As noted above, the City's intent is to accommodate forecast housing demand. Through 2040, the City anticipates adding 293,000 housing units. This 21 percent increase as compared to the current citywide housing stock would exceed the 17 percent citywide population growth over the same time period. As such, although some individual housing units may be displaced as redevelopment of properties occurs throughout the City, the overall effect of implementation of the City's 35 community plans would be to increase the City's housing stock. Thus, although temporary displacement of some individuals could occur, such displacement would not necessitate the construction of new housing beyond what is already planned for and forecast to occur.

As discussed under Impact 4.12-2, implementation of the Downtown Plan would accommodate the construction of additional housing, including affordable housing, in an urban center where impacts to many environmental resources can be minimized and would help to offset displacement impacts arising from cumulative development. The Downtown Plan is expected to result in a net increase of housing over existing conditions and would allow a variety of new housing types. As noted above, the Downtown Plan could result in some temporary displacement of housing units and people due to the time lag between removal and replacement of housing, but this displacement would be offset by the anticipated increases in housing. Therefore, such temporary impacts would not add to other impacts resulting from redevelopment of sites outside the Downtown Plan Area and permanent displacement of housing and people is not anticipated. Reasonably anticipated development under the Downtown Plan would temporarily displace some people and housing, but the overall effect of the Downtown Plan would be a substantial increase in the Downtown Plan Area housing stock. In addition, the Downtown Plan includes policies for the preservation of Rent Stabilized and covenanted affordable units. Overall, the Downtown Plan would have a beneficial contribution to any cumulative impacts related to displacement.

The New Zoning Code would not directly displace any people or housing. Further, the New Zoning Code would not be implemented outside of the Downtown Plan Area at this time; therefore, any indirect impacts from the future use of the New Zoning Code outside the Downtown Plan Area would be speculative.

Based on the information above, the contribution of the Downtown Plan and the New Zoning Code to cumulative impacts related to displacement of people and housing would not be cumulatively considerable. Cumulative impacts would be ***less than significant.***

# 4.13 PUBLIC SERVICES

This section provides an overview of existing public services and evaluates potential environmental impacts resulting from the provision of public service facilities to accommodate Plan development. Public services addressed include fire and emergency services, police protection services, public schools, and libraries; parks are addressed in Section 4.14, *Recreation*.

## *Fire Protection and Emergency Services*

## ENVIRONMENTAL SETTING

### CITYWIDE SETTING

The Los Angeles Fire Department provides fire prevention, protection, and emergency medical services throughout Los Angeles. LAFD is a full-spectrum life safety agency that provides essential emergency and non-emergency services throughout the 472-square mile jurisdiction within the City. LAFD consists of 3,435 uniformed fire personnel that provide fire prevention, firefighting, emergency medical care, technical rescue, hazardous materials mitigation, disaster response, public education, and community service. LAFD also consists of 381 professional support staff that provides technical and administrative support to the LAFD. A total of 1,018 uniformed firefighters, in addition to 270 firefighter/paramedics are on active duty citywide serving at 106 neighborhood fire stations (LAFD 2018). In January 2015, the LAFD service areas were re-structured into four geographic bureaus that align with the Los Angeles Police Department (LAPD) geographic boundaries: Central, Valley, West, and South Bureaus. With this updated approach, the LAFD, LAPD, and the City's Emergency Management Department have developed a more unified effort to respond to emergencies. Each designated Bureau Commander is responsible for all LAFD activities in the respective bureaus. In addition, the LAFD has implemented a new emergency medical dispatch card system, known as the Tiered Dispatch System, to reduce call-processing times; and the LAFD Automatic Vehicle Location System, to ensure the nearest emergency resource is dispatched during calls (LAFD 2015a).

The LAFD provides fire prevention, protection, and emergency medical services throughout Los Angeles. The LAFD is organized into groups of fire stations clustered into battalions within larger geographic groups known as bureaus (LAFD 2017a). Each bureau is commanded by a Deputy Chief who oversees and coordinates daily field operations within each bureau's respective service area.

### DOWNTOWN PLAN AREA SETTING

The Downtown Plan Area is in the service area of the Central Bureau and contains four fire stations, Stations 3, 4, 9 and 10, which are part of Battalion 1 of the Los Angeles Fire Department. Battalion 1 also includes Fire Stations 2, 14, 17 and 25 which are not located in the Downtown Plan Area. An additional five fire stations are located within a mile of the Downtown Plan Area boundary, and at least two other fire stations are located within two miles of the Downtown Plan Area and would be able to assist in responding to fire and medical emergencies in the Downtown Plan Area.

## Service Performance Measures

**Table 4.13-1** summarizes the performance statistics for stations that serve the Downtown Plan Area. Most fire stations in and near the Downtown Plan Area have an average turn-out time standard for fire incidents and EMS incidents, (which begins at dispatch notification and includes turn-out and travel times) of less than five minutes and 20 seconds for fire incidents, with the exception of stations 20, 17, and 44.

