The trip generation estimated by the Travel Demand Forecasting (TDF) model was categorized according to the origin and destination of each trip. In the following discussion regarding VMT calculation using origins and destinations, internal trips are referred to with an “I” and external trips are referred to with an “X”. Internal-to-internal (II) trips remain within the Project Area. Internal-to-external (IX) trips originate within the Project Area and terminate at an outside destination. External-to-internal (XI) trips originate outside the Project Area and terminate within it. The VMT calculation accounts for all internal (II) trips and trips that begin or end (IX or XI) within the Project Area, as these trips are generated by or are attracted to land uses within the Project Area. The travel behavior effects of land use and network changes within the Project Area can be understood by measuring the VMT of trips originating in and/or destined for the Project Area.

VMT is reported as Total Daily VMT per Service Population, which equates to all VMT for the Project Area divided by the number of people living and working within the Project Area. For more information on the use of VMT and service population, see the *Environmental Impacts* section.

An alternative method for measuring VMT is known as the “boundary method”, which accounts for all vehicle miles traveled strictly within the border of a defined area. This method would include VMT for trips passing through, but not originating in or destined for, the Project Area. Although a valid method for measuring VMT, it less effectively measures the regional travel effects of Project Area land uses, and includes travel that passes through the area, which is unrelated to the CASP’s land uses. This method was not used to calculate VMT for the purposes of this report.

Figure 4.15-1 Existing Roadway Network

The tables below summarize the travel characteristics under Existing Conditions for the Project Area. Table 4.15-1 presents the model estimates of vehicle mode split for automobiles, transit, bicycles and walk trips. According to model estimates, approximately 16 percent of all trips within the Project Area are made by transit, walking, or biking. This is 4 percentage points less than trips across the City of Los Angeles at large.

TABLE 4.15-1 2021 MODE SPLIT		
Travel Mode	Project Area Percentage (%)	Citywide Percentage (%)
Automobile	84%	80%
Non-Automobile (transit/bike/walk)	16%	20%
SOURCE: Fehr & Peers, <i>City of Los Angeles Model</i> , 2021.		

Table 4.15-2 summarizes the Daily vehicle trips (VT) and VMT within the Project Area. **Table 4.15-3** summarizes the Daily vehicle trips (VT) and VMT Citywide. **Table 4.15-4** summarizes the Daily vehicle trips (VT) and VMT Regional-wide in 2021, interpolated from the SCAG 2012 base and 2040 future TDF models.

TABLE 4.15-2 2021 CASP DAILY VEHICLE TRIPS AND VEHICLE MILES TRAVELED	
Transportation Metrics	Daily Total
Vehicle Trips (VT)	41,323
Total Vehicle Miles Traveled (VMT)	328,439
Vehicle Miles Traveled per Service Population	28.7
SOURCE: Fehr & Peers, 2021.	

TABLE 4.15-3 2021 CITYWIDE DAILY VEHICLE TRIPS AND VEHICLE MILES TRAVELED	
Transportation Metrics	Daily Total
Vehicle Trips (VT)	17,608,140
Total Vehicle Miles Traveled (VMT)	134,912,420
Vehicle Miles Traveled per Service Population	22.6
SOURCE: Fehr & Peers, 2021.	

TABLE 4.15-4 2021 SCAG REGIONWIDE DAILY VEHICLE TRIPS AND VEHICLE MILES TRAVELED	
Transportation Metrics	Daily Total
Vehicle Trips (VT)	81,981,938
Total Vehicle Miles Traveled (VMT)	919,653,837
Vehicle Miles Traveled per Service Population	33.1
SOURCE: Fehr & Peers, 2021.	

The Daily VMT generated by uses from, to, and within the Project Area is approximately 328,439 miles, which equates to 28.7 VMT per service population. Citywide, the Travel Demand Forecasting (TDF) Model estimates a total of 17,608,140 daily vehicle trips for a total of 134,912,420 daily vehicle miles traveled. This results in an average daily VMT per service population of 22.6. Regional-wide, the SCAG Model

estimates a total of 81,981,938 daily vehicle trips for a total of 919,653,837 daily vehicle miles traveled. This results in an average daily VMT per service population of 33.1.

Level of Service (LOS)

Another way to understand existing traffic conditions is to study existing traffic volumes with an analysis of the operating conditions, indicated through volume-to-capacity (V/C) ratios and Level of Service (LOS). LOS was used previously as the primary method for determining CEQA transportation-related impacts but, upon implementation of VMT thresholds, vehicle delay or traffic congestion is no longer a significant impact in itself and is now considered only as it relates to secondary impacts such as emergency access. Recent changes in State legislation and the related guidance from OPR have moved analysis to VMT in order to support Statewide Greenhouse Gas Emissions (GHG) reduction goals and encourage multi-modality in California cities. Traditional mitigation measures to address increases in vehicle delay often involved increasing capacity (i.e., the width of a roadway or intersection), which has the potential to induce more trips/VMT and does not support State goals.

As an informational metric, LOS is a measure used to describe the condition of traffic flow, ranging from excellent conditions at LOS A to overloaded conditions at LOS F. LOS can be determined by dividing the number of vehicles (i.e., volume (V)) by roadway capacity (C), and the resulting V/C ratio is then used to obtain the corresponding LOS. To determine the operations of the roadway network during peak commute hours, a LOS analysis was conducted for the roadways in the Project Area.

The highest peak period traffic volume during the AM peak period (6AM – 9 AM) or PM peak period (3 PM – 7PM) on roadways within the Project Area are displayed in **Figure 4.15-2** and **Figure 4.15-3**, AM Peak Period Level of Service and PM Peak Period Level of Service, respectively. It should be noted that because traffic volumes are a result of the collective travel choices of thousands of individual drivers, variation in the daily and peak period volumes on any given facility is both expected and observed. The Federal Highway Administration (FHWA) guidelines recommend that traffic models be calibrated to within 7 to 15 percent for freeway and arterial volumes to account for this regular variation. This range is based on studies that show that this range represents the average daily fluctuation in traffic for major roadways. Accordingly, the estimates of both existing and future conditions are subject to regular variation due to fluctuations in travel demand (or the travel choices of the thousands of individual drivers using the Project Area roadways).

The LOS of the study corridors was determined based on the V/C ratio using the City of Los Angeles TDF model. This ratio was calculated by comparing peak period traffic volumes to the roadway capacity for each facility. The roadway capacities reflect the operating characteristics of the study corridors, such as functional classifications, number of lanes, and travel speeds. Functional classification is a scale that determines the vehicles-per-lane-per-hour capacity; higher classifications generally have more and wider lanes and are designed to facilitate a higher volume of vehicles per hour. **Table 4.15-5** summarizes the typical travel conditions for the roadway network (using a weighted average V/C ratio) and the percentage of roadway segments operating at LOS E or F. The weighted average V/C ratio represents typical travel conditions for the roadway network in the Project Area.

TABLE 4.15-5 EXISTING 2021 ROADWAY SEGMENT LEVEL OF SERVICE (LOS)		
Transportation Metrics	Analyzed Time Period	
	AM Peak Period	PM Peak Period
Weighted Average V/C	0.68 (LOS B)	0.73 (LOS C)
Percentage (%) of Street Segments at LOS E or F	2%	5%
Weighted Average V/C by Facility Type		
Avenue	0.70 (LOS C)	0.75 (LOS C)
Boulevard	N/A	N/A
Local / Collector	0.47 (LOS A)	0.57 (LOS A)
SOURCE: City of Los Angeles TDF Model, Fehr & Peers, 2021.		

Approximately 2-5percent of the roadways operate at an LOS E or F during the AM and PM peak periods. The weighted average V/C ratio is 0.68 (LOS B) in the AM peak period and 0.73 (LOS C) in the PM peak period.

Reliability

Citywide and Project Area Reliability

The VMT results presented in this section reflect typical weekday (Tuesday through Thursday) conditions within the City of Los Angeles TDF Model and the Project Area without major incidents and under mild weather conditions. Atypical traffic conditions, such as a collision on the freeway, rainy weather or a special event, can impact travelers in a given plan area. The reliability of the roadway network can be impacted by these occurrences and is a common frustration for drivers. The bus transit system can also be affected by these events.

Emergency Access

Citywide Emergency Access

California state law requires that drivers yield the right-of-way to emergency vehicles and remain stopped until the emergency vehicles have passed. Generally, multi-lane roadways allow the emergency vehicles to travel at higher speeds and permit other traffic to maneuver out of the path of the emergency vehicle. In addition, the LAFD in collaboration with LADOT has developed a Fire Preemption System (FPS), a system that automatically turns traffic lights to green for emergency vehicles travelling on designated streets in the City (LADOT 2016a). The City has over 205 miles of routes equipped with FPS (LAFD 2008).

Within the City of Los Angeles, fire prevention and suppression and emergency medical services are provided by the Los Angeles Fire Department (LAFD). Public protection service and law enforcement are provided by LAPD. New development projects in the City may increase the demand for fire protection and emergency medical services, and the LAFD evaluates new project impacts on a project-by-project basis. Consideration is given to project size and components, required fire-flow, response time and distance for engine and truck companies, fire hydrant sizing and placement standards, access, and potential to use or store hazardous materials (Los Angeles 2006). The adequacy of emergency service may be influenced by factors such as staffing levels, emergency response times, and technology improvements, management strategies, and mutual aid agreements. Every year, LAFD assesses its resources and reallocates them based on demand and need citywide. The provision of new fire stations varies as a function of not only the geographic distribution of physical stations but also due to the availability of fire trucks, ambulances, and other equipment as well as access to reciprocal agreements with neighboring jurisdictions. The City requires that development plans be submitted to the City for review and approval to ensure that new development has adequate access, including driveway access and turning radius in compliance with existing City regulations (LAMC).

Figure 4.15-2 Existing AM Peak Period Level of Service

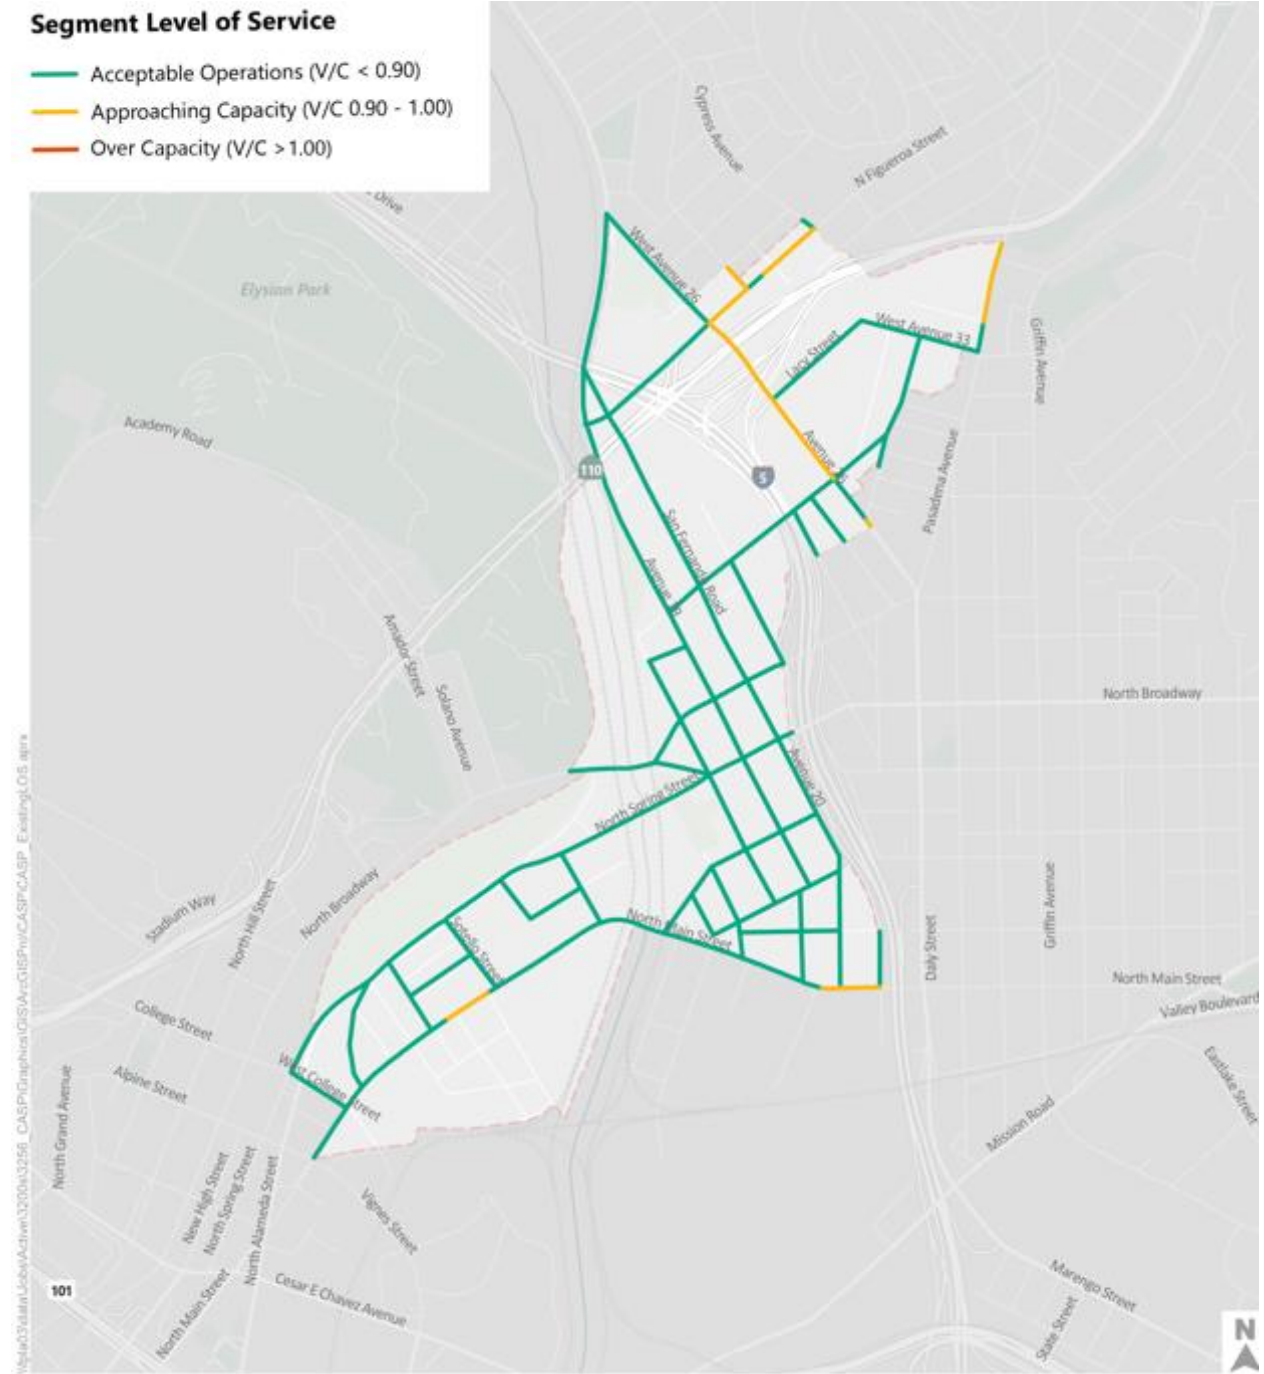

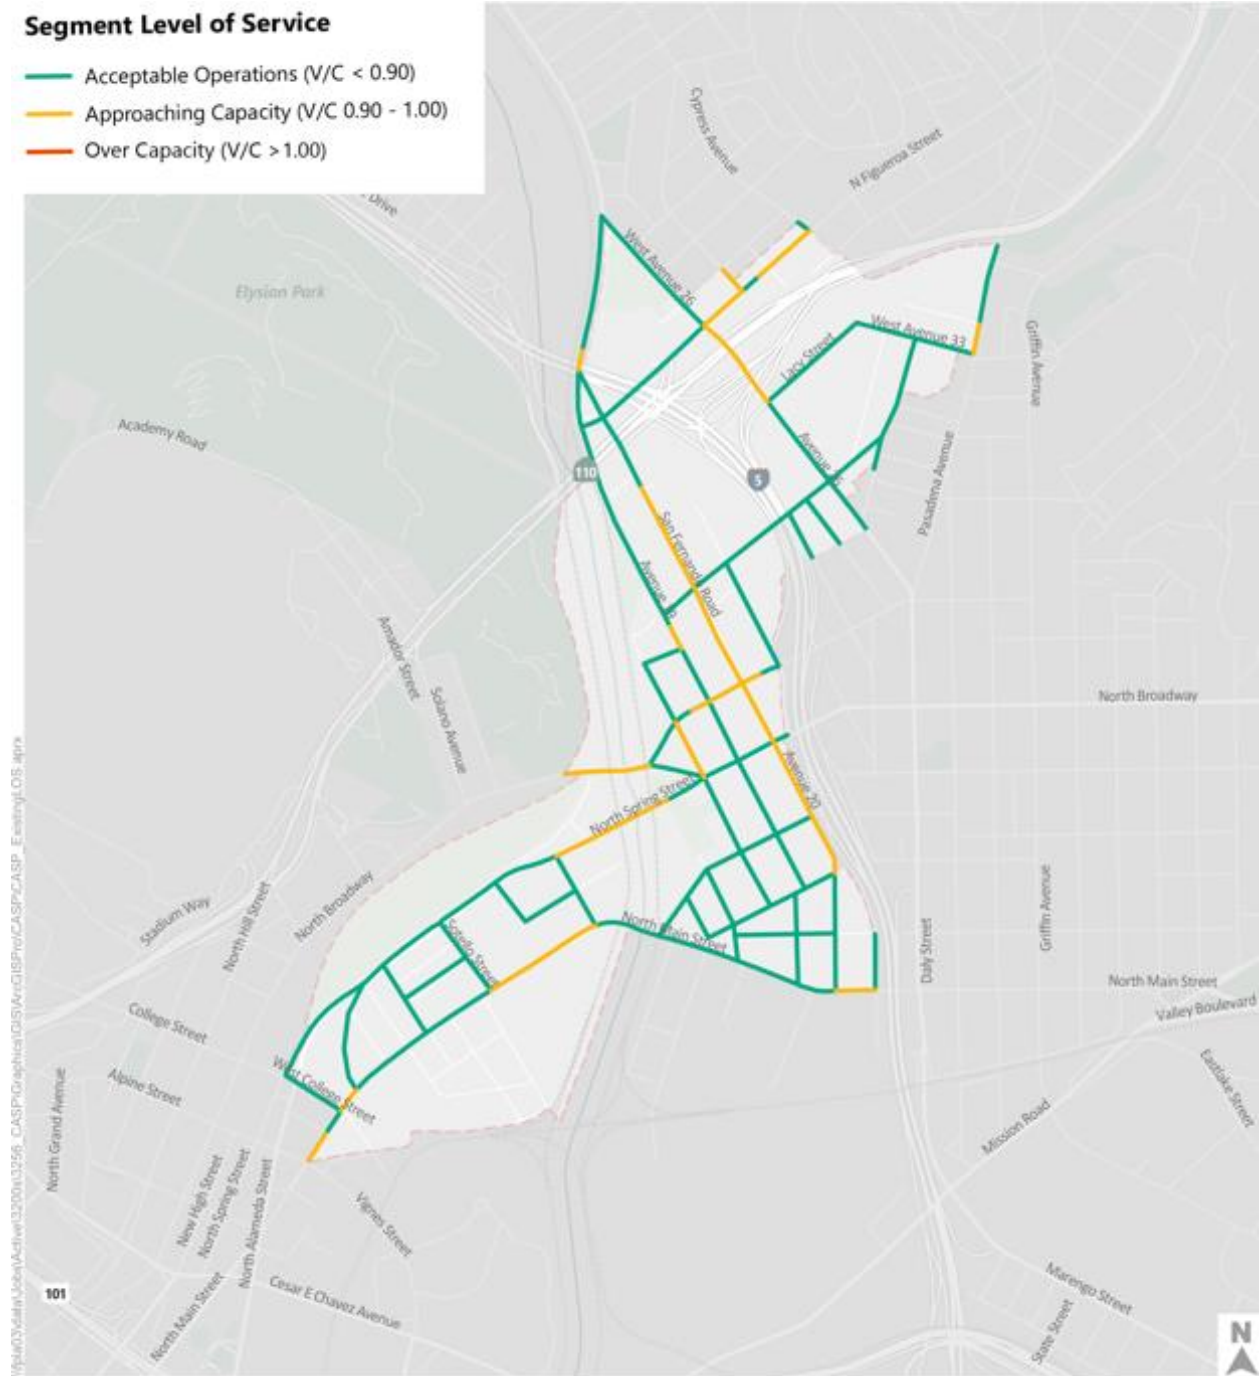

Figure 4.15-3 Existing PM Peak Period Level of Service

Project Area Emergency Access

As discussed above, multi-lane roadways allow emergency vehicles to travel at higher speeds and allow other traffic to maneuver out of the path of emergency vehicles. Within the Project Area, multi-lane roadways include:

North-South Multi-Lane Roadways

- Avenue 26
- Daly Street
- Pasadena Avenue
- San Fernando Road

East-West Multi-Lane Roadways

- Broadway
- Figueroa Street
- Main Street
- Spring Street†

†Roadways with segments that narrow or change from one-way to two-way

Additionally, the I-5, SR-110, and US-101 freeways provide primary emergency access to and from locations within the Project Area.

Table 4.15-6 identifies the existing fire stations in the Project Area and provides the 2021 average response times for Non-EMS and EMS calls.

TABLE 4.15-6 LAFD FIRE STATIONS SERVING THE PROJECT AREA				
Fire Station	Address	LAFD Community	2021 Average Response Times (mins) /a/	
			Non-EMS	EMS
1	2230 Pasadena Avenue, Los Angeles, CA 90031	Central Bureau	07:29	07:24
44	1410 Cypress Avenue, Los Angeles, CA 90065	Central Bureau	6:56	7:26

Note: Non-EMS = fire and other services; EMS = Emergency Medical Services

Public Transit Service

Citywide Public Transit Service

The primary origin/destination for transit in the city at large is Los Angeles Union Station. Located in Downtown Los Angeles, Union Station was built in 1939 to serve as a terminal for local railroads. Today, it serves as a major transportation hub for the region, with Metro, Metrolink, and Amtrak train service, as well as bus service from multiple operators.

Services are provided by multiple transit operators, including Metro Rail, Rapid buses, Express buses, Local buses, LADOT Commuter Express buses, Downtown Area Short Hop (DASH) buses, and other local operators. Below are brief descriptions of the transit operators that provide service within the City:

Metro

Metro is the primary transit operator in Los Angeles County, providing bus, light rail, and subway services as described below.

- Rail & Bus Rapid Transit: There are two Metro heavy rail lines (B Line (Red) and D Line (Purple)), four Metro light rail lines (A Line (Blue), C Line (Green), E Line (Expo), L Line (Gold)) and two bus rapid transit (BRT) lines (G Line (Orange) and J Line (Silver)) operating in exclusive rights-of-way. Headways for Metro rail and bus rapid transit lines are typically as frequent as 15 minutes or less. Bicycles are allowed in designated areas on Metro trains at no extra charge.
- Rapid, Express & Local Bus Lines: Metro also operates approximately 115 bus routes in mixed traffic, with services varying considerably in speed, frequency and capacity. Headways for Metro Rapid buses are typically 10 minutes during peak hours, and 20 minutes during off-peak times. Metro Express buses operate during peak hours only. All buses are equipped with two bicycle racks at the front of the bus, and bicyclists may load their bicycles on the rack when there is space available at no extra charge. If the rack is full, bicyclists are asked to wait for the next bus.

LADOT

LADOT provides local Downtown Area Short Hop (DASH) buses and Commuter Express bus services in the City of Los Angeles. DASH operates 32 community circulator routes covering Downtown Los Angeles and many outlying communities within the City. DASH buses provide local access in addition to first/last-mile connections to and from Metro Rail stations. Headways for DASH buses vary between 5-20 minutes depending on the selected route. The Commuter Express operates 15 routes, making a limited number of stops and transporting passengers between Downtown Los Angeles and other major centers within the City. Most Commuter Express routes operate during the peak hours only in the peak direction. All LADOT buses are equipped with three bicycle racks at the front of the bus, and bicyclists may load their bicycles on the rack when there is space available at no extra charge. If the rack is full, bicyclists are asked to wait for the next bus.

Metrolink

Metrolink operates on seven routes across six-counties, including Los Angeles, Orange, Riverside, San Bernardino, Ventura, and a portion of northern San Diego County. Each Metrolink train accommodates three bicycles on the lower level at no extra charge. To accommodate more bicycles on select trains, “bike cars” (identified with yellow decals on the side of the train) have been added to hold up to nine bikes on the lower level. All Metrolink lines operate during the peak hours only in the peak direction. The following Metrolink services operate within and through the City:

- Antelope Valley Line
- Inland Empire – Orange County Line
- Orange County Line
- Riverside Line
- San Bernardino Line
- Ventura County Line
- 91/Perris Valley Line

Amtrak – Pacific Surfliner

Amtrak is a nationwide rail network, serving more than 500 destinations in 46 states, the District of Columbia and three Canadian provinces. The Pacific Surfliner connects San Luis Obispo and San Diego through Los Angeles and Santa Barbara. This line offers 10 daily round-trip services between San Diego and Los Angeles as of 2021, and five between Santa Barbara and San Diego. Each Amtrak train can

accommodate 6 bicycles per train and must be stored in designated racks. Passengers are recommended to make reservations for bicycle racks at no extra cost.

Los Angeles International Airport (LAX) FlyAway – Union Station

The LAX FlyAway buses offer daily, regularly scheduled round-trips between each terminal at LAX and two locations (Union Station and Van Nuys). FlyAway buses provide services every 30 minutes to an hour. Bicycle racks are not provided on these buses. In Downtown Los Angeles, Flyaway buses depart from Union Station at the Patsaouras Transit Plaza on the east side of the facility.

Other Transit Operators

There are several other transit operators with routes throughout the City: Antelope Valley Transit Authority, Foothill Transit, Gardena GTrans, Greyhound Buses, Montebello Bus Lines, Orange County Transit Authority Express, Santa Clarita Transit Commuter Express, Santa Monica Big Blue Bus, and Torrance Transit.

Project Area Public Transit Service

Transit service in the Project Area is provided by LADOT and Metro. Existing service coverage is shown in **Figure 4.15-4**, Existing Transit Service.

Metro

The following Metro lines currently provide transit service in and through the Project Area:

Metro Rail

- Gold (L) Line

Metro Local Lines

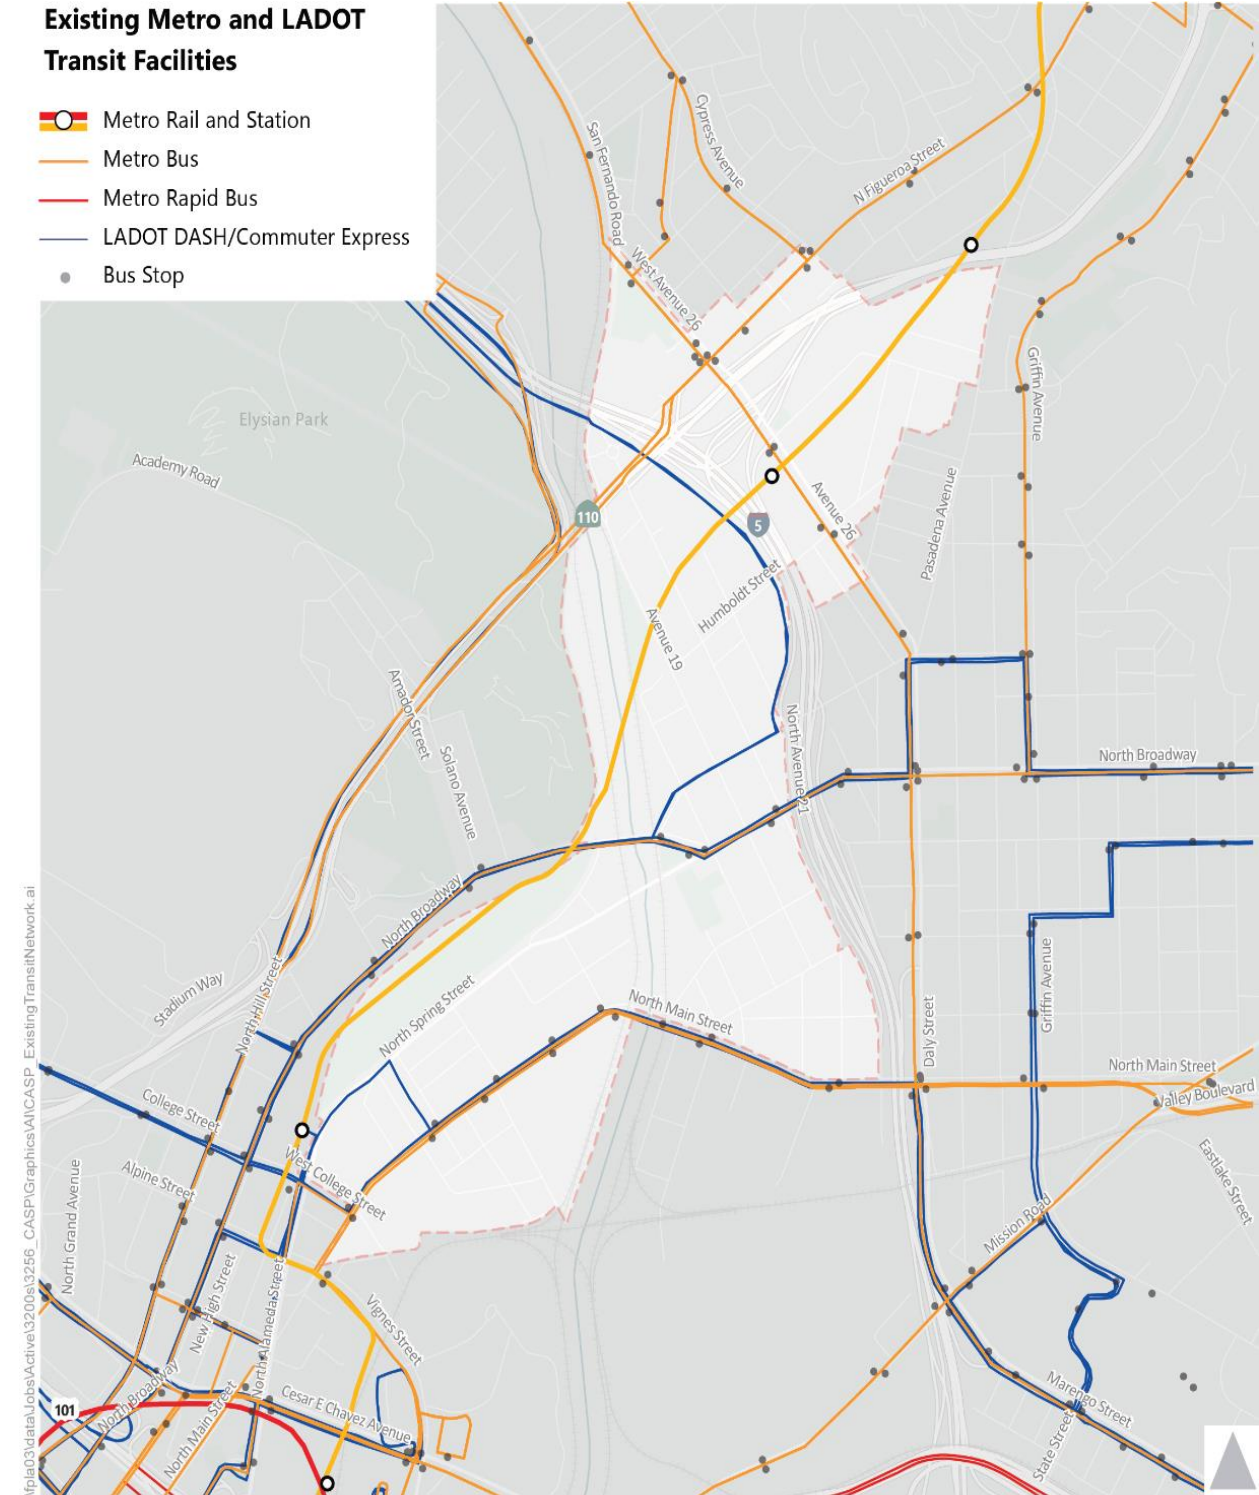

- 45
- 76
- 90
- 94
- 96
- 251

LADOT

The following LADOT services operate within and through the Project Area:

- DASH B (Chinatown, Financial District)
- DASH Commuter Express 413, 419

Figure 4.15-4 Existing Transit Service – Metro and LADOT

Note: This map represents the Existing Conditions year for the purposes of this study as 2021, consistent with the analysis for the scoping year of the project. DASH lines may have since been updated.

Bicycle and Pedestrian Facilities

Citywide Bicycle and Pedestrian Facilities

The City's existing bicycle network consists of approximately 500 miles of on- and off-street facilities including approximately 58 miles of Class I bikeways (bicycle paths), 324 miles of Class II bikeways (bicycle lanes), and 121 miles of Class III bikeways (bicycle routes and bicycle friendly streets) (City of Los Angeles 2015a). Bicycle facilities are defined as off-street bicycle paths (Class I), on-street signed and striped bicycle lanes (Class II), on-street signed bicycle routes (Class III), and protected bicycle lanes or cycle tracks (Class IV). The design features of the various types of bicycle facilities are summarized below.

- **Bicycle Path:** A paved pathway separated from motorized vehicular traffic by an open space or barrier and either within the highway rights-of-way or within an independent alignment. Bicycle paths may be used by bicyclists, skaters, wheelchairs users, joggers, and other non-motorized users. Caltrans refers to this facility as Class I Bikeway, which “provides a completely separated right-of-way for the exclusive use of bicycles and pedestrians with cross flow of motorists minimized.”
- **Buffered Bike Lanes:** Buffered bicycle lanes provide on-street right-of-way in the form of a painted buffer that directs motorists to travel away from the bike lane and provides room for bicyclists to pass another bicyclist without entering the adjacent motor vehicle travel lane. A buffered bicycle lane is considered a Class II bikeway.
- **Bicycle Lane:** A striped lane for 1-way bicycle travel on a street or highway. Caltrans refers to this facility as a Class II bikeway.
- **Bicycle Route:** is a shared roadway specifically identified for use by bicyclists, providing a superior route based on traffic volumes and speeds, street width, directness, and/or cross-street priority, denoted by signs only. Caltrans refers to this facility as a Class III Bikeway.
- **Protected Bicycle Lane (Cycle Track):** A bicycle lane that provides further protection from other travel lanes with a physical roadway intervention. This is considered a Class IV Bikeway.

The City's *Mobility Plan 2035*—the policy foundation for the future of Los Angeles' streets—prioritizes bicycle travel on approximately 1,200 miles of streets and other rights-of-way by designating them on either the Bicycle Enhanced Network (BEN) or the Bicycle Lane Network (BLN). The BEN provides all bicycle paths and protected bicycle lanes expected to be completed by the year 2035. It consists of Bicycle Paths, Protected Bicycle Lanes (also known as cycletracks), and Priority Neighborhood Enhanced Network connections, while the BLN is made up of Bicycle Lanes. The BEN includes the following bicycle facility designations:

- **Tier 1 Protected Bicycle Lane:** Bicycle facilities on arterial roadways with physical separation.
- **Tier 2 Bicycle Lane:** Bicycle facilities on arterial roadways with pavement striping and signage used to allocate a portion of a roadway for exclusive bicycle travel. More likely to be built by 2035 than Tier 3.
- **Tier 3 Bicycle Lane:** Bicycle facilities on arterial roadways with pavement striping and signage used to allocate a portion of a roadway for exclusive bicycle travel.

Pursuant to the California Vehicle Code, bicycles are allowed on any street within the local street system. Pursuant to Los Angeles City Code, bicycles are also allowed on the sidewalk (LAMC 56.15). Bicyclists are able to bring their bikes on board transit in designated areas on Metro trains and on most Metro and LADOT buses on bicycle racks at the front of the bus at no extra cost (City of Los Angeles 2015a). Metrolink and Amtrak also allow bicycles on board.

There are approximately 40,000 intersections in the City, of which 4,300 are signalized and approximately 22,000 contain marked crosswalks (City of Los Angeles 2015a). Conditions vary widely in terms of sidewalk condition, pavement marking visibility, and obstructions in the sidewalk realm. An estimated 42 percent of the City's 10,750 miles of sidewalks are in disrepair (Times 2012). In April 2015, the City of Los Angeles agreed to spend \$1.3 billion over the next 30 years to fix sidewalks throughout the City and produce two reports per year to document its progress in repairing substandard sidewalks.

Pedestrian travel in the City varies based on the circulation network in any given area. Areas that have pedestrian-oriented uses fronting the sidewalk offer a pedestrian-friendly atmosphere whereas other areas characterized by long blocks fronting surface parking lots and industrial land uses offer little pedestrian amenities. In general, sidewalks range from 10 to 12 feet wide. The City of Los Angeles General Plan designates commercial and neighborhood activity centers that are characterized by ground floor retail and service uses oriented to pedestrians along the sidewalk as Pedestrian Priority Street segments. Pedestrian Priority Street segments are recommended to have wider sidewalks of 15 to 17 feet in width and other pedestrian friendly features such as curb side parking, wide crosswalks with a minimum width of 15 feet, and traffic signal modifications (City of Los Angeles 2015a).

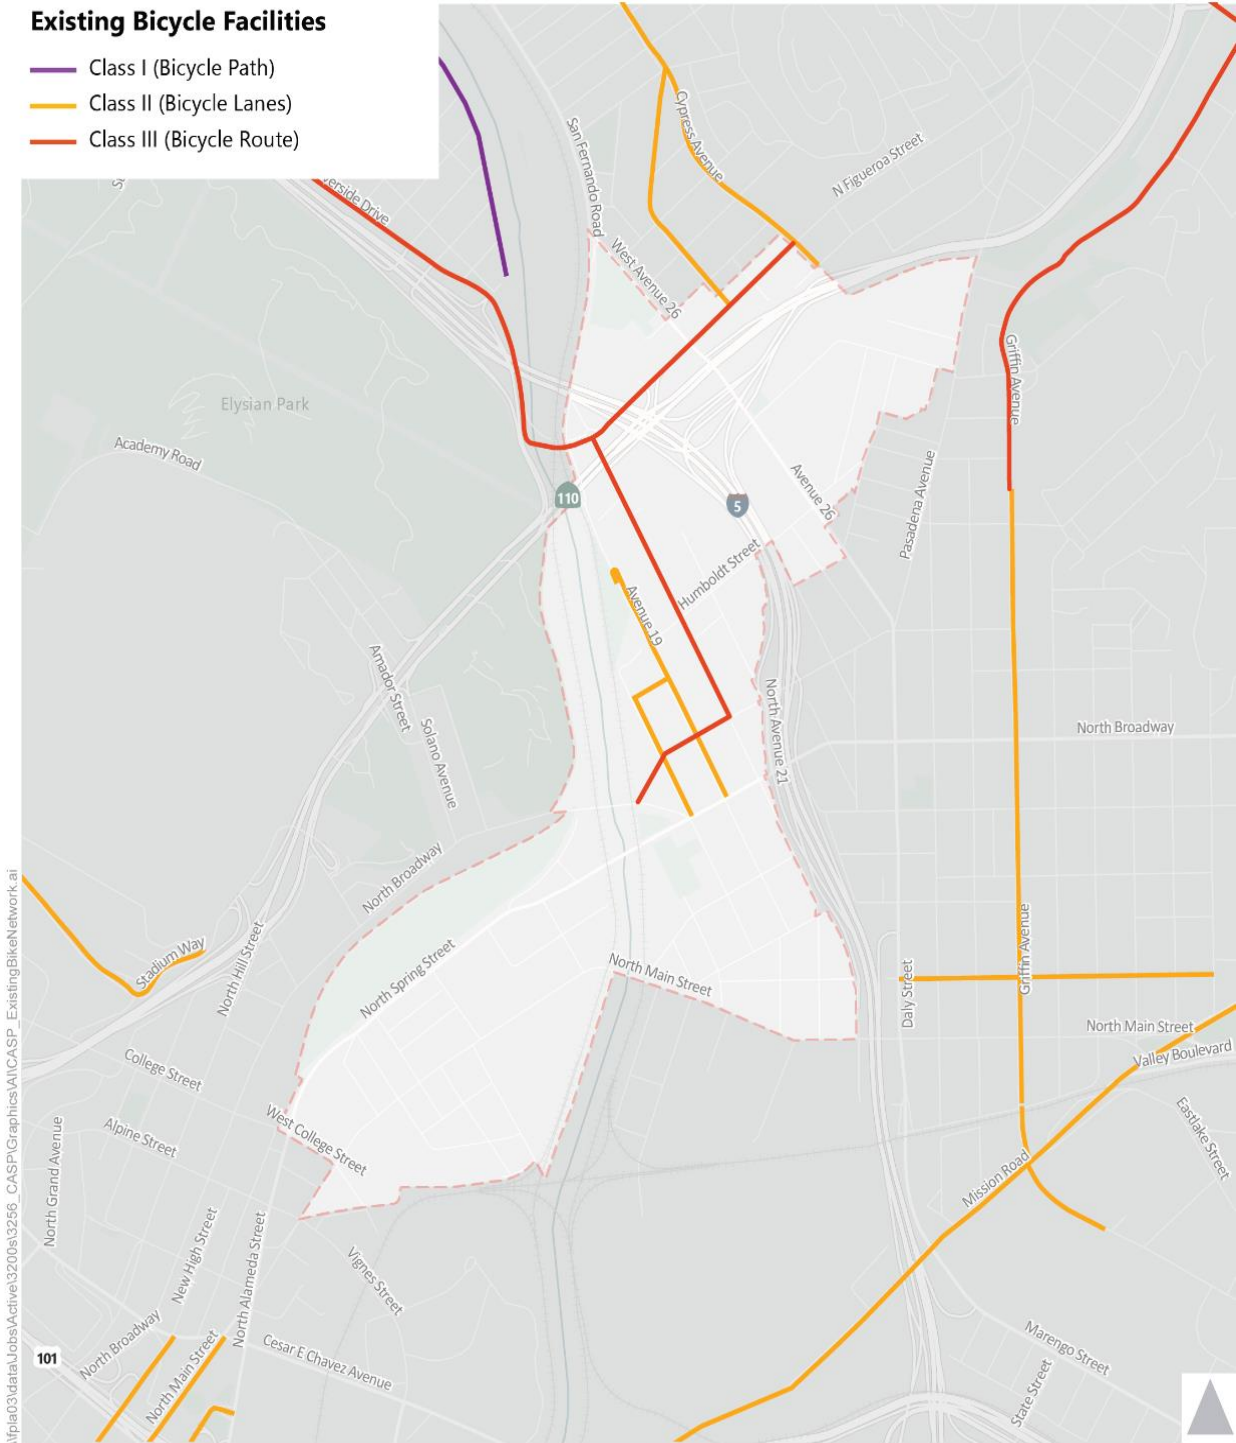

Project Area Bicycle and Pedestrian Facilities

The Project Area includes a network of pedestrian facilities. Crosswalks are generally provided at signalized intersections and sidewalks exist along the frontage of most developed properties. The Project Area is classified as "very walkable" with an average rating of 80 out of 100, as reported by WalkScore.com (WalkScore 2021). Walk Score is a company that provides walk scores, transit scores, and bike scores for neighborhoods ranging from 0-100. A walk score is created by assessing the walkability of an area dependent upon how many errands can be completed by foot. Walking routes are assessed and areas which have amenities within a five-minute walk proximity are scored the highest.

Bike scores from WalkScore.com are created by evaluating available bicycle infrastructure available in an area, frequency of hills, the number of bicycle commuters, and road connectivity. All four components are weighted equally to create a bike score. Bicycle access in the area is less robust, receiving an average score of 73 out of 100. Class II (on-street with signing and striping) bike lanes are generally not provided in the study area, so bicyclists must ride in the same traffic stream as automobiles. However, several streets in the area are identified in the *Mobility Plan 2035* Bicycle Enhanced Network, including Spring Street (Tier 2), Broadway (Tier 1), Main Street (Tier 1), San Fernando Road (Tier 2), Pasadena Avenue (Tier 1), Avenue 18 (Tier 1), Avenue 19 (Tier 2), and Avenue 26 (Tier 2). There are also several existing bicycle facilities in addition to bicycle racks provided at various public and private locations throughout the Cornfield Arroyo Seco Plan Area. **Figure 4.15-5**, Existing Bicycle Network, shows the locations of the existing bicycle facilities within the Plan Area.

The pedestrian network includes sidewalks, crosswalks, and curb ramps, as well as pedestrian amenities such as street trees and benches in some areas. Similar to many areas in the City, the Project Area has an aging network of pedestrian facilities including sidewalks of varying widths. Many areas have pedestrian-friendly features such as curb-side parking, wide crosswalks at most major intersections and traffic signal modifications to ensure longer pedestrian crossing times, where warranted.

Figure 4.15-5 Existing Bicycle Network

Special Event Transportation Operations

Citywide Special Event Transportation Operations

Special events such as the Los Angeles Marathon, Chinese New Year Festival & Parade, AIDS/Lifecycle bike ride, CicLAvia, weekly farmers' markets, organized marches, races, block parties, and similar events frequently require partial or full closure of city streets, including sidewalks and crosswalks, for periods of several hours to several days at a time.

Project Area Special Event Transportation Operations

In addition to Citywide street closures, several destinations within the Project Area host special events that attract large crowds. These venues include but are not limited to:

- **Dodger Stadium:** Located in Elysian Park just north of the Project Area, the baseball stadium is home to Major League Baseball's Los Angeles Dodgers and hosts other sporting events, concerts, and expositions throughout the year. Seat capacity is 56,000.
- **Los Angeles State Historic Park:** The park is located at 1245 North Spring Street and sits on 34 acres of open space directly adjacent to Chinatown. Reopened in April 2017, the park continues to host several outdoor concerts, weekend-long music festivals, evening movie screenings, educational events and exhibitions, craft fairs, and other special events. Additionally, visitors just wishing to enjoy the park can wander and hike its pathways, go for a bike ride, and enjoy a view of the Project Area and includes views of Downtown.

REGULATORY FRAMEWORK

FEDERAL

Americans with Disabilities (ADA) Act of 1990

Titles I, II, III, and V of the ADA have been codified in Title 42 of the United States Code, beginning at Section 12101. Title III prohibits discrimination based on disability in "places of public accommodation" (businesses and non-profit agencies that serve the public) and "commercial facilities" (other businesses). The regulation includes Appendix A through Part 36 (Standards for Accessible Design), establishing minimum standards for ensuring accessibility when designing and constructing a new facility or altering an existing facility. Examples of key guidelines include detectable warnings for pedestrians entering traffic where there is no curb, a clear zone of 48 inches for the pedestrian travel way, and a vibration-free zone for pedestrians.

STATE

Complete Streets Act

Assembly Bill 1358, the Complete Streets Act (Government Code Sections 65040.2 and 65302), was signed into law by Governor Arnold Schwarzenegger in September 2008. As of January 1, 2011, the law requires cities and counties, when updating the part of a local general plan that addresses roadways and traffic flows, to ensure that those plans account for the needs of all roadway users. Specifically, the legislation requires cities and counties to ensure that local roads and streets adequately accommodate the needs of bicyclists, pedestrians and transit riders, as well as motorists.

At the same time, the California Department of Transportation (Caltrans), which administers transportation programming for the State, unveiled a revised version of Deputy Directive 64 (DD-64-R1 October 2008), an internal policy document that now explicitly embraces Complete Streets as the policy covering all phases of state highway projects, from planning to construction to maintenance and repair.

Statewide Transportation Improvement Program (STIP)

Caltrans administers transportation programming for the State. Transportation programming is the public decision-making process that sets priorities and funds projects envisioned in long-range transportation plans. It commits expected revenues over a multi-year period to transportation projects. The STIP is a multi-year capital improvement program of transportation projects on and off the State Highway System, funded with revenues from the State Highway Account and other funding sources.

Senate Bill (SB) 743

On September 27, 2013, Governor Jerry Brown signed Senate Bill (SB) 743, which went into effect in January 2014. SB 743 directed the Governor's Office of Planning and Research (OPR) to develop revisions to the California Environmental Quality Act (CEQA) Guidelines by July 1, 2014 to establish new criteria for determining the significance of transportation impacts and define alternative metrics for traffic LOS. This started a process that changes transportation impact analysis under CEQA. These changes include elimination of auto delay, LOS, and other similar measures of vehicular capacity or traffic congestion as a basis for determining significant impacts for land use projects and plans in California. Additionally, as discussed further below, as part of SB 743, parking impacts for particular types of development projects in areas well served by transit are not considered significant impacts on the environment. According to the legislative intent contained in SB 743, these changes to current practice were necessary to "more appropriately balance the needs of congestion management with statewide goals related to infill development, promotion of public health through active transportation, and reduction of greenhouse gas emissions."

On January 20, 2016, OPR released the Revised Proposal on Updates to the CEQA Guidelines on Evaluating Transportation Impacts in CEQA, which was an update to Updating Transportation Impacts Analysis in the CEQA Guidelines, Preliminary Discussion Draft of Updates to the CEQA Guidelines Implementing Senate Bill 743, which had been released August 6, 2014. Of particular relevance was the updated text of the proposed new CEQA Guidelines Section 15064.3 that relates to the determination of the significance of transportation impacts, alternatives, and mitigation measures. Specifically, CEQA Guidelines Section 15064.3, which is discussed further below, establishes VMT as the most appropriate measure of transportation impacts. In November 2018, the California Natural Resources Agency finalized the updates to the CEQA Guidelines and the updated guidelines became effective on December 28, 2018.

Based on these changes, on July 30, 2019, the City of Los Angeles City Council adopted the CEQA Transportation Analysis Update, which sets forth the revised thresholds of significance for evaluating transportation impacts as well as screening and evaluation criteria for determining impacts. The CEQA Transportation Analysis Update establishes VMT as the City's formal method of evaluating a project's transportation impacts. In conjunction with this update, LADOT adopted its Transportation Assessment Guidelines (adopted in July 2019 and updated in July 2020), which defines the methodology for analyzing a project's transportation impacts in accordance with SB 743.

Parking Cash Out

Assembly Bill (AB) 2109, is a state law requiring employers of 50 or more employees who lease their parking and subsidize any part of their employee parking to offer their employees the opportunity to give

up their parking space and rideshare to work instead. In return for giving up their parking space, the employer pays the employee the cost of the parking space.

Assembly Bill 32 (AB32) and Senate Bill 375 (SB 375)

With the passage of AB 32, the Global Warming Solutions Act of 2006, the State of California committed itself to reducing statewide GHG emissions to 1990 levels by 2020. The California Air Resources Board (California ARB) is coordinating the response to comply with AB 32.

On December 11, 2008, California ARB adopted its Proposed Scoping Plan for AB 32. This scoping plan included the approval of SB 375 as the means for achieving regional transportation-related GHG targets. SB 375 provides guidance on how curbing emissions from cars and light trucks can help the state comply with AB 32.

There are five major components to SB 375. First, regional GHG emissions targets: California ARB's Regional Targets Advisory Committee guides the adoption of targets to be met by 2020 and 2035 for each Metropolitan Planning Organization (MPO) in the state. These targets, which Metropolitan Planning Organization (MPOs) may propose themselves, are updated every eight years in conjunction with the revision schedule of housing and transportation elements.

Second, MPOs are required to prepare a Sustainable Communities Strategy (SCS) that provides a plan for meeting regional targets. The SCS and the Regional Transportation Plan (RTP) must be consistent with each other, including action items and financing decisions. If the SCS does not meet the regional target, the MPO must produce an Alternative Planning Strategy that details an alternative plan to meet the target.

Third, SB 375 requires that regional housing elements and transportation plans be synchronized on 8-year schedules. In addition, Regional Housing Needs Assessment (RHNA) allocation numbers must conform to the SCS. If local jurisdictions are required to rezone land as a result of changes in the housing element, rezoning must take place within three years.

Fourth, SB 375 provides CEQA streamlining incentives for preferred development types. Certain residential or mixed-use projects qualify if they conform to the SCS. Transit-oriented developments (TODs) also qualify if they (1) are at least 50% residential, (2) meet density requirements, and (3) are within 0.5 mile of a transit stop. The degree of CEQA streamlining is based on the degree of compliance with these development preferences.

Finally, MPOs must use transportation and air emissions modeling techniques consistent with guidelines prepared by the California Transportation Commission (CTC). Regional Transportation Planning Agencies, cities, and counties are encouraged, but not required, to use travel demand models consistent with the CTC guidelines.

CEQA Guidelines Section 15064.3

Recent changes to CEQA include the adoption of Section 15064.3, *Determining the Significance of Transportation Impacts*. CEQA Guidelines Section 15064.3 establishes VMT as the most appropriate measure of transportation impacts. Generally, land use projects within 0.5 miles of either an existing major transit stop or a stop along an existing high quality transit corridor should be presumed to cause a less than significant transportation impact. Projects that decrease vehicle miles traveled in the project area compared to existing conditions should be presumed to have a less than significant transportation impact. A lead agency has discretion to choose the most appropriate methodology to evaluate VMT, including whether to express the change in absolute terms, per capita, per household or in any other measure. A lead agency may also use models to estimate VMT, and may revise those estimates to reflect professional judgment based on substantial evidence. As discussed further below, LADOT developed City of Los Angeles VMT

Calculator Version 1.3 (May 2020) (VMT Calculator) to estimate project-specific daily household VMT per capita and daily work VMT per employee for developments within City limits. The methodology for determining VMT based on the VMT Calculator is consistent with CEQA Guidelines Section 15064.3 and the Transportation Assessment Guidelines.

California Vehicle Code (CVC)

The CVC provides requirements for ensuring emergency vehicle access regardless of traffic conditions. Sections 21806(a)(1), 21806(a)(2), and 21806(c) define how motorists and pedestrians are required to yield the right-of-way to emergency vehicles.

REGIONAL

Southern California Association of Governments 2020-2045 Regional Transportation Plan / Sustainable Communities Strategy

In compliance with SB 375, on September 3, 2020, the Southern California Association of Governments (SCAG) Regional Council adopted the Connect SoCal 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (2020-2045 RTP/SCS), a long-range visioning plan that incorporates land use and transportation strategies to increase mobility options and achieve a more sustainable growth pattern while meeting greenhouse gas reduction targets set by the California Air Resources Board (CARB). The 2020-2045 RTP/SCS contains baseline socioeconomic projections that are used as the basis for SCAG's transportation planning, as well as the provision of services by the six-county region of Imperial, Los Angeles, Orange, Riverside, San Bernardino, and Ventura counties. SCAG policies are directed towards the development of regional land use patterns that contribute to reductions in vehicle miles and improvements to the transportation system.

The 2020-2045 RTP/SCS builds on the long-range vision of SCAG's prior 2016-2040 RTP/SCS to balance future mobility and housing needs with economic, environmental and public health goals. A substantial concentration and share of growth is directed to Priority Growth Areas (PGAs), which include high quality transit areas (HQTAs), Transit Priority Areas (TPAs), job centers, Neighborhood Mobility Areas (NMAs) and Livable Corridors. These areas account for four percent of SCAG's total land area but the majority of directed growth. HQTAs are corridor-focused PGAs within one half mile of an existing or planned fixed guideway transit stop or a bus transit corridor where buses pick up passengers at a frequency of every 15 minutes (or less) during peak commuting hours. TPAs are PGAs that are within a half mile of a major transit stop that is existing or planned. Job centers are defined as areas with significant higher employment density than surrounding areas which capture density peaks and locally significant job centers throughout all six counties in the region. NMAs are PGAs with robust residential to non-residential land use connections, high roadway intersection densities, and low-to-moderate traffic speeds. Livable Corridors are arterial roadways where local jurisdictions may plan for a combination of the following elements: high-quality bus frequency; higher density residential and employment at key intersections; and increased active transportation through dedicated bikeways.

The 2020-2045 RTP/SCS' "Core Vision" prioritizes the maintenance and management of the region's transportation network, expanding mobility choices by co-locating housing, jobs, and transit, and increasing investment in transit and complete streets. Strategies to achieve the "Core Vision" include but are not limited to: Smart Cities and Job Centers, Housing Supportive Infrastructure, Go Zones, and Shared Mobility. Connect SoCal intends to create benefits for the SCAG region by achieving regional goals for sustainability, transportation equity, improved public health and safety, and enhancement of the regions' overall quality of life. These benefits include but are not limited to a five percent reduction in VMT per capita, nine percent reduction in vehicle hours traveled, and a two percent increase in work-related transit trips.

Metro 2009 Long Range Transportation Plan (LRTP)

The 2009 LRTP includes funding for general categories of improvements, such as Arterial Improvements, Non-motorized Transportation, Rideshare and Other Incentive Programs, Park-and-Ride Lot Expansion, and Intelligent Transportation System (ITS) improvements for which Call for Project Applications can be submitted for projects in Los Angeles County. Metro also has a Short Range Transportation Plan to define the near-term (through year 2024) transportation priorities in Los Angeles County. In addition to the regional transportation plans, Metro has recently adopted a Complete Streets Policy and a First Last Mile Strategic Plan.

Metro Complete Streets Policy

Metro's recently adopted Complete Streets policy is reinforcing the California Complete Streets Act (AB 1358). Effective January 1, 2017, Metro is requiring that all local jurisdictions within LA County must adopt a Complete Streets Policy, an adopted city council resolution supporting Complete Streets, or an adopted general plan consistent with the California Complete Streets Act of 2008 in order to be eligible for Metro capital grant funding programs, starting with the 2017 grant cycles.

Metro Short Range Transportation Plan (SRTP)

The 2014 Metro SRTP is a 10-year action plan that guides future Metro programs and projects through 2024 and advances Metro towards the long-term goals identified in the 2009 Metro LRTP. The SRTP identifies the short-term challenges, provides an analysis of our financial resources, proposes action plans for the public transportation and highway modes, and includes other project and program initiatives. In addition, it addresses sustainability, future funding strategies, and lastly, measures the Plan's performance (Metro 2014).

LOCAL

City of Los Angeles General Plan Framework and Safety Elements

The Citywide General Plan Framework (Framework), an element of the City of Los Angeles General Plan, is a guide for Community Plans to implement growth and development policies by providing a comprehensive long-range view of the City as a whole. It provides a comprehensive strategy for accommodating long-term growth should it occur as predicted. Chapter 9 Infrastructure and Public Services of the Framework Element addresses fire prevention, fire protection and emergency medical services provided to the City.

The Safety Element of the General Plan identifies existing police, fire, and emergency services and the service needs of the City of Los Angeles in the event of a natural disaster. The Safety Element goals, objectives, policies, and programs are broadly stated to reflect the comprehensive scope of the Emergency Operations Organization (EOO), which is the program that implements the Safety Element. The Framework and Safety Elements include goals, objectives, and policies that are applicable to emergency services.

Los Angeles Municipal Code

With regard to construction traffic, Los Angeles Municipal Code (LAMC) Section 41.40 limits construction activities to the hours from 7:00 a.m. to 9:00 p.m. on weekdays and from 8:00 a.m. to 6:00 p.m. on Saturdays and national holidays. No construction is permitted on Sundays.

LAMC Section 12.37 sets forth requirements for street dedications and improvements for new development projects. Specifically, LAMC Section 12.37 states that no building or structure shall be erected or enlarged

on any property, and no building permit shall be issued therefore, on any R3 or less restrictive zone, or in any lot in the RD1.5, RD2, or R3 Zones, if the lot abuts a major or secondary highway or collector street unless one-half of the street adjacent to the subject property has been dedicated and improved to the full width to meet the standards for a highway or collector street as provided in the LAMC.

With regard to on-site bicycle parking, LAMC Section 12.21 A.16 sets forth requirements for long-term and short-term bicycle parking for residential and commercial buildings. Where there is a combination of uses on a lot, the number of bicycle parking spaces required shall be the sum of the requirements of the various uses. LAMC Section 12.21 A.16 also includes facility requirements, design standards and siting requirements for bicycle parking.

LAMC Section 12.26 J provides for Transportation Demand Management (TDM) and Trip Reduction Measures that are applicable to the construction of new non-residential gross floor area. Different TDM requirements are provided for developments in excess of 25,000 square feet of gross floor area, 50,000 square feet of gross floor area, and 100,000 square feet of gross floor area. The TDM requirements set forth therein vary depending upon the maximum non-residential gross floor area described above, and include measures such as the provision of a bulletin board, display case, or kiosk with transit information and carpool/vanpool parking spaces. City of Los Angeles Mobility Plan 2035.

In August 2015, the City Council adopted Mobility Plan 2035 (Mobility Plan), which serves as the City's General Plan circulation element. The City Council has adopted several amendments to the Mobility Plan since its initial adoption, including the most recent amendment on September 7, 2016. The Mobility Plan incorporates "complete streets" principles and lays the policy foundation for how the City's residents interact with their streets. The Mobility Plan includes five main goals that define the City's high-level mobility priorities:

- **Safety First:** focuses on topics related to crashes, speed, protection, security, safety, education, and enforcement.
 - Objective: Vision Zero: Decrease transportation related fatality rate to zero by 2035.
- **World Class Infrastructure:** focuses on topics related to the Complete Streets Network (walking, bicycling, transit, vehicles, green streets, and goods movement), Great Streets, Bridges, Street Design Manual, and demand management.
 - Objective: Provide 95% on-time arrival reliability of buses traveling on the Transit Enhanced Network by 2035. Establish an off-peak 5-minute bus frequency on 25% of the Transit Enhanced Network by 2035.
 - Objective: Increase vehicular travel time reliability on all segments of the Vehicle Enhanced Network by 2035.
 - Objective: Maintain the Automated Traffic Control Surveillance and Control System (ATSAC) Communications Network.
- **Access for all Angelenos:** focuses on topics related to affordability, least cost transportation, land use, operations, reliability, demand management, and community connections.
 - Objective: Ensure that 90% of households are within one mile of the Transit Enhanced Network by 2035.
 - Objective: Ensure that 90% of all households have access within one-half mile of high quality bicycling* facilities by 2035 (*protected bicycle lanes, paths, and neighborhood enhanced streets).

- Objective: Increase the combined mode split of persons who travel by walking, bicycling or transit to 50% by 2035.
- **Collaboration, Communication & Informed Choices:** focuses on topics related to real-time information, open-source data, transparency, monitoring, reporting, emergency response, departmental and agency cooperation and data base management.
 - Objective: Install street parking occupancy-detection capability at 50% of on-street parking locations by 2035.
 - Objective: Implement coordinated wayfinding at all major transit stations by 2035.
- **Clean Environment and Healthy Communities:** focuses on topics related to environment, health, clean air, clean fuels and fleets, and open street events.
 - Objective: Decrease vehicle miles traveled (VMT) per capita by 5% every five years, to 20% by 2035.
 - Objective: Meet a 9% per capita GHG reduction for 2020 and a 16% per capita reduction for 2035 (SCAG RTP).
 - Objective: Reduce the number of unhealthy air quality days to zero by 2025.

Street classifications are designated in the Mobility Plan, and may be amended by a Community Plan, and are intended to create a balance between traffic flow and other important street functions, including transit routes and stops, pedestrian environments, bicycle routes, building design and site access, etc. The Complete Streets Design Guide, which was adopted by the City Council alongside the Mobility Plan, defines the street classifications as follows:

Arterial Streets: Major streets that serve through traffic and provide access to major commercial activity centers. Arterials are divided into two categories:

- **Boulevards** represent the widest streets that typically provide regional access to major destinations and include two further categories, Boulevard I and Boulevard II.
- **Avenues** pass through both residential and commercial areas and include three further categories, Avenue I, Avenue II, and Avenue III.

Collector Streets: Generally located in residential neighborhoods and provide access to and from arterial streets for local traffic and are not intended for cut-through traffic.

Local Streets: Intended to accommodate lower volumes of vehicle traffic and provide parking on both sides of the street.

- Continuous local streets that connect to other streets at both ends, and/or
- Non-Continuous local streets that lead to a dead-end.

The Mobility Plan also identifies enhanced networks of major and neighborhood streets that facilitate multi-modal mobility within the citywide transportation system. This layered approach to complete streets selects a subset of the City's streets to prioritize travel for specific transportation modes. In all, there are four enhanced networks: the Bicycle Enhanced Network, Transit Enhanced Network, Vehicle Enhanced Network, and Neighborhood Enhanced Network. In addition to these networks, many areas that could benefit from additional pedestrian features are identified as Pedestrian Enhanced Districts.

Great Streets for Los Angeles/LADOT Strategic Plan

In September 2014, the Mayor's Office and LADOT released Great Streets for Los Angeles, LADOT's first strategic plan to turn the city's essential infrastructure -- its streets and sidewalks -- into safer, more livable 21st century public spaces that accommodate everyone who uses them. The plan builds upon Mayor Garcetti's Great Streets Initiative, which looks at Los Angeles's streets as valuable assets that can help revitalize neighborhoods across the City and make it easier for Angelenos to get around whether they walk, bike, drive, or take transit. The plan also stresses the importance of working closely with other city and regional agencies, such as the Bureau of Street Services and Metro, to improve safe, accessible transportation services and infrastructure.

The plan focuses on Mayor Garcetti's priorities of making the city safe, prosperous, and livable with a well-run government and includes the following key goals:

- **Vision Zero:** Eliminate traffic deaths by 2025 and design streets to increase the safety of pedestrians, including adding 100 new high-visibility continental crosswalks.
- **Great Streets:** Implement changes to the 15 Great Street corridors and launch programs to reduce dangerous speeding in residential neighborhoods. Increase bike infrastructure and launch a regional bikeshare program. Expand bus service and improve its quality and connectivity with surrounding neighborhoods.
- **A 21st Century DOT:** Streamline LADOT's operations to implement needed safety and mobility projects quickly and efficiently. Enhance technologies to manage traffic, meters, and parking operations.
- **World-Class Streets for a World-Class Economy:** Real-time traffic information and more efficient allocation of the street to support local foot traffic and better manage freight traffic. Build Great Streets for vibrant and prosperous neighborhood business districts.

Transit Oriented Community Guidelines

Pursuant to the voter-approved Measure JJJ, LAMC Section 12.22.A.31 was added to create the Transit Oriented Communities (TOC) Affordable Housing Incentive Program to encourage affordable housing near transit. The TOC Guidelines provide the eligibility standards, incentives, and other necessary components of the TOC Program. TOC incentive areas are tiered based on a project site's distance from transit and the type of transit.

Los Angeles Department of Transportation (LADOT) Transportation Assessment Guidelines

As discussed above, on July 30, 2019, LADOT updated its Transportation Impact Study Guidelines, travel demand model and transportation impact thresholds based on vehicle miles traveled, pursuant to State CEQA Guidelines Section 15064.3, of the 2019 CEQA Updates that implement SB 743. The City established the Transportation Assessment Guidelines (TAG) that includes both CEQA thresholds (and screening criteria) and non-CEQA thresholds (and screening criteria). LADOT most recently updated the TAG in July 2020. The CEQA thresholds provide the methodology for analyzing the Appendix G transportation thresholds, including providing the City's adopted VMT thresholds. The non-CEQA thresholds provide a method to analyze projects for purposes of entitlement review and making necessary findings to ensure the project is consistent with adopted plans and policies including Mobility Plan 2035. Specifically, the TAG is intended to effectuate a review process that advances the City's vision of developing a safe, accessible, well-maintained, and well-connected multimodal transportation network. The TAG have been developed to identify land use development and transportation projects that may impact

the transportation system; to ensure proposed land use development projects achieve site access design requirements and on-site circulation best practices; to define whether off-site improvements are needed; and to provide step-by-step guidance for assessing impacts and preparing Transportation Assessment Studies.

LADOT Manual of Policies and Procedures Section 321

LADOT Manual of Policies and Procedures (MPP) Section 321 provides the basic criteria for the review of driveway design. As discussed in MPP Section 321, the basic principle of driveway location planning is to minimize potential conflicts between users of the parking facility and users of the abutting street system, including the safety of pedestrians.

Vision Zero

The Vision Zero Los Angeles program, implemented by LADOT, represents a citywide effort to eliminate traffic deaths in the City by 2025. Vision Zero has two goals: a 20-percent reduction in traffic deaths by 2017 and zero traffic deaths by 2025. In order to achieve these goals, LADOT has identified a network of streets, called the High Injury Network, which has a higher incidence of severe and fatal collisions. The High Injury Network, which was last updated in 2018, represents 6 percent of the City's street miles but accounts for approximately two thirds (64 percent) of all fatalities and serious injury collisions involving people walking and biking.

Citywide Design Guidelines

The Citywide Design Guidelines serve to implement the Framework Element's urban design principles and are intended to be used by City of Los Angeles Department of City Planning staff, developers, architects, engineers, and community members in evaluating project applications, along with relevant policies from the Framework Element and Community Plans. The Citywide Design Guidelines were updated in October 2019 and include guidelines pertaining to pedestrian-first design which serves to reduce VMT.

Los Angeles Fire Department (LAFD) Strategic Plan 2018-2020

The LAFD Strategic Plan focuses on nine goals and corresponding strategic actions that guide the LAFD. The primary goals that apply to the Proposed Project include providing exceptional public safety and emergency service and implementing and capitalizing on advanced technologies. Some of the key priorities associated with these goals include:

- Improving response times by utilizing data and metrics to identify gaps in LAFD's response strategies and exploring response time improvements through dialogue, cognitive inquiry, innovation, and follow-up;
- Delivery of emergency medical services by expanding LAFD Emergency Medical Service (EMS) response capabilities for special events and addressing period of high vehicle traffic; and
- Implementing advanced technologies by developing performance metrics, tracking standards, data collection, analysis and reporting procedures (FireStatLA).
- The Strategic Plan also focuses on the development of an even more professional workforce and promotion of a positive work environment to address risk management issues and strengthening community relationships to improve preparedness and enhance resiliency during emergency events.

ENVIRONMENTAL IMPACTS

This section explains the metrics used to measure the impacts of the Proposed Project to VMT. The metrics used are from the proposed CEQA Guidelines from the California State Office of Planning and Research (OPR) from December 2018.

HISTORY

Senate Bill 743 directed OPR to “prepare, develop, and transmit to the Secretary of the Natural Resources Agency for certification and adoption proposed revisions to the guidelines adopted pursuant to Section 21083 establishing criteria for determining the significance of transportation impacts of projects within transit priority areas... Upon certification of the guidelines by the Secretary of the Natural Resources Agency pursuant to this section, automobile delay, as described solely by LOS or similar measures of vehicular capacity or traffic congestion within a transit priority area, shall not support a finding of significance pursuant to this division...”

On January 20, 2016, OPR updated the CEQA Guidelines “Revised Proposal on Updates to the CEQA Guidelines on Evaluating Transportation Impacts in CEQA,” the evaluation of vehicle miles traveled (VMT) was recognized as “generally the most appropriate measure of transportation impacts.” OPR also states that lead agencies may tailor their analysis to include other measures.

On November 2017, OPR proposed a new section, 15064.3, to help determine the significance of transportation impacts. This section was updated July 2, 2018 and finalized on December 28, 2018 with criteria for analyzing transportation impacts and is seen below in the section *Thresholds of Significance*. Its purpose is to describe specific elements for considering the transportation impacts of a given project given the use of VMT as the primary measurement.

Per the guidance from OPR, “a lead agency may elect to be governed by the provisions of this section immediately. Beginning on July 1, 2020, the provisions of this section shall apply statewide” (CNRA 2018). In order to comply with the guidelines understood to become the standard in our state, this EIR evaluates vehicle trips and VMT consistent with the intent of SB 743. This EIR also includes vehicular level of service (LOS) for its primary impacts for historical comparison and informational purposes. As discussed below, it is also considered for its secondary impacts to emergency services under Threshold 4.15-4.

PERFORMANCE METRICS

The current metrics shift the focus from LOS to VT and VMT. These are defined as follows, with methodology specifics outlined in the following *Methodology* section:

Vehicle Trips. VT are defined as the number of trips undertaken in an automobile, such as in single occupancy vehicles, private automobiles, and vehicles that contain two or more travelers, such as carpools, taxis, or ride-share vehicles. A reduction in VT over time can be used as an indicator of reduced reliance on the automobile as well as an indicator of more travel by carpools.

Vehicle Miles Traveled. VMT is a measurement of miles traveled (e.g., private automobiles, trucks and buses) by all land uses (e.g., residential, retail, office) in the Project Area. To compare scenarios, VMT per service population is used. A reduction in VMT overall and in VMT per service population can be used as an indicator of reduced reliance on vehicular travel, primarily by private automobiles.

Service Population. Service Population is the sum of population and employment. It is used in this study to represent both residents and employees. Some VMT metrics focus on VMT per capita and VMT per

employee as separate markers of these indications; however, VMT per service population showcases the effects of all vehicular movement in an area. It includes not only trips that are attracted and produced by home and work trips, but those that fit in neither category (i.e., school to grocery store) as well as truck trips. It is therefore more representative of the effect of users and trips on the roadways in the Project Area.

THRESHOLDS OF SIGNIFICANCE

In accordance with Appendix G of the aforementioned CEQA Guidelines, the Proposed Project would have a significant impact related to transportation if it would:

- Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadways, bicycle and pedestrian facilities (Threshold 4.15-1).
- Conflict or be inconsistent with CEQA Guidelines Section 15064.3, Subdivision (b) (Threshold 4.15-2).
- Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment) (Threshold 4.15-3).
- Result in inadequate emergency access (Threshold 4.15-4).

Text of CEQA Guidelines Section 15064.3, Subdivision (b):

Land Use Projects. *Vehicle miles traveled exceeding an applicable threshold of significance may indicate a significant impact. Generally, projects within one-half mile of either an existing major transit stop or a stop along an existing high-quality transit corridor should be presumed to cause a less than significant transportation impact. Projects that decrease vehicle miles traveled in the project area compared to existing conditions should be presumed to have a less than significant transportation impact.*

Transportation Projects. *Transportation projects that reduce, or have no impact on, vehicle miles traveled should be presumed to cause a less than significant transportation impact. For roadway capacity projects, agencies have discretion to determine the appropriate measure of transportation impact consistent with CEQA and other applicable requirements. To the extent that such impacts have already been adequately addressed at a programmatic level, such as in a regional transportation plan EIR, a lead agency may tier from that analysis as provided in Section 15152.*

Qualitative Analysis. *If existing models or methods are not available to estimate the vehicle miles traveled for the particular project being considered, a lead agency may analyze the project's vehicle miles traveled qualitatively. Such a qualitative analysis would evaluate factors such as the availability of transit, proximity to other destinations, etc. For many projects, a qualitative analysis of construction traffic may be appropriate.*

Methodology. *A lead agency has discretion to choose the most appropriate methodology to evaluate a project's vehicle miles traveled, including whether to express the change in absolute terms, per capita, per household or in any other measure. A lead agency may use models to estimate a project's vehicle miles traveled and may revise those estimates to reflect professional judgment based on substantial evidence. Any assumptions used to estimate vehicle miles traveled and any revisions to model outputs should be documented and explained in the environmental document prepared for the project. The standard of adequacy in Section 15151 shall apply to the analysis described in this section.*

The Proposed Project would have an impact related to transportation if it would result in VMT per service population that exceeded an applicable threshold of significance. OPR recommends that a per capita or per employee VMT that is fifteen percent below that of existing development regionally may be a reasonable

threshold. However, the “region” identified for the City of Los Angeles is the six-county SCAG region, which is very large and not representative of the Project Area. Holding this Project Area to that as a threshold would not accurately disclose a relevant change in VMT outputs to the Proposed Project, as it is significantly lower than the region’s VMT already. Additionally, the use of per capita and per employee is not as representative of all travel in the area as per service population. As “CEQA generally defers to lead agencies on the choice of methodology to analyze impacts” (OPR 2018), the City of Los Angeles is choosing to use the following as part of a two-pronged threshold:

- The Proposed Project would result in average total VMT per service population in the plan horizon year that exceeds 15% below the regional average total VMT per service population from the most recent regional metric available.
- The Proposed Project would result in average total VMT per service population in the plan horizon year that exceeds the average total VMT per service population for the “project area” for the baseline year.

METHODOLOGY

The transportation analysis for the Project Area has been developed through a process that includes the use of the City of Los Angeles Travel Demand Forecasting (TDF) Model, as well as the use of the SCAG TDF Model for the analysis of the 2021 conditions throughout the region. This *Methodology* section describes the procedures used to assess impacts on the transportation system. It includes an overall discussion of methodology and assumptions, followed by a discussion of how the Proposed Project is expected to perform in comparison to the thresholds described above. .

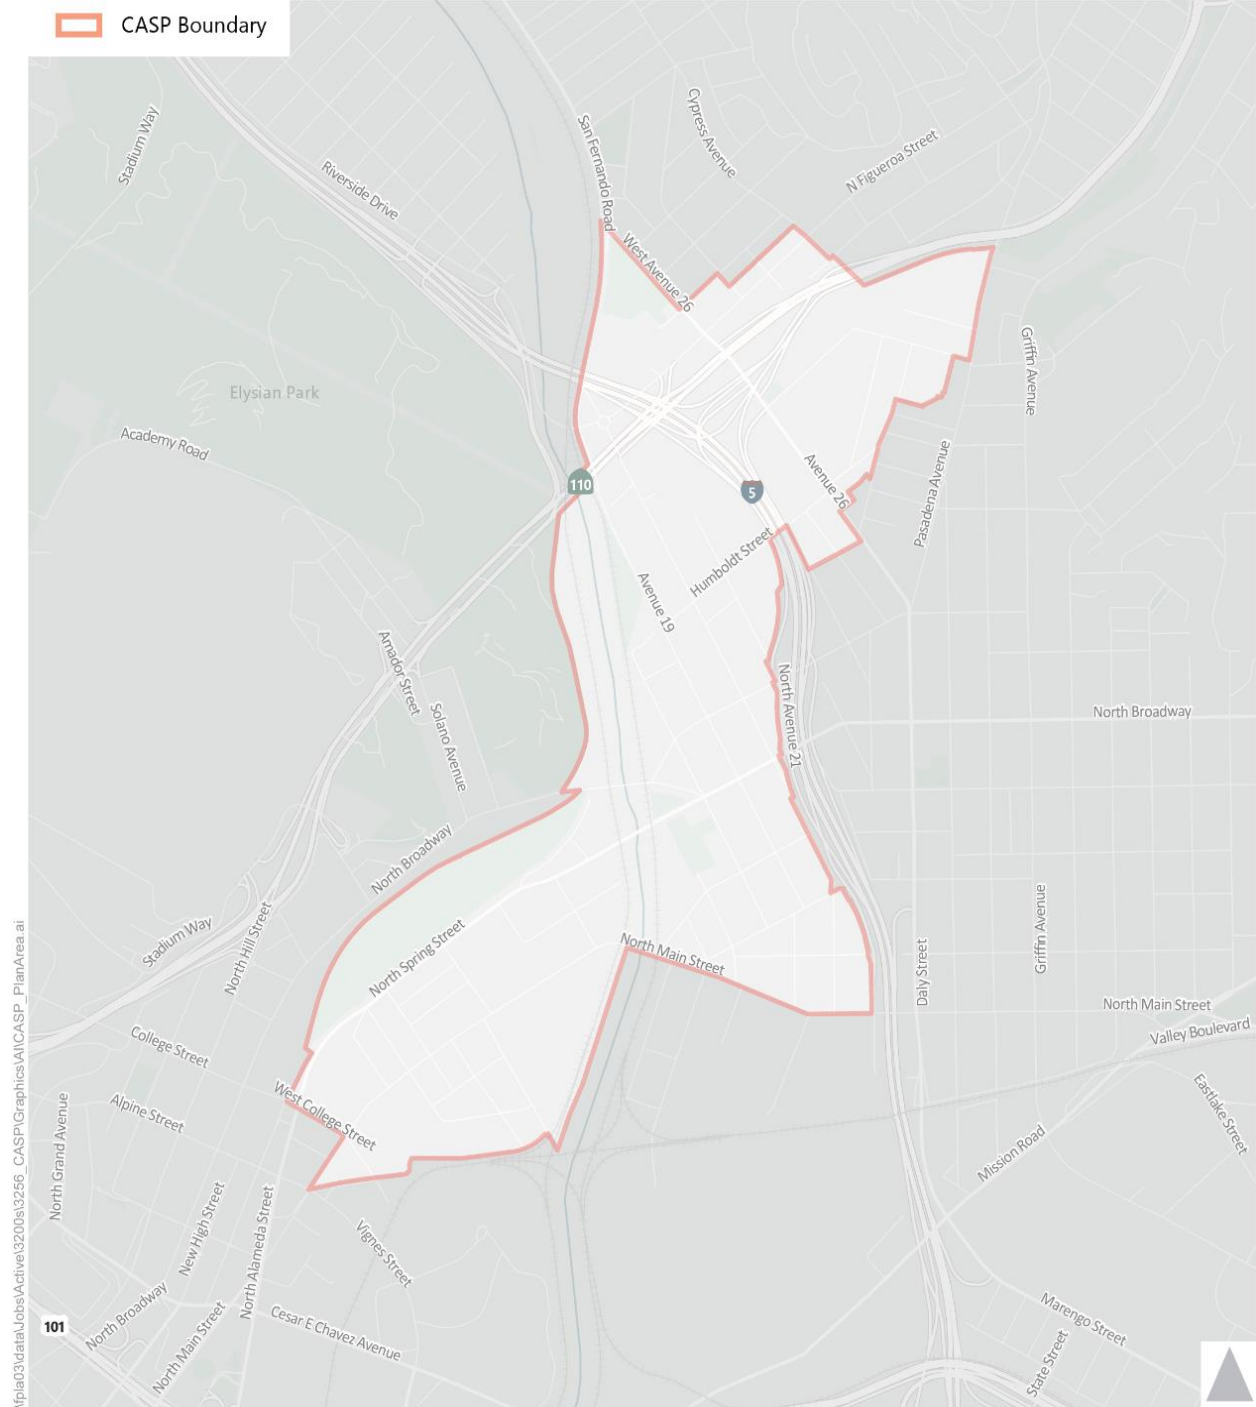

Study Area and Reporting Framework

The Project Area is defined by the boundaries as shown in **Figure 4.15-6**. This study is defined by the potential impacts of the Proposed Project to transportation and its related elements in the study area.

VMT Methodology

In order to determine whether the socio-economic and transportation network included in the Project Area would result in an impact (as outlined in the *Environmental Impacts* section previously), VMT calculated for the 2021 Baseline and the SCAG Region in 2021 is compared to the 2040 Project. This is calculated using the following outputs from the City of Los Angeles and SCAG TDF Models.

Figure 4.15-6 Project Area

Vehicle Trips

Vehicle Trips are defined as the number of trips undertaken in an automobile or a truck, such as in single-occupancy private automobiles, vehicles that contain two or more travelers, such as carpools, taxis, or ride-share vehicles, and trucks including light truck, medium truck, and heavy truck. While the total number of vehicle trips is expected to increase as growth occurs in the Project Area and in the region, a reduction in vehicle trips per service population over time can be used as an indicator of reduced reliance on the automobile as well as an indicator of more travel by walk, bike, take transit, carpools, etc. A reduction in the number of vehicle trips per service population also helps meet the State's goal of reducing GHG emissions, as mandated by AB 32 and SB 375. An increase in the number of daily vehicle trips per service population would be an undesirable outcome of the Proposed Project but would not constitute a significant impact.

Vehicle trips are calculated from outputs of the City of Los Angeles TDF model and SCAG TDF model. With estimated population relevant to each model's year and household and employment values input into each model Traffic Analysis Zone (TAZ), the models develop a vehicle trip calculation for the Project Area and SCAG Region. A Traffic Analysis Zone is a spatial unit that includes socioeconomic data such as population, households, and employees of a particular region.

Vehicle Miles Traveled

VMT is a measurement of miles traveled (e.g., private automobiles, trucks and buses) generated by all land uses (e.g., residential, retail, office). While the total VMT is expected to increase as growth occurs in the Project Area and in the region, a reduction in VMT per service population over time can be used as an indicator of reduced reliance on the automobile. Reducing VMT helps meet the State's goals of reducing GHG emissions, as mandated by AB 32 and SB 375. Any increase in the total number of VMT per service population would be an undesirable outcome of the Proposed Project and would constitute an impact. VMT was forecasted for the Plan Area using the TDF model.

For this analysis, VMT is reported as Total Daily VMT per Service Population. The Total Daily VMT per Service Population is the total VMT divided by the number of people living or working within the plan area. This VMT is generated by both residents and employees within the Project Area as well as travel between the Project Area and other areas.

The reported VMT results include both personal vehicles and truck VMT. The VMT calculation accounts for internal trip ends and trips that begin or end within the Project Area, as these trips are generated by or attracted to land uses within the Project Area. The travel behavior effects of land use changes in the Project Area can be understood by measuring the VMT of trips originating in and/or destined for the Project Area and comparing them to the 2021 Baseline and 2021 SCAG Region outputs.

VMT is calculated by multiplying the vehicle trip length by the number of trips estimated through the TDF model. VMT takes into consideration population, household, and employment values, as well as travel patterns of origins and destinations, including all of these inputs in the City of Los Angeles and SCAG TDF models, which makes them sensitive to each land use and network scenario tested.

Roadway Segment Level of Service Methodology

In addition to the VMT methodology, the Proposed Project was also analyzed using LOS changes on road segments, as described below. As discussed above, under SB 743, LOS as a metric for traffic congestion is not used to determine CEQA impacts. However, congestion may still be considered for safety, and therefore, this information is used to inform the analysis related to emergency access in Impact Threshold 4.15-4, as well as for informational and historical comparison purposes.

LOS is a qualitative measure used to describe the condition of traffic flow, ranging from excellent conditions at LOS A to overloaded conditions at LOS F. LOS definitions for street segments are summarized in **Table 4.15-7**. LOS can be determined by dividing demand V/C, and the resulting V/C ratio is then used to obtain the corresponding LOS. The capacity values for analyzed roadway segments were obtained from the City of Los Angeles TDF Model.

TABLE 4.15-7 ROADWAY SEGMENT LEVEL OF SERVICE (LOS) DEFINITIONS		
Level of Service (LOS)	Volume to Capacity Ratio (V/C)	Description
A	0.00 – 0.60	Excellent operation. All approaches to the intersection appear quite open, turning movements are easily made, and nearly all drivers have freedom of operation.
B	>0.60 – 0.70	Very good operation. Many drivers begin to feel somewhat restricted within platoons of vehicles. This represents stable flow. An approach to an intersection may occasionally be fully utilized and traffic queues start to form.
C	>0.70 – 0.80	Good operation. Occasionally drivers may have to wait more than 60 seconds, and back-ups may develop behind turning vehicles. Most drivers feel somewhat restricted.
D	>0.80 – 0.90	Fair operation. Cars are sometimes required to wait more than 60 seconds during short peaks. There are no long standing traffic queues. This level is typically associated with design practice for peak periods.
E	>0.90 – 1.00	Poor operation. Some long-standing vehicular queues develop on critical approaches to intersections. Delays may be up to several minutes.
F	>1.00	Forced flow. Represents jammed conditions. Backups from locations downstream or in the cross street may restrict or prevent movement of vehicles out of the intersection approach lanes; therefore, volumes carried are not predictable. Potential for stop and go type traffic flow.

SOURCE: Transportation Research Board, *Highway Capacity Manual, Special Report 209*, Washington, D.C., 2000.

Plans that involve large areas and are not expected to be fully implemented until 2040 or beyond are not analyzed effectively by detailed intersection V/C analyses. In addition, detailed roadway designs for improvements to individual intersections are not yet available. Consequently, roadway segment analysis is commonly used to determine the average service capacity of the roadway network. Street segment capacity impacts are generally evaluated in program-level analyses (such as community plans or long-range development projects) for which details regarding specific land use types, sizes, project access points, etc., are not known.

The resulting V/C ratio is then used to obtain the corresponding LOS. The volume-weighted V/C ratio is used in order to obtain aggregate statistics regarding the transportation conditions, allowing a comparison of different scenarios and alternatives. The weighted average V/C ratio represents typical travel conditions for the roadway network in the Project Area. The volume-weighted average V/C ratio is calculated by taking the volume of each street segment and multiplying it by its corresponding V/C ratio. This is divided by the sum of the total volumes, and essentially represents the average V/C ratio for the roadway network in the Project Area.

Travel Demand Forecasting Model

The City of Los Angeles TDF Model provides the ability to evaluate the transportation system, use performance indicators for land use and transportation alternatives, provide information on regional pass-through traffic versus locally generated trips, and graphically display these results. The model considers forecast growth in City of Los Angeles and surrounding areas, including special generators, such as airports and universities, and is sensitive to emerging land use trends through improved sensitivity to built environment variables. The model forecasts AM and PM peak period and daily vehicle and transit flows on the transportation network in the City. In essence, the travel demand model serves as a tool to implement, manage and monitor the City of Los Angeles' transportation plans, projects, and programs, providing a suitable starting point for additional refinement as part of a more local application, such as the Project Area.

The potential impacts associated with implementation of the Proposed Project are evaluated using a refined version of the City of Los Angeles' Travel Demand Model within the Project Area. The Travel Demand Forecasting Model utilizes the TransCAD Version 7.0 R4 Build 12410 modeling software (consistent with the citywide model). The Model builds on the citywide model update and refines the level of detail within the Project Area for improved sensitivity in measuring the effect of land use development and transportation network changes. The model has a future horizon year of 2040 and was designed to produce daily and AM and PM peak hour vehicle and transit flows on roadways within the Project Area based on comprehensive land use and socioeconomic data (SED) and uses a conventional 4-step process of trip generation, trip distribution, modal split and assignment. For modeling purposes, the Los Angeles model area is divided into 4,192 Transportation Analysis Zones (TAZs) and the Project Area is divided into 18 TAZs, each with corresponding SED and connections to the roadway and transit networks.

Impact Analysis

The purpose of the transportation analysis is to identify potential transportation system deficiencies resulting from vehicle trips generated by the employment and population growth anticipated under the Proposed Project, and to identify feasible mitigation measures. The Proposed Project is a long-term plan that will be implemented over many years in conjunction with already approved development projects in the study area, and regional growth and transportation projects outlined in the 2016-2040 RTP/SCS. The Proposed Project is represented by the 2040 Proposed Project scenario and is compared to 2021 Baseline and 2021 SCAG Region scenarios in order to show the potential impacts of the Proposed Project.

The Model includes the entirety of the City of Los Angeles Travel Demand Forecasting Model, which is consistent with the 2016-2040 SCAG RTP/SCS model and includes all reasonably foreseeable development and regional transportation improvements for the year 2040 in the City of Los Angeles as well as the adjacent Cities, such as West Hollywood, Burbank and Glendale. Thus, the Model includes the regional growth forecast for both inside and outside of the Project Area for the purpose of analyzing 2040 Proposed Project conditions. The Model measures the effects of land use and transportation network changes for the 2040 Proposed Project. The analysis tools used to forecast future travel patterns are long-range models of travel demand. Long-range travel demand models primarily focus on forecasting auto use, with limited sensitivity to other modes of travel such as transit, bicycling, and walking. This is consistent with the traffic forecasting methods used by most cities and is consistent with the state of the transportation and traffic engineering practice. Recently, new travel behavior trends have emerged that traditional travel demand models are not designed to accommodate. Transportation and traffic experts continue to evaluate the anticipated longevity of these trends and the impact they may have on travel behavior in the future. Factors that affect long-term trends in travel behavior include recessionary effects on employment, changes in younger generations' interest in driving and vehicle ownership, baby boomer retirement choices and their continued participation in the workforce, increasing preference across generations for urban living, fuel

prices, increased availability of on-demand delivery of goods and services, and greater travel options through autonomous vehicles and shared use mobility (e.g., Lyft, Uber, bikeshare programs).

While SCAG's 2020-2045 RTP/SCS (adopted in September 2020) is the most recently adopted RTP/SCS, this document relies on the 2016-2040 RTP/SCS as the most up to date and validated Los Angeles Transportation Demand Forecasting (TDF) model contains data and information from the 2016-2040 RTP/SCS. However, the population, housing, and employment projections of these two regional plans are consistent with each other in the Project Area. The current TDF Model, which was developed in the last few years as part of the City's effort to move to vehicle miles traveled (VMT) thresholds of significance, relies on the 2016-2040 RTP/SCS. This model and its outputs are used in various section of this Draft EIR and therefore, the 2016-2040 RTP/SCS is utilized as the analysis baseline throughout this document.

The latest adopted 2020-2045 RTP/SCS, using a baseline year of 2016, estimates a Project Area population of 6,202 in 2021, while the 2016-2040 RTP/SCS, using a baseline year of 2012, estimates a Project Area population of 6,027 in 2021. To address the time gap between the RTP/SCS baseline years of 2012 and 2016 and the EIR's baseline year of 2021, the demographic data were interpolated to estimate 2021 existing conditions. Annual demographics data are not immediately available and there is usually a lag time in the data released. Therefore, the interpolated population numbers using an annual growth average rate represented the most reasonable estimate available in 2021. Between the 2016-2040 RTP/SCS and 2020-2045 RTP/SCS, the population and households estimates for the EIR baseline year (2021) differ by less than 3 percent and 4 percent, respectively. The 2016-2040 RTP/SCS estimates that baseline year employment within the Project Area is 5,411 jobs, compared to the 2020-2045 RTP/SCS's estimate of 6,189 jobs, a difference of 14 percent. The use of the 2016-2040 RTP/SCS's lower employment figure represents a more conservative analysis, as the EIR would be analyzing a greater employment delta over the course of the Proposed Project compared to the 2020-2045 RTP/SCS's higher baseline year employment figure.

The transportation analysis approach used in this EIR applies established traffic forecasting tools that have been empirically proven and previously accepted under CEQA. However, these may prove to be conservative if some of the recent trends in travel persist. It is not clear what direction the trends will take at this point. VMT per capita has been generally dropping since around 2004 but increased for many decades prior. If the trends toward higher levels of walking, bicycling, and transit use exceed what is forecast in the EIR, this could result in fewer driving-related impacts than the Proposed Project conservatively accounts for in the EIR. It is possible, however, that innovations in autonomous and driverless vehicles, transportation network companies (e.g., Lyft and Uber), and same-day delivery will increase future VMT per capita. A variety of factors contribute to VMT, and transportation technologies along with demographic trends will influence future travel behavior. It would be speculative to make assumptions about how these new technologies and changes in transportation may affect travel behavior long-term; therefore, the methodologies and travel forecasts applied in this analysis rely on the state-of-the-practice at this time as previously accepted under CEQA.

Project Mobility Network

Mobility Plan 2035 (MP 2035) is the Mobility Element of the City of Los Angeles' General Plan. MP 2035 provides the framework for future community plan updates, which take a closer look at the transportation system in specific areas of the City and recommend more detailed implementation strategies to be realized by 2035. The MP 2035 reflects policies and programs that lay the foundation for safe, accessible, and enjoyable streets for pedestrians, bicyclists, transit users, and vehicles throughout the City of Los Angeles, including the Project Area. MP 2035 was adopted by the City in August 2015 and updated in 2016. It is compliant with the 2008 Complete Streets Act (AB 1358), which mandates that the circulation element of a City's General Plan be modified to plan for a balanced, multimodal transportation network that meets the needs of all users of streets, roads, and highways, defined to include motorists, pedestrians, bicyclists,

children, persons with disabilities, seniors, movers of commercial goods, and users of public transportation, in a manner that is suitable to the rural, suburban, or urban context of the general plan.

The transportation improvements planned for the Project Area primarily originated from the MP 2035. The enhanced network treatments envisioned through MP 2035 were reviewed and refined to complement the anticipated growth areas as well as the Proposed Project's goals and policies. The Proposed Project would enhance mobility by focusing future growth in areas well-served by transit and by establishing pedestrian-oriented development standards for new development in order to encourage transit ridership, walking, and bicycling. Mixed-use development around Metro stations and transit corridors offers residents, employees and visitors mobility choices that enable them to reduce the number and length of vehicle trips. MP 2035 anticipates that subsequent community plans and specific plans will provide updates as appropriate to that community's needs. Therefore, the Proposed Project would be consistent with the City's MP 2035 and the Complete Streets Act. However, since MP 2035 does not prescribe or mandate how the enhanced network treatments are implemented within each community plan, the refinements to the enhanced network treatments primarily consisted of developing potential implementation options within the Project Area.

The Proposed Project Transportation Improvement Project List is presented in **Table 4.15-8**. The Project List is not exhaustive but is representative of the types of improvements proposed for inclusion in the Proposed Project. In addition, the Proposed Project would not, itself, entitle or otherwise approve any transportation projects. Nevertheless, potential impacts of implementing the transportation improvements contained in the Project Lists were analyzed at a programmatic level as part of the Proposed Project. Similar to the MP 2035, the Proposed Project does not prescribe how the enhanced network treatments will be implemented within each community plan. Therefore, the enhanced network treatments in the Project Area were reviewed in relation to the roadway characteristics, such as roadway width, right-of-way, street designations and adjacent land uses. **Figure 4.15-7**, Project Area Network, shows the following enhanced network treatments for roadways in the Project Area.

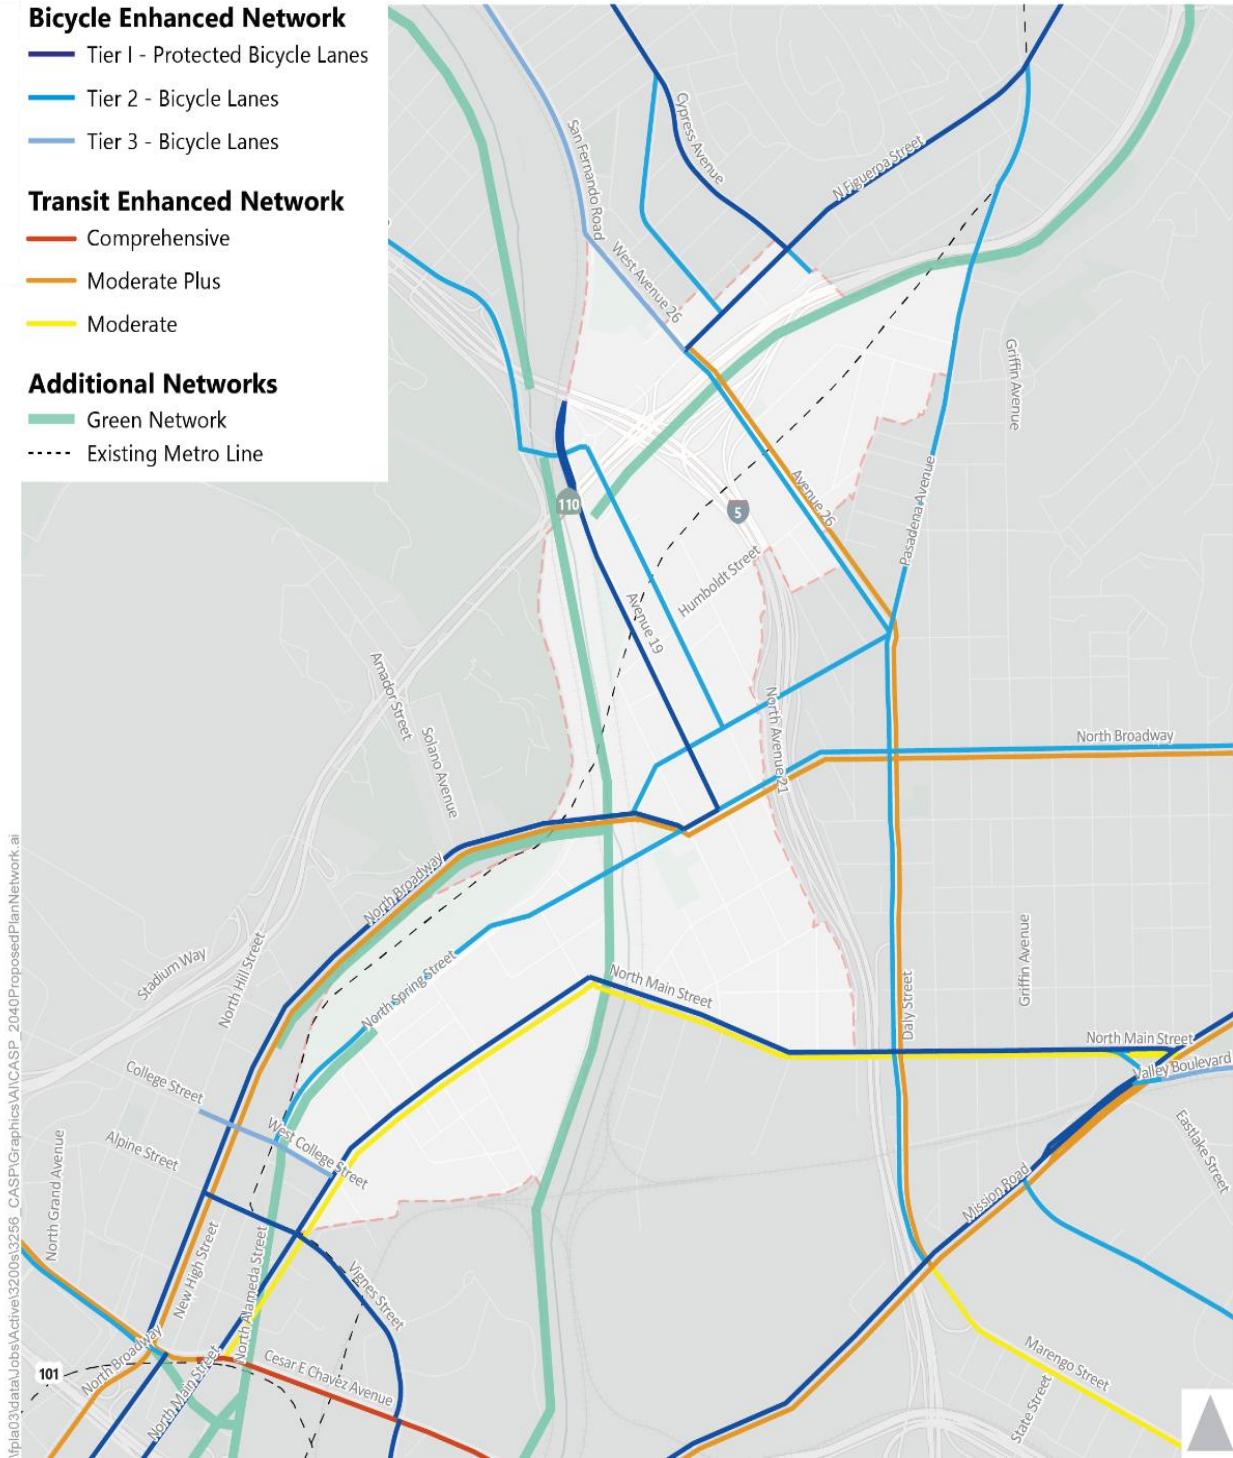

- Bicycle Enhanced Network (BEN)
 - Tier 1 Protected bike lane: bicycle facilities with a physical separation from the vehicular lanes
 - Tier 2 bike lane: bicycle lanes painted on the roadway and adjacent to vehicular lanes, anticipated to be built by 2035
 - Tier 3 bike lane: bicycle lanes painted on the roadway and adjacent to vehicular lanes, not anticipated to be built by 2035
- Transit Enhanced Network (TEN)
 - Moderate: stop enhancements and increased service; bus operates in mixed-flow with vehicles
 - Moderate Plus: moderate treatments, plus peak-period bus-only lanes
 - Comprehensive: moderate treatments, plus full-time bus-only lanes

Parking

Parking deficits are not CEQA impacts. They are considered socio-economic impacts, rather than impacts on physical environment as defined by CEQA, unless there are secondary impacts, such as safety impacts.

TABLE 4.15-8 TRANSPORTATION IMPROVEMENT PROJECT LIST		
Project Location	Endpoints	Project Description
Figueroa St	Avenue 26 to Cypress Ave	BEN: Protected bike lane
Cypress Ave	Arroyo Seco Ave to Figueroa St	BEN: Tier 2 bike lane

San Fernando Rd	Avenue 19 to Pasadena Ave	BEN: Tier 2 bike lane
Avenue 19	5 FWY to Broadway	BEN: Protected bike lane
Pasadena Ave	5 FWY to Broadway	BEN: Tier 2 bike lane
Broadway	College St to Avenue 19	BEN: Protected bike lane; TEN: Moderate Plus treatments
Broadway	Avenue 19 to 5 FWY	BEN: Tier 2 bike lane; TEN: Moderate Plus treatments
Spring St	College St to Broadway	BEN: Tier 2 bike lane
Main St	Alpine St to 5 FWY	BEN: Protected bike lane; TEN: Moderate treatments
College St	Spring St to Main St	BEN: Tier 3 bike lane

Figure 4.15-7 2040 Project Network

PROJECT IMPACTS

The impacts and mitigation discussion presented below reflects CEQA requirements as finalized on July 1, 2020. Delay-based metrics are included in some cases for informational purposes and are not discussed in mitigation.

Threshold 4.15-1	Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadways, bicycle and pedestrian facilities
-------------------------	--

Impact 4.15-1 **Proposed Project:** The Proposed Project would not conflict with adopted City and state policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance of safety of such facilities. This impact would be *less than significant*.

Project Impacts

The Proposed Project seeks to enhance access to all modes in the local circulation system, improving access on transit, roadways, bicycle, and pedestrian facilities. This is accomplished through applying new land use and zoning regulations to encourage mixing and scales of use as well as site design supportive of all modes. The Proposed Project also implements MP 2035 with a refined lens on the Project Area and is consistent with the objectives of the SCAG 2020-2045 RTP/SCS.

The types of transportation improvements envisioned as part of the Proposed Project are within the framework established in MP 2035. The proposed updates to the Proposed Project are consistent with the City's municipal approach to transportation planning and apply such principles to the Proposed Project. The proposed mobility improvements would provide transportation options and accommodations for multiple modes of travel (i.e., transit, bicycle, pedestrian, and vehicle) as part of the transportation system.

In addition to MP 2035, the Proposed Project would support the City's Plan for a Healthy LA by creating more opportunities for people to live and work in areas of the City where travel by active transportation can be part of daily life. The implementation of active transportation facilities is anticipated to improve safety and is in alignment with the City's Vision Zero Action Plan. The existing light rail stations within and outside of the Project Area create opportunities for the City to further enhance first- and last-mile opportunities through the creation of mobility hubs. In addition, individual development projects will need to adhere to the requirements in LADOT's recently adopted Transportation Assessment Guidelines. The Proposed Project would not conflict with adopted City and state policies, plans or programs regarding public transit, bicycle, or pedestrian facilities. Therefore, a *less than significant impact* related to consistency with other plans with respect to this impact category may occur.

Significant impacts have not been identified; therefore, mitigation is not required for the Proposed Project.

Threshold 4.15-2	Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)
-------------------------	---

Impact 4.15-2 **Proposed Project:** The Proposed Project would not conflict with CEQA Guidelines section 15064.3, subdivision (b) related to VMT thresholds. Thus, impacts would be *less than significant*.

Project Impacts

The Proposed Project would have an impact if its VMT exceeds either of the following:

- The Proposed Project results in average VMT per service population for the 2040 Plan that exceeds 15% below the regional average total VMT per service population from the 2021 SCAG Region.
- The Proposed Project results in average total VMT per service population for the 2040 Plan that exceeds the average total VMT per service population for the Project Area from the 2021 Baseline.

Table 4.15-9 shows vehicle trips and VMT for the 2021 SCAG Region conditions and 2040 Project Area conditions, and **Table 4.15-10** shows vehicle trips and VMT for the 2021 Baseline conditions and 2040 Proposed Project conditions.

TABLE 4.15-9 FUTURE TOTAL VEHICLE MILES TRAVELED (VMT) COMPARED TO 2021 SCAG REGION			
Metric	2021 SCAG Region Conditions ^[a]	2040 Proposed Project Conditions	Percent Difference
Total Daily VT	81,981,938	155,383	N/A ^[b]
Total Daily VT per Service Population	3.0	2.4	-20%
Total Daily VMT	919,653,837	983,961	N/A ^[b]
Total Daily VMT per Service Population	33.1	15.2	-54%

SOURCE: Fehr & Peers, 2021. SCAG 2016 RTP Models, 2016.
Note:
 [a] 2021 SCAG Region results were interpolated from the SCAG 2012 base and 2040 future TDF models.
 [b] Comparison here is not applicable as the conditions represented come from different geographic areas, the SCAG region and the Project Area, respectively.

TABLE 4.15-10 FUTURE TOTAL VEHICLE MILES TRAVELED (VMT) COMPARED TO 2021 BASELINE			
Metric	2021 Project Area Baseline Conditions	2040 Project Area Conditions	Percent Difference
Total Daily VT	41,323	155,383	276%
Total Daily VT per Service Population	3.6	2.4	-34%
Total Daily VMT	328,439	983,961	200%
Total Daily VMT per Service Population	28.7	15.2	-47%

SOURCE: Fehr & Peers, 2021.

Given that service population VMT for the Project Area is more than 15% below the 2021 SCAG Region and less than the 2021 Baseline for the Project Area, the Plan would have *a less than significant impact*.

Mitigation Measures

Significant impacts have not been identified; therefore, mitigation is not required for the Proposed Project.

Threshold 4.15-3	Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)
-------------------------	--

Impact 4.15-3 **Proposed Project:** The Proposed Project would not substantially increase hazards due to geometric design features (such as sharp curves or dangerous intersections) or incompatible uses. However, there could be safety impacts related to off ramp queuing as growth occurs pursuant to the Proposed Project. This impact would be *significant and unavoidable*.

Project Impacts

The Proposed Project describes the reasonably expected future development for a portion of the City and does *not* constitute a commitment to any project-specific development within the Project Area. Furthermore, none of the regulations included in the Proposed Project would promote sharp curves, dangerous intersections, or incompatible uses that could present safety hazards. Rather, numerous policies and programs emphasize transportation safety for all people using the transportation system, support implementation of transportation treatments that are designed to improve roadway safety and help implement other City initiatives (such as Vision Zero or Safe Routes to School) which aim to improve the safety of the City's transportation facilities.

None of the transportation system improvements envisioned in the Project Area would introduce new safety hazards or incompatible uses at intersections or along roadway segments, as most would be designed to improve safe circulation and access to the transit stations for all users. The multi-modal improvements envisioned in the Proposed Project are intended to help minimize conflicts between pedestrians and vehicles. Furthermore, design standards in the Proposed Project are intended to limit the number, width, and location of new driveways along major streets and in areas of high pedestrian activity, thereby improving pedestrian safety.

The implementation of bicycle and pedestrian facilities identified in the Project Area are anticipated to improve the safety of bicyclists and pedestrians. Automobile speed is a major factor in the severity of collisions with bicyclists and pedestrians, the most vulnerable roadway users. Collisions with a vehicle traveling at 20 miles per hour result in a five percent pedestrian fatality rate, and fatalities increase to 40, 80 and 100 percent when the vehicle speed increases to 30, 40 and 50 mph, respectively (USDOT 1999). Bicycle lanes, when accompanied by travel lane reductions can help reduce overall vehicle speeds (FHWA). When modified from four travel lanes to two travel lanes with a two-way left-turn lane, research along 45 corridors throughout the country has found a range of 19 to 47 percent reduction in all roadway crashes. The upgrade to fully protected bicycle lanes or cycle tracks has been shown to reduce the risk of injury by 90 percent (Teschke 2012).

The bicyclist and pedestrian improvements associated with the Proposed Project are also anticipated to increase the number and visibility of bicyclists and pedestrians on the City's transportation network. Of 68 cities across California with highest per capita pedestrian and bicycle collisions, per capita injury rates to pedestrians and bicyclists are shown to fall precipitously as the number of bicyclists increases, revealing a non-linear relationship between bicycle safety and the level of bicycling (Jacobsen 2003). This study showed as much as an eight-fold variation of collisions (expressed as a percentage of those that bike or walk to work) in comparing low and high bicycling cities. The underlying reason for this pattern is that motorists drive slower when bicyclists and pedestrians are visible either in number or frequency and drive faster when few pedestrians and bicyclists are present, resulting in higher overall travel speeds. This effect

of modified driving behavior is consistent with other research focused on 24 California cities that shows that higher bicycling rates among the population generally show a much lower risk of fatal crashes for all road users (Marshall et.al 2011). Comparing these low versus high bicycling communities, there was a ten-fold reduction in fatality rate for motorists, and eleven-fold reduction in fatality rate for pedestrians, and an almost fifty-fold reduction in fatality rate for bicyclists.

The Proposed Project is responding to changing demographics, a younger population desirous of safe and accessible active transportation options (bike, walk), a growing number of residents and employees seeking alternatives to the car, and an aging population that may need to rely more and more on transportation alternatives to the automobile. In 2030, senior citizens will make up 1/5 of Los Angeles County's population. This older population (as well as children and the disabled) will benefit from longer pedestrian crossing times, shorter street crossing distances, wider, shaded sidewalks, street benches, increased transit service and separated bicycle facilities. Ultimately, nothing in the Proposed Project is expected to significantly reduce pedestrian mobility, including but not limited to the disabled, those with strollers, and bus riders.

Freeway Analysis

As part of individual development project entitlements, the Interim Guidance for Freeway Safety Analysis released by LADOT in May 2020 requires that individual land use projects evaluate the potential for safety impacts related to freeway off ramp queuing. The specific concern relates to the possibility that the speed differential between vehicles traveling on freeway mainlines (the 5 and 110 Freeways) and vehicles queuing at freeway off-ramps may create the potential for collisions if drivers on the freeway mainline lack sufficient time to slow or stop once they are aware of a queuing situation. Generally speaking, it is anticipated that freeway mainline traffic would slow at times when high levels of off ramp queuing occurs and that the speed differential would be sufficiently small that mainline drivers would have sufficient warning about a queuing situation; however, it is possible that queuing at individual off ramps could occur at times when mainline traffic congestion is low, thus creating a potential safety issue. Because the Proposed Project is programmatic in nature, it does not include specific development projects or details about the size, nature, or location of individual developments. In addition, future traffic levels and speeds at individual off ramps in and near the Project Area cannot be predicted with any degree of certainty at this time because it is not known how conditions may change over an approximately 20-year period and what measures the City and Caltrans may implement to address any off-ramp queuing issues that arise. Therefore, any detailed analysis of potential future impacts related to off ramp queuing would be speculative. Nevertheless, queuing-related safety issues could potentially arise as additional development occurs in the Project Area, although it is anticipated that the City and Caltrans would address any such issues as they arise, it cannot be determined with certainty that queuing-related safety issues would not occur. As such, safety impacts related to off ramp queuing as growth occurs pursuant to the Plan are ***potentially significant***.

Mitigation Measures

Significant and unavoidable impacts have been identified in relation to the potential for project-specific ramp queuing safety impacts as growth occurs pursuant to the Proposed Project. Potential mitigation may include transportation demand management strategies to reduce a project's trip generation, investments to active transportation infrastructure, or transit system amenities, and/or operational changes to the ramp terminal such as lane reassignment, traffic signalization, signal phasing or timing modifications, etc. However, without specific information on where safety impacts may occur as a result of freeway off ramp queuing, it is not possible to identify appropriate mitigation measures. Therefore, no feasible mitigation can be identified for the Proposed Project. It is anticipated that subsequent land use development projects that are seeking approval under the plan study freeway queuing and safety impacts in more detail per the Interim Guidance for Freeway Safety Analysis.

Significance After Mitigation

Impacts related to highway safety as a result of design features or incompatible uses would be *significant and unavoidable*. All other safety related issues from hazards are *less than significant*.

Threshold 4.15-4	Result in inadequate emergency access
-------------------------	---------------------------------------

Impact 4.15-4 **Proposed Project:** The Proposed Project would not result in inadequate emergency access. This impact would be *less than significant*.

Project Impacts

In the City of Los Angeles, fire prevention and suppression and emergency medical services are provided by the LAFD. Public protection service and law enforcement are provided by LAPD. This impact analysis provides an evaluation of impacts to emergency services as they relate to transportation. (EIR Section 4.14 considers the impacts to emergency services and whether that will result in impacts to the environment from the construction or expansion of new fire or emergency service or police facilities.) For individual development projects, this impact criterion considers whether a project would have adequate access to emergency services based on the road configuration and project design. At the program level, individual project design level details, such as location of driveway location and design, are unknown. Therefore, the Draft EIR does not consider impacts to emergency access to particular properties in the Project Area or particular streets based on roadway configurations. The Draft EIR considers, at the detail available, the reasonably foreseeable impacts to roadway congestion from the Proposed Project and the associated impacts to emergency access from any forecasted congestion.

Therefore, the discussion will first consider the Proposed Project's impacts to roadway congestion using LOS and V/C criteria when compared to existing conditions (2021) and then discuss the emergency access impacts associated with roadway congestion.

Roadway Congestion

Many factors influence the LOS and V/C analysis including, but not limited to, land use patterns, the relationship between land use and transportation, how transportation treatments are designed within the existing roadways, how and where the Proposed Project directs anticipated growth within the Project Area, and growth anticipated in the region surrounding the Project Area.

Land Use Patterns

Where and how the Proposed Project directs anticipated growth in relation to transportation will affect transportation use; therefore, land use patterns are factored into the analysis of the circulation system. The Proposed Project would create new housing and employment opportunities, mostly in areas around existing transit systems.

Regional Background Growth

On a regional level, traffic in the Project Area is anticipated to increase in conjunction with regional population, housing, and employment growth projected to occur in the future by SCAG. This growth will occur with or without implementation of the Proposed Project. The background growth influences the transportation analysis by accounting for the increased activity levels under Proposed Project conditions, although those increases would occur with or without the Project. Background growth is included in the City of Los Angeles TDF Model.

Level of Analysis

At the aggregate Project scale, the traffic operations results reflect the impacts related to the Proposed Project and the number of vehicle travel lanes. However, turn lanes, signal timings, and driveways are not accounted for in the analysis at this scale. Each of these features has the potential to affect operations, delay, VMT, and rerouting of traffic at the neighborhood level. Plans that involve large areas and are not expected to be fully implemented until Year 2040 or beyond are not analyzed effectively by detailed intersection V/C analyses. Consequently, roadway segment analysis is commonly used to determine the average service capacity of the roadway network. Street segment capacity impacts are generally evaluated in program-level analyses (such as community plans or long-range development projects) for which details regarding specific land use types, sizes, project access points, etc., are not known (Los Angeles 2006).

Circulation System Analysis

As identified above, two criteria (weighted average V/C ratio and the number of street segments at LOS E or F) are used to evaluate the impacts of the Proposed Project when compared to Existing conditions. **Table 4.15-11** presents the volume-weighted V/C ratios and LOS results for the AM peak period. With the implementation of the Proposed Project and regional growth anticipated in Year 2040; the weighted V/C ratio worsens from 0.680 (LOS B) to 0.971 (LOS E). The percentage of roadway segments operating at LOS E or F also increases from 2 percent to 42 percent. **Table 4.15-12** presents the volume-weighted V/C ratios and LOS results for the PM peak period. With the implementation of the Proposed Project and regional growth anticipated in Year 2040, the weighted V/C ratio worsens from 0.734 (LOS C) to 1.018 (LOS F). The percentage of roadway segments operating at LOS E or F also increases from 5 percent to 46 percent.

TABLE 4.15-11 AM PEAK PERIOD ROADWAY OPERATIONS		
Transportation Metrics	2021 Baseline	2040 Project
Weighted Average V/C	0.680 (LOS B)	0.971 (LOS E)
Percentage (%) of Street Segments at LOS E or F	2%	42%
Weighted Average V/C by Facility Type

Emergency Access Impacts Associated with Roadway Congestion

Within the City of Los Angeles, fire prevention and suppression and emergency medical services are provided by the LAFD. Public protection service and law enforcement are provided by LAPD.

While the Proposed Project would impact segment-level LOS as shown above, there is not a direct relationship between predicted travel delay and response times as California state law does require drivers to yield the right-of-way to emergency vehicles and even permits emergency vehicles to use opposing lane of travel, the center turn lanes, or bus-only lanes. LAFD in collaboration with LADOT has developed a Fire Preemption System (FPS), a system that automatically turns traffic lights to green for emergency vehicles traveling on designated streets in the City. (LAFD 2008a). The City of Los Angeles has over 205 miles of routes equipped with FPS. In some instances, roadway reconfigurations with the implementation of the transportation improvements as part of the enhanced network treatments could improve emergency access. For example, a roadway reconfiguration could improve emergency access where a bus-only lane or a contiguous center left-turn lane is introduced where it did not exist. Emergency vehicles are permitted to use bus-only lanes for local access to emergency destinations. People traveling by bicycle are required to pull to the side of the road to yield access to emergency providers regardless if they are traveling in a bicycle-only lane or in a standard travel lane. It is more likely that when in route to an emergency incident, general traffic will be expected to merge into the bus-only lane, permitting the emergency vehicle to pass in the through lane to the left. Emergency responders also routinely use the center left-turn lanes, or even travel in opposing travel lanes if needed. Generally, multi-lane roadways allow the emergency vehicles to travel at higher speeds and permit other traffic to maneuver out of the path of the emergency vehicle.

Knowing exactly how fire and emergency service response times will be affected calls for a great deal of speculation. As explained above, it is not possible to exactly predict the Proposed Project impacts at the street level. This is one factor as to why it is not possible to forecast response times. The other is that, as explained above, the relationship between emergency access and traffic and potential impacts associated with emergency access is complex and involves factors such as the following:

- The proximity of LAFD and LAPD (and other) facilities to those they serve.
- The staffing and equipment at fire stations.
- The opportunity for emergency responders to use alternative routes in an area.
- The specific street configuration. LAFD, in cooperation with LADOT and LADCP, actively participates in the design of specific roadway changes in order to ensure adequate fire/emergency access is maintained. LAFD, in reviewing street and right-of-way projects, comments on particular street configuration designs, and will raise concerns if roadways present particular access challenges, and can recommend no changes be done at all or alternative changes be undertaken if fire and emergency access are particularly impacted.
- As identified in the Thresholds Guide (Los Angeles 2006), on any given project review, LAFD can implement project specific mitigation requirements, such as requiring fire retardant landscaping, prohibiting construction in fire hazard areas, requiring design features that reduce fire potential and developing emergency response plans.
- The changing demand for service is complex. For example, with increasing populations there may be more density and more construction, though new buildings are constructed in accordance with increasingly stringent building and fire codes making them safer and more resistant to fires, such as requiring fire sprinklers. The population is aging, which may increase demand for service. But it is also feasible that the population may not need additional service, as healthcare and other technologies evolve and are improved.

- Future factors that could increase efficiencies in response, including improvements in technology and management, such as changes in deployment of equipment and staff and mutual aid agreements.

As discussed in Section 4.13, *Public Services*, LAFD has a Constitutional mandate to provide fire services as, “the protection of the public safety is the first responsibility of local government.” Cal. Const. Art. XIII, Sec. 35, subd. (a)(2). LAFD “preserves life and property, promotes public safety and fosters economic growth through a commitment to prevention, preparedness, response and recovery as an all risk life safety response provider.” It is the nation’s second busiest provider of Emergency Medical Services (EMS); more than 85% of LAFD’s daily responses are related to EMS. The types of medical response calls received range from minor cuts to trauma and heart attacks. The call volume for structure and brush fires is less frequent.

In 2015, LAFD published a Strategic Plan 2015-2017, *A Safer City*, that focuses on nine goals and corresponding strategic actions that would guide the LAFD for the next three years (LAFD 2015).

In 2018, LAFD released the new Strategic Plan 2018-2020, *A Safer City 2.0*, which reports that since the previous Strategic Plan was released, LAFD has hired hundreds of new firefighters, implemented the Four Bureau Reorganization, and created innovative resources such as the Advanced Provider Response Unit (APRU), the Sober Response Unit and the Fast Response Vehicle program as well as other pilot programs (LAFD 2018). The new Strategic Plan has updated goals that are more refined. The five goals are 1) Provide exceptional public safety and emergency service, 2) Embrace a healthy, safe and productive work environment, 3) Capitalize on Advanced Technology, 4) Enhance LAFD sustainability and community resiliency, and 5) Increase opportunities for personal growth and professional development. Goal 1 includes improving emergency response times, the delivery of EMS, resource deployment and readiness to respond to disasters. Goal 1 includes an objective to complete the Standards of Cover deployment analysis to determine the optimal distribution and concentration of resources and ensure a safe and effective response force for fire suppression, EMS and specialty response situations. The recommendations from the Standards of Cover are expected to be identified based on different geographic areas in the City; the Standards of Cover study was funded in the City’s 2019-2020 budget and is expected to be completed within the next few years (LAFD 2019).

In 2015, Planning Department staff discussed the LAFD Strategic Plan and its relationship to growth and traffic with LAFD staff in order to understand how LAFD responds to growth and changes in traffic (LAFD 2015a). LAFD advised that although increasing congestion is a factor in how they address emergency response, their ongoing planning efforts, including the LAFD Strategic Plan take into account such increases in congestion and LAFD continues to plan for and maintain public safety and emergency service as required. LAFD monitors any impact on-the-ground implementation of the Proposed Project may have on response times and makes adjustments as necessary. These adjustments may or may not include redeploying resources, adding staff or building new fire stations. In the summer of 2019, Planning Department staff met with LAFD staff on the same topic due to public comments received about congestion and emergency response (LAFD 2019a). LAFD staff indicated that there are ongoing assessments of increases in call load or types of calls throughout the City, and LAFD continuously makes resource and deployment adjustments to address these changes, such as hiring additional medical personnel, acquiring new apparatus or flex staffing of personnel during the busiest hours of the day. LAFD staff said incremental changes are currently being addressed but the pending Standards of Cover is expected to have new recommendations for the long term. The Standards would include levels of staffing of firefighters and other personnel, target response times, new facilities and apparatus needed by geography, and address a City where development is expected to become denser and taller around transit infrastructure systems.

LAFD has some adopted response times that are consistent with the response times stated in the National Fire Protection Association guidelines, including call processing, turnout for EMS and non-EMS calls, and travel. LAFD holds regular FireStat meetings to review response times throughout the City. These meetings include battalion chiefs and captains from the four Geographic Bureaus (Central, South, Valley, and West) and the Administrative Bureaus in the City and uses the FireStat data to exercise performance management and spot trends to adjust practices, methods or identify other solutions to maintain response times. Metrics are compared between stations and even across shifts or platoons to determine if there is an issue and to continue always to work on reducing all response times to get closer to the NFPA guidelines. If response times are shown to be increasing, battalion chiefs and captains will be tasked with identifying the reason and put in place mediations to resolve the issue. For example, if it is shown that one platoon is managing a four-minute average response and another platoon at the same station in similar conditions has an average response time of four and a half minutes, the responsible officers for the station will need to determine why one platoon is doing better than another, such as whether one platoon is taking a different route and resolve the differences to improve the slower numbers. If the factors are external to LAFD, LAFD will coordinate with other City departments, such as LADOT or ITA to adjust street light timing, or look for completely new solutions, in order to improve response times. In general, LAFD is constantly monitoring FireStat and utilizing all available resources so that appropriate and feasible response times are being maintained.

Many members of the public focus on response times as operational measures to assess system performance (Fitch 2005) or believe that faster response times mean better patient outcome. Nationwide, the most widely referenced response time standard for advanced life support (ALS) incidents in urban settings has been for emergency responders to respond within 8 minutes and 59 seconds, when including call processing time, for 90 percent of incidents. The National Fire Protection Association *1710 Standard for the Organization and Deployment of Fire Suppression Operations, Emergency Medical Operations and Special Operations to the Public by Career Fire Departments* is for an ALS unit to respond within 8 minutes to 90 percent of incidents, without including call processing time (Fitch, 2010). This response goal time has been commonly cited since Dr. Mickey Eisenberg published a study in 1979, which concluded that survival from cardiac arrest is maximized if the time between collapse to receiving CPR is four minutes and the time from collapse to receiving definitive care (e.g. defibrillation) is 8 minutes, which has led to a widespread goal of an 8-minute response for ALS units responding to life-threatening emergencies (Blanchard et al., 2012).

