PROJECT: Historic-Cultural Monument Application for the

POLITO HOUSE

REQUEST: Declare the property a Historic-Cultural Monument

OWNER/ Jared Stein

APPLICANT: 1650 N. Queens Road

Los Angeles, CA 90019

APPLICANT'S Charles J. Fisher REPRESENTATIVE: 140 S. Avenue 57

Highland Park, CA 90042

RECOMMENDATION That the Cultural Heritage Commission:

- 1. **Take the property under consideration** as a Historic-Cultural Monument per Los Angeles Administrative Code Chapter 9, Division 22, Article 1, Section 22.171.10 because the application and accompanying photo documentation suggest the submittal warrants further investigation.
- 2. Adopt the report findings.

MICHAEL J. LOGRANDE Director of Planning

SUMMARY

Built in 1940, the Polito House is a Bauhaus-influenced, single family residence of the International Style. The house is set into the Hollywood hillside, with a three-story elevation built to the lot line facing Queens Road. Since the home backs onto the hillside, a cantilever bridge was included in the design to connect the uppermost floor to an elevated garden. A pool was added in 1983, replacing a former grassy area in the backyard.

The exterior of the building exhibits many character-defining features of the International Style, including a stucco exterior, flat roofs, steel casement ribbon windows, flush-mounted windows without trim, and an overall absence of ornamentation.

The subject property was designed for residents Anthony and Carmella Polito by prominent architect Raphael S. Soriano. Other designs by Soriano include:

- Ross House (1938), HCM #964
- Glen Lukens Home and Studio (1940), HCM #866
- Shulman House (1950), HCM #325
- "El Paradiso" (1964), HCM #638

Born in Greece, Soriano immigrated to Los Angeles in 1924 where he earned his Bachelor of Architecture from the University of Southern California. While completing his degree, he interned for local master architect Richard Neutra, later opening his own firm in1936. The Grove Encyclopedia of American Art includes Soriano, and recognizes Polito House as one of his earlier designs featuring banded glass and stucco walls. Polito House is also featured in David Gebhard and Robert Winter's *An Architectural Guidebook to Los Angeles*, as well as in a February 1946 issue of *Architectural Record*.

CRITERIA

The criterion is the Cultural Heritage Ordinance which defines a historical or cultural monument as any site (including significant trees or other plant life located thereon) building or structure of particular historic or cultural significance to the City of Los Angeles, such as historic structures or sites in which the broad cultural, economic, or social history of the nation, State or community is reflected or exemplified, or which are identified with historic personages or with important events in the main currents of national, State or local history or which embody the distinguishing characteristics of an architectural type specimen, inherently valuable for a study of a period style or method of construction, or a notable work of a master builder, designer or architect whose individual genius influenced his age.

FINDINGS

Based on the facts set forth in the summary and application, the Commission determines that the application is complete and that the property may be significant enough to warrant further investigation as a potential Historic-Cultural Monument.

NOMINATION FORM

5. ALTERATION SUMMARY

List date and write a brief description of work done for major alterations. This section may also be completed on a separate document. Be sure to include copies of building permits in the nomination packet (see Section 9. SUBMITTAL).

1.	1983	Swimming pool added to site.
2.	1990	Retaining wall added in front of pool.
3.	1992	Roof replaced in kind.
4.	2005	Kitchen remodeled, some deteriorated windows replaced in kind, doors added to rear facade, chimney rebuilt.
5.		
6.		
7.		
8.		

6. EXISTING HISTORIC RESOURCE IDENTIFICATION (If known)

Listed in the National Register of Historic Places

Listed in the California Register of Historical Resources

Formally determined eligible for the National and/or California Registers

Located in a Historic Preservation Overlay Zone (HPOZ)

Contributing feature

Determined eligible for national, state, or local landmark

Non-contributing feature

status by a historic resources survey(s)

Survey Name(s):

Other historical or cultural resource designation(s):

7. WRITTEN STATEMENTS

This section allows you to discuss at length the significance of the proposed monument and why it should be nominated as a Historic-Cultural Monument. Type your responses on a separate document and attach sheets to the back of this form.

- A. Proposed Monument Description Describe the proposed monument's physical characteristics and relationship to its surrounding environment. Identify and describe any character-defining elements, structures, interior spaces, or landscape features.
- B. Statement of Significance Address the proposed monument's historic, cultural, and/or architectural significance by discussing how it satisfies the HCM criteria selected in Section 4 (on the previous page). You must support your argument with substantial evidence and analysis.

Polito House Architectural Description

This Bauhaus Style residence is set into a hillside, which gives it a three story facade at the street level, consisting of two stories of living space over a two car garage at street level. The front facade is squared, punctuated by two bands of windows at the second and third story levels, A two-story multi-light opaque window is along the West facade stairwell. The facade is covered in smooth stucco. The L-shaped second story opens to a large balcony, which sits atop the first floor living room. This (East) side of the house has large widow bands across at both floor levels. The large quantity of windows makes the interior well lit and airy.

A wooden bridge connects the rear of the balcony with the rear of the steep lot. The balcony as well as a narrow patio area under part of it at the first floor both have solid stucco covered railings. There is also a similar designed parapet surrounding the flat roof of the house. A thin wall at the front of the house hides the balcony and patio area from the street. All exterior doors have a single large window light. The front door has opaque glass. A double set of steel folding doors on the East facade open to the garden. A triple set of tall single light wooden and glass double doors are at the rear of the house, under bridge (not original).

The front of the house is directly on the street with no setback. The West side is close to the lot line, heavily sloped. The wider East side yard had a grass or garden area that is now occupied by a rectangular swimming pool. The back yard is terraced up to the rear street (Franklin Avenue).

Interior features an open floor plan for the first floor living and dining rooms, including hardwood floors, built-in cabinetry with no railing at the top of the staircase, which is mostly enclosed between the glass window wall on the West side and a wall. The kitchen and bathrooms have been remodeled in the basic style of the house.

Polito House 1650 Queens Road Significance Statement

Designed by Modernist architect Raphael S. Soriano in 1940 for Anthony and Carmella Polito, this cubic shaped hillside residence could also be considered to be built in the International Style, which is frequently used as an alternative name for the Bauhaus Style is given to more variation in design. The Polito House is pure in its Bauhaus regimen. The concept originated in Weimar Germany under the Bauhaus design school founded in 1919 by German architect Walter Gropius. Initially, the Bauhaus did not have an architecture department. Nonetheless, it was founded with the idea of creating a "total" work of art in which all arts, including architecture, would eventually be brought together. The Bauhaus style later became one of the most influential currents in modern design. The Bauhaus was to have a profound influence upon subsequent developments in art, architecture, graphic design, interior design, industrial design, and typography.

The school existed in three German cities: Weimar from 1919 to 1925, Dessau from 1925 to 1932 and Berlin from 1932 to 1933, under three different architect-directors: Walter Gropius from 1919 to 1928, Hannes Meyer from 1928 to 1930 and Ludwig Mies van der Rohe from 1930 until 1933, when the school was closed by its own leadership under pressure from the Nazi regime. The Nazi government claimed that it was a centre of Communist intellectualism. Though the school was closed, the staff continued to spread its idealistic precepts as they left Germany and emigrated all over the world.

