EXECUTIVE SUMMARY

ERM-West, Inc. (ERM) completed a Phase I Environmental Site Assessment (ESA) of the Westside Medical Park property located at 1901, 1925, and 1933 S. Bundy Drive in Los Angeles, California, on 12 August 2004 (hereinafter referred to as the 'subject property').

The subject property consists of a 5-acre parcel of land with three buildings that are currently vacant. Initially developed between 1949 and 1953, the three buildings were reportedly all connected at one time, and used for manufacturing activities, and later for office administration activities. The total rentable space for the three buildings measures approximately 84,000 square feet. The property is currently owned by Westside Medical Park, LLC. Former property owners include AGI Properties, Teledyne Controls, and Packard Bell.

The subject property is currently zoned for commercial/industrial use, and is listed by the Los Angeles County Assessor's Office as Parcel Numbers 4259-019-010 (1933 S. Bundy Drive), 4259-018-008 (1925 S. Bundy Drive), and 4259-018-007 (1901 S. Bundy Drive).

Adjacent land use in the area of the subject property is primarily commercial/retail and office space, with some industrial activities to the south.

ERM identified recognized environmental conditions (RECs) at the subject property as defined in the American Society for Testing and Materials (ASTM) Standard E 1527-00. An REC is defined as "the presence or likely presence of *hazardous substances* or *petroleum products* on a *property* under conditions that indicate an existing release, a past release, or a material threat of a release of *hazardous substances* or *petroleum products* into structures on the *property* or into the ground, ground water, or surface water of the *property*, excluding *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies".

Based on a site reconnaissance, interview activities, a review of reasonably obtainable and available historical documentation, company documentation, Environmental Data Resources, Inc (EDR) Report, and previous Phase I ESA and site investigation reports, ERM has identified the following RECs:

- Low levels of volatile organic compounds (primarily tetrachloroethane and trichloroethene) were observed in vapor samples collected at and near the three existing buildings. These compounds were also observed in groundwater beneath the subject property.
- An unknown hydrocarbon was observed at relatively high concentrations in vapor samples collected at or near the property boundary with Teledyne Controls (southwest). This unknown hydrocarbon was reported to be isomers or derivatives of perfluorotri-n-butylamine, which is a relatively non-toxic compound. However, the Los Angeles Regional Water Quality Control Board has suggested that this compound could degrade into chemicals that could adversely effect area groundwater.
- Based on the historical use of the subject property (agricultural and industrial), other chemicals could have been deposited in the subsurface such as pesticides, polyaromatic hydrocarbons (PAHs), metals, and petroleum hydrocarbons.
- Based on the information provided in the EDR Report, surrounding properties that have the potential to impact the subject property have been identified in several databases, including leaking underground storage tanks (LUSTs), and potential hazardous waste sites. Potential impacts to the subject property are based on the surrounding property locations; at an equal or higher elevation, and/or upgradient to the subject property.

Other findings identified at the subject property that do not meet the ASTM definition of a REC are presented below:

- Pad mounted transformers were observed on the subject property in the south parking area. According to the Los Angeles Department of Water and Power, transformer no. 028-08-111 has not been tested for PCBs.
- A visual inspection of potential asbestos-containing materials (PACMs) in easily accessible areas was conducted by ERM, however no samples were collected or analyzed. Floor tiles observed in building common areas such as hallways were identified as potential friable PACMs. The floor tiles were observed in good condition. It is

possible that PACMs are also present in roofing materials and/or mastics that are not readily accessible for observation.

According to Ms. Louise Del Mage of AGI Properties, there are no known PACMs at the subject property. However, no asbestos surveys have been conducted at any of the three buildings.

Demolition, renovation, and/or remodeling of areas within the building confirmed to contain asbestos-containing material must be handled by a licensed asbestos abatement contractor.

PURPOSE AND AUDITORS

ERM-West, Inc. (ERM) completed a Phase I Environmental Site Assessment (ESA) of the Westside Medical Park, property located at 1901, 1925, and 1933 South Bundy Drive in the City of Los Angeles, Los Angeles County, California (hereinafter referred to as the 'subject property'). The Phase I ESA was performed at the request of Westside Medical Park, LLC. (Westside Medical) in anticipation of an upcoming real estate transaction.

The subject property consists of a 5-acre parcel of land with three buildings that are currently vacant, and were historically used for manufacturing, and office administration activities. Currently there are no tenants occupying the three buildings at the subject property.

The site visit was performed on 12 August 2004 by ERM auditor Ms. Sheri Cook-Johnstone, REA, of ERM's South Coast Metro, California office. ERM was accompanied on the site visit by Ms. Lorie Garcia of Westside Medical. Additional site information was provided by Mr. Sonny Miks, of Teledyne Control's Construction and Facilities Department, and Ms. Louise DelMage of AGI Properties, the former property owners.

SCOPE OF WORK

This ESA was conducted in conformance with ERM's proposal P05-050 dated 14 May 2004 and with the general requirements of American Society for Testing and Materials (ASTM) Standard E1527-00; *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. The ESA was conducted to evaluate the potential for environmental impacts on the subject property as a result of past or current activities on the subject or surrounding properties. ERM's Phase I ESA included the following tasks:

- An on-site inspection of the subject property to evaluate current conditions and identify areas of potential concern;
- A review of property history through interviews, aerial photographs, and historical topographic mapping, city directories, building permits, and previous site investigation reports;
- Observation of adjacent properties and the local area to evaluate the potential for adverse environmental impact to the subject property;

- Contracting of Environmental Data Resources, Inc. (EDR) to identify properties of concern as required in the regulatory records review section of the ASTM standards for a Phase I ESA;
- Where applicable, contact with local regulatory agencies to request file information concerning the subject property; and
- A preliminary building asbestos assessment that included visible observations of readily accessible building areas, though no sampling was conducted.

Photographs of the subject property and surrounding area were taken to document current conditions and are included in Appendix A.

1.3 ***LIMITATIONS***

This report is based upon the application of scientific principles and professional judgment to certain facts with resultant subjective interpretations. Professional judgments expressed herein are based on the facts currently available within the limits of the existing data, scope of work, budget, and schedule. We make no warranties, expressed or implied, including, without limitation, warranties as to merchantability or fitness for a particular purpose. In addition, the information provided in this report is not to be construed as legal advice.

ERM is not engaged in environmental auditing and reporting for the purpose of advertising, sales promotion, or endorsement of any client's interests, including raising investment capital, recommending investment decisions, or other publicity purposes. The client acknowledges that this report has been prepared for the exclusive use of the client and agrees that ERM reports or correspondence will not be used or reproduced in full or in part for such purposes, and may not be used or relied upon in any prospectus, offering circular, or similar document. Client also agrees that none of its advertising, sales promotion, or other publicity matter containing information obtained from this audit and report will mention or imply the name of ERM.

1.4 ***PROJECT LIMITATIONS***

No limiting conditions were encountered during the site visit. The weather during the site visit was sunny and approximately 75° Fahrenheit.

SIGNIFICANT ASSUMPTIONS

ERM applied the following significant assumptions in its development of conclusions based on the results of this Phase I ESA:

- Referenced sources are accurate and represent a complete assessment of the past and present use of the subject property.

2.0 *SITE SETTING*

2.1 *LOCATION*

The subject property is located on the south side of South Bundy Drive, near the southwest intersection of South Bundy Drive and West Olympic Boulevard, in the City of Los Angeles, Los Angeles County, California. The Santa Monica Freeway (Interstate 10) is located within 1/2 mile to the south of the subject property. The subject property is accessible from both South Bundy Drive and Nebraska Avenue.

The three buildings are located within a mixed commercial, office and light industrial land use area. The general location of the subject property and the physiographic features of the surrounding area are shown on Figure 1, developed from the United States Geological Survey (USGS) 7.5-minute quadrangle for Beverly Hills, California, 1995.

2.2 *NEIGHBORING PROPERTIES*

The subject property is located in a land use area that is primarily commercial/retail, with a mix of office buildings and light industrial facilities. Properties observed immediately adjacent to the subject property include:

- Northeast: A multi-tenant office building is located at 1990 South Bundy Drive, and a Bally Total Fitness facility is located at 1914 South Bundy Drive.
- Southeast: Immediately southeast of the subject property is the Fox Television studios and offices at 1999 South Bundy Drive.
- South: The Teledyne Controls facility is located to the south at 12333 West Olympic Boulevard. Teledyne manufactures various aerospace components such as flight recorders (black boxes). A paved parking surface separates the subject property buildings from the Teledyne Controls building. Previous reports suggest that these operations historically involved the storage and use of various hazardous chemicals such as paints and solvents, and generated large quantities of hazardous waste;

- Southwest: A storage yard for the Los Angeles Department of Water and Power (DWP) is located immediately to the southwest of the subject property. In addition, a multi-tenant building is located to the west at 1861 South Bundy Drive. Observations from outside of the building indicate that some of the office space is occupied by a Plastic Reconstructive Aesthetic Surgery Center.

Based on ERM's observations made from publicly accessible areas, no visual evidence of significant environmental concerns was observed on properties immediately surrounding the subject property. Hazardous materials were observed in storage at 12333 West Olympic Boulevard at the west side of the Teledyne Controls building. In addition, the DWP facility houses several large transformers and maintenance equipment.

The nearest residential area is located to the west and within 1/8 mile of the subject property. Residential properties located to the west are accessible from Nebraska Avenue.

According to the Physical Settings Source Map of the EDR Report, there are no oil/gas wells located within 1 mile of the subject property.

2.3 *TOPOGRAPHY AND HYDROLOGY*

Information on topography and hydrology was obtained from historical mapping, the GeoCheck™, and the Physical Settings Source Addendum section of the EDR Report, and from a review of previous environmental investigation reports conducted at the subject property.

According to a previous Preliminary Site Assessment Report (Glenfos Inc., 1995), the subject property is located within the Coastal Plain, which is situated in the northwest corner of the Peninsular Range geomorphic province. This Range extends south from West Los Angeles to the tip of Baja California, and consists of northwest-trending mountain ranges and valleys. The subject property is located approximately 1.5 miles northeast from the Pacific Ocean.

The subject property is located at an elevation of approximately 162 feet above mean sea level. The terrain in the area of the subject property is generally flat, or gently sloping. The property is relatively flat with a gentle, engineered slope to the south, towards the south parking surface area. The general topographic gradient in the area of the subject property is to the south, southwest.

No suspected wetlands areas were observed on the subject property. Wetland areas are not shown on the Detail Map of the EDR Report, within

1 mile of the subject property. According to the EDR Report, the subject property is not located within ½-mile of a 100 or 500-year flood zone (Appendix B).

The nearest surface water body is the Santa Monica Canyon located approximately 1.5 miles to the west of the subject property. The Santa Monica Canyon drains south to the Pacific Ocean.

The EDR Report does not show any fault zones located within 1 mile of the subject property (Appendix B).

2.4 *GEOLOGY AND HYDROGEOLOGY*

ERM reviewed the following documents to determine the physical setting (including the topography, underlying stratigraphy, and hydrogeology) of the subject property:

- The USGS 7.5-minute topographic map showing the subject property (7.5-minute quadrangle, for Beverly Hills, California, 1995);
- United States Geologic Map of California, Jennings, 1977;
- Geologic Map of California, Los Angeles Sheet, 1981;
- The GeoCheck™ report prepared by EDR for the subject property; and
- Various reports produced by Glenfos, Inc. (Glenfos), as listed in Section 8.0.

According to the Geologic Map of California (Jennings, 1977), soils in the area of the subject property are alluvium, lake, playa, and terrace deposits; unconsolidated and semi-consolidated. These soils are mostly non-marine, but include some marine deposits near the coast.

The Geologic Map of California, Los Angeles Sheet (1981), describes soils at the subject property as recent alluvium and alluvial fan deposits. In the Los Angeles area, these soils include flood plain deposits, artificial fill, and some natural and artificial beach deposits.

The EDR Report describes soils at the subject property as urban land soils, having a variable texture and depth to bedrock of over 10 inches. These soils are from the Cenozoic era, and the Quaternary system.

Consistent with the map findings, the previous report by Glenfos describes soils at the subject property as alluvial sediments that typically consist of clayey sand, and sands with gravel. These alluvial sediments are underlain by marine and non-marine terrace deposits of the Lakewood Formation. The report also references previous subsurface investigation projects conducted

at the subject property in 1990 by Ebasco Environmental. According to the Report, groundwater was not encountered at the property to a maximum depth of 40 feet below ground surface (bgs).

According to the EDR Report, the closest groundwater well (well no. USGS0141557) is located between 1/8 to 1/4 mile to the south, southwest of the subject property. This is a single groundwater well operated by Los Angeles County (Map ID A1, Appendix B). An EDR search for site-specific hydrogeological data (such as groundwater levels, measurements, or flow directions) conducted to a distance of 1.25 miles and revealed no data. The search did reveal the presence of groundwater information at one location approximately 1/8 to 1/4 mile south of the subject property at the McDonnell Douglas Aircraft Facility. The depth to water reported at this location is 50 feet, with a flow direction to the south, southwest.

Further studies conducted by Glenfos identified the presence of four water supply wells located within 1/2 mile of the subject property. These wells are operated by the City of Santa Monica. It has also been suggested by Glenfos that these wells are screened at depths of 200 to 540 feet bgs, and that a thick clay layer separates shallow groundwater from these screened intervals. Site-specific well installations conducted by Glenfos have documented the presence of shallow perched groundwater at a depth of 35 to 40 feet bgs. Groundwater generally flows to the south in the perched zone.

GENERAL SITE DESCRIPTION

The subject property is owned by Westside Medical. The three buildings and surrounding property grounds occupy a total land area of approximately 5 acres. The three buildings have a total rentable space measuring approximately 84,000 square feet. At one time, it was reported that all three of the buildings were connected (Figure 2).