**TABLE 4.13-1 LAFD FIRE STATIONS – CENTRAL BUREAU**

| Fire Station[1] | Address | Overall Operational Response Time (min : sec)[1] | | | Staffing | Service and Equipment |
|---|---|---|---|---|---|---|
| | | *Non-EMS* | *EMS* | *Structural Fire* | | |
| **Stations in the Downtown Plan Area** | | | | | | |
| 3 | 108 North Fremont Avenue | 5:51 | 6:30 | 4:35 | 18 | Task force, search and rescue team, heavy rescue team, command team |
| 4 | 450 East Temple Street | 6:03 | 6:12 | 3:46 | 19 | Dispatch center, engine house, two paramedic ambulances |
| 9 | 430 East 7th Street | 5:25 | 5:44 | 4:15 | | |
| 10 | 1335 South Olive Street | 5:45 | 6:12 | 4:27 | 14 | Task force, rescue air cushion, paramedic ambulance |
| **Stations Less than Two Miles from the Downtown Plan Area** | | | | | | |
| 1 | 2230 Pasadena Ave Los Angeles, CA 90031 (0.5 mi away) | 6:50 | 6:50 | 4:56 | 14 | Task force, paramedic ambulance |
| 2 | 1962 East Cesar Chavez Avenue (0.9 mi away) | 5:52 | 6:00 | 4:40 | 12 | Task force |
| 11 | 1819 7th St Los Angeles, CA 90057 (0.9 mi away) | 5:31 | 5:54 | 4:03 | 14 | Task force, two paramedic ambulances |
| 17 | 1601 South Santa Fe Avenue (0.5 mi away) | 6:16 | 6:25 | 4:59 | | |
| 14 | 3401 South Central Avenue (1.0 mi away) | 5:59 | 6:12 | 4:18 | 8 | Task force, two paramedic ambulances |
| 20 | 2144 West Sunset Boulevard (1.2 mi away) | 5:41 | 6:23 | 4:26 | 8 | Task force, paramedic ambulance |
| 44 | 1410 Cypress Avenue (1.8 mi away) | 6:29 | 6:38 | 4:52 | | |

[1]Average overall response time for January –July 2018.
**NOTE:** Non-EMS = fire and other services; EMS = Emergency Medical Services; task force = fire truck and two engines
**SOURCE**: 1. LAFD 2017b 2. LAFD 2018a

LAFD's services continue to be based on the community's needs, as determined by on-going evaluations that consider the number of calls and other factors. These evaluations are used to determine the need for reallocation of existing equipment or personnel and/or the acquisition of new equipment, personnel, or new stations. As development occurs, the LAFD reviews EIRs and subdivisions applications for needed facilities. Where appropriate, construction of new facilities is required as a condition of development for individual projects (Los Angeles 2001).

### Fire Flow and Response Distance

The adequacy of fire protection for a given area is based on required fire flow, response distance from existing fire stations, and the LAFD's judgment of needs in the area. Personnel and equipment needs for individual fire stations are determined based on the LAFD's review of the number of incidents within a station's service area. As the number of incidents increases, the LAFD assigns new staff and equipment as necessary to maintain acceptable service ratios and response times (Los Angeles 2012).The Fire Code specifies required fire flow (measured in gallons per minute from the local water system) and response distance for fire protection services, as discussed in the Regulatory Framework.

The fire flow necessary to contain a fire depends on the existing land use or combination of land uses and the density of the area being served. Consequently, the amount of water necessary for fire protection depends on various factors, including the type of development, occupancy, and the level or intensity of a fire hazard. Maximum response distances also vary with land use and density of development. Response distance relates directly to the linear travel distance (i.e., miles between a station and a site) and the LAFD's ability to successfully navigate through an area's circulation system. The Fire Code specifies maximum response distances allowed between specific locations and engine/truck companies based upon land use and fire flow requirements.

When response distances exceed these requirements, plans for new commercial and residential structures must be reviewed and various fire suppression equipment (e.g., automatic fire sprinkler systems, fire signaling systems, fire extinguishers, smoke removal systems, and any other fire protection devices) as deemed necessary by the Fire Chief are required to be incorporated in the plans prior to the approval of an occupancy permit. In addition to fire flow requirements, the LAFD requires different types of fire hydrants within a specified distance to deliver the required fire flow, as discussed in the Regulatory Framework.

# REGULATORY FRAMEWORK

Federal, state and local laws, regulations, plans, and guidelines that are potentially applicable to the Proposed Project are summarized below.

## FEDERAL

### Federal Emergency Management Act (FEMA)

FEMA was established in 1979 via executive order and is an independent agency of the federal government. In March 2003, FEMA became part of the U.S. Department of Homeland Security with the mission to lead the effort in preparing the nation for all hazards and effectively manage federal response and recovery efforts following any national incident. FEMA also initiates proactive mitigation activities, trains first responders, and manages the National Flood Insurance Program and the U.S. Fire Administration.

