Appendix I

Neighborhood Traffic Management Plan Process

Appendix I

LADOT Neighborhood Traffic Management Process

This appendix sets forth the Los Angeles Department of Transportation (LADOT) process for implementation of Neighborhood Traffic Management Plan(s) for the Project.

ELIGIBLE NEIGHBORHOODS

After implementation of the Project's proposed Transportation Demand Management (TDM) program and traffic mitigation measures, six neighborhoods, the boundaries of which are described below, have the potential to experience neighborhood intrusion traffic:

1. Franklin Avenue to the north, Highland Avenue to the east, Sunset Boulevard to the south, and La Brea Avenue to the west.
2. Franklin Avenue to the north, Cahuenga Boulevard to the east, Sunset Boulevard to the south, and Highland Avenue to the west.
3. Sunset Boulevard to the north, La Brea Avenue to the east, Santa Monica Boulevard to the south, and Gardner Street to the west.
4. Sunset Boulevard to the north, Highland Avenue to the east, Santa Monica to the south, and La Brea Avenue to the west.
5. Sunset Boulevard to the north, Vine Street to the east, Santa Monica Boulevard to the south, and Highland Avenue to the west.
6. Sunset Boulevard to the north, Van Ness Avenue to the east, Santa Monica Boulevard to the south, and Vine Street to the west.

TRAFFIC CALMING MEASURES

The following are traffic calming measures that may be included in Neighborhood Traffic Management Plan(s) for the Project.

Non-restrictive Control Measures

Non-restrictive control measures are intended to reduce traffic speeds on local streets and/or make the neighborhood streets less inviting for through traffic. Non-restrictive traffic calming measures may include, but are not limited to, traffic circles, speed humps, roadway narrowing effects (raised medians, traffic chokers, etc.), landscaping features, roadway striping changes (adding bike lanes or parking striping to reduce the perceived width of the roadway), and stop sign pattern.

Non-restrictive Improvements

Non-restrictive improvements include neighborhood improvements that can offset the effects of added traffic, including street trees, sidewalks, landscaping, neighborhood identification features, and pedestrian amenities. Such measures can support trip reduction efforts by encouraging walking, bicycling, and the use of public transit.

NEIGHBORHOOD TRANSPORTATION MANAGEMENT PLAN(S) BUDGET

Based on its experience implementing Transportation Management Plans, LADOT has determined that a budget of up to $500,000 is appropriate for the development of Neighborhood Transportation Management Plan(s) for the eligible neighborhoods identified above. The Applicant or its successor shall guarantee the budget in a form reasonably satisfactory to LADOT.

Consultant time to develop the plans shall be paid by the Applicant or its successors and shall not be counted against the $500,000 budget, but data collection and mailing costs shall be included in the budget, as shall the costs associated with the design of any changes approved by the neighborhood.

NEIGHBORHOOD TRANSPORTATION MANAGEMENT PLAN(S) PROCESS

Each Neighborhood Transportation Management Plan process shall include three workshops that shall take place over a maximum four-month time period. Each workshop shall be rescheduled a maximum of one time if a quorum of the Committee (described below) is not present in person or by proxy. Failure to deliver a quorum for two consecutive meetings duly called and approved by the Committee shall constitute a declaration of non-interest in the process and the process shall cease.

1. Kick-Off Neighborhood Workshops – Based on the schedule in the final Project mitigation program, the transportation consultant for the Applicant or its successors shall hold a "Kick-off Workshop" meeting with the residents of each of the neighborhoods. Working with the Council Office, residents in the boundaries of the neighborhood will be invited to participate in the workshops. At the Kick-off Workshop, each neighborhood shall select a Committee of seven members by a consensus of the neighbors present at the meeting. If fewer than seven members of the neighborhood attend the Kick-off Workshop, the meeting will be rescheduled. If fewer than seven members attend the rescheduled Kick-off Workshop, it shall constitute a declaration of non- interest in the process and the process shall cease and all funds allocated to that neighborhood shall be returned to the Applicant.