LAFD publishes average operational response times citywide and by specific fire stations online through FIRESTATLA (<http://www.lafd.org/fsla/stations-map>), and was the first fire agency in the United States to release response times to the public (Los Angeles 2019). ALS operational response times are provided for the full calendar year (January through December) starting with the year 2016; when this document was prepared in June 2022, the data available through FIRESTATLA online for 2022 was January through April. Operational response time is the time interval that starts when first contact is made (either through 911 or the fire dispatch center) and ends when the first Standard Unit arrives on-scene. A Standard Unit has the capacity or equipment to administer the full suite of lifesaving services (LAFD 2019b). Average ALS operational response times for the City and for the two stations in the Project Area is less than the 8-minute 59 seconds standard, including call processing time. See **Table 4.15-13**.

TABLE 4.15-13 LOS ANGELES FIRE DEPARTMENT RESPONSE TIMES		
Year	Station 1 2230 Pasadena Avenue, Los Angeles, CA 90031	Station 44 1410 Cypress Avenue, Los Angeles, CA 90065
2016	6:13	6:16
2017	6:20	5:55
2018	6:16	6:25
2019	6:00	6:38
2020	6:21	6:14
2021	6:29	6:17
2022 /a/	7:00	6:39

/a/ Metrics for 2016, 2017, 2018, 2019, 2020, and 2021 are for January-December; for 2022, the available months were January-April when sourced in June 2022.

SOURCE: LAFD, FIRESTATLA, 2022.

From the data, the average operational response times for ALS incidents for the two fire stations in the Project Area have generally slightly increased in recent years but remain under the 8 minutes 59 seconds standard. Based on all of the above, it is not reasonably foreseeable that the City will not continue to stay below the 8 minutes and 59 second standard for average emergency response times in the Project Area in consideration of the increasing congestion in the Project Area identified above. It is reasonably foreseeable that LAFD will continue to meet its own mission statement and constitutional mandate to provide necessary fire and emergency services to the residents and visitors of the City. LAFD is currently preparing a Standards of Cover that will establish the City’s response time standard and identify the facilities, equipment and staff to maintain that response time, including in consideration of increasing congestion identified above. Additionally, LAFD continues to develop, obtain and innovate new methods, resources and equipment to meet the needs of the City for fire and emergency response, including in the Project Area. Based on the above, the impact of the Proposed Project on emergency medical services and fire protection and police protection would be *less than significant*.

Mitigation Measures

No significant impact has been identified; therefore, mitigation is not required for the Proposed Project.

CUMULATIVE IMPACTS

Cumulative transportation and traffic impacts consider regional population, housing and employment growth projections prepared by SCAG as well as growth anticipated in the Project Area. The RTP also includes a Sustainable Communities Strategy (SCS) that provides guidance on land use planning and transportation to ensure that the region meets CARBs region-specific GHG reduction goals. The RTP also includes large-scale transportation improvements to show how linking transportation and land use planning can reduce automobile trips and greenhouse gas emissions. The 2016-2040 RTP/SCS identifies transportation corridors and transit routes, High Quality Transit Areas (HQTAs), and a variety of strategies to be employed across the region.

MP 2035 and SCAG 2020-2045 RTP/SCS Consistency

The adopted City of Los Angeles Mobility Plan 2035 (MP 2035) could have overlapping impacts with the Proposed Project. In August 2015, the City of Los Angeles adopted MP 2035. MP 2035 (formerly the Transportation Element of the City’s General Plan) is the transportation blueprint for the City of Los Angeles. MP 2035 identifies a number of changes to the City’s circulation system, including policies, an Enhanced Complete Street System, an Action Plan, a Complete Streets Design Guide, and a revised Bicycle

Plan, all of which will influence the network conditions in the Plan Area and adjacent areas in the City of Los Angeles.

MP 2035 provides the framework for future community plans and specific plans, which take a closer look at the transportation system in specific areas of the City and recommend more detailed implementation strategies to realize MP 2035. MP 2035 was prepared in compliance with the 2008 Complete Streets Act, which mandates that the circulation element of a city's General Plan be modified to plan for a balanced, multimodal transportation network that meets the needs of all users of streets, roads, and highways, defined to include motorists, pedestrians, bicyclists, children, persons with disabilities, seniors, movers of commercial goods, and users of public transportation, in a manner that is suitable to the rural, suburban, or urban context of the general plan.

The Proposed Project contains a Project List that reflects the vision of MP 2035 and the analysis above considers one option for implementing MP 2035 in the Project Area; however, the Future transportation impact analysis does not reflect full buildout of MP 2035 in adjacent areas of the City of Los Angeles. In the remaining portion of the City outside the Project Area, buildout of MP 2035 was not included in the Future with Proposed Project analysis because, although MP 2035 has been adopted, the timing of implementation has not yet been identified. However, the cumulative impacts analysis evaluates the impacts of the Proposed Project in conjunction with full buildout of MP 2035 throughout the City of Los Angeles.

CEQA Guidelines Section 15064.3, Subdivision (b) Consistency

The Proposed Project meets the City adopted threshold of not exceeding baseline conditions, and therefore does not create a transportation impact itself. While the Proposed Project cannot be used to determine the impact of individual development projects or adjacent community plans, the inclusion of the regionally used future forecasts accounts for potential cumulative impacts in this analysis. Therefore, the Proposed Project's incremental contribution to increased VMT would not be cumulatively considerable and cumulative impacts related to the increased VMT *less than significant*.

Hazards Due to a Geometric Design Feature or Incompatible Uses

The Proposed Project does not include any elements that would promote sharp curves, dangerous intersections, or incompatible uses that could present safety hazards, and promotes policies and programs to encourage safety of users across all modes. Although the Proposed Project describes a reasonably expected future and cannot constitute a commitment to any project-specific development, individual projects would be expected to align with the safety principles of the Proposed Project as well. However, queuing-related safety issues could potentially arise as additional development occurs in the Project Area and elsewhere in the region and, although it is anticipated that the City and Caltrans would address any such issues as they arise, it cannot be determined with certainty that queuing-related safety issues would not occur. Thus, cumulative impacts related to freeway off ramp queuing are considered *significant and unavoidable* and the Proposed Project may make a cumulatively considerable contribution to freeway safety impacts.

Cumulative impacts related to queuing-related safety issues are *significant and unavoidable*. All other cumulative impacts related to transportation hazards are *less than significant*.

Emergency Access

The Proposed Project would increase traffic in the Project Area, which could result in potential delays for emergency vehicles. However, while the MP2035 includes proposed roadway changes, they do not provide intersection-level detail in the Plan Area. It is feasible that some of these improvements to the network would provide benefits to emergency access as well. As noted above, the Department of City Planning staff

have discussed the LAFD Strategic Plan and its relationship to growth and traffic with LAFD staff. While LAFD acknowledged the possible effects of congestion on their efforts, their ongoing planning efforts and new Strategic Plan consider increased congestion and the possible adjustments necessary. These adjustments may include redeploying resources, adding staff, or building new fire stations as deemed necessary. LAFD will continue to monitor growth in the Project Area and any impact they identify will be addressed when needed. Therefore, the Proposed Project's incremental contribution to potential delays for emergency vehicles would not be cumulatively considerable and cumulative impacts related to emergency access would be *less than significant*.

4.16 TRIBAL CULTURAL RESOURCES

This section analyzes the potential environmental effects on tribal cultural resources and evaluate impacts associated with the Proposed Project. The Proposed Project is evaluated in terms of whether implementation of the Updated Cornfield Arroyo Seco Specific Plan would impact tribal cultural resources.

EXISTING ENVIRONMENTAL SETTING

For a full discussion of the prehistoric and ethnographic history of the Project Area, see Section 4.4, *Cultural Resources*.

REGIONAL SETTING

Prior to Spanish colonization in the mid-1500s, much of the Los Angeles region, including the Project Area, was occupied by an indigenous tribe known as the Gabrielino. The name was applied by the Spanish to the indigenous people that were attached to Mission San Gabriel. Today, most contemporary Gabrielino prefer to identify themselves as Tongva. It is believed that the area has been inhabited for at least 13,000 years, though the ancestors of the Tongva people did not arrive from the Sonoran Desert until around 3,500 years ago. The area inhabited by the Tongva people was known as Tovaangar and consisted of the Los Angeles Basin, portions of the Santa Monica and Santa Ana mountains, and the Southern Channel Islands. Historical evidence and archaeological findings show an intricate material culture of carvings, paintings, baskets, and many tools and decorative objects made from stone, shell, and bone. The Tongva people were hunter-gatherers and survived on a broad diet of sea, river, and land animals, as well as a variety of plants. Primary plant resources included acorns and seeds including chia, sages, various grasses and holly-leaved cherry. The Tongva used wooden boats, harpoons, and clubs for deep-sea hunting; lines, nets, and poisons for river fishing; and traps and bow and arrows for hunting land mammals.

It is estimated that there were approximately 5,000 Tongva in the Los Angeles area prior to colonization by the Spanish in 1542. It would not be until the arrival of the Mission de San Gabriel and the San Fernando Mission in 1771 that the rapid decline of indigenous people in the area began. The forced assimilation of the now “Gabrielino” people (named for the mission) to western European culture, in conjunction with European diseases, lead quickly to the near-complete annihilation of the native people and culture.

LOCAL SETTING

As the Project Area was inhabited by native people for presumably thousands of years, substantial numbers of tribal cultural resources have been discovered over time in the area. Various federal, State, and local regulations have been promulgated to protect archaeological sites and resources. Although the California general plan law calls for mapping of the sites, the exact location of sites is confidential, pursuant to California Government Code Section 6254.10, to protect sites from disturbance, scavenging, and vandalism.

Despite the heavy development of the Project Area, there is still potential for the occurrence of unidentified tribal cultural resources within the Project Area. For example, it is possible that human remains would be located outside of formal cemeteries, as it was common for Native Americans to bury their own beyond the confines of the Mission grounds. However, no known informal cemetery sites are known to exist within the Project Area.

Native American Consultation/Sacred Lands Files

Approved by Governor Brown on September 25, 2014, Assembly Bill 52 (AB 52) establishes a formal notification and, when requested, consultation process for California Native American Tribes to identify potential significant impacts to Tribal Cultural Resources (TCR), as defined in PRC Section 21074, as part of CEQA. Assembly Bill 52 requires meaningful consultation with California Native American Tribes on potential impacts to TCRs, as defined in Public Resources Code Section 21074. Tribal cultural resources are sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe that are either eligible or listed in the California Register of Historical Resources or local register of historical resources.

As part of the AB 52 process, Native American tribes must submit a written request to the City of Los Angeles to be notified of projects within their traditionally and culturally affiliated area. The City of Los Angeles must provide written, formal notification to those tribes within 14 days of deciding to undertake a project where a negative declaration or EIR will be prepared. The tribe must respond to the City of Los Angeles within 30 days of receiving this notification if they want to engage in consultation on the project, and the City of Los Angeles must begin the consultation process within 30 days of receiving the tribe's request. Consultation concludes when either 1) the parties agree to mitigation measures to avoid a significant effect on a tribal cultural resource, or 2) a party, acting in good faith and after reasonable effort, concludes mutual agreement cannot be reached.

The City of Los Angeles sent notification letters to a list of 10 Native American contacts provided by the Native American Heritage Commission (NAHC) in compliance with AB 52 and Senate Bill (SB) 18 on April 7, 2021, to advise them of the Proposed Project and afford them the opportunity to engage in government-to-government consultation pursuant to the requirements of California AB 52. Those tribes include the Fernandeano Tataviam Band of Mission Indians, Gabrieleño Band of Mission Indians-Kizh Nation, Gabrielino Tongva Indians of California Tribal Council, Gabrielino/Tongva Nation, Gabrielino/Tongva San Gabriel Band of Mission Indians, Gabrielino-Tongva Tribe, San Fernando Band of Mission Indians, Soboba Band of Luiseño Indians, and Torres Martinez Desert Cahuilla Indians. At the time of preparation of this EIR, the City of Los Angeles received one response from the Gabrieleño Band of Mission Indians – Kizh Nation on April 16, 2021. The City responded on April 27, 2021, explaining that the Proposed Project is a long-range land use plan that involves rezoning certain properties within the Project Area and establishing new or enhanced development standards and use requirements for which future development must comply. The Gabrieleño Band of Mission Indians – Kizh Nation replied on April 27, 2021, stating that there would be no need for consultation and requesting that they be notified should there be any type of ground disturbance in the future. No other responses were received within the 30-day consultation window or as of the date of this EIR. The City also requested a review of the Sacred Land File (SLF) by the NAHC and received a response on May 18, 2022, which indicated the search of the SLF was positive for Sacred Lands.

REGULATORY FRAMEWORK

This section includes a discussion of the applicable laws governing tribal cultural resources, which must be adhered to before and during implementation of the Proposed Project.

California Senate Bill 18

As of March 1, 2005, SB 18 (Government Code Sections 65352.3 and 65352.4) requires that, prior to the adoption or amendment of a general plan proposed on or after March 1, 2005, a city or county must consult with Native American tribes with respect to the possible preservation of, or the mitigation of impacts to,

specified Native American places, features, and objects located within that jurisdiction. This section does not apply to charter cities, like the City of Los Angeles.

Assembly Bill 52

AB 52 was approved on September 25, 2014. The act amended California PRC Section 5097.94, and added PRC Sections 21073, 21074, 21080.3.1, 21080.3.2, 21082.3, 21083.09, 21084.2, and 21084.3. The primary intent of AB 52 is to involve California Native American Tribes early in the environmental review process and to establish a category of resources related to Native Americans, known as tribal cultural resources, that require consideration under CEQA. PRC Section 21074(a)(1) and (2) defines tribal cultural resources as “sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American Tribe” that are either included or determined to be eligible for inclusion in the California Register or included in a local register of historical resources, or a resource that is determined to be a tribal cultural resource by a lead agency, in its discretion and supported by substantial evidence. A tribal cultural resource is further defined by PRC Section 21074(b) as a cultural landscape that meets the criteria of subdivision (a) to the extent that the landscape is geographically defined in terms of the size and scope of the landscape. PRC Section 21074(c) provides that a historical resource described in Section 21084.1, a unique archaeological resource as defined in subdivision (g) of Section 21083.2, or a “nonunique archaeological resource” as defined in subdivision (h) of Section 21083.2 may also be a tribal cultural resource if it conforms with the criteria of subdivision (a).

PRC Section 21080.3.1 requires that, within 14 days of a lead agency determining that an application for a project is complete, or a decision by a public agency to undertake a project, the lead agency provide formal notification to the designated contact, or a tribal representative, of California Native American Tribes that are traditionally and culturally affiliated with the geographic area of the project (as defined in PRC Section 21073) and who have requested in writing to be informed by the lead agency of projects within their geographic area of concern. Tribes interested in consultation must respond in writing within 30 days from receipt of the lead agency’s formal notification and the lead agency must begin consultation within 30 days of receiving the tribe’s request for consultation.

PRC Section 21080.3.2(a) identifies the following as potential consultation discussion topics: the type of environmental review necessary; the significance of tribal cultural resources; the significance of the project’s impacts on the tribal cultural resources; project alternatives or appropriate measures for preservation; and mitigation measures. Consultation is considered concluded when either: (1) the parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or (2) a party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached.

In addition to other CEQA provisions, the lead agency may certify an EIR or adopt a MND for a project with a significant impact on an identified tribal cultural resource, only if a California Native American tribe has requested consultation pursuant to Section 21080.3.1 and has failed to provide comments to the lead agency, or requested a consultation but failed to engage in the consultation process, or the consultation process occurred and was concluded as described above, or if the California Native American tribe did not request consultation within 30 days.

PRC Section 21082.3(c)(1) states that any information, including, but not limited to, the location, description, and use of the tribal cultural resources, that is submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public without the prior consent of the tribe that provided the information. If the lead agency publishes any information submitted by a California Native American tribe during the consultation or environmental review process, that information shall be published

in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public.

Confidentiality does not apply to data or information that are, or become publicly available, are already in lawful possession of the project applicant before the provision of the information by the California Native American tribe, are independently developed by the Project applicant or the Project applicant's agents, or are lawfully obtained by the Project applicant from a third party that is not the lead agency, a California Native American tribe, or another public agency.

California Public Resources Code

California PRC Section 5097.98, as amended by Assembly Bill 2641, provides procedures in the event human remains of Native American origin are discovered during project implementation. PRC Section 5097.98 requires that no further disturbances occur in the immediate vicinity of the discovery, that the discovery is adequately protected according to generally accepted cultural and archaeological standards, and that further activities take into account the possibility of multiple burials. PRC Section 5097.98 further requires the Native American Heritage Commission (NAHC), upon notification by a County Coroner, designate and notify a Most Likely Descendant (MLD) regarding the discovery of Native American human remains. Once the MLD has been granted access to the site by the landowner and inspected the discovery, the MLD then has 48 hours to provide recommendations to the landowner for the treatment of the human remains and any associated grave goods. In the event that no descendant is identified, or the descendant fails to make a recommendation for disposition, or if the land owner rejects the recommendation of the descendant, the landowner may, with appropriate dignity, reinter the remains and burial items on the property in a location that will not be subject to further disturbance.

PRC Section 5097.99 prohibits acquisition or possession of Native American artifacts or human remains taken from a Native American grave or cairn after January 1, 1984, except in accordance with an agreement reached with the Native American Heritage Commission.

PRC Section 5097.5 provides protection for tribal resources on public lands, where Section 5097.5(a) states, in part, that:

No person shall knowingly and willfully excavate upon, or remove, destroy, injure, or deface, any historic or prehistoric ruins, burial grounds, archaeological or vertebrate paleontological site, including fossilized footprints, inscriptions made by human agency, rock art, or any other archaeological, paleontological or historical feature, situated on public lands, except with the express permission of the public agency having jurisdiction over the lands.

California Penal Code

California Penal Code Section 622.5 provides the following: "Every person, not the owner thereof, who willfully injures, disfigures, defaces, or destroys any object or thing of archeological or historical interest or value, whether situated on private lands or within any public park or place, is guilty of a misdemeanor."

California Penal Code Section 623 provides the following: "Except as otherwise provided in Section 599c, any person who, without the prior written permission of the owner of a cave, intentionally and knowingly does any of the following acts is guilty of a misdemeanor punishable by imprisonment in the county jail not exceeding one year, or by a fine not exceeding one thousand dollars (\$1,000), or by both such fine and imprisonment: (1) breaks, breaks off, cracks, carves upon, paints, writes or otherwise marks upon or in any manner destroys, mutilates, injures, defaces, mars, or harms any natural material found in any cave. (2) disturbs or alters any archaeological evidence of prior occupation in any cave. (3) kills, harms, or removes any animal or plant life found in any cave. (4) burns any material which produces any smoke or gas which

is harmful to any plant or animal found in any cave. (5) removes any material found in any cave. (6) breaks, forces, tampers with, removes or otherwise disturbs any lock, gate, door, or any other structure or obstruction designed to prevent entrance to any cave, whether or not entrance is gained.

ENVIRONMENTAL IMPACTS

THRESHOLDS OF SIGNIFICANCE

The following thresholds of significance were developed based on Appendix G of the CEQA Guidelines. The Proposed Project would have a significant impact to tribal cultural resources if it would:

- Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:
 - Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or
 - A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe (Threshold 4.16-1).

METHODOLOGY

The methodologies employed for the tribal cultural resources impacts analyses are described in the Regulatory Setting and Thresholds, above.

PROJECT IMPACTS

<p>Threshold 4.16-1</p>	<p>Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:</p> <p>Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or</p> <p>A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.</p>
--------------------------------	---

Impact 4.16-1 **Proposed Project:** New reasonably anticipated development from the Proposed Project would involve ground disturbance with the potential to disturb as yet undiscovered tribal cultural resources. However, impacts would be *less than significant with mitigation incorporated*.

Project Impacts

As mentioned above, AB 52 consultation did not identify known tribal cultural resources in the Project Area as part of this analysis; however, the SLF results received from the NAHC were positive for Sacred Lands. Effects on tribal cultural resources are only known once a specific development has been proposed because the effects are highly dependent on both the individual development site conditions and the characteristics of the proposed activity. Future discretionary development under the Proposed Project that is subject to CEQA must comply with the requirements of AB 52, including consultation with California Native American tribes as each project is proposed may result in the identification of tribal cultural resources. As described in Section 4.4, *Cultural Resources*, Los Angeles has a long history of Native American occupation; therefore, tribal cultural resources could be present and development activities that could be implemented under the Proposed Project would have the potential to significantly impact tribal cultural resources. As such, grading and excavation associated with individual development projects that disturb previously undisturbed soils could potentially encounter intact tribal cultural resources. Individual discretionary projects that are subject to CEQA would be subject to AB 52 Native American consultation requirements and, as appropriate, analysis of and/or monitoring for cultural resources. However, “by right” projects would not be subject to either AB 52 or CEQA. Therefore, impacts to tribal cultural resources would be *potentially significant*.

Mitigation Measures

Individual projects subject to CEQA would be required to adhere to Assembly Bill 52 and discretionary projects would be subject to mitigation measures 4.4-2(a), (b), and (c) in Section 4.4, *Cultural Resources*. In addition, the following measures are required for projects in the Project Area.

4.16-1(a) Unanticipated Discovery of Tribal Cultural Resources

If a possible tribal cultural resource is uncovered during earthwork or construction related to any project that requires a permit for grading or excavation, all work shall cease within a minimum distance of 50 feet from the find until a Qualified Tribal Monitor or Archaeological Monitor has been retained to evaluate the find.

Following discovery, the Applicant or Owner shall immediately contact all Native American tribes that have informed the City of Los Angeles they are traditionally and culturally affiliated with the geographic area of the Project, as well as the Department of City Planning, Office of Historic Resources (OHR). If a Qualified Tribal Monitor or Archaeological Monitor determines, pursuant to Public Resources Code Section 21074(a)(2), that the object or artifact appears to be a potential tribal cultural resource, in its discretion and supported by substantial evidence, the Applicant and Owner shall provide any affected tribe a reasonable period of time, not less than five business days, to conduct a site visit and make recommendations to the Applicant or Owner and OHR regarding the monitoring of future Ground Disturbance Activities and the treatment and disposition of any discovered tribal cultural resources. The Applicant or Owner shall implement the tribe’s recommendations if the Qualified Tribal Monitor or Archaeological Monitor reasonably concludes such recommendations are reasonable and feasible.

Consistent with Public Resources Code Section 21083.2, the handling, treatment, preservation, and recordation of tribal cultural resources should occur as follows:

- The find should be preserved in place or left in an undisturbed state unless the Project would damage the resource.
- When preserving in place or leaving in an undisturbed state is not possible, excavation and recovery of the find for scientific study should occur unless testing or studies already completed have adequately recovered the scientifically consequential information from and about the resource, and this determination is documented by a Qualified Tribal Monitor or Qualified Archaeologist.

All collected artifacts and fieldwork notes, if not human remains or other mortuary objects, shall be curated at the Natural History Museum of Los Angeles County or another appropriate curatorial facility for educational purposes. If cleared by the Qualified Tribal Monitor or Archaeological Monitor, Ground Disturbance Activities may continue unimpeded on other portions of the site. Ground Disturbance Activities in the area where resource(s) were found may recommence once the identified resources are properly assessed and processed. A report that describes the resource and its disposition, as well as the assessment methodology shall be prepared by the Qualified Tribal Monitor or Archaeological Monitor, according to current professional standards and maintained pursuant to the proof of compliance requirements in Subsection I.D.6. A copy of the report shall be submitted to OHR, the South Central Coastal Information Center at California State University, Fullerton and to the Native American Heritage Commission for inclusion in its Sacred Lands File. If requested by the City, OHR may review and approve any monitoring or mitigation plan prior to implementation.

4.16-1(b) Native American Consultation and Monitoring for Discretionary Projects

All discretionary projects that involve ground disturbing activities in previously undisturbed soils, shall prepare a cultural resources assessment and do a record search with a study area of no less than 0.5 mile around the project area. Projects conducted in culturally and historically sensitive areas, as determined by a Qualified Archaeologist meeting the Secretary of the Interior's Professional Qualification Standards for Archaeologist, should include a record search with a study area of no less than 1 mile around the project area.

Notification shall be provided to California Native American tribes that are traditionally and culturally affiliated with the geographic area of the project site and have submitted a written request to the Department of City Planning to be notified of projects in that area. Should projects have potential to impact cultural resources, as determined during the environmental assessment or Tribal consultation, a Cultural Resources Monitoring Program (CRMP) shall be prepared by Qualified Archaeologist, in consultation with all interested Tribes, prior to the commencement of any and all ground disturbing activities for the Project, including any archaeological testing. The CRMP shall include compliance with 4.15-1(b) and will provide details regarding the process for infield treatment of inadvertent discoveries and the disposition of inadvertently discovered non-funerary resources and shall be consistent with the treatment of unique archaeological resources in PRC 21083.2.

4.16-1(c) Notices for Non-Discretionary Projects

All projects that are seeking excavation or grading permits, prior to issuance of a permit for grading or excavation, the Department of Building and Safety shall issue the following notice and obtain a signed acknowledgement that the notice was received and read by the applicant and owner.

- Several federal and State laws regulate the treatment of tribal resources and make it a criminal violation to destroy those resources. These include, but are not limited to:
 - California Penal Code Section 622.5 provides the following: "Every person, not the owner thereof, who willfully injures, disfigures, defaces, or destroys any object or thing of

- archeological or historical interest or value whether situated on private lands or within any public park or place, is guilty of a misdemeanor.”
- Public Resources Code Section 5097.5(a) states, in part, that:

No person shall knowingly or willfully excavate upon, or remove, destroy, injure, or deface, any historic or prehistoric ruins, burial grounds or vertebrate paleontological site, including fossilized footprints, inscriptions made by human agency, rock art, or any other archeological, paleontological or historic feature, situated on public lands, except with the express written permission of the public agency having jurisdiction over the lands.
 - California Code of Regulations, Title 14, Section 4307 states: “No person shall remove, injure, deface or destroy any object of paleontological, archeological, or historical interest or value.” Section 1427 “recognizes that California’s archeological resources are endangered by urban development and population growth and by natural forces...Every person, not the owner thereof, who willfully injures, disfigures, defaces, or destroys any object or thing of archeological or historic interest or value, whether situated on private lands or within any public park or place, is guilty of a misdemeanor. It is a misdemeanor to alter any archeological evidence found in any cave, or remove any materials from a cave.”
 - Best practices to ensure that tribal cultural resources are not damaged include but are not limited to the following steps:
 - A Sacred Lands File (SLF) records search shall be requested from and conducted by the California Native American Heritage Commission (NAHC) to determine whether cultural resources associated with any Native American tribe(s) with traditional lands or cultural places located within or near the Project site have been previously identified or whether the Project area is considered sensitive for the presence of tribal cultural resources.
 - All tribes listed on the NAHC’s Native American Contact List included with the SLF search shall be contacted, informed of the Project, and given an opportunity to provide input. If the tribe provides substantial evidence of a potential discovery of tribal cultural resources within the Project site and requests monitoring of Project excavation, grading or other Ground Disturbance Activities, a Qualified Tribal Monitor or Archeological Monitor shall be retained.
 - A Qualified Tribal Monitor or Archeological Monitor shall observe Ground Disturbance Activities within those areas identified in the records search as sensitive for the presence of tribal cultural resources in order to identify resources and avoid potential impacts to such resources. In the event of a possible discovery of a tribal cultural resource, the Qualified Tribal Monitor or Archeological Monitor shall have the authority to temporarily halt earthwork activities within the appropriate radius of the find, as determined by the Qualified Tribal Monitor or Archeological Monitor to ensure the find or any other potential tribal cultural resources on or near the Project site is not damaged.
 - If tribal resources are uncovered (in either a previously disturbed or undisturbed area), all work should cease in the appropriate radius determined by the Qualified Tribal Monitor or Archeological Monitor and in accordance with federal, state, and local guidelines.
 - Any find shall be treated with appropriate dignity and protected and preserved as appropriate with the agreement of the Qualified Tribal Monitor or Archeological Monitor and in accordance with federal, state, and local guidelines.
 - The location of the tribal cultural resources find and the type and nature of the find should not be published beyond providing it to public agencies with jurisdiction or responsibilities related any affected tribal resources.

- Following discovery, the applicant or owner shall immediately contact all Native American tribes that have informed the City of Los Angeles they are traditionally and culturally affiliated with the geographic area of the Project, as well as the Department of City Planning, Office of Historical Resources (OHR).
- The applicant or owner shall provide any affected tribe a reasonable period of time, not less than five business days, to conduct a site visit and make recommendations to the applicant or owner regarding the monitoring of future ground disturbance activities and the treatment and disposition of any discovered tribal cultural resources.
- The applicant or owner shall implement the tribe's recommendations if the Qualified Tribal Monitor or Archeological Monitor reasonably concludes such recommendations are reasonable and feasible and determined to be supported with substantial evidence.
- Consistent with Public Resources Code 21083.2, the handling, treatment, preservation, and recordation of tribal cultural resources shall occur as follows:
 - The find shall be preserved in place or left in an undisturbed state unless the Project would damage the resource.
 - When preserving in place or leaving in an undisturbed state is not possible, excavation and recovery of the find for scientific study shall occur unless testing or studies already completed have adequately recovered the scientifically consequential information from and about the resource, and this determination is documented by a Qualified Tribal Monitor or Archeological Monitor.
 - All collected artifacts and fieldwork notes, if not human remains or other mortuary objects, shall be curated at the Natural History Museum of Los Angeles County or another appropriate curator facility.
 - If cleared by the Qualified Tribal Monitor or Archeological Monitor, Ground Disturbance Activities may continue unimpeded on other portions of the site. Ground Disturbance Activities in the area where the resource(s) were found may commence once the identified resources are properly assessed and processed.
 - Personnel of the Project should not collect or move any tribal cultural resources or associated materials or publish the location of the tribal cultural resources.

Significance After Mitigation

Implementation of the above measures, in combination with **Measures 4.4-2(a)** through **(c)** in Section 4.4, *Cultural Resources*, would reduce impacts to tribal cultural resources to a less than significant level by requiring a process to identify and, if necessary, avoid and/or recover identified tribal cultural resources throughout the Project Area, including areas where resources have been previously identified. The impact would be *less than significant with mitigation* incorporated.

CUMULATIVE IMPACTS

Cumulative development within the Project Area could disturb areas that may potentially contain tribal cultural resources. The potential for impacts from individual developments is site-specific and depends on the location and nature of each individual development proposal. All future development projects would continue to be subject to existing federal, State and local requirements (as described in the Environmental Setting of this section and Section 4.4, Cultural Resources), and discretionary projects may be subject to project-specific mitigation requirements under CEQA. Additionally, with the implementation of the above described mitigation measures, significant cumulative impacts to tribal cultural resources related to the Proposed Project could be avoided or mitigated to a less than significant level. Based on the above, the

incremental effect of the Proposed Project on tribal cultural resources would not be cumulatively considerable and cumulative impacts to tribal cultural resources citywide would ***be less than significant with mitigation.***

4.17 UTILITIES AND SERVICE SYSTEMS

This section describes the utilities and service systems and evaluates the construction and operational impacts associated with the updated Cornfield Arroyo Seco Plan (CASP) (or “Proposed Project” or “Project”) in the existing CASP area of Los Angeles (or “Project Area”). Topics addressed include wastewater, water supply, solid waste, natural gas, electricity, and telecommunications facilities.

Wastewater and Stormwater Drainage

ENVIRONMENTAL SETTING

EXISTING CONDITIONS

Citywide Wastewater System

The City of Los Angeles sewer system includes more than 6,700 miles of sewers serving a population of more than four million. The sewer system consists of primary sewers (16-inches and larger in diameter) and secondary sewers (less than 16-inches in diameter). The secondary sewers provide service to property laterals and feed into the primary sewer lines. Primary sewers discharge into trunk, interceptor, and outfall pipes. Tributaries to interceptor sewer systems are called sewer reaches. Sewer reaches are usually named after the street to which their alignment is closest. Primary sewers have pipes with a diameter of 15 inches or more and are found in all sewer reaches. Interceptor sewer systems consist of large sewer pipelines that control the conveyance of wastewater to treatment plants.

The Los Angeles sewer system is comprised of three collection systems: Hyperion Sanitary Sewer System, Terminal Island Water Reclamation Plant Sanitary Sewer System, and Regional Sanitary Sewer System (City of Los Angeles 2019). The three collection systems also convey the flows of 29 satellite agencies to plants for treatment. To comply with Waste Discharge Requirements (WDRs), a Sewer System Management Plan (SSMP) was updated in 2019.

The City’s wastewater is then treated at one of the four water reclamation and treatment facilities: Hyperion Water Reclamation Plant, the Terminal Island Water Reclamation Plant, the Donald C. Tillman Water Reclamation Plant, and the Los Angeles-Glendale Water Reclamation Plant. The Hyperion Water Reclamation Plant is the largest of the City’s four water reclamation and treatment facilities. Together, they have a combined capacity of 580 million gallons per day (mgd) of recycled water. The Donald C. Tillman Water Reclamation Plant serves the area between Chatsworth and Van Nuys in the San Fernando Valley. The Los Angeles-Glendale Water Reclamation Plant is located in the San Fernando Valley and services the communities in east San Fernando Valley that are both within and outside of the City limits.

The Hyperion Water Reclamation Plant (HWRP) has a treatment capacity of 450 mgd and was designed to accommodate a maximum peak wet weather flow of 800 mgd. On average, approximately 275 million gallons of wastewater enter the HWRP on a dry weather day (LADPW 2022a). The HWRP performs pretreatment of wastewater (i.e., the removal of large objects), followed by primary and secondary treatments (i.e., elimination of harmful biological contents). In January 2019, an SSMP was prepared for the Hyperion Sanitary Sewer System pursuant to the State Water Resources Control Board’s (SWRCB) May 2, 2006 Statewide General Waste Discharge Requirements (WDRs) (City of Los Angeles 2022a).

The Terminal Island Water Reclamation Plant Sanitary Sewer System covers residential areas in San Pedro, Harbor City, and parts of Wilmington; and industrial areas on Terminal Island (City of Los Angeles 2017). The Terminal Island Water Reclamation Plant has the capability to provide high quality tertiary treatment for up to 30 mgd and currently treats approximately 15 mgd. Sixty percent of the incoming flow to the plant comes from nearby industries while the remaining forty percent is from residential areas (LADPW 2022b).

The Regional Sanitary Sewer System serves the Harbor Gateway, an area approximately five square-miles (City of Los Angeles 2019). Wastewater generated in the service area is processed at the Los Angeles County Sanitation Districts' Joint Water Pollution Control Plant located in the City of Carson. **Figure 4.17-1** on the following page illustrates the geographic area of each collection system and a summary of the collection system assets for each system.

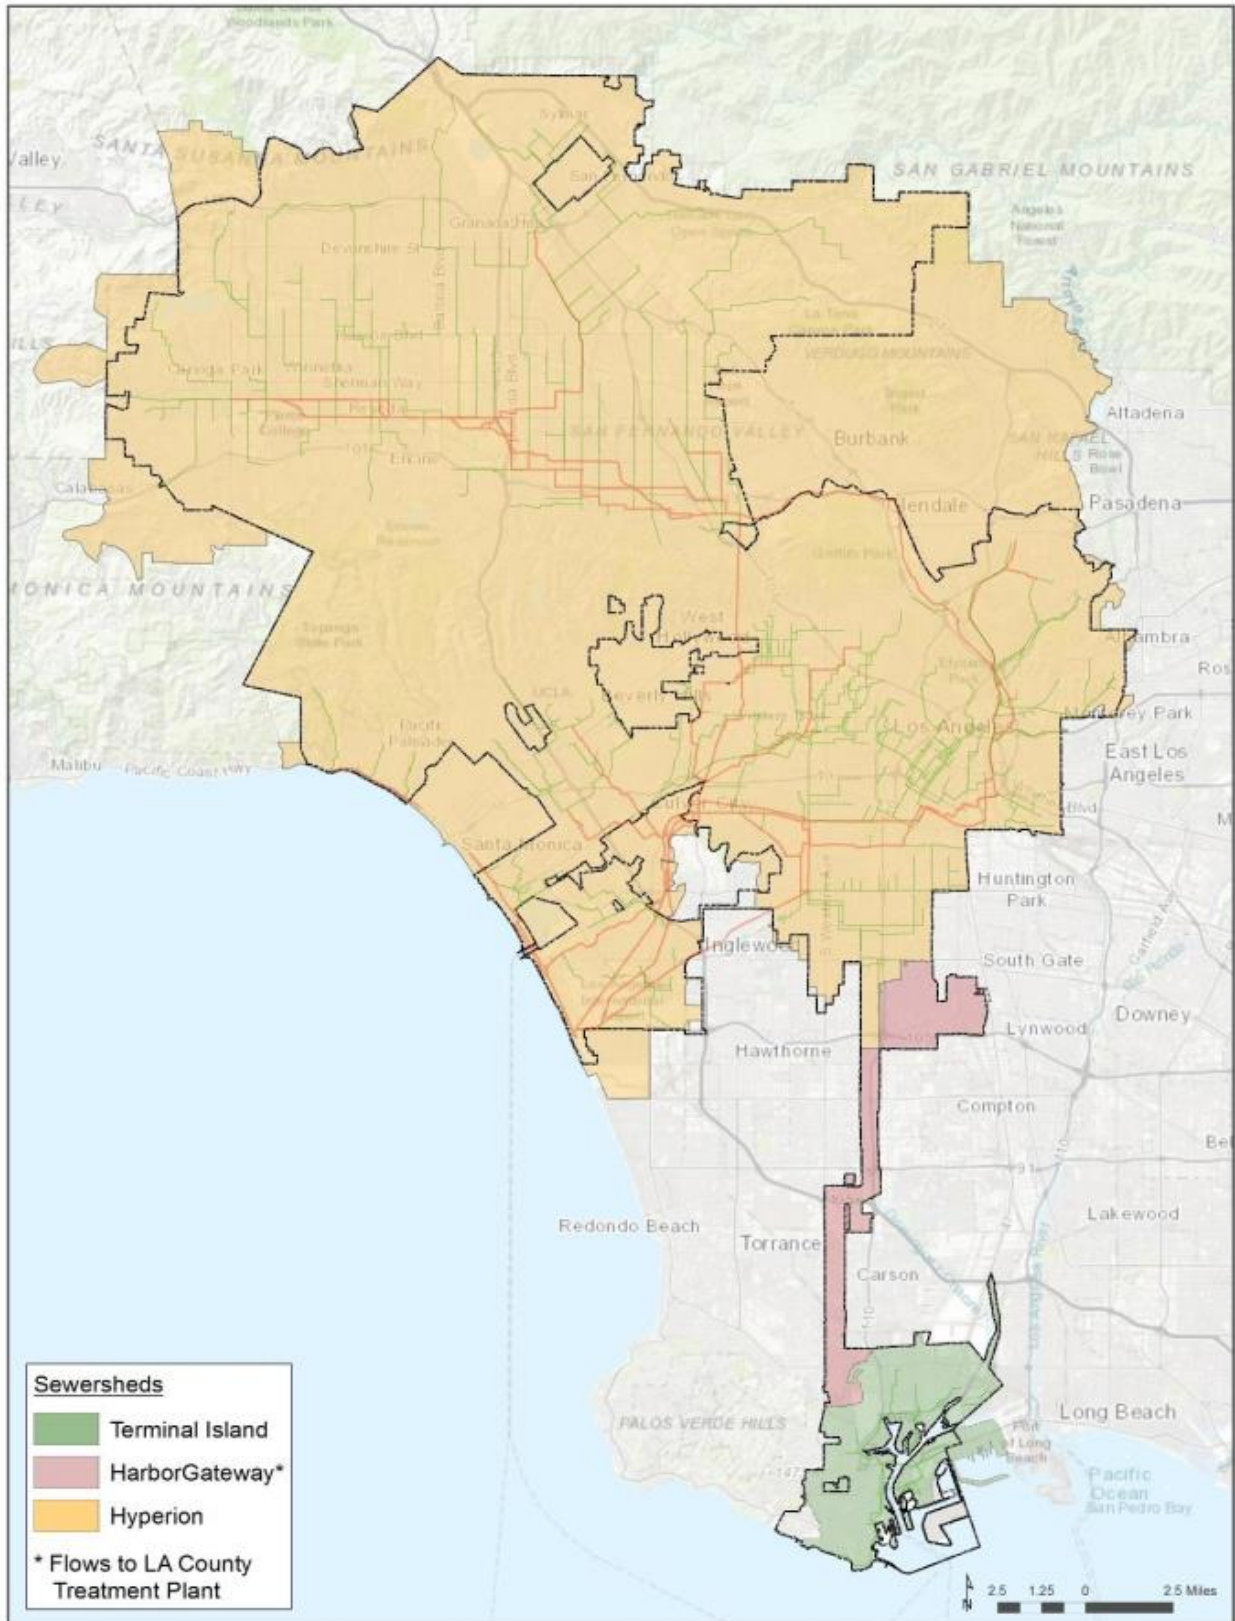

To assess and maintain the condition of this expansive system, the City actively conducts an ongoing dry- and wet-weather flow monitoring program. The monitors use either telephone lines to send data to a central location or staff will download data in the field. Additionally, flow gauging is performed at over 600 strategic locations throughout the City's secondary sewer system on either a quarterly, semi-annual, or annual cycle to monitor flow depth.

New and rehabilitated sewers and pump stations are planned, designed, and constructed to meet the highest performance standards in the industry in accordance with the City's Sewer Design Manual. The Sewer Design Manual is a comprehensive set of criteria for planning and designing of new sewers, pump stations, force mains, and appurtenances, and for the rehabilitation of existing sewers. In conjunction with the Sewer Design Manual, the City also maintains Standard Plans, which are used to provide consistency and quality in design. All system components are designed to meet permit requirements of the various federal, state, and local agencies thereby ensuring that projects benefit from the input of all affected and interested parties, including the communities.

The Sewer Design Manual and Standard Plans are updated, maintained, and administered by LA Sanitation & Environment (LASAN). For all projects, LASAN is responsible for determining the sewer capacity availability for new sewer connections for residential, commercial, and industrial developments. This function is part of an overall sewer connection permitting process that involves a combined effort by LASAN and Bureau of Engineering (BOE) personnel. In issuing a sewer connection permit, the BOE Development Services Division determines if further investigation is needed to evaluate the capacity of an existing sewer line to handle the additional flow from the proposed development or project and take appropriate preemptive action to attenuate potential emergency sewer overflow incidences in the future. In addition to preemptive sewer monitoring and permitting activities, the LASAN Wastewater Collection Systems Division also maintains up-to-date Sanitary Sewer Overflow Response and Reporting Procedures. The procedures outline the necessary actions to provide immediate response to sewage overflows. It is City policy that, "[e]very reported sewage spill affecting public or private property within the City of Los Angeles shall be acted upon by the Division." Crew leaders are immediately notified upon receipt of a reported potential sewer overflow and are instructed to respond immediately.

Sewer capacity planning is prioritized based on two ratios of sewer flow to sewer capacity (d/D): a Trigger ratio and a Relief ratio. Trigger flow is the quantity of flow, that once reached, would initiate planning for a relief or a replacement sewer. The buffer capacity is defined as the product of the estimated years to complete a new sewer project and the rate of recent flow increases in the sewer being evaluated. The Relief d/D is currently 0.75 across the City (i.e., when a sewer is at 75 percent of capacity) for all existing sewers, the Trigger d/D varies on a project by project basis because each project's tributary area has its own unique characteristics such as population growth projection, commercial and industrial discharge forecast, and other contributing factors that determine how quickly flows are projected to increase over time. The Sewer Design Manual requires all new sewers to meet a d/D of 0.5 for the projected design year (i.e., that they be at no more than 50 percent of capacity in their design year).

Figure 4.17-1 City of Los Angeles Wastewater Collection and Treatment Systems

Project Area Wastewater Generation and Conveyance

The Project Area is served by the Hyperion Sanitary Sewer System and is served by a network of local, interceptor, relief, outfall and trunk sewers that convey flow from residential, business and commercial properties to the HWRP. Underground pipes range from as small as 6 inches in diameter to as large as 14 feet in diameter. The backbone of the system, the North Outfall Sewer (NOS), was built in the 1920s. Due in part to the age of the Project Area sewer system, ongoing maintenance and replacement of sewer lines is needed. The Wastewater Capital Improvement Program (WCIP) identifies capital projects developed for the City's wastewater facilities (LA Sanitation & Environment 2018). The WCIP is developed for 10-year periods and was last updated in Fiscal Year 2018/2019 for projects through 2027/2028. The WCIP includes replacement, rehabilitation, and expansion of the City's wastewater treatment and collection system facilities. The WCIP identifies a number of sewer line projects in the Project Area (<https://www.lacitysan.org/cs/groups/public/documents/document/y250/mdm1/~edisp/cnt035434.pdf>).

The estimated wastewater generation of existing land uses in the Project Area is shown in **Table 4.17-1**. Existing development in the Project Area generates an estimated 0.7 mgd of wastewater. Wastewater generated by the Project Area represents less than 0.1 percent of the Hyperion Treatment Plant's (HTP's) current wastewater treatment capacity of 1000 mgd (City of Los Angeles 2022a).

TABLE 4.17-1 CURRENT WASTEWATER GENERATED IN THE PROJECT AREA 2021				
\	Dwelling Units or Jobs in Plan Area	Daily Wastewater Generation Rate (gpd/unit)	Wastewater Generation (gpd)	Wastewater Generation (mgd)
Single-family ¹	402 du	329	132,258	0.1
Multi-family ¹	1,610 du	189	304,290	0.3
Commercial/ Governmental	5,411 jobs	69	373,359	0.3
Total			809,907	0.7
NOTES:				
du = dwelling unit				
gpd – gallons per day				
Totals may not add up due to rounding.				
1. Single-family and multi-family units were estimated by assuming that 20 percent of total household units are single-family and 80 percent are multi-family.				
SOURCE: Wastewater is assumed to be 100% of indoor water use. Per Exhibit 2E of the LADWP 2020 UWMP, indoor water use constitutes 56% of overall water use for single-family residences and 80% of overall water use for multi-family residences. Per the 2020 UWMP, per unit water demand is forecast to decline over time; the forecast 2040 rates per Exhibit 2L of the LADWP 2020 UWMP are assumed to apply to new development.				

Storm Water and Urban Runoff

The Project Area is located within the Los Angeles River Watershed. The Los Angeles River Watershed covers a land area of 834 square miles. The eastern portion spans from the Santa Monica Mountains to the Simi Hills and in the west from the Santa Susana Mountains to the San Gabriel Mountains. The watershed encompasses and is shaped by the path of the Los Angeles River, which flows from its headwaters in the mountains eastward to the northern corner of Griffith Park. Here the channel turns southward through the Glendale Narrows and the Project Area before it flows across the coastal plain and into San Pedro Bay near Long Beach.

The Project Area is an urban center that is primarily paved. Consequently, most storm water and urban runoff travels along the area's roadways and is captured by storm drains and catch basins. The City is served by an extensive urban drainage system comprised of more than 80,000 catch basins, 14 major dams and

reservoirs, 162 debris dams, 2,919 miles of underground storm drain and 487 miles of open channels (LADPW 2022a). Storm water captured by the City's drainage system is channeled into Santa Monica and San Pedro Bays, where it is discharged without treatment (LADPW 2022b). The City's Stormwater Program focuses on flood control and pollution abatement and oversees the City's compliance with federal, state, and local regulations to reduce the amount of stormwater pollution. Regulations to reduce and prevent stormwater pollution are discussed in greater detail in Section 4.9, *Hydrology and Water Quality*.

Water Quality and Flow Monitoring

Los Angeles is constantly monitoring the infrastructure to ensure reliable service. Dischargers are regulated under Waste Discharge Requirements (WDRs) and are required to "self-monitor," that is, to collect regular samples of their effluent and receiving waters according to a prescribed schedule to determine facility performance and compliance with their requirements. In addition to self-monitoring by dischargers, the Los Angeles Regional Water Quality Control Board (LARWQCB) makes unannounced inspections and collects samples to determine compliance with discharge requirements and receiving water objectives and to provide data for enforcement actions. The LARWQCB also responds to a variety of incidents, including accidental and illegal discharges of oil from offshore pipelines, oily waste discharges, and dumping in the storm drains. Each regional board in the state prepares a biennial Water Quality Assessment Report using data collected by regional planning, permitting, surveillance, and enforcement programs. The regional reports contain inventories of the pollutants in the major water bodies of the region.

The Flow Monitoring Expansion Program helps operations and maintenance to manage the conveyance system. Flow data is gathered to support resource allocation.

REGULATORY FRAMEWORK

FEDERAL

Clean Water Act (CWA)

The primary goals of the Federal Clean Water Act (CWA), 33 USC §§ 1251, et seq. (CWA) are to restore and maintain the chemical, physical, and biological integrity of the nation's waters and to make all surface waters fishable and swimmable. The CWA forms the basic national framework for the management of water quality and the control of pollutant discharges. The CWA sets forth a number of objectives in order to achieve the above-mentioned goals. The CWA objectives include regulating pollutant and toxic pollutant discharges; providing for water quality which protects and fosters the propagation of fish, shellfish and wildlife; developing waste treatment management plans; and developing and implementing programs for the control of non-point sources pollution.

National Pollutant Discharge Elimination System (NPDES)

The NPDES permit system was established in the CWA to regulate point source discharges into waters within the United States. Point sources are discrete conveyances such as pipes or manmade ditches. Individual homes connected to a municipal system are not required to obtain a permit under the NPDES, however, industrial, municipal, and other facilities must obtain permits if their discharges go directly to surface waters.

Safe Drinking Water Act (SDWA)

The Safe Drinking Water Act ensures the quality of Americans' drinking water. The law requires actions to protect drinking water and its sources (e.g., rivers, lakes, reservoirs, springs and groundwater wells) and applies to public water systems serving 25 or more people. It authorizes the U.S. Environmental Protection Agency (USEPA) to set national health-based standards for drinking water to protect against both naturally occurring and manmade contaminants. In addition, it oversees the states, municipalities and water suppliers that implement the standards. USEPA standards are developed as a Maximum Contaminant Level (MCL) for each chemical or microbe. The MCL is the concentration that is not anticipated to produce adverse health effects after a lifetime of exposure, based upon toxicity data and risk assessment principles. USEPA's goal in setting MCLs is to assure that even small violations for a period of time do not pose significant risk to the public's health over the long run. National Primary Drinking Water Regulations (NPDWRs) are legally enforceable standards that limit the levels of contaminants in drinking water supplied by public water systems. Secondary standards are non-enforceable guidelines regulating contaminants that may cause cosmetic effects (such as skin or tooth discoloration) or aesthetic effects (such as taste, odor, or color) in drinking water. USEPA recommends secondary standards to water systems but does not require systems to comply. However, states may choose to adopt them as enforceable standards. California has adopted secondary standards in Title 22 of the California Code of Regulations (CCR).

STATE

California Urban Water Management Plan Act

The California Urban Water Management Planning Act (Water Code, Section 10610, et seq.) addresses several state policies regarding water conservation and the development of water management plans to ensure the efficient use of available supplies. The California Urban Water Management Planning Act also requires Urban Water Suppliers to develop Urban Water Management Plans (UWMPs) every five years to identify short-term and long-term demand management measures to meet growing water demands during normal, dry, and multiple-dry years. Urban Water Suppliers are defined as water suppliers that either serve more than 3,000 customers or provide more than 3,000 acre feet per year (afy) of water to customers.

Senate Bill 610 and 221, and Senate Bill 7

Two of the state laws addressing the assessment of water supply necessary to serve large-scale development projects, Senate Bill (SB) 610 and SB 221, became effective January 1, 2002. SB 610, codified in Water Code Sections 10910-10915, specifies the requirements for water supply assessments (WSAs) and their role in the California Environmental Quality Act (CEQA) process, and defines the role UWMPs play in the WSA process. SB 610 requires that, for projects subject to CEQA that meet specific size criteria, the water supplier prepare WSAs that determine whether the water supplier has sufficient water resources to serve the projected water demands associated with the projects. SB 610 provides specific guidance regarding how future supplies are to be calculated in the WSAs where an applicable UWMP has been prepared. Specifically, a WSA must identify existing water supply entitlements, water rights, or water service contracts held by the public water system, and prior years' actual water deliveries received by the public water system. In addition, the WSA must address water supplies over a 20-year period and consider normal, single-dry, and multiple-dry year conditions. In accordance with SB 610, projects for which a WSA must be prepared are those subject to CEQA that meet any of the following criteria:

- Residential developments of more than 500 dwelling units;
- Shopping centers or business establishments employing more than 1,000 persons or having more than 500,000 square feet of floor space;

- Commercial office buildings employing more than 1,000 persons or having more than 250,000 square feet of floor space;
- Hotels, motels, or both, having more than 500 rooms;
- Industrial, manufacturing, or processing plants, or industrial parks planned to house more than 1,000 persons, occupying more than 40 acres of land, or having more than 650,000 square feet of floor area
- Mixed-use projects that include one or more of the projects specified in this subdivision; or
- Projects that would demand an amount of water equivalent to or greater than the amount of water required by a 500-dwelling-unit project. (Water Code Section 912, CEQA Guidelines Section 15155(a).

The WSA must be approved by the public water supplier serving the project at a regular or special meeting and must be incorporated into the CEQA document. The lead agency must then make certain findings related to water supply based on the WSA.

In addition, under SB 610, a water supplier responsible for the preparation and periodic updating of an UWMP must describe the water supply projects and programs that may be undertaken to meet the total project water use of the service area. If groundwater is identified as a source of water available to the supplier, the following additional information must be included in the UWMP: (1) a groundwater management plan; (2) a description of the groundwater basin(s) to be used and the water use adjudication rights, if any; (3) a description and analysis of groundwater use in the past 5 years; and (4) a discussion of the sufficiency of the groundwater that is projected to be pumped by the supplier.

SB 7, enacted on November 10, 2009, mandates new water conservation goals for UWMPs, requiring Urban Water Suppliers to achieve a 20 percent per capita water consumption reduction by the year 2020 statewide, as described in the “20 x 2020” State Water Conservation Plan. As such, each updated UWMP must now incorporate a description of how each respective urban water supplier will quantitatively implement this water conservation mandate, which requirements in turn must be taken into consideration in preparing and adopting WSAs under SB 610.

SB 221 also addresses water supply in the land use approval process for large residential subdivision projects. However, unlike SB 610 WSAs, which are prepared at the beginning of a planning process, SB 221-required Water Supply Verification (WSV) is prepared at the end of the planning process for such projects. Under SB 221, a water supplier must prepare and adopt a WSV indicating sufficient water supply is available to serve a proposed subdivision, or the local agency must make a specific finding that sufficient water supplies are or will be available prior to completion of a project, as part of the conditions for the approval of a final subdivision map. SB 221 specifically applies to residential subdivisions of 500 units or more. However, Government Code Section 66473.7(i) exempts “...any residential project proposed for a site that is within an urbanized area and has been previously developed for urban uses; or where the immediate contiguous properties surrounding the residential project site are, or previously have been, developed for urban uses; or housing projects that are exclusively for very low and low-income households.”

Senate Bill X7-7, Water Conservation Act

SB X7-7 (Water Conservation Act of 2009), codified in California Water Code Section 10608, requires all water suppliers to increase water use efficiency. Enacted in 2009, this legislation sets an overall goal of reducing per capita urban water use, compared to 2009 use, by 20 percent by December 31, 2020. The State of California was required to make incremental progress towards this goal by reducing per capita water use by at least 10 percent on or before December 31, 2015. Monthly statewide potable water savings reached

25.1 percent in February 2017 as compared to that in February 2013. Cumulative statewide savings from June 2015 through February 2017 were estimated at 22.5 percent. Following a multi-year drought and improvements to hydrologic conditions, statewide potable water savings reached 14.7 percent in August 2017 as compared to August 2013 potable water production.

California Code of Regulations Title 20

Title 20, Section 1605.3 (h) and 1505(i) of the California Code of Regulations (CCR) establishes applicable State efficiency standards (i.e., maximum flow rates) for plumbing fittings and fixtures, including fixtures such as showerheads, lavatory faucets and water closets (toilets). Among the standards, the maximum flow rate for showerheads manufactured on or after July 1, 2018 is 1.8 gpm at 80 psi; and lavatory faucets manufactured after July 1, 2016 is 1.2 gpm at 60 psi. The standard for toilets sold or offered for sale on or after January 1, 2016 is 1.28 gallons per flush.

CALGreen Code

Part 11 of Title 24, the title that regulates the design and construction of buildings, establishes the California Green Building Standards (CALGreen) Code. The purpose of the CALGreen Code is to improve public health, safety and general welfare by enhancing the design and construction of buildings through the use of building concepts having a reduced negative impact or a positive environmental impact and encouraging sustainable construction practices in the following categories: planning and design, energy efficiency, water efficiency and conservation, material conservation and resource efficiency, and environmental quality. The CALGreen Code includes both mandatory measures as well as voluntary measures. The mandatory measures establish minimum baselines that must be met in order for a building to be approved. The mandatory measures for water conservation provide limits for fixture flow rates, which are the same as those for the Title 20 efficiency standards listed above. The voluntary measures can be adopted by local jurisdictions for greater efficiency.

Plumbing Code

Title 24, Part 5 of the California Code of Regulations establishes the California Plumbing Code. The California Plumbing Code sets forth efficiency standards (i.e., maximum flow rates) for all new federally-regulated plumbing fittings and fixtures, including showerheads and lavatory faucets. The 2019 California Plumbing Code, which is based on the 2018 Uniform Plumbing Code, has been published by the California Building Standards Commission and went into effect on January 1, 2019.

Sustainable Groundwater Management Act of 2014

The Sustainable Groundwater Management Act (SGMA) of 2014, passed in September 2014, is a comprehensive three-bill package that provides a framework for the sustainable management of groundwater supplies by local authorities. The SGMA requires the formation of local groundwater sustainability agencies to assess local water basin conditions and adopt locally based management plans. Local groundwater sustainability agencies were required to be formed by June 30, 2017. The SGMA provides 20 years for groundwater sustainability agencies to implement plans and achieve long-term groundwater sustainability, and protect existing surface water and groundwater rights. The SGMA provides local groundwater sustainability agencies with the authority to require registration of groundwater wells, measure and manage extractions, require reports and assess fees, and request revisions of basin boundaries, including establishing new subbasins. Furthermore, SGMA requires governments and water agencies of high and medium priority basins to stop overdraft and bring groundwater basins into balanced levels of pumping and recharge. Under SGMA, these basins should reach sustainability within 20 years of

implementing their sustainability plans. For the basins that are critically over-drafted the timeline is 2040. For the remaining high and medium priority basins, the deadline is 2042.

State of Drought Emergency Declaration and Executive Orders

In response to California's drought conditions, on January 17, 2014, Governor Brown declared a State of Drought Emergency and directed state officials to take numerous necessary actions with local Urban Water Suppliers and municipalities to reduce the impacts of the ongoing drought conditions that had been occurring in California since approximately 2009. Subsequently, four Executive Orders were issued between April 2015 to April 2017 to address changing drought conditions and provide guidance for addressing the drought conditions.

Executive Order B-29-15 (April 2015) imposed a mandatory 25 percent statewide water reduction on potable water use by Urban Water Suppliers. It prioritized water infrastructure projects, incentivized water efficiencies, and streamlined permitting with new approval processes for water transfers and emergency drinking water projects. Executive Order B-36-15 (November 2015) called for additional actions to build on the state's response to record dry conditions and assisted recovery efforts from devastating wildfires; and Executive Order B-37-16 (May 2016) continued water use restrictions from Executive Order B-29-15 as drought conditions continued to persist. Executive Order B-37-16 called for long-term improvements to local drought preparation across the state, and directed the California State Water Resources Control Board (SWRCB) to develop proposed emergency water restrictions for 2017 if the drought persists.

The regulatory requirements resulting from these Executive Orders were codified in Article 22.5, Drought Emergency Water Conservation of the California Code of Regulations.

In May 2016, SWRCB adopted a revised emergency water conservation regulation, effective June 2016 through at least February 2017, which rescinded numeric reduction targets for Urban Water Suppliers, instead requiring locally developed conservation standards based upon each agency's specific circumstances.

Finally, on April 7, 2017, Executive Order B-40-17 was issued to formally end the drought emergency and lifted the drought emergency in all California counties except Fresno, Kings, Tulare, and Tuolumne. In response to Executive Order B-40-17, on April 26, 2017, the SWRCB partially repealed the emergency regulation in regard to water supply stress test requirements and remaining mandatory conservation standards for urban water suppliers. The order also rescinded two drought-related emergency proclamations and four drought-related executive orders. Cities and water districts throughout the state are required to continue reporting their water use each month. Executive Order B-40-17 continued the ban on wasteful practices, including hosing off sidewalks and running sprinklers when it rains.

California Water Plan

Required by the CWC Section 10005(a), the California Water Plan is the state's strategic plan for managing and developing water resources statewide for current and future generations. It provides a collaborative planning framework for elected officials, agencies, tribes, water and resource managers, businesses, academia, stakeholders, and the public to develop findings and recommendations and make informed decisions for California's water future.

The plan, updated every five years, presents the status and trends of California's water-dependent natural resources; water supplies; and agricultural, urban, and environmental water demands for a range of plausible future scenarios. The Water Plan also evaluates different combinations of regional and statewide resource management strategies to reduce water demand, increase water supply, reduce flood risk, improve water quality, and enhance environmental and resource stewardship. The evaluations and assessments

performed for the plan help identify effective actions and policies for meeting California's resource management objectives in the near term and for several decades to come.

In July 2019, DWR released the Final 2018 Update to the California Water Plan. The document provides recommended actions, funding scenarios, and an investment strategy to bolster efforts by water and resource managers, planners, and decision-makers to overcome the State's most pressing water resource challenges. It reaffirms the State government's role and commitment to sustainable, equitable, long-term water resource management; and introduces implementation tools to inform decision-making. The 2018 Update recommends significant additional investment in infrastructure and ecosystem improvements to overcome challenges to sustainability; and it recommends actions to resolve systemic and institutional issues that contribute to many of the state's water challenges.

California Water Action Plan

The California Water Action Plan is a roadmap for the State's journey towards sustainable water management. The first California Water Action Plan was released in January 2014 under Governor Brown's administration and updated in 2016. The California Water Action Plan discusses the challenges to water in California: uncertain water supplies, water scarcity/drought, declining groundwater supplies, poor water quality, declining native fish species and loss of wildlife habitat, floods, supply disruptions, and population growth and climate change further increasing the severity of these risks.

REGIONAL

As discussed in detail below, the Metropolitan Water District of Southern California (MWD) is a primary source of water supply within Southern California. Based on the water supply planning requirements imposed on its member agencies and ultimate customers, MWD has adopted a series of official reports on the state of its water supplies. As described in further detail below, in response to recent developments in the Sacramento Delta, the MWD has developed plans intended to provide solutions that, when combined with the rest of its supply portfolio, will ensure a reliable long-term water supply for its member agencies, including the City of Los Angeles.

Metropolitan Water District's 2020 Urban Water Management Plan

The Metropolitan Water district's (MWD) 2020 Regional UWMP addresses the future of MWD's water supplies and demand through the year 2045. The 2020 Regional UWMP provides an assessment of the MWD's water service reliability; describes and evaluates sources of water supply, efficient uses of water, demand management measures, implementation strategies, and schedule; and other relevant information and programs. In addition to the water reliability assessments, the UWMP includes an evaluation of frequent and severe periods of droughts, as described in the Drought Risk Assessment, and the preparation and adoption of the Water Shortage Contingency Plan (WSCP). The 2020 UWMP reports also identified projected supplies to meet the long-term demand within its service area.

The 2020 UWMP concluded that the MWD has sufficient supply to meet the expected demands from 2025 through 2045 under a single dry year condition and a period of drought lasting five consecutive water years, as well as in a normal water year hydrologic condition. The analysis for multiple-dry year conditions, i.e., under the most challenging weather conditions such as drought and service interruptions caused by natural disasters, is presented in Table 2-5 of the 2020 UWMP. In the 2020 UWMP, the projected 2045 water demand is 1,564,000 afy, with supply projected to be 2,239,000 afy, resulting in a surplus of 675,000 afy.

Metropolitan Water District's 2015 Urban Water Management Plan

The Metropolitan Water District's (MWD) 2015 Regional UWMP (RUWMP) addresses the future of MWD's water supplies and demand through the year 2040. Evaluations are prepared for average year conditions, single dry-year conditions, and multiple dry-year conditions. The analysis for multiple-dry year conditions, i.e. under the most challenging weather conditions such as drought and service interruptions caused by natural disasters, is presented in Table 2-4 of the 2015 RUWMP. The analysis in the 2015 RUWMP concluded that reliable water resources would be available to continuously meet demand through 2040. In the 2015 RUWMP, the projected 2040 demand water is 2,201,000 afy, whereas the expected and projected 2040 supply is 2,941,000 afy based on current programs, and an additional 398,000 afy is expected to become available under programs under development for a potential surplus in 2040 of 1,138,000 afy.

MWD has comprehensive plans for stages of actions it would undertake to address up to a 50-percent reduction in its water supplies and a catastrophic interruption in water supplies through its Water Surplus and Drought Management and Water Supply Allocation Plans. MWD has also developed an Emergency Storage Requirement to mitigate against potential interruption in water supplies resulting from catastrophic occurrences within the Southern California region and is working with the State to implement a comprehensive improvement plan to address catastrophic occurrences that could occur outside of the Southern California region. MWD is also working with the State on the Delta Risk Management Strategy to reduce the impacts of a seismic event in the Delta that would cause levee failure and disruption of State Water Project (SWP) deliveries. In addition, MWD has plans for supply implementation and continued development of a diversified resource mix, including programs in the Colorado River Aqueduct (CRA), SWP, Central Valley transfers, local resource projects, and in-region storage that enables the region to meet its water supply needs. As set forth in their 2015 UWMP, MWD will also continue investments in water use efficiency measures to help the region achieve the 20 percent per person potable water use reduction by 2020.

MWD's 2015 Integrated Resources Plan

The MWD prepares an Integrated Water Resources Plan (IRP) that provides a water management framework with plans and programs for meeting future water needs. It addresses issues that can affect future water supply such as water quality, climate change, and regulatory and operational changes. The most recent IRP (2015 IRP) was adopted in January 2016. It establishes a water supply reliability mission of providing its service area with an adequate and reliable supply of high-quality water to meet present and future needs in an environmentally and economically responsible way. Among other topics, the 2015 IRP discusses water conservation, local and imported water supplies, storage and transfers, water demand, and adaptation to drought conditions.

The 2015 IRP reliability targets identify developments in imported and local water supply, and in water conservation that, if successful, would provide a future without water shortages and mandatory restrictions under planned conditions. For imported supplies, MWD would make investments to maximize CRA deliveries in dry years. MWD would make ecologically-sound infrastructure investments to the SWP so that the water system can capture sufficient supplies to help meet average year demands and to refill the MWD storage network in above-average and wet years.

Planned actions to keep supplies and demands in balance include, among others, lowering regional residential per capita demand by 20 percent by the year 2020 (compared to a baseline established in 2009 state legislation), reducing water use from outdoor landscapes and advancing additional local supplies. IRP Table ES-1, 2015 IRP Update Total Level of Average-Year Supply Targeted (Acre-Feet), of the 2015 IRP, shows the supply reliability and conservation targets. As presented in the IRP, the total supply reliability target for each five-year increase between 2016 and 2040 would exceed the retail demand after

conservation. In 2040, retail demand after conservation is estimated to be 4,273,000 acre-feet and the total supply reliability target is approximately 4,539,000 acre-feet, representing an excess of 266,000 acre-feet.

MWD's Water Surplus and Drought Management Plan

In 1999, MWD incorporated the water storage contingency analysis that is required as part of any UWMP into a separate, more detailed plan, called the Water Surplus and Drought Management Plan (WSDM Plan). The overall objective of the WSDM Plan is to ensure that shortage allocation of MWD's imported water supplies is not required. The WSDM Plan provides policy guidance to manage MWD's supplies and achieve the goals laid out in the agency's IRP. The WSDM Plan separates resource actions into two major categories: Surplus Actions and Shortage Actions. The WSDM Plan considers the region to be in surplus only after MWD has met all demands for water, including replenishment deliveries. The Surplus Actions store surplus water, first inside then outside of the region. The Shortage Actions of the WSDM are separated into three subcategories: Shortage, Severe Shortage, and Extreme Shortage. Each category has associated actions that could be taken as part of the response to prevailing shortage conditions. Conservation and water efficiency programs are part of MWD's resource management strategy through all categories.

MWD's Water Supply Allocation Plan

While the WSDM Plan included a set of general actions and considerations for MWD staff to address during shortage conditions, it did not include a detailed water supply allocation plan or implementation approach. Therefore, in February 2008, MWD adopted a water supply plan called the Water Supply Allocation Plan (WSAP), which has since been implemented three times, most recently in April 2015 (under the new name Drought Rationing Plan). The WSAP includes a formula for determining equitable, needs-based reductions of water deliveries, with the potential application of a surcharge, to member agencies during extreme water shortages in MWD's service area conditions (i.e., drought conditions or unforeseen interruptions in water supplies).

The WSAP allows member agencies the flexibility to choose among various local supply and conservation strategies to help ensure that demands on MWD stay in balance with limited supplies. The WSAP formula addresses shortages of MWD supplies, by taking into account growth, local investments, changes in supply conditions and the demand hardening aspects of non-potable recycled water use and the implementation of conservation savings programs. The allocation period covers 12 consecutive months from July of a given year through the following June.

LOCAL

Wastewater

Integrated Resources Plan

In 2006, the City approved the Integrated Resources Plan (IRP), which incorporates a Wastewater Facilities Plan. The Integrated Resources Program was developed to meet future wastewater needs of more than 4.3 million residents expected to live in the City by 2020 (LADPW 2006). To meet future demands posed by increased wastewater generation, the City has chosen to expand its current overall treatment capacity, while maximizing the potential to reuse recycled water through irrigation, and other approved uses.

Water IRP 5-year Reviews

The Los Angeles Department of Public Works (LADPW) had been monitoring implementation of the IRP and updating its projections via the preparation Water IRP 5-Year Review Final Documents. The last 5-year review, prior to preparation of the One Water LA Plan that now supersedes the 5-year reviews as

discussed below, was completed in 2012. Based on updated 2008 Southern California Association of Governments (SCAG) data, the estimated future flow of the Hyperion Sanitary Sewer System was forecasted as 500 mgd by 2020, and approximately 496 mgd by 2018. At the same time, IRP data in the five-year review showed that the actual Hyperion Sanitary Sewer System service area flow was less than projected by the 2008 SCAG data used for planning. Per that data, the Hyperion Sanitary Sewer System service area flow had decreased from 400 mgd in 2002 to 350 mgd in 2012. This could be attributed to such factors as water conservation and the economic downturn. The five-year Report estimated reductions in flow requirements indicating that there had been a reduction of wastewater flow of 26.5% relative to the amount estimated in the SCAG projection.

City of Los Angeles Municipal Code

Green Building Code

The City has been pursuing a number of green development initiatives intended to promote energy conservation and reductions in the amount of greenhouse gas emissions generated within the City. While these ordinances do not focus on the provision of sewer services, they do mandate the use of water conservation features in new developments. Examples of such water conservation features include, but are not limited to, low water shower heads, toilets, clothes washers and dishwashers. Because the flow through these fixtures is reduced, residual wastewater passing through is reduced, in turn reducing the demand for sewage conveyance and treatment.

The Los Angeles Municipal Code (LAMC) Chapter IX, Article 9, the Los Angeles Green Building Code (LA Green Building Code, Ordinance No. 181,480), was adopted in April 2008 and provides standards and a mechanism for evaluating projects for their water conservation features during site plan review. The LA Green Building Code has been subsequently amended to incorporate various provisions of the California Green Building Standards (CALGreen) Code. The LA Green Building Code includes mandatory requirements and elective measures pertaining to wastewater for three categories of buildings, the first of which applies to this Project: (1) low-rise residential buildings; (2) non-residential and high-rise residential buildings; and (3) additions and alterations to residential and non-residential buildings.

Water Efficiency Requirements Ordinance

LAMC Chapter XII, Article 5, the Water Efficiency Requirements Ordinance (Ordinance No. 180,822), effective December 1, 2009, requires the installation of efficient water fixtures, appliances, and cooling towers in new buildings and renovation of plumbing in existing buildings, to minimize the effect of water shortages for City customers and enhance water supply sustainability.

Sewer Capacity Availability Review

The LAMC includes regulations that require the City to assure available sewer capacity for new projects and to collect fees for improvements to the infrastructure system. LAMC Section 64.15 requires that the City perform a SCAR when an applicant seeks a sewer permit to connect a property to the City's sewer system, proposes additional discharge through their existing public sewer connection, or proposes a future sewer connection or future development that is anticipated to generate 10,000 gallons or more of sewage per day. A SCAR provides a preliminary assessment of the capacity of the existing municipal sewer system to safely convey a project's newly generated wastewater to the appropriate sewage treatment plant.

Sewerage Facilities Charge

LAMC Sections 64.11 and 64.12 require approval of a sewer permit, also called an "S" Permit, prior to connection to the wastewater system. LAMC Sections 64.11.2 and 64.16.1 require the payment of fees for new connections to the City's sewer system to assure the sufficiency of sewer infrastructure. New

connections to the sewer system are assessed a Sewerage Facilities Charge. The rate structure for the Sewerage Facilities Charge is based upon wastewater flow strength as well as volume. The determination of wastewater flow strength for each applicable project is based on City guidelines for the average wastewater concentrations of two parameters, biological oxygen demand and suspended solids, for each type of land use. Sewerage Facilities Charge fees are deposited in the City's Sewer Construction and Maintenance Fund for sewer and sewage-related purposes, including, but not limited to, industrial waste control and water reclamation purposes.

Bureau of Engineering Special Order

The City establishes design criteria for sewer systems to assure that new infrastructure provides sewer capacity and operating characteristics to meet City standards (Bureau of Engineering Special Order No. SO 06-0691). Per the Special Order, lateral sewers, which are sewers 18 inches or less in diameter, must be designed for a planning period of 100 years. The Special Order also requires that sewers be designed so that the peak dry weather flow depth during their planning period does not exceed one-half of the pipe diameter (D) (i.e., depth-to-diameter ratio or d/D).

Low Impact Development Ordinance

Under LAMC Section 64.72, all development projects in the City are required to integrate low impact development (LID) practices and standards for stormwater pollution mitigation to manage and capture stormwater runoff, to the maximum extent feasible, in priority order: infiltration, evapotranspiration, capture and use, treated through high removal efficiency biofiltration/biotreatment system of all of the runoff on site. High removal efficiency biofiltration/biotreatment systems are required to comply with the standards and requirements of the Development Best Management Practices (BMPs) Handbook.

One Water LA 2040 Plan

In April 2018, the City prepared the One Water LA 2040 Plan (One Water LA Plan), an integrated approach to Citywide recycled water supply, wastewater treatment, and stormwater management. The new plan builds upon the City's Water IRP, which projected needs and set forth improvements and upgrades to wastewater conveyance systems, recycled water systems, and runoff management programs through the year 2020, and extends its planning horizon to 2040. The One Water LA Plan proposes a collaborative approach to managing the City's future water, wastewater treatment, and stormwater needs with the goal of yielding sustainable, long-term water supplies for Los Angeles to ensure greater resilience to drought conditions and climate change. The One Water LA Plan is also intended as a step toward meeting the Mayor's Executive Directive to reduce the City's purchase of imported water by 50 percent by 2024. Major challenges addressed in the One Water LA Plan include recurring drought, climate change, and the availability of recycled water in the future in light of declining wastewater volumes. Volume 2 of the One Water LA Plan is the Wastewater Facilities Plan.

Green New Deal

The City released the first Sustainable City pLAN in April 2015, which has been updated in 2019 as the Green New Deal. The Green New Deal includes a multi-faceted approach to developing a locally sustainable water supply to reduce reliance on imported water, reducing water use through conservation, and increasing local water supply and availability. Towards the end, the Green New Deal establishes a target of recycling 100 percent of all wastewaters for beneficial reuse by 2035, which would be an improvement from the fiscal year 2017-2018, baseline of 27 percent.

The Green New Deal establishes a number of milestones and initiatives:

- 2021: Produce 1.5 mgd of recycled water at HWP for use at LAWA and other local facilities.

- 2025: Recycle 17,000 AFY of water at the Tillman WRP to recharge into groundwater basin.
- 2025/2035: Increase non-potable reuse of recycled water by an additional of 6,000 AFY 2025; and an additional 8,000 AFY by 2035; and
- 2025/2035: Reduce annual sewer spills to fewer than 65 by 2025; and 60 by 2035.

Sewer System Management Plan

The State of California, via the State Water Quality Control Board’s May 2, 2006 Statewide General Waste Discharge Requirements (WDRs), requires a Sewer System Management Plan (SSMP) to be prepared for all publicly owned sanitary sewer systems. The plans include measures to control and mitigate sewer spills and must be made available to the public. Accordingly, the City has prepared three SSMPs, one for each of the three separate sanitary sewer systems owned and operated by LA Sanitation: the Hyperion Sanitary Sewer System, the City of Los Angeles Regional Sanitary Sewer System (Harbor Gateway); and the Terminal Island Water Reclamation Plant Sanitary Sewer System. The City’s SSMPs were last updated in January 2019 as part of a required biennial internal audit. The SMMPs address the proper management, operation, and maintenance of all parts of the systems. The SSMP establishes design and performance standards for the sewer system; provides procedures for evaluating the system and providing capacity assurance; and establishes a performance standard to identify sewers in need of replacement or relief. The City’s SSMP is in full compliance with the WDRs and meets applicable WDR objectives.

Los Angeles Wastewater Capital Improvement Program

Every 10 years, the City of Los Angeles Department of Public Works, Bureau of Sanitation (LASAN) updates the City’s 10-Year Capital Improvement Program, which identifies the wastewater system upgrades, equipment, and modifications to be funded by the City within a 10-year period. Many of these improvements are necessary in order to comply with state and CWA regulations. The most recent update, the Wastewater Capital Improvement Program Fiscal Years 2013/2014 through 2022/2023, identifies improvements scheduled through 2016 for the four treatment plants, collection system, pumping plants, and system-wide operations.

City of Los Angeles General Plan

The City of Los Angeles General Plan Framework Element (Framework), adopted in December 1996, and readopted in 2001, sets forth a citywide comprehensive long-range growth strategy and defines citywide policies regarding land use, housing, urban form, neighborhood design, open space and conservation, economic development, transportation, infrastructure, and public services. Framework land use policies are implemented at the community level through community plans and specific plans. The applicable policies that are related to the City utilities and services systems, including wastewater, are listed in **Table 4.17-2**.

TABLE 4.17-2 RELEVANT GENERAL PLAN UTILITIES AND SERVICE SYSTEMS GOALS, OBJECTIVES, AND POLICIES	
Goal/Objective/Policy	Goal/Objective/Policy Description
FRAMEWORK ELEMENT – CHAPTER 9 INFRASTRUCTURE AND PUBLIC SERVICES	
Goal 9A	Adequate wastewater collection and treatment capacity for the City and in basins tributary to City-owned wastewater treatment facilities.
Objective 9.1	Monitor and forecast demand based upon actual and predicted growth.
Policy 9.1.1	Monitor wastewater generation.
Policy 9.1.2	Monitor wastewater flow quantities in the collection system and conveyed to the treatment plants.

TABLE 4.17-2 RELEVANT GENERAL PLAN UTILITIES AND SERVICE SYSTEMS GOALS, OBJECTIVES, AND POLICIES	
Goal/Objective/Policy	Goal/Objective/Policy Description
Policy 9.1.3	Monitor wastewater effluent discharged into the Los Angeles River, Santa Monica Bay, and San Pedro Harbor to ensure compliance with water quality requirements.
Objective 9.2	Maintain the wastewater collection and treatment system, upgrade it to mitigate current deficiencies, and improve it to keep pace with growth as measured by the City's monitoring and forecasting efforts.
Policy 9.2.1	Collect and treat wastewater as required by law and Federal, State, and regional regulatory agencies.
Policy 9.2.2	Maintain wastewater treatment capacity commensurate with population and industrial needs.
Policy 9.2.3	Provide for additional wastewater treatment capacity in the Hyperion Service Area, as it becomes necessary.
Policy 9.2.4	Continue to implement programs to upgrade the wastewater collection system to mitigate existing deficiencies and accommodate the needs of growth and development.
Policy 9.2.5	Review other means of expanding the wastewater system's capacity.
Objective 9.3	Increase the utilization of Demand Side Management (DSM) strategies to reduce system demand and increase recycling and reclamation.
Policy 9.3.1	Reduce the amount of hazardous substances and the total amount of flow entering the wastewater system.
Policy 9.3.2	Consider the use of treated wastewater for irrigation, groundwater recharge, and other beneficial purposes.
Objective 9.4	Ensure continued provision of wastewater collection and treatment after an earthquake or other emergency.
Policy 9.4.1	Restore minimal operations as soon as possible after an emergency, and full operations as soon as feasible.
Policy 9.4.2	Establish joint cooperation agreements with other jurisdictions for mutual assistance during emergencies.

Stormwater

County of Los Angeles Hydrology Manual

Drainage and flood control within the CPA is regulated by LADPW and the County of Los Angeles Department of Public Works (CLADPW). The County has jurisdiction over regional drainage facilities. The County's Hydrology Manual requires a storm drain system be designed for a 25-year storm event and that the combined capacity of a storm drain and street flow system accommodate flow from a 50-year storm event.

Los Angeles Department of Public Works (LADPW) Bureau of Engineering (BOE) B-Permit (LAMC §62.106.b)

Any proposed drainage improvements within the street right-of-way or any other property owned by, to be owned by, or under the control of the City requires the approval of a B-permit. Under the B-permit process, storm drain installation plans are subject to the review and approval by BOE. Additionally, any connections to the City's storm drain system from a property line to a catch basin or a storm drain pipe requires a storm drain permit from BOE.

Proposition O

Proposition O, is a \$500 million bond, authorized the City to fund projects that protect public health, capture stormwater for reuse and meet the federal CWA through removal and prevention of pollutants entering regional waterways. Proposition O projects include but are not limited to: the Temescal Canyon Park Stormwater BMP, Los Angeles Zoo Parking Lot, the Westchester Stormwater BMP, Echo Park Lake Rehabilitation Project, and the Hansen Dam Recreational Area Parking Lot and Wetlands Restoration. In addition, Proposition O funds were utilized for the Catch Basin Screen Cover and Insert Project, which provided for the installation of catch basin inserts and screen covers throughout the City beginning in 2005 with completion on September 30, 2007 (Phase I and Phase II). Phase III began in the spring of 2008 and will retrofit approximately 34,000 remaining catch basins with opening screen covers:

Low Impact Development (LID) Ordinance

The LID Ordinance was adopted by the City in 2011. The ordinance requires a variety of BMPs to manage stormwater and urban runoff and reduce runoff pollution. It provides stormwater and rainwater LID strategies for development projects that require building permits in order to maintain or restore the natural hydrologic character of a development site, reduce off-site runoff, improve water quality, and provide groundwater recharge. The ordinance does not apply to development that creates, adds, or replaces less than 500 square feet of impervious area; development that involves emergency construction activity; infrastructure projects within the public right-of-way; development that involves only activity related to gas, water, cable, or electricity services on private property; development involving only restriping of permitted parking lots; and projects involving only exterior movie or television production sets, or facades on an existing developed site.

City of Los Angeles General Plan Framework Element

The General Plan Framework Element is also discussed above under “Regulatory Framework” in the Water Supply subsection. Relevant objectives and policies of the Framework Element related to stormwater drainage facilities are listed in **Table 4.17-2**, above.

ENVIRONMENTAL IMPACTS

THRESHOLDS OF SIGNIFICANCE

The following thresholds of significance were developed in accordance with CEQA Guidelines Appendix G. Impacts would be significant if either the Proposed Project

- Require or result in the relocation or construction of new or expanded wastewater treatment, the construction or relocation of which could cause significant environmental effects (Threshold 4.17-1)
- Result in a determination by the wastewater treatment provider which serves or may serve the project that has adequate capacity to serve the project’s projected demand in addition to the provider’s existing commitments (Threshold 4.17-2)
- Require or result in the relocation or construction stormwater drainage facilities, the construction or relocation of which could cause significant environmental effects (Threshold 4.17-3)

METHODOLOGY

The analysis of the Proposed Project’s impacts with respect to wastewater treatment and conveyance focuses on whether existing and projected infrastructure capacities or supplies would be sufficient to meet future demands associated with anticipated development, including impacts associated with building new facilities to meet future demand. Project-generated demands were calculated using existing level of development in the Project Area, 2040 Reasonably anticipated development in the Project Area, and utility rates per development unit (e.g., water use per dwelling unit). The impact is the net change relative to existing conditions (i.e., 2040 with Proposed Project conditions – baseline conditions).

Water demand rates were obtained from the LADWP’s 2020 Urban Water Management Plan (UWMP), Exhibit 2H and Exhibit 2K (LADWP 2021). Per Exhibit 2E of the 2020 UWMP, indoor water use constitutes the following percentages of overall water use: Residential single family – 56%; Residential multi-family – 80%; Commercial/ Government– 56%; Industrial – 9%; It was assumed that 20 percent of existing residential development is single-family and 80 percent is multifamily. This provides a conservative estimate as the Project Area contains few single-family residential areas and single-family units have higher average utility usage rates than multi-family units. It was also assumed that the number of single-family homes would remain constant under future conditions relative to baseline conditions and all new residential development through 2040 would be multifamily.

State and local policies, plans, initiatives, and projects, such as SBX7-7, SB 1016, Emergency Water Conservation Plan, RENEW LA Plan and Ordinance 181519, as discussed above under Regulatory Setting, are in place or are anticipated to be implemented over the project’s time horizon that would reduce utility consumption rates over time. However, baseline rates were used to calculate projected usage in 2040, as it is speculative to assume the decreases that would result from their implementation. The one exception is for water as the 2020 UWMP provides project water use rates for 2045. These projected rates incorporate savings from codes and ordinances currently in place, but do not take into consideration planned projects, future policies, or initiatives (LADWP 2021), and therefore, also provide a conservative estimate of future consumption. A qualitative discussion of planned capacity-building or supply-enhancing projects is included in the analysis.

Consistent with the Population and Housing analysis, citywide impacts are analyzed assuming growth and demands placed on utilities and service systems based on SCAG projections.

PROJECT IMPACTS

Threshold 4.17-1	Require or result in the relocation or construction of new or expanded wastewater treatment facilities, the construction or relocation of which could cause significant environmental effects
Threshold 4.17-2	Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project’s projected demand in addition to the provider’s existing commitments

Impact 4.17-1, 4.17-2 Proposed Project: Implementation of the Proposed Project would increase demand for wastewater collection and treatment from the 500 percent increase in wastewater generation projected under the Proposed Project. However, this increase represents only one percent of the HWRP’s available capacity and the HWRP would, therefore, be able to adequately treat project-generated sewage and the treatment requirements. Additionally, ongoing maintenance and identified capital improvement projects would ensure the capacity is preserved. Therefore, impacts to wastewater facilities would be *less than significant*.

Project Impact

Table 4.17-3, below, summarizes projected wastewater generation for the Project Area in 2040 with implementation of the Proposed Project. As indicated in the table, the total wastewater generation with the Proposed Project in 2040 is estimated to be 4.1 mgd of wastewater. The projected net increase of 3.4 mgd of wastewater anticipated under the Proposed Project would constitute over 500 percent increase compared to the baseline generation of just under 0.7 mgd.

On average, 275 million gallons of wastewater enters the HWRP on a dry weather day. Because the amount of wastewater entering HWRP can double on rainy days, the plant was designed to accommodate both dry and wet weather days with a maximum daily flow of 450 million gallons of water per day (mgd) and peak wet weather flow of 800 MGD (LADPW 2022a). The projected wastewater increase to 4.1 mgd generated under the Proposed Project represents approximately one percent of the plant's available capacity. Therefore, the HWRP has sufficient available treatment capacity to serve reasonably foreseeable development in the Project Area. The HWRP would be able to adequately treat project-generated sewage in addition to currently generated sewage, and the treatment requirements of the RWQCB would not be exceeded. Therefore, it is not foreseeable that implementation of the Proposed Project would require construction of a new or expanded wastewater treatment plant.

As discussed above under *Regulatory Framework*, reasonably anticipated growth under the Proposed Project would occur in compliance with the requirements of LAMC 64.11, 64.12 and 64.15, which establishes City standards related to wastewater discharge, peak flow and sewer capacity. Sewer pipeline upgrades would be necessary as development generally occurs in the Project Area. As discussed in the *Environmental Setting*, a number of sewer line projects in the Project Area are identified. Such upgrades would likely occur within existing utility easements and would not result in new areas of disturbance. All upgrades would be subject to subsequent environmental review, wherein potential site- or project-specific impacts, if any, would be addressed. Routine infrastructure projects involving replacing or upgrading wastewater conveyance facilities generally include the preparation of a ND/MND and in some cases may possibly qualify for a Categorical Exemption (e.g., CEQA Guidelines Section 15302). The environmental impacts of the construction and operation of these new or upgraded facilities would be localized in nature and consistent with the impacts that have been evaluated throughout this EIR. To the extent that any significant impacts could result from the unique characteristics of a specific site, those impacts would be speculative at this time.

The City is proactively undertaking capital improvement projects to not only maintain the existing infrastructure but also enhance and expand capacity of treatment plants. Such projects would include rehabilitating old sewer mains and maintenance holes and replacing aging equipment and structures at treatment and pumping plants. As detailed in the *Environmental Setting*, the City maintains the Wastewater Capital Improvement Program (WCIP), which contains the capital projects and estimated costs for the renewal of the City's infrastructure at 10-year intervals.

The LASAN Wastewater Engineering Services Division is responsible for determining sewer capacity availability for new sewer connections for residential, commercial, and industrial developments. Thus, all development activities that require sewer connection permits are evaluated under the purview of existing capacity of sewer lines in the development site's vicinity at the time of development. By doing so, each new development must adhere to the most current Sewer Design Manual specifications as well as appropriate Standard Plan requirements. The Sewer Design Manual and Standard Plan are continuously updated to incorporate the most recent industry practices and materials ensuring appropriate measures are taken to accommodate any potential project. The City also has immediate response and reporting procedures in place to attend to any unexpected sewer overflows. The procedures are maintained in the Wastewater Collection Systems Division's up-to-date Sanitary Sewer Overflow Response and Reporting Procedures. Moreover, the City proactively monitors the sewer system to preemptively identify and resolve deficiencies

before they become problematic. System deficiencies in need of rehabilitation are then included in the WCIP, which are attended to according to their associated priority ranking. The City would require that localized system deficiencies are adequately addressed by the responsible project. Any future upgrades would be designed in accordance with applicable provisions of the Municipal Code and to the satisfaction of the City Engineer.

Upgrades to sewer lines may cause temporary localized disturbance of roads, which may require re-routing of traffic and localized temporary increases in congestion, as well as temporary increases in air pollutant emissions and noise. However, such impacts would be within what is described in this EIR and upgrades would not result in long-term effects. As discussed above, any upgrades would be subject to subsequent environmental review, wherein potential site- or project-specific impacts, if any, would be addressed accordingly. Therefore, impacts related to construction of wastewater conveyance system upgrades would be *less than significant*.

Mitigation Measures

No significant impacts have been identified; therefore, mitigation is not required for the Project.

TABLE 4.17-3 ESTIMATED WASTEWATER GENERATION FOR THE PROJECT AREA 2040				
Land Use	Dwelling Units or Jobs	Wastewater Generation Rate (gpd/unit)	Wastewater Generation (gpd)	Wastewater Generation (mgd)
Single-family Residential	4,007 du	329	1,318,303	1.1
Multi-family Residential	16,029 du	189	3,029,481	2.5
Commercial/ Governmental	8,263 jobs	69	570,147	0.5
Total 2040 with Project Wastewater Generation			4,917,931	4.1
Current Wastewater Generation (2021)			809,907	0.7
Net Change in Wastewater Generation			4,108,024	3.4
Notes: Wastewater generation numbers are rounded to the nearest thousand. Totals may not add up due to rounding. gpd – gallons per day du – dwelling units sf – square feet SOURCE: Wastewater is assumed to be 100% of indoor water use. Per Exhibit 2E of the LADWP 2020 UWMP, indoor water use constitutes 56% of overall water use for single-family residences and 80% of overall water use for multi-family residences. Per the 2020 UWMP, per unit water demand is forecast to decline over time; the forecast 2030 rates per Exhibit 2L of the LADWP 2020 UWMP are assumed to apply to new development.				

Threshold 4.17-3	Require or result in the relocation or construction of stormwater drainage facilities, the construction or relocation of which could cause significant environmental effects
-------------------------	--

Impact 4.17-3 **Proposed Project:** Implementation of the Proposed Project would not require construction of new stormwater drainage facilities or expansion of existing facilities; impacts to water drainage facilities would be *less than significant*.

Project Impact

As discussed in Section 4.9, *Hydrology and Water Quality*, of this Draft EIR, implementation of the Proposed Project would not result in a substantial increase in impervious surfaces. Accordingly, anticipated growth from reasonably anticipated development under the Proposed Project would not cause a substantial

increase in the peak flow rates or volumes that would exceed the drainage capacity of existing stormwater facilities. The Proposed Project would not significantly alter the existing drainage pattern and development of projects would be required to comply with all applicable hydromodification and flood control requirements. Compliance with the City's Low Impact Development (LID) Ordinance would further ensure that any future development resulting from the Proposed Project would not require construction of new stormwater drainage facilities and or expansion of existing facilities beyond specific improvements needed for individual development projects. In the long-term, redevelopment of properties in the Proposed Project Area would improve surface water quality by replacing older development with new development that incorporates LID methods. Therefore, impacts related to water drainage facilities would be *less than significant*.

Mitigation Measures

No significant impacts have been identified; therefore, mitigation is not required for the Proposed Project.

CUMULATIVE IMPACTS

The geographic area to analyze cumulatively considerable impacts to wastewater and/or storm drains includes the entire City of Los Angeles and immediately adjacent areas served by common infrastructure. Cumulative development throughout Los Angeles would add both dwelling units and non-residential development to the City. Citywide development through 2040 would add approximately 562,000 new residents, 236,000 new households, and 256,000 new employees (SCAG 2020). Cumulative impacts from this development are discussed below by impact area.

Wastewater

Growth anticipated by the Proposed Project and citywide cumulative growth would generate an increase in wastewater. Total water demand projected by the City's 2020 UWMP accounts for population growth within its jurisdictional boundaries, which is based on SCAG's demographic data and the 2016 RTP. As discussed in Section in 4.12, *Population and Housing*, the Proposed Project would allow for an additional 57,000 persons, 18,000 housing units, and 3,000 jobs to the Project Area. The updates to the existing CASP would accommodate a development capacity consistent with long-range SCAG growth projections.

As described above, the City of Los Angeles is served by four water reclamation plants, which include the HWRP, the Terminal Island Reclamation Plant, the Donald C. Tillman Water Reclamation and the Los Angeles-Glendale Water Reclamation Plant. Combined these reclamation plants have capacity to treat 580 mgd (649,684 afy) of wastewater citywide (LADPW 2020). According to the 2020 UWMP, average dry-weather wastewater influent projections for the City's wastewater treatment plants are expected to increase by approximately 20 percent over the next 25 years. Wastewater treatment projections of average dry-weather flows through 2040 for all four wastewater treatment plants total approximately 478.5 mgd (536,000 afy). Wastewater treatment projections of average dry-weather flows through 2040 for the HWRP are projected to be 366 mgd (410,000 afy), an increase of 91 mgd relative to baseline average dry-weather flows (275 mgd) (LADWP 2021a). Growth anticipated by the Proposed Project would increase wastewater generation by approximately 3.4 mgd, which comprises approximately less than one percent of citywide treatment capacity and one percent of projected wastewater treatment for the HWRP. Citywide growth would further increase wastewater generation, but such increases would not approach overall treatment capacity. Therefore, the cumulative increase in wastewater generation would not exceed the capacity of the City's wastewater treatment plants. Additionally, the City's 2006 Integrated Resources Plan incorporates a Wastewater Facilities Plan to meet future wastewater needs through the expansion of overall treatment capacity, maximizing the potential to reuse recycled water and implementation of new water conservation and technology programs (LADPW 2006).

Growth anticipated by the Proposed Project and citywide cumulative growth would contribute to an anticipated citywide increase in wastewater flow and place added demands on the wastewater conveyance system as future development takes place with the implementation of the Proposed Project. Development under the Proposed Project could require the construction of new or upgraded wastewater facilities. Such upgrades would likely occur within existing utility easements and would not result in new areas of disturbance. Construction of new or expanded conveyance facilities may be needed as a result of reasonably anticipated development and as discussed above, the City's WCIP identifies a number of sewer line projects in the Project Area. The City would require that localized system deficiencies are adequately addressed by the responsible project. Any future upgrades would be designed in accordance with applicable provisions of the Municipal Code and to the satisfaction of the City Engineer.

Routine infrastructure projects involving replacement or upgrade of sewer lines generally result in the preparation of a Mitigated Negative Declaration (MND) or, in some cases, a Categorical Exemption. The City's MNDs for sewer line replacements indicate typical less than significant construction-related impacts, including air quality, noise, and transportation impacts. The environmental impacts of the construction and operation of sewer lines would be consistent with the impacts evaluated throughout this EIR. Specifically, the EIR analyzes anticipated effects of citywide growth related to air quality, noise, traffic, and other environmental impact areas. To the extent that any significant impacts could result from the unique characteristics of a specific project or site, those impacts are too speculative to analyze at this time. As necessary, based on project and site characteristics, any such upgrades would be subject to subsequent environmental review, wherein potential impacts, if any, would be addressed accordingly. Regardless, impacts associated with construction of new facilities would be limited to the area in which the specific construction activity is occurring and would not contribute to any cumulative or citywide environmental impacts.

Any cumulative impacts related to future updates of other community or specific plans would be speculative. Individual infrastructure improvements needed citywide may result in site-specific temporary impacts related to traffic, air quality, and noise, but such impacts would be limited to the area of the construction activity and would not create any cumulative or citywide impacts. Based on the above information, the incremental contribution of the Proposed Project related to wastewater treatment and conveyance would not be cumulatively considerable and cumulative impacts would be *less than significant*.

Stormwater Drainage

Continued compliance with the City's Low Impact Development (LID) Ordinance for all new development would ensure that any future development in Los Angeles would not increase demands on stormwater drainage facilities and or expansion of existing facilities beyond specific improvements needed for individual development projects. As with the Project Area, long-term redevelopment of properties throughout the City would improve surface water quality by replacing older development with new development that incorporates LID methods. Therefore, cumulative impacts related to stormwater drainage facilities would be *less than significant*.

Water Supply

ENVIRONMENTAL SETTING

CITYWIDE SETTING

Los Angeles Department of Water and Power

The LADWP is responsible for providing water supply to the City in compliance with County, State, and Federal regulations. According to the City's 2020 Urban Water Management Plan (UWMP), which is further discussed below under *Regulatory Framework*, the primary LADWP sources of water supplies are water purchased from the Metropolitan Water District (MWD), the Los Angeles Aqueducts (LAA), and local groundwater. Recycled water projects are progressing and expected to be a greater portion of LADWP water supply in the future. Overall, these sources of water provide the necessary water to meet LADWP's water supply needs. In 2019/20 total water demand totaled 106 gallons per person per day or 495,685 AF a year from 2016-2020 (LADWP 2021b, LADWP 2021a). The 2020 UWMP water demand projection for 2045 is approximately 565,751 afy, based on normal weather conditions (LADWP 2021).

The LAA has historically been the primary source of the City's water supply. In recent years, however, the amount of water supplies from the LAA has been limited due to environmental concerns, and the City's water supply relied heavily (average of 42 percent in recent years) on the purchased water from MWD delivered from the Colorado River or the Sacramento-San Joaquin Delta. Local ground water has been a reliable water source, providing an average of 9 percent of the total water supply, but there have been concerns in recent years due to declining groundwater level and contamination issues. The City's recycled water supply is limited to specific projects within the City at this time (LADWP 2021a).

Los Angeles Aqueduct

The LAA system extends approximately 340 miles from the Mono Basin to the City. From 1995 through 2004, the LAA supplied about half of the City's water needs. The City owns approximately 312,000 acres of property in the Owens Valley and appropriates groundwater from its lands in the Owens Valley pursuant to a long-term groundwater management plan with Inyo County (LADWP 2020a).

The LAA conveys snowmelt runoff from the eastern Sierra Nevada Mountains and water supplies are supplemented by groundwater pumping. LAA supplies fluctuate from year to year due to varying annual snowfall and hydrological conditions. In recent years, the LAA supplies have decreased because of environmental obligations to dedicate water resources to mitigate groundwater pumping in the Owens Valley, restore the water level of Mono Lake, and mitigate dust emissions from Owens Lake. The Runoff Forecast Model and the Los Angeles Aqueduct Simulation Model (LAASM) was used jointly to predict water available from the LAA. Absent any system improvements, average long-term LAA is expected to be 184,200 AFY in 2045, with a decline to 1129,300 AFY given multiple dry years.

Local Groundwater

In addition to groundwater extraction from nine wellfields throughout the Owens Valley, the LADWP extracts from three local groundwater basins: San Fernando, Sylmar, and Central. The LADWP plans to continue future pumping from the local basins, with limitations based on water quality and overdraft protection.

The LADWP's groundwater pumping strategy is based on a "safe yield" strategy, in which the amount of water removed over a period of time equals the amount of water entering the groundwater basin through native and imported groundwater recharge. Further, protection from potential overdraft conditions is provided by the court-appointed Los Angeles River Area Watermaster for the San Fernando and Sylmar Basins, and a court-appointed Watermaster Panel for the Central Basin (LADWP 2021a). Annually, the Watermaster prepares a Watermaster Service Report indicating groundwater extractions, replenishment operations, imported water use, recycled water use, finances of Watermaster services, administration of the water exchange pool, and significant water-related events in the Central Basin. Additionally, a long-term groundwater management agreement between the City and Inyo County ensures the protection of LADWP's groundwater resources in Owens Valley from overdraft conditions.

Local Groundwater provided approximately eight percent of the total water supply for the City over the last five years. Additionally, local groundwater has supplied up to 23 percent of total water supply since 1970 during extended dry periods when other supplies were less reliable (LADWP 2021a).

LADWP plans to continue production from its groundwater basins in the coming years to offset reductions in imported supplies. Extraction from the basins is, however, limited by water quality and overdraft protection. Both LADWP and the California Department of Water Resources have programs in place to monitor wells to prevent over drafting.

Recycled Water

LADWP restores wastewater to a level of quality specified by the California Department of Health Services and distributes it for landscaping and industrial uses. The sustainability of the City's water supplies is dependent on the City's ability to maximize water conservation and increase recycled water use. LADWP uses recycled water produced by four wastewater treatment plants: Hyperion Advanced Water Purification Facility, Terminal Island Water Reclamation Plant, Donald C. Tillman Water Reclamation Plant, and the Los Angeles-Glendale Water Reclamation Plant. It is estimated that in 2019 320,000,000 gallons of wastewater was cleaned per day between the four reclamation plants (City of Los Angeles 2019). Currently recycled water provides approximately two percent to the City's water supply (LADWP 2021a). In 2019/20 FY, 366,000 AF came from recycled water.

Purchased Water

The remainder of the City's water demand is supplied by purchases from MWD. The Metropolitan Water District imports its water supplies from Northern California through the State Water Project's California Aqueduct and from the Colorado River by way of the MWD's Colorado River Aqueduct. LADWP is one of 26 member agencies that have preferential rights to purchase water from the MWD. LADWP has a preferential right to purchase water from the MWD pursuant to MWD Act Section 135. As a percentage of the City's total water supply, purchases of MWD water have historically varied from 4 percent in 1983-84 to 71 percent in 2008-09, with a five-year average 42 percent between 2015/16 and 2019/20. The City relies on the MWD even more in dry years and has increased its dependence in recent years as LAA supply has been reduced. Although the City plans to reduce its reliance on MWD supply, it has made significant investments in the MWD anticipating that the City will continue to rely on the wholesaler to meet its current and future supplemental water needs. The 2020 UWMP projects that LADWP's reliance on the MWD water supplies would be an average 175 percent under average weather conditions by 2045 (LADWP 2021a).

Water Supply Treatment Process

LADWP supplies water that meets or exceeds all health-related state and federal standards. LADWP accomplishes such standards by: (1) filtration of the LAA supply; (2) security measures safeguarding access

to water supply and storage areas; (3) control of algae growth in groundwater and reservoirs; (4) continuous disinfection of water entering mains; and (5) regular water quality testing, inspection, and cross-control prevention. LADWP was issued one citation in 2018 for violating the surface water treatment rule. LADWP addressed the citation and put measures in place to prevent this type of occurrence in the future.

All water coming from the LAA, the California Aqueduct, and the Colorado River Aqueduct is filtered and treated at the Los Angeles Aqueduct Filtration Plant to ensure a safe drinking water supply. Once at the filtration plant, all water travels through screens that remove environmental debris such as twigs and dead leaves. Bacteria and other impurities that can affect taste, odor, and color are eliminated by Ozone injections, a super-charged oxygen molecule with powerful disinfecting properties. Treatment chemicals are then quickly dispersed into the water to make fine particles called “floc,” which are subsequently removed via a 6-foot-deep coal filter. The final step is the addition of chlorine and fluoride which ensure lasting disinfection and strengthen tooth enamel. In May 2014, LADWP commissioned a new advanced process at the filtration plant, the Dr. Pankaj Parekh Ultraviolet (UV) Disinfection Facility, which replaces ozone as the primary disinfectant for surface water. The water goes through UV purification, which has been identified as one of the most effective methods of drinking water treatment by USEPA. Then, chlorine and ammonia are added during the final step to ensure lasting disinfection and to protect the water as it travels through the City’s large distribution system.

The Los Angeles Aqueduct Filtration Plant has a water treatment capacity of up to 600 mgd. In the mid-2000’s, LADWP began a comprehensive modernization of the filtration plant to upgrade and replace equipment. The upgrade program is on-going process and will continue to deliver dependable supply of safe, quality water to its customers in an efficient and publicly responsible manner. Furthermore, LADWP continues to invest in improving drinking water quality through its Capital Improvement Program. The approved water budget in FY 2018/2019 is \$1.54 billion with \$891 million earmarked for capital projects.

The City’s groundwater supply in the San Fernando and Central Basins is generally clean. LADWP pumps from the clean parts of the basins and disinfects this groundwater with chlorine as a safeguard against microorganisms. Additionally, LADWP continuously monitors and ensures that all water meets water quality standards and results are far below the maximum contaminant levels permitted by state or federal regulations.

Water Conveyance Facilities

As detailed in the LADWP’s 2020-2021 Fact and Figures document, water supply to the City is provided by the LADWP’s water infrastructure system. LADWP’s infrastructure and conveyance system includes 7,340 of distribution mains and trunk lines, 115 tanks and reservoirs, 85 pump stations, 9 ammoniation stations, 22 chlorination stations, 329 regulator / relief stations, 61,503 fire hydrants and 323,820 acre-feet Total Storage Capacity (LADWP 2021b).

Water Conservation

As reported in the 2020 Los Angeles Urban Water Management Plan, the City of Los Angeles is the national leader in water use efficiency (LADWP 2021a). Despite an increase in population of over one million people, the City’s water usage is lower than it was in the 1970’s. The LADWP’s goal of reducing potable water use per capita by 25% by 2023 will require the implementation of multiple strategies including investments in new technologies, rebates and incentives promoting installation of water-efficient fixtures and appliances, expansion and enforcement of prohibited water use, reduction in outdoor water use, extending education and outreach effort, and encouraging regional conservation efforts. Estimated water saving for 2019/2020 was 417,445 AF. Furthermore, state legislation, which postdates several City water conservation ordinances, has strengthened the City’s commitment to water conservation and provides added

assurance that the City will continue its leadership role in managing demand for water in the near and distant future.

PROJECT AREA SETTING

Table 4.17-4 shows the estimated daily water demand associated with existing land uses in the Project Area. Under existing conditions, Project Area development generates demand for an estimated 0.8 mgd or 913-acre feet per year (afy).

TABLE 4.17-4 CURRENT WATER DEMAND IN THE PROJECT AREA 2021				
Land Use	Dwelling Units or Jobs in Plan Area	Daily Water Use Rate (gpd/unit)	Daily Water Demand (gpd)	Annual Water Demand (afy)
Single-family ^[1]	402 du	329	132,258	148
Multi-family ^[1]	1,610 du	189	304,290	341
Commercial/Government	5,411 jobs	69	373,359	418
Total			809,907	907
NOTES:				
du - dwelling units				
gpd – gallons per day				
afy – acre feet per year (1 af = 325,850 gallons)				
Totals may not add up due to rounding.				
Single-family and multi-family units were estimated by assuming that 20 percent of total household units are single-family and 80 percent are multi-family.				
SOURCE: Source: Water demand rates were obtained from the LADWP's 2020 UWMP, Exhibit 2L. Per the 2020 UWMP, per unit water demand is forecast to decline over time; the forecast 2040 rates are assumed to apply to new development.				

REGULATORY FRAMEWORK

FEDERAL

Safe Drinking Water Act (SDWA)

The Safe Drinking Water Act ensures the quality of Americans' drinking water. The law requires actions to protect drinking water and its sources (e.g., rivers, lakes, reservoirs, springs and groundwater wells) and applies to public water systems serving 25 or more people. It authorizes the U.S. Environmental Protection Agency (USEPA) to set national health-based standards for drinking water to protect against both naturally occurring and manmade contaminants. In addition, it oversees the states, municipalities and water suppliers that implement the standards. USEPA standards are developed as a Maximum Contaminant Level (MCL) for each chemical or microbe. The MCL is the concentration that is not anticipated to produce adverse health effects after a lifetime of exposure, based upon toxicity data and risk assessment principles. USEPA's goal in setting MCLs is to assure that even small violations for a period of time do not pose significant risk to the public's health over the long run. National Primary Drinking Water Regulations (NPDWRs) are legally enforceable standards that limit the levels of contaminants in drinking water supplied by public water systems. Secondary standards are non-enforceable guidelines regulating contaminants that may cause cosmetic effects (such as skin or tooth discoloration) or aesthetic effects (such as taste, odor, or color) in drinking water. USEPA does not enforce these "secondary maximum contaminant levels" (SMCLs). They are established only as guidelines to assist public water systems in managing their drinking water for aesthetic considerations, such as taste, color, and odor. USEPA recommends secondary standards to water systems but does not require systems to comply. However, states may choose to adopt them as enforceable

standards. California has adopted secondary standards in Title 22 of the California Code of Regulations (CCR).

STATE

California Urban Water Management Plan Act

The California Urban Water Management Planning Act (Water Code, Section 10610, et seq.) addresses several state policies regarding water conservation and the development of water management plans to ensure the efficient use of available supplies. The California Urban Water Management Planning Act also requires Urban Water Suppliers to develop Urban Water Management Plans (UWMPs) every five years to identify short-term and long-term demand management measures to meet growing water demands during normal, dry, and multiple-dry years. Urban Water Suppliers are defined as water suppliers that either serve more than 3,000 customers or provide more than 3,000 acre feet per year (afy) of water to customers.

Senate Bill 610 and 221, and Senate Bill 7

Two of the state laws addressing the assessment of water supply necessary to serve large-scale development projects, Senate Bill (SB) 610 and SB 221, became effective January 1, 2002. SB 610, codified in Water Code Sections 10910-10915, specifies the requirements for water supply assessments (WSAs) and their role in the California Environmental Quality Act (CEQA) process, and defines the role UWMPs play in the WSA process. SB 610 requires that, for projects subject to CEQA that meet specific size criteria, the water supplier prepare WSAs that determine whether the water supplier has sufficient water resources to serve the projected water demands associated with the projects. SB 610 provides specific guidance regarding how future supplies are to be calculated in the WSAs where an applicable UWMP has been prepared. Specifically, a WSA must identify existing water supply entitlements, water rights, or water service contracts held by the public water system, and prior years' actual water deliveries received by the public water system. In addition, the WSA must address water supplies over a 20-year period and consider normal, single-dry, and multiple-dry year conditions. In accordance with SB 610, projects for which a WSA must be prepared are those subject to CEQA that meet any of the following criteria:

- Residential developments of more than 500 dwelling units.
- Shopping centers or business establishments employing more than 1,000 persons or having more than 500,000 square feet of floor space;
- Commercial office buildings employing more than 1,000 persons or having more than 250,000 square feet of floor space;
- Hotels, motels, or both, having more than 500 rooms;
- Industrial, manufacturing, or processing plants, or industrial parks planned to house more than 1,000 persons, occupying more than 40 acres of land, or having more than 650,000 square feet of floor area
- Mixed-use projects that include one or more of the projects specified in this subdivision; or
- Projects that would demand an amount of water equivalent to or greater than the amount of water required by a 500-dwelling-unit project. (Water Code Section 912, CEQA Guidelines Section 15155(a).

The WSA must be approved by the public water supplier serving the project at a regular or special meeting and must be incorporated into the CEQA document. The lead agency must then make certain findings related to water supply based on the WSA.

In addition, under SB 610, a water supplier responsible for the preparation and periodic updating of an UWMP must describe the water supply projects and programs that may be undertaken to meet the total project water use of the service area. If groundwater is identified as a source of water available to the supplier, the following additional information must be included in the UWMP: (1) a groundwater management plan; (2) a description of the groundwater basin(s) to be used and the water use adjudication rights, if any; (3) a description and analysis of groundwater use in the past 5 years; and (4) a discussion of the sufficiency of the groundwater that is projected to be pumped by the supplier.

SB 7, enacted on November 10, 2009, mandates new water conservation goals for UWMPs, requiring Urban Water Suppliers to achieve a 20 percent per capita water consumption reduction by the year 2020 statewide, as described in the “20 x 2020” State Water Conservation Plan. As such, each updated UWMP must now incorporate a description of how each respective urban water supplier will quantitatively implement this water conservation mandate, which requirements in turn must be taken into consideration in preparing and adopting WSAs under SB 610.

SB 221 also addresses water supply in the land use approval process for large residential subdivision projects. However, unlike SB 610 WSAs, which are prepared at the beginning of a planning process, SB 221-required Water Supply Verification (WSV) is prepared at the end of the planning process for such projects. Under SB 221, a water supplier must prepare and adopt a WSV indicating sufficient water supply is available to serve a proposed subdivision, or the local agency must make a specific finding that sufficient water supplies are or will be available prior to completion of a project, as part of the conditions for the approval of a final subdivision map. SB 221 specifically applies to residential subdivisions of 500 units or more. However, Government Code Section 66473.7(i) exempts “...any residential project proposed for a site that is within an urbanized area and has been previously developed for urban uses; or where the immediate contiguous properties surrounding the residential project site are, or previously have been, developed for urban uses; or housing projects that are exclusively for very low and low-income households.”

Senate Bill X7-7, Water Conservation Act

SB X7-7 (Water Conservation Act of 2009), codified in California Water Code Section 10608, requires all water suppliers to increase water use efficiency. Enacted in 2009, this legislation sets an overall goal of reducing per capita urban water use, compared to 2009 use, by 20 percent by December 31, 2020. The State of California was required to make incremental progress towards this goal by reducing per capita water use by at least 10 percent on or before December 31, 2015. Monthly statewide potable water savings reached 25.1 percent in February 2017 as compared to that in February 2013. Cumulative statewide savings from June 2015 through February 2017 were estimated at 22.5 percent. Following a multi-year drought and improvements to hydrologic conditions, statewide potable water savings reached 14.7 percent in August 2017 as compared to August 2013 potable water production.

California Code of Regulations Title 20

Title 20, Section 1605.3 (h) and 1505(i) of the California Code of Regulations (CCR) establishes applicable State efficiency standards (i.e., maximum flow rates) for plumbing fittings and fixtures, including fixtures such as showerheads, lavatory faucets and water closets (toilets). Among the standards, the maximum flow rate for showerheads manufactured on or after July 1, 2018 is 1.8 gpm at 80 psi; and lavatory faucets manufactured after July 1, 2016 is 1.2 gpm at 60 psi. The standard for toilets sold or offered for sale on or after January 1, 2016 is 1.28 gallons per flush.

CALGreen Code

Part 11 of Title 24, the title that regulates the design and construction of buildings, establishes the California Green Building Standards (CALGreen) Code. The purpose of the CALGreen Code is to improve public health, safety and general welfare by enhancing the design and construction of buildings through the use of building concepts having a reduced negative impact or a positive environmental impact and encouraging sustainable construction practices in the following categories: planning and design, energy efficiency, water efficiency and conservation, material conservation and resource efficiency, and environmental quality. The CALGreen Code includes both mandatory measures as well as voluntary measures. The mandatory measures establish minimum baselines that must be met in order for a building to be approved. The mandatory measures for water conservation provide limits for fixture flow rates, which are the same as those for the Title 20 efficiency standards listed above. The voluntary measures can be adopted by local jurisdictions for greater efficiency.

Plumbing Code

Title 24, Part 5 of the California Code of Regulations establishes the California Plumbing Code. The California Plumbing Code sets forth efficiency standards (i.e., maximum flow rates) for all new federally-regulated plumbing fittings and fixtures, including showerheads and lavatory faucets. The 2019 California Plumbing Code, which is based on the 2018 Uniform Plumbing Code, has been published by the California Building Standards Commission and went into effect on January 1, 2019.

Sustainable Groundwater Management Act of 2014

The Sustainable Groundwater Management Act (SGMA) of 2014, passed in September 2014, is a comprehensive three-bill package that provides a framework for the sustainable management of groundwater supplies by local authorities. The SGMA requires the formation of local groundwater sustainability agencies to assess local water basin conditions and adopt locally based management plans. Local groundwater sustainability agencies were required to be formed by June 30, 2017. The SGMA provides 20 years for groundwater sustainability agencies to implement plans and achieve long-term groundwater sustainability and protect existing surface water and groundwater rights. The SGMA provides local groundwater sustainability agencies with the authority to require registration of groundwater wells, measure and manage extractions, require reports and assess fees, and request revisions of basin boundaries, including establishing new subbasins. Furthermore, SGMA requires governments and water agencies of high and medium priority basins to stop overdraft and bring groundwater basins into balanced levels of pumping and recharge. Under SGMA, these basins should reach sustainability within 20 years of implementing their sustainability plans. For the basins that are critically over-drafted the timeline is 2040. For the remaining high and medium priority basins, the deadline is 2042.

State of Drought Emergency Declaration and Executive Orders

In response to California's drought conditions, on January 17, 2014, Governor Brown declared a State of Drought Emergency and directed state officials to take numerous necessary actions with local Urban Water Suppliers and municipalities to reduce the impacts of the ongoing drought conditions that had been occurring in California since approximately 2009. Subsequently, four Executive Orders were issued between April 2015 to April 2017 to address changing drought conditions and provide guidance for addressing the drought conditions.

Executive Order B-29-15 (April 2015) imposed a mandatory 25 percent statewide water reduction on potable water use by Urban Water Suppliers. It prioritized water infrastructure projects, incentivized water efficiencies, and streamlined permitting with new approval processes for water transfers and emergency drinking water projects. Executive Order B-36-15 (November 2015) called for additional actions to build

on the state's response to record dry conditions and assisted recovery efforts from devastating wildfires; and Executive Order B-37-16 (May 2016) continued water use restrictions from Executive Order B-29-15 as drought conditions continued to persist. Executive Order B-37-16 called for long-term improvements to local drought preparation across the state and directed the California State Water Resources Control Board (SWRCB) to develop proposed emergency water restrictions for 2017 if the drought persists.

The regulatory requirements resulting from these Executive Orders were codified in Article 22.5, Drought Emergency Water Conservation of the California Code of Regulations.

In May 2016, SWRCB adopted a revised emergency water conservation regulation, effective June 2016 through at least February 2017, which rescinded numeric reduction targets for Urban Water Suppliers, instead requiring locally developed conservation standards based upon each agency's specific circumstances.

Finally, on April 7, 2017, Executive Order B-40-17 was issued to formally end the drought emergency and lifted the drought emergency in all California counties except Fresno, Kings, Tulare, and Tuolumne. In response to Executive Order B-40-17, on April 26, 2017, the SWRCB partially repealed the emergency regulation in regard to water supply stress test requirements and remaining mandatory conservation standards for urban water suppliers. The order also rescinded two drought-related emergency proclamations and four drought-related executive orders. Cities and water districts throughout the state are required to continue reporting their water use each month. Executive Order B-40-17 continued the ban on wasteful practices, including hosing off sidewalks and running sprinklers when it rains.

California Water Plan

Required by the CWC Section 10005(a), the California Water Plan is the state's strategic plan for managing and developing water resources statewide for current and future generations. It provides a collaborative planning framework for elected officials, agencies, tribes, water and resource managers, businesses, academia, stakeholders, and the public to develop findings and recommendations and make informed decisions for California's water future.

The Plan, updated every five years, presents the status and trends of California's water-dependent natural resources; water supplies; and agricultural, urban, and environmental water demands for a range of plausible future scenarios. The Water Plan also evaluates different combinations of regional and statewide resource management strategies to reduce water demand, increase water supply, reduce flood risk, improve water quality, and enhance environmental and resource stewardship. The evaluations and assessments performed for the plan help identify effective actions and policies for meeting California's resource management objectives in the near term and for several decades to come.

In July 2019, DWR released the Final 2018 Update to the California Water Plan. The document provides recommended actions, funding scenarios, and an investment strategy to bolster efforts by water and resource managers, planners, and decision-makers to overcome the State's most pressing water resource challenges. It reaffirms the State government's role and commitment to sustainable, equitable, long-term water resource management; and introduces implementation tools to inform decision-making. The 2018 Update recommends significant additional investment in infrastructure and ecosystem improvements to overcome challenges to sustainability; and it recommends actions to resolve systemic and institutional issues that contribute to many of the state's water challenges:

California Water Action Plan

The California Water Action Plan is a roadmap for the State's journey towards sustainable water management. The first California Water Action Plan was released in January 2014 under Governor Brown's

administration and updated in 2016. The California Water Action Plan discusses the challenges to water in California: uncertain water supplies, water scarcity/drought, declining groundwater supplies, poor water quality, declining native fish species and loss of wildlife habitat, floods, supply disruptions, and population growth and climate change further increasing the severity of these risks.

REGIONAL

As discussed in detail below, the Metropolitan Water District of Southern California (MWD) is a primary source of water supply within Southern California. Based on the water supply planning requirements imposed on its member agencies and ultimate customers, MWD has adopted a series of official reports on the state of its water supplies. As described in further detail below, in response to recent developments in the Sacramento Delta, the MWD has developed plans intended to provide solutions that, when combined with the rest of its supply portfolio, will ensure a reliable long-term water supply for its member agencies, including the City of Los Angeles.

Metropolitan Water District's 2020 Urban Water Management Plan

The Metropolitan Water district's (MWD) 2020 Regional UWMP addresses the future of MWD's water supplies and demand through the year 2045. The 2020 Regional UWMP provides an assessment of the MWD's water service reliability; describes and evaluates sources of water supply, efficient uses of water, demand management measures, implementation strategies, and schedule; and other relevant information and programs. In addition to the water reliability assessments, the UWMP includes an evaluation of frequent and severe periods of droughts, as described in the Drought Risk Assessment, and the preparation and adoption of the Water Shortage Contingency Plan (WSCP). The 2020 UWMP reports also identified projected supplies to meet the long-term demand within its service area.

The 2020 UWMP concluded that the MWD has sufficient supply to meet the expected demands from 2025 through 2045 under a single dry year condition and a period of drought lasting five consecutive water years, as well as in a normal water year hydrologic condition. The analysis for multiple-dry year conditions, i.e., under the most challenging weather conditions such as drought and service interruptions caused by natural disasters, is presented in Table 2-5 of the 2020 UWMP. In the 2020 UWMP, the projected 2045 water demand is 1,564,000 afy, with supply projected to be 2,239,000 afy, resulting in a surplus of 675,000 afy.

Metropolitan Water District's 2015 Urban Water Management Plan

The Metropolitan Water District's (MWD) 2015 Regional UWMP (RUWMP) addresses the future of MWD's water supplies and demand through the year 2040. Evaluations are prepared for average year conditions, single dry-year conditions, and multiple dry-year conditions. The analysis for multiple-dry year conditions, i.e. under the most challenging weather conditions such as drought and service interruptions caused by natural disasters, is presented in Table 2-4 of the 2015 RUWMP. The analysis in the 2015 RUWMP concluded that reliable water resources would be available to continuously meet demand through 2040. In the 2015 RUWMP, the projected 2040 demand water is 2,201,000 afy, whereas the expected and projected 2040 supply is 2,941,000 afy based on current programs, and an additional 398,000 afy is expected to become available under programs under development for a potential surplus in 2040 of 1,138,000 afy.

MWD has comprehensive plans for stages of actions it would undertake to address up to a 50-percent reduction in its water supplies and a catastrophic interruption in water supplies through its Water Surplus and Drought Management and Water Supply Allocation Plans. MWD has also developed an Emergency Storage Requirement to mitigate against potential interruption in water supplies resulting from catastrophic occurrences within the Southern California region and is working with the State to implement a comprehensive improvement plan to address catastrophic occurrences that could occur outside of the

Southern California region. MWD is also working with the State on the Delta Risk Management Strategy to reduce the impacts of a seismic event in the Delta that would cause levee failure and disruption of State Water Project (SWP) deliveries. In addition, MWD has plans for supply implementation and continued development of a diversified resource mix, including programs in the Colorado River Aqueduct (CRA), SWP, Central Valley transfers, local resource projects, and in-region storage that enables the region to meet its water supply needs. As set forth in their 2015 UWMP, MWD will also continue investments in water use efficiency measures to help the region achieve the 20 percent per person potable water use reduction by 2020.

MWD's 2015 Integrated Resources Plan

The MWD prepares an Integrated Water Resources Plan (IRP) that provides a water management framework with plans and programs for meeting future water needs. It addresses issues that can affect future water supply such as water quality, climate change, and regulatory and operational changes. The most recent IRP (2015 IRP) was adopted in January 2016. It establishes a water supply reliability mission of providing its service area with an adequate and reliable supply of high-quality water to meet present and future needs in an environmentally and economically responsible way. Among other topics, the 2015 IRP discusses water conservation, local and imported water supplies, storage and transfers, water demand, and adaptation to drought conditions.

The 2015 IRP reliability targets identify developments in imported and local water supply, and in water conservation that, if successful, would provide a future without water shortages and mandatory restrictions under planned conditions. For imported supplies, MWD would make investments to maximize CRA deliveries in dry years. MWD would make ecologically-sound infrastructure investments to the SWP so that the water system can capture sufficient supplies to help meet average year demands and to refill the MWD storage network in above-average and wet years.

Planned actions to keep supplies and demands in balance include, among others, lowering regional residential per capita demand by 20 percent by the year 2020 (compared to a baseline established in 2009 state legislation), reducing water use from outdoor landscapes and advancing additional local supplies. IRP Table ES-1, 2015 IRP Update Total Level of Average-Year Supply Targeted (Acre-Feet), of the 2015 IRP, shows the supply reliability and conservation targets. As presented in the IRP, the total supply reliability target for each five-year increase between 2016 and 2040 would exceed the retail demand after conservation. In 2040, retail demand after conservation is estimated to be 4,273,000 acre-feet and the total supply reliability target is approximately 4,539,000 acre-feet, representing an excess of 266,000 acre-feet.

MWD's Water Surplus and Drought Management Plan

In 1999, MWD incorporated the water storage contingency analysis that is required as part of any UWMP into a separate, more detailed plan, called the Water Surplus and Drought Management Plan (WSDM Plan). The overall objective of the WSDM Plan is to ensure that shortage allocation of MWD's imported water supplies is not required. The WSDM Plan provides policy guidance to manage MWD's supplies and achieve the goals laid out in the agency's IRP. The WSDM Plan separates resource actions into two major categories: Surplus Actions and Shortage Actions. The WSDM Plan considers the region to be in surplus only after MWD has met all demands for water, including replenishment deliveries. The Surplus Actions store surplus water, first inside then outside of the region. The Shortage Actions of the WSDM are separated into three subcategories: Shortage, Severe Shortage, and Extreme Shortage. Each category has associated actions that could be taken as part of the response to prevailing shortage conditions. Conservation and water efficiency programs are part of MWD's resource management strategy through all categories.