### Disaster Mitigation Act of 2000

Disaster Mitigation Act (42 United States Code [U.S.C.] Section 5121) provides the legal basis for FEMA mitigation planning requirements for state, local, and Indian Tribal governments as a condition of mitigation grant assistance. It amends the Robert T. Stafford Disaster Relief Act of 1988 (42 U.S.C. Section 5121-5207) by repealing the previous mitigation planning provisions and replacing them with a new set of requirements that emphasize the need and creates incentives for state, tribal, and local agencies to closely coordinate mitigation planning and implementation efforts. This Act reinforces the importance of pre-disaster infrastructure mitigation planning to reduce disaster losses nationwide and the streamlining of the

administration of federal disaster relief and programs to promote mitigation activities. Some of the major provisions of this Act include:

- Funding pre-disaster mitigation activities
- Developing experimental multi-hazard maps to better understand risk
- Establishing state and local government infrastructure mitigation planning requirements
- Defining how states can assume more responsibility in managing the Hazard Mitigation Grant Program (HMGP)
- Adjusting ways in which management costs for projects are funded

The mitigation planning provisions outlined in Section 322 of this Act establish performance-based standards for mitigation plans and require states to have a public assistance program (Advance Infrastructure Mitigation [AIM]) to develop county government plans. The consequence for counties that fail to develop an infrastructure mitigation plan is the chance of a reduced federal share of damage assistance from 75 percent to 25 percent if the damaged facility has been damaged on more than one occasion in the preceding 10-year period by the same type of event.

### Federal Fire Safety Act (FFSA)

The FFSA of 1992 is different from other laws affecting fire safety as the law applies to federal operations, and there is no requirement for local action unless a private building owner leases space to the federal government. The FFSA requires federal agencies to provide sprinkler protection in any building, whether owned or leased by the federal government that houses at least 25 federal employees during their employment.

## STATE

### California Constitution Article XIII Section 35

Section 35 of Article III of the California Constitution at subdivision (a)(2) provides: "The protection of the public safety is the first responsibility of local government and local officials have an obligation to give priority to the provision of adequate public safety services." Section 35 of Article XIII of the California Constitution was adopted by the voters in 1993 under Proposition 172. Proposition 172 directed the proceeds of a 0.50 percent sales tax to be used exclusively for local public safety services. California Government Code Sections 30051-30056 provide rules to implement Proposition 172. Public safety services include fire protection. Section 30056 provides that cities are not allowed to spend less of their own financial resources on their combined public safety services in any given year compared to the 1992-93 fiscal year. Therefore, an agency is required to use Proposition 172 to supplement its local funds used on fire protection, as well as other public safety services. In City of Hayward v. Trustee of California State University (2015) 242 Cal. App. 4th 833, the court found that, Section 35 of Article XIII of the California Constitution requires local agencies to provide fire services and that it is reasonable to conclude that a lead agency will comply with that provision and ensure that public services are provided. (See City of Hayward v. Trustee of California State University (2015) 242 Cal. App. 4th 833, 847, stating "the city has a constitutional obligation to provide adequate fire protection services".)

### California Fire Code

Title 24, Part 9 of the California Code of Regulations (CCR), also referred to as the California Fire Code, is part of the California Building Code and establishes standards regarding fire protection and notification systems for residential and commercial buildings. It includes fire safety requirements and regulations,

including implementation of fire protection devices, such as fire extinguishers and smoke alarms, installation of sprinklers in all high-rise buildings, establishment of fire resistance standards for fire doors, buildings materials, and types of construction, clearance of debris and vegetation within a prescribed distance from occupied structures in wildfire hazards areas, and fire suppression training. The California Fire Code is applicable to all occupancies in California, but can be superseded by local regulations if they are more stringent. Regulations in the California Fire Code are incorporated by reference with amendments in the Los Angeles Building Code, Fire Safety Regulations.

### Title 8 California Code of Regulations (CCR) Sections 1270 and 6773

In accordance with CCR, Title 8 Section 1270, "Fire Prevention," and Section 6773, "Fire Protection and Fire Equipment," the California Occupational Safety and Health Administration (Cal-OSHA) establishes minimum standards for fire suppression and emergency medical services. The standards include, but are not limited to, guidelines on the handling of highly combustible materials, fire hose sizing requirements, restrictions on the use of compressed air, access roads, and the testing, maintenance, and use of all firefighting and emergency medical equipment.

### California Health and Safety Code Section 13100-13135

California Health Safety Code Section 13100-13135 codifies regulations known as the "Regulations of the State Fire Marshal" and constitutes the Basic Building Design and Construction Standards of the State Fire Marshall. The regulations establish minimum standards for the preservation and protection of life and property against fire, explosion, and panic through requirements for fire protection and notification systems, fire protection devices, and fire suppression training.

### California Governor's Office of Emergency Services (Cal OES)

In 2009, the State of California passed legislation creating the Cal OES and authorized it to prepare a Standard Emergency Management System (SEMS) program (Title 19 CCR Section 2401 et seq.), which sets forth measures by which a jurisdiction should handle emergency disasters. In California, SEMS provides the mechanism by which local government requests assistance. Non-compliance with SEMS could result in the state withholding disaster relief from the non-complying jurisdiction in the event of an emergency disaster. Cal OES coordinates the state's preparation for, prevention of, and response to major disasters, such as fires, floods, earthquakes and terrorist attacks. During an emergency, Cal OES serves as the lead state agency for emergency management in the state. It also serves as the lead agency for mobilizing the state's resources and obtaining federal resources. Cal OES coordinates the state response to major emergencies in support of local government. The primary responsibility for emergency management resides with local government. Local jurisdictions first use their own resources and, as they are exhausted, obtain more from neighboring cities and special districts, the county in which they are located, and other counties throughout the state through the statewide mutual aid system (see discussion of Mutual Aid Agreements, below). California Emergency Management Agency (Cal-EMA) maintains oversight of the state's mutual aid system.

