correspondence in your possession, this email is to request any *additional* correspondence from, to, or between any City staff relating to the Hollywood Center Project, **from the date of your initial response to present**.

If you did not respond to the first email, this email is to request any written or email correspondence from, to, or between any City staff relating to the Hollywood Center Project, dating back **from October 12, 2017 to present**.

Please note that as an Environmental Leadership Development Project (ELDP), the City is required to collect and upload all relevant public records of proceedings regarding the Project at the time the Draft EIR is published, until the administrative record for this Project is certified. That said, I ask that, following compliance with the subject request, you continue to upload any correspondence on this Project, as you receive it, to the following Dropbox link: https://www.dropbox.com/sh/lufus38kl50p0he/AACd9mR7C-Gs7RtPqvuhJdHba?dl=0, within a folder titled under your Full Name, using the following instructions:

1. All **email (digital) correspondence** should be submitted, per the Office of the City Attorney's request, in the format outlined in the instructions attached to this email.

2. Any **written (non-digital) correspondence** should be submitted via a scanned PDF file.

3. Any **text messages** should be screenshot and forwarded to your "lacity.org" email address, and compiled based on the instructions attached to this email.

At a minimum, please conduct a search using the following key words/phrases:

- *CPC-2018-2114*
- *CPC-2018-2115*
- *ENV-2018-2116*
- *VTT-82152*
- *Tract Map 82152*
- *Hollywood Center Project*
- *Hollywood Center*
- *HCP*
- *Millennium*
- *1720-1770 North Vine Street (any address in the range)*
- *1746-1760 Ivar Avenue (any address in the range)*
- *1733 and 1741 Argyle Avenue (any address in the range)*
- *6236, 6270, and 6334 West Yucca Street (any address in the range)*
- *MCAF Vine LLC*

Please submit all documents to me no later than **Thursday, April 2, 2020**.

If you are aware of other City staff who may have worked on this Project but has not been included in this email, please let me know as soon as possible. If you do not have any correspondence regarding this matter, you do not need to respond.

Thank you in advance for your time and cooperation.

Subject: Re: Soil Report Requirements and Soil Tracking Worksheet

Good morning Ms. McCord,

That is a great question. I was referring back to our sheet that we have and I was trying to find one as well. We have a Geologist for the LAFD CUPA.

He would probably know best, as he reviews all of the soils reports after. His name is Eloy Luna. His email is: eloy.luna@lacity.org.

I hope this steers you in the right direction. Please let me know if you have any further questions.

Take care.

Mr. Luna –

I am in the process of setting up the crew to go back out to our site and continue to overexcavate at our site. I contacted Inspector Bystrom to ask if I needed to schedule him in to be on site for he sample collection, even though the tank is gone. He said that since we need to continue to dig at this location that this falls to you to decide if you will be there or not.

For planning purposes, should I plan on scheduling you to be on site potentially next week? If so, do I schedule you through the on-line system like I would Inspector Bystrom?

Thank you!

Mr. Luna,

I certainly will.

A remaining concern. We need to submit a report 30 days from the date of soil sampling. This is not an issue except for the manifest for the tank rinsate. The waste oil sludge was RCRA hazardous for lead. Due the quantity (~150 gallons), we need to acquire a temporary 60 day US EPA ID for a one-time planned event for generating more than 220 lb/month of hazardous material spill cleanup material (waste code D008). I have been told by DTSC that once they have the EPA ID application that they will issue a number within 15 days. My transporter is ready to go as soon as we have the number. Assuming our reporting clock begins from today, I might have all the rinsate manifest within 30 days.

How should I handle this? Should I inform you of the steps as we complete them for receiving the US EPA ID (ie, application submitted, ID issued, date of drum removal, etc)? I fear the biggest hold up will be waiting for the application approval.

Eloy –

I have results back for the additional over excavation. We dug an additional 7 cubic yards (for a total of 10.5 cubic yards), and ended up with sample results that were under the requirements listed on the UST Soil Report Requirements. We are proceeding with backfilling and generating the report. Our US EPA ID application has been shipped to DTSC today.

Dear Mr. Palumbo:

The Los Angeles Fire Department (LAFD) has reviewed the "UST Soil Closeout Report", dated, June 19, 2019 as submitted by Group Delta Consultants. Based on the information provided, this Department has determined that no further action is required at the site for removal of one 150-gallon underground storage tank under permit No. 32994.

Please note, this correspondence does not exempt you of any liability under the California Health and Safety Code or Water Code for past, present or future operations at this site. Additionally, you maintain responsibility to correct additional or previously unidentified conditions at the site, which cause, or may thereafter cause, pollution or nuisance, or otherwise pose a threat to water quality or public health.