Observations of building interiors shows evidence of historic building modifications such as former walls and bay doors being filled in or 're-bricked'. The 1901 South Bundy Drive building was the first of the three buildings constructed in 1950. Having a total rentable space of 30,000 square feet, this building is a single-story brick structure, with a concrete floor, and exposed wood-frame ceiling.

The 1925 South Bundy Drive building was constructed later in 1953, and measures 20,000 square feet in size. The largest of the three buildings is the 1933 South Bundy Drive structure. This building measures over 34,000 square feet. The 1925 and 1933 buildings are similar in construction, having a concrete floor, and exposed wood-frame ceiling. Although at one time used for manufacturing, all of the buildings appear to have been used more recently as office space.

At the time of the site visit, the buildings were vacant. The building interiors are configured with individual offices, restrooms, telephone and computer rooms, common areas, and conference rooms. A small landscaped courtyard separates buildings 1901 and 1925. No chemicals were observed in use or in storage, and no evidence of staining or previous releases was noted while on site.

There are no basements located in any of the subject property buildings. In addition, there are no known underground storage tanks (USTs), or asbestos-containing materials located inside the buildings or on the subject property grounds.

The property grounds are paved to the southwest of all buildings, and to the southeast of the 1933 South Bundy Drive building. Concrete sidewalks border the property to the northeast, along South Bundy Drive, and to the northwest of building 1901. There is no perimeter fencing or gated access to the subject property. A chain link fence along the southwest parking area

separates the subject property from an underground reservoir (former swimming pool) that is part of the neighboring Teledyne Controls facility. Limited landscaping is located along the northeast side of the three buildings. Three pad-mounted, and fenced transformers are located to the southwest of the 1901 building, and a transformer station with pole-mounted transformers associated with the neighboring Teledyne Controls facility is located to the southeast of the 1933 building within the paved parking area.

The buildings are equipped with sprinkler systems throughout. Alarm systems are present, however they are not activated as a result of the buildings being vacant. Utilities such as natural gas, electricity, telephone, and water are provided to the subject property, though currently not in use.

Other items observed on site include electric power poles and pole-mounted transformers, manhole covers, light standards, pad-mounted transformers, conduit vaults, utility vaults, and a water pump (hook-up) for emergency fire suppression.

Storm water is managed using man-made engineered sloping to drain runoff to the south, towards catch basins at the paved parking surface. There is no known underground septic system for wastewater treatment located at the subject property.

3.2 UTILITIES

According to Ms. Garcia, the subject property is provided with the following services:

- Water supply from the Los Angeles DWP;
- Off-site storm water management from the DWP;
- Electricity from the Los Angeles DWP; and
- Natural gas from Southern California Gas.

One natural gas line reportedly runs under the ground between the 1925 and 1933 South Bundy Drive buildings. This line is currently not active.

All utility services required for the various operations at the subject property enter the premises through adjoining public streets and dedicated easements. Easements are in use by utility companies for drainage structures, telephone lines, electric lines, power lines, cables, conduits, sewer, water, and gas lines. Easements have also been dedicated for public roads and highways.

Auxiliary equipment includes roof-mounted air conditioning units.

3.3 PROCESSES AND MATERIAL USE

3.3.1 *Current Operations*

There are no current operations at the subject property. The three buildings, historically used for both manufacturing and administrative activities, were vacated by Fox Television in 2003. With the exception of some office furniture that remains in storage at building 1933, the buildings are not in use, and are currently vacant.

A summary of discontinued operations and a brief site history is discussed in Section 3.3.2.

3.3.2 *Discontinued Operations*

The buildings, originally constructed between 1950 and 1953, have a significant operations history. At one time, it was reported that the buildings may all have been connected. It appears from historical land use documents and discussions with Mr. Sonny Miks, that the subject property buildings were at one time operated as part of the Teledyne Controls manufacturing facility. In addition, historical aerial photographs indicate that between the mid 1960's and late 1970's, three additional buildings were in place between the 1901, 1925, and 1933 South Bundy Drive buildings, and the 12333 West Olympic Boulevard building; all were in use for manufacturing activities by Teledyne Controls, and possibly by Packard Bell prior to that.

1901 South Bundy Drive - From 1950 to 1958, this building was used for electronics manufacturing and storage. In the early 1950's this building was owned by Mr. Richard Kite, and Grifillan Bros Inc. In the mid to late 1950s the property was owned and operated by Packard Bell, who manufactured navy testing equipment and electronics such as radios and televisions. By 1970, the building was owned and operated by Teledyne Controls who reportedly discontinued use of the building for manufacturing, and used the building for office and warehousing until the early to mid 1990's. By 1996, the Teledyne Group sold the property to AGI Properties, who in turn leased the space to Fox Television.

1925 South Bundy Drive - This building was constructed in 1953 for electronics assembly. At that time the building was owned by Fortune Investment Company. By 1953, Packard Bell began a lease at this building for warehousing activities only, and later in 1955 as office space. Later permits show that by 1982, the building was owned and operated by

Teledyne Inc. who continued to utilize the space for office activities until 1990. In 1993, Argonaut Insurance Group is listed as the property owner and the building was used for office space. From 1997 to 2000, the building was owned by AGI Properties Inc. who leased the office space to Fox Television.

1933 South Bundy Drive – Also constructed in 1953, this building was owned and operated by Packard Bell for manufacturing from 1953 to the early 1960's. By 1977, manufacturing activities had ceased, and Teledyne Properties Inc. had purchased the building for use as office and warehouse space until the early 1990's. By 1993, Argonaut Insurance Group had purchased the property from Teledyne. A seismic retrofit was later carried out in 1996 during ownership by AGI Properties. AGI Properties leased the building to Fox Television for office space. AGI Properties owned this building until 2003.

According to Ms. Garcia, Westside Medical purchased the three buildings and surrounding property grounds from AGI Properties in April 2003. At that time, Fox Television was still a tenant of the three buildings.

ERM contacted Mr. Sonny Miks, a long-time employee of the neighboring Teledyne Controls facility regarding site history at both the subject property and adjacent Teledyne Controls property at 12333 West Olympic Boulevard. According to Mr. Miks, one of the former buildings located behind the 1933 building was used to store chemicals. This building reportedly burned down approximately 20 years ago. Mr. Miks also reported that the 1901 building may have been used to manufacture calculators in the late 1950s, and that the 1925 building was once referred to as the 'trading post' due to the public buying and selling of electronics parts that occurred there at one time. Mr. Miks also recalled that former manufacturing activities at the subject property included use of the exterior property as a lumberyard and finishing area.

A summary of building permit applications for each of the three buildings is discussed in Tables 2, 3, and 5.

3.4 ***CHEMICAL USE AND STORAGE***

ERM did not observe the use and/or storage of chemicals at the subject property during the site reconnaissance on 12 August 2004. No evidence of spills or leaks from historical chemical use was observed on interior floors, or exterior concrete and asphalt surfaces. Recent use of the three buildings for administrative activities likely restricted chemical use to general-purpose cleaners and maintenance chemicals.

3.4.1 *Chemical Storage*

Chemicals were not observed in storage inside the subject property buildings, or outside of the buildings on exterior surfaces. ERM observed no evidence of current or former storage of drums, aboveground storage tanks (ASTs), or USTs used to store chemicals on site.

3.4.2 *Underground Storage Tanks*

Ms. Garcia and Ms. DelMage reported that there are no known USTs containing hazardous chemicals or wastes currently at the subject property. ERM did not observe evidence of USTs such as fill or vent pipes during the site reconnaissance.

The EDR Report did not list the subject property in any government databases for registered USTs.

According to a previous environmental assessment report prepared by Glenfos in June 1995, file information concerning USTs was available with the local Fire Department for the adjacent Teledyne Controls facility at 12333 West Olympic Boulevard. The Glenfos Preliminary Site Assessment Report (June 1995) documents reported information of a UST removal conducted at the northeast corner of the Teledyne Controls facility. A total of four USTs were removed from this facility in 1990. The tanks reportedly contained diesel fuel, gasoline, and mineral oil. The tank removal was documented in a report entitled ' *Tank Removal Report* ', prepared by A&S Environmental Recovery, 14 February 1990. Subsequent soil investigations were conducted at the property by Ebasco Environmental in June 1990, and a closure letter was received by Teledyne Controls from the Los Angeles Fire Department in July 1990.

The EDR Report lists two neighboring facilities with USTs, including Fox Television to the southeast, and the Los Angeles Animal Shelter to the northeast.

3.4.3 *Aboveground Storage Tanks*

ERM did not observe evidence of ASTs during the site inspection. Facility personnel reported that no ASTs were formerly present at the subject property during administrative or manufacturing activities.

The EDR Report did not list the subject property in any government databases for registered ASTs.

3.5 HAZARDOUS AND NON-HAZARDOUS WASTE MANAGEMENT

3.5.1 Hazardous Waste

No hazardous waste is generated, stored, or handled at the subject property as there are no current operations and/or activities taking place in any of the three buildings.

ERM did not observe evidence of leaks or spills in areas where waste materials may have been stored during former site operations.

3.5.2 Non-Hazardous Waste

No non-hazardous solid waste is generated, stored, or handled at the subject property as there are no current operations and/or activities taking place in any of the three buildings. ERM did not observe discarded materials or waste storage bins inside the buildings or on property grounds. No evidence of former dumping or incineration was observed during the site visit.

Approximately 12 to 15, 55-gallon drums were observed in storage at the southwest side of the parking lot, south of the 1901 South Bundy building. The drums contain soil that was extracted from the subject property during recent soil sampling activities conducted by ERM. The drums of soil are scheduled for removal from the subject property in August 2004.

3.6 WATER, WASTEWATER, AND STORM WATER

3.6.1 Water

The facility is connected to the public water system. Water is reportedly provided to the subject property by the DWP. According to facility personnel and a review of the EDR Report, there are no drinking water supply wells located at the subject property.

Water is currently not in use at the subject property as there are no building occupants. However, water service is available for use in building restrooms, kitchen facilities (sinks), and outside irrigation.

3.6.2 Wastewater

The subject property is hooked into the public sanitary sewer system to treat wastewater off site. As there are no current building occupants or activities,

wastewater is not being generated or discharged from the three buildings. Irrigation water is discharged off site to the municipal storm sewer system.

3.6.3 Storm Water

Storm water sources at the subject property include general precipitation, irrigation runoff, and runoff from the surface of the roof and parking lots. Storm water that falls and collects on the subject property is gravity fed via engineered surface sloping and directed to property catch basins, which flow off site to municipal storm drains along South Bundy Drive.

3.7 AIR EMISSIONS

There are no sources of air emissions or air pollution control equipment in use at the subject property. ERM submitted a written request to the South Coast Air Quality Management District (SCAQMD) to inquire about current and/or former air emissions sources at the subject property. A written response received from the SCAQMD on 3 August 2004 indicates that no records were found for the 1933 South Bundy Drive facility. The SCAQMD reported that an Equipment List Report (EQL) was found for the 1901 South Bundy Drive facility. A copy of this report provides no site-specific information concerning air emissions at this facility. Two EQL Reports were also found on file with the SCAQMD for the 1925 South Bundy Drive property including two inactive permits to operate two electric diesel generators.

Rooftop heating, ventilation, and air conditioning systems are maintained by an outside contractor.

3.8 POLYCHLORINATED BIPHENYLS (PCBS)

ERM inspected the property for types of equipment that have been historically associated with the use of PCBs as a dielectric fluid coolant and stabilizer. Three pad-mounted transformers, owned and operated by the DWP are located in the southwest parking lot, behind the 1901 South Bundy Drive building. No labeling was evident to identify the transformers as non-PCB units. In addition, one pole-mounted transformer was observed in the southwest parking area.

ERM contacted the DWP concerning these units. According to Mr. Herman Eng a Staff Engineer with the DWP, the transformers (No. 028-08-111) have not been tested for PCBs.

Fluorescent light ballasts were observed throughout the building. ERM did not inspect the fluorescent light ballasts for the presence of PCBs as part of the Phase I ESA. Ms. DelMage reported that there are no known PCB-containing light ballasts in place at the facility.

3.9 VISUAL INDICATIONS OF ON-SITE CONTAMINATION

ERM did not observe evidence of contamination such as staining, spills, or stressed or dead vegetation on site. General wear and deterioration of floors and ceilings was observed in some areas throughout the buildings.

Although historical manufacturing activities and hazardous chemical use are a potential concern for possible on-site contamination, ERM observed no visual indication of a historical or recent release at the subject property.

3.10 ASBESTOS-CONTAINING MATERIALS

Asbestos was banned in most friable building materials (sprayed applied surfacing materials and thermal system insulation) in 1978, but the Occupational Safety and Health Administration (OSHA) deems spray applied surfacing materials, thermal system insulation materials, and vinyl flooring materials as “presumed asbestos-containing materials” (PACMs) if they are present in pre-1980 buildings (Title 29 of the Code of Federal Regulations, Parts 1910.1001 and 1926.1101). Historical records indicate that the subject property buildings were constructed prior to 1980, and therefore PACMs may have been used during building construction.

The OSHA PACM definition does not include all suspect asbestos-containing material (ACM). The use of ACMs as building materials, except in the case of friable surfacing materials and thermal system insulation, has not been prohibited. Building materials that are ACMs can continue to be used. In 1989, the Environmental Protection Agency published the Ban and Phase-Out Final Rule allowing a 7-year period to prohibit the future manufacturing, importation, processing, and distribution in commerce of most ACMs. However, this rule was partially overturned in 1992, an action that allows the continued use of asbestos in a variety of products. Although less likely, asbestos can still be found in some present day building materials, including floor tile.