MWD's Water Supply Allocation Plan

While the WSDM Plan included a set of general actions and considerations for MWD staff to address during shortage conditions, it did not include a detailed water supply allocation plan or implementation approach. Therefore, in February 2008, MWD adopted a water supply plan called the Water Supply Allocation Plan (WSAP), which has since been implemented three times, most recently in April 2015 (under the new name Drought Rationing Plan). The WSAP includes a formula for determining equitable, needs-based reductions of water deliveries, with the potential application of a surcharge, to member agencies during extreme water shortages in MWD's service area conditions (i.e., drought conditions or unforeseen interruptions in water supplies).

The WSAP allows member agencies the flexibility to choose among various local supply and conservation strategies to help ensure that demands on MWD stay in balance with limited supplies. The WSAP formula addresses shortages of MWD supplies, by taking into account growth, local investments, changes in supply conditions and the demand hardening aspects of non-potable recycled water use and the implementation of conservation savings programs. The allocation period covers 12 consecutive months from July of a given year through the following June.

LOCAL

City of Los Angeles General Plan Framework Element.

The Citywide General Plan Framework Element (General Plan Framework) establishes the conceptual basis for the City's General Plan. The General Plan Framework sets forth a comprehensive Citywide long-range growth strategy and defines Citywide policies regarding land use, housing, urban form and neighborhood design, open space and conservation, economic development, transportation, infrastructure and public services. Chapter 9, Infrastructure and Public Services, of the City's General Plan Framework identifies goals, objectives, and policies for City utilities including water service. Goal 9C is to provide adequate water supply, storage facilities, and delivery system to serve the needs of existing and future water needs. The goals, objectives, and policies of the Framework that are related to water supply, storage, and delivery infrastructure are listed in **Table 4.17-5**.

TABLE 4.17-5 RELEVANT GENERAL PLAN WATER SUPPLY GOALS, OBJECTIVES, AND POLICIES	
Goal/Objective/Policy	Goal/Objective/Policy Description
FRAMEWORK ELEMENT – CHAPTER 9 INFRASTRUCTURE AND PUBLIC SERVICES	
Goal 9C	Adequate water supply, storage facilities, and delivery system to serve the needs of existing and future residents and businesses.
Objective 9.8	Monitor and forecast water demand based upon actual and predicted growth.
Policy 9.8.1	Monitor water usage and population and job forecast to project future water needs.
Objective 9.9	Manage and expand the City's water resources, storage facilities, and water lines to accommodate projected population increases and new or expanded industries and businesses.
Policy 9.9.1	Pursue all economically efficient water conservation measures at the local and statewide level.
Policy 9.9.2	Develop reliable and cost-effective sources of alternative water supplies, including water reclamation and exchanges and transfers.
Policy 9.9.3	Protect existing water supplies from contamination and clean up groundwater supplies so those resources can be more fully utilized.
Policy 9.9.4	Work to improve water quality and reliability of supply from the State Water Project and other sources.

TABLE 4.17-5 RELEVANT GENERAL PLAN WATER SUPPLY GOALS, OBJECTIVES, AND POLICIES	
Goal/Objective/Policy	Goal/Objective/Policy Description
Policy 9.9.5	Maintain existing rights to groundwater and ensure continued groundwater pumping availability.
Policy 9.9.6	Identify the needs for land and facilities necessary to provide an adequate and reliable water supply and develop those facilities in an environmentally and socially sensitive way.
Policy 9.9.7	Incorporate water conservation practices in the design of new projects so as not to impede the City's ability to supply water to its other users or overdraft its groundwater basins.
Policy 9.9.9	Clean or replace where necessary, deficient water distribution lines in the City.
Objective 9.10	Ensure that water supply, storage, and delivery systems are adequate to support planned development.
Policy 9.10.1	Evaluate the water system's capability to meet water demand resulting from the Framework Element's land use patterns.
Policy 9.10.2	Solicit public involvement, when appropriate, in evaluating options for the construction of new and/or expansion of existing water facilities.
Objective 9.11	Ensure, to the extent possible, the continued provision of water capacity, quality and delivery after an earthquake or other emergency.
Policy 9.11.1	Provide for the prompt resumption of water service with adequate quantity and quality of water after an emergency.
SOURCE: City of Los Angeles, <i>City of Los Angeles General Plan, Safety Element</i> , adopted 1996; <i>Conservation Element</i> , adopted 2001., and <i>Framework Element</i> , re-adopted 2001.	

In addition to the Framework Element, the Safety Element (adopted in 2021) has a policy that supports water conservation and local water supply. Policy 1.2.3 (**Local Water**): Continue to lead in water conservation and smart water policy through improvements to per capita water use, watershed management, and wastewater and stormwater recycling.

Los Angeles Municipal Code

The City has adopted several ordinances, later codified in the Los Angeles Municipal Code (LAMC), in an effort to reduce water consumption. A summary of the City's key regulations regarding water conservation is provided below.

- Ordinance Nos. 166,080, 181,288, 183,608, and 184,250—amending LAMC Chapter XII, Article 1 to clarify prohibited uses of water and modify certain water conservation requirements of the City's Emergency Water Conservation Plan. The City's Emergency Water Conservation Plan sets forth six different phases of water conservation, which shall be implemented based on water conditions. As part of these requirements, watering is limited to specific days and hours. In determining which phase of water conservation shall be implemented, LADWP monitors and evaluates the projected water supply and demand. In addition, the Emergency Water Conservation Plan includes penalties for those that violate its requirements.
- Ordinance No. 180,822—amended LAMC Chapter XII, Article 5 to establish water efficiency requirements for new development and renovation of existing buildings, and mandate installation of high efficiency plumbing fixtures in residential and commercial buildings.
- Ordinance No. 181,480—amended LAMC Chapter IX by adding Article 9 (Green Building Code) to the LAMC to incorporate various provisions of the California Green Building Standards Code. This ordinance added mandatory measures for newly constructed low-rise residential and non-

residential buildings to reduce indoor water use by at least 20 percent by: (1) using water saving fixtures or flow restrictions; and/or (2) demonstrating a 20percent reduction in baseline water use.

- Ordinance Nos. 181,899 and 183,833—amended LAMC Chapter VI, Article 4.4, Section 64.72 regarding stormwater and urban runoff to include new requirements, including Low Impact Development (LID) requirements that promote water conservation.
- Ordinance No. 182,849—amended LAMC Chapter IX, Article 9 (Green Building Code) to mandate that for new water service or for additions or alterations requiring upgraded water service for landscaped areas of at least 1,000 square feet, separate sub-meters or metering devices shall be installed for outdoor potable water use. This ordinance also required that for new non-residential construction with at least 1,000 square feet of cumulative landscaped area, weather or soil moisture-based irrigation controllers and sensors be installed.
- Ordinance No. 184,692—amended LAMC Chapter IX, Article 4 (Plumbing Code) by adopting by reference various sections of the California Plumbing Code. This ordinance also added requirements for plumbing fixtures and fixture fitting.
- Ordinance No. 184,248—amended LAMC Chapter IX, Article 4 (Plumbing Code) and Article 9 (Green Building Code) to establish citywide water efficiency standards and mandate a number of new fixture requirements and methods of construction for plumbing and irrigation systems.

The City of Los Angeles also has adopted numerous requirements related to the provision of water for purposes of fire protection. These requirements are set forth in the Fire Code (LAMC Chapter V, Article 7). LAMC Section 57.507.3.1 establishes fire water flow standards. Fire water flow requirements, as determined by the Los Angeles Fire Department (LAFD), vary by project site as they are dependent on land use (e.g., higher intensity land uses require higher flow from a greater number of hydrants), life hazard, occupancy, and fire hazard level. As set forth in LAMC Section 57.507.3.1, fire water flow requirements vary from 2,000 gallons per minute (gpm) in low density residential areas to 12,000 gpm in high density commercial or industrial areas. A minimum residual water pressure of 20 pounds per square inch (psi) is to remain in the water system with the required gpm flowing. As set forth in LAMC Section 57.507.3.1, Industrial and Commercial land uses (which the LAFD has classified the Project as) have a minimum required fire flow of 6,000 gpm to 9,000 gpm from four to six adjacent hydrants flowing simultaneously with a residual pressure of 20 psi unless otherwise determined by LAFD. LAMC Section 57.507.3.2 also addresses land use-based requirements for fire hydrant spacing and type. Land uses in the Industrial and Commercial category require one hydrant per 80,000 square feet of land with 300-foot distances between hydrants, and 2.5 inch by 4 inch double fire hydrants or 4-inch by 4-inch double fire hydrants. Regardless of land use, every first story of a residential, commercial, and industrial building must be within 300 feet of an approved hydrant.

LADWP Urban Water Management Plan

In accordance with the California Urban Water Management Planning Act, UWMPs are updated at 5-year intervals. LADWP adopted the 2020 UWMP on May 25, 2021. The 2020 UWMP complies with the Urban Water Management Planning Act, builds upon the goals and progress made in the 2015 UWMP and currently serves as the City's master plan for reliable water supply and resource management consistent with the City goals and objectives. The UWMP details LADWP's efforts to promote the efficient use and management of its water resources. LADWP's UWMP used a service area-wide methodology in developing its water demand projections. This methodology does not rely on individual development demands to determine area-wide growth. Rather, the projected growth in water use for the entire service area was considered in developing long-term water projections for the City to the year 2045. Long range projections are based on SCAG growth projections. The 2020 UWMP is based on projections in the 2020-2045 RTP/SCS.

The 2020 UWMP takes into account a number of significant changes that have occurred since LADWP prepared its 2015 UWMP. The year 2012 marked the beginning of the current multi-year drought in California. As stated above, in January 2014, Governor Brown proclaimed a drought state of emergency. In July 2014, the SWRCB implemented its Emergency Water Conservation Regulation (Emergency Regulation), as directed by Governor Brown, to take actions to reduce water use by 20 percent statewide. Later, the mandated reductions were increased to 25 percent statewide, with adjustments to account for different climates, expected growth, investment made to create drought-resilient water supplies by different cities through October 2016. In October 2014, Mayor Eric Garcetti issued Executive Directive No. 5 (ED5) Emergency Drought Response which set goals to reduce per capita water use, reduce purchases of imported potable water by 50 percent, and create an integrated water strategy to increase local supplies and improve water security considering climate change and seismic vulnerability. Lastly, in April 2015, the Mayor's Sustainable City pLAN, (updated in 2019 as the City's Green New Deal), was released establishing targets for the City over the next 20 years to strengthen and promote sustainability. The 2020 UWMP incorporates the objectives of these recent initiatives. As a result of water conservation measures, including the first ever statewide mandatory water use restrictions implemented by 2015, the City has reduced its water usage by 18 percent during FY 2019/20 compared to FY 2013/2014.

Single-family residential use decreased by 20 percent, multi-family residential use decreased by 11 percent, commercial use decreased by 23 percent, industrial use decreased by 33 percent, and government use decreased by 21 percent.

The LADWP is committed to meeting all the City's current and future water needs while increasing supply reliability, reducing imported water purchases, and increasing locally produced water by continuing with the strategy to:

- Achieve significant water conservation and water use efficiency enhancements
- Increase stormwater capture capacity
- Maximize water reuse
- Maximize and expand groundwater production
- Maintain and increase operational integrity of the LAA and in-City water distribution systems
- Ensure continued reliability of the water supplies from the MWD through active representation of the City's interests on the MWD Board
- Meet or exceed all federal and State standards for drinking water quality

Green New Deal

The City released the first Sustainable City pLAN in April 2015, which has been updated in 2019 as the City's Green New Deal. The Green New Deal includes a multi-faceted approach to developing a locally sustainable water supply to reduce reliance on imported water, reducing water use through conservation, and increasing local water supply and availability.

One Water LA 2040 Plan

In April 2018, the City prepared the One Water LA 2040 Plan (One Water LA Plan), an integrated approach to Citywide recycled water supply, wastewater treatment, and stormwater management. The new plan builds upon the City's Water IRP, which projected needs and set forth improvements and upgrades to wastewater conveyance systems, recycled water systems, and runoff management programs through the year 2020, and extends its planning horizon to 2040. The One Water LA Plan proposes a collaborative approach to managing the City's future water, wastewater treatment, and stormwater needs with the goal of

yielding sustainable, long-term water supplies for Los Angeles to ensure greater resilience to drought conditions and climate change. The One Water LA Plan is also intended as a step toward meeting the Mayor's Executive Directive to reduce the City's purchase of imported water by 50 percent by 2024. Major challenges addressed in the One Water LA Plan include recurring drought, climate change, and the availability of recycled water in the future in light of declining wastewater volumes.

Los Angeles Water Rate Ordinance

The City's Water Rate Ordinance was adopted in June 1995 and last amended by the City's Board of Water and Power Commissioners pursuant to Ordinance No. 184,130. Effective since April 15, 2016, this City Water Rate Ordinance restructured water rates to help further promote conservation. Specifically, the goal of the ordinance is to incentivize water conservation while recovering the higher costs of providing water to high volume users and accelerating development of sustainable local water supply. Tiered water rate schedules were established for: single-dwelling unit customers; multi-dwelling unit customers; commercial, industrial, and governmental customers and temporary construction; recycled water service; private water service; publicly sponsored irrigation, recreational, agricultural, horticultural, and floricultural uses, community gardens and youth sports. The new water rate structure increases the number of tiers from two to four for single-dwelling unit customers. In addition, this ordinance intends to maintain cost-of-service principles, incremental tier pricing based on the cost of water supply, and added pumping and storage costs.

Landscape Ordinance No. 170978

In 1996, Landscape Ordinance No. 170978 became effective with an overarching goal to improve the efficient use of outdoor water. This Ordinance was amended in 2009 to comply with the Water Conservation in Landscaping Act of 2006 and the Model Water Efficient Landscape Ordinance.

- Ordinance No. 185,198, 185,5585, and 186,789—the Existing Buildings Energy and Water Efficiency (EBEWE) Ordinance amended LAMC Chapter IX, Article 1 (Building Code) in 2017 and made public the annual energy and water consumption of all buildings over 20,000 square feet in the City. Beginning in 2017, privately owned buildings that are 20,000 square feet or more and buildings owned by the City that are 7,500 or more are required to be benchmarked, and owners must disclose annual energy and water consumption. Privately owned buildings that are 100,000 square feet or more must begin benchmarking reporting by December 1, 2017, and smaller buildings must begin reporting over the following two years. The Ordinance is designed to facilitate the comparison of buildings' energy and water consumption, and reduce building operating costs, lower energy and water consumption.

LADWP Policies

The City requires that each applicant coordinate with the LADWP in order to ensure that existing and/or planned water conveyance facilities are capable of meeting water demand/pressure requirements. In coordination with the LADWP, each applicant/contractor shall identify specific on- and off-site improvements needed to ensure that impacts related to water supply and conveyance demand/pressure requirements are addressed at the time that a water connection permit application is submitted. Water supply and conveyance demand/pressure clearance from LADWP shall be required during this time as well.

ENVIRONMENTAL IMPACTS

THRESHOLDS OF SIGNIFICANCE

The following thresholds of significance were developed in accordance with CEQA Guidelines Appendix G. Impacts would be significant if the Proposed Project would:

- Require or result in the relocation or construction of new or expanded water facilities, the construction or relocation of which could cause significant environmental effects (Threshold 4.17-4); and/or
- Have insufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years (Threshold 4.17-5)

METHODOLOGY

The analysis of the Proposed Project's impacts with respect to water quality and supply focuses on whether existing and projected infrastructure capacities or supplies would be sufficient to meet future demands associated with forecast development, including impacts associated with building new facilities to meet future demand. Project-generated demands were calculated using existing level of development in the Project Area, forecast level of development in the Project Area in 2040, and utility rates per development unit (e.g., water use per dwelling unit). The impact is the net change relative to existing conditions (i.e., 2040 with Project conditions – baseline conditions).

Under Threshold 4.17.1, not having adequate facilities to serve the Proposed Project is not in and of itself a significant impact. Rather the question is whether construction of needed facilities results in environmental impacts. As a result, the analysis is two parts: first, whether reasonably anticipated development under the Proposed Project can be served by existing water facilities or if it is reasonably anticipated to cause the need for new or relocated; and second, if it will need new or relocated water facilities, whether it is reasonably anticipated that construction or relocation of such facilities will result in a significant environmental impact.

Under Threshold 4.17.2, the Proposed Project would have a significant impact if the City did not have adequate water supply to serve reasonably anticipated development under the Proposed Project,

Water demand rates were obtained from the LADWP's 2020 UWMP, Exhibit 2F and Exhibit 2L (LADWP 2021a). This provides a conservative estimate as the Project Area contains few single-family residential areas and single-family units have higher average utility usage rates than multi-family units. It was also assumed that the number of single-family homes would remain constant under future conditions relative to baseline conditions and all new residential development through 2040 would be multifamily.

State and local policies, plans, initiatives, and projects, such as SBX7-7, SB 1016, Emergency Water Conservation Plan, RENEW LA Plan and Ordinance 181519, as discussed above under Regulatory Setting, are in place or are anticipated to be implemented over the Proposed Project's time horizon that would reduce utility consumption rates over time. However, baseline rates were used to calculate projected usage in 2040, as it is speculative to assume the decreases that would result from their implementation. The one exception is for water as the 2020 UWMP provides project water use rates for 2045. These projected rates incorporate savings from codes and ordinances currently in place, but do not take into consideration planned projects, future policies, or initiatives (LADWP 2020a), and therefore, also provide a conservative estimate of future consumption. A qualitative discussion of planned capacity-building or supply-enhancing projects is included in the analysis.

Consistent with the Population and Housing Analysis, Citywide impacts are analyzed assuming growth and demands placed on utilities and service systems based on SCAG projections.

PROJECT IMPACTS

Threshold 4.17-4	Require or result in the relocation or construction of new or expanded water facilities, the construction or relocation of which could cause significant environmental effects
Threshold 4.17-5	Have insufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years

Impact 4.17-4, 4.17-5 Proposed Project: If new facilities are determined to be necessary, the construction of such infrastructure would not be expected to result in significant impacts since it typically involves replacement of lines in the same locations as existing lines. Therefore, impacts related to the construction of new water conveyance infrastructure and water treatment facilities or expansion of existing facilities would be *less than significant*. Implementation of the Proposed Project is forecast to increase water demand in the Project Area by approximately 4,108,024 gpd (17,892 afy), an increase of 100 percent from existing conditions. Although the City’s 2020 UWMP indicates adequate water supply exists to meet projected demand through the year 2045., a water supply assessment will ensure that there is adequate supply to address the increase in population and water supply demand projected. Therefore, impacts to water supply would be *less than significant with mitigation*.

Project Impact

Impacts from Construction of Facilities

As development occurs incrementally throughout the Project Area, upgrades to water conveyance facilities may be required. LADWP installs and maintains the water distribution system. The 2022-2023 LADWP Water Infrastructure Plan establishes goals and targets for replacing and/or upgrading infrastructure. Through infrastructure projects, the LADWP would replace or upgrade major system components that are outdated or malfunctioning. With approximately 7,200 miles of water pipes citywide, LADWP plans to replace approximately 500 miles in the next 10 years giving the highest priority to pipes with high risk of failure.

TABLE 4.17-6 ESTIMATED WATER DEMAND IN THE PROJECT AREA (2040)				
Land Use	Dwelling Units or Jobs in Plan Area	Daily Water Use Rate (gpd/unit)	Daily Water Demand (gpd)	Annual Water Demand (afy)
Single-family Residential	4,007 du	329	1,318,3030	14,767
Multi-family Residential	16,029 du	189	3,029,481	3,393
Commercial/ Governmental	8,263 jobs	69	570,147	639
Total 2040 with Project Water Demand			4,917,931	18,799
Current Water Demand (2021)			809,907	907
Net Change in Water Demand			4,108,024	17,892
NOTES:				
Water demand numbers are rounded to the nearest thousand. Totals may not add up due to rounding.				
du – dwelling unit				
gpd – gallons per day				
afy – acre feet per year (1 af = 325,850 gallons)				
SOURCE: Water demand rates were obtained from the LADWP's 2020 UWMP, Exhibit 2L. Per the 2020 UWMP, per unit water demand is forecast to decline over time; the forecast 2040 rates are assumed to apply to new development.				

The precise location and connection would need to be determined at the time development is proposed. Should any new connections or upgrades be required, such upgrades would be subject to subsequent environmental review. Any future line size modifications or connections would be designed in accordance with applicable provisions of the Municipal Code. In coordination with the LADWP, project applicants are required to identify specific on- and off-site improvements needed to ensure that impacts related to water supply and conveyance demand/pressure requirements are addressed prior to issuance of a certificate of occupancy. Water supply and conveyance demand/pressure clearance from LADWP are required at the time that a water connection permit application is submitted. In addition, the City requires applicants to coordinate with the LAFD and Building and Safety Department to ensure that existing and/or planned fire hydrants are capable of meeting fire flow demand/pressure requirements. The issuance of building permits is dependent upon submission, review, approval, and testing of fire flow demand and pressure requirements, as established by the LAFD and Building Safety Department prior to occupancy.

Development under the Proposed Project could require the construction of new or upgraded water distribution facilities. However, if new facilities are determined to be necessary at some point in the future, the construction of such infrastructure would not be expected to result in significant environmental impacts since it typically involves replacement of lines in the same locations as existing lines. Routine infrastructure projects involving replacing or upgrading water distribution facilities, such as trunk lines, generally include the preparation of a ND/MND and in some cases may possibly qualify for a Categorical Exemption (e.g., CEQA Guidelines Section 15302). The environmental impacts of the construction and operation of these new or upgraded facilities are consistent with the impacts that have been evaluated throughout this EIR. Specifically, the EIR analyzes anticipated effects of citywide growth related to air quality, noise, traffic, and other environmental impact areas. To the extent that any significant impacts could result from the unique characteristics of a specific site, those impacts would be speculative at this time. Any such upgrades would be subject to subsequent environmental review, wherein potential impacts, if any, would be addressed. Therefore, impacts related to the construction of new water conveyance infrastructure and water treatment facilities or expansion of existing facilities under the Proposed Project would be *less than significant*.

Water Supplies

Table 4.17-6, above, summarizes estimated water demand for the Project Area in 2040 with implementation of the Proposed Project. As indicated in the table below, new development forecast under the Project through 2040 would generate an estimated demand of 4,917,931 gpd, or 18,799 afy, which is an increase of about 100 percent compared to the baseline generation of 809,907 gpd, or 907 afy.

Per the 2020 UWMP, current water supplies, planned future water conservation efforts, and planned future water supplies will enable LADWP to reliably provide water that meets the demands of the City for a 25-year planning horizon (through 2045). The 2020 UWMP indicates that water deliveries to the City totaled approximately 300,000 afy in 2020. Projected total water demand for the City under average year conditions for year 2040 is 697,800afy. Projected total water demand for the City for 2040 under single/multiple dry years conditions is 714,400 afy. The 2020 UWMP projects an increase of 58,000 afy (8 percent) in water demand between 2025 and 2045, under single/multiple dry year conditions. The projected net increase in water demand of 17,892 afy generated by new development facilitated by the Proposed Project would represent about 31 percent of the forecasted water demand increase through 2045. The 2020 UWMP water demand projections are based on SCAG demographic data and population projections and the 2020 Regional Transportation Plan (RTP). As discussed in Section 4.12, *Population and Housing*, updates to the CASP would accommodate a development capacity consistent with long-range SCAG growth projections for the City. Because the water demand projections for the Project Area have been accounted for in the 2020 UWMP, adequate supply should be available to meet estimated demand of the Project Area during normal and single dry year conditions and multiple dry years up to the year 2045.

As discussed in the *Regulatory Setting*, new development facilitated by the Proposed Project would be required to comply with the City's water conservation ordinances, such as the Model Water Efficient Landscape Ordinance, which requires that new construction projects develop water budgets for landscaping, reduction of erosion and irrigation related runoff, utilization of recycled water if available, irrigation audits, development of requirements for landscape and irrigation design, and scheduling of irrigation based on localized climate. Compliance with the Water Efficiency Requirements Ordinance and Supply Ordinance No. 165004 would require new buildings to install water conservation fixtures, such as ultra-low-flush toilets, urinals, taps, and showerheads, and plumbing fixtures in order to obtain building permits in the City of Los Angeles. Although the City's 2020 UWMP indicates adequate water supply exists to meet projected demand through the year 2045, the projected increase in water demand in the Project Area by approximately 4,108,024 gpd (17,892 afy), an increase of 100 percent from existing conditions, would result in impacts to future water supplies that are *potentially significant*.

Mitigation Measures

4.17-1 Water Supply Assessment

A Water Supply Assessment (WSA), prepared by a qualified water expert to meet the requirements herein, shall be required and furnished to the City for inclusion in any environmental documentation for certain developments (as defined in Water Code 10912[a]) in the Project Area subject to California Environmental Quality Act. Under SB 221, approval by the City of certain residential subdivisions should require a affirmative written verification of sufficient water supplies. The WSA must identify existing water supply entitlements, water rights, or water service contracts held by the public water system, and prior years' actual water deliveries received by the public water system. The WSA must address water supplies over a 20-year period and consider normal, single-dry, and multiple-dry year conditions.

Significance After Mitigation

To ensure there is adequate water supply, Mitigation Measure 4.17-1 requires completion of a Water Supply Assessment for all discretionary projects in the Project Area if required by SB 221. With this, impacts would be *less than significant with mitigation*.

CUMULATIVE IMPACTS

The geographic area to analyze cumulatively considerable impacts to water includes the entire City of Los Angeles. Cumulative development throughout Los Angeles would add both dwelling units and non-residential development to the City. Citywide development through 2040 would add approximately 562,000 new residents, 236,000 new households, and 256,000 new employees (SCAG 2020). Cumulative impacts from this development are discussed below by impact area.

Total water demand projected by the City's 2020 UWMP accounts for population growth within its jurisdictional boundaries, which is based on SCAG's demographic data and the 2020 RTP/SCS. Per the 2020 UWMP, demographic projections for the LADWP service area include a population of 4,670,693 persons, 1,757,976 housing units and 2,150,360 jobs for 2040 (LADWP 2020a). As shown in **Table 4.17-6**, projected total water demand for the City for 2040 under single/multiple dry year conditions is 732,700 afy. Per the 2020 UWMP, based on current water supplies, planned future water conservation and planned future water supplies, LADWP will be able to reliably provide water to meet the demands of the City for the 25-year planning horizon identified in the 2020 UWMP. Therefore, cumulative development related to the Proposed Project would not result in a cumulative impacts with respect to water supply and the Proposed Project's incremental contribution to water supply demand would not be cumulatively considerable. Cumulative impacts related to water supply are *less than significant*.

As discussed in Section 4.12, *Population and Housing*, and under Impact 4.17- and 4.17-2, the Proposed Project, an update to the existing CASP, would provide for a development capacity consistent with long-range Citywide SCAG growth projections; therefore, implementation of the Proposed Project would result in an increase in water demand consistent within UWMP projections. As discussed above, the 2020 UWMP water demand projections are based on SCAG population projections, so since the UWMP forecasts adequate water supplies based on these projections water supply shortages are not anticipated. Additionally, future community and specific plan updates would be required to adhere to existing state and local requirements related to water supply.

The increase in water demand could potentially increase pressure on the City's water infrastructure, including water mainline and trunk lines. In 2018, LADWP prepared a Water Infrastructure Plan, which addresses the City's long-term goals for replacing the City's water infrastructure. The report states that LADWP plans to replace approximately 500 miles of leak-prone and high-risk water mainlines in the next 10 years, and LADWP is increasing the rate at which they replace water distribution mainline to bring the pipe replacement cycle closer to the expected pipe life cycle by year 2020. The upgrading and replacement of the City's water infrastructure generally result in the preparation of an MND or, in some cases, a Categorical Exemption. The City's MNDs for water line replacements typically indicate less-than-significant impacts, including air quality, noise, and traffic impacts. The environmental impacts of the construction and operation of water lines are localized in nature and consistent with the impacts evaluated throughout this EIR. Specifically, the EIR analyzes anticipated effects of citywide growth related to air quality, noise, traffic, and other environmental impact areas. To the extent that any significant impacts could result from the unique characteristics of a specific project site, those impacts are too speculative to analyze at this time. Therefore, the Proposed Project's contribution to impacts related to water conveyance would not be cumulatively considerable.

Based on the above information, the incremental contribution of the Proposed Project related to water supply or conveyance would not be cumulatively considerable and cumulative impacts would be *less than significant*.

Solid Waste

ENVIRONMENTAL SETTING

CITYWIDE SETTING

Solid waste management, including collection and disposal services and landfill operation in Los Angeles is administered by various public agencies and private companies. Refuse on public streets is collected by the City Department of Public Works Bureau of Sanitation (LASAN) and disposed of at City operated landfills. LASAN administers the City of Los Angeles's Clean Water, Solid Resources, Watershed Protection, and Environmental Quality Programs with the mission to protect public health and the environment. Additionally, LASAN provides collection services primarily to single-family residences and some of the smaller multi-family residences, collecting over one million tons of refuse annually from 750,000 customers including single- and small multi-family residences, averaging 6,652 tons per day (LADPW 2022a). The City is also responsible for collecting waste from the City Hall complex, some public buildings, parks, and fire stations. Large multi-family residences, such as apartment complexes and condominiums, and commercial and industrial buildings, contract with a private company to collect and transport their materials for disposal or recycling (City of Los Angeles 2022c).

Waste generated by construction and the majority of multi-family residential sources and all commercial and industrial sources is collected by private contractors. Private contractors can dispose of waste at a City-operated landfill or a landfill of their choosing. On April 15, 2014, the Mayor and City Council approved the ordinance that established the Zero Waste LA Franchise System, which allows the City to establish an exclusive franchise system with 11 zones. With a single trash hauler responsible for each zone, the franchise system allows for the efficient collection and sustainable management of solid waste resources and recyclables. The Franchise System serves all users within a zone that are not serviced by LASAN and became operational in July, 2017.

As of 2012, the City achieved a diversion rate of 76.4 percent (City of Los Angeles 2022c). As discussed further under *Regulatory Framework*, per the Solid Waste Integrated Resources Plan (SWIRP), landfill solid waste disposal for the City of Los Angeles totaled 2,849,237 annual tons in 2010. Assuming no additional programs are implemented to reduce waste and that the City maintains its 2010 baseline diversion rate (72 percent), citywide disposal is projected to increase by 10 percent to 3,121,937 annual tons by 2030 (LADPW 2022c).

Landfills

Solid waste generated in Los Angeles is sent to waste disposal sites (i.e., landfills) operated by the City and County as well as by private companies. In addition, transfer stations temporarily store debris until larger haul trucks are available to transport the materials directly to the landfills. **Table 4.17-7** lists the city in which each landfill is located, remaining capacity, daily intake, and Annual Tonnage (County of Los Angeles 2020). The Commerce Refuse to Energy Facility and the Southeast Resource Recovery Facility extend the landfill capacity by combusting solid waste and selling energy generated by combustion to local utility companies. While neither facility currently encounters maximum capacity issues, both are restricted in regard to the daily amount and type of solid waste that they can accept and process. Another alternate solid waste disposal method includes recycling businesses, with the most notable location being the Azusa

Reclamation facility. The City is primarily served by the Sunshine Canyon Landfill, which accepts residential, commercial, and construction waste (City of Los Angeles 2019). As shown in **Table 4.17-7**, the combined daily intake average is 18,620 tons per day.

TABLE 4.17-7 SOLID WASTE FACILITIES SERVING THE CITY OF LOS ANGELES				
Facility Name	Landfill Site Location	Remaining Capacity (Mil. tons)^[1]	2019 Average Disposal (tons/day)	Annual Tonnage
Antelope Valley	Palmdale	11.0	2,046	638,400
Calabasas	Agoura	4.3	842	262,800

SOURCE: County of Los Angeles 2020				

Recycling Facilities

Waste generated in the City may also be diverted from landfills and recycled. In 2017 the City of Los Angeles launched the recyclLA program with the goal of extending recycling opportunities to the City. LA service providers (RSPs) are contractually bound to meet stringent landfill diversion goals, invest in waste recycling infrastructure, and develop innovative strategies to help meet state-mandated recycling laws and become a landfill free City. As of 2019, over 66,000 businesses and multi-family residences within the City are now able to recycle due to the recyclLA program. recyclLA also offers an innovative, first-of-its-kind program that mandates that the RSPs fund Food Rescue activities through partnerships with non-profit organizations. RSPs are required to increase activities in these sectors through direct funding, in-kind services, or sub-contracting. Funding is equal to at least \$1,000 per 100 customer accounts annually. In the 2019 fiscal year, 3,193 tons of rescued food were collected and redistributed to food insecure City residents (City of Los Angeles 2019).

PROJECT AREA SETTING

As shown in **Table 4.17-8**, below, existing development in the Project Area currently generates an estimated 5.1 tons of solid waste per day or 1,869 tons per year. The current solid waste generation calculation for the Project Area does not take into account diversion of solid waste from landfills. Not accounting for the current 76 percent diversion rate, solid waste generated in the Project Area that is actually sent to area landfills totals roughly 1,869 tons annually.

TABLE 4.17-8 CURRENT SOLID WASTE GENERATION IN THE PROJECT AREA				
Land Use	Dwelling Units (du⁽¹⁾) or Jobs in Plan Area	Annual Waste Generation Rate	Annual Waste Generation (tons)	Daily Waste Generation (tons)
Residential	2,012 du	2.2	925.5	2.5
Commercial/ Governmental	5,411 jobs	5.7	943.2	2.6
Total			1,868.8	5.1

REGULATORY FRAMEWORK

FEDERAL

Title 40 Code of Federal Regulations, Part 258 Subtitle D of the Resource Conservation and Recovery Act (RCRA)

Title 40 Code of Federal Regulations, Part 258 Subtitle D of the Resource Conservation and Recovery Act (RCRA) establishes minimum location standards for siting municipal solid waste landfills. Because California laws and regulations governing the approval of solid waste landfills meet the requirements of Subtitle D, the USEPA delegated the enforcement responsibility to the State of California.

STATE

California Integrated Waste Management Act of 1989 (Assembly Bill 939)

The California Integrated Waste Management Act of 1989 (Assembly Bill [AB] 939), as amended, was enacted to reduce, recycle, and reuse solid waste generated in the state. AB 939 requires city and county jurisdictions to divert 50 percent of the total waste stream from landfill disposal. AB 939 also requires each city and county to promote source reduction, recycling, and safe disposal or transformation. AB 939 further requires each city and county to conduct a Solid Waste Generation Study and to prepare a Source Reduction and Recycling Element to describe how it would reach these goals. The Source Reduction and Recycling Element contains programs and policies for fulfillment of the goals of AB 939, including the above-noted diversion goals, and must be updated annually to account for changing market and infrastructure conditions. As projects and programs are implemented, the characteristics of the waste stream, the capacities of the current solid waste disposal facilities, and the operational status of those facilities are upgraded, as appropriate. California cities and counties are required to submit annual reports to CalRecycle to update their progress toward the AB 939 goals.

Assembly Bill 341

The purpose of AB 341 is to reduce GHG emissions by diverting commercial solid waste to recycling efforts and to expand the opportunity for additional recycling services and recycling manufacturing facilities in California. In addition to Mandatory Commercial Recycling, AB 341 sets a statewide goal for 75 percent disposal reduction by the year 2020.

Senate Bill 1016

Senate Bill (SB) 1016 requires expressing the 50 percent solid waste diversion requirement established by AB 939 in pounds per person per day. SB 1016 changed the CalRecycle review process for each municipality's integrated waste management plan. After an initial determination of diversion requirements in 2006 and establishing diversion rates for subsequent calendar years, the Board reviews a jurisdiction's diversion rate compliance in accordance with a specified schedule. Beginning January 1, 2018, the Board will be required to review a jurisdiction's source reduction and recycling element and hazardous waste element once every two years.

Assembly Bill 1327

The California Solid Waste Reuse and the Recycling Access Act of 1991 (AB 1327) is codified in Public Resources Code Sections 42900-42911. As amended, AB 1327 requires each local jurisdiction to adopt an ordinance requiring commercial, industrial, or institutional building, marina, or residential buildings having five or more living units to provide an adequate storage area for the collection and removal of recyclable materials. The size of these storage areas is to be determined by the appropriate jurisdiction's ordinance. Pursuant to AB 1327, the City of Los Angeles adopted the Space Allocation Ordinance (Ordinance No. 171,687), discussed below.

Senate Bill 1374

Signed in 2002, the Construction and Demolition Waste Materials Diversion Requirements (Senate Bill [SB] 1374) were codified in Public Resources Code Section 42919. SB 1374 requires that jurisdictions include in their annual AB 939 report a summary of the progress made in diverting construction and demolition waste. The legislation also required that CalRecycle adopt a model ordinance for diverting 50 to 75 percent of all construction and demolition waste from landfills. The model ordinance was adopted by CalRecycle on March 16, 2004.

Assembly Bill 1826

AB 1826 requires jurisdictions to implement an organic waste recycling program for businesses, including outreach, education, and monitoring of affected businesses. Additionally, each jurisdiction is to identify a multitude of information, including barriers to siting organic waste recycling facilities, as well as closed or abandoned sites that might be available for new organic waste recycling facilities. AB 1826 defines "organic waste" as food waste, green waste, landscape and pruning waste, non-hazardous wood waste, and food-soiled paper waste that is mixed in with food waste. It also defines a "business" as a commercial or public entity, including, but not limited to, a firm, partnership, proprietorship, joint stock company, corporation, or association that is organized as a for-profit or nonprofit entity, or a multifamily residential dwelling consisting of five or more units. As of January 1, 2017, businesses that generate 4 cubic yards or more of organic waste per week are subject to this requirement. Commencing January 1, 2019, businesses that generate 4 cubic yards or more of commercial solid waste per week also are required to arrange for organic waste recycling services. CalRecycle may reduce this triggering threshold for organics recycling to 2 cubic yards or more of commercial solid waste per week as of January 1, 2020.

Zero Waste California

Zero Waste California is a state program launched by CalRecycle in 2002 to promote a new vision for the management of solid waste by maximizing existing recycling and reuse efforts, while ensuring that products are designed for the environment and have the potential to be repaired, reused, or recycled. The Zero Waste California program promotes the goals of market development, recycled product procurement, and research and development of new and sustainable technologies.

California Green Building Standards

The 2019 California Green Building Standards Code, referred to as the CALGreen Code, sets standards for new structures to minimize the state's carbon output. California requires that new buildings reduce water consumption, increase building system efficiencies, divert construction waste from landfills, and install low pollutant-emitting finish materials. Each local jurisdiction retains the administrative authority to exceed the new CALGreen standards. The 2019 CALGreen Code went into effect January 1, 2020.

Senate Bill 1383

Signed in 2016, SB 1383 established methane emission reduction targets to reduce emissions of short-lived climate pollutants in various sectors of the state's economy. The bill establishes statewide targets to reduce the amount of organic waste disposed statewide targets to reduce the amount of organic waste that is disposed of in landfills. The bill established targets to achieve a 50 percent reduction in the level of the statewide disposal of organic waste from the 2014 level by 2020 and a 75 percent reduction by 2025. It also sets a goal to rescue at least 20% of currently disposed edible food by 2025 and redirect that food to people in need. As of January 1, 2022, all California residences and businesses are now required to separate organic waste from other trash and non-organic recyclables and participate in an organics collection program.

REGIONAL

The Los Angeles County Integrated Waste Management Plan

Pursuant to AB 939, each County is required to prepare and administer a CoIWMP, including preparation of an Annual Report. The CoIWMP is to comprise of the various counties' and cities' solid waste reduction planning documents, plus an Integrated Waste Management Summary Plan (Summary Plan) and a Countywide Siting Element (CSE). The Summary Plan describes the steps to be taken by local agencies, acting independently and in concert, to achieve the mandated state diversion rate by integrating strategies aimed toward reducing, reusing, recycling, diverting, and marketing solid waste generated within the County. The County's Department of Public Works is responsible for preparing and administering the Summary Plan and the CSE.

The County continually evaluates landfill disposal needs and capacity as part of the preparation of the CoIWMP Annual Report. Within each annual report, future landfill disposal needs over the next 15-year planning horizon are addressed in part by determining the available landfill capacity. The most recent annual report, the CoIWMP 2019 Annual Report, published in September 2020, provides disposal analysis and facility capacities for 2019, as well as projections to the CoIWMP's horizon year of 2034. As stated within the CoIWMP 2019 Annual Report, the County is not anticipating a solid waste disposal capacity shortfall within the next 15 years under current conditions. A variety of strategies, including mandatory commercial recycling, diversion of organic waste from landfills, and development of alternative technology facilities would ensure that the County would be able to accommodate the solid waste daily disposal demand under different scenarios through the horizon year of 2034.

LOCAL

City of Los Angeles General Plan Framework Element

The Framework Element was adopted in 1996 and recently amended in August 2001. The Framework Element is a general, long-term, programmatic document that has goals and policies that are implemented by the various individual elements of the General Plan. The goals of the Framework Element that are related to the solid waste disposal and landfills are listed in **Table 4.17-9**.

TABLE 4.17-9 RELEVANT GENERAL PLAN SOLID WASTE GOALS, OBJECTIVES, AND POLICIES	
Goal/Objective/Policy	Goal/Objective/Policy Description
FRAMEWORK ELEMENT – CHAPTER 9 INFRASTRUCTURE AND PUBLIC SERVICES	
Goal 9D	An integrated solid waste management system that maximizes source reduction and materials recovery and minimizes the amount of waste requiring disposal.
Goal 9E	Adequate Recycling Facility Development - expanded siting of facilities that enhance the City's reduction, recycling and composting efforts using methods and strategies that are economically, socially, and politically acceptable.
Goal 9F	Adequate collection, transfer and disposal of mixed solid waste - the City shall seek to ensure that all mixed solid waste that cannot be reduced, recycled or composted is collected, transferred and disposed of in a manner that minimizes adverse environmental impacts.
Goal 9G	An environmentally sound solid waste management system that protects public health, safety, and natural resources and minimizes adverse environmental impacts.
Goal 9H	A cost-effective solid waste management system that emphasizes source reduction, recycling, reuse, and market development and is adequately financed to meet operational and maintenance needs.
SOURCE: City of Los Angeles, <i>City of Los Angeles General Plan, Safety Element</i> , adopted 1996; <i>Conservation Element</i> , adopted 2001.;and <i>Framework Element</i> , re-adopted 2001.	

City of Los Angeles Solid Waste Integrated Resources Plan

The City of Los Angeles Solid Waste Integrated Resources Plan (SWIRP), prepared by the Bureau of Sanitation, is a 20-year master plan to reduce waste, increase recycling, and manage trash in the City. The SWIRP outlines the City’s objectives to provide sustainability, resource conservation, source reduction, recycling, renewable energy, maximum material recovery, public health and environmental protection for solid waste management planning through 2030 with a goal of a “zero waste city”. Although the City of Los Angeles SWIRP is a long-term overarching plan to manage solid resources, it also encompasses all of the solutions and programs currently in place within the City by addressing all solid waste generators within the City, including residential, commercial, industrial, and institutional uses. In addition, the SWIRP process identifies the number, types, and size of new solid waste disposal facilities that the City will need in the future. Per the SWIRP, landfill solid waste disposal for the City of Los Angeles totaled 2,849,237 annual tons in 2010. The SWIRP provides the projected solid waste quantities by generator sector based on projected changes in population and employment provided by SCAG. Assuming no additional programs are implemented to reduce waste and that the City maintains its 2010 baseline diversion rate (72 percent), citywide disposal is projected to increase by 10 percent to 3,121,937 annual tons by 2030 (LADPW 2013a).

Recovering Energy, Natural Resources and Economic Benefit from Waste for Los Angeles (RENEW LA Plan)

A resource management blueprint called RENEW LA was adopted by the City Council in February 2006. This 20-year plan is the blueprint that will guide the City in reducing the use of landfills by maximizing recycling and reuse and converting much of the solid waste that currently would go to landfills into clean energy and/or valuable raw materials. Many of the plan components have been and continue to be implemented.

Citywide Construction and Demolition (C&D) Waste Recycling Ordinance (Ordinance 181519)

On March 5, 2010, the City Council adopted the Citywide C&D Waste Recycling Ordinance (Ordinance 181519) that requires all mixed C&D waste generated within City limits be taken to City certified C&D waste processors. All haulers and contractors responsible for handling C&D waste must obtain a Private Solid Waste Hauler Permit prior to collecting, hauling and transporting C&D waste and C&D waste can only be taken to City certified C&D Processing Facilities. Among the various purposes of this program is the goal of maintaining an open and competitive market for all companies providing solid waste and disposal services in the City, and to mandate the recycling of construction and demolition waste.

City of Los Angeles General Plan

The applicable policies that are related to the City utilities and services systems, including solid waste and recycling, are listed in **Table 4.17-2**.

Citywide Recycling Chute Ordinance (Ordinance 181227)

On July 7, 2010, the City Council approved the Citywide Recycling Chute Ordinance that requires all new development projects, all existing multi-family residential development projects of four or more units where the addition of floor area is 25 percent or more, and all other existing development projects where the addition of floor area is 30 percent or more, to provide an adequate recycling area or room for the collection and loading of recyclable materials. When a new development project provides a trash chute, or an existing development project adds a trash chute, a recycling chute shall also be provided in both cases. Recycling chutes shall be clearly marked "recycling only" at every point of entry.

Zero Waste LA Franchise System

Zero Waste LA Franchise System is a public-private partnership to address three-million tons of waste disposed yearly by City of Los Angeles businesses, consumers, and residents. The Zero Waste LA Franchise System was approved by City Council in April 2014 and expected to go into full effect by July 2017. As part of the program, the City is divided into 11 zones that are served by a single trash hauler that would allow for the efficient collection and sustainable management of solid waste resources and recyclables. LASAN solid waste collection services will continue to be provided to current City customers, including the collection of bulky items from all residents. Zero Waste LA goals include the following:

- Reduction of landfill disposal by 1,000,000 tons per year by 2025.
- Transparent and predictable solid waste and recycling service rates for the next 10-20 years.
- Quality customer service standards with LASAN monitoring and enforcement.
- Franchise hauler accountability for program outcomes and customer satisfaction through a series of measures implemented by LASAN, up to and including liquidated damages.

- Compliance with environmental regulations, including mandatory commercial and organics recycling.
- Investment of over \$200 million in new and improved solid resources infrastructure.
- Clean fuel vehicles; and
- Decrease and recycling of food waste and increase in food rescue.

City of Los Angeles Space Allocation Ordinance

Pursuant to the California Solid Waste Reuse and the Recycling Access Act of 1991 (AB 1327), the City enacted the Space Allocation Ordinance (Ordinance No. 171,687) on August 13, 1997, which is incorporated in various sections of the LAMC. The Space Allocation Ordinance requires the provision of an adequate recycling area or room for collecting and loading recyclable materials in all new construction projects, all existing multi-family residential projects of four or more units where the addition of floor area is 25 percent or more, and all other existing development projects where the addition of floor area is 30 percent or more.

City of Los Angeles Green Building Ordinance

On December 17, 2013, the Los Angeles City Council approved Ordinance No. 182,849, which amended Chapter IX, Article 9 of the LAMC to reflect local administrative changes and incorporate by reference portions of the CALGreen Code. The amended Article 9 is referred to as the “Los Angeles Green Building Code.” Projects must comply with the Los Angeles Green Building Code as amended to comply with various provisions of the CALGreen Code. The City’s Green Building Code creates a set of development standards and guidelines to further energy efficiency and reduction of greenhouse gases, including provisions regarding construction waste reduction, disposal and recycling. It builds upon and sets higher standards than those incorporated in CALGreen and is implemented through the building permit process.

ENVIRONMENTAL IMPACTS

THRESHOLDS OF SIGNIFICANCE

The following thresholds of significance were developed in accordance with CEQA Guidelines Appendix G. Impacts would be significant if the Proposed Project would:

- Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals (Threshold 4.17-6)
- Not comply with federal, state, and local management and reduction statutes and regulations related to solid waste (Threshold 4.17-7)

METHODOLOGY

The analysis of the Proposed Project’s impacts to solid waste focuses on whether the project would impair attainment of solid waste reduction goals by generating solid waste in excess of local standards or in excess of infrastructure capacities or would not comply with solid waste management and reduction regulations. Project-generated demands were calculated using existing level of development in the Project Area, forecast level of development in the Project Area in 2040, and utility rates per development unit. The impact is the net change relative to existing conditions (i.e., 2040 with Project conditions – baseline conditions).

Waste generation rates were obtained from CalEEMod. This provides a conservative estimate as the Project Area contains few single-family residential areas and single-family units have higher average utility usage rates than multi-family units. It was also assumed that the number of single-family homes would remain constant under future conditions relative to baseline conditions and all new residential development through 2040 would be multifamily.

Consistent with the Population and Housing Analysis, citywide impacts are analyzed assuming growth and demands placed on utilities and service systems based on SCAG projections.

PROJECT IMPACTS

Threshold 4.17-6	Would the Proposed Project generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals
-------------------------	--

Impact 4.17-6 **Proposed Project:** Implementation of the Proposed Project would generate an increase of approximately 36 tons of solid waste per day above existing conditions that would need to be disposed of at local landfills. However, projected future solid waste generation would remain within the capacity of landfills serving the City; therefore, impacts would be *less than significant* for the Project.

Project Impact

As shown in **Table 4.17-10**, reasonably anticipated development under the Proposed Project would increase the amount of solid waste generated in the Project Area by approximately 30 tons per day, or 10,991 tons per year, above existing conditions. The calculation for the Proposed Project does not take into consideration current and planned City programs to divert solid waste from landfills. For example, compliance with LAMC Section 66.32 would ensure that at least 50 percent of the demolition and construction waste generated by development under the Project would be diverted from landfills serving the City. In addition, the City will continue to implement waste reduction policies set forth by the RENEW LA Plan and the Framework Element. As shown, the combined daily intake capacity of landfills serving the Project Area is 18,620 tons per day. Therefore, available capacity (200.2 million tons per day) can accommodate the estimated daily solid waste that would be generated in the Project Area. Assuming no diversion, the increase in Project Area generated solid waste would represent less than 1 percent of the total available daily capacity.

Based on the County of Los Angeles Countywide Integrated Waste Management Plan (CIWMP) 2019 Annual Report (County of Los Angeles 2020), Los Angeles County would be able to meet the disposal needs of all County jurisdictions through the 15-year planning period for six of seven scenarios considered. Although daily capacity at area landfills is currently available (as noted above), the CIWMP Annual Report concludes that reliance on existing permitted County landfill capacity alone is insufficient to meet the County's long-term disposal needs; however, under the "status quo" scenario (i.e., solid waste disposed will continue to be managed by existing permitted in-County disposal infrastructure and available out-of-County landfill capacity and diversion efforts by individual jurisdictions continue, resulting in a countywide diversion rate of 65 percent) and each of the other scenarios contemplated in the CIWMP Annual Report, no shortfall in capacity is expected. The "status quo" scenario is conservative insofar as it assumes no new waste reduction programs or disposal facilities and no increase in waste diversion. Based on these facts, sufficient permitted capacity is anticipated to be available to accommodate the Project Area's solid waste disposal needs and impacts related to solid waste would be *less than significant*.

TABLE 4.17-10 ESTIMATED FUTURE SOLID WASTE GENERATION IN THE PROJECT AREA				
Land Use	Dwelling Units or Square Feet	Annual Waste Generation Rate	Annual Waste Generation (tons)	Daily Waste Generation (tons)
Residential	20,036	2.2	9,216.6	25.3
Commercial/ Governmental	8,263 jobs	2.3	3,644.1	9.9
Total 2040 Project Area Solid Waste Generation			12,860.7	35.2
Current Solid Waste Generation (2021)			1,868.8	5.1
Net Change in Waste Generation			10,991.9	30.1
NOTES: Waste generation (tons) was rounded to the nearest whole number. Totals may not add up due to rounding. du – dwelling unit sf – square feet SOURCE: CalEEMod Land Use SubType				

Mitigation Measures

No significant impacts have been identified; therefore, mitigation is not required for the Proposed Project.

Threshold 4.17-7	Would the Proposed Project not comply with federal, state, and local management and reduction statutes and regulations related to solid waste
-------------------------	---

Impact 4.17-7 **Proposed Project:** Development under the Proposed Project would comply with applicable solid waste policies and objectives from the SWIRP and RENEW LA Plan as well as local ordinances; impacts would be *less than significant* Project.

Project Impact

Future development in the Project Area would be required to comply with LAMC Section 66.32 regarding demolition activities. Compliance with LAMC Section 66.32 would ensure that at least 50 percent of the demolition and construction waste generated by future development would be diverted from landfills serving the City of Los Angeles. Additionally, implementation of the Proposed Project would be consistent with all waste reduction goals set forth by SWIRP, RENEW LA Plan, and the Framework Element, which are discussed in the Regulatory Framework section above. The Proposed Project would not conflict with any solid waste policies and objectives in the SWIRP or Framework Element.

All solid waste-generating activities in the City of Los Angeles are subject to the requirements set forth in AB 939 and other local ordinances, such as LAMC Section 66.32. As discussed in the Environmental Setting, the City already exceeds State goals with respect to reduction of solid waste generation and diversion of solid waste from landfills. Therefore, because future development permitted under the Proposed Project would comply with applicable solid waste policies and objectives, impacts related to compliance with federal, state, and local statutes and regulations related to solid waste would be *less than significant*.

Mitigation Measures

No significant impacts have been identified; therefore, mitigation is not required for implementation of the Proposed Project.

CUMULATIVE IMPACTS

The geographic area to analyze cumulatively considerable impacts to solid waste includes the entire City of Los Angeles. Cumulative development throughout Los Angeles would add both dwelling units and non-residential development to the City. Citywide development through 2040 would add approximately 562,000 new residents, 236,000 new households, and 256,000 new employees (SCAG 2020). Cumulative impacts from this development are discussed below by impact area.

Cumulative citywide development would increase solid waste disposal at local landfills. Landfill solid waste disposal for the City of Los Angeles totaled 4,282,012 annual tons in 2019 (11,732 daily tons) (LADPW 2019a). The SWIRP provides the projected solid waste quantities by generator sector based on -projected changes in population and employment provided by SCAG. Assuming that no additional programs are implemented to reduce waste and that the City maintains its baseline diversion rate (76 percent), citywide disposal is projected to increase by 10 percent to 3,121,937 tons annually by 2030 (12,007 tons daily) (LADPW 2013a). This would not cause existing landfills serving the City of Los Angeles to exceed their combined daily intake capacity of 200.2 million tons per day (see **Table 4.17-7**). As noted under Impact 4.17-6, the County's CIWMP 2019 Annual Report concludes that reliance on County landfills alone would not provide adequate capacity through 2034, the status quo scenario (which includes continued export of some waste to out-of-County landfills, but no new waste diversion programs or facility expansions) provides adequate solid waste disposal capacity to meet future demand. Consequently, waste disposal capacity is adequate to meet cumulative solid waste disposal projections.

The Project Area would contribute less than 1 percent of citywide disposal in 2040, as it would generate 12,861 tons annually in 2040 (approximately 36 tons daily). As discussed under Impact 4.17-6 and above, solid waste generated citywide and in the Project Area would not exceed the available daily capacity of landfills serving the City and the County's CIWMP 2019 Annual Report forecasts adequate capacity through at least 2034 under the status quo scenario. Any cumulative impacts related to future updates of other community or specific plans would be speculative, however, as discussed above, the SWIRP solid waste generation projections are based on SCAG population projections so since the SWIRP forecasts adequate solid waste disposal capacity based on these projections, solid waste disposal capacity exceedances are not anticipated. Additionally, future plan updates would be required to adhere to existing state and local requirements related to solid waste disposal.

Based on the above information, the incremental effect of the Proposed Project related to solid waste disposal facilities would not be cumulatively considerable and cumulative impacts would be *less than significant*.

Electric Power, Natural Gas, and Telecommunications Facilities

ENVIRONMENTAL SETTING

The environmental setting for electrical power and natural gas is described in Section 4.5, Energy. The environmental setting for telecommunications is described below.

CITYWIDE SETTING

There are 42 cellular towers that serve the City of Los Angeles. Cellular towers that serve the City are located in the following cities/communities.

- Catalina Island (4)
- Gorman (3)
- Palos Verdes (3)
- Palmdale (3)
- Glendale (2)
- Los Angeles (2)
- Pearblossom (2)
- San Pedro (2)
- Acton
- Agua Dulce
- Altadena
- Arcadia
- Azusa
- Calabasas
- Chatsworth
- Commerce
- Glendora
- Lancaster
- Long Beach
- Malibu
- Pacific Palisades
- Pomona
- Pasadena
- Rolling Hills
- Santa Clarita
- Santa Monica
- Saugus

Range and service for an individual tower can vary; therefore, the towers described above likely serve cities outside of Los Angeles County. All cellular towers and equipment are managed by private telecommunications service providers under the jurisdiction of the Federal Communications Commission (FCC).

PROJECT AREA SETTING

Electricity

Electrical power is supplied to the Project Area by LADWP, which supplies more than 22 million megawatt (MW) hours of electricity a year for the City's 1.4 million customers. Business and industry consume about 70 percent of the electricity in Los Angeles, but residences constitute the largest number of customers. In addition, the LADWP lights public streets and highways, powers the city's water system, and sells

electricity to other utilities. The City's first power plant, located at Division Creek, was built in 1905 to supply hydroelectric power for the construction of the Los Angeles Aqueduct. LADWP has continued to provide additional electric generation facilities since then to meet the increasing demand for power in Los Angeles. The Los Angeles City Council approved LADWP's ten-year IRP on August 15, 2000. The IRP is designed to improve reliability while keeping rates stable and preserving the environment. The IRP calls for a \$1.7 billion investment to finance 2,400 megawatts (MW) of in-basin power generation including new combustion turbines, development of new renewable energy resources, and energy efficiency programs (LADWP, July 14, 2009).

According to the City of Los Angeles General Plan (General Plan) Framework Element, "LADWP obtains 17 percent of the required power are met by municipally-owned power plants within the Los Angeles Basin. The remaining LADWP requirements are met by sources outside of the Los Angeles Basin. The current emphasis on purchasing power from non-LADWP power systems is to improve fuel diversity, take advantage of low-priced surplus electricity, and to minimize the air emissions in the South Coast Air Basin." (City of Los Angeles, July 14, 2009)

Natural Gas

The City of Los Angeles, including the Project Area, is served by the investor-owned Southern California Gas Company (SoCal Gas), a unit of Sempra Energy. SoCal Gas serves approximately 21.8 million customers through 5.9 million meters of gas lines within a 24,000-square-mile service area that includes over 500 communities in Central and Southern California. The City contains existing natural gas infrastructure, including both pipelines and one storage facility (located in Playa del Rey), and in general, the majority of natural gas lines run underground to provide secure transfer and reduce risk of damage.

In 2016, a total of approximately 5,124 million therms of natural gas were consumed by SoCal Gas' customers. Of this total, residential, industrial, commercial and miscellaneous other customers consumed 2,136 million, 1,725 million, 893 million, and 313 million therms of natural gas, respectively. In 2020, a total of 5,231 million therms of natural gas were consumed by SoCal Gas' customers. Of this total, residential, industrial, commercial and miscellaneous other customers consumed 2,426 million, 1,616 million, 802 million, and 388 million therms of natural gas, respectively. California natural gas anticipates gas demand to decline at an annual rate of 1.4 percent between 2016 and 2035 as a result of modest growth in the Natural Gas Vehicle (NGV) market, economic growth, energy efficiency standards, other sources of renewable energy, metering infrastructure and the decline in demand of commercial and industrial sectors. More specifically, from 2016 to 2035, SoCal Gas residential demand is expected to decline from 239 billion cubic feet (Bcf) to 218 Bcf, reflecting an annual decline rate of 0.5 percent, and non-residential markets are expected to decline from 113 Bcf in 2016 to 105 Bcf by 2035, reflecting an annual decline rate of 0.24 percent.

SoCal Gas natural gas supplies originate from sedimentary basins located in California, New Mexico (San Juan Basin), west Texas (Permian Basin), the Rocky Mountains, western Canada, and local California supplies. Interstate pipelines used by SoCalGas and San Diego Gas and Electric (SDG&E) have a natural gas upstream capacity of 6,725 million cubic feet per day (MMcf/d). Additionally, SoCal Gas and SDG&E currently have firm receipt capacity (i.e., access to supply from interstate pipelines for core customers) of 3,875 MMcf/d of natural gas. Locally, SoCalGas distributes natural gas through an extensive network of approximately 41,500 miles of underground gas mains.

Underground storage of natural gas plays a vital role in balancing the region's energy supply and demand. SoCal Gas owns and operates four underground storage facilities located in Aliso Canyon, Honor Rancho, Goleta, and Playa Del Rey. These facilities have a total storage capacity of 137.1 Bcf. Stored gas is appropriated as follows: 83 Bcf is allocated to core residential, small industrial and commercial customers; 4.2 Bcf is used for system balancing; and the remainder is available to other customers. In October 2015

the storage facility in Aliso Canyon had a natural gas leak resulting in DOGGR (now CalGEM) imposing a moratorium on the storage facility with a safety review for all 114 wells within the facility. The safety review requires the wells to be thoroughly tested for safe operation or removed from operation and isolated from the underground reservoir.

Telecommunications Facilities

Telecommunication services in the City of Los Angeles are provided by various companies, such as but not limited to, AT&T, Verizon, and SBC Telecom. Telecommunication companies are regulated by California Public Utilities Commission (CPUC). A wide array of products and telecommunication services for residential and commercial uses are offered by various companies, including internet services, wireless services, television technology utilizing digital fiber optic technology, and satellite technology. A variety of telecommunication facilities exist along roadways and other areas around the City.

Range and service for an individual tower can vary; therefore, the towers likely serve cities outside of Los Angeles County. All cellular towers and equipment are managed by private telecommunications service providers under the jurisdiction of the Federal Communications Commission (FCC).

Communication systems located throughout the Project Area include underground fiber optic cable, telephone transmission lines (overhead and underground), and cellular towers owned or leased by telecommunications service providers.

Landline telephone service in the Project Area is provided by various commercial communication companies. The majority of the landline facilities are located in county- or city-owned rights-of-way and on private easements. Telecommunications lines are either copper wire or fiber optic cable and are routed overhead on utility poles and underground.

In addition to landline service, communication facilities have been constructed throughout the Project Area for cellular telephone service. Cellular service is available, to varying degrees, throughout the Project Area. Regulatory framework

The regulatory framework for electrical power and natural gas is described in Section 4.5, Energy. The regulatory framework for telecommunications is described below.

FEDERAL

Federal Communications Commission (FCC)

The FCC was passed by the Communication Act of 1934 in order to replace the outdated Federal Radio Commission. As communications expanded and television became more prominent, the role of the FCC was expanded to include regulating all forms of communication in the United States. The FCC regulates content, award station charters, and monitor innovation to make sure that all forms of communication can co-exist, including the Internet.

Telecommunications Act of 1996

The Telecommunication Act of 1996 opened up competition by local telephone companies, long distance providers, and cable companies with each other. It also reconfirms the government's commitment to universal service, in part by connecting all schools, libraries, and hospitals to the information superhighway by the end of the decade.

STATE

California Independent System Operator

The California ISO is an independent public benefit corporation responsible for operating California's long-distance electric transmission lines. The California ISO is led by a five-member board appointment by the Governor and is also regulated by FERC. While transmission owners and private electric utilities own their lines, the California ISO operates the transmission system independently to ensure that electricity flows comply with federal operational standards. The California ISO analyzes current and future electrical demand and plans for any needed expansion or upgrade of the electric transmission system.

California Public Utilities Commission (CPUC)

In 1911, the CPUC was established by a Constitutional Amendment as the Railroad Commission and the following year, the state Legislature passed the Public Utilities Act, expanding the Commission's regulatory authority to include natural gas, electric, telephone, and water companies as well as railroads and marine transportation companies. In 1946, the Commission was renaming the CPUC. Today, in regard to telecommunications and broadband services, the CPUC develops and implements policies for the telecommunications industry, including ensuring fair, affordable universal access to necessary services; developing clear rules of the game and regulatory tools to allow flexibility without compromising due process; removing barriers that prevent a fully competitive market; and reducing or eliminating burdensome regulation.

California Energy Commission

The CEC is a planning agency which provides guidance on setting the state's energy policy. Responsibilities include forecasting electricity and natural gas demand, promoting and setting energy efficiency standards throughout the state, developing renewable energy resources and permitting thermal power plants 50 megawatts and larger. The CEC also has specific regulatory authority over publicly owned utilities to certify, monitor and verify eligible renewable energy resources procured.

Senate Bill 1389

Senate Bill (SB) 1389 (Public Resources Code Sections 25300–25323), adopted in 2002, requires the development of an integrated plan for electricity, natural gas, and transportation fuels. Under the bill, the CEC must adopt and transmit to the Governor and Legislature an Integrated Energy Policy Report every two years. In 2018, the CEC decided to write the Integrated Energy Policy Report in two volumes. The Volume I, which was published on August 1, 2018, highlights the implementation of California's innovative policies and the role they have played in moving toward a clean energy economy. Volume II, which was adopted in February 2019, identifies several key energy issues and actions to address these issues and ensure the reliability of energy resources.

Senate Bill 822 (SB 822)

SB 822 was signed into law in September 2018 as California's net neutrality law. SB 822 would ban internet providers from the following: blocking or throttling legal apps and websites; offering paid prioritization of content, or zero-rating (offering free data for specific apps). Shortly after SB 822 was signed, the U.S. Department of Justice filed suit against California over SB 822 on preemption grounds; California later agreed to hold off on enforcing its new net neutrality law until the U.S. Court of Appeals for the D.C. Circuit determines whether the FCC lawfully revoked its net neutrality regulations. In February 2021, the Department of Justice dropped the lawsuit and a preliminary injunction brought against SB 822 by the telecom industry was declined. As a result, SB 822 was allowed to go into effect.

Senate Bill 649

Senate Bill 649 (SB 649) requires small cellular installations be on vertical infrastructure and on property outside of public rights-of-way. The installation is required to comply with all applicable federal, State, and local health and safety regulations. Additionally, cellular equipment that is no longer in use is required to be removed at no cost to the City.

LOCAL**City of Los Angeles Information Technology Agency**

Mayor Eric Garcetti established the City of Los Angeles Information Technology Agency (ITA), which is responsible for a broad spectrum of services within 18 divisions that deliver 366 different technology services to both internal and external customers. These services range from classic IT services, such as computer support, enterprise applications, data networks, and a 24/7 data center to progressive digital services, such as TV station, 3-1-1 Call Center, public safety radio/microwave communications, helicopter avionics, enterprise social media, and more. ITA's Video Services Regulation Division regulates and monitors the compliance of video/cable TV service providers comply with local, state, and federal laws and oversees the video/cable TV service interests of City residents.

City of Los Angeles Municipal Code Section 10.5.4

Section 10.5.4 of the City's Municipal Code states that telecommunications providers are required to comply with all City, state, and federal regulations during installation and operation of equipment. Additionally, each lease, sublease, or license facilitated by telecommunications providers are required to seek approval from the City.

ENVIRONMENTAL IMPACTS

THRESHOLDS OF SIGNIFICANCE

The following threshold of significance was developed in accordance with CEQA Guidelines Appendix G. Impacts would be significant if the Project would:

- Require or result in the relocation or construction of new or expanded electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects (Threshold 4.17-8)

METHODOLOGY

The analysis of the Proposed Project's impacts related to the potential construction and relocation of electric power, natural gas, and telecommunications facilities focuses on whether existing and projected infrastructure capacities or supplies would be sufficient to meet future demands associated with forecast development and, if not, whether the construction of needed new or expanded facilities would result in significant environmental effects.

Project-generated demands were calculated based on the existing level of development in the Project Area and the forecast level of development in the Project Area in 2040. However, cellular towers vary in range of service and maximum number of users. Therefore, this analysis qualitatively evaluates need for additional telecommunication facilities.

PROJECT IMPACTS

Threshold 4.17-8	Require or result in the relocation or construction of new or expanded electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects.
-------------------------	--

Impact 4.17-8 **Proposed Project:** Implementation of the Proposed Project would generate energy and telecommunications demand. Forecast demand may require the construction of new energy or telecommunication facilities or the expansion of such facilities, but the construction of such facilities is not expected to result in significant environmental effects. This impact would be *less than significant*.

Project Impact

Electrical Power

As shown in **Table 4.17-6** and **Table 4.17-7** in Section 4.5, *Energy*, implementation of the Proposed Project would result in an approximately 73 percent decrease in per capita electricity consumption and 68 percent decrease in per capita natural gas consumption compared to 2021 baseline conditions. Overall electricity consumption is projected to increase from 85,989 MWh in 2021 to 212,296 MWh in 2040, while overall natural gas consumption is projected to increase from 11 billion Btu in 2021 to 342 billion Btu in 2040, with implementation of the Proposed Project. Implementation of the Proposed Project may require construction of new or expanded energy facilities to meet future energy needs in the Project Area, including electrical transmission and distribution infrastructure and natural gas facilities (e.g., storage, pipelines).

As discussed in the *Environmental Setting*, the LADWP utilizes a long-term planning process to plan for increased energy demand in the future with its publication of ten-year Transmission Plans. The most recent, LADWP's 2017 Power Integrated Resource Plan (IRP), identifies actions that are central to the continued reliability of the LADWP Power System, including energy efficiency and demand response, energy storage, and addressing net demand in peak hours, while meeting all regulatory requirements. The 2017 IRP provides detailed analysis and results of several new IRP resource cases, which investigated the economic and environmental impact of an increased Renewable Portfolio Standard (RPS) of 55 percent by 2030 and 65 percent by 2036, local solar, energy storage, and various levels of transportation electrification within a 20-year horizon.

In order to achieve 100 percent renewable energy generation, the LADWP is two years ahead of schedule for early coal replacement by 2025, accelerating its RPS to 50 percent by 2025, 55 percent by 2030, and 65 percent by 2036. In addition, the LADWP is implementing a strategy of 15 percent energy efficiency by 2020, repowering coastal in-basin generating units with new, highly efficient units by 2029 to provide grid reliability and critical ramping capability, accelerating electric transportation to absorb GHG emission from the transportation sector, and investing in a Power System Reliability Program to maintain a robust and reliable Power System.

Although the introduction of new renewable energy sources is expected to meet energy demands associated with future population growth, many renewable energy sources reduce a power grid's baseload reliability due to the fluctuating nature of energy captured (i.e., solar energy is only accumulated during optimum sunlight hours and conditions while energy is consumed 24 hours a day). To meet this challenge, the LADWP's 2022 Power Infrastructure Plan states the following long-term goals to diversify energy generation sources, improve energy storage capabilities, and secure energy reliability in the future (LADWP 2016):

- Replace 4,000 poles, 13,892 crossarms, 1,340 transformers, and 60 miles of lead and synthetic cables annually by fiscal year 2025-2026.
- Resolve 11,000 “fix-it” tickets annually to reduce backlog to an acceptable level in 10 years.
- Expand 4.8kV system capacity by 800 megawatts (MW) and 34.5kV system capacity by 1,700 MW by 2040 to address overloads and accommodate growth of electrification.
- Upgrade or replace aging substations and construct 10 new facilities by 2045 to accommodate load growth and maintain reliability.

The California Independent System Operator Corporation’s (Cal-ISO) 2021-2022 Transmission Plan also provides a comprehensive evaluation of the ISO transmission grid to identify upgrades needed to successfully meet California’s policy goals, in addition to examining conventional grid reliability and requirements. The Cal-ISO 2021-2022 Transmission Plan is a ten-year planning document that assesses California’s energy supply capability and reliability and has identified the need for two supply reliability projects, both of which are located in the Southern California Electric (SCE) service area.

No system improvements have specifically been identified as needed to meet new policy-driven or economic-driven demands. Nevertheless, reasonably anticipated growth in the Project Area would contribute to the need for distribution infrastructure improvements and expansions. Such expansions would result in temporary construction-related impacts pertaining to such issues as transportation, air quality, and noise. These impacts are anticipated to be within the parameters of what is described in this EIR and any new or expanded facilities, the construction of which may result in impacts beyond those identified herein, would be subject to further environmental review under CEQA. Impacts would be *less than significant*.

Natural Gas

As shown in **Table 4.17-7** in Section 4.5, *Energy*, natural gas use in the Project Area with the implementation of the Proposed Project is estimated to account for less than 0.1 percent of statewide demand for natural gas. The Proposed Project would be within the projected available supply for natural gas and the current trend of energy efficient practices, increased use of renewable power, and a decreased use of natural gas would further reduce future energy demands. Nevertheless, reasonably anticipated development in the Project Area may necessitate the construction of new or expanded natural gas distribution facilities. Such expansions would result in temporary construction-related impacts pertaining to such issues as transportation, air quality, and noise. These impacts are anticipated to be within the parameters of what is described in this EIR and any new or expanded facilities, the construction of which may result in impacts beyond those identified herein, would be subject to further environmental review under CEQA. Impacts would be *less than significant*.

Telecommunications

As discussed in Section 4.12, *Population and Housing*, reasonably anticipated development in the Project Area would allow for an additional 57,000 persons, 18,000 housing units, and 3,000 jobs through 2040. The telecommunication requirements for the Project Area are expected to evolve as development increases and technologies change. Construction of additional telecommunications facilities or upgrades to existing facilities to meet Project Area demands would be undertaken by private telecommunication service providers in accordance with applicable federal, state, and local regulations. No restrictions on the ability to provide adequate telecommunication service are anticipated, but new or expanded facilities may be needed to meet increased demand in the Project Area. Such expansions would result in temporary construction-related impacts pertaining to such issues as transportation, air quality, and noise. These impacts are anticipated to be within the parameters of what is described in this EIR and any new or expanded

facilities, the construction of which may result in impacts beyond those identified herein, would be subject to further environmental review under CEQA. Impacts would be *less than significant*.

Mitigation Measures

No significant impacts have been identified; therefore, mitigation is not required.

CUMULATIVE IMPACTS

The geographic area to analyze cumulatively considerable impacts related to electrical power, natural gas, and telecommunications includes the entire City of Los Angeles. Cumulative development throughout Los Angeles would add both dwelling units and non-residential development to the City. Citywide development through 2040 would add approximately 562,000 new residents, 236,000 new households, and 256,000 new employees (SCAG 2020). Cumulative impacts associated with the construction of new or expanded electrical, natural gas, and telecommunications facilities necessitated by this development are discussed below by impact area.

Electrical Power

Citywide development through 2040 would cumulatively increase demand for electrical power. However, as discussed above, LADWP's 2017 IRP identifies actions that would achieve the continued reliability of the LADWP Power System throughout the LADWP service area while meeting all regulatory requirements. The Proposed Project would contribute to the overall citywide demand for electrical power but would not result in an exceedance of existing or planned system capacity. Future plan updates would be required to adhere to existing state and local requirements related to electrical power.

New or expanded facilities for the generation, transmission, storage, and distribution of electricity may be needed to meet increased citywide demand. Impacts associated with the construction of new facilities would depend on the location, size, and nature of such facilities, but would primarily consist of temporary construction-related impacts pertaining to such issues as transportation, air quality, and noise. These impacts are anticipated to be within the parameters of what is described in this EIR and any new or expanded facilities, the construction of which may result in impacts beyond those identified herein, would be subject to further environmental review under CEQA.

Based on the above information, the incremental effect of the Proposed Project related to the provision of electrical power infrastructure would not be cumulatively considerable and cumulative impacts would be *less than significant*.

Natural Gas

Citywide development through 2040 would cumulatively increase demand for natural gas. However, as discussed above, the current trend of energy efficient practices, increased use of renewable power, and a decreased use of natural gas, including a City Ordinance prohibiting residential natural gas hookups, would further reduce future energy demands. Natural gas use in the Project Area is estimated to account for less than 0.1 percent of statewide demand for natural gas and would not exceed the projected available supply for natural gas or require the construction of new or expanded natural gas facilities. Future plan updates would be required to adhere to existing state and local requirements related to natural gas.

New or expanded facilities for the transmission and distribution of natural gas may be needed to meet increased citywide demand. Impacts associated with the construction of new facilities would depend on the location, size, and nature of such facilities, but would primarily consist of temporary construction-related impacts pertaining to such issues as transportation, air quality, and noise. These impacts are anticipated to

be within the parameters of what is described in this EIR and any new or expanded facilities, the construction of which may result in impacts beyond those identified herein, would be subject to further environmental review under CEQA.

Based on the above information, the incremental effect of the Proposed Project related to the provision of natural gas infrastructure would not be cumulatively considerable and cumulative impacts would be *less than significant*.

Telecommunications

Citywide development through 2040 would cumulatively increase demand for telecommunication service. However, as discussed above, the City is well served by telecommunications facilities and no restrictions on the expansion of service as necessary to meet future demands is anticipated anywhere in the City, including the Project Area. Future plan updates would be required to adhere to existing state and local requirements related to telecommunication service.

New or expanded telecommunication facilities may be needed to meet increased citywide demand. Impacts associated with the construction of new facilities would depend on the location, size, and nature of such facilities, but would primarily consist of temporary construction-related impacts pertaining to such issues as transportation, air quality, and noise. These impacts are anticipated to be within the parameters of what is described in this EIR and any new or expanded facilities, the construction of which may result in impacts beyond those identified herein, would be subject to further environmental review under CEQA.

Based on the above information, the incremental effect of the Proposed Project related to the provision of telecommunication infrastructure would not be cumulatively considerable and cumulative impacts would be *less than significant*.

5.0 ALTERNATIVES

5.1 INTRODUCTION

As required by Section 15126.6 of the CEQA Guidelines, the EIR must examine a range of reasonable alternatives to the Proposed Project that would feasibly attain most of the basic project objectives but would avoid or substantially lessen any of its significant environmental effects. The primary purpose of analyzing alternatives for a project is to identify and disclose ways to mitigate or avoid the significant effects that a project may have on the environment (Public Resources Code Section 21002.1). Key provisions of the CEQA Guidelines pertaining to alternatives analysis are summarized below.

- The discussion of alternatives shall focus on alternatives to the project, including alternative locations that are capable of avoiding or substantially lessening any significant effects of the project, even if these alternatives would impede to some degree the attainment of the project objectives, or would be more costly (CEQA Guidelines Section 15126.6(b)).
- The EIR shall include a brief discussion of the rationale for selecting alternatives to be discussed and should identify any alternatives that were considered but were rejected as infeasible during the scoping process and briefly explain the reason underlying the lead agency's decision. Among others, the following factors may be used to eliminate alternatives from detailed consideration in an EIR: (1) failure to meet most of the basic project objectives; (2) infeasibility; or (3) inability to avoid significant environmental impacts (CEQA Guidelines Section 15126.6(c)).
- The No Project Alternative shall be evaluated along with its impacts. The "no project" alternative analysis shall discuss existing conditions at the time the Notice of Preparation is published, as well as what would reasonably be expected to occur in the foreseeable future if the project were not approved, based on current plans and consistent with available infrastructure and community services (CEQA Guidelines Section 15126.6(e)(2)).
- When the project involves an update to an existing land use or regulatory plan, the "no project" alternative will be the continuation of the existing plan, policy or operation into the future (CEQA Guidelines Section 15126.6(e)(3)(A)).
- The range of alternatives required in an EIR is governed by a "rule of reason." Therefore, the EIR must evaluate only those alternatives necessary to permit a reasoned choice. The alternatives shall be limited to ones that would avoid or substantially lessen any of the significant effects of the proposed project (CEQA Guidelines Section 15126.6(f)).
- For alternative locations, only locations that are feasible and would avoid or substantially less any of the significant effects of the project need be considered for inclusion in the EIR (CEQA Guidelines Section 15126.6(f)(2)(A)).
- An EIR need not consider an alternative whose effects cannot be reasonably ascertained and whose implementation is remote and speculative (CEQA Guidelines Section 15126.6(f)(3)).
- The evaluation of alternatives would include sufficient information about each alternative to allow meaningful evaluation, analysis, and comparison with the proposed project. A matrix displaying the major characteristics and significant effects of each alternative may be used to summarize the comparison. If an alternative would cause one or more significant effects in addition to those that would be caused by the project as proposed, the significant effects of the alternative shall be

discussed, but in less detail than the significant effects of the proposed project (CEQA Guidelines Section 15126.6(d)).

- CEQA Guidelines Section 15126.6(a) states:

An EIR shall describe a range of reasonable alternatives to the project, or to the location of the project, which would feasibly attain most of the basic project objectives but would substantially lessen any of the significant effects of the project,” and specifies that “An EIR need not consider every conceivable alternative to a project. Rather, it must consider a reasonable range of potentially feasible alternatives that will foster informed decision-making and public participation. An EIR is not required to consider alternatives which are infeasible.”

- CEQA Guidelines Section 15126.6(f)(1) explains that:

...factors that may be taken into account when addressing the feasibility of alternatives are site suitability, economic viability, availability of infrastructure, general plan consistency, other plans or regulatory limitations, jurisdictional boundaries...and whether the proponent can reasonably acquire, control or otherwise have access to the alternative sites...

Based on the above, this Section identifies, describes, and evaluates a reasonable range of project alternatives with the same focus as the Proposed Project. It is intended to inform the public and decision-makers about the comparative effects of alternatives that address concerns raised by the public during the outreach process and identified in this EIR. The analysis is particularly focused on alternatives that could achieve most of the basic project objectives while reducing or avoiding the Proposed Project’s significant environmental effects.

As noted in Section 4 of this EIR, the unavoidably significant effects of the Proposed Project after implementation of all feasible mitigation measures are:

- **Air Quality:** Criteria Air Pollutant Emissions Exceed Standards related to construction emissions (NO_x, PM₁₀, and PM_{2.5}) and operational emissions (VOC, NO_x, CO, PM₁₀ and PM_{2.5}); cumulative impact related to construction emissions of NO_x, PM_{2.5}, and PM₁₀; and cumulative impact related to operation emissions of VOC, NO_x, CO, PM_{2.5}, and PM₁₀.
- **Cultural Resources:** Historical Resources; Cumulative Historical Resources; Cumulative Archaeological Resources
- **Noise:** Temporary (stationary) and permanent (mobile) ambient noise level impacts; Construction-related groundborne noise and vibration impacts; Cumulative temporary (stationary) and permanent (mobile) ambient noise level impacts; Cumulative Construction-related groundborne noise and vibration impacts
- **Transportation:** Safety impacts related to off-ramp queuing; cumulative safety impacts related to off-ramp queuing

The following issues were found to have impacts that would be reduced to a less-than-significant level with implementation of mitigation measures:

- **Air Quality:** Construction-related emissions of toxic air contaminants
- **Biological Resources:** Candidate, sensitive, or special status species; Wetlands
- **Cultural Resources:** Archaeological resources
- **Geology:** Paleontological Resources; Cumulative Paleontological Resources

- **Hazards and Hazardous Materials:** Hazardous Materials within ¼-Mile of School; Hazardous Materials Sites
- **Tribal Cultural Resources:** Tribal Cultural Resources; Cumulative Tribal Cultural Resources
- **Utilities:** Water Facilities and Supply

See **Table ES-3** in the Executive Summary (Chapter 2), for the proposed mitigation measures.

5.2 PROJECT OBJECTIVES

CEQA requires an EIR to include a statement of the objectives sought by a project proponent, in this case the City of Los Angeles. The statement of objectives should include the underlying purpose of the project.

UNDERLYING PURPOSE OF THE PROJECT

The underlying purpose of the Proposed Project is to encourage the production of affordable, mixed-income, and permanent supportive housing in the Project Area. The Proposed Project will entail updates to the CASP's zoning regulations, land use incentives, boundaries, and other key provisions to facilitate the production of housing, in a manner consistent with the underlying vision and purpose of the existing CASP.

Objectives of the Proposed Project are as follows:

- Increase the production of affordable and mixed-income housing within the Project Area.
- Protect residents, especially low-income households, from indirect and direct displacement, and ensure stability of existing vulnerable communities.
- Design and regulate housing to promote health and well-being, increase access to amenities such as parks and public transit, contribute to a sense of place, foster community and belonging, and plan for a sustainable future.
- Build, operate, and maintain welcoming and accessible housing for Angelenos with unique needs, including those with disabilities, large families, older adults, and other people facing housing barriers and economic insecurity.
- Refine Plan standards, processes, and procedures to be more intuitive and transparent, with the goal of enhancing development certainty for both market-rate and affordable housing developers; and
- While reducing overall employment capacity, preserve employment areas that show a concentration of jobs, while supporting small and/or legacy businesses, local employment, and new productive uses and employment spaces, such as light industrial and general commercial uses.

5.3 SELECTION OF ALTERNATIVES FOR ANALYSIS

The following analysis considers three alternatives, including the CEQA-required “no project” alternative. As required by CEQA, this section also includes a discussion of the “environmentally superior alternative” among those studied. The alternatives are listed below:

- Alternative 1: No Project Alternative
- Alternative 2: No Urban Village Alternative
- Alternative 3: Reduced Urban Village Alternative

EIR alternatives analyses is required to focus on alternatives that reduce or avoid the unavoidably significant environmental impacts of the Proposed Project and feasibly attain most of the Proposed Projects basic objectives. The Proposed Project’s unavoidably significant impacts are those associated with temporary (construction-related) and long-term air pollutant emissions, the possible loss of historical and cumulative archaeological resources, safety issues related to off-ramp queuing, , and temporary construction-related noise and vibration. Impacts identified as significant, but that can be reduced to a less than significant level with proposed mitigation measures include construction-related emissions of toxic air contaminants, biological resources, archeological and paleontological resources, hazardous sites, tribal cultural resources, and water supply. All these potential impacts could be reduced to some degree by limiting the amount of development in the Project Area; however, outside of a moratorium on new development, none of the impacts could be reduced to below a level of significance. Moreover, limiting development in the Project Area may simply divert more growth and development to other areas of the City, thus, increasing the potential for similar impacts in other areas of the City. Diverting growth and development to other areas that have few transit options may increase overall regional air pollutant emissions and vehicle miles traveled (VMT) compared to focusing more development in the Project Area.

Table 5-1 shows the housing, population and employment projections under each alternative and the percentage of growth projected from 2021 through 2040, over existing baseline conditions, for each alternative.

TABLE 5-1 HOUSING, POPULATION AND EMPLOYMENT GROWTH PROJECTIONS						
Scenario	Total Summary for 2040			Percent Growth 2021-2040		
	Housing (du)	Population (person)	Employment (job)	Housing	Population	Employment
Existing 2021 Conditions	2,012*	6,027	5,411	--	--	--
SCAG 2016 RTP/SCS	5,039*	14,444	8,797	250%	240%	163%
Proposed Project	20,036	56,501	8,263	996%	937%	153%
Alternative 1 (No Project)	12,773	36,021	10,005	635%	598%	185%
Alternative 2	15,434	43,523	9,551	767%	722%	177%
Alternative 3	17,208	48,527	9,055	855%	805%	167%

Notes:
du = dwelling unit; *For conservative purposes, this number represents households and does not include vacant units.

5.4 ANALYSIS METHODOLOGY

Feasible alternatives that address the City's need to accommodate foreseeable growth in the City and Project Area are evaluated herein. The analysis compares the impacts of the Proposed Project to those of each alternative, concluding whether the alternative's impact would be less than, similar to, or greater than that of the Proposed Project. The analysis also concludes whether the alternative would either create or avoid a significant impact and discusses what, if any, mitigation would be required for the alternative.

5.5 COMPARATIVE IMPACT ANALYSIS

ALTERNATIVE 1: NO PROJECT ALTERNATIVE

Alternative Description

The "No Project" alternative involves continued implementation of the existing CASP. This alternative assumes that the City's existing plans and policies would continue to accommodate development in accordance with existing zoning designations. As shown in **Table 5-1**, under Alternative 1, the Project Area is projected to accommodate a population of 36,021 residents, 12,773 housing units, and 10,005 jobs by 2040. SCAG projects growth of the Project Area to reach 14,444 residents, 5,039 housing units, and 8,797 jobs by 2040. Therefore, population and housing growth in the Project Area would exceed SCAG's forecasts under current plans, as would forecasted employment growth. Overall, current land use patterns limit population and housing growth in the Project Area, as compared to the Proposed Project, and would likely cause development to occur elsewhere in the region to meet the SCAG's 2040 Citywide projections. This may increase regional emissions of air pollutants and greenhouse gases as well as increased regional energy consumption, and VMT.

Alternative 1 was selected because it meets CEQA's requirement to study a "no project" alternative. The analysis of Alternative 1 treats the alternative as a "new" project similar to the other alternatives and discusses both potentially "significant" impacts and mitigation requirements. However, it should be recognized that Alternative 1 would not actually require any new discretionary approval from the City and, therefore, would not technically have any new impacts under CEQA, nor would the City have a mechanism for imposing the mitigation measures proposed for the Proposed Project and other Project alternatives.

Alternative 1 would partially meet some of the basic Project objectives. Alternative 1 would preserve employment areas that show a concentration of jobs, while supporting small and/or legacy businesses, local employment, and new productive uses and employment spaces, such as light industrial and general commercial uses and would not reduce overall employment capacity as compared to SCAG's forecasts or the Proposed Project. Alternative 1 would also partially meet the objective to build, operate, and maintain welcoming and accessible housing for Angelenos with unique needs, including those with disabilities, large families, older adults, and other people facing housing barriers and economic insecurity. Alternative 1 would be subject to existing federal, state and local regulations regarding housing accessibility, but it would not include new specific plan regulations and incentives that support housing of different types. Alternative 1 would partially meet the objective of increasing the production of affordable and mixed-income housing within the Project Area. However, as noted in **Table 5-1**, dwelling units and population growth forecast under this alternative are less than those forecast under the Proposed Project. In addition, Alternative 1 would not include the same regulations and incentives as the Proposed Project intended to promote affordable and low-income income housing and would result in less of those housing options being developed.

Absent the strengthened affordable housing incentives and requirements of the Proposed Project, or its alignment with the new Zoning Code, Alternative 1 would not be consistent with the following Project objectives: Protect residents, especially low-income households, from indirect and direct displacement, and ensure stability of existing vulnerable communities; and refine Plan standards, processes, and procedures to be more intuitive and transparent, with the goal of enhancing development certainty for both market-rate and affordable housing developers.

As discussed below, Alternative 1 would incrementally increase impacts related to transportation, energy and GHG emissions as compared to the Proposed Project and would have the same significant and unavoidable impacts to air quality, historic resources, construction noise and vibration, recreation and transportation safety related to freeway off-ramps.

Impact Analysis

Aesthetics

Under Alternative 1, development would continue under current planned land use patterns in Project Area. The Project Area is primarily characterized by a variety of high and low intensity development areas with an assortment of different development scales and a variety of visual character, including scattered parks, residential neighborhoods, commercial districts, restaurants, and industrial manufacturing facilities. Compared to the Proposed Project's designations, Alternative 1 would generally accommodate less residential zoning capacity but have the same overall building height, scale and intensity.

The current Specific Plan regulations would generally accommodate development with similar overall height, scale and intensity, as compared to the Proposed Project, and thus would likely not result in changes in visual character, obstruction of scenic views, alterations of historical resource and shading effects. Any development would be implemented in accordance with applicable state and local plans, policies and guidelines including, but not limited to, the City's General Plan Framework, Conservation Element, Mobility Plan 2035, relevant specific plans, the City of Los Angeles Citywide Design Guidelines and provisions of the LAMC as it relates to development standards, visual character and historical resources. Like the Proposed Project, Alternative 1 could introduce new sources of light and glare in the Project Area. However, development in most of the Project Area already experiences high levels of nighttime lighting and glare, such that any additional effects would be incremental. In addition, future development would comply with applicable regulations regarding permitted light and glare. Similarly, development in the Project Area accommodated by Alternative 1 may increase shading and shadows in specific locations; however, shadows would be limited to the immediate area of each new development and would be typical of highly urbanized neighborhoods. Overall, similar to the Proposed Project, development accommodated by Alternative 1 may benefit, and would generally enhance, the visual character of the Project Area, and impacts related to aesthetics would be *less than significant*.

Air Quality

Alternative 1 would accommodate less overall housing development and associated population growth than the Proposed Project while resulting in more employment growth. Alternative 1 would result in 7,263 fewer housing units, 20,480 fewer residents, and 1,742 more jobs, through 2040 than would be anticipated under the Proposed Project. However, like the Proposed Project, Alternative 1 would generate growth that is consistent with the 2020-2045 RTP/SCS and 2022 AQMP forecasts at a Citywide level and as a result, would not conflict with and obstruct implementation of the 2020-2045 RTP/SCS or the 2022 AQMP. As with the Proposed Project, impacts related to conflicting with or obstructing implementation of the applicable air quality plans would be *less than significant*.

Although less construction may occur overall under Alternative 1 as compared to the Proposed Project, maximum daily emissions would be similar to what would occur under the Proposed Project since the nature and magnitude of individual construction projects would be similar. Therefore, it is reasonable to assume that development would result in construction emissions of NO_x that exceed SCAQMD regional and local significance thresholds, and emissions of PM₁₀ and PM_{2.5} that exceed SCAQMD LSTs. Similarly, because less residential development would occur under Alternative 1, it is reasonable to assume that overall operational emissions would be less within the Project Area as compared to the Proposed Project. However, growth would likely occur elsewhere in the City and potentially result in increased operational emissions outside of the Project Area. The increase in development in the Project Area accommodated by Alternative 1 could result in daily emissions of VOC that would exceed the SCAQMD regional significance thresholds due to expanded use of consumer products and increased energy demand, similar to the Proposed Project. In addition, future development in the Project Area accommodated by Alternative 1 would result in daily emissions of NO_x, PM₁₀ and PM_{2.5} from area sources and mobile sources (brake and tire wear) that would exceed the SCAQMD regional significance thresholds. Additionally, it is reasonable to assume that exposure of sensitive receptors to temporary construction emissions would be less with Alternative 1 because less overall construction may occur and similar mitigation measures are found in the existing Specific Plan. Exposure to odors would also be similar to the *less than significant impact* identified for the Proposed Project. As with the Proposed Project, impacts related to construction and operational emissions would be *significant and unavoidable*, while similar mitigation measures limiting impacts from exposure of sensitive receptors to temporary construction emissions would result in *less than significant* impacts.

Biological Resources

In the Project Area, which is expected to experience new development under the existing CASP, individual reasonably anticipated development could potentially impact biological resources. However, the Project Area is already urbanized and generally lacks riparian habitat, wetlands, wildlife corridors and habitat that would support special status plant or animal species. The Los Angeles River and Arroyo Seco, as well as small portions of parks and open space, trees and minor urban landscaping are the only sources of biological habitat in and around the Project Area. There are a variety of bird species protected by the Migratory Bird Treaty Act (MBTA) that have adapted to human activity and may utilize existing trees and shrubs for nesting or foraging. Additionally, temporary direct and indirect impacts from the Proposed Project include the removal or degradation (e.g., excessive noise, dust, or light) of this habitat. Indirect impacts could result from excessive dust generated by developments occurring in the vicinity of the Los Angeles River and Arroyo Seco. Similar to the Proposed Project, Alternative 1 would include increased development in the Project Area, which would also potentially result in impacts related to certain bird species and dust generated by increased development. However, the extent of anticipated development would be lower under Alternative 1 which could result in reduced impacts to bird species. Because this alternative would be subject to the existing biological mitigation measures of the Specific Plan, impacts related to biological resources would be *less than significant*.

Cultural Resources

In the Project Area, which is expected to experience substantial new development, individual reasonably anticipated development could potentially cause a substantial adverse change in or disturbance of historical resources and archeological resources. As with the Proposed Project, Alternative 1 may result in demolition or alteration of historical resources or their setting or disturb areas that may potentially contain archaeological resources. Alternative 1 would accommodate development consistent with current land use designation and patterns and, as such, may result in slightly reduced impacts to historical resources and associated settings as compared to the Proposed Project. However, development under either Alternative 1 or the Proposed Project would have the potential to disturb archaeological resources and/or human remains. All future development projects would continue to be subject to existing federal, state, and local requirements with respect to cultural resources and discretionary projects may be subject to project-specific

mitigation requirements under CEQA. Under the Proposed Project, implementation of **Mitigation Measures 4.4-1(a), (b) and (c)** would reduce the potential to disturb historic resources and **4.4-2(a), (b), and (c) and (d)** would reduce the potential to disturb archaeological resources and human remains. In addition, although existing regulations provide certain protections for significant historical resources, individual developments allowed by Alternative 1 could potentially cause a substantial adverse change in or disturbance of historical and archaeological resources as defined in CEQA Guidelines Section 15064.5. Therefore, while Alternative 1 would impose similar Mitigation Measures found in the existing Specific Plan, the potential for disturbance of cultural resources would be the same as under the Proposed Project and impacts to cultural resources would remain *significant and unavoidable*.

Energy

As compared to the Proposed Project, development under Alternative 1 would result in less transportation energy use and less electricity and natural gas consumption than the Proposed Project in 2040. However, on a per capita basis, Alternative 1 would result in more transportation energy use and more electricity and natural gas consumption than the Proposed Project for year 2040 because of the increased job opportunities coupled with reduced housing density in the Project Area. In addition, Alternative 1 would result in 2040 per capita electricity and natural gas consumption higher than under 2021 baseline conditions, while the Proposed Project would result in lower per capita electricity and natural gas consumption in 2040 as compared to year 2021 baseline conditions. The lower per capita energy use that would occur under the Proposed Project can be attributed in part to the fact that implementation of the Proposed Project would lower per capita VMT due to the location of jobs and housing in close proximity to each other and creation of substantial opportunities to use such transportation modes as transit, bicycling, and walking.

Because Alternative 1 would consume less energy overall, but more energy than the Proposed Project on a per capita basis, it may result incrementally greater impacts with respect to the inefficient, unnecessary, or wasteful direct or indirect consumption of energy as compared to the Proposed Project. Nevertheless, as with the Proposed Project, Alternative 1 would not result in energy demands that exceed the existing or planned capacity for the service area or the wider Southern California region. In addition, neither Alternative 1 nor the Proposed Project would conflict with applicable federal, state, or local energy conservation policies aimed at reducing reliance on fossil fuels and increasing reliance on renewable energy sources. Overall, impacts would be *less than significant* under Alternative 1, as with the Proposed Project.

Geology and Soils

Implementation of the City's current General Plan and existing CASP would generally accommodate development in the same footprints as existing structures in the Project Area. Any new development in the Project Area under either Alternative 1 or the Proposed Project would be exposed to existing geologic and soil hazards; however, it would not increase the potential for such hazards or create new hazards. Compliance with existing regulatory requirements and policies, including the LAMC and CBC would reduce impacts from adverse effects related to seismic activity and ground shaking, liquefaction, on or off-site landslides, ground failure; or adverse effects related to expansive soil, or to a geologic unit or soil that is unstable or would become unstable as a result of the project and result in landslide, lateral spreading, liquefaction or collapse. In some cases, future development in the Project Area may reduce the potential for property damage and/or safety concerns by replacing older structures with new structures built to current seismic standards. Similar to the Proposed Project, Alternative 1 would have the potential to disturb paleontological resources to the same degree. Implementation of the Proposed Project's **Mitigation Measures 4.6-1(a), (b) and (c)** would reduce the potential to disturb or damage paleontological resources. As similar mitigation measures are found in the existing Specific Plan, the potential for disturbance of paleontological resources would remain *less than significant* with Alternative 1.

Greenhouse Gas Emissions

Development accommodated by either Alternative 1 or the Proposed Project would generate GHG emissions through individual project construction and operation. GHG emissions would be generated by direct sources such as motor vehicles, natural gas consumption, solid waste handling/treatment, and indirect sources such as electricity generation. Alternative 1 would accommodate less residential development overall than the Proposed Project and would result in fewer GHG emissions in the Project Area. However, it would accommodate less intense development and associated growth in the Project Area, which may result in more population and housing growth elsewhere in the City and region where fewer transit options are available and the distances between residences, jobs, and services are greater. Additionally, the increased number of jobs in the Project Area coupled with the reduced dwelling units under Alternative 1 would increase per capita VMT and transportation related GHG emissions. As a result, overall citywide and regional GHG emissions as a function of VMT may increase and Alternative 1 would not be as consistent with AB 32, SB 32, SB 375 (through demonstration of conformance with the 2020-2045 RTP/SCS), the Sustainable City pLAN and GreenLA as the Proposed Project. Overall GHG emissions would be incrementally greater than those of the Proposed Project. However, impacts related to GHG would be *less than significant* under Alternative 1, as with the Proposed Project.

Hazards and Hazardous Materials

Development under Alternative 1 would continue under the current zoning regulations of the existing CASP. Alternative 1 would involve no change to planned land use patterns and would involve less overall residential development capacity and associated growth than would occur under the Proposed Project. Similar to the Proposed Project, operational activities associated with development under Alternative 1 would not create increased potential for upset or accident conditions involving hazardous materials release from transport, use or disposal. As such, as with the Proposed Project, impacts related to the routine transport, use, or disposal of hazardous materials or upset or accident conditions involving hazardous materials would be *less than significant*.

Similar to the Proposed Project, this alternative would pose no or less than significant issues related to airports or emergency management plans because there are no airports or private airstrips in or near the Project Area, and development under Alternative 1 would not interfere with circulation plans or emergency management plans. Therefore, *no impacts* related to airports would occur and *less than significant impacts* related to emergency management plans would occur. No wildland fire hazard areas are present in the Project Area; therefore, *no impacts* related to wildland fire risks would occur.

As with the Proposed Project, redevelopment, renovation, and demolition of structures built before 1979 could potentially involve asbestos or lead but asbestos and lead would not be released into the atmosphere with compliance of existing regulations. In addition, future development would potentially occur in Methane Zones and Methane Buffer Zones and near oil wells. Grading and construction activity could also potentially result in the release of soil and/or groundwater contamination, which could potentially affect schools. Compliance with applicable regulations would reduce such impacts to a less than significant level. As with the Proposed Project, grading and construction activity could potentially result in the release of soil and/or groundwater contamination, which could potentially affect schools or involve a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, create a significant hazard to the public or the environment. Overall impacts associated with Alternative 1 would be similar to, but slightly less than, those of the Proposed Project since the overall level of development would be lower. As with the Proposed Project, impacts related to the potential disturbance of contaminated soils would be significant. Adherence to **Mitigation Measures 4.8-4(a)** and **4.8-4(b)**, as discussed in Section 4.8, *Hazards and Hazardous Materials*, would reduce impacts related to contaminated soils. Because this alternative has similar mitigation measures, the potential for exposure to contaminants

to the public due to possible construction on hazardous sites, and release of hazardous emissions which could potentially affect schools would be similar to the Proposed Project and would be *less than significant*.

Hydrology and Water Quality

The Project Area is urbanized and almost entirely paved and developed except for parks, green spaces, and the Los Angeles River, which runs through the center of the Project Area. Alternative 1 would accommodate development in a manner consistent with current land use patterns and, therefore, would not substantially alter drainage patterns or result in substantial erosion, siltation, or flooding on- or off-site. Development accommodated by either Alternative 1 or the Proposed Project would be subject to federal, state, and local requirements that prevent violations of water quality standards or waste discharge requirements and support the preservation and expansion of pervious surfaces. In addition, new development projects under either Alternative 1 or the Proposed Project would be required to incorporate Best Management Practices to manage stormwater and reduce runoff during construction and operation, and industrial sources would be subject to additional stormwater management and discharge requirements under the NPDES program for industrial uses. Compliance with the City's LID Ordinance would further ensure that any future development resulting from either this alternative or the Proposed Project would not require construction of new stormwater drainage facilities and or expansion of existing facilities beyond specific improvements needed for individual development projects. In the long-term, redevelopment of sites in the Project Area under either Alternative 1 or the Proposed Project would improve surface water quality by replacing older development with new development that incorporates LID methods. Therefore, like the Proposed Project, Alternative 1 would not adversely affect conditions with respect to hydrology and water quality and impacts would be *less than significant*.

Land Use and Planning

Under Alternative 1, development would continue under current planned land use patterns in the City. This alternative would not accommodate the greater residential development capacity that could occur in portions of the Project Area under the Proposed Project. Like the Proposed Project, Alternative 1 would be generally consistent with 2020-2045 RTP/SCS policies related to the provision of high intensity and transit-oriented development as well as with the City's General Plan and Framework Element, Mobility Plan 2035, and Housing Element 2013-2021. However, as discussed under *Air Quality*, Alternative 1 may implement 2020-2045 RTP/SCS, AQMP, and Air Quality Element policies related to concentrating development near transit and reducing regional VMT to a lesser degree than the Proposed Project since the lower overall residential development totals may result in increased residential development elsewhere in the City and incrementally higher regional VMT. Like the Proposed Project, Alternative 1 would not physically divide an established community or conflict with an applicable habitat conservation plan, natural community conservation plan. Overall, like the Proposed Project, this alternative would not conflict with land use plans and policies or divide a community. Overall, impacts related to land use would be *less than significant* under Alternative 1, as with the Proposed Project.

Noise

New sensitive uses accommodated by either Alternative 1 or Proposed Project would be exposed to ambient noise that is in the "normally unacceptable" to "clearly unacceptable" range based on noise level/land use compatibility standards in the Noise Element the City's General Plan. Although all construction would be required to comply with the appropriate Regulatory Compliance Measures as well as LAMC Chapter 41.40, Section 112.05, reasonably anticipated development under Alternative 1 would potentially result in construction with lengthy durations, substantial soil movement, use of large, heavy-duty equipment, and/or pile driving near noise-sensitive land uses that would result in significant impacts that cannot be feasibly mitigated. Therefore, like the Proposed Project, the impact generated by temporary construction noise under Alternative 1 would also be *significant and unavoidable*.

Any future development in the Project Area would include mechanical equipment, loading, trash pick-up, and other noise-generating activities. However, such activities would be typical of the urban environment in the Project Area. In addition, any on-site activities would be required to comply with applicable provisions of the LAMC. Future development accommodated by either Alternative 1 or the Proposed Project would also increase vehicle trips in the Project Area that would generate mobile noise. Mobile noise would increase noise levels to be above the “normally unacceptable” category for land uses adjacent to these corridors. With this, like the Proposed Project, permanent noise increases due to mobile operational activities under Alternative 1 would be *significant and unavoidable*.

All construction would be required to comply with the appropriate Regulatory Compliance Measures as well as LAMC Chapter 41.40, Section 112.05. Nevertheless, maximum noise levels generated by construction equipment under Alternative 1 could potentially involve two subterranean levels or more, construction durations of 18 months or more, use of large, heavy-duty equipment rated 300 horsepower or greater, or the potential for impact pile driving. In addition, **Mitigation Measure 4.11-1** for the Proposed Project would not apply. Therefore, impacts from temporary construction noise resulting from implementation of Alternative 1 would be *significant and unavoidable* and be greater than that of the Proposed Project.

Any future construction activity, specifically pile driving, could potentially generate vibration exceeding the 90 VdB threshold for buildings extremely susceptible to building damage (e.g., historical structures). Although mitigation is available to minimize the potential effects of vibration, it cannot be assured that construction-related vibration would not result in building damage. **Mitigation Measure 4.11-2(a) and (b)** would not apply and thus, construction-related vibration would be greater to that of the Proposed Project and remain *significant and unavoidable impact*.

It is not anticipated that new development in the Project Area would involve activities that would result in substantial vibration levels (e.g., blasting operations). Like the Proposed Project, operational groundborne vibration in the vicinity of new development associated with Alternative 1 would be primarily generated by vehicular travel on the local roadways. According to the FTA *Transit Noise and Vibration Impact Assessment* guidance document, rubber tires and suspension systems dampen vibration levels from trucks to a level that is rarely perceptible (2006). Accounting for additional vehicle trips that would be accommodated by Alternative 1, traffic vibration levels would be similar to existing conditions and not perceptible. Therefore, like the Proposed Project, Alternative 1 would result in a *less than significant impact* for operational vibration.

Population and Housing

As shown in **Table 5-1**, under Alternative 1 the Project Area is projected to accommodate a population of 36,021 residents, 12,773 housing units, and 10,005 jobs by 2040. SCAG projects growth of the Project Area to reach 14,444 residents, 5,039 housing units, and 8,797 jobs by 2040. The population forecast for Alternative 1 is greater than under SCAG’s RTP/SCS, but Alternative 1 would concentrate forecast growth in an area with a mix of jobs and housing and with good transit access. As such, although it would not implement RTP/SCS policies related to jobs/housing balance and concentrating growth and development near transit to the same degree that the Proposed Project would, it would not result in significant impacts related population or housing growth. Alternative 1 would have less potential to displace housing than the Proposed Project but would also include less replacement and affordable housing. Like the Proposed Project, Alternative 1 would result in an overall increase in housing that would more than offset any housing displacement that may occur. It should be noted, however, that limiting housing development in the Project Area as would occur under Alternative 1 may result in increased housing development elsewhere in the City, which could potentially increase displacement of existing housing in other Los Angeles neighborhoods. Like the Proposed Project Alternative 1 would not induce substantial population growth

inconsistent with the regional growth plans. Overall, impacts related to population and housing would be *less than significant* under Alternative 1, as with the Proposed Project.

Public Services

Implementation of Alternative 1 would involve less overall development and associated growth than the Proposed Project. Nevertheless, the increased growth under either scenario may require additional public facilities to serve new residents. With respect to fire and police services, both Alternative 1 or the Proposed Project would accommodate new development that would increase demand for fire and police protection service. This may result in the need for new or expanded fire and police facilities. Based on the urbanized character of the Project Area, it is anticipated that new or expanded facilities could be built without creating significant environmental impacts. Depending on the location or nature of new facilities, the construction of needed new facilities could potentially result in impacts; however, like the Proposed Project, those impacts would be consistent with those already identified in this EIR for construction or operations. Project-specific environmental analysis under CEQA would be required to address any site-specific environmental concerns.

With respect to schools, as summarized below in **Table 5-2**, residential and non-residential development accommodated by Alternative 1 would result in approximately 5,534 new students by 2040. Of this total, an estimated 2,869 would enroll in elementary school, 874 would enroll in middle school, 1,601 would enroll in high school, and 189 would enroll in special day classes. Overall Alternative 1 would result in approximately 36 percent less students as compared to the Proposed Project. As such, Alternative 1 would accommodate development that would increase the student population of the Proposed Project and would create the need for new or expanded school facilities, but to a lesser extent than the Proposed Project. As with the Proposed Project, developers would be required to pay applicable school impact fees. As with the Proposed Project, any impacts associated with new school construction would be similar to those analyzed and identified in the EIR for other types of development, any site-specific impacts would be speculative and would be addressed by LAUSD as part of a project-level CEQA review.

TABLE 5-2 ALTERNATIVE 1 ANTICIPATED STUDENT GENERATION IN THE PROJECT AREA						
	Units	Student Generation				
		Elementary School (TK-5)	Middle School (6-8)	High School (9-12)	SDC	Total Students Generated
Residential ¹	12,773 du	2,495	687	1,368	189	4739
Non-Residential ²	16,418,000 sf	374	187	233	--	795
Total Students Generated by the No Project Alternative		2,869	874	1,601	189	5,534

Note: du = dwelling units; sf = square feet; TK = Transitional Kindergarten; SDC = Specialized Day Care
 Totals may not add up due to rounding.

¹ Student generation rates for residential use is based on Level 1 – Developer Fee Justification Study for Los Angeles Unified School District (LAUSD 2022c). Residential Generation Rates: Elementary: 0.1953/du, Middle School: 0.0538/du, High School: 0.1071 /du, SDC: 0.0148/du

² Student generation rates for non-residential use is based on the average of office and retail/service student generation rates for a conservative estimate, taken from the LAUSD Commercial/Industrial Development School Fee Justification Study, September 2010 (LAUSD 2010). Non-residential Generation Rates: Elementary: 0.0228/1,000 sf, Middle School: 0.0114/1,000 sf, High School: 0.0142/1,000 sf. Non-residential uses include commercial, industrial, and public facilities.

With respect to libraries, either Alternative 1 or the Proposed Project would increase demand for library facilities. However, the Project Area is well served by library facilities and would not require the construction of new or expanded facilities.

Overall, impacts related to public services would be *less than significant* under Alternative 1, as with the Proposed Project.

Recreation

Implementation of Alternative 1 would involve less overall development and associated population increases than the Proposed Project. However, any new development would increase the use of existing park and recreational facilities throughout the City, including in and around adjacent to the Project Area. The City of Los Angeles Public Recreation Plan states that in order to meet long-range local recreational standards, the City should maintain a minimum of two acres of neighborhood facilities and two acres of community recreational facilities for every 1,000 persons, or a combination of neighborhood and community facilities adding up to four acres. Under Alternative 1, the Project Area population is projected to increase to approximately 36,000 residents, which would result in a ratio of parks to residents of approximately 27.3 acres per 1,000 residents- exceeding the City's 4 acres per 1,000 residents goal for neighborhood and community facilities. Therefore, like the Proposed Project, impacts related to deterioration of existing parks in and around the Project Area would be *less than significant*.

Reasonably expected development from Alternative 1 would increase demand for recreational and park facilities that serve the Project Area but would not require construction of new recreational or park facilities. Furthermore, based on the urban nature of the Project Area and the presence of constraints to the development of large park facilities, the construction and operation of new facilities would not be expected to result in significant environmental impacts. Like the Proposed Project, impacts from the construction or expansion of new recreational facilities would be *less than significant*.

Transportation/Traffic

Alternative 1 would result in less residential development and population growth in the project area compared to the Proposed Project. However, it would also result in an increased amount of job growth in the Project Area. The increased number of jobs in the Project Area coupled with the reduced dwelling units under Alternative 1 would increase per capita VMT and result in more traffic related impacts citywide and in the Project Area as employees would have to travel from other locations to get to their jobs and would be less likely to use transit options.

As with the Proposed Project, Alternative 1 would not increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment), or result in inadequate emergency access. However, as with the Proposed Project, freeway off ramp queuing-related safety issues could potentially arise as additional development occurs in the Project Area. As with the Proposed Project, this would result in *significant and unavoidable impacts* to freeway safety impacts.

Tribal Cultural Resources

As described in Section 4.4, *Cultural Resources*, Los Angeles has a long history of Native American occupation, and any development activities that include ground disturbance have the potential to significantly impact tribal cultural resources. Effects on tribal cultural resources are only known once a specific development has been proposed because the effects are highly dependent on both the individual development site conditions and the characteristics of the proposed activity. Development accommodated by either Alternative 1 or the Proposed Project may disturb areas that potentially contain tribal resources. Similar to the Proposed Project, all future development projects under Alternative 1 would continue to be subject to existing federal, state, and local requirements and discretionary projects, subject to CEQA review would be required to comply with AB 52, which for projects relying on a [mitigated] negative declaration or an EIR, would require consultation with California Native American tribes. Implementation of **Mitigation Measures 4.4-2 (a), (b), (c), and (d)** in Section 4.4, *Cultural Resources*, and **Measures 4.16-**

1(a), (b), and (c) in Section 4.16-1, *Tribal Cultural Resources*, would reduce the potential to disturb tribal cultural resources. However, this Alternative would not be subject to the same mitigation measures proposed in the Proposed Project. Therefore, unlike the Proposed Project which would have less than significant impacts with the mitigation, Alternative 1's potential for disturbance of tribal cultural resources would be greater than under the Proposed Project and instead be *significant and unavoidable*.

Utilities and Service Systems

Implementation of Alternative 1 would involve less overall development and associated growth than the Proposed Project and, instead, result in 7,263 fewer housing units, 20,480 fewer residents, and 1,742 more jobs through 2040 than would be anticipated under the Proposed Project. As shown in **Table 4.17-3**, in Section 4.17, *Utilities and Service Systems*, projected wastewater generation for the Project Area in 2040 with implementation of the Proposed Project would generate an estimated 2.5 mgd of wastewater, which would represent about 2 percent of the HWRP excess capacity of 175 mgd. By comparison, **Table 5-3**, indicates that implementation of Alternative 1 would increase wastewater generation in the Project Area by approximately 1,754,164 mgd, which represents about 1 percent of the HWRP excess capacity of 175 mgd. Alternative 1 would generate approximately 52 percent less wastewater as compared to the Proposed Project. Therefore, as with the Proposed Project, the HWRP would have sufficient available treatment capacity to serve the Project Area under Alternative 1. In addition, the HWRP would be able to adequately treat future project-generated sewage under Alternative 1 and the treatment requirements of the RWQCB would not be exceeded so new or expanded treatment facilities would not be needed. Expansion/replacement of Project Area conveyance infrastructure may be needed and various facility improvements are already planned. Temporary traffic, air quality, and noise impacts associated with construction of such improvements would be within the parameters described for the Proposed Project. Continued compliance with the City's Low Impact Development (LID) Ordinance for all new development would ensure that any future development under Alternative 1 would not increase demands on stormwater drainage facilities and or expansion of existing facilities beyond specific improvements needed for individual development projects and impacts would remain *less than significant*.

With respect to water demand, per the 2020 Urban Water Management Plan, current water supplies, planned future water conservation efforts, and planned future water supplies will enable LADWP to reliably provide water that meets the demands of the City for a 25-year planning horizon (through 2045), based on SCAG's population projections. The 2020 UWMP projects an increase of 58,000 acre feet per year (afy) (8 percent) in water demand between 2025 and 2045, under single/multiple dry year conditions. As shown on **Table 5-4**, the projected net increase in water demand of 8,765 afy generated by new development accommodated by Alternative 1 would represent about 15 percent of the forecasted water demand increase through 2045. By comparison, as shown in **Table 4.17-6**, in Section 4.17, *Utilities and Service Systems*, estimated water demand for the Project Area in 2045 with implementation of the Proposed Project would be 17,892 afy. This represents about 31 percent of the forecasted citywide water demand increase through 2045. Alternative 1 would demand approximately 51 percent less water as compared to the Proposed Project. Therefore, as with the Proposed Project, adequate water supply exists to meet projected demand through the year 2045 for Alternative 1 and development of new water supplies would not be necessary. Expansion/replacement of water distribution infrastructure may be needed, but temporary traffic, air quality, and noise impacts associated with construction of such improvements would be within the parameters described for the Proposed Project and impacts would similarly be *less than significant*.

TABLE 5-3 ALTERNATIVE 1 PROJECTED WASTEWATER GENERATION			
Land Use	Dwelling Units or Jobs	Wastewater Generation Rate (gpd/unit)	Wastewater Generation (gpd)
Residential ¹	12,773 du	137.9	17,613,967
Commercial	6,642 jobs	59.8	397,192
Industrial	3,257 jobs	123	400,611
Public Facilities	105 jobs	46.4	4,872
Total 2040 with Alternative 1 Wastewater Generation			2,564,071
Current Wastewater Generation			809,907
Net Change in Wastewater Generation			1,754,164
<p>Notes: Wastewater generation numbers are rounded to the nearest thousand. Totals may not add up due to rounding. gpd – gallons per day du – dwelling units sf – square feet</p> <p>SOURCE: Wastewater is assumed to be 100% of indoor water use. Per Exhibit 2E of the LADWP 2020 UWMP, indoor water use constitutes 56% of overall water use for single-family residences and 80% of overall water use for multi-family residences. Per the 2020 UWMP, per unit water demand is forecast to decline over time; the forecast 2030 rates per Exhibit 2L of the LADWP 2020 UWMP are assumed to apply to new development.</p>			

TABLE 5-4 ALTERNATIVE 1 PROJECTED WATER DEMAND IN THE PROJECT AREA				
Land Use	Dwelling Units or Jobs in Plan Area	Daily Water Use Rate (gpd/unit)	Daily Water Demand (gpd)	Annual Water Demand (afy)
Residential	12,773 du	202.8	2,590,364	7,097
Commercial	6,642 jobs	78.7	522,725	1,432
Industrial	3,257 jobs	125.5	408,754	1,120
Public Facilities	105 jobs	78.7	8,264	23
Total 2040 with Alternative 1 Demand			3,530,107	9,672
Current Water Demand			809,907	907
Net Change in Water Demand			2,720,200	8,765
<p>NOTES: du - dwelling units gpd – gallons per day afy – acre feet per year (1 af = 325,850 gallons) Totals may not add up due to rounding. Single-family and multi-family units were estimated by assuming that 20 percent of total household units are single-family and 80 percent are multi-family.</p> <p>SOURCE: Source: Water demand rates were obtained from the LADWP's 2020 UWMP, Exhibit 2L. Per the 2020 UWMP, per unit water demand is forecast to decline over time; the forecast 2040 rates are assumed to apply to new development.</p>				

As shown in **Table 4.17-7** in Section 4.17, *Utilities and Service Systems*, the combined daily intake capacity of landfills serving the Project Area is 45,540 tons per day and the average disposal intake is 18,620 tons per day, resulting in an available capacity of 200.2 million tons per day. As shown in **Table 5-5**, implementation of Alternative 1 would generate an increase of approximately 22.7 tons of solid waste per day, or 10,156 tons per year, above existing conditions, which would represent about .009 percent of the total available daily capacity (200.2 million ton per day) at local landfills. As shown in **Table 4.17-9** in

Section 4.17, *Utilities and Service Systems*, development accommodated by the Proposed Project would increase the amount of solid waste generated in the Project Area by 35 tons per day, or 12,861 tons per year, above existing conditions. This would represent less than 1 percent of the available intake capacity of landfills serving the Project Area. With that said, Alternative 1 would generate approximately 79 percent less waste than the Proposed Project. Based on the County of Los Angeles Countywide Integrated Waste Management Plan (CIWMP) 2019 Annual Report, sufficient permitted capacity is available to accommodate the County's long-term disposal needs under the status quo. Sufficient permitted capacity is available to accommodate the Project Area's solid waste disposal needs. Therefore, as with the Proposed Project, implementation of Alternative 1 would result in solid waste generation that would remain within the capacity of waste disposal facilities serving the City. Therefore, similar to the Proposed Project, new or expanded facilities would not be needed and impacts would be *less than significant*.

TABLE 5-5 ALTERNATIVE 1 ESTIMATED FUTURE SOLID WASTE GENERATION IN THE PROJECT AREA				
Land Use	Dwelling Units or Square Feet	Annual Waste Generation Rate	Annual Waste Generation (tons)	Daily Waste Generation (tons)
Residential	12,773	2.2	5,805.9	15.9
Commercial/ Governmental	10,005 jobs	2.3	4,350.0	11.9
Total 2040 Project Area Solid Waste Generation			10,155.9	27.8
Current Solid Waste Generation (2021)			1,868.8	5.1
Net Change in Waste Generation			8,287.1	22.7
NOTES:				
Waste generation (tons) was rounded to the nearest whole number. Totals may not add up due to rounding.

Electrical and natural gas supplies are not expected to be adversely affected by development under Alternative 1, but improvements to Project Area distribution and telecommunication facilities may be needed. Temporary traffic, air quality, and noise impacts associated with construction of such improvements would be within the parameters described for the Proposed Project.

Overall, impacts related to utilities and service systems would be *less than significant* under Alternative 1, as with the Proposed Project.

Conclusion

Alternative 1 would include less residential development capacity overall and thus less residential growth in the Project Area, as compared to the Proposed Project. Nevertheless, as with the Proposed Project, this alternative would have the potential to disturb cultural and tribal cultural resources and would also generate air pollutant emissions, ambient noise, and construction noise and vibration exceeding applicable thresholds. Finally, similar to the Proposed Project, it may result in safety related impacts due to highway off-ramp queuing. Because this alternative would not be subject to the same mitigation measures proposed in the Proposed Project, the level of impact for noise and tribal resources would be greater than under the Proposed Project despite the lower overall intensity of development in the Project Area. In addition, limiting development potential in the Project Area may induce higher levels of growth in other areas of the City and region that have fewer transit options and longer distances between housing, jobs, and services. As such, Alternative 1 may incrementally increase impacts related to energy, greenhouse gas emissions, land use and planning, population and housing, and transportation.

ALTERNATIVE 2: NO URBAN VILLAGE ALTERNATIVE

Alternative Description

The “No Urban Village” alternative does not include the expansion of the residential Urban Village zone to any new parcels, but it includes other changes to the existing CASP that are likely to increase housing production, such as the establishment of the new Public Use (P2) zone and allowing 100% affordable housing in the Urban Center, Urban Innovation, and Public Use (P2) zones. As shown in **Table 5-1**, under Alternative 2 the Project Area is projected to accommodate a population of 43,523 residents, 15,434 housing units, and 9,551 jobs by 2040. SCAG projects growth of the Project Area to reach 14,444 residents, 5,039 housing units, and 8,797 jobs by 2040. Therefore, population, housing and employment growth in the Project Area would exceed SCAG’s forecasts under current plans, though the City has discretion in how it allocates growth across the City to meet other objectives and has historically allocated more growth to the Project Area than SCAG, consistent with the City’s General Plan Framework. Overall, the lack of the residential Urban Village zone expansion would limit population and housing growth in the Project Area, as compared to the Proposed Project but would result in increased job opportunities in the Project Area as commercial and light industrial uses would take the place of residential development.

Under Alternative 2, the Project Area would have reduced residential development capacity, as compared to the Proposed Project. Therefore, Alternative 2 was selected because it was expected to incrementally reduce the significant unavoidable impacts of the Proposed Project with regard to air quality, cultural resources, and construction noise and vibration, as well as reduce the Proposed Project’s less than significant with mitigation impacts related to biology, geology and soils, hazardous materials, public services, recreation, tribal cultural resources, and utilities and service systems while still meeting most of the basic project objectives.

Alternative 2 would meet the objective to preserve employment areas that show a concentration of jobs, while supporting small and/or legacy businesses, local employment, and new productive uses and employment spaces, such as light industrial and general commercial uses but would not reduce overall employment capacity to a greater extent than the Proposed Project.

Due to the lack of increased housing without the inclusion of the expansion of the residential Urban Village zone, Alternative 2 would partially meet the following objectives, but not to the same extent as the Proposed Project:

- Increase the production of affordable and mixed-income housing within the Project Area.
- Protect residents, especially low-income households, from indirect and direct displacement, and ensure stability of existing vulnerable communities.
- Design and regulate housing to promote health and well-being, increase access to amenities such as parks and public transit, contribute to a sense of place, foster community and belonging, and plan for a sustainable future.
- Build, operate, and maintain welcoming and accessible housing for Angelenos with unique needs, including those with disabilities, large families, older adults, and other people facing housing barriers and economic insecurity.
- Refine Plan standards, processes, and procedures to be more intuitive and transparent, with the goal of enhancing development certainty for both market-rate and affordable housing developers

As discussed below, Alternative 2 would incrementally increase impacts related to energy, greenhouse gas emissions, land use and planning, population and housing, and transportation as compared to the Proposed

Project and would have the same significant and unavoidable impacts to air quality, historic resources, construction noise and vibration, and transportation safety related to freeway off-ramps.

Impact Analysis

Aesthetics

Alternative 2 would include developments with the same overall scale and intensity as the Proposed Project and thus would result in the same impacts to visual character, obstruction of scenic views, alterations of historical resource and shading effects. Nevertheless, any development would be implemented in accordance with applicable state and local plans, policies and guidelines including, but not limited to, the City's General Plan Framework, Conservation Element, Mobility Plan 2035, relevant specific plans, the City of Los Angeles Citywide Design Guidelines and provisions of the LAMC as it relates to development standards, visual character and historical resources. Like the Proposed Project, Alternative 2 could introduce new sources of light and glare in the Project Area. However, development in most of the Project Area already experiences high levels of nighttime lighting and glare, such that any additional effects would be incremental. In addition, future development would comply with applicable regulations regarding permitted light and glare. Similarly, development in the Project Area accommodated by Alternative 2 may increase shading and shadows in specific locations; however, shadows would be limited to the immediate area of each new development and would be typical of highly urbanized neighborhoods. Overall, similar to the Proposed Project, development accommodated by Alternative 2 may benefit, and would generally enhance, the visual character of the Project Area, and impacts related to aesthetics would be *less than significant*.