### Mutual Aid Agreements

Cal OES developed the Emergency Managed Mutual Aid (EMMA) System in response to the 1994 Northridge Earthquake. The EMMA System coordinates emergency response and recovery efforts along the coastal, inland, and southern regions of California. The purpose of EMMA is to provide emergency management personnel and technical specialist to afflicted jurisdictions in support of disaster operations during emergency events. Objectives of the EMMA Plan is to provide a system to coordinate and mobilize assigned personnel, formal requests, assignment, training and demobilization of assigned personnel; establish structure to maintain the EMMA Plan and its procedures; provide the coordination of training for

EMMA resources, including SEMS training, coursework, exercises, and disaster response procedures; and to promote professionalism in emergency management and response. The EMMA Plan was updated in November 2012 and supersedes the 1997 EMMA Plan and November 2001 EMMA Guidance.

# LOCAL

## Los Angeles City General Plan

The City's General Plan contains two elements with policies pertaining to fire protection and emergency response. Chapter 9 (Infrastructure and Public Services) of the Framework Element contains general objectives and specific policies to ensure provision of fire protection and emergency response services into the future through adequate planning, funding, data collection, creation of standards, and cooperation with other agencies. The Safety Element of the General Plan identifies existing police, fire, and emergency services and the service needs of the City of Los Angeles in the event of a natural disaster and provides broad goals, objectives, and policies related to the City's response to hazards and natural disasters. The Emergency Operations Organization (EOO) is responsible for implementing the Safety Element. Goals and policies applicable to fire protection and emergency services are summarized in **Table 4.13-2**.

**TABLE 4.13-2 RELEVANT GENERAL PLAN FIRE PROTECTION GOALS, OBJECTIVES, AND POLICIES**

| | |
|---|---|
| **Framework Element – Infrastructure and Public Services** | |
| Goal 9J | Every neighborhood has the necessary level of fire protection service, emergency medical service (EMS) and infrastructure. |
| Objective 9.16 | Monitor and forecast demand for existing and projected fire facilities and service. |
| Policy 9.16.1 | Collect appropriate fire and population development statistics for the purpose of evaluating fire service needs based on existing and future conditions. |
| Objective 9.17 | Assure that all areas of the City have the highest level of fire protection and EMS, at the lowest possible cost, to meet existing and future demand. |
| Policy 9.17.2 | Identify areas of the City with deficient fire facilities and/or service and prioritize the order in which these areas should be upgraded based on established fire protection standards. |
| Policy 9.17.4 | Consider the Fire Department's concerns and, where feasible adhere to them, regarding the quality of the area's fire protection and emergency medical services when developing General Plan amendments and zone changes, or considering discretionary land use permits. |
| Objective 9.19 | Maintain the Los Angeles Fire Department's ability to assure public safety in emergency situations. |
| Policy 9.19.1 | Maintain mutual aid or mutual assistance agreements with local fire departments to ensure an adequate response in the event of a major earthquake, wildfire, urban fire, fire in areas with substandard fire protection, or other fire emergencies. |
| Policy 9.19.3 | Maintain the continued involvement of the Fire Department in the preparation of contingency plans for emergencies and disasters. |
| **Safety Element** | |
| Goal 2 | A city that responds with the maximum feasible speed and efficiency to disaster events so as to minimize injury, loss of life, property damage and disruption of the social and economic life of the City and its immediate environs. |
| Objective 2.1 | Develop and implement comprehensive emergency response plans and programs that are integrated with each other and with the City's comprehensive hazard mitigation and recovery plans and programs. |
| Policy 2.1.5 | Response: Develop, implement, and continue to improve the City's ability to respond to emergency events. [All EOO emergency response programs and all hazard mitigation and disaster recovery programs related to protecting and reestablishing communications and other infrastructure, service and governmental operations systems implement this policy.] |
| Policy 2.1.6 | Standards/fire. Continue to maintain, enforce and upgrade requirements, procedures and standards to facilitate more effective fire suppression. [All peak load water and other standards, code requirements (including minimum road widths, access, and clearances around structures) and other requirements or procedures related to fire suppression implement this policy.] |