If you require additional information regarding this matter, please contact Eloy Luna of the Underground Storage Tanks – Plan Check Unit, at (213) 978-3708.

Very truly yours,

1.0 INTRODUCTION

This report documents field activities and analytical results from abandoning by removal of an unknown underground storage tank (UST) encountered during an investigation at the 1770 Ivar LLC Site (Site) located at 6334 Yucca Street in Los Angeles, California (**Figure 1**). The current owner, 1770 Ivar LLC., has owned the Site since July 2017. In preparation of future development activities, the owner is underway in determining design criteria and completing processes for permitting. The unknown UST was found during an unrelated investigation at the Site in October 2018.

For this report, Section 1.0 discussed the site description, background, geology and hydrogeology. Section 2.0 discusses pre-field and field activities to abandon the UST by removal. Section 3.0 has a discussion of the laboratory results from the soil sampling. A discussion of handling of waste is included as Section 4.0. A summary and recommendations are included as Section 5.0.

1.1 Site Description and Background

The UST was found at the boundary between the Assessor's Parcel ID Numbers (APN) 5546-004-006 and 5546-004-029, which are two parcels on the southeast corner of the intersection of Yucca Street and Ivar Street (**Figure 1**). The 1-acre Site (combining the two parcels) were initially developed as a parking lot in the 1940s serving the area businesses since the properties were developed. A single story building was added to APN 5546-004-029 in 1979.

1.2 Geology

The Site is located within the southern boundary of the Transverse Ranges geomorphic province. This boundary is structurally characterized by reverse, oblique, and strike-slip offsets along a series of west and northwest trending active faults accommodating west rotation of the Transverse Ranges. These faults include the Santa Monica, Hollywood, and Raymond fault system locally (Dolan, 1997). The Santa Monica Mountains have been uplifted north of this fault zone relative to the Los Angeles Basin to the south due to Miocene extensional tectonics and subsequent compressional tectonics. Mesozoic granitic and Tertiary sedimentary rocks are exposed at the surface within the mountains. Cyclic Quaternary sea level rise and fall has resulted in several episodic deeply eroded canyons and subsequent fill, with modern fan deposition at the base of the mountains. Recent Holocene alluvial deposition is concentrated within the canyons and southward extending drainages.

The project site is situated with an alluvial fan margin, near the toe of a fingering, south extending foothill. Here, at the southern base of the Santa Monica Mountains, canyons cut through Tertiary sedimentary rock of the Topanga Formation and open southward forming alluvial fans. Regional mapping indicates Pleistocene alluvial deposits blanket underlie the Site.

1.3 Hydrogeology

Based on an unrelated investigation completed at the Site and in the immediate vicinity, the Site is situated in an alluvial fan margin giving the Site a few feet of Quaternary deposits overlying the Tertiary sedimentary rock of the Topanga Formation (Group Delta Consultants, Inc. [Group Delta], 2015), which overlies the Lakewood Formation as part of the Hollywood Sub-basin. This evaluation is consistent with the California Department of Water Resources [CDWR] Bulletin 104 (CDWR, 1961), and CDWR Bulletin 118 (CDWR, 2004).

During unrelated investigations, monitoring wells were installed at the Site. The wells were installed on the southern half of the Site at a lower elevation of 392 feet mean sea level (MSL). The UST was located upslope from these wells. Groundwater during drilling was encountered at approximately 59 feet below grade surface (bgs) and a static level of 51 feet bgs. This is consistent with the Bellflower Aquiclude in the area with saturated lenses of sandy and/or gravelly clays.

Review of the State Water Resources Control Board's Geotracker website notes open sites within the vicinity of the Site. A remediation site is located at 5700 Hollywood Boulevard. This site has a surface elevation of approximately 398 feet MSL. During the Fourth Quarter 2018 Groundwater Monitoring Event, the monitoring wells were gauged with depth to water ranging from 84 to 87 feet bgs or an elevation of 307 to 309 feet MSL, which is consistent with the depth of the Exposition Aquifer. The horizontal hydraulic gradient is to the west at approximately 0.005 feet/feet.

2.0 UST ABANDONMENT BY REMOVAL

This section discusses the UST removal and soil sampling procedures, and analytical methods.

2.1 Condition of UST

During excavation activities as part of an unrelated investigation on October 25, 2018, an unknown UST was encountered. Bedding sand was encountered at 2 feet bgs in the upper parking lot. The UST was buried in silty to clayey sand, likely derived locally, and resting on native well bedded alluvial sand deposits. The UST was comprised of steel and had two connection points. One opening was open to atmosphere and the other opening had a portion of pipe connected to the UST, however, this 18-inch pipe was upright and not connected to anything. The UST measured 4 feet long by 2.5 feet wide, approximately 150 gallons (**Figure 2**).