The Bauhaus movement had a major impact in the Modernism of the United States, especially in Los Angeles, with the Austrian-born architects Rudolph Michael Schindler and Richard Josef Neutra. Probably the earliest pure Bauhaus design in Los Angeles was Neutra's Lovell Health House (HCM 123), built in 1929, which was followed in 1934 with Schindler's Buck House (HCM 122), which were both declared in 1974 under the International Style description. Soriano, along with Gregory An and Harwell Hamilton Harris, worked for both Neutra and Schindler after graduating from the University of Southern California School of Architecture in 1934.

Born on the island of Rhodes in 1907, Soriano had come to the United States from his native Greece in 1924 and became a U S citizen five years later. His earliest work, after his internships with Neutra and Schindler, was for several Works Progress Administration (WPA) projects, which were never built. His first project to actually be constructed was a house in Silver Lake for Emanuel M. Lipetz (HCM 967), in 1936, followed by the short-lived Dodie Priver House the next year. The William Ross House (HCM 964) also in Silver Lake was built in 1938.

These early homes were pure Bauhaus in their design and execution, following the design regimen laid out by Walter Grupius, who had influenced both Neutra and Schindler. The Polito House was built with the concept that "form follows function", in that the layout of the house was dictated by what each part of it was to be used for. There was also the challenge of building the house on a steep slope that more conventional designers at the time would have

considered unbuildable. The house was built on Lot 135 of Tract No. 8500, which was the second tract marketed as "Hacienda Park" in the mid 1920s. The name has fallen into disuse and the area is today referred to as "Hollywood Hills West". The neighborhood has a few homes from that early period, mostly on the more accessible lots. The rugged nature of the hillside properties delayed much of the development and the Polito House was one of the first built on a near vertical lot in the neighborhood.

Soriano used the windows along the South and East sides of the house to capture the views of the city and the Hollywood Hills, respectively. On the West, he designed a large three story window to bring the afternoon light into the house, but had the glass sandblasted to provide privacy. The kitchen was placed at the rear with the living and dining rooms sharing an open floor plan. A bridge was placed at the rear of the house, connecting the second story office to the terraced gardens at the rear. When looking at the house from the end of the bridge, one is reminded of the front view of Neutra's Lovell Health House in the Los Feliz Hills. The house was clearly designed for entertaining guests.

Not much has been found Anthony (aka Antonio) J. Polito or his wife Carmella (Constella). Prior to building the house, they were living on East 37th Street with her family. The 1940 Census lists Anthony as a bookkeeper for a wholesale food company and Carmella as a stenographer for Title Insurance an Trust. Anthony was born in California on November 26, 1910 in California to Italian immigrants Giusseppe "Joe" and Domenica (Sansone) Polito. His father died when he was 3 and his mother raised him and his three brothers until her death in 1929, after which Anthony lived with his older brother, Joseph, for several years. He passed away in San Diego on March 1, 1993. Carmella had died in 1962.

The original building permit for the Polito House does not list an architect, engineer or contractor, however, the document was filled out and signed by Soriano, who had not yet been granted his architects license. Most likely the architect served as the general contractor for the project as well. This did not keep him from being recognized for the Polito design after he obtained his license by several architectural publications.

On June 25, 1945, the Politos sold the house to Viktor R. Benesch, who added Jon L. Layman to the title on August 9th of the following year. It was transferred to William I. Noel on April 29, 1949 and then to Vernon J. Alves on October 26, 1953. Alves deeded it to Louis Fox on February 26, 1957. It was sold to Philip and Edna Teal on April 9, 1959. It was acquired by Kay Nelson on April 6, 1960 and then by Alex and Helen M. Alexander on June 24, 1963, who transferred it to Conrad V. Feia on November 17th of the following year.

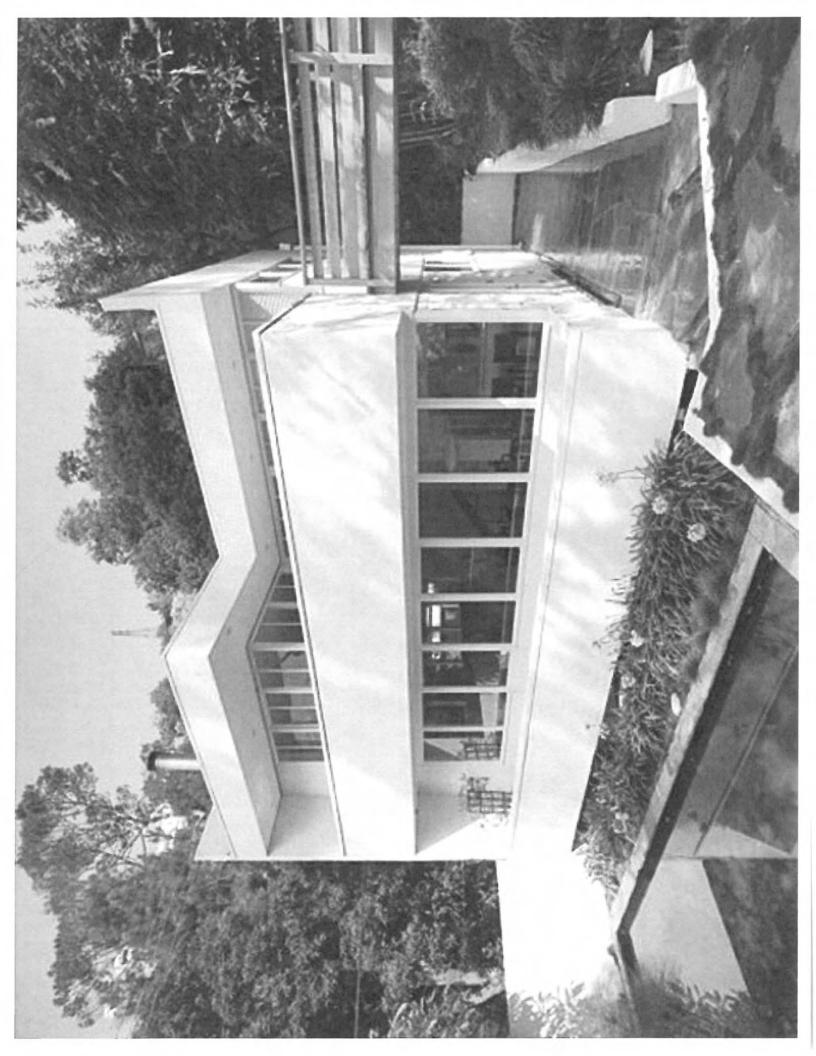

Feia remained in the house until January 29, 1978, when he transferred it to William R. and Annette Taylor, who lived there until the sold it to Helene Hahn on September 30, 1983. She added the swimming pool to the property in 1984 and stayed there until December 2, 2004, when it was deeded to Steven D. Hamilton who renovated the house the following year, while retaining its original design and floor plan. Hamilton sold it to the current owner on December 11, 2013.