   A majority of the Committee members must be present at each of the workshops for the Neighborhood Transportation Management Plan. The Agenda for the "Kick-off Workshop" shall include the following:

   a. Identify the process to be used to develop the Neighborhood Traffic Management Plan

   b. Identify the non-restrictive control measures and non-restrictive improvement choices for the neighborhood

   c. Discuss the existing and anticipated traffic issues in the neighborhood

   d. Match the types of improvements with the types of problems that each measure addresses

   e. Identify the types of improvements that the neighbors are likely to support

If a consensus of the residents present at the kick-off workshop approve of proceeding with data collection and development of a draft plan, the process shall proceed. If not, the process shall cease and all funds allocated to that neighborhood shall be returned to the Applicant.

2. Data Collection – If the neighborhood approves of proceeding with data collection, the transportation consultant for the Applicant or its successors shall collect and submit to LADOT appropriate traffic data (average daily trips, speed data, intersection turning movement counts, roadway characteristics, etc.) for the applicable neighborhoods within 60 days.

3. Draft Plan – Based on the data and input from the Kick-off Workshop, the transportation consultant for the Applicant or its successors shall develop a draft plan to implement for the neighborhood. The transportation consultant for the Applicant shall review the proposed measures with the appropriate City agency (LADOT, Bureau of Engineering, Street Services and Sanitation, etc.) to confirm the feasibility of each of the measures.

4. Neighborhood Workshop 2 – Upon completion of a draft plan, Neighborhood Workshop 2 shall be held to get reactions to the draft plan and suggestions from the residents for modifications to the plan.

5. Revised Plan – Based on input obtained during Neighborhood Workshop 2, the transportation consultant for the Applicant or its successors shall revise the draft plan for the neighborhood. The transportation consultant for the Applicant shall review the revised plan with the appropriate City agency (LADOT, Bureau of Engineering, Street Services and Sanitation, etc.) to confirm the feasibility of each of the measures.

6. Neighborhood Workshop 3 – Upon completion of the revised plan, Neighborhood Workshop 3 shall be held to finalize the plan. The plan shall be finalized based on the consensus of the residents present at Neighborhood Workshop 3.

7. Information Brochure – The transportation consultant for the Applicant or its successors shall prepare an information brochure that summarizes the final plan approved in Neighborhood Workshop 3 and a process for the neighborhood to approve

or reject the plan. LADOT shall cause the information brochure to be mailed to all households in the neighborhood at issue.

8. Approval/Rejection of the Plan – If a majority of the households in the neighborhood approve of the plan, the Applicant or its successors shall implement the traffic management plan on a temporary basis based on the schedule in the final Project mitigation program. If a majority of the households do not approve of the plan, the measures in the plan shall not be implemented, the process shall be declared over and all remaining funds for that neighborhood shall be returned to the Applicant or its successors.

9. Approval on Final Plan – If Step 8 above resulted in the approval of the plan and temporary measures were implemented, six months after the implementation of the temporary measures, LADOT shall cause a second survey of the households in the neighborhood at issue to determine the level of interest in making the temporary traffic measures in the plan permanent. If a majority of the households in the neighborhood approve of permanent implementation of the measures, the traffic measures shall be made permanent. If a majority of the households do not approve of the traffic measures, the measures shall be removed.

Upon completion of Steps 1 through 9 above, the Applicant's or its successors' responsibility for the Neighborhood Traffic Management Plan shall be deemed complete and any remaining funds allocated for that neighborhood shall be returned to the Applicant.

Los Angeles Department of Transportation
Assessment of the Traffic Study

FORM GEN. 160A (Rev. 1/82)