Air Quality

Alternative 2 would accommodate less overall housing development and associated population growth than the Proposed Project while resulting in more employment growth. Alternative 2 would result in 4,602 fewer housing units, 12,978 fewer residents, and 1,288 more jobs, through 2040 than would be anticipated under the Proposed Project. However, like the Proposed Project, Alternative 2 would generate growth that is consistent with the 2020-2045 RTP/SCS and 2022 AQMP forecasts at the Citywide level, and as a result, it would not conflict with and obstruct implementation of the 2020-2045 RTP/SCS or the 2022 AQMP. As with the Proposed Project, impacts related to conflicting with or obstructing implementation of the applicable air quality plans would be *less than significant*.

Although less construction may occur overall under Alternative 2 as compared to the Proposed Project, maximum daily emissions would be similar to what would occur under the Proposed Project since the nature and magnitude of individual construction projects would be similar. Therefore, it is reasonable to assume that development would result in construction emissions of NO_x that exceed SCAQMD regional and local significance thresholds, and emissions of PM₁₀ and PM_{2.5} that exceed SCAQMD LSTs. Similarly, because less residential development would occur under Alternative 2, it is reasonable to assume that overall operational emissions would be less as compared to the Proposed Project. The increase in development in the Project Area accommodated by Alternative 2 could result in daily emissions of VOC that would exceed the SCAQMD regional significance thresholds due to expanded use of consumer products and increased energy demand, similar to the Proposed Project. In addition, future development in the Project Area accommodated by Alternative 2 would result in daily emissions of NO_x, PM₁₀ and PM_{2.5} from area sources and mobile sources (brake and tire wear) that would exceed the SCAQMD regional significance. Mitigation measures required for the Proposed Project would also be required for Alternative 2 and would reduce impacts associated with this alternative. Exposure to odors would also be similar to the *less than significant impact* identified for the Proposed Project. As with the Proposed Project, impacts related to construction and operational emissions would be *significant and unavoidable*, and even with implementation of

mitigation measures limiting impacts from exposure of sensitive receptors to temporary construction emissions would result in *significant and unavoidable impacts*.

Biological Resources

In the Project Area, which is expected to experience new development under Alternative 2, individual reasonably anticipated development could potentially impact biological resources. However, the Project Area is already urbanized and generally lacks riparian habitat, wetlands, wildlife corridors and habitat that would support special status plant or animal species. The Los Angeles River and Arroyo Seco, as well as small portions of parks and open space, trees and minor urban landscaping are the only sources of biological habitat in and around the Project Area. There are a variety of bird species protected by the Migratory Bird Treaty Act (MBTA) that have adapted to human activity and may utilize existing trees and shrubs for nesting or foraging. Additionally, temporary direct and indirect impacts from the Proposed Project include the removal or degradation (e.g., excessive noise, dust, or light) of this habitat. Indirect impacts could result from excessive dust generated by developments occurring in the vicinity of the Los Angeles River and Arroyo Seco. Similar to the Proposed Project, Alternative 2 would include increased development in the Project Area, which would also potentially result in impacts related to certain bird species and dust generated by increased development. However, the extent of anticipated development would be lower under Alternative 2 which could result in reduced impacts to bird species. Because this alternative would be subject to the same biological mitigation measures as the Specific Plan, impacts related to biological resources would be *less than significant with mitigation*.

Cultural Resources

In the Project Area, which is expected to experience substantial new development, individual reasonably anticipated development could potentially cause a substantial adverse change in or disturbance of historical resources and archeological resources. As with the Proposed Project, Alternative 2 may result in demolition or alteration of historical resources or their setting or disturb areas that may potentially contain archaeological resources. Alternative 2 would accommodate development consistent with current land use designation and patterns and, as such, may result in slightly reduced impacts to historical resources and associated settings as compared to the Proposed Project. However, development under either Alternative 2 or the Proposed Project would have the potential to disturb archaeological resources and/or human remains. All future development projects would continue to be subject to existing federal, state, and local requirements with respect to cultural resources and discretionary projects may be subject to project-specific mitigation requirements under CEQA. Under the Proposed Project, implementation of **Mitigation Measures 4.4-1(a), (b) and (c)** would reduce the potential to disturb historic resources and **4.4-2(a), (b), and (c) and (d)** would reduce the potential to disturb archaeological resources and human remains. In addition, although existing regulations provide certain protections for significant historical resources, individual developments allowed by Alternative 2 could potentially cause a substantial adverse change in or disturbance of historical and archaeological resources as defined in CEQA Guidelines Section 15064.5. Alternative 2 would be subject to these same mitigation measures and the potential for disturbance of cultural resources would be similar under the Proposed Project and would remain *significant and unavoidable*.

Energy

As compared to the Proposed Project, development under Alternative 2 would result in less transportation energy use and less electricity and natural gas consumption than the Proposed Project in 2040. However, on a per capita basis, Alternative 2 would result in more transportation energy use and more electricity and natural gas consumption than the Proposed Project for year 2040 because of the increased job opportunities coupled with reduced housing density in the Project Area. In addition, Alternative 2 would result in 2040 per capita electricity and natural gas consumption higher than under 2021 baseline conditions, while the Proposed Project would result in lower per capita electricity and natural gas consumption in 2040 as

compared to year 2021 baseline conditions. The lower per capita energy use that would occur under the Proposed Project can be attributed in part to the fact that implementation of the Proposed Project would lower per capita VMT due to the location of jobs and housing in close proximity to each other and creation of substantial opportunities to use such transportation modes as transit, bicycling, and walking.

Because Alternative 2 would consume less energy overall, but more energy than the Proposed Project on a per capita basis, it may result in incrementally greater impacts with respect to the inefficient, unnecessary, or wasteful direct or indirect consumption of energy as compared to the Proposed Project. Nevertheless, as with the Proposed Project, Alternative 2 would not result in energy demands that exceed the existing or planned capacity for the service area or the wider Southern California region. In addition, neither Alternative 2 nor the Proposed Project would conflict with applicable federal, state, or local energy conservation policies aimed at reducing reliance on fossil fuels and increasing reliance on renewable energy sources. Overall, impacts would be *less than significant* under Alternative 2, as with the Proposed Project.

Geology and Soils

Under Alternative 2, future development in the Project Area would generally occur on the same land as existing structures in the Project Area. Any new development in the Project Area under either Alternative 2 or the Proposed Project would be exposed to existing geologic and soil hazards; however, it would not increase the potential for such hazards or create new hazards. Compliance with existing regulatory requirements and policies, including the LAMC and CBC would reduce impacts from adverse effects related to seismic activity and ground shaking, liquefaction, on or off-site landslides, ground failure; or adverse effects related to expansive soil, or to a geologic unit or soil that is unstable or would become unstable as a result of the project and result in landslide, lateral spreading, liquefaction or collapse. In some cases, future development in the Project Area may reduce the potential for property damage and/or safety concerns by replacing older structures with new structures built to current seismic standards. Similar to the Proposed Project, Alternative 2 would have the potential to disturb paleontological resources and result in potentially significant impacts. Implementation of **Mitigation Measures 4.6-1(a), (b) and (c)** would reduce the potential to disturb or damage paleontological resources. Alternative 2 would also be subject to these mitigation measures, so the potential for disturbance of paleontological resources would be similar to the Proposed Project and impacts would be *less than significant after mitigation*.

Greenhouse Gas Emissions

Development accommodated by either Alternative 2 or the Proposed Project would generate GHG emissions through individual project construction and operation. GHG emissions would be generated by direct sources such as motor vehicles, natural gas consumption, solid waste handling/treatment, and indirect sources such as electricity generation. Alternative 2 would accommodate less residential development overall than the Proposed Project and would result in fewer GHG emissions. However, it would accommodate less intense development and associated growth in the Project Area, which may result in more population and housing growth elsewhere in the City and region where fewer transit options are available and the distances between residences, jobs, and services are greater. Additionally, the increased number of jobs in the Project Area coupled with the reduced dwelling units under Alternative 2 would increase per capita VMT and transportation related GHG emissions. As a result, overall citywide and regional GHG emissions as a function of VMT may increase and Alternative 2 would not be as consistent with AB 32, SB 32, SB 375 (through demonstration of conformance with the 2020–2045 RTP/SCS), the Sustainable City pLAN and GreenLA as the Proposed Project. Overall GHG emissions would be incrementally greater than those of the Proposed Project. However, impacts would remain *less than significant*.

Hazards and Hazardous Materials

Alternative 2 would involve less overall residential development capacity and associated residential growth than would occur under the Proposed Project. Similar to the Proposed Project, operational activities associated with development under Alternative 2 would not create increased potential for upset or accident conditions involving hazardous materials release from transport, use or disposal. As such, as with the Proposed Project, impacts related to the routine transport, use, or disposal of hazardous materials or upset or accident conditions involving hazardous materials would be *less than significant*.

Similar to the Proposed Project, this alternative would pose no or less than significant issues related to airports or emergency management plans because there are no airports or private airstrips in or near the Project Area, and development under Alternative 2 would not interfere with circulation plans or emergency management plans. Therefore, *no impacts* related to airports would occur and *less than significant impacts* related to emergency management plans would occur. No wildland fire hazard areas are present in the Project Area; therefore, *no impacts* related to wildland fire risks would occur.

As with the Proposed Project, redevelopment, renovation, and demolition of structures built before 1979 could potentially involve asbestos or lead but asbestos and lead would not be released into the atmosphere with compliance of existing regulations. In addition, future development would potentially occur in Methane Zones and Methane Buffer Zones and near oil wells. Compliance with applicable regulations would reduce such impacts to a *less than significant level*. As with the Proposed Project, grading and construction activity could potentially result in the release of soil and/or groundwater contamination, which could potentially affect schools or involve a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, create a significant hazard to the public or the environment. Overall impacts associated with Alternative 2 would be similar to, but slightly less than, those of the Proposed Project since the overall level of development would be lower. As with the Proposed Project, impacts related to the potential disturbance of contaminated soils would be significant. Adherence to **Mitigation Measures 4.8-4(a)** and **4.8-4(b)**, as discussed in Section 4.8, *Hazards and Hazardous Materials*, would reduce impacts related to contaminated soils. Alternative 2 would also be subject to these mitigation measures so the potential for exposure to contaminants to the public due to possible construction on hazardous sites, and release of hazardous emissions which could potentially affect schools would be similar to the Proposed Project and impacts would be *less than significant with mitigation* incorporated.

Hydrology and Water Quality

The Project Area is urbanized and almost entirely paved and developed except for parks, green spaces, and the Los Angeles River, which runs through the center of the Project Area. Alternative 2 would accommodate development in a manner consistent with current land use patterns and, therefore, would not substantially alter drainage patterns or result in substantial erosion, siltation, or flooding on- or off-site. Development accommodated by the either Alternative 2 or the Proposed Project would be subject to federal, state, and local requirements that prevent violations of water quality standards or waste discharge requirements and support the preservation and expansion of pervious surfaces. In addition, new development projects under either Alternative 2 or the Proposed Project would be required to incorporate Best Management Practices to manage stormwater and reduce runoff during construction and operation, and industrial sources would be subject to additional stormwater management and discharge requirements under the NPDES program for industrial uses. Compliance with the City's LID Ordinance would further ensure that any future development resulting from either this alternative or the Proposed Project would not require construction of new stormwater drainage facilities and or expansion of existing facilities beyond specific improvements needed for individual development projects. In the long-term, redevelopment of sites in the Project Area under either Alternative 2 or the Proposed Project would improve surface water quality by replacing older development with new development that incorporates LID methods. Therefore, like the Proposed Project,

Alternative 2 would not adversely affect conditions with respect to hydrology and water quality and impacts would be *less than significant*.

Land Use and Planning

Development under Alternative 2 would not accommodate the same degree of residential development that could occur in portions of the Project Area under the Proposed Project. Like the Proposed Project, Alternative 2 would be generally consistent with 2020-2045 RTP/SCS policies related to the provision of high intensity and transit-oriented development as well as with the City's General Plan and Framework Element, Mobility Plan 2035, and Housing Element 2013-2021. However, as discussed under *Air Quality*, Alternative 2 may implement 2020-2045 RTP/SCS, AQMP, and Air Quality Element policies related to concentrating development near transit and reducing regional VMT to a lesser degree than the Proposed Project since the lower overall development totals may result in increased development elsewhere in the City and incrementally higher regional VMT. Like the Proposed Project, Alternative 2 would not physically divide an established community or conflict with an applicable habitat conservation plan, natural community conservation plan. Overall, like the Proposed Project, this alternative would not conflict with land use plans and policies or divide a community. Overall, impacts related to land use would be *less than significant* under Alternative 2, as with the Proposed Project.

Noise

New sensitive uses accommodated by either Alternative 2 or Proposed Project would be exposed to ambient noise that is in the "normally unacceptable" to "clearly unacceptable" range based on noise level/land use compatibility standards in the Noise Element of the City's General Plan. Although all construction would be required to comply with the appropriate Regulatory Compliance Measures as well as LAMC Chapter 41.40, Section 112.05, reasonably anticipated development under Alternative 2 would potentially result in construction with lengthy durations, substantial soil movement, use of large, heavy-duty equipment, and/or pile driving near noise-sensitive land uses that would result in significant impacts that cannot be feasibly mitigated. Therefore, like the Proposed Project, the impact generated by temporary construction noise under Alternative 2 would also be *significant and unavoidable*.

Any future development in the Project Area would include mechanical equipment, loading, trash pick-up, and other noise-generating activities. However, such activities would be typical of the urban environment in the Project Area. In addition, any on-site activities would be required to comply with applicable provisions of the LAMC. Future development accommodated by either Alternative 2 or the Proposed Project would also increase vehicle trips in the Project Area that would generate mobile noise. Mobile noise would increase noise levels to be above the "normally unacceptable" category for land uses adjacent to these corridors and with mitigation, impacts would also be *significant and unavoidable*.

All construction would be required to comply with the appropriate Regulatory Compliance Measures as well as LAMC Chapter 41.40, Section 112.05. Nevertheless, maximum noise levels generated by construction equipment under Alternative 2 could potentially involve two subterranean levels or more, construction durations of 18 months or more, use of large, heavy-duty equipment rated 300 horsepower or greater, or the potential for impact pile driving. Although **Mitigation Measure 4.11-1** for the Proposed Project would also apply, impacts from temporary construction noise resulting from implementation of Alternative 2 would be similar to those of the Proposed Project and remain *significant and unavoidable*.

Any future construction activity, specifically pile driving, could potentially generate vibration exceeding the 90 VdB threshold for buildings extremely susceptible to building damage (e.g., historical structures). Although mitigation is available to minimize the potential effects of vibration, it cannot be assured that construction-related vibration would not result in building damage. Although **Mitigation Measure 4.11-**

2(a) and **(b)** would also apply to reduce this impact, construction-related vibration would be similar to that of the Proposed Project and remain *significant and unavoidable* impact.

It is not anticipated that new development in the Project Area would involve activities that would result in substantial vibration levels (e.g., blasting operations). Like the Proposed Project, operational groundborne vibration in the vicinity of new development associated with Alternative 2 would be primarily generated by vehicular travel on the local roadways. According to the FTA *Transit Noise and Vibration Impact Assessment* guidance document, rubber tires and suspension systems dampen vibration levels from trucks to a level that is rarely perceptible (2006). Accounting for additional vehicle trips that would be accommodated by Alternative 2, traffic vibration levels would be similar to existing conditions and not perceptible. Therefore, like the Proposed Project, Alternative 2 would result in a *less than significant* impact for operational vibration.

Population and Housing

As shown in **Table 5-1**, under Alternative 2 the Project Area is projected to accommodate a population of 43,523 residents, 15,434 housing units, and 9,551 jobs by 2040. SCAG projects growth of the Project Area to reach 14,444 residents, 5,039 housing units, and 8,797 jobs by 2040. The population forecast for Alternative 2 is greater than under SCAG's RTP/SCS, but Alternative 2 would concentrate forecast growth in an area with a mix of jobs and housing and with good transit access. As such, although it would not implement RTP/SCS policies related to jobs/housing balance and concentrating growth and development near transit to the same degree that the Proposed Project would, it would not result in significant impacts related population or housing growth. Alternative 2 would have less potential to displace housing than the Proposed Project but would also include less replacement and affordable housing. Like the Proposed Project, Alternative 2 would result in an overall increase in housing that would more than offset any housing displacement that may occur. It should be noted, however, that limiting housing development in the Project Area as would occur under Alternative 2 may result in increased housing development elsewhere in the City, which could potentially increase displacement of existing housing in other Los Angeles neighborhoods. Like the Proposed Project Alternative 2 would not induce substantial population growth inconsistent with the regional growth plans. Overall, impacts related to population and housing would be *less than significant* under Alternative 2, as with the Proposed Project.

Public Services

Implementation of Alternative 2 would involve less overall development and associated growth than the Proposed Project. Nevertheless, the increased growth under either scenario may require additional public facilities to serve new residents. With respect to fire and police services, both Alternative 2 or the Proposed Project would accommodate new development that would increase demand for fire and police protection service. This may result in the need for new or expanded fire and police facilities. Based on the urbanized character of the Project Area, it is anticipated that new or expanded facilities could be built without creating significant environmental impacts. Depending on the location or nature of new facilities, the construction of needed new facilities could potentially result in impacts; however, like the Proposed Project, those impacts would be consistent with those already identified in this EIR for construction or operations. Project-specific environmental analysis under CEQA would be required to address any site-specific environmental concerns.

With respect to schools, as summarized in **Table 5-6**, residential and non-residential development accommodated by Alternative 2 would result in approximately 6,489 new students by 2040. Of this total, an estimated 3,373 would enroll in elementary school, 1,010 would enroll in middle school, 1,877 would enroll in high school, and 288 would enroll in special day classes. Overall Alternative 2 would result in approximately 43 percent less students as compared to the Proposed Project. As such, Alternative 2 would accommodate development that would increase the student population of the Project Area and would create

the need for new or expanded school facilities, but to a lesser extent than the Proposed Project. As with the Proposed Project, developers would be required to pay applicable school impact fees. As with the Proposed Project, any impacts associated with new school construction would be similar to those analyzed and identified in the EIR for other types of development, any site-specific impacts would be speculative and would be addressed by LAUSD as part of a project-level CEQA review.

TABLE 5-6 ALTERNATIVE 2 ANTICIPATED STUDENT GENERATION IN THE PROJECT AREA						
	Units	Student Generation				Total Students Generated
		Elementary School (TK-5)	Middle School (6-8)	High School (9-12)	SDC	
Residential ¹	15,434 du	3014	830	1653	228	5,726
Non-Residential ²	15,756,000 sf	359	180	224	--	763
Total Students Generated by the No Project Alternative		3,373	1,010	1,877	228	6,489

Note: du = dwelling units; sf = square feet; TK = Transitional Kindergarten; SDC = Specialized Day Care
 Totals may not add up due to rounding.

¹ Student generation rates for residential use is based on Level 1 – Developer Fee Justification Study for Los Angeles Unified School District (LAUSD 2022c). Residential Generation Rates: Elementary: 0.1953/du, Middle School: 0.0538/du, High School: 0.1071 /du, SDC: 0.0148/du

² Student generation rates for non-residential use is based on the average of office and retail/service student generation rates for a conservative estimate, taken from the LAUSD Commercial/Industrial Development School Fee Justification Study, September 2010 (LAUSD 2010). Non-residential Generation Rates: Elementary: 0.0228/1,000 sf, Middle School: 0.0114/1,000 sf, High School: 0.0142/1,000 sf. Non-residential uses include commercial, industrial, and public facilities.

With respect to libraries, either Alternative 2 or the Proposed Project would increase demand for library facilities. However, the Project Area is well served by library facilities and would not require the construction of new or expanded facilities.

Overall, impacts related to public services would be *less than significant* under Alternative 2, as with the Proposed Project.

Recreation

Implementation of Alternative 2 would involve less overall development and associated population increases than the Proposed Project. However, any new development would increase the use of existing park and recreational facilities throughout the City, including in and around adjacent to the Project Area. The City of Los Angeles Public Recreation Plan states that in order to meet long-range local recreational standards, the City should maintain a minimum of two acres of neighborhood facilities and two acres of community recreational facilities for every 1,000 persons, or a combination of neighborhood and community facilities adding up to four acres. Under Alternative 2, the Project Area population is projected to increase to approximately 43,500 residents, which would result in a ratio of parks to residents of approximately 22.6 acres per 1,000 residents- exceeding the City’s 4 acres per 1,000 residents goal for neighborhood and community facilities. Therefore, like the Proposed Project, impacts related to deterioration of existing parks in and around the Project Area would be *less than significant*.

Reasonably anticipated development from Alternative 2 would increase demand for recreational and park facilities that serve the Project Area but would not require construction of new recreational or park facilities. Furthermore, based on the urban nature of the Project Area and the presence of constraints to the development of large park facilities, the construction and operation of new facilities would not be expected to result in significant environmental impacts. Like the Proposed Project, impacts from the construction or expansion of new recreational facilities would be *less than significant*.

Transportation/Traffic

Alternative 2 would result in less residential development and population growth in the Project Area compared to the Proposed Project. However, it would also result in an increased amount of job growth in the Project Area. The increased number of jobs in the Project Area coupled with the reduced dwelling units under Alternative 2 would increase per capita VMT and result in more traffic related impacts citywide and in the Project Area as employees would have to travel from other locations to get to their jobs and would be less likely to use transit options.

As with the Proposed Project, Alternative 2 would not increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment), or result in inadequate emergency access. However, as with the Proposed Project, freeway off ramp queuing-related safety issues could potentially arise as additional development occurs in the Project Area. As with the Proposed Project, this would result in *significant and unavoidable* impacts to freeway safety impacts.

Tribal Cultural Resources

As described in Section 4.4, *Cultural Resources*, Los Angeles has a long history of Native American occupation, and any development activities that include ground disturbance have the potential to significantly impact tribal cultural resources. Effects on tribal cultural resources are only known once a specific development has been proposed because the effects are highly dependent on both the individual development site conditions and the characteristics of the proposed activity. Development accommodated by either Alternative 2 or the Proposed Project may disturb areas that potentially contain tribal resources, resulting potentially significant impacts. Similar to the Proposed Project, all future development projects under Alternative 2 would continue to be subject to existing federal, state, and local requirements and discretionary projects, subject to CEQA review would be required to comply with AB 52, which for projects relying on a [mitigated] negative declaration or an EIR, would require consultation with California Native American tribes. Implementation of **Mitigation Measures 4.4-2 (a), (b), (c), and (d)** in Section 4.4, *Cultural Resources*, and **Measures 4.16-1(a), (b), and (c)** in Section 4.16-1, *Tribal Cultural Resources*, would reduce the potential to disturb tribal cultural resources. Alternative 2 would also be subject to these mitigation measures. Therefore, the potential for disturbance of tribal cultural resources would be similar than under the Proposed Project and would be *less than significant with mitigation* incorporated.

Utilities and Service Systems

Implementation of Alternative 2 would involve less overall residential development and associated growth than the Proposed Project. Also, it would result in 12,978 fewer residents and 1,288 more jobs through 2040 than would be anticipated under the Proposed Project. As shown in **Table 4.17-3**, in Section 4.17, *Utilities and Service Systems*, projected wastewater generation for the Project Area in 2040 with implementation of the Proposed Project would generate an estimated 4.1 mgd of wastewater, which would represent about 2 percent of the HWRP excess capacity of 175 mgd. By comparison, **Table 5-7** indicates that implementation of Alternative 2 would increase wastewater generation in the Project Area by approximately 2.9 mgd, which represents about 1.6 percent of the HWRP excess capacity of 175 mgd. Alternative 2 would generate approximately 51 percent less wastewater when compared to the Proposed Project. Therefore, as with the Proposed Project, the HWRP would have sufficient available treatment capacity to serve the Project Area under Alternative 2. In addition, the HWRP would be able to adequately treat future project-generated sewage under Alternative 2 and the treatment requirements of the RWQCB would not be exceeded so new or expanded treatment facilities would not be needed. Expansion/replacement of Project Area conveyance infrastructure may be needed and various facility improvements are already planned. Temporary traffic, air quality, and noise impacts associated with construction of such improvements would be within the parameters described for the Proposed Project. Continued compliance with the City's Low Impact Development (LID) Ordinance for all new development would ensure that any future development under

Alternative 2 would not increase demands on stormwater drainage facilities and or expansion of existing facilities beyond specific improvements needed for individual development projects and impacts would remain *less than significant*.

With respect to water demand, per the 2020 Urban Water Management Plan, current water supplies, planned future water conservation efforts, and planned future water supplies will enable LADWP to reliably provide water that meets the demands of the City for a 25-year planning horizon (through 2045), based on SCAG's population projections. The 2020 UWMP projects an increase of 58,000 afy (8 percent) in water demand between 2025 and 2045, under single/multiple dry year conditions. As shown on **Table 5-8**, the projected net increase in water demand of 10,176 afy generated by new development accommodated by Alternative 2 would represent about 17 percent of the forecasted water demand increase through 2045. By comparison, as shown in **Table 4.17-6**, in Section 4.17, *Utilities and Service Systems*, estimated water demand for the Project Area in 2045 with implementation of the Proposed Project would be 17,892 afy. This represents about 31 percent of the forecasted citywide water demand increase through 2045. Alternative 2 would demand approximately 55 percent less water as compared to the Proposed Project. Therefore, as with the Proposed Project, adequate water supply exists to meet projected demand through the year 2045 for Alternative 2 and development of new water supplies would not be necessary. Expansion/replacement of water distribution infrastructure may be needed, but temporary traffic, air quality, and noise impacts associated with construction of such improvements would be within the parameters described for the Proposed Project and impacts would similarly be *less than significant*.

TABLE 5-7 ALTERNATIVE 2 PROJECTED WASTEWATER GENERATION			
Land Use	Dwelling Units or Jobs	Wastewater Generation Rate (gpd/unit)	Wastewater Generation (gpd)
Residential	15,434 du	137.9	2,128,349
Commercial	5,962 jobs	59.8	356,528
Industrial	3,493 jobs	123	429,639
Public Facilities	97 jobs	46.4	4,501
Total 2040 with Alternative 2 Wastewater Generation			2,919,016
Current Wastewater Generation			809,907
Net Change in Wastewater Generation			2,109,109
Notes: Wastewater generation numbers are rounded to the nearest thousand. Totals may not add up due to rounding. gpd – gallons per day du – dwelling units sf – square feet SOURCE: Wastewater is assumed to be 100% of indoor water use. Per Exhibit 2E of the LADWP 2020 UWMP, indoor water use constitutes 56% of overall water use for single-family residences and 80% of overall water use for multi-family residences. Per the 2020 UWMP, per unit water demand is forecast to decline over time; the forecast 2030 rates per Exhibit 2L of the LADWP 2020 UWMP are assumed to apply			

TABLE 5-8 ESTIMATED ALTERNATIVE 2 PROJECTED WATER DEMAND IN THE PROJECT AREA				
Land Use	Dwelling Units or Jobs in Plan Area	Daily Water Use Rate (gpd/unit)	Daily Water Demand (gpd)	Annual Water Demand (afy)
Residential	15,434 du	202.8	3,130,015	8,575
Commercial	5,962 jobs	78.7	469,209	1,286
Industrial	3,493 jobs	125.5	438,372	1,201
Public Facilities	97 jobs	78.7	7,634	21

TABLE 5-8 ESTIMATED ALTERNATIVE 2 PROJECTED WATER DEMAND IN THE PROJECT AREA		
Total 2040 with Alternative 2 Demand	4,045,230	11,083
Current Water Demand	809,907	907
Net Change in Water Demand	3,235,323	10,176
Notes: Water demand numbers are rounded to the nearest thousand. Totals may not add up due to rounding. du – dwelling unit gpd – gallons per day afy – acre feet per year (1 af = 325,850 gallons)		
SOURCE: Water demand rates were obtained from the LADWP's 2015 Urban Water Management Plan (UWMP), Exhibit2K (LADWP 2016). Per the UWMP, per unit water demand is forecast to decline over time; the forecast 2040 rates are assumed to apply to new development.		

As shown in **Table 4.17-7** in Section 4.17, *Utilities and Service Systems*, the combined daily intake capacity of landfills serving the Project Area is 45,540 tons per day and the average disposal intake is 18,620 tons per day, resulting in an available capacity of 200.2 million tons per day. As shown in **Table 5-9**, implementation of Alternative 2 would generate an increase of approximately 26 tons of solid waste per day above existing conditions, which would represent about 1 percent of the total available daily capacity (200.2 million ton per day) at local landfills. As shown in **Table 4.17-9** in Section 4.17, *Utilities and Service Systems*, development accommodated by the Proposed Project would increase the amount of solid waste generated in the Project Area by 30 tons per day, or 10,991 tons per year, above existing conditions. This would represent less than 1 percent of the available intake capacity of landfills serving the Project Area. Alternative 2 would generate approximately 14 percent less waste when compared to the Proposed Project. Based on the County of Los Angeles Countywide Integrated Waste Management Plan (CIWMP) 2019 Annual Report, sufficient permitted capacity is available to accommodate the County's long-term disposal needs under the status quo. Sufficient permitted capacity is available to accommodate the Project Area's solid waste disposal needs. Therefore, as with the Proposed Project, implementation of Alternative 2 would result in solid waste generation that would remain within the capacity of waste disposal facilities serving the City. Therefore, similar to the Proposed Project, new or expanded facilities would not be needed and impacts would be *less than significant*.

TABLE 5-9 ESTIMATED ALTERNATIVE 2 SOLID WASTE GENERATION IN THE PROJECT AREA				
Land Use	Dwelling Units or Square Feet	Annual Waste Generation Rate	Annual Waste Generation (tons)	Daily Waste Generation (tons)
Residential	15,434	2.2	7015.5	19.2
Commercial/ Governmental	9,551 jobs	2.3	4152.6	11.4
Total 2040 Project Area Solid Waste Generation			11168.1	30.6
Current Solid Waste Generation (2021)			1,868.80	5.1
Net Change in Waste Generation			9299.3	25.5
NOTES: Waste generation (tons) was rounded to the nearest whole number. Totals may not add up due to rounding. du – dwelling unit sf – square feet SOURCE: CalEEMod Land Use SubType				

Electrical and natural gas supplies are not expected to be adversely affected by development under Alternative 2, but improvements to Project Area distribution and telecommunication facilities may be needed. Temporary traffic, air quality, and noise impacts associated with construction of such improvements would be within the parameters described for the Proposed Project.

Overall, impacts related to utilities and service systems would be *less than significant* under Alternative 2, as with the Proposed Project.

Conclusion

Alternative 2 would accommodate less residential development overall and thus accommodate less growth in the Project Area, as compared to the Proposed Project. Therefore, Alternative 2 would result in a reduced level of impact for biological resources, geology and soil, hazards and hazardous materials, public services, recreation, tribal cultural resources, and utilities/service systems compared to the Proposed Project. Impacts related to air quality, cultural resources, and noise would be reduced compared to the Proposed Project but remain *significant and unavoidable* with Alternative 2. Impacts related to energy, greenhouse gas emissions, land use and planning, and population and housing would be increased compared to the Proposed Project but would remain *less than significant* with Alternative 2. In addition, limiting development potential in the Project Area may induce higher levels of growth in other areas of the City and region that have fewer transit options and longer distances between housing, jobs, and services. As such, Alternative 2 may incrementally increase regional transportation impacts, which would remain *significant and unavoidable*.

ALTERNATIVE 3: REDUCED URBAN VILLAGE ALTERNATIVE

Alternative Description

The “Reduced Urban Village” does include the expansion of the residential Urban Village zone to new parcels, but not to the same extent as the Proposed Project. Compared to the Proposed Project, Alternative 3 does not include any new Urban Village zoning east of the Los Angeles River, or in an area along Main Street west of the Los Angeles River. As shown in **Table 5-1**, under Alternative 3 the Project Area is projected to accommodate a population of 48,527 residents, 17,208 housing units, and 9,055 jobs by 2040. SCAG projects growth of the Project Area to reach 14,444 residents, 5,039 housing units, and 8,797 jobs by 2040. Therefore, population, housing and employment growth in the Project Area would exceed SCAG’s forecasts under current plans. Overall, the reduced expansion of the residential Urban Village zone would limit population and housing growth in the Project Area, as compared to the Proposed Project but would result in increased job opportunities in the Project Area as commercial and light industrial uses would take the place of residential development.

Under Alternative 3, the Project Area would have reduced residential development capacity, as compared to the Proposed Project. Therefore, Alternative 3 was selected because it was expected to incrementally reduce the significant unavoidable impacts of the Proposed Project with regard to air quality, cultural resources, and construction noise and vibration, as well as the Proposed Project’s less than significant with mitigation impacts related to biological and tribal cultural resources while still meeting most of the basic project objectives.

Alternative 3 would meet the objective to preserve employment areas that show a concentration of jobs, while supporting small and/or legacy businesses, local employment, and new productive uses and employment spaces, such as light industrial and general commercial uses and would not reduce overall employment capacity to a greater extent than the Proposed Project.

Due to the lack of increased housing without the inclusion of the full expansion of the residential Urban Village zone, Alternative 3 would partially meet the following objectives, but not to the same extent as the Proposed Project:

- Increase the production of affordable and mixed-income housing within the Project Area.
- Protect residents, especially low-income households, from indirect and direct displacement, and ensure stability of existing vulnerable communities.
- Design and regulate housing to promote health and well-being, increase access to amenities such as parks and public transit, contribute to a sense of place, foster community and belonging, and plan for a sustainable future.
- Build, operate, and maintain welcoming and accessible housing for Angelenos with unique needs, including those with disabilities, large families, older adults, and other people facing housing barriers and economic insecurity.

As discussed below, Alternative 3 would incrementally increase impacts related to energy, greenhouse gas emissions, land use and planning, and population and housing as compared to the Proposed project and would have the same significant and unavoidable impacts to air quality, historic resources, construction noise and vibration, and transportation safety related to freeway off-ramps.

Impact Analysis

Aesthetics

Compared to existing conditions, either Alternative 3 or the Proposed Project would generally not result in buildings of greater height, scale and intensity. Alternative 3 would include developments with the same overall high scale and intensity as the Proposed Project thus would result in the same impacts to in visual character, obstruction of scenic views, alterations of historical resource and shading effects. Nevertheless, any development would be implemented in accordance with applicable state and local plans, policies and guidelines including, but not limited to, the City's General Plan Framework, Conservation Element, Mobility Plan 2035, relevant specific plans, the City of Los Angeles Citywide Design Guidelines and provisions of the LAMC as it relates to development standards, visual character and historical resources. Like the Proposed Project, Alternative 3 could introduce new sources of light and glare in the Project Area. However, development in most of the Project Area already experiences high levels of nighttime lighting and glare, such that any additional effects would be incremental. In addition, future development would comply with applicable regulations regarding permitted light and glare. Similarly, development in the Project Area accommodated by Alternative 3 may increase shading and shadows in specific locations; however, shadows would be limited to the immediate area of each new development and would be typical of highly urbanized neighborhoods. Overall, similar to the Proposed Project, development accommodated by Alternative 3 may benefit, and would generally enhance, the visual character of the Project Area, and impacts related to aesthetics would be *less than significant*.

Air Quality

Alternative 3 would accommodate less overall housing development and associated population growth than the Proposed Project while resulting in more employment growth. Alternative 3 would result in 2,828 fewer housing units, 7,974 fewer residents, and 792 more jobs, through 2040 than would be anticipated under the Proposed Project. However, like the Proposed Project, Alternative 3 would generate growth that is consistent with the 2020-2045 RTP/SCS and 2022 AQMP Citywide forecasts and as a result, it would not conflict with and obstruct implementation of the 2020-2045 RTP/SCS or the 2022 AQMP. As with the Proposed Project, impacts related to conflicting with or obstructing implementation of the applicable air quality plans would be *less than significant*.

Although less construction may occur overall under Alternative 3 as compared to the Proposed Project, maximum daily emissions would be similar to what would occur under the Proposed Project since the nature and magnitude of individual construction projects would be similar. Therefore, it is reasonable to assume that development would result in construction emissions of NO_x that exceed SCAQMD regional and local significance thresholds, and emissions of PM₁₀ and PM_{2.5} that exceed SCAQMD LSTs. Similarly, because less residential development would occur under Alternative 3, it is reasonable to assume that overall operational emissions would be less as compared to the Proposed Project. The increase in development in the Project Area accommodated by Alternative 3 could result in daily emissions of VOC that would exceed the SCAQMD regional significance thresholds due to expanded use of consumer products and increased energy demand, similar to the Proposed Project. In addition, future development in the Project Area accommodated by Alternative 3 would result in daily emissions of NO_x, PM₁₀ and PM_{2.5} from area sources and mobile sources (brake and tire wear) that would exceed the SCAQMD regional significance. Mitigation measures required for the Proposed Project would also be required for Alternative 3 and would reduce impacts associated with this alternative. Additionally, exposure of sensitive receptors to temporary construction emissions could be significant and unavoidable without the mitigation measure and impacts from toxic air contaminants (TACs) from distribution center truck activity would be greater than that of the Proposed Project. While Alternative 3 would be required to implement the same construction emission reduction mitigation measures identified in Impact Section 4.2-2, even with Mitigation Measure 4.2-2 Alternative 3 would still have **significant and unavoidable impacts**. Exposure to odors would also be similar to the **less than significant** impact identified for the Proposed Project. As with the Proposed Project, impacts related to construction and operational emissions would be **significant and unavoidable**, and the lack of mitigation measures limiting impacts from exposure of sensitive receptors to temporary construction emissions would result in **significant and unavoidable** impacts.

Biological Resources

In the Project Area, is expected to experience new development under the existing CASP, individual reasonably anticipated development could potentially impact biological resources. However, the Project Area is already urbanized and generally lacks riparian habitat, wetlands, wildlife corridors and habitat that would support special status plant or animal species. The Los Angeles River, as well as small portions of parks and open space, trees and minor urban landscaping are the only sources of biological habitat in and around the Project Area. There are a variety of bird species protected by the Migratory Bird Treaty Act (MBTA) that have adapted to human activity and may utilize existing trees and shrubs for nesting or foraging. Additionally, temporary direct and indirect impacts from the Proposed Project include the removal or degradation (e.g., excessive noise, dust, or light) of this habitat. indirect impacts could result from excessive dust generated by developments occurring in the vicinity of the Los Angeles River and Arroyo Seco. Similar to the Proposed Project, Alternative 3 would include development in the Project Area, which would also potentially result in impacts related to certain bird species and dust generated by increased development. As with the Proposed Project, impacts related to biological resources less than **significant with mitigation**.

Cultural Resources

In the Project Area, which is expected to experience substantial new development, individual reasonably anticipated development could potentially cause a substantial adverse change in or disturbance of historical resources and archeological resources. As with the Proposed Project, Alternative 3 may result in demolition or alteration of historical resources or their setting or disturb areas that may potentially contain archaeological resources. Alternative 3 would accommodate development consistent with current land use designation and patterns and, as such, may result in slightly reduced impacts to historical resources and associated settings as compared to the Proposed Project. However, development under either Alternative 3 or the Proposed Project would have the potential to disturb archaeological resources and/or human remains. All future development projects would continue to be subject to existing federal, state, and local

requirements with respect to cultural resources and discretionary projects may be subject to project-specific mitigation requirements under CEQA. Under the Proposed Project, implementation of **Mitigation Measures 4.4-1(a), (b) and (c)** would reduce the potential to disturb historic resources and **4.4-2(a), (b), and (c) and (d)** would reduce the potential to disturb archaeological resources and human remains. In addition, although existing regulations provide certain protections for significant historical resources, individual developments allowed by Alternative 3 could potentially cause a substantial adverse change in or disturbance of historical and archaeological resources as defined in CEQA Guidelines Section 15064.5. Alternative 3 would be subject to these same mitigation measures and the potential for disturbance of cultural resources would be similar under the Proposed Project and would remain *significant and unavoidable*.

Energy

As compared to the Proposed Project, development under Alternative 3 would result in less transportation energy use and less electricity and natural gas consumption than the Proposed Project in 2040. However, on a per capita basis, Alternative 3 would result in more transportation energy use and more electricity and natural gas consumption than the Proposed Project for year 2040 because of the increased job opportunities coupled with reduced housing density in the Project Area. In addition, Alternative 3 would result in 2040 per capita electricity and natural gas consumption higher than under 2021 baseline conditions, while the Proposed Project would result in lower per capita electricity and natural gas consumption in 2040 as compared to year 2021 baseline conditions. The lower per capita energy use that would occur under the Proposed Project can be attributed in part to the fact that implementation of the Proposed Project would result in lower per capita VMT due to the location of jobs and housing in close proximity to each other and creation of substantial opportunities to use such transportation modes as transit, bicycling, and walking.

Because Alternative 3 would consume less energy overall, but more energy than the Proposed Project on a per capita basis, it may result in incrementally greater impacts with respect to the inefficient, unnecessary, or wasteful direct or indirect consumption of energy as compared to the Proposed Project. Nevertheless, as with the Proposed Project, Alternative 3 would not result in energy demands that exceed the existing or planned capacity for the service area or the wider Southern California region. In addition, neither Alternative 3 nor the Proposed Project would conflict with applicable federal, state, or local energy conservation policies aimed at reducing reliance on fossil fuels and increasing reliance on renewable energy sources. Overall, impacts would be *less than significant* under Alternative 3, as with the Proposed Project.

Geology and Soils

Implementation of the City's current General Plan and Project would generally accommodate development in the same footprints as existing structures in the Project Area. Any new development in the Project Area under either Alternative 3 or the Proposed Project would be exposed to existing geologic and soil hazards; however, it would not increase the potential for such hazards or create new hazards. Compliance with existing regulatory requirements and policies, including the LAMC and CBC would reduce impacts from adverse effects related to seismic activity and ground shaking, liquefaction, on or off-site landslides, ground failure; or adverse effects related to expansive soil, or to a geologic unit or soil that is unstable or would become unstable as a result of the project and result in landslide, lateral spreading, liquefaction or collapse. In some cases, future development in the Project Area may reduce the potential for property damage and/or safety concerns by replacing older structures with new structures built to current seismic standards. Similar to the Proposed Project, Alternative 3 would have the potential to disturb paleontological resources. Implementation of **Mitigation Measures 4.6-1(a), (b) and (c)** would reduce the potential to disturb or damage paleontological resources. Alternative 3 would also be subject to these mitigation measures, so the potential for disturbance of paleontological resources would be similar to the Proposed Project and impacts would be *less than significant after mitigation*.

Greenhouse Gas Emissions

Development accommodated by either Alternative 3 or the Proposed Project would generate GHG emissions through individual project construction and operation. GHG emissions would be generated by direct sources such as motor vehicles, natural gas consumption, solid waste handling/treatment, and indirect sources such as electricity generation. Alternative 3 would accommodate less residential development overall than the Proposed Project and would result in fewer GHG emissions. However, it would accommodate less intense development and associated growth in the Project Area, which may result in more population and housing growth elsewhere in the City and region where fewer transit options are available and the distances between residences, jobs, and services are greater. Additionally, the increased number of jobs in the Project Area coupled with the reduced dwelling units under Alternative 3 would increase per capita VMT and transportation related GHG emissions. As a result, overall citywide and regional GHG emissions as a function of VMT may increase and Alternative 3 would not be as consistent with AB 32, SB 32, SB 375 (through demonstration of conformance with the 2020-2045 RTP/SCS), the Sustainable City pLAN and GreenLA as the Proposed Project. Overall GHG emissions would be incrementally greater than those of the Proposed Project but remain *less than significant*.

Hazards and Hazardous Materials

Alternative 3 would involve less overall development capacity and associated growth than would occur under the Proposed Project. Similar to the Proposed Project, operational activities associated with development under Alternative 3 would not create increased potential for upset or accident conditions involving hazardous materials release from transport, use or disposal. As such, as with the Proposed Project, impacts related to the routine transport, use, or disposal of hazardous materials or upset or accident conditions involving hazardous materials would be *less than significant*.

Similar to the Proposed Project, this alternative would pose no or less than significant issues related to airports or emergency management plans because there are no airports or private airstrips in or near the Project Area, and development under Alternative 3 would not interfere with circulation plans or emergency management plans. Therefore, *no impacts* related to airports would occur and *less than significant impacts* related to emergency management plans would occur. No wildland fire hazard areas are present in the Project Area; therefore, *no impacts* related to wildland fire risks would occur.

As with the Proposed Project, redevelopment, renovation, and demolition of structures built before 1979 could potentially involve asbestos or lead but asbestos and lead would not be released into the atmosphere with compliance of existing regulations. In addition, future development would potentially occur in Methane Zones and Methane Buffer Zones and near oil wells. Compliance with applicable regulations would reduce such impacts to a *less than significant* level. As with the Proposed Project, grading and construction activity could potentially result in the release of soil and/or groundwater contamination, which could potentially affect schools or involve a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, create a significant hazard to the public or the environment. Overall impacts associated with Alternative 3 would be similar to, but slightly less than, those of the Proposed Project since the overall level of development would be lower. As with the Proposed Project, impacts related to the potential disturbance of contaminated soils would be significant. Adherence to **Mitigation Measures 4.8-4(a)** and **4.8-4(b)**, as discussed in Section 4.8, *Hazards and Hazardous Materials*, would reduce impacts related to contaminated soils. Alternative 3 would also be subject to these mitigation measures so the potential for exposure to contaminants to the public due to possible construction on hazardous sites, and release of hazardous emissions which could potentially affect schools would be similar to the Proposed Project and impacts would be *less than significant with mitigation* incorporated.

Hydrology and Water Quality

The Project Area is urbanized and almost entirely paved and developed except for parks, green spaces, and the Los Angeles River, which runs through the center of the Project Area. Alternative 3 would accommodate development in a manner consistent with current land use patterns and, therefore, would not substantially alter drainage patterns or result in substantial erosion, siltation, or flooding on- or off-site. Development accommodated by either Alternative 3 or the Proposed Project would be subject to federal, state, and local requirements that prevent violations of water quality standards or waste discharge requirements and support the preservation and expansion of pervious surfaces. In addition, new development projects under either Alternative 3 or the Proposed Project would be required to incorporate Best Management Practices to manage stormwater and reduce runoff during construction and operation, and industrial sources would be subject to additional stormwater management and discharge requirements under the NPDES program for industrial uses. Compliance with the City's LID Ordinance would further ensure that any future development resulting from either this alternative or the Proposed Project would not require construction of new stormwater drainage facilities and or expansion of existing facilities beyond specific improvements needed for individual development projects. In the long-term, redevelopment of sites in the Project Area under either Alternative 3 or the Proposed Project would improve surface water quality by replacing older development with new development that incorporates LID methods. Therefore, like the Proposed Project, Alternative 3 would not adversely affect conditions with respect to hydrology and water quality and impacts would be *less than significant*.

Land Use and Planning

Like the Proposed Project, Alternative 3 would be generally consistent with 2020-2045 RTP/SCS policies related to the provision of high intensity and transit-oriented development as well as with the City's General Plan and Framework Element, Mobility Plan 2035, and Housing Element 2013-2021. Implementation of the 2020-2045 RTP/SCS, AQMP, and Air Quality Element policies related to concentrating development near transit and reducing regional VMT would be to a lesser degree than the Proposed Project, since the lower overall residential development totals may result in increased development elsewhere in the City and incrementally higher regional VMT. Like the Proposed Project, Alternative 3 would not physically divide an established community or conflict with an applicable habitat conservation plan, natural community conservation plan. Overall, like the Proposed Project, this alternative would not conflict with land use plans and policies or divide a community. Overall, impacts related to land use would be *less than significant* under Alternative 3, as with the Proposed Project.

Noise

New sensitive uses accommodated by either Alternative 3 or Proposed Project would be exposed to ambient noise that is in the "normally unacceptable" to "clearly unacceptable" range based on noise level/land use compatibility standards in the Noise Element the City's General Plan. Although all construction would be required to comply with the appropriate Regulatory Compliance Measures as well as LAMC Chapter 41.40, Section 112.05, reasonably anticipated development under Alternative 3 would potentially result in construction with lengthy durations, substantial soil movement, use of large, heavy-duty equipment, and/or pile driving near noise-sensitive land uses that would result in significant impacts that cannot be feasibly mitigated. Therefore, like the Proposed Project, the impact generated by temporary construction noise under Alternative 3 would also be *significant and unavoidable*.

Any future development in the Project Area would include mechanical equipment, loading, trash pick-up, and other noise-generating activities. However, such activities would be typical of the urban environment in the Project Area. In addition, any on-site activities would be required to comply with applicable provisions of the LAMC. Future development accommodated by either Alternative 3 or the Proposed Project would also increase vehicle trips in the Project Area that would generate mobile noise. Mobile noise

would increase noise levels to be above the “normally unacceptable” category for land uses adjacent to these corridor, and like the Proposed Project, permanent noise increases due to mobile operational activities under Alternative 3 would be lesser than the Proposed Project but would remain *significant and unavoidable*.

All construction would be required to comply with the appropriate Regulatory Compliance Measures as well as LAMC Chapter 41.40, Section 112.05. Nevertheless, maximum noise levels generated by construction equipment under Alternative 3 could potentially involve two subterranean levels or more, construction durations of 18 months or more, use of large, heavy-duty equipment rated 300 horsepower or greater, or the potential for impact pile driving. Although **Mitigation Measure 4.11-1** for the Proposed Project would also apply impacts from temporary construction noise resulting from implementation of Alternative 3 would be similar to those of the Proposed Project and remain *significant and unavoidable*.

Any future construction activity, specifically pile driving, could potentially generate vibration exceeding the 90 VdB threshold for buildings extremely susceptible to building damage (e.g., historical structures). Although mitigation is available to minimize the potential effects of vibration, it cannot be assured that construction-related vibration would not result in building damage. Although **Mitigation Measure 4.11-2(a)** and **(b)** would also apply, construction-related vibration would be similar to that of the Proposed Project and remain *significant and unavoidable* impact.

It is not anticipated that new development in the Project Area would involve activities that would result in substantial vibration levels (e.g., blasting operations). Like the Proposed Project, operational groundborne vibration in the vicinity of new development associated with Alternative 3 would be primarily generated by vehicular travel on the local roadways. According to the FTA *Transit Noise and Vibration Impact Assessment* guidance document, rubber tires and suspension systems dampen vibration levels from trucks to a level that is rarely perceptible (2006). Accounting for additional vehicle trips that would be accommodated by Alternative 3, traffic vibration levels would be similar to existing conditions and not perceptible. Therefore, like the Proposed Project, Alternative 3 would result in a *less than significant impact* for operational vibration.

Population and Housing

As shown in **Table 5-1**, under Alternative 3 the Project Area is projected to accommodate a population of 48,527 residents 17,208 housing units, and 9,055 jobs by 2040. SCAG projects growth of the Project Area to reach 14,444 residents, 5,039 housing units, and 8,797 jobs by 2040. The population forecast for Alternative 3 is greater than under SCAG’s RTP/SCS, but Alternative 3 would concentrate forecast growth in an area with a mix of jobs and housing and with good transit access. As such, although it would not implement RTP/SCS policies related to concentrating growth and development near transit to the same degree that the Proposed Project would, it would not result in significant impacts related population or housing growth. Alternative 3 would have less potential to displace housing than the Proposed Project but would also include less replacement and affordable housing. Like the Proposed Project, Alternative 3 would result in an overall increase in housing that would more than offset any housing displacement that may occur. It should be noted, however, that limiting housing development in the Project Area as would occur under Alternative 3 may result in increased housing development elsewhere in the City, which could potentially increase displacement of existing housing in other Los Angeles neighborhoods. Like the Proposed Project, Alternative 3 would not induce substantial population growth inconsistent with the regional growth plans. Overall, impacts related to population and housing would be *less than significant* under Alternative 3, as with the Proposed Project.

Public Services

Implementation of Alternative 3 would involve less overall development and associated growth than the Proposed Project. Nevertheless, the increased growth under either scenario may require additional public facilities to serve new residents. With respect to fire and police services, both Alternative 3 or the Proposed Project would accommodate new development that would increase demand for fire and police protection service. This may result in the need for new or expanded fire and police facilities. Based on the urbanized character of the Project Area, it is anticipated that new or expanded facilities could be built without creating significant environmental impacts. Depending on the location or nature of new facilities, the construction of needed new facilities could potentially result in impacts; however, like the Proposed Project, those impacts would be consistent with those already identified in this EIR for construction or operations. Project-specific environmental analysis under CEQA would be required to address any site-specific environmental concerns.

With respect to schools, as summarized in **Table 5-10**, residential and non-residential development accommodated by Alternative 3 would result in approximately 7,110 new students by 2040. Of this total, an estimated 3,703 would enroll in elementary school, 1,097 would enroll in middle school, 2,065 would enroll in high school, and 255 would enroll in special day classes. Overall Alternative 3 would result in approximately 47 percent less students as compared to the Proposed Project. As such, Alternative 3 would accommodate development that would increase the student population of the Proposed Project and would create the need for new or expanded school facilities, but to a lesser extent than the Proposed Project. As with the Proposed Project, developers would be required to pay applicable school impact fees. As with the Proposed Project, any impacts associated with new school construction would be similar to those analyzed and identified in the EIR for other types of development, any site-specific impacts would be speculative and would be addressed by LAUSD as part of a project-level CEQA review.

	Units	Student Generation				
		Elementary School (TK-5)	Middle School (6-8)	High School (9-12)	SDC	Total Students Generated
Residential ¹	117,208 du	3,361	926	1,843	255	6,384
Non-Residential ²	14,998,000 sf	342	171	213		726
Total Students Generated by the No Project Alternative		3,703	1,097	2,056	255	7,110

Note: du = dwelling units; sf = square feet; TK = Transitional Kindergarten; SDC = Specialized Day Care
 Totals may not add up due to rounding.

³ Student generation rates for residential use is based on Level 1 – Developer Fee Justification Study for Los Angeles Unified School District (LAUSD 2022c). Residential Generation Rates: Elementary: 0.1953/du, Middle School: 0.0538/du, High School: 0.1071 /du, SDC: 0.0148/du

³ Student generation rates for non-residential use is based on the average of office and retail/service student generation rates for a conservative estimate, taken from the LAUSD Commercial/Industrial Development School Fee Justification Study, September 2010 (LAUSD 2010). Non-residential Generation Rates: Elementary: 0.0228/1,000 sf, Middle School: 0.0114/1,000 sf, High School: 0.0142/1,000 sf. Non-residential uses include commercial, industrial, and public facilities.

With respect to libraries, either Alternative 3 or the Proposed Project would increase demand for library facilities. However, the Project Area is well served by library facilities and would not require the construction of new or expanded facilities.

Overall, impacts related to public services would be *less than significant* under Alternative 3, as with the Proposed Project.

Recreation

Implementation of Alternative 3 would involve less overall development and associated population increases than the Proposed Project. However, any new development would increase the use of existing park and recreational facilities throughout the City, including in and around adjacent to the Project Area. The City of Los Angeles Public Recreation Plan states that in order to meet long-range local recreational standards, the City should maintain a minimum of two acres of neighborhood facilities and two acres of community recreational facilities for every 1,000 persons, or a combination of neighborhood and community facilities adding up to four acres. Under Alternative 3, the Project Area population is projected to increase to approximately 48,500 residents, which would result in a ratio of parks to residents of approximately 20.3 acres per 1,000 residents- exceeding the City's 4 acres per 1,000 residents goal for neighborhood and community facilities. Therefore, like the Proposed Project, impacts related to deterioration of existing parks in and around the Project Area would be *less than significant*.

Reasonably anticipated development from Alternative 3 would increase demand for recreational and park facilities that serve the Project Area but would not require construction of new recreational or park facilities. Furthermore, based on the urban nature of the Project Area and the presence of constraints to the development of large park facilities, the construction and operation of new facilities would not be expected to result in significant environmental impacts. Like the Proposed Project, impacts from the construction or expansion of new recreational facilities would be *less than significant*.

Transportation/Traffic

Alternative 3 would result in less residential development and population growth in the Project Area compared to the Proposed Project. However, it would also result in an increased amount of job growth in the Project Area. The increased number of jobs in the Project Area coupled with the reduced dwelling units under Alternative 3 would increase per capita VMT and result in more traffic related impacts citywide and in the Project Area as employees would have to travel from other locations to obtain jobs located in the Project Area and would be less likely to use local transit options.

As with the Proposed Project, Alternative 3 would not increase traffic hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment), or result in inadequate emergency access. However, as with the Proposed Project, freeway off ramp queuing-related safety issues could potentially arise as additional development occurs in the Project Area. As with the Proposed Project, this would result in *significant and unavoidable* impacts to freeway safety impacts.

Tribal Cultural Resources

As described in Section 4.4, *Cultural Resources*, Los Angeles has a long history of Native American occupation, and any development activities that include ground disturbance have the potential to significantly impact tribal cultural resources. Effects on tribal cultural resources are only known once a specific development has been proposed because the effects are highly dependent on both the individual development site conditions and the characteristics of the proposed activity. Development accommodated by either Alternative 3 or the Proposed Project may disturb areas that potentially contain tribal resources. Similar to the Proposed Project, all future development projects under Alternative 3 would continue to be subject to existing federal, state, and local requirements and discretionary projects, subject to CEQA review would be required to comply with AB 52, which for projects relying on a [mitigated] negative declaration or an EIR, would require consultation with California Native American tribes. Implementation of **Mitigation Measures 4.4-2 (a), (b), (c), and (d)** in Section 4.4, *Cultural Resources*, and **Measures 4.16-1(a), (b), and (c)** in Section 4.16-1, *Tribal Cultural Resources*, would reduce the potential to disturb tribal cultural resources. Alternative 3 would also be subject to these mitigation measures. Therefore, the potential

for disturbance of tribal cultural resources would be similar than under the Proposed Project and would remain *less than significant with mitigation* incorporated.

Utilities and Service Systems

Implementation of Alternative 3 would involve less overall development and associated growth than the Proposed Project and would result in 2,828 fewer housing units, 7,974 fewer residents, and 792 more jobs, through 2040 than would be anticipated under the Proposed Project. As shown in **Table 4.17-3**, in Section 4.17, *Utilities and Service Systems*, projected wastewater generation for the Project Area in 2040 with implementation of the Proposed Project would generate an estimated 4.1 mgd of wastewater, which would represent less than one percent of the HWRP available capacity. By comparison, **Table 5-11** indicates that implementation of Alternative 3 would increase wastewater generation in the Project Area by approximately 2.3 mgd, which is less than one percent of the HWRP capacity. Alternative 3 would generate approximately 56 percent less wastewater as compared to the Proposed Project. Therefore, as with the Proposed project, the HWRP would have sufficient available treatment capacity to serve the Project Area under Alternative 3. In addition, the HWRP would be able to adequately treat future project-generated sewage under Alternative 3 and the treatment requirements of the RWQCB would not be exceeded so new or expanded treatment facilities would not be needed. Expansion/replacement of Project Area conveyance infrastructure may be needed and various facility improvements are already planned. Temporary traffic, air quality, and noise impacts associated with construction of such improvements would be within the parameters described for the Proposed Project. Continued compliance with the City's Low Impact Development (LID) Ordinance for all new development would ensure that any future development under Alternative 3 would not increase demands on stormwater drainage facilities and or expansion of existing facilities beyond specific improvements needed for individual development projects and impacts would remain *less than significant*.

With respect to water demand, per the 2020 Urban Water Management Plan, current water supplies, planned future water conservation efforts, and planned future water supplies will enable LADWP to reliably provide water that meets the demands of the City for a 25-year planning horizon (through 2045), based on SCAG's population projections. The 2020 UWMP projects an increase of 58,000 afy (8 percent) in water demand between 2025 and 2045, under single/multiple dry year conditions. As shown on **Table 5-12**, the projected net increase in water demand of 11,029 afy generated by new development accommodated by Alternative 3 would represent about 18 percent of the forecasted water demand increase through 2045. By comparison, as shown in **Table 4.17-6**, in Section 4.17, *Utilities and Service Systems*, estimated water demand for the Project Area in 2045 with implementation of the Proposed Project would be 17,892 afy. This represents about 31 percent of the forecasted citywide water demand increase through 2045. Alternative 3 would demand approximately 61 percent less water as compared to the Proposed Project. Therefore, as with the Proposed Project, adequate water supply exists to meet projected demand through the year 2045 for Alternative 3 and development of new water supplies would not be necessary. Expansion/replacement of water distribution infrastructure may be needed, but temporary traffic, air quality, and noise impacts associated with construction of such improvements would be within the parameters described for the Proposed Project and impacts would similarly be *less than significant*.

TABLE 5-11 ALTERNATIVE 3 PROJECTED WASTEWATER GENERATION			
Land Use	Dwelling Units or Jobs	Wastewater Generation Rate (gpd/unit)	Wastewater Generation (gpd)
Residential	17,208 du	137.9	2,372,983
Commercial	5,666 jobs	59.8	338,827
Industrial	3,296 jobs	123	405,408
Public Facilities	93 jobs	46.4	4,315
Total 2040 with Alternative 3 Wastewater Generation			3,121,533
Current Wastewater Generation			809,907
Net Change in Wastewater Generation			2,311,626
<p>Notes: Wastewater generation numbers are rounded to the nearest thousand. Totals may not add up due to rounding. gpd – gallons per day du – dwelling units sf – square feet</p> <p>SOURCE: Wastewater is assumed to be 100% of indoor water use. Per Exhibit 2E of the LADWP 2020 UWMP, indoor water use constitutes 56% of overall water use for single-family residences and 80% of overall water use for multi-family residences. Per the 2020 UWMP, per unit water demand is forecast to decline over time; the forecast 2030 rates per Exhibit 2L of the LADWP 2020 UWMP are assumed to apply to new development.</p>			

TABLE 5-12 ALTERNATIVE 3 PROJECTED WATER DEMAND IN THE PROJECT AREA				
Land Use	Dwelling Units or Jobs in Plan Area	Daily Water Use Rate (gpd/unit)	Daily Water Demand (gpd)	Annual Water Demand (afy)
Residential	17,208 du	202.8	3,489,782	9,561
Commercial	5,666 jobs	78.7	445,914	1,222
Industrial	3,296 jobs	125.5	413,648	1,133
Public Facilities	93 jobs	78.7	7,319	20
Total 2040 with Alternative 3 Demand			4,356,664	11,936
Current Water Demand			809,907	907
Net Change in Water Demand			3,546,757	11,029
<p>NOTES: Water demand numbers are rounded to the nearest thousand. Totals may not add up due to rounding. du – dwelling unit gpd – gallons per day afy – acre feet per year (1 af = 325,850 gallons)</p> <p>SOURCE: Water demand rates were obtained from the LADWP's 2020 UWMP, Exhibit 2L. Per the 2020 UWMP, per unit water demand is forecast to decline over time; the forecast 2040 rates are assumed to apply to new development.</p>				

As shown in **Table 4.17-7** in Section 4.17, *Utilities and Service Systems*, the combined daily intake capacity of landfills serving the Project Area is 45,540 tons per day and the average disposal intake is 18,620 tons per day, resulting in an available capacity of 200.2 million tons per day. As shown in **Table 5-13**, implementation of Alternative 3 would generate an increase of approximately 27 tons of solid waste per day above existing conditions, which would represent about 1 percent of the total available daily capacity (200.2 million ton per day) at local landfills. As shown in **Table 4.17-9** in Section 4.17, *Utilities and Service Systems*, development accommodated by the Proposed Project would increase the amount of solid waste generated in the Project Area by 30 tons per day, or 10,991 tons per year, above existing conditions. This

would represent less than 1 percent of the available intake capacity of landfills serving the Project Area. Alternative 3 would generate approximately 1.11 percent less waste as compared to the Proposed Project. Based on the County of Los Angeles Countywide Integrated Waste Management Plan (CIWMP) 2019 Annual Report, sufficient permitted capacity is available to accommodate the County's long-term disposal needs under the status quo. Sufficient permitted capacity is available to accommodate the Project Area's solid waste disposal needs. Therefore, as with the Proposed Project, implementation of Alternative 3 would result in solid waste generation that would remain within the capacity of waste disposal facilities serving the City. Therefore, similar to the Proposed Project, new or expanded facilities would not be needed and impacts would be *less than significant*.

Electrical and natural gas supplies are not expected to be adversely affected by development under Alternative 3, but improvements to Project Area distribution and telecommunication facilities may be needed. Temporary traffic, air quality, and noise impacts associated with construction of such improvements would be within the parameters described for the Proposed Project.

TABLE 5-13 ALTERNATIVE 3 SOLID WASTE GENERATION IN THE PROJECT AREA				
Land Use	Dwelling Units or Square Feet	Annual Waste Generation Rate	Annual Waste Generation (tons)	Daily Waste Generation (tons)
Residential	17,208	2.2	7,821.8	21.4
Commercial/ Governmental	9,055 jobs	2.3	3,937.0	10.8
Total 2040 Project Area Solid Waste Generation			11,758.8	32.2
Current Solid Waste Generation (2021)			1,868.80	5.1
Net Change in Waste Generation			9,890.0	27.1
NOTES:				
Waste generation (tons) was rounded to the nearest whole number. Totals may not add up due to rounding.				
du – dwelling unit				
sf – square feet				
SOURCE: CalEEMod Land Use SubType				

Overall, impacts related to utilities and service systems would be *less than significant* under Alternative 3, as with the Proposed Project.

Conclusion

Alternative 3 would accommodate less residential development overall and thus accommodate less growth in the Project Area, as compared to the Proposed Project. Therefore, Alternative 3 would result in a reduced level of impact for biological resources, geology and soil, hazards and hazardous materials, public services, recreation, tribal cultural resources, and utilities/service systems compared to the Proposed Project. Impacts related to air quality, cultural resources, and noise would be reduced compared to the Proposed Project but remain *significant and unavoidable* with Alternative 3. Impacts related to energy, greenhouse gas emissions, land use and planning, and population and housing would be increased compared to the Proposed Project but would remain *less than significant* with Alternative 3. In addition, limiting development potential in the Project Area may induce higher levels of growth in other areas of the City and region that have fewer transit options and longer distances between housing, jobs, and services. As such, Alternative 3 may incrementally increase regional transportation impacts, which would remain *significant and unavoidable*.

ENVIRONMENTALLY SUPERIOR ALTERNATIVE

CEQA requires identification of the environmentally superior alternative among the options studied. In general, the environmentally superior alternative is the alternative that would be expected to generate the fewest adverse impacts. If the No Project Alternative (Alternative 1) is identified as environmentally superior, then another environmentally superior alternative shall be identified among the other alternatives.

As shown in **Table 5-14**, Alternatives 1, 2, and 3 would all incrementally reduce impacts for multiple issue areas compared to the Proposed Project. This is because these alternatives would all reduce overall development levels in the Project Area. However, none of these alternatives would avoid any of the significant and unavoidable impacts of the Proposed Project. Alternative 1 would involve the lowest overall level of population growth and development in the Project Area. However, because Alternative 1 would not be subject to all of the same mitigation measures as proposed in the Proposed Project, it may result in higher greater overall impacts than the Proposed Project for certain issues, such as noise and tribal cultural resources. In addition, by limiting growth in the Project Area, Alternative 1 could cause more forecast growth and associated development to occur in other areas of the City or region that have less access to transit and longer distances between housing, jobs, and services. In this way, Alternative 1 may also result in greater overall regional VMT and associated air pollutant and GHG emissions.

Between the two other alternatives, Alternative 2 has the potential to reduce impacts more so than Alternative 3, although both are very similar with respect to environmental impacts. Alternative 2 would accommodate less growth in the Project Area, as compared to Alternative 3, potentially resulting in slightly reduced impacts to air quality (operational emissions), cultural resources, hazards/hazardous materials, public services, and utilities/service systems, although Alternative 2 would still result in the same impact conclusions as Alternative 3 and the Proposed Project in all impact categories. Similar to Alternative 1, limiting development potential in the Project Area may induce higher levels of growth in other areas of the City and region that have fewer transit options and longer distances between housing, jobs, and services, potentially increasing regional traffic and related GHG emissions. Additionally, while significant impacts would potentially be less under Alternative 2, impacts related to historical resources, air quality, construction noise and vibration, and transportation safety impacts related to freeway off-ramp queuing would remain *significant and unavoidable*. Nonetheless, Alternative 2 is identified as the Environmentally Superior Alternative as it would be expected to generate the fewest adverse impacts.

TABLE 5-14 IMPACT COMPARISON OF ALTERNATIVES			
Issue	Alternative 1: No Project	Alternative 2: No Urban Village	Alternative 3: Reduced Urban Village
Aesthetics	=	=	=
Air Quality	+	+	+
Biology	+	+	+
Cultural Resources	+	+	+
Energy	-	-	-
Geology and Soils	+	+	+
Greenhouse Gas Emissions	-	-	-
Hazards/Hazardous Materials	+	+	+
Hydrology/Water Quality	=	=	=
Land Use and Planning	-	-	-
Noise	-	+	+
Population and Housing	-	-	-
Public Services	+	+	+
Recreation	+	+	+
Transportation/Traffic	-	-	-
Tribal Cultural Resources	-	+	+
Utilities/Service Systems	+	+	+
<p>+ Superior to the Proposed Project (reduced level of impact) - Inferior to the Proposed Project (increased level of impact) = Similar level of impact to the Proposed Project</p> <p>Significant and unavoidable impacts are bolded and red. Note that for Alternative 1, impacts would not technically be "significant" under CEQA since that alternative involves continued implementation of the existing CASP; impacts are identified as "significant and unavoidable" if the physical effect associated with the alternative would be equivalent to a "significant impact" if the alternative involved a new discretionary action.</p>			

5.6 ALTERNATIVES CONSIDERED BUT REJECTED

Section 15126.6 (c) of the *CEQA Guidelines* requires that an EIR identify those alternatives that were considered but rejected by the lead agency because they either did not meet the objectives of the project, were considered infeasible, or would not avoid or substantially lessen one or more significant effects of the Proposed Project. No other alternatives were identified that would feasibly attain most of the basic project objectives but would also avoid or substantially lessen the significant effects of the Proposed Project. Outside of a complete moratorium on new development, none of the impacts could be reduced to below a level of significance. Any demolition or construction activity in the Project Area would have the potential to adversely affect historical resources or generate significant construction-related noise. Moreover, as previously noted, limiting development in the Project Area may simply divert more growth and development to other areas of the City, thus increasing the potential for similar impacts in other areas and increasing overall Citywide and regional VMT and associated air pollutant and GHG emissions.

6.0 OTHER CEQA CONSIDERATIONS

Section 15126 of the California Environmental Quality Act (CEQA) Guidelines requires that all phases of a project must be considered when evaluating its impact on the environment. As part of this analysis, in addition to the impact analysis done in Chapter 4 and the alternative analysis in Chapter 5, the EIR must also analyze and identify (1) significant irreversible environmental changes that would result from implementation of the Proposed Project, (2) growth-inducing impacts of the Proposed Project, and (3) any secondary impacts from the proposed mitigation measures identified in Chapter 4. These impacts are analyzed in this Chapter.

6.1 SIGNIFICANT IRREVERSIBLE ENVIRONMENTAL EFFECTS

Section 15126.2(c) of the CEQA Guidelines requires a discussion of any significant irreversible environmental changes that would be caused by the Proposed Project. Specifically, Section 15126.2(c) states:

Uses of nonrenewable resources during the initial and continued phases of the project may be irreversible since a large commitment of such resources makes removal or nonuse thereafter unlikely. Primary impacts and, particularly, secondary impacts (such as highway improvement which provides access to a previously inaccessible area) generally commit future generations to similar uses. Also, irreversible damage can result from environmental accidents associated with the project. Irreversible commitments of resources should be evaluated to assure that such current consumption is justified.

Generally, a project would result in significant irreversible environmental changes if any of the following would occur:

- The primary and secondary impacts would generally commit future generations to similar uses.
- The project would involve a large commitment of nonrenewable resources.
- The project involves uses in which irreversible damage could result from any potential environmental accidents associated with the project; or
- The proposed consumption of resources is not justified (e.g., the project involves the wasteful use of energy).

Resources that would be consumed as a result of implementation of the Proposed Project include water, electricity, natural gas, and fossil fuels; however, the amount and rate of consumption of these resources would not result in significant environmental impacts related to the unnecessary, inefficient, or wasteful use of resources (see Chapters 4.5, *Energy*, and 4.17, *Utilities and Service Systems*). In addition, construction activities related to the reasonably anticipated development would result in the irretrievable commitment of nonrenewable energy resources, primarily in the form of fossil fuels (including fuel oil), natural gas, and gasoline for automobile and construction equipment. However, use of such resources would not be unusual as compared to other construction projects and would not substantially affect the availability of such resources.

With respect to operation activities, compliance with applicable building codes, as well as mitigation measures, would ensure that natural resources are conserved or recycled to the maximum extent feasible. It

is also likely that in response to GHG reduction mandates, new technologies or systems will emerge, or will become more cost-effective or user-friendly, that will further reduce the reliance of Project Area development upon nonrenewable natural resources. However, even with implementation of conservation measures, consumption of natural resources would generally increase with implementation of the Proposed Project due to population increases.

In summary, implementation of the Proposed Project would involve irreversible environmental changes to existing natural resources, such as the commitment of energy and water resources as a result of the operation and maintenance of future development. However, the Proposed Project would not involve wasteful or unjustifiable use of energy or other resources, and energy conservation efforts would also occur with new construction. New development accommodated by the Project would be constructed and operated in accordance with specifications contained in Title 24 of the California Code of Regulations and local green building requirements, as discussed in Section 4.5, *Energy*. Therefore, the use of energy related to the Proposed Project would occur in an efficient manner.

6.2 GROWTH INDUCING IMPACTS

Section 15126.2(d) of the CEQA Guidelines requires that growth inducing impacts of a project be considered. Growth inducing impacts are characteristics of a project that could directly or indirectly foster economic or population growth or the construction of additional housing, either directly or indirectly, in the surrounding environment. According to the CEQA Guidelines, such projects include those that would remove obstacles to population growth (e.g., a major expansion of a wastewater treatment plant). In addition, as set forth in the CEQA Guidelines, increases in the population may tax existing community service facilities, requiring construction of new facilities that could cause significant environmental effects. The CEQA Guidelines also state that it must not be assumed that growth in an area is necessarily beneficial, detrimental, or of little significance to the environment. Generally, a project is considered to result in growth inducing effects if it results in one of the following:

- The extension of infrastructure (sewer, water, etc.) to an area currently undeveloped and/or lacking adequate infrastructure, thus removing an obstacle to growth; and/or
- The provision of housing or employment to an area currently undeveloped or lacking in adequate housing or employment.

The Project Area is an urbanized community with road, water, sewer, storm drain, and other infrastructure in place. Although the Project would include certain utility upgrades, such upgrades are specifically intended to accommodate the growth planned for the Project Area and would not induce growth outside the Project Area. Rather, the Proposed Project is specifically intended to concentrate development in an area that is already served by infrastructure in order to ensure that infrastructure is utilized efficiently and in a manner that reduces the environmental impacts of development.

As analyzed in Chapter 4.12, *Population, Housing, and Employment*, of this EIR, the Proposed Project would accommodate substantial growth in population and employment in the Project Area. However, such growth would not induce growth outside the Project Area beyond what is anticipated to result from the Proposed Project itself. To the contrary, by concentrating growth in the Project Area, it is anticipated that implementation of the Proposed Project would actually limit growth in other areas of the City to some degree. Because growth in the Project Area would involve high density, mixed-use infill development in an area that is well-served by transit, it is actually anticipated to reduce per capita vehicle miles traveled (VMT) and associated air pollutant and GHG emissions relative to development in other areas of the City. Further, concentrating development in the urbanized Project Area would generally avoid impacts to agricultural, biological, and mineral resources while redevelopment of properties with new development

built to current standards would generally improve surface water quality and reduce the potential for substantial seismic damage.

The Proposed Project would not result in unplanned growth; rather, it would ensure that projected growth is accommodated. In conclusion, the Proposed Project is anticipated to satisfy a portion of the anticipated population growth in the region in an efficient manner consistent with state, regional and City policies. The Proposed Project would be consistent with the projected growth forecast for the Los Angeles region and regional policies to reduce urban sprawl. To that end, it would efficiently utilize existing infrastructure, reduce regional congestion, and improve air quality.

6.3 POTENTIAL SECONDARY EFFECTS

CEQA Guidelines Section 15126.4(a)(1)(D) states that, “[i]f a mitigation measure would cause one or more significant effects in addition to those that would be caused by the project as proposed, the effects of the mitigation measures shall be discussed but in less detail than the significant effects of the project as proposed.” In accordance with the Guidelines, the following provides a discussion of the potential impacts that could occur from implementation of the proposed mitigation measures.

Air Quality

Mitigation Measure 4.2-2 would reduce regional and local emissions generated by various construction activities, including equipment operation and truck trips, through best management practices. Implementation of this measure would have a beneficial impact on reducing air quality impacts and would not result in adverse secondary impacts.

Biology

Mitigation Measure 4.3-1 requires that an applicant retain a qualified biologist, who is not likely to cause secondary impacts due to their education and training, conduct an initial site assessment for projects that have the potential to disturb biological resources. Similarly, **Mitigation Measures 4.3-2(a)** and **4.3-2(b)** involve surveying and notification, which are not activities that would cause secondary impacts when performed under a qualified biologist.

Cultural Resources

Mitigation Measures 4.4-1(a), **4.4-1(b)** and **4.4-1(c)** would ensure that historic resources are identified and treated appropriately to avoid or minimize potential impacts. **Mitigation Measures 4.4-2(a)**, **4.4-2(b)**, and **4.4-2(c)**, would provide for the recovery of any significant archaeological resources that cannot be preserved in place. These mitigation measures are procedural actions that would not result in physical changes in the environment that could result in secondary impacts.

Geology

Mitigation Measures 4.6-6(a), **4.6-6(b)**, and **4.6-6(c)** would ensure that potential paleontological resources are identified and either further avoided or recovered. These mitigation measures are procedural actions that would not result in physical changes in the environment that could result in secondary impacts.

Hazards and Hazardous Materials

Mitigation Measures **4.8-4(a)** and **4.8-4(b)** would require preliminary investigation for hazardous materials potential on all Project Area excavation and grading. These mitigation measures are procedural actions that would not result in physical changes in the environment that could result in secondary impacts. Any potential remediation of contamination would be required to comply with regulations and regulatory agency oversight, which may require subsequent environmental review. Any impacts from remediation would be speculative at this time.

Noise

Mitigation Measure **4.11-1** involves specific construction-related measures to substantially reduce noise levels. Mitigation Measures **4.11-2(a)** and **4.11-2(b)** involve specific construction-related measures to substantially reduce vibration levels. These measures would not result in additional secondary impacts. The potential use of some measures, such as sound barriers and building designs, could affect the visual environment. However, the potential visual effects from this mitigation measure are expected to be similar to the effects that have been evaluated in the Aesthetics section of this EIR. No adverse secondary impacts would result from these measures.

Tribal Resources

Mitigation Measures **4.16-1(a)**, **4.16-1(b)**, and **4.16-1(c)** would ensure that tribal resources are identified and either further avoided or recovered. These mitigation measures are procedural actions that would not result in physical changes in the environment that could result in secondary impacts.

**NOTICE OF PREPARATION OF A DRAFT ENVIRONMENTAL IMPACT REPORT
AND NOTICE OF SCOPING MEETING FOR
UPDATES TO THE CORNFIELD ARROYO SECO SPECIFIC PLAN (CASP)**

TO: Agencies, Organizations, and Interested Parties

DATE: April 8, 2021

The City of Los Angeles is the Lead Agency under the California Environmental Quality Act (CEQA) and will prepare an Environmental Impact Report (EIR) for a project involving updates to the Cornfield Arroyo Seco Specific Plan ("CASP Update" or "Proposed Project" or "Project"). The CASP Update would amend the text, maps, and tables of the CASP, including new land use and zoning regulations, incentives, and boundaries, for the purpose of encouraging affordable and mixed-income housing production. More details on the Project are provided below.

The City is requesting identification of environmental issues, environmental impacts, and information that you or your organization believes needs to be considered and analyzed in the EIR, including environmental impacts, mitigation measures, and alternatives.

NOTICE OF SCOPING MEETING

Pursuant to California Public Resources Code Section 21083.9 and California Code of Regulations, Title 14, Chapter 3, ("CEQA Guidelines") Section 15082, the Lead Agency will conduct a scoping meeting for the purpose of soliciting oral and written comments from interested parties requesting notice, responsible agencies, agencies with jurisdiction by law, trustee agencies, and involved federal agencies, as to the appropriate scope and content of the EIR.

The Public Scoping Meeting will be held virtually in an online format using Zoom to share information regarding the Project and the environmental review process and to provide information on how interested parties can provide written comments. City staff and environmental consultants will be available during this virtual meeting which will begin with a pre-recorded presentation. After the Public Scoping Meeting has ended, a copy of the pre-recorded presentation will be posted to the Department's website at <https://planning.lacity.org/development-services/eir>.

The City encourages all interested individuals and organizations to attend this virtual meeting. Questions may be submitted via the chat box in the control panel or verbally for participants joining by telephone during the Question and Answer session. Interested parties wishing to provide comments or public testimony in response to the NOP should provide them in writing, as described under "Submittal of Written Comments," below. No decisions about the Project will be made at the Public Scoping Meeting. A separate

public hearing for the CASP Update, along with other public engagement activities, will be scheduled at a later date. The date, time, and virtual location of the Public Scoping Meeting are as follows:

Date: Thursday, April 22, 2021
Time: 4:00 PM
Virtual Location: Join Zoom Meeting <https://planning-lacity-org.zoom.us/j/84993793018>
Meeting ID: 849 9379 3018
Password: 912684

Instructions for joining by telephone:
Dial by your location
+1 213 338 8477 US (Los Angeles)
+1 669 900 9128 US (San Jose)
Meeting ID: 849 9379 3018

Participants will be asked for a Meeting ID, enter "(Meeting ID listed above)", followed by "#" (pound sign).
Participants will be asked to enter a participant ID, enter "#" (pound sign) to continue.

ACCOMMODATIONS: As a covered entity under Title II of the Americans with Disabilities Act, the City of Los Angeles does not discriminate. Closed captioning or other assistive services may be provided upon request. Other services, such as translation between English and other languages, may also be provided upon request. To ensure availability of services, please make your request no later than three working days (72 hours) prior to the meeting by contacting Clare Kelley at (213) 978-1207 or clare.kelley@lacity.org.

RESPONSIBLE AND TRUSTEE AGENCIES

The City requests your agency's views on the scope and content of the environmental information relevant to your agency's statutory responsibilities in connection with the project, in accordance with the CEQA Guidelines, Section 15082(b). Your agency will need to use the EIR prepared by the City when considering any permits or other project approvals that your agency must issue. As such, your responses to this Notice of Preparation (NOP), at a minimum should identify: (1) The significant environmental issues and reasonable alternatives and mitigation measures that your agency will need to have explored in the EIR; and (2) Whether your agency will be a responsible or trustee agency for this project.

REVIEW AND RESPONSE PERIOD

April 8, 2021 to May 8, 2021

Pursuant to CEQA Guidelines, Section 15082(b), responses to this NOP must be provided during this response period.

PROJECT LOCATION

The Project location is the Cornfield Arroyo Seco Specific Plan Area ("CASP Area" or "Project Area"), a geographically contiguous, approximately 660-acre (1.0 square mile) area located within portions of the Central City North, Northeast Los Angeles, and Silver Lake-Echo Park-Elysian Valley Community Plan Areas. The Project Area encompasses the Los Angeles State Historic Park, segments of the Los Angeles River and Arroyo Seco, segments of Interstate 5 and California State Route 110, and the Lincoln/Cypress Metro L Line station. Approximately 6,201 individuals (1,814 households) reside within the Project Area, which is bordered by the neighborhoods of Chinatown to the west, Lincoln Heights to the east, and Cypress Park to the north. The regional context of the CASP is shown on **Figure 1**. The CASP Area boundaries are shown in **Figure 2**.

PROJECT BACKGROUND

On June 28, 2013, the City adopted the CASP and certified its Environmental Impact Report (ENV-2009-599-EIR, SCH No. 2009031002). The CASP involved substantial revisions to portions of the Central City North, Northeast Los Angeles, and Silver Lake-Echo Park-Elysian Valley Community Plans and the establishment of a specific plan to guide the future development of the predominantly industrial, approximately 660-acre area. Broadly, the CASP includes the following:

- The designation of new mixed-use zoning districts that replace former industrial zoning, and the identification of the types and intensities of uses permitted within these districts, as well as building height, massing, and façade standards,
- The establishment of new affordable housing land use incentives,
- The designation of new open spaces and parks and the establishment of open space requirements for new developments,
- Circulation and parking standards,
- Revised street designations and standards,
- Resource conservation standards, and
- Mitigation measures for subsequent development projects.

The intent of the adopted CASP is to guide the transition of an underserved, vehicular-oriented industrial and public facility area into a cluster of mixed-use, pedestrian-oriented neighborhoods. Policies in the CASP support a range of housing options, new public spaces, opportunities for walking and bicycling, and the retention of land for existing industrial businesses and the clean technology businesses of the future. Among its numerous goals, a key priority of the CASP is to facilitate the production and continued provision of affordable housing for Extremely Low Income and Very Low Income households.

However, since the CASP's adoption, housing production of any kind has been extremely limited. Among the projects proposed and approved, all involved discretionary actions from the City Planning Commission or Area Planning Commission to deviate from the CASP, with less than one percent of total units reserved for low-income households. The limited supply of available housing units (0.9 percent residential vacancy rate), together with the low average household income and strong demand for housing in the area, creates growing displacement pressure for existing residents and disproportionately in communities of color. The Project Area has seen rents increase at a higher rate than in nearby neighborhoods that have experienced greater increases to their housing supply.

In light of the present housing situation, and in response to a City Council Motion (Council File No. 13-0078-S2) calling for the evaluation and amendment of the Specific Plan, the City of Los Angeles is updating the CASP with the goal of further bolstering the production of affordable and mixed-income housing in the Project Area. The Proposed Project will entail updates to the CASP's zoning regulations, land use incentives, boundaries, and other key provisions to facilitate the production of housing, in a manner consistent with the underlying vision and purpose of the adopted CASP.

PROJECT DESCRIPTION

The Proposed Project is the update of the CASP and the adoption of necessary revisions and any other amendments necessary to implement this update, including amendments to General Plan elements (such as the Framework Element), Community Plans, the LAMC (Chapter 1 and Chapter 1A), specific plans, and other ordinances to implement those updates. The primary objective of the Proposed Project is to encourage affordable and mixed-income housing production in the Project Area.

The Proposed Project would accommodate additional housing in the Project Area by expanding the residential Urban Village zoning designation to more parcels within the CASP and allowing 100% affordable housing developments in the Urban Innovation and Urban Center zones where they are not currently

permitted. The changes would result in a more even split between Urban Village and Urban Innovation zoning compared to the existing CASP. Additionally, the existing 10% non-residential use requirement for projects in the Urban Village zone would be removed. At the same time, the CASP's affordable housing zoning incentives would be recalibrated and updated for those development projects seeking additional FAR rights.

The Proposed Project would also update the building form, urban design, open space, parking, conservation, performance, and sign standards of the CASP as necessary to support housing production, and amend the CASP text with technical revisions that ensure consistency, clarity, and ease of implementation and reflect current and future demographic, regulatory, environmental, and economic conditions. The CASP boundaries would be revised to exclude parcels that currently do not contain CASP zoning, such as RD zones. The Project would retain the existing ministerial review process for subsequent development projects.

Project Objectives

The primary objectives of the Project will be to:

- Increase the production of affordable and mixed-income housing within the Project Area,
- Protect residents, especially low-income households, from indirect and direct displacement, and ensure stability of existing vulnerable communities,
- Design and regulate housing to promote health and well-being, increase access to amenities such as parks and public transit, contribute to a sense of place, foster community and belonging, and plan for a sustainable future,
- Build, operate, and maintain welcoming and accessible housing for Angelenos with unique needs, including those with disabilities, large families, older adults, and other people facing housing barriers and food insecurity,
- Refine Plan standards, processes, and procedures to be more intuitive and transparent, with the goal of enhancing development certainty for both market-rate and affordable developers, and
- Preserve employment areas that show a concentration of jobs, while supporting small and/or legacy businesses, local employment, new productive uses, and employment spaces, such as light industrial and general commercial uses.

ISSUES TO BE ADDRESSED IN THE EIR

Based on the project description and the Lead Agency's understanding of the environmental issues associated with the CASP update, the following topics will be analyzed in the EIR:

- Aesthetics
- Air Quality

- Transportation
- Tribal Cultural Resources
- Utilities and Service Systems
- Wildfire

The EIR will analyze the reasonably foreseeable indirect physical changes to the environment in the above topic areas caused by the project, including the updates to the CASP and any other necessary amendments to the General Plan or the LAMC.

The Hazards and Hazardous Materials section of the Draft EIR will discuss the potential impacts associated with housing development on sites identified as hazardous materials sites, known as the Cortese List, pursuant to Government Code Section 65962.5. The Project area includes hundreds of sites, some of which are on the Cortese List. Interested parties can view the Cortese List sites within the CASP Area at the following link: <https://planning4la.org/odoc/corteseList>.

Alternatives to be analyzed in the EIR are to be defined and analyzed consistent with the requirements of CEQA Guidelines, Section 15126.6. The specific alternatives to be evaluated will include a “No Project” alternative, as required by CEQA, and may include alternative land use configurations.

DOCUMENT AVAILABILITY

The NOP can be viewed on the City of Los Angeles Department of City Planning website at: <https://planning.lacity.org/development-services/environmental-review/published-documents>.

To request an appointment to view a hard copy of the documents, please contact Clare Kelley at (213) 978-1207 or clare.kelley@lacity.org.

SUBMITTAL OF WRITTEN COMMENTS

The Lead Agency solicits comments regarding the scope, content and specificity of the EIR from all interested parties requesting notice, responsible agencies, agencies with jurisdiction by law, trustee agencies, and involved agencies. Please send written/typed comments (including a name, telephone number, and contact information) electronically or by mail to the following:

City of Los Angeles, Department of City Planning
ATTN: Clare Kelley, City Planner
Case Numbers: CPC-2021-2642-SP; ENV-2021-2643-EIR
200 N. Spring Street, Room 667, Los Angeles, CA 90012

E-mail: clare.kelley@lacity.org
Phone: (213) 978-1207

In accordance with CEQA Section 15082, this Notice of Preparation is being circulated for a 30-day comment period. **The City of Los Angeles requests that written comments be provided at the earliest possible date, but no later than 5:00 p.m. on May 8, 2021.**

For more information about the CASP Update, please visit Planning4LA.org/casp-update.

ALL INTERESTED PARTIES ARE INVITED TO ATTEND THE PUBLIC SCOPING MEETING TO ASSIST IN IDENTIFYING ISSUES TO BE ADDRESSED IN THE EIR. ATTENDEES WILL HAVE AN OPPORTUNITY TO PROVIDE INPUT TO THE CONSULTANTS PREPARING THE EIR.

RE: Cornfield Arroyo Seco Specific Plan (CASP)
Update – Notice of Preparation (NOP)
SCH# 2021040206
GTS# 07-LA-2021-03543
Vic. LA-Multiple

Dear Clare Kelley,

Thank you for including the California Department of Transportation (Caltrans) in the environmental review process for the above referenced project. The Proposed Project is an update of the CASP. The primary objective of the Proposed Project is to encourage affordable and mixed-income housing production in the Project Area by expanding the residential Urban Village zoning designation to more parcels within the CASP and allowing 100% affordable housing developments in the Urban Innovation and Urban Center zones where they are not currently permitted. The changes would result in a more even split between Urban Village and Urban Innovation zoning compared to the existing CASP. Additionally, the existing 10% non-residential use requirement for projects in the Urban Village zone would be removed. At the same time, the CASP's affordable housing zoning incentives would be recalibrated and updated for those development projects seeking additional FAR rights. The Proposed Project would also update the building form, urban design, open space, parking, conservation, performance, and sign standards of the CASP as necessary to support housing production, and amend the CASP text with technical revisions that ensure consistency, clarity, and ease of implementation and reflect current and future demographic, regulatory, environmental, and economic conditions. The CASP boundaries would be revised to exclude parcels that currently do not contain CASP zoning, such as RD zones. The Project would retain the existing ministerial review process for subsequent development projects.

The nearest State facilities to the proposed project are SR 110 and I-5. After reviewing the NOP, Caltrans has the following comments:

Caltrans acknowledges and supports mixed-use, infill development that prioritizes affordable housing, like the proposed Specific Plan aims to facilitate. The primary goals of the updated CASP are in direct alignment with State-level sustainable transportation policy goals which seek to

reduce the number of trips made by driving, reduce Greenhouse Gas (GHG) emissions, and encourage alternative modes of travel. Caltrans' Strategic Management Plan has set targets of tripling trips made by bicycle and doubling trips made by walking and public transit, as well as achieving a reduction in statewide, per capita, vehicle miles traveled (VMT). Similar goals are embedded in the California Transportation Plan 2040, California Transportation Plan 2050, and Southern California Association of Governments (SCAG) Connect SoCal (2020-2045 Regional Transportation Plan/Sustainable Communities Strategy). Statewide legislation such as AB 32 and SB 375, as well as Executive Order S-3-05 and N-19-19, echo the need to pursue more sustainable development. Projects, like the one proposed, can help California meet these goals.

Caltrans has the following recommendations for two of the Specific Plan sections outlined in the NOP that should be addressed while developing the Draft Environmental Impact Report:

1. Street Designations and Standards:

Caltrans recommends creating the safest streetscape possible for pedestrians and people on bikes. Wide roadways with numerous travel lanes are associated with higher vehicle speeds and less safe conditions for people walking and biking. Elements should be considered to create the most comfortable environment possible for all the people who will be walking and biking within the specific plan area. The most effective methods to reduce pedestrian and bicyclist exposure to vehicles is through physical design and geometrics. These methods include the construction of physically separated facilities such as Class IV bike lanes, curb extensions or bulb-outs, sidewalks, pedestrian refuge islands, landscaping, street furniture, and reductions in crossing distances through roadway narrowing. Visual indicators such as, pedestrian and bicyclist warning signage, flashing beacons, crosswalks, signage, and striping should be used in addition to physical design improvements to indicate to motorists that they can expect to see and yield to pedestrians and people on bikes.

2. Circulation and Parking Standards:

Caltrans encourages the lead agency to seriously consider eliminating car parking requirements altogether. Research looking at the relationship between land-use, parking, and transportation indicates that the amount of car parking supplied can undermine a project's ability to encourage public transit and active modes of transportation. Additionally, Rates of car ownership and vehicle miles traveled (VMT) are significantly lower for low-income households than they are for high-income households. Seeing as one of the primary objectives of this specific plan update is to encourage affordable housing, including developments with 100% affordable housing, this should be taken into serious consideration. There is sufficient justification to consider eliminating parking requirements to promote affordability and achieve the project's goals.

Caltrans also recommends that at least one long-term bicycle parking space be provided per residential unit, allowing residents to take advantage of the Specific Plan's central location and choose the bicycle as their mode of travel more easily. Long-term bicycle parking should be located onsite, indoors, on the ground floor, and within 200 feet of primary pedestrian entrances.

While Caltrans does not expect project approval to result in a direct adverse impact to the existing State transportation facilities, the Cornfield Arroyo Seco Specific Plan area is immediately adjacent to SR 110 and I-5, so an encroachment permit will be required for any project work proposed on or in the vicinity of the Caltrans right-of-way and all environmental concerns must be adequately addressed. Please note that any modifications to State facilities will be subject to additional review by the Office of Permits prior to issuance of the permit.

Caltrans looks forward to the forthcoming Draft Environmental Impact Report to confirm that the Project will result in a net reduction in Vehicle Miles Traveled.

If you have any questions, please contact project coordinator Anthony Higgins, at anthony.higgins@dot.ca.gov and refer to GTS# 07-LA-2021-03543.

Sincerely,

MIYA EDMONSON

Subject: Notice of Preparation of a Draft Environmental Impact Report for Updates to the Cornfield Arroyo Seco Specific Plan, SCH #2021040206, City of Los Angeles, Los Angeles County

Dear Ms. Kelley:

The California Department of Fish and Wildlife (CDFW) has reviewed the Notice of Preparation (NOP) of a Draft Environmental Impact Report (DEIR) from the City of Los Angeles (City; Lead Agency) for the Updates to the Cornfield Arroyo Seco Specific Plan (Project; CASP). Thank you for the opportunity to provide comments and recommendations regarding those activities involved in the Project that may affect California fish and wildlife. Likewise, we appreciate the opportunity to provide comments regarding those aspects of the Project that CDFW, by law, may be required to carry out or approve through the exercise of its own regulatory authority under the Fish and Game Code.

CDFW's Role

CDFW is California's Trustee Agency for fish and wildlife resources and holds those resources in trust by statute for all the people of the State [Fish & G. Code, §§ 711.7, subdivision (a) & 1802; Pub. Resources Code, § 21070; California Environmental Quality Act (CEQA) Guidelines, § 15386, subdivision (a)]. CDFW, in its trustee capacity, has jurisdiction over the conservation, protection, and management of fish, wildlife, native plants, and habitat necessary for biologically sustainable populations of those species (Id., § 1802). Similarly, for purposes of CEQA, CDFW is charged by law to provide, as available, biological expertise during public agency environmental review efforts, focusing specifically on projects and related activities that have the potential to adversely affect State fish and wildlife resources.

CDFW is also submitting comments as a Responsible Agency under CEQA (Pub. Resources Code, § 21069; CEQA Guidelines, § 15381). CDFW expects that it may need to exercise regulatory authority as provided by the Fish and Game Code, including lake and streambed alteration regulatory authority (Fish & G. Code, § 1600 *et seq.*). Likewise, to the extent implementation of the Project as proposed may result in "take", as defined by State law, of any species protected under the California Endangered Species Act (CESA) (Fish & G. Code, § 2050 *et seq.*), or CESA-listed rare plant pursuant to the Native Plant Protection Act (NPPA; Fish & G. Code, §1900 *et seq.*), CDFW recommends the Project proponent obtain appropriate authorization under the Fish and Game Code.

Conserving California's Wildlife Since 1870

Clare Kelley
City of Los Angeles
April 27, 2021
Page 2 of 14

Project Description and Summary

Objective: The intent of the adopted CASP is to guide the transition of an underserved, vehicular-oriented industrial and public facility area into a cluster of mixed-use, pedestrian-oriented neighborhoods. Policies in the CASP support a range of housing options, new public spaces, opportunities for walking and bicycling, and the retention of land for existing industrial businesses and the clean technology businesses of the future. Among its numerous goals, a key priority of the CASP is to facilitate the production and continued provision of affordable housing for Extremely Low Income and Very Low-Income households. The City of Los Angeles is updating the CASP with the goal of further production of affordable and mixed-income housing in the Project Area. The proposed Project will entail updates to the CASP's zoning regulations, land use incentives, boundaries, and other key provisions to facilitate the production of housing, in a manner consistent with the underlying vision and purpose of the adopted CASP. The primary objectives of the Project will be to:

- Increase the production of affordable and mixed-income housing within the Project Area;
- Protect residents, especially low-income households, from indirect and direct displacement, and ensure stability of existing vulnerable communities;
- Design and regulate housing to promote health and well-being, increase access to amenities such as parks and public transit, contribute to a sense of place, foster community and belonging, and plan for a sustainable future;
- Build, operate, and maintain welcoming and accessible housing for people with unique needs, including those with disabilities, large families, older adults, and other people facing housing barriers and food insecurity;
- Refine CASP standards, processes, and procedures to be more intuitive and transparent, with the goal of enhancing development certainty for both market-rate and affordable developers; and
- Preserve employment areas that show a concentration of jobs, while supporting small and/or legacy businesses, local employment, new productive uses, and employment spaces, such as light industrial and general commercial uses.

Location: The Project location is a geographically contiguous, approximately 660-acre (1.0 square mile) area located within portions of the Central City North, Northeast Los Angeles, and Silver Lake-Echo Park-Elysian Valley Community Plan Areas. The Project area encompasses the Los Angeles State Historic Park, segments of the Los Angeles River and Arroyo Seco, segments of Interstate 5 and California State Route 110, and the Lincoln/Cypress Metro L Line station. The Project area is bordered by the neighborhoods of Chinatown to the west, Lincoln Heights to the east, and Cypress Park to the north.

Comments and Recommendations

CDFW offers the comments and recommendations below to assist the City in adequately identifying, avoiding, and/or mitigating the Project's significant, or potentially significant, direct, and indirect impacts on fish and wildlife (biological) resources.

Specific Comments

- 1) California Protected Areas. CDFW recommends the City consider the Project's potential

Clare Kelley
City of Los Angeles
April 27, 2021
Page 3 of 14

impacts on the following areas within or adjacent to the Project boundary: Arroyo Seco, Los Angeles River, Los Angeles State Historic Park, Confluence Park, Downey Playground and Recreation Center, Albion Riverside Park, and Elysian Park. All these areas are a part of the California Protected Areas Database (CPAD). The CPAD contains data on lands owned in fee by governments, non-profits, and some private entities that are protected for open space purposes. Data includes all such areas in California, from small urban parks to large national parks and forests (CPAD 2020).

CDFW recommends the City avoid development that may have an adverse direct or indirect impact on CPAD sites. CDFW recommends the DEIR include measures where any future development facilitated by the Project mitigate (avoid if feasible) for impacts on biological resources occurring within these CPAD sites, as well as mitigate for impacts on wildlife, sensitive natural communities, and aquatic and riparian resources. CDFW also recommends new development occur in areas that are not adjacent to CPAD sites, if feasible. CDFW recommends the City consider configuring Project construction and activities, as well as the development footprint to fully avoid impacts to areas, such as CPAD sites, that may provide habitat for wildlife (see General Comment #7.d). Lastly, CDFW recommends effective setbacks be established to where building adjacent to these sites is infeasible. The environmental document should provide a justification for the effectiveness of the chosen distance for the setback.

- 2) Jurisdictional Waters. Figure 2 of the NOP shows that the Los Angeles River and the Arroyo Seco flow through the Project area. As a Responsible Agency under CEQA, CDFW has authority over activities in streams and/or lakes that will divert or obstruct the natural flow, or change the bed, channel, or bank (including vegetation associated with the stream or lake) of a river or stream or use material from a streambed. For any such activities, the project applicant (or "entity") must provide written notification to CDFW pursuant to Fish and Game Code Section 1600 *et seq.*
 - a) CDFW's issuance of a Lake and Streambed Alteration (LSA) Agreement for a project that is subject to CEQA will require CEQA compliance actions by CDFW as a Responsible Agency. As a Responsible Agency, CDFW may consider the environmental document of the local jurisdiction (Lead Agency) for the Project. To minimize additional requirements by CDFW pursuant to section 1600 *et seq.* and/or under CEQA, the environmental document should fully identify the potential impacts to the stream or riparian resources and provide adequate avoidance, mitigation, monitoring, and reporting commitments for issuance of the LSA Agreement. Please visit CDFW's [Lake and Streambed Alteration Program](#) webpage for information about LSA Notification (CDFWa 2020).
 - b) In the event the Project area may support aquatic, riparian, and wetland habitats; a preliminary delineation of the streams and their associated riparian habitats should be included in the environmental document. The delineation should be conducted pursuant to the U.S. Fish and Wildlife Service (USFWS) wetland definition adopted by CDFW (Cowardin et al. 1970). Be advised that some wetland and riparian habitats subject to CDFW's authority may extend beyond the jurisdictional limits of the U.S. Army Corps of Engineers' Section 404 permit and Regional Water Quality Control Board Section 401 Certification.

Clare Kelley
City of Los Angeles
April 27, 2021
Page 4 of 14

- c) In Project areas which may support ephemeral or episodic streams, herbaceous vegetation, woody vegetation, and woodlands also serve to protect the integrity of these resources and help maintain natural sedimentation processes. Therefore, CDFW recommends effective setbacks be established to maintain appropriately sized vegetated buffer areas adjoining ephemeral drainages. The environmental document should provide a justification for the effectiveness of the chosen distance for the setback.
 - d) Project-related changes in upstream and downstream drainage patterns, runoff, and sedimentation should be included and evaluated in the environmental document.
 - e) As part of the LSA Notification process, CDFW requests a hydrological evaluation of the 200, 100, 50, 25, 10, 5, and 2-year frequency storm event for existing and proposed conditions. CDFW recommends the environmental document evaluate the results and address avoidance, minimization, and/or mitigation measures that may be necessary to reduce potential significant impacts.
- 3) Nesting Birds. CDFW recommends the DEIR include measures where future development facilitated by the Project avoids potential impacts to nesting birds. These avoidance measure should especially consider any development that may occur adjacent to parks and open space, such as the Los Angeles State Historic Park or Elysian Park. Project activities occurring during the bird and raptor breeding and nesting season could result in the incidental loss of fertile eggs or nestlings, or otherwise lead to nest abandonment.
- a) Migratory nongame native bird species are protected by international treaty under the Federal Migratory Bird Treaty Act (MBTA) of 1918 (Code of Federal Regulations, Title 50, § 10.13). Sections 3503, 3503.5, and 3513 of the California Fish and Game Code prohibit take of all birds and their active nests including raptors and other migratory nongame birds (as listed under the Federal MBTA). It is unlawful to take, possess, or needlessly destroy the nest or eggs of any raptor.
 - b) CDFW recommends that measures be taken to fully avoid impacts to nesting birds and raptors. Ground-disturbing activities (e.g., mobilizing, staging, drilling, and excavating) and vegetation removal should occur outside of the avian breeding season which generally runs from February 15 through September 15 (as early as January 1 for some raptors) to avoid take of birds, raptors, or their eggs.
 - c) If impacts to nesting birds and raptors cannot be avoided, CDFW recommends the DEIR include measures where future development facilitated by the Project mitigates for impacts. CDFW recommends surveys by a qualified biologist with experience conducting breeding bird and raptor surveys. Surveys are needed to detect protected native birds and raptors occurring in suitable nesting habitat that may be disturbed and any other such habitat within 300 feet of the Project disturbance area, to the extent allowable and accessible. For raptors, this radius should be expanded to 500 feet and 0.5 mile for special status species, if feasible. Project personnel, including all contractors working on site, should be instructed on the sensitivity of the area. Reductions in the nest buffer distance may be appropriate depending on the avian species involved, ambient levels of human activity, screening vegetation, or possibly other factors.

Clare Kelley
City of Los Angeles
April 27, 2021
Page 5 of 14

- 4) Loss of Bird and Raptor Nesting Habitat. The Project site has potential for nesting bird habitat in areas such as Los Angeles State Historic Park and in and around the Los Angeles River and Arroyo Seco. According to ebird, raptors such as the red-tailed hawk (*Buteo jamaicensis*) and American kestrel (*Falco sparverius*) have been recorded within the Project area. The biggest threat to birds is habitat loss and conversion of natural vegetation into another land use such as development (e.g., commercial, residential, industrial). In the greater Los Angeles, urban forests and street trees, both native and some non-native species, provide habitat for a high diversity of birds (Wood and Esaian 2020). Some species of raptors have adapted to and exploited urban areas for breeding and nesting (Cooper et al. 2020). For example, raptors (*Accipitridae*, *Falconidae*) such as red-tailed hawks and Cooper's hawks (*Accipiter cooperii*) can nest successfully in urban sites. Red-tailed hawks commonly nest in ornamental vegetation such as eucalyptus (Cooper et al. 2020).
- a) CDFW recommends the DEIR provide measures where future development facilitated by the Project avoids removal of any native trees, large and dense-canopied native and non-native trees, and trees occurring in high density (Wood and Esaian 2020). CDFW also recommends avoiding impacts to trees protected by the City's Protected Tree Ordinance. CDFW also recommends avoiding impacts to understory vegetation (e.g., ground cover, subshrubs, shrubs, and trees).
 - b) If impacts to trees cannot be avoided, trees should be replaced to compensate for the temporal or permanent loss habitat within a project site. Depending on the status of the bird or raptor species impacted, replacement habitat acres should increase with the occurrence of a California Species of Special Concern. Replacement habitat acres should further increase with the occurrence of a CESA-listed threatened or endangered species.
 - c) CDFW recommends planting native tree species preferred by birds. This includes coast live oak (*Quercus agrifolia*) and California sycamore (*Platanus racemosa*) (Wood and Esaian 2020). CDFW recommends Audubon Society's [Plants for Birds](#) for more information on selecting native plants and trees beneficial to birds (Audubon Society 2020).
- 5) Loss of Wading Bird Habitat. The Project proposes to increase housing production within the Project area. This increase in residences may increase human presence in and adjacent to the Los Angeles River or Arroyo Seco. This population increase could require the need for new infrastructure for recreational uses within or adjacent to the Los Angeles River or Arroyo Seco. It will be necessary to consider the impacts on wading bird habitat with any new development in or along the Los Angeles River or Arroyo Seco. Aerial photography indicates the presence of algal mats within the Los Angeles River. Any activity that may disturb or cover areas where algal mats form may prevent birds from utilizing the area for foraging. Algal mats along with other herbaceous vegetation might no longer persist in that portion of the river.

In these concrete-lined rivers, the resulting sheet-flows allow phytoplankton (algae and cyanobacteria), microorganisms, and herbaceous vegetation to establish. The algae provide habitat and a food source for benthic invertebrates, a vital food source for wading birds, such as black necked stilts (*Himantopus mexicanus*). In addition, wading birds, such as mallards (*Anas platyrhynchos*), also feed on herbaceous vegetation. Stilts and mallards are

Clare Kelley
City of Los Angeles
April 27, 2021
Page 6 of 14

just some of the wading birds that have been identified in this stretch of the Los Angeles River.

- a) Changes to hydrology through new infrastructure installation are reasonable potential direct and indirect physical changes in the environment. Changes in the occurrence, distribution, movement, and increases/reductions in water flow should be considered with new infrastructure installation. These changes and their potential impacts on biological resources should be analyzed and disclosed in an environmental document.
 - b) CDFW recommends the City include an analysis of potential impacts on biological resources within the river resulting from the Project. At a minimum, an analysis should include:
 - i. A map of plant communities and important bird foraging habitat occurring in the Project area, namely within the Los Angeles River. Plant communities should be mapped at the alliance/association level using the [Manual of California Vegetation](#), second edition (Sawyer et al. 2009). Also, CDFW recommends an updated and thorough floristic-based assessment of plant communities, following CDFW's [Protocols for Surveying and Evaluating Impacts to Special Status Native Plant Populations and Sensitive Natural Communities](#) (CDFW 2018).
 - ii. A comprehensive list of sensitive and special status plant and wildlife species, and sensitive plant communities, occurring in the Los Angeles River and Arroyo Seco within the Project site. For each biological resource, provide:
 1. A summary of species-specific habitat requirements;
 2. A discussion as to how the species or plant community may be significantly impacted directly or indirectly through habitat modification, as result of changes to hydrology (reduced flow), hydraulics (water depth, wetted perimeter, velocity), and sunlight exposure (photosynthetic ability of plants and algae); and,
 3. A quantitative analysis and/or adequate discussion to evaluate whether the Project would result in those significant impacts.
 - iii. A discussion of whether construction, operations, and maintenance of any development within or adjacent to the river would have direct and/or indirect, permanent, or temporal impact on biological resources.
 - iv. An adequate discussion of Project-related impacts on biological resources in relation to cumulative changes to the hydrologic regime.
- 6) Bats. Numerous bat species are known to roost in trees and structures throughout Los Angeles County (Remington and Cooper 2014). In urbanized areas, bats use trees and man-made structures for daytime and nighttime roosts. Accordingly, CDFW recommends the DEIR provide measures where future increases in development, such as in areas in and adjacent to the Los Angeles State Historic Park, Elysian Park, or other parks and open space, facilitated by the Project avoids potential impacts to bats.
- a) Bats are considered non-game mammals and are afforded protection by state law from take and/or harassment (Fish & G. Code, § 4150; Cal. Code of Regs., § 251.1). Project

Clare Kelley
City of Los Angeles
April 27, 2021
Page 7 of 14

construction and activities, including (but not limited to) ground disturbance, vegetation removal, and any activities leading to increased noise levels may have direct and/or indirect impacts on bats and roosts.

- b) CDFW recommends a project-level biological resources survey provide a thorough discussion and adequate disclosure of potential impacts to bats and roosts from Project construction and activities including (but not limited to) ground-disturbing activities (e.g., mobilizing, staging, drilling, and excavating) and vegetation removal. If necessary, to reduce impacts to less than significant, a project-level environmental document should provide bat-specific avoidance and/or mitigation measures [CEQA Guidelines, § 15126.4(a)(1)].

General Comments

- 1) Disclosure. An environmental document should provide an adequate, complete, and detailed disclosure about the effect which a proposed project is likely to have on the environment (Pub. Resources Code, § 20161; CEQA Guidelines, §15151). Adequate disclosure is necessary so CDFW may provide comments on the adequacy of proposed avoidance, minimization, or mitigation measures, as well as to assess the significance of the specific impact relative to the species (e.g., current range, distribution, population trends, and connectivity).
- 2) Mitigation Measures. Public agencies have a duty under CEQA to prevent significant, avoidable damage to the environment by requiring changes in projects through the use of feasible alternatives or mitigation measures [CEQA Guidelines, §§ 15002(a)(3), 15021]. Pursuant to CEQA Guidelines section 15126.4, an environmental document shall describe feasible measures which could mitigate for impacts below a significant level under CEQA.
 - a) Level of Detail. Mitigation measures must be feasible, effective, implemented, and fully enforceable/imposed by the lead agency through permit conditions, agreements, or other legally binding instruments (Pub. Resources Code, § 21081.6(b); CEQA Guidelines, §§ 15126.4, 15041). A public agency shall provide the measures that are fully enforceable through permit conditions, agreements, or other measures (Pub. Resources Code, § 21081.6). CDFW recommends that the City prepare mitigation measures that are specific, detailed (i.e., responsible party, timing, specific actions, location), and clear in order for a measure to be fully enforceable and implemented successfully via a mitigation monitoring and/or reporting program (CEQA Guidelines, § 15097; Pub. Resources Code, § 21081.6). Adequate disclosure is necessary so CDFW may provide comments on the adequacy and feasibility of proposed mitigation measures.
 - b) Disclosure of Impacts. If a proposed mitigation measure would cause one or more significant effects, in addition to impacts caused by the Project as proposed, the environmental document should include a discussion of the effects of proposed mitigation measures [CEQA Guidelines, § 15126.4(a)(1)]. In that regard, the environmental document should provide an adequate, complete, and detailed disclosure about a project's proposed mitigation measure(s). Adequate disclosure is necessary so CDFW may assess the potential impacts of proposed mitigation measures.

Clare Kelley
City of Los Angeles
April 27, 2021
Page 8 of 14

- 3) Biological Baseline Assessment. An adequate biological resources assessment should provide a complete assessment and impact analysis of the flora and fauna within and adjacent to a Project site and where a Project may result in ground disturbance. The assessment and analysis should place emphasis upon identifying endangered, threatened, sensitive, regionally, and locally unique species, and sensitive habitats. Impact analysis will aid in determining any direct, indirect, and cumulative biological impacts, as well as specific mitigation or avoidance measures necessary to offset those impacts. CDFW recommends avoiding any sensitive natural communities found on or adjacent to a Project. CDFW also considers impacts to Species of Special Concern a significant direct and cumulative adverse effect without implementing appropriate avoid and/or mitigation measures. A Project-level environmental document should include the following information:
- a) Information on the regional setting that is critical to an assessment of environmental impacts, with special emphasis on resources that are rare or unique to the region [CEQA Guidelines, § 15125(c)]. An environmental document should include measures to fully avoid and otherwise protect Sensitive Natural Communities from Project-related impacts. CDFW considers these communities as threatened habitats having both regional and local significance. Plant communities, alliances, and associations with a state-wide ranking of S1, S2, S3 and S4 should be considered sensitive and declining at the local and regional level. These ranks can be obtained by visiting [Vegetation Classification and Mapping Program - Natural Communities](#) webpage (CDFWb 2020);
 - b) A thorough, recent, floristic-based assessment of special status plants and natural communities following CDFW's [Protocols for Surveying and Evaluating Impacts to Special Status Native Plant Populations and Sensitive Natural Communities](#) (CDFW 2018). Adjoining habitat areas should be included where Project construction and activities could lead to direct or indirect impacts off site;
 - c) Floristic, alliance- and/or association-based mapping and vegetation impact assessments conducted at a Project site and within the neighboring vicinity. The [Manual of California Vegetation](#) (MCV), second edition, should also be used to inform this mapping and assessment (Sawyer et al. 2009). Adjoining habitat areas should be included in this assessment where Project activities could lead to direct or indirect impacts off site. Habitat mapping at the alliance level will help establish baseline vegetation conditions;
 - d) A complete, recent, assessment of the biological resources associated with each habitat type on site and within adjacent areas that could also be affected by a Project. CDFW's [California Natural Diversity Database](#) (CNDDDB) in Sacramento should be contacted to obtain current information on any previously reported sensitive species and habitat (CDFWc 2020). An assessment should include a nine-quadrangle search of the CNDDDB to determine a list of species potentially present at a Project site. A lack of records in the CNDDDB does not mean that rare, threatened, or endangered plants and wildlife do not occur in the Project site. Field verification for the presence or absence of sensitive species is necessary to provide a complete biological assessment for adequate CEQA review [CEQA Guidelines, § 15003(i)];
 - e) A complete, recent, assessment of rare, threatened, and endangered, and other sensitive species on site and within the area of potential effect, including California

Clare Kelley
City of Los Angeles
April 27, 2021
Page 9 of 14

Species of Special Concern, and California Fully Protected Species (Fish & G. Code, §§ 3511, 4700, 5050, and 5515). Species to be addressed should include all those which meet the CEQA definition of endangered, rare, or threatened species (CEQA Guidelines, § 15380). Seasonal variations in use of a Project site should also be addressed such as wintering, roosting, nesting, and foraging habitat. Focused species-specific surveys, conducted at the appropriate time of year and time of day when the sensitive species are active or otherwise identifiable, may be required if suitable habitat is present. See CDFW's [Survey and Monitoring Protocols and Guidelines](#) for established survey protocol for select species (CDFWd 2020). Acceptable species-specific survey procedures may be developed in consultation with CDFW and the U.S. Fish and Wildlife Service;

- f) A recent wildlife and rare plant survey. CDFW generally considers biological field assessments for wildlife to be valid for a one-year period, and assessments for rare plants may be considered valid for a period of up to three years. Some aspects of a proposed Project may warrant periodic updated surveys for certain sensitive taxa, particularly if build out could occur over a protracted time frame or in phases; and,
 - g) A biological resources survey should include identification and delineation of any rivers, streams, and lakes and their associated natural plant communities/habitats. This includes any culverts, ditches, storm channels that may transport water, sediment, pollutants, and discharge into rivers, streams, and lakes.
- 4) Wetland Resources. CDFW, as described in Fish and Game Code section 703(a), is guided by the Fish and Game Commission's (Commission) policies. The [Wetlands Resources](#) policy the Commission "...seek[s] to provide for the protection, preservation, restoration, enhancement and expansion of wetland habitat in California. Further, it is the policy of the Fish and Game Commission to strongly discourage development in or conversion of wetlands. It opposes, consistent with its legal authority, any development or conversion that would result in a reduction of wetland acreage or wetland habitat values. To that end, the Commission opposes wetland development proposals unless, at a minimum, Project mitigation assures there will be 'no net loss' of either wetland habitat values or acreage. The Commission strongly prefers mitigation which would achieve expansion of wetland acreage and enhancement of wetland habitat values" (CFGF 2005).
- a) The Wetlands Resources policy provides a framework for maintaining wetland resources and establishes mitigation guidance. CDFW encourages avoidance of wetland resources as a primary mitigation measure and discourages the development or type conversion of wetlands to uplands. CDFW encourages activities that would avoid the reduction of wetland acreage, function, or habitat values. Once avoidance and minimization measures have been exhausted, a Project must include mitigation measures to assure a "no net loss" of either wetland habitat values, or acreage, for unavoidable impacts to wetland resources. Conversions include, but are not limited to, conversion to subsurface drains, placement of fill or building of structures within the wetland, and channelization or removal of materials from the streambed. All wetlands and watercourses, whether ephemeral, intermittent, or perennial, should be retained and provided with substantial setbacks, which preserve the riparian and aquatic values and functions for the benefit to on-site and off-site wildlife populations. CDFW recommends mitigation measures to compensate for unavoidable impacts be included in an environmental document and

Clare Kelley
City of Los Angeles
April 27, 2021
Page 10 of 14

these measures should compensate for the loss of function and value.

- b) The Fish and Game Commission's [Water policy](#) guides CDFW on the quantity and quality of the waters of this State that should be apportioned and maintained respectively so as to produce and sustain maximum numbers of fish and wildlife; to provide maximum protection and enhancement of fish and wildlife and their habitat; encourage and support programs to maintain or restore a high quality of the waters of this State; prevent the degradation thereof caused by pollution and contamination; and, endeavor to keep as much water as possible open and accessible to the public for the use and enjoyment of fish and wildlife (CFGF 1994). CDFW recommends avoidance of water practices and structures that use excessive amounts of water, and minimization of impacts that negatively affect water quality, to the extent feasible (Fish & G. Code, § 5650).
- 5) Data. CEQA requires that information developed in environmental impact reports be incorporated into a database which may be used to make subsequent or supplemental environmental determinations [Pub. Resources Code, § 21003, subd. (e)]. Accordingly, please report any special status species and natural communities detected by completing and submitting [CNDDDB Field Survey Forms](#) (CDFW 2020e). The City should ensure data collected at a Project-level has been properly submitted, with all data fields applicable filled out. The data entry should also list pending development as a threat and then update this occurrence after impacts have occurred.
- 6) Biological Direct, Indirect, and Cumulative Impacts. CDFW recommends providing a thorough discussion of direct, indirect, and cumulative impacts expected to adversely affect biological resources, with specific measures to offset such impacts. The DEIR should address the following:
- a) A discussion regarding Project-related indirect impacts on biological resources, including resources in nearby public lands, open space, adjacent natural habitats, riparian ecosystems, and any designated and/or proposed or existing reserve lands [e.g., preserve lands associated with a Natural Community Conservation Plan (NCCP, Fish & G. Code, § 2800 et. seq.)]. Impacts on, and maintenance of, wildlife corridor/movement areas, including access to undisturbed habitats in adjacent areas, should be fully evaluated in the DEIR;
 - b) A discussion of both the short-term and long-term effects to species population distribution and concentration and alterations of the ecosystem supporting the species impacted [CEQA Guidelines, § 15126.2(a)];
 - c) A discussion of potential adverse impacts from lighting, noise, temporary and permanent human activity, and exotic species, and identification of any mitigation measures;
 - d) A discussion on Project-related changes on drainage patterns; the volume, velocity, and frequency of existing and post-Project surface flows; polluted runoff; soil erosion and/or sedimentation in streams and water bodies; and, post-Project fate of runoff from the Project sites. The discussion should also address the potential water extraction activities and the potential resulting impacts on the habitat (if any) supported by the groundwater. Mitigation measures proposed to alleviate such Project impacts should be included;

Clare Kelley
City of Los Angeles
April 27, 2021
Page 11 of 14

- e) An analysis of impacts from proposed changes to land use designations and zoning, and existing land use designation and zoning located nearby or adjacent to natural areas that may inadvertently contribute to wildlife-human interactions. A discussion of possible conflicts and mitigation measures to reduce these conflicts should be included in the DEIR; and,
 - f) A cumulative effects analysis, as described under CEQA Guidelines section 15130. General and specific plans, as well as past, present, and anticipated future projects, should be analyzed relative to their impacts on similar plant and wildlife species, habitat, and vegetation communities. If the City determines that the Project would not have a cumulative impact, the environmental document should indicate why the cumulative impact is not significant. The City's conclusion should be supported by facts and analyses [CEQA Guidelines, § 15130(a)(2)].
- 7) Project Description and Alternatives. To enable CDFW to adequately review and comment on the proposed Project from the standpoint of the protection of plants, fish, and wildlife, we recommend the following information be included in the DEIR:
- a) A complete discussion of the purpose and need for, and description of, the proposed Project;
 - b) CEQA Guidelines section 15126.6(a) states that an environmental document shall describe a reasonable range of potentially feasible alternatives to the Project, or to the location of the Project, which would feasibly attain most of the basic objectives of the Project but would avoid or substantially lessen any of the significant effects of the Project. CEQA Guidelines section 15126.6(f)(2) states if the Lead Agency concludes that no feasible alternative locations exist, it must disclose the reasons for this conclusion and should include reasons in the environmental document; and,
 - c) A range of feasible alternatives to Project component location and design features to avoid or otherwise minimize direct and indirect impacts to sensitive biological resources and wildlife movement areas. CDFW recommends the City consider configuring Project construction and activities, as well as the development footprint, in such a way as to fully avoid impacts to sensitive and special status plants and wildlife species, habitat, and sensitive vegetation communities. CDFW also recommends the City consider establishing appropriate setbacks from sensitive and special status biological resources. Setbacks should not be impacted by ground disturbance or hydrological changes for the duration of the Project and from any future development. As a general rule, CDFW recommends reducing or clustering the development footprint to retain unobstructed spaces for vegetation and wildlife and provide connections for wildlife between properties and minimize obstacles to open space.
- Project alternatives should be thoroughly evaluated, even if an alternative would impede, to some degree, the attainment of the Project objectives or would be more costly (CEQA Guidelines, § 15126.6).
- d) Where the Project may impact aquatic and riparian resources, CDFW recommends the City consider alternatives that would fully avoid impacts to such resources. CDFW also recommends alternatives that would allow not impede, alter, or otherwise modify existing

Clare Kelley
City of Los Angeles
April 27, 2021
Page 12 of 14

surface flow; watercourse and meander; and water-dependent ecosystems and vegetation communities. Project-related designs should consider elevated crossings to avoid channelizing or narrowing of streams. Any modifications to a river, creek, or stream may cause or magnify upstream bank erosion, channel incision, and drop in water level and cause the stream to alter its course of flow.

- 8) CESA. CDFW considers adverse impacts to a species protected by CESA to be significant without mitigation under CEQA. As to CESA, take of any endangered, threatened, candidate species, or CESA-listed plant species that results from the Project is prohibited, except as authorized by state law (Fish & G. Code §§ 2080, 2085; Cal. Code Regs., tit. 14, §786.9). Consequently, if the Project or any Project-related activity during the life of the Project will result in take of a species designated as endangered or threatened, or a candidate for listing under CESA, CDFW recommends that the Project proponent seek appropriate take authorization under CESA prior to implementing the Project. Appropriate authorization from CDFW may include an Incidental Take Permit (ITP) or a consistency determination in certain circumstances, among other options [Fish & Game Code, §§ 2080.1, 2081, subds. (b) and (c)]. Early consultation is encouraged, as significant modification to a Project and mitigation measures may be required in order to obtain a CESA Permit. Revisions to the Fish and Game Code, effective January 1998, may require that CDFW issue a separate CEQA document for the issuance of an ITP unless the Project CEQA document addresses all Project impacts to CESA-listed species and specifies a mitigation monitoring and reporting program that will meet the requirements of an ITP. For these reasons, biological mitigation monitoring and reporting proposals should be of sufficient detail and resolution to satisfy the requirements for a CESA ITP.
- 9) Translocation/Salvage of Plants and Animal Species. Translocation and transplantation is the process of moving an individual from a project site and permanently moving it to a new location. CDFW generally does not support the use of, translocation or transplantation as the primary mitigation strategy for unavoidable impacts to rare, threatened, or endangered plant or animal species. Studies have shown that these efforts are experimental and the outcome unreliable. CDFW has found that permanent preservation and management of habitat capable of supporting these species is often a more effective long-term strategy for conserving sensitive plants and animals and their habitats.
- 10) Compensatory Mitigation. An environmental document should include mitigation measures for adverse Project related direct or indirect impacts to sensitive plants, animals, and habitats. Mitigation measures should emphasize avoidance and reduction of Project-related impacts. For unavoidable impacts, on-site habitat restoration or enhancement should be discussed in detail. If on-site mitigation is not feasible or would not be biologically viable and therefore not adequately mitigate the loss of biological functions and values, off-site mitigation through habitat creation and/or acquisition and preservation in perpetuity should be addressed. Areas proposed as mitigation lands should be protected in perpetuity with a conservation easement, financial assurance and dedicated to a qualified entity for long-term management and monitoring. Under Government Code, section 65967, the Lead Agency must exercise due diligence in reviewing the qualifications of a governmental entity, special district, or nonprofit organization to effectively manage and steward land, water, or natural resources on mitigation lands it approves.
- 11) Long-term Management of Mitigation Lands. For proposed preservation and/or restoration,

Clare Kelley
City of Los Angeles
April 27, 2021
Page 13 of 14

an environmental document should include measures to protect the targeted habitat values from direct and indirect negative impacts in perpetuity. The objective should be to offset the Project-induced qualitative and quantitative losses of wildlife habitat values. Issues that should be addressed include (but are not limited to) restrictions on access, proposed land dedications, monitoring and management programs, control of illegal dumping, water pollution, and increased human intrusion. An appropriate non-wasting endowment should be set aside to provide for long-term management of mitigation lands.