Under OSHA regulations, building and/or facility owners are required to identify the presence, location, and quantity of ACMs in structures built prior to 1981 if construction, alteration, repair, maintenance, renovation, or custodial activities are performed. Building and/or facility owners are

required to communicate the presence, location, and quantity of PACMs to facility employees or subcontractors and/or building tenants.

A visual inspection of PACMs in easily accessible areas was conducted, however no samples were collected or analyzed. Floor tiles observed in building common areas such as hallways were identified as potential friable PACMs. The floor tiles were observed in good condition. It is possible that PACMs are also present in roofing materials and/or mastics that are not readily accessible for observation.

According to Ms. DelMage, there are no known PACMs at the subject property. Ms. DelMage reported that prior to Fox Television occupying the subject property, the buildings were 'shelled out', and any PACMs would have been removed at that time. No known asbestos survey has been conducted at the buildings.

3.11 ***MERCURY***

Mercury is not in use or in storage at any of the three buildings, and is not anticipated to be an environmental concern at the subject property.

3.12 ***WETLANDS***

No mapped wetlands are present on the subject property. The Overview and Detail Map contained within the EDR Report shows no mapped wetland areas within 1 mile of the subject property.

3.13 ***LEAD-CONTAINING MATERIALS***

Based on site observations and interviews, lead is not utilized or stored at the subject property. Based on the age of the three buildings, it is likely that lead-based paint was used during construction. Given the extensive history and modifications made to the buildings since the date of original construction, it is likely that any lead-based paint that may have been used in the buildings has been painted over and/or covered (encapsulated) by subsequent painting and/or building renovations.

No significant peeling, flaking or chipping paint was observed on building interior or exterior surfaces during the site visit.

Radon is a colorless, odorless gas that exists naturally in some geologic formations. According to the Colorado Department of Health Radiation Control Division, "radon gas can enter a home from the soil through dirt floors, cracks in concrete floors and walls, floor drains, sump pumps, water wells, joints, and tiny cracks or pores in hollow-block walls. Radon levels are generally highest in basements and ground-floor rooms in contact with the earth." Building products, especially cinder blocks made from material high in uranium and other alpha-emitting radionuclides, may release radon gas.

According to site observations, there are no basements located inside the subject property buildings. In addition, there are no known radioactive sources or materials in use or in storage at the subject property. A radon gas survey was not part of the scope of work for this assessment, and therefore was not conducted during the site visit.

Information supplied by EDR, and obtained from the United States Environmental Protection Agency (USEPA), indicates that the subject property is located in Zone 2, where the predicted average indoor radon level is typically ≥ 2 picocuries per liter (pCi/L), and ≤ 4 pCi/L. Radon mitigation measures are recommended by the USEPA when concentrations of radon exceed 4 pCi/L. Site-specific sampling has not been performed to evaluate the concentrations of radon within the buildings at the subject property.

Radon is not anticipated to be a concern at the subject property.

Building owners reported that internal noise surveys would have been conducted at the discretion of former buildings tenants. No excessive noise concerns were identified at the subject property during the site visit.

4.0 *ASSESSMENT OF PAST LAND USE AND OPERATIONS*

4.1 *GENERAL INFORMATION*

Historical land use information was obtained from interviews with building owners, a review of available historical aerial photographs, topographic maps, and building permits, and a review of previous site investigation reports.

4.2 *PAST OPERATING LOCATIONS*

The three subject property buildings were constructed between 1950 and 1953. Historical operations at the buildings have included both manufacturing and administrative activities. Manufacturing was carried out at these buildings by companies such as Packard Bell and Teledyne Controls. The three buildings were later utilized as office space by Fox Television.

Teledyne Controls currently operates at 12333 Olympic Boulevard, immediately south of the subject property. Fox Television now operates at 1999 South Bundy Drive, immediately east of the 1933 South Bundy Drive building.

4.3 *PREVIOUS ENVIRONMENTAL REPORTS*

Previous investigations and studies relating to environmental issues have been conducted at the subject property. ERM was provided copies of the following reports:

- Preliminary Site Assessment Report, Glenfos, June 26 1995;
- Phase II Investigation Report, Glenfos, September 6, 1995; and
- Phase II Soil Assessment, Glenfos, February 15, 1995.

According to the Preliminary Site Assessment Report (June 1995), several areas of potential concern were identified at the subject property relating to former electronic manufacturing activities. It should be noted that this Report included an investigation of the adjacent Teledyne Controls manufacturing facility operating at 12333 Olympic Boulevard, and subsequently, findings reported in this assessment encompass these operations. The report identified the following:

1. Teledyne maintains a large inventory of hazardous materials in use and in storage at the west side of the building, including paints, solvents, motor oils, thinners, acids, and bases.
2. The Teledyne facility is a large quantity generator of hazardous waste, including chlorinated solvents.
3. The Teledyne facility is a source of industrial wastewater discharge and regulated air emissions.
4. Prior to occupancy by Teledyne, Packard Bell manufactured electronics at the subject property, and stored various paints and solvents on site.
5. Groundwater contaminated with trichloroethene (TCE) was reportedly identified at a downgradient groundwater well. The report identifies Packard Bell and/or Teledyne as potentially responsible parties to the contamination of the well.

Based on these findings, Glenfos recommended that additional site investigation work would be warranted, including sampling and analysis of soil and groundwater to ascertain the impact of possible releases to the soil and groundwater.

Subsequent Phase II investigation work was conducted in September 1995, and February 1996. A summary of results from these investigations is presented below.

A follow up *Phase II Investigation Report* was prepared by Glenfos in September 1995, and included the subject property and adjacent 12333 West Olympic Boulevard property. The limited Phase II, which included a soil vapor survey, was performed to evaluate possible soil contamination related to former and current manufacturing operations at all of the above noted properties. Reported findings from this investigation include the following:

- Trace to low levels of Freon 11, Freon 13, Chloroform, 1,1,1 trichloroethane (TCA), and TCE vapors were detected in the subsurface soil, with a possible source identified across or beyond the northwestern property boundary (DWP site).

- An unknown halogenated chemical mixture was detected adjacent to the northeast portion of the 12333 West Olympic Boulevard property.
- Low-level sources of tetrachloroethene (PCE) were detected along the southwest side of the South Bundy Drive buildings.
- Elevated PCE levels were detected along the northwest portion of the 12333 West Olympic Boulevard building, indicating a possible historic release in this area.
- An unknown mixture of fuel hydrocarbons (jet fuel to diesel range) was detected along the northwest portion of the Teledyne facility.

Based on these findings, Glenfos recommended additional assessment work to further define boundaries of contaminants discovered during this preliminary investigation, including a soil vapor survey inside property buildings, and soil borings excavated at the center of suspected areas of significant releases.

A *'Phase II Soil Assessment'* was conducted by Glenfos in February 1996 to evaluate possible soil contamination. Similar to the previous Phase II Report, this investigation included the three South Bundy Drive buildings, and the adjacent 12333 West Olympic Boulevard building. This assessment included a soil vapor survey, soil borings, collection and analysis of soil and groundwater samples, and the installation and monitoring of two sets of nested vapor probes. Reported findings from this assessment include the following:

- The soil vapor survey identified the presence of PCE, TCE, and an unknown halogenated mix at two primary areas of concern; the loading dock west of the 12333 Olympic Boulevard building, and the northeast corner of the Olympic Boulevard building, a former loading dock area. Concentrations of chloroform, Freon 11, and Freon 13 were also identified.
- Soil borings and vapor probes were installed at 5, 15, and 30 feet in these two noted areas of concern. PCE and TCE concentrations increased with depth at the loading dock area.
- Perched groundwater beneath the site was found to have elevated concentrations of chloroform, TCA, TCE, PCE, and dichloroethene (DCE). Soil samples did not contain significant levels of contaminants.
- The absence of elevated levels of contaminants in the soil indicates that a large-scale excavation of contaminated soils is not required.

Based on these findings, Glenfos recommended that the existing vapor probes be sampled and retested to ascertain soil vapor conditions, and that

additional extraction wells be installed to evaluate the appropriate remediation methodology.

4.4 EVALUATION OF HISTORIC INFORMATION SOURCES

To determine past uses of the subject property and surrounding properties, ERM reviewed historical sources of information as outlined below. Historical aerial photographs and topographic maps were requested from EDR using the 12333 Olympic Boulevard address to ensure a complete coverage of the subject and adjacent properties. The City Directory Abstract was requested using both the 12333 Olympic Boulevard address and the 1925 South Bundy Drive address.

Historical Sanborn Maps were not available to cover the area of the subject property. Copies of available historical land use documents are presented in Appendix C.

Table 1 Summary of Historical Records Reviewed

4.4.1 Subject Property

Aerial photographs were available for the years 1928, 1947, 1952, 1965, 1976, 1989, 1994, and 2002.

1928 Photograph: Show that the subject property was in use for agricultural purposes. Small buildings, possibly residential homes and/or barn structures are evident on the subject property at that time.

1947 Photograph: Similar to the 1928 photograph, the 1947 photograph shows that the subject property was in use for agricultural purposes. Additional structures are evident on the subject property at that time.

1952 Photograph: Shows that the subject property is no longer used for agricultural activities. The property appears to be undeveloped, with limited use for parking and/or equipment storage, particularly at the north end of the property along South Bundy Drive.

1965 Photograph: This photograph shows the development of the subject property for industrial use and the three South Bundy Drive buildings. In addition to the 1901, 1925, and 1933 buildings, there are three industrial-sized buildings on site at this time in the area currently in use as the southwest paved parking surface.

1976 Photograph: This photo shows a similar use and configuration of the subject property to that in the 1965 photograph. Three additional industrial-sized buildings remain present to the southwest of the 1901, 1925, and 1933 South Bundy Drive buildings.

1989 Photograph: In this photo, the three southwest buildings are no longer present, and only the 1901, 1925, and 1933 South Bundy Drive buildings remain on the subject property. The area to the south of the three Bundy buildings now appears to be used for parking and/or materials storage.

1994 Photograph: In this photo, land use at the subject property appears similar as it is today, with the three South Bundy Drive buildings and the parking surface to the southwest.

2002 Photograph: In this photo, land use at the subject property appears similar as it is today with the three South Bundy Drive buildings and the parking surface to the south.

Historical land use shown on topographic maps is similar to that shown in historical aerial photographs. Maps from 1902, 1915, and 1934 show that the subject property is undeveloped, and possibly in use for agricultural purposes. A 1966 map shows the South Bundy Drive buildings on the subject property as part of the adjacent Teledyne Controls building. Maps from 1981, 1994, and 1995 also show the subject property as part of the adjacent Teledyne Controls facility.

The City Directory Abstract does not provide tenant listings for the 1901, 1925, and 1933 South Bundy Drive addresses in directory listings from 1920 through to 2003.

Building permit applications were reviewed by ERM at the Los Angeles Department of Building and Safety. Permit application records provided the following site history:

Table 2

Permit Application Records – 1901 South Bundy Drive

Document Type	Document Date	Building Tenant/Use
Application to alter, repair, or demolish, and for a certificate of occupancy.	9/28/1950	Present use of building: Factory New use of building: Factory Description of work: Add toilet room in Factory Owner: Richard C. Kite
Application to erect a new building and for a certificate of occupancy	3/30/51	Not legible
Application to erect a new building and for certificate of occupancy	8/16/51	Purpose of new building: Sell sandwiches to employees How many buildings now and use: 1-Type IIIA, Electronics Plant; and 1-Type IV, Storage. Owner: Grifillan Bros Inc.
Application to alter, repair, demolish and for certificate of occupancy	2/18/57	Present use of building: Manufacturing Electronic Parts; New use of building: same and storage of electronic parts Owner: Packard Bell Co.
Application to construct new building and for certificate of occupancy	7/1/1958	Purpose of building: Navy test equipment Description of work: add new building Owner: Packard Bell Co.
Application to inspection of signs	11/10/1970	Type of sign or new work: wall sign Owners name: Teledyne
Application for inspection	4/8/86	Present use of building: office and warehouse New use of building: offices Description of work: New interior walls and extra light Owners: Teledyne Controls
Application for inspection	3/30/92	Present use of building: commercial New use of building: commercial Description of work: remove existing roof, replace with new Owner: Teledyne Controls
Application for building permit and certificate of occupancy	1/29/96	Description of work: disable access restroom (1 single) Owner: Argonaut Group
Application for building permit and certificate of occupancy	9/18/96	Reason: Repair wall Owner: Argonaut Insurance

Table 3

Building Application Records - 1925 South Bundy Drive

<i>Document Type</i>	<i>Document Date</i>	<i>Reason</i>
Application to erect a new building and for a certificate of occupancy	10/10/52	Purpose of building: industrial State how many buildings now on lot: none Owner: Fortune Investment Company
Application to alter, repair, or demolish, and for a certificate of occupancy	9/16/53	Present use of building: warehouse Use of building after alteration or moving: offices of labs, government engineering Owner: Mr. Cohen- Leased by Packard Bell
Application to alter, repair, demolish and for certificate of occupancy	1/6/55	Present use of building: Offices New use of building: same Owner: Packard Bell Co.
Application to alter, repair, demolish and for certificate of occupancy	9/8/1982	Present use of building: commercial Owner: Teledyne Inc
Application for inspection	10/12/1989	Present use of building: office New Work: tenant improvement Owner: Teledyne Inc.
Application for inspection	5/22/1990	Present use of building: office New work: 2 new windows at north wall Owner: Teledyne Inc.
Application for inspection	4/29/1993	Present use of building: office New work: new partition for 2 offices, and 1 door at 1 st floor Owner: Argonaut Insurance Group
Application for building permit and certificate of occupancy	2/20/1997	Present use of building: commercial, light industrial, office Work description: structural seismic upgrade (div. 96) wall ties, crossties, pilaster confinement Owner: AGI Properties Inc.
Application for building permit and certificate of occupancy	11/29/1999	Work: Interior non structural remodeling Owner: AGI Properties Inc.
Application for building permit and certificate of occupancy	1/25/2000	Description of work: Tenant improvement Owner: AGI Properties Inc.