CITY OF LOS ANGELES

INTER-DEPARTMENTAL CORRESPONDENCE

6701 W. Sunset Bl
DOT Case No. CEN 15-43805

Date: October 11, 2016

To: Nicholas Hendricks, Senior City Planner
Department of City Planning

From: Wes Pringle, Transportation Engineer
Department of Transportation

Subject: **TRAFFIC IMPACT STUDY FOR THE PROPOSED CROSSROADS HOLLYWOOD MIXED-USE DEVELOPMENT LOCATED AT**

The Department of Transportation (DOT) has reviewed the traffic analysis dated June 2016 prepared by Gibson Transportation Consultant Inc., for the proposed mixed-use development (Crossroads Hollywood) located at 1540-1552 Highland Avenue, 6700-6760 Selma Avenue, 1543-1553 McCadden Place, 1542-1546 McCadden Place, 1501-1573 Las Palmas Avenue, 1500-1570 Las Palmas Avenue, 1600-1608 Las Palmas Avenue and 6665-6713 ½ Sunset Boulevard. In order to evaluate the effects of the project's traffic on the available transportation infrastructure, the significance of the project's traffic impacts is measured in terms of change to the volume-to-capacity (V/C) ratio between the "future no project" and the "future with project" scenarios. This change in the V/C ratio is compared to DOT's established threshold standards to assess the project-related traffic impacts. The traffic study included the detailed analysis of 123 intersections, including 111 signalized and 12 unsignalized. Based on DOT's traffic impact criteria[1], twenty two (22) of the study signalized intersections in the traffic analysis are expected to be significantly impacted by the project-related traffic, are summarized in **Attachments 1**. The results of the traffic analysis which accounted for other known development projects in evaluating potential cumulative impacts, adequately evaluated the project's traffic impacts on the surrounding community.

DISCUSSION AND FINDINGS

A. Project Description

The project proposes to redevelop a project site that consists of 29 individual parcels across four city blocks. The project will retain, preserve and rehabilitate Crossroads of the World a designated city cultural-historic monument and demolish all existing uses on the project site that includes approximately 172,573 square feet of floor area, a total of 84 residential dwelling units, 79,107 square feet of office space, 26,690 square feet of retail space, 475 square feet of restaurant space and surface parking lots.

The project would consist of mixed use buildings that include 760 apartment units, 190 condominiums, 308 hotel rooms, approximately 95,000 square feet of office space, approximately 61,750 square feet of commercial/retail space, approximately 40,000 square feet of supermarket space, approximately 41,600 square feet of quality

[1] Per the DOT Traffic Study Policies and Procedures, a significant impact is identified as an increase in the Critical Movement Analysis (CMA) value, due to project related traffic, of 0.01 or more when the final ("with project") Level of Service (LOS) is LOS E or F; an increase of 0.020 or more when the final LOS is LOS D; or an increase of 0.040 or more when the final LOS is LOS C.

restaurant space and approximately 41,600 square feet of high-turnover restaurant space as illustrated in the conceptual site plan in **Attachment 2**.

The project site has been grouped into four project areas referred to as developmental parcels A, B, C and D.

- Development Parcel A consist of an approximately 348,500 square foot 32 stories high-rise structure that includes 308 hotel rooms, ancillary meeting rooms, a lobby lounge and bar, rooftop bar and lounge, and ground floor commercial/retail/restaurant space.

- Development Parcel B would construct four mixed-used residential buildings with ground-floor commercial/retail/restaurant space. Building B1 is a 30 stories high-rise structure that would consist of 190 condominiums units and ground-floor commercial/retail/restaurant space. Building B2 is 6 stories that would consist of 70 apartment units and ground-floor commercial/ retail/restaurant space. Building B3 is a 32-stories high-rise structure that would consist of 489 apartment units and ground floor commercial/ retail/restaurant space. Building B4 is 6 stories that would consist of a mezzanine floor, 123 apartment units and ground-floor commercial/ retail/restaurant space.

- Development Parcel C would construct two mixed-used buildings with office/retail space. Building C1 is 3 stories that would consist of approximately 50,000 square feet of office space, approximately 40,000 square feet of supermarket space and ground-floor commercial/retail/restaurant space. Building C2 is two stories that would consist of approximately 45,000 square feet of office space and commercial/retail/restaurant space. The Crossroads of the World complex consisting of approximately 68,000 feet of office and retail would be retained, preserved and rehabilitated as part of the project.

- Development Parcel D would construct one mixed-used residential building with ground-floor commercial/retail/restaurant space. The building is a 6 stories that would consist of 78 apartment units and ground-floor commercial/ retail/restaurant space.

The Project will provide vehicular and pedestrian circulation improvements. The project proposes to establish a new pedestrian passageway that would extend diagonally from Sunset Boulevard fronting Crossroads of the World to the intersection of Selma Avenue & McCadden Place. Vehicular access to the subterranean parking garages would be provided via one driveway on Selma Avenue, one driveway on Highland Avenue, two driveways on McCadden Place and four driveways on Las Palmas Avenue. Loading areas and a valet drop-off area will be along Las Palmas Avenue for commercial uses and along McCadden Place and Selma Avenue for hotel uses. The project is expected to be completed by 2022.