Conclusion

We appreciate the opportunity to comment on the NOP for the Updates to the Cornfield Arroyo Seco Specific Plan to assist the City of Los Angeles in identifying and mitigating Project impacts on biological resources. If you have any questions or comments regarding this letter, please contact Felicia Silva, Environmental Scientist, at Felicia.Silva@wildlife.ca.gov.

Sincerely,

DocuSigned by:

Good afternoon Ms. Kelley,

Please see the attached letter regarding CDFW's comments on the Notice of Preparation for the Draft Environmental Impact Report for the Updates to the Cornfield Arroyo Seco Specific Plan for the City of Los Angeles. If you have any questions or concerns relating to this letter, please feel free to contact CDFW at your convenience. Thank you for the opportunity to comment and have a good day.

Regards,

Felicia Silva

SUBJECT: Cornfield Arroyo Seco Specific Plan Update
EIR Scoping Meeting CPC-2021-2642-SP; ENV-2021-2643-EIR

RE: Notice of Preparation (NOP) & Scoping Review Public Comments

After review of the many pages, I find the NOP and “initial studies” to be incomplete and inadequate for scoping of the proposed “update” of the Cornfields Arroyo Seco Specific Plan (CASP). I have prepared more than 400 CEQA/EIR+ and NEPA/EIS+ worldwide and in the US, since I prepared my first EIR in 1972 for the City of San Jose. I am experienced in preparation and review of CEQA/NEPA documents and their contents. I and a few others contributed to the initial 2010 CASP development and commented on such.

As a Specific Plan, the process is different from that of a General/Community Plan update and must achieve greater clarity, quantification, and informative content for public/community participation, review, and comments. I recommend that the LACity Dept.City Planning withdraw current documents, revise and supplement based on the attached comments and recommendations, and recirculate for post-Covid review and comment by stakeholder and the Public. DCP must also involve Dept.Publ.Wrks.-Bur.of Engineering because of the many infrastructure facilities involved in such a major transformation from industrial/public related facilities and systems to residential and commercial land uses.

The CASP was adopted in 2013 but the problems were known and arose immediately:

- Large parcel sizes and corporate ownerships without resources to profit from housing conversions;
- Prop-13 ownerships (LLP/LLCs) of parcels and need for owners to participate in partnerships;
- Century of industrial direct and groundwater expanded contamination and potential costs of remediation;
- Historic housing protections and considerations; and
- Lack of and expense for housing infrastructure – drains, sewers, cabling/transformers.

SEE attached also/below

COMMENTS:

Update to the CASP will also include:

- Explore ways to encourage affordable and mixed-income housing production in the Plan Area, such as:
- Expanding the Urban Village zoning designation to more parcels;
- Allowing 100% affordable housing developments in Urban Innovation and Urban Center zones, where they are not currently permitted;
- Eliminating the existing 10% non-residential use requirement in the Urban Village zone; and/or
- Recalibrating affordable housing incentives.

The primary objectives

- Increase the production of affordable and mixed-income housing within the Project Area;
- Prevent displacement and promote housing stability;
- Design and regulate housing to promote health and well-being, increased access to amenities such as parks and public transit, and sustainability;
- Promote welcoming and accessible housing for Angelenos with unique needs;
- Refine Plan standards, processes, and procedures to be more intuitive and transparent; and
- Preserve existing employment areas that show a concentration of jobs, while supporting small and/or legacy businesses, local employment, new productive uses, and employment spaces

SCAG 2020-45 Projections of population, households (dwelling units required) and jobs and employees commutes

Discretionary City Approvals –
Amendment of the CASP

- Certification of an EIR
- Adoption of necessary revisions and any other amendments necessary to implement this update, such as amendments to
General Plan elements (such as the Framework Element),
Community Plans,
the LAMC,
specific plans, and
other ordinances to implement those updates

Cornfield Arroyo Seco Specific Plan (CASP) Update | Los Angeles City Planning (lacity.org)

Key Provisions

A key feature of the CASP is its groundbreaking value capture incentive zoning system,...additional floor area rights in exchange for setting aside affordable units for low-income households. to make targeted revisions to the CASP, including its incentive zoning system...further strengthen the original vision and intent of the Specific Plan.

Update Components:

- Recalibrating zoning regulations and incentives to incentivize affordable housing development more strongly;
- Identifying additional opportunity areas that could allow for affordable and mixed-income housing development;
- Updating the Specific Plan to reflect current and future demographic, regulatory, environmental, and economic conditions; and
- Updating the Specific Plan's standards, processes, and procedures to be more intuitive and transparent.

The NOP uses the “standard” alphabetic content list for environmental sectors which leads to an arbitrary unconnected description and assessment of environmental sectors without ecosystem/environmental associations and relationships between the sectors and the project’s environment, qualities, and impacts. I recommend the NOP/Initial Studies be reorganized as follows:

- Aesthetics - Provide viewsheds, conflicting images, and River views/use
- Noise (Tunnels, UP/ATSFRR, freeways, warehouse/reflectance and hills) - Provide traffic noise assessment with model, including RR uses
- Air Quality - Greenhouse Gas Emissions - Energy
Provide SR-110 tunnel emissions and modeling of cold NOX
Delineate TOCs for the CASP area and within 1000ft of boundary
- Biological Resources - Provide river flyways, closest wildfire risk area (ZIMAS), and vegetated hills
- Cultural Resources - Tribal Cultural Resources
Provide thorough, complete review for endemic peoples – especially for the river confluence and summer water sources for villages
Review of historic documents, ground and aerial photos, and assess potential for subsurface remains as found in Union Station during Red Line construction
- Geology and Soils - Mineral Resources
Provide Fault zones maps of entire CASP and within 1000ft of boundary (ZIMAS)
Provide the historic seismicity (>0.1 RM) North Spring and Avenue 18 north edge of fault zone
Confirm/Provide current LA Oil Field and related wells and EDR Aerial Photos
- Hazards and Hazardous Materials
Provide historic hazardous materials from industries with storage tanks and from LA Oil Field for fueling engines and tankers in Cornfields Yard
Provide review of historic hazardous materials from railroad/trains liquids and dumping contamination including hydraulic fluids with dioxane
Provide HazWaste inventory based on historic photography and accounts. Locate and prioritize contamination related to residential land use development and guidelines
Provide for program and zoning requirements for borings, exhaust stacks, and vapor recovery/extraction for all residential structures and zoning areas. Zero (0.00000 ppm) tolerance for all VOCs and all H2S in soil vadose zones.

- Hydrology and Water Quality
Provide current and planned Storm Water runoff projections and infiltration/recharge for Low Impact Development compliance.
Provide groundwater surveys and modeling for contamination by LA Oil Field, leakage along fault zones, industrial/railroad use/spillage into alluvium, and human wastes/septage and anaerobic decomposition with H2S formation in contaminated groundwater.
Provide geologic borings for at least three E-W geological cross-section from the bottom of the alluvial groundwater to its upper limits and the vadose zones above.
Provide inventory of ground gaseous emissions confined by extensive asphaltting/paving of surface with sand bed storage/conveyance.
Provide CASP wide groundwater probe-boring and liquid/gases levels monitoring and flow modeling from 2022 to completion of development.
Provide CASP wide boring, sampling, testing, source locating, and remediation of vadose and saturated soil/geologic zones.

- Land Use / Planning
Provide transition zones (150ft zones) between public facilities, commercial, industrial, and residential uses/zonings.
Provide a planning development model for parcellation of current plots of >220,000 sqft.

- Population / Housing (and Economics)
Provide SCAG projections through 2045 for all TAZs in CASP and within 30min (5-miles) commutes/bus trips during AM/PM commutes.
Provide current home ownership, home rentals, and R2-R5 rental levels and costs for 2010-2020 and 2020-current.

Provide economic and household financial summaries for CASP and included TAZs Incomes affordable housing.

Provide definitions/enumerations for economic status and affordability (quarterly levels – Median/50%ile 25%ile 75%ile 90%ile) and estimated % of Income for rental rates by status-group, of all included TAZs (SCAG) in and within 5280ft of the CASP boundaries.

- Public Services - Recreation - Transportation - Utilities / Service Systems

Provide a program and schedule for major services and support improvements/upgrades required for changes from industrial land uses to housing/residential services.

Provide services availabilities for R3-R5 averaged for the city, then apply same service levels to all TAZs in Specific Plan and those immediately adjacent to the CASP and provide for differentials during the CASP upgrade implementation period.

- Mandatory Findings of Significance

Provide numerical/quantified level of findings and of significance and their statutory sources.

- Cumulative impacts consists of **impacts** that are created by a combination of the project evaluated in the environmental **impact** report (**EIR**) together with other projects causing related **impacts**.

Provide transportation, sewage, and power/water improvements leading to and supporting/inducing land use upgrades requiring/inducing increased social/medical services.

Provide an air quality modeling (for, NOX, PM1, and CO) for current conditions and those projected for 2045 and any exceedances of current or assumed future air quality parameters.

- EIR requires an analysis of a “**reasonable** range” of **feasible** alternatives

Provide definitions and specific examples for reasonable and feasible alternatives.

Provide an economic review and models for projected zoning/land use changes, since feasible usually includes economic considerations.

- Project alternatives to be determined based on Draft EIR analysis, and include the required “No Project” alternative

Provide alternative including only 66% and 33% of current non-residential properties developed for R3-5 residential uses.

Provide alternative with 100% Mixed C+R uses for all parcels other than for recreational uses and public facilities..

THEN ALSO

Provide Draft Mitigation Monitoring and REPORTING Plan in the DEIR.

Provide account for gentrification pressure that current residents and small businesses.

Provide strategies to retain and support small community-serving businesses.

Provide preservation of industrial land remain a goal of the CASP.

Provide demand for industrial land use

Provide areas targeting to mixed use

target current pollution issues - SR-110 Tunnel Exhausts, RR exhausts Tier 4

Provide SCAG 2045 projections for Population, Households, and Jobs within CASP Transportation Analysis Zones (TAZ).

Provide estimates of AM/PM commutes to/from area based on populations, households, expected employed, and jobs within CASP and with 30min commute/bus trips.

Provide EIR Alternatives - doubling of William Mead Homes (as done in the Rose Hill Courts project underway).

Provide any new or updated incentives result in deeply affordable units that serve current residents, and include community benefits such as parks and community spaces.
Provide CASP limits Floor Area Ratio (FAR) of housing.
Provide the existing Option A and Option B bonus structure
Provide allow additional incentives to create more affordable and mixed-income units via FAR and Height
Provide additional housing be attainment paths

Provide the questions asked in this Q&A on your web page
Provide update accommodate people of all income levels \$25-75K, \$75-\$125K, \$125 and above
Provide the City CASP market study.
Provide updated CASP for TOC and/or state density bonus options and those incentives in the CASP, thus allowing additional housing

Provide inventory of current, permitted/zoned, and projected housing in the plan area and within 30 min commute.

Provide historic inventory of all structures built in part or wholly pre-1930.
Provide review/analyses of all historic aerial and surface photos of structures within the CASP.
Provide archaeological review of the area for potential endemic, Spanish, and Mexican buried/subsurface cultural remains (e.g., 1000ft of the confluence of the Arroyo Seco and LA River).

Provide planning and permit fees in the CASP to help offset the current high development and remediation costs.

Provide CASP area-wide hazardous material/wastes/contamination review/study/inventory for the area due to historic railroad and industrial development and the Los Angeles oil fields.

Provide information about the height restrictions for each building.

Specific NOP Comments - No pagination makes references difficult for public.

ALTERNATIVES

1/2 The City is requesting identification of environmental issues, environmental impacts, and information that you or your organization believes needs to be considered and analyzed in the EIR, including environmental impacts, mitigation measures, and **alternatives**.

2/3 RESPONSIBLE AND TRUSTEE AGENCIES The City requests your agency's views on the scope and content of the environmental information relevant to your agency's statutory responsibilities in connection with the project, in accordance with the CEQA Guidelines, Section 15082(b)....

(1) The significant environmental issues and **reasonable alternatives** and mitigation measures that your agency will need to have explored in the EIR; and

NOP 2/5 **Alternatives** to be analyzed in the EIR are to be defined and analyzed consistent with the requirements of CEQA Guidelines, Section 15126.6. The **specific alternatives** to be evaluated will include a "No Project" alternative, as required by CEQA, and may include alternative land use configurations.

In order to propose alternatives, the NOP/Scoping Docs must provide clear and numerical "Goals" and "Objectives" for the CASP Update and how applied to alternatives.

In order to present "reasonable alternatives" and "specific alternatives", parameters and definitions must be provided but have not been, thereby restricting the public from proposing such alternatives. Provide definitions and differentiations and general examples for public consideration and submissions for alternatives, reasonable alternatives, and specific alternatives for the CASP

NOP 3/2 The intent of the adopted CASP is to guide the transition of an underserved, vehicular-oriented industrial and public facility area into a cluster of mixed-use, pedestrian-oriented neighborhoods. **Policies**

in the CASP support a range of housing options, new public spaces, opportunities for walking and bicycling, and the retention of land for existing industrial businesses and the clean technology businesses of the future. Among **its numerous goals**, a key priority of the CASP is to facilitate the production and continued provision of affordable housing for Extremely Low Income and Very Low Income households.

No basis is provided for alternatives to be provided compared to “Do-Nothing”.

Provide appropriate reasonable, specific, numerous, and feasible Goals, Objectives, Policies for which the public can provide appropriate alternatives.

Provide definitions, differences, and examples of policies and goals as referenced herein.

Provide definition and numbers for affordability, median/averaged/separated household incomes for the CASP areas.

NOP 4/2 The Proposed Project would also update the **building form, urban design, open space, parking, conservation, performance, and sign standards** of the CASP as necessary to support housing production, and amend the CASP text with technical revisions that ensure consistency, clarity, and **ease of implementation** and

reflect current and future demographic, regulatory, environmental, and economic conditions.

The Project would retain the **existing ministerial review process for subsequent development projects**.

Provide specific tables indicating the parcel(s) new (2021) zoning designations and specific numerical definitions for building form, urban design, open space, parking, conservation, performance, and sign standards.

Provide specific existing 2013, current 2021, and any post-2021 review processes for implementation of the updated Specific Plan ministerial and discretionary processes.

Upgrade does not provide for/include public utilities, services, and facilities nor roads and parkways. Provide projected populations, households, jobs, required dwelling units, and all appropriate facilities, services, and utilities commensurate with the community.

4/3 **Project Objectives** The **primary objectives** of the Project will be to:

- Increase the production of affordable and mixed-income housing within the Project Area,
- Protect residents, especially low-income households, from indirect and direct displacement, and ensure stability of existing vulnerable communities,
- Design and regulate housing to promote health and well-being, increase access to **amenities such as parks and public transit**, contribute to a sense of place, foster community and belonging, and plan for a sustainable future,
- Build, operate, and maintain welcoming and accessible housing for Angelenos with unique needs, including those with disabilities, large families, older adults, and other people facing housing barriers and food insecurity,
- Refine Plan standards, processes, and procedures to be more intuitive and transparent, with the goal of enhancing development certainty for both market-rate and affordable developers, and
- Preserve **employment areas** that show a **concentration of jobs**, while supporting small and/or **legacy** businesses, local employment, new productive uses, and employment spaces, such as light industrial and general commercial uses.

Provide all, primary and secondary objectives. Provide enumeration/quantification, and numerical parameters for such and the methods by which they will fulfil the Goals of the CASP.

Provide clear, direct, and enumerated relationships (“model”) between Goals, Policies, and objectives, which has not been included in available document.

Provide actual/projected population, households, and jobs for all SCAG-TAZ in CASP for 2010 to 2025.

Provide definition of concentration, employment/jobs, and definitions of small, medium, and large businesses.

Provide listing of any “legacy businesses” other than railroads.

Provide existing City examples of standards, processes, and procedures which are sufficiently intuitive/transparent and enhance development certainty for both market-rate and affordable housing and proponents.

SUBJECT: Cornfield Arroyo Seco Specific Plan Update EIR Scoping Meeting CPC-2021-2642-SP; ENV-2021-2643-EIR

RE: Notice of Preparation (NOP) & Scoping Review Public Comments for Groundwater and Hazardous Contaminations

After review of the many pages, I find the NOP and "initial studies" to be incomplete and inadequate for scoping of the proposed "update" of the Cornfields Arroyo Seco Specific Plan (CASP).

The CASP was adopted in 2013 but the problems were known and arose immediately:
Century-plus of industrial direct and groundwater expanded contamination;
Large parcel sizes and corporate ownerships without resources to profit from housing conversions;
Prop-13 ownerships (LLP/LLCs) of parcels and need for owners to participate in partnerships;
Historic housing protections and considerations; and
Lack of and expense for housing infrastructure – drains, sewers, cabling/transformers.

Following review of scoping documents and other materials, the DEIR must include a CASP Groundwater Model for entire Specific Plan area to locate and provide plan-wide groundwater flows, depths, and thicknesses. Such environmental description must be provided to assess environmental impacts of such upon existing and future impacts subjecting land uses and residents to upward spreading contamination and degassing from oil rich geology and historic/current industrial contamination west of Avenue 18/Daly (I-5).

Based on the description and assessment of contaminations, impacts can be mitigated and compensated for by the City and major developments.

Proposed structural development over the contaminated soils/alluvium may contain the contamination and promoting downstream movement of contaminated liquids and gases.

Mitigation/compensation by the City should include borings and well fields along Main, Spring, and Bolera and any public facilities along the CASP southerly boundaries. Some evidence of contamination was encountered during construction of Red Line Phase 1 south of Chavez Av.

Historic aerial photos of 1923, -27, -28, -31, and -38 may provide evidence of historic contamination by RR and tankage and focus additional borings and investigations to locate and evaluate levels of industrial and railroad contaminations. Such information must become the basis for describing contamination, evaluations of such, and mitigation measures for decontamination and exposures of residents to toxic gases out gassing into overlying new land uses.

Assessments and mitigation of significant toxic gases/liquids must include any increase in downward recharging of storm waters and leaching of contaminations through 20ft of soil/alluvium/vadose into the underlying groundwater and then compressing of the vadose zone and entrapped toxic gases above a rising groundwater table, augmented by increased stormwater recharge.

Eastside of river and I-5, the CASP has thinner alluvium/soils and thereby contamination maybe more local and static with thinner alluvium with easier/cheaper studies to find and remove.

Mitigation measures for west of I-5 must be far larger and expensive than those east of I-5. Any mitigation studies and measures must reflect initial geological/soil studies.

The EIR must describe and assess the effects of the LA Oil Field, including a Methane Zone related to the field. EIR must include a CalGEM map of the underground oil field and all leases include therein. This must be further directly related to the oil/gas producing zones and the geological structure of the Upper Elysian Park Fault across the easterly end of the oil field. Soil/alluvial borings and gas sampling must be included as methane/sulphide/toxic gas mitigation to locate, remove, and treat for methane and other gases. Such mitigation must be incorporated into parcel development regarding surface recharging/barriers and gas collection-treatment-release.

The EIR must include a complete groundwater setting and river along with surface recharge, passage southward of the Bolera Lane and westward extension of "Alhambra Ave." (=railroad). Overall application of Low Impact Development requirements must consider and mitigate any recharge reductions and/or increases across the entire CASP and releases.

The LA River lined channel was rendered generally impervious by concreting, but constructed channel designs incorporated in channel "weep-holes" (>15 from upstream concrete margin south to Chavez/US-101) which establishes a local base groundwater level of >20ft below the surface (west of Channel).

SUBJECT: Cornfield Arroyo Seco Specific Plan Update

EIR Scoping Meeting CPC-2021-2642-SP; ENV-2021-2643-EIR

RE: Notice of Preparation (NOP) & Scoping Review Public Comments

After review of the many pages, I find the NOP and "initial studies" to be incomplete and inadequate for scoping of the proposed "update" of the Cornfields Arroyo Seco Specific Plan (CASP). I have prepared more than 400 CEQA/EIR+ and NEPA/EIS+ worldwide and in the US, since I prepared my first EIR in 1972 for the City of San Jose. I am experienced in preparation and

review of CEQA/NEPA documents and their contents. I and a few others contributed to the initial 2010 CASP development and commented on such.

As a Specific Plan, the process is different from that of a General/Community Plan update and must achieve greater clarity, quantification, and informative content for public/community participation, review, and comments. I recommend that the LACity Dept.City Planning withdraw current documents, revise and supplement based on the attached comments and recommendations, and recirculate for post-Covid review and comment by stakeholder and the Public. DCP must also involve Dept.Publ.Wrks.-Bur.of Engineering because of the many infrastructure facilities involved in such a major transformation from industrial/public related facilities and systems to residential and commercial land uses.

The CASP was adopted in 2013 but the problems were known and arose immediately:

Large parcel sizes and corporate ownerships without resources to profit from housing conversions;

Prop-13 ownerships (LLP/LLCs) of parcels and need for owners to participate in partnerships;

Century of industrial direct and groundwater expanded contamination and potential costs of remediation;

Historic housing protections and considerations; and

Lack of and expense for housing infrastructure – drains, sewers, cabling/transformers.

SEE attached also/below. More to Come

Dr. Williams,

We are in receipt of your comments on the Notice of Preparation (NOP) of the Draft EIR for the CASP Update.

To clarify, the CASP Update will apply to the entire geographic area located within the boundaries of the Cornfield Arroyo Seco Specific Plan, which encompasses approximately 660 acres. We have worked with our systems division to remove reference to any specific parcels that were previously shown on the Planning Document Information System (PDIS) for that case number.

The City of Los Angeles has initiated the CASP Update (Council File No. 13-0078-S2), not a private entity, and the City is the lead agency for the Project. Detailed information on the Project, including project location, objectives, and contact information, can be found in [the NOP](#) released April 8, 2021. Please refer to Page 4 of the NOP for a list of all Project Objectives and Figures 1 and 2 showing the boundaries of the Project Area.

You can also learn more about the CASP Update, including the staff members involved in the Project, on our website: Planning4LA.org/casp-update.

Regards,

Re: Notice of Preparation for the Cornfield Arroyo Seco Specific Plan ("CASP") Update
(Case Numbers: CPC-2021-2642-SP; ENV-2021-2643-EIR)

Dear Ms. Kelley:

On behalf of our client, Goodwill Industries of Southern California ("Goodwill"), we respectfully submit this comment letter on the City's proposed update to the Cornfield Arroyo Seco Specific Plan ("CASP Update"). Goodwill owns property at 342 N. San Fernando Road in the City of Los Angeles ("City"). The Goodwill property is located within the CASP area and the Northeast Los Angeles Community Plan. Goodwill considers its property an ideal location for redevelopment, which could deliver new affordable housing and other mixed-uses to the area. This type of redevelopment would also complement Goodwill's existing commercial operations. As you know, however, the CASP constrains the site and prevents Goodwill from developing affordable housing. Therefore, Goodwill requests that the City modify the zoning on the site during the CASP Update.

Goodwill's redevelopment intentions and the CASP Update appear aligned. The CASP Update has the primary goal of incentivizing the development of more affordable and mixed-income housing in the CASP area. Currently, only six dwelling units in the CASP would be reserved as affordable units for Extremely Low Income households pursuant to the CASP's affordable housing incentives. The majority of land in the CASP has been zoned to not allow predominantly residential development. A limited number of parcels, comprising 25 percent of land in the CASP, are zoned Urban Village which allows for residential projects. Furthermore, the CASP Update can encourage affordable and mixed-income housing production more broadly by easing development restrictions on new residential projects. Specifically, Goodwill requests that the City apply the Urban Village zoning designation to the Goodwill site and study it accordingly in the forthcoming Environmental Impact Report ("EIR") for the CASP Update.

I. CASP Existing Zoning

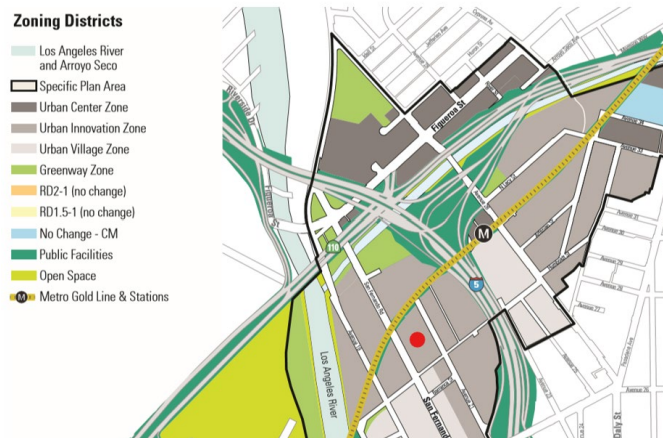

The CASP's existing zoning classification identifies the Goodwill site as Urban Innovation ("UI"). The Urban Innovation zoning designation includes as permitted uses, multi-family residential, public parking, corporate headquarters, commercial office, light manufacturing, and warehousing. The CASP also allows for certain permitted ancillary uses in the Urban Innovation zone. Permitted ancillary uses include restaurant, retail, entertainment and recreation facilities. Ancillary uses are limited to 10% of the Base Floor Area Ratio ("Base FAR") of the site.

Residential multi-family uses in the Urban Innovation zone are limited to a maximum of 15% of the applicable Floor Area Ratio ("FAR").¹ The Base FAR of the Goodwill site is 3:1. The 15% FAR cap required by the Urban Innovation zoning unreasonably hinders the ability to construct affordable and mixed-income developments. The CASP Update provides an opportunity to remedy this constraint.

II. CASP Update – Proposed Zoning

The CASP Update would accommodate additional housing in the CASP area by expanding the residential Urban Village ("UV") zoning to more parcels. Goodwill agrees that that UV zoning is more appropriate for the Goodwill site and would provide greater development potential for much needed affordable housing units. Parcels zoned as UV are located directly south and southwest of the site. Residential multi-family uses in the UV zone are only limited to a maximum of 90% of the applicable FAR. Figure 1 below indicates the areas that Goodwill is requesting be changed to UV zoning.

Figure 1 – Proposed CASP Zoning District Map

The UV zone, compared to the existing UI zone, would improve the possibility of developing affordable housing as a component of the redevelopment of the Goodwill site. Assuming a Base

¹ CASP Section 2.1 E.

FAR of 1.5:1, the Goodwill site (if zoned Urban Village) could produce approximately three times the residential square footage compared to the more limited Urban Innovation zone. Thus, Goodwill believes the City should change the zoning on the Goodwill site from UI to UV as part of the CASP Update.

In addition, Goodwill supports the CASP Update proposal to remove the existing 10% non-residential use requirement for projects in the UV zone. The removal of the 10% non-residential restriction will further incentivize the development of housing in the CASP. Also note, that Goodwill is currently analyzing other land use mechanisms (such as increasing base FAR, adjusting development regulations, and/or modifying land use designations) to facilitate robust redevelopment opportunities on the Goodwill site. Goodwill anticipates sharing these additional comments and suggestions with the City during the CASP Update process. As an example, the CASP Update proposes changes to various development standards including building form, urban design, open space, parking, conservation, performance, and sign standards to further support housing production. Goodwill looks forward to working with the City to craft development standards that facilitate streamlined development opportunities on the site to provide a mix of land uses and affordable housing units.

III. Conclusion

Thank you for the opportunity to comment on the Notice of Preparation for the CASP Update EIR. Goodwill plans to stay involved with the CASP Update process. Please consider the zone change request in this letter as the planning process proceeds.

Respectfully,

James E. Pugh

Hi Michael,

I hope that you are doing well. I'm forward you this email as I know Clare is out of the office until Monday. Please let me know if you have any questions.

Best,

Justin

Subject: CASP Update Comment Letter

Good morning Clare,

On behalf of our client Goodwill Industries of Southern California, please find attached a comment letter to the NOP for the proposed CASP Update. Please do not hesitate to reach out should you have any questions.

Best,

Justin

Re: Southeast Asian Community Alliance Scoping Comments on the Cornfield Arroyo Seco Specific Plan Update (CPC-2021-2642-SP; ENV-2021-2643-EIR 200)

Dear Ms. Kelley,

On behalf of the Southeast Asian Community Alliance (SEACA), I respectfully submit comments on the Notice of Preparation (NOP) of the Environmental Impact Report (EIR) for the update of the Cornfield Arroyo Seco Specific Plan (CASP). These comments are also endorsed by Public Counsel, and Natural Resources Defense Council.

SEACA is a community organization representing low-income refugee and immigrant youth and families in Chinatown, and the surrounding areas. Historically, we were a key community stakeholder that helped shape the CASP and ensure that affordable housing incentives are built into the current zoning provisions. We look forward to working with the City to ensure that the CASP update results in solutions to the affordable housing shortage that prioritize the needs of the existing low-income refugee and immigrant community, prevent the displacement of long-term residents and businesses, and results in positive racial equity and health equity outcomes for our community.

Target Community Engagement

The CASP area (Project Area) encompasses a multilingual and diverse community. In addition, the community includes many low-income seniors and adults who have limited access and proficiency with technology. Despite the limitations to in-person interaction placed on us by the coronavirus pandemic, the plan update process must be an inclusive process that specifically reaches low-income community members and those that face language and technology barriers. We appreciate the City Planning Department's (CDP) willingness to be creative and inclusive, and look forward to supporting the process and finding ways to meaningfully engage our community in the

CASP update and specifically reach residents who face language, technology, and other barriers to participation.

Ensure Deep Affordability and Community Benefits

Los Angeles is undeniably in the midst of an affordable housing crisis, which has been exacerbated by the economic recession due to the coronavirus pandemic. However the crisis is more acute for Extremely Low Income (ELI) households (those earning below 30% of AMI), 74% of which are severely rent burdened - meaning they spend more than 50% of their income on housing costs.¹ Many of our families earn \$25,000 or less, putting them at risk for displacement and homelessness. Although we agree that additional affordable housing is badly needed, we want to ensure that any recalibration of affordable housing incentives in the plan results in maximization of ELI and Deeply Low Income (DLI) units that match the affordability needs of the community. In addition any new incentives should also include a community benefits program, similar to the model program in the DTLA 2040 Plan², that incentivizes the creation of public parks and community spaces.

The new plan must also include robust anti-displacement strategies that address both direct and indirect displacement as a result of new development. Low-income tenants and those with limited English must be protected from the threat of losing their homes.

Protect Community-serving Small Businesses

Since CASP's implementation in 2013, the pressures of gentrification have become all the more pronounced for small businesses. In the past year we have lost our last full-service grocery store as the long-time owners were refused a new lease and forced to move, leaving transit-dependent residents without a place to buy groceries³. The pandemic has also had a devastating effect on Asian-owned small businesses as racist associations with the virus persisted, and federal PPP loans were disproportionately funneled to more affluent communities⁴. Although the update's stated objectives prioritize housing, the plan must continue to protect and encourage community-serving small businesses which generate the local economic base, serve the needs of transit dependent residents, and generate employment for the immigrant labor force.

Improve Health Outcomes

Chinatown and the CASP area have some of the most unhealthy air quality in Los Angeles. According to CalEnviroScreen the area covered by CASP is in the 99th Pollution Burden Percentile⁵ for LA County. At the same time, the low-income residents, youth, and the elderly rely on public transit and walking, and have much lower rates of car ownership. Out of necessity, we are a model TOC community. However, as residents and businesses are displaced and higher income

⁵ <https://oehha.ca.gov/calenviroscreen/maps-data>

people take their place, car ownership rates have gone up. By incorporating anti-gentrification and anti-displacement strategies that stabilize both low-income residents and small businesses, CASP can sustain and improve upon the multi-modal transportation systems that many residents rely on, improve air quality and lead to better health outcomes. Prioritizing the needs of low-income community members can reduce GHG emissions and result in better economic and health outcomes.

Focus on Racial Equity

The CASP update provides an opportunity for DCP to deliver on its statement of solidarity with AAPI communities⁶, and the recent call for anti-racist planning that addresses the structural discrimination that communities of color have faced in Los Angeles⁷. In addition to the stated project goals, we urge DCP to center racial equity in the update process and include an outcome-focused Racial Equity Analysis, which we are currently proposing in the DTLA2040 Community plan update, in the new CASP.

SEACA appreciates the opportunity to provide these comments on the CASP NOP. We are committed to make our community a thriving and safe environment for low-income residents of color. We urge you to address the concerns raised in our comments both throughout the plan update process, and in the substance of the new CASP. We look forward to any additional dialogue and opportunities for public engagement as part of the CEQA process.

Sincerely,

Sissy Nga Trinh
Executive Director

Hello Mr. Sin,

I'm forwarding you this email submitting our scoping comments on the CASP update. I received a notification that Ms. Kelley will be out of the office and to forward communications regarding CASP to you. I want to ensure these are received into the record before the NOP deadline.

My best.

Dear Ms. Kelley,

On behalf of SEACA, and with support from Public Counsel and the Natural Resources Defense Council, I'm submitting the attached scoping comments regarding the CASP update (CPC-2021-2642-SP; ENV-2021-2643-EIR 200).

Thank you.

Dear Ms. Kelley and Mr. Sin

I request that you please add me to the list of interested parties for the CASP Update (CPC-2021-2642-SP; ENV-2021-2643-EIR) project to ensure notification of all actions, approvals, determinations, notices, hearings, and any other matters related to the Project's land use approvals and compliance with the California Environmental Quality Act, Pub. Res. Code § 21000 et seq.

Please send notices electronically to yelena@seaca-la.org. If you have any questions regarding this request, please contact me at (310) 463-8714.

Thank you

CASP Update - 4 p.m. Scoping Meeting

2 messages

Phyllis Ling <pling.hcnnc@gmail.com>

Mon, Apr 12, 2021 at 1:26 PM

To: Clare Kelley <clare.kelley@lacity.org>, michael.sin@lacity.org, valerie.watson@lacity.org

Hi Ms. Kelley, Mr. Sin, Ms. Watson,

I'm writing in regard to a CASP Update EIR scoping meeting that is scheduled for April 22 at 4 p.m.

I am curious how 4 p.m. was selected as the time for this public meeting. This is during typical business hours, and many stakeholders will still be at work, and unable to participate.

The Historic Cultural North Neighborhood Council, which represents the CASP area, has its regular board meetings at 4 p.m., but this is something that occurred with a lot of controversy and outcry, and is also the subject of a grievance against the neighborhood council.

I am writing to make sure you are aware that 4 p.m. public meetings will exclude a large number of stakeholders from participating. I hope you will consider rescheduling the meeting or holding a second scoping meeting at a time that is reasonably accessible to the public, such as 5:30pm or 6pm.

The opinions expressed are my own, and do not represent any official position of the board of HCNNC.

Sincerely,

Phyllis Ling
Outreach Committee Chair, Historic Cultural North Neighborhood Council

Good afternoon Ms. Ling,

We are in receipt of your comments on the Scoping Meeting for the CASP Update. We understand and appreciate your concerns regarding meeting scheduling.

City Planning will record the Scoping Meeting and will post that recording, as well as other meeting materials, to the [project website](#) after the meeting. Additionally, we will be hosting open houses and other outreach events for this effort in the coming months, and anticipate offering these participation opportunities during a variety of times.

Best regards,

APPENDIX B
Methodology

Appendix B

Methodology

APPENDIX B. METHODOLOGY

POPULATION, HOUSING AND EMPLOYMENT

This section describes the data sources and methodologies employed in the identification of the Draft EIR Existing Conditions and Future Projections, both of which are used to assess potential impacts of the Proposed Cornfield Arroyo Seco Specific Plan (Proposed Plan). This section also explains how reasonably expected population, housing, and employment under the Proposed Plan are derived and how the Proposed Plan addresses anticipated growth.¹

The Draft EIR evaluates the potential environmental impacts related to anticipated changes in population, housing and employment based upon information from a variety of sources including, the United States Census Bureau (U.S. Census), California Department of Finance (DOF), California Employment Development Department (EDD), the Southern California Association of Governments (SCAG), the City of Los Angeles Department of City Planning (DCP), the City of Los Angeles General Plan Framework Element (Framework) and associated documents. Since each of these sources may use different methods of data collection and analysis and/or different timeframes, the data do not always arrive at precisely the same results. Accordingly, the demographic data used in the analysis may vary somewhat, depending upon the source cited. Despite the variations, the data used in this Draft EIR represent the best available data sources during the Draft EIR preparation and provide a reasonable estimate of the population, housing, and employment characteristics of the Cornfield Arroyo Seco Specific Plan Area (Specific Plan Area).

EXISTING CONDITIONS

Existing Conditions or Baseline Conditions for the purposes of environmental analysis of a specific plan update, can be described in demographic terms (population, housing, and employment) or in terms of development characteristics (square feet of development, height of structures or number of housing units). The City has the discretion to determine the best data source for Existing Conditions. For Existing Conditions, DCP, as the City's professional planning agency and the department responsible for reviewing and preparing the Draft EIR, uses demographic data that is published and referenced public data used by multiple agencies in planning for the City and region. Obtaining accurate development characteristics at the parcel level for a Specific Plan Area has in recent decades become possible through geographic information systems (GIS); however the technology still presents practical difficulties in verifying precise, detailed data at the lot and parcel level for a city the size of Los Angeles. The size of the City at over 478 square miles (including 5 square miles of water area) results in duplicate, incomplete, and/or unverified data that is time and cost prohibitive to verify at present. Reasonable efforts are made to collect and use the most complete and current data at the time of the Draft EIR analysis recognizing the constraints, limitations and margins of error associated with data sources.

¹ Nothing in this document is intended to contradict or control the particular data or methodology used in the EIR. This methodology was developed by DCP in its review and preparation of Draft EIRs for the community plan and specific plan update programs and is provided in the appendices to supplement and support the Draft EIR.

The leading source of demographic data is the U.S. Census. While Census data is typically the most reliable representation of socioeconomic data, such as housing and population, for discrete geographic areas, it is only available on a decennial basis, i.e., 2000, 2010, and 2020. While it is preferable to utilize decennial census data for analysis, it is not always possible to align planning processes with the release of decennial census data. Consequently, other sources are consulted to employ the most current information as well as to provide a benchmark for the Existing Condition year. In the interim years, the U.S. Census Bureau gathers more detailed socioeconomic data through other surveys, such as the American Community Survey (ACS) program, which provides data on an annual basis for certain geographies. For example, the ACS provides annual estimates for incorporated cities but does not provide annual estimates for specific plan areas. There is a lag time between when the data is collected and when it is released for both Census products. Both the decennial Census and ACS data are subject to sampling variability.

SCAG, as the Regional Transportation Planning Agency (RTPA) and the Metropolitan Planning Organization (MPO), publishes demographic estimates and projections through the long-range Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS), which is updated by SCAG every four years. Census and ACS data are utilized by SCAG to prepare regional demographic estimates and forecasts. In addition to estimating existing demographics, the RTP/SCS provides a vision for future transportation investments throughout the region. Using demographic growth forecasts and economic trends that project out over a 20-year period or "horizon," typically, the RTP/SCS considers the role of transportation in regional planning in the broader context of economic, environmental, and quality-of-life goals for the region. Therefore, SCAG data are often utilized by planning agencies in the region for consistency with the goals and demographic data of the RTP/SCS.

■ **Baseline Existing Conditions (SCAG)**

SCAG is the regional demographer for a six-county region that includes Los Angeles County. In that capacity it has an established methodology for estimating population, housing, and employment for the region and for projecting future population, housing, and employment at a jurisdictional or citywide level. SCAG utilizes various sources to determine existing or baseline population, housing and employment. This method is used for deriving annual estimates of population, housing, and employment for years that are not a Census year.

SCAG's small area growth forecasting process is applied to develop baseline year estimates and future year socioeconomic data at the Transportation Analysis Zone (TAZ) level. The approach is utilized by SCAG to distribute jurisdictional level population, housing, and employment estimates and projections into TAZs. Population figures are estimates derived from households and are generally viewed to be a more accurate representation at a jurisdictional level where multiple data sources are consulted. It is generally less precise to estimate population numbers for smaller areas, and or for areas where boundaries do not precisely match census reporting divisions, such as at the Specific Plan Area level than at recognized jurisdictional boundary levels.

The following is the list of SCAG data sources excerpted from the most recent 2020 RTP/SCS Background Document Report:

- California Department of Finance (DOF) population and household estimates;

- California Employment Development Department (EDD) jobs report by industry;
- 2015 existing land use and General Plans from local jurisdictions;
- 2010 Census and the latest ACS data (2013-2017 5-year samples);
- County assessor parcel databases;
- 2011 and 2015 business establishment data from InfoGroup; and
- SCAG's 2016 RTP/SCS growth forecast.

See the following SCAG publication for the full methodology employed to determine estimates and forecasts of population, housing, and employment data:

https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_demographics-and-growth-forecast.pdf

■ How DCP Verifies Existing Conditions

DCP has regularly tracked growth and development activity in the City. As part of the regional planning process, local planning departments (including DCP) work together with SCAG to develop demographic estimates for the City of Los Angeles and the Southern California region approximately every four years. SCAG publishes regional transportation and sustainability plans (RTP/SCSs) every four years. However, the cycles of RTP preparation do not regularly coincide with the release of Census data. Because of the time involved in preparing the RTP/SCS, there is a lag between the time the Census data is released or demographic estimate is prepared and the time that SCAG makes demographic estimates available through the RTP/SCS. An additional lag occurs between the time the Planning Department receives SCAG's demographics estimates for the baseline and forecasts for the horizon year, and the time a draft specific plan and EIR are completed. Therefore, interpolations of data utilizing a previous point in time and future point may be necessary.

Furthermore, the DCP's planning process for community and specific plan updates is comprehensive; the updates are long-term projects that take several years to complete. The planning process focuses on addressing land use changes at the parcel level to both resolve inconsistencies in land use regulations as well as to fulfill City objectives. For the Proposed Plan, the Notice of Preparation (NOP) was released in April 8, 2021, and the latest available Decennial Census data was for the year 2010.² The 2010 Census data provides a snapshot in time and is used as a reference to benchmark data along with other sources. Given the number of years that have lapsed between the release of the 2010 Census and the present, the Census data no longer reflects the best available data for 2021, the NOP publication year. Growth has occurred in the years after the Great Recession and consequently, more recent data from the 2016-2040 RTP/SCS is utilized for Existing Conditions.³

² The Census Bureau released the initial 2020 Census Post-Enumeration Survey (PES) results, which provides estimates of population coverage overall and for important demographic groups, on March 10, 2022, after the NOP release.

³ As the 2016 RTP/SCS utilizes a baseline year of 2012, 2021 baseline year demographic estimates were interpolated (an annual average growth rate was applied) to estimate existing conditions. The interpolation method was corroborated by SCAG as a suitable methodology to estimate existing conditions.

SCAG’s two most recent RTP/SCSs, the 2016-2040 RTP/SCS and 2020-2045 RTP/SCS, were adopted in April 2016 and September 2020, respectively. As described in further detail below, the population, housing, and employment projections of these two regional plans are consistent with each other in the Specific Plan Area. Accordingly, the City has elected to use the socio-economic estimates and projections of the 2016-2040 RTP/SCS in this EIR in order to be consistent with the City of Los Angeles Travel Demand Forecasting (TDF) Model. The current TDF Model, which was developed in the last few years as part of the City’s effort to move to vehicle miles traveled (VMT) thresholds of significance, relies on the 2016-2040 RTP/SCS. The outputs of the TDF Model are used to inform transportation, air quality, and greenhouse gas emissions analysis in this EIR.

The City has begun the process of updating the TDF Model to use 2020-2045 RTP/SCS data. However, the update is not expected to be complete by the time this EIR is published. It would not be reasonable to complete an update to the TDF Model every time the City prepares a new EIR, as the update is a significant, multi-year work product costing approximately \$400,000. The current TDF Model is the best tool the City has available to estimate VMT and conduct the required analysis. As such, the socio-economic data for the Proposed Plan is derived from 2016-2040 RTP/SCS population, housing, and employment estimates, which as shown below in Table 1, is consistent with the data from the most recent 2020-2045 RTP/SCS.

TABLE 1 BASELINE YEAR (2021) SOCIO-ECONOMIC DATA ESTIMATES WITHIN THE PROJECT AREA		
	2016-2040 RTP/SCS (2021)	2020-2045 RTP/SCS (2021)
Population	6,027	6,202
Households	2,012	1,936
Employment	5,411	6,189
Source: SCAG 2016-2040 RTP/SCS and 2020-2045 RTP/SCS interpolated.		

Between the 2016-2040 RTP/SCS and 2020-2045 RTP/SCS, the population and households estimates for the baseline year (2021) differ by less than 3 percent and 4 percent, respectively. The 2016-2040 RTP/SCS estimates that baseline year employment within the Project Area is 5,411 jobs, compared to the 2020-2045 RTP/SCS’s estimate of 6,189 jobs, a difference of 14 percent. The use of the 2016-2040 RTP/SCS’s lower employment figure represents a more conservative analysis, as the EIR would be analyzing a greater employment delta over the course of the Proposed Plan compared to the 2020-2045 RTP/SCS’s higher baseline year employment figure.

Many municipalities and government agencies (including public service providers and other City departments) rely on the same source, i.e., 2016-2040 SCAG RTP/SCS data, for purposes of planning, both for estimates of current population, housing and employment, as well as for projections of future population, housing, and employment. Use of such data is a consistent and best practice for local governments. It is also the DCP’s practice to use SCAG RTP/SCS data as a benchmark or as a reference point for estimates and projections locally.

Although CEQA does not require a lead agency to change the baseline year for Draft EIR analysis every

time a government agency at the state, federal, or local level issues a projection for a future condition or issues an estimate for those years subsequent to the Draft EIR baseline year, the DCP does review new data or projections released subsequent to the publication of the NOP to verify that it would not substantively affect the analysis or conclusions for significant impacts that are correlated or reliant upon population, housing or employment data. For instance, the City used Los Angeles County Assessor data to benchmark and analyze the general distribution patterns and totals for housing estimates in the Specific Plan Area. This system of utilizing SCAG data and comparing or benchmarking it with other available data represents a best practice approach to obtaining and using complete and most current data. Other sources were also consulted (i.e., Longitudinal Employer-Household Dynamics (LEHD) and American Community Survey) to verify demographic totals for the Specific Plan Area. See Table 2. These sources are used as benchmarks or control totals whereas Assessor data is used for distribution because it is regularly updated and available at small geographic levels.

TABLE 2 COMPARISON OF DEMOGRAPHIC ESTIMATES FOR THE SPECIFIC PLAN AREA

Data Source	Households	Population	Employment
2016-2040 RTP/SCS (2021 interpolated)	2,000	6,000	5,400
ACS (2014-2018) ¹	1,700	6,200	n/a
LEHD (2017) ²	n/a	n/a	5,600 ³
Assessor Parcel Data (2021)	2,100	n/a	n/a

Note: A lag time for the public release of most of the data sources, such as ACS and LEHD, is typical. All numbers are rounded to the nearest one hundred.

1. U.S. Census Bureau, 2014-2018 American Community Survey
2. Longitudinal Employer-Household Dynamics (LEHD on the Map)
3. The estimated total does not include self-employed jobs but includes multiple jobs held by one person.

FUTURE PROJECTIONS

The Proposed Plan is intended to plan for anticipated growth by 2040 (the planning horizon year), and as explained above, uses the adopted 2016-2040 SCAG RTP/SCS (2016 RTP/SCS) as a resource for both the baseline (also called Existing Conditions) population, housing, and employment estimates and future projections for the 2040 horizon year.

The 2016 RTP/SCS projection for 2040 factors in recent and past trends, key demographic and economic assumptions, and local, regional, state or national policies. The Great Recession had a significant impact on household, population, and employment trends. Growth is still anticipated in SCAG's six-county region but at a slower pace. SCAG's projection assumes that regional growth will be approximately 0.7 percent per year on average for households and population, while employment is also forecast to grow at

0.7 percent per year.⁴

■ Projections (SCAG)

SCAG prepares regional and jurisdictional forecasts or projections. Regional employment forecasts are based on a set of national employment forecasts using a shift-share model. The population forecast uses the cohort-component model, which adds to the existing population conditions the projected number of persons living in group quarters, births, and persons moving into the region and subtracts the number of projected deaths and persons moving out of the region. Households are forecast by multiplying the projected residential population by projected headship rates, or the share of householders in population cohorts based on age-sex-racial/ethnic specific household formation levels. Regional demographic-economic assumptions were also considered in the forecasts and cover issues such as fertility rate, domestic migration, international immigration, and labor force participation rates.

For the jurisdictional forecast, also known as small area forecast, SCAG derives household growth rates and household sizes based on historical trends and the amount of potential development from jurisdictions' general plans and land uses. Population projections are based on household growth and size. Future employment numbers for jurisdictions are based on the share of the county's employment by sector. The major data sources used to develop the jurisdictional forecast include: California Department of Finance (DOF) population and household estimates; California Employment Development Department (EDD) jobs reported by industry; 2010 Census and the latest American Community Survey (ACS) data; Regional Housing Needs Assessment (RHNA) growth projections for 2014 through 2021; and 2014 Business Installment data from infoGroup. Local jurisdictions also provided input and comments to SCAG and adjustments were made.

For the City of Los Angeles, SCAG distributes the total citywide number among all of the city's Community Plan Areas by Transportation Analysis Zones (TAZs), again derived from past trends and building upon/compared to TAZ projections of previous adopted Regional Transportation Plans. DCP reviews the proposed SCAG projections based on knowledge of the applicable Community Plan and/or Specific Plan Area(s) and may give feedback based on local knowledge of development trends and development activity observed during the process of developing the RTP/SCS and its projections. An example of input could be advising SCAG to reflect growth in areas with existing or planned transit infrastructure, areas with flexible land use regulations that can allow higher levels of growth and away from hillsides or historic single-family neighborhoods. This local feedback can also include further input based on the effects of local policymaking, such as General Plan, Community Plan or Specific Plan updates, and the mandates of federal and state plans, which are also taken into consideration during the local review process.

See the following SCAG publications for the methodology employed to determine estimates of population, housing, and employment data for the region:

⁴ 2016 RTP/SCS Demographics Growth Forecast Appendix, April 2016, accessed March 3, 2020, http://scagrtpscs.net/Documents/2016/final/f2016RTPSCS_DemographicsGrowthForecast.pdf

■ How Specific Plans Consider SCAG Projections

The City of Los Angeles uses SCAG's projections to plan for the future. The Department of City Planning considers SCAG projections for housing, population, and employment as targets in its long-range planning efforts for Specific Plan Areas when updating specific plans. SCAG provides the demographic expertise in developing regional and citywide projections and works with DCP planners and demographers to refine those projections and their distribution throughout the city, as described previously. At a minimum, Community Plan and Specific Plan updates meet SCAG projections for the City and each Plan Area but in some cases may exceed those projections for certain Plan Areas depending on circumstances such as market demand, development trends, new legislation, the introduction of transit or other infrastructure, etc. This may occur because the available data or information SCAG used during the time it prepared projections changed or because new information became available later. In this respect, the most recently adopted SCAG projections are viewed as targets, and DCP ultimately determines the distribution of citywide growth through adherence to the General Plan Framework and Community Plan goals, objectives, and policies while the citywide projections are being accommodated. This means growth projections within individual Community Plan or Specific Plan Areas by SCAG may be redistributed between Community Plan Areas and/or Specific Plan Areas to meet the SCAG Citywide growth projections.

The table on the next page compares the allocations of population estimates by seven geographic planning areas within the City of Los Angeles for 2021, and the population projections at the horizon year 2040. Using SCAG's 2016 RTP/SCS as the source, the City of Los Angeles as a whole is projected to grow by 13% in population during this time (4,609,000/4,091,000), which over the course of 19 years, is approximately 0.6% growth per year.

The Specific Plan Area is within the Central Los Angeles and East Los Angeles Geographic Planning Areas. Table 4 indicates that the Central Los Angeles Geographic Planning Area, which includes the Downtown, Westlake, Wilshire and Hollywood Community Plan Areas (CPAs), is currently home to approximately 18% of the citywide population, and it is projected that in 2040 the region will be home to approximately 20% of the citywide population. Table 4 also indicates that the East Los Angeles Geographic Planning Area, which includes the Northeast Los Angeles, Silver Lake-Echo Park-Elysian Valley, and Boyle Heights CPAs, is currently home to approximately 10% of the citywide population, and it is projected that the figure will remain approximately 10% by 2040.

It is generally assumed that CPAs would continue to grow consistent with SCAG assumptions of approximately 0.7% growth per year on average across the region and would still need to accommodate at least marginal levels of growth (i.e., it was not assumed that any CPAs would have less population than current existing conditions levels).

TABLE 3 PROJECTED POPULATION GROWTH FOR THE CITY			
Geographic Planning Area	2021 Estimated Population /a/	2040 Projected Population /a/	Projected Population Growth (2021 – 2040) /a/
City of Los Angeles	4,091,000	4,609,000	518,308
South Valley	780,493	875,559	95,066
South Los Angeles	779,803	874,467	94,664
North Valley	734,546	795,498	60,952
Central	738,605	903,743	165,138
West Los Angeles	441,950	497,159	55,209
East Los Angeles	412,614	448,846	36,232
Harbor	202,680	213,603	10,923

/a/ The 2021 estimated population and the 2040 projected population are based on SCAG's 2016-2040 RTP/SCS. Due to rounding, the percentages may not add up to 100 percent.

TABLE 4 PERCENTAGE OF CITYWIDE POPULATION AND PROJECTED GROWTH			
Geographic Planning Area	% of Citywide 2021 Population /a/	% of Citywide 2040 Projected Population /a/	% Change of Citywide Projected Population Growth (2021 – 2040) /a/
City of Los Angeles	100%	100%	
South Valley	19%	19%	-
South Los Angeles	19%	19%	-
North Valley	18%	17%	-1%
Central	18%	20%	2%
West Los Angeles	11%	11%	-
East Los Angeles	10%	10%	-
Harbor	5%	5%	-

/a/ The 2021 estimated population and the 2040 projected population are based on SCAG's 2016-2040 RTP/SCS. Due to rounding, percentages may not add up to 100 percent.

HOW GROWTH IS ADDRESSED THROUGH PLANNING AND ZONING

In preparing Community Plan and Specific Plan updates, land use and zoning changes are proposed that will allow for projected growth to be accommodated while meeting the policies of the Framework Element and the Sustainable Community Strategies. During the planning process, technical land use analysis including the study of development trends, and consideration of General Plan policies is conducted to identify appropriate locations and levels of future development. DCP evaluates the geographic distribution of land use designations

and zoning within a Community Plan or Specific Plan Area to see where development potential is warranted. Some areas are expected to remain largely unchanged over time, such as open space areas, and public facilities. In other areas, development could occur as infill development and re-development, such as in multi-family residential areas. There are also some areas where development is directed, such as near transit stations and major corridors with bus lines, in order to increase access to transit, reduce vehicle miles of travel and thereby reduce greenhouse gas emissions and advance the climate change goals of the city and the region. Land use designation and/or zoning are applied to implement the updated land use policies of the City, the Community Plan, and/or the Specific Plan.

Under the Proposed Plan, new developments would be subject to form and frontage regulations that are designed to achieve compatibility with the existing visual character of each of the neighborhoods within the Specific Plan Area. Specifically, Floor Area Ratio limitations and transition height requirements, where appropriate, would help to provide cohesive height and bulk transitions across future structures within the Specific Plan Area. A new project must meet the use and design regulations established in the updated Specific Plan and comply with applicable Environmental Protection Standards to receive approval. Some of the design requirements will result from the planning process and some will result from the environmental review process.

For example, regulations set through the zoning could include limitations on Floor Area Ratio or transition height requirements in certain specific areas of the Specific Plan Area. An environmental standard might require shielding of light source so as to direct light away from adjacent residential uses. These are examples that represent the types and range of regulations that can be applied to reduce potential impacts of new development. Planners will review most projects in the Specific Plan Area through a ministerial process. Where projects exceed the Project Compliance threshold, discretionary review will be applied.

PROPOSED PLAN'S REASONABLE ANTICIPATED DEVELOPMENT

After preparing the Specific Plan update, separate from the demographic projections is the determination of the Reasonable Anticipated Development of the Proposed Plan, or what is reasonably expected to be built out under the Proposed Plan during the planning horizon. On a citywide basis, DCP's goal is to align citywide Reasonable Expected Development for all of the Community and Specific Plans with the total SCAG projection for the City to be consistent with other departments and agencies who plan for and provide public services and infrastructure to the city.

Planners use their educational and professional experience and expertise of land use and zoning standards to make assumptions about where development is likely to occur and at what scale, and create assumptions about the amount of residential, commercial, and industrial development that will occur during the life of the plan to determine the Reasonable Anticipated Development.

These assumptions are established through extensive research and analysis of existing development trends, existing conditions on the ground, project entitlement and building permit data, geographic and historic constraints, age of existing buildings, and the development potential between the existing built conditions and what uses and development intensities the new regulations would allow. Factors such as existing and planned infrastructure improvements are also considered.

Although the Project Planners do significant research relying on a multitude of data sets and market trends are considered while establishing assumptions, determining the Reasonable Anticipated Development involves

making a lot of assumptions. Although the Planning Team are experts on the Specific Plan Area and on the City's land use and zoning plans and laws, the Proposed Plan, with its policies, zoning, and land use changes do not grant permits for or construct any developments. Future unforeseen market changes that either incentivize or inhibit development are unknown at this time, leaving uncertainty in the process of developing assumptions. The Planning Team, including City Planners, Senior City Planners, and a Principal City Planner, use their expertise and the data sets available at the time of EIR preparation to inform the assumptions used in this analysis. These data sets include, but are not limited to the following:

- Real world conditions through field surveys by the Project Planners of every block of the Plan Area to assess vacancy and existing uses
- Assessor data for the entire Plan Area to determine existing unit counts and existing uses
- Uses (residential, commercial, industrial) and development intensities (height, density, FAR) allowed by the existing General Plan land use designations, zoning, and any zoning overlays and Specific Plans.
- Planning entitlements and building permits to assess market trends
- Proposed General Plan land use designations and General Plan objectives and policies and Zoning regulations for the Proposed Plan and Draft EIR Alternatives
- Other applicable regulations or physical conditions that could constrain potential development (such as, historic preservation protections, topography, flood plains, sensitive habitats, institutional facilities, open space)
- Other State or local programs or regulatory schemes active in the Specific Plan Area that are intended to incentivize or facilitate potential development (such as, Community Benefits Programs, reductions in parking near transit infrastructure, tax incentive areas)

Utilizing these data sets and its collective expertise, the Community Planning team make and apply assumptions to the acreage within the Specific Plan Area, to determine the amount of Reasonable Anticipated Development from the Proposed Plan of residential units and non-residential square footage (commercial and industrial) that could be built during the life of the plan. For example, residential land area is multiplied by dwelling units per acre to generate an assumed dwelling unit count, and non-residential land area is multiplied by development potential, applying industry standards of employment density to calculate the total number of employees.

Ultimately, market factors dictate the level of development that occurs. Experience shows that only a percentage of the properties within a Specific Plan Area will be redeveloped within the horizon year, typically 20-25 years, and that even the sites that do redevelop are not always developed to maximum levels allowed by the by-right zoning and various incentive systems available. For this reason, 100 percent build out is a theoretical scenario and is not analyzed, but rather a more reasonable expected level of development is used both to guide proposed land use changes and analyze the potential environmental impacts of those changes. Community planners conduct the analysis of Reasonable Anticipated Development to analyze what level of development would reasonably occur during the life of the plan. While some jurisdictions may conduct a "full build out" analysis, the Specific Plan Area is a highly urbanized area where the most common form of development is infill development. Conducting a full build out analysis would require making the unreasonable assumption that each parcel that is not already fully built out to the Proposed Plan's density and intensity will be wholly redeveloped during the 20-year life of the plan. This is unrealistic due to development constraints including existing historic structures and recently completed developments that are unlikely to be redeveloped. Additionally, it does not reconcile with historic development patterns in the City. A number of factors serve to constrain development, including:

- Physical site constraints (topography, geology, etc.)
- Zoning regulations (requirements for open space, yards, setbacks and height that sometimes limit the maximum development on a site to levels below what the zoning would otherwise permit)
- Public review process
- Environmental factors and constraints (adjacent uses, sensitive uses, local, state and federal laws)
- Historic preservation goals and regulations
- Historical development patterns
- Land values
- Market factors, (economy, financial lending practices, etc.)

DCP considers these factors in using its best judgement, based on the education, experience and knowledge of its Planning Team, to determine the Reasonably Anticipated Development for the Proposed Plan. Revisions to the Reasonably Anticipated Development from the onset of the Specific Plan Update may occur considering the multi-year time frame that specific plans take to update.

Chapter 1

Plan Boundary Map

-  Los Angeles River and Arroyo Seco
-  Specific Plan Area
-  Metro Gold Line & Stations
-  Plan Boundary

Prepared by Los Angeles Department of City Planning
025_at: 05.2013

1.1 Administration

A. Establishment

The City Council establishes the Cornfield Arroyo Seco Specific Plan for the area within the lines on the Plan Boundary Map.

B. Purposes

This Specific Plan is intended to:

1. Implement the Central City North, Northeast LA and Silverlake/Echo Park/Elysian Valley Community Plans.
2. Transform an underserved and neglected vehicular-oriented industrial and public facility area into a cluster of mixed-use, pedestrian-oriented and aesthetically pleasing neighborhoods.
3. Increase access to open space.
4. Provide economic growth opportunities for emerging clean technologies.
5. Re-connect historical communities.
6. Maintain and enhance the concentration of jobs, in both the public and private sectors.
7. Provide a range of housing types and price levels that offer a full range of choices, including affordable housing opportunities, for people of diverse ages, ethnicities, household sizes and incomes.
8. Provide shops and services for everyday needs, including groceries, day care, cafes and restaurants, banks and drug stores, within an easy walk from home or work.
9. Facilitate pedestrian mobility, encourage bicycle use, provide shared and unbundled parking spaces, provide access to a variety of transit options including frequent light rail and bus connections, shared vehicles and bicycles, and taxis.
10. Lessen dependence on automobiles, and thereby reduce vehicle emissions, while enhancing the personal health of residents, employees and visitors.

11. Provide "eyes on the street" to create a safe and stable community and to encourage interaction and identity.
12. Respect historically significant buildings, including massing and scale, while at the same time encouraging innovative architectural design that expresses the identity of contemporary urban Los Angeles.
13. Reduce the use of energy and potable water, improve the ecology surrounding the Los Angeles River Watershed and Arroyo Seco, create connections from the community to the River and Arroyo Seco, and support the Los Angeles River Revitalization Master Plan (LARRMP).
14. Provide places for people to socialize, including parks, sidewalks, courtyards and plazas that are combined with shops and services.
15. Provide adequate public recreational open space within walking distance of residents and employees, integrate public art, and contribute to the civic and cultural life of the City.

c. Definitions.

Whenever the following terms are used in this Specific Plan, they shall be construed as defined in this section. Words and phrases not defined here shall be construed as defined in the Los Angeles Municipal Code (LAMC).

Project. The construction, erection, alteration, or addition to any building, sign or structure, on a lot located in whole or in part within the areas shown in Plan Boundary Map that requires the issuance of a demolition, grading, foundation, sign or building permit, use of land permit, or change of use permit.

Accessory Use. A use, which is customarily incidental to that of the main building or the main use of the land and which is located on the same lot with a main building or main use.

Active Street. A street where retail, cultural, office, and/or residential uses are required at the ground floor level where adjacent to street frontage.

Active Industrial Street. A street where retail, office, lobby, meeting rooms or sales areas are required at the ground floor level where adjacent to street frontage.

Affordable Housing. Rental Housing units restricted to households earning Extremely Low, Very Low or Low Incomes; Rental Housing units restricted by any LAHD or other regulatory or successor agency covenant or regulatory agreement; or For-Sale Housing units that are restricted to households earning Moderate Income or less.

Affordable Housing Floor Area Bonus. An increase in floor area greater than the otherwise maximum allowable floor area permitted that is awarded as a bonus for Projects that include a requisite number of affordable housing units per the Floor Area Bonus Option.

Allocation Plan. A plan that describes the amount of additional Floor Area that a Project is seeking through either the bonus or transfer FAR Program.

Ancillary Use. A permitted use that is limited to 10% of the Base FAR of the site. Ancillary uses may be located in a standalone building or structure separate from the principal use. More than one ancillary use is permitted on a single site.

Animal Clinic / Kennels. Uses where animals or pets are given medical or surgical treatment by an authorized licensed agent to treat injuries, illnesses and diseases of animals, including uses where small, domesticated animals and pets are cared for and boarded overnight for less than 30 days.

North Central Animal Services
Center on Lacy Street

Appraisal. An economic valuation of the Receiver Site prepared by a City appraiser, but paid for by the applicant, that sets forth the fair market value of the Receiver Site (i) as of the date the application was submitted and (ii) as if the Receiver Site were vacant and used for its highest and best use under all current zoning and planning restrictions and Agency policies affecting the Receiver Site.

Architectural Feature. Those purely aesthetic elements of a building, designed pursuant to the overall style of architecture that are not habitable or otherwise counted as floor area.

Area Median Income (AMI). The median income in Los Angeles County adjusted for household size, as determined annually by the California Department of Housing and Community Development (HCD) adjusted by household size. AMI for publically subsidized units may instead be based upon income figures published by the Housing and Urban Development Department (HUD) or any regulatory or successor agency.

Automobile Fueling Stations. Uses for fueling stations and car washes.

Auto-Oriented Uses. Automobile wrecking, salvage, and tow yards.

Average Building Height. The average building height is the average height of all building and building sections on a given parcel.

Base FAR. The base floor area ratio (FAR) established for each district within the Plan area.

Block. A block is a group of lots bounded on all sides by streets or by a combination of streets, public parks, railroad rights-of-way, pier head lines or airport boundaries.

Brownfield. Abandoned or under used industrial or commercial facilities (including older gas stations and auto repair yards located on smaller sites adjacent to residential neighborhoods) that may be contaminated by hazardous waste or pollution and that have the potential to be redeveloped into other uses once environmental remediation has been performed.

Central Parking. A parking structure or surface lot accessible and available for public use.

Commercial Hotels. Housing built to accommodate the general and traveling public for a typical fee, generally limited to stays of less than 31 days.

Auto-Oriented Use

Commercial Hotel

Commercial Office

Entertainment, Exhibits, and Multi-Purpose Cultural Facilities

Community Facilities. Any use whose primary purpose is to provide non-profit, or not-for-profit assistance to the general public in the specific plan area. Included are government offices and services or privately funded services or charities that are provided to the public at a free, subsidized, or reduced rate. Specific examples include child care centers, libraries, schools, adult day care, and related administrative office uses; health clinics, museums, cultural centers, telecommuting centers, gyms or recreation centers; restrooms open to the general public; rooms available to the general public for community meetings; and pedestrian amenities such as covered arcades, covered promenades, showers for bicyclists, sites for purchase of transit tokens, tickets, or passes, or at which transit information is displayed.

Conservation, Environmental, and Social Service Organizations, Religious Institutions and Public Facilities. Organizations and/or institutions engaged in conservation, environmental, social service, religious or public service or support activities.

Cornfield Arroyo Seco Specific Plan Floor Area Payment Trust Fund. Means the certain interest-bearing Trust Account administered by the Director of Planning designated as Cornfield Arroyo Seco Specific Plan Floor Area Payment Fund, from which funds may be distributed as set forth in Sub-Section 6.E.4 of this Plan.

Corporate Headquarters. The main administrative center or centers for one or more enterprises.

Designated Historical Resource. A building, structure, landscape element or natural feature listed in or formally determined to be eligible for the National Register of Historic Places, California Register of Historical Resources, or the City's list of Historic-Cultural Monuments, or a Contributing Element located in a City Historic Preservation Overlay Zone.

Dual Pipe. A system of plumbing installations used to supply both potable and reclaimed water to a home or business through two separate pipes.

Donor Site. A site from which Floor Area Rights are transferred pursuant to the provisions of this Plan.

Drive-thru establishments. Uses, other than automobile fueling and service stations, that permit a customer to order and/or obtain a purchase without leaving the confines of his or her car.

Eligible Historical Resource. A building, structure, landscape element, or natural feature identified in a completed historic survey or assessment as eligible for recognition as historically or architecturally significant either individually or as part of a district at the local, State or national level.

Entertainment, Exhibits and Multi-Purpose Cultural Facilities. Uses designed to host public or private gatherings for an audience.

Floor Area Payment. The dollar sum established by the application of the formula set forth in Section 2 of this Plan.

Floor Area Rights. The right to construct additional floor area within a Project, pursuant to an approved Transfer Plan, in excess of the amount of floor area such Project would be allowed to construct based on its lot area.

Free-Standing Fast Food Establishment. A single or multiple tenant free-standing structure designed solely for restaurant use that dispenses prepared food over a counter or by way of drive through service for consumption on or off the premises. This definition does not include cafeterias.

Greenway. A new zoning district established by this Plan that provides for open space.

Heavy Manufacturing. The manufacture or compounding process of raw materials. These activities or processes necessitate the storage of large volumes of highly flammable, toxic matter or explosive materials needed for the manufacturing process. These activities may involve outdoor operations as part of their manufacturing process.

Hospitals, Nursing and Residential Care Facilities. Uses involved in providing medical, surgical, or assisted living care to patients and offering short and long-term overnight care.

Holiday Lighting. Seasonal displays of 60 days or less within one calendar year, using multiple low wattage bulbs (approximately 15 lumens or less) provided they do not constitute a fire hazard and are maintained in a safe condition.

Income Extremely Low (30% AMI), Very Low (50% AMI), Low (80% AMI) Moderate (120% AMI). Extremely Low Income (30% AMI) as defined by Health and Safety Code Section 50106; Very Low Income (50% AMI) as defined by Health and Safety Code Section 50105; Low Income (80% AMI) as defined by Health and Safety Code Section 50079.5; Moderate Income (120% AMI) as defined by Health and Safety Code Section 50093.

Heavy Manufacturing

Hospitals, Nursing, and Residential Care Facilities

Light Manufacturing and Assembly

Live-Work Unit. Residential and work quarters combined within a single unit provided that the “work” use is permitted in the underlying zone and that the work area does not exceed more than 40% of the floor area allocated to the unit.

Light Industrial Uses. Uses in the Classification Table defined as Manufacturing and Assembly, Repair and Maintenance Facilities, Research and Development, Publishing, Motion Picture, Broadcasting, Trucking and Transportation Terminals, Urban Agriculture, Utilities, or Warehousing, Distribution and Storage.

Light Manufacturing and Assembly. Uses that process, fabricate, assemble, treat, or package finished parts or products and/or whose noise, odor, dust, hazardous materials or other pollutants/nuisances can be contained on site.

Light Trespass. Light from any outdoor lighting that shines directly onto neighboring property.

Los Angeles River Revitalization Master Plan (LARRMP).

The plan approved in 2007, which describes a vision for the revitalization of the 32 miles of the Los Angeles River that are within the City of Los Angeles’s boundaries.

Lot Area. Means the total horizontal area within the lot lines of a lot, prior to any required public dedication.

Lot Coverage. The portion of a lot occupied by the footprint of a building(s).

Maximum FAR. The maximum floor area ratio (FAR) established for each district within the Plan area.

Modified River Buffer Area. Portions of the River Buffer Area whereby a public-right-of-way extends between the parcels and the River, as set forth in the Zoning Map.

North Facade. North facades are defined as these facades between -22.5 and +22.5° N.

Paseo or Pedestrian Walkway. A walkway that is open to the sky and that provides pedestrian passage between structures, or through landscaping, or parking lots, and that is distinguished by ground surface treatments that provide for pedestrian safety and ease of movement.

Pedestrian Amenities. Uses, services, or features typically available within, or adjacent to, a public right-of-way that assist and enhance the pedestrian experience. Amenities may include but are not limited to street furniture, wayfinding signage, kiosks, street lighting, street trees, coffee shops, and bookstores.

Pedestrian Lighting. Freestanding lighting fixtures that illuminate the sidewalk or other pedestrian travel path.

Personal Services. Uses involved in personal service-oriented sales to the general public.

Publishing, Motion Picture, and Broadcasting. Uses engaged in film, video, audio, and other media production, but excluding movie houses and theatres.

Public Benefit. Something that serves a public purpose benefitting the Plan area, such as: providing infrastructure or amenities available for public use including, but not limited to, open space, pedestrian walkways, historic preservation, recreational, cultural, community and public facilities, new infrastructure, maintenance and improvement of existing infrastructure, job training and outreach programs, affordable housing, affordable child care, streetscape improvements, public arts programs, homeless services programs, or public transportation improvements.

Publicly Accessible Open Space. Open space that is accessible to the public for a minimum of 10 hours per day or during all daylight hours, whichever is greater.

Public Service Facilities. Uses that provide government services to the public (except health-related services such as Hospitals, Nursing and Residential Care Facilities).

Receiver Site. A site that receives additional Floor Area Rights from a Donor Site pursuant to the Plan's provisions.

Repair and Maintenance Facilities. Facilities used for the repair or servicing of industrial, business or consumer machinery, equipment, products or by-products. The repair and service of consumer goods falls into the Personal Services category.

Research and Development. Uses related to scientific and technical research leading to the development of new products and processes, including development/testing activities and prototype fabrication.

Paseo or Pedestrian Walkway

Personal Service Facilities

Publishing, Motion Picture, and Broadcasting

Repair and Maintenance Facilities

Residential-Multi-Family

Residential-Single Family

Recreation Facilities

Restricted Affordable Units. A residential unit for which rental or sale prices are restricted so as to be affordable to, and occupied by, Extremely Low, Very Low, Low, or Moderate Income households, as determined by the Family Median Income (FMI).

Retail Street. A street where a percentage of retail and community serving uses are required at the ground floor level where adjacent to street frontage.

Recreation Facilities. Facilities used for indoor and/or outdoor recreational activities.

Residential-Multi-Family. A structure or structures that provide multiple dwelling units that may have separate sleeping areas and some combination of shared bath or toilet facilities. Single Room Occupancy (SRO) residential structures, live-work units, dormitory-style apartment hotels, homeless shelters, rooming houses, small lot subdivisions, and Senior Independent Housing are also included in this category.

Residential-Single Family. A residential Project that includes no more than one dwelling unit on a lot, but which may contain an accessory unit ("granny flat") or servant's quarters. Small lot subdivisions do not fall within the Residential-Single Family category.

Restaurants and Bars. Uses involving food and beverage sales to the general public. Adult entertainment is not included in this category.

Retail. Uses involving the sale and/or lease of new or used products to the general public.

River Buffer Area. An approximately 300 foot buffer area adjacent to the Los Angeles River and Arroyo Seco, as set forth in the Zoning Map.

River Public Benefits. Amenities provided to the public such as affordable housing, public open space, historic preservation, recreational, cultural, community and public facilities, storm water management, watershed protection and preservation, habitat restoration, flood control, streetscape improvements, public arts programs, or public transportation improvements with a demonstrable connection to improvements to the Los Angeles River and its environs.

Schools, Colleges, Tutoring, and Vocational/Technical Schools or Programs. Uses that include public and private schools as well as institutions offering courses of general or specialized study leading to a degree or certificate.

Server Farms. Centers established for the exclusive purpose of providing operational facilities for, but not limited to, the storage of phone equipment, computers, and internet data.

Streetwall (or street edge). The vertical face of one or more buildings within the setback area and parallel to the public right-of-way.

Transfer. The conveyance of unused allowable Floor Area of a lot from a Donor Site to a Receiver Site, that is approved in accordance with the requirements of this Plan.

Transfer Plan. A plan that identifies and describes the Donor Site(s), Receiver Site(s), amount of Floor Area Rights to be transferred and the River Public Benefit Payment.

Transportation Amenities. Bus shelters, bus benches, bicycle lockers, showers, public restrooms, cafe, restaurant, or community serving retail uses located adjacent to, or within 150 feet of a bus and/or rail station.

Trucking and Transportation Terminals. Uses related to the dispatching, maintenance and long-term or short-term storage of large vehicles such as tractor-trailers, catering trucks, shipping vessels, helicopters, locomotives, and airplanes.

Unused FAR. FAR that a Donor Site does not need and has elected to transfer to a Receiver Site.

Urban Agriculture. The production, processing, and/or marketing of beverages and/or food.

Schools, Colleges, or Tutoring

Server Farms

Trucking, and Transportation Terminals

Utilities

Warehouse Distribution and Storage

Waste Management and Remediation

Wholesale

Utilities. Uses that provide the transfer or delivery of power, water, natural gas, sewage, stormwater runoff, or telephone and related communication services.

Vocational/Technical School or Program. Uses related to the provision of vocational and/or technical training to students entering into a vocation or technical field without first obtaining higher education.

Warehousing, Distribution and Storage. Uses that package, provide, hold, and/or distribute goods in large quantities, especially to retail sales establishments. Long-term and short-term storage of commercial goods and personal items are included.

Waste Management and Remediation Services. Uses that receive solid or liquid wastes (including hazardous wastes) for on-site disposal, recycling, or transfer to another location, including uses that manufacture or produce goods or energy from the biological decomposition of organic material.

Wholesale. Uses engaged in the sale, lease, or rental of products primarily intended for industrial, institutional, or commercial businesses. The uses may include on-site sales or order taking and may include display areas.

D. Uses and Buildings Made Non-Conforming by this Plan

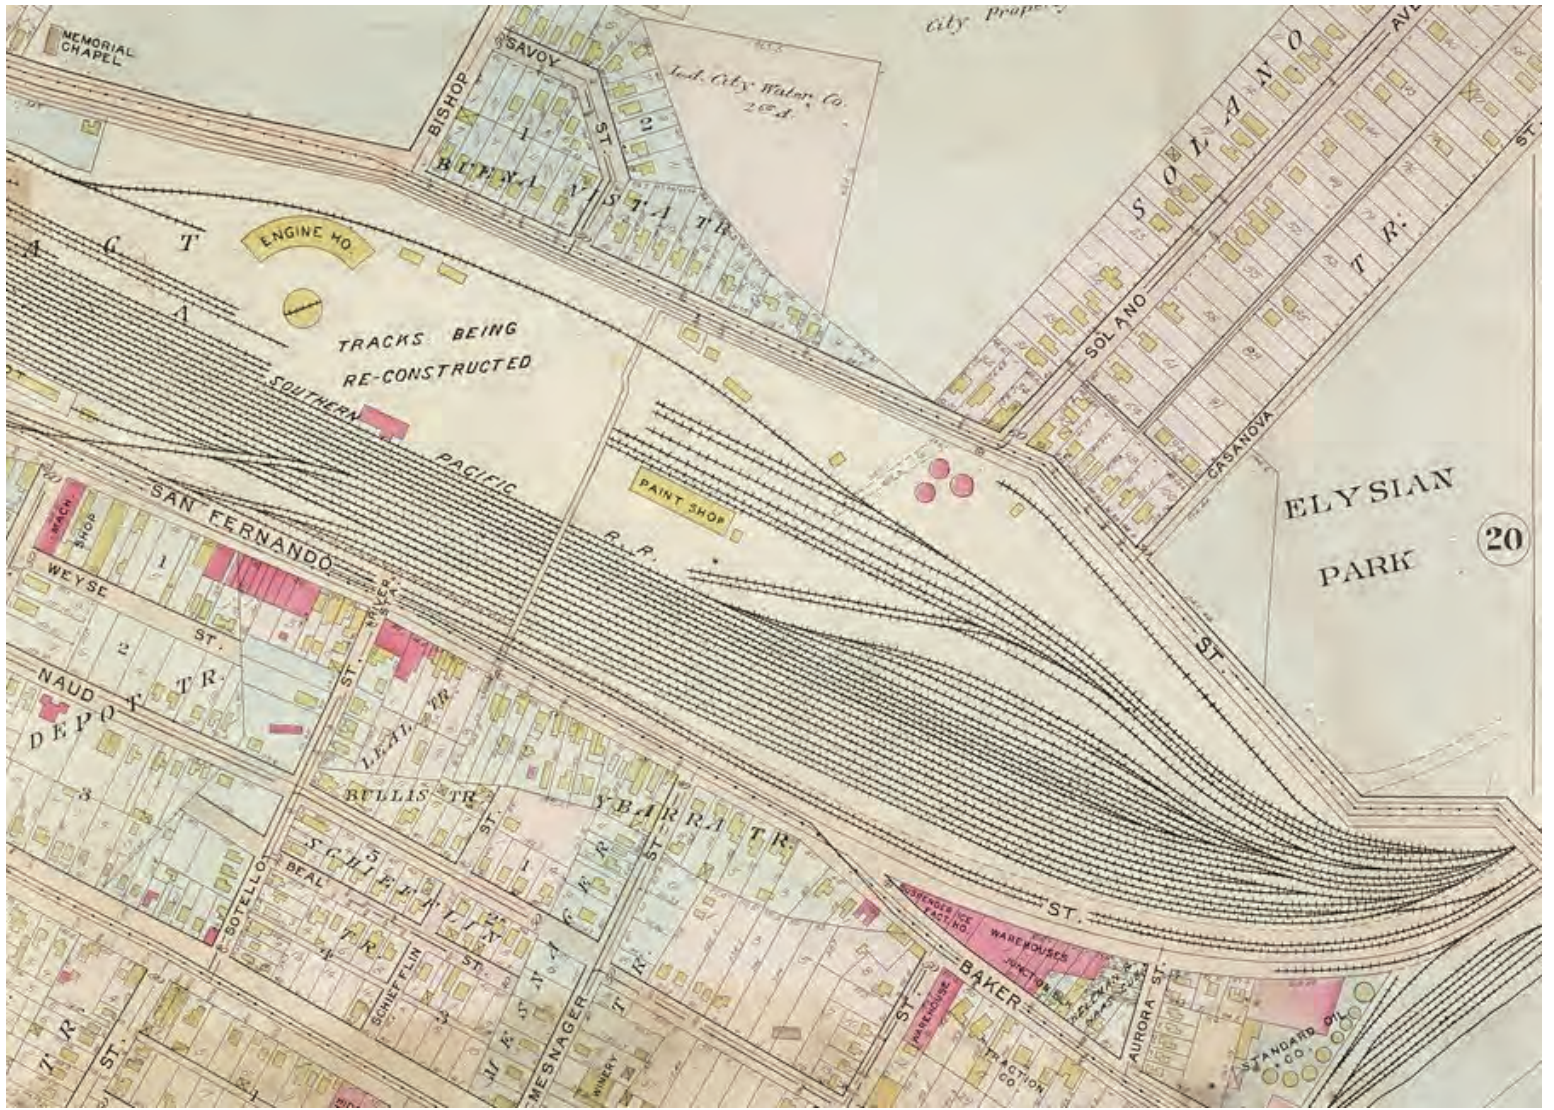

Any legally existing uses, buildings or structures that are made nonconforming by establishment of this Specific Plan shall be deemed to be legal, non-conforming uses and may continue to exist without termination. Legal, nonconforming uses may not expand beyond their existing floor area.

E. Interpretation

Whenever any ambiguity or uncertainty exists related to this Specific Plan or the application of this Specific Plan so that it is difficult to determine the precise application of these provisions, the Director shall, upon application by an owner, operator or lessee, issue written interpretations on the requirements of the Specific Plan consistent with the purpose and intent of this Specific Plan.

F. Severability

If any provision of this Specific Plan or its application to any person or circumstance is held to be unconstitutional or otherwise invalid by any court of competent jurisdiction, the invalidity shall not affect other Specific Plan provisions, clauses or applications which can be implemented without the invalid provision, clause or application, and to this end the provisions and clauses of this Specific Plan are declared to be severable.

1.2 Application Process

A. Relationship to the Los Angeles Municipal Code

1. The regulations of this Specific Plan are in addition to those set forth in the planning and zoning provisions of Chapter 1 of the LAMC as amended, and any other relevant ordinance, and do not convey any rights not otherwise granted under the provisions and procedures contained in the LAMC or other ordinances, except as specifically provided for here.
2. Wherever this Specific Plan contains provisions that establish regulations (including, but not limited to, standards such as densities, heights, uses, parking, signage, open space, and landscape requirements), that are different from, more restrictive or more permissive than would be allowed or required pursuant to the provisions contained in the LAMC, this Specific Plan shall prevail and supersede the applicable provisions of the LAMC and those relevant ordinances.
3. **Site Plan Review Ordinance.** Approvals pursuant to LAMC Sections 16.05 are not required for Projects within this Specific Plan area.
4. **Commercial Corner and Mini-Shopping Centers Ordinance.** Approvals pursuant to LAMC Sections 12.22 A 23, and 12.24 W 27 are not required for Projects within this Specific Plan.
5. **Development Combining Residential and Commercial Uses.** Approvals pursuant to LAMC Sections 12.22 A 18 and 12.24 V are not required for Projects within this Specific Plan area.
6. **Hotels.** Approvals pursuant to LAMC Section 12.24 W 24 are not required for Projects within this Specific Plan area.
7. **Landscape Ordinance.** Compliance with the provisions of this Specific Plan shall be considered compliance with the requirements of LAMC Sections 12.40, 12.41, 12.42 and 12.43.
8. **Major Projects.** Approvals pursuant to 12.24U.14 are not required for Projects within this Specific Plan area
9. If there is any conflict between the written provisions of this Plan and the charts, graphs, or figures provided herein, the written language shall control.

B. Prohibitions

1. No demolition permit, grading permit, foundation permit, building permit, or use of land permit shall be issued for any Project on any lot located in whole or in part within this Specific Plan area and no work shall be conducted in the public right of way, unless the Project complies with all applicable provisions of this Specific Plan, as determined by the Director.
2. The provisions of this Specific Plan shall not apply to:
 - a. Any Project that has obtained a still-valid discretionary land use approval from the City prior to the operative date of this Specific Plan;
 - b. Underground tank removal/remediation, and/or seismic reinforcement/retrofitting;
 - c. Projects with vested rights pursuant to LAMC Section 12.26 A 3;
 - d. Any Project complying with an order issued by the Department of Building and Safety for the repair of an unsafe or substandard condition; or
 - e. Any Project that has an application that is deemed complete by the Department of City Planning prior to the adoption of this Specific Plan.
3. Land area subject to easements granted pursuant to this Specific Plan shall be counted as buildable area for the purposes of determining the maximum floor area ratio.

C. Development Review Procedures

1. Application.
 - a. All Projects proposed within the Plan area, except Projects eligible for an Administrative Clearance, shall file an application with the Department of City Planning on a form provided by the Department, and include all information required by the instructions on the application and the guidelines adopted by the Director of Planning. Prior to deeming the application complete, the Director shall determine, and if necessary, advise the applicant of the processes to be followed, materials to be submitted, and fees to be paid.
 - b. This Plan's regulations shall apply to Projects only as set forth in the Project Table on the following page.
2. **Administrative Clearance.** A permit for a Project may be issued with an Administrative Clearance from the Director if the Project's FAR does not exceed 4.0:1, and if the Project complies with all of this Specific Plan's requirements.
3. **Director's Determination of Alternative Design.** If a proposed Project fails to meet the urban design regulations contained in either Section 2.2 and/or Section 2.3 of this Plan, the applicant may apply to the Director of Planning for a Director's Determination of Alternative Design. Such application shall be processed in accordance with the procedures specified in LAMC 11.5.7 C and E.1. The limitations specified in LAMC 11.5.7 E.2 shall not apply. The Director shall only approve a Project upon making all of the following written findings in the affirmative:
 - a. The Project's location, size, height, operations and other significant features shall be compatible with and shall not adversely affect or further degrade adjacent properties, the surrounding neighborhood, or the public health, welfare, and safety;
 - b. The Project provides for an arrangement of uses, buildings, structures, open spaces and other improvements that are compatible with the scale and character of the adjacent properties and surrounding neighborhood; and
 - c. The Project shall not create an adverse impact on street access or circulation in the surrounding neighborhood.

The Director's Determination shall only address the requested deviations from the building form and urban design standards set forth in Sections 2.2 and 2.3 herein. The remainder of the Project shall be reviewed through the Administrative Clearance Process.

Footnotes:

1. Existing parking located along a street frontage is not required to be relocated, but the design of the parking area shall be modified to conform to the applicable design and parking standards.
 2. Existing ground floor space is not required to be redesigned to accommodate the active uses described in Section 2.3 C.1a-c; however, the entrance location and transparency standards shall still apply.
 3. Projects identified as potential historic resources shall comply with Section 2.6.C of this Plan.
 4. Applied to extent feasible as determined by the Office of Historic Resources.
 5. Applicable only to the area being altered and to applicable construction activities.
 6. Subject to only Historic Resource Mitigations.
- * Eligible or Designated Historic Resources seeking a demolition permit shall contact the Office of Historic Resources. See Section 1.2.C.2.b.

4. Allocation of Floor Area Rights for Transfer of FAR.
 - a. **Application for Transfer of FAR.** An Applicant seeking an Allocation of Floor Area Rights for a Transfer FAR shall file an application with the Department on a form prescribed by the Director. The application shall be accompanied by a proposed Allocation Plan. For Projects with a FAR less than 4.0:1, the Director shall approve the Transfer ministerially, provided that the Allocation Plan complies with the requirements of this Specific Plan.
 - b. **Action by Director.** For applications requesting a Project with a FAR in excess of a 4.0:1, the Director may approve, approve with conditions or disapprove the request for Allocation, including the Floor Area Payment to be provided, based upon the following findings:
 - i. Will the Project's location, size, height, operations and other significant features be compatible with and not adversely affect or further degrade adjacent properties, the surrounding neighborhood, or the public health, welfare and safety, and
 - ii. Does the Project substantially conform with the purpose, intent and provisions of the General Plan, the applicable community plan, and this Specific Plan?
 - c. **Floor Area Payment.** A Floor Area Payment shall be provided as part of an Allocation Plan when a Project receives density from a site owned by the City of Los Angeles. Prior to approving an Allocation Plan, the Director shall determine that the Floor Area Payment proposed in the Allocation Plan will result in public benefits or improvements with an economic value equal to the sum of the Floor Area Payment set forth in Subsection (1.2.C.5.c.ii) below.
 - i. A Floor Area Payment may be provided by any combination of the payment of monies to the Cornfield Arroyo Seco Floor Area Payment Trust Fund (a Public Benefit Trust Fund) or by the direct provision of Public Benefits by the Applicant; provided, at least 50% of the Floor Area Payment must consist of a cash payment made by the Applicant to the Cornfield Arroyo Seco Floor Area Payment Trust Fund.
 - ii. The Payment under any Allocation Plan when a Project receives density from a site owned by the City of Los Angeles shall equal (a) the sale price of the Receiver Site, if it has been purchased through an unrelated third-party transaction within 18 months of the date of submission of the request for approval of the Transfer, or the value of an Appraisal, if it has not, (b) divided by the Lot Area (prior to any dedications) of

the Receiver Site, (c) further divided by the Base Floor Area Ratio, (d) multiplied by 40%, and (e) further multiplied by the number of square feet of Floor Area Rights to be transferred to the Receiver Site.

- iii. Example: If a Receiver Site with a Lot Area of 50,000 square feet (before any dedications) was purchased for \$2,500,000 (through an unrelated third-party transaction within 18 months of the date of submission of the request for approval of the Transfer), the Floor Area Payment under an Allocation Plan transferring 25,000 square feet of Floor Area Rights would equal: (a) \$2,500,000 (the purchase price), (b) divided by 50,000 (the Lot Area of the Receiver Site), (c) divided by the base FAR, for example, 3 (the Floor Area Ratio Factor), (d) multiplied by 40%, and (e) multiplied by 25,000 (the number of square feet of Floor Area Rights to be transferred) = \$166,666.67 (or \$6.66 for each square foot of transferred Floor Area Rights).
 - iv. The non-cash portion of the Payment, which shall not exceed 50% of the overall Payment, shall be provided as set forth in the Allocation Plan to the satisfaction of the Director.
- d. **Payments and Vesting.** Any Floor Area Payment (when applicable) shall be provided as set forth in the Allocation Plan and as set forth below in this subsection:
- i. If the Project specifies a single-phase Project on the Receiver Site, then the owner of the Receiver Site shall pay the Floor Area Payment (when applicable) on or before the issuance of the building permit for the Project.
 - ii. If the Project is a multi-phased Project on the Receiver Site, then the owner of the Receiver Site may elect to pay the the Floor Area Payment (when applicable) in any one of the three manners set forth below,
 - a) In total for all phases of the Project, on or before the earlier of (i) the issuance of the building permit for the first phase of the Project or (ii) 24 months after the final approval of the Allocation, the expiration of any appeals or appeals period for all phases of the Project and recordation of the document running with the land described below in Paragraph A.2 of subsection 1.6.7 of this Plan; or
 - b) Incrementally by each phase of the Project, proportionate to the Floor Area Rights utilized in each such phase, on or before the issuance of the building permit for each such phase, with the amount of each payment being recalculated as of the date that the building permit for each phase is issued in accordance with an Appraisal establishing the fair market value of the Receiver Site within six months prior to the issuance of the building permit for that phase.

- c) Upon the Applicant's payment to the City of all of the Floor Area Payment (when applicable) required under an approved Allocation, all Floor Area Rights allocated to the Receiver Site pursuant to the Allocation Plan shall vest in the Receiver Site and thereafter run with the land.

D. Administrative Procedures for Allocation of Floor Area Rights

1. **General Requirement.** Any Allocation of Floor Area Rights approved pursuant to this Specific Plan shall be recorded by covenant, or similar instrument, to the satisfaction of the Director of Planning. This document shall clearly set forth the amount of Floor Area Rights allocated to the Receiver Site from the Donor Site.
2. **Cornfield Arroyo Seco Specific Plan Floor Area Payment Trust Fund.** Funds held in the Cornfield Arroyo Seco Specific Plan Floor Area Payment Trust Fund shall be disbursed in accordance with the provisions of Los Angeles Administrative Code Division 5, Chapter 160; and
 - a. As determined by a committee comprised of one representative from each of the following: the City Council Office for the City Council District in which the Receiver Site is located, the Chair of the Ad Hoc Committee on the Los Angeles River (unless they are the same), the City Engineer, the Mayor's Office, the Chief Administrative Officer and the Chief Legislative Analyst, the Department of City Planning, the Los Angeles Housing Department and the Los Angeles River Revitalization Corporation in accordance with the procedure previously established for the Public Benefit Trust Fund, and
 - b. For the purposes of providing community benefits including, but not limited to, improving river access, overall river enhancements, non-vehicular transportation improvements, removing visual blight, improving public safety and affordable housing.

THIS PAGE IS INTENTIONALLY LEFT BLANK

Zoning and Standards

Chapter 2

2.1 Zoning

A. Purposes

These zoning regulations are intended to:

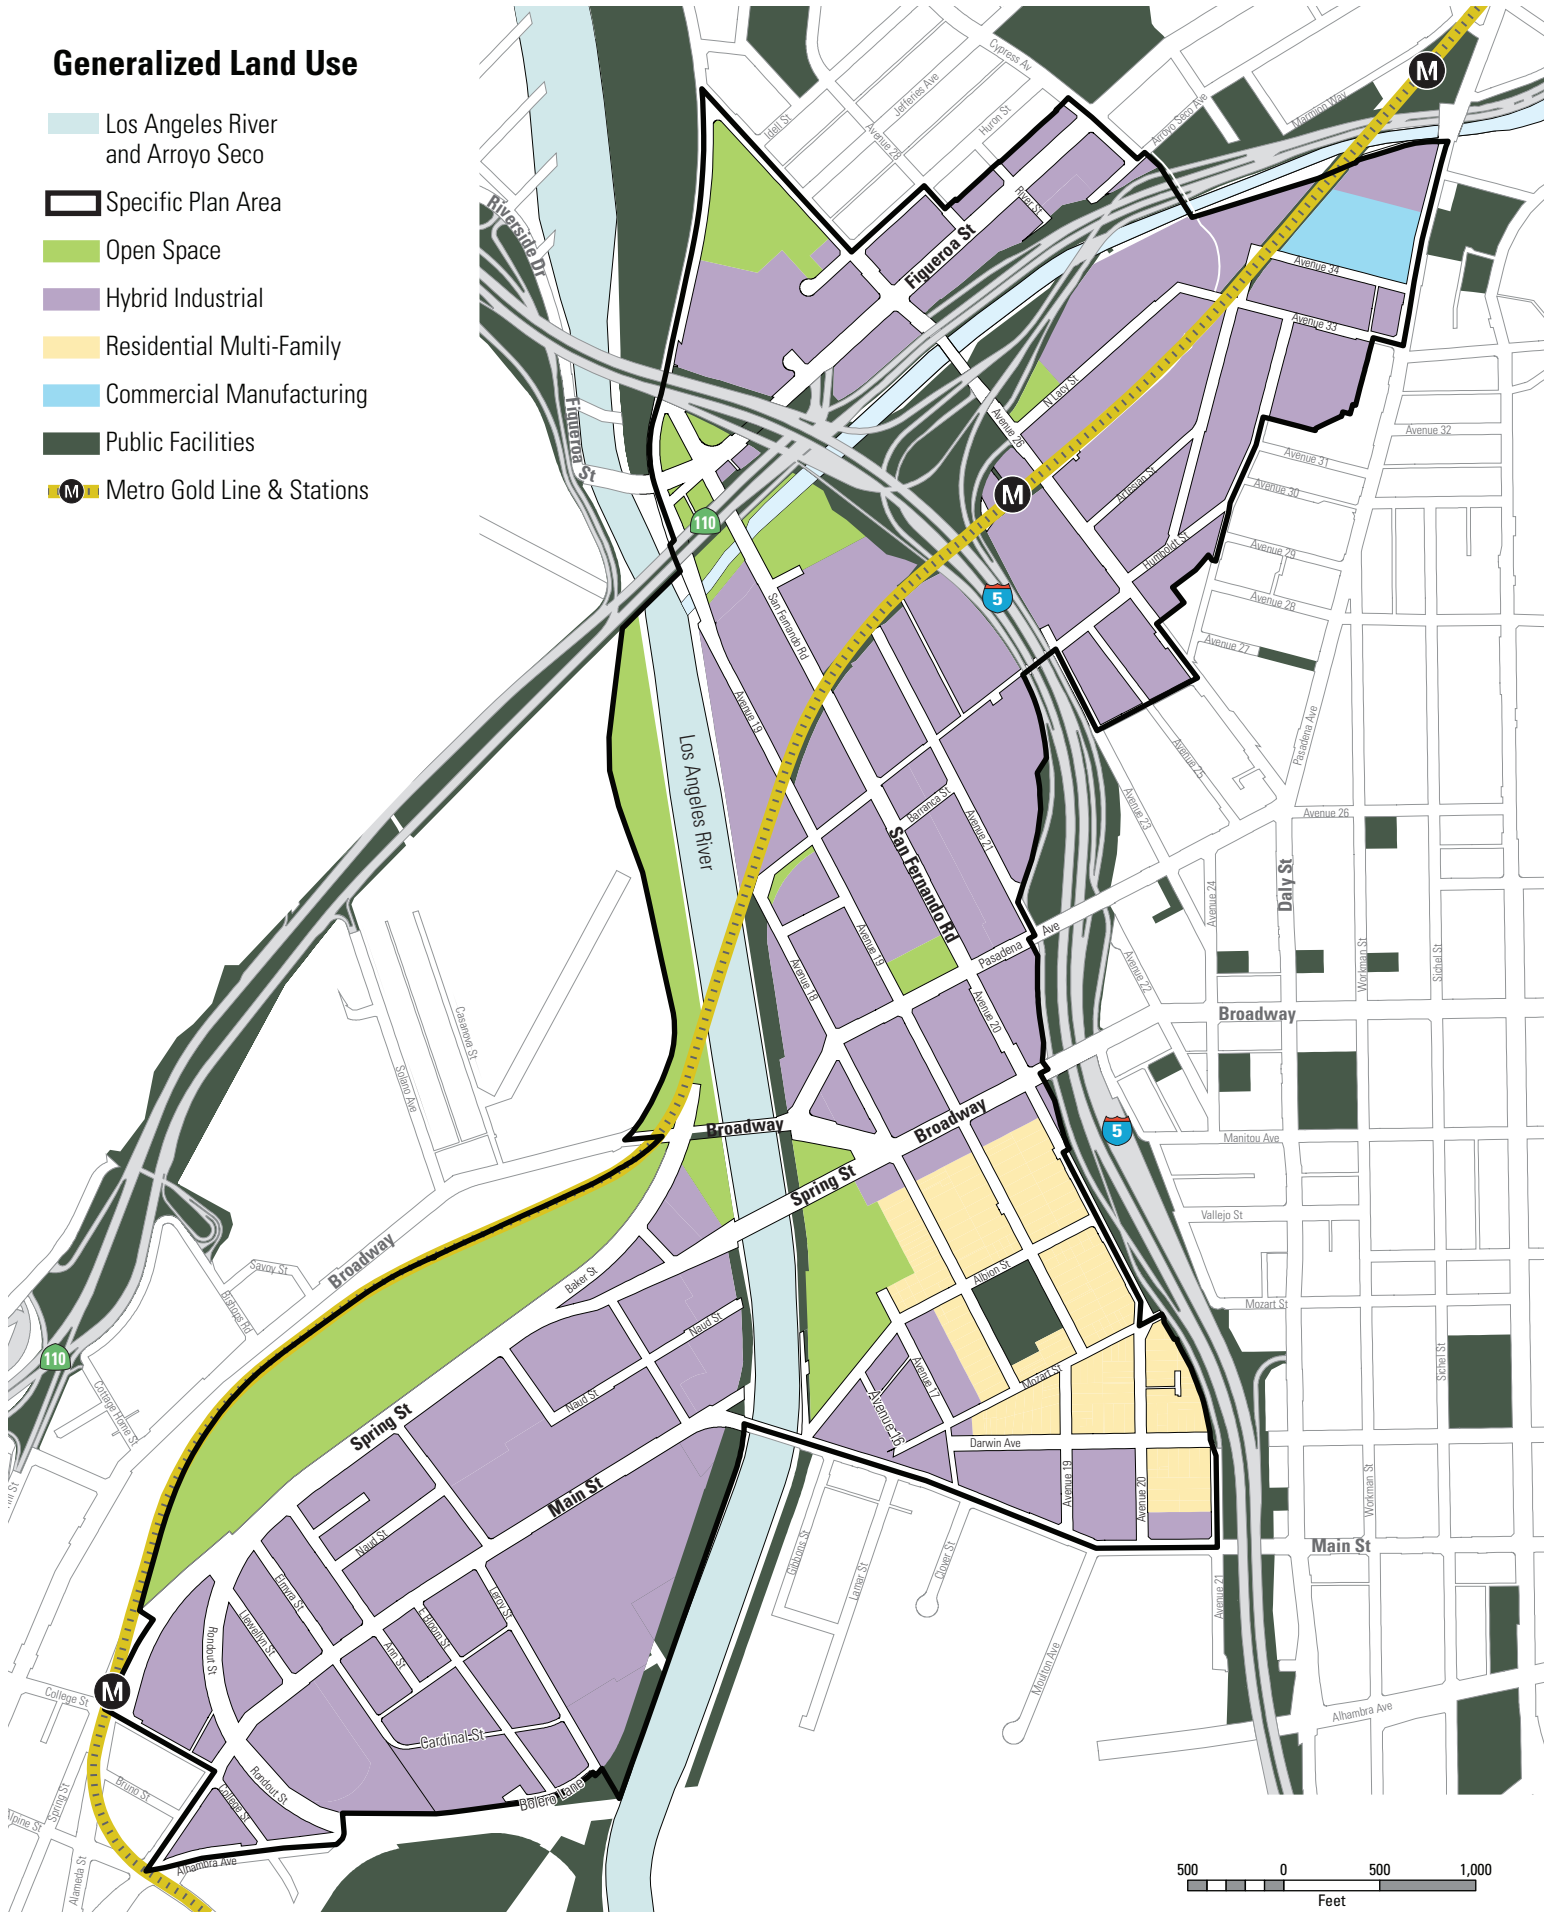

1. Protect existing light industrial areas from residential encroachment.
2. Provide areas where residential, commercial, and light industrial uses can co-locate horizontally and/or vertically.
3. Facilitate the development of mixed-use and affordable housing projects.
4. Ensure the continued provision of housing for extremely low and very low income populations.
5. Encourage the inclusion of affordable housing in the future redevelopment of city owned properties, especially those located within the Urban Village zone.

B. Land Use

1. The Plan is divided into the following four land use categories:
 - a. Public Facility
 - b. Open Space
 - c. Residential Multi-Family
 - d. Hybrid Industrial
2. The boundaries of each land use category are illustrated on the Generalized Land Use Map.

Generalized Land Use

-  Los Angeles River and Arroyo Seco
-  Specific Plan Area
-  Open Space
-  Hybrid Industrial
-  Residential Multi-Family
-  Commercial Manufacturing
-  Public Facilities
-  Metro Gold Line & Stations

C. Zoning Districts

1. The Plan is divided into the following zones:
 - a. Greenway (CASP)
 - b. Urban Village (CASP)
 - c. Urban Innovation (CASP)
 - d. Urban Center (CASP)
2. The boundaries of each zone are indicated on the Zoning District Map.

D. Permitted Uses

The permitted uses for each zone are set forth in the following Use Classification Table. All other uses are prohibited, except as follows:

1. Accessory Uses that are customarily incidental to the main building or use of land and that are located on the same lot are permitted, even if not listed in the Use Classification Table. There is no maximum lot area that may be occupied by an Accessory Use.
2. Outdoor Eating Areas. Outdoor eating areas are permitted on all building floors, sidewalk easements and public sidewalk areas, when in compliance with all other applicable local, state and federal requirements. Outdoor eating areas shall be designed in accordance with the applicable urban design standards.

Footnotes for Use Classification Table

1. See Limits Table for area, FAR, and square footage limits.
2. Truck repair uses are not permitted in the Urban Village zone.
3. Free Standing Fast Food establishments are permitted with a Conditional Use Permit pursuant to Section 12.24.W.17., except that the finding set forth in Section 12.24.W.17 (a) shall not apply.
4. Self storage uses are limited to 50% of the Base FAR.
5. Schools, Colleges, Tutoring, and Technical Training Programs in the Urban Innovation zone are limited to Vocational Technical Training Schools or Programs.
6. Parking uses must be combined with the development of other uses, and such other uses must equal no less than a 1:1 FAR for the project site.
7. Conservation, Environmental, and Social Services uses are limited to Block 70 in the Block Numbers Map on page 3-23.
8. These uses are limited to Block 52 in the Block Numbers Map on page 3-23.
9. If the parcel is 30,000 square feet in area or less, then the Ancillary Use is permitted up to a 1:1 FAR.

E. Use Limitations

1. The following uses shall be prohibited within the Plan area:
 - a. Auto wrecking, salvage and tow yards, except as Accessory Uses.
 - b. Drive-through establishments.
2. As set forth below, the following uses are further limited as to a percentage of the applicable FAR, maximum square footage, or maximum number of rooms.
3. **Density.** There is no limit on the number of dwelling units or guest rooms permitted on any lot located within the Plan area.

LIMITS TABLE

Commercial Office	N/A	65% ^a	Ancillary-(10%) ^a	65% ^a
Retail square footage limit	1,200 sf ^b	15,000 sf ^b	5,000 sf ^b	50,000 sf ^b
Retail and/or Personal Services	Only Retail uses are permitted, and they are subject to a 10% FAR limitation. ^a	20% ^a	20% ^a	20% ^a
Residential Multi-Family	N/A	90% ^{c,d}	15% ^{c,d}	15% ^{c,d}
Commercial Hotels	N/A	150 rooms	100 rooms	200 rooms

Footnote for Limits Table

- a. The floor area for the use shall not exceed the allowable percentage of the site’s Base FAR set forth in the Limits Table. For example, a 100,000 square foot site with a permitted 3:1 Base FAR may not be developed with a Commercial Office project that exceeds 195,000 square feet (i.e., 65% of 300,000 sf) of commercial use. The same project could include other permitted uses to maximize the permitted total floor area if desired. If a Project applicant obtains a FAR in excess of their Base FAR as a result of a Bonus Option or TFAR, then the floor area for the use shall not exceed the allowable percentage of the site’s total FAR.
- b. The square footage provided is the maximum square footage permitted for each Retail establishment on the lot.
- c. The maximum floor area of Residential Multi-Family uses shall not exceed the stated percentage of the total gross floor area of all principal and Ancillary Uses combined.
- d. Only the “living” portion of a joint living and work quarter that is designed for residential purposes shall count towards the residential square footage limitation.

**Figure 2.1
Residential Use Limits**

Urban Center

Urban Village

Residential Use
Non-Residential Use

F. Floor Area Limitations

1. A Base FAR and a Maximum FAR is established for each parcel as set forth in the FAR Table below and further illustrated in the FAR Map.
2. Where applicable, the Base FAR can be increased up to the Maximum FAR, through the Bonus FAR and/or Transfer of Floor Area (TFAR) Programs described in Section 2.1.1 of this Plan.
3. Residential projects with more than 15 units must utilize the Bonus FAR Program to be eligible for the TFAR Program, except for projects purchasing Unused FAR from a Donor Site that participated in the Bonus FAR Program (See 2.1.1.4).

FAR TABLE

	Greenway	Urban Village	Urban Innovation	Urban Center
Base FAR	1.5:1	1.5:1 or 3:1 ^a	3.0:1	3.0:1
Base FAR within River Buffer Areas	1.5:1	1.5:1	1.5:1	1.5:1
Max FAR	1.5:1	3:1 to 5:1 ^b	3:1 to 4:1 ^b	3:1 to 6:1 ^b
Max FAR within River Buffer Areas	1.5:1	1.5:1 ^c	1.5:1 ^c	1.5:1
Max FAR within River Buffer Areas with Affordable Housing Bonus Option	NA	2:1	1.8:1	1.8:1

FAR Table Footnotes

- a. Projects with more than 15 residential units are limited to a 1.5:1 Base FAR unless the residential portion of the project is equal to or less than 75% of the FAR or the Project pursues the Affordable Housing Bonus Option in Section 2.1 G 1. All other Projects are limited to a 3.0:1 Base FAR. As set forth in the Limits Table, the residential component of a Project is limited to 90% of the Project's FAR.
- b. The Maximum FAR for each parcel varies depending on its location, as set forth in the FAR Map.
- c. Parcels located entirely within the River Buffer Area are limited to a Maximum 1.5:1 FAR. If a Parcel is located both inside and outside of the River Buffer Area, then the Maximum 1.5:1 FAR shall only apply to the portion of the parcel inside the River Buffer Area, unless restricted elsewhere in the FAR Table. The Base FAR for projects that straddle the River Buffer Area shall be calculated by multiplying the lot square footage within the River Buffer Area by 1.5 and multiplying the lot square footage outside the River Buffer Area by the Base FAR. The sum of these two totals represents the total Base FAR of the project. Example: (10,000 sf x 1.5) + (10,000 sf x 3.0) = 45,000 sf. Any portion of a project can be built within the River Buffer Area as long as the project does not exceed the average maximum height and maximum lot coverage established for the area within the River Buffer Area.

G. Floor Area Bonus

Project applicants may obtain additional floor area rights by complying with the Affordable Housing Bonus Option and/or the Community Benefit Bonus Options as described below.

1. **Affordable Housing Bonus Option.** Projects in the Urban Village, Urban Innovation, or Urban Center Zones that include Residential uses may participate in the Affordable Housing Bonus Option. Projects may pursue, as appropriate, either of the two Affordable Housing Bonus Strategies- Strategy A or Strategy B.
 - a. **Certificate of Occupancy.** If an applicant elects to pursue the Affordable Housing Bonus Option, then no certificate of occupancy may be issued for the Project unless a certificate of occupancy is concurrently issued for, or has already been issued for, the restricted affordable residential units.
 - b. **Strategy A.** If an applicant agrees to set aside a portion of the Residential units in a Project for affordable housing, then the Project shall be granted a Floor Area Bonus as set forth in the following table.

FLOOR AREA BONUS TABLE- STRATEGY A*

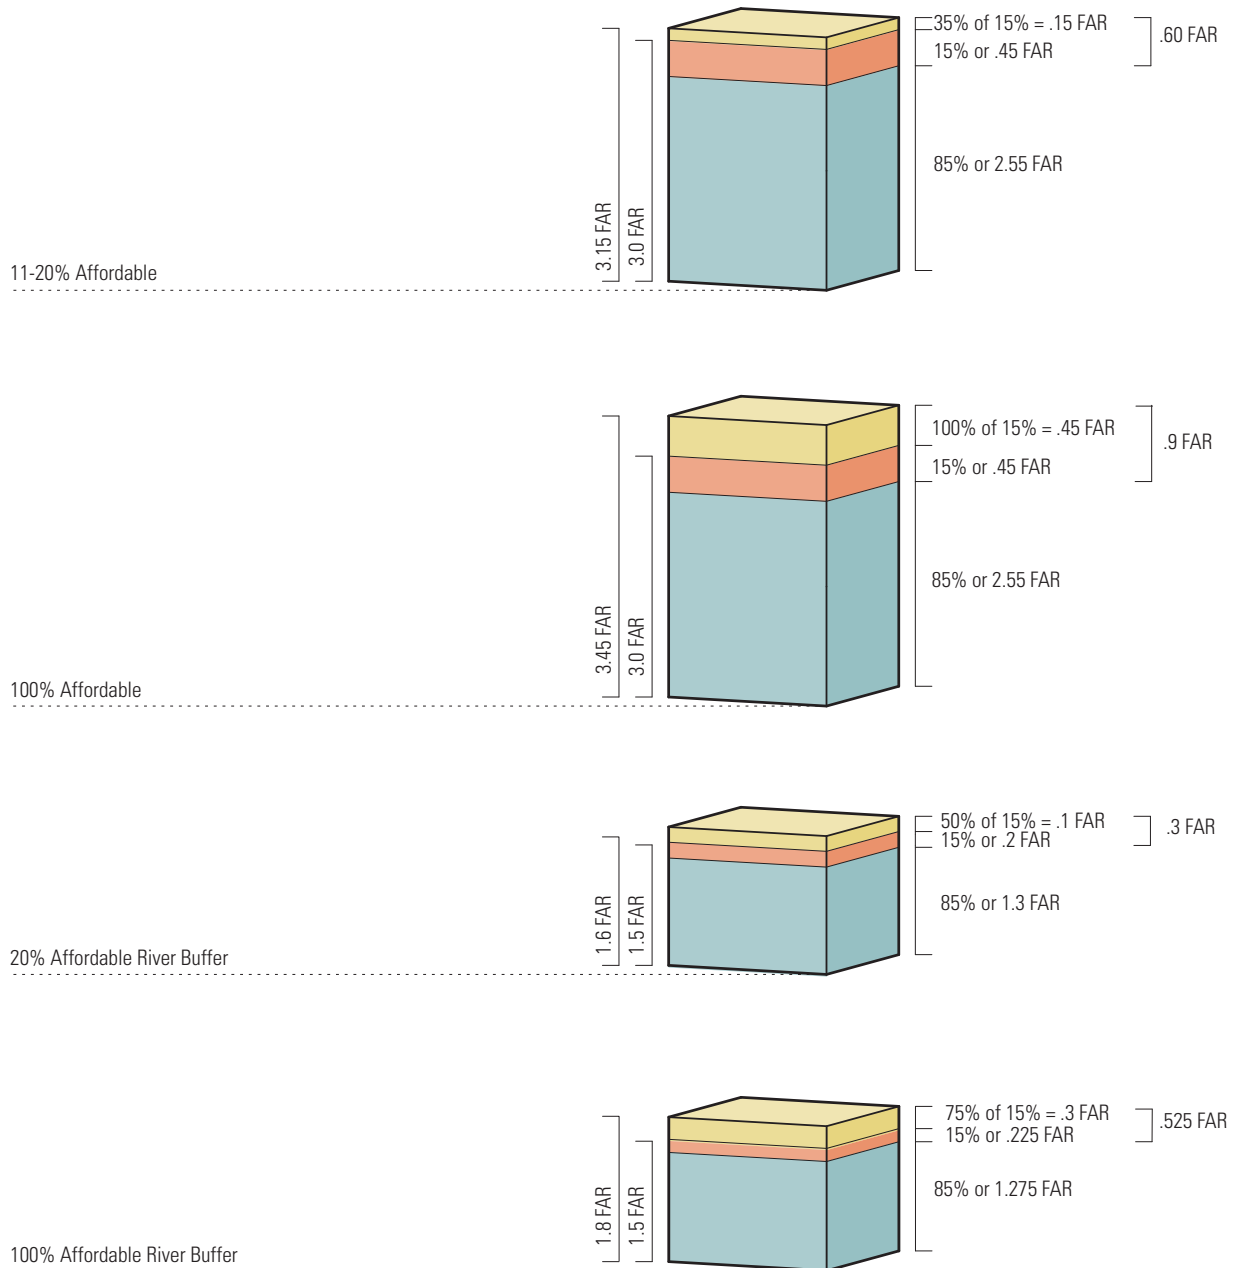

Affordability Level/Location	Greenway	Urban Village	Urban Innovation	Urban Center
11% of units set aside for households earning 50% of AMI or less, or 20% of units set aside for households earning 80% of AMI or less	NA	3:1	3.15:1 (The Residential portion of the Project is subject to a .6:1 FAR)	3.15:1 (The Residential portion of the Project is subject to a .6:1 FAR)
100% of units set aside for households earning 80% of AMI or less	NA	4:1	3.45:1 (The Residential portion of the Project is subject to a .9:1 FAR)	3.45:1 (The Residential portion of the Project is subject to a .9:1 FAR)
11% of units located in the River Buffer set aside for households earning 50% of AMI or less, or 20% of units located in the River Buffer set aside for households earning 80% of AMI or less	NA	2:1	1.6:1 (The residential portion of the Project is subject to a .3:1 FAR)	1.6:1 (The residential portion of the Project is subject to a .3:1 FAR)
100% of units located in the River Buffer set aside for households earning 80% of AMI or less	NA	2:1	1.8:1 (The residential portion of the Project is subject to a .525:1 FAR)	1.8:1 (The residential portion of the Project is subject to a .525:1 FAR)

Floor Area Bonus Strategy A Footnote

*Projects located in an area with a Maximum FAR of 3:1, as shown on the FAR Map, shall be limited to a 3.375:1 FAR.

Figure 2.3
Affordable Housing Bonus Option; Strategy A

Urban Innovation/Center

- Residential Use
- Non-Residential Use
- Affordable Housing Bonus Option

- c. **Strategy B.** As an alternative to Strategy A, if an applicant agrees to set aside a portion of the Residential units in a Project for affordable housing, then for each square foot of affordable housing constructed, the applicant shall be granted the right to construct additional floor area above the Base FAR for the Project, as set forth in the Bonus Square Footage Table below. One additional square foot shall be added to the bonus numbers set forth below for square footage that is used to construct affordable units containing three or more bedrooms.

BONUS SQUARE FOOTAGE TABLE- UNTIL FIVE YEARS FOLLOWING PLAN ADOPTION*

Affordability	Affordable SF	Market SF	Total Bonus SF
Extremely-Low - Units set aside for households earning 30% of AMI or less	1	18	19
Very Low - Units set aside for households earning 50% of AMI or less	1	13	14
Low - Units set aside for households earning 80% of AMI or less	1	5	6

Bonus Square Footage Table Footnote

*Five Years After Plan Adoption the market square value footage is reduced by half unless the City Council legislatively acts to modify the current market square footage. The revised numbers shall not apply to Projects for which the application is deemed complete by the Department of City Planning prior to the termination of the five year period following Plan adoption.

- d. **Floor Area Bonus.** The Floor Area Bonus in Strategy B is limited to the Maximum FAR set forth in the following table.

FLOOR AREA BONUS LIMITS- STRATEGY B TABLE*

Location	Greenway	Urban Village	Urban Innovation	Urban Center
Outside of the River Buffer Area	NA	4:1	3.45:1 (The Residential portion of the Project is subject to a .9:1 FAR)	3.45:1 (The Residential portion of the Project is subject to a .9:1 FAR)
Within the River Buffer Area	NA	2:1	1.8:1 (The Residential portion of the Project is subject to a .525:1 FAR)	1.8:1 (The Residential portion of the Project is subject to a .525:1 FAR)

Floor Area Bonus- Strategy B Footnote

*Projects located in an area with a Maximum FAR of 3:1, as shown on the FAR Map, shall be limited to a 3.375:1 FAR.

Figure 2.4
Affordable Housing Bonus Option; Strategy B

Extremely Low

Affordable Unit SF at 30% AMI + 18 Bonus Market SF = 19 Total Bonus SF
Ex. 1,000 + 18,000 = 19,000

Very Low

Affordable Unit SF at 50% AMI + 13 Bonus Market SF = 14 Total Bonus SF
Ex. 2,000 + 26,000 = 28,000

Low

Affordable Unit SF at 80% AMI + 5 Bonus Market SF = 6 Total Bonus SF
Ex. 1,000 + 5,000 = 6,000

- e. **Incentives.** Applicants who participate in the Affordable Housing Bonus Option (either Strategy A or B) are eligible for up to three on or off-menu incentives either based upon the requirements set forth in Government Code Section 65915 (d)(2) (or any successor mandatory state statute), or as set forth below, whichever results in the greater number of incentives.
 - i. **Strategy A.** A Strategy A Project:
 - a) With at least 11% very-low income or 20% low-income affordable units is eligible for two incentives.
 - b) With 100% units set aside for households earning 80% of AMI or less is eligible for three incentives.
 - ii. **Strategy B.** A Strategy B Project that achieves:
 - a) A 3.0:1 FAR, or greater, shall be eligible for one incentive
 - b) A 3.5:1 FAR, or greater, shall be eligible for two incentives
 - c) A 4.0:1 FAR, or greater, shall be eligible for three incentives.

Figure 2.5
Affordable Housing Bonus Option; Strategy B

Urban Village

Building Footprint = 45,000 sf

Total SF = 45,000 sf at 1.5 FAR = 67,500 sf

Residential SF = 67,000 x .9 = 60,750 sf
Non-Residential SF = 67,500 x .1 = 6,750 sf

Density Bonus FAR Limit = 4.0 FAR

Bonus FAR

Affordable SF at 30% AMI + 18 Bonus Market SF = 19 Total SF at 30% AMI
Ex. 2,000 + 36,000 = 38,000

Affordable SF at 50% AMI + 13 Bonus Market SF = 14 Total SF at 50% AMI
Ex. 2,000 + 26,000 = 28,000

Affordable SF at 80% AMI + 5 Bonus Market SF = 6 Total SF at 80% AMI
Ex. 3,667 + 18,333 = 22,000

Total Bonus SF = Total at 35% AMI + Total at 50% AMI + Total at 80% AMI
Ex. 28,000 + 22,000 + 38,000 = 90,000 SF

- Residential Use
- Non-Residential Use
- Affordable Housing Bonus Option

iii. On-Menu Incentives.

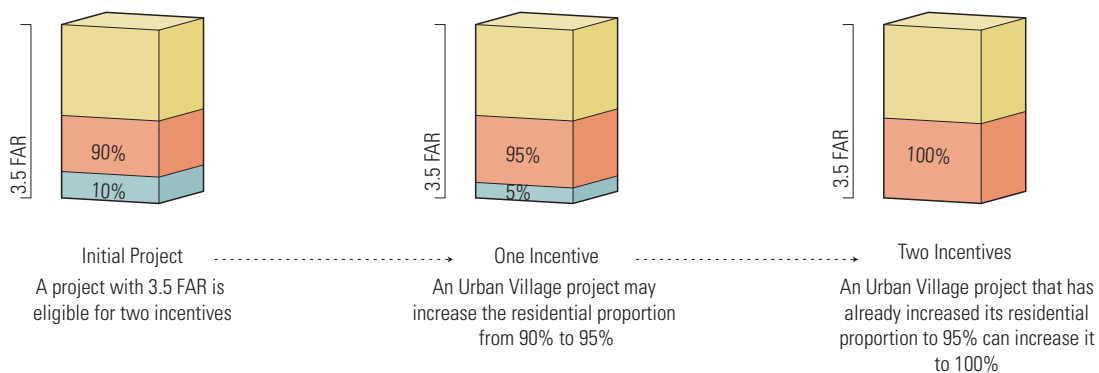

- a) For Projects in the Urban Village Zone, the portion of square footage developed for residential uses may be increased from 90% to 95% of the maximum permitted floor area.
- b) For Projects in the Urban Village Zone utilizing incentive a) above, the portion of square footage developed for residential uses may be increased from 95% to 100% of the maximum permitted floor area.
- c) The maximum height for Projects may be increased by 15 feet.
- d) Public areas, accessible to all residents, including public common areas that serve both residential and commercial uses, and any unenclosed architectural features and building areas, such as a decks, patios, porticos, trellises, or port-cheres may be excluded from the total floor area calculation.

iv. Off-Menu Incentives And Waivers of Development Standards.

- a) A Project applicant seeking an off-menu incentive or waiver of development standards shall follow the procedures for conditional uses set forth in Section 12.24 D of the LAMC. A public hearing shall be held by the City Planning Commission or its designee. The decision of the City Planning Commission shall be final.
- b) The City Planning Commission shall grant an off-menu incentive if it finds, based upon substantial evidence in the record, that the off-menu incentive is necessary in order to make the Restricted Affordable Units economically feasible. As part of the application materials, the applicant shall provide a pro forma or other documentation to show that the off-menu incentive is necessary in order to make the Restricted Affordable Units economically feasible.
- c) A Project applicant may apply for the waiver of any development standard contained in this Plan, or to any applicable development standard set forth in the Chapter 1 of the Municipal Code. The City Planning Commission shall grant a waiver if it finds, based upon substantial evidence in the record, that the development standard in question will have the effect of physically precluding the construction of the affordable housing Project with the incentives granted above. As part of the application materials, the applicant shall provide documentation demonstrating the need for the waiver.

- v. **Covenant.** Applicants who receive a Floor Area Bonus under the Affordable Housing Option shall comply with the following conditions prior to obtaining a building permit for the Project:
 - a) **Rental Units.** Applicants shall sign and record a covenant acceptable to the Los Angeles Housing Department (LAHD) guaranteeing that the occupancy restriction will be observed for at least 30 years from the issuance of the Certificate of Occupancy or a longer period of time if required by the construction or mortgage financing assistance program, mortgage assistance program, or rental subsidy program.
 - b) **For-Sale Units.** Applicants shall sign and record a covenant acceptable to the Los Angeles Housing Department and consistent with the for-sale requirements of California Government Code Section 65915(c)(2) guaranteeing that the affordability criteria will be observed for at least ten years from the issuance of the Certificate of Occupancy.
 - c) If the duration of affordability covenants set forth in this section conflicts with the duration of any other government requirement, the longest duration shall control.
 - d) The covenants described in this section must provide for a private right of enforcement by the City, any tenant, or owner of any building to which a covenant and agreement applies.

**Figure 2.6
Incentives**

■ Residential Use
■ Non-Residential Use
■ Affordable Housing Bonus Option

- e) Restricted affordable units shall be provided in accordance with the City's most recently approved Affordable Housing Incentives Guidelines.
- f) Rent for the restricted affordable units are established pursuant to California Health and Safety Code Section 50053, except that rent for publicly subsidized restricted affordable units may be established pursuant to HUD's maximum allowable rent levels that are published on the LAHD website each year.

2. Community Benefit Option.
 - a. Increased Floor Area Rights. Subject to the limitations set forth below, Project applicants may obtain additional Floor Area Rights by providing the following Community Benefits.
 - i. Open Space. A Project applicant may add 3 square feet of Floor Area for each square foot of publicly accessible open space provided.
 - ii. Community Facility. A Project applicant may add 6 square feet of Floor Area for each square foot of area provided for a Community Facility.
 - iii. Passageway. A Project applicant may add 3 square feet of Floor Area for each square foot of a public passageway that extends from an adjacent street to another public right-of-way.