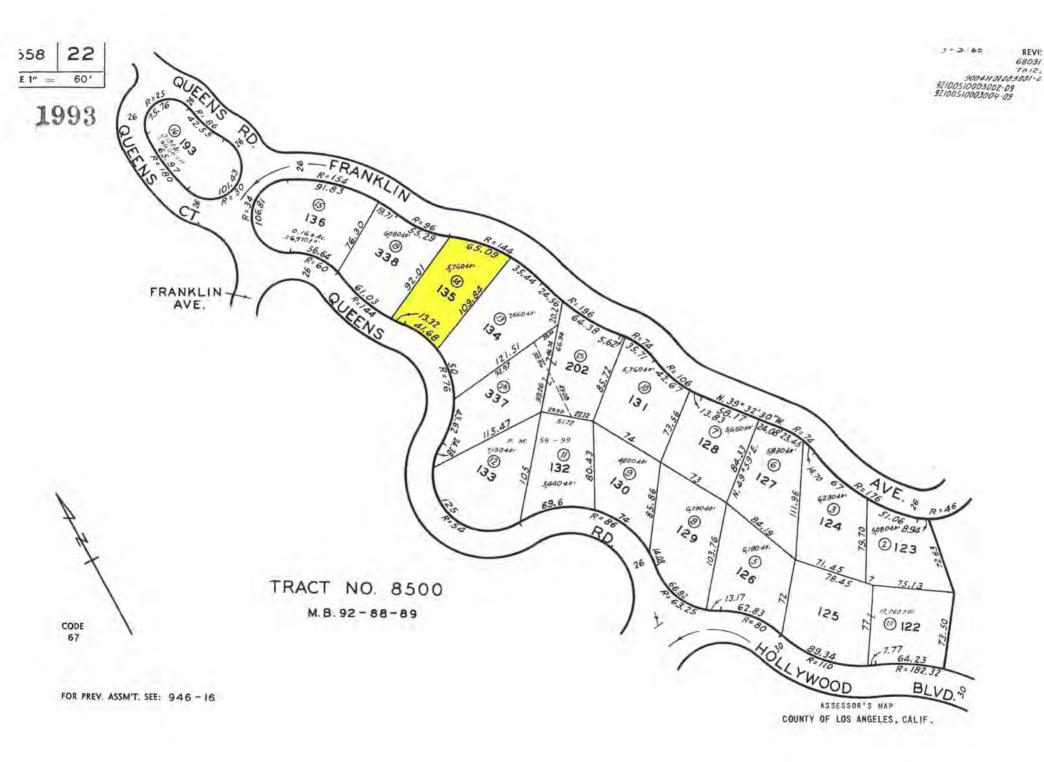

The Polito House is noted in several books on Soriano, as well as Gebhard and Winter's architectural guide for Los Angeles (page 137 in the 1994 edition). The house was also profiled in the February 1946 issue of Architectural Record>

Unlike many of Soriano's houses, the Polito House has retained its integrity by not undergoing any major remodeling, in spite of the many transfers between 1945 and 1964. The most significant work was done in 2005, when the kitchen was remodeled and an additional door was added to the rear of the dining room.

The Polito House meets two of the criteria for a Los Angeles Historic Cultural Monument. First, it is a representative of the Bauhaus (AKA International) Style of Modernist architecture. The use of the original German term "Bauhaus" due to its purity of design. Second, as a significant surviving work by the architect Raphael S. Soriano, a pioneer of the Modernist movement in Los Angeles.

Raphael Soriano

From Wikipedia, the free encyclopedia

Raphael S. Soriano, FAIA, (August 1, 1904–July 21, 1988) was an architect and educator who helped define a period of 20th-century architecture that came to be known as Mid-century modern. Soriano pioneered the use of modular prefabricated steel and aluminum structures in residential and commercial design and construction.

Biography

Born in Rhodes to a Sephardic Jewish family, Soriano attended the College Saint-Jean-Baptiste there before emigrating to the United States in 1924. After settling with relatives in Los Angeles, Soriano enrolled in the University of Southern California's School of Architecture in 1929, from which he graduates in 1934. In 1930 Soriano became an American citizen and in 1931 he secured an internship at the practice of Richard Neutra, working alongside fellow interns Gregory Ain and Harwell Hamilton Harris. This was followed by a brief internship with Rudolph Schindler in 1934, but Soriano quickly returned to his unpaid position at Neutra's office.

With America in the midst of the Great Depression, upon graduation Soriano managed to find work with the County of Los Angeles on several WPA projects such as the famous "Steel Lobster" located in the county and with a local architect's office. By 1936 he had completed his first commission — the Lipetz house, which was included in the 1937 International Architectural Exhibition held in Paris.

With U.S. residential and commercial construction largely curtailed by America's involvement in the World War II, Soriano took up lecturing at USC and contributing designs to various competitions and publications featuring proposals for post-war housing. Of these, Soriano received Third Prize in the Postwar Living Competition sponsored by Arts & Architecture magazine in 1943 with his "Plywood House" prototype. With the end of the war Soriano found no trouble in securing commissions, and now it was his built houses receiving the awards, with his Katz house in Studio City picking up an award from the American

Institute of Architects (AIA) Southern California Chapter Three in 1949, 1950 found Soriano completing a residential design for friend and renown architectural photographer Julius Shulman one of the few Soriano structures still standing

today, and along with the 1964 Grossman House, the last that was occupied by the original commissioning party.

Invited by John Entenza of Arts & Architecture magazine to participate in the Case Study Houses program, Soriano completed his entry in 1950. It marks a turning point for the program with its pioneering use of steel in residential construction, culminating in Pierre Koenig's Case Study Houses #21 and #22. Soriano's Colby Apartments of 1951 were distinct not only for their modern design but also for their extensive use of steel, and were recognized, receiving the National American Institute of Architects Award for Design, the VII International Pan American Congress Award, and the AIA Southern California Chapter One Honor Award.

In 1953 Soriano relocated from Los Angeles to Tiburon, in Marin County, across the bay north of San Francisco, where he lived with his wife Elizabeth Stephens(Betty) and her two daughters Margaret and Lucille Coberly. By 1955 Soriano designed the first mass-produced steel house, built by developer Joseph Eichler in Palo Alto. His work with Eichler would garner two awards from the Northern California Chapter of the AIA.

Soriano was made a Fellow by the American Institute of Architects (FAIA) in 1961. In 1965 Soriano started a venture to design and build prefabricated aluminum houses called Soria Structures, Inc.; the structures were marketed as "All Aluminum Homes." The last designs of Soriano's to be realized were eleven All Aluminum Homes on the island of Maui, Hawaii, built in 1965.

From 1970 to his death in 1988 Soriano focused on traveling the world as an architectural lecturer, writer and researcher. Soriano was recognized by the AIA with a Distinguished Achievement Award and by USC with a Distinguished Alumni Award, both in 1986. Shortly before his death he served as a Special Sessions Instructor at the College of Environmental Design at Cal Poly Pomona.^[1]

Works

Of the 50 buildings of Soriano's built, only 12 remain standing, the others having suffered from southern California's wildfires, earthquakes, and demolition. Of those remaining, a number had to endure unsympathetic make-overs and additions. The several that remain intact and unmolested now benefit from municipal preservation codes. A collection of Soriano Documents is kept at the College of Environmental Design Resource Center at the California State Polytechnic University, Pomona (Cal Poly Pomona).