| TABLE 4.13-2 RELEVANT GENERAL PLAN FIRE PROTECTION GOALS, OBJECTIVES, AND POLICIES | |
|---|---|
| | The Fire Department and/or appropriate City agencies shall revise regulations or procedures to include the establishment of minimum standards for location and expansion of fire facilities, based upon fire flow requirements, intensity and type of land use, life hazard, occupancy and degree of hazard so as to provide adequate fire and emergency medical event response. At a minimum, site selection criteria should include the following standards which were contained in the 1979 General Plan Fire Protection and Prevention Plan:<br>Fire stations should be located along improved major or secondary highways. If, in a given service area, the only available site is on a local street, the site must be on a street which leads directly to an improved major or secondary highway.<br>Fire station properties should be situated so as to provide drive-thru capability for heavy fire apparatus.<br>If a fire station site is on the side of a street or highway where the flow of traffic is toward a signalized intersection, the site should be at least 200 feet from that intersection in order to avoid blockage during ingress and egress.<br>The total number of companies which would be available for dispatch to first alarms would vary with the required fire flow and distance as follows: (a) less than 2,000 gpm would require not less than 2 engine companies and 1 truck company; (b) 2,000 but less than 4,500 gpm, not less than 2 or 3 engine companies and 1 or 2 truck companies; and (c) 4,500 or more gpm, not less than 3 engine companies and 2 truck companies.<br>These provisions of the 1979 Plan were modified by the Fire Department for purposes of clarification. |
| Goal 3 | A city where private and public systems, services, activities, physical condition and environment are reestablished as quickly as feasible to a level equal to or better than that which existed prior to the disaster. |
| Objective 3.1 | Develop and implement comprehensive disaster recovery plans which are integrated with each other and with the City's comprehensive hazard mitigation and emergency response plans and programs. |
| Policy 3.1.1 | Coordination: Coordinate with each other, with other jurisdictions and with appropriate private and public entities prior to a disaster and to the greatest extent feasible within the resources available, to plan and establish disaster recovery programs and procedures which will enable cooperative ventures, reduce potential conflicts, minimize duplication and maximize the available funds and resources to the greatest mutual benefit following a disaster. [All EOO recovery programs involving cooperative efforts between entities implement this policy.] |

## Los Angeles Fire Department (LAFD) Strategic Plan 2015-2017

The LAFD Strategic Plan 2015-2017 focuses on goals and strategic actions to guide the LAFD in the following areas: improving service delivery, implementing advanced technologies, employing sound budgeting practices and enhancing leadership. The plan also addresses the development of an even more professional workforce, promoting a positive work environment, and working to strengthen community relationships to improve preparedness and enhance resiliency during emergency events.

## Los Angeles Municipal Code (LAMC) and Charter

The Los Angeles Fire Code is a combination of the California Fire Code and Los Angeles amendments and is contained within Chapter V, Article 7, Fire Protection and Prevention of the LAMC. As required by the Fire Code, the LAFD Bureau of Fire Prevention and Public Safety is required to administer and enforce basic building regulations as set forth by the State fire marshal. The Los Angeles Fire Code provides regulations for the safeguarding of life and property from fire, explosion, panic, or other hazardous conditions which may arise in the use or occupancy of buildings, structures, or premises.

LAMC Section 57.503 requires any facility, structure, group of structures, or premises to provide and maintain LAFD access and requires that any structure located more than 150 feet from an approved street provide an approved fire lane.

LAMC Section 57.507.3 contains the fire flow requirements characterized by the type of development (see **Tables 4.13-3** and **4.13-4**). As discussed therein and per Table 57.507.3.1 of the LAMC, fire flow requirements require 2,000 gallons per minute (gpm) from three adjacent fire hydrants for low-density residential developments; 4,000gpm from four adjacent fire hydrants for high density residential and neighborhood commercial developments; 6,000 to 9,000 gpm from four to six fire hydrants for industrial and commercial developments; and to 12,000 gpm available to any block for high-density industrial and commercial developments. As provided in LAMC Section 57.507.3.2 and described in Table 57.507.3.2, each fire hydrant serving industrial and commercial land developments serve 80,000 square feet of land area, be spaced 300 feet from the next fire hydrant on roads and fire lands, and be a 2.5-inch-by-4-inch double fire hydrant, or 4-inch-by-4-inch double fire hydrant.

**TABLE 4.13-3 REQUIRED FIRE FLOW AND MAXIMUM RESPONSE DISTANCES**

| Land Use | Required Fire Flow | Maximum Response Distance to LAFD Fire Station[1] | |
|---|---|---|---|
| | | Engine Company[2] | Truck Company[2] |
| **Residential** | | | |
| Low Density Residential | 2,000 gpm from three adjacent hydrants flowing simultaneously | 1.5 miles | 1.5 miles |
| High Density Residential and Commercial Neighborhood | 4,000 gpm from four adjacent hydrants flowing simultaneously | 1.5 miles | 1.5 miles |
| **Commercial** | | | |
| Industrial and Commercial | 6,000 to 9,000 gpm from four hydrants flowing simultaneously | 1 mile | 1.5 miles |
| High Density Industrial and Commercial or Industrial (Principal Business Districts or Centers) | 12,000 gpm available to any block (where local conditions indicate that consideration must be given to simultaneous fires, an additional 2,000 to 8,000 gpm will be required) | 0.75 mile | 1 mile |

1. The maximum response distance to LAFD fire stations pertains to areas outside the boundaries covered by the Hillside Ordinance (Ordinance Number 168,159). When a portion of any subdivision, as that term is defined in Section 17.02 of the Los Angeles Municipal Code, falls outside of the one and one-half mile distance requirement, automatic fire sprinklers will not be required in that portion whenever a review by the Chief has determined that no unacceptable increase in hazard to the public will result.
2. The maximum response distances for both LAFD fire suppression companies (engine and truck) must be satisfied.
gpm = gallons per minute

**SOURCE**: City of Los Angeles Municipal Code, *Chapter V – Public Safety and Protection, Article 7 – Fire Protection and Prevention (Fire Code),* Section 57.507.3, Table 57.507.3.1.