Figure 2.7
Community Benefit Option

Example of a Non-Residential Project

Ex. Open Space SF x 3 = Bonus Floor Area SF
 EX: 3,250 sf x 3 = 9,750 sf

Community Facility SF x 6 = Bonus Floor Area SF
 EX: 2,000 sf x 6 = 18,000 sf

Passageway SF x 3 = Bonus Floor Area SF
 EX: 3,500 sf x 3 = 10,500 sf

Total Community Benefit Option = 38,250 sf

- a) The owner or owners of the lot on which the passageway is to be provided shall record an agreement in the Office of the County Recorder of Los Angeles County, California, as a covenant running with the land for the benefit of the City of Los Angeles, providing that such owner or owners shall continue to provide the passageway as a publicly accessible pedestrian passageway so long as the building or use the passage is intended to serve is maintained.
 - b) Such a passageway shall permit unlimited 24 hour public access to pedestrians, bicyclists, and emergency vehicles.
 - c) Passageways shall be designed in conformance with Section 2.4 L 3.
- b. Limitations and Administration.
- i. Residential and/or Mixed-Use Projects with a Base FAR of 2.5:1 that have obtained a 3.375:1 FAR by utilizing the Affordable Housing Option may obtain up to an additional .625 FAR in locations where the Maximum FAR is 4:1 or greater.
 - ii. Projects that include more than 15 residential units must comply with the Affordable Housing Density Option to be eligible for the Community Benefit Option set forth in this section, or to be eligible for the TFAR Program in Section 2.1 I. below.
 - iii. A Non-Residential Project and/or a Mixed-Use Project with less than 15 Residential units, or a Mixed-Use Project that has a Base FAR of 3:1 and that has Residential uses comprising less than 75% of the total uses on the site may obtain up to an additional 1:1 FAR (where permitted - see FAR Map) through the Community Benefits Option. Project applicants must apply for Project Permit Compliance Review, and submit with their application an Allocation Plan as described in Section 6.G of this plan.
 - iv. Public benefits may be provided on the same site as the Project or on a site within the Specific Plan Area.
 - v. The owner or owners of the property that is the recipient of the Community Benefit Bonus shall record an agreement in the Office of the County Recorder of Los Angeles County, California, as a covenant running with the land for the benefit of the City of Los Angeles, providing that such owner or owners shall continue to provide the public benefit (or a substitute benefit approved by the director) so long as the building or use the public benefit is intended to serve is maintained. If the public benefit is to be maintained off-site, then the owner or owners of such off-site property shall also record a covenant for the benefit of the City.

H. Transfer of FAR (TFAR) Program

1. Where applicable, non-residential Projects may pursue either the Bonus FAR and/or TFAR Programs up to the allowable Maximum FAR. An existing parcel that has an existing FAR that is less than the Base FAR assigned by this Plan may transfer its Unused FAR to a Receiver Site that is located within the same Zoning District.
2. An existing parcel within the Urban Village District that is eligible, as a result of participation in the Floor Area Bonus Strategy A Option, may transfer any of its Unused FAR to a Receiver Site that is located within the Specific Plan.
3. An existing parcel within the Greenway District that has an existing FAR that is less than the Base FAR assigned by this Plan may transfer its Unused FAR to a Receiver Site that is located within the Specific Plan.
4. Properties within the River Buffer Area may transfer any portion of their Unused FAR to another property within the same district but may not be a Receiver Site.
5. The value of the transferred FAR shall be determined between the participants of the Transfer unless the Donor Site is owned by either the City of Los Angeles or the Los Angeles River Revitalization (Corporation) in which case the Floor Area Payment described in Section 1.2 D will be used to establish the value and payment method.

Figure 2.8
Affordable Housing Bonus Transfer FAR

- Transfer FAR

2.2 Building Form

A. Purposes

These zoning regulations are intended to:

1. Provide spatial and proportional standards that reinforce the street as a large public outdoor room.
2. Emphasize the public realm (streets and public open spaces) more than individual buildings.
3. Ensure that development is designed with a pedestrian orientation.
4. Reinforce the street wall with well-scaled elements or structures that are sensitive to the neighborhood context.
5. Respect the smaller scale of adjacent low-density buildings

B. Yard and Setback Regulations

The Project applicant shall provide a site plan that indicates the distance between the Project’s property line(s) that abut public rights of way and the front of buildings.

1. **Yard Requirements.** No yard requirements shall apply except as required by the applicable urban design standards. Project applicants shall provide a Sidewalk Easement where required by the Street Standards established in Section 3 of this Plan.
2. **Setbacks.**
 - a. The building setbacks shall be as defined in the Building Setback Table below. The Streetwall Table, which is also set forth below, defines the percentage of the Streetwall that must observe the required building setbacks.
 - b. The ground floor Streetwall (including entries and display windows) may be set back farther than the specified range, provided that structural columns and building walls above the ground floor are located within the specified range.

SETBACK TABLE

Setback	Greenways	Urban Village	Urban Innovation	Urban Center
Street Façade				
- Retail Ground Floor Uses	N/A	0'-5' max	0'-10' max	0'-3' max
- Professional Office/ Live Work	N/A	0'-10' max	0'-15' max	0'-5' max
- Industrial Ground Floor Uses	N/A	0'-10' max	0'-15' max	0'-10' max
- Residential Ground Floor Uses	N/A	0'-15' max	N/A	0'-10' max
Alley, Abutting Property Line	0' min	0' min	0' min	0' min
Public Parks	30' min	30' min	30' min	30' min
River or Arroyo Seco	50' min	50' min	50' min	50' min
Rail Tracks	30' min	30' min	30' min	30' min

Figure 2.9
Ground Floor Streetwall

Figure 2.10
Setbacks

C. Streetwall & Massing

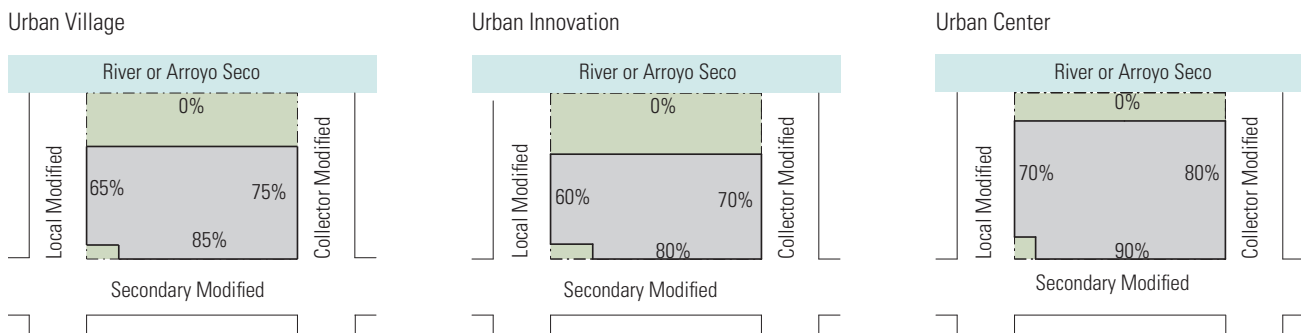

The Project applicant shall provide a site plan that indicates both the overall length of the building and the percent of the facade that is located within the setback area. Indicate what District the Project is located within.

1. **Streetwall.** A minimum percentage of the Streetwall shall observe the required Setbacks as set forth below.

STREETWALL TABLE

Minimum Percent of Building Streetwall at Setback	Greenways	Urban Village	Urban Innovation	Urban Center
Project Facing River or Arroyo Seco	NA	0%	0%	0%
Project Facing Secondary Modified	NA	85%	80%	90%
Project Facing Collector Modified	NA	75%	70%	80%
Project Facing Local Modified	NA	65%	60%	70%

Figure 2.11
Streetwall

2. Projects that include publicly accessible open space and/or stormwater retention/detention features between the building face and the property line shall be exempt from meeting the Streetwall percentage requirements.
3. **Massing.** Buildings more than 300 feet in length shall include a design element that provides visual relief every 200 feet. The design feature shall either setback from or step forward from the primary face of the building by at least a depth of 12 inches and shall be of a width no less than 5% of the building face (ex: 5% of 200' = 10') and shall extend up the face of the building at least the full height of the building's first story.

Figure 2.12
Massing

D. Maximum Lot Coverage

The Project applicant shall provide a site plan that indicates the square footage of the site, the square footage of the building footprint, and the percentage of the site that is covered with building. The site plan shall also indicate the District and maximum buildable lot coverage permitted for the site.

The percentage of a Project’s building footprint relative to the overall site area shall be limited as set forth in the following table.

MAXIMUM LOT COVERAGE TABLE

Max Lot Coverage	Greenway	Urban Village	Urban Innovation	Urban Center
Maximum Buildable Lot Coverage*	25%	85%	85%	85%
Maximum Buildable Lot Coverage for Projects Within The River Buffer Area*	25%	50%	50%	50%

Maximum Lot Coverage Table Footnotes

*Existing buildings are exempt from this limitation. Projects within the Modified River Buffer Area are not subject to the lot coverage limitations established for the Maximum Building Lot Coverage For Projects Within The River Buffer Area category set forth in the Maximum Lot Coverage Table. Those Projects are instead subject to the standard Maximum Buildable Lot Coverage category.

**Figure 2.13
Max Lot Coverage**

Greenway

Urban Village, Innovation, and Center

Total Lot Size (sf.) x Max Lot Coverage (.25) = Max Buildable Lot Coverage (sf.)

Ex: 7,500 x .25 = 1,875

Total Lot Size (sf.) x Max Lot Coverage (.85) = Max Buildable Lot Coverage (sf.)

Ex: 7,500 x .85 = 6,375

E. Height

The Project applicant shall provide an elevation that indicates the building’s overall height and the height(s) at the street wall(s).

1. 90% of a Streetwall shall comply with the minimum height requirements set forth in the Building Heights Map.
2. The average height of the Project shall not exceed the average maximum height limitations established in the Building Heights Map as measured from the lowest ground level point located within five feet from the building.
3. Parapet walls and other guard rails utilized to enclose roof terraces, gardens or green roofs may exceed the maximum allowable height by up to 42 inches.
4. Buildings shall be designed to cast no more than 1.5 hours of a shadow projection on any park, open space, and/or rooftop area of abutting properties between 10:00 a.m. and 2:00 p.m. on December 21.

The Project applicant shall provide a site plan that includes adjacent properties and indicate the shadow line that will be formed by the building on abutting parks, open spaces, and/or roof top areas, between 10am and 2pm on the Winter Solstice. The site plan shall also indicate the duration of the shadow during these hours.

Figure 2.14

Street Wall Height

Parapet Walls

Figure 2.15
Average Height

Step One

$$\frac{\text{Building 1 Roof Area (sf.)}}{(\text{Building 1 Roof Area (sf.)} + \text{Building 2 Roof Area (sf.)})} = \text{Building 1 Percentage (\%)}$$

Ex: $\frac{2,500}{(2,500 + 7,500)} = 25 \%$

$$\frac{\text{Building 2 Roof Area (sf.)}}{(\text{Building 1 Roof Area (sf.)} + \text{Building 2 Roof Area (sf.)})} = \text{Building 2 Percentage (\%)}$$

Ex: $\frac{7,500}{(2,500 + 7,500)} = 75 \%$

Step Two

$$(\text{Building 1 Height (ft)} \times \text{Building 1 Percentage (\%)}) + (\text{Building 2 Height (ft)} \times \text{Building 2 Percentage (\%)}) = \text{Average Height}$$

Ex: $(100' \times .25) + (60' \times .75) = 70'$

Prepared by Los Angeles Department of City Planning
025_jr: 05.2013

F. Buffers

The Project applicant shall provide a site plan and exterior section that indicates the distance from the building to the adjoining low-density residential property, the standard applicable side or rear yard setback of the adjoining property, and the height of the building at the location where it is closest to the adjoining building. The Project applicant shall also demonstrate that the building's height does not exceed 125% of the combined setback distance.

Projects immediately abutting the RD3 zone or a lower density residential zone, and Projects separated only by an alleyway from such zones shall comply with the following standards:

1. Projects shall observe a setback buffer of no less than 30 feet between the edge of the building and the property line of the low density residentially zoned property.
2. At the buffer line and for a distance of 20 feet back from the buffer line, no building shall exceed a height of 125% of the buffer distance plus the side or rear yard setback required by the zoning of the abutting property. (See Figure 2.17)

Figure 2.16
Shadow Projection

- Additional height is permitted, up to the limits set forth in the Building Heights map, within a 50 degree envelope. (See Figure 2.17)

The Project applicant shall provide an exterior section that illustrates the building's height at the street wall and that demonstrates that the height above the allowable street wall height does not exceed the 50 degree envelope.

Figure 2.17
Buffers

$$(Open\ Space\ Buffer + Side/Rear\ Setback) \times 1.25 = Max.\ Height$$

$$Ex. (30 + 5) \times 1.25 = 50$$

2.3 Urban Design

A. Purposes

These zoning regulations are intended to:

1. Maximize the advantage of the area's moderate climate by emphasizing the public realm and public spaces more than individual buildings.
2. Promote pedestrian-scaled architecture along the street.
3. Promote fine-grained and well articulated development while enabling permissible development intensities to be achieved.
4. Orient buildings to the street to promote sidewalk activity and reinforce the pedestrian environment along the sidewalk.
5. Vary the horizontal plane of a building to provide visual interest and enrich the pedestrian experience, while contributing to the quality and definition of the Streetwall.
6. Incorporate glazing that contributes to a warm, inviting environment while also reducing bird collisions by minimizing the reflection of the surrounding habitat or sky.
7. Provide well-designed, energy efficient, architectural and landscape lighting that contributes to a safe and inviting atmosphere without casting light into the night sky, adjacent properties, or sensitive habitat areas.
8. Integrate all exterior lighting (building, landscape, and security) with the building design, and require such design to be of a character and scale that relates to the pedestrian and accentuates major architectural and special landscape features.
9. Respect neighboring properties, and design major mechanical systems, trash and recycling, antennas, glare lighting, and reflective materials to limit adverse impacts.
10. Balance the need for security doors and windows with the need to create an attractive, inviting environment.

B. Entrance

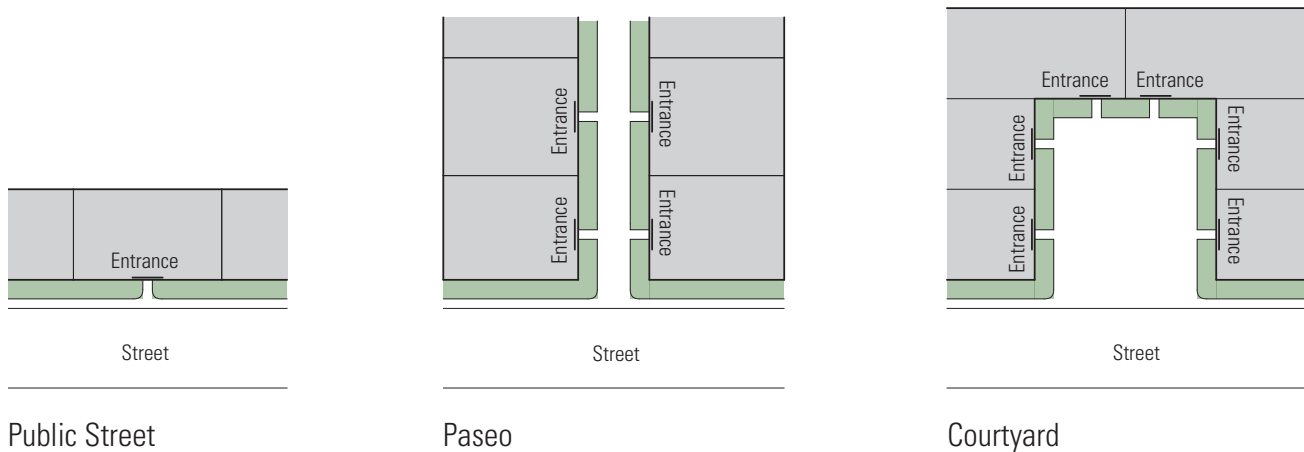

The Project applicant shall provide a site plan that indicates the location of the primary entrances of the building and the location of the entrances in relation to the public street and vehicle parking areas.

1. Primary entrances shall be connected to and visible from a public street such that a pedestrian entering the building need not walk through a vehicle parking area in order to arrive at the entrance.
2. Ground floor (non-residential) tenant spaces located on the public street or sidewalk shall have their primary entrance located adjacent to the public street or sidewalk.
3. Ground floor (non-residential) tenant spaces not located on the street or sidewalk shall have their primary entrance located adjacent to a pedestrian paseo, courtyard or plaza that is connected to a public street.
4. Ground floor residential units with individual entries shall include windows on the ground floor that look out onto the street.

Primary Entrances

Figure 2.18
Examples of Ground Floor Tenant Entrances

Active Streets Map

-  Los Angeles River and Arroyo Seco
-  Specific Plan Area
-  Active Streets
-  Retail Streets
-  Active Industrial Streets
-  Metro Gold Line & Stations

Prepared by Los Angeles Department of City Planning
025_d: 05.2013

C. Ground Floor

The Project applicant shall provide a site plan and/or elevations that indicates the percentage of the building’s ground floor frontage intended for retail, community serving, cultural, professional, live/work, residential, and other active space uses.

1. Frontage Uses

- a. At least 75% of the ground floor frontage of a building, or 50% of the ground floor frontage of a building intended for Light Industrial uses, located on a Retail Street identified on the Active Streets Map shall be designed to accommodate the following active uses: retail, community serving uses, cultural, professional office, live/work units, residential units with individual entries along the street, and/or other active space such as recreation and meeting rooms, lobbies, sales areas, or common rooms.

Active Ground Floor

Transparent Facade

Figure 2.19
Frontage Uses

Other Use (sf.) ÷ Street Level Facade = Percent of Other Use
 Ex. 375 sf. ÷ 1,500 = .25 or 25%

- b. At least 50% of the ground floor frontage of a building, or 35% of the ground floor frontage of a building intended for Light Industrial uses, located on an Active Street identified on the Active Streets Map shall be designed to accommodate the following active uses: retail, cultural, professional office, live/work units, residential units with individual entries along the street, and/or other active spaces such as recreation and meeting rooms, lobbies or sales areas, or common rooms.
 - c. At least 25% of the ground floor frontage of a building, or 20% of the ground floor frontage of a building intended for Light Industrial uses, located on an Active Industrial Street identified on the Active Streets Map shall be designed to accommodate the following active uses: lobbies, sales areas, retail, professional office, and/or other active spaces such as meeting rooms.
2. Transit Information. All Projects shall provide information concerning local transit services at a primary entry point to the site or building. The information shall be prominently displayed, updated quarterly, and shall include phone numbers, web-information, and a Quick Response (QR) code for transit, paratransit, and taxis as well as brochures and maps for local bus and rail service.

The Project applicant shall provide a ground floor plan that indicates the location and information that will be included for the transit information board.

3. Ground Floor Transparency.

The Project applicant shall provide an elevation that indicates the square footage of the building’s street level facade(s), the square footage of the transparent wall openings, and the percentage of the building that is covered in transparency.

- a. Along Retail Streets (as designated in the Active Streets Map), transparent wall openings, such as storefront windows and doors, shall comprise at least 50% of a building’s street level façade(s). Such openings shall be located between 2 feet and 8 feet from the finished floor level of the ground floor. An exception shall be made for buildings intended for Light Industrial Uses, in which case the transparent wall openings need comprise only 35% of the building’s street level façade(s).
- b. Along Active Streets and Paseos, transparent wall openings, such as storefront windows and doors shall comprise at least 35% of a building’s street level façade(s). Such openings shall be located between 2 feet and 8 feet from the finished floor level of the ground floor. An exception shall be made for buildings intended for Light Industrial Uses, in which case the transparent wall openings need comprise only 25% of the building’s street level façade(s).

Figure 2.20
Ground Floor Transparency

- c. Along Active Industrial Streets, transparent wall openings, such as storefront windows and doors, shall comprise at least 25% of a building's street level façade(s). Such openings shall be located between 2 feet and 8 feet from the finished floor level of the ground floor. An exception shall be made for buildings intended for Light Industrial Uses, in which case the transparent wall openings need comprise only 18% of the building's street level façade(s).
- d. An exception shall be made for older structures that are being renovated if the transparency requirement would render the building structurally infeasible or would compromise the historical integrity or original character of the building.

4. Ground Floor Facade. To avoid blank walls that would detract from the experience and appearance of an active streetscape there shall be no blank walls (without doors or windows) longer than 50 feet along sidewalks on Active or Retail Streets. Walls with public art installations such as murals shall be exempt, provided such public art or murals are permitted pursuant to the LAMC or other applicable City regulations.

The Project applicant shall provide elevation(s) that indicate the dimension of any blank facades or walls. For blank façade or wall sections 50 feet or greater in length, the applicant shall provide an illustration of the artwork or landscaping that will be installed on or in front of the façade or wall.

Figure 2.21
Ground Floor Facade

Ground Floor Retail

Ground Floor Corner Retail

5. Ground Floor Retail.

The Project applicant shall provide a site plan that indicates the location of the ground floor retail space and the distance of the retail frontage from the sidewalk.

- a. All ground floor retail space shall be located either along the streetwall or along a courtyard or plaza, provided the retail frontage is not set back more than 60 feet from the sidewalk and is visible from the sidewalk.
- b. Where ground floor retail spaces are located along Retail streets that intersect other streets, the ground floor transparency requirements for the Retail street shall apply around the corner for a minimum of 20 feet, even if such street is not also a Retail street.

Figure 2.22
Examples of Ground Floor Retail Locations

D. Windows and Glazing.

The Project applicant shall provide an elevation that indicates the direction of the facade(s), the square footage of the building facades, the square footage of the windows, and the percentage of the building that is covered in windows.

1. **Windows.** To reduce interior heat gain and improve energy performance, the window to wall ratio (exclusive of the ground floor) shall not exceed 40% on the east, west, southwest, northwest, southeast and northeast facades, unless an applicant can demonstrate with calculations provided by a licensed mechanical engineer that an alternative facade design will provide the same or greater reduction in the building’s cooling loads.

Figure 2.23
E, W, SW, NW, SE, and NE Facades

2. Glazing.

The Project applicant shall provide an elevation that indicates the window and door glazing and the shading devices used to reduce birds' access to glass.

- a. At least 50% of ground-floor window and door glazing shall be transparent and have a 0-10% reflectivity rating, and/or include shading devices, screens or other barriers to reduce birds' access to glass. In addition, or alternatively, the glass may be installed between 20-40 degrees from vertical.
- b. Glazing on the upper floors shall include one or more of the following: 0-10% reflectivity, etching, sandblasted patterns, fretting, low-e patterning, shading devices, screen, other barriers to reduce birds' access to glass, and/or angle the glass between 20-40 degrees from vertical.

Figure 2.24
Glazing

Transparent Glazing ÷ Total Glazing = Percent Transparent

Ex. 100 sf. ÷ 200 sf. = .5 or 50%

E. Exterior Lighting

The Project applicant shall provide a site plan and/or elevation that indicates the location of all exterior lighting fixtures, the maximum initial illuminance value, and the total initial lumens emitted at an angle of 90 degrees and higher.

1. General Requirements

- a. Light levels shall be measured with a photoelectric photometer, following the standard spectral luminous efficiency curve adopted by the International Commission on Illumination.
 - b. The outdoor lighting for all projects in the Urban Center, Innovation, and Village Districts shall be designed such that it produces a maximum initial illuminance value no greater than 0.20 horizontal and vertical foot candles when measured at the site boundary and no greater than 0.01 horizontal foot candles when measured 15 feet from the site. No more than 5.0% of the total initial lumens shall be emitted at an angle of 90 degrees or higher from nadir (straight down).
 - c. The outdoor lighting for all projects in the Greenway District shall be designed such that it produces a maximum initial illuminance value no greater than 0.01 horizontal and vertical foot candles when measured at the site boundary. None of the total initial lumens shall be emitted at an angle of 90 degrees or higher from nadir (straight down).
 - d. Lighting shall be provided along all vehicular access ways and pedestrian walkways.
 - e. All low pressure sodium, high pressure sodium, metal halide, fluorescent, quartz, 60 watts or greater incandescent, mercury vapor, and halogen fixtures shall be fully shielded in such a manner as to preclude light pollution or light trespass on any of the following: an abutting residential use district; a lot zoned for residential use; the public right of way, a park, or open space.
 - f. Lighting (exterior building and landscape) shall be directed away from properties and roadways, and shielded as necessary. In particular, no lighting shall be directed at the window of a residential unit located either within or adjacent to a project.
2. **Exemptions.** The following outdoor lighting fixtures and activities are exempt from the requirements of this section:
- a. Fixtures producing light directly by the combustion of fossil fuels, such as kerosene lanterns or gas lamps.

Figure 2.25
Urban Village, Innovation, and C

Greenway

- b. All neon, argon or krypton outdoor lighting fixtures.
- c. Emergency lighting operated by a public utility or agency during the course of repairing or replacing damaged facilities.
- d. Emergency lighting and fixtures necessary to conduct rescue operations, provide emergency medical treatment or address any other emergency situation.
- e. Lighting fixtures within five feet of an entrance or exit door and/or alcove of a dwelling unit, not exceeding a height of eight feet and a wattage not exceeding 75 watts provided there is no light pollution, or light trespass, or provided the lighting fixtures are regulated by a motion detector.
- f. Internally illuminated signs.
- g. Holiday lighting fixtures or displays.
- h. Architectural lighting whether it is freestanding or attached to a building, provided the lighting does not exceed an intensity of 60 watts.
- i. Pedestrian lighting that does not have an intensity greater than 60 watts.
- j. Vertical lighting for the display of flags that does not exceed an intensity of 140 watts.

F. Minimizing Impacts on Neighbors

The Project applicant shall provide a site plan and/or elevation that indicates the location of any electrical transformers, mechanical equipment, water meters or other equipment and how they are screened from public view.

1. Mechanical Systems and Trash Enclosures
 - a. Mechanical units shall be either screened from public view or the equipment itself shall be integrated into the architectural design of the building.
 - b. Ventilation intakes/exhausts shall be located at least 20 feet vertically and horizontally from a sidewalk and air flow shall be directed away from the public area.
 - c. Recycling and trash facilities shall be screened from public view.
 - d. Exterior trash enclosures shall:
 - i. Be designed to complement the primary building with a wall height that exceeds, by at least 18 inches, the disposal unit it is designed to contain;
 - ii. Have a solid roof to deter birds and to block views from adjacent properties;
 - iii. Be comprised of solid metal doors that accommodate a lock and that remain closed when not in use; and
 - iv. Not be constructed of chain links or wood.

The Project applicant shall provide a site plan and/or site plan sections showing any exterior trash enclosures, the wall height of the structure, the height of the disposal unit, and the materials to be used in the construction of the structure.

Figure 2.26
Ventilation Intakes

Security Features

2. Ground Floor Utilitarian Uses.
 - a. Electrical transformers, mechanical equipment, water meters and other equipment shall not be located along the ground floor streetwall unless screened from public view.
 - b. Electrical transformers, mechanical equipment, other equipment, enclosed stairs, storage spaces, and blank walls shall not be located within 100 feet of a corner.
3. Security Grills and Roll-Down Doors and Windows.
 - a. Exterior roll-down doors and security grills are not permitted unless they are designed to be 75% transparent (open) or retractable and fully screened from view during business hours.
 - b. Windows with security features shall not block more than 30% of the natural light to the interior, and shall be designed as an architectural feature compatible with the building's style.

Figure 2.27
Example of Exterior Trash Enclosure

2.4 Open Space

A. Purposes

These zoning regulations are intended to:

1. Provide inviting, safe and accessible public open space.
2. Increase recreational opportunities for residents, employees, and visitors.
3. Provide pedestrian linkages throughout the Plan area.
4. Provide parks and open space that minimizes demand for potable water resources.
5. Encourage community-based and local food production.
6. Provide open space areas that provide for native habitat and facilitate the migration of local species.
7. Provide adequate lighting to create a park environment where residents feel safe.
8. Generate visual interest by creating focal points and meeting places to enhance the area's image.
9. Support an easy transition between indoors and outdoors.
10. Include permanent and temporary seating that is placed with consideration to sun and shade, and other factors contributing to human comfort.
11. Support the goals of the Los Angeles River Revitalization Master Plan.
12. Contribute to the environmental and ecological health of the City's watersheds.
13. Establish a positive interface between river-adjacent property and river parks and/or greenways.
14. Promote the river identity of river-adjacent communities.

B. Open Space Typologies

Adjacent. Properties that abut a river and/or abut a river frontage road.

Alleys. Alleys provide access to service activities and while not typically the most visible of public spaces they can facilitate physical connections between traditional open spaces.

Balconies. Balconies are typically private open space areas generally available exclusively to a unit's occupants and their visitors.

California -Friendly Plants. Plants defined as drought tolerant and suitable to Southern California by the Metropolitan Water District. A full list of plants is available at: <http://www.thegarden.org/siteDocs/resources/CAFriendlyList-botanical.pdf>.

Community Gardens.

Community Gardens provide community members with local opportunities to tend individual plots and grow their own food.

Courtyards. Courtyards are common open space areas of a scale and enclosure that is conducive to social interaction at a smaller scale. A courtyard is typically contained on three sides by building and/or architectural features.

Entry forecourts. Entry forecourts announce the function and importance of primary building entrances. They should provide a clear comfortable transition between exterior and interior space. An entry forecourt is typically contained on two sides by building and/or architectural features.

Invasive Plants. Plants identified by the California Invasive Plant Council (CAL-IPC) and included on the California Invasive Plant Inventory at: <http://www.cal-ipc.org/ip/inventory/pdf/Inventory2006.pdf>.

Los Angeles County’s River Master Plan’s Landscaping Guidelines and Plant Palettes.

A plant palette comprised primarily of native plants suitable for a riparian habitat. The Guidelines can be found at: <http://ladpw.org/wmd/watershed/LA/LARPlantingguidelineswebversion.pdf>.

Native Plants. A native plant is one that occurs naturally in a given geographic area. Examples are trees, flowers, grasses and any other plants included in the California Native Plant Library at: http://www.theodorepayne.org/mediawiki/index.php?title+Main_Page

Parks. Parks provide a wide range of recreational opportunities for multiple users.

Paseos. Paseos are extensions of the street grid located on private property. As outdoor

passages devoted exclusively to pedestrians, they establish clear connections between streets, plazas and courtyards, building entrances, parking and transit facilities. A paseo is typically contained on two sides by building and/or architectural features.

Patios. Similar to Balconies, Patios are typically private open space areas generally available exclusively to a unit’s occupants and their visitors.

Plazas. Plazas are common open space areas typically amenable to larger public gatherings. They are readily accessible from the street, as well as active building uses. A plaza is typically contained on only one side by building and/or architectural features.

Promenade. A public area set aside as a pedestrian walkway.

Public-Right-of-Way (ROW). A parcel of land over which the public can legally traverse. It usually consists of a street, road, sidewalk, or footpath.

Residential Setbacks. Building setbacks adjacent to residential buildings provide a transition between the public and private realm, allowing residents to have private spaces with visual access to the public realm.

River. A general term for a body of flowing water. A river may be classified as follows in relation to time: perennial (flows continuously) or, intermittent (flows seasonally).

Riverfront Door. An exterior door of a Project that faces and is directly accessible from the adjacent river corridor or river frontage road.

Roof Terrace. Roof terraces and gardens can augment open space and are especially encouraged in conjunction with hotels or residential uses.

Streets. Streets are the most public of all open spaces. Streets communicate the quality of the public environment and the care a city has for its residents.

Trails. Trails provide opportunities for walking and hiking without the interruption of vehicular traffic.

Watershed Friendly Plants. Plants included in the Watershed Friendly Plant List published by the Council for Watershed Health.

C. Area Requirements

The Project applicant shall provide a site plan that indicates the location and size of the open space area, the total site area, and the representative percentage of the open space area. If the open space area is not located on the same site as the Project, the applicant shall provide an area site plan that indicates the location of the Project relative to the open space, whether the open space area satisfies the open space requirement of more than one lot, and whether the square footage of the new alleyways, paseos, or new streets is included in the open space contribution. The applicant shall also indicate the location of all railway right of ways.

1. All Projects in the Greenway District shall maintain 25% of the lot area as open space, and if the property is owned by the City the area shall be publicly accessible.

Figure 2.28
Area Requirements

Greenway

Urban Village, Innovation, Center

Ex. $35,000 \text{ sf.} \div 16 = 2,188 \text{ sf.}$
 $17,500 \text{ sf.} \div 48 = 365 \text{ sf.}$
 $2,188 + 365 = 2,553 \text{ sf of Open Space}$

2. All Projects in the Urban Village, Urban Center and Urban Innovation Districts shall provide:
 - a. One square foot of open space area for building users per every 16 square feet of residential space; and
 - b. One square foot of open space area for building users for every 48 square feet of non-residential space.
3. At least 50% of the required open space shall be provided as common open space and shall comply with LAMC Section 12.21 G 2(a).
4. Projects may provide up to 25% less common open space if the common open space is publicly accessible and is maintained at no public expense.
5. Private open space shall comply with Section 12.21 G 2 (b).
6. Any common area or publicly accessible open spaces shall be located within 900 feet of the Project.
7. Multiple Projects may combine the open space requirement of each Project into a single open space equal to no less than the sum of the requirement of each parcel as long as the combined spaces remain accessible to all of the residents, employees or visitors of the respective Projects.
8. In the case of a Transfer of Floor Area Rights, a Project may comply with the provisions of this Section by providing the required open space on either the Receiver or the Donor Site.
9. All parking areas, including access aisles, and driveways qualify as usable common or publicly accessible open space provided that the area complies with the following design standards:
 - a. Traffic design speed is 5 mph or less; and
 - b. Parking Lot Design Standards in Section 2.5 D 3. of this Plan are met.
10. Public alleyways, paseos, or new streets that are added to a Project site shall qualify as publicly accessible open space and may be used to satisfy the open space requirement.

Bikeshare

Transit Shelter

Soccer Field

Newsstand

F. Permitted Uses

The Project applicant shall provide a landscape that indicates the location and specifications of the functional uses.

Publicly Accessible Open Spaces shall be designed to serve at least one function including but not limited to:

Basketball Courts	Mobility Hub Amenities	Tennis Courts
Bicycle Rental Center	Off-leash Dog Park	Trails, Alleys, Streets, Paseos for walking and bicycling
Community amenities	Open air cafe	
Community garden space	Picnic Area or other seating	Transit Hub Amenities
Farmers' Market	Soccer Field	Exercise Areas, Yoga, Pilates, and Tai Chi
Information or newsstand kiosk	Softball Field	

G. Access

The Project applicant shall provide a site and/or landscape plan that indicates the location and specifications of the paths of travel, public access points, height of access point above or below the adjacent grade, and intended hours of access.

1. All paths of travel shall conform to the standards of the Americans with Disabilities Act (ADA).
2. Publicly accessible open spaces shall:
 - a. Be at the same level as the public sidewalk for at least 50% of its frontage and for a depth of 10 feet. The remainder may not be more than three feet above or below the street curb level.
 - b. Be visible from an adjoining street(s) or adjacent parks.

H. Dimensions and Boundaries

The Project applicant shall provide a landscape plan that indicates the dimensions of the open space area. If the open space is greater than one acre, the plan shall also indicate the ratio between the length and width of the open space area.

All publicly accessible open space shall have a minimum area of 650 square feet with no horizontal dimension less than 15 feet when measured perpendicular from any point on each of the boundaries.

I. Seating

The Project applicant shall provide a site or landscape plan that indicates the location of all seating areas and the quantity of seating relative to the amount of open space.

One linear foot of seating shall be provided for every 500 square feet of common or publicly accessible open space area. The flat top of walls and ledges may count as seating as long as they are no less than 15 inches in depth, between 15 inches and 20 inches in height, and have smooth surfaces to ensure comfort.

J. Landscape

The Project applicant shall provide a site or landscape plan that indicates the Open Space Type of each open space area, identifies the location and size of the requisite planting area, and the percentage of landscaped area relative to the overall open space area.

The Project applicant shall provide a landscape demolition plan that identifies the location of all existing weedy plants and describes the removal plan.

1. Landscaping shall conform to the following regulations:
 - a. **Plant Species.** 75 percent of a Project's newly landscaped area shall be planted with either indigenous native trees, plants and/or shrubs and/or species as defined by the Los Angeles County's River Master Plan's Landscaping Guidelines and Plant Palettes and/or Watershed Friendly Plants.
 - b. **Invasive Plants.** All existing invasive plants shall be removed from the Project area, and any plants identified by the CAL-IPC shall not be permitted.

2. Trees.

The Project applicant shall provide a landscape plan that indicates the location, caliper at planting, radial distance at maturity of each tree, and the material and porosity of the surface area under the tree.

- a. Deciduous trees shall be installed at a minimum of one tree per 600 square feet of common or publicly accessible open space area.
- b. Trees in common and/or publicly accessible open space areas must have a minimum caliper size of 4 inches at planting and have a canopy of at least 10 feet at maturity.
- c. A 32 square foot permeable surface shall be maintained below each tree.

3. Irrigation

The Project applicant shall provide a landscape irrigation plan that indicates the location and size of each drip outlet, the specification for the Weather Based Irrigation Controller, and the location and specification of the purple pipe that will service the system.

- a. Irrigation systems shall be equipped with a Weather Based Irrigation Controller such that the system does not turn on during a storm event or when the soil has a moisture level sufficient to support the plant species.
- b. Irrigation systems shall be designed to meet the water needs of different parts of the landscape. This is referred to as Zoned Irrigation.
- c. Any irrigation system shall be plumbed with a purple pipe to enable a connection to a recycled or gray water system once it is available.
- d. All irrigation systems shall be either drip, microspray, or subsurface depending upon the type and number of plants the irrigation is servicing.

4. Hardscape and Materials

The Project applicant shall provide a site and/or landscape plan that indicates the location and Solar Reflectance Index of all hardscape materials.

The Project applicant shall provide elevations of all fence or vertical border sections.

- a. Hardscape materials shall have a Solar Reflectance Index (SRI) of at least 29.
- b. No spikes, pointed railings, or other sharp objects are permitted.

K. Operations and Maintenance

The owner or owners of the lot on which the publicly accessible open space is to be provided and maintained shall record an agreement in the Office of the County Recorder of Los Angeles County, California, as a covenant running with the land for the benefit of the City of Los Angeles, providing that such owner or owners shall continue to provide and maintain the publicly accessible open space as described in Sections 5 of the Plan so long as the building or use the open space is intended to serve is maintained.

L. Specialty Design Requirements

The Project applicant shall provide a landscape plan that indicates the additional amenities that will be provided.

1. Community Gardens

The Project applicant shall provide a landscape plan that indicates the location of the fencing, watering system, and secure storage space and that includes a list of the parties who will be responsible for maintaining the garden's operation.

- a. Community gardens shall provide fencing, a watering system and a secure storage space.
 - b. Community gardens must have solar access to at least 4 hours of summer sun between the hours of 10am and 2pm.
 - c. The Project applicant shall identify the parties responsible for maintaining the garden's operation.
2. Park Recreational Areas. Park/Recreational areas shall be designed to the specifications of the Department of Recreation and Parks.

The Project applicant shall provide a landscape plan that indicates how the area is consistent with the specifications of the Department of Recreation and Parks.

3. Paseos. Paseos shall be designed to:

The Project applicant shall provide a landscape plan that indicates the width, length, site lines, and percentage of frontage devoted to active uses.

- a. Be at least 20 feet wide;

- b. Have a clear line of sight from the street to the end of the passageway, gathering place, or focal element; and
 - c. Be at least 50% open to the sky or covered with a transparent material.
4. Off-Leash Dog Park. Off-leash dog parks shall use softscaping to capture and “scrub” animal fecal matter.

Off-Leash Dog Park

The Project applicant shall provide a landscape plan that indicates the ground material to be used in the dog park, describes the maintenance plan, and identifies the parties responsible for its maintenance.

M. River Design Standards

1. For all Projects that face a street that crosses the River or terminates at the River or a River frontage road, if a fence located within the front and/or side yards of the Project is visible from the street, then the fence shall be designed to be consistent with the Los Angeles County Master Landscape Guidelines. This requirement shall not apply to single family homes.
2. All Projects located adjacent to the River or Arroyo Seco shall:
 - a. **Landscape Buffers.** Provide a 10 foot landscape buffer as measured from the Project’s property line that is adjacent to the river. New building structures and/or parking shall not be permitted within the 10 foot landscape buffer.
 - b. **Fence.** All fences located within 10 feet of the river corridor shall be consistent with the fence designs identified in the Los Angeles County River Master Plans Landscape Guidelines.
 - c. **Fence Height.** All fences located within less than 10 feet of the river shall be no higher than 6 feet in height; and all fences located at the 10 foot landscape buffer setback line, shall not exceed 10 feet in height. A fence located within a landscape buffer that also serves a Project’s front yard shall be limited in height to 3 feet 6 inches.
 - d. **Gates.** All fences located within 10 feet of the river shall be consistent with the gate designs identified in the Los Angeles County River Master Plans Landscape Guidelines. The gate height shall be consistent with the adjacent fence height and shall be designed to not encroach into either the river and/or public right-of-way when opened.
 - e. **Noise.** All Projects subject to a conditional use permit for the sale or dispensing of alcoholic beverages, including beer and wine, shall incorporate noise-attenuating features (physical as well as operational) designed by

a licensed acoustical sound engineer to assure that operational sounds shall not exceed 5 dba above the existing measured or presumed ambient levels at the property line(s) of properties on the opposite bank.

- f. **River Access.** All river adjacent Projects that partially or wholly abut the river shall have access gates to the River that are compliant with the Americans with Disabilities Act. The gates shall also be designed to be accessible to bicyclists. Access may be controlled and limited to any or none of the following: residents, employees and/or visitors of the Project.
- g. **Riverfront Door.** All Projects located either adjacent to the river corridor or frontage road shall include a Riverfront Door visible to, and accessible from the river corridor or frontage road.

Exceptions

An exception to the California Friendly, Native and/or Los Angeles County River Master Plans Landscape Guidelines requirement can be made on a 1:1 replacement ratio for horticulture such as herbs, fruit, or vegetables for up to 100% of the landscaped area.

2.5 Parking and Access

A. Purposes

These zoning regulations are intended to:

1. Manage and control the parking supply and demand.
2. Avoid an oversupply of parking.
3. Increase pedestrian, bicycle, and transit use, and reduce vehicular trips to, through, and within the area.
4. Minimize the area's parking footprint and preserve land for other productive uses.
5. Reduce the cost of parking typically associated with new construction.
6. Provide vehicular access from side streets or alleyways to minimize driveways along Active Streets, to maintain building continuity and to avoid vehicle and pedestrian conflicts.
7. Create active ground floors around the base of parking structures that are adjacent to Active Streets.
8. Screen parking to provide a safe, aesthetically pleasing and secure environment for pedestrians.
9. Provide adequate signage to public parking structures to aid visitors in finding the structures upon arrival and in becoming oriented to their surroundings.
10. Encourage the use of alternate modes of transportation by reducing the availability of off-street parking.
11. Limit the number and width of curb cuts and vehicular entries to promote streetwall continuity and reduce conflicts with pedestrians.
12. Encourage the provision of shared parking agreements and/or public parking facilities.

B. Parking Regulations.

1. **No Minimum Parking Requirements.** Projects located in this Plan area need not provide on-site or off-site automobile parking.
2. All Projects that elect to provide any parking shall provide:
 - a. Vehicle charging stations for a minimum of 1% of the vehicle parking spaces.
 - b. Designated stalls for scooters, mopeds and motorcycles at a ratio of one space for every 25 units and/or 25,000 square feet.
 - c. Clear directional signage indicating the location of vehicle charging stations, shared vehicle parking spaces, and scooter, moped, and motorcycle stalls shall be provided at all parking area entrances.
3. All Project applicants who elect to provide parking are encouraged to provide one shared vehicle parking space for every 25 units and/or 25,000 square feet of construction.
4. **Bicycle Parking.**
 - a. **Residential Bicycle Parking standards.** Notwithstanding the provisions of LAMC Section 12.21 of the Code and regardless of the underlying zone, Residential Projects or those residential portions of Mixed-Use Projects within the Specific Plan area, shall provide both short and long-term bicycle parking as described in LAMC Section 12.21 A 16 (a)(1).
 - b. **Non-Residential Bicycle Parking standards.** Notwithstanding the provisions of Section 12.21 of the Code and regardless of the underlying zone, Non-Residential Projects or those non-residential portions of Mixed-Use Projects within the Specific Plan area shall provide both short and long-term bicycle parking as provided per LAMC Table 12.21 A 16 (a)(2) and Sections 12.21 A 16 (a)(2)(ii) and 12.21 A 16 (a)(3).
 - c. **Open Space and Public Park Bicycle Parking Standards.** Notwithstanding the provisions of Section 12.21 of the Code and regardless of the underlying zone, Open Space areas and Public Parks within the Specific Plan area shall provide a minimum of two bicycle parking spaces for every 15,000 square feet of open space or park area.
 - d. **Additional Requirements and Allowances.** Short-term bicycle parking shall be eligible to participate in the Bicycle Parking in the Public Right-of-Way and Bicycle Corrals programs as described in LAMC Sections 12.21 A 16 (f).

Charging Stations

Bicycle Parking

Bicycle Parking

5. **Unbundled Parking.** Project landlords shall unbundle automobile parking charges from the rents or other fees charged for occupying living, employment, commercial, or industrial space. If a Project includes a subdivision, provisions shall be made in the subdivision process such that any automobile parking spaces shall be separately sold, leased, or rented from the living, employment, commercial or industrial space. The owner or owners of the lot on which the parking is to be provided shall record an agreement in the Office of the County Recorder of Los Angeles County, California, as a covenant running with the land for the benefit of the City of Los Angeles, providing that such owner or owners shall continue to segregate parking fees from rents or other fees charged for occupying Project space so long as the building or use the parking is intended to serve is maintained. This Plan does not prohibit landlords from leasing or licensing parking spaces to third parties who do not lease living, employment, commercial, or industrial spaces within the Project.

Exceptions. Restricted Affordable Units are exempt from this regulation.

C. Parking Design Requirements

1. **Bicycle Parking Design.** All bicycle parking shall be designed to comply with the Bicycle Parking Requirements, and Design Standards, as described in LAMC Sections 12.21 A 16 (d), and (e) respectively.
2. **Parking Structure Design.** Good parking structure design can elevate the building's stature and contribute to the overall quality of the built landscape. In order to achieve good parking structure design, all Projects shall comply with the following standards:
 - a. Parking structures shall have an external skin designed to improve the building's appearance and to conceal ramps, walls and columns. This can include heavy-gage metal screens, pre-cast concrete panels, laminated glass or photovoltaic panels.

The Project applicant shall provide elevations that indicate the external skin design. Elevations shall identify the materials used for the skin.

- b. Parking structures that include parking at the ground level shall either line the perimeter with active uses and/or provide a low screen to block parked vehicle bumpers and headlights from pedestrian views.

The Project applicant shall provide a ground floor plan that indicate the location of any ground level parking, the circulation systems (elevators and stairs), and either the active uses or low screening element lining the parking. The applicant shall also provide a scaled illustration of the screening element when applicable.

- c. Vertical circulation cores (elevators and stairs) shall be highlighted architecturally so visitors can easily find and access these entry points.
 - d. Parking levels above the ground floor shall be screened to block parked automobiles from the public view.

The Project applicant shall provide an elevation that illustrates how parking on levels above the ground floor shall be screened from public view.

- e. Parking structures that are within 200 feet of any residential use shall:

The Project applicant shall provide a site plan that includes the Project site and the existing uses on all of the abutting properties. When the existing use is residential plans, elevations and specifications shall also be provided that indicate:

a. The elevation and the materials on parking structure facades adjacent to the residential uses; and, b. Information to indicate that a textured surface shall be used on the floors and ramps; and, c. The location and specifications of interior garage lighting.

- i. Contain solid decorative walls and/or baffles to block light and deflect noise along those sides closest to the residential use;
- ii. Contain solid spandrel panels at a minimum of 3 feet 6 inches in height, installed at the ramps of the structure, to minimize headlight glare;
- iii. Construct garage floors and ramps using textured surfaces to minimize tire squeal;
- iv. Locate exhaust vents away from residential uses; and
- v. Eliminate light source glare falling on the adjacent residential units.

3. Parking Lot Design

The Project applicant shall provide a site plan that indicates the location of the surface parking lot, the parking capacity of the lot, the location, dimensions, and design of any screening, the location, dimensions, and description of any stormwater Best Management Practices, and the location and design strategy employed to achieve the 50% shade requirement.

The applicant shall also provide a landscape plan that indicates the location, dimensions, and percentage of the planting areas relative to the surface parking lot, the selected planting species, and the species, quantity, and location of trees, the design, and dimensions of the protective tree barriers, and the location and design standards of the pedestrian paths.

- a. Parking lot area may contribute towards open space requirements as long as parking is limited to the hours of 7pm to 7am, the parking lot area has a traffic design of five mph or less, and the parking lot area is designed to accommodate a functional use(s) such as described in Section 2.4 D.
- b. The parking capacity of a surface parking lot shall be limited to no more than 10% of the total parking provided for the specific Project unless the parking lot area has a traffic design of 5 mph or less.

- c. No at-grade parking space shall be located within the front yard.
- d. Loading areas and off-street parking facilities containing three or more spaces and not located in a structure shall be effectively screened from abutting streets and lots. However, such screening shall not obstruct the view of the driver entering or leaving the loading area or parking facility, or the view from the street of entrances and exits to a loading area or parking facility. The screening shall consist of one or a combination of the following:
 - i. A strip at least five feet in width of densely planted shrubs or trees that are at least two feet high at the time of planting and are of a type that may be expected to form, within three years after time of planting, a continuous, unbroken, year round visual screen; or
 - ii. A wall, barrier, or fence of uniform appearance. Such wall, barrier, or fence may be opaque or perforated provided that not more than 50% of the face is open. The wall, barrier or fence shall be between four and six feet in height.

Figure 2.9
Off-Street Parking Facility

- e. Parking lots shall be designed to provide any combination of the following strategies for at least 50% of the surface parking lot and driveways:
 - i. The applicable parking area shall be shaded within five years of occupancy,
 - ii. Utilize paving materials with a Solar Reflectance Index (SRI) of at least 29, or
 - iii. Consist of an open grid pavement system.

Figure 2.30
On Grade, Open Parking Facilities

- f. On grade, open parking facilities that contain five or more parking spaces shall be landscaped in accordance with the design regulations set forth in Sections 2.4 H 1, 3, and 4 and the following requirements:
 - i. At least 5% of the interior area of the parking facility shall be landscaped with native trees, plants and shrubs as defined by the Los Angeles River Master Plan’s Landscape Guidelines and Plant Palettes and/or the Watershed Friendly Shade Tree List. This requirement is in addition to the perimeter planting and screening requirements.
 - ii. Each planting shall be at least twenty five square feet in area and have no dimension less than five feet.
 - iii. Each planting area shall contain at least one tree and the facility as a whole shall contain at least one tree for every ten parking spaces.

- iv. Trees used to satisfy parking lot landscaping requirements shall be a minimum of three inch caliper at planting and shall be suitable for location in parking lots.
 - v. Existing trees shall be preserved wherever possible.
 - vi. Existing and new trees shall be protected by bollards, high curbs or other barriers sufficient to minimize damage.
 - vii. Parking lots shall be designed to provide clear and designated paths of travel for pedestrians.
 - viii. Paths shall conform to the standards of the Americans with Disabilities Act.
4. **Parking Signage.** Parking that is available to the public shall include signage that helps visitors locate the parking.

D. Vehicular Access

The Project applicant shall provide a site plan that indicates the location, dimension of, and distance between, all existing and proposed curb cuts. The plan shall indicate the name, location, and designation of all abutting streets.

1. No curb cuts are permitted from Secondary Modified and Collector Modified Streets except when no other street type is adjacent to the Project.
2. The primary point of vehicular access for parking facilities and services such as unloading or refuse pick-up shall be located along Local Modified Streets, Local Modified Industrial Streets or Alleyways, if the Project has access to such streets or Alleyways.
3. Not more than two driveways shall be permitted per building, and there shall be a minimum 20 foot span between them.
4. Driveways shall not exceed the minimum width required by LADOT.

Curb Cuts

5. A vehicular exit from a parking structure within five feet of a sidewalk area, paseo, or trail shall feature a visual/audible alarm to warn pedestrians and cyclists of exiting vehicles.

The Project applicant shall provide a site plan that indicates the location of and distance to all primary building entrances, pedestrian paseos, or any public outdoor gathering area from the parking and loading areas. The plan shall include the location, and specification of a visual and audible alarm for any vehicular exit that is located within 5' of a sidewalk area, paseo, or trail.

E. Drop-Off Zones. Drop-off Zones, when provided, shall either be located:

1. Within, or along the driveway access to the off-street parking facilities, or
2. Alongside the required curb line where there is a full-time curbside parking lane with no sidewalk narrowing.

2.6 Conservation

A. Purposes

These zoning regulations are intended to:

1. Reduce energy demand.
2. Recycle water and decrease demand for potable water.
3. Reduce waste and use of new materials.
4. Reduce demand on natural resources.

B. Plumbing and Plumbing Fixtures. For all projects installing or replacing plumbing or plumbing fixtures:

The Project applicant shall provide a plumbing plan that indicates the location of all male public restrooms that require a urinal. Indicate the model and type of urinal specified.

1. All faucets not governed by City Ordinance 180822 shall be limited to 1.5 gallons per minute.

The Project applicant shall provide a plumbing plan that indicates the location and flow rate of all faucets no governed by City Ordinance 180822.

2. Residential shower stalls shall not have more than one shower head per stall. Shower head flow shall be no greater than 2.0 gallons/minute.

The Project applicant shall provide a plumbing plan that indicates the location of all residential showers and their shower head.

3. All residential units shall be either individually metered or sub-metered such that each unit is billed individually for its water use.

The Project applicant shall provide a plumbing plan that indicates the location and quantity of all water meters and sub-meters. The plan shall indicate the number of owners or tenants that will utilize each meter or sub meter

4. All Projects, that involve the installation of a new internal rough plumbing system shall install a dual plumbing system such that toilets and industrial uses can be served by recycled water, if authorized by applicable law.

The Project applicant shall provide a plumbing plan that indicates the location and design of the dual plumbing system.

5. Tankless and on-demand Water Heaters shall be installed in lieu of standard water heaters.
6. Conductivity Controllers or pH Conductivity Controllers shall be used when installing Cooling Towers.

C. Interior Lighting Design and Operations. For all projects installing or replacing interior lighting system:

1. All non-residential buildings or portions thereof shall install lighting controls to extinguish all unnecessary exterior and interior lights from 11pm to sunrise.

The Project applicant shall provide a lighting plan that indicates the location, and performance measures of lighting controls for all of exterior and interior lights that are not required to be on between the hours from 11pm and sunrise.

2. All buildings shall schedule nightly maintenance activities to conclude before 11p.m.
3. All non-residential buildings or portions thereof shall use gradual, "staggered switching" to turn on building lights at sunrise rather than instant light-up of the entire building.

The Project applicant shall provide a lighting plan that indicates the performance measures of the "staggered switching" plan.

4. All non-residential buildings or portions thereof shall install devices such as photo-sensors, infrared and/or motion detectors to turn off lights when no occupants are present.

The Project applicant shall provide a lighting plan that indicates the location and performance measures of all photo sensors, infrared, and motion detectors.

5. All commercial and industrial buildings or portions thereof shall design lighting layouts in smaller zones and avoid wholesale area illumination.

The Project applicant shall provide a lighting plan that indicates the location of the lighting areas.

6. All non-residential perimeter space with a continuous depth of 20 feet shall have 20% dimming ballasts and day lighting control.

The Project applicant shall provide a lighting plan that indicates the location of dimming ballasts and day lighting controls within the first 20' of all non-residential perimeter spaces.

7. All buildings shall include dimmers in lobbies, atria and perimeter corridors for nighttime use.

The Project applicant shall provide a lighting plan that indicates the location of all dimmers in lobbies, atria and perimeter corridors.

D. Energy Generation

The Project applicant shall provide a plan that indicates the location of the on site renewable energy system and the percent of electrical needs it provides.

1. All New Construction Projects shall install and maintain an onsite renewable energy generation system to provide a minimum of 20% of the Project's non-residential electrical needs and 10% of the Project's residential demand.

E. Heat Island Reduction

The Project applicant shall provide a roof plan that indicates the percentage of the roof covered by EPA approved Energy Star roofing or green (vegetated) roofing.

All Project applicants who are installing or replacing a roof shall install an EPA approved Energy Star roof for a minimum of 75% of the roof surface or install a green (vegetated) roof for at least 50% of the roof area of all buildings within the Project. A combination of Energy Star compliant and vegetated roofs may be installed provided that they collectively cover 75% of the roof area of all buildings.

F. Windows/Glazing

All project applicants who are installing or replacing windows shall comply with Section 2.3 D 1's Urban Design Regulations to reduce internal heat gain.

G. Pools and Jacuzzis

1. All pools shall be installed with a water-saving pool filter.

The Project applicant shall provide a landscape plan that indicates the location and specifications of the water-saving pool filter.

2. A leak detection system shall be installed on all swimming pools and Jacuzzis.

The Project applicant shall provide a landscape plan that indicates the location and specification of the leak detection system for all swimming pools and Jacuzzis.

2.7 Performance

A. Purposes

These zoning regulations are intended to:

1. Provide for a safe, clean, and healthy environment.
2. Minimize the effects of noise and vibrations on the surrounding environment.
3. Reduce the visual impact of utility facilities.

B. Compliance

Prior to the issuance of a building permit or land use permit, the owner of the lot or lots shall execute and record a covenant and agreement, acknowledging that the owner shall implement each of the applicable regulations set forth in this Section. The covenant and agreement shall run with the land and be binding upon the owners, and any assignees, lessees, heirs, and successors of the owners. The City's right to enforce the covenant and agreement is in addition to any other remedy provided by law.

C. Maintenance and Delivery Standards

1. All Projects shall be maintained in a clean, safe and sanitary condition.
2. All Projects shall be kept clear of weeds, rubbish, and all types of litter and combustible materials at all times.
3. Loitering, camping, use of illegal narcotics, and any other criminal activity shall be prohibited on any premises within the Project.
4. Standing water shall be prevented from accumulating anywhere within the Project.
5. Loading and unloading of vehicles shall occur either on site, within an alley, or on a local modified, or local industrial modified street. Loading and unloading of vehicles from a Secondary street shall be permitted only when no other public right of way is adjacent to the Project site.
6. Site cleaning, sweeping, trash collection, deliveries, and loading and unloading are limited to the hours set forth in the table below.

MAINTENANCE AND DELIVERY SCHEDULE TABLE

Hours	Greenway	Urban Village	Urban Innovation	Urban Center
Mon-Friday	6am-10pm	7am-7pm	24 Hours	6am-10pm
Sat., Sun., & Legal Holidays	8am-5pm	8am-5pm	24 Hours	8am-8pm

D. Recycled Materials

All Project applicants shall provide a plan (site or floor) that indicates the location of the recycling area and includes information on the Project’s recycling program.

1. A recycling area that is clearly labeled, and easily accessible shall be provided at all Projects.
2. A recycling program and a contract for recycling pick-up if all recycled refuse is not re-used on site shall be established for all Projects.
3. All recycled goods shall be placed or stored in Recycling Receptacles by the end of the business day and not be left in plain view on the site.
4. All recycling receptacles shall be kept covered, and made of durable, waterproof, rustproof, of incombustible construction materials, and shall be of sufficient capacity to accommodate the materials collected.
5. The recycling area shall be kept free of litter, debris, spillage, bugs, rodents, odors, and other similar undesirable hazards.
6. Paper products and other lightweight materials shall be immediately placed into covered recycling receptacles.
7. All recycling receptacles and containers shall be kept in a secure location to prevent unauthorized entry and scavenging and theft of recyclable materials.
8. Recyclable materials, other than recyclable materials contained in reverse vending machine commodity storage bins, shall be emptied from recycling receptacles when full or every week, whichever comes first.

E. Storage

All Project applicants shall provide a site plan that indicates the location, size, and height of outdoor storage areas. The Plan shall include information on the type of materials or equipment that shall be stored in the storage area, provide an elevation that illustrates the height of, and construction materials that will be used to construct the storage area and trash areas and their gates, and include specifications of the gate/door self-closure that will be installed.

1. No materials or equipment shall be stored out of doors to a height greater than the height of the enclosing wall or fence.
2. Open air storage of merchandise or materials must be confined to a storage area completely enclosed by a solid, non-combustible wall with self-closing gates.

F. Utilities and Equipment

The Project applicant shall provide a utility plan that indicates either the location of the new underground utility lines or describe the alternative provisions that have been determined.

1. All new utility lines, which directly service the lot or lots, shall be installed underground. If underground service is not available at the time the application is submitted and fees paid for plan check, then provisions shall be made for future underground service to the satisfaction of the Bureau of Engineering, if determined necessary by the Department of Water and Power.
2. Electrical transformers, mechanical equipment, water meters and other equipment shall be screened from public view. The screening may be opaque or perforated provided that not more than fifty percent of the face is open. The screen shall be at least six inches taller than the equipment and not more than two feet taller than the equipment.

The Project applicant shall provide plans (electrical, mechanical, water, or plumbing) or an elevation that shows the location of the equipment and illustrates the screening

2.8 Signs

A. Purposes

These zoning regulations are intended to:

1. Create strong building identity that is well integrated with the design of the architecture.
2. Provide clear and attractive business identity.
3. Attract visitors to publicly accessible open space areas.

B. Prohibitions

All Project applicants shall provide a site plan and elevations that indicate the location, size, and style of each exterior sign, and the number of non-residential tenants or owners that will occupy the building.

1. The exposed unfinished backs and sides of all signs shall not be visible from a public right-of-way or greenway.
2. The following signs are prohibited: animated, blinking and scrolling signs; inflatable devices; and off-site, supergraphics, pole signs, roof, and window signs.
3. Signs shall not obscure the architecture, windows, window trim, or molding.
4. Neither the variance procedure nor the specific plan exception procedure may be used to permit any sign prohibited by this Plan or the LAMC.

2.9 Mitigation Measures

A. Purposes

These Mitigation Measures are intended to:

1. Reduce the transportation impacts of the Proposed Plan to the extent feasible.
2. Reduce the Plan's potential impacts on earth resources to a level of less-than-significant.
3. Reduce the Plan's potential impacts on hydrology and water quality to a level of less-than-significant.
4. Reduce the Plan's potential impacts on biological resources to a level of less-than-significant.
5. Reduce the Plan's potential impacts on cultural resources to a level less-than-significant.
6. Reduce the Plan's potential impacts on hazardous materials to a level of less-than-significant.
7. Mitigate significant impacts on regional and local air quality to the extent feasible.
8. Mitigate roadway and construction noise impacts associated with implementation of the Proposed Plan to the extent feasible.
9. Reduce the Plan's potential impacts on utilities to a level of less-than-significant.
10. Reduce the Plan's potential impacts on greenhouse gas emissions to a level of less-than-significant.

B. Mitigation Standards

The Mitigation Measures set forth in Appendix 1 are incorporated in to this Plan by references as if fully stated herein. Applicants shall comply with all mitigation measures set forth in Appendix 1 that are applicable to the Project.

THIS PAGE IS INTENTIONALLY LEFT BLANK

Streets

Chapter 3

3.1 Streets

A. Purposes

These zoning regulations are intended to:

1. Connect the area to its neighboring communities, the City of Los Angeles, and the greater Los Angeles region through a safe, efficient and accessible circulation network that embraces pedestrians, bicyclists, transit, truck traffic, and automobiles.
2. Recognize the shared use of streets not only for moving traffic, but also as the front door to businesses, which are the economic and fiscal foundation of the City, and as public outdoor space for residents and workers.
3. Develop an efficient yet balanced circulation system that defines different types of streets based on their transportation function and community role.
4. Provide residents, employees, and visitors with a variety of transportation alternatives that result in a more efficient use of transportation resources.
5. Encourage a vibrant pedestrian-oriented environment with activity centered along property edges at the interface between buildings and streets.
6. Design streets and sidewalks so that pedestrians, bicyclists, transit riders, transit vehicles, trucks and automobile traffic can coexist safely.
7. Build linkages to the neighboring Chinatown, Lincoln Heights, Cypress Park, Elysian and Heritage Square neighborhoods to nearby regional park amenities such as Elysian Park, Debs Park, El Rio de Los Angeles State Park, and to the Arroyo Seco and to Los Angeles River Greenways.
8. Promote a multi-modal street network.
9. Establish recommended standards for modified cross sections.
10. Illustrate modified street standards.
11. Establish street assumptions and criteria.

B. Street Definitions

Stormwater Best Management Practices (BMPs).

A type of water pollution control that includes both structural or engineered control devices and systems (e.g. retention ponds) to treat polluted stormwater, as well as operational or procedural practices (e.g. minimizing use of chemical fertilizers and pesticides).

Collector Modified Streets. Collector Modified Streets emphasize multi-modal neighborhood travel and serve as a “Main Street” for Urban Villages and Urban Centers. Collector Modified Streets contain one vehicle lane for each traffic direction. Typical features include wide sidewalks, exclusive bicycle lanes, on-street parking, and street trees.

Local Modified Streets. Local Modified Streets emphasize access to individual properties and serve living or work spaces. Local Modified Streets allow for one lane in each direction and are not designed to accommodate regular bus or truck traffic. Typical features include relatively narrow cross sections, on-street parking, sidewalks, and street trees.

Local Industrial Modified Streets. Local Industrial Modified Streets emphasize truck access to industrial properties. Local Industrial Modified Streets allow for one lane in each direction and include a bicycle lane. Typical features include limited on-street parking, sidewalks, and street trees.

Modified Alleys. Modified Alleys emphasize access to individual properties, and accommodate parking access and service functions as an alternative to other streets and provide the opportunity to incorporate stormwater Best Management Practices (BMPs).

Pedestrian Street Lights. Provide ornamentation to supplement the required illumination level. Pedestrian street lights contribute to the pedestrian scale of the area by adding a soft flow of light on the sidewalk and by

enhancing pedestrian safety.

Roadway Lights. Provide roadway illumination.

Secondary Modified Streets. Secondary Modified Streets emphasize intra-city, multi-modal travel and connect urban activity centers. Secondary Modified Streets have two lanes in each direction and carry a mix of local and regional traffic. Typical features include on-street parking, exclusive bicycle lanes, wide sidewalks, and street trees.

Sidewalks. A sidewalk is that portion of the public-right-of-way that is typically raised above the street surface and is physically defined as the area between the property line and the curb. A sidewalk can be divided into three separate zones: parkway, pedestrian, and furniture zone.

Stormwater Greenway. A non-motorized public access road that mimics a dry creek or arroyo ecosystem and supports a biological community that filters and further cleans stormwater runoff.

Parkway Zone. The sidewalk area adjacent to the curb is typically referred to as the Parkway zone and depending upon the level of activity may include landscaping, trees, transit infrastructure, signage, lighting, benches, fire hydrants, and vending machines.

Pedestrian Zone. The Pedestrian Zone is the portion of the sidewalk that shall be maintained clear of obstructions for the safe and accessible passage of pedestrians.

Furniture Zone. The sidewalk area immediately abutting the property line is typically referred to as the Furniture Zone. The width of the Furniture Zone will vary throughout the Plan area depending upon the overall width of the sidewalk area.

C. Street Modification Summary

For the purposes of this Subsection, the regulations and procedures contained in Section 12.37 of the LAMC shall be followed. Notwithstanding Section 12.37 H, the modified highway and street improvement standards illustrated in Appendix 4 of this Plan, and summarized in the Street Modification Table, the Modified Street Standards Map, and the other street maps located in this section shall be utilized, to the extent physically feasible, for any street improvements required in the Specific Plan area.

D. Sidewalk Regulations

The Project applicant shall provide a site plan that includes all abutting public rights of way and indicate the location and design specifications of all curb and gutter, parkway, crosswalk, sidewalk, pedestrian, bicycle, and transit improvements.

1. Sidewalks.
 - a. Required minimum sidewalk widths for all streets in the plan area are included in Appendix 4.
 - b. Street furniture, trees and similar amenities shall be located outside of the Pedestrian Zone.
 - c. A minimum 6 foot wide barrier-free continuous path of travel shall be provided in all Pedestrian Zones.
 - d. Project applicants installing a paving pattern or using non-standard materials shall obtain prior approvals from the Department of Public Works.
 - e. Sidewalks shall be maintained by the adjacent property owner.
 2. Street Lighting.
-

The Project applicant shall provide a site plan that indicates the location of street lighting and the distance between each light pole.

- a. Roadway lights shall be spaced 90 to 110 feet apart and designed to illuminate both the roadways and sidewalks to the levels required by the Bureau of Street Lighting for safety and security.
- b. Trees shall be spaced from other elements, as specified by the Urban Forestry Division, except that trees may be positioned within 10 feet of pedestrian lights. The adjacent property owner shall maintain any tree planted within 10 feet of a pedestrian light so that the lights are accessible for maintenance purposes.
- c. Energy-efficient Pedestrian Style Lighting Fixtures shall be installed midway between two street lights and no less than every 100 feet or as determined by the Bureau of Street Lighting.
- d. Once the Bureau of Street Lighting selects a Pedestrian Style Lighting Fixture for a particular block the entirety of that block shall be designated with that lighting fixture type.

- Sidewalk Extension
- M Metro Gold Line & Stations

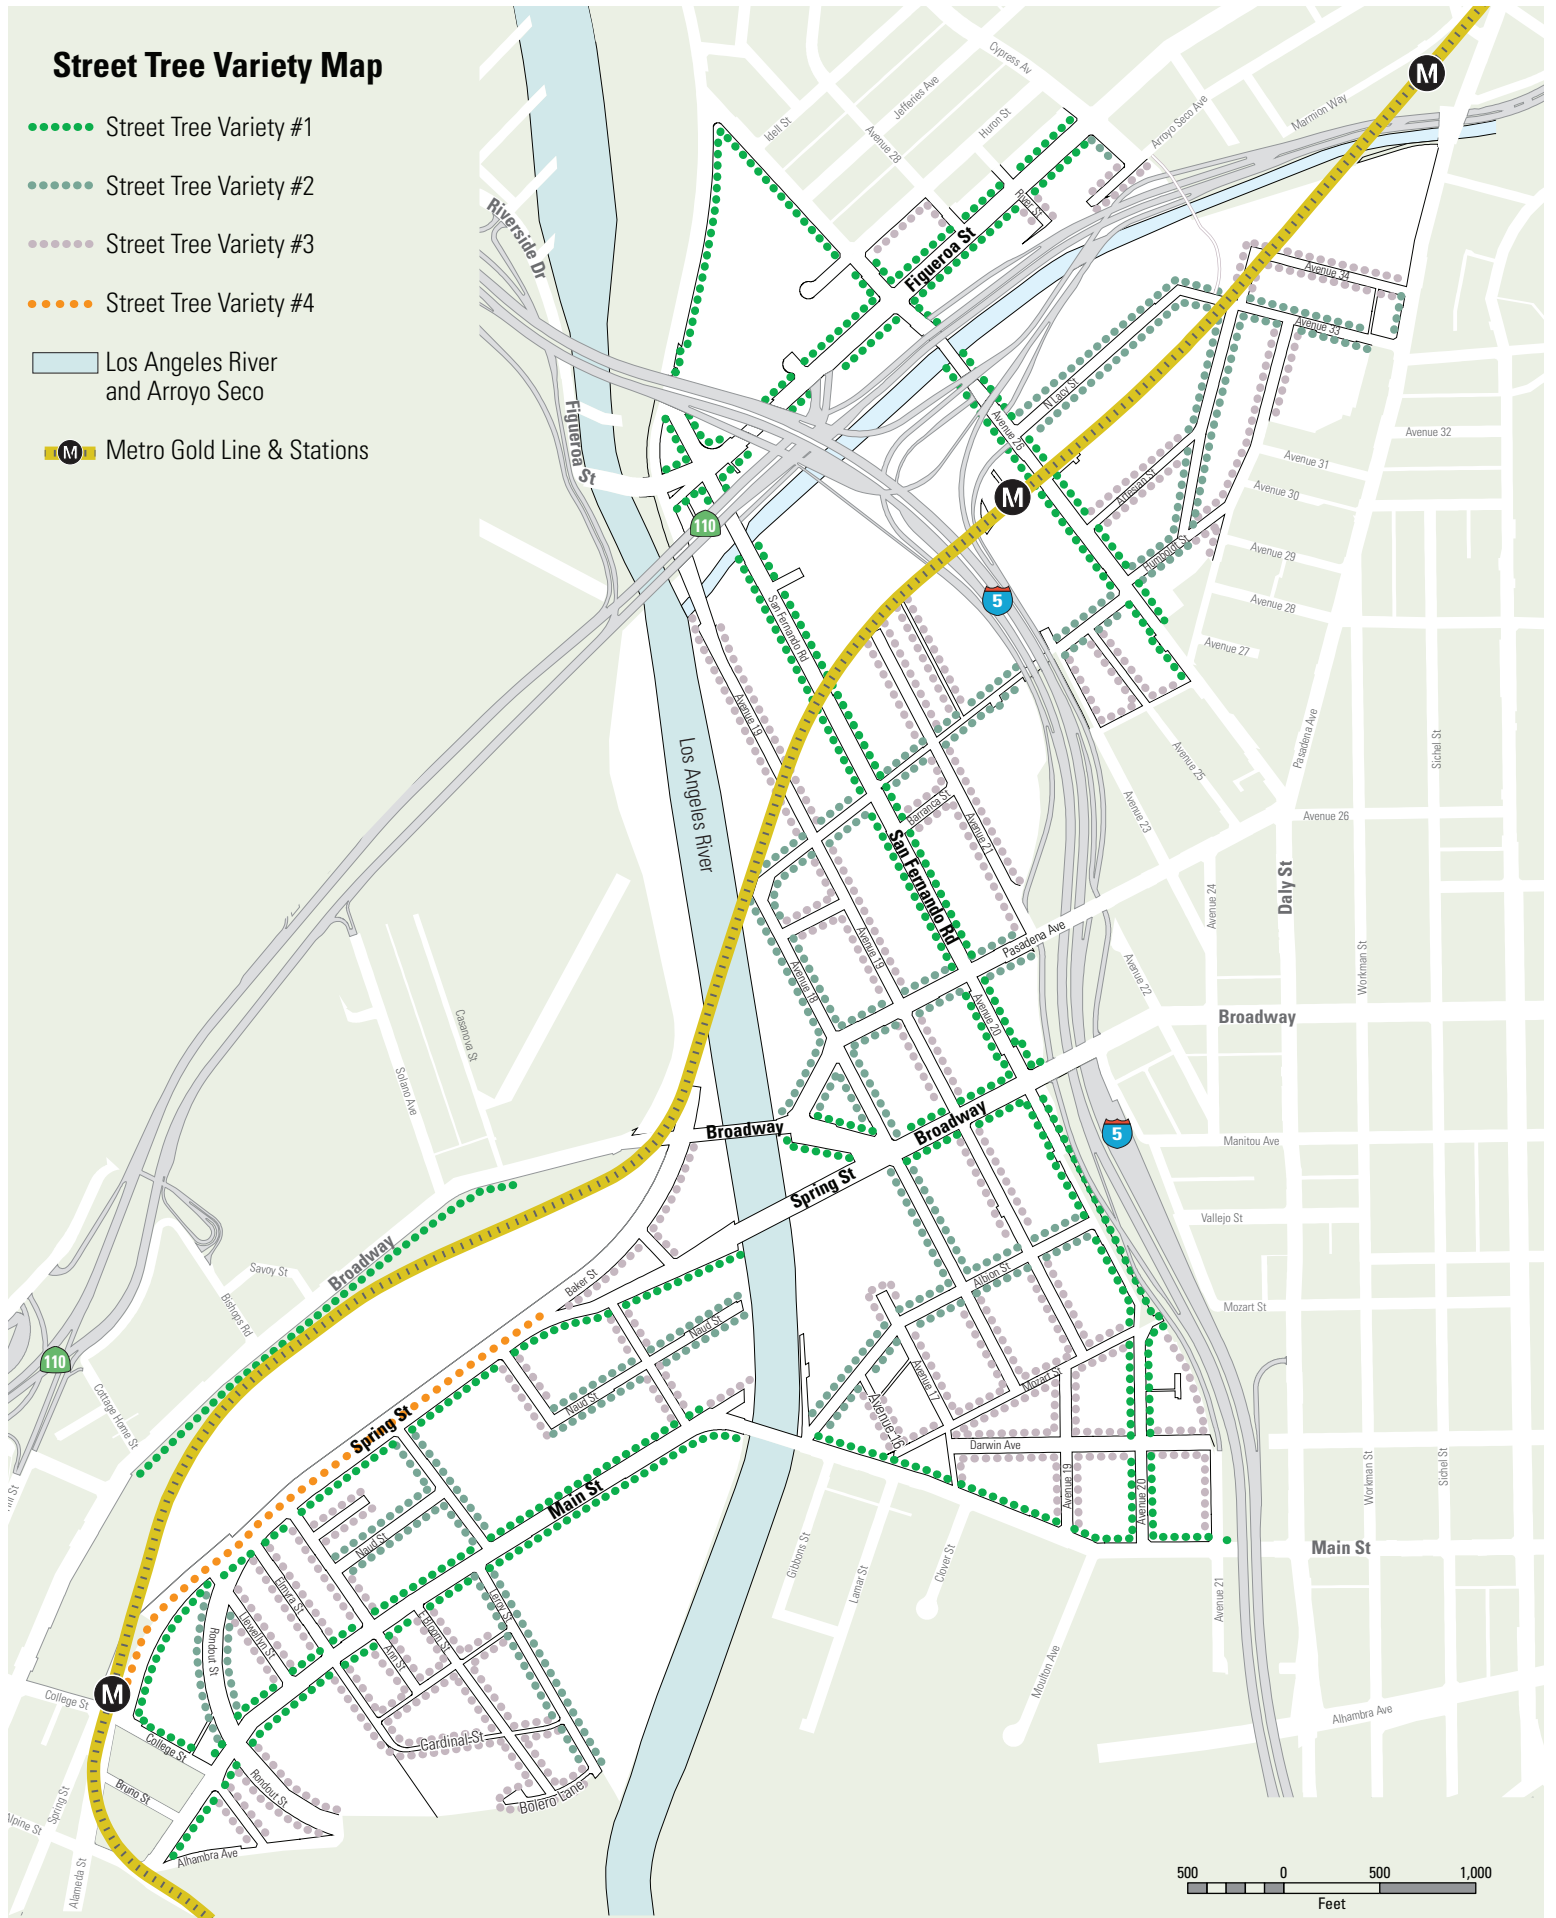

- e. All light poles shall be located adjacent to the curb as required by the Bureau of Street Lighting.
 - f. If the streets are widened or narrowed, the existing street lights shall be moved along with the new curb line to maintain the existing street light and tree spacing pattern.
 - g. Maintenance of street lighting shall be provided by the Bureau of Street Lighting, and shall be funded through the assessment district process. Any additions or changes to the assessment rates must be approved by all affected property owners pursuant to California law.
3. **Special Lighting.** Special lighting that adds to the Area's sense of place is permitted within the public right-of-way, provided that it does not interfere with pedestrian movement, vehicular safety, the approved street light/street tree spacing pattern, or other required streetscape elements.
- a. Examples of special lighting include accent lighting of landscape and architectural features, and seasonal light displays celebrating holidays or special events.
 - b. Special lighting may be installed with a revocable permit. The infrastructure for this lighting shall be maintained by the permit holder and not the Bureau of Street Lighting.
4. Street Trees.

The Project applicant shall provide a landscape plan that indicates the location, caliper at planting, and radial distance at maturity of each tree, the size of tree wells and the material and porosity of the surface area under the tree.

- a. The Parkway Zone shall be planted with a tree selected from the Street Tree Table at the designated spacing for the selected tree. Street trees shall be spaced from 20 to 40 feet on center. If there are no existing trees within the block, the applicant may select the tree species from the list, with the approval of the Urban Forestry Division. Once a tree is selected and planted for a particular block that same tree species shall be planted for subsequent Projects that develop within the same block.
- b. Where existing street trees must be removed as a result of required street widening, or other improvements, they shall be relocated or replaced, as approved by the Urban Forestry Division.
- c. Trees shall be planted using minimum 24 inch box trees.

- d. Trees shall be planted with 4 x 8 foot tree wells with a 3 inch decomposed granite on the tree well surface, compacted to no more than 80%.
- e. Structural soil to a depth of three feet shall be installed under the entire width of a sidewalk within 25 feet of all new or relocated street trees.
- f. Street trees shall not be planted without first obtaining approval from the Department of Public Works-Urban Forestry Division.
- g. The adjacent property owner shall be responsible for regular pruning, staking, and supplemental irrigation of trees for the first three years as needed.

Sidewalk Dining

STREET TREE TABLE

STREET TREE VARIETY 1	STREET TREE VARIETY 2	STREET TREE VARIETY 3	MEDIAN TREATMENT
African Sumac	African Sumac	Brazilian Rosewood	American Sweetgum
American Sweetgum	American Sweetgum	California Sycamore	Brazilian Rosewood
Brazilian Rosewood	Australian Willow	California White Oak	California Black Walnut
California Sycamore	Brazilian Rosewood	Chinese Pistachio	California White Oak
California White Oak	California Sycamore	Coast Live Oak	Jacaranda
Chinese Elm	California White Oak	Honey Locust	Los Angeles Beautiful Floss Silk Tree
Chinese Pistachio	Chinese Elm	Purple Orchid Tree	
Coast Live Oak	Chinese Pistachio	Los Angeles Beautiful Floss Silk Tree	
Honey Locust	Coast Live Oak		
	Honey Locust		
	Rainbow Bark		

5. **Sidewalk Dining Facilities.** Just as sidewalk dining contributes to street life, the physical facilities associated with it should contribute to the quality of the street environment and the Project. While sidewalk dining is not required, Projects that elect to include sidewalk dining shall comply with the following regulations:

- a. All dining facilities located on the sidewalk shall be freestanding, shall not be attached to the sidewalk, and shall be removed when the dining facilities are closed for business.

Subarea 2 Street Map

- Los Angeles River and Arroyo Seco
- Specific Plan Area
- Continental Striping for Existing Crosswalks
- Continental Striping for Proposed Crosswalks
- Proposed Traffic Signal
- Existing Traffic Signal
- Existing Stop Sign
- M Metro Gold Line & Stations

- b. Enclosures are required only where alcohol is served, but may be provided elsewhere to create a sense of security. Enclosures shall not exceed 42 inches in height and shall be constructed of durable materials that are in the same family as, or compatible with, the Project's architectural materials.
- c. A revocable permit, from the Department of Public Works (DPW) is required for outdoor dining facilities.

E. Street Intersection Design Regulations

1. Crosswalks.
 - a. Continental crosswalks shall be installed at all intersections that include either a Major Class II, Modified Secondary and/or Collector street as indicated on the five Subarea Street Maps included in this Section.
 - b. The Bureau of Engineering (BOE) shall identify intersections that require crosswalks on Navigate LA.

Project applicants shall provide a site plan that indicates any bicycle friendly streets or bicycle lanes, and that indicates any on-street parking spaces. The Plan shall also indicate whether the space is a car share, bicycle share, or bicycle corral space.

2. Signalized Intersections.
 - a. Traffic signals shall be added to the intersections indicated below and illustrated on the five Subarea Street Maps included in this Section:

Main Street and W. College

Ann Street and N. Spring Street

Sotello Street and N. Spring Street

Messenger and N. Spring Street

Wilhardt Street and N. Main Street

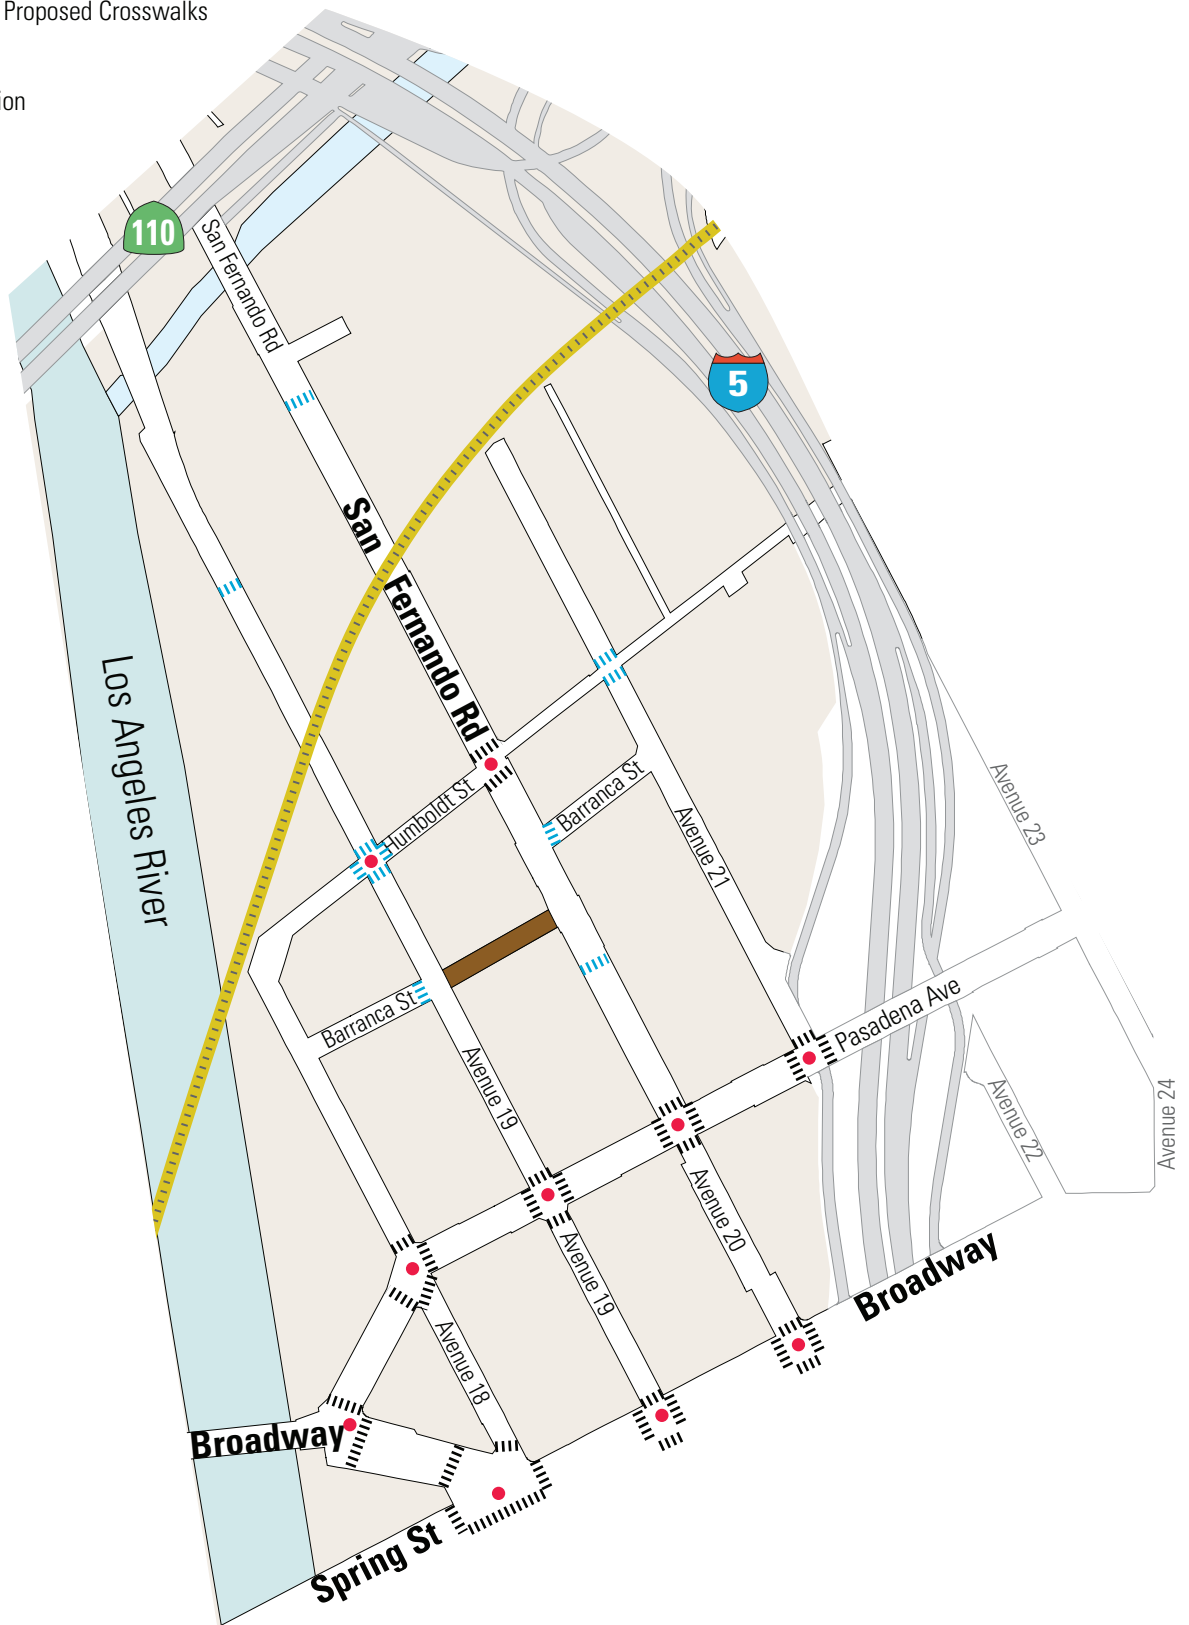

Avenue 21 and N. Main Street

Humboldt and Avenue 26

- b. The Bureau of Engineering (BOE) shall identify intersections that require signals on Navigate LA.

3. Bicycle, Vehicle, and Parking Lanes

- a. Traffic Lanes. Roadbeds shall be marked with the number of traffic lanes that coincide with the standard plans on Navigate LA.
- b. Bikeways.
 - i. All Bicycle Friendly Streets identified in the 2010 Bicycle Plan shall be improved to include Bicycle Friendly Street improvements as described in the 2010 Bicycle Plan and highlighted in the 2010 Bicycle Plan's Technical Design Handbook.
 - ii. Any landscaped portions of a bicycle friendly feature shall be planted with drought tolerant trees and/or low-maintenance, drought tolerant shrubs and groundcover.
 - iii. Bicycle lanes shall be included on N. Spring, N. Main, Pasadena Avenue, San Fernando Boulevard, Figueroa Street, and a portion of Avenue 26 as illustrated on the cross-section standard plans on Navigate LA, the Bicycle Network Map on the following page and Appendix 4.
 - iv. Bicycle sharrows shall be included on Avenue 26 between the Arroyo Seco (Pasadena) Freeway and the Gold Line Bridge since severe roadway width constraints (i.e. the existence of freeway on and off-ramps) prohibit the addition of bicycle lanes at this location.
 - v. A bicycle lane shall be installed on Avenue 20 between Broadway and Main Street as illustrated in the cross-section standard plans on Navigate LA, the Bicycle Network Map on the following page and Appendix 4.
 - vi. Temporary sharrows shall be installed on Broadway between Avenue 18 and the Golden State Freeway to indicate the presence of bicyclists until such time as a bicycle lane is installed at the location, as described in the 2010 Bicycle Plan.
- c. Parking Lanes.
 - i. Car Share, Bicycle share or bicycle corrals shall be given priority access to on-street parking spaces.
 - ii. Approval for any enhancement or unique design treatments in the parking lane shall be obtained from the Department of Transportation.

Prepared by Los Angeles Department of City Planning
025_g_05.2013

iii. If a parking space is reserved for a bicycle corral, the adjacent property owner shall assume maintenance responsibilities beyond normal re-striping and repair, which will continue to be performed by the Department of Transportation.

d. Landscaped Median.

- i. A landscaped median shall be installed along Spring Street between College and Baker Streets. The median improvements shall be interrupted to accommodate left-turn pockets at Ann Street, Sotello and Mesnager Streets.
- ii. The landscaped median shall be approximately 10 feet in width and shall be planted with mature, drought-tolerant, shade canopy trees and low-maintenance, drought-tolerant ground cover and shrubs.
- iii. Approval for the design, plant selection, and irrigation plans for the landscaped median shall be obtained from the Department of Transportation and the Department of Public Works.
- iv. The Bureau of Street Services shall be responsible for regular pruning, weed control, tree and/or plant replacement, and irrigation repair and replacement.

F. Street Standards

1. This Plan's Street Standards are modifications of the existing street designations and apply to the Plan's street segments illustrated in the Cross-Sections in Appendix 4 Modified Streets. The cross-sections show the typical midblock conditions. Intersections are not shown. For each street, the existing street designation and existing cross sections by segment are shown in the left column. The proposed cross-sections for those same segments are shown in the right column.
2. The proposed Plan Street Standard illustrated in Appendix 4 for each street segment includes:
 - a. **Right-of-way width** (ROW).
 - b. **Roadway width** (curb to curb).
 - c. **Sidewalk width within the ROW.** The designated sidewalk width cannot be reduced. In other words, the roadway width cannot be widened at the expense of the sidewalk.
3. Upon final approval of these standards the Bureau of Engineering shall add a layer to its Navigate LA website to inform all developers of the future block-by-block requirements for streets and sidewalk widths.

Mitigation Monitoring Plan

Appendix 1

THIS PAGE IS INTENTIONALLY LEFT BLANK

MITIGATION MONITORING PLAN

Section 21081.6 of the Public Resources Code and Section 15097 of the CEQA Guidelines require adoption of a Mitigation Monitoring or Reporting Plan (MMP) for all projects for which an Environmental Impact Report (EIR) or Mitigated Negative Declaration (MND) has been prepared. This requirement was originally mandated by Assembly Bill (AB) 3180 which was enacted on January 1, 1989 to ensure the implementation of all mitigation measures adopted through the California Environmental Quality Act (CEQA) process. Specifically, Section 21081.6 of the Public Resources Code states that "...the agency shall adopt a reporting or monitoring Plan for the changes made to the project or conditions of project approval, adopted in order to mitigate or avoid significant effects on the environment...[and that the Plan]...shall be designed to ensure compliance during project implementation."

AB 3180 provided general guidelines for implementing monitoring and reporting Plans, which are enumerated in more detail in Section 15097 of the CEQA Guidelines. Specific reporting and/or monitoring requirements to be enforced during project implementation are defined prior to final approval of the project. The proposed monitoring Plan will be considered by the City of Los Angeles (the lead agency) prior to certification of the EIR. Although the lead agency may delegate reporting or monitoring responsibilities to other agencies or entities, it "...remains responsible for ensuring that implementation of the mitigation measures occurs in accordance with the Plan."

The Mitigation Monitoring Plan describes the procedures for the implementation of the mitigation measures to be adopted for the proposed project as identified in the Draft and Final EIR. The MMP for the proposed project will be in place through the planning horizon of the Plan (2035) or until the Plan and EIR are updated again. While the Proposed Project is a planning document, it is anticipated that development that occurs pursuant to the plan will include the following phases: design (pre-construction), construction, and operation (post-construction both prior to and post-occupancy), and therefore some mitigation measures are tied to these phases. The City is responsible for administering the MMP activities. The City may choose to delegate parts of the Plan (particularly enforcement and monitoring) to staff, other City departments (e.g., Department of Building and Safety, Department of Public Works, etc.), consultants, or contractors. The City may choose to designate one or more environmental monitor(s) (e.g. City building inspector, project contractor, certified professionals, etc., depending on the provision specified below).

Each mitigation measure is categorized by impact area, with an accompanying identification of:

Performance Criteria/Monitoring Actions – this is the criteria that would determine when the measure has been accomplished and/or the monitoring actions to be undertaken to ensure the measure is implemented.

The implementing agency – this is the agency or agencies that will actually undertake the measure.

The enforcement agency and monitoring agency -- this is the agency or agencies that will monitor the measure and ensure that it is implemented in accordance with this MMP.

Cornfield Arroyo Seco Specific Plan Mitigation Monitoring Plan

Mitigation Measure	Implementing Agency	Enforcement and Monitoring Agency
4. Transportation		
<p>Mitigation Measure Transportation 4.1:</p> <p><i>Transportation Demand Management Strategies (TDM).</i></p> <p>All projects shall include the following:</p> <p><u>Unbundled Parking.</u> All projects shall unbundle the cost of parking from the cost of living and employment areas, either by charging a rent or lease fee, or selling the parking space separately. (See Section 2.5.B.2)</p> <p><u>Bicycle Facilities.</u> Residential projects or those portions of mixed-use projects that are residential shall provide a minimum of one bicycle parking space for every two units. Nonresidential projects, or those portions of mixed-use projects that are nonresidential shall provide a minimum of one bicycle parking space or locker for every 2,000 square feet. Open Space and public parks shall provide a minimum of two bicycle parking space for every 15,000 square feet. (See Section 2.5.B.5a, 6a, and 7b.)</p> <p><u>Transportation Information Center.</u> All projects shall provide a centrally located Transportation Information Center (TIC) where residents, employees, and visitors can obtain information regarding a variety of local transportation Plans and services. A TIC typically provides information about transit schedules, commute planning, ridesharing, telecommuting, bicycle and pedestrian routes and facilities, taxis, para-transit, onsite services, and local businesses. (See Section 2.3.C.2)</p> <p><u>Rideshare or Carshare Parking.</u> Residential projects or those portions of mixed-use projects that are residential and provide parking shall provide, in a publicly accessible area, one shared vehicle parking space for every 25 units. Nonresidential projects, and those portions of mixed-use projects that are nonresidential shall provide a minimum of one share or carpool space for every 25,000 square feet. (See Section 2.5.B.4.b)</p> <p><u>Scooters, Mopeds and Motorcycles.</u> Residential projects or those portions of mixed-use projects that are residential shall provide a designated stall for scooters, mopeds, and motorcycles at a ratio of one space for every 25 units. Nonresidential projects or those portions of mixed-use projects that are nonresidential shall provide a designated stall for scooters, mopeds, and motorcycles at a ratio of one space for every 25,000 square feet. (See Section 2.5.B.4.c)</p>	DCP/DOT	DBS/DCP/DOT

DCP = Department of City Planning, DBS = Department of Building and Safety, LAFCD = Los Angeles County Fire Department, LAFD = Los Angeles Fire Department, LAPD = Los Angeles Police Department, LADOT= Los Angeles Department of Transportation, RAP = Department of Recreation and Parks, LAUSD = Los Angeles Unified School District, DWP = Department of Water and Power, BOS = Bureau of Sanitation, SCAQMD = South Coast Air Quality Management District, DOGGR = Department of Conservation’s Division of Oil, Gas, and Geothermal Resources, BOE = Bureau of Engineering, DF&G = Department of Fish and Game

Mitigation Measure	Implementing Agency	Enforcement and Monitoring Agency
<p>Projects seeking to add either 50 units and/or 50,000 square feet, or otherwise requiring additional environmental analysis are required to include the following additional TDM strategies:</p> <p><u>Transit Pass Subsidy Plan.</u> Provide a subsidized transit pass to new residents for a period of one year; and, provide a subsidized transit pass, or equivalent cash-out to employees who walk, bicycle, or take transit to work.</p> <p><u>Parking Cash Out.</u> Employers that offer subsidized or no cost parking shall offer the cash equivalent to employees who forgo their parking space and use alternative travel modes such as biking, walking, or taking the bus to work.</p> <p><u>Guaranteed Ride Home.</u> All employers shall implement a Guaranteed Ride Home (GRH) Plan for employees who do not drive to work. The GRH Plan provides emergency rides to participating employees who may need to leave work during the day due to a family emergency or are asked to work late into the evening after their bus/ride-share/shuttle service no longer operates.</p> <p><u>Flexible Work Hours.</u> Establish Flexible Work Hours, or flextime, to spread out the arrival and departure of employees and shifts trips (especially vehicle trips) to non-peak hours.</p> <p><u>Commuter Club.</u> Develop a Commuter Club to offer incentives to employees for choosing alternative modes of transportation to and from work. Employees who agree to use alternative modes of travel (including walk, bike, transit, carpool or vanpool) to travel to work for a minimum number of days per week (e.g. at least three days per week) may participate in the Club. As a member, employees are entitled to various discounts at local businesses, special offers, and monthly raffle prizes. These benefits shall be determined and negotiated for each development project.</p> <p><u>Ridesharing Services Plan.</u> Develop a Ridesharing Services Plan to reduce the number of employees that drive alone to work. The Plan will identify the home location of participating employees and implement strategies to ensure that at least 25% of the employees who do not walk, bicycle, or take transit to work are enrolled in either a carpool/vanpool and/or employer or area sponsored shuttle service.</p> <p><u>Flex Work Trips.</u> Provide transportation options for work-related trips (exclusive of home to work trips). Options may include access to a flex/shared car and/or bicycle share Plan and/or transit passes.</p>

<p>of appropriate structural systems to accommodate anticipated displacements or any combination of these measures.</p> <p>The aforementioned project shall comply with the conditions contained within the Department of Building and Safety's Geology and Soils Report Approval Letter for the proposed project, and as it may be subsequently amended or modified.</p>		
<p>Mitigation Measure Earth Resources 6.4:</p> <p><i>Hillside Grading Areas.</i></p> <p>All projects that require a grading permit and are located in a designated hillside area shall conform to the City's Landform Grading Manual guidelines, subject to approval by the Advisory Agency and the Department of Building and Safety's Grading Division.</p> <p>Appropriate erosion control and drainage devices for the aforementioned projects shall be provided to the satisfaction of the Building and Safety Department. These measures include interceptor terraces, berms, vee-channels, and inlet and outlet structures, as specified by Section 91.7013 of the Building Code, including planting fast-growing annual and perennial grasses in areas where construction is not immediately planned.</p>	DBS	DBS
<p>Mitigation Measure Earth Resources 6.5:</p> <p><i>Grading Activities. (20,000 Cubic Yards, or 60,000 SF of Surface Area or Greater.)</i></p> <p>All projects that require grading permits for 20,000 Cubic Yards, or 60,000 square feet of surface area or greater shall include the following best management practices (bmps):</p> <ul style="list-style-type: none"> • A deputy grading inspector shall be on-site during grading operations, at the owner's expense, to verify compliance with the conditions described below. The deputy inspector shall report weekly to the Department of Building and Safety (LADBS); however, they shall immediately notify LADBS if any conditions are violated. • "Silt fencing" supported by hay bales and/or sand bags shall be installed based upon the final evaluation and approval of the deputy inspector to minimize water and/or soil from going through the chain link fencing potentially resulting in silt washing off-site and creating mud accumulation 	DBS	DBS

DCP = Department of City Planning, DBS = Department of Building and Safety, LAFCD = Los Angeles County Fire Department, LAFD = Los Angeles Fire Department, LAPD = Los Angeles Police Department, LADOT= Los Angeles Department of Transportation, RAP = Department of Recreation and Parks, LAUSD = Los Angeles Unified School District, DWP = Department of Water and Power, BOS = Bureau of Sanitation, SCAQMD = South Coast Air Quality Management District, DOGGR = Department of Conservation's Division of Oil, Gas, and Geothermal Resources, BOE = Bureau of Engineering, DF&G = Department of Fish and Game

Mitigation Measure	Implementing Agency	Enforcement and Monitoring Agency
<p>impacts.</p> <ul style="list-style-type: none"> • “Orange fencing” shall not be permitted as a protective barrier from the secondary impacts normally associated with grading activities. • Movement and removal of approved fencing shall not occur without prior approval by LADBS. <p>The applicant shall provide a staked signage at the site with a minimum of 3-inch lettering containing contact information for the Senior Street Use Inspector (Department of Public Works), the Senior Grading Inspector (LADBS) and the hauling or general contractor.</p>		
7. Hydrology and Water Quality		
<p>Mitigation Measure Hydrology and Water Quality 7.1:</p> <p><i>Floodplain.</i></p> <p>Projects located within the 100 year floodplain shall comply with the requirements of the Flood Hazard Management Specific Plan, and shall obtain any required concurrence from FEMA that the new development complies with the requirements of that agency.</p>	BOS	BOS
<p>Mitigation Measure Hydrology and Water Quality 7.2:</p> <p><i>Stormwater Infiltration.</i></p> <p>Shallow, perched conditions, or seepage may be encountered in the project area and therefore all projects shall, as part of their compliance with the City’s new Low-Impact Development Ordinance, demonstrate as part of their LID application that the infiltration of stormwater on the site will not raise groundwater conditions to such a level that they would adversely affect existing facilities or structures.</p>	BOS	BOS
<p>Mitigation Measure Hydrology and Water Quality 7.3:</p> <p><i>Dewatering System.</i></p> <p>Projects that impact groundwater quantity as a result of direct additions or withdrawals, or through interception of an aquifer by cuts or excavations, or through substantial loss of groundwater recharge capacity shall modify the structural design of a building so as not to need a permanent dewatering system. When a permanent dewatering system is necessary, and unavoidable, the Department of Building and Safety requires the following measures:</p>	DBS/BOS	DBS/BOS

DCP = Department of City Planning, DBS = Department of Building and Safety, LAFCD = Los Angeles County Fire Department, LAFD = Los Angeles Fire Department, LAPD = Los Angeles Police Department, LADOT= Los Angeles Department of Transportation, RAP = Department of Recreation and Parks, LAUSD = Los Angeles Unified School District, DWP = Department of Water and Power, BOS = Bureau of Sanitation, SCAQMD = South Coast Air Quality Management District, DOGGR = Department of Conservation’s Division of Oil, Gas, and Geothermal Resources, BOE = Bureau of Engineering, DF&G = Department of Fish and Game

Mitigation Measure	Implementing Agency	Enforcement and Monitoring Agency
<ul style="list-style-type: none"> • Prior to the issuance of any permit for excavation, the applicant shall, in consultation with the Department of Building and Safety, submit a Dewatering Plan to the decision-maker for review and approval. Such plan shall indicate estimates for how much water is anticipated to be pumped and how the extracted water will be utilized and/or disposed of. • Extracted groundwater shall be pumped to a beneficial on-site use such as, but not limited to: 1) landscape irrigation; 2) decorative fountains or lakes; 3) toilet flushing; or 4) cooling towers. • Return water to the groundwater basin by an injection well. 		
<p>Mitigation Measure Hydrology and Water Quality 7.4:</p> <p><i>Stormwater Pollution Prevention. (Demolition, Grading, and Construction Activities)</i></p> <p>During construction all projects shall comply with the following requirements:</p> <ul style="list-style-type: none"> • Leaks, drips and spills shall be cleaned up immediately to prevent contaminated soil on paved surfaces that can be washed away into the drains. • All vehicles/equipment maintenance, repair, and washing shall be conducted away from storm drains. All major repairs shall be conducted off-site. Drip pans or drop cloths shall be used to catch drips and spills. • Pavement shall not be hosed down at material spills. Dry cleanup methods shall be used whenever possible. • Dumpsters shall be covered and maintained. Uncovered dumpsters shall be placed under a roof or be covered with tarps or plastic sheeting. 	DBS/BOS	DBS/BOS
<p>Mitigation Measure Hydrology and Water Quality 7.5:</p> <p><i>Standard Stormwater Mitigation Plan. (SUSMP)</i></p> <p>All projects must meet the requirements of the Standard Urban</p>	BOS	BOS

Mitigation Measure	Implementing Agency	Enforcement and Monitoring Agency
Stormwater Mitigation Plan (SUSMP) approved by Los Angeles Regional Water Quality Control Board, including the following (a copy of the SUSMP can be downloaded at: http://www.swrcb.ca.gov/rwqcb4/)		
8. Biological Resources		
<p>Mitigation Measure Biological Resources 8.1:</p> <p><i>Habitat Modification. (Nesting Native Birds)</i></p> <p>Migratory nongame native bird species are protected by international treaty under the Federal Migratory Bird Treaty Act (MBTA) of 1918 (50 C.F.R Section 10.13). Sections 3503, 3503.5 and 3513 of the California Fish and Game Code prohibits the taking of any birds and their active nests including raptors and other migratory nongame birds (as listed under the Federal MBTA). Therefore, all projects that require a grading and/or building permit are subject to the following:</p> <ul style="list-style-type: none"> • Proposed project activities (including disturbances to native and non-native vegetation, structures and substrates) should take place outside of the breeding bird season which generally runs from March 1- August 31 (as early as February 1 for raptors) to avoid take (including disturbances which would cause abandonment of active nests containing eggs and/or young). Take means to hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture of kill (Fish and Game Code Section 86). • If project activities cannot feasibly avoid the breeding bird season, beginning thirty days prior to the disturbance of suitable nesting habitat, the applicant shall: <ol style="list-style-type: none"> 1. Arrange for weekly bird surveys to detect any protected native birds in the habitat to be removed and any other such habitat within properties adjacent to the project site, as access to adjacent areas allows. The surveys shall be conducted by a qualified biologist with experience in conducting breeding bird surveys. The surveys shall continue on a weekly basis with the last survey being conducted no more than 3 days prior to the initiation of clearance/construction work. 2. If a protected native bird is found, the applicant shall delay all clearance/construction disturbance activities until August 31; or, 	DCP	DBS/DCP/ DF&G

Mitigation Measure	Implementing Agency	Enforcement and Monitoring Agency
<p>3. Alternatively, the qualified biologist could continue the surveys in order to locate any nests. If an active nest is located the qualified biological monitor shall develop a mitigation plan that includes a buffer appropriate to the specific species of bird as well as the type and degree of disturbance expected at the construction site. The mitigation plan and identified buffer shall remain in place until the nest is vacated and juveniles have fledged and when there is no evidence of a second attempt at nesting. The buffer zone from the nest shall be established in the field with flagging and stakes. Construction personnel shall be instructed on the sensitivity of the area.</p> <p>4. The applicant shall record the results of the recommended protective measures described above to document compliance with applicable State and Federal laws pertaining to the protection of native birds. Such record shall be submitted and received into the case file for the associated discretionary action permitting the project.</p>		
<p>Mitigation Measure Biological Resources 8.2:</p> <p><i>Oak Trees.</i></p> <p>A person shall not cut, destroy, remove, relocate, inflict damage, or encroach into the protected zone of any tree of the oak tree genus, which is 8 inches or more in diameter, four and one-half feet above mean natural grade, or in the case of oaks with multiple trunks, combined diameter of twelve inches or more of the two largest trunks, without first obtaining approval from the Board of Public Works. Contact Urban Forestry Division at: 213.847.3077 and complying with the following:</p> <ul style="list-style-type: none"> • Prior to the issuance of a grading or building permit, the applicant shall prepare and submit a Tree Report, prepared by a Tree Expert as defined in Section 17.02, indicating the location, size, and condition of all oak trees on the site, to the Urban Forestry Division of the Bureau of Street Services, Department of Public Works, for review and approval (213-847-3077), prior to implementation of the Report's recommended measures. Such report shall also contain a recommendation of measures to ensure the protection, relocation, or replacement of affected trees during grading and construction activities. 	<p>DPW-BOE/Urban Forestry Division</p>	<p>DPW-BOE//Urban Forestry Division</p>

LSA Project No. ARU1001

LSA

June 3, 2011

EXECUTIVE SUMMARY

LSA Associates, Inc. (LSA) is under contract to Arup, who is the prime consultant under contract to the City of Los Angeles Department of City Planning (DCP), to conduct a historic resources survey of the Cornfield Arroyo Seco Specific Plan (CASP) Area. The CASP survey area comprises 660 acres and roughly 1,600 assessor's parcels in an area northeast of downtown just east of Chinatown and comprising portions of Lincoln Heights.

The purpose of the survey, completed in cooperation with the City Office of Historic Resources (OHR), was to identify, document, and evaluate, at the intensive level, selected properties for eligibility for the National Register of Historic Places (National Register), California Register of Historical Resources (California Register), and/or for designation as a City of Los Angeles Historic Cultural Monument (HCM) to facilitate future planning considerations. The survey largely followed methodology currently in use for SurveyLA, the City's first-ever comprehensive historic resources survey.

In February 2011, the survey team conducted windshield surveys and limited archival research to identify potentially significant properties, using the contexts, themes, and property types developed for SurveyLA. In March 2011, the survey team conducted an intensive-level survey of the potentially significant properties, using the Field Guide Survey System (FiGSS) developed for SurveyLA as well as the Historic Architecture Inventory (HAI) developed by LSA for field data collection. The FiGSS enabled the survey team to use SurveyLA's contexts, themes, and property types in the field, while HAI provided the team with the ability to create architectural descriptions and to print Department of Parks and Recreation (DPR 523) forms.

The initial windshield surveys resulted in the identification of 50 properties to survey using the FiGSS, including two potential "conservation areas" containing both eligible and ineligible properties related by an overarching theme. Of the 50 properties, 23 met one or more eligibility standards in the FiGSS and were documented on DPR 523 forms and attached to the report. The remaining 27 properties did not ultimately meet any eligibility standards and/or did not retain sufficient integrity. These properties were assigned a 6Z status code and are included in a table in the Results section of this report. The two 6LQ planning areas include the "River Station Historic Landscape" and the "Albion Street Community Planning Area." Although neither constitutes an eligible historic district, there is distinctive character in each area that warrants consideration in future design and planning processes.

All properties assigned a status code of 1-5 are considered to be "historical resources" for CEQA compliance purposes and City's Cultural Heritage Ordinance. Those properties assigned a status code of 6DQ, 6Z, or 6L do not constitute "historic properties" (Section 106) or "historical resources" (CEQA) and require no further cultural resources considerations. Properties that were not identified for intensive-level survey were assigned a "7RQ" meaning they were identified in a SurveyLA survey, but not evaluated. These properties did not appear to warrant intensive level survey for the CASP planning and review process, but may need to be evaluated in connection with future projects.

INTRODUCTION

LSA Associates, Inc. (LSA) is under contract to Arup, who is the prime consultant under contract to the City of Los Angeles Department of City Planning (DCP), to conduct an historic resources survey of the Cornfield Arroyo Seco Specific Plan (CASP) Area.

PROJECT TEAM

The Historic Resources Survey was completed by Tanya Sorrell, M.A. of LSA, Kathryn McGee of Chattel Architecture, Planning & Preservation, Inc. (Chattel), and Shane Swerdlow of Chattel. Ms. Sorrell acted as project manager, leading the reconnaissance survey of the CASP area, preparing the Survey Report, and coordinating with the City Office of Historic Resources (OHR) to identify and apply the relevant contexts developed by SurveyLA. Ms. McGee acted as lead surveyor for the team, participating in reconnaissance surveys, conducting intensive-level surveys on properties identified in the reconnaissance survey, and entering data into the FiGSS and HAI. Mr. Swerdlow acted as survey and research assistant, participating in intensive-level surveys and conducting property-specific research. Ms. Sorrell and Ms. McGee both meet the Secretary of the Interior's Professional Qualifications Standards in History and Architectural History.

DESCRIPTION OF THE SURVEY AREA

The CASP survey area comprises 660 acres and roughly 1,600 assessor's parcels in an area northeast of downtown just east of Chinatown and comprising portions of Lincoln Heights. Spring Street/Broadway, Main Street, San Fernando Road, Avenue 26, and Figueroa Street are arterial streets that traverse the area (Figure 1). The survey area is divided into four sections by Interstate 5 (I-5), Arroyo Seco Parkway (which follows Arroyo Seco Wash), and the Los Angeles River.

Western Section

The section west of the Los Angeles River is characterized by blocks of industrial buildings constructed throughout the 20th century. The section along Spring Street historically surrounded the Southern Pacific River Station (HCM #82), which is now Los Angeles State Historic Park. In 2005, the State Park was the site of an art project by Lauren Bon called "Not a Cornfield," which is where the Cornfield Arroyo Seco Specific Plan gets part of its name. One of the more notable industrial buildings in the section is the Raphael Junction Block/NY Suspenders Factory (HCM #872), a flatiron-shaped building adjacent to the State Park. The western section also includes Los Angeles Department of Water and Power (LADWP) generating and maintenance facilities and William Mead Homes Public Housing. A rare extant section of the Zanja Madre, the main irrigation ditch that fed the early Pueblo de Los Angeles, is located just north of the State Park along the Metro Gold Line alignment.

*The Cornfield Arroyo Seco Specific Plan Area
Historic Resources Survey*

Regional and Project Location

Central Section

The section between the Los Angeles River and I-5, south of Arroyo Seco is mixed in character, containing residential, commercial, and industrial uses, often adjacent to each other. Five or six blocks on the south side of Broadway contain a concentration of late 19th and early 20th century residences, as well as the Albion Elementary School. Albion Cottages and Milagro Market (HCM #442) are located in this small residential area. Broadway and Pasadena Avenue act as commercial corridors through the area. Industrial properties are interspersed throughout the section, but the north half of the section is particularly industrial in character. The Lincoln Heights Jail (HCM #587) is located in this section, as is the old Fuller Paint Company (remodeled into loft housing), and Goodwill Industries. The Brewery Art Colony, housed in the old Pabst Brewery and Edison Steam Power Plant (HCM #388), is just outside the CASP boundaries on the south side of Main Street.

Eastern Section

Located east of I-5 and south of Arroyo Seco, this section is largely industrial, with the exception of a few old homes left over from the original residential tract that existed before industry expanded into it. The Lincoln Heights Gold Line stop is located in this section, which has spurred apartment and condominium development in recent years. Lacy Street is defined by a mix of historic and new buildings, including the old Columbia Mills (now Lacy Street Studios), Lacy Street Neighborhood Park, the North Central Animal Care Center, and former offices of the Cannon Electric Development Company. Other industries in the area were historically involved in metal work, from the manufacture of brass to general fabrication of metal objects and building materials.

Northern Section

The section north of Arroyo Seco comprises mainly the properties facing Figueroa Street and Avenue 26, which are largely commercial in character. Properties along Figueroa Street have seen extensive redevelopment and remodeling over the last half of the 20th century, leading to a mix of older one-story commercial buildings, a neighborhood movie theater (converted to a store), gas stations, and a Googie-style IHOP restaurant. The former Los Angeles Railway Huron Substation is located in this section (HCM #404), as is the former Lawry's California Center (now the Los Angeles River Center and Gardens).

PROJECT METHODOLOGY

The purpose of the survey, completed in cooperation with the OHR, was to identify, document, and evaluate, at the intensive level, selected properties for eligibility for the National Register of Historic Places (National Register), California Register of Historical Resources (California Register), and/or for designation as a City of Los Angeles Historic Cultural Monument (HCM) to facilitate future planning considerations. The survey largely followed methodology currently in use for SurveyLA, the City's first-ever comprehensive historic resources survey.

The CASP survey area is the home of several designated HCMs and, because the historic importance of these resources has already been recognized by the City, these properties were not resurveyed. Properties that were previously surveyed and determined eligible were included in the survey, but

research and documentation were limited to providing updates on the current conditions of the resources.

To streamline survey activities and eliminate redundant efforts with the OHR, the survey team adapted SurveyLA methodology to the extent feasible for compliance with the California Environmental Quality Act (CEQA). The methodology involved the review of contexts and eligibility standards prepared for SurveyLA, developing eligibility standards for the industrial development context (which had not yet been prepared for SurveyLA, but is in preparation by LSA under a separate contract with the City), and application of these eligibility standards in the field using reconnaissance surveys and property-specific research. Properties identified as potentially eligible through review of SurveyLA contexts and themes were then surveyed at the intensive level, with data entered into the OHR's Field Guide Survey System (FiGSS) and LSA's custom-designed Historic Architecture Inventory (HAI). Department of Parks and Recreation (DPR 523) forms were generated using HAI for eligible properties. Survey results were summarized in this Survey Report, with recommendations for the treatment of identified properties and future surveys. Specific tasks within the overall project methodology are described in more detail below.

Field Surveys

The LSA survey team conducted several reconnaissance-level surveys of the CASP to identify properties that could potentially meet eligibility standards created for SurveyLA. Reconnaissance surveys were conducted on foot and driving. In addition to physically surveying the area, the survey team inspected current aerial photographs overlaid with historic Sanborn Fire Insurance Maps to identify historic uses and determine whether properties possessed a basic level of historic integrity. This pre-survey investigation helped the survey team to focus its efforts on properties that had the greatest likelihood of meeting SurveyLA eligibility standards.

Following the reconnaissance surveys, LSA prepared a list of properties for intensive survey. The intensive surveys were conducted by the lead surveyor and survey assistant from Chattel, and involved the preparation of a detailed physical description of each property and making an evaluation using SurveyLA eligibility standards.

Field Guide Survey System¹

The Historic Context Statement (HCS) framework has been used as the basis for developing the FiGSS, a custom mobile application designed for use in the field on tablet PCs. The FiGSS uses Geographic Information System (GIS) mapping software and is preloaded with maps and aerial photographs of survey areas, context statement eligibility standards, and information relating to designated, previously surveyed and potentially significant historic resources.

The FiGSS is unique in that it “translates” the components of the Historic Context Statement into data fields so that surveyors can readily place a property within the appropriate context and theme by selecting from drop-down lists. For example, when surveying a neighborhood school (such as the Albion Street School in the survey area), a field surveyor may select the context “Institutional

¹ This summary of FiGSS is adapted from a description developed by the OHR for a cover letter that explains SurveyLA methodology. The entire cover letter is attached to this report as Appendix A.

Development” and then the theme “Education” and the sub-theme “Education and Ethnic-Cultural Associations.” A set of eligibility standards associated with this context/theme selection is then presented as a list of check boxes that the surveyors will select from as appropriate to determine if the property retains the physical and associative qualities needed to be an important example of its type. The FiGSS also allows surveyors to “flag” properties that require additional research or follow up.

The overall concept behind the FiGSS is to provide surveyors with the information they need in the field to identify and evaluate resources according to defined contexts and themes and in an efficient and consistent manner. The FiGSS is garnering attention from local, state, and federal agencies and organizations for its potential to change the way historic resources surveys are completed.

Historic Architecture Inventory

LSA developed the HAI in 2008 to increase staff’s efficiency in conducting large scale historic resources surveys. The HAI is a Microsoft Visual Basic field application and Access/ArcReader database that organizes records using the Assessor’s Parcel Number (APN). The HAI enables surveyors to select each parcel in the field, create a physical description using pre-programmed descriptors, incorporate property-specific research/evaluation criteria, and link photographs. The survey data entered into the HAI allow the survey team to create DPR Primary and BSO records efficiently and to use the data gathered for secondary analysis.

Property-Specific Research

The survey team researched properties that were included in the intensive-level survey in order to develop a complete understanding of their historic associations and development history. In some cases, research was done prior to the intensive-level survey, and in others, research was done as a follow-up to the survey. Some of the sources consulted as part of the property-specific research are listed below. A complete list of references is provided in footnotes and at the end of this report.

- Historic maps, including Sanborn Fire Insurance Maps and United States Geological Survey (USGS) maps;
- Aerial photographs of the survey area 1948–2010;
- Original subdivision and survey maps 1849–2008;
- Newspaper articles (primarily the *Los Angeles Times* via Proquest);
- Electronic and physical databases of the Los Angeles Public Library (including the Photographic Collection and the California Index); and
- Los Angeles City Directories

SIGNIFICANCE CRITERIA

CEQA (PRC Chapter 2.6, Section 21083.2 and CCR Title 145, Chapter 3, Article 5, Section 15064.5) calls for the evaluation and recordation of historic and archaeological resources. The criteria for determining the significance of impacts to cultural resources are based on Section 15064.5 of the *CEQA Guidelines* and Guidelines for the Nomination of Properties to the California Register. Properties eligible for listing in the California Register and subject to review under CEQA are those meeting the criteria for listing in the California Register, National Register, or designation under a local ordinance.

NATIONAL REGISTER OF HISTORIC PLACES

The National Register of Historic Places is the Nation's official list of cultural resources worthy of preservation. According to National Register Bulletin 15, in order to qualify for the National Register, a resource must meet the criteria for evaluation. Properties are significant under the following criteria:

- a) They are associated with events that have made a significant contribution to the broad patterns of our history; or
- b) They are associated with the lives of persons significant in our past; or
- c) They embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or
- d) They have yielded, or may be likely to yield, information important in prehistory or history.

Criteria Considerations

Ordinarily, cemeteries, birthplaces, or graves of historical figures, properties owned by religious institutions or used for religious purposes, structures that have been moved from their original locations, reconstructed historic buildings, properties primarily commemorative in nature, and properties that have achieved significance within the past 50 years shall not be considered eligible for the National Register. However, such properties will qualify if they are integral parts of districts that do meet the criteria or if they fall within the following categories:

- a) A religious property deriving primary significance from architectural or artistic distinction or historical importance; or
- b) A building or structure removed from its original location but which is significant primarily for architectural value, or which is the surviving structure most importantly associated with a historic person or event; or
- c) A birthplace or grave of a historical figure of outstanding importance if there is no appropriate site or building directly associated with his or her productive life; or

- d) A cemetery which derives its primary significance from graves of persons of transcendent importance, from age, from distinctive design features, or from association with historic events; or
- e) A reconstructed building when accurately executed in a suitable environment and presented in a dignified manner as part of a restoration master plan, and when no other building or structure with the same association has survived; or
- f) A property primarily commemorative in intent if design, age, tradition, or symbolic value has invested it with its own exceptional significance; or
- g) A property achieving significance within the past 50 years if it is of exceptional importance.

Integrity

Integrity is the ability of a property to convey its significance. To be listed in the National Register, a property must not only be shown to be significant under the National Register criteria, but it also must have integrity. The evaluation of integrity is sometimes a subjective judgment, but it must always be grounded in an understanding of a property's physical features and how they relate to its significance. Historic properties either retain integrity (this is, convey their significance) or they do not. Within the concept of integrity, the National Register criteria recognize seven aspects or qualities that, in various combinations, define integrity. To retain historic integrity, a property will always possess several, and usually most, of the aspects. The retention of specific aspects of integrity is paramount for a property to convey its significance. Determining which of these aspects is most important to a particular property requires knowing why, where, and when the property is significant. The seven aspects of integrity are locations, design, setting, materials, workmanship, feeling, and association, defined as follows:

- a) Location is the place where the historic property was constructed or the place where the historic event occurred.
- b) Design is the combination of elements that create the form, plan, space, structure, and style of a property.
- c) Setting is the physical environment of a historic property.
- d) Materials are the physical elements that were combined or deposited during a particular period of time and in a particular pattern or configuration to form a historic property.
- e) Workmanship is the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory.
- f) Feeling is a property's expression of the aesthetic or historic sense of a particular period of time.
- g) Association is the direct link between an important historic event or person and a historic property.

CALIFORNIA REGISTER OF HISTORICAL RESOURCES

The California Register program encourages public recognition and protection of resources of architectural, historical, archaeological, and cultural significance, identifies historical resources for

State and local planning purposes, determines eligibility for State Historic Preservation grant funding, and affords certain protections under CEQA. According to Technical Assistance Bulletin #3, to become a historic resource, a site must be significant at the local, state, or national level under one or more of the following four criteria:

1. It is associated with events that have made a significant contribution to the broad patterns of local or regional history, or the cultural heritage of California or the United States; or
2. It is associated with the lives of persons important to local, California, or national history; or
3. It embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of a master or possesses high artistic values; or
4. It has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California, or the nation.

In addition to having significance, resources must have integrity for the period of significance. The period of significance is the date or span of time within which significant events transpired, or significant individuals made their important contributions. Integrity is the authenticity of a historical resource's physical identity as evidenced by the survival of characteristics or historic fabric that existed during the resource's period of significance. Alterations to a resource or changes in its use over time may have historical, cultural, or architectural significance. Simply, resources must retain enough of their historic character or appearance to be recognizable as historical resources, and to convey the reasons for their significance.