The initial inspection of the newly exposed UST reported the UST appeared to be in stable shape and had the beginning of a corrosion exfoliation rine. From the limited inspection, the UST did not have any obvious holes or weak spots from corrosion. The UST was of single wall design, welded, and contained no rivets. The west end of the UST was partially deformed and may have sustained minor damage when the UST was encountered. During this inspection, a photo-ionization detector (PID) was utilized to determine if the surrounding soils were impacted by volatile organic compounds (VOCs). No readings above background levels were reported. There were no stained soils or detectable odor in the soils. Based on the results of the sampling, the contents appeared to be water and waste oil impacted with lead. On April 2, 2019, the UST was removed under the oversight of a City of Los Angeles Fire Department (LAFD) Inspector.

2.2 Pre-Field Activities

Prior to abandoning the UST by removal, the *Application for Division 5 Permit – Atmospheric Underground Tank* was completed and submitted to the LAFD on November 13, 2018. LAFD responded with a request for the required fees on November 29, 2018. The fees were delivered to LAFD on December 5, 2018. The acknowledgement of the fees allowing the application to go to Plan Check was received on February 4, 2019 with a request to resubmit the application with a current temporary California Environmental Protection Agency (EPA) identification number. On March 4, 2019, LAFD Inspector Stevens contacted Group Delta to request additional information to be submitted, which included the State of California License for the excavation contractor and a scope of work for removing the UST. The Division 5 Permit was issued on March 6, 2019 (**Appendix A**). LAFD Inspector Bystrom was assigned to this case.

Additional pre-field activities included:

- Work with site owner in coordinating access with current tenants on access to UST area and preferred waste staging location on site.
- Scheduled LAFD Inspector Bystrom to be on site for the UST removal on April 2, 2019.

- Notifying Underground Service Alert of Southern California (Dig Alert) prior to excavation activities
- Submitting notification to the South Coast Air Quality Management District (SCAQMD) to utilizing the excavation contractor's Rule 1166 Various Locations Compliance Plan No. 581787.

2.3 UST Removal Activities

Excell Excavating, Inc. (Excell) of Laguna Nigel, California was contracted to excavate around the UST, and after the UST was removed, over excavate as needed. Nieto and Sons Trucking, Inc. (Nieto) on 1281 Brea Canyon Road, Brea, California was contracted to open up and clean out the UST, then remove the UST from the site and dispose of the UST. Certified Industrial Hygienist (CIH) Nancy G. Carraway of Pasadena, California was contracted to certify the UST as clean before removal of the UST commenced. Belshire Environmental Services, Inc. (Belshire) of Foothill Ranch, California was contracted to provide waste containers and transport waste for off-site disposal to approved facilities.

On April 2, 2019 under the supervision of LAFD Inspector Yoshihoshi, who replaced LAFD Inspector Bystrom, the UST was removed. Excell exposed the UST down to the spring line on all sides. The atmosphere of the UST was tested by the CIH to verify that cold cutting could commence. The UST was deemed suitable for cold work, which Nieto cold cut the top of the UST off to allow access to clean out the UST. Nieto attempted to pump the waste oil and water, then proceeded to shovel out a thick waste oil sludge, which filled approximately a third of the UST.

Once the UST was cleaned, the CIH certified the UST as closed and ready for removal (**Appendix B**). Excell and Nieto removed the UST from the excavation and loaded the UST onto a staged truck for shipment for disposal. Once the UST contents and rinsate were secured into three North American (NA)-approved 55-gallon steel drums, Nieto transported the UST off-site for disposal. The UST was destroyed at Ecology Auto Wrecking of Santa Fe Springs on April 4, 2019 (**Appendix C**).

2.3 Condition of the Excavation

The UST excavation is located on the slope between two parcel boundaries. The excavation showed some staining on the southwest side of the pit bottom, which coincided with the location of a pinhole leak in the UST. The four sides of the excavation had no apparent staining or odor. The pit bottom was excavated an additional two feet to permit soil sampling. The pit extent was 58 inches by 55 inches. The depth on the north wall was 84 inches and 40 inches on the south wall side with a total of 3.5 cubic yards of soil removed. The soil was contained in thirteen 55-gallon NA-approved steel drums and staged pending proper profiling and manifesting procedures for off-site disposal. LAFD Inspector Yoshihoshi requested one pit bottom sample and side wall samples from both the north and south sides of the excavation (**Figure 2**).