B. Trip Generation

The project is estimated to generate 15,005 daily trips, a net increase of 879 trips in the a.m. peak hour, and a net increase of 1,283 trips in the p.m. peak. The trip generation estimates are based on formulas published by the Institute of Transportation Engineers (ITE) Trip Generation, 9th Edition, 2012. These trip

generation rates are typically derived from surveys of similar land use developments but in areas with little to no transit service. Therefore, DOT's traffic study guidelines allow projects to reduce their total trip generation with trip credits to account for potential transit usage to and from the site. A copy of the trip generation table can be found in **Attachment 3**.

C. Freeway Analysis

The traffic study included a freeway impact analysis that was prepared in accordance with the State-mandated Congestion Management Program (CMP) administered by the Los Angeles County Metropolitan Transportation Authority (MTA). According to this analysis, the project would result in significant traffic impacts on the evaluated freeway mainline segments. To comply with the Freeway Analysis Agreement executed between Caltrans and DOT in October 2013, the project included a screening analysis to determine if additional evaluation of freeway mainline and ramp segments was necessary beyond the CMP requirements. Exceeding one of the four screening criteria would require the applicant to work directly with Caltrans to prepare more detailed freeway analyses.

D. Traffic Impacts

The study estimates that the project would result in significant traffic impacts (pre-mitigation) at the following intersections:

1. Cahuenga Boulevard and Franklin Avenue (a.m. and p.m. peak hours)
2. Cahuenga Boulevard and Hollywood Boulevard (a.m. and p.m. peak hours)
3. Cahuenga Boulevard and Santa Monica Boulevard (a.m. and p.m. peak hours)
4. Cahuenga Boulevard and Sunset Boulevard (a.m. and p.m. peak hours)
5. Gower Street and Santa Monica Boulevard (a.m. and p.m. peak hours)
6. Gower Street and Sunset Boulevard (p.m. peak hour)
7. Highland Avenue and Franklin Avenue (North) (p.m. peak hour)
8. Highland Avenue and Hollywood Boulevard (a.m. and p.m. peak hours)
9. Highland Avenue and Santa Monica Boulevard (a.m. and p.m. peak hours)
10. Highland Avenue and Sunset Boulevard (a.m. and p.m. peak hours)
11. La Brea Avenue and Fountain Avenue (a.m. peak hour)
12. La Brea Avenue and Hollywood Boulevard (a.m. and p.m. peak hours)
13. La Brea Avenue and Santa Monica Boulevard (a.m. and p.m. peak hours)
14. La Brea Avenue and Sunset Boulevard (a.m. and p.m. peak hours)
15. Las Palmas Avenue and Sunset Boulevard (p.m. peak hour)
16. Van Ness Avenue and Santa Monica Boulevard (p.m. peak hour)
17. Van Ness Avenue and Sunset Boulevard (p.m. peak hour)
18. Vine Street and Fountain Avenue (p.m. peak hours)
19. Vine Street and Hollywood Boulevard (a.m. and p.m. peak hours)
20. Vine Street and Santa Monica Boulevard (a.m. and p.m. peak hours)
21. Vine Street and Sunset Boulevard (a.m. and p.m. peak hours)
22. Western Avenue and Santa Monica Boulevard (p.m. peak hours)

The transportation mitigation program (described below) partially or fully reduces these impacts (see **Attachment 4**). However, the remaining impact intersections would be considered significant and unmitigated after the implementation of the proposed mitigation program. The intersections expected to experience unmitigated impacts are:

1. Highland Avenue and Hollywood Boulevard
2. La Brea Avenue and Sunset Boulevard
3. Highland Avenue and Sunset Boulevard
4. Cahuenga Boulevard and Sunset Boulevard
5. Vine Street and Sunset Boulevard
6. Las Palmas Avenue and Sunset Boulevard

Physical traffic mitigation improvement options at these impacted intersections were evaluated in an attempt to fully mitigate the impacts; however, no feasible mitigations were identified due to the constraints of the existing physical conditions. Although a physical improvement was identified at the intersection of Las Palmas Avenue and Sunset Boulevard in the Traffic Study, the improvement is neither recommended nor desirable as it conflicts with adopted plans and policies. With the recent adoption of Vision Zero, Mobility Plan 2035 and Complete Streets Design Guide the roadway width has been set along the majority of arterials in Hollywood. Street widening was not an option either due to these new standards, or since it was not considered practical nor desirable to widen the street at the expense of reduced sidewalk widths or the loss of on-street parking spaces.