CITY OF LOS ANGELES HISTORIC CULTURAL MONUMENT (HCM)

Section 22.171.8: Monument Designation Criteria

A proposed Monument may be designated by the City Council upon the recommendation of the Commission if it:

A) Meets at least one of the following criteria:

- 1) Is identified with important events in the main currents of national, State, or local history, or exemplifies significant contributions to the broad cultural, political, economic or social history of the nation, state, city, or community; or
- 2) Is associated with the lives of historic personages important to national, State, City, or local history; or
- 3) Embodies the distinctive characteristics of a style, type, period, or method of construction; or represents a notable work of a master designer, builder or architect whose genius influenced his or her age; or possesses high artistic values; or
- 4) Has yielded, or has the potential to yield, information important to the pre-history or history of the nation, State, City, or community; or
- 5) Reflects or exemplifies the diversity of Los Angeles, including, but not limited to, the significant contributions of people of color, women, and workers; or stimulates and promotes a greater understanding of diversity, democracy, and freedom; and

- B) Retains Integrity from its Period of Significance. Proposed Monuments do not need to retain all aspects of Integrity, but should retain a sufficient degree of those aspects of Integrity that relate to why it is significant. Flexibility shall be used in assessing Integrity, particularly when a proposed Monument is significant under designation criteria 1 or 2 above. A proposed Monument's deferred maintenance, dilapidated condition, or illegal alterations shall not, on their own, be construed to equate to a loss of integrity.

CITY OF LOS ANGELES HISTORIC PRESERVATION OVERLAY ZONE

A Historic Preservation Overlay Zone (HPOZ) is a significant concentration, linkage, or continuity of sites, buildings, structures, or objects united historically or aesthetically by plan or physical development. According to Section 12.20.3 of the City of Los Angeles Municipal Code, the criteria for the designation of an HPOZ are:

- 1) Adds to the historic architectural qualities or historic associations for which a property is significant because it was present during the period of significance, and possesses historic integrity reflecting its character at that time; or
- 2) Owing to its unique location or singular physical characteristics, represents an established feature of the neighborhood, community or city; or
- 3) Retaining the building, structure, landscaping, or natural feature, would contribute to the preservation and protection of a historic place or area of historic interest in the City.

CALIFORNIA HISTORICAL RESOURCE (CHR) STATUS CODES

To be significant, a resource must meet at least one of the above-listed criteria and also retain enough integrity to convey its period of significance and association with an important historic context. Once a significance evaluation has been made, the resource is assigned a CHR status code. The CHR status codes are a standardized, shorthand method for identifying the significance level of a resource and include the following general categories:

1. Properties listed in the National Register or the California Register.
2. Properties determined eligible for listing in the National Register or California Register.
3. Properties that appear eligible for National Register or California Register through survey evaluation.
4. Properties that appear eligible for National Register or California Register through other evaluation.
5. Properties recognized as historically significant by local government.
6. Properties not eligible for listing or designation as specified.
7. Properties not evaluated for National Register or California Register or that need re-evaluation.

It should be noted that there are several subcategories within each of these that allow for various nuances, such as whether or not a resource is a contributor to a Historic District. Relevant codes for the CASP historic resources survey are described further in the Results section.

SUMMARY OF FINDINGS

HISTORICAL OVERVIEW²

The CASP Survey area contains some of the oldest developed areas of Los Angeles. The site where Gaspar de Portola's 1769 expedition camped in Los Angeles is believed to be along the Los Angeles River just south of where it is joined by the Arroyo Seco Wash. In 1781, settlers from Spain and Mexico founded the Pueblo de Los Angeles about a mile south of the survey area along the river. Agriculture provided the main source of industry for the nascent Pueblo, which grew slowly along the river during most of the 19th century. By 1820, the Pueblo was home to 650 Californio residents. In 1847, the U.S. gained possession of the Pueblo during the Mexican-American War. Under U.S. control, the riverfront began to industrialize. The Southern Pacific Railroad/River Station was completed in the 1870s and triggered a large wave of European and Chinese immigrants. The River Station became a major industrial and commercial center, connecting Los Angeles to major U.S. cities and the East. Much of the early growth of Los Angeles can be attributed to the development of the riverfront industrial center.

In the early 20th century, Los Angeles expanded across the river east into Lincoln Heights. In 1910, Henry G. Parker and Hugo Eckardt constructed the first monumental bridge across the Los Angeles River. The classically-styled North Main Street Bridge connected East Los Angeles to Downtown. One year later, in 1911, the Buena Vista Viaduct (now called the North Broadway-Buena Vista Bridge) was completed. At the time, this bridge was the longest and widest concrete arch bridge in California. Designers Homer Hamlin and Alfred P. Rosenheim incorporated Ionic arches and balustrades to complement the North Main Street Bridge. Eighteen years later, the North Spring Street Viaduct was completed. John C. Shaw designed the North Spring Street Viaduct to relieve traffic on the North Broadway Bridge. Shaw's design continued the classical style of the two earlier bridges, linking the three bridges as a thematic sub-group that connects Lincoln Heights to Downtown. All three bridges were designated as City Historic Cultural Monuments in 2008.

Some of the original industrial and commercial buildings still exist along the riverfront. The Standard Oil Company of California buildings on North Spring Street served as sales department and provided industrial facilities for one of the most powerful corporations in the world. Rockefeller's Standard Oil of California was one of the "seven sisters" that ran the oil industry during the 20th century and later became Chevron Corporation. The Baker Iron Works Site, on North Broadway, was an influential industrial pioneer in Los Angeles. Baker played a major role in stimulating growth in California, particularly through the production of streetcars, water distribution systems, and oil drilling products. In the following years, the area surrounding Baker became the premier steel and iron manufacturing center in California. In addition, Baker was a major supplier to the United States military during World Wars I and II. Located on North Spring Street, Capitol Milling Company was one of Los Angeles' leading enterprises, specializing in milling grains to produce flour, cereal, and food. The nearby Southern Pacific Railroad allowed Capitol Milling to transport products nationwide. Today,

² This section is largely adapted from the Background History section of the Cornfield Arroyo Seco Specific Plan, draft 3/9/2010.

these buildings provide a window to Los Angeles' past and serve as symbols of the industries that allowed the city to grow.

The concentration of industry near the river fostered the growth of new immigrant communities, including vibrant Italian, Mexican, and Chinese districts. These communities introduced new cultural elements and helped to establish Los Angeles as a global city. In 1917, Santo Cambianica, an Italian immigrant, opened the San Antonio Winery near the Los Angeles River. San Antonio remains the last producing winery in Los Angeles.

Lincoln Heights

As commercial and industrial activity grew downtown in the late 19th century, new arrivals to Los Angeles looked to adjacent land surrounding downtown as the setting for the City's first suburbs. Similar subdivisions were recorded concurrently in areas east, south, and north of Downtown. The community of Lincoln Heights was built on the higher plain southeast of the confluence of the river and Arroyo Seco, subdividing the former farmlands. This new community was linked to downtown Los Angeles along Downey Avenue and served by horse-drawn streetcars. The main north-south road, San Fernando Road/Avenue 20, passed through Lincoln Heights and connected it to northern and southern California. Into the 20th century, Lincoln Heights grew into a small town with a classic mix of residential neighborhoods around a small downtown located between Broadway and Five Points. At the same time, owing to its location as the mouth of a pass to the north, the first rail lines linking northern and southern California were built, paralleling the Los Angeles River. Along with the railroads came the first industrial uses, some directly rail-related in the form of rail yards, such as the Cornfield site, and some uses that were served by the rail. The residential small town character of Lincoln Heights began to erode.

By the end of World War II, Lincoln Heights transformed into a predominantly working class neighborhood. This transformation accelerated with the construction of the Golden State Freeway (I-5) in the 1950s, replacing the historic north-south Route 99 that used San Fernando Road and Avenue 20, split Lincoln Heights in half at its core and destroyed the neighborhood's important relationship with downtown, the river, and the historic origins of Los Angeles.

Railroads and Industry

After the rapid development of the 1920s, more and more industry began to locate in Lincoln Heights along the river banks following the railroad. Early land use districting ordinances had already established industrial use areas along the rail and river corridor, which were hardened further into discrete zones around 1920. The mixed-use character of Lincoln Heights with its residential neighborhoods was "pushed" to the east, with older neighborhoods nearer the river displaced by industrial lands.

Meanwhile, plagued by the river's unpredictability and constant flooding, the U.S. Army Corps of Engineers began to channelize the river in the 1930s. Ever since, the once natural resource has served as a flood control system and carried storm water and other runoff south to San Pedro and the harbor. Only recently has the city begun to return to the concept of transforming the Los Angeles River into an environmental and open space resource.

In 1996, one of the largest undeveloped parcels within the area was proposed to be developed as an industrial park but the surrounding neighborhoods resoundingly rejected the concept and instead demanded that the parcel, which was known as “the Cornfield,” be set aside as a park. With the assistance of the Trust for Public Land, the State of California purchased the 33-acre property and is today developing conceptual plans to develop the Los Angeles State Historic Park. With the introduction of the Gold Line only a few short years later, in 2002, and subsequently the interest in the revitalization of the River and the Arroyo Seco, the stage was set for developer speculation and the pressure for residential conversion began.

Currently, the area is home to 4,600 residents and approximately 6,000 employees visit the area each weekday to make their livelihood in the light industrial employment sectors, which include everything from the manufacturing of furniture to carpet warehousing and logistics. Six hundred new units have been built in the last three years, which have provided critical affordable housing for low and moderate income seniors and families. Two hundred moderately priced condominiums have been built, 102 units are currently in construction, and another 350 units have been entitled. A 20 unit live-work rental project recently opened to round out the residential offerings.

SUMMARY OF RELEVANT HISTORIC CONTEXTS AND THEMES³

The following HCS Context/Theme summaries are provided to place the resources of the CASP survey area into the framework established by SurveyLA. The Contexts and Themes included here represent potentially relevant themes for the CASP survey area, but the survey team did not ultimately find potentially eligible properties for every theme listed.

3.0 Context: Residential Development and Suburbanization

Much of the central portion of the CASP area was once part of the City’s oldest suburbs. The Lincoln Heights HPOZ is adjacent to the eastern boundary of CASP, and the residential block in CASP appears to have the same general historical association and architectural character, though the level of historic integrity is not as high and I-5 physically separates it from the Lincoln Heights HPOZ.

Sub-Context/Theme: Multifamily Residential Development

Sub-Theme: Public and Defense Housing

In the CASP area, this subtheme is represented entirely by William Mead Homes, a public housing project that was constructed in 1942 and designed by architects T.A. Elisen, A.R. Walker, Armand Monaco, Marsh Smith & Powell. It has been previously determined eligible for the National Register under Criteria A and C.

4.0 Context: Commercial Development

Theme: Neighborhood Theaters, Pre-WWII, 1915–1942

A pre-WWII neighborhood theater is extant at 3232 North Figueroa Street. It was constructed in 1928 and retains some of its historical appearance. Affiliated with Fox West Coast Theaters, this building

³ This outline consists of selections from the SurveyLA Context Outline and has retained that outline’s numbering for easier cross-reference.

was called the Arroyo Theater. A *Los Angeles Times* 1936 movie listing includes the theater located at 3232 N Figueroa Street. The theater was used until at least 1956, according to 1956 City Directory.

Theme: Restaurants, 1880–1980

The former Lawry's California Center (now the Los Angeles River Center and Gardens) is located in the northernmost section of the CASP survey area. It was originally constructed in 1952 by the Frank and Van De Kamp families as an early example of the "corporate campus," a collection of commercial office, restaurants, bars, and manufacturing buildings organized around promoting the Lawry's brand of seasonings. By 1987, the California Center accommodated 600,000 visitors a year. It was determined that while architecturally interesting and generally retaining integrity from 1979, it is not clear that the site rises to the exceptional level of significance necessary for listing. Lawry's had on-site facilities for manufacturing signature spices at this location as early as the 1950s, as well as a gift shop and restaurant. A portion of a 1950s industrial building may be intact. The rest of the site was designed in 1979 by Calvin Straub of Scottsdale, Arizona as a 150-seat restaurant, garden, courtyard and art exhibition, constructed at a cost of \$1.5 million. While a unique property, sufficient time has not passed to gain a historical perspective on the significance of the largely 32-year old campus.

5.0 Context: Institutional Development

Sub-Context: Education

Theme: Public Schools and the LAUSD, 1876–1980

Sub-Theme: Post-1933 Long Beach Earthquake, 1933–1945

Albion Street School is an excellent example of an elementary school built after the 1933 Long Beach Earthquake, a period in which the widespread quake-caused destruction of unreinforced schools led to the development of stricter standards for school construction. This pressure to rebuild schools coupled with the infusion of federal funding from the Works Progress Administration (WPA) produced an extensive collection of Art Deco, Streamline Moderne, and PWA Moderne schools in the Los Angeles Basin. Albion Street School has retained several key buildings from the 1937 Moderne-styled campus.

Sub-Context: Government Infrastructure and Services

Theme: Municipal Water and Power

Sub-Theme: Distributing and Receiving Stations

The Department of Water and Power Main Street Station is a major distributing and receiving station within the Los Angeles power grid. It was previously determined eligible for the National Register.

Theme: Public Works

Sub-Theme: Bridges

The CASP area is home to three landmark bridges across the Los Angeles River: the Main Street Bridge, the North Spring Street Bridge, and the North Broadway Bridge. These three bridges have all been recently designated Los Angeles HCMs.

Sub-Context: Civil Rights Movement – Ethnic and Gender Equality, 1942–1980

Theme: Women's Rights Movements

The Woman's Building and Women's Graphic Center (Woman's Building) was an art gallery and communal space developed by artists within the feminist movement. These women started the

Feminist Studio Workshop in 1973 in reaction to the lack of access or exposure afforded them and all women by mainstream galleries and art museums. The original Woman's Building was opened at the former Chouinard Institute near MacArthur Park, but in 1975, Chouinard was closed and the Woman's Building moved to 1727 North Spring Street in the old Standard Oil Company office and warehouse near the Spring Street Bridge. The Woman's Building became an internationally recognized icon for women's creative expression in the 1970s and 1980s. It closed in 1991. The building has retained its historical appearance from the period of significance for the Woman's Building.

6.0 Context: Architecture and Engineering

Theme: Late 19th and Early 20th Century Architecture, 1865–1950

Theme: Arts and Crafts Movement, 1895–1930

Theme: Mediterranean Revival, 1887–1952

Theme: American Colonial Revival, 1895–1960

Sub-Themes: Folk Victorian, Neoclassical, Craftsman, Spanish Colonial Revival, and Early American Colonial Revival Styles

Due to the age of residential development in the CASP area, there are examples of late 19th early 20th century architectural styles, including Folk Victorian, Colonial Revival, Spanish Colonial Revival, Neoclassical, and Craftsman.

Theme: Postwar Modernism, 1946–1976

Sub-Theme: Googie 1935–1969

The former Prebles Restaurant (now the International House of Pancakes) at 2227 North Figueroa is a good representative example of the Googie style of architecture, a whimsical and visually arresting style applied to retail buildings in the post-World War II era. It was designed by Armet and Davis, an architecture firm responsible for design of many prominent Googie restaurants throughout Southern California. Googie buildings were designed to attract passing motorists and create a memorable brand for the store, and it was common for casual restaurants and coffee shops in the 1950s and 1960s.

8.0 Context: Cultural Landscapes, 1850–1980

Theme: Historic Vernacular Landscapes

Because the CASP survey area contains some of the earliest-developed areas in the City, the survey team investigated the potential for historic vernacular landscapes. Specific areas of focus included the River Station area, where early industry and freight activity left related buildings, street improvements, and spatial relationships from the early 20th century. The residential area surrounding Albion Street School was also investigated due to its Italian heritage.

9.0 Context: Industrial Development, 1850–1980

Theme: Building the City, 1876–1965

The building industry emerged to support the exponential residential and commercial growth in Los Angeles in the late 19th and early 20th centuries, providing the raw materials, carpentry, and furnishings needed to create the City's extensive built environment. Very few, if any properties are extant that represent this critical component of Los Angeles community development. The CASP

Area is unique in the City because it contains a concentration of metal shops from the early 20th century, including the former Price Pfister Brass Manufacturing Company, the California Steel and Cornice Company, and smaller steel and metal shops on Avenue 33 and on Naud Street.

Theme: Oil and Other Petroleum Products, 1892–1950

Oil exploration and processing is a theme that has had a significant impact on the City, from fueling emerging industries in the early 20th century to financing the construction of fantastic residential and commercial architecture. Unfortunately, there are very few industrial properties citywide that strongly represent this theme. There are a few examples in the CASP area, including 1727 North Spring Street, a former Standard Oil Company office and warehouse and the Standard Oil maintenance facilities across the street.

Theme: Freight Transportation, 1876–1920

The River Station area owes its configuration and land use history to the proximity of the Union Pacific rail yard, which is now the site of the Los Angeles SHP. The park contains the partially excavated remains of a roundhouse. While there are no individual resources in the area (besides the SHP) that represent this theme, there are features of industrial buildings in the River Station area that are related to freight transportation, including rail sidings and spurs (see 8.0: Cultural Landscapes Context).

Theme: Manufacturing for the Masses, 1887–1980

Sub-Theme: Food Processing, 1831–1945

Food processing facilities such as mills, bakeries, and bottling plants represent the City's oldest industrial endeavors. They are associated with the City's once-prosperous agricultural sector and represent a significant shift in social history toward purchasing more pre-processed, manufactured food instead of preparing raw ingredients from home. Some food processing plants, like mills and bakeries, are distinctive property types that can be identified by their exterior features.

Theme: Industrial Engineering and Design

Sub-Theme: Daylight Factory, 1887–1940

Prior to the widespread use of electricity, controlling and capitalizing on daylight was a necessary component of the design of manufacturing buildings. Daylight was brought into the building using a variety of methods, including expansive industrial sash windows, orientation of intensive hand work next to the exterior walls of the building, skylights, and specialized roof forms to bring light into the interior. The former Columbia Mills on Lacy Street is an excellent example of a daylight factory, with multiple daylight features including expansive industrial sash and sawtooth rooflines.

Sub-Theme: Industrial Loft, 1900–1940

Industrial lofts were a distinctive early industrial building type designed to accommodate a vertical manufacturing process in a fire-resistant timber or reinforced concrete building. Heavy machinery was generally set on the lower floors and toward the middle of the building, while lighter manufacturing processes and handwork occurred on the perimeters where daylight could illuminate detailed tasks. Offices were located on the upper stories. The structural materials were dense in character, designed to absorb vibration from heavy equipment and keep accidental fires slow-burning and confined as much as possible. Industrial lofts were commonly built in the late 19th and early 20th century in large built-up cities where land area was a premium. Industrial lofts are not common in Los Angeles, due mainly to the timing of industrial development in relation to the City's supply of

available land. Because space was available and relatively inexpensive, manufacturers tended to set up a horizontal process in and around Los Angeles, which was easier to expand and reorganize to suit changing technology. The exception in Los Angeles is the garment industry, where the vertical process provided the most efficient workflow for manufacturers and proximity to markets downtown was essential. The KeLite Products plant, located at 1250 N Main, includes a three-story industrial loft building.

Sub-Theme: Quonset Hut, 1941–1950

The Quonset hut is a variant of the c. 1916, British-designed Nissen hut. It was named for the Naval Air Station at Quonset Point, Rhode Island, where it was first designed for large-scale production in the United States in 1941. Built to serve as temporary, flexible military facilities for World War II, the Quonset hut bears a distinctive form: a simple half-cylinder typically constructed of a wood or steel rib-framing system with corrugated metal sheathing. It was ideal for wartime because it was both inexpensive and efficient to build, and could be easily moved to accommodate a variety of uses.

Following the end of World War II in 1945, there was a nationwide housing shortage as veterans returned from war in large numbers; Quonset huts served as one answer to accommodate the population. Given their flexible interior layout and the low cost to move and erect, it was not uncommon for individual Quonset huts to be purchased and appropriated for a variety of uses, including industrial and commercial facilities. Not all Quonset huts were designed for military activities and then reused; some companies advertised their effectiveness as an efficient, flexible space for a wide variety of home, warehouse, commercial, and other uses, and sold them for those purposes. An important symbol of both the wartime and immediate post-World War II eras, the Quonset hut is a rapidly disappearing property type.

RESOURCES IDENTIFIED

Of the approximately 1,600 unique parcels within the survey area, 50 were digitally photographed and entered into the FiGSS database. Each of the surveyed properties was assigned a California Historical Resources status code according to level of significance. Of this number, 23 properties appeared to meet SurveyLA eligibility criteria under one or more themes, and were recorded on the appropriate DPR forms. One or more of the following status codes were assigned to resources in the CASP survey area:

- **3S:** *Appears to be eligible for the National Register as an individual property through survey evaluation.* These properties met one or more eligibility standards included in the SurveyLA HCS and have retained the highest degree of integrity. **Resources with this code are considered historical resources for the purposes of CEQA.**
- **3CS:** *Appears to be eligible for California Register as an individual property through survey evaluation.* This code includes all properties assigned a 3S status code, plus properties that met one or more eligibility standards included in the SurveyLA HCS, but have lost a critical aspect of integrity that precludes eligibility for the National Register. **Resources with this code are considered historical resources for the purposes of CEQA.**
- **5S3:** *Appears to be eligible for local listing or designation through survey evaluation.* In the CASP survey, this code includes all 3S and 3CS properties. No properties were assigned only a 5S3 code in conjunction with this survey. **Resources with this code are considered historical resources for the purposes of CEQA.**
- **6L/6LQ:** *Determined ineligible for local listing or designation through a survey process, but may warrant special consideration for local planning.* **These resources do not constitute historic resources for the purposes of CEQA.** They are identified because, though ineligible, they possess a distinctive character that planning staff may want to take into consideration during the design phase of future projects in the area.
- **6Z:** *Individual property assessed for significance in accordance with the SurveyLA Multiple Property Documentation approach, but does not meet eligibility standards.* This group comprises the 37 properties that were identified in the reconnaissance surveys but when surveyed using FiGSS did not ultimately meet any of the eligibility standards. **These resources do not constitute historic resources for the purposes of CEQA.**
- **7RQ:** *Individual Property identified in a SurveyLA Survey; not evaluated.* This status code will be assigned to all properties that were not identified for intensive-level survey. **These resources do not constitute historic resources for the purposes of CEQA.** They did not appear to warrant intensive-level survey for the CASP planning and review process, but may need to be evaluated in connection with future projects.

HISTORICAL RESOURCES (3S, 3CS, 5S3)

Nearly all of the properties that the survey found eligible (19 of 21) warranted all three status codes. One property was assigned a 3CS and 5S3 status code because it did not retain sufficient integrity to be eligible for the National Register. One property was assigned a 5S3 status code only because it did not retain integrity sufficient for the National or California Registers, but represented a rare neighborhood property type (1920s Movie Theater). Each of the 21 properties was documented on DPR 523 Primary and Building, Structure, Object (BSO) forms, which are attached to the survey report as Appendix C. Table A provides a brief summary of eligible properties.

Table A: Historical Resources in the CASP Area (not including HCMs)

Address	Name	Historical Property Type	Year Built	Status Code	Notes
147 N. Avenue 18	—	Quonset Hut	1946	3S; 3CS; 5S3	Noted on Sanborn maps as a sheet metal shop.
271 Avenue 18	—	Residence	1885	3CS, 5S3	Folk Victorian, vinyl windows (original openings)
267 Avenue 18	—	Residence	1885	3S, 3CS, 5S3	Early Hipped-Roof Vernacular residence.
322 S. Avenue 18	Albion Street School, Hayes Street School, 19 th Street School	School	1937	3S; 3CS; 5S3	Post-1933 earthquake Moderne School, also identified with the Italian and Mexican immigrant communities.
227, 229, and 231 Avenue 19	—	Multifamily Property	1905	3S; 3CS; 5S3	Trio of identical Folk Victorian residences on one lot.
420 W. Avenue 33	Cannon Electric Development Co., Plant #1	Office (related factory demolished)	1926	3S; 3CS; 5S3	Office building for what was once a key factory producing “Cannon Plugs.” Cannon was known as an early innovator and 20 th century leader in electronic connections, with applications in civic infrastructure, entertainment, and aviation/aerospace industries.
1300 N. Cardinal Street	William Mead Homes; Ann Street Project	Public Housing Project	1942	2S2;	Already formally determined eligible; boundaries updated.
1805 Darwin	—	Residence	1910	3S; 3CS; 5S3	Folk Victorian
1837 Darwin	—	Residence	1895	3S; 3CS; 5S3	Folk Victorian

Table A: Historical Resources in the CASP Area (not including HCMs)

Address	Name	Historical Property Type	Year Built	Status Code	Notes
2227 N. Figueroa Street	Prebles Restaurant	Restaurant	1968	3S; 3CS; 5S3	Googie Architecture, now an IHOP
3232 N. Figueroa Street	Arroyo Theater	Movie Theater	1928	5S3	Affiliated with Fox West Coast Theatres. Extensive alterations.
3005 N. Humboldt	Price Pfister Brass Mfg Co.	Metal Shop	1914–1951	3S; 3CS; 5S3	Associated with industrialist, philanthropist, and Jewish leader Isadore Familian and key factory for Price Pfister, an internationally recognized plumbing/fixture brand.
2630 Lacy Street	Columbia Mills; Talbert-Whitmore Co	Factory	1885–ca. 1945	3S; 3CS; 5S3	Excellent example of Daylight Factory.
1250 N. Main Street	Kelite	Industrial Loft	1924–1954	3S; 3CS; 5S3	Industrial Loft, former Kelite Chemical Factory
1630 N. Main Street	DWP Facility	Municipal Power Plant	1946–2000	2S2	Already formally determined eligible; boundaries updated.
510 Avenue 17; 1801 N. Main Street	Lanza Bros. Market	residence/deli	1898–1926	3S; 3CS; 5S3	Italian Deli and residences historically associated with historical Italian community near Albion Street, Deli run by Italian immigrant family from 1926 through 2000s.
1811 N. Main Street	—	Residence	1898	3S; 3CS; 5S3	Folk Victorian
1611 Naud Street	California Steel and Cornice Co.	Metal Shop	1945	3S; 3CS; 5S3	Produced steel for the Case Study Houses, also for Standard Oil
1640 N. Spring Street	—	Factory	1925	3S; 3CS; 5S3	Daylight Factory, manufactured paper
1726–1756 N. Spring Street	Standard Oil Maintenance	Maintenance Facilities	1920–1960	3S; 3CS; 5S3	Early office and auto repair/machine shop for Standard Oil.
1727 N. Spring Street	Standard Oil Company; Woman's Building	Oil Co. Office	1914	3S; 3CS; 5S3	Originally served as Standard Oil sales office, it was the 1973–1991 home of the Woman's Building, a key institution in Feminist History.

INELIGIBLE PROPERTIES

The other 30 properties identified in the reconnaissance survey were surveyed but did not ultimately meet the eligibility requirements of any particular SurveyLA theme, either for a lack of significance or extensive alterations. Most of these properties (26 of 30) were assigned a “6Z” status code in the FiGSS and were not documented on DPR 523 forms. These are not considered historical resources for the purposes of CEQA. Table B lists these surveyed but ineligible properties.

Table B: Ineligible Properties (6Z)

Address	Historical Names	Historical Property Type	Year Built	Notes
1750 Albion Street	Grogan Olive Co.	food processing	ca 1930	Company does not appear notable and does not visually convey historical use.
351 S. Avenue 17	Certified Chrome Furniture Co; Goldenberg Plywood and Lumber Co.	carpentry/metal shop	1926–1967	Oldest buildings have not retained integrity; associated companies do not appear to be notable.
214 S. Avenue 18	—	multifamily	ca 1925	Not a significant example of multifamily housing.
216 Avenue 18	—	multifamily	ca 1925	Too altered for listing.
440 Avenue 19; 405–427 San Fernando Road	Log Cabin Bakery Bread Co	bakery	1916–1944	Too altered for listing.
540 W. Avenue 26	—	residence	1908	Intact craftsman bungalow identified in the reconnaissance survey, but did not meet eligibility standards.
220 W. Avenue 33	—	duplex	1922	Told by resident that these properties were associated with Lacy Estate or tract, but no associations were found in research.
214 W. Avenue 33	—	duplex	1922	
153 W. Avenue 34	—	metal shop	1929	Does not appear to have significant historical associations.
130 W. Avenue 34	—	residence	1924	Not a significant example of type or style; no historical associations.
140½ Avenue 34	—	residence	ca. 1925	Not a significant example of type or style; no historical associations.
1134 College	Lacy Manufacturing Company	metal shop	1891-1960	Too altered for listing.

Table B: Ineligible Properties (6Z)

Address	Historical Names	Historical Property Type	Year Built	Notes
1812 Darwin	—	residence	1924	Not a significant example of type or style; no historical associations.
1902 Darwin	—	residence	1910	Not a significant example of type or style; no historical associations.
2200 N. Humboldt	Fuller & Co Lacquer Paint	Factory	1937	Not a key facility for Fuller Paint Company.
2684 Lacy Street	National Battery Company	factory	1911–1970	Too altered for listing.
1100 N. Main Street	former neon sign factory	factory	1924–1955	Too altered for listing.
1667 and 1650 N Main Street (corner of Naud Street and Wilhardt)	—	machine shop/factory	1911–1953	No significant historical associations, not sufficiently intact or distinctive example of Daylight Factory.
1718 Albion Street; 1745–55 N. Main Street; 325 Avenue 16	—	trailer manufacturing	1912–1937	Too altered overall for listing, does not appear to have significant historical associations.
1615–1625 Naud Street	—	metal shop	1942–1949	Too altered for listing, does not appear to have significant historical associations.
1200–1220 N. Spring Street	Allison Coffee Co.	food processing plant	1910–1920	Company does not appear notable, no other historical associations.
1400–1426 N. Spring Street	JW MacMillan Electrical Lighting Supply	factory	1910	Too altered for listing.
136 N. San Fernando Road	National Wire and Cable Co.	metal shop	1951	Not a significant example of type or style; no historical associations.
154–162 N. San Fernando Road	—	residence and commercial	1915	Not a significant example of type or style; no historical associations.
208 San Fernando Road	Fuller Paint Co.	warehouse	1925	Now Alta Lofts. Too altered for listing.
221 San Fernando Road	—	commercial	1915	Too altered for listing.

Four of the 30 ineligible properties were assigned a 6L status code to recognize that, although they are not eligible for designation, they warrant consideration in the planning process (see Table C). In

three of the four cases, restoration to the period of significance may render these properties eligible for designation. In the case of Lawry’s California Center (now LA River Center and Gardens) sufficient scholarly perspective may develop in the future in support of its eligibility.

Table C: Ineligible Properties that Warrant Consideration in the Planning Process (6L)

Address	Historical Names	Historical Property Type	Year Built	Notes
308 Avenue 17	Four Square Gospel, Inc. Mexican Church	church	1938	Has been a Mexican Foursquare church for over 50 years, but significantly altered.
570 W. Avenue 26	Lawry’s CA Center	mixed use commercial/ industrial park	1954–1979	Remodeled in 1979, not enough time has passed to evaluate.
404 S. Avenue 20	First Baptist Italian Mission	church	1895–1924	Too altered for listing, but associated with the Italian immigrant community.
1711–1719 N. Spring Street	Carnation Co.	warehouse	1910–1916	Too altered for listing, not a key facility for Carnation. Part of the River Station Historic Landscape.

NON-ELIGIBLE PLANNING AREAS (6LQ)

The survey team identified two non-eligible conservation areas: the River Station Historic Landscape and the Albion Street Community Conservation Area. These areas are each composed of properties and non-parcel features that, when taken together, represent the historical land use and cultural values of the people that lived and worked there. While neither area has retained sufficient integrity to be eligible as a historic district or cultural landscape, the remaining features, spatial relationships, and community character warrant consideration in the planning process for any future projects in the area.

River Station Historic Vernacular Landscape

This landscape contains remnants of industrial development that followed the establishment of the historic Southern Pacific River Station in 1876. Its centerpiece is Los Angeles SHP (HCM #82). It includes several industrial buildings, including the Raphael Junction Block Building (HCM #872, includes related rail siding), the Standard Oil Company Sales and Maintenance Buildings, the Paper Company Factory on North Spring, and the Carnation Company Warehouse. Non-parcel resources that are part of this landscape include the hoof and wagon wheel imprints in front of 1418 North Spring Street, a granite swale in the median of Naud Street (east of Wilhardt), and a railroad spur alignment that runs behind the buildings facing Naud and Main Streets, opening to Wilhardt. Outside of the CASP survey area, the Capitol Milling Company and the section of the Zanja Madre north of the Cornfields are associated with this landscape as well.

Albion Street Community Planning Area

The Albion Street Community Conservation Area is part of the core area that historically represented the Italian immigrant community in Los Angeles. This area is a small part of a larger section of Los Angeles which extends to the Plaza, the area now known as Chinatown, and Lincoln Heights formed a nucleus where Italian families settled from the earliest days of the Pueblo through much of the 20th century. Italian and Mexican families worked in nearby rail yards and factories, lived in the residential blocks, and attended neighborhood schools like Albion Street School. The conservation area consists of the Chavez tract and neighboring residential blocks, neighborhood markets such as the Lanza Brothers Market and Garcia Brothers Market, churches such as the First Italian Baptist Church (now Centro Cristiano Internacional) and the Mexican Four Square Gospel (now Gethsemane Iglesia Cristiana Pentecostes), and the Albion Street School. The Albion Cottages and Milagro Market (HCM #442) are also part of this conservation area. The Albion Street Community Conservation Area was considered for inclusion with the Lincoln Heights HPOZ, but the survey team concluded that the physical separation presented by I-5 diminishes the neighborhood's sense of continuity with Lincoln Heights, and does not on its own represent significant themes in the Residential Development and Suburbanization Context.

RECOMMENDATIONS

All properties assigned a status code of 1–5 are considered to be “historical resources” for CEQA compliance purposes and City’s Cultural Heritage Ordinance. Those properties assigned a status code of 6DQ, 6Z, or 6L do not constitute “historic properties” (Section 106) or “historical resources” (CEQA) and require no further cultural resources considerations. Properties that were not identified for intensive-level survey were assigned a “7RQ” meaning they were identified in a SurveyLA Survey, but not evaluated. These properties did not appear to warrant intensive-level survey for the CASP planning and review process, but may need to be evaluated in connection with future projects.

Planning documents such as the CASP should guide future development toward preserving the area’s historic character through the preservation and/or rehabilitation of eligible resources. The CASP should also promote compatible infill construction that celebrates the historical themes prevalent in the CASP survey area, particularly the industrial character of the River Station and the Italian and Mexican heritage in the Albion Street Community.

APPENDIX A

SUMMARY OF FIGGS

I. INTRODUCTION TO SURVEYLA

In 2005, the City of Los Angeles entered into a multi-year grant agreement with the J. Paul Getty Trust to complete a citywide historic resources survey, a process of systematically identifying and gathering information on properties and neighborhoods that reflect Los Angeles' architectural, social and cultural history. The project managed by the staff of the Office of Historic Resources (OHR) within the Department of City Planning (DCP), which named this project SurveyLA (www.SurveyLA.com).

SurveyLA is first and foremost a planning tool. The information gathered during the surveys help shape decisions by policymakers, developers, urban planners, community organizations, and property owners. Survey findings also provide vast opportunities for public engagement and education in areas relating to curriculum development, heritage tourism, economic development, and marketing historic neighborhoods and properties.

The surveys identify and evaluate properties according to standardized criteria for listing in the National Register of Historic Places, California Register of Historical Resources, and for local designation as Historic Cultural Monuments and Historic Preservation Overlay Zones. However, no actual designation results directly from survey activity. Designation by the City of Los Angeles and nominations to the California or National Registers are separate processes which include property owner notification and public hearings.

SurveyLA gathers various types of information on potential historic resources throughout Los Angeles including construction and ownership history, architectural styles, reasons for significance, relevant evaluation criteria, and photographs. This information will be organized in a searchable database and made readily accessible to the public via the DCP's SurveyLA and ZIMAS websites. Once the database is launched it will be possible, for example, to search for all buildings designed by a particular architect or all properties associated with an ethnic group in a specific geographic area of Los Angeles.

During the Initiation Phase of SurveyLA (2006-2009), the OHR worked with the DCP's Systems and GIS Division, consultant teams, and staff of the California Office of Historic Preservation to develop and test survey tools and methods. SurveyLA methodology meets all accepted federal and state survey guidelines and standards and provides streamlined, cutting-edge approaches to identifying and evaluating historic resources. For these reasons, SurveyLA has gained national attention and is changing the way...

II. SURVEYLA FIELD SURVEY PHASING PLAN

The field survey phase of SurveyLA, the Implementation Phase, began in July 2010. The OHR developed a three-year plan for this phase, which was approved by SurveyLA's Advisory Committee in January 2009 and by the Cultural Heritage Commission in February 2009. As indicated in the plan (see pages 4-5), the field surveys parallel the DCP's New Community Plan program, to the extent possible. The 35 Community Plans serve as the Land Use Element of the City's General Plan, and guide and focus new development and investment in all Los Angeles communities. Coordinating SurveyLA with the New Community Plan program helps promote the OHR's key goal to integrate historic preservation more fully into the City's planning processes. It also offers key

opportunities to coordinate the SurveyLA public outreach and participation programs with New Community Plan outreach activities. SurveyLA's outreach to Certified Neighborhood Councils, historical societies, business groups and local residents may often proceed in tandem with the Department of City Planning's outreach to these same organizations. SurveyLA and public discussions of potential historic resources may be incorporated, wherever feasible, into focus groups and public workshops held in each Community Plan Area.

Completing the field surveys within three years requires that SurveyLA cover approximately one-third of Los Angeles each year. The Phasing Plan is designed to schedule the survey work to ensure a balanced and manageable workload for each year. The plan also maintains a balance of neighborhoods expected to have a high concentration of historic resources with neighborhoods expected to yield fewer potential resources.

SURVEYLA PHASING PLAN By Community Plan Area

Approximate parcel counts in each Community Plan area in parentheses

Year 1 Total Parcels in Year 1: 282,006

Palms-Mar Vista-Del Rey (22,015)
Harbor Gateway (7,790)
Wilmington-Harbor City (13,628)
South Los Angeles (50,722)
Southeast Los Angeles (46,198)
Central City North (2,920)
West Los Angeles (16,107)
Sunland-Tujunga-Shadow Hills-Lakeview Terrace-East La Tuna Canyon (23,945)
West Adams-Baldwin Hills-Leimert Park (because other surveys are concentrated in South LA) (37,509)
San Pedro (because other surveys are concentrated in Harbor) (17,803)
Hollywood (due to significant development pressure and concentration of historic resources) (43,369)

Year 2 Total Parcels in Year 2: 237,510

Sherman Oaks-Studio City-Toluca Lake-Cahuenga Pass (26,906)
North Hollywood-Valley Village (24,560)
Mission Hills-Panorama City-North Hills (20,285)
Arleta-Pacoima (17,152)
Canoga Park-West Hills-Winnetka-Woodland Hills (45,402)
Encino-Tarzana (20,822)
Brentwood-Pacific Palisades (21,298)
Bel Air-Beverly Crest (18,271)
Westchester-Playa del Rey (14,270)
Silver Lake-Echo Park-Elysian Valley (19,192)
Westlake (9,352)

Year 3 Total Parcels in Year 3: 302,515

Venice (11,333)
Sun Valley-La Tuna Canyon (17,841)
Van Nuys-North Sherman Oaks (26,063)
Chatsworth-Porter Ranch (22,853)
Northridge (14,166)
Northeast Los Angeles (65,578)
Westwood (5,279)
Reseda-West Van Nuys (22,719)
Granada Hills-Knollwood (18,061)
Sylmar (14,291)
Wilshire (38,056)
All Industrial Properties in all Community Plan Areas (46,006)
LAX (separate Community Plan – with LAWA) (269)

III. SURVEYLA TOOLS

SurveyLA tools include a citywide Historic Context Statement and customized mobile Field Guide Survey System. These tools, and the methodology developed for their use, are described briefly below.

A. SurveyLA Historic Context Statement (HCS)

A historic context statement is a narrative, technical document that provides a framework for completing historic resources surveys. The SurveyLA HCS uses the Multiple Property Documentation approach developed by the National Park Service. This approach organizes the themes, trends and patterns of history shared by properties into historic contexts, identifies and describes historic resources, or property types that represent the contexts, and provides specific standards to guide the evaluation of significance.

The SurveyLA HCS consists of nine broad contexts which cover the period from about 1850 to 1980 and are specific to the City of Los Angeles:

- Spanish and Mexican Colonial Era Settlement
- Pre-Annexation Communities of Los Angeles
- Residential Development & Suburbanization
- Commercial Development
- Industrial Development
- Institutional Development: Government & Private
- Architecture and Engineering
- The Entertainment Industry
- Cultural Landscapes

Each of the nine contexts is comprised of a number of themes and sub-themes which not only address important movements in Los Angeles architecture or distinct property types, but also focus on important topics in ethnic, social, and cultural history. For example, Institutional Development includes government

buildings as well as resources relating to social, cultural, political, and religious history and movements. The Entertainment Industry includes resources associated with the motion picture, recording, television and radio industries in addition to those associated with entertainment culture such as night clubs and restaurants. Within Residential Development and Suburbanization, the theme-relating to Multi-Family Residential Development deals with resources ranging from elegant high-rise apartments of the 1920s and 30s to the apartment types of the post-World War II era. Los Angeles' diverse ethnic and cultural history is reflected throughout the HCS and addresses topics such as the Civil Rights Movement, Deed Restriction and Segregation, and LGBT history.

The HCS not only identifies contexts and themes within which a property may be significant, but also includes "Eligibility Standards," which are specific physical and associative characteristics a property must have to convey its significance. For example, a property that is an excellent example of a Craftsman house must embody the physical characteristics of the Craftsman style. A residence associated with an important writer in Los Angeles, may not be significant architecturally, but must be directly associated with the persons productive career and retain the physical characteristics present during that time.

Developing a comprehensive HCS for a city as large, diverse, and complex as Los Angeles is an extreme challenge. Throughout the initiation phase, consultant teams and the OHR have worked together to develop the format and structure for the HCS. Using this framework, a team of over 40 historic preservation professionals, volunteers, and student interns have completed numerous themes, but others are still in development. And while context statements help guide survey work, they are also informed by the results of field work. The OHR, therefore, anticipates that the HCS will remain a "work in progress" as the field surveys progress over the next few years.

B. Field Guide Survey System (FiGSS)

The HCS framework has been used as the basis for developing the FiGSS, a custom mobile application designed for use in the field on tablet PCs. The FiGSS uses Geographic Information System (GIS) mapping software and is preloaded with maps and aerial photographs of survey areas, context statement eligibility standards, and information relating to designated, previously surveyed and potentially significant historic resources.

The FiGSS is unique in that it "translates" the components of the HCS into data fields so that surveyors can readily place a property within the appropriate context and theme by selecting from drop down lists. For example, when surveying a neighborhood school, a field surveyor may select the context "Institutional Development" and then the theme "Education" and the sub-theme "Education and Ethnic-Cultural Associations." A set of eligibility standards associated with this context/theme selection are then presented as a list of check boxes which the surveyors will select from as appropriate to determine if the property retains the physical and associative qualities needed to be an important example of its type. The FiGSS also allows surveyors to "flag" properties that require additional research or follow up.

The overall concept behind the FiGSS is to provide surveyors with the information they need in the field to identify and evaluate resources according to defined contexts and themes and in an efficient and consistent manner. The FiGSS is garnering attention from local, state and federal agencies and organizations for its potential to change the way historic resources surveys are completed.

IV. SURVEYLA METHODOLOGY

A. Survey Teams

The DCP is contracting with pre-qualified consultant firms specializing in historic preservation to complete SurveyLA.

- Consultants are deployed in the field in teams of two and multiple teams may be working in survey areas at any one time.
- At least one surveyor from each team of two must meet or exceed professional qualification standards in the field of historic preservation. Consultants meeting these professional standards are responsible for making historic resource evaluations.
- Consultants may enlist students and other volunteers with training and interest in the field of historic preservation, or specialized knowledge of geographic areas and contexts, to assist them with the field survey work.
- All consultants and volunteers receive classroom and field training from the DCP in the use of the FiGSS and SurveyLA methodology.

B. Field Survey Methods Summary

- SurveyLA identifies and evaluates properties and districts that are significant within the contexts developed for the HCS.
- Properties are evaluated in the field using the HCS in accordance with National Register of Historic Places and California Register of Historical Resources criteria as well as for local eligibility as potential City Historic-Cultural Monuments and Historic Preservation Overlay Zones.
- Surveys focus on identifying resources dating from 1850 to 1980.
- Information relating to properties of historic, social and cultural significance is pre-loaded in the FiGSS based on research completed for development of the HCS, pre-field research provided by interns and volunteers, and community input from SurveyLA's public participation program. This information appears as a GIS data layer on the FiGSS application.

- All surveys are completed from the public right-of-way (from vehicles or on foot as needed).
- Digital photographs are be taken of all surveyed properties.
- Field Surveys do not include:
 - Individual resources and historic districts (including HPOZs) that are already designated (federal, state, local). For individual resources, there may be some verification (updating) of existing conditions in the field where appropriate
 - Community Redevelopment Area (CRA) surveys conducted within the last five years
 - Historic Preservation Overlay Zone (HPOZ) surveys completed within the last five years (submitted to OHR as complete but not designated)

V. CRITERIA FOR EVALUATION

Properties surveyed for SurveyLA are evaluated for eligibility for listing in the National Register of Historic Places, California Register of Historical Resources and for local designation as City Historic-Cultural Monuments (HCM) or Historic Preservation Overlay Zones (HPOZ), commonly known as historic districts. A discussion of the criteria for each of these programs is summarized below.

A. National Register of Historic Places (NR)

The National Register of Historic Places is the Nation's official list of cultural resources worthy of preservation. According to *National Register Bulletin 15*, in order to qualify for the register, a resource must meet the criteria for evaluation, which are:

CRITERIA FOR EVALUATION:

The quality of significance in American history, architecture, archeology, engineering, and culture is present in districts, sites, buildings, structures, and objects that possess integrity of location, design, setting, materials, workmanship, feeling, and association, and:

- a) That are associated with events that have made a significant contribution to the broad patterns of our history; or
- b) That are associated with the lives of persons significant in our past; or
- c) That embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or
- d) That have yielded, or may be likely to yield, information important in prehistory or history.

CRITERIA CONSIDERATIONS:

Ordinarily cemeteries, birthplaces, or graves of historical figures, properties owned by religious institutions or used for religious purposes, structures that have been moved from their original locations, reconstructed historic buildings, properties primarily commemorative in nature, and properties that have achieved significance within the past 50 years shall not be considered eligible for the National Register. However, such properties will qualify if they are integral parts of districts that do meet the criteria or if they fall within the following categories:

- a) A religious property deriving primary significance from architectural or artistic distinction or historical importance; or
- b) A building or structure removed from its original location but which is significant primarily for architectural value, or which is the surviving structure most importantly associated with a historic person or event; or
- c) A birthplace or grave of a historical figure of outstanding importance if there is no appropriate site or building directly associated with his or her productive life; or
- d) A cemetery which derives its primary significance from graves of persons of transcendent importance, from age, from distinctive design features, or from association with historic events; or
- e) A reconstructed building when accurately executed in a suitable environment and presented in a dignified manner as part of a restoration master plan, and when no other building or structure with the same association has survived; or
- f) A property primarily commemorative in intent if design, age, tradition, or symbolic value has invested it with its own exceptional significance; or
- g) A property achieving significance within the past 50 years if it is of exceptional importance.

INTEGRITY:

Integrity is the ability of a property to convey its significance. To be listed in the National Register of Historic Places, a property must not only be shown to be significant under the National Register criteria, but it also must have integrity. The evaluation of integrity is sometimes a subjective judgment, but it must always be grounded in an understanding of a property's physical features and how they relate to its significance. Historic properties either retain integrity (this is, convey their significance) or they do not. Within the concept of integrity, the National Register criteria recognize seven aspects or qualities that, in various combinations, define integrity. To retain historic integrity a property will always possess several, and usually most, of the aspects. The retention of specific aspects of integrity is paramount for a property to convey its significance. Determining *which* of these aspects are most important to a particular property requires knowing why, where, and when the property is significant. The following

sections define the seven aspects and explain how they combine to produce integrity.

The Seven Aspects of Integrity:

- 1) **Location** is the place where the historic property was constructed or the place where the historic event occurred.
- 2) **Design** is the combination of elements that create the form, plan, space, structure, and style of a property.
- 3) **Setting** is the physical environment of a historic property.
- 4) **Materials** are the physical elements that were combined or deposited during a particular period of time and in a particular pattern or configuration to form a historic property.
- 5) **Workmanship** is the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory.
- 6) **Feeling** is a property's expression of the aesthetic or historic sense of a particular period of time.
- 7) **Association** is the direct link between an important historic event or person and a historic property.

B. California Register of Historical Resources (CR)

The California Register program encourages public recognition and protection of resources of architectural, historical, archeological and cultural significance, identifies historical resources for state and local planning purposes, determines eligibility for state historic preservation grant funding and affords certain protections under the California Environmental Quality Act. According to the California Office of Historic Preservation's *Technical Assistance Bulletin #3*, to become a historic resource, a site must be significant at the local, state, or national level under one or more of the following four criteria:

- 1) It is associated with events that have made a significant contribution to the broad patterns of local or regional history, or the cultural heritage of California or the United States; or
- 2) It is associated with the lives of persons important to local, California, or national history; or
- 3) It embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of a master or possesses high artistic values; or

- 4) It has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California, or the nation.

In addition to having significance, resources must have integrity for the period of significance. The period of significance is the date or span of time within which significant events transpired, or significant individuals made their important contributions. Integrity is the authenticity of a historical resource's physical identity as evidenced by the survival of characteristics or historic fabric that existed during the resource's period of significance. Alterations to a resource or changes in its use over time may have historical, cultural, or architectural significance. Simply, resources must retain enough of their historic character or appearance to be recognizable as historical resources, and to convey the reasons for their significance.

C. City of Los Angeles Historic Cultural Monument (HCM)

Sec. 22.171.8. Monument Designation Criteria

A proposed Monument may be designated by the City Council upon the recommendation of the Commission if it:

(A) Meets at least one of the following criteria:

- 1) Is identified with important events in the main currents of national, State or local history, or exemplifies significant contributions to the broad cultural, political, economic or social history of the nation, state, city, or community; or
- 2) Is associated with the lives of Historic Personages important to national, state, city, or local history; or
- 3) Embodies the distinctive characteristics of a style, type, period, or method of construction; or represents a notable work of a master designer, builder or architect whose genius influenced his or her age; or possesses high artistic values; or
- 4) Has yielded, or has the potential to yield, information important to the pre-history or history of the nation, state, city or community; or
- 5) Reflects or exemplifies the diversity of Los Angeles, including, but not limited to, the significant contributions of people of color, women, and workers; or stimulates and promotes a greater understanding of diversity, democracy, and freedom.

and

(B) Retains Integrity from its Period of Significance. Proposed Monuments do not need to retain all aspects of Integrity, but should retain a sufficient degree of those aspects of Integrity that relate to why it is significant. Flexibility shall be used in assessing Integrity, particularly when a proposed Monument is significant under designation criteria 1 or 2 above. A proposed Monument's deferred maintenance, dilapidated condition, or illegal alterations shall not, on their own, be construed to equate to a loss of Integrity.

D. Historic Preservation Overlay Zone (HPOZ)

A Historic Preservation Overlay Zone (HPOZ) is a significant concentration, linkage, or continuity of sites, buildings, structures, or objects united historically or aesthetically by plan or physical development. According to Section 12.20.3 of the City of Los Angeles Municipal Code, the criteria for the designation of an HPOZ are:

- 1) Adds to the Historic architectural qualities or Historic associations for which a property is significant because it was present during the period of significance, and possesses Historic integrity reflecting its character at that time; or
- 2) Owing to its unique location or singular physical characteristics, represents an established feature of the neighborhood, community or city; or
- 3) Retaining the building, structure, Landscaping, or Natural Feature, would contribute to the preservation and protection of a Historic place or area of Historic interest in the City.

E. SurveyLA Evaluations

The California State Office of Historic Preservation has developed California Register Status Codes as a standardized system for classifying historical resources in the State's Historic Resources Inventory. These Status Codes are used statewide and are assigned to properties and districts by field surveyors as part of the survey process.

Field surveyors will apply the following CHR Status Codes when evaluating properties for SurveyLA. A property may have more than one Status Code:

3S – Appears eligible for National Register as an individual property through survey evaluation

3CS – Appears eligible for California Register as an individual property through survey evaluation

5S3 – Appears to be individually eligible for local listing or designation through survey evaluation

6L – Property identified through the SurveyLA process as ineligible for National Register, California Register or local designation; may warrant special consideration for local planning

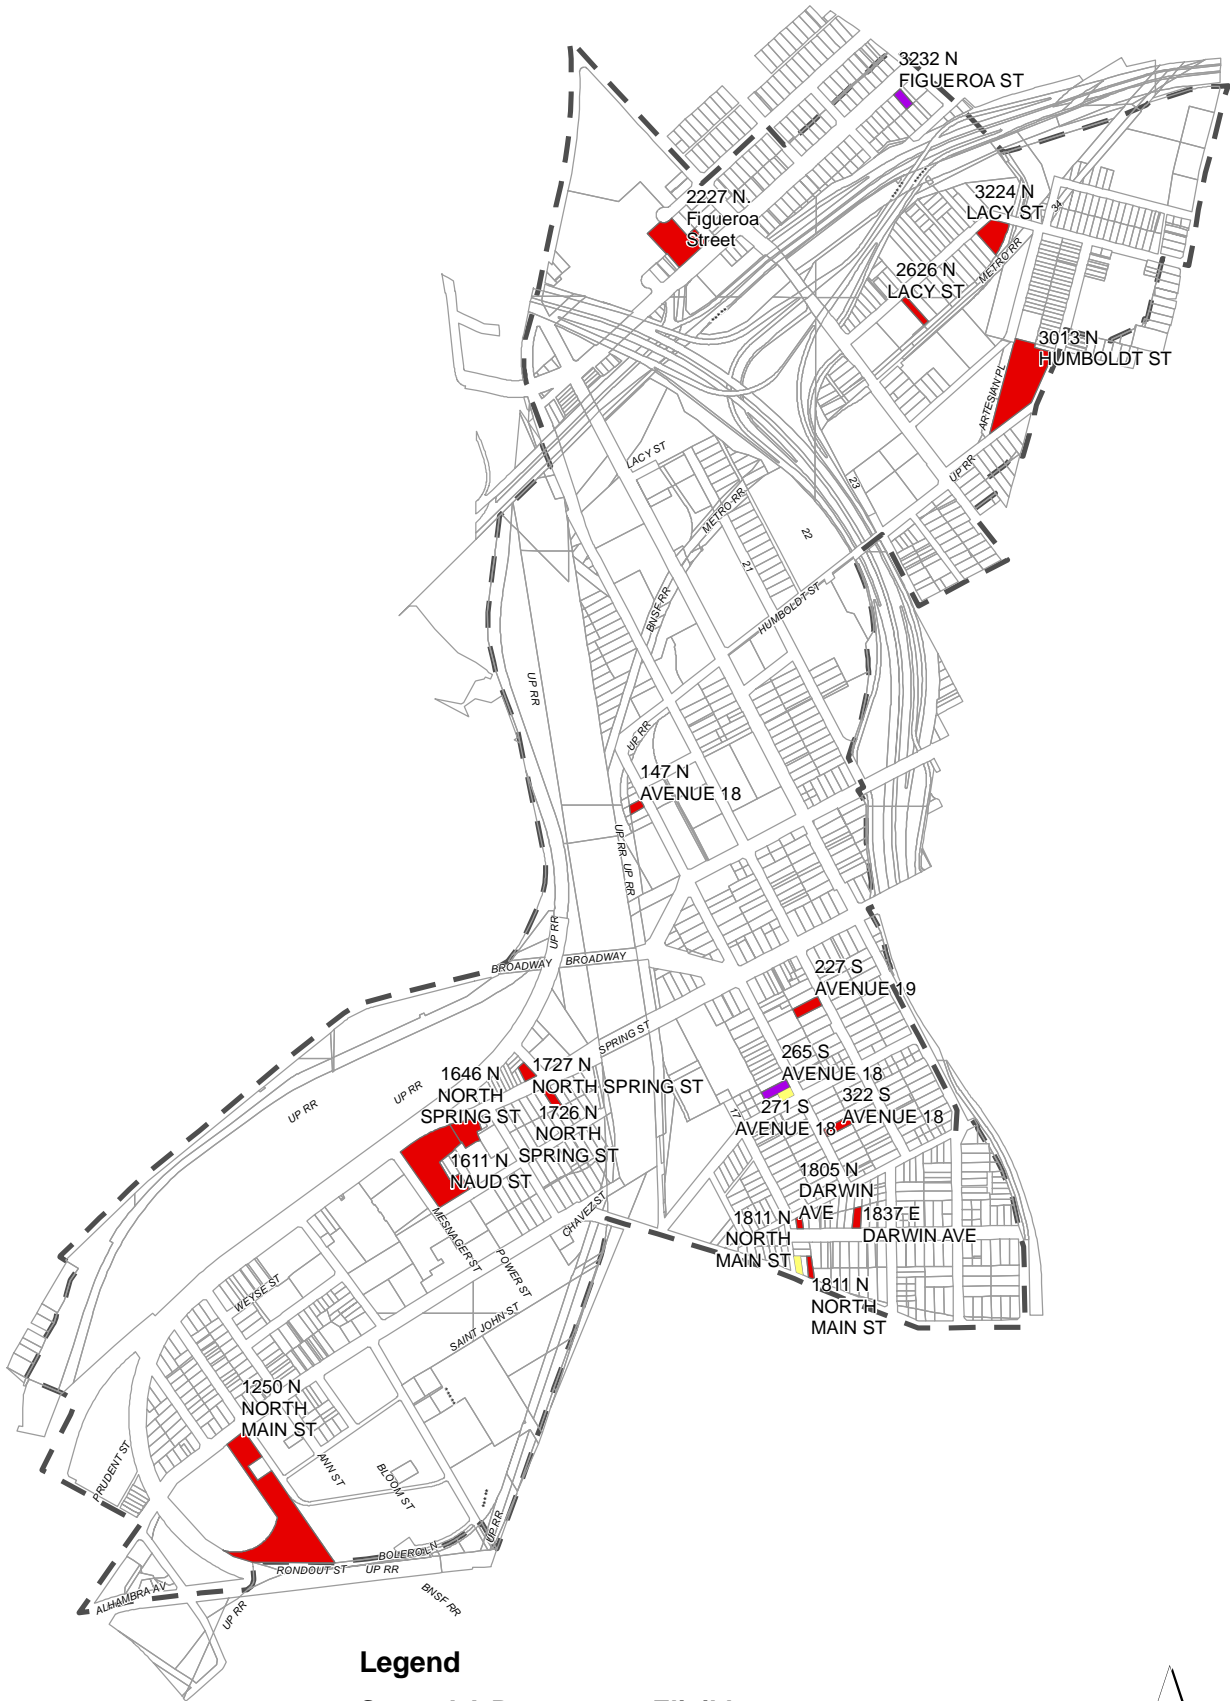

6LQ – Determined ineligible for local listing or designation as a historic district through a survey process; neighborhood or area may warrant special consideration for local planning.

6Z – Found ineligible for National Register, California Register or local designation through survey evaluation

7RQ – Individual property identified in a SurveyLA Survey – Not evaluated

7SQ – Individual property assessed for significance in accordance with the SurveyLA Multiple Property Documentation approach, but does not meet eligibility standards.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

This property appears eligible for the National and California Registers and for designation as an HCM under Criterion C/3/3 as an excellent example of a Quonset Hut, an increasingly rare property type developed to provide mass temporary workspace and housing in the World War II era. The 1920-1951 Sanborn map identifies its early use as a "sheet metal shop." The Quonset hut is a variant of the c. 1916, British-designed Nissen hut. It was named for the Naval Air Station at Quonset Point, Rhode Island, where it was first designed for large-scale production in the United States in 1941. Built to serve as temporary, flexible military facilities for World War II, the Quonset hut bears a distinctive form: a simple half-cylinder typically constructed of a wood or steel rib-framing system with corrugated metal sheathing. It was ideal for wartime because it was both inexpensive and efficient to build, and could be easily moved to accommodate a variety of uses.

Continuation

Update

B10. Statement of Significance (continued): World War II in 1945, there was a nationwide housing shortage as veterans returned from war in large numbers; Quonset huts served as one answer to accommodate the population. Given their flexible interior layout and the low cost to move and erect, it was not uncommon for individual Quonset huts to be purchased and appropriated for a variety of uses, including industrial and commercial facilities. Not all Quonset huts were designed for military activities and then reused; some companies advertised their effectiveness as an efficient, flexible space for a wide variety of home, warehouse, commercial, and other uses, and sold them for those purposes. An important symbol of both the wartime and postwar eras, the Quonset hut is a rapidly disappearing property type. Despite its simple, utilitarian design, research and existing cultural resources evaluations support the notion that Quonset huts are of nationwide importance and extant examples may be eligible for listing in the National Register under Criterion C for their architecture.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

This property appears eligible for the California Register and for designation as an HCM under Criterion C/3/3 as an excellent example of Folk Victorian architecture. Due to the replacement of the original wood windows with vinyl (albeit in their original openings) the residence does not retain sufficient integrity for the National Register. It does, however, still retain sufficient integrity to appear eligible for the California Register and for designation as an LAHCM. Folk Victorian styled residences were popular in the late 19th and early 20th centuries as an affordable way to decorate otherwise modest homes with the elaborate decorative styles of the Victorian Era. Generally chosen from pattern books and mass-produced, the ornamentation on Folk Victorian homes demonstrate how industrialization of the building industry boadened and popularized what would otherwise have been prohibitively expensive design for most people. Hundreds of these residences were built during the...(continued on next page)

Period of Significance: 1937 Property Type: School Applicable Criteria: A/1/1

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

This property appears eligible for the National and California Registers and for designation as an HCM under Criterion A/1/1 because it significantly represents the public response to early earthquake awareness within the LAUSD school system. Albion Street School is an excellent example of an elementary school built after the 1933 Long Beach Earthquake, a period in which the widespread quake-caused destruction of unreinforced schools led to the development of stricter standards for school construction. This pressure to rebuild schools coupled with the infusion of federal funding from the Works Progress Administration (WPA) produced an extensive collection of Art Deco, Streamline Moderne, and PWA Moderne schools in the Los Angeles Basin. Albion Street School has retained several key buildings from the 1937 Moderne-styled campus.

Located in the Chavez Tract and known as Hayes Street School until 1903 and then Nineteenth Avenue School (to accompany a change in street names) until...(continued on next page)

B10. Statement of Significance (continued): 1917, the Albion Street School was one of the earliest school sites in the City of Los Angeles. Its first structure was a wood building constructed ca. 1891 (demolished 1968). A 1968 LA Times article identifies this structure as the oldest L.A. school building and a "gleaming wood-frame school building with...hand-carved gingerbread trimming, big double doors and broad front porch." It had five rooms and was torn down for replacement with a "modern two-story stucco building--with air conditioning." While the building was in 1968 found to be structurally sound, it had pipe and wiring issues and had, "gone about as far as it can go" ("Oldest L.A. School Building Scheduled to Be Demolished," LA Times, 26 May 1968, EB). The site served as the center of its neighborhood and, according to the United States Census, originally enrolled children of Italian and Mexican immigrants who worked in nearby railyards. The existing buildings were constructed in 1937. According to a brief, undated school history, "The Albion community is identified with the early history of Los Angeles. It is within the "five minute call zone" of the Southern Pacific shops, where many of the parents are employed. It is a compact community... Most of the children are American born, but their racial backgrounds are Italian and Mexican. The school is a neighborhood center..." ("History fo the School," Albion Street School, California Index, Los Angeles Public Library, undated). In 1938, the school was part of a program called American Friends Service Committee wherein college and graduate-level students would engage in a "volunteer work camp" at the Albion Street School to learn more about the community and "study the perplexities of American life" ("Seeking Understanding of Industrial Changes," LA Times, 25 Jul 1938, 10).

Period of Significance: 1907 Property Type: Residential Applicable Criteria: C/3/3

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

The grouping of three early residences located on one parcel appears eligible for the National and California Registers and for designation as an HCM under Criterion C/3/3 as a unique example of Folk Victorian as applied to a multifamily property. Folk Victorian styled residences were popular in the late 19th and early 20th centuries as an affordable way to decorate otherwise modest homes with the elaborate decorative styles of the Victorian Era. Generally chosen from pattern books and mass-produced, the ornamentation on Folk Victorian homes demonstrate how industrialization of the building industry boadened and popularized what would otherwise have been prohibitively expensive design for most people. Hundreds of these residences were built during the residential booms in the 1880s and 1900s, but intact examples have since become increasingly rare. While these residences represent a modest example of the style, together they represent an application of the style to a multifamily...(continued on next page)

The William Mead Homes is significant as one fo the first government housing projects in Los Angeles and is also significant for its Pre-War Modern architecture. Originally known as Ann Street project, William Mead Homes was constructed c. 1942 and partially occupied by 1943. It is located in the industrial area east of Downtown, situated on 15-acre tract located north of the Union Pacific Rail Line and bounded by E. Elmyra St and Bolero Ln to the south and west and Leroy St and N. Main St to the east and north. It includes multiple standardized, rectangular and L-shaped apartment buildings configured around communal and outdoor spaces, a leasing office and the Ann Street Elementary School. It was designed to accommodate 449 families and its estimated cost of construction in 1940 was \$2,100,000 ("One Housing Project Wins," LA Times, 13 Dec 1940). In 1941, President Roosevelt approved a \$1,862,100 U.S. Housing Authority loan to the City of Los Angeles for construction of the project, covering about 90 percent of the estimated cost of construction. The land for the project was purchased by the Los Angeles Housing Authority from Consolidated Steel Corporation for \$20,000 an acre. Over 100 dwellings were demolished to make way for the project ("President Approves Loan for Slum Clearance Here," LA Times, 13 March 1941). The early nickname for the area, "Dog Town," comes from the site's historical proximity to a dog pound.

*B10. Significance: Area: Los Angeles Theme: Googie 1935-1969

Period of Significance: 1968 Property Type: Restaurant Applicable Criteria: C/3/3

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

This property appears eligible for the National and California Registers and for designation as an HCM under Criterion C/3/3 as an excellent example of the Googie style of architecture, a whimsical and visually arresting style applied to retail buildings in the post-World War II era. It was designed by Armet and Davis, an architecture firm responsible for design of many prominent Googie restaurants throughout Southern California. Googie buildings were designed to attract passing motorists and create a memorable brand for the store, and it was common for casual restaurants and coffee shops in the 1950s and 1960s.

The property was constructed in 1968 as part of the chain Prebles Restaurants. Based in Pasadena and owned by Richard S. Preble, the chain originally included locations in South Pasadena and Alhambra, opened in 1965, comprising 85 seats and 4,100 square feet, both of which had designs identical to the Figueroa location. ('Prebles Chain Begins Expansion Program,' LA Times,...(continued on next page)

B10. Statement of Significance (continued): 24 May 1968). A major franchising and expansion program in the 1960s included new Prebles drive-through restaurants and coffee shops in Pasadena, La Crescenta, Anaheim, Cardiff-By-The-Sea, and San Diego ('Display Ad 24,' LA Times, 18 March 1966)

The 2227 N Figueroa location was designed by architecture firm Arnet & Davis. Joseph Illig & Sons, Inc. served as developer and contractor. Formed by Louis Arnet and Eldon Davis in 1947, the Arnet & Davis firm was known primarily for designs of coffee shops in Southern California. Notable works include the Holiday Bowl on Crenshaw Boulevard, Johnie's Coffee Shop at Wilshire Boulevard and Fairfax Avenue, Pann's Restaurant in Inglewood, and the original Norm's in West Hollywood. Their restaurant designs were defined by slanted roofs, terrazzo floors, driftstone walls, and exposed stainless steel kitchens, which were designed to allow for quick delivery of food while keeping patrons entertained. Restaurants like the Figueroa location frequently featured cantilevered stools, with bases that angled out from counters, which could be swept under while seats were occupied by customers. To evoke warmth, yellow, red, and orange were frequently used colors on their buildings ('You Can Still Get a Cup of Nostalgia at L.A.'s...: Coffee Shops Modern" by Amy Wallace, LA Times, 1 April 1993).

Period of Significance: 1928 Property Type: Theater Applicable Criteria: HCM 1

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

The former Arroyo Theater has lost much of its original integrity, but in the context of the neighborhood is a rare property type, a pre-World War II neighborhood theater. It has retained its attractive Churrigueresque frieze and essential form. For this reason, it appears eligible for HCM status in spite of appearing ineligible for National and California Registers due to a lack of integrity.

Affiliated with Fox West Coast Theaters, this building was called the Arroyo Theater. In December 1932, the theater collaborated with the Marcal, Marquis, Larchmont, and Western theaters to host a holiday event during which movie screenings were hosted for children (Display ad, LA Times, 22 June 1936, A16; "Youngsters Hail Times Film Party," LA Times, 30 Dec 1932, A2). An LA Times 1936 movie listing includes the theater located at 3232 N Figueroa. There is an advertisement in the LA Times for the Arroyo Theater as late as 1955. The theater was used until at least 1956, according to...(continued on next page)

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

This property appears eligible for the National and California Registers and for designation as an HCM under Criterion A/1/1 and B/2/2 for its association with Isadore Familian and Price Pfister Brass Manufacturing Co, an important manufacturer of brass plumbing fixtures and faucets. Isadore Familian (1911-2002) was an important Los Angeles industrialist, philanthropist and Jewish Community leader. According to his LA Times obituary, Familian was born in Chicago to Russian immigrant parents and came to Los Angeles in 1913. He became partner in his family business in 1941, at which time the business purchased Price Pfister Brass Manufacturing Company. Under Mr. Familian's leadership, the Price Pfister plant expanded from 50 employees to 1,500 and became one of the largest manufacturers of brass bath and kitchen hardware in the world. In 1969, Price- Pfister became a subsidiary of Norris Industries and Mr. Familian continued as chairman of the board. Since the 1947 founding...(continued on next page)

B10. Statement of Significance (continued): of the University of Judaism in Hollywood, Mr. Familian served on its board of directors and various committees. In the 1970s, he spearheaded the fund-raising campaign to build the university's 28-acre campus, which is named after him and his first wife, Sunny, who died in 1979. Familian also made important contributions to the City of Hope and served as chairman of the manufacturing committee for the March of Dimes in 1954 ("Familian Heads Polio Drive Industry Group," LA Times, 17 Dec 1954, 21). Price Pfister moved to an expanded plant in Pacoima in 1965, and remained there until 1997, when parent company Black and Decker closed the plant and moved operations to Mexico.

The building industry emerged to support the exponential residential and commercial growth in Los Angeles in the late 19th and early 20th centuries, providing the raw materials, carpentry, and furnishings needed to create the City's extensive built environment. Very few, if any properties are extant that represent this critical component of Los Angeles community development. The CASP Area is unique in the City because it contains a concentration of metal shops from the early 20th century, including the former Price Pfister Brass Manufacturing Company, the California Steel and Cornice Company, and smaller steel and metal shops on Avenue 33 and on Naud Street.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

This property appears eligible for the National and California Registers and for designation as an HCM under Criterion C/3/3 as an excellent example of the Daylight Factory within the context of industrial design and engineering. Prior to the widespread use of electricity, controlling and capitalizing on daylight was a necessary component of the design of manufacturing buildings. Daylight was brought into the building using a variety of methods, including expansive industrial sash windows, orientation of intensive hand work next to the exterior walls of the building, skylights, and specialized roof forms to bring light into the interior. This property is an excellent example of a daylight factory, with multiple daylight features including expansive industrial sash and sawtooth rooflines.

In 1908 Talbert-Whitmroe Co developed a factory at 2360 Lacy St for manufacture of shade cloth and window shades. By 1921, the factory had become the largest shade cloth producer west of Chicago,...(continued on next page)

This property appears eligible for the National and California Registers and for designation as an HCM under Criterion A/1/1 because it is a key factory for the Cannon Electric Company, a significant manufacturer in Los Angeles industrial history. According to a 1941 LA Times article, Cannon was at the time the world's largest exclusive manufacturer of electrical cable connectors (Cannon Plugs) in 1941 and that the company had developed from a 2-man specialty shop into an organization supplying Electrical Signal Systems to such institutions as the Los Angeles Stock Exchange and Los Angeles County General Hospital, and experimental switchboards to scores of Southland schools. By 1941, the company was creating the greatest variety of cable connector fittings provided by any manufacturer ("Display Ad 22," LA Times, 2 Jan 1941, A24). Property meets most eligibility standards for the property sub-type. This property is significant as the last remaining building from a key factory for...(continued on next page)

*B10. Significance: Area: Los Angeles Theme: Industrial Engineering/Design 1887-1940

Period of Significance: 1924-1954 Property Type: Industrial Applicable Criteria: C/3/3

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

This property appears eligible for the National and California Registers and for designation as an HCM under Criterion C/3/3 as an excellent example of an industrial loft. Although some glazing and sash is missing, it still retains sufficient integrity to convey its significance. Shown in Sanborn maps (corrected through 1951) as a site used for Kelite Products, Inc., a manufacturer of specialized chemical compositions and equipment for industrial cleaning and metal treating, the site contains three buildings: Plant No's 1-3, all of which are extant. Plant No. 1, located at the corner of E. Elmyra and N. Main Streets, is the primary building, composed in an industrial/utilitarian style with elements of Art Deco. In 1966, Keylite Products Inc. had plants in L.A., Chicago, and Berkeley Heights, New Jersey. In the year ended Jan 31, 1966, it had sales of \$4.5 million and earnings of \$325,000 ("Boards Agree on Acquisition of L.A. Firm", LA Times, 11 Feb 1966, B16).

Update Status: Retains Integrity

The Department of Water and Power Main Street Facility is significant as an early power station for the Department of Water and Power that played an important role in support of development of the City of Los Angeles. It is located on a triangular-shaped site containing multiple buildings and bounded by Main and Leroy Streets to the north and west and the Union Pacific Rail Road to the east and south. The early DWP site shown in Sanborn maps (corrected through 1951) include such buildings as Transformer House No 1 (1923 and 1918); Electrical Manintenance building (no date); General Warehouse (1923 and 1940); General Repair Shop (1925); Test Laboratory (1916); Outdoor Transformers (no date) and other ancillary buildings. Unable to confirm from public right-of-way whether all buildings listed are extant and if they all retain integrity. Site currently contains large collection of outdoor transformers at corner of Main St and the UPRR.

*B10. Significance: Area: Los Angeles Theme: ; Early Neighborhood Commercial Development 1880-1930

Period of Significance: 1926 Property Type: Commercial Applicable Criteria: A/1/1, HCM 5

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

The Lanza Brothers Market appears eligible for the National and California Registers and for HCM designation under Criterion A/1/1 because it is a rare intact commercial building associated with the Italian immigrant community, which has its roots in the earliest days of the Pueblo and continues to be active today. The building and associated residence was operated by the Lanza and Bruno families from the early 1920s through the early 2000s. In addition, the property appears to be eligible for designation as an HCM under Criterion 5 because it reflects the diversity of Los Angeles history as a physical representative of the City's Italian heritage.

Los Angeles City Directories starting as early as 1923 locate the Lanza Family at 1801 N Main St, listing Frank, a sheet metal worker, John (no occupation given), Joseph, a sheet metal worker, and Tony A., a sheet metal worker, as residing at 1801 N. Main. According to the 1930 United States Census, John Lanza was born in Italy to...(continued on next page)

B10. Statement of Significance (continued): Italian parents c. 1866 and immigrated to the United States in 1898. He was recorded in the 1930 U.S. Census as residing at 1801 N Main at the age of 64 where he lived with his wife, Phyllis (age 54; born in Italy), daughter, Margaret Bruno (age 21; born in Texas), son-in-law Nick Bruno (age 25; born in Italy), and grandchildren Sam, John, Rosala and Rosie. The 1930 U.S. Census also includes other Lanza family members residing on the property. Head of household, Frank Lanza (age 29; born in Italy) and his wife Jenny (age 21; born in Italy) resided at 1801 1/2 N. Main with their children Johnny and Phyllis. Frank Lanza was a carpenter in a railroad shop at the time. At 1805 N. Main, head of household Phillip Lanza (age 28; born in Italy) resided with his wife Elizabeth (age 20; born in Colorado). Phillip Lanza was a builder of railroad cars at the time. At 1807 N. Main, head of household Anthony Lanza (age 26; born in Alabama) resided with his wife Cornelia (age 25; born in Italy) and their son, John. Anthony Lanza was a grocery merchant at the time. Census records indicate that while John and Phyllis Lanza lived in Los Angeles in the 1930s, they lived in southern states, likely including Texas and Alabama, and possibly also Louisiana, after immigrating to the U.S. and prior to moving to Los Angeles.

The 1927 Los Angeles City Directories also associate the property with Mary Millone, a grocer at 1803 N Main, and John Millone, who worked as a truck builder; the couple resided at 1706 Pomeroy Ave at the time. In addition, Bruno Pete meats is listed as tenant of 1803 N Main. The connection between the Lanza and Bruno names likely starts with Margaret Lanza's marriage to Nick Bruno (Margaret was the Texas-born daughter of John and Phyllis Lanza). The Millone connection is, however, unclear. It is possible Mary Millone was simply a worker at that location, or was related to the Lanza or Bruno Families in a manner that has not been identified; it is also possible the Millone family had a small shop in the building, since the building contains three storefront entrances (and could have contained three businesses). Anthony Lanza and wife Cornelia are listed as grocers at 1803 N Main and residing at 1801 1/2 N Main in the 1942 LA City Directory. The Lanza Bros Grocery is located at 1803 N Main in the 1956 LA City Directory; Anthony Lanza still occupies 1801 1/2 N Main; and 1807 N. Main is identified as Jerry G Barroy dry goods in the same year.

A 2000 Los Angeles Times article written by the son-in-law of Lanza Family member Gloria Worsham, who owned the property with her brothers Anthony and Louis Lanza for many years, notes that the site housed generations of Lanzas since the 1920s in the seven houses directly behind the store (not all of which are necessarily on the APN listed above; it is unclear exactly which houses are associated with the Lanza family). The author also notes, "My wife's family still owns most of the city block where the store sits, and her mother was brought up in the family compound that consists of the seven houses directly behind the store. But the family moved away long ago, Gloria and Anthony heading to the suburbs of San Gabriel a few miles away, Louis a little closer in Silver Lake. The Lanza Brothers market remained behind, however, and has served the neighborhood for 80 years." The author further notes, "When the [store opened] in the 1920s, [it was] a working-class neighborhood. In a time before supermarkets, it was the place where the Italian immigrants would buy fresh groceries on their way home from the nearby rail yards and factories. People would come to talk, buy stamps and money orders, and have a feeling of home and community in a strange new land." The article concludes that due to frequent break-ins and robberies in recent years, the Lanza family has vacated some or all of the site (Rick Garcia, 'Sunset in Lincoln Heights,' Los Angeles Times, 8 Oct. 2000). Current on-line reviews of the market indicate that it is being run by Korean immigrants.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

This property appears eligible for the National and California Registers and for designation as an HCM under Criterion C/3/3 as an excellent example of Folk Victorian architecture. Folk Victorian styled residences were popular in the late 19th and early 20th centuries as an affordable way to decorate otherwise modest homes with the elaborate decorative styles of the Victorian Era. Generally chosen from pattern books and mass-produced, the ornamentation on Folk Victorian homes demonstrate how industrialization of the building industry boadened and popularized what would otherwise have been prohibitively expensive design for most people. Hundreds of these residences were built during the residential booms in the 1880s and 1900s, but intact examples have since become increasingly rare. This residence has several character-defining features of the style as applied to a hipped-roof cottage, including a full-width front porch with decorative spindles and spandrels, and boxed eaves. It...(continued on next page)

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

This property appears eligible for the National and California Registers and for designation as an HCM under Criterion A/1/1 as a key factory of the California Steel and Cornice Co., an important steel fabricator that made steel for the Case Study House program and Standard Oil Company. A 1939 Los Angeles Times ad also credits the company for providing steel for the I.Magnin & Co. store constructed at the intersection of Wilshire Boulevard and New Hampshire Avenue.

The building industry emerged to support the exponential residential and commercial growth in Los Angeles in the late 19th and early 20th centuries, providing the raw materials, carpentry, and furnishings needed to create the City's extensive built environment. Very few, if any properties are extant that represent this critical component of Los Angeles community development. The CASP Area is unique in the City because it contains a concentration of metal shops from the early 20th century, including the former Price...(continued on next page)

Period of Significance: 1925 Property Type: Industrial Applicable Criteria: C/3/3

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

This property appears eligible for the National and California Registers and for designation as an HCM under Criterion C/3/3 as an excellent example of a daylight factory because it combines the important elements of a daylight factory with an architecturally distinct façade. Prior to the widespread use of electricity, controlling and capitalizing on daylight was a necessary component of the design of manufacturing buildings. Daylight was brought into the building using a variety of methods, including expansive industrial sash windows, orientation of intensive hand work next to the exterior walls of the building, skylights, and specialized roof forms to bring light into the interior.

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

The building located at 1727 N. Spring St appears eligible for the National and California Registers and for designation as an HCM under Criterion A/1/1 for its association with Standard Oil Company of California, as well as for its association with the Womens Rights Movement. Originally designed in 1914 as a sales department office and industrial facility for Standard Oil Company of California, the building retains integrity from its date of construction. Standard Oil Company was founded by John D. Rockefeller and was broken up in the U.S. Supreme Court antitrust decision in 1911. Standard Oil Company of California was a successor company resulting from that break up. It played an important role in Citywide development and later became Chevron Corporation.

In 1975 the building reopened by the Feminist Studio Workshop (FSW) organization as "The Woman's Building & Women's Graphic Center," home of the FSW, Sisterhood Bookstore, Olivia Records, Women's Graphic Center, Women's...(continued on next page)

Continuation

Update

B10. Statement of Significance (continued): Switchboard, Canis Gallery, a cafe, open gallery and performance spaces and feminist therapists ("About Women," LA Times, 7 Dec 1975, E4). A center supporting the creative achievements of women, its archives are currently held at the Smithsonian and Getty, among other locations. The Woman's Building & Women's Graphic Center was at this location until 1991. It was assessed for significance for its association with Judy Chicago, founder of the Feminist Art Program at Fresno State College and co-founder of Feminist Art Program at CalArts, and, finally, cofounder of the FSW, the group that started the first Woman's Building at Choinard Art Institute (743 S Grandview) in 1973. Chicago left Feminist Studio Workshop Staff in 1974, prior to FSW's move to the 1727 N Spring St location. Since she left the organization prior to its occupation of 1727 N Spring, the building isn't significant for its association with her. Note that while references to the building alternate between calling it "Woman's Building" and "Women's Building," a 1980s photo of the building shows that its facade signage read: "The Woman's Building & Women's Graphic Center."

(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)

This property appears eligible for the National and California Registers and for designation as an HCM under Criterion A/1/1 as a key facility for the Standard Oil Company of California. It was an early office and auto repair/machine shop for Standard Oil Company of CA, a successor company of Standard Oil that played an important role in citywide development, later becoming Chevron Corp. Note that this parcel includes the small office building located just below the Spring Street Bridge.

Oil exploration and processing is a theme that has had a significant impact on the City, from fueling emerging industries in the early 20th century to financing the construction of fantastic residential and commercial architecture. Unfortunately, there are very few industrial properties that strongly represent this theme. There are a few examples in the CASP area, including a former Standard Oil Company office and warehouse, and Standard Oil maintenance facilities across the street.

207523003	1/10	LOS ANGELES, CALIFORNIA	

**TABLE 1 – SELECTED REDEVELOPMENT PROPERTIES ASSESSED
CORNFIELD ARROYO SECO SPECIFIC PLAN AREA, LOS ANGELES, CALIFORNIA**

Rank 1 - (red on Figure 2) meaning the property has known unresolved environmental issues, an open regulatory agency case. Ranking of 1 was further subdivided into 1A, which includes those properties where no obvious action is being taken (and no responsible party [RP] is known, based on reviewed information), and 1B which includes those properties where action is being taken by an identified RP or through a voluntary cleanup.

Rank 2 - (orange) meaning the property has had environmental concerns in the past, but there is a potential for further issues in the future, and thus further assessment is recommended. In some cases these sites may have received a regulatory closure that did not address all potential issues.

Rank 3 - (yellow) meaning the property has active permits (typically underground storage tanks [USTs], or hazardous waste permits) and/or known historic uses that have a potential for causing impact.

Rank 4 - (green) meaning the property has no significant known environmental issues, based on the information readily available.

SITE NUMBER	ADDRESS	ASSESSOR PARCEL NUMBER	GEOTRACKER NOTES (Regional Water Quality Control Board [RWQCB])	ENVIROSTOR NOTES (Department of Toxic Substances Control [DTSC])	FIRST SEARCH REVIEW NOTES (Compilation of Databases)	SIDEWALK OBSERVATION FOR RECs	RANK	RANK REASONING	RECOMMENDATIONS
1	1000 NORTH MAIN STREET	5409009010	Nothing found for this site.	Nothing found for this site.	The site has hazardous waste permits.	The site is currently used as a recycling center. There are railroad tracks on site.	3	(3) Permits are an indication of possible impacts.	Additional research, site inspection - Review historic info.
2	1001 NORTH MAIN STREET	5409007001	Nothing found for this site.	Nothing found for this site.	The site listed as a hazardous waste generator as Biner Ellison.	Unknown occupants; a sign reading Fu Yuan International was observed on the side of the building (facing 109 West College Street). No hazardous materials were observed from the street. Fu Yuan International is a manufacturer of art supplies; unclear if manufacturing occurred at this site.	3	(3) Manufacturing operations are potential sources of impacts.	Additional research on current and historic uses of site.
3	130 WEST ELMYRA STREET	5409006057	Nothing found for this site.	Nothing found for this site.	The site listed as a hazardous waste generator as Kim Phuoc Jewelry.	The site is currently occupied by KP Inc, a jewelry manufacturer for unidentified uses.	3	(3) Manufacturing operations are potential sources of impacts.	Additional research on current and historic uses of site.
4	1209 NORTH MAIN STREET	5409006048	Nothing found for this site.	Nothing found for this site.	Historic UST (inactive); site listed as Chevron USA gas station as of 1994.	The site is currently occupied by "Arts of Self Defense" studio and "Neon Light and Novelty" custom gifts. No other information was found on the reported former association of the site with Chevron.	3	(3) Historic uses might have impacted the site. Possibly, formerly used as a gasoline station.	Research the past uses of the site. Reverse Directory, Chain of Title, Aerial Photo Review.
5	1250 NORTH MAIN STREET	5409010032	The site was owned Allied Kelite. The lead agency is the Los Angeles Regional Water Quality Control Board (RWQCB), but DTSC is also providing oversight.	The site is referred to as Witco/Allied Kelite Division. The site is listed as overseen by DTSC under the VCP. The site status is No Further Action (NFA) as of October 1995. The site was historically used for manufacturing, chemical usage, and metal finishing. The contaminants of concern are metals and VOCs. The media affected at the site are soil vapor, soil, and groundwater ("other than drinking water). Groundwater sampling has been conducted at the site. (A copy of the Preliminary Endangerment Assessment (PEA) Report dated October 1995 for this site is available in the interactive Figure 2 on the CD.)	The site was used for blending and formulation of liquid and solid chemical compounds and as a metal finishing plant. Soil vapor, groundwater, and soil are impacted by VOCs and metals. An NFA for soil was granted in October 1995 from the DTSC. Groundwater is still impacted from the site and off site sources. Former site uses are for electroplating, plating, polishing, anodizing and coloring, industrial machine manufacturing, and miscellaneous chemical use and manufacturing.	Former occupants Kelite, Witco Allied Kelite are no longer active at this site, which is an abandoned building. Kelite Allied Witco was purchased by MacDermid Corp. in 1994.	1	(1B) Known releases at the site, NFA granted. Groundwater still impacted.	Assess reasons for the NFA. Identify current RP (likely MacDermid) See if the impacts have been delineated and/or cleaned up. Track down groundwater and soil sample reports. The available report in Geotracker is a PEA agreement with the Department of Toxic Substances Control (DTSC). Review DTSC, Los Angeles Regional Water Quality Control Board (LARWQCB) and City of Los Angeles Fire Department (LAFD) files. Potential Phase II or request further information from Responsible Party (RP).
6	1430 BOLERO LANE	5409012903	The site is the Burlington Northern Santa Fe (BNSF) Mission Tower site. A site assessment was conducted in June 2000 but the case is still open. No evidence in database of work performed after June 2000. The contaminants of concern at the site are metals, VOCs, arsenic, and chromium. (A copy of the Office of Environmental Health Hazard Assessment (OEHHA) toxicologist's review for this site is available in the interactive Figure 2 on the CD.)	Nothing found for this site.	The site is listed as a "spills case". The site assessment indicates that arsenic, chromium, other metals, total petroleum hydrocarbons (TPH), and VOCs were released.	Currently at the site are residential apartments with a maintenance yard for automobiles and tool storage.	1	(1A) Known spill and the media affected is not specified. Current residential use; site may be impacted.	Additional research, review the LARWQCB and the Office of Environmental Health Hazard Assessment (OEHHA) health risk files. Site is owned by the City of Los Angeles. Phase II recommended.
7	1417 NORTH MAIN STREET	5409005016	Nothing found for this site.	Nothing found for this site.	Nothing found for this site.	The site is currently occupied by Food Corp.	4	(4) No indication of impacts	None
8	1418- 1424 NORTH SPRING STREET	5409004002	Nothing found for this site.	Nothing found for this site.	The site is listed with UST (inactive) as Bradley Import Co. as of 1994.	The site is currently used as a Poultry Distributor. The new site building address is 1418 North Spring Street. The site address of 1424 North Spring Street was not found during the site visit.	3	(3) Site listed as historically containing a UST, which may have impacted the site.	Additional research on current and historic uses of site.

DTSC = California Department of Toxic Substances Control

9	1460 NAUD STREET	5409005022 5409005023 5409005024	Nothing found for this site on this database.	This site is referred to as Champion Brass Manufacturing Company, and is listed as an evaluation is needed. The Envirostor website indicates "For the clean-up Status Reference: 1248 Local Agency as of February 2004." Additional information concerning this clean-up status reference was not provided on the Envirostor website.	Evaluation needed to be conducted at the site. The past use of the site was by a brass manufacturer. There is limited information available.	Currently the site contains a large building occupied by Super Home Mart with second level parking.	1	(1A) DTSC recommendation is "Evaluation needed."	Research the past uses of the site with a DTSC and LAFD File Review. Possibly reverse directory, aerial photos and chain of title reviews. Identify why the site needs to be evaluated. Check RP status. Phase II recommended.
10	201 WEST SOTELLO STREET	5409003029	The site currently has an UST.	Nothing found for this site.	Site listed with UST and on hazardous waste tracking system for oil/water separator sludge.	The site is currently being utilized for bus storage and maintenance with lifts by Atlantic Express Transportation Group. The site is adjacent to a metals scrap yard.	2	(2) Permitted USTs at the site, possible impacts from adjacent property.	Review tank records and a LAFD File Review. Evaluate corner property for possible off site impacts.
11	1635 NORTH MAIN STREET	5409003041	Nothing found for this site.	Nothing found for this site.	The site has hazardous waste permits for: -Aqueous solution with organic residues >10% (0.22935 tons per year) -Unspecified Solvent Mixture (0.60465 tons per year), -Unspecified Organic Mixture (0.22935 tons per year).	The site contains a large building which was addressed as 1639 North Main Street and also identified as 1635 Main Street, occupied by Vaughn Benz. No indications of potential environmental concerns were observed from the street.	3	(3) Hazardous waste permits are an indication of possible impacts, but relative low volumes of waste indicate impact likely limited.	Site inspection to investigate current site uses.
12	1639 NORTH MAIN STREET	5409003034	Nothing found for this site.	Nothing found for this site.	Site listed with active UST.	A sign on the site building indicates the occupant is I-basic Intima. The site is associated with 1635 North Main Street (Vaughn Benz). No indications of potential environmental concerns were observed from the street. The site contains a large building.	3	(3) Permitted UST is an indication of possible impacts. This address is on the same building as 1635 North Main Street.	Site inspection to investigate current site uses. Review tank records and a LAFD File Review.
13	1620 NORTH SPRING STREET	5409002016	The site is the former Main Street Dairy, and has a leaking UST case which was closed in January 1997. The site contaminant of concern is gasoline.	Nothing found for the site on this database.	A gasoline leak was discovered at the site. Free product was removed from the groundwater table. Groundwater samples indicate methyl-tertiary butyl ether (MTBE) concentrations were reported at 36 parts per billion (ppb).	The site is currently occupied by Veolia, as a Metrolink Bus Maintenance yard. The property is fenced around the perimeter. An Avco Gas aboveground storage tank (AST), vehicle lifts, and possible chemical storage containers were observed at the site.	1	(1B) Groundwater apparently still impacted. Past and current uses have the potential to have impacted the site.	Further investigation needed. LARWQCB and LAFD File Review. Phase II recommended.
14	1625 NAUD STREET	5409002017	Nothing found for this site.	Nothing found for this site.	The site is listed with an inactive UST.	The site is currently occupied by the Southern California Steel Company. The site is adjacent to Stadco and Veolia Metro Bus Maintenance yard (addressed at 1623 Naud Street and 1620 North Spring Street, respectively). 55-gallon drums were observed the rear area.	3	(3) UST and current uses have the potential to impact the site.	Site inspection to investigate current site uses. Review tank records and a LAFD File Review.
15	1645 NORTH MAIN STREET	5409003036 5409003037 5409003038	Nothing found for this site.	Nothing found for this site.	Site listed on the California hazardous waste tracking system.	The site is currently occupied by the California Department of General Services. Two ASTs were seen on site; one labeled as containing diesel fuel, and the other containing nitrogen gas.	3	(3) ASTs were observed on site.	Site inspection and LAFD file review.
16	1667 NORTH MAIN STREET	5409003018	The site is the Sage Property. The case was closed in August 2002. The contaminants of concern are chromium, petroleum, tetrachloroethylene (PCE), other metals, and VOCs.	Site listed as inactive, but needs an evaluation as of June 1995. The DTSC received a complaint about unlawful release or disposal of hazardous waste or hazardous substances, including PCE, trichloroethylene (TCE), 1,1,1-trichloroethane (1,1,1-TCA), and toluene, at the site and the neighboring property. Due to evidence of on-site contamination, the DTSC recommends conducting a Preliminary Environmental Assessment (PEA).	DTSC indicates an evaluation is needed and recommends conducting a PEA. Unlawful disposal of PCE, TCE, 1,1,1-TCA, and toluene was reported at the site. The site was historically used for tire manufacturing (except retreading), then a circuit breaker company. Available hazardous waste records indicates halogenated solvents for degreasing, ignitable waste, corrosive waste, lead, and various others chemicals have been used at the site.	Oriental art statues and pottery glazed in metal were observed at the site The site is also addressed as 1650 North Naud Street.	1	(1A) There are known impacts at the site. The DTSC recommends a PEA, but there is no record of it being performed.	Check for recent environmental work conducted at the site. Further investigation needed. DTSC and LAFD File Review. Check RP status. Phase II recommended.

DTSC = California Department of Toxic Substances Control

17	1646 NORTH SPRING STREET	5409002014	Nothing found for this site.	Nothing found for this site.	Site address listed a Resource Conservation & Recovery Act (RCRA) waste generator as Kim Phuoc Jewelry.	The site is currently an Art Gallery. There is a placard on the door indicating the site building was constructed in 1925.	3	(3) Hazardous waste permits are an indication of possible impacts, but relative low volumes of waste indicate impact likely limited.	Site inspection to investigate current site uses.
18	117 WEST WILHARDT STREET	5409002021	The site currently has an UST.	Nothing found for this site.	Site listed with an active UST.	Current property occupant is Daily Seafood Company. The site is adjacent to 119 Wilhardt (which contains unknown users), and 1716 Naud Street which is occupied by Left Coast Electric Inc. (where drums, pallets, and chemical containers were observed).	3	(3) Current uses (Permitted UST) have the potential to impact the site.	Check for possible impacts from surrounding properties. DTSC and LAFD File Review. Phase II recommended.
19	1700 NORTH SPRING STREET	5409002019	Nothing found for this site.	Nothing found for this site.	A train track incident was reported at the site; a dead body was found.	The site is currently occupied by Soy Sauce and Canned Food, Inc. No hazardous materials were observed on the site from the public road.	3	(3) Historic uses might have impacted the site. (Railroad tracks)	Review historical site use, reverse directory, chain of title, historic aerial photo review. Phase II recommended.
20	1746 NORTH SPRING STREET	5409002029	Owned by Bortz Oil Company (BOC). The contaminant of concern is gasoline. (Copies of reports for this site are available in the interactive Figure 2 on the CD.)	State Superfund Site, and the site status indicates there are active land use restrictions as of August 1996. The impacts were caused by Bortz Oil Company (BOC) which was a distributor and manufacturer of chemicals. The contaminants of concern are volatile organic compounds (VOCs). The site cleanup program lead agency is the California Department of Toxic Substances Control (DTSC). Copies of reports available on the CD.	The site has active land use restrictions prohibiting residential reuse. The site historically was used for distribution and manufacturing of chemicals. A building fire occurred in August 1984. BOC was cited for spills, leaking piping valves and drums, and illegal disposal of chemicals. Soil and groundwater was impacted by VOCs and metals. Soils were cleaned-up as of August 2002 according to the DTSC. Groundwater is still impacted. The property next door is 1726 Naud Street and is owned by the same owner. Soil vapor extraction was conducted between June 2000 and April 2001. Soil vapor clean-up goals were met as of December 2001. Currently, groundwater is sampled semi annually.	The site does not appear to be actively used, and consists of an empty yard. One 55-gallon drum was observed on this site. The property adjacent to this site is addressed as 1726 North Spring Street, which was occupied by Luckey Import and Export, Inc.	1	(1B) On-going ground water concern. Land use restrictions suggest contamination left in place.	Review reports for nature and scope of cleanup and Prohibited Uses. Review and synopsise all environmental reports or complete Phase I ESA. Phase II recommended.
21	1777 NORTH MAIN STREET	5410019008	Nothing found for this site.	Nothing found for this site.	Site listed on the California hazardous waste tracking system.	The site is currently occupied by China Pacific Restaurant Equipment Inc. The site is adjacent to 1785 North Main Street (which is occupied by Ace Used Auto Parts and Dismantling).	3	(3) No indication of on-site impacts. Possible impacts from site use and surrounding properties.	Further investigate the uses of the Ace Used Auto Parts and Dismantling next door at 1785 N. Main. Research 1785 North Main Street Geotracker, Envirostor, and LAFD records. Phase II recommended.
22	502 SOUTH AVENUE 17	5410019004	The site reportedly has active hazardous waste permits.	Nothing found for this site.	The site is utilized for dismantling vehicle and sale of used auto parts. The site has active hazardous waste permits.	The site is currently occupied by R&F Used Auto Parts for used auto parts and a junk yard.	3	(3) Permits are an indication of possible impacts. Historic uses might have impacted the site.	Review historical site use, reverse directory, chain of title, historic aerial photo review.
23	1750 ALBION STREET	5447028001	Nothing found for this site.	Nothing found for this site.	The site has active hazardous waste permits, including (waste type, other organic solids) - 0.85 tons per year.	The site is currently occupied by General Truck Body, Inc. The inside of the building looks similar to a metals shop. The site is adjacent to General Restaurant Equipment Inc.	3	(3) Permits are an indication of possible impacts. Current and/or historic uses might have impacted the site.	Review historical site use, reverse directory, change of title, historic aerial photo review.
24	1796 NORTH SPRING STREET	5447026001	The site is Bill's Automotive shop and has a leaking UST case with no record of closure as of June 1997. The contaminant of concern is gasoline. The oversight agency is LARWQCB. (Copies of Quarterly Groundwater Monitoring reports are available for this site in the interactive Figure 2 on the CD.)	Nothing found for this site.	The site has active hazardous waste permits. A gasoline release occurred on site. MTBE migrated into groundwater with concentration of 180 ppb. The requested abatement method by the LARWQCB is to remove free product and floating product for MTBE in groundwater.	The site is currently occupied by an auto repair shop. 55-gallon drums and vehicle lifts were observed at the site.	1	(1A) There are known impacts at the site. The site is an open case.	Further investigation needed. Check for most recent reports. Check RP status. LARWQCB and LAFD File Review. Contact with RP or Phase II recommended.
25	1721 NORTH BROADWAY	5447020006	Nothing found for this site.	Nothing found for this site.	Site listed with and active UST as Young-Nak Press Church as of 1994.	The site building is currently utilized as a Church campus. Another address on the building reads 125 Avenue 18.	3	(3) Current uses (Permitted UST) have the potential to impact the site.	Further investigation needed. LARWQCB and LAFD File Review.

DTSC = California Department of Toxic Substances Control
 NFA = No Further Action
 tpy = tons per year
 VOCs = Volatile organic compounds
 UST = Underground Storage Tank

 THM = Total Halogenated Hydrocarbons

**TABLE 1 – SELECTED REDEVELOPMENT PROPERTIES ASSESSED
CORNFIELD ARROYO SECO SPECIFIC PLAN AREA, LOS ANGELES, CALIFORNIA**

Rank 1 - (red on Figure 2) meaning the property has known unresolved environmental issues, an open regulatory agency case. Ranking of 1 was further subdivided into 1A, which includes those properties where no obvious action is being taken (and no responsible party [RP] is known, based on reviewed information), and 1B which includes those properties where action is being taken by an identified RP or through a voluntary cleanup.

Rank 2 - (orange) meaning the property has had environmental concerns in the past, but there is a potential for further issues in the future, and thus further assessment is recommended. In some cases these sites may have received a regulatory closure that did not address all potential issues.

Rank 3 - (yellow) meaning the property has active permits (typically underground storage tanks [USTs], or hazardous waste permits) and/or known historic uses that have a potential for causing impact.

Rank 4 - (green) meaning the property has no significant known environmental issues, based on the information readily available.

SITE NUMBER	ADDRESS	ASSESSOR PARCEL NUMBER	GEOTRACKER NOTES (Regional Water Quality Control Board [RWQCB])	ENVIROSTOR NOTES (Department of Toxic Substances Control [DTSC])	FIRST SEARCH REVIEW NOTES (Compilation of Databases)	SIDEWALK OBSERVATION FOR RECs	RANK	RANK REASONING	RECOMMENDATIONS
26	1815 NORTH BROADWAY	5447021028	Nothing found for this site.	Nothing found for this site.	Site listed as a RCRA Small Quantity Generator (SQG) as Service Motor Parts Co.	The site is attached to the 1800 Pasadena Avenue site. This side of the property is used as the Church bus parking lot.	4	(4) No indication of on-site impacts. Possible impacts from surrounding properties.	None
27	126 SOUTH AVENUE 18	5447021027	The site is listed with a permitted UST.	Nothing found for this site.	Site listed with active UST.	The entire block looks to be occupied by a church (with main address at 1800 Pasadena). There is one building with a sign for Jabels Cosmetics at 126 South Avenue 18.	3	(3) Current uses (Permitted UST) have the potential to impact the site.	Additional research, LAFD file review.
28	1800 NORTH PASADENA AVENUE	5447021022	Nothing found for this site.	Nothing found for this site.	Nothing found for this site.	The site building is currently a church; the parking area is utilized as a church bus parking lot.	4	(4) No indication of on-site impacts. Possible impacts from surrounding properties.	None
29	1831 NORTH PASADENA AVENUE	5447018900 5447018901	The site is the Los Angeles Department of Transportation (LADOT) Central Traffic Yard, and had a leaking UST case which was closed in March 2002. The contaminant of concern is aviation fuel.	Nothing found for this site.	Only soil was impacted by on-site Leaking UST. Case was closed.	The site is occupied by the LADOT Central Yard, and is utilized as a truck maintenance facility.	1	(1B) Known historic impacts at the site. Case was closed 3/2002. Current site uses have potential to impact the site.	Review closure report, LARWQCB and LAFD File Review. Site is owned by the City of Los Angeles. Phase II may be recommended based on review.
30	2001 NORTH BROADWAY	5447023018	The site is the NASA Oil Company. The site has a leaking UST case which was closed in November 2006. The contaminant of concern is gasoline. (Copies of Groundwater Monitoring reports are provided in the interactive Figure 2 on the attached CD.)	Nothing found for this site.	The site has hazardous waste permits. There was a reported gasoline leak. MTBE concentrations in groundwater were reported at 65,000 ppb. According to First Search, the case is closed since 2008.	The site is currently a gas station with auto repair. Lifts, ASTs, drum storage, USTs, and pump stations were observed at the site.	1	(1B) Known historic impacts at the site. Current site uses have potential to impact the site.	Review closure report, LARWQCB and LAFD File Review. Site reconnaissance. Phase II recommended.
31	1931 NORTH BROADWAY	5447022027	Nothing found for this site.	Nothing found for this site.	The site has been used for machine manufacturing and fabricated metal products manufacturing. The site has hazardous waste permits.	The site is currently occupied by STADCO. 55-gallon drums, storage of chemicals, Invar solids (i.e., a nickel steel alloy), nitrogen ASTs, and a machine room were observed at the site.	2	(2) Current uses have the potential to impact the site. Permits are an indication of possible impacts. Drums and chemical storage bins observed at the site.	Further investigation needed. LAFD File Review. Site reconnaissance. Determine historical profile. Phase II recommended.
32	140 NORTH AVENUE 19	5447015901	The site is the Supply and Maintenance Division of the City of Los Angeles Fire Department (LAFD). The site had a leaking UST case which was closed in March 1993. The contaminant of concern was gasoline. UST(s) still present on the site.	Nothing found for this site.	A gasoline leak was discovered at the site. Approximately 3 gallons of ethyl ether was spilled (dumped), which impacted the soil. Chemicals found in soil consist of benzene, methyl ethyl ketone (MEK), TCE, PCE, and others. The site is used for general auto paint, maintenance, and repair.	The site is currently the City of Los Angeles Fire Department, Supply and Maintenance Yard. There is an on-site fueling station. Vehicle lifts and possible chemical storage containers were observed from the street.	1	(1B) Known gasoline spill and the media affected is soil. Chemicals found in soil indicate impacts other than known gasoline leak.	LARWQCB and LAFD File Review. Site reconnaissance. Determine historical profile. Phase II recommended. Site is owned by the City of Los Angeles.
33	2003 NORTH PASADENA AVENUE	5447014001	Nothing found for this site.	Nothing found for this site.	The site has hazardous waste permits.	The site is currently a radiator repair shop. Lifts and a possible drum storage area were observed.	2	(2) Historic and current uses might have impacted the site. Permits are an indication of possible impacts.	Review historical site use, reverse directory, chain of title, historic aerial photo review. LAFD File Review. Site inspection.
34	108 NORTH SAN FERNANDO ROAD	5447014003	Nothing found for this site.	Nothing found for this site.	The site has hazardous waste permits.	The site building is currently used as an art shop, and adjacent to a radiator repair shop (at 2003 Pasadena Avenue).	3	(3) Permits are an indication of possible impacts. Next door is a radiator repair shop.	Review historical site use, reverse directory, chain of title, historic aerial photo review for this site as well as adjacent site.
35	136 NORTH SAN FERNANDO ROAD	5447014025	Nothing found for this site.	Nothing found for this site.	Site listed on the California hazardous waste tracking system for small amounts of liquid wastes.	The name on the side of the building indicates the site is occupied by the National Wire and Cable Company. No hazardous materials were observed from the public thoroughfare.	4	(4) No indication of impacts.	None
36	138 NORTH SAN FERNANDO ROAD	5447014024	Nothing found for this site.	Nothing found for this site.	The site was historically used to manufacture industrial batteries. Groundwater beneath the site is suspected to be contaminated. There was a possible illegal discharge of hazardous waste into an unlined pit in the rear and driveway portions of the site. Maximum lead concentrations of 30,000 mg/kg and the minimum pH of 0.48 were reported. The site has active deed restrictions. An NFA status was granted by the DTSC. The First Search report included "(note: check deed restrictions at DTSC website.)". No other information was provided regarding the note to check deed restrictions.	Signs on building possibly indicate this building is occupied by a sports bar.	1	(1A) Active deed restrictions, possibly still contaminated.	Check for recent work conducted at the site. Further investigation needed. Check RP status. DTSC File Review. Phase II recommended.

DTSC = California Department of Toxic Substances Control
 NFA = No Further Action
 ppb = parts per billion
 VOCs = Volatile organic compounds

 SQG = Small Quantity Hazardous Waste Generator
 REC = Recognized Environmental Condition
 LARWQCB = California Regional Water Quality Control Board - Los Angeles Region
 LAFD = City of Los Angeles Fire Department
 OEHHA = California Office of Environmental Health Hazard Assessment
 RP = Responsible Party
 THF = Total Hazardous Inorganics

**TABLE 1 – SELECTED REDEVELOPMENT PROPERTIES ASSESSED
CORNFIELD ARROYO SECO SPECIFIC PLAN AREA, LOS ANGELES, CALIFORNIA**

Rank 1 - (red on Figure 2) meaning the property has known unresolved environmental issues, an open regulatory agency case. Ranking of 1 was further subdivided into 1A, which includes those properties where no obvious action is being taken (and no responsible party [RP] is known, based on reviewed information), and 1B which includes those properties where action is being taken by an identified RP or through a voluntary cleanup.

Rank 3 - (yellow) meaning the property has active permits (typically underground storage tanks [USTs], or hazardous waste permits) and/or known historic uses that have a potential for causing impact.

Rank 2 - (orange) meaning the property has had environmental concerns in the past, but there is a potential for further issues in the future, and thus further assessment is recommended. In some cases these sites may have received a regulatory closure that did not address all potential issues.

Rank 4 - (green) meaning the property has no significant known environmental issues, based on the information readily available.

SITE NUMBER	ADDRESS	ASSESSOR PARCEL NUMBER	GEOTRACKER NOTES (Regional Water Quality Control Board [RWQCB])	ENVIROSTOR NOTES (Department of Toxic Substances Control [DTSC])	FIRST SEARCH REVIEW NOTES (Compilation of Databases)	SIDEWALK OBSERVATION FOR RECs	RANK	RANK REASONING	RECOMMENDATIONS
37	140 NORTH AVENUE 21	5447012019	Nothing found for this site.	Nothing found for this site.	The site has hazardous waste permits	The site is currently a LADOT bus maintenance and storage yard. Vehicle lifts and ASTs were observed at the site.	2	(2) Historic and current uses might have impacted the site. Permits are an indication of possible impacts.	Review historic records, LAFD File Review. Site reconnaissance. Site operated by the City of Los Angeles. Phase II recommended.
38	401 NORTH AVENUE 19	5447005900	The site is listed as having a permitted UST.	Nothing found for this site.	Site listed with an active UST.	The back portion of the site is currently used as a LADOT truck maintenance facility. The front portion of the site contains a large building with a Bilingual Foundation of the Arts poster over the front doors (421 North Avenue 19). The site has railroad tracks on the western and southern borders. There are two old-appearing electric transformer towers which are suspected of containing polychlorinated biphenyls (PCBs). Stains were not observed beneath the transformers.	3	(3) Current uses (Permitted UST) have the potential to impact the site.	Review UST records, LAFD file review. Site is owned by the City of Los Angeles. Phase II recommended.
39	342 SAN FERNANDO ROAD	5447009017	The site is listed as having a permitted UST.	Nothing found for this site.	The site has hazardous waste permits. Site listed with an active UST.	The site is currently occupied by Good Will Industries.	3	(3) Current uses (Permitted UST) have the potential to impact the site. Permits are an indication of possible impacts.	Review UST records, LAFD file review.
40	452 SAN FERNANDO ROAD	5447003900 5447003902 5447009903 5447009901	The site is the San Fernando Consolidated Facility. The site has a leaking UST case. The case appears to still be open with significant amount of contamination still likely to be present. The potential contaminant of concern is diesel and gasoline. (Copies of the most recent Groundwater Monitoring reports are provided in the interactive Figure 2 on the attached CD.)	Nothing found for this site.	The site is referred as the San Fernando Consolidated Facility, San Fernando Road Consolidated, East Yard, East Street Maintenance District Yard and the City of LA General services. A piping leak was discovered from conducting subsurface monitoring at the site March 2004, it was leaking 1203 (gasoline). The leak was stopped by removing contents. The lead agency is the Regional Board. The current known status of the site is a Remediation Plan. The site has hazardous waste permits for: -off specification, aged or surplus organics (1.7 tons per year), -unspecified aqueous solution (2.5 tons per year), -waste oil and mixed oil (51.6 tons per year), -tank bottom waste (0.834 tons per year) and Aqueous solution with total organic residues less than 10% (6.72 tons per year.)	452 North San Fernando Road, is currently used as a maintenance yard for dump trucks, with an on-site fueling station, lifts, and possible chemicals stored bins.	1	(1A) Historic and current uses might have impacted the site.	LARWQCB and LAFD File Review. Synopsise environmental reports. Site is owned by the City of Los Angeles. Phase II recommended.
41	451 SAN FERNANDO ROAD	5447004001	Nothing found for this site.	Nothing found for this site.	The site listing indicates it has on-site dry-cleaning and laundry services. Tetrachloroethylene is listed under hazardous waste information. Site is listed with an active UST as Angelica Textile Services.	The site is currently occupied by Angelica's Health Services. It appears to be a large scale laundry services building. Possible PCE and TCE impacts. A 2-inch monitoring well was observed (MW9). Believed to be from 452 San Fernando Road GW investigation.	2	(2) Historic and current uses might have impacted the site. Possible impacts from an off-site source (452 San Fernando Road)	Research current site activities, develop historical profile. Phase II recommended.
42	2010 NORTH FIGUEROA STREET	5415001016	Nothing found for this site.	Nothing found for this site.	The site has hazardous waste permits for waste oil and mixed oil, produced at a rate of approximately 5.421 tons per year (TPY).	The site is currently utilized as a tow truck yard with tow trucks and recently towed cars. A diesel AST was observed at the site. There is possible truck maintenance conducted in one of the buildings at the site.	3	(3) Current uses have the potential to impact the site. Permits are an indication of possible impacts. Diesel AST observed at the site.	Review historic records, LAFD File Review. Site reconnaissance.

SITE NUMBER	ADDRESS	ASSESSOR PARCEL NUMBER	GEOTRACKER NOTES (Regional Water Quality Control Board [RWQCB])	ENVIROSTOR NOTES (Department of Toxic Substances Control [DTSC])	FIRST SEARCH REVIEW NOTES (Compilation of Databases)	SIDEWALK OBSERVATION FOR RECs	RANK	RANK REASONING	RECOMMENDATIONS
43	241 AVENUE 26	5205015005	Nothing found for this site.	The site is the former Baron Manufacturing property. The site is listed under special programs for RCRA 3012 regarding waste oil. The cause of contamination was not specified. The contaminant of concern is an unspecified solvent mixture.	The site has been used for sheet metal fabrication. Unspecified solvent mixtures were used at the site. Potential improper hazardous waste disposal and inventory issues for waste oil were identified. A site screening was conducted and no significant impacts were found. The site was granted an NFA by the DTSC in October 1994.	The site is currently used as a swap meet lot.	2	(2) Historic uses might have impacted the site.	Additional research, DTSC File Review. Phase II recommended.
44	2630 HUMBOLDT STREET	5205015014	Nothing found for this site.	Nothing found for this site.	The site has hazardous waste permits. Site listed with an inactive UST.	No hazardous materials were observed on site.	3	(3) Permits and UST are an indication of possible impacts.	Review historical site use, reverse directory, chain of title, historic aerial photo review. LAFD File Review. Site inspection.
45	3005 HUMBOLDT STREET	5205009003	Nothing found for this site.	Nothing found for this site.	Site is listed on the hazardous waste tracking system.	The site occupants currently include L.A. Cabinet & Millwork, Inc. Indications of various other occupants were observed in the same building; however, they were not identifiable from the road.	3	(3) The site is one suite of a large building, and is on the same lot as 3209 Humboldt Street along with many other types of businesses.	Further investigation needed of entire block, reverse directory, chain of title, historic aerial photo review.
46	3209 HUMBOLDT STREET	5205006053	Nothing found for this site.	The site is referred to as the former Kennington Property. The site status is active, with land use restrictions, as of April 1996. The lead regulatory oversight agency is the DTSC under the site voluntary cleanup program (VCP). Past uses of the site include battery manufacturing and manufacturing of electronics. The contaminants of concern at the site include lead, PCBs, PCE, and TCE. Reported concentrations of PCBs were at 24,076 parts per million (ppm), and concentrations of total recoverable petroleum hydrocarbons (TRPH) up to 73,050 ppm. A Final Remedial Investigation Report has been reviewed and approved by the DTSC. There are active land use restrictions at the site. (Copies of the Groundwater Monitoring reports for this site are available in the interactive Figure 2 on the CD.)	There are active land use restrictions at the site. The site was used in the past by a battery manufacturer, it was also used at one time for preparation of ant poison. The soil and groundwater are impacted with high levels of PCE, PCBs, TCE and metals (primarily lead). Reported concentrations of PCBs were at 24,076 ppm, and concentrations of TRPH up to 73,050 ppm. The site is in process of implementing a groundwater monitoring plan (for PCE and TCE). As directed by DTSC, fence and erosion controls are needed at the site until developed. Asbestos-containing materials (ACMs) were found in the previous building. Soil impacts were contained by concrete flooring (i.e., engineering controls).	Currently the site contains a large building with parking on the second level.	1	(1B) Active land use restrictions. Site still contaminated.	Check for recent work conducted at the site. DTSC File Review. Identify potential RPs. Phase II recommended.
47	380 AVENUE 26 2600 LACY STREET	5205011012	Nothing found for this site.	Nothing found for this site.	The site was used by the Blue Line Construction Authority in the past. Lead is listed under hazardous waste information. Substances released at the site are lead and total petroleum hydrocarbons (TPH), the lead agency is the LARWQCB. Case is closed.	The site is currently a film production studio. The title on the side of the building is Lacy Street Production Studios and American Wrecking Company (at 2600 Lacy Street). Blue drums were observed at the site.	1	(1B) Lead and TPH indicates a known release at the site. Case has been closed.	Additional research, LAFD and LARWQCB file review. Site was formerly used by Metropolitan Transit Authority (MTA). Phase II recommended.
48	2250 NORTH FIGUEROA STREET	5446016010 5446016003 5446016004 5446016012	The site is referred to as the Former 76 Station and Circle-K. The site had a leaking UST. The LUST case is closed as of July 2005. The contaminant of concern was gasoline. (Copies of Groundwater Monitoring reports for the site are available in the interactive Figure 2.)	Nothing found for this site.	The LUST case is closed. The site has hazardous waste permits.	The site is currently a Circle-K gas station with USTs and pump stations. Drums were observed at the site.	1	(1B) Known historic impacts at the site. Case was closed 2005. Current site uses have potential to impact the site.	Further investigation needed. The most recent available report from second quarter 2005 indicates groundwater is still impacted with TPH and MTBE, concentrations are increasing. LARWQCB and LAFD File Review. Phase II recommended.
49	2251 NORTH FIGUEROA STREET	5446015061	The site is referred to as an ARCO Facility. The site had a leaking UST case which was closed as of September 2003. The contaminant of concern was gasoline. (Some groundwater data is available on Geotracker, but no reports were found.)	Nothing found for this site.	The site had a gasoline leak. The case status is closed.	Currently the site is a gas station and tire repair shop, with possible lifts on site.	1	(1B) Known historic impacts at the site, Case was closed 2003. Current site uses have potential to impact the site.	LARWQCB and LAFD File Review, further investigation needed. Phase II recommended.

Chapter 1

Introduction

A. Administration

1. Authority

Pursuant to Div. 8.3. (*Special Districts*), Sec. 13B.1.2. (*Specific Plan Adoption/Amendment*), and Sec. 13B.1.3. (*Zoning Code Amendment*) of Chapter 1A (Zoning Code) of the Los Angeles Municipal Code (LAMC), the City Council hereby establishes a Special District that utilizes the provisions of this Cornfield Arroyo Seco Specific Plan (“CASP” or “Specific Plan”) as the vehicle for regulatory measures to achieve the planning objectives of the designated area.

2. Boundaries

The Special District shall apply to all lots located in whole or in part within the boundaries indicated on **Map 1-1 (Plan Boundary Map)** as specifically set forth in this Specific Plan. The boundaries of each General Plan land use designation are illustrated on **Map 1-2 (General Plan Land Use Designation Map)**.

Plan Boundary Map 1-1

Plan Boundary

General Plan Land Use Designation Map 1-2

- Hybrid Industrial
- Public Facilities
- Open Space

3. Purposes

The purposes of this Specific Plan are as follows:

- a. Establish regulatory measures for the designated Special District.
- b. Implement the Downtown Los Angeles and Northeast Los Angeles Community Plans.
- c. Increase the production of affordable, mixed-income, and permanent supportive housing within the Specific Plan Area.
- d. Protect residents, especially low-income households, from indirect and direct displacement, and ensure stability of existing vulnerable communities.
- e. Establish Specific Plan standards, processes, and procedures that are intuitive and transparent.
- f. Preserve employment areas that show a concentration of jobs, while supporting small and/or legacy businesses, local employment, new productive uses, and employment spaces, such as light industrial and general commercial uses.
- g. Provide a range of housing types and price levels that offer a full range of choices for people of diverse ages, ethnicities, household sizes, and incomes.
- h. Provide shops and services for everyday needs, including groceries, day care, restaurants, banks and drug stores, within walking distance from home or work.
- i. Facilitate pedestrian mobility, encourage bicycle use, and provide access to a variety of transportation options including frequent light rail and bus connections, shared vehicles, and bicycles.
- j. Lessen dependence on automobiles, and thereby reduce vehicle emissions, while enhancing the personal health of residents, employees, and visitors.
- k. Respect historically significant buildings, including massing and scale, while at the same time encouraging innovative architectural design that expresses the identity of contemporary Los Angeles.

- l. Reduce the use of energy and potable water, improve the ecology surrounding the Los Angeles River Watershed and Arroyo Seco, and create connections from the community to the River and Arroyo Seco.
- m. Provide public open space, including parks, courtyards, and plazas, within walking distance of residents and employees.
- n. Clean up sources of air pollution and soil contamination, while ensuring that the communities disproportionately burdened by environmental harms and risks are meaningfully involved in the process.

4. Definitions

The general rules and definitions as set forth in Article 14 (*General Rules*) of Chapter 1A (Zoning Code) of the LAMC shall apply to this Specific Plan.

Additionally, whenever the following terms are used in this Specific Plan, they shall be construed as defined herein. The definitions set forth in this ordinance that reference, or incorporate by reference, other statutes or ordinances are deemed to be amended when those statutes or ordinances are amended or renumbered from time to time.

“100 Percent Affordable Housing” shall mean a project in which 100 percent of the residential dwelling units, excluding any manager unit(s), are Restricted Affordable Units, as defined in Div. 14.2. (*Glossary*) of Chapter 1A (Zoning Code) of the LAMC.

“Mixed-income Housing” shall mean a project comprising a mix of market-rate and Restricted Affordable Units.

“Small and/or Legacy Business” shall mean 1) any business that is on the Citywide Legacy Business Registry, or 2) a privately-owned corporation, cooperative, non-profit, social enterprise, or other entity that serves the neighborhood in which it is located, is not franchised or affiliated with a national chain, and meets at least three of the following five standards:

- a. Has been in continuous operation within the Specific Plan, or within a half-mile radius of the Specific Plan boundaries, for at least 10 years with no break in its operations exceeding two years;
- b. Has no more than 50 employees/shareholders;

- c. The business includes employees who can speak a language other than English in order to serve linguistically isolated members of the community;
- d. Accepts government issued assistance such as EBT;
- e. Pays employees a living wage per the City's Living Wage Ordinance.

5. Relationship to Other Zoning Regulations

- a. This Specific Plan contains self-contained zoning regulations pursuant to Div. 8.1. (*Specific Plans*) and Div. 8.3. (*Special Districts*) of Chapter 1A (Zoning Code) of the LAMC. The regulations of this Specific Plan supersede the Zoning Districts outlined in Part 2B (Form Districts), Part 3B (Frontage Districts), Part 4B (Development Standards Districts), Part 5B (Use Districts), and Part 6B (Density Districts) of Chapter 1A. All other provisions of Chapter 1A, including rules and non-string articles, apply to the properties within the boundaries of this Specific Plan.
- b. The Specific Plan is the zone of the lot, as outlined in Sec. 1.5.2.A.4. (*Special Districts*) of Chapter 1A (Zoning Code) of the LAMC, for the properties located within its boundaries. It is intended, therefore, to serve as a zoning designation for purposes of California Public Resources Code Section 21083.3.
- c. Chapter 1 (General Provisions and Zoning) of the LAMC does not apply to the properties within the boundaries of this Specific Plan.
- d. All references to sections of the LAMC shall be deemed references to those sections as they are amended, modified, or renumbered from time to time. At the discretion of the Director, the Plan may be administratively modified for clarity to reflect any such amendments, modifications, or renumbering.
- e. **Reconciling Regulations.** Refer to Sec. 8.3.1.B.3. (*Reconciling Provisions*) of Chapter 1A (Zoning Code) of the LAMC.

6. Uses and Buildings Made Nonconforming by This Plan

Any legally existing uses, buildings, or structures that are made nonconforming by the establishment of this Specific Plan shall be deemed to be legal nonconforming uses, buildings, or structures and may continue to exist, in accordance with Division 12.1. (*General Provisions*) of Chapter 1A (Zoning Code) of the LAMC.

7. Severability

If any portion, subsection, sentence, clause or phrase of this Specific Plan is for any reason held by a court of competent jurisdiction to be invalid, such a decision shall not affect the validity of the remaining portions of this Specific Plan. The City Council hereby declares that it would have passed this Specific Plan and each portion or subsection, sentence, clause and phrase herein, irrespective of the fact that any one or more portions, subsections, sentences, clauses, or phrases may be declared invalid.

B. Applicability of the Specific Plan

1. Definition of a Project

Only the following Project Activities as set forth in Sec. 14.1.15. (*Project Activities*) of Chapter 1A (Zoning Code) of the LAMC shall constitute a Project in the Specific Plan:

- a. New Construction
- b. Major Demolition
- c. Facade Modification
- d. Use Modification

2. Applicability of Specific Plan Regulations

- a. Any Project Activity that constitutes a Project, in whole or in part, shall be done so in conformance with the Specific Plan's regulations as set forth in the applicability provisions of each Specific Plan chapter.
- b. The provisions of this Specific Plan apply to all buildings, structures, or land owned, operated or controlled by any person, corporation, or, to the extent permitted by law, governmental agency.
- c. In the event that any provision of this Specific Plan conflicts with LAMC Chapter 5, Article 7 (Fire Code), then LAMC Chapter 5, Article 7 (Fire Code) shall prevail.

C. Review Procedures

1. Prohibition of Issuance of Permits Prior to Specific Plan Review

The Department of Building and Safety shall not issue any building, grading, demolition, or change of use permit for any Project within the Specific Plan boundaries (in whole or in part) unless the Project has been reviewed pursuant to Subdivision 4 (Specific Plan Review) below.

2. Demolition

No demolition permit shall be issued for any Project unless building permits for a replacement development on the site have been issued, and any necessary land use entitlements have been granted.

- a. Notwithstanding the above this prohibition shall not apply to any structure deemed hazardous by the Department of Building and Safety.
- b. Furthermore, this prohibition shall not apply to structures that are considered uninhabitable.

3. Filing Requirements for Multiple Approvals

When an applicant applies for any discretionary approval for a property located (in whole or in part) within the Specific Plan boundaries, the applicant shall also apply for a Specific Plan Review.

4. Specific Plan Review

- a. **Administrative Review.** The Director shall grant an Administrative Review pursuant to Sec. 13B.3.1. (*Administrative Review*) of Chapter 1A (Zoning Code) of the LAMC, after reviewing the Project and determining that it is in compliance with all applicable provisions of the Specific Plan as indicated by a plan stamped by the Department of City Planning.
- b. **Scope of Review.** In reviewing a Project for an Administrative Review, the Director shall review the Project for compliance with those regulations that are applicable to the proposed scope of construction or use.