Since the soil was impacted with waste oil, the PID readings were not reliable to equate to concentrations in soil. There was a chance that additional excavation work would be required. As discussed in Section 3.0, the initial soil sample results for the south wall and pit bottom were above the analytical requirements listed for total petroleum hydrocarbons (TPH) in the *UST Soil Report Requirements* provided by LAFD Inspector Yoshihoshi (**Appendix D**).

On April 29, 2019, additional excavation work was completed. To ensure the results for the new pit bottom and south side wall samples were below the total petroleum limit of 100 milligrams per kilogram (mg/kg), an additional 3.5 cubic yard of soil was removed from the excavation and stored on site in a 20-yard closed top bin pending proper profiling and manifesting procedures for off-site disposal. A bin was utilized with the assumption that the excavation could go up to 15 feet deep. An unrelated investigation during October and November 2018, which exposed the unknow UST while exposing the subsurface conditions to a depth of 15 feet bgs immediately west of the UST. There were no observed odors or staining in the excavation during this investigation. On-going air monitoring was conducted during this investigation, and there were no VOC readings over 50 parts per million (ppm). From this investigation, there was an understanding that the extent of impacted soil from the UST was limited. The final pit extent was 64 inches by 60 inches. The depth on the north wall was 108 inches bgs and 64 inches bgs on the south wall side (**Figure 2**).

After the activities on April 2 and 29, 2019, the excavation was covered and secured with fencing on the private properties. After the results were received from the sampling on April 29, 2019, the excavation was backfilled on May 6 and the area repaved on May 7, 2019. Due to the slope of the excavation, clean fill material was compacted to 95% Proctor density in 6-inch lifts instead of a bentonite cement-slurry backfill that was originally proposed. Then on May 7, 2019, the remaining site restoration activities were completed. The area was repaved, temporary security fencing was removed, permanent fencing was replaced, and the parking areas were restriped.

2.4 Air Monitoring

Rule 1166 monitoring was conducted by Group Delta during all the excavation activities. There were no VOC readings over 50 ppm on April 2 or 29, 2019. The Rule 1166 Compliance Plan Permit 581787 Completion Memorandum was prepared and submitted to SCAQMD on May 14, 2019. The Completion Memorandum include the calibration forms and monitoring forms from April 2 and 29, 2019. The Completion Memorandum is included as **Appendix E**.

2.5 Soil Sampling Procedures

Samples were collected directly from the bucket of excavator, which collected the soil from specific locations within the excavation (**Figure 2**). For non-organic analyses, an 8-oz sealed glass jar with a Teflon™ lined lid was used per soil sample. In addition to filling glass jars, the VOC and TPH samples were preserved utilizing EPA Method 5035. This preservation method was completed by using a TerraCore™ dual analysis sampling kit. The kit includes a dedicated 5-gram

plastic plunger, four volatile organic analysis (VOA) 40-mililiter (ml) container with 5 ml of 20% sodium bisulfate solution with stir bars, one VOA container with 5 ml of methanol, and one 50 ml poly container. A total of 5 VOAs and 1 poly container were collected per sample.

The samples were labeled with a unique sample identification, date, and time. The sample containers were placed in plastic bags, and the bags sealed and placed in a cooler on ice prior being transported under chain-of-custody protocol to Eurofins Calscience Environmental Laboratory (Calscience) in Garden Grove, California, a State-certified laboratory under the Environmental Laboratory Accreditation Program (ELAP) No. 1230.

2.6 Analytical Methods

Each confirmation soil sample was analyzed for the following:

- VOCs plus fuel oxygenates in accordance with EPA Method 8260B, and preserved by EPA Method 5035
- TPH – specified carbon chain in accordance with EPA Methods 8015B(M) and 8015M, and preserved by EPA Method 5035
- Title 22 Metals in accordance with EPA Method 6010B/7471
- Polychlorinated biphenyls (PCBs) in accordance with EPA Method 8082

As a note, PCBs were not required as part of *UST Soil Report Requirement.* However, once the UST was opened where the hardened sludge of waste oil was visible, the tank contents were suspect of containing PCBs. There is no history on this UST and has had an unknown purpose. Waste oil could be from coolant fluids, heat transfer fluids, and PCBs are highly soluble in organic solvents and oils. Since the Site has proposed redevelopment plans underway, the oversight Professional Geologist included this analysis into the sampling suite to eliminate this potential concern from future evaluations.

3.0 SUMMARY OF RESULTS

The results of the confirmation sampling are discussed in this section, and the data is presented on **Tables 1 through 4**, and the laboratory analytical reports are included as **Appendix F**. Screening criteria has been established for the project as listed in the *UST Soil Report Requirements* (**Appendix D**). If a detected result is not listed in the *UST Soil Report Requirements,* then the screening criteria for residential use scenario from either the California Department of Toxic Substances Control (DTSC) Human and Ecological Risk Office (HERO) *Human Health Risk Assessment, Note 3 Screening Levels* (SL; DTSC, April 2019) or EPA's *Regional Screening Levels* (RSLs; EPA, April 2019).