**TABLE 4.13-4 LAND USE AND REQUIRED FIRE FLOW**

| Type of Land Development | Net Land Area Served Per Hydrant[1] | Distance Between Hydrants on Roads and Fire Lanes | Type of Hydrant |
|---|---|---|---|
| Low-Density Residential | 150,000 sq. ft. | 600 ft. | 2 1/2" x 4" Double Fire Hydrant |
| High-Density Residential & Neighborhood Commercial | 100,000 sq. ft. | 300 - 450 ft. | 2 1/2" x 4" Double Fire Hydrant |
| Industrial & Commercial | 80,000 sq. ft. | 300 ft. | 2 ½" x 4" Double Fire Hydrant or 4" x 4" Double Fire Hydrant |
| High-Density Industrial & Commercial | 40,000 sq. ft. | 300 ft. | 4" x 4" Double Fire Hydrant |

1. These standards will be systematically reduced where greater fire flow is required due to restricted access, depth of lots, length of blocks, or additional hazards.

**SOURCE:** City of Los Angeles Municipal Code, *Chapter V – Public Safety and Protection, Article 7 – Fire Protection and Prevention (Fire Code),* Section 57.507.3.2, Table 57.507.3.2.

LAMC Section 57.507.3.3 requires land uses to include the installation of an automatic fire-sprinkler system should the type of land use exceed the maximum response distances per Table 57.507.3.3 of LAMC Section 57.507.3.3.

### City of Los Angeles Proposition F, Q, and J – Facilities Bond

Proposition F, also known as the Fire Facilities Bond, was approved in November 2000 and authorized the issuance of $532.6 million to finance the construction and rehabilitation of fire stations and animal shelters in the City of Los Angeles. Further, $378.6 million was allocated for the construction of 18 new or replacement neighborhood fire/paramedic stations, one regional fire station and training facility, and an emergency air operations/helicopter maintenance facility, for a total of 20 Proposition F projects. Through Proposition F, regional Fire Station 82 (5769 Hollywood Boulevard) was reconstructed and opened in 2012.

Proposition Q, known as the Citywide Public Safety Bond Measure was approved in March 2002 and allocated $600 million to renovate, improve, expand, and construct police, fire, 911, and paramedic facilities. Proposition Q also includes renovations to existing LAFD facilities, totaling 80 LAFD facility renovation projects.

In 2006, Measure J amended Proposition F, providing flexibility in the design of new facilities and setting standards for such facilities. Specifically, Measure J allows the following: the development of new regional fire/paramedic stations to be designed and built on one or more properties that are less than two acres; standard fire/paramedic stations to be designed and built on one acre; components to be built on two or more sites within proximity; or facilities to be designed to fit on a single site of less than two acres (Los Angeles 2017).

# ENVIRONMENTAL IMPACTS

## THRESHOLDS OF SIGNIFICANCE

Based on Appendix G of the *CEQA Guidelines*, the Proposed Project would have a potentially significant impact if it would result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, or need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for fire protection.

Consistent with *City of Hayward v. Trustees of California State University* (2015; 242 Cal.App.4th 833), significant impacts under CEQA consist of adverse changes to physical conditions resulting from a project. Potential impacts on public safety services are not an environmental impact that CEQA requires a project applicant to mitigate:

"[T]he obligation to provide adequate fire and emergency medical services is the responsibility of the city." (Cal. Const., art. XIII, § 35, subd. (a)(2) ["The protection of the public safety is the first responsibility of local government, and local officials have an obligation to give priority to the provision of adequate public safety services."].) Therefore, while response times and standards for services are discussed herein, they are provided for informational purposes only and to provide an indication of the potential need for new facilities, rather than as thresholds for significance.

The determination of significance shall be made considering whether a project would require the addition of a new fire station or the expansion, consolidation or relocation of an existing facility to maintain service, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for fire protection.

# METHODOLOGY

The following analysis focuses on determining whether the Proposed Project would result in adverse physical impacts to the environment due to the expansion of existing fire protection facilities or construction of new facilities. Whether additional facilities would be required is determined primarily by considering the adequacy of existing fire protection services, impacts of the Proposed Project on demand for fire protection service, and input from the LAFD. Whether provision of new or expanded facilities would result in substantial adverse environmental effects is evaluated by considering the physical context in which facilities would be built, constraints on the size and number of new and/or expanded facilities, and an analysis of potential environmental impacts that would result from their construction.