TRACT OPENS TODAY

Unsold Land in Hacienda Park Taken Over by Local Subdivision Company

Hacienda Park, destined, it is believed, to be a showplace of Southern California, will be formally opened today by John A. Evans Corporation. It will be a \$5,000,000 development at its completion and improvements to cost more than \$200,000 are being installed now. The Hacienda Park Land Company, owners of the hills for fifteen years, received \$500,000 for the land from John A Evans, head of the sub-

dividing firm, it is reported.

Franz Herding, famous Swiss engineer and landscape expert, responsible for many of the great showplaces in the mountains of Switzerland and Germany and who was recently brought to the United States by the government for development work, has been retained to act as chief engineer of the Hacienda Park project.

For fifteen year, Haclenda Park has been a lindmark. Its development has been slow, due to retarded improvements, but there are several fine homes erected upon its heights, and others are

being planned.

Work on the \$300,000 improvements is already under way, under the supervision and direction of Mr. Evans and Chief Engineer

Herding.

A pumping station of enormous power has been installed to force city water to one thousand feet above we level. These hills have bit berto been without water series which has been one reason why development of this territory has been retarded.

Modern electroliers will be installed along the winding drives Among the innocations will be sidewalks for pedestrian traffic along the rear of the lots. The streets will be wide, curving and surfaced with concrete or gravel as the case requires Gas, electricity, telephones, and all necessary improvements are now being installed by the Evans Corpora-

Acquisition of Hacienda Park marks an ambition which Mr. Evans has had ever since he entered the real estate profession in Los Angeles. For some time he has been a member of the firm of McCar.y. Vaughan & Evans, Inc., subdividers and sellers of Beverly Vista.

Due to the fact that over 400 acres of Revery Vista have been sold, kaying only a comparatively small amount of unsold land, Messrs Evans and Walter G. Me-Carty have arranged with John A. Vaughan, the third member of the him, to care for the remainder Mr. Evans of the sales, leaving free to take over Haclenda Park, in which there will be 325 small An innovation at Hacienrstutes da Park will be night selling. An attractive little patio 18 erected on the hill at Mr. Evanys home, where salesmen quirers may meet.

'What I Believe ...'

A statement of architectural principles by Raphael Soriano

by Esther McCoy

IKE the Island of Rhodes, where IKE the Island of Rhodes, where a Raphael Soriano was born in 1907, his architectural longitude and latitude are recorded but too seldom celebrated. Less access to be known about him than most of the major California architects, in spite of the fact that he's been winning awards since the 30s.

He's the kind of man around whom larged accumulate. The squares architecture of the control of the state of the

legends accumulate. The younger archi-tects who beard him lecture at the Univer-sity of Southern California bave a raft of

sity of Southern California have a raft of stories about his outspokenness and his intensely serious approach to design. As the legends have grown, he's been developing a substantial body of fine work both here and in San Francisco. His office has been in Tiburon for several years, but he commutes between north and south as his work resulters. his work requires.

his work requires.

His career has always had direction and
in his earlier houses can be found the seed
for his later ones. His virtuosity is evident, not in a variety of points of view or
a multitude of materials but in the sym-

pathetic exploitation of a very few.

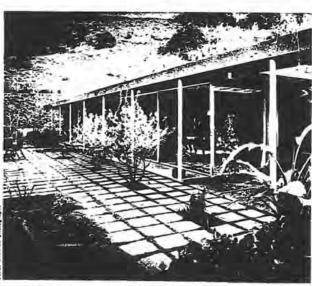

Soriano pioneered the ateel house; in fact he brought to it a conviction that did much to turn the tide in its favor. When he built his first steel house in 1936, there was strong prejudice against the material. He might easily have ingratisted himself by disguising the ateel, but since it was there he chose to recognize it.

The material at that time seemed not only cold to the public but seemed wrong only cold to the public but seemed wrong.

The material at that time seemed not only cold to the public but seemed wrong to the eye. We were accustomed to seeing walls or heavy posts supporting a roof load and, in apite of steel's strength, the slender columns or l-beams did not seem up to the job. Soriano could have eased them in with wood, but steel is steel and it was silly to pretend it was wood.

Soriano was intrigued with the many advantages of steel over wood framing. The major one was that the house is freed from its floor plan. Interior walls are non-structural and indeed may be eliminated. Watla are used only to obtain privacy; they do no work.

Cantinued as Page Party-Iwo

Absence of strong horizontal lines below roal level gives to a Soriana steel house the look of a pavilion with indoors and outdoors integrated

When the bedroom's sliding glass wall is ope as above, the garden and terrace seem a part of the indoor setting. Roofed terrace affords a sheltered autdoor lounging space, while the opening in the terrace roof brings sky and tree tops closer to the indoor living areas

in creating flexible space, Soriamo makes the el his servant, subordinate to the design

This office at home opens through two glass walls to a partially rooled terrace as above. Steel framing makes such lightly paised structures possible today

Openings for trees and vines add natural look to the covered passage

What I Believe

Continued from Page Forty

There were also dinadvan tages. Steel can become me chanical except in the hand of one with a highly devel oped architectural oped architectural sens.
There were no guidepost to the steel house whe Soriano set to work. Excep for Elichard Neutra's Love house, 1927, the materia was thought fit only for it dustrial use.

There were two reason for delay in the developmen of the material. In the dependence of the material in the dependence of the material in the dependence of the material in the delay in the seel companie tal. Also the steel companie tal. Also the steel companie had not brought out an sections for other than in dustrial use and to integrat the industrial sections intresidential architecture required more time than more men would have wanted terrand. expend.

This walted for Sorian He did a great deal of thinking about the nature of the material itself. What he as material itseif. What he ai rived at was a new scale-one which had nothing to d with the wood house but so pressed the special proper ties of steel—lightness an strength. The eye abhora somethin

the eye annor somethin that appears ready to collapse, but one structure the may look fragile but in un versally loved in the pavinon. Because of its grawer don't question its stubility. The pleasure it give un is enough.

Dility, The Deasure it give us is enough. So instead of striving fo an appearance of solidity. Soriano made a virtue of th lightness of steel and di-signed houses that have family resemblance to the pavillon. His roofs have floating quality and the thi-supports seem to disappear floating quality and the this supports seem to disappeas He has found many ways a emphasize the lightness Us ain g an 8-foot do throughout the house ar reducing the space betwee door top and ceiling, I gives rooms an added effect beither. of height.

Architect Soriano Gets Neutra Medal

By JOHN DREYFUSS.
Times Architecture and Design Critic

Architect Raphael Soriano, 73, of Tiburon, received the Neutra Professional Medal for Design Excellence Saturday at Cal Poly Pomona.

Soriano, who was born in Greece, graduated from USC's School of Architecture and practiced in Southern California for about 20 years before moving to the Bay Area in 1952.

He is best known and most admired for his elegant,

Raphael Soriano

spare metal and glass residences built since World War II.

In 1967 a single-story office building he designed was selected by the City of Los Angeles and the American Institute of Architects' Southern California chapter as "one of the most significant buildings erected in the Los Angeles area since 1947." The structure is at 1800 W. Magnolia Blvd., Burbank.