3.1 TPH Analytical Results

For the initial confirmation samples collected on April 2, the samples were analyzed for the TPH full specified carbon chain ranging from C4 to C44 (**Table 1**). The LAFD's *Analytical Requirements* did not include an action level for waste oil. The LAFD Geologist, Mr. Eloy Luna, was contacted to discuss and determine an action level. In Mr. Luna's capacity, he has only been provided one action level for all types of TPH from the state agencies. If the decision was made to keep levels of TPH in soil above the LAFD action levels, Mr. Luna would need to escalate this case to these state agencies. Since this small UST had a limited source size and as described in Section 2.0, a prior investigation showed that the impacted soil was limited. The action level of 100 mg/kg was accepted for heavy end oils. Only the north sidewall (SW-N-040219) was below the action level. On April 29, additional over excavation work to remove impacted soil in the pit bottom and the south wall, and to collect final confirmation samples. Final confirmation samples were collected for the south wall (SW-S-042919) and pit bottom (PB-CENTER-042919). The results for the two final confirmation samples were below the LAFD action level of 100 mg/kg (**Table 1**).

3.2 VOCs Analytical Results

For the initial confirmation samples collected on April 2, the samples were analyzed for the full VOC analytical suite including fuel oxygenates (ie, diisopropyl ether, ethyl-t-butyl ether, methyl-t-butyl ether, tert-amyl-methyl ether, tert-butyl alcohol). No fuel oxygenates concentrations were detected above the laboratory reporting limits of 0.97 micrograms per kilogram (µg/kg) in the two side wall samples, SW-S-040219 and SW-N-040219 (**Table 2**). For the aromatic fuel additives also known as benzene, toluene, ethylbenzene and xylenes (BTEX), a combined total concentration of 50 mg/kg is the LAFD action level for BTEX. Results from the two side wall samples, SW-S-040219 and SW-N-040219 are below the LAFD's *Analytical Requirements*.

However, the pit bottom sample had other VOCs detected. The concentration for naphthalene for this sample was 9,700 µg/kg, which is above the established residential screening criteria (**Table 2**). These results prompted additional over excavation work to remove impacted soil in the pit bottom, and collect final confirmation samples. The additional over excavation was completed on April 29, 2019.

On April 29, final confirmation samples were collected for the south wall (SW-S-042919) and pit bottom (PB-CENTER-042919). There were no detections of VOCs in the two final confirmation samples (**Table 2**).

3.3 Metals Analytical Results

Analyzing for metals was not included as part of LAFD's *Analytical Requirements.* However, as part of the initial assessment of the UST when the UST discovered, waste characterization samples were collected as part of the sampling suite required by disposal facilities. The tank contents contained lead impacted waste oil. Once the UST was removed showing a small leak at the bottom of the UST, metals analysis was added to the sampling suite.

For the metal detections in soil, none of the results were above the established screening criteria. It should be noted that Southern California has a higher acceptable level for arsenic than what is listed in the DTSC SLs or the EPA RSLs. DTSC made a determine of background arsenic levels in Southern California in March 2008, which established the average arsenic background level is 12 mg/kg (DTSC, 2008). Soil analytical results for metals are provided in **Table 3.**

3.4 PCBs Analytical Results

Analyzing for PCBs was not included as part of LAFD's *Analytical Requirements.* Once the tank contents were visible and due the potential age of the UST, there was a high probability that the UST might contain PCBs. For the initial confirmation sampling on April 2, 2019, samples were analyzed for PCBs. No PCBs were detected in the side wall or pit bottom samples (**Table 4**). The final confirmations samples collected on April 29, 2019 were not analyzed for PCBs.

4.0 WASTE MANAGEMENT

Management of waste generated during the UST abandonment is discussed in this section, and the data and documents are included as **Appendices G to I**.

4.1 Sampling Procedures

Samples were collected directly from the waste containers. An 8-oz sealed glass jar with a Teflon™ lined lid was used per sample. The samples were labeled with a unique sample identification, date, and time. The sample containers were placed in plastic bags, and the bags sealed and placed in a cooler on ice prior being transported under chain-of-custody protocol to Calscience.