Table 4 ***Building Application Records - 1933 South Bundy Drive***

<i>Document Type</i>	<i>Document Date</i>	<i>Reason</i>
Application to alter, repair, demolish and for certificate of occupancy	10/17/1955	Present use of building: Factory New use of building: Factory Description of work: Add one office Owner: Packard Bell Co.
Application to alter, repair, demolish, and for certificate of occupancy	6/25/1956	Present use of building: Manufacturing New use of building: Same Description of work: add photo dark room within existing building Owner: Packard Bell Co.
Application to alter, repair, demolish, and for certificate of occupancy	4/24/1957	Present use of building: Manufacturing New use of building: Same Description of work: Interior partition Owner: Packard Bell Co.
Application for Inspection	7/14/1977	Present use of building: office and warehouse New use of building: Same Description of work: Interior partition and suspended offices Owner: Teledyne Properties Inc.
Application for Inspection	6/11/1986	Present use of building: Offices and warehouse New use of building: same Description of work: steel stud walls Owner: Teledyne Inc.
Application for Inspection	10/9/1991	Present use of building: Warehouse Description of work: Tear off 3 ply bit up class A Owner: Teledyne Controls
Application for Inspection	4/29/1993	Present use of building: Office Description of work: replace exterior door, upgrade H/C restrooms Owner: Argonaut Insurance Group

1928 Photograph: This photo shows that land use immediately surrounding the subject property is primarily agricultural, particularly to the north and south. One property to the north is developed with several structures, and may be used as 'hothouses' as indicated on historical topographic mapping. Residential properties are located to the west and northwest. Land use to the southeast, on the south side of Olympic Boulevard, appears to be graded and subdivided in preparation for residential development.

1947 Photograph: This photo shows a drive-in movie theatre to the southeast of the subject property accessible from both South Bundy Drive and Olympic Boulevard. Land use to the east and south is agricultural. Residential land use is prevalent to the west, across Nebraska Avenue, and to the northwest, across South Bundy Drive. Some industrial development is shown to the southeast, on the south side of Olympic Boulevard. The historic hothouses are shown to the north of the subject property.

1952 Photograph: This photo shows that adjacent land use to the west of the subject property has been developed for use as office and/or light industrial facilities. Some agricultural land remains to the southwest. The drive-in movie theatre remains in place to the southeast, and an industrial building (currently the Teledyne Controls) has been constructed to the south of the theatre, and subject property at 12333 Olympic Boulevard.

1965 Photograph: Land use shown on the 1965 photo indicates that the industrial building to the south (the Teledyne building) has expanded by constructing new industrial buildings. These buildings extend north and are immediately adjacent to the 1901, 1925, and 1933 South Bundy Drive buildings. The drive-in movie theatre is still shown to the southeast, and office buildings are shown to the west. Two large ASTs are shown to the southwest, across from the 12333 Olympic Boulevard property.

1976 Photograph: This photograph shows that the drive-in theatre to the southeast is no longer present, and appears to have been replaced with the development of an office or industrial building. The expansion of industrial buildings associated with the 12333 Olympic Boulevard property remain in place and immediately adjacent to, and south of the subject property buildings. Multi-tenant office and industrial buildings are shown to the west. The historic hothouses are no longer shown in this photo, and this property appears to be vacant. There is continued growth of industrial properties to the south and north.

1989 Photograph: The ASTs observed in the 1965 and 1976 photographs are no longer visible in this photo. This property appears to now be in use as a

storage yard. The buildings that were part of the 12333 Olympic Boulevard property expansion are also no longer evident in this photo, and have been replaced with a storage and/or parking surface. Additional office buildings have been constructed to the southeast, on the former drive-in movie theatre property, including the building currently occupied by Fox Television. Development has occurred to the north of the subject property, where the former historic hothouses once stood.

1994 Photograph: The 1994 photograph shows a similar land use on adjacent properties to that of the 1989 photograph. One additional office building has been constructed to the northeast of the subject property, at the intersection of South Bundy Drive and Olympic Boulevard. This photo also clearly shows the land immediately south of the three South Bundy Drive buildings in use as a paved parking surface.

2002 Photograph: No significant land use changes are shown on adjacent properties in the 2002 photograph.

Historical topographic maps dated 1902 and 1915 indicate that properties adjacent to the subject property are primarily rural. The Pasadena and Pacific Railroad, and the Southern Pacific Railroad are located approximately 0.5 miles north and 0.3 miles south, respectively from the subject property. A reservoir is shown approximately 2.4 miles north of the subject property.

A later topographic map dated 1934 shows surrounding properties to be primarily undeveloped, possibly in use for agricultural purposes. The historic hothouses are shown to the north of the subject property, just north of South Bundy Drive. A small circular track is shown to the south of Centinela Avenue. Land use to the north and west appears to be primarily residential. Nearby communities shown on the map include Santa Monica and Sawtelle West Los Angeles.

The 1966 map shows the drive-in theatre to the southeast, and industrial development to the south. Commercial or office-type buildings are shown to the west. The Santa Monica Freeway and Olympic Boulevard are shown south of the subject property. The adjacent 12333 Olympic Boulevard property is shown as one building in this photograph, and appears to incorporate the 1901, 1925, and 1933 South Bundy Drive buildings.

Consistent with the historical aerial photographs, maps dated 1972, 1981, 1994, and 1995 all depict very similar land use at adjacent properties. The drive-in movie theatre to the southeast is not shown after 1976, and industrial and commercial development continue to expand to the south, east, and north.

A City Directory Abstract provides listings for adjacent properties from 1924 through to 2003. Some of the tenant listings for South Bundy Drive addresses include the following:

Table 5 *Tenant Listings for Bundy Drive*

<i>Property Address</i>	<i>1920-1950</i>	<i>1950-1970</i>	<i>1970-2000</i>
2120 South Bundy Drive	Los Angeles Public Library	No Listing	No Listing
2121 South Bundy Drive	Private resident Olympic Trailer Court Private resident	Private residents Olympic Trailer Court Swain Back Hoe Rentals	United Continental Development Court Bomaine Corporation Diagnostics Imaging/Medical Group

GOVERNMENT RECORDS REVIEW/INTERVIEWS

ERM contacted local government agencies to request a file search for the subject property. File searches were requested by phone or fax to obtain available, relevant environmental information concerning the subject property. The following agencies were contacted by ERM:

- The Department of Toxic Substances Control (DTSC), Glendale and Cypress Offices;
- The County of Los Angeles Department of Health Services, Public Health Investigation Office;
- The SCAQMD;
- The DWP;
- The Los Angeles City Fire Department; and
- The City of Los Angeles Department of Building and Safety.

ERM received a written response from both the Cypress and Glendale DTSC offices concerning the subject property. According to their files, the DTSC has no such records pertaining to the 1901, 1925, or 1933 South Bundy Drive facilities.

A written response received from the County Public Health offices indicates that the file search revealed no records for the subject property addresses. The Public Health offices also retain records for the Los Angeles County Fire Department.

A response from the SCAQMD on 3 August 2004 indicates that no records were found for the 1933 South Bundy Drive facility. The SCAQMD reported that an EQL was found for the 1901 South Bundy Drive facility. A copy of this report provides no site-specific information concerning air emissions at this facility. Two EQLs were also found on file with the SCAQMD for the 1925 South Bundy Drive property including two inactive permits to operate two electric diesel generators.

The DWP was contacted to request information concerning the transformers located at the subject property. According to a written response from the DWP dated 5 August 2004, the transformers (No. 028-08-111) have not been tested for PCBs.

According to the City Fire Department, there are no records on file for the subject property.

Copies of correspondence are included in Appendix D.

5.2 ENVIRONMENTAL DATABASE SEARCH

ERM contracted EDR to conduct a database search for agency records. The EDR Report, presented in Appendix B, defines and summarizes the ASTM databases reviewed in the EDR Report and notes if any sites (including the subject property) were identified within the specified radius. The search was conducted using the 12333 West Olympic Boulevard property address to ensure coverage of this facility in addition to the three subject property buildings.

It should be noted that the computerized geocoding technology used in the database search is based on available census data and is only accurate to approximately ± 300 feet. The EDR Report provides a list of unmapped sites for which inadequate location/address information was provided. ERM reviewed this list of 'orphan' sites to determine if any of these sites are within the study radius. If any of these sites appeared likely to be within the search radius, they are discussed in the sections that follow.

Sites identified within the study radii were evaluated to determine if they are likely to have had an adverse impact on the subject property. The criteria used to evaluate sites within the study radii include:

- Distance from the subject property;
- Expected depth and direction of ground water and surface water flow;
- Expected storm water flow direction; and
- The presence/absence of documented contaminant releases at the identified sites that have not been remedied to the satisfaction of regulators.

The identification of a site as potentially upgradient or downgradient is based on the expected direction of groundwater flow to the southwest.

5.2.1 *Subject Property*

The subject property addresses 1901, 1925, and 1933 South Bundy Drive were not identified in any of the government database records searched by EDR.

5.2.2 Surrounding Properties

None of the orphan (unmapped) sites were identified as neighboring properties having the potential to adversely impact the subject property.

Surrounding area sites located within 1 mile and at an equal or higher elevation to the subject property are listed and described below. Only those databases that have the potential to negatively impact the subject property are discussed.

Table 7 *Surrounding Area Sites Identified in EDR Report*

<i>Database</i>	<i>Radius Searched</i>	<i>Sites Found</i>

Based on the information provided in the EDR Report, surrounding properties that may potentially impact the subject property have been identified in several databases. Impact to the subject property is most likely based on their location; equal or higher elevation, and/or an upgradient to the subject property. A summary of database information for the identified surrounding properties is provided below.

CERCLIS

Properties listed in CERCLIS contain data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 10 of the Comprehensive Environmental Response, Compensation and Liability ACT (CERCLA). CERCLIS contains sites, which are either proposed, or on the

National Priorities List (NPL) of sites, which are in the screening and assessment phase for possible inclusion on the NPL.

One CERCLIS site with potential to impact the subject property was identified in the EDR Report:

- AVES Trust (Map ID R96), located 1,708 feet to the east, northeast at 2010 South Westgate Avenue.

LUST- Sites

LUST is a database of reported leaking UST incidents. Four adjacent properties were listed on the LUST database within one mile, at a higher elevation, and upgradient to the subject property:

- Western District Collection Yard (Map ID AF167) located 2,418 feet east, northeast of the subject property at 2027 Stoner Avenue. This property is reported to have a leaking UST. The quantity of the leak was not reported, however, groundwater was affected. The listed status of the facility is 'pollution characterization'.
- ARCO Power Gas Station (Map ID AM 207), located 2,884 feet east of the subject property at 11748 Olympic Boulevard. This property is reported to have a leaking UST. The quantity of the leak was not reported, however groundwater was affected. The listed status of the facility is 'remediation plan'.
- SHELL Service Station (Map ID BH302) located 4,361 feet north, northeast of the subject property at 11574 Santa Monica Boulevard. This property is reported to have a leaking UST. The quantity of the leak was not reported. The case type is recorded as soil only. The listed status of the case is 'leak being confirmed' for hydrocarbons.
- Thrifty (Map ID BJ308), located 4,615 feet north, northeast of the subject property at 11526 Santa Monica Boulevard. The property is reported to have a leaking UST. The quantity of the leak was not reported. The case type is recorded as soil only. The listed status of the case is 'leak being confirmed' for hydrocarbons.

CA SLIC Sites

This database contains information regarding spills, leaks, investigation and clean-up cost and recovery. The database information comes from the California Regional Water Quality Control Board (RWQCB) records.

The Stoner Avenue Site (Map ID AI198), located 2645 feet east of the subject property at 2131 Stoner Avenue, is listed in this database due to a 'potential annual work plan (AWP)' underway at the property.

Detailed information concerning the status of these surrounding properties is accessible by conducting a thorough public records request and file search at the local enforcement agency offices.

Additional surrounding properties were identified in agency databases, however, they are not expected to have adversely impacted the subject property because a) the case has been closed, b) they are located downgradient to the subject property, or c) they have been remedied to the satisfaction of regulators.

Based on a site reconnaissance, interview activities, a review of reasonably obtainable and available historical documentation, company documentation, and previous site investigation reports, ERM has identified the following recognized environmental conditions (RECs):

- Low levels of volatile organic compounds (primarily PCE and TCE) were observed in vapor samples collected at and near the three existing buildings. These compounds were also observed in groundwater beneath the site.
- An unknown hydrocarbon was observed at relatively high concentrations in vapor samples collected at or near the property boundary with Teledyne Controls (southwest). This unknown hydrocarbon was reported to be isomers or derivatives of perfluorotri-n-butylamine, which is a relatively non-toxic compound. However, the Los Angeles RWQCB has suggested that this compound could degrade into chemicals that could adversely effect area groundwater.
- Based on the historical use of the property (agricultural and industrial), other chemicals could have been deposited in the subsurface such as pesticides, polyaromatic hydrocarbons, metals, and petroleum hydrocarbons.
- Based on the information provided in the EDR Report, surrounding properties that have the potential to impact the subject property have been identified in several databases, including LUSTs, and potential hazardous waste sites. Potential impacts to the subject property are based on the surrounding property locations; at an equal or higher elevation, and/or upgradient to the subject property.