As discussed under "Thresholds of Significance," an impact related to public services would occur if the Proposed Project promotes growth patterns resulting in the need for and/or the provision of new or physically altered fire or emergency response facilities, the construction of which would cause significant environmental impacts in order to maintain service ratios, response times, or other performance objectives. The need for or deficiency in adequate fire and emergency response services in and of itself is not a CEQA impact, but a social or economic impact. (*City of Hayward v. B'd of Trustees* (2015) 242 Cal.App. 4th 833, 843. To the extent that the Proposed Project causes the need for additional fire and emergency response services that result in the construction of new facilities or additions to existing facilities and the impact from that construction results in a potential impact to the environment, that is a CEQA impact that needs to be assessed in this EIR. Any discussion in this EIR of social or economic impacts that relates solely to the level of fire and life safety services provided to the community, including any existing or future needs and deficiencies, is not determinant on its own of CEQA impacts, absent those social or economic impacts resulting in physical impacts. The ultimate determination of whether there is a significant impact related to fire and emergency response services is based on whether a significant physical impact would result from the construction of new or expanded fire and emergency response facilities.

# PROJECT IMPACTS

| | |
|---|---|
| **Threshold 4.13-1** | Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, or the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for fire protection? |

**Impact 4.13-1**

**Downtown Plan:** The Downtown Plan would allow for increased development potential that could increase demand for fire protection service in the Downtown Plan Area. This may result in the need for new or expanded fire protection facilities. The size and location of new facilities is not known at this time, but based on the urbanized character of the Downtown Plan Area, it is anticipated that new or expanded facilities could be built without creating significant environmental impacts; therefore, impacts would be ***less than significant***.

**New Zoning Code:** The New Zoning Code does not include any standards that would result in impacts related to the provision of fire protection facilities**.** The Proposed Project does not intend to implement the New Zoning Code outside of the Downtown Plan Area and therefore any indirect impacts from the future use of the New Zoning Code outside the Downtown Plan Area would be speculative. The impact would be ***less than significant***.

## Downtown Plan Impact

The Downtown Plan provides a framework for development of the City's Downtown through 2040 and includes changes to existing policy to enable higher-density development. Future growth under the Downtown Plan is anticipated to add about 99,000 new housing units (291 percent increase), 176,000 new residents (232 percent increase), and 86,000 new employees (39 percent increase) in the Downtown Plan Area by 2040. The Downtown Plan also includes policies to improve pedestrian, bike, and public transit networks in the Downtown Plan Area and encourage use of alternative transportation modes and active transport. Impacts to fire protection services resulting from construction and operation of new development are discussed below.

Construction

While the Downtown Plan would allow for increased residential, commercial, and light industrial development, it would not constitute a commitment to any specific construction. Nevertheless, construction activities associated with development of the Plan Area would potentially temporarily increase existing demand on fire protection and EMS. Construction activities could potentially expose combustible materials (e.g., wood, plastics, sawdust, coverings, and coatings) to fire risks from machinery and equipment sparks, exposed electrical lines, and chemical reactions in combustible materials and coatings. However, in compliance with Occupational Safety and Health Administration (OSHA) requirements, construction managers and personnel would be trained in emergency response and fire safety operations. In addition, fire suppression equipment (e.g., fire extinguishers) would be maintained on each specific construction site during construction.

Road and lane closures due to construction activities related to individual development projects could temporarily affect travel times of fire and emergency services vehicles. Traffic delays caused by potential closures could impede the ability of emergency vehicles to efficiently move along roadways to their destination. In addition, road closures may result in detours that adversely affect response times. However, individual developers are required to implement construction staging and traffic management plans

consistent with LAFD requirements, if warranted, to ensure emergency access is maintained. Moreover, construction activities facilitated by the Downtown Plan would not foreseeably result in the need for expansion of existing fire stations or construction of new fire stations due to their temporary nature. Therefore, construction activity would have a ***less than significant*** environmental impacts related to fire protection.

Operation

Based on information provided in LAFD's Strategic Plan 2015-2017, the ability to provide adequate fire protection services is dependent on numerous factors including staffing levels, mutual aid agreements, deployment strategies, and technological advances in equipment. LAFD's primary determinant for assessing future service needs is based on their cumulative review and analysis of past incidents. Options available to LAFD include expanding fire prevention services, increasing staffing levels, and adding new fire stations(s) to underserved areas. The projected number of residents, employees and overall anticipated development levels is routinely reviewed by LAFD to assist in determining the future need for emergency services. LAFD determines the need for new fire stations based on the needs assessment that takes into account the complex set of factors discussed above, as well as geographic distribution of physical structures; access to trucks, ambulances, and other equipment; the location of new structures and anticipated response times (LAFD 2015).

Meeting service standards could also be affected by the impact of increased land use intensity and residential density in the Downtown Plan Area on roadway congestion in and around the Plan Area used by fire protection vehicles to access emergency sites. However, there is not a direct relationship between predicted travel delay and emergency response times because California State law requires that drivers yield the right-of-way to emergency vehicles and remain stopped until the emergency vehicles have passed. Generally, multi-lane arterial roadways allow emergency vehicles to travel at higher speeds and permit other traffic to maneuver out of the path of the emergency vehicle. The LAFD, in collaboration with Los Angeles Department of Transportation (LADOT), has also developed a Fire Preemption System (FPS) that automatically turns traffic lights to green for emergency vehicles traveling on designated streets in the City.