PROJECT REQUIREMENTS

A. Traffic Mitigation Program

Consistent with City policies on sustainability and smart growth and with DOT's trip reduction and multi-modal transportation goals, the project's mitigation first focuses on developing a trip reduction program and on solutions that promote other modes of travel. The traffic mitigation program includes the following improvements:

1. **Transportation Demand Management (TDM)**

The purpose of a TDM plan is to reduce the use of single occupant vehicles (SOV) by increasing the number of trips by walking, bicycle, carpool, vanpool and transit. A TDM plan should include design features, transportation services, education, and incentives intended to reduce the amount of SOV during commute hours. Through strategic building design and orientation, this project can facilitate access to transit, can provide a pedestrian-friendly environment, can promote non-automobile travel and can support the goals of a trip-reduction program.

A preliminary TDM program shall be prepared and provided for DOT review prior to the issuance of the first building permit for this project and a final TDM program approved by DOT is required prior to the issuance of the first certificate of occupancy for the project. The TDM program should include, but not be limited to, the following strategies:

- Transportation Information Center, educational programs, kiosks and/or other measures;
- Provide a Transportation Management Office (TMO) with a TDM coordinator;
- Promote and support of carpools and rideshare;

- Bicycle amenities such as racks and showers;
- Guaranteed ride home program for employees;
- Flexible or alternative work schedules;
- Incentives for using alternative travel modes;
- Parking incentives and administrative support for formation of carpools/vanpools;
- Mobility hub support;
- Contribution to the City's Bicycle Plan Trust Fund for implementation of bicycle improvements in the project area;
- Participation as a member in the future Hollywood Community TMO, when operational;
- Contribute a one-time fixed fee contribution of **$200,000** to be deposited into the City's Bicycle Plan Trust Fund to implement bicycle improvements in the vicinity of the project;

DOT recommends that the TDM program also include the following:

- Space on-site for a future bicycle hub (requires coordination with DOT to assess location for potential integration in a City bike-share program and to determine actual space requirements);
- Execute a Covenant and Agreement to ensure that the TDM program will be maintained;

2. **Transportation Systems Management (TSM) Improvements**
The project would contribute up to **$200,000** toward TSM improvements within the Hollywood-Wilshire District that may be considered to better accommodate intersection operations and increase intersection capacity throughout the study area.

LADOT's ATSAC Section has identified the need to replace existing Multi-Mode video fiber/fiber optic cables with approximately 30,000 feet of high-capacity Single-mode data cables in existing conduits and upgrade eight closed-circuit television (CCTV) cameras/equipment in the Hollywood area. The new cables would be installed from an ATSAC hub located at Wilcox Avenue & De Longpre Avenue to Franklin Avenue/Highland Avenue, to Hollywood Boulevard/Highland Avenue, to the Hollywood Bowl/Highland Avenue and to Hollywood Boulevard/Vine Street. These cables would provide the network capacity for additional (CCTV) cameras to real-time video monitoring of intersection, corridor, transit, and pedestrian operations in Hollywood. Collectively, these TSM improvements provide a system wide benefit by reducing delays experienced by motorists at study intersections.

Should the project be approved, then a final determination on how to implement these video fiber/fiber optic upgrades will be made by DOT prior to the issuance of the first building permit. These video fiber/fiber optic upgrades will be implemented **either** by the applicant through the B-Permit process of the Bureau of Engineering (BOE), **or** through payment of a one-time fixed fee of **$200,000** to DOT to fund the cost of the upgrades. If DOT selects the payment option, then the applicant would be required to pay **$200,000** to DOT, and DOT shall design and construct the upgrades.

