### DENSITY AND FLOOR AREA RATIO CALCULATION

Use the following definitions to calculate Density and Floor Area in the Hollywood Redevelopment Project Area.

“Gross Acre” is defined as the site area plus one half of any abutting street(s) and alley(s).

“Floor Area Ratio” or FAR is defined as the ratio of total floor area of all buildings in a parcel to the parcel area. The floor area of a building excludes space devoted to stairwells, elevator shafts, light courts vehicular parking and mechanical equipment.

Formula for “Base” Density Calculation

Total Gross acre X Permitted Units per Gross Acre permitted by the Redevelopment Plan = Base Permitted Units

Formula for Density Bonus Calculation

(Base Permitted Units X % as allowed by Density Bonus) + Base Permitted Units = Total Permitted Units

Formula for Bonus Units pursuant to Section 505.3

Base Permitted Units X up to 30% as allowed by Section 505.3 Housing Incentive Units = Enhanced Permitted Units