The Neutra medal, named for the late architect Richard Neutra, is sponsored by the department of architecture at Cal Poly Pomona, where Neu-

tra taught in 1970, the year before he died. The award is given annually to an architect whose work and philosophy reflects many of Neutra's ideals.

phy reflects many of Neutra's ideals.
"Soriano was a highly logical choice," said Marvin Malecha, chairman of Cal Poly Pomona's department of architecture and a member of the jury that selected Soriano.

"As a follower of Richard Neutra, Soriano advocated the concepts of survival through design: the theory that architecture strongly and positively affects attitudes about life," Malecha said.

Thomas S. Hines, architectural historian at UCLA, and also a jury member, said, "Soriano's architecture of the late 1930s and early 1940s was, for the time and place (Southern California) daring and courageous, He was a pioneer in developing metal and glass structures that did not become widely accepted until the 1950s."

Soriano, who worked for Neutra in the 1930s, first drew attention in that decade with his white, rectilinear houses that were highly responsive to their climate and landscape. In the '40s, he began working with the metal and glass style for which he is best known.

Soriano is vehemently opposed to "art for art's sake" in architecture. "'Art' does not enlighten, but creates confusion and enslavement," Soriano has written.

"If you carve or paint anything on your buildings," the architect said, "then you have to say what you are doing with these non-architectural things. At best they become decorative aspects or an applique. Alain, the French thinker, said that women will usually put trinkets on, especially the older they get, to detract from their creases. That is exactly what is too often happening in architecture."

Members of the jury that selected Soriano were Mrs. Richard Neutra, widow of the late architect; Jere S. French, dean of Cal Poly Pomona's School of Environmental Design; Bernard Zimmerman, who teaches architecture at Cal Poly Pomona; Malecha, and Hines.

Pioneering Architect R. Soriano
Los Angeles Times (1923: Current File), Jul 19, 1988.
ProQuest Historical Newspapers: Los Angeles Times (1881-1990)
no. C.16.

Pioneering Architect R. Soriano

Raphael Soriano, an architect best known for his pioneering use of steel framing in a series of homes and office buildings across Southern California, was found dead Saturday at his Claremont home

His longtime friend, Richard Chylinski, said the Greek-born engineer and planner was 83 and had been in apparent good health. A specific cause of death has not been

reported.

Sam Hall Kaplan, The Times' architecture critic, last May called attention to Soriano's "reasoned marriage between architecture and engineering." The comment was occasioned by Cal Poly Pomona's School of Environmental Design paying tribute to Soriano, who had returned to the Los Angeles area from Northern California three years ago.

He since had been teaching at

Cal Poly.

A 1934 graduate of the University of Southern California, which honored him in 1986 with its Distinguished Alumnus Award, Soriano was admired for his elegant homes designed since World War II.

Designs for which he is best known here include the Case Study House in Pacific Palisades, the Shulman House in the Hollywood Hills (declared a historical-cultural monument last year) and the Colby apartment complex on Beverly Green Drive in Palms that has since been demolished.

Rock 'n' Roll Architect
Los Angeles Times (1923 Current File): Feb 19, 1989;
ProQuest Historical Newspapers: Los Angeles Times (1881-1990)
pg. F20

Rock 'n' Roll Architect

What misbegotten muse, I wondered could have driven Austrian architect Wolf Prix to come up with his unearthly junk pile pictured in the story "Dramatic Dwelling That Says 'I Love L.A.'" (by Leon Whiteson, Feb. 5).

The answer came in the telling of how Prix shuts his eyes—"literally"—and begins scribbling out his phantasmagoric concoctions with the nerve-fraying blare of Jimi Hendrix and the Beatles filling his Vienna workplace.

Influenced by such aural dissonance, little wonder Prix is drawn bizarre, cacophonous images. In computer parlance, "garbage in garbage out."

A far—and sad—cry from the nightmares of this "deconstructivist" were those of the late Raphael Soriano. This architect's residential and commercial structures reflected a highly refined discipline that were always sensitively tuned to be in harmony with the challenges of site and client.

The difference between Prix's ephemeral novelties and Soriano's timeless concepts is that the latter sought his inspiration from the sounds of J. S. Bach in his studio.

ED MITCHELL, Los Angeles

The Polito House by Raphael Soriano

Sun, 2013-02-10 10:08 -- David Kubiczky

The Polito House by Raphael Soriano., 1940. 1650 Queens Road, Los Angeles, CA 90069 - List Price: \$1,895,000

Long before there was Gangnam Style, there was International Style. And a few days ago another fine specimen from one of L.A.'s International Style architect posse hit the market. The Antonio Polito House by Raphael is a restored three-level Bauhaus cube, located on a street-to-street lot in the hills above the Sunset Strip.

Bauhaus

From Wikipedia, the free encyclopedia

■ Staatliches Bauhaus, commonly known simply as Bauhaus, was an art school in Germany that combined crafts and the fine arts, and was famous for the approach to design that it publicised and taught. It operated from 1919 to 1933. At that time the German term ■ Bauhaus - literally "house of construction" - was understood as meaning "School of Building".

The Bauhaus was first founded by Walter Gropius in Weimar. In spite of its name, and the fact that its founder was an architect, the Bauhaus during the first years of its existence did not have an architecture department. Nonetheless, it was founded with the idea of creating a "total" work of art in which all arts, including architecture, would eventually be brought together. The Bauhaus style later became one of the most influential currents in modern design, Modernist architecture and art, design and architectural education. [11] The Bauhaus had a profound influence upon subsequent developments in art, architecture, graphic design, interior design, industrial design, and typography.

The school existed in three German cities: Weimar from 1919 to 1925, Dessau from 1925 to 1932 and Berlin from 1932 to 1933, under three different architect-directors: Walter Gropius from 1919 to 1928, Hannes Meyer from 1928 to 1930 and Ludwig Mies van der Rohe from 1930 until 1933, when the school was closed by its own leadership under pressure from the Nazi regime. The Nazi government claimed that it was a centre of communist intellectualism. Though the school was closed, the staff continued to spread its idealistic precepts as they left Germany and emigrated all over the world.^[2]

The changes of venue and leadership resulted in a constant shifting of focus, technique, instructors, and politics. For instance: the pottery shop was discontinued when the school moved from Weimar to Dessau, even though it had been an important revenue source; when Mies van der Rohe took over the school in 1930, he transformed it into a private school, and would not allow any supporters of Hannes Meyer to attend it.

Bauhaus and German modernism

The Bauhaus Museum - Tel Aviv

Germany's defeat in World War I, the fall of the German monarchy and the abolition of censorship under the new, liberal Weimar Republic allowed an upsurge of radical experimentation in all the arts, previously suppressed by the old regime. Many Germans of left-wing views were influenced by the cultural experimentation that followed the Russian Revolution, such as constructivism. Such influences can be overstated: Gropius himself did not share these radical views, and said that Bauhaus was entirely apolitical. [3] Just as important was the influence of the 19th century English designer William Morris, who had argued that art should meet the needs of society and that there should be no distinction between form and function. [4] Thus the Bauhaus style, also known as the International Style, was marked by the absence of ornamentation and by harmony between the function of an object or a building and its design.