5. Project Compliance

A Project that has one or more of the following characteristics shall obtain Project Compliance pursuant to Section 13B.4.2. (*Project Compliance*) of Chapter 1A, in lieu of Specific Plan Review.

- a. Any development project which adds at least 500,000 square feet of nonresidential floor area.
- b. Any development project which adds at least 500 dwelling units.
- c. Any development project that includes drive-through lanes which results in a net increase of 500 or more average daily trips.
- d. Any change of use which results in a net increase of 1,000 or more average daily trips.

6. Project Adjustment

Refer to Sec. 13B.4.4. (*Project Adjustment*) of Chapter 1A (Zoning Code) of the LAMC.

7. Project Exception

Refer to Sec. 13B.4.5. (*Project Exception*) of Chapter 1A (Zoning Code) of the LAMC.

8. Specific Plan Interpretation

When there is a lack of clarity in the meaning of the Specific Plan's regulations, the Director of Planning may issue a written interpretation of the Specific Plan's regulations either upon application by an applicant or upon the Director of Planning's own initiation. Refer to Sec. 13B.4.6. (*Specific Plan Interpretation*) of Chapter 1A (Zoning Code) of the LAMC.

9. Conditional Use Permit

Refer to Sec. 13B.2.1. (*Class 1 Conditional Use Permit*), Sec. 13B.2.2. (*Class 2 Conditional Use Permit*), and Sec. 13B.2.3. (*Class 3 Conditional Use Permit*) of Chapter 1A (Zoning Code) of the LAMC.

AMERICAN WRECKING

Chapter 2

Form

This Chapter establishes Form Districts to regulate the placement, scale, and intensity of buildings and structures on a lot in order to ensure building forms are compatible with their context and consistent with community goals.

A. Form Applicability

1. General

All Projects filed after the effective date of this Specific Plan shall comply with the Form District standards as further specified below.

2. Applicability

Refer to Sec. 2A.2.2. (*Form Applicability*) of Chapter 1A (Zoning Code) of the LAMC for the Form Rule Categories that apply to a Project based on the types of Project Activities involved.

3. Form Rules

Refer to Part 2C. (*Form Rules*) of Chapter 1A (Zoning Code) of the LAMC for the Intent, Applicability, Standards, Measurement, Exceptions, and Relief of each Form Rule Category, except as modified in Paragraph a. (Relief) below.

- a. **Relief.** Where relief may be requested pursuant to the Form Rules, Sec. 13.B.4.4. (*Project Adjustment*) of Chapter 1A (Zoning Code) of the LAMC shall substitute for Sec. 13B.5.2. (*Adjustments*) of Chapter 1A, and Sec. 13B.4.5. (*Project Exception*) of Chapter 1A shall substitute for Sec. 13B.5.3. (*Variance*) of Chapter 1A.

B. Form Districts

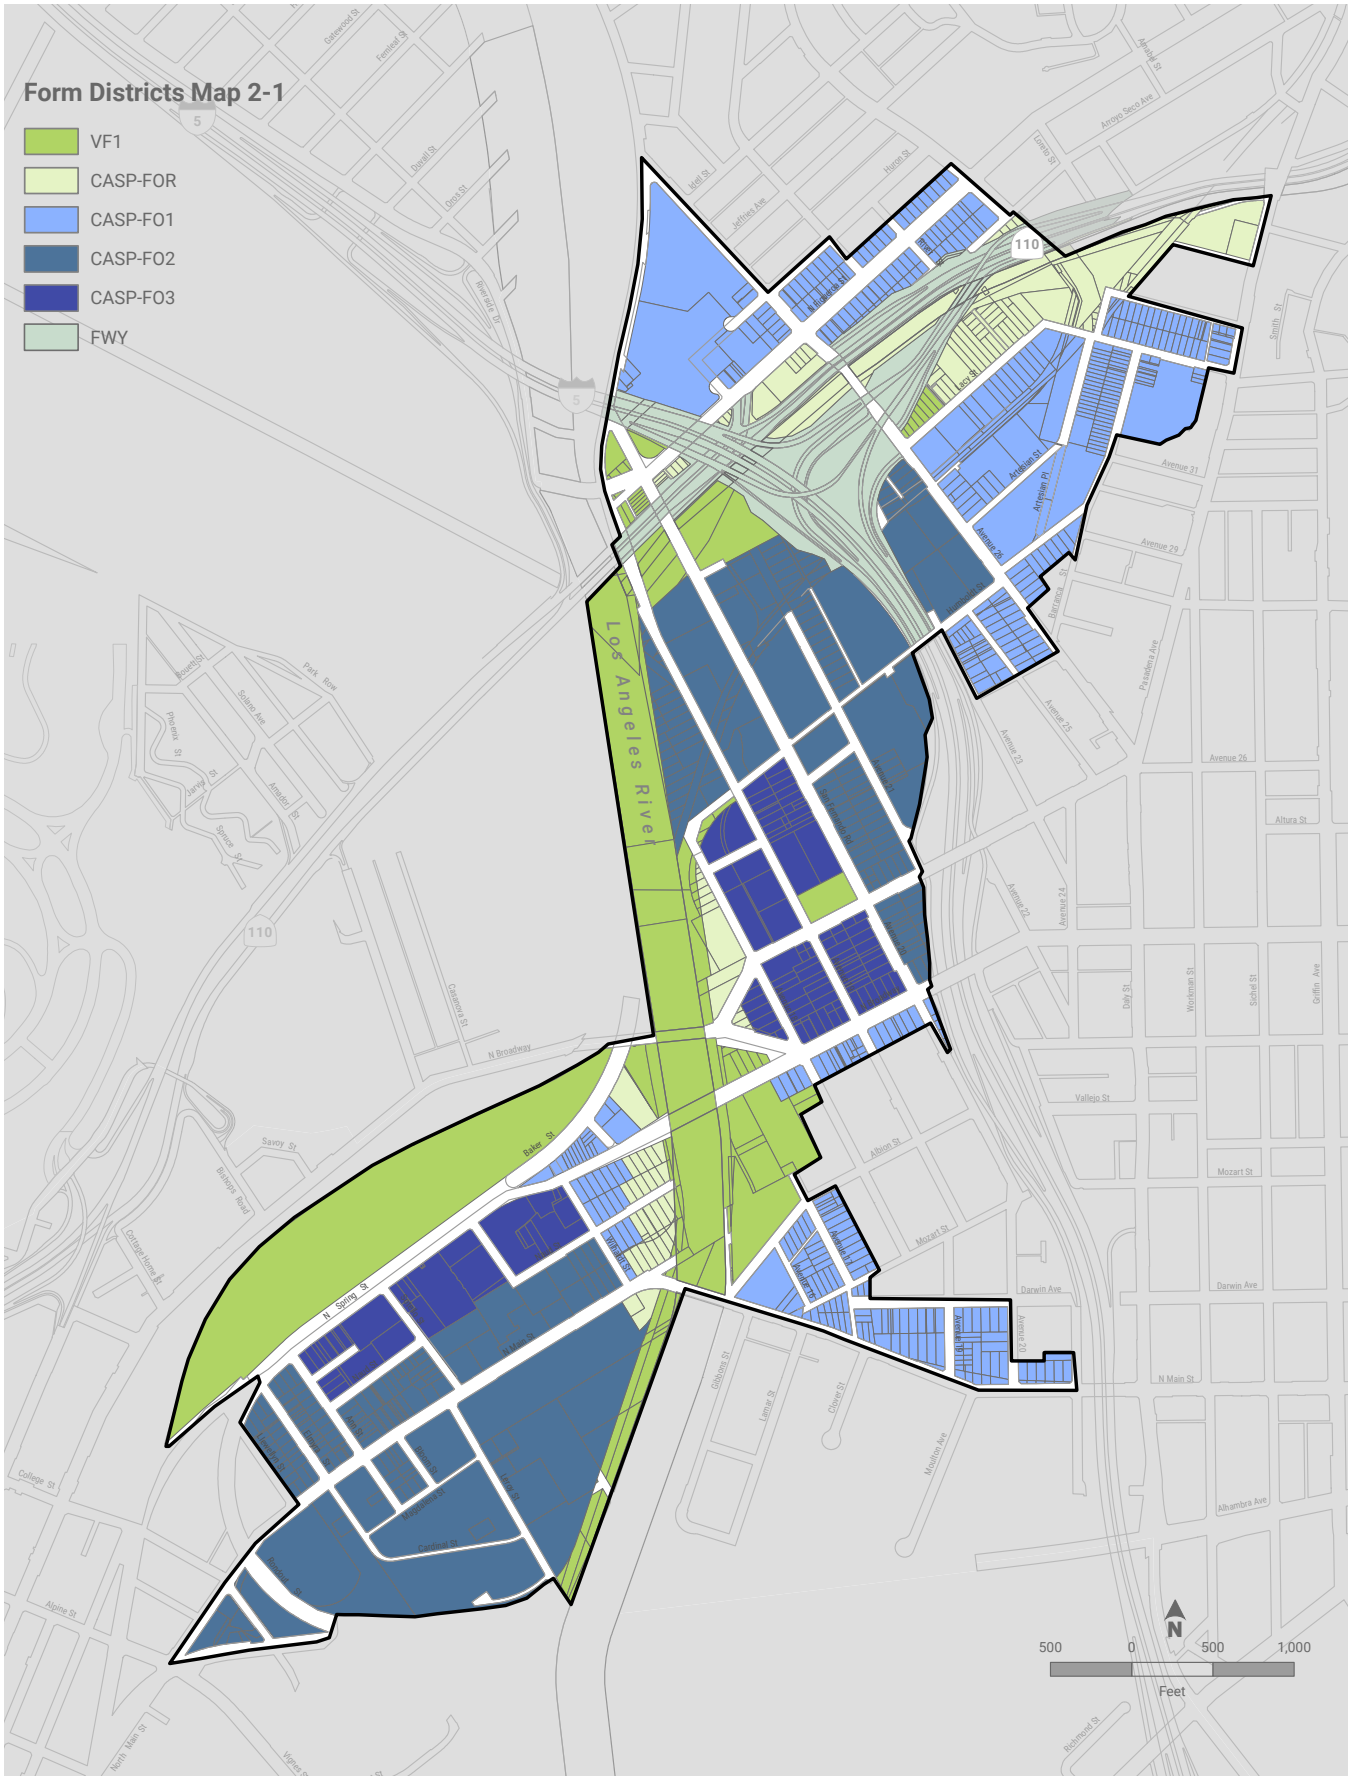

1. Form Districts Map

The Form District for each property within the Specific Plan is set forth in **Map 2-1 (Form Districts Map)**.

Chapter 3

Frontage

This Chapter establishes Frontage Districts to regulate the portions of a lot and exterior building facades that affect the public realm. Frontage Districts help ensure that projects respond to the public realm in a contextually appropriate manner.

A. Frontage Applicability

1. General

All Projects filed after the effective date of this Specific Plan shall comply with the Frontage District standards as further specified below.

2. Applicability

Refer to Sec. 3A.2.2. (*Frontage Applicability*) of Chapter 1A (Zoning Code) of the LAMC for the Frontage Rule Categories that apply to a Project based on the types of Project Activities involved.

3. Frontage Rules

Refer to Part 3C. (*General Frontage Rules*) of Chapter 1A (Zoning Code) of the LAMC for the Intent, Applicability, Standards, Measurement, and Relief of each Frontage Rule Category, except as modified by Paragraph a. (Relief) below.

- a. **Relief.** Where relief may be requested pursuant to the Frontage Rules, Sec. 13.B.4.4. (*Project Adjustment*) of Chapter 1A (Zoning Code) of the LAMC shall substitute for Sec. 13B.5.2. (*Adjustments*) of Chapter 1A, and Sec. 13B.4.5. (*Project Exception*) of Chapter 1A shall substitute for Sec. 13B.5.3. (*Variance*) of Chapter 1A.

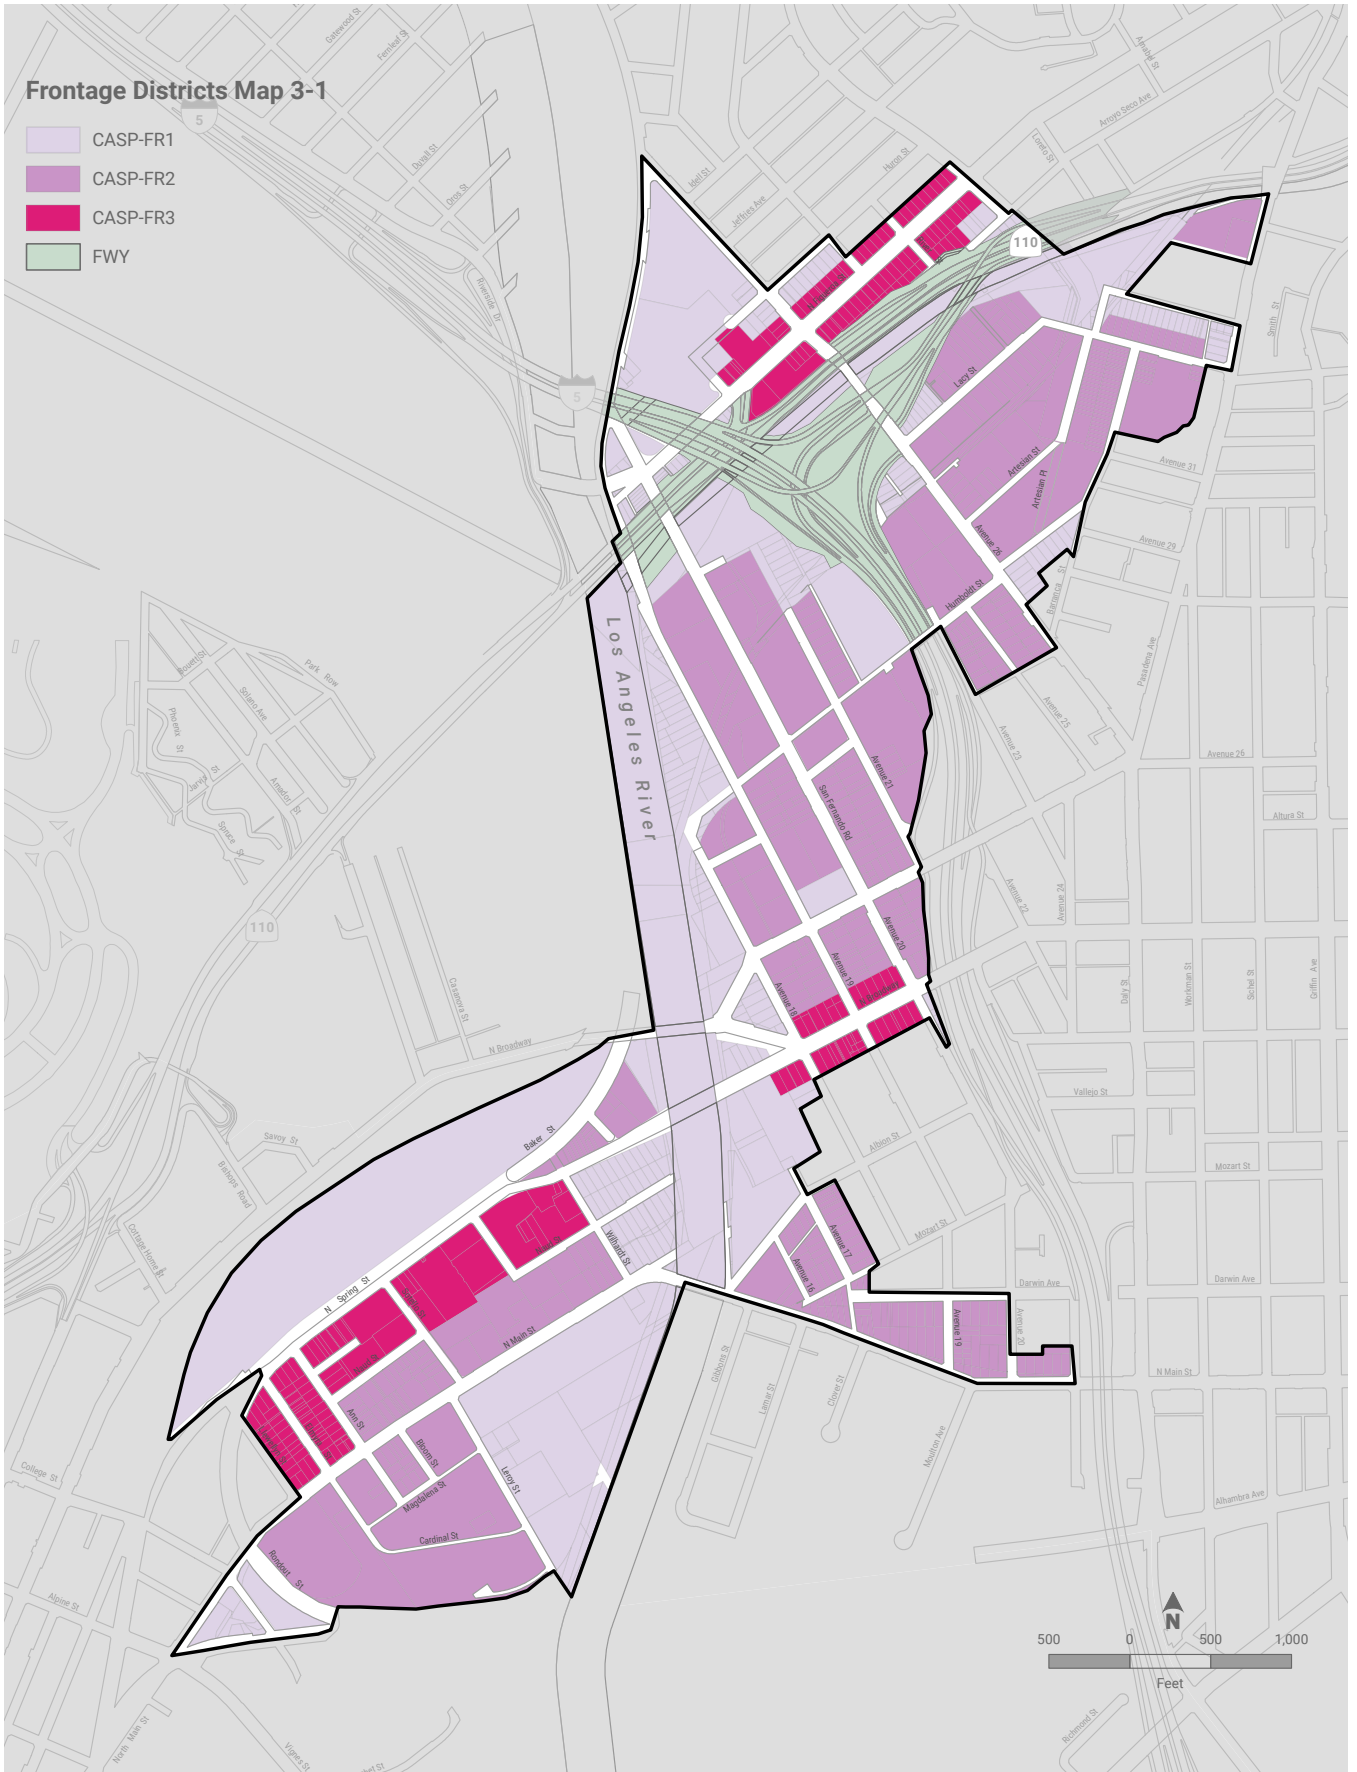

B. Frontage Districts

1. Frontage Districts Map

The Frontage District for each property within the Specific Plan is set forth in **Map 3-1 (Frontage Districts Map)**.

Frontage Districts Map 3-1

- CASP-FR1
- CASP-FR2
- CASP-FR3
- FWY

2. Frontage Districts Table

The regulations for each Frontage District are provided for in **Table 3-1 (Frontage Districts Table)**.

Table 3-1: Frontage District Table

Chapter 4

Development

Standards

This Chapter establishes Development Standards Districts to regulate site design, including location and characteristics of access, parking, landscape and other site features. Development Standards Districts consist of a combination of regulations that are appropriate to a variety of contexts.

A. Development Standards Applicability

1. General

All Projects filed after the effective date of this Specific Plan shall comply with the Development Standards as further specified below.

2. Applicability

Refer to Sec. 4A.2.2. (*Development Standards Applicability*) of Chapter 1A (Zoning Code) of the LAMC for the Development Standards Rule Categories that apply to a Project based on the types of Project Activities involved.

3. Development Standards Rules

Refer to Part 4C. (*Development Standards Rules*) of Chapter 1A (Zoning Code) of the LAMC for the Intent, Applicability, Standards, Measurement, and Relief of each Development Standards Rule Category, except as modified in Paragraph a. (Relief) and Paragraph b. (Development Review) below.

- a. **Relief.** Where relief may be requested pursuant to the Development Standards Rules, Sec. 13.B.4.4 (*Project Adjustment*) of Chapter 1A (Zoning Code) of the LAMC shall substitute for Sec. 13B.5.1. (*Alternative Compliance*) and Sec. 13B.5.2. (*Adjustments*) of Chapter 1A, and Sec. 13B.4.5. (*Project Exception*) of Chapter 1A shall substitute for Section 13B.5.3. (*Variance*) of Chapter 1A.
- b. **Development Review.** In lieu of Div. 4C.14. (*Development Review*) of Chapter 1A (Zoning Code) of the LAMC, Projects that conform with the Specific Plan and receive Specific Plan Review, or Project Compliance, shall be exempt from Development Review.

B. Development Standards Districts

1. Development Standards Districts Map

The Development Standards District for each property within the Specific Plan is set forth in **Map 4-1 (Development Standards Districts Map)**.

Development Standards District Map 4-1

Chapter 5

Use

This Chapter establishes Use Districts and Use Standards to regulate the activities on a lot, and to mitigate any potential impacts within a lot and on surrounding property as a result of those activities.

A. Use Applicability

1. General

All Projects filed after the effective date of this Specific Plan shall comply with the Use District standards as further specified below.

2. Applicability

Refer to Sec. 5A.2.2. (*Use Applicability*) of Chapter 1A (Zoning Code) of the LAMC for the Use Rule Categories that apply to a Project based on the types of Project Activities involved.

3. Use Rules

Refer to Part 5C. (*Use Rules*) of Chapter 1A (Zoning Code) of the LAMC for Use Definitions, Use Permissions, Use Standards, and Special Use Programs.

B. Use Districts

1. Use Districts Map

The Use District for each property within the Specific Plan is set forth in **Map 5-1 (Use Districts Map)**.

Use Districts Map 5-1

- Urban Village
- Urban Center
- Urban Innovation
- Public 2 (P2)
- Open Space 1 (OS1)
- FWY

C. Urban Village Use District

1. Intent

Urban Village is an Industrial-Mixed Use District intended to expand housing opportunities that include affordable units, while accommodating employment uses and community supporting services.

2. Allowed Uses & Use Limitations

F. Supplemental Standards

1. Animal Keeping, Bees

- a. Bee keeping operator shall be registered as a beekeeper with the Los Angeles County Agricultural Commission.
- b. A water source for bees shall be provided at all times on the lot where the bees are kept.

2. Home Occupation

On-site deliveries and shipments related to the commercial use in a home occupation shall not be performed by vehicles having a gross vehicular weight rating designation greater than Class 4 or greater than 16,000 pounds. Deliveries from larger trucks shall occur no more frequently than once every 2 months.

3. Lodging

A lodging use shall not be permitted where it requires a change of use from any residential use.

4. Motor Vehicle Services, General

- a. Bay doors and other building entrances and exits designed and intended for motor vehicle access shall meet the following standards:
 - i. Shall remain closed except during the allowed hours of operation, and
 - ii. Shall not face any frontage lot line.
- b. An off-street loading area, in compliance with development standard requirements for loading areas (LAMC Chapter 1A Sec. 4C.2.2.3.), shall be provided to adequately accommodate all loading, unloading and any other activities requiring the use of commercial vehicles for transportation.
- c. All client vehicles being serviced by a general motor vehicle service use shall be stored onsite.

5. Recycling Facilities, Collection

- a. All deposited goods and materials, temporary installations, debris, trash, and any other material associated with the use shall be placed or stored in a fully covered and enclosed recycling facility, and not be left or stored outdoors beyond the hours of operation.
- b. Collection facilities shall be emptied in accordance with their posted pick-up schedule, and the area surrounding the collection bins shall be maintained free of overflow goods and materials, litter, debris, posted bills, and graffiti at all times.
- c. In order to prevent unauthorized access to the collection facility, a tamper-resistant locking mechanism shall secure the opening of the collection facility.
- d. The receptacle, container, or bin in which goods and materials are stored shall be fabricated of durable, noncombustible, and waterproof materials.
- e. The recycling collection facility enclosure shall be clearly identified with the operator's name, address, and telephone number, the lot owner's name, address of the lot, the types of items or materials that may be deposited, the pick-up schedule, a notice that no material shall be left outside the enclosure, and instructions to call 311 to register any complaint regarding the facility with the Department of Building and Safety.

6. Recycling Facilities, Donation Bin

- a. No more than one collection bin shall be located on any lot.
- b. Collection bins shall be emptied in accordance with their posted pick-up schedule, and the area surrounding the collection bins shall be maintained free of overflow goods and materials, litter, debris, posted bills, and graffiti at all times.
- c. In order to prevent unauthorized access to the collection bin, a tamper-resistant locking mechanism shall secure the opening of the collection bin.
- d. The collection bin shall be fabricated of durable, noncombustible, and waterproof materials.
- e. Collection bins shall be illuminated between sunset and sunrise by a light source providing at least 1 footcandle of light.

- f. The collection bin shall be clearly identified with the operator’s name, address, and telephone number, the lot owner’s name, address of the lot, the types of items or materials that may be deposited, the pick-up schedule, a notice that no material shall be left outside the enclosure, and instructions to call 311 to register any complaint regarding the collection bin with the Department of Building and Safety.

7. Wireless Facility, All

The wireless facility shall meet all applicable standards required by LAMC Chapter 1A Sec. 4C.12.4. (Wireless Telecommunication Facilities).

G. Supplemental Procedures

1. Recycling Facilities, Collection

An annual site inspection shall be conducted by LADBS, pursuant to Sec. 13B.10.3. (Annual Inspection Monitoring - Auto Dismantling Yards, Junk Yards, Scrap Metal or Recycling Materials Processing Yards, Recycling Collection Centers, Buyback Centers, Recycling Materials Sorting Facilities, and Cargo Container Storage Yards).

2. Recycling Facilities, Donation Bin

An annual site inspection shall be conducted by LADBS pursuant to Sec. 13B.10.3. (Annual Inspection Monitoring - Auto Dismantling Yards, Junk Yards, Scrap Metal or Recycling Materials Processing Yards, Recycling Collection Centers, Buyback Centers, Recycling Materials Sorting Facilities, and Cargo Container Storage Yards).

3. Retail, Firearms

- a. In addition to the findings otherwise required by Sec. 13B.2.2. (Class 2 Conditional Use Permit), the Zoning Administrator shall also consider:
 - i. Whether the proposed use will result in an over-concentration of this use in the area, and
 - ii. The number of firearms available for sale at the lot.

4. Retail, Large Format

- a. In addition to a Conditional Use Permit with approval by the City Planning Commission, pursuant to Sec. 13B.2.3. (Class 3 Conditional Use Permit), new large format retail uses are required to prepare an economic impact analysis report for submission to the Department of City Planning and the Economic & Workforce Development Department for review in conjunction with its application to the Department of City Planning. The Economic & Workforce Development Department shall complete its review of the report within 60 days after receipt of the report from the applicant. The report shall identify the following:

- i. The economic impact on retail businesses within a 3-mile radius based on the potential to divert or expand the local or regional customer base. Data portraying the existing customer volume of the study area as well as the anticipated customer volume of the study area shall be included in the report.
 - ii. The destruction or demolition of any buildings, structures, facilities or site area containing any of the following uses: any Residential Use, Civic Facility, School, Nature Reserve, Public Open Space, or Public Recreation.
 - iii. Contribution to local retail market in terms of providing lower in cost or higher in quality goods and services than currently available to residents within a 3-mile radius. A survey of goods and services offered by retail uses within a 3-mile radius shall be included within the report.
 - iv. The number of permanent jobs displaced or created as a direct result of the project. Permanent jobs shall be categorized by employment sector within the report.
 - v. Fiscal impact on City tax revenue, either positive or negative.
 - vi. Viability of future reuse of the project site in the event the business vacates the premises based on factors such as building design, site layout, and lease terms requiring the lot to remain vacant for a significant amount of time.
 - vii. Reasonable expectation that employment solicitation by day laborers will occur at or around the lot.
 - viii. Measures to mitigate any materially adverse impacts identified within the report.
- b. If determined by the City Planning Commission, or the City Council on appeal, that based on the findings of the report, or any other information received before or at a public hearing that there is a reasonable expectation that employment solicitation by day laborers will occur at or around the lot then the following measures may be required to the satisfaction of the City Planning Commission, or the City Council on appeal:

- i. The project shall accommodate employment solicitation by day laborers with dedicated congregation space that meets the following criteria:
 - a. Is sufficient in size based on reasonably expected users;
 - b. Located along but clear of a pedestrian accessway leading to a primary entrance; and
 - c. Is covered to provide adequate shelter from the weather.
- ii. Amenities including publicly accessible sources of drinking water, toilet and trash facilities, tables, and seating areas shall also be made available during business hours of operation.
- iii. A signage plan, indicating the location of signs at appropriate locations throughout the lot directing users to dedicated congregation areas and amenities.

Chapter 6

Density

This Chapter establishes the maximum density of household dwelling units and efficiency dwelling units permitted on a lot.

Properties designated with the FA Density District, an abbreviation for “Floor Area”, are limited only by floor area. Properties designated with the N Density District, an abbreviation for “Not Permitted”, do not allow dwelling units.

A. Density Applicability

1. General

All Projects filed after the effective date of this Specific Plan shall comply with the Density District standards as further specified below.

2. Applicability

Refer to Section 6A.2.2. (*Density Applicability*) of Chapter 1A of the LAMC for the Density Rule Category that applies to a Project based on the types of Project Activities involved.

B. Density Districts

1. Density Districts Map

The Density District for each property within the Specific Plan is set forth in **Map 6-1 (Density Districts Map)**.

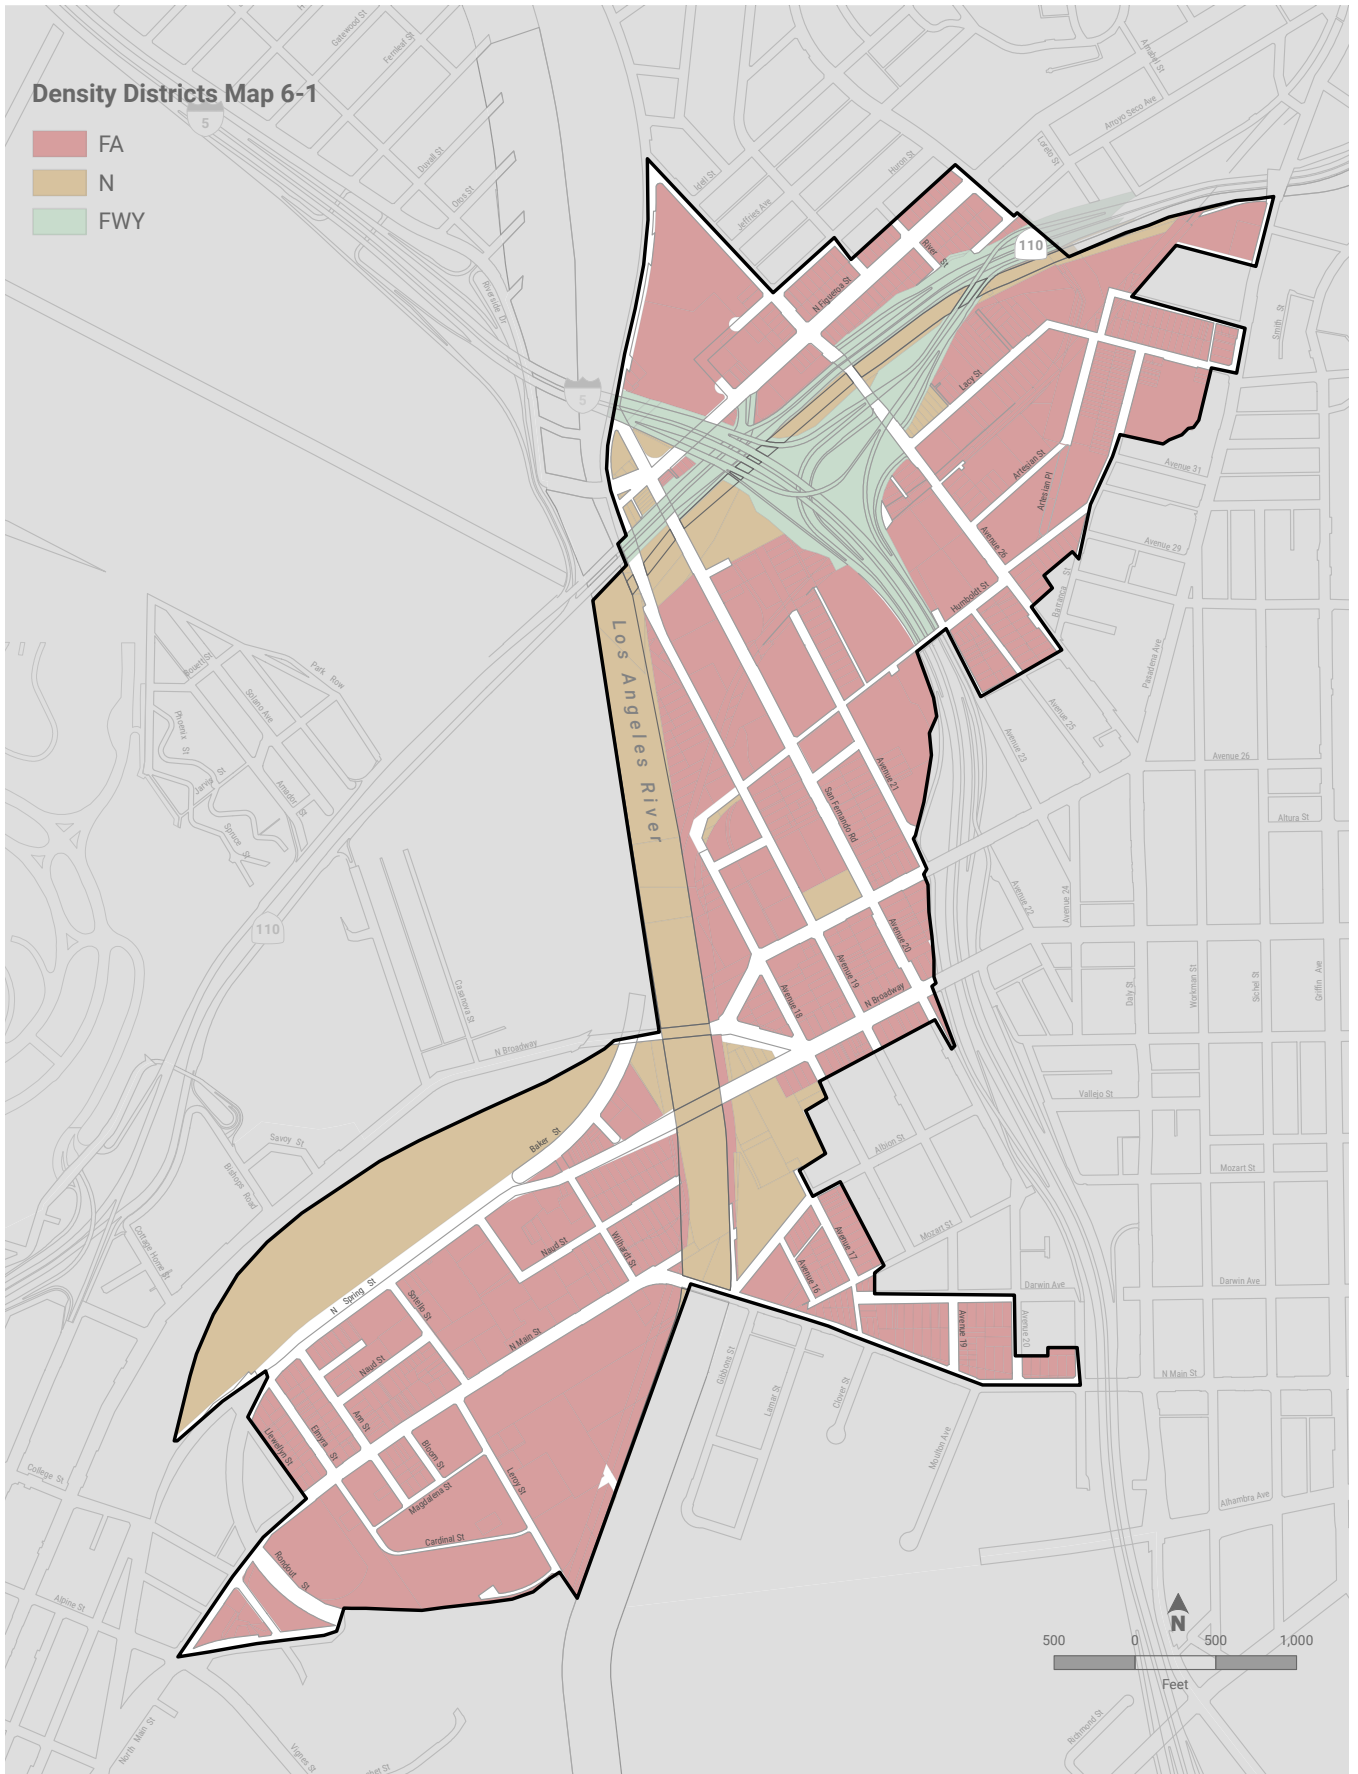

2. Density Districts Table

The regulations for each Density District are provided for in Section 6B.1.2. (*Lot-Area Based Density Districts*) of Chapter 1A (Zoning Code) of the LAMC.

Density Districts Map 6-1

- FA
- N
- FWY

Chapter 7 Community Benefits Program

This Chapter establishes a Community Benefits Program pursuant to Div. 9.3. (*Community Benefits Program*) of Chapter 1A of the LAMC. This Community Benefits Program is comprised of a Local Affordable Housing Incentive Program, in Section B below, followed by a Public Benefits Incentive Program, in Section C below.

A. Community Benefits Standards

1. Relief

Requirements of this Chapter shall not be eligible for a Project Adjustment pursuant to Sec. 13B.4.4. (*Project Adjustment*) of Chapter 1A (Zoning Code) of the LAMC or a Project Exemption pursuant to Sec.13B.4.5. (*Project Exemption*) of Chapter 1A (Zoning Code) of the LAMC.

2. Pro Rata Share

Projects may seek less than the full increment of FAR available through the incentives in this Chapter provided that they provide a proportional share of community benefits and meet the minimum requirements.

3. Relationship to Other Regulations

- a. Citywide Density Bonus and Qualified Permanent Supportive Housing. Nothing in this Specific Plan is intended to override or conflict with the regulations set forth in Section 9.2.1. (*Density Bonus*) or 9.4.1. (*Permanent Supportive Housing Incentive Program*) of Chapter 1A (Zoning Code) of the LAMC that provide bonuses, waivers, and incentives for certain affordable housing projects. Projects may utilize bonuses, waivers, and incentives for certain affordable housing projects pursuant to Section 9.2.1. or 9.4.1. of Chapter 1A, applied to the Base FAR or other applicable base development rights for that zone. Projects that obtain density, height, or FAR bonuses, incentives, waivers, or concessions pursuant to Section 9.2.1. or 9.4.1. of Chapter 1A, or any other State or local program, including Government Code Sections 65915-65918, may not use the incentives set forth in this Chapter.
- b. Transit Oriented Communities Affordable Housing Incentive Program. For Housing Development Projects within the boundaries of this Specific Plan, the Citywide Transit Oriented Communities Guidelines shall be superseded by the provisions and requirements contained within this Chapter.

B. Local Affordable Housing Incentive Program Pursuant to Sec. 9.3.2. of Chapter 1A (Zoning Code) of the LAMC

1. Bonus Floor Area

A Housing Development that meets the requirements below may obtain an additional 100 percent FAR above the subject site’s base Maximum FAR.

2. Requirements

- a. **On-Site Restricted Affordable Units.** Within the boundaries of the CASP, a Housing Development shall provide Restricted Affordable Units at rates outlined in Set A of Sec. 9.3.2.B. (*Eligibility*) of Chapter 1A (Zoning Code) of the LAMC. The minimum number of Restricted Affordable Units shall be calculated based upon the total number of units in the final project.

Local Incentive Program Affordability Requirements - Set A (For Reference Only)

Deeply Low Income	Extremely Low Income	Very Low Income	Lower Income	Moderate
--	11%	15%	25%	n/a

As an alternative to providing Restricted Affordable Units at the rates outlined in Set A, a Housing Development may set aside 10% of units for Deeply Low Income Households.

- b. **Dwelling Unit Mix and Location.** A minimum of 20% of the total dwelling units for an eligible Housing Development that is Mixed-Income Housing shall be two bedrooms or greater.

3. Additional Incentives

In addition to the FAR bonus identified in Sec. B.1. of this Chapter, a Housing Development Project shall be granted two additional incentives and a 100 Percent Affordable Housing Project shall be granted three additional incentives. This shall supersede Sec. 9.3.2.D. (*Additional Incentives*) of Chapter 1A (Zoning Code) of the LAMC.

- a. **Building Width.** See Sec. 2.C.6. (*Building Width*) of Chapter 1A (Zoning Code) of the LAMC.
 - i. For all eligible Housing Development Projects, up to a 20% increase in maximum building width may be granted.
- b. **Lot Coverage.** See Sec. 2.C.2. (*Coverage*) of Chapter 1A (Zoning Code) of the LAMC.
 - i. For all eligible Housing Development Projects, up to a 20% increase in maximum lot coverage may be granted.
- c. **Lot Width.** See Sec. 2.C.1. (*Lot Size*) of Chapter 1A (Zoning Code) of the LAMC.
 - i. For all eligible Housing Development Projects, up to a 20% decrease in required minimum lot width may be granted.
- d. **Averaging of Floor Area.** See Sec. 2.C.4. (*Floor Area Ratio & Height*) of Chapter 1A (Zoning Code) of the LAMC.
 - i. A Housing Development Project that is located on two or more adjacent parcels may average the Floor Area over the project site provided that:
 - a. The proposed use is permitted by the Use District of each parcel; and
 - b. No further lot line adjustment or any other action that may cause the Housing Development Project site to be subdivided subsequent to this grant is permitted.

C. Public Benefits Incentive Programs Pursuant to Sec. 9.3. of Chapter 1A (Zoning Code) of the LAMC

To promote the production of improvements, facilities, resources, and services beyond affordable housing for the benefit and enjoyment of the general public.

1. Eligibility

A project must meet the criteria set forth in Sec. 9.3.1.C. (*Eligibility*) of Chapter 1A (Zoning Code) of the LAMC to be eligible for the following Public Benefits Incentive Programs.

A Housing Development Project must first use the Local Affordable Housing Incentive Program established in Section B of this Chapter to its fullest extent before being eligible for Public Benefits Incentive Programs. Projects which do not involve the construction of a Housing Development Project are eligible to use any of the following Public Benefits Incentive Programs.

2. Privately Owned Public Space pursuant to Sec. 9.3.3. of Chapter 1A (Zoning Code) of the LAMC

- a. For every additional four percent of buildable lot area dedicated as publicly accessible outdoor amenity space, above the subject site's required Lot Amenity Space, eligible projects may obtain an additional 1.0:1 FAR for either of the following:
 - i. Land dedicated for public open space, in consultation with the Department of Recreation and Parks.
 - ii. On-site publicly accessible open space, constructed in accordance with the requirements listed below:
 - a. At least one public restroom and drinking water fountain shall be provided within, adjacent to, and/or and directly accessible from the publicly accessible open space. Public restrooms shall be made available during the operational hours of the publicly

accessible open space, and shall not necessitate the need to enter secured or otherwise publicly inaccessible portions of a building or site. Signage viewable from within the publicly accessible open space shall indicate that the restroom and drinking water fountain is available for public use.

- b. At least one of the amenity options listed below, which shall occupy a minimum of 400 square feet with no horizontal dimension less than 15 feet, shall be provided within or adjacent to the publicly accessible open space:
 - i. Outdoor exercise equipment available for public use
 - ii. Sport courts available for public use
 - iii. Dog run available for public use
 - iv. Children’s play area available for public use
 - v. Community garden available for public use
 - vi. Public art or historical interpretive element
 - vii. Alternative Open Space Amenities deemed appropriate by the Director of Planning and approved under a Director’s Determination
- c. At least 20% of the publicly accessible open space shall be shaded. Percentage shading shall be the shadow cast on the publicly accessible open space measured at noon (12:00 p.m.) on the summer solstice.
- d. A minimum of three public charging stations for personal electronic devices, with features like power outlets and USB connections, shall be provided at no cost to users.

3. Community Facilities pursuant to Sec. 9.3.4. of Chapter 1A (Zoning Code) of the LAMC

- a. Sites seeking to utilize the Community Facilities incentive must dedicate a minimum of 5,000 square feet to one of the eligible uses below. In addition to the minimum required space, for every 10% of bonus buildable floor area dedicated to one of the following, eligible projects may obtain an additional 1.0:1 FAR:
 - i. Daycare Facility pursuant to LAMC Chapter 1A Sec. 9.3.4.C.1.
 - ii. Full-Service Grocery Store pursuant to LAMC Chapter 1A Sec. 9.3.4.C.2.
 - iii. Health Center pursuant to LAMC Chapter 1A Sec. 9.3.4.C.3.
 - iv. School and Library pursuant to LAMC Chapter 1A Sec. 9.3.4.C.5.
 - v. Social Services pursuant to LAMC Chapter 1A Sec. 9.3.4.C.6.
 - a. Alternative Social Services shall require the approval of a Director's Determination.
 - vi. Civic Facility pursuant to LAMC Chapter 1A Sec. 9.3.4.C.7.
 - a. Alternative Civic Facilities shall require the approval of a Director's Determination.
 - vii. Small and/or Legacy Business Area
 - a. The property owner shall devote floor area with below-market rent for a Small and/or Legacy Business, as defined in Sec. 1.A.4. (Definitions) of this Specific Plan. Market rent shall be determined by a licensed appraiser.
 - b. Floor area used by a Small and/or Legacy Business shall be used for such purpose for a minimum of 55 years after the Certificate of Occupancy is issued. For the purposes of this provision, the time in which the Small Legacy Business space is vacant does not count towards the required minimum.

- c. A minimum 10-year lease with a Small and/or Legacy Business, with a 5 year renewal option, shall be required prior to the issuance of a Certificate of Occupancy. This requirement does not mean that the Small Legacy Business is required to complete the term of the lease. If the lease is not completed prior to the 10-year term, the property owner or their representatives shall find a new Small Legacy Business to complete the 10-year term. For the purposes of this provision, the time in which the Small Legacy Business space is vacant does not count towards the required minimum.
- d. The floor area devoted to a Small and/or Legacy Business shall be located on-site.
- e. More than one Small and/or Legacy Business may be permitted on a site pursuant to this incentive.
- f. For a project which is obtaining additional floor area for providing a Small and/or Legacy Business, no other Certificate of Occupancy for the project shall be issued prior to a Certificate of Occupancy for the Small and/or Legacy Business required pursuant to this Section.
- g. Prior to the issuance of a building permit, the owner of the lot or lots shall execute and record a covenant and agreement, acknowledging that the owner shall implement each of the applicable requirements set forth in this Community Facilities incentive. The covenant and agreement shall run with the land and be binding upon the owners, and any assignees, lessees, heirs, and successors of the owners. The City's right to enforce the covenant and agreement is in addition to any other remedy provided by law.

4. Additional On-Site Restricted Affordable Units

- a. A Housing Development may exceed the bonus FAR received through the Local Affordable Housing Incentive Program (Section 2 of this Chapter) up to the maximum bonus FAR by an additional 1.0:1 FAR for each increase in the amount of on-site Restricted Affordable Units, calculated on the total number of units, according to the following percentages: 3% Deeply Low, Extremely Low Income, or Very Low Income; or 4% Low Income.

Chapter 8

Streets

A. Street Dedication and Improvement

1. Requirement

Projects in the Specific Plan shall comply with the applicable dedication and improvement requirements of Div. 10.1. (*Street Dedication and Improvement*) of Chapter 1A (Zoning Code) of the LAMC. For the purposes of this Division, any lot in an Urban Village, Urban Center, Urban Innovation, or Public Use (P2) Use District shall be deemed equivalent to a lot in an Industrial-Mixed Use District.

- a. Pursuant to Div. 10.1.I. of Chapter 1A (Zoning Code) of the LAMC, where the existing improved roadway meets or exceeds the street standard, but the abutting sidewalk dimension is less than standard as depicted in the most recent version of the Bureau of Engineering's standard plan number S470, the sidewalk must be widened to meet the standard.

2. Street Standards

The street designations and street standards of rights-of-way within the Specific Plan boundaries can be found in Appendix A (Street Cross-Sections) and the Bureau of Engineering Navigate LA website.

B. Basic Streetscape Improvements

1. Applicability

When a right-of-way improvement is required of any Project pursuant to Section 8.A. of this Specific Plan, the following Basic Streetscape Improvements are also required as part of the right-of-way improvement.

2. Waiver of Improvements

The Director of Planning may waive, reduce, or modify the requirements of the Basic Streetscape Improvements pursuant to the waiver of dedication and improvement provisions set forth in Sec. 10.1.10. (*Waiver and Appeals*) of Chapter 1A (Zoning Code) of the LAMC.

3. Street Trees

- a. **Requirement.** The Project shall include the installation of street trees planted in parkways along the right of way adjacent to the Project, in coordination with the Bureau of Engineering and as approved by the Bureau of Street Services, Urban Forestry Division.
- b. **Number, Size, and Location of Street Trees.** The Project shall provide the maximum number of street trees, as determined by the Bureau of Street Services, Urban Forestry Division. Trees shall be planted in parkways; or if not in parkways, in the largest possible size tree wells meeting the requirements of the Bureau of Street Services, Urban Forestry Division.
- c. **Tree Removal and Replacement.** Where existing street trees must be removed and/or replaced as a result of required street widening or other improvements, approval from the Board of Public Works through the Bureau of Street Services, Urban Forestry Division, may be necessary.

4. Additional Basic Streetscape Improvements

- a. **Requirement for Projects.** A Project that includes fewer than 50 dwelling units or guest rooms shall provide at least one of the Additional Basic Streetscape Improvements listed in Table 8-1. For every additional 100 dwelling units or guest rooms, a Project shall provide an additional improvement listed in Table 8-1, not to exceed four Additional Basic Streetscape Improvements. A Project that does not include dwelling units or guest rooms shall include one Additional Basic Streetscape Improvement per 50,000 square feet of nonresidential floor area.

Table 8-1. Basic Streetscape Improvements

Typical Characteristics	Required Review	Standard Plan or Agency Review	Typical Maintenance
Parkways			
<ul style="list-style-type: none"> - Standard dimension: 5' wide - Surface treatment: low-growing drought-tolerant plants with mulch - Convenience Strip: Unobstructed area 18" from back of curb, excluding a minimum 6"-wide curb. Required at planted parkways adjacent to curbside parking spaces or loading areas. Natural concrete (standard gray) or permeable pavers if approved by BOE. - House Walk: If parkway is adjacent to marked on-street parking or loading spaces, a 5'-wide walkable surface across the parkway shall be provided every 35 to 50 feet. Walkable surface should be concrete (or permeable pavers if approved by BOE). 	BOE, BSS	BOE, BSS	Repair house walks when damaged; weed and clean as needed by owner
Special Sidewalk Paving			
<ul style="list-style-type: none"> - Preferred: Concrete to be standard gray color, with approved permeable interlocking concrete pavers between tree wells (standard gray color). Type and pattern of permeable pavers to be approved by BOE. Approved pavers are listed on the "Approved Products" page at https://boe.lacity.org/apm/menu.cfm 	BOE	Non-Standard	Repair when damaged; clean as needed by owner

Table 8-1. Basic Streetscape Improvements

Typical Characteristics	Required Review	Standard Plan or Agency Review	Typical Maintenance
Special Lighting			
<ul style="list-style-type: none"> - Special lighting that adds to the Area’s sense of place is encouraged within the public right-of-way, provided that it does not interfere with pedestrian movement, vehicular safety, the approved street light/street tree spacing pattern, or other required streetscape elements 	BSS	Non-Standard	Repair when damaged
<ul style="list-style-type: none"> - Examples of special lighting include accent lighting of landscape and architectural features 			
<ul style="list-style-type: none"> - Special lighting may be installed with a revocable permit. The infrastructure for this lighting shall be maintained by the permit holder and not the Bureau of Street Lighting. 			
Bicycle Racks			
<ul style="list-style-type: none"> - Place at a location approved by the DOT and city engineer. A minimum 48" wide unobstructed sidewalk access must be maintained. 	DOT, BOE	S-671	Per review agency
<ul style="list-style-type: none"> - Inverted U or approved equal 			
Potted Planters			
<ul style="list-style-type: none"> - Shrub heights to be approved by BSS 	BSS	Non-Standard	Weed; remove/replace dead, dying or diseased plants; prune; remove litter; fertilize periodically
<ul style="list-style-type: none"> - Include water trays or internal water system 			
<ul style="list-style-type: none"> - Not to exceed dimensions (width/depth) of tree wells per this plan 			
<ul style="list-style-type: none"> - Must be designed and installed against any overturning force 			
Bus Shelters			
<ul style="list-style-type: none"> - Provided at the discretion of the City Coordinated Street Furniture Program vendor at major bus stops 	BSS, BOE	BSS, BOE	By City vendor

Table 8-1. Basic Streetscape Improvements

Typical Characteristics	Required Review	Standard Plan or Agency Review	Typical Maintenance
Bus Benches & Trash Receptacles			
<ul style="list-style-type: none"> – Provided at the discretion of the City Coordinated Street Furniture Program vendor at major bus stops 	BSS, BOE	BSS, BOE	By City vendor
Bus Stop Lights			
<ul style="list-style-type: none"> – Install in pairs within 20' of bus stops – 14' or 12' AV Steel Pole (galvanized steel) or approved equal 	BSL, DWP	BSL, DWP	By BSL
Crosswalk Striping			
<ul style="list-style-type: none"> – Per LADOT policy, the implementation of continental striping on existing marked crosswalks shall be prioritized on major streets and at intersection crossings 	DOT, BOE	S-480, S-481.1	Reapply every 5–10 years
Crosswalk ADA Ramps			
<ul style="list-style-type: none"> – ADA-approved ramps with detectable warning surface (min. 3' x 4') – Two ramps per corner at intersections (as feasible) and one ramp at each end of mid-block crossings – Detectable warning surface in yellow; remainder of ramp to be natural concrete (standard gray) 	BOE	S-442	Repair when damaged; clean as needed
Major Streetscape Improvements Listed in Table 8-2			
<ul style="list-style-type: none"> – See Table 8-2 			

- b. **Proposed Street Extension.** In addition to the requirement(s) set forth above, a Project shall include, at minimum, a paseo or other pedestrian passageway at the location where a Proposed Street Extension has been identified in the Subarea Street Map. No building or structure shall be erected on the portion of a lot identified as a Proposed Street Extension. The passageway shall be ungated and made permanently available to the general public at no cost.

For the purposes of the Frontage District requirements in Chapter 3 of this Specific Plan, the required passageway is considered a side street and abutting a side street lot line.

Alternatively, the portion of a lot identified as a Proposed Street Extension may be dedicated and improved into a public right-of-way, including lanes for vehicular traffic, pursuant to Section 8.C of this Specific Plan (Major Streetscape Improvements).

C. Major Streetscape Improvements

1. Intent

The Major Streetscape Improvements list in Table 8-2, and as shown on the Subarea Street Maps, serves to inform and support future street improvements and investments within the boundaries of the Specific Plan, and are intended to be implemented over time through a variety of means, including:

- a. By City agencies in conjunction with street improvement projects, Metro Call for Projects funding or other grants;
- b. By Certified Neighborhood Councils, Business Improvement District(s) or other community organizations; and
- c. By private property owners, developers, and business owners, in conjunction with development projects or as voluntary improvements.

2. Project Applicability

A Project that requires discretionary Project Compliance pursuant to Section 1.C.5. of this Specific Plan, or a parcel or tract map approval, may be required to implement applicable portions of the Major Streetscape Improvements, should the decision-maker determine that the selected improvements bear an essential nexus and rough proportionality to the Project's impact and impose conditions on project approvals.

3. Major Streetscape Improvements List

Table 8-2. Major Streetscape Improvements

Typical Characteristics	Required Review	Standard Plan or Agency Review	Typical Maintenance
New Crosswalks			
<ul style="list-style-type: none"> - Per LADOT policy, the implementation of continental striping on new marked crosswalks shall be prioritized on major streets and at intersection crossings - Where the nearest existing pedestrian crossings are spaced more than 600 feet apart, crosswalks should be provided, either at uncontrolled intersections or mid-block, as determined by LADOT - At new uncontrolled, marked crosswalks a new signal (e.g., Rectangular Rapid Flash Beacon, Advanced Pedestrian Warning Device) should be considered, which would require a warrant analysis by the LADOT District Office - Pedestrian refuge islands should be considered for all midblock crossings or intersection locations where there is a center turn lane and where a turn pocket is not necessary - The type and design of specific pedestrian signals, and refuge islands would be studied and determined by LADOT - BSL to review new crosswalks to ensure adequate illumination and lighting level 	<p>DOT, BOE, BSL</p>	<p>S-480, S-481</p>	<p>Reapply every 5–10 years</p>
New Traffic Signals			
<ul style="list-style-type: none"> - Refer to Proposed Traffic Signals locations indicated on the Subarea Street Maps - Any new traffic signal shall be planned and installed in conjunction with the LADOT District Office, including signal warrant analysis 	<p>DOT, BOE</p>	<p>DOT, BOE</p>	<p>By DOT</p>

Table 8-2. Major Streetscape Improvements

Typical Characteristics	Required Review	Standard Plan or Agency Review	Typical Maintenance
Proposed Street Extensions			
<ul style="list-style-type: none"> - The portion of a lot identified as a Proposed Street Extension on the Subarea Street Maps may be dedicated and improved into a public right-of-way, including lanes for vehicular traffic 	DOT, BOE, BSL, BSS	DOT, BOE, BSL, BSS	By DOT, BOE, BSL, and BSS
Curb Extensions			
<ul style="list-style-type: none"> - Located at intersections or midblock, where feasible subject to LADOT approval - Extending to width of parking lane - Natural concrete paving (standard gray) - Planting and trees optional; incorporate per BSS and LADOT guidelines; max 36" high - Refer to Green Street Standard Plans for Vegetated Stormwater Curb Extensions (S-484-0) - Minimum curb return radius of 25' for street cleaning purposes. If less than 25', to be maintained by R-permit holder. - Provide traffic warning sign at the curb extensions to prevent drivers from driving into the curb extension 	BOE, DOT, BSS	S-484	Per review agency
Parking Lane Planters			
<ul style="list-style-type: none"> - Located within existing parking lanes - Minimum size: 4' x 6' (not to exceed width of parking lane) - Install street trees (Lavender Trumpet Tree) within planters - Surface treatment: low growing plants (max 36" high) - Observe LADOT guidelines to maintain visibility for vehicles - Protection from errant drivers provided by raised curbs, bollards, railings, or other fixed objects per LADOT standards 	BOE, DOT, BSS	Non-Standard	Weed; remove/replace dead, dying or diseased plants; prune; remove litter; fertilize periodically; prune trees for clearance (permit required); maintain gutter between planter and sidewalk

Table 8-2. Major Streetscape Improvements

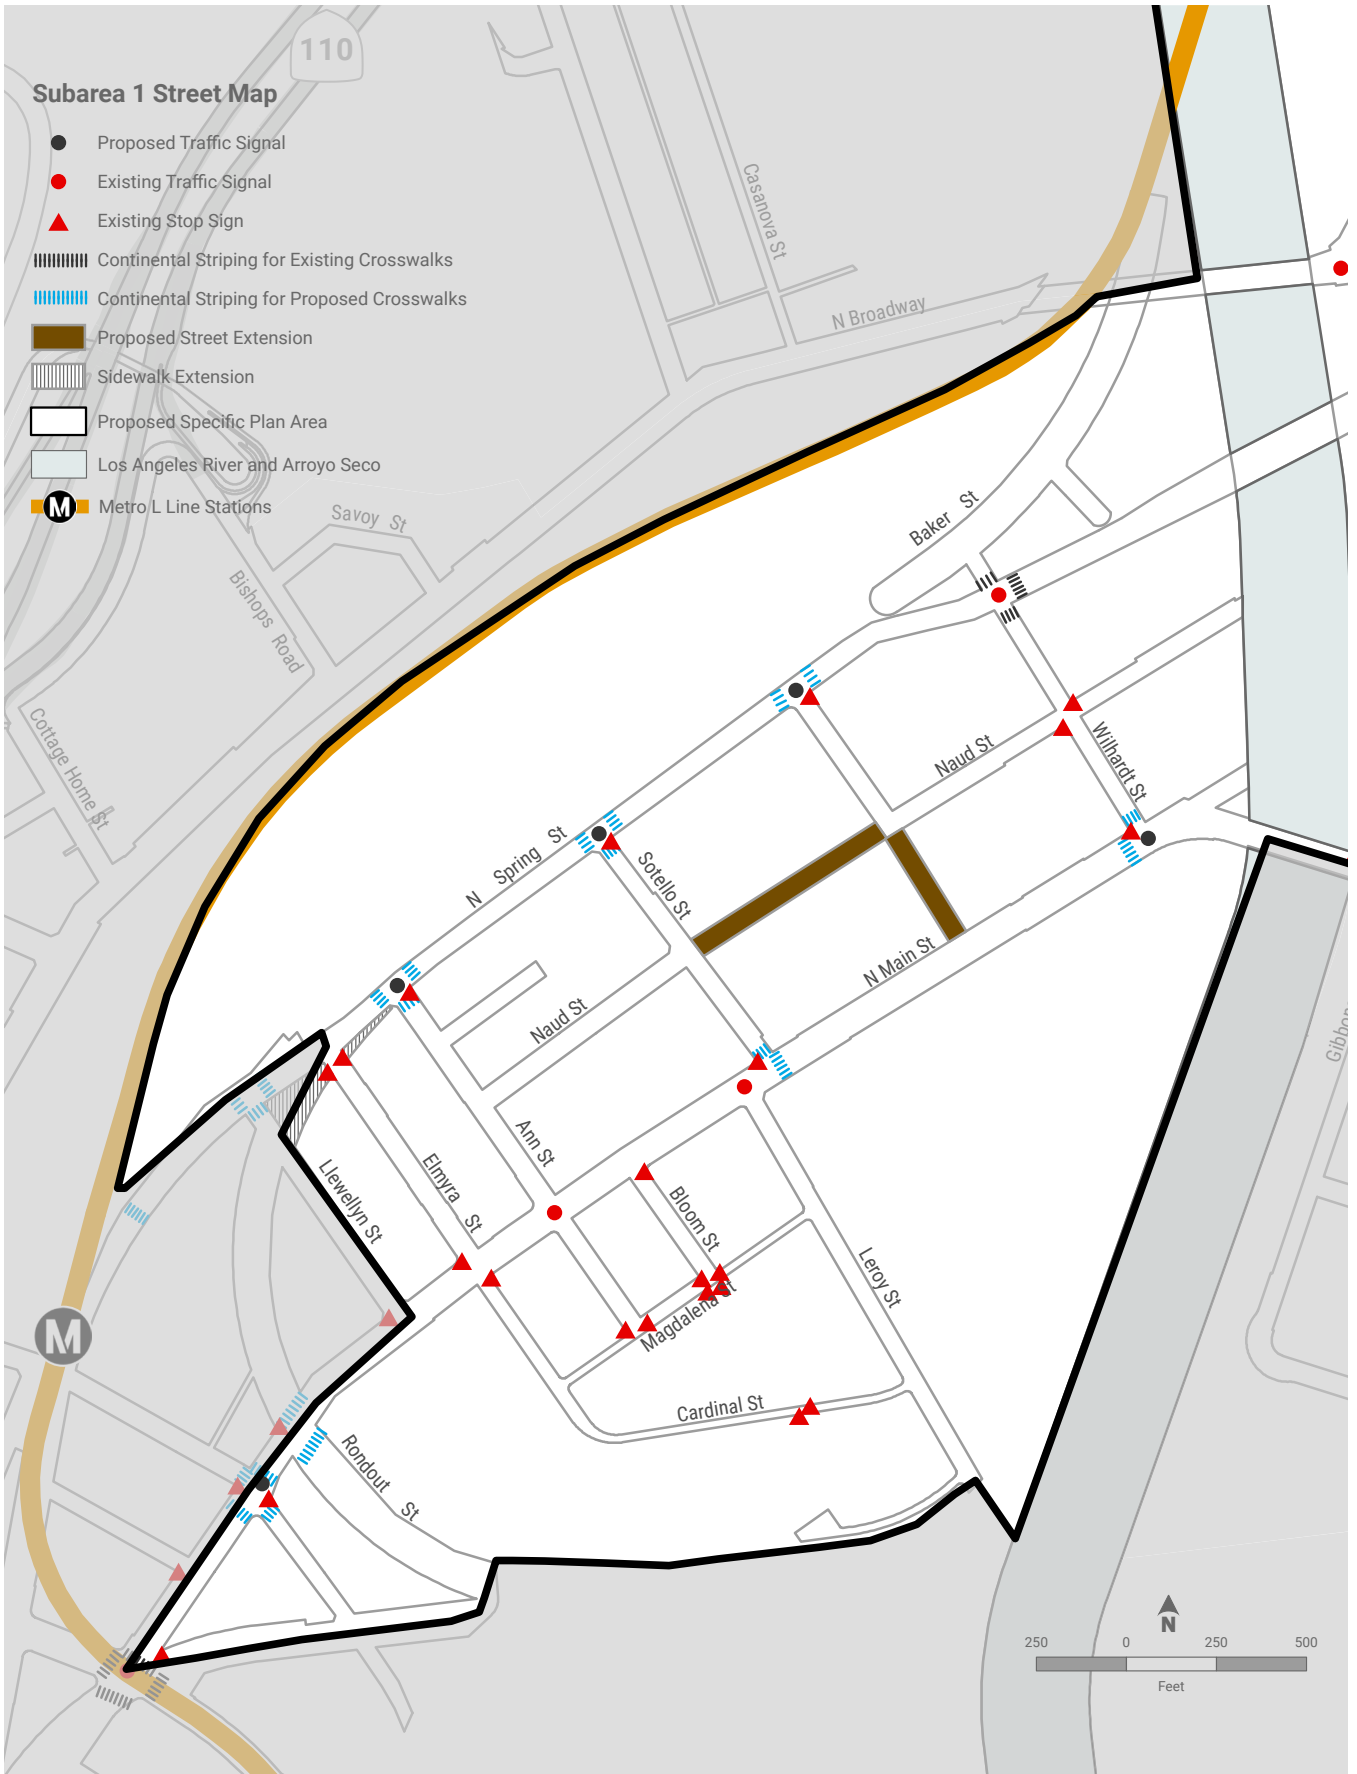

Typical Characteristics	Required Review	Standard Plan or Agency Review	Typical Maintenance
Raised Landscaped Medians			
<ul style="list-style-type: none"> - A landscaped median shall be installed along Spring Street between College and Baker Streets. The median improvements shall be interrupted to accommodate left-turn pockets at Ann Street, Sotello and Mesnager Streets. 	BOE, DOT, BSS	BOE, DOT, BSS	Weed; remove/replace dead, dying or diseased plants; prune; remove litter; fertilize periodically; prune trees for clearance (permit required); mulch and irrigate
<ul style="list-style-type: none"> - The landscaped median shall be approximately 10 feet in width and shall be planted with mature, drought-tolerant, shade canopy trees and low-maintenance, drought-tolerant ground cover and shrubs 			
<ul style="list-style-type: none"> - Minimum 6" high integral curb and gutter per City Standard Plan 			
<ul style="list-style-type: none"> - Natural concrete (standard gray) 			
<ul style="list-style-type: none"> - Slope to center to collect runoff; infiltration or treatment of street runoff where feasible 			
Bioswales			
<ul style="list-style-type: none"> - Plant low-growing plants not to exceed 36" in height (measured from pavement) 	BOE, BSS, BOS	S-480, S-483	Weed; remove/replace dead, dying or diseased plants; prune; remove litter; fertilize periodically; prune trees for clearance (permit required)
<ul style="list-style-type: none"> - Refer to Green Street Standard Plan for list of permitted planting materials 			
Seating and Benches			
<ul style="list-style-type: none"> - 118" wide with a middle arm rest 	BOE, BSS	Non-Standard	Remove graffiti; clean
<ul style="list-style-type: none"> - Place at mid-block or a minimum of every 300' 			
<ul style="list-style-type: none"> - Distinct from benches provided as part of City Coordinated Street Furniture Program 			

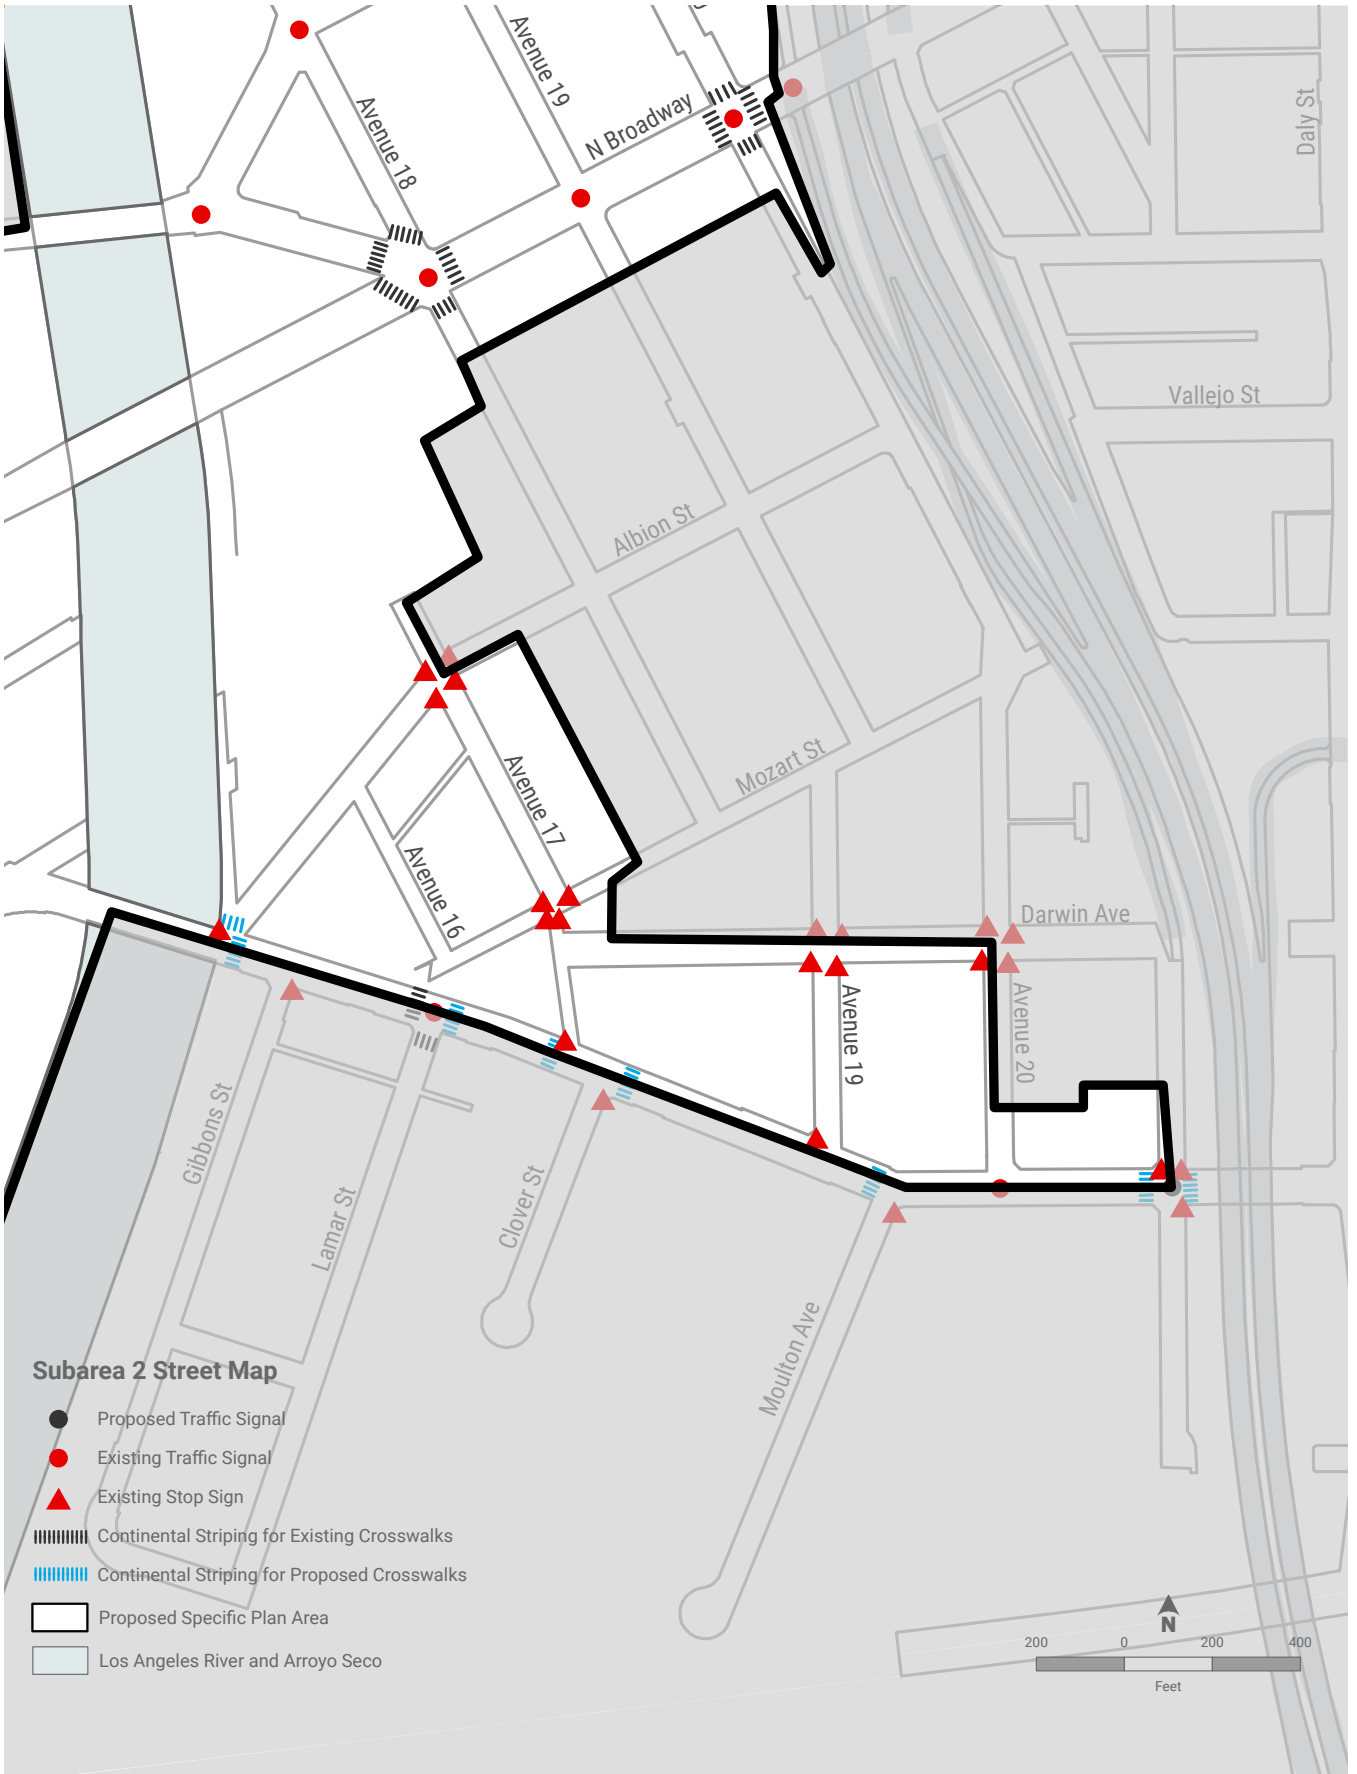

Table 8-2. Major Streetscape Improvements

Typical Characteristics	Required Review	Standard Plan or Agency Review	Typical Maintenance
Trash Receptacles			
<ul style="list-style-type: none"> - At corners of major intersections, and adjacent to benches. - Distinct from trash receptacles provided as part of City Coordinated Street Furniture Program. 	BSS	Non-Standard	Empty as needed; remove graffiti; clean
Bicycle Infrastructure			
<ul style="list-style-type: none"> - All Bicycle Friendly Streets identified in the 2010 Bicycle Plan shall be improved to include Bicycle Friendly Street improvements as described in the 2010 Bicycle Plan and highlighted in the 2010 Bicycle Plan's Technical Design Handbook. - Bicycle lanes shall be included on N. Spring, N. Main, Pasadena Avenue, San Fernando Boulevard, Figueroa Street, and a portion of Avenue 26 as illustrated on the cross-section standard plans on Navigate LA, the Bicycle Network Map, and Appendix 1. - Bicycle sharrow markings shall be included on Avenue 26 between the Arroyo Seco (Pasadena) Freeway and the Gold Line Bridge if severe roadway width constraints (i.e. the existence of freeway on and off-ramps) prohibit the addition of bicycle lanes at this location. - A bicycle lane shall be installed on Avenue 20 between Broadway and Main Street as illustrated in the cross-section standard plans on Navigate LA, the Bicycle Network Map, and Appendix 1. - Temporary sharrow markings shall be installed on Broadway between Avenue 18 and the Golden State Freeway to indicate the presence of bicyclists until such time as a bicycle lane is installed at the location, as described in the 2010 Bicycle Plan. 6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	12.3	annual days of extreme heat
Extreme Precipitation	6.65	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A

Air Quality Degradation	1	1	1	2
-------------------------	---	---	---	---

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	59.7
AQ-PM	94.7
AQ-DPM	94.2
Drinking Water	92.5
Lead Risk Housing	84.4
Pesticides	0.00
Toxic Releases	77.5
Traffic	92.5
Effect Indicators	—
CleanUp Sites	95.1
Groundwater	83.8
Haz Waste Facilities/Generators	98.7
Impaired Water Bodies	72.2
Solid Waste	37.6

Sensitive Population	—
Asthma	65.0
Cardio-vascular	24.0
Low Birth Weights	83.8
Socioeconomic Factor Indicators	—
Education	85.3
Housing	91.6
Linguistic	90.6
Poverty	85.3
Unemployment	26.9

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	9.585525472
Employed	65.58449891
Median HI	7.25009624
Education	—

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	97.0
Healthy Places Index Score for Project Location (b)	19.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Standard plan level construction assumption
Construction: Construction Phases	Grading 1 scenario
Construction: Off-Road Equipment	Grading 1 scenario

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	12.3	annual days of extreme heat
Extreme Precipitation	6.65	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	0	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	0	0	0	N/A
Wildfire	0	0	0	N/A
Flooding	N/A	N/A	N/A	N/A

Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	59.7
AQ-PM	94.7
AQ-DPM	94.2
Drinking Water	92.5
Lead Risk Housing	84.4
Pesticides	0.00
Toxic Releases	77.5
Traffic	92.5
Effect Indicators	—
CleanUp Sites	95.1
Groundwater	83.8
Haz Waste Facilities/Generators	98.7
Impaired Water Bodies	72.2
Solid Waste	37.6
Sensitive Population	—
Asthma	65.0
Cardio-vascular	24.0
Low Birth Weights	83.8
Socioeconomic Factor Indicators	—
Education	85.3
Housing	91.6
Linguistic	90.6
Poverty	85.3
Unemployment	26.9

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	9.585525472
Employed	65.58449891
Median HI	7.25009624
Education	—
Bachelor's or higher	38.73989478
High school enrollment	100
Preschool enrollment	60.4901835
Transportation	—
Auto Access	12.42140382

Other Decision Support	—
2016 Voting	22.1

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	97.0
Healthy Places Index Score for Project Location (b)	19.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	12.3	annual days of extreme heat
Extreme Precipitation	6.65	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	0	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	0	0	0	N/A
Wildfire	0	0	0	N/A
Flooding	N/A	N/A	N/A	N/A

Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	59.7
AQ-PM	94.7
AQ-DPM	94.2
Drinking Water	92.5
Lead Risk Housing	84.4
Pesticides	0.00
Toxic Releases	77.5
Traffic	92.5
Effect Indicators	—
CleanUp Sites	95.1
Groundwater	83.8
Haz Waste Facilities/Generators	98.7
Impaired Water Bodies	72.2
Solid Waste	37.6
Sensitive Population	—
Asthma	65.0
Cardio-vascular	24.0
Low Birth Weights	83.8
Socioeconomic Factor Indicators	—
Education	85.3
Housing	91.6
Linguistic	90.6
Poverty	85.3
Unemployment	26.9

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	9.585525472
Employed	65.58449891
Median HI	7.25009624
Education	—
Bachelor's or higher	38.73989478

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	97.0
Healthy Places Index Score for Project Location (b)	19.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	12.3	annual days of extreme heat
Extreme Precipitation	6.65	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A

Air Quality Degradation	1	1	1	2
-------------------------	---	---	---	---

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	59.7
AQ-PM	94.7
AQ-DPM	94.2
Drinking Water	92.5
Lead Risk Housing	84.4
Pesticides	0.00
Toxic Releases	77.5
Traffic	92.5
Effect Indicators	—
CleanUp Sites	95.1
Groundwater	83.8
Haz Waste Facilities/Generators	98.7
Impaired Water Bodies	72.2
Solid Waste	37.6

Sensitive Population	—
Asthma	65.0
Cardio-vascular	24.0
Low Birth Weights	83.8
Socioeconomic Factor Indicators	—
Education	85.3
Housing	91.6
Linguistic	90.6
Poverty	85.3
Unemployment	26.9

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	9.585525472
Employed	65.58449891
Median HI	7.25009624
Education	—
Bachelor's or higher	38.73989478
High school enrollment	100
Preschool enrollment	60.4901835
Transportation	—
Auto Access	12.42140382
Active commuting	91.06890799
Social	—
2-parent households	56.61491082

Other Decision Support	—
2016 Voting	22.1

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	97.0
Healthy Places Index Score for Project Location (b)	19.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Grading Scenario 4
Construction: Construction Phases	Grading scenario 4
Construction: Off-Road Equipment	Grading Scenario 4
Construction: Trips and VMT	Grading Scenario 4

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	12.3	annual days of extreme heat
Extreme Precipitation	6.65	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A

Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	59.7
AQ-PM	94.7
AQ-DPM	94.2
Drinking Water	92.5
Lead Risk Housing	84.4
Pesticides	0.00
Toxic Releases	77.5
Traffic	92.5
Effect Indicators	—

CleanUp Sites	95.1
Groundwater	83.8
Haz Waste Facilities/Generators	98.7
Impaired Water Bodies	72.2
Solid Waste	37.6
Sensitive Population	—
Asthma	65.0
Cardio-vascular	24.0
Low Birth Weights	83.8
Socioeconomic Factor Indicators	—
Education	85.3
Housing	91.6
Linguistic	90.6
Poverty	85.3
Unemployment	26.9

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	9.585525472
Employed	65.58449891
Median HI	7.25009624
Education	—
Bachelor's or higher	38.73989478
High school enrollment	100
Preschool enrollment	60.4901835

Transportation	—
Auto Access	12.42140382

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	97.0
Healthy Places Index Score for Project Location (b)	19.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Based on applicant provided information
Operations: Hearths	Based on SCAQMD Rule 445
Operations: Water and Waste Water	No septic tank onsite.

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	CASP Update Operational No Project 2040
Lead Agency	—
Land Use Scale	Plan/community
Analysis Level for Defaults	County
Windspeed (m/s)	0.50
Precipitation (days)	8.60
Location	34.07091146379966, -118.22325217004024
County	Los Angeles-South Coast
City	Los Angeles
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	4031
EDFZ	16
Electric Utility	Los Angeles Department of Water & Power
Gas Utility	Southern California Gas

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Apartments Mid Rise	12,773	Dwelling Unit	336	12,262,080	0.00	—	37,808	—
Strip Mall	3,878	1000sqft	89.0	3,877,426	0.00	—	—	—
Industrial Park	8,557	1000sqft	196	8,556,485	0.00	—	—	—

Government Office Building	487	1000sqft	11.2	846,246	0.00	—	—	—
----------------------------	-----	----------	------	---------	------	---	---	---

1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

Un/Mit.	ROG	NOx	CO	SO2	PM10E	PM10D	PM10T	PM2.5E	PM2.5D	PM2.5T	BCO2	NBCO2	CO2T	CH4	N2O	R	CO2e
Daily, Summer (Max)	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—
Unmit.	40.3	141	723	0.82	1.37	217	218	1.26	52.2	53.2	—	276,840	276,840	5.31	15.1	601	282,059

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

Mobile source emissions results are presented in Sections 2.6. No further detailed breakdown of emissions is available.

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	12.3	annual days of extreme heat
Extreme Precipitation	6.65	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	59.7
AQ-PM	94.7
AQ-DPM	94.2
Drinking Water	92.5
Lead Risk Housing	84.4

Linguistic	90.6
Poverty	85.3
Unemployment	26.9

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	9.585525472
Employed	65.58449891
Median HI	7.25009624
Education	—
Bachelor's or higher	38.73989478
High school enrollment	100
Preschool enrollment	60.4901835
Transportation	—
Auto Access	12.42140382
Active commuting	91.06890799
Social	—
2-parent households	56.61491082
Voting	0.795585782
Neighborhood	—
Alcohol availability	4.516874118

Park access	81.35506224
Retail density	87.09097908
Supermarket access	64.42961632
Tree canopy	39.67663288
Housing	—
Homeownership	8.443474913
Housing habitability	3.708456307
Low-inc homeowner severe housing cost burden	2.065956628
Low-inc renter severe housing cost burden	15.78339535
Uncrowded housing	18.58077762
Health Outcomes	—
Insured adults	12.03644296
Arthritis	48.2
Asthma ER Admissions	50.6
High Blood Pressure	37.6
Cancer (excluding skin)	82.6
Asthma	32.2
Coronary Heart Disease	21.3
Chronic Obstructive Pulmonary Disease	22.0
Diagnosed Diabetes	8.1
Life Expectancy at Birth	79.3
Cognitively Disabled	18.3
Physically Disabled	14.9
Heart Attack ER Admissions	76.9
Mental Health Not Good	14.3

2016 Voting	22.1

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	97.0

Healthy Places Index Score for Project Location (b)	19.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Based project applicant data
Operations: Hearths	Based on SCAQMD 445
Operations: Water and Waste Water	No septic tank onsite

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	12.3	annual days of extreme heat
Extreme Precipitation	6.65	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A

Air Quality Degradation	1	1	1	2
-------------------------	---	---	---	---

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.

The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.

The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	59.7
AQ-PM	94.7
AQ-DPM	94.2
Drinking Water	92.5
Lead Risk Housing	84.4
Pesticides	0.00
Toxic Releases	77.5
Traffic	92.5
Effect Indicators	—
CleanUp Sites	95.1
Groundwater	83.8
Haz Waste Facilities/Generators	98.7
Impaired Water Bodies	72.2
Solid Waste	37.6

Sensitive Population	—
Asthma	65.0
Cardio-vascular	24.0
Low Birth Weights	83.8
Socioeconomic Factor Indicators	—
Education	85.3
Housing	91.6
Linguistic	90.6
Poverty	85.3
Unemployment	26.9

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	9.585525472
Employed	65.58449891
Median HI	7.25009624
Education	—
Bachelor's or higher	38.73989478
High school enrollment	100
Preschool enrollment	60.4901835
Transportation	—
Auto Access	12.42140382
Active commuting	91.06890799
Social	—
2-parent households	56.61491082

Climate Change Adaptive Capacity	—
Impervious Surface Cover	8.5
Traffic Density	93.9
Traffic Access	87.4
Other Indices	—
Hardship	86.9
Other Decision Support	—
2016 Voting	22.1

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	97.0
Healthy Places Index Score for Project Location (b)	19.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Based on applicant provided data
Operations: Hearths	Based on SCAQMD 445
Operations: Water and Waste Water	No septic tank onsite

Appendix F

Cultural Resources

California Historical Resource Status Codes

Current as of 3/1/2020

1. Listed in the National Register (NR) or the California Register (CR):

- 1D:** Contributor to a multi-component resource like a district listed in the NR by the Keeper. Listed in the CR.
- 1S:** Individually listed in the NR by the Keeper. Listed in the CR.
- 1CD:** Contributor to a multi-component resource listed in the CR by the State Historical Resources Commission (SHRC).
- 1CS:** Individually listed in the CR by the SHRC.
- 1CL:** State Historical Landmark (CHL) numbered 770 and above, or an earlier CHL reheard by the SHRC and determined that it also meets CR criteria. Listed in the CR.
- 1CP:** State Point of Historical Interest (CPHI) nominated since 1998 that the SHRC also found CR eligible, or an earlier CPHI reheard by the SHRC and determined that it also meets CR criteria. Listed in the CR.

2. Determined Eligible for Listing in National (NR) or California (CR) Registers:

- 2B:** Determined eligible for NR both individually and as a contributor to a NR eligible multi-component resource like a district in a federal regulatory process. Listed in the CR.
- 2D:** Contributor to a multi-component resource determined eligible for NR by the Keeper. Listed in the CR.
- 2D2:** Contributor to a multi-component resource determined eligible for NR by consensus through Section 106 process. Listed in the CR.
- 2D3:** Contributor to a multi-component resource determined eligible for NR by Part 1 Tax Certification. Listed in the CR.
- 2D4:** Contributor to a multi-component resource determined eligible for NR pursuant to Section 106 without review by the State Historic Preservation Office (SHPO). Listed in the CR.
- 2S:** Individually determined eligible for NR by the Keeper. Listed in the CR.
- 2S2:** Individually determined eligible for NR by consensus through Section 106 process. Listed in the CR.
- 2S3:** Individually determined eligible for NR by Part 1 Tax Certification. Listed in the CR.
- 2S4:** Individually determined eligible for NR pursuant to Section 106 without review by SHPO. Listed in the CR.
- 2CB:** Determined eligible for CR both individually and as a contributor to a CR eligible multi-component resource by the State Historical Resources Commission (SHRC).
- 2CD:** Contributor to a multi-component resource determined eligible for CR by the SHRC.
- 2CS:** Individually determined eligible for CR by the SHRC.

3. Appears Eligible for National (NR) or California (CR) Registers:

- 3B:** Appears eligible for NR both individually and as a contributor to a NR eligible multi-component resource like a district through survey evaluation.
- 3D:** Appears eligible for NR as a contributor to a NR eligible multi-component resource through survey evaluation.
- 3S:** Appears eligible for NR individually through survey evaluation.
- 3CB:** Appears eligible for CR both individually and as a contributor to a CR eligible multi-component resource through survey evaluation.
- 3CD:** Appears eligible for CR as a contributor to a CR eligible multi-component resource through survey evaluation.
- 3CS:** Appears eligible for CR individually through survey evaluation.

4. Appears Eligible for National Register or as State Historical Landmark through PRC§ 5024:

- 4CM:** State agency owned resource added to Master List - appears to meet criterion.

5. Recognized as Historically Significant by Local Government:

- 5B:** Locally significant both individually (listed, eligible, or appears eligible) and as contributor to a multi-component resource like a district that is locally listed, designated, determined eligible, or appears eligible through survey evaluation.
- 5D1:** Contributor to a multi-component resource that is listed or designated locally.
- 5D2:** Contributor to a multi-component resource that is eligible for local listing or designation.
- 5D3:** Appears to be a contributor to a multi-component resource that appears eligible for local listing or designation.
- 5S1:** Individually listed or designated locally.
- 5S2:** Individually eligible for local listing or designation.
- 5S3:** Appears to be individually eligible for local listing or designation through survey evaluation.

6. Not Eligible for or Removed from Listing or Designation as Specified:

- 6J:** State Historic Landmark (CHL) or State Point of Historical Interest (CPHI) determined ineligible for or removed by the State Historical Resources Commission (SHRC).
- 6L:** Determined ineligible for local listing or designation through local government review process; may warrant special consideration in local planning.
- 6R:** Resource listed more than once on the National Register (NR) that has had some, but not all listings removed by the Keeper. Still NR listed.
- 6T:** Determined ineligible for NR through Part 1 Tax Certification process.
- 6U:** Determined ineligible for NR pursuant to Section 106 without review by Office of Historic Preservation (OHP).
- 6W:** Removed from NR by the Keeper.

6X: Determined ineligible for NR by the SHRC or the Keeper.

6Y: Determined ineligible for NR by consensus through Section 106 process – Not evaluated for CR or local listing.

6Z: Found ineligible for NR, CR or local designation through survey evaluation.

6CR: Resource listed more than once on the California Register (CR) that has had some, but not all listings removed by the SHRC. Still CR listed.

6CW: Removed from CR by the SHRC.

6CX: Determined ineligible for CR by the SHRC.

6WM: Removed from Master List because no longer state owned.

6XM: Removed from Master List because of historic feature loss or further evaluation.

6YM: State agency owned resource determined ineligible for Master List.

7. Not Evaluated, or Needs Re-evaluation for National (NR) or California (CR) Registers:

7J: Received by Office of Historic Preservation (OHP) for evaluation or action but not yet evaluated.

7K: Submitted to OHP for action but not reevaluated.

7L: State Historical Landmarks 1 through 769 that does not meet CR criteria.

7M: Submitted to OHP but not evaluated - referred to National Park Service.

7N: Needs to be reevaluated - formerly coded as may become NR eligible with specific conditions.

7N1: Needs to be reevaluated (former status code 4) - may become NR eligible with restoration or other specific conditions.

7P: State Point of Historical Interest that does not meet CR criteria.

7R: Identified in Reconnaissance Level Survey or in an Area of Potential Effect (APE): Not evaluated.

7W: Submitted to OHP for action – withdrawn or inactive.

Introduction

In 2016 the City of Los Angeles updated their new Travel Demand Forecasting Model (Los Angeles Model) as part of the Infill and Complete Streets – Capturing VMT Impacts and Benefits to CEQA Project. The citywide model focused on consistency with the latest version of the SCAG regional travel demand model, improving key components of the model process, and meeting or exceeding industry standards for calibration and validation. The details of the updated Los Angeles Model are available as part of the *2016 City of Los Angeles Travel Demand Model, Model Development Report*¹. The City of Los Angeles Model was used to analyze the Base and Future year scenarios for the Cornfield Arroyo Seco Specific Plan (CASP).

The Cornfield Arroyo Seco Travel Demand Forecasting Model (referred to as the CASP Model in the remainder of this report) builds upon the Downtown Travel Demand Forecasting Model (referred to as the Downtown Model in the remainder of this report) that was previously developed to analyze the Downtown Community Plan Area. The Downtown Model refines the level of detail within the Downtown Community Plan Area for improved sensitivity in measuring the effect of land use development and transportation network changes. The Downtown Model was developed using TransCAD Version 7.0 Build 12410. The model utilizes a conventional 4-step process consisting of trip generation, trip distribution, mode split, and assignment. This report focuses on the SED and network inputs included in the 2040 City of Los Angeles Model scenario, as well as the model enhancements made to the Downtown Model to develop the CASP Model, which was developed for the purpose of analyzing both the 2021 Existing Conditions and the 2040 Proposed Plan scenarios.

Model Inputs

Socioeconomic Data

The Southern California Association of Governments (SCAG) 2016 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) provided the initial baseline socioeconomic data estimates for the CASP Area. From this baseline set of data, the City of Los Angeles derived 2017 and 2040 estimates for population, households, and employment. Fehr & Peers used these inputs to interpolate 2021 estimates of population, households, and employment in the CASP Area and the City of Los Angeles, as summarized in Table 1. The CASP Area contains less than 1% of the employment within the City of Los Angeles, and less than 1% of the households.

¹ 2016 City of Los Angeles Travel Demand Model, Model Development Report, Fehr & Peers, February 2017.

Table 1. Existing 2021 Socioeconomic Data

Category	CASP Model Area	City of Los Angeles
Population	6,027	4,088,915
Households	2,012	1,455,656
K12 Students	1,474	616,220
College Students	0	277,680
Employees	5,411	1,884,667

Traffic Analysis Zone System

Socioeconomic data and other information used in the model are contained in geographically defined areas known as Transportation Analysis Zones (TAZs). These zones provide the spatial unit within which travel behavior and trip generation are estimated. The City of Los Angeles model has TAZ system based on the Tier 1 TAZ system used in the 2016 SCAG RTP/SCS model. The custom zone system was created to add more detail within the City of Los Angeles, so that the zonal boundaries are predominantly defined by roadways or other geographic features. This method of subdividing the SCAG Tier 1 zones improves vehicle access to the local street network. The subdivided TAZs better reflect how and where traffic enters and exits the street network and are divided along logical transportation boundaries like major streets and topography.

Figure 1 shows the TAZ system within the CASP Area used by City staff to develop land use estimates for existing conditions and land use forecasts for the future year scenarios.

As part of the process to subdivide the SCAG Tier 1 zones for the citywide model update, the socioeconomic data was modified using geographic area calculations and aerial imagery within GIS software. Residential, school, and employment disaggregation factors were individually developed for each Tier 1 zone.

For the development of the CASP Model, City staff reviewed the socioeconomic data assumptions for the TAZs within the Plan Area and adjusted the distribution of households and employment. These distribution adjustments were based on data from the Los Angeles County Assessor, but maintained the total number of households, population, and jobs within the Plan Areas based on SCAG’s estimates for the model base year.

CASP Boundary

Figure 1

Highway Network

The highway network within the CASP Model is shown in **Figure 2**. The primary attributes of the network links include directionality (1-way versus 2-way), posted speed limit, and number of lanes (by time of day, including parking restrictions). The network inputs also include turning movement restrictions for each model time period at signalized intersections and freeway ramps where appropriate.

The highway network was also reviewed for consistency with the classifications established in the Los Angeles Mobility Plan 2035 to ensure that facilities classified as Boulevards or Avenues within the Plan Area were included in the model.

Transit Network

The transit network for the citywide model was updated to include the most recently available route and schedule information from the largest transit providers in Los Angeles County. As part of the Downtown Travel Demand Model, the Metro Expo Phase 2 and Gold Line Foothill light rail extensions were included in the transit network. As such, these changes are also included in the CASP Model.

Transit service in the CASP Area is provided by LADOT and Metro:

- Los Angeles County Metropolitan Transportation Authority (Metro)
 - Gold (L) Line Light Rail
 - Metro Local Lines
 - 45
 - 76
 - 90
 - 94
 - 96
 - 251

- Los Angeles Department of Transportation (LADOT)
 - DASH B (Chinatown, Financial District)
 - Dash Commuter Express
 - 413
 - 419

Figure 2

CASP Model Network

Future Year Conditions

The following future year scenarios were analyzed utilizing the Downtown and CASP Models:

- 2040 Future (No Project) Conditions (Downtown Model)
- 2040 Proposed Plan (Project) Conditions (CASP Model)

The socioeconomic data and transportation networks under these analysis scenarios are presented below.

Future 2040 Socioeconomic Data

Future year socioeconomic household, population, and employment data for the 2040 Future (No Project) Plan and 2040 Proposed Plan scenarios were developed by the Los Angeles Department of City Planning and are described below.

2040 Future (No Project) Conditions

The 2040 Future (No Project) Plan scenario was analyzed using the 2040 Downtown Model because it was anticipated at the time the CASP analysis was conducted that the land use, socioeconomic, and transportation network changes envisioned by the Downtown Community Plan will have been implemented by 2040. This assumption was validated in May 2023 when the Los Angeles City Council voted to approve the Downtown Community Plan. The SED and network within the CASP Area were informed by the Downtown Model but adjustments were made within the CASP Area using updated SED inputs provided by the City of Los Angeles. The 2040 Future (No Project) Conditions SED inputs for the CASP Area are summarized in **Table 2**.

Table 2. 2040 Existing Plan (No Project) Conditions SED

Households	Household Growth*	Population	Population Growth*	Employment	Employment Growth*
12,773	10,761	36,021	29,994	10,004	4,593

Source: Southern California Association of Governments (SCAG), 2016. City of Los Angeles, 2022.

* Growth is calculated as the difference between 2040 Future (No Project) Conditions and Existing 2021 Conditions.

2040 Proposed Plan (Project) Conditions

Socioeconomic data for the Proposed Plan reflect reasonably anticipated future development through the Year 2040 including the proposed land use and zoning changes and housing incentive units. The distribution of household and employment growth with the Proposed Plan were determined at the TAZ level based on planned land use and zoning changes. **Table 3** shows the 2040 Proposed Plan socioeconomic data, as prepared by the Los Angeles Department of City Planning. This SED is based on known approved and

pipeline development projects within the Plan Area in addition to growth associated with the Proposed Plan. **Figures 3** and **4** illustrate the growth distribution for Households and Employment, respectively, comparing the 2040 Proposed Plan scenario with the 2040 Downtown Model Future (No Project) scenario.

Detailed SED data, including household categorization by income level and employment categorization by industry, for TAZs within the CASP Area was developed using the total population, household, and employment data described above.

Table 3. 2040 Proposed Plan (Project) Conditions SED

Households	Household Growth*	Population	Population Growth*	Employment	Employment Growth*
20,036	7,623	56,502	20,481	8,263	-1,741

* Growth is calculated as the difference between 2040 Future (No Project) Conditions and Existing 2021 Conditions.

Future Transportation Network

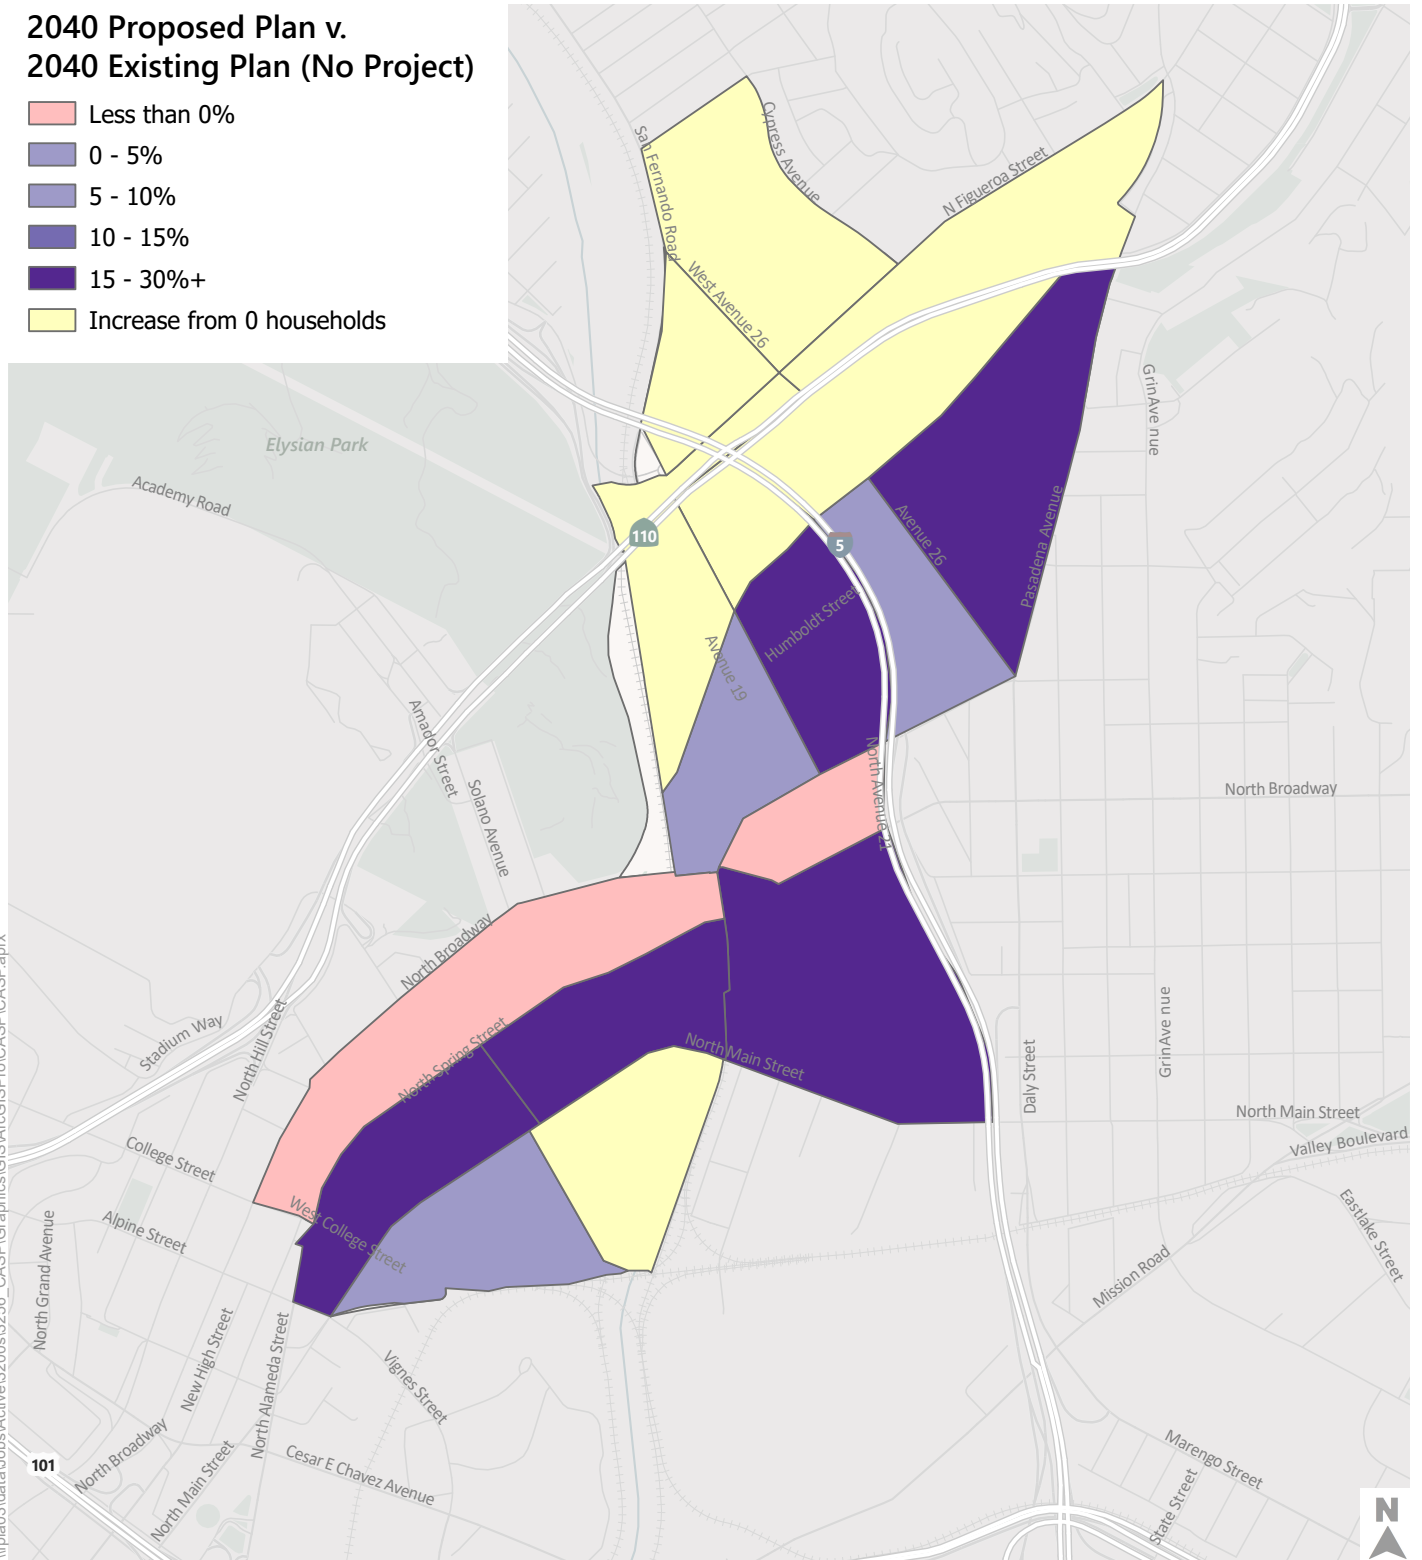

2040 Future (No Project) & Proposed Plan (Project) Conditions

The highway and transit network improvements included in the 2040 Future (No Project) Conditions scenario reflect the 2040 Plan scenario of the 2016 SCAG RTP/SCS and Mobility Plan 2035. Related to the 2016 SCAG RTP/SCS, the improvements selected for the City of Los Angeles model 2040 scenario include those projects that have committed funding on the Federal Transportation Improvement Program (FTIP) in the near-term or are included in the fiscally-constrained Regional Transportation Plan (RTP). For a complete description of projects selected in the 2040 Existing Plan model, refer to the *2016 City of Los Angeles Travel Demand Model, Model Development Report*. No RTP or FTIP highway projects included in the 2040 City of Los Angeles model are located within or adjacent to the CASP Area.

In addition to the City of Los Angeles Travel Demand Model 2040 projects, the 2040 Future (No Project) and Proposed Plan (Project) scenarios of the CASP Model also include projects from Mobility Plan 2035. Mobility Plan 2035 provides the framework for future community plan updates, which take a closer look at the transportation system in specific areas of the City and recommend more detailed implementation strategies to realize Mobility Plan 2035. The Mobility Plan 2035 reflects policies and programs that lay the foundation for safe, accessible, and enjoyable streets for pedestrians, bicyclists, transit users, and vehicles throughout the City of Los Angeles, including the CASP Area. Mobility Plan 2035 was adopted by the City in August 2015 and is compliant with the 2008 Complete Streets Act (AB 1358), which mandates that the circulation element of a city's General Plan be modified to plan for a balanced, multimodal transportation network that meets the needs of all users of streets, roads, and highways, defined to include motorists, pedestrians, bicyclists, children, persons with disabilities, seniors, movers of commercial goods, and users of public transportation, in a manner that is suitable to the rural, suburban, or urban context of the general plan.

Figure 4

The Mobility Plan 2035 contains a variety of enhanced network treatments within the CASP Area that are incorporated into the 2040 Future (No Project) and Proposed Plan (Project) scenarios of the model. **Figure 5** shows the following enhanced network treatments for roadways in the Plan Area and the surrounding vicinity:

- Bicycle Enhanced Network (BEN)
- Transit Enhanced Network (TEN)
- Vehicle Enhanced Network (VEN)

Additional Mobility Plan 2035 Considerations

Mobility Plan 2035 represents the best indication of long-term capital planning for transportation infrastructure in Los Angeles, and at the time of Mobility Plan 2035 adoption it was envisioned that the identified networks would be realized by the year 2035. As the officially adopted mobility element of the General Plan, the Plan establishes priority for future investments along the various enhanced networks on a citywide scale.

While the City typically accounts for and assumes projects that are built, underway, or have secured funding as part of the horizon year future, there is evidence of a rapid pace of improvements and funding of the enhanced networks in the Plan Area outlined in Mobility Plan 2035. Recent and ongoing investments and prioritization of first-last mile connectivity demonstrate the commitment to improve this infrastructure regardless of whether the CASP itself is adopted. For this reason, it is reasonable to analyze all future scenarios in this area with the inclusion of Mobility Plan 2035.

For all Future 2040 scenarios of the CASP, transportation network assumptions to be applied to the roadways designated for enhanced network treatments are summarized in **Table 4**.

Table 4. CASP Enhanced Networks Model Assumptions

Enhanced Network	Treatment Level	Model Assumptions
Vehicle-Enhanced Network (VEN)	Moderate	<ul style="list-style-type: none"> Reduce vehicle travel times by 10% Add one vehicular travel lane per direction if all-day parking is available, or convert one off-peak parking lane per direction to a full-time vehicular travel lane
	Comprehensive	<ul style="list-style-type: none"> Reduce vehicle travel times by 10% Add one vehicular travel lane per direction if all-day parking is available, or convert one off-peak parking lane per direction to a full-time vehicular travel lane Increase effective vehicular capacity by 10%
Transit-Enhanced Network (TEN)	Moderate	<ul style="list-style-type: none"> No change to lane configurations Double frequency of bus service
	Moderate Plus	<ul style="list-style-type: none"> Convert one vehicular travel lane per direction to a bus only lane during peak periods Double frequency of bus service
	Comprehensive	<ul style="list-style-type: none"> Convert one vehicular travel lane per direction to a bus only lane for the full day Double frequency of bus service
Bicycle-Enhanced Network (BEN)/Bicycle Lane Network	Bike Lane (Tier 3)	<ul style="list-style-type: none"> No change in lane configuration
	Bike Lane (Tier 2)	<ul style="list-style-type: none"> Remove one vehicular travel lane per direction to accommodate a bicycle lane or buffered bicycle lane
	Protected Bike Lanes (Tier 1)	<ul style="list-style-type: none"> Remove one vehicular travel lane per direction to accommodate a Protected Bike Lane

Source: Mobility Plan 2035 Model Assumptions, Fehr & Peers, City of Los Angeles.

Other model assumptions:

- Tier 1 and Tier 2 bicycle facilities were included as these are facilities planned by the sunset of this plan. Tier 3 was not included as those facilities were not assumed to be implemented by that time.
- In cases where Tier 1 or Tier 2 bicycle facilities, and Moderate Plus or Comprehensive transit enhancements are planned for the same roadway facility, only one vehicle travel lane was removed in each direction of travel as part of the Enhanced Network.
- On roadway facilities with only one general purpose vehicle lane in each direction under existing conditions, no travel lanes were removed from the Enhanced Network.

- For purposes of developing the network in a travel demand model, the Neighborhood Enhanced Networks (NEN) identified in Mobility Plan 2035, while increasing pedestrian safety, will not reduce vehicle capacity and therefore are not included in the transportation analysis.
- On the TEN, Comprehensive and Moderate Plus networks included the conversion of a travel lane, as these enhancements include bus-only lanes at least some of the day. Moderate networks were not modeled, as these are designated for stop enhancements and increases service, with buses operating in mixed flow with vehicles.
- **Table 4** and these assumptions were determined with the project team.

Model Outputs for the Specific Plan

One of the primary uses of the CASP Model is to forecast vehicle miles traveled (VMT) and level of service (LOS) on the roadway network for each analysis scenario. These forecasts help to determine whether a plan would have any environmental impacts. For many years, LOS has been utilized to determine these impacts, but the City of Los Angeles is now using VMT as the primary measurement tool consistent with the California Environmental Quality Act (CEQA). There are two methods for estimating VMT using the travel demand model: the boundary method and the origin-destination (OD) method. Each method is best suited for supporting different types of analysis, such as estimating air pollution and GHG emissions. For purposes of this project, the OD method will be employed.

VMT is a measurement of miles traveled (e.g., private automobiles, trucks and buses) by all land uses (e.g., residential, retail, office) in the Project Area. For this analysis, VMT is reported as Total Daily VMT per Service Population, which equates to all VMT for the Plan Area divided by the number of people living and working within the Plan Area. A reduction in VMT overall and in VMT per capita service population can be used as an indicator of reduced reliance on vehicular travel, primarily by private automobiles. Some VMT metrics focus on VMT per capita and VMT per employee as separate markers of these indications; however, VMT per service population the effects of all vehicular movement in an area. It includes not only trips that are attracted and produced by home and work trips, but those that fit in neither category (i.e. school to grocery store) as well as truck trips. The VMT calculation accounts for internal (II) trips and trips that begin or end (IX or XI) within the Plan Area, as these trips are generated by or attracted to land uses within the CASP Area. The travel behavior effects of land use changes in the CASP Area can be understood by measuring the VMT of trips originating in and/or destined for the Plan Area.

RE: Cornfield Arroyo Seco Specific Plan (CASP) Update
CASE NO.: CPC-2021-2642-SP; ENV-2021-2643-EIR

Dear Tribal Representative,

This letter is to inform you that the Los Angeles Department of City Planning is preparing an Environmental Impact Report ("EIR") for the Cornfield Arroyo Seco Specific Plan (CASP) Update ("Proposed Project") in accordance with the requirements of the California Environmental Quality Act ("CEQA"). This notification is being forwarded to Native American tribes that are understood to be traditionally, culturally, and/or geographically affiliated with the Proposed Project area pursuant to the statutory requirements of Assembly Bill 52 (AB 52). Per AB 52, your tribe has the right to consult on the Proposed Project prior to the release of the related EIR and your tribe has 30 calendar days from receipt of this letter to notify us in writing that it wishes to consult on the Proposed Project. The Proposed Project is a long-range land use plan that does not consist of any proposed development projects, includes no ground disturbing activity or any related construction activity.

PROJECT LOCATION

The Project location is the Cornfield Arroyo Seco Specific Plan Area ("CASP Area" or "Project Area"), a geographically contiguous, approximately 660-acre (1.0 square mile) area located within portions of the Central City North, Northeast Los Angeles, and Silver Lake-Echo Park-Elysian Valley Community Plan Areas. The Project Area encompasses the Los Angeles State Historic Park, segments of the Los Angeles River and Arroyo Seco, segments of Interstate 5 and California State Route 110, and the Lincoln/Cypress Metro L Line station. Approximately 6,201 individuals (1,814 households) reside within the Project Area, which is bordered by the neighborhoods of Chinatown to the west, Lincoln Heights to the east, and Cypress Park to the north. The CASP Area boundaries are shown in Figure 1.

PROJECT DESCRIPTION

The Proposed Project is the update of the CASP and the adoption of necessary revisions and any other amendments necessary to implement this update, including amendments to General Plan elements (such as the Framework Element), Community Plans, the LAMC (Chapter 1 and Chapter 1A), specific plans, and

other ordinances to implement those updates. The primary objective of the Proposed Project is to encourage affordable and mixed-income housing production in the Project Area.

The Proposed Project would accommodate additional housing in the Project Area by expanding the residential Urban Village zoning designation to more parcels within the CASP and allowing 100% affordable housing developments in the Urban Innovation and Urban Center zones where they are not currently permitted. The changes would result in a more even split between Urban Village and Urban Innovation zoning compared to the existing CASP. Additionally, the existing 10% non-residential use requirement for projects in the Urban Village zone would be removed. At the same time, the CASP's affordable housing zoning incentives would be recalibrated and updated for those development projects seeking additional FAR rights.

The Proposed Project would retain Urban Innovation zoning in areas that show a concentration of jobs, with vacant or underutilized land targeted to be zoned as Urban Village instead. The Proposed Project would also update the building form, urban design, open space, parking, conservation, performance, and sign standards of the CASP as necessary to support housing production, and amend the CASP text with technical revisions that ensure consistency, clarity, and ease of implementation and reflect current and future demographic, regulatory, environmental, and economic conditions. The CASP boundaries would be revised to exclude parcels that currently do not contain CASP zoning, such as RD zones. The Project would retain the existing ministerial review process for subsequent development projects.

DEADLINE TO REQUEST CONSULTATION:

As stated above, your tribe has 30 calendar days from receipt of this letter to notify us in writing that it wants to consult on the Proposed Project pursuant to AB 52. In your request, please provide any updated contact information for your tribe's representative. Please mail your tribe's request to:

RE: Cornfield Arroyo Seco Specific Plan (CASP) Update
CASE NO.: CPC-2021-2642-SP; ENV-2021-2643-EIR

Dear Tribal Representative,

This letter is to inform you that the Los Angeles Department of City Planning is preparing an Environmental Impact Report (“EIR”) for the Cornfield Arroyo Seco Specific Plan (CASP) Update (“Proposed Project”) in accordance with the requirements of the California Environmental Quality Act (“CEQA”). This notification is being forwarded to Native American tribes that are understood to be traditionally, culturally, and/or geographically affiliated with the Proposed Project area pursuant to the statutory requirements of Assembly Bill 52 (AB 52). Per AB 52, your tribe has the right to consult on the Proposed Project prior to the release of the related EIR and your tribe has 30 calendar days from receipt of this letter to notify us in writing that it wishes to consult on the Proposed Project. The Proposed Project is a long-range land use plan that does not consist of any proposed development projects, includes no ground disturbing activity or any related construction activity.

PROJECT LOCATION

The Project location is the Cornfield Arroyo Seco Specific Plan Area (“CASP Area” or “Project Area”), a geographically contiguous, approximately 660-acre (1.0 square mile) area located within portions of the Central City North, Northeast Los Angeles, and Silver Lake-Echo Park-Elysian Valley Community Plan Areas. The Project Area encompasses the Los Angeles State Historic Park, segments of the Los Angeles River and Arroyo Seco, segments of Interstate 5 and California State Route 110, and the Lincoln/Cypress Metro L Line station. Approximately 6,201 individuals (1,814 households) reside within the Project Area, which is bordered by the neighborhoods of Chinatown to the west, Lincoln Heights to the east, and Cypress Park to the north. The CASP Area boundaries are shown in Figure 1.

PROJECT DESCRIPTION

The Proposed Project is the update of the CASP and the adoption of necessary revisions and any other amendments necessary to implement this update, including amendments to General Plan elements (such as the Framework Element), Community Plans, the LAMC (Chapter 1 and Chapter 1A), specific plans, and

other ordinances to implement those updates. The primary objective of the Proposed Project is to encourage affordable and mixed-income housing production in the Project Area.

The Proposed Project would accommodate additional housing in the Project Area by expanding the residential Urban Village zoning designation to more parcels within the CASP and allowing 100% affordable housing developments in the Urban Innovation and Urban Center zones where they are not currently permitted. The changes would result in a more even split between Urban Village and Urban Innovation zoning compared to the existing CASP. Additionally, the existing 10% non-residential use requirement for projects in the Urban Village zone would be removed. At the same time, the CASP's affordable housing zoning incentives would be recalibrated and updated for those development projects seeking additional FAR rights.

The Proposed Project would retain Urban Innovation zoning in areas that show a concentration of jobs, with vacant or underutilized land targeted to be zoned as Urban Village instead. The Proposed Project would also update the building form, urban design, open space, parking, conservation, performance, and sign standards of the CASP as necessary to support housing production, and amend the CASP text with technical revisions that ensure consistency, clarity, and ease of implementation and reflect current and future demographic, regulatory, environmental, and economic conditions. The CASP boundaries would be revised to exclude parcels that currently do not contain CASP zoning, such as RD zones. The Project would retain the existing ministerial review process for subsequent development projects.

DEADLINE TO REQUEST CONSULTATION:

As stated above, your tribe has 30 calendar days from receipt of this letter to notify us in writing that it wants to consult on the Proposed Project pursuant to AB 52. In your request, please provide any updated contact information for your tribe's representative. Please mail your tribe's request to:

RE: Cornfield Arroyo Seco Specific Plan (CASP) Update
CASE NO.: CPC-2021-2642-SP; ENV-2021-2643-EIR

Dear Tribal Representative,

This letter is to inform you that the Los Angeles Department of City Planning is preparing an Environmental Impact Report ("EIR") for the Cornfield Arroyo Seco Specific Plan (CASP) Update ("Proposed Project") in accordance with the requirements of the California Environmental Quality Act ("CEQA"). This notification is being forwarded to Native American tribes that are understood to be traditionally, culturally, and/or geographically affiliated with the Proposed Project area pursuant to the statutory requirements of Assembly Bill 52 (AB 52). Per AB 52, your tribe has the right to consult on the Proposed Project prior to the release of the related EIR and your tribe has 30 calendar days from receipt of this letter to notify us in writing that it wishes to consult on the Proposed Project. The Proposed Project is a long-range land use plan that does not consist of any proposed development projects, includes no ground disturbing activity or any related construction activity.

PROJECT LOCATION

The Project location is the Cornfield Arroyo Seco Specific Plan Area ("CASP Area" or "Project Area"), a geographically contiguous, approximately 660-acre (1.0 square mile) area located within portions of the Central City North, Northeast Los Angeles, and Silver Lake-Echo Park-Elysian Valley Community Plan Areas. The Project Area encompasses the Los Angeles State Historic Park, segments of the Los Angeles River and Arroyo Seco, segments of Interstate 5 and California State Route 110, and the Lincoln/Cypress Metro L Line station. Approximately 6,201 individuals (1,814 households) reside within the Project Area, which is bordered by the neighborhoods of Chinatown to the west, Lincoln Heights to the east, and Cypress Park to the north. The CASP Area boundaries are shown in Figure 1.

PROJECT DESCRIPTION

The Proposed Project is the update of the CASP and the adoption of necessary revisions and any other amendments necessary to implement this update, including amendments to General Plan elements (such as the Framework Element), Community Plans, the LAMC (Chapter 1 and Chapter 1A), specific plans, and

other ordinances to implement those updates. The primary objective of the Proposed Project is to encourage affordable and mixed-income housing production in the Project Area.

The Proposed Project would accommodate additional housing in the Project Area by expanding the residential Urban Village zoning designation to more parcels within the CASP and allowing 100% affordable housing developments in the Urban Innovation and Urban Center zones where they are not currently permitted. The changes would result in a more even split between Urban Village and Urban Innovation zoning compared to the existing CASP. Additionally, the existing 10% non-residential use requirement for projects in the Urban Village zone would be removed. At the same time, the CASP's affordable housing zoning incentives would be recalibrated and updated for those development projects seeking additional FAR rights.

The Proposed Project would retain Urban Innovation zoning in areas that show a concentration of jobs, with vacant or underutilized land targeted to be zoned as Urban Village instead. The Proposed Project would also update the building form, urban design, open space, parking, conservation, performance, and sign standards of the CASP as necessary to support housing production, and amend the CASP text with technical revisions that ensure consistency, clarity, and ease of implementation and reflect current and future demographic, regulatory, environmental, and economic conditions. The CASP boundaries would be revised to exclude parcels that currently do not contain CASP zoning, such as RD zones. The Project would retain the existing ministerial review process for subsequent development projects.

DEADLINE TO REQUEST CONSULTATION:

Hello Clare Kelley,

Thank you for your letter dated April 7,2021. Will there be any ground disturbance taken place regarding the above project?

Admin Specialist

 website: www.gabrielenoindians.org

The region where Gabrieleño culture thrived for more than eight centuries encompassed most of Los Angeles County, more than half of Orange County and portions of Riverside and San Bernardino counties. It was the labor of the Gabrieleño who built the missions, ranchos and the pueblos of Los Angeles. They were trained in the trades, and they did the construction and maintenance, as well as the farming and managing of herds of livestock. "The Gabrieleño are the ones who did all this work, and they really are the foundation of the early economy of the Los Angeles area ". "That's a contribution that Los Angeles has not recognized--the fact that in its early decades, without the Gabrieleño, the community simply would not have survived."

Good afternoon,

Thank you for your inquiry regarding the Cornfield Arroyo Seco Specific Plan Update. The project is a long-range land use plan and does not involve any construction activity or ground disturbance. The project includes rezoning certain properties within the Project boundaries and establishing new or enhanced property development standards and use requirements for said properties with which future development must comply.

Please feel free to contact me with any additional questions or concerns.

Best regards,

Hello Clare

Thank you for your response. Since there will not be any type of ground disturbance taking place there will be no need for consultation. We ask that you please notify us if any type of ground disturbance occurs in the future.

Thank you

Gabrieleno Band of Mission Indians - Kizh Nation

PO Box 393

Covina, CA 91723

Office: 844-390-0787

website: www.gabrielenoindians.org

The region where Gabrieleño culture thrived for more than eight centuries encompassed most of Los Angeles County, more than half of Orange County and portions of Riverside and San Bernardino counties. It was the labor of the Gabrieleño who built the missions, ranchos and the pueblos of Los Angeles. They were trained in the trades, and they did the construction and maintenance, as well as the farming and managing of herds of livestock. "The Gabrieleño are the ones who did all this work, and they really are the foundation of the early economy of the Los Angeles area ". "That's a contribution that Los Angeles has not recognized--the fact that in its early decades, without the Gabrieleño, the community simply would not have survived."
