ENVIRONMENTAL  
UNIT

Dear Sirs

I am writing you concerning  
the Canyon Hills Project EIR case  
No. ENV-2002-2481-EIR and reference  
No. Sch # 2002091018

The EIR is flawed and should  
be redone!!

This report is downplaying any  
impact on the area to be developed.  
For instance, this project impacts  
coastal sage scrub, deerwood scrub,  
riparian forest, live oaks and other  
flora that is significant and necessary  
for the environment and wildlife  
in this area.

24-1

This project states in the EIR report  
and I quote "No state or federally  
listed species were identified in the  
study area."

This statement is completely false.  
I have lived in South Bunland since  
1987 and I have seen with my own  
eyes deer, bobcat, road runners, red  
tail hawks, peacock, grey squirrels,  
raccoon and of course coyotes.

24-2

I have seen deer walking trails  
in the project area. Last summer  
a cougar was spotted on my street

by a police cruiser, and I live just north of the project area.

24-2

This project will be a blight for our community, it is totally against the community plan for this area.

24-3

This project would increase traffic, congestion, and pollution in my area.

24-4

I live on Woodward Ave and the proposed access road for Woodward would greatly increase traffic on my street alone (if not now on the future when they open that road)

24-5

Please, don't let this project go thru. I moved up to Sunland-Tujunga for the peace and quiet of the foothills. This project would change zoning laws that are necessary for the Sunland-Tujunga area.

24-6

10140 Woodward Ave.

Sunland, CA 91040-3342

Sincerely  
Randy Ruiz
