

## CLEAN WATER

LA Sanitation & Environment (LASAN) is responsible for operating and maintaining one of the world's largest wastewater collection and treatment systems. We proactively maintain over 6,700 miles of sewer lines and 49 pumping plants in addition to four water reclamation plants across the City, which have a combined capacity to treat 580 millions gallons per day (mgd) of wastewater.

Our Clean Water program consists of the Hyperion Service Area and the Terminal Island Service Area. The Hyperion system includes two upstream water reclamation plants: DC Tillman in the San Fernando Valley and Los Angeles Glendale near the intersection of the 5 and 2 freeways. Both of these plants produce recycled water used for landscape and industrial purposes as well as supplement the LA River to support the local habitat and other beneficial uses. Solids residuals from these plants are discharged back to the sewer for further treatment at the Hyperion Water Reclamation Plant (HWRP).

HWRP treats the vast majority of the City's flow, a portion of which is recycled with the remainder going to the Santa Monica Bay. Solids treatment occurs at HWRP, where Class A biosolids are produced for beneficial reuse.

Terminal Island consists of a separate collection system and treatment plant in the LA Harbor area, producing advanced treated water and biosolids for beneficial use.

If you have any questions about our services, please call our 24-hour Customer Care Center at [1-800-773-2489](tel:1-800-773-2489).

## CLEAN WATER EDUCATION

## BIOSOLIDS

The wastewater treatment process produces nutrient rich byproducts that can have a beneficial reuse such as soil amendment, fertilizer, as an ingredient in compost, or as an energy source.

## SEPTIC SYSTEMS AND PRIVATE SEWERS

Property owners are responsible for private sewers (pipes connecting buildings to the public sewer system) and septic systems. LASAN manages several programs that can help customers avoid

[More about SEPTIC SYSTEMS AND PRIVATE SEWERS](#)

Flushing anything but human waste and toilet paper can cause blockages, back ups, and sewer line breaks. Unfortunately, when this happens, untreated sewage can enter the storm drain system and impact our beaches.