However, the most important influence on Bauhaus was modernism, a cultural movement whose origins lay as far back as the 1880s, and which had already made its presence felt in Germany before the World War, despite the prevailing conservatism. The design innovations commonly associated with Gropius and the Bauhaus—the radically simplified forms, the rationality and functionality, and the idea that mass-production was reconcilable with the individual artistic spirit—were already partly developed in Germany before the Bauhaus was founded. The German national designers' organization Deutscher Werkbund was formed in 1907 by Hermann Muthesius to harness the new potentials of mass production, with a mind towards preserving Germany's economic competitiveness with England. In its first seven years, the Werkbund came to be regarded as the authoritative body on questions of design in Germany, and was copied in other countries. Many fundamental questions of craftsmanship versus mass production, the relationship of usefulness and beauty, the practical purpose of formal beauty in a commonplace object, and whether or not a single proper form could exist, were argued out among its 1,870 members (by 1914).

The entire movement of German architectural modernism was known as Neues Bauen. Beginning in June 1907, Peter Behrens' pioneering industrial design work for the German electrical company AEG successfully integrated art and mass production on a large scale. He designed consumer products, standardized parts, created clean-lined designs for the company's graphics, developed a consistent corporate identity, built the modernist landmark AEG Turbine Factory, and made full use of newly developed materials such as poured concrete and exposed steel. Behrens was a founding member of the Werkbund, and both Walter Gropius and Adolf Meyer worked for him in this period.

The Bauhaus was founded at a time when the German zeitgeist had turned from emotional Expressionism to the matter-of-fact New Objectivity. An entire group of working architects, including Erich Mendelsohn, Bruno Taut and Hans Poelzig, turned away from fanciful experimentation, and turned toward rational, functional, sometimes standardized building. Beyond the Bauhaus, many other significant German-speaking architects in the 1920s responded to the same aesthetic issues and material possibilities as the school. They also responded to the promise of a "minimal dwelling" written into the new Weimar Constitution. Ernst May, Bruno Taut, and Martin Wagner, among others, built large housing blocks in Frankfurt and Berlin. The acceptance of modernist design into everyday life was the subject of publicity campaigns, well-attended public exhibitions like the Weissenhof Estate, films, and sometimes fierce public debate.

The Vkhutemas, the Russian state art and technical school founded in 1920 in Moscow, has been compared to Bauhaus. Founded a year after the Bauhaus school, Vkhutemas has close parallels to the German Bauhaus in its intent, organization and scope. The two schools were the first to train artist-designers in a modern manner. Both schools were state-sponsored initiatives to merge the craft tradition with modern technology, with a Basic Course in aesthetic principles, courses in color theory, industrial design, and architecture. Nkhutemas was a larger school than the Bauhaus, but it was less publicised outside the Soviet Union and consequently, is less familiar to the West.

With the internationalism of modern architecture and design, there were many exchanges between the Vkhutemas and the Bauhaus. [8] The second Bauhaus director Hannes Meyer attempted to organise an exchange between the two schools, while Hinnerk Scheper of the Bauhaus collaborated with various Vkhutein members on the use of colour in architecture. In addition, El Lissitzky's book Russia: an Architecture for World Revolution published in German in 1930 featured several illustrations of Vkhutemas/Vkhutein projects there.

History of the Bauhaus

Weimar

The school was founded by Walter Gropius in Weimar in 1919 as a merger of the Grand Ducal School of Arts and Crafts and the Weimar Academy of Fine Art. Its roots lay in the arts and crafts school founded by the Grand Duke of Saxe-Weimar-Eisenach in 1906 and directed by Belgian Art Nouveau architect Henry van de Velde.[9] When van de Velde was forced to resign in 1915 because he was Belgian, he suggested Gropius, Hermann Obrist and August Endell as possible successors. In 1919, after delays caused by the destruction of World War I and a lengthy debate over who should head the institution and the socio-economic meanings of a reconciliation of the fine arts and the applied arts (an issue which remained a defining one throughout the school's existence), Gropius was made the director of a new institution integrating the two called the Bauhaus.[10] In the pamphlet for an April 1919 exhibition entitled "Exhibition of Unknown Architects", Gropius proclaimed his goal as being "to create a new guild of craftsmen, without the class distinctions which raise an arrogant barrier between craftsman and artist." Gropius' neologism Bauhaus references both building and the Bauhütte, a premodern guild of stonemasons.[11] The early intention was for the Bauhaus to be a combined architecture school, crafts school, and academy of the arts. In 1919 Swiss painter Johannes Itten, German-American painter Lyonel Feininger, and German sculptor Gerhard Marcks, along with Gropius, comprised the faculty of the Bauhaus. By the following year their ranks had grown to include German painter, sculptor and designer Oskar Schlemmer who headed

the theater workshop, and Swiss painter Paul Klee, joined in 1922 by Russian painter Wassily Kandinsky. A tumultuous year at the Bauhaus, 1922 also saw the move of Dutch painter Theo van Doesburg to Weimar to promote De Stijl ("The Style"), and a visit to the Bauhaus by Russian Constructivist artist and architect El Lissitzky.^[12]

From 1919 to 1922 the school was shaped by the pedagogical and aesthetic ideas of Johannes Itten, who taught the *Vorkurs* or "preliminary course" that was the introduction to the ideas of the Bauhaus. [10] Itten was heavily influenced in his teaching by the ideas of Franz Cižek and Friedrich Wilhelm August Fröbel. He was also influenced in respect to aesthetics by the work of the Blaue Reiter group in Munich as well as the work of Austrian Expressionist Oskar Kokoschka. The influence of

German Expressionism favoured by Itten was analogous in some ways to the fine arts side of the ongoing debate. This influence culminated with the addition of Der Blaue Reiter founding member Wassily Kandinsky to the faculty and ended when Itten resigned in late 1922. Itten was replaced by the Hungarian designer László Moholy-Nagy, who rewrote the *Vorkurs* with a leaning towards the New Objectivity favored by Gropius, which was analogous in some ways to the applied arts side of the debate. Although this shift was an important one, it did not represent a radical break from the past so much as a small step in a broader, more gradual socioeconomic movement that had been going on at least since 1907 when van de Velde had argued for a craft basis for design while Hermann Muthesius had begun implementing industrial prototypes. [12]

Gropius was not necessarily against Expressionism, and in fact himself in the same 1919 pamphlet proclaiming this "new guild of craftsmen, without the class snobbery," described "painting and sculpture rising to heaven out of the hands of a million craftsmen, the crystal symbol of the new faith of the future." By 1923 however, Gropius was no longer evoking images of soaring Romanesque cathedrals and the craft-driven aesthetic of the "Völkisch movement", instead declaring "we want an architecture adapted to our world of machines, radios and fast cars."[13] Gropius argued that a new period of history had begun with the end of the war. He wanted to create a new architectural style to reflect this new era. His style in architecture and consumer goods was to be functional, cheap and consistent with mass production. To these ends, Gropius wanted to reunite art and craft to arrive at high-end functional products with artistic merit. The Bauhaus issued a magazine called Bauhaus and a series of books called "Bauhausbücher". Since the Weimar Republic lacked the quantity of raw materials available to the United States and Great Britain, it had to rely on the proficiency of a skilled labor force and an ability to export innovative and high quality goods. Therefore designers were needed and so was a new type of art education. The school's philosophy stated that the artist should be trained to work with the industry.