Other findings identified at the subject property that do not meet the ASTM definition of a REC are presented below:

- Three pad-mounted transformers were observed on the subject property in the south parking area. According to the DWP, the transformers (No.028-08-111) have not been tested for PCBs.
- A visual inspection of PACMs in easily accessible areas was conducted by ERM, however no samples were collected or analyzed. Floor tiles observed in building common areas such as hallways were identified as potential friable PACMs. The floor tiles were observed in good condition. It is possible that PACMs are also present in roofing materials and/or mastics that are not readily accessible for observation.

- According to Ms. Louise Del Mage of AGI Properties, there are no known PACMs at the subject property. However, no asbestos surveys have been conducted at any of the three buildings.
- Demolition, renovation, and/or remodeling of areas within the building confirmed to contain ACMs must be handled by a licensed asbestos abatement contractor.

Based on these findings, further site investigation is warranted at this time to further evaluate subsurface soil and groundwater conditions at the subject property.

***QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONAL
CONDUCTING THIS ASSESSMENT***

This assessment was conducted by Ms. Sheri Cook-Johnstone, REA, of ERM's South Coast Metro, California office. Mr. Brett Bowyer, R.G., Principal of ERM's South Coast Metro office reviewed the contents of this report. The professional qualifications for Ms. Cook-Johnstone and Mr. Bowyer are included in Appendix E.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc. (EDR). The report meets the government records search requirements of ASTM Standard Practice for Environmental Site Assessments, E 1527-00. Search distances are per ASTM standard or custom distances requested by the user.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

FEDERAL ASTM STANDARD

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA).

CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 02/26/2004 has revealed that there are 8 CERCLIS sites within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Dist / Dir</u>	<u>Map ID</u>	<u>Page</u>

CERCLIS-NFRAP: As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund Action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

A review of the CERC-NFRAP list, as provided by EDR, and dated 02/26/2004 has revealed that there are 23 CERC-NFRAP sites within approximately 0.75 miles of the target property.

RCRIS: Resource Conservation and Recovery Information System. RCRIS includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs): generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs): generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs): generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRIS-TSD list, as provided by EDR, and dated 06/15/2004 has revealed that there is 1 RCRIS-TSD site within approximately 1 mile of the target property.

FEDERAL ASTM SUPPLEMENTAL

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 04/08/2004 has revealed that there are 41 FINDS sites within approximately 0.5 miles of the target property.

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency

A review of the HAZNET list, as provided by EDR, and dated 12/31/2002 has revealed that there are 90 HAZNET sites within approximately 0.5 miles of the target property.

Design Flow: Not reported
Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
Agency Type: Private
Waste Type: Not reported
Threat to Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface

Comments Date :	07141992
Comments :	THE SITE WAS IDENTIFIED FORM EPA FIT PA REPORT DATED FEB 22, 1991 WHICH WAS RECOMMENDED NFA FOR EPA. THE ONE ACRE SITE OCCUPIED A 23,600 SQ. FT. BUILDING. THE BUILDING IS CURRENTLY OCCUPIED BY TWO BUSINESSESS FIDELITY ARTS, A RETAILER OF ARTWORKS AND CARPETCRAFT, A WHOLESALE AND RETAIL CARPET STORE. THE BUILDING CONSTRUCTED IN 1960S, LATER LEASED BY 3M COMPANY (MINNESOTA MINING & MANUFACTURING CO. AND THE COMPUTER COMMUNICATIONS CORP, BOTH PERFORMED ELECTRONIC ASSEMBLY AT THE SITE. FROM 1973 TO 1986 CINEMA PRODUCTS OPERATED AT THE SITE IN THE MANUFACTURING OF SPECIALITY MOTION PICTURE CAMERAS. CINEMA PRODUCTS USED THE CHEMICALS SUCH AS TCE, ACETONE, LACQUER THINNER, WHITE GAS, KEROSENE, DEODORIZED KEROSENE AND TRETHANE III. SPENT TCE WAS DISPOSED AT THE SITE. ALSO, DRUM STORAGE AREA WAS STAINED WITH OIL. DEPTH TO THE GROUNDWATER AT THE SITE IS APPX 40 TO 50 FEET. PEA IS REQUIRED BECAUSE OS THE EVIDENCE OF CONTAMINATION ONSITE. ADDITIONAL INFORMATION SUBMITTED TO THE DEPARTMENT INDICATES THAT THE SITE DOES NOT POSE A THREAT TO HUMAN HEALTH AND THE ENVIRONMENT. THE DEPARTMENT CONCURS WITH THE RECOMMENDATION THAT NO FURTHER ACTION IS NEEDED AT THE SITE. DATABASE VERIFICATION PROJECT CONFIRMS NFA FOR DTSC.

INSPECTION(LOCAL) CO HLTH. WATER FAC ADEQUATE.
U.S. EPA completed a Site Inspection Prioritization and
recommended a HRS evaluation. Papermate currently working
with the City of Santa Monica to implement remediation of
soil contamination.
Not reported
The site consists of approximately 10 acres which includes
four buildings. Building I is used for metal fabrication,
assembly, and jparts molding processes. Building II is used
for packaging, ink formulation, and additional product
assembly. Building II is used for warehousing and packaging
and Building IV is used for storage of machine parts and
furniture. The site is entirely covered by buildings or
pavement and completely fenced.
Not reported
In 1985 in response to the City of Santa Monica's require-
ments RP tested the pressure of 18 USTs and excavated and
removed VOC contaminated soil from the site. In Feb 1992
metal contaminated soil beneath the plating room floor of
Building I was excavated and removed. In June 1993, six
USTs were removed from the vicinity of Building I and soil
contaminated with TPH was excavated and removed from the
site. In August 1993 RP removed four USTs containing haz
substances in the vicinity of Building II. Post removal
soil samples indicated the presence of 1,2-dichloroethane
57 ug/kg, 1,1-dichloroethane 180 ug/kg, 1,1,1-trichloro-
ethane 450 ug/kg, tetrachloroethene 100 ug/kg, trichloro-
ethene 30 ug/kg, and 1,1-dichloroethene 440 ug/kg. The
City of Santa Monica is currently working with Papermate
to implement a remediation technique for the VOC contamin-
ated soil in the vicinity of Building II.

Facility Type:	Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.		
Facility Status:	Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.		
Agency Type:	Private		
Waste Type:	Not reported		
Threat to Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.		
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

N/A

Relative:
Lower

BEP:

Actual:
152 ft.

Site Description : This site is a former "burn dump", which operated until the early 1950's. In later years, the facility apparently accepted inert materials.

Hazardous Waste Desc : During core drilling prior to construction at the former "burn dump" site, elevated levels of organic material and lead were encountered in the soil and in the upper saturated zone. It is believed most of the contaminated soil has been removed from the site and properly disposed of, in accordance with State regulations.

Threat To Public Health & Env : The threat from this site is believed to be minimal. It is believed that most of the contamination has already been removed from the site. The upper aquifer in the area is generally contaminated by organic solvents and is not used as a public water supply.

Site Activity Status : DHS has required and the developer has provided a waste management plan for dealing with hazardous substances during excavation. The proposed depth of the excavation would remove the majority of residual wastes from the landfill. Materials exceeding DHS's standards are hazardous wastes and will be handled as Class 1 wastes; marginally contaminated waste will be taken to an appropriate landfill.

Project Revenue Source Co. : Not Reported
PRS Company Address : Not reported
Not reported

Project Revenue Source Desc : This site is projected for cleanup by responsible parties with reimbursement to DHS for staff and related costs. However, if the responsible parties fail to provide funding for cleanup, another source of

EPA Waste Codes Addendum

Code	Description
D001	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
D002	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
D006	CADMIUM
D008	LEAD
D039	TETRACHLOROETHYLENE

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Elapsed ASTM days: Provides confirmation that this EDR report meets or exceeds the 90-day updating requirement of the ASTM standard.

FEDERAL ASTM STANDARD RECORDS

NPL: National Priority List

Source: EPA

Telephone: N/A

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

Source: EPA

Telephone: 703-413-0223

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 02/26/04

Date Made Active at EDR: 04/02/04

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Source: EPA

Telephone: 703-413-0223

As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

RCRIS: Resource Conservation and Recovery Information System

Source: EPA

Telephone: 800-424-9346

Resource Conservation and Recovery Information System. RCRIS includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs): generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs): generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs): generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

US BROWNFIELDS: A Listing of Brownfields Sites

Source: Environmental Protection Agency
Telephone: 202-566-2777

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become BCRLF cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Date of Government Version: 04/14/04
Database Release Frequency: Semi-Annually

RMP: Risk Management Plans

Source: Environmental Protection Agency
Telephone: 202-564-8600

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

UMTRA: Uranium Mill Tailings Sites

Source: Department of Energy
Telephone: 505-845-0011

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized. In 1978, 24 inactive uranium mill tailings sites in Oregon, Idaho, Wyoming, Utah, Colorado, New Mexico, Texas, North Dakota, South Dakota, Pennsylvania, and on Navajo and Hopi tribal lands, were targeted for cleanup by the Department of Energy.

RAATS: RCRA Administrative Action Tracking System

Source: EPA
Telephone: 202-564-4104

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/95
Database Release Frequency: No Update Planned

Date of Last EDR Contact: 06/07/04
Date of Next Scheduled EDR Contact: 09/06/04

STATE OF CALIFORNIA ASTM STANDARD RECORDS

AWP: Annual Workplan Sites

Source: California Environmental Protection Agency
Telephone: 916-323-3400

Known Hazardous Waste Sites. California DTSC's Annual Workplan (AWP), formerly BEP, identifies known hazardous substance sites targeted for cleanup.

Date of Government Version: 06/01/04
Date Made Active at EDR: 06/25/04
Database Release Frequency: Annually

Date of Data Arrival at EDR: 06/04/04
Elapsed ASTM days: 21
Date of Last EDR Contact: 06/04/04

CAL-SITES: Calsites Database

Source: Department of Toxic Substance Control
Telephone: 916-323-3400

The Calsites database contains potential or confirmed hazardous substance release properties. In 1996, California EPA reevaluated and significantly reduced the number of sites in the Calsites database.

Date of Government Version: 06/01/04
Date Made Active at EDR: 06/25/04
Database Release Frequency: Quarterly

Date of Data Arrival at EDR: 06/04/04
Elapsed ASTM days: 21
Date of Last EDR Contact: 06/04/04

CHMIRS: California Hazardous Material Incident Report System

Source: Office of Emergency Services
Telephone: 916-845-8400

California Hazardous Material Incident Reporting System. CHMIRS contains information on reported hazardous material incidents (accidental releases or spills).

Date of Government Version: 12/31/03
Date Made Active at EDR: 06/25/04
Database Release Frequency: Varies

Date of Data Arrival at EDR: 05/18/04
Elapsed ASTM days: 38
Date of Last EDR Contact: 05/13/04

CORTESE: "Cortese" Hazardous Waste & Substances Sites List

Source: CAL EPA/Office of Emergency Information
Telephone: 916-323-9100

The sites for the list are designated by the State Water Resource Control Board (LUST), the Integrated Waste Board (SWF/LS), and the Department of Toxic Substances Control (Cal-Sites). This listing is no longer updated by the state agency.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Date of Government Version: 04/01/01

Date of Last EDR Contact: 04/28/04

NOTIFY 65: Proposition 65 Records

Source: State Water Resources Control Board
Telephone: 916-445-3846

Proposition 65 Notification Records. NOTIFY 65 contains facility notifications about any release which could impact drinking water and thereby expose the public to a potential health risk.

Date of Government Version: 10/21/93
Date Made Active at EDR: 11/19/93
Database Release Frequency: No Update Planned

Date of Data Arrival at EDR: 11/01/93
Elapsed ASTM days: 18
Date of Last EDR Contact: 04/19/04

TOXIC PITS: Toxic Pits Cleanup Act Sites

Source: State Water Resources Control Board
Telephone: 916-227-4364

Toxic PITS Cleanup Act Sites. TOXIC PITS identifies sites suspected of containing hazardous substances where cleanup has not yet been completed.

Date of Government Version: 07/01/95
Date Made Active at EDR: 09/26/95
Database Release Frequency: No Update Planned

Date of Data Arrival at EDR: 08/30/95
Elapsed ASTM days: 27
Date of Last EDR Contact: 05/03/04

SWF/LF (SWIS): Solid Waste Information System

Source: Integrated Waste Management Board
Telephone: 916-341-6320

Active, Closed and Inactive Landfills. SWF/LF records typically contain an inventory of solid waste disposal facilities or landfills. These may be active or inactive facilities or open dumps that failed to meet RCRA Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 06/14/04
Date Made Active at EDR: 07/26/04
Database Release Frequency: Quarterly

Date of Data Arrival at EDR: 06/16/04
Elapsed ASTM days: 40
Date of Last EDR Contact: 06/16/04

WMUDS/SWAT: Waste Management Unit Database

Source: State Water Resources Control Board
Telephone: 916-227-4448

Waste Management Unit Database System. WMUDS is used by the State Water Resources Control Board staff and the Regional Water Quality Control Boards for program tracking and inventory of waste management units. WMUDS is composed of the following databases: Facility Information, Scheduled Inspections Information, Waste Management Unit Information, SWAT Program Information, SWAT Report Summary Information, SWAT Report Summary Data, Chapter 15 (formerly Subchapter 15) Information, Chapter 15 Monitoring Parameters, TPCA Program Information, RCRA Program Information, Closure Information, and Interested Parties Information.