If the upgrades are implemented by the applicant through the B-Permit process, then these video fiber/fiber optic improvements must be guaranteed prior to the issuance of any building permit and completed prior to the issuance of any certificate of occupancy. Temporary certificates of occupancy may be granted in the events of any delay through no fault of the applicant, provided that, in each case, the applicant has demonstrated reasonable efforts and due diligence to the satisfaction of DOT.

3. **Transit System Improvements**
Transit system improvements are aimed at enhancing and improving service between the existing transit service and the developmental study area to reduce peak hour trips. An analysis was conducted to determine potential transit improvements to the existing transportation system servicing the project site. To mitigate the significant traffic impacts at the study intersections associated with construction of the project, LADOT has asked the project applicant to contribute a fixed fee of **$1,330,864** to a trust fund to be administered by LADOT for the implementation of alternative transportation modes. The funding may include purchase and/or operation of additional transit services as a means to improve existing transit service in the project vicinity. For the purpose of this study, it was assumed that the transit system improvements would be focused along the Hollywood Boulevard and Santa Monica Boulevard corridors. LADOT's Transit Section proposed the rough estimate for the total expenses amount for the DASH Hollywood route; $865,386 to purchase one 35 foot zero emissions bus, $100,000 maintenance cost expenses for three years, $262,800 driver salary expenses for three years and $102,678 fuel expenses for three years.

In accordance with the project's transportation mitigation plan, prior to the issuance of any building permit and completed prior to the issuance of any certificate of occupancy, DOT must receive the total transit system improvement funds from the project applicant.

B. Voluntary Pedestrian Safety Enhancements
The City of Los Angeles provides various methods for safety enhancement of Pedestrian Crossings throughout the city. As part of the comprehensive response to pedestrian safety, LADOT's Vision Zero section proposes the installation of three new Rectangular Rapid Flash Beacon (RRFB) System at three locations:

1. La Brea Avenue and De Longpre Avenue
2. Gower Street and Lexington Avenue
3. Cahuenga Boulevard and Warning Avenue

The project applicant has offered to fund the approximate cost of **$450,000** for the three RRFB systems.

C. Implementation of Improvements and Mitigation Measures
For all of the proposed intersection improvements, the final determination on the feasibility of street widening shall be made by BOE. The applicant should be responsible for the cost and implementation of any necessary traffic signal

equipment modifications, bus stop relocations and lost parking meter revenues associated with the proposed transportation improvements described above. All proposed street improvements and associated traffic signal work within the City of Los Angeles must be guaranteed through BOE's B-Permit process, prior to the issuance of any building permit and completed prior to the issuance of any certificate of occupancy. Prior to setting the bond amount, BOE shall require that the developer's engineer or contractor contact DOT's B-Permit Coordinator, at (213) 972-8687, to arrange a pre-design meeting to finalize the proposed design. Costs related to any relocation of bus zones and shelters, and to modifying or upgrading traffic signal equipment and that are necessary to implement the proposed mitigations shall be incurred by the applicant. In the event the originally proposed mitigation measures become infeasible, substitute mitigation measures of an equivalent cost may be provided subject to approval by DOT, upon demonstration that the substitute measure is equivalent or superior to the original measure in mitigating the project's significant impact.

D. Traffic Signal Warrant Analysis

In the preparation of traffic studies, DOT guidelines indicate that unsignalized intersections should be evaluated solely to determine the need for the installation of a traffic signal or other traffic control device. When choosing which unsignalized intersections to evaluate in the study, intersections that are adjacent to the project or that are integral to the project's site access and circulation plan, or that can facilitate pedestrian access should be identified. This traffic study included four traffic signal warrant analysis for the intersections of Cahuenga Boulevard and US 101 Southbound Off-Ramp (am peak hour), Gower Street and US 101 Southbound Off-Ramp/Yucca Street (am peak hour), Las Palmas Avenue and Selma Avenue (am and pm peak hours) and Wilton Place and US 101 Northbound Off-Ramp/Harold Way (am peak hour). According to the analysis, a traffic signal at Gower Street and US 101 Southbound Off-Ramp/Yucca Street and Las Palmas Avenue and Selma Avenue is warranted as it satisfies the peak hour warrant for a signal based on future projected traffic volumes. However, the satisfaction of a traffic signal warrant does not in itself require the installation of a signal. Other factors relative to safety, traffic flow, signal spacing, coordination, etc. should be considered.