4.2 Analytical Methods

Each confirmation soil sample was analyzed for the following:

- VOCs plus fuel oxygenates in accordance with EPA Method 8260B
- TPH – specified carbon chain in accordance with EPA Methods 8015B(M) and 8015M, and preserved by EPA Method 5035
- Title 22 Metals in accordance with EPA Method 6010B/7471
- PCBs in accordance with EPA Method 8082
- Toxicity characteristic leaching procedure (TCLP) for VOCs
- TCLP for metals

4.3 Soil

The results of the soil sampling supported classifying the soil removed from the excavation as non-hazardous solid waste utilizing the temporary State ID number CAC002999570 (**Appendix G**). On April 11, a total of 13 NA-approved 55-gallon drums (total of 4.07 tons) were transported by Belshire for disposal at Soil Safe of California – TPST located at 12328 Hibiscus Road in Aldelanto, California. The soil (total of 6.13 tons) from the final over excavation on April 29, 2019 was loaded into a 20-yard closed top bin. The bin was transported off-site by Belshire for disposal at Soil Safe of California – TPST on May 8, 2019. The manifests are included as **Appendix H**.

4.4 Tank Contents and Rinsate

The results of the tank contents and rinsate sampling was classified as Resource Conservation and Recovery Act (RCRA) hazardous waste flammable liquid due to the levels of lead in the waste oil. A temporary State ID number could not be utilized to remove this waste. A temporary Federal ID application was submitted on May 1, 2019 and approved on May 6, 2019. The waste was profiled and accepted by Demenno Kerdoon at 2100 North Alameda Street, Compton, California. The waste was transported off-site by Belshire under the temporary Federal ID CAP000295071 to Demenno Kerdoon on May 24, 2019.

5.0 SUMMARY AND CONCLUSION

On April 2, an unknown 150-gallon UST was permanently abandoned by removal. The UST was cleaned, certified, removed from the excavation and transported off-site for disposal. The pit was over excavated, and confirmation samples were collected. Only the results from one of the samples, SW-N-040219, was in accordance with LAFD action levels. Additional over excavation work was completed on April 29, and more confirmation samples were collected. The results for the remaining confirmation samples were in accordance with LAFD action levels.

The soil from the excavation activities was properly manifested and transported off-site by Belshire for disposal at Soil Safe of California – TPST. The UST contents and rinsate were profiled as RCRA hazardous waste flammable liquid. The UST contents were transported off-site by Belshire under the temporary Federal ID CAP000295071 to Demenno Kerdoon.

The recommendation is for no further action and closure of this case. After review of the confirmation sampling results, depth to groundwater (at approximately 51 feet bgs), and observations made during a deeper excavation adjacent to the UST, the source has been contained and removed with no further threat to groundwater or as an indoor air intrusion risk to any current or future development at the Site.

Notes

Samples were analyzed utilizing EPA Method 6010B/7471

The lower value between DTSC SLs or EPA RSLs will be used to evaluate detected analytes, with the exception of arsenic.

Highlight = detected concentration is above the site-specific screening criteria

mg/kg = milligrams per kilogram

< = less than the laboratory reporting limit shown

Analytes not detected at or above the laboratory reporting limit were excluded from the results table

Bold = detected concentration at or above the laboratory reporting limit

EPA = United States Enviromental Protection Agency

DTSC = California EPA, Department of Toxic Substances Control

RSLs = Regional Screening Levels

-- = Not Available

GROUP DELTA

Memorandum

GDC Project: LA1301B

To: **Inspector Gregory Stevens**

From: Alycia A. McCord, Group Delta Consultants, Inc.

Date: March 5, 2019

Subject: Scope of Work for UST Removal

The purpose of this memorandum is to provide a scope of work (SOW) outlining field procedures to permanently abandon a small (less than 200 gallon) underground storage tank (UST) encountered at 6334 Yucca Street in Los Angeles, California (Site). The UST was encountered during a fault investigation conducted at the Site in October and November 2018.

Tank Condition

During excavation activities, the trench was expanded to the east. Bedding sand was encountered in the weathered bedrock being investigated as part of a fault investigation. The bedding sand was covering small tank. The tank has 2 connection points. One point was open with not piping connected. The tank measured 4 feet long X 2.5 feet wide. Other than the connection point being open, the tank appears to be in stable shape. Though the tank has the beginning of a corrosion exfoliation layer, the tank did not have any holes or obvious weak spots from corrosion. Based on the exposed western edge of the tank, the tank appears to be homemade. The tank is of single wall design, welded, and no rivets. The ends are not smooth welded or rounded ends. It appears that a sheet of metal was welded in side a metal tube and the excess was torched off unevenly.

Since the tank was exposed on the top and one side, an assessment of the tank and surrounding soils were conducted. A photo-ionization detector (PID) was utilized to determine if the tank had leaked. No readings above background levels were reported. There were no stained soils or detectable odor in the soils.