The main building of the Bauhaus-University Weimar (built 1904–1911, designed by Henry van de Velde to house the sculptors' studio at the Grand Ducal Saxon Art School. Designated as a UNESCO World Heritage Site in 1996).

Foyer of the Bauhaus-University Weimar

Weimar was in the German state of Thuringia, and the Bauhaus school received state support from the Social Democrat-controlled Thuringian state government. The school in Weimar experienced political pressure from conservative circles in Thuringian politics, increasingly so after 1923 as political tension rose. One condition placed on the Bauhaus in this new political environment was the exhibition of work undertaken at the school. This condition was met in 1923 with the Bauhaus' exhibition of the experimental Haus am Horn. [14] In February 1924, the Social Democrats lost control of the state parliament to the Nationalists. The Ministry of Education placed the staff on six-month contracts and cut the school's funding in half. On 26 December 1924 the Bauhaus issued a press release and setting the closure of the school for the end of March 1925. [15][16] At this point they had already been looking for alternative sources of funding. After the Bauhaus moved to Dessau, a school of industrial design with teachers and staff less antagonistic to the conservative political regime remained in Weimar. This school was eventually known as the Technical University of Architecture and Civil Engineering, and in 1996 changed its name to Bauhaus-University Weimar.

Dessau

Gropius's design for the Dessau facilities was a return to the futuristic Gropius of 1914 that had more in common with the International style lines of the Fagus Factory than the stripped down Neo-classical of the Werkbund pavilion or the Völkisch Sommerfeld House. [17] The Dessau years saw a remarkable change in direction for the school. According to Elaine Hoffman, Gropius had approached the Dutch architect Mart Stam to run the newly founded architecture program, and when Stam declined the position, Gropius turned to Stam's friend and colleague in the ABC group, Hannes Meyer.

The Bauhaus Dessau

Meyer became director when Gropius resigned in February 1928, and brought the Bauhaus its two most significant building

commissions, both of which still exist: five apartment buildings in the city of Dessau, and the headquarters of the Federal School of the German Trade Unions (ADGB) in Bernau. Meyer favored measurements and calculations in his presentations to clients, along with the use of off-the-shelf architectural components to reduce costs, and this approach proved attractive to potential clients. The school turned its first profit under his leadership in 1929.

But Meyer also generated a great deal of conflict. As a radical functionalist, he had no patience with the aesthetic program, and forced the resignations of Herbert Bayer, Marcel Breuer, and other long-time instructors. Even though Meyer shifted the orientation of the school further to the left than it had been under Gropius, he didn't want the school to become a tool of left-wing party politics. He prevented the formation of a student Communist cell, and in the increasingly dangerous political atmosphere, this became a threat to the existence of the Dessau school. Dessau mayor Fritz Hesse fired him in the summer of 1930.^[18] The Dessau city council attempted to convince Gropius to return as head of the school, but Gropius instead suggested Ludwig Mies van der Rohe. Mies was appointed in 1930, and immediately interviewed each student, dismissing those that he deemed uncommitted. Mies halted the school's manufacture of goods so that the school could focus on teaching. Mies appointed no new faculty other than his close confidant Lilly Reich. By 1931, the National Socialist German Workers' Party was becoming more influential in German politics. When they gained control of the Dessau City Council they moved to close the school.^[19]

Berlin

In late 1932, Mies rented a derelict factory in Berlin to use as the new Bauhaus with his own money. The students and faculty rehabilitated the building, painting the interior white. The school operated for ten months without further interference from the Nazi Party. In 1933, the Gestapo closed down the Berlin school. Mies protested the decision, eventually speaking to the head of the Gestapo, who agreed to allow the school to re-open. However, shortly after receiving a letter permitting the opening of the Bauhaus, Mies and the other faculty agreed to voluntarily shut down the school. [19]

Although neither the Nazi Party nor Hitler himself had a cohesive architectural policy before they came to power in 1933, Nazi writers like Wilhelm Frick and Alfred Rosenberg had already labeled the Bauhaus "un-German" and criticized its modernist styles, deliberately generating public controversy over issues like flat roofs. Increasingly through the early 1930s, they characterized the Bauhaus as a front for communists and social liberals. Indeed, a number of communist students loyal to Meyer moved to the Soviet Union when he was fired in 1930.

Even before the Nazis came to power, political pressure on Bauhaus had increased. The Nazi movement, from nearly the start, denounced the Bauhaus for its "degenerate art", and the Nazi regime was determined to crack down on what it saw as the foreign, probably Jewish influences of "cosmopolitan modernism." Despite Gropius's protestations that as a war veteran and a patriot his work had no subversive political intent, the Berlin Bauhaus was pressured to close in April 1933. Emigrants did succeed, however, in spreading the concepts of the Bauhaus to other countries, including the "New Bauhaus" of Chicago: [20] Mies decided to emigrate to the United States for the directorship of the School of Architecture at the Armour Institute (now Illinois Institute of Technology) in Chicago and to seek building commissions. [a] The simple engineering-oriented functionalism of stripped-down modernism, however, lead to some Bauhaus influences living on in Nazi Germany. When Hitler's chief engineer, Fritz Todt, began opening the new autobahn (highways) in 1935, many of the bridges and service stations were "bold examples of modernism"—among those submitting designs was Mies van der Rohe. [21]

Architectural output

The paradox of the early Bauhaus was that, although its manifesto proclaimed that the ultimate aim of all creative activity was building, the school did not offer classes in architecture until 1927. During the years under Gropius (1919–1927), he and his partner Adolf Meyer observed no real distinction between the output of his architectural office and the school. So the built output of Bauhaus architecture in these years is the output of Gropius: the Sommerfeld house in Berlin, the Otte house in Berlin, the Auerbach house in Jena, and the competition design for the Chicago Tribune Tower, which brought the school much attention. The definitive 1926 Bauhaus building in Dessau is also attributed to Gropius. Apart from contributions to the 1923 Haus am Horn, student architectural work amounted to un-built projects, interior finishes, and craft work like cabinets, chairs and pottery.

In the next two years under Meyer, the architectural focus shifted away from aesthetics and towards functionality. There

were major commissions: one from the city of Dessau for five tightly designed "Laubenganghäuser" (apartment buildings with balcony access), which are still in use today, and another for the headquarters of the Federal School of the German Trade Unions (ADGB) in Bernau bei Berlin. Meyer's approach was to research users' needs and scientifically develop the design solution.

Mies van der Rohe repudiated Meyer's politics, his supporters, and his architectural approach. As opposed to Gropius's "study of essentials", and Meyer's research into user requirements, Mies advocated a "spatial implementation of intellectual decisions", which effectively meant an adoption of his own aesthetics. Neither van der Rohe nor his Bauhaus students saw any projects built during the 1930s.

The popular conception of the Bauhaus as the source of extensive Weimar-era working housing is not accurate. Two projects, the apartment building project in Dessau and the Törten row housing also in Dessau, fall in that category, but developing worker housing was not the first priority of Gropius nor Mies. It was the Bauhaus contemporaries Bruno Taut, Hans Poelzig and particularly Ernst May, as the city architects of Berlin, Dresden and Frankfurt respectively, who are rightfully credited with the thousands of socially progressive housing units built in Weimar Germany. The housing Taut built in south-west Berlin during the 1920s, close to the U-Bahn stop Onkel Toms Hütte, is still occupied.