The installation of a traffic signal at the intersection of Gower Street and US 101 Southbound Off-Ramp/Yucca Street is planned as part of another development project. For the intersection of Las Palmas Avenue and Selma Avenue, after the project has been operational for one year DOT has recommended the applicant to conduct new traffic counts and to perform a traffic signal warrant analysis. If deemed warranted by DOT, the design and construction of the traffic signal would be required of the applicant. DOT's Hollywood District Office will issue a Traffic Control Report (TCR) authorizing the installation of the traffic signal that is warranted per DOT's requirements. The traffic signal warrant analysis shall be prepared pursuant to section 353 of DOT's Manual of Policies and Procedures and submitted to DOT for review.

E. Neighborhood Traffic Management (NTM) Plan

According to the residential street impact analysis included in the traffic study, six neighborhoods were identified according to DOT's criteria that may be subject to significant neighborhood intrusion impacts by project related traffic. A local

residential street is considered to be impacted based on an increase in the average daily traffic volumes. The objective of the residential street impact analysis is to determine the potential for cut-through traffic impacts on a residential street that can result from the project. Cut-through trips are measured as vehicles that bypass a congested arterial by instead opting to travel along a residential street. These local street impacts are typically mitigated through the implementation of neighborhood traffic calming measures such as installing speed humps. The traffic study identified six neighborhood boundaries that can potentially experience increases in cut-through traffic.

1. Franklin Avenue to the north, Highland Avenue to the east, Sunset Boulevard to the south, and La Brea Avenue to the west.
2. Franklin Avenue to the north, Cahuenga Boulevard to the east, Sunset Boulevard to the south, and Highland Avenue to the west.
3. Sunset Boulevard to the north, La Brea Avenue to the east, Santa Monica Boulevard to the south, and Gardner Street to the west.
4. Sunset Boulevard to the north, Highland Avenue to the east, Santa Monica to the south, and La Brea Avenue to the west.
5. Sunset Boulevard to the north, Vine Street to the east, Santa Monica Boulevard to the south, and Highland Avenue to the west.
6. Sunset Boulevard to the north, Van Ness Avenue to the east, Santa Monica Boulevard to the south, and Vine Street to the west.

The applicant has offered up to **$500,000** to fund any necessary NTM measures within these six neighborhood boundaries. This amount, which is commensurate with the size of the project and with the level of residential street impacts that are expected, is acceptable to DOT. Working within this budget, it would be the applicant's responsibility to coordinate with DOT, the affected neighborhood residents, and the local City Council office to design and implement NTM measures approved by DOT and supported by stakeholders.

The applicant should submit a NTM Implementation Plan to DOT that sets key milestones and identifies a proposed process in developing a NTM plan for the six identified neighborhoods. This implementation plan should be formalized through an agreement between the applicant and DOT prior to the issuance of the first building permit for this project. The agreement should include a funding guarantee, an outreach process and budget for each of the identified neighborhoods, selection and approval criteria for any evaluated NTM measures, and an implementation phasing plan. The final NTM plan, if consensus is reached among the stakeholders, should be completed to the satisfaction of DOT and should consider and evaluate neighborhood improvements that can offset the effects of added traffic, including street trees, sidewalks, landscaping, neighborhood identification features, and pedestrian amenities. Such measures can support trip reduction efforts by encouraging walking, bicycling, and the use of public transit. It would be the applicant's responsibility to implement any approved NTM measures through the Bureau of Engineering's B-permit process.

F. Highway Dedication and Street Widening Requirements

On August 11, 2015, the City Council adopted the Mobility Plan 2035 which is the new Mobility Element of the General Plan. A key feature of the updated plan is to

revise street standards in an effort to provide a more enhanced balance between traffic flow and other important street functions including transit routes and stops, pedestrian environments, bicycle routes, building design and site access, etc. Per the new Mobility Element **Sunset Boulevard and Highland Avenue** have been redesignated an Avenue I (Major Highway Class II) that would require a 35-foot half-width roadway within a 50-foot half-width right-of-way. **Las Palmas Avenue, McCadden Place and Selma Avenue** will continue to be designated Local Streets that would require an 18-foot half-width roadway within a 30-foot half-width right-of-way. The applicant should check with BOE's Land Development Group to determine the specific highway dedication, street widening and/or sidewalk requirements for this project.