Sampling of Fluid in Tank

A polyethylene bailer was deployed into the tank to collect the contents of the tank. The contents are layered with bedding sand and sediment on the bottom, water, and an oily sludge floating on top of the water. Samples were collected of tank contents, specifically the oily sludge, water/sediment, and soil immediately outside the tank. The samples were submitted to Eurofins Calscience Laboratory Inc. in Gardena, California. The samples were analyzed for total petroleum hydrocarbons carbon chain (TPH-cc) by US Environmental Protection Agency (EPA) Method 8015B (M), volatile organic compounds (VOCs) by EPA Method 8260B, and metals by EPA Method 6010B.

Scope for Tank Removal

The procedure for cleaning and removing the tank included the following steps:

- Expose tank complete on all sides. Soil will be placed in steel 55-gallon North American (NA)-approved drums or a 20-yard closed top bin. The existing piping will be capped at the edge of the excavation.
- A vacuum truck will pump out tank contents.
- After pumping out the tank, the tank will be degassed, if necessary, and triple rinsed.
- Once the tank is cleaned, a marine chemist will test and certify the tank is cleaned.
- The vacuum truck will pump the contents from the tank and rinsate into steel 55-gallon NA-approved drums.
- The tank will be removed from the excavation and loaded on a truck for transport to an approved disposal facility.
- The excavation will be over excavated. Based on observations during the fault investigation, the over excavation will be an additional 2 feet below the tank into the weathered bedrock.
- Pit bottom samples will be collected from beneath each end of the tank. At the request of the Fire Inspector, wall samples will be collected.
- The samples will be analyzed for TPH-cc by EPA Method 8015B (M), VOCs by EPA Method 8260B, and metals by EPA Method 6010B.
- Once the samples have been received, reviewed, and confirmed to report no detections above established screening criteria, the excavation will be backfilled with slurry and paved to match the existing grade.

Waste Handling

Based on the expected quantity of waste generated during this tank removal, the tank contents and rinsate will be placed in steel 55-gallon NA-approved drums. The soil will be placed either in steel 55-gallon NA-approved drums or a 20-yard closed top bin pending waste profiling for transport for off-site disposal in accordance with State and Federal regulations. The waste containers will be sealed, labeled, and stored in an area free of vehicular traffic.

If you have any questions, please feel free to contact me at (310) 740-6971.

Sincerely,
GROUP DELTA CONSULTANTS, INC.

UST SOIL REPORT REQUIREMENTS

UST SOIL REPORT REQUIREMENTS

A complete soil report is due 30 days from the date of soil sampling

MAIL COMPLETED SOIL REPORT TO:
LOS ANGELES FIRE DEPARTMENT
UNDERGROUND STORAGE TANK - ENFORCEMENT UNIT
200 NORTH MAIN STREET, SUITE 1700
LOS ANGELES, CALIFORNIA 90012

Also EMAIL COMPLETED SOIL REPORT TO:
lafd.usttestnotify@lacity.org

FACILITY ADDRESS	PERMIT #	FACILITY ID	DATE
6334 YUCCA	32994	0041009	4-2-19

The soil report should follow the Los Angeles Fire Department's General Report submittal guidelines. To assist you, the guidelines are available at **http://www.lafd.org/sites/default/files/pdf_files/fpb41_tank_aband.pdf**.

The following documentation shall be included as part of your report:

- A copy of the Los Angeles Fire Department Division 5-Permit
- Marine Chemist Certificate
- Copy of the Hazardous Waste Manifest for Disposal of Tank's Rinsate
- Certificate of Tank Disposal/Destruction and associated piping
- Soil manifest for soil removed from the site
- Scaled plot plan, clearly illustrating the location and depth of all the samples collected
- All analytical results should be presented in milligram per kilogram (mg/kg)
- All names in the chain of custody must be legible
- A copy of this page
- ***If soil analysis results exceed the LAFD Minimum Action Levels, include an Unauthorized Release Report (URR) with your soil report***

ANALYTICAL REQUIREMENTS

Group A Gasoline	Group-B Diesel	Analytical Method	Required MDL's (ug/kg)	LAFD Minimum Action Levels mg/kg
Analyte	Analyte

UST SOIL REPORT REQUIREMENTS

1.0 Cover Letter/Introduction/Table of Contents

2.0 Site Identification
- 2.1 Current owner/s
- 2.2 Current business activities
- 2.3 Spill, leak, and accident history
- 2.4 Number, capacity, and contents of tanks and other components