Date of Government Version: 04/01/00

HAZNET: Facility and Manifest Data

Source: California Environmental Protection Agency

Telephone: 916-255-1136

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

EDR PROPRIETARY HISTORICAL DATABASES

EDR Historical Gas Station and Dry Cleaners: EDR has searched select national collections of business directories and has collected listings of potential dry cleaner and gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning and gas station/filling station/service station establishments. The categories reviewed included, but were not limited to: *gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, dry cleaner, cleaners, laundry, laundromat, cleaning/laundry, wash & dry, etc.*

This information is meant to assist and complement environmental professionals in their conduct of environmental site assessments, and is not meant to be a substitute for a full historical investigation as defined in ASTM E1527. The information provided in this proprietary database may or may not be complete; i.e., the absence of a dry cleaner or gas station/filling station/service station site does not necessarily mean that such a site did not exist in the area covered by this report.

(A note on "dry cleaning" sites: it is not possible for EDR to differentiate between establishments that use PERC on-site as a cleaning solvent and sites that function simply as drop-off and pick-up locations or that are traditional wet cleaning/laundry facilities. Therefore, it is essential for environmental professionals to incorporate professional judgment in the evaluation of each site.)

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Former Manufactured Gas (Coal Gas) Sites: The existence and location of Coal Gas sites is provided exclusively to EDR by Real Property Scan, Inc. ©Copyright 1993 Real Property Scan, Inc. For a technical description of the types of hazards which may be found at such sites, contact your EDR customer service representative.

Disclaimer Provided by Real Property Scan, Inc.

Date of Next Scheduled EDR Contact: 08/30/04

US BROWNFIELDS: A Listing of Brownfields Sites

Source: Environmental Protection Agency

Telephone: 202-566-2777

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become BCRLF cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities

Source: Department of Social Services

Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 from the U.S. Fish and Wildlife Service.

GEOCHECK[®] - PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

WESTSIDE MEDICAL PARK
12333 OLYMPIC BLVD.
LOS ANGELES, CA 90025

TARGET PROPERTY COORDINATES

Latitude (North):	34.033600 - 34° 2' 1.0"
Longitude (West):	118.458298 - 118° 27' 29.9"
Universal Transverse Mercator:	Zone 11
UTM X (Meters):	365373.7
UTM Y (Meters):	3766646.0
Elevation:	162 ft. above sea level

EDR's GeoCheck Physical Setting Source Addendum has been developed to assist the environmental professional with the collection of physical setting source information in accordance with ASTM 1527-00, Section 7.2.3. Section 7.2.3 requires that a current USGS 7.5 Minute Topographic Map (or equivalent, such as the USGS Digital Elevation Model) be reviewed. It also requires that one or more additional physical setting sources be sought when (1) conditions have been identified in which hazardous substances or petroleum products are likely to migrate to or from the property, and (2) more information than is provided in the current USGS 7.5 Minute Topographic Map (or equivalent) is generally obtained, pursuant to local good commercial or customary practice, to assess the impact of migration of recognized environmental conditions in connection with the property. Such additional physical setting sources generally include information about the topographic, hydrologic, hydrogeologic, and geologic characteristics of a site, and wells in the area.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata. EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

USGS Topographic Map: 34118-A4 BEVERLY HILLS, CA
General Topographic Gradient: General South
Source: USGS 7.5 min quad index

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

BEVERLY HILLS	<u>Data Coverage</u>
	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data:*

Search Radius:	1.25 miles
Location Relative to TP:	1/8 - 1/4 Mile South
Site Name:	Mcdonnell-Douglas Aircraft Facility
Site EPA ID Number:	CA0000485326
Groundwater Flow Direction:	South-Southwest
Inferred Depth to Water:	50 feet.
Hydraulic Connection:	Information is not available regarding the hydraulic connection between aquifers underlying the site.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION</u> <u>FROM TP</u>	<u>GENERAL DIRECTION</u> <u>GROUNDWATER FLOW</u>

<u>MAP ID</u>	<u>LOCATION</u>	<u>GENERAL DIRECTION</u>
A2	<u>FROM TP</u>	<u>GROUNDWATER FLOW</u>
	1/8 - 1/4 Mile SW	Not Reported

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Cenozoic
System: Quaternary
Series: Quaternary
Code: Q (decoded above as Era, System & Series)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: loam
clay
silt loam
clay loam
sandy loam
gravelly - sandy loam
loamy sand
fine sand
coarse sand
sand
gravelly - sand

Surficial Soil Types: loam
clay
silt loam
clay loam
sandy loam
gravelly - sandy loam
loamy sand
fine sand
coarse sand
sand
gravelly - sand

Shallow Soil Types: fine sandy loam
gravelly - loam
sand
silty clay

Deeper Soil Types: stratified
clay loam
silty clay loam
gravelly - sandy loam
coarse sand
sand
weathered bedrock
very fine sandy loam

ADDITIONAL ENVIRONMENTAL RECORD SOURCES

According to ASTM E 1527-00, Section 7.2.2, "one or more additional state or local sources of environmental records may be checked, in the discretion of the environmental professional, to enhance and supplement federal and state sources... Factors to consider in determining which local or additional state records, if any, should be checked include (1) whether they are reasonably ascertainable, (2) whether they are sufficiently useful, accurate, and complete in light of the objective of the records review (see 7.1.1), and (3) whether they are obtained, pursuant to local, good commercial or customary practice." One of the record sources listed in Section 7.2.2 is water well information. Water well information can be used to assist the environmental professional in assessing sources that may impact groundwater flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

CA WELLS 2992

Water System Information:

Prime Station Code:	02S/15W-04A01 S	User ID:	4TH
FRDS Number:	1910146017	County:	Los Angeles
District Number:	07	Station Type:	WELL/AMBNT/MUN/INTAKE
Water Type:	Well/Groundwater	Well Status:	Active Raw
Source Lat/Long:	340148.5 1182746.4	Precision:	1,000 Feet (10 Seconds)
Source Name:	SANTA MONICA WELL 04		
System Number:	1910146		
System Name:	SANTA MONICA-CITY, WATER DIVISION		
Organization That Operates System:	1212 FIFTH ST., 3RD FLOOR SANTA MONICA, CA 90401		
Pop Served:	86905	Connections:	15905
Area Served:	SANTA MONICA		

Sample Information: * Only Findings Above Detection Level Are Listed

Sample Collected:	03/11/1985	Findings:	1.900 UG/L
Chemical:	CHLOROFORM (THM)		
Sample Collected:	03/11/1985	Findings:	6.000 UG/L
Chemical:	1,1-DICHLOROETHYLENE		
Sample Collected:	03/11/1985	Findings:	90.000 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	03/11/1985	Findings:	1.000 UG/L
Chemical:	BROMOMETHANE		
Sample Collected:	07/18/1989	Findings:	3.000 UNITS
Chemical:	COLOR		
Sample Collected:	07/18/1989	Findings:	4.000 TON
Chemical:	ODOR THRESHOLD @ 60 C		
Sample Collected:	07/18/1989	Findings:	1470.000 UMHO
Chemical:	SPECIFIC CONDUCTANCE		
Sample Collected:	07/18/1989	Findings:	7.100
Chemical:	PH (LABORATORY)		
Sample Collected:	07/18/1989	Findings:	380.000 MG/L
Chemical:	TOTAL ALKALINITY (AS CaCO3)		
Sample Collected:	07/18/1989	Findings:	463.000 MG/L
Chemical:	BICARBONATE ALKALINITY		
Sample Collected:	07/18/1989	Findings:	674.000 MG/L
Chemical:	TOTAL HARDNESS (AS CaCO3)		
Sample Collected:	07/18/1989	Findings:	147.000 MG/L
Chemical:	CALCIUM		
Sample Collected:	07/18/1989	Findings:	73.700 MG/L
Chemical:	MAGNESIUM		
Sample Collected:	07/18/1989	Findings:	77.900 MG/L
Chemical:	SODIUM		
Sample Collected:	07/18/1989	Findings:	2.500 MG/L
Chemical:	POTASSIUM		

GEOCHECK® - PHYSICAL SETTING SOURCE MAP FINDINGS

Sample Collected:	07/18/1989	Findings:	81.000 MG/L
Chemical:	CHLORIDE		
Sample Collected:	07/18/1989	Findings:	.350 MG/L
Chemical:	FLUORIDE (TEMPERATURE DEPENDENT)		
Sample Collected:	07/18/1989	Findings:	180.000 UG/L
Chemical:	ZINC		
Sample Collected:	07/18/1989	Findings:	4.200 PCI/L
Chemical:	GROSS ALPHA		
Sample Collected:	07/18/1989	Findings:	1.800 PCI/L
Chemical:	GROSS ALPHA COUNTING ERROR		
Sample Collected:	07/18/1989	Findings:	.200 PCI/L
Chemical:	RADIUM 226 COUNTING ERROR		
Sample Collected:	07/18/1989	Findings:	5.000 PCI/L
Chemical:	URANIUM		
Sample Collected:	07/18/1989	Findings:	11.000 UG/L
Chemical:	CHLOROFORM (THM)		
Sample Collected:	07/18/1989	Findings:	1.500 UG/L
Chemical:	TETRACHLOROETHYLENE		
Sample Collected:	07/18/1989	Findings:	.030 UG/L
Chemical:	FOAMING AGENTS (MBAS)		
Sample Collected:	07/18/1989	Findings:	9.500 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	07/18/1989	Findings:	960.000 MG/L
Chemical:	TOTAL DISSOLVED SOLIDS		
Sample Collected:	07/18/1989	Findings:	.300
Chemical:	LANGELIER INDEX @ 60 C		
Sample Collected:	07/18/1989	Findings:	30.500 MG/L
Chemical:	NITRATE (AS NO3)		
Sample Collected:	07/18/1989	Findings:	.450 NTU
Chemical:	TURBIDITY (LAB)		
Sample Collected:	07/18/1989	Findings:	11.000 UG/L
Chemical:	TOTAL TRIHALOMETHANES		
Sample Collected:	04/24/1990	Findings:	12.000 UG/L
Chemical:	CHLOROFORM (THM)		
Sample Collected:	04/24/1990	Findings:	1.000 UG/L
Chemical:	DICHLOROMETHANE		
Sample Collected:	04/24/1990	Findings:	1.800 UG/L
Chemical:	TETRACHLOROETHYLENE		
Sample Collected:	04/24/1990	Findings:	.800 UG/L
Chemical:	1,1-DICHLOROETHANE		
Sample Collected:	04/24/1990	Findings:	9.000 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	04/24/1990	Findings:	12.000 UG/L
Chemical:	TOTAL TRIHALOMETHANES		
Sample Collected:	04/24/1990	Findings:	3.600 PCI/L
Chemical:	GROSS ALPHA		
Sample Collected:	04/24/1990	Findings:	2.800 PCI/L
Chemical:	GROSS ALPHA COUNTING ERROR		
Sample Collected:	04/24/1990	Findings:	9.000 PCI/L
Chemical:	URANIUM		

GEOCHECK® - PHYSICAL SETTING SOURCE MAP FINDINGS

Sample Collected:	05/22/1991	Findings:	8.500 PCI/L
Chemical:	URANIUM		
Sample Collected:	05/05/1992	Findings:	21.000 C
Chemical:	SOURCE TEMPERATURE C		
Sample Collected:	05/05/1992	Findings:	3.000 TON
Chemical:	ODOR THRESHOLD @ 60 C		
Sample Collected:	05/05/1992	Findings:	1330.000 UMHO
Chemical:	SPECIFIC CONDUCTANCE		
Sample Collected:	05/05/1992	Findings:	7.100
Chemical:	PH (LABORATORY)		
Sample Collected:	05/05/1992	Findings:	32.000 MG/L
Chemical:	SILICA		
Sample Collected:	05/05/1992	Findings:	900.000 MG/L
Chemical:	TOTAL DISSOLVED SOLIDS		
Sample Collected:	05/05/1992	Findings:	.200
Chemical:	LANGELIER INDEX @ 60 C		
Sample Collected:	05/05/1992	Findings:	.300 NTU
Chemical:	TURBIDITY (LAB)		
Sample Collected:	05/05/1992	Findings:	12.300
Chemical:	AGGRSSIVE INDEX (CORROSIVITY)		
Sample Collected:	05/05/1992	Findings:	4.200 PCI/L
Chemical:	GROSS ALPHA		
Sample Collected:	05/05/1992	Findings:	2.300 PCI/L
Chemical:	GROSS ALPHA COUNTING ERROR		
Sample Collected:	05/15/1992	Findings:	16.000 UG/L
Chemical:	CHLOROFORM (THM)		
Sample Collected:	05/15/1992	Findings:	1.500 UG/L
Chemical:	TETRACHLOROETHYLENE		
Sample Collected:	05/15/1992	Findings:	.700 UG/L
Chemical:	1,1-DICHLOROETHANE		
Sample Collected:	05/15/1992	Findings:	.700 UG/L
Chemical:	1,1-DICHLOROETHYLENE		
Sample Collected:	05/15/1992	Findings:	13.000 UG/L
Chemical:	TRICHLOROETHYLENE		
Sample Collected:	05/15/1992	Findings:	16.000 UG/L
Chemical:	TOTAL TRIHALOMETHANES		
Sample Collected:	07/28/1992	Findings:	369.000 MG/L
Chemical:	TOTAL ALKALINITY (AS CaCO3)		
Sample Collected:	07/28/1992	Findings:	450.000 MG/L
Chemical:	BICARBONATE ALKALINITY		
Sample Collected:	07/28/1992	Findings:	656.000 MG/L
Chemical:	TOTAL HARDNESS (AS CaCO3)		
Sample Collected:	07/28/1992	Findings:	164.000 MG/L
Chemical:	CALCIUM		
Sample Collected:	07/28/1992	Findings:	70.000 MG/L
Chemical:	MAGNESIUM		
Sample Collected:	07/28/1992	Findings:	77.200 MG/L
Chemical:	SODIUM

Water System Information:

Prime Station Code:	02S/15W-04C02 S	User ID:	4TH
FRDS Number:	1910146015	County:	Los Angeles
District Number:	07	Station Type:	WELL/AMBNT/MUN/INTAKE/SUPPLY
Water Type:	Well/Groundwater	Well Status:	Active Raw
Source Lat/Long:	340200.0 1182700.0	Precision:	Undefined
Source Name:	SANTA MONICA WELL 03		
System Number:	1910146		
System Name:	SANTA MONICA-CITY, WATER DIVISION		
Organization That Operates System:	1212 FIFTH ST., 3RD FLOOR SANTA MONICA, CA 90401		
Pop Served:	86905	Connections:	15905
Area Served:	SANTA MONICA		

Sample Information: * Only Findings Above Detection Level Are Listed

Sample Collected:	04/26/1985	Findings:	14.000 UG/L
Chemical:	CHLOROFORM (THM)

CA WELLS 1507

Water System Information:

Prime Station Code:	01S/15W-04C01 S	User ID:	4TH
FRDS Number:	1910146020	County:	Los Angeles
District Number:	07	Station Type:	WELL/AMBNT/MUN/INTAKE
Water Type:	Well/Groundwater	Well Status:	Active Raw
Source Lat/Long:	340145.0 1182800.0	Precision:	1,000 Feet (10 Seconds)
Source Name:	SANTA MONICA WELL 07		
System Number:	1910146		
System Name:	SANTA MONICA-CITY, WATER DIVISION		
Organization That Operates System:	1212 FIFTH ST., 3RD FLOOR SANTA MONICA, CA 90401		
Pop Served:	86905	Connections:	15905
Area Served:	SANTA MONICA		

Sample Information: * Only Findings Above Detection Level Are Listed

Sample Collected:	04/11/1989	Findings:	3.000 UNITS
Chemical:	COLOR		
Sample Collected:	04/11/1989	Findings:	1350.000 UMHO
Chemical:	SPECIFIC CONDUCTANCE		
Sample Collected:	04/11/1989	Findings:	7.300
Chemical:	PH (LABORATORY)		
Sample Collected:	04/11/1989	Findings:	280.000 MG/L
Chemical:	TOTAL ALKALINITY (AS CaCO3)		
Sample Collected:	04/11/1989	Findings:	341.000 MG/L
Chemical:	BICARBONATE ALKALINITY		
Sample Collected:	04/11/1989	Findings:	.530 MG/L
Chemical:	CARBONATE ALKALINITY		
Sample Collected:	04/11/1989	Findings:	520.000 MG/L
Chemical:	TOTAL HARDNESS (AS CaCO3)		

GEOCHECK® - PHYSICAL SETTING SOURCE MAP FINDINGS

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002. 7.5-Minute DEMs correspond to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

ADDITIONAL ENVIRONMENTAL RECORD SOURCES

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

Historical Topographic Map Report

Environmental Data Resources, Inc.'s (EDR) Historical Topographic Map Report is designed to assist professionals in evaluating potential liability on a target property, and its surrounding area, resulting from past activities. ASTM E 1527-00, Section 7.3 on Historical Use Information, identifies the prior use requirements for a Phase I environmental site assessment. The ASTM standard requires a review of *reasonably ascertainable standard historical sources*. *Reasonably ascertainable is defined as information that is publicly available, obtainable from a source with reasonable time and cost constraints, and practically reviewable.*

To meet the prior use requirements of ASTM E 1527-00, Section 7.3.4, the following *standard historical sources* may be used: aerial photographs, city directories, fire insurance maps, topographic maps, property tax files, land title records (although these cannot be the sole historical source consulted), building department records, or zoning/and use records. ASTM E 1527-00 requires "*All obvious uses of the property shall be identified from the present, back to the property's obvious first developed use, or back to 1940, whichever is earlier. This task requires reviewing only as many of the standard historical sources as are necessary, and that are reasonably ascertainable and likely to be useful.*" (ASTM E 1527-00, Section 7.3.2 page 12.)

EDR's Historical Topographic Map Report includes a search of available public and private color historical topographic map collections.

Topographic Maps

A topographic map (topo) is a color coded line-and-symbol representation of natural and selected artificial features plotted to a scale. Topos show the shape, elevation, and development of the terrain in precise detail by using contour lines and color coded symbols. Many features are shown by lines that may be straight, curved, solid, dashed, dotted, or in any combination. The colors of the lines usually indicate similar classes of information. For example, topographic contours (brown); lakes, streams, irrigation ditches, etc. (blue); land grids and important roads (red); secondary roads and trails, railroads, boundaries, etc. (black); and features that have been updated using aerial photography, but not field verified, such as disturbed land areas (e.g., gravel pits) and newly developed water bodies (purple).

For more than a century, the USGS has been creating and revising topographic maps for the entire country at a variety of scales. There are about 60,000 U.S. Geological Survey (USGS) produced topo maps covering the United States. Each map covers a specific quadrangle (quad) defined as a four-sided area bounded by latitude and longitude. Historical topographic maps are a valuable historical resource for documenting the prior use of a property and its surrounding area, and due to their frequent availability can be particularly helpful when other standard historical sources (such as city directories, fire insurance maps, or aerial photographs) are not reasonably ascertainable.

City Directory Abstract

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist professionals in evaluating potential liability on a target property resulting from past activities. ASTM E 1527-00, Section 7.3 on Historical Use Information, identifies the prior use requirements for a Phase I environmental site assessment. The ASTM standard requires a review of *reasonably ascertainable standard historical sources*. *Reasonably ascertainable means information that is publicly available, obtainable from a source with reasonable time and cost constraints, and practically reviewable.*

To meet the prior use requirements of ASTM E 1527-00, Section 7.3.4, the following *standard historical sources* may be used: aerial photographs, fire insurance maps, property tax files, land title records (although these cannot be the sole historical source consulted), topographic maps, city directories, building department records, or zoning/land use records. ASTM E 1527-00 requires *"All obvious uses of the property shall be identified from the present, back to the property's obvious first developed use, or back to 1940, whichever is earlier. This task requires reviewing only as many of the standard historical sources as are necessary, and that are reasonably ascertainable and likely to be useful."* (ASTM E 1527-00, Section 7.3.2, page 12.)

EDR's City Directory Abstract includes a search and abstract of available city directory data.

City Directories

City directories have been published for cities and towns across the U.S. since the 1700s. Originally a list of residents, the city directory developed into a sophisticated tool for locating individuals and businesses in a particular urban or suburban area. Twentieth century directories are generally divided into three sections: a business index, a list of resident names and addresses, and a street index. With each address, the directory lists the name of the resident or, if a business is operated from this address, the name and type of business (if unclear from the name). While city directory coverage is comprehensive for major cities, it may be spotty for rural areas and small towns. ASTM E 1527-00 specifies that a *"review of city directories (standard historical sources) at less than approximately five year intervals is not required by this practice."* (ASTM E 1527-00, Section 7.3.2.1, page 12.)

NAICS (North American Industry Classification System) Codes

NAICS is a unique, all-new system for classifying business establishments. Adopted in 1997 to replace the prior Standard Industry Classification (SIC) system, it is the system used by the statistical agencies of the United States. It is the first economic classification system to be constructed based on a single economic concept. To learn more about the background, the development and difference between NAICS and SIC, visit the following Census website: <http://www.census.gov/epcd/www/naicsdev.htm>.

4. SUMMARY

- *City Directories:*

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2003. (These years are not necessarily inclusive.) A summary of the information obtained is provided in the text of this report.

This report compiles information by geocoding the subject properties (that is, plotting the latitude and longitude for such subject properties and obtaining data concerning properties within 1/16th of a mile of the subject properties). There is no warranty or guarantee that geocoding will report or list all properties within the specified radius of the subject properties and any such warranty or guarantee is expressly disclaimed. Accordingly, some properties within the aforementioned radius and the information concerning those properties may not be referenced in this report.

City Directory Abstract

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist professionals in evaluating potential liability on a target property resulting from past activities. ASTM E 1527-00, Section 7.3 on Historical Use Information, identifies the prior use requirements for a Phase I environmental site assessment. The ASTM standard requires a review of *reasonably ascertainable standard historical sources*. *Reasonably ascertainable means information that is publicly available, obtainable from a source with reasonable time and cost constraints, and practically reviewable.*

To meet the prior use requirements of ASTM E 1527-00, Section 7.3.4, the following *standard historical sources* may be used: aerial photographs, fire insurance maps, property tax files, land title records (although these cannot be the sole historical source consulted), topographic maps, city directories, building department records, or zoning/land use records. ASTM E 1527-00 requires *"All obvious uses of the property shall be identified from the present, back to the property's obvious first developed use, or back to 1940, whichever is earlier. This task requires reviewing only as many of the standard historical sources as are necessary, and that are reasonably ascertainable and likely to be useful."* (ASTM E 1527-00, Section 7.3.2, page 12.)

EDR's City Directory Abstract includes a search and abstract of available city directory data.

City Directories

City directories have been published for cities and towns across the U.S. since the 1700s. Originally a list of residents, the city directory developed into a sophisticated tool for locating individuals and businesses in a particular urban or suburban area. Twentieth century directories are generally divided into three sections: a business index, a list of resident names and addresses, and a street index. With each address, the directory lists the name of the resident or, if a business is operated from this address, the name and type of business (if unclear from the name). While city directory coverage is comprehensive for major cities, it may be spotty for rural areas and small towns. ASTM E 1527-00 specifies that a *"review of city directories (standard historical sources) at less than approximately five year intervals is not required by this practice."* (ASTM E 1527-00, Section 7.3.2.1, page 12.)

NAICS (North American Industry Classification System) Codes

NAICS is a unique, all-new system for classifying business establishments. Adopted in 1997 to replace the prior Standard Industry Classification (SIC) system, it is the system used by the statistical agencies of the United States. It is the first economic classification system to be constructed based on a single economic concept. To learn more about the background, the development and difference between NAICS and SIC, visit the following Census website: <http://www.census.gov/epcd/www/naicsdev.htm>.

4. SUMMARY

- *City Directories:*

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2003. (These years are not necessarily inclusive.) A summary of the information obtained is provided in the text of this report.

This report compiles information by geocoding the subject properties (that is, plotting the latitude and longitude for such subject properties and obtaining data concerning properties within 1/16th of a mile of the subject properties). There is no warranty or guarantee that geocoding will report or list all properties within the specified radius of the subject properties and any such warranty or guarantee is expressly disclaimed. Accordingly, some properties within the aforementioned radius and the information concerning those properties may not be referenced in this report.

Re: 1901, 1925, 1933 Bundy Drive, Los Angeles, CA 90064

I, the undersigned, being the Custodian or Keeper of Records, certify that a thorough search for the records you requested was carried out under my direction and control.

This search revealed no records.

It should be understood that this does not mean that the records you requested do not exist. It is possible that such records may be misfiled; exist under another spelling, name, or classification; or were not located. However, with the information furnished to our office, and to the best of our knowledge, no records were located.

If you have any questions regarding your request, please contact me at (213) 890-7806.

Very truly yours,

Samuel Kaddis, Deputy Health Officer
Public Health Investigation

Dear Ms. Menjivar:

Subject: Polychlorinated Biphenyl (PCB) Status of Transformers

In response to your to your Fax dated August 4, 2004, the Department is supplying the PCB Status of the transformer serving the properties at 1901, 1925, and 1933 Bundy Drive, Los Angeles, California 90064.

Transformer 028-08-111 on Pole No. 32176M has not been tested for PCB.

If you have any further questions, please submit them in writing to me at following address:

Ref.: CONTROL NO. 33795
Received 8/3/2004

**Re: APPL'S, P/O'S, COMPLAINTS & EMISSIONS SUM. FOR 1901
BUNDY DR., LOS ANGELES, CA.**

After a thorough search of this agency's records, the following records were found:
EQL FOR 1901 BUNDY DR., LOS ANGELES, CA.

The following records were not found:
NO P/O'S, COMPLAINTS OR EMISSIONS SUM. FOUND.

These records total less than 10 pages,so there is no charge for the direct cost of duplication.

If you have any questions, please do not hesitate to contact me, Tuesday through Friday, **8:00 a.m. to 4:30 p.m.**

Sincerely,

COLLEEN PAINEx2594

Professional Profiles

Brett H. Bowyer, R.G.

Partner

Mr. Brett Bowyer has 19 years of hydrogeologic, remediation, and project/program management experience in the environmental field. Mr. Bowyer, a Principal at ERM's Southern California office, has served as the primary technical consultant on a variety of projects and programs, involving diverse client objectives, including mergers and acquisitions; fast-track, multimedia investigations to support property redevelopment/brownfield; agency- (USEPA, California Department of Toxic Substances Control [DTSC], Regional Water Quality Control Board [RWQCB], and CUPA) driven remedial investigation/feasibility studies (RI/FS); litigation support involving cost recovery; and defense-related issues. He has worked for major transportation firms, chemical and oil companies, electronics/semiconductor manufacturers, real estate developers, law firms, insurance carriers, municipal/hazardous waste management companies, and the aerospace industry. Mr. Bowyer has also served as the technical lead for Potentially Responsible Parties (PRP) groups on several high-profile projects in the Southern California area.

Mr. Bowyer has designed and managed over 150 hydrogeological investigations. He is a technical expert in various innovative investigation techniques, such as direct push soil sampling, multi-phase sampling techniques, active soil gas surveys, various drilling methodologies, and standard and multi-depth ground water sampling procedures. Mr. Bowyer specializes in the design and implementation of innovative and effective data collection, evaluation, and visualization techniques.

Mr. Bowyer has also planned and implemented numerous effective remedial solutions, including in and ex situ soil vapor extraction, bioremediation, recycling, air sparging, free product recovery, soil stabilization, chemical oxidation, and monitored natural attenuation.