G. Construction Impacts

DOT recommends that a construction work site traffic control plan be submitted to DOT for review and approval prior to the start of any construction work. The plan should show the location of any roadway or sidewalk closures, traffic detours, haul routes, hours of operation, protective devices, warning signs and access to abutting properties. DOT also recommends that all construction related traffic be restricted to off-peak hours, to the extent feasible.

H. Parking Requirements

Vehicle and bicycle parking for the project would be on-site in subterranean parking garages. The developer should check with the Department of Building and Safety on the number of parking spaces required.

I. Project Access

As previously stated above, the project proposes to provide vehicular access via eight driveways. Vehicular access to the subterranean parking garages will be provided via full access driveways along Selma Avenue, McCadden Place and Las Palmas Avenue. A secondary hotel driveway accommodating right-turn only egress movements would be provided on Highland Avenue. A truck loading area would be accessed via a driveway on Las Palmas Avenue for commercial uses and a driveway on McCadden Place for hotel uses. All truck loading and unloading should take place on site with no vehicles backing into the project via any of the project driveways. If delivery trucks are expected during peak hours a dock manager shall be available on-site to facilitate efficient use of the loading dock.

J. Driveway Access and Circulation

The proposed site plan illustrated in **Attachment 2** is acceptable to DOT; however, review of the study does not constitute approval of internal circulation schemes and driveway dimensions. Those require separate review and approval and should be coordinated with DOT's Citywide Planning Coordination Section 201 N. Figueroa Street, 5th Floor, Room 550, at (213) 482-7024. Any changes to the project's site access, circulation scheme, or loading/unloading area after issuance of this report would require separate review and approval and should be coordinated as well. In order to minimize potential building design changes, the applicant should contact DOT for driveway width and internal circulation requirements so that such traffic flow considerations are designed and incorporated early into the building and parking layout plans.

K. Development Review Fees
An ordinance adding Section 19.15 to the Los Angeles Municipal Code relative to application fees paid to DOT for permit issuance activities was adopted by the Los Angeles City Council in 2009 and updated in 2014. This ordinance identifies specific fees for traffic study review, condition clearance, and permit issuance. The applicant shall comply with any applicable fees per this ordinance.

If you have any questions, please contact Eduardo Hermoso of my staff at (213) 972-8473.

Notes

* LOS based on field observations, as the CMA methodology for individual intersections does not in every case account for vehicular queues along corridors, pedestrian, conflicts, etc., and thus, the calculated average operating conditions may appear better than is observed.

[a] Intersections located within the City of West Hollywood were also analyzed using HCM 2010 methodology, per City of West Hollywood guidelines, and is provided in Appendix F.

ksf: 1,000 square feet
du: dwelling units
[a] Source: *Trip Generation, 9th Edition*, Institute of Transportation Engineers, 2012.
[b] The Project site is located within a 1/4 mile of the Metro Red Line Hollywood Highland station and a RapidBus stop, therefore a 15% transit adjustment was applied, per *Traffic Study Polices and Procedures* (LADOT, August 2014).
[c] Hotel trip rates includes ancillary conference/meeting rooms, a lobby lounge and bar, rooftop bar and lounge, guest amenities, as well as retail and restaurant space. However, the retail and restaurant uses within the hotel were considered separately and included in the total retail and restaurant square footage to provide a conservative analysis.
[d] Shopping center includes retail, restaurant, and recreational uses.
[e] Internal capture adjustments account for person trips made between distinct land uses within a mixed-use development without using an off-site road system (e.g., hotel guests visiting retail/restaurant uses).
[f] Pass-by adjustments account for Project trips made as an intermediate stop on the way from an origin to a primary trip destination without route diversion.
[g] See Table 3-A for calcuation of the Existing Use trip generation.

Notes

* LOS based on field observations, as the CMA methodology for individual intersections does not in every case account for vehicular queues along corridors, pedestrian, conflicts, etc., and thus, the calculated average operating conditions may appear better than is observed.

[a] Intersections located within the City of West Hollywood were also analyzed using HCM 2010 methodology, per City of West Hollywood guidelines, and is provided in Appendix F.