3.0 Background and Summary
- 3.1 Site description
- 3.2 Previous investigation
- 3.3 Wet ink signature
- 3.4 Geologist Seal with I.D number and expire date (stamp)
- 3.5 Name and address of individual that produced the report

NOTE: All reports must include the wet-ink signature and seal of one of the following licensed professionals: Professional Civil Engineer (PE), Professional Geologist (PG), Certified Engineering Geologist (CEG), Certified Hydrogeologist (CHG), Professional Petroleum Engineer (PPE)

4.0 Geology and Hydrology
- 4.1 Geology
- 4.2 Hydrology

5.0 Tank Removal Activities, Procedures, On-site Inspection
- 5.1 Tank Removal/or abandonment in place activities
- 5.2 Clarifier Removal/associated with a UST **only**
- 5.3 Dispenser Replacement/Upgrade activities
- 5.4 Piping Replacement/Upgrade activities
- 5.5 Laboratory Analyses and Chain-of –Custody
- 5.6 Condition of tanks and pit upon removal
- 5.7 Date of removal activities & sampling protocols
- 5.8 Name & address of Removal Company

6.0 Soil Disposal Operations/Contaminated soil

7.0 AQMD Rule 1166 Air Monitoring

8.0 Recommendations/Conclusion

9.0 List of Figures/Maps
- 9.1 Site Location Map with cross streets
- 9.2 Site Plan (soil sample locations)

10.0 List of Tables
- 10.1 Soil analytical Laboratory Results per LAFD guidelines
- 10.2 Indicate which analytical method and detection limit used
- 10.3 Report all “non-detect” (ND) with < numerical MDL value (not just the ND without the detection limit value)

11.0 List of Appendices
- 11.1 Copy of the LAFD Div-5 Permit
- 11.2 UST Certification for Removal
- 11.3 Tank Rinsate Disposal Manifest
- 11.4 Analytical Results with chain of custody
- 11.5 Soil Disposal Manifest
- 11.6 AQMD Rule 1166 Field Monitoring Data Sheets
- 11.7 Tank disposal manifest/with facility address
- 11.8 UST Soil Report Requirements

AQMD RULE 1166
COMPLETION MEMORANDUM

GROUP DELTA

To: South Coast Air Quality Management District
Engineering & Compliance Division
Toxics and Waste Management Unit
21865 E. Copley Drive
Diamond Bar, CA. 91765-4182

May 14, 2019

From: Group Delta Consultants, Inc.
370 Amapola Avenue, Suite 212
Torrance, CA 90501

Attention: Senior Enforcement Manager

SUBJECT: Rule 1166 Compliance Plan Permit 581787 Completion Memorandum
Site Location: 6334 Yucca Street, Los Angeles, CA 90028
Initial Notification: 554751

Dear Senior Enforcement Manager:

Per Condition 28 of Plan #581787, Group Delta Consultants, Inc. (GDC) submits this *Rule 1166 Compliance Plan Permit #581787 Completion Memorandum*. The excavation project was initiated on March 26, 2019 and completed on April 29, 2019. This completion memorandum will contain the required documents accumulated during April 2019.

Per Condition 14 of Plan #581787, all the organic vapor analyzer (OVA) monitoring forms and associated daily equipment calibration forms have been included as Attachment 1 and Attachment 2, respectively. There were only two days of excavation activities, April 2 and 29.

If there are any further questions or concerns regarding this submittal, please contact me at (310) 320-5100 or via e-mail at alyciam@groupdelta.com.

Sincerely,

GROUP DELTA CONSULTANTS, INC.

Alycia A. McCord
Senior Geologist, PG 9253

Work Order Narrative

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 04/03/19. They were assigned to Work Order 19-04-0223.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Glossary of Terms and Qualifiers

Work Order: 19-04-0223

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Work Order Narrative

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 04/29/19. They were assigned to Work Order 19-04-2258.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Detections Summary

Client: Group Delta Consultants, Inc.
370 Amapola Avenue, Suite 212
Torrance, CA 90501-7243

Work Order: 19-04-2258
Project Name: 6334 Yucca St. / LA1301B
Received: 04/29/19

Attn: Alycia McCord

Client SampleID / Analyte	Result	Qualifiers	RL	Units	Method	Extraction
SW-S-042919 (19-04-2258-1)						
Barium	61.1		0.510	mg/kg	EPA 6010B	EPA 3050B

Glossary of Terms and Qualifiers

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Work Order Narrative

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 04/03/19. They were assigned to Work Order 19-04-0221.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Glossary of Terms and Qualifiers

Work Order: 19-04-0221

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Work Order Narrative

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 04/03/19. They were assigned to Work Order 19-04-0222.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Glossary of Terms and Qualifiers

Work Order: 19-04-0222

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.