Registration

- Registered Geologist, California (#5720) and Idaho (#774)

Fields of Competence

- Superfund program design and implementation
- Hydrogeologic and remedial evaluations
- Property redevelopment/brownfield programs
- Environmental insurance cost evaluation
- Strategic planning and regulatory negotiation
- Site remediation and closure
- Cost allocation and recovery
- Program management
- Multi-party PRP representation

Education

- B.S., Geology, California State University, 1985
- Graduate Course Work, Hydrogeology, California State University, 1986
- Capture Plume Analysis Short Course, Association of Groundwater Scientists and Engineers, 1992
- Risk Assessment Short Course, Association of Groundwater Scientists and Engineers, 1993
- Emergency Response Cleanup Training to Specialist Level, Southern Pacific 40-Hour Course, 1994

Key Projects

Served as principal investigator for development consortium acquiring a approximately 120 acres of former industrial property in El Segundo as part of major new commercial retail development. Facilities being acquired include former Honeywell Chemical plant, former General Chemical Chemical facility, and Air Products facility. Issues of concern include pesticides, volatile organic compounds (VOCs), heavy metals, and refrigerants.

Principal-in-Charge of all Phase I and remedial oversight projects conducted on behalf of Los Angeles Unified School District (LAUSD). Projects have involved former oil field operations, pesticides from former agricultural uses, methane gas, dry-cleaning facilities, and potential indoor air quality issues associated with off-gasing of impacted ground water emanating from off-site sources, and metals within on-site soil.

Served as Principal-in-Charge of former oil field site investigation and cleanup program in Santa Clarita, CA. Work conducted as part of 320-acre development, which will include major new golf course and 300 custom-built luxury homes. Remedial work involves removal of VOCS, removal of surface hydrocarbon impacts, and passive methane gas venting system.

Served as project manager or Principal-in-Charge for Union Pacific Railroad Company (UPRR) projects in Southern California, including Taylor Yard, Colton Yard, San Bernardino Yard, Cornfield Yard, Home Junction, and Long Beach Yard. Worked with UPRR project managers to define scope of work, assigned appropriate staff, reviewed all significant deliverables, and negotiated with regulatory agencies.

Served as Principal-in-Charge for site investigation and remediation program at BNSF's San Bernardino Rail Yard. Oversaw remedial alternatives analyses, feasibility studies, and workplan development. Negotiated with DTSC and RWQCB for approval of remedial action workplans and expedited investigation and remediation program to facilitate "on-schedule" property redevelopment.

Served as Principal-in-Charge for site investigation and remediation program at BNSF's rail yard in Barstow, CA. Oversaw comprehensive subsurface soil and ground water investigation (60 soil borings and 20 monitoring wells), and negotiated phased approach with Lahontan RWQCB resulting in significant reduction in overall investigation costs.

Technical representative for a di minimis group of PRPs in cash-out negotiations with working parties within high-profile Southern California Superfund site. Based on convincing technical arguments, di minimis group successfully negotiated favorable settlement with no reopeners for future inter-basin allocations or emerging chemicals.

Assisted major Southern California landowner in cleanup and sale of 30-acre parcel to Legacy Partners for development of multi-tenant industrial/commercial park. Cleanup program involved removal of lead, petroleum hydrocarbons, and VOCs on accelerated basis to meet terms of sale.

Managed Charnock Initial Regional Response Activities (CIRRA) on behalf of multi-party group (including ARCO, Chevron, Exxon Mobil, Tosco, Unocal, and others) in response to Participation and Cooperation Orders issued by USEPA and RWQCB. Task completed involved evaluating and commenting on regional ground water model, developing of conceptual approach for focused remedial program to address MtBE, and development of *Aquifer Test Workplan*.

Developed interim remedial measure in conjunction with outside counsel for removal of 3,000 cubic yards of PCB- and VOC-impacted soil at Superfund site in Marina Del Rey area of Los Angeles, CA. Developed risk-based corrective action (RBCA) strategy to eliminate primary source of contamination followed by evaluation of residual site risks.

Performed technical and managerial oversight for 250-acre railroad facility within San Gabriel Valley Federal National Priority List (NPL) site study area.

Managed high-priority hydrocarbon investigation and cleanup program for ARCO Products Company. Project included negotiations and settlements with three other major oil companies. Negotiated and coordinated activities that involved other major oil companies and Orange County Health Care Agency.

Designed and implemented on-site remedial action program to address RCRA waste associated with former metal recycler in Los Angeles, CA. Facility abandoned with 5,000 tons of auto-shredder waste (containing high levels of extractable lead, zinc, copper, and petroleum hydrocarbons) left on site. Stabilized on-site metals and transported and disposed of material as nonregulated waste. Saved client \$1 million.

Managed investigation program of former drycleaning facility in Westminster, CA, for one of several PRPs. Program responded to Cleanup and Abatement Order issued by RWQCB.

Designed and implemented pneumatic fracturing and air sparging system to remove residual and dissolved phase hydrocarbons from ground water and semi permeable underlying shale units. System operation resulted in reduced subsurface hydrocarbons; completed closure application. Performed work for client in oil and gas industry.

Managed hydrocarbon remediation program that included designing, permitting, installing, and operating vapor extraction and off-gas treatment system in Los Angeles, CA. Off-gas treatment methodology consisted of regenerative thermal oxidation system, which was not previously permitted for use by South Coast Air Quality Management District by City of Los Angeles Fire Department. Performed work for client in oil and gas industry.

Represented major transportation firm as one of 20 PRPs at El Monte Operable Unit of San Gabriel Valley Superfund site, CA. Based on effort, client significantly influenced PRP group's decision-making process and reduced its potential share of financial liability.

Developed and implemented in situ bioremediation program that incorporated various methodologies for monitoring enhanced biodegradation process to clean up soil and ground water affected by diesel fuel oil at Penske Truck Leasing facility in City of Industry, CA.

Managed implementation of excavation and ex situ soil vapor extraction program that involved 1,200 cubic yards of gasoline-affected soil at former underground storage tank site. Completed remedial program within 2-month timeframe and adhered to Caltrans-specified schedule. Conducted project work for Penske Truck Leasing company.

Participated in extensive multi-aquifer test program that utilized 140 wells for major semiconductor manufacturing company in Silicon Valley, CA. Performed test as part of ground water modeling program designed to quantify client's contribution to contaminant plume.

Served as senior technical advisor on accelerated cleanup program at prime, 8-acre commercial real estate property in Santa Monica, CA. Identified several areas of concern based on results of investigation. Implemented remedial procedures to address halogenated and aromatic hydrocarbon removal. Completed ex and in situ vapor extraction, and obtained closure from Los Angeles RWQCB in 1-year time frame. Client met obligations of escrow, and purchase was completed.

Conducted drilling and piezometer/extraction well installation program at Ventura County landfill; employed coring, mud rotary, air rotary, and casing hammer drilling techniques. Placed extraction wells in fill cells with leachate and ground water to conduct aquifer test program.

Represented confidential client in CERCLA cost recovery claim against neighboring facilities. Demonstrated that VOC and petroleum hydrocarbon impacts were result of releases from neighboring sites. Based, in part on strength of technical arguments, out-of-cost settlement was reached with representatives of neighboring facilities.

Designed and constructed vapor extraction pilot test unit and set up data collection and evaluation procedures. Evaluated effectiveness and estimated cost of implementing vapor extraction and in situ biodegradation remedial efforts at numerous sites in Los Angeles, CA.

Served as Principal-in-Charge for initial site assessments of 53 1-mile-square parcels in Mohave Desert for transfer to BLM by real estate developer. Ensured required staff was available to conduct fast-track assessments, and performed QA/QC for draft and final reports.

Principal-in-Charge for two initial site assessments and subsequent site investigation of packaging company involving soil gas survey, surface soil sampling, and subsurface soil and ground water sampling. Secured *No Further Action* designation from RWQCB for VOCs in soil.

Designed and managed closure programs in San Francisco Bay Area, California, for A.O. Smith Corporation and Harris Semiconductors Inc. Received closure for both facilities following implementation of cleanup and demolition activities.

Managed investigation program for Sheppard, Mullin, Richter, & Hampton involving former dry-cleaning facility in Garden Grove, CA. Used results in conjunction with risk assessment to negotiate cleanup goals with Santa Ana RWQCB.

Performed Phase I environmental site assessments for large land acquisition program for Fortune 500 developer. Based on audit results, arranged purchase agreement and completed transaction.

Managed investigation and remediation program that involved former wood treatment dip tank in Los Alamitos, CA. Soil and ground water beneath tank impacted with pentachlorophenols. Developed and used total costs for remedial effort by client and outside council to support cost recovery efforts from past property lessees.

Designed free product recovery system at site near Los Angeles International Airport, CA, for client in oil and gas industry. System recovered product from numerous wells without affecting hydraulic gradients in area that may have resulted in further site contamination.

Planned, supervised, and managed subsurface investigation at former landfill area for commercial development corporation in Torrance, CA. Converted area into high-rise office complex with attached parking and landscaped grounds.

Evaluated in and ex situ vapor extraction, excavation, bioremediation, and landfilling remedial options for gasoline and diesel spills affecting vadose zone at various sites in Los Angeles, Orange, and San Diego Counties, CA. Presented and contrasted total costs, long-term liability factors, and disruption of ongoing site operations on site-by-site basis for each proposed remedial action.

Obtained regulatory approval and implemented removal action at California Bond Expenditure Plan Superfund site for Southern Pacific Transportation Company. Recycled 20,000 tons of lead-impacted soil.

Managed preliminary endangerment assessment for PCB-impacted site at former electric power generating facility in Santa Fe Springs, CA. DTSC accepted preliminary endangerment assessment results with minimal comments.

Technical lead for major transportation firm in non-binding arbitration associated with allocation of remedy costs for Puente Valley Operable Unit of San Gabriel Valley Superfund Site. Three-dimensional visualization software and ground water flow modeling was used to demonstrate that impacts to client's site resulted from DNAPL released from upgradient facility.

Performed technical quality control/quality assurance of RI/FS program for California Superfund site within study area of Pollock Well Field, Federal NPL site.

Sheri Cook-Johnstone, R.E.A.

Ms. Sheri Cook-Johnstone has over 6 years of environmental consulting and training experience. She has proven skills in environmental compliance audits, Phase I environmental site assessments (ESAs), training, emergency planning, and sampling programs for a wide range of industries including manufacturing, real estate development, financial, and educational.

Ms. Cook-Johnstone has managed environmental compliance programs for manufacturing facilities, including auditing, permitting, waste management and minimization, water quality control, emergency response, and air emissions control. She has particular expertise in solid waste management, including auditing and the development of waste reduction workplans and recycling programs.

Ms. Cook-Johnstone's training capabilities include developing and conducting Phase I ESAs training courses and developing manuals for several Ontario colleges and the Associated Environmental Site Assessors of Canada (AESAC). She has also developed and implemented emergency response and preparedness plans and training programs for various manufacturing facilities in Canada.

As well, Ms. Cook-Johnstone has provided field assistance for Phase II site investigations and soil and ground water monitoring programs.

Registration

- Registered Environmental Assessor (REA-07790)
- Certified Environmental Site Assessor
- Applied Science Technologist (A.Sc.T)

Fields of Competence

- Environmental compliance programs
- Environmental, health, and safety (EHS) auditing
- Phase I and II ESAs
- Solid waste management
- Emergency response and preparedness
- Risk management planning
- Indoor air quality monitoring
- Chemical safety
- Spill prevention and control
- Storm water pollution prevention
- Soil and ground water sampling and monitoring

Education

- B.A., Geography and Environmental Studies, McMaster University, Hamilton, Ontario, Canada, 1994
- Post Diploma Degree, Environmental Management, Niagara College, St. Catharines, Ontario, Canada, 1995

Professional Affiliations

- Ontario Association of Certified Engineering Technologists and Technicians (OACETT)
- Environmental Auditing Association (EAA)

Publications

- *Environmental Site Assessments and Due Diligence*, Presented at Environmental Auditing Conference, Toronto, Ontario, March 13, 1997.

Key Projects

Managed and maintained environmental compliance at more than 20 of Magna International's automotive manufacturing facilities in Ontario, Canada. Compliance projects included annual EHS auditing, storm and sanitary sewer sampling programs, certificate of approval applications for air emissions, solid waste management and auditing, and emergency response planning.

Managed over 300 Phase I ESAs for various clients in the industrial and commercial sectors in Canada and the United States.

Designed and implemented a Storm Water Pollution Prevention Plan (SWPPP), Spill Prevention Control and Countermeasures Plan (SPCC) and Hazardous Materials Business Plan (HMBP) for a leading manufacturer of home and personal care products.

Developed comprehensive written Risk Management Plan, Emergency Response Plan, and Compressed Gas Safety Plan for a semiconductor wafer manufacturing facility.

Participated in a comprehensive regulatory compliance audit identifying regulatory deficiencies in Title V air permit conditions at one of California's leading oil refineries.

Developed an Emergency Response and Preparedness Plan and guidance manual for LTV Copperweld Canada's manufacturing facility in Woodstock, Ontario. The manual contents included spill preparedness, personal protective equipment, fire-fighting equipment, evacuation routes, emergency response planning, and response procedures.

Developed and presented a Phase I ESA study course for Centennial College, Toronto, Ontario, and for the Associated Environmental Site Assessors of Canada (AESAC).

Developed site-specific written Health and Safety Plans (HASP) to conduct subsurface investigative work at various industrial facilities.

Conducted Phase II site investigations and monitoring, such as soil and ground water sampling and well development, for various industrial facilities in Ontario, Canada.