Impact

The Bauhaus had a major impact on art and architecture trends in Western Europe, the United States, Canada and Israel in the decades following its demise, as many of the artists involved fled, or were exiled by, the Nazi regime. Tel Aviv in 2004 was named to the list of world heritage sites by the UN due to its abundance of Bauhaus architecture; [22][23] it had some 4,000 Bauhaus buildings erected from 1933 on.

In 1928, the Hungarian painter Alexander Bortnyik founded a school of design in Budapest called Miihely (also "Muhely"^[24] or "Mugely"^[25]), which means "the studio".^[26] Located on the seventh floor of a house on Nagymezo Street,^[26] it was meant to be the Hungarian equivalent to the Bauhaus.^[27] The literature sometimes refers to it—in an oversimplified manner—as "the Budapest Bauhaus".^[28] Bortnyik was a great admirer of Moholy-Nagy and had met Walter Gropius in Weimar between 1923 and 1925.^[29] Moholy-Nagy himself taught at the Miihely. Victor Vasarely, a pioneer of Op Art, studied at this school before establishing in Paris in 1930.^[30]

Walter Gropius, Marcel Breuer, and László Moholy-Nagy re-assembled in Britain during the mid 1930s to live and work in the Isokon project before the war caught up with them. Both Gropius and Breuer went to teach at the Harvard Graduate School of Design and worked together before their professional split. Their collaboration produced The Aluminum City Terrace in New Kensington, Pennsylvania and the Alan I W Frank House in Pittsburgh, among other projects. The Harvard School was enormously influential in America in the late 1920s and early 1930s, producing such students as Philip Johnson, I.M. Pei, Lawrence Halprin and Paul Rudolph, among many others.

Bauhaus building in Chemnitz

A stage in the Festsaal

Ceiling with light fixtures for stage in the Festsaal

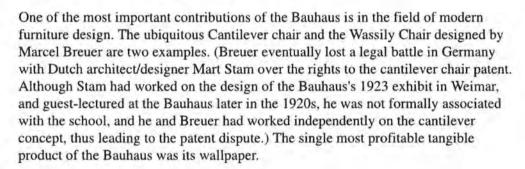

Dormitory balconies in the residence

In the late 1930s, Mies van der Rohe re-settled in Chicago, enjoyed the sponsorship of the influential Philip Johnson, and became one of the pre-eminent architects in the world. Moholy-Nagy also went to Chicago and founded the New Bauhaus school under the sponsorship of industrialist and philanthropist Walter Paepcke. This school became the Institute of Design, part of the Illinois Institute of Technology. Printmaker and painter Werner Drewes was also largely responsible for bringing

the Bauhaus aesthetic to America and taught at both Columbia University and Washington University in St. Louis, Herbert Bayer, sponsored by Paepcke, moved to Aspen, Colorado in support of Paepcke's Aspen projects at the Aspen Institute. In 1953, Max Bill, together with Inge Aicher-Scholl and Otl Aicher, founded the Ulm School of Design (German: Hochschule für Gestaltung-HfG Ulm) in Ulm. Germany, a design school in the tradition of the Bauhaus. The school is notable for its inclusion of semiotics as a field of study. The school closed in 1968, but the "Ulm Model" concept continues to influence international design education. [31]

The influence of the Bauhaus on design education was significant. One of the main objectives of the Bauhaus was to unify art, craft, and technology, and this approach was incorporated into the curriculum of the Bauhaus. The structure of the Bauhaus Vorkurs (preliminary course) reflected a pragmatic approach to integrating theory and application. In their first year, students learnt the basic elements and principles of design and colour theory, and experimented with a range of materials and processes. [32][33] This approach to design education became a common feature of architectural and design school in many countries. For example, the Shillito Design School in Sydney stands as a unique link between Australia and the Bauhaus. The colour and design syllabus of the Shillito Design School was firmly underpinned by the theories and ideologies of the Bauhaus. Its first year foundational course mimicked the Vorkurs and focused on the elements and principles of design plus colour theory and application. The founder of the school, Phyllis Shillito, which opened in 1962 and closed in 1980, firmly believed that "A student who has mastered the basic principles of design, can design anything from a dress to a kitchen stove". [34]

The physical plant at Dessau survived World War II and was operated as a design school with some architectural facilities by the German Democratic Republic. This included live stage productions in the Bauhaus theater under the name of Bauhausbühne ("Bauhaus Stage"). After German reunification, a reorganized school continued in the same building, with no essential continuity with the Bauhaus under

Mechanically opened windows

The Mensa (Cafeteria)

Typewriter Olivetti Studio 42 designed by the Bauhaus-alumnus Alexander Schawinsky in 1936

Gropius in the early 1920s. [35] In 1979 Bauhaus-Dessau College started to organize postgraduate programs with participants from all over the world. This effort has been supported by the Bauhaus-Dessau Foundation which was founded in 1974 as a public institution.

Later evaluation of the Bauhaus design credo was critical of its flawed recognition of the human element, an acknowledgement of "...the dated, unattractive aspects of the Bauhaus as a projection of utopia marked by mechanistic views of human nature... Home hygiene without home atmosphere."[36]

The White City

The White City of Tel Aviv (Hebrew: העיר הלבנה, Ha-Ir HaLevana) refers to a collection of over 4,000 Bauhaus or International style buildings built in Tel Aviv from the 1930s by German Jewish architects who emigrated to the British Mandate of Palestine after the rise of the Nazis. Tel Aviv has the largest number of buildings in this style of any city in the world. In 2003, the United Nations Educational, Scientific and Cultural Organization (UNESCO) proclaimed Tel Aviv's White City a World Cultural Heritage site, as "an outstanding example of new town planning and architecture in the early

20th century."[37]

Established in 2000, The Bauhaus Center in Tel Aviv is an organization dedicated to the ongoing documentation of the architectural heritage. [38] In 2003, it hosted an exhibition on preservation of the architecture that showcased 25 buildings. [39] To further the architectural culture in the city, a Bauhaus Museum opened in Tel Aviv in 2008, designed by Israeli architect Ron Arad. [40][41]

Bauhaus artists

The Bauhaus was not a formal group, but rather a school. Its three architect-directors (Walter Gropius, Hannes Meyer, and Ludwig Mies van der Rohe) are the names most closely associated with it.

Furthermore a large number of outstanding artists of their time were lecturers at the Bauhaus:

■ Anni Albers	 Werner Drewes 	 Otto Lindig
 Josef Albers 	 Lyonel Feininger 	 Gerhard Marcks
■ Herbert Bayer	Naum Gabo	 László Moholy-Nagy
Max Bill	 Ludwig Hilberseimer 	■ Piet Mondrian
■ Marianne Brandt	 Ludwig Hirschfeld 	Oskar Schlemmer
 Marcel Breuer 	Mack	 Lothar Schreyer
 Avgust Černigoj 	 Johannes Itten 	 Joost Schmidt
Christian Dell	 Wassily Kandinsky 	 Naum Slutzky
	■ Paul Klee	■ Gunta Stölzl