Existing regulations and policies would partially offset future increases in demand for fire protection service. For example, Downtown Plan Area developers would be required to comply with current fire code standards, which require new construction to incorporate more dynamic and advanced fire and life safety technologies and fire prevention measures than was previously required. In addition, policy measures in the Downtown Plan would encourage use of public transit and alternative modes of transportation, which would generally reduce traffic congestion in the Downtown Plan Area. Furthermore, LAFD has a constitutional mandate to protect public safety and must respond to changing circumstances and, therefore, would act to maintain response times. As development occurs over the life time of the Downtown Plan, it is expected that fire protection service levels will be evaluated and maintained by LAFD. In conformance with California Constitution Article XIII, Section 35, (a)(2), existing policies, procedures and practices related to fire protection and emergency services, LAFD would maintain acceptable emergency response times through the provision of additional personnel and equipment as needed, as well as potentially constructing new or expanding existing fire and emergency response facilities.

The ability of EMS and fire protection services to respond to calls in a timely manner depends primarily on the distance of the station to the incident and the speed at which the emergency vehicles are able navigate intervening roadways. While growth reasonably anticipated under the Downtown Plan would result in higher overall traffic volumes in the Downtown Plan Area, this would not impede emergency response, since California State law requires that drivers yield the right-of-way to emergency vehicles and remain stopped until the emergency vehicles have passed. Therefore, EMS and fire protection services response times generally would not change substantially as the population of the Downtown Plan increases.

As discussed in Section 4.12, *Population, Housing, and Employment*, implementation of the Downtown Plan would result in an increase in overall housing, population, and employment in the Downtown Plan Area. An increase in population, would foreseeably increase demand for fire or emergency protection facilities. Based on this rising demand and existing facilities that are already over capacity, the LAFD estimates that several facilities would require expansion and at least one new station would need to be built in or near the Downtown Plan Area to maintain timely response (Perez 2017). LAFD is considering the expansion of Fire Station No. 9, located at 430 7th Street, in the Downtown Plan Area. Fire Station No. 9 would be demolished and reconstructed as a larger facility. This expansion of this facility would accommodate existing staff and existing resources (Perez 2019). The existing station has not been identified as a historical resource and the site of this facility is surrounded by parking areas and commercial/industrial uses that would not be unusually sensitive to construction or operational noise, lighting, or other impacts associated with facility expansion.

Construction of new fire stations and expansion of existing fire stations to serve the Downtown Plan Area would occur in an urban center and would be limited in number (possibly one or two new facilities) and size. New facilities would also be required to comply with applicable federal, State, and local regulations and policies discussed in this EIR, such as NPDES permit requirements, the City's Tree Ordinance and Noise Ordinance, and the California Building Code, including CALGreen requirements.

Potential environmental impacts of construction and operation of any new facility, as an allowed land use, have been evaluated throughout this EIR. Construction and operational impacts to air, noise, traffic, as well as other impacts of new developments are discussed throughout this EIR, and they would not be any different for a fire/paramedic station/facility. It is not foreseeable that impacts from rebuilding Fire Station No. 9 or upgrades to any of the other existing stations or the construction of any other stations in the Downtown Plan Area would have greater or different impacts than those identified in this EIR for construction or operations. Similar to other types of development, the construction of new or expanded fire protection facilities could contribute to the significant historic resource and construction noise impacts identified in sections 4.4, *Cultural Resources*, and 4.11, *Noise*, of this EIR. According to the Los Angeles Bureau of Engineering (BOE), there are four basic configurations for fire stations but the typical standard fire/paramedic station would consist of a 15,250-square foot building on a parcel that is approximately one acre. Although the Fire Department is preparing a Standards of Cover that could result in recommendations for new fire station typologies, including those better suited to dense urban infill. Based on the urban location and the relatively small size of typical facilities, the construction of a new fire facility or expansion of an existing facility would likely qualify for an infill exemption or result in less–than-significant impacts with standard regulatory compliance measures and project specific design features or project specific mitigation measures identified through a project EIR or mitigated negative declaration. It is noted, that the EIR for Van Nuys No. 39, certified in 2017, found no unavoidable significant impacts for the construction of a new fire station. To the extent that any significant impacts could result from the unique characteristics of a specific site, those impacts would be speculative at this time. Furthermore, the construction of a new fire facility or expansion of an existing facility would require a project-specific environmental analysis under CEQA to address any site-specific environmental concerns. Therefore, impacts related to fire protection and emergency services would be ***less than significant.***

## New Zoning Code Impact

As discussed in Existing Conditions, the LAFD is organized into four geographic bureaus with 14 battalions, each responsible for a group of five to eight fire stations within a geographic area typically 20 to 30 square miles in size. The LAFD is comprised of 106 fire stations and serves a population of over 3.9 million people. Future development has the potential to affect fire protection services by adding additional people and structures within the City that require protection and by increasing roadway congestion that can reduce response times, which could in turn require the construction of new or altered existing facilities.

However, the Proposed Project does not intend to implement the New Zoning Code outside of the Downtown Plan Area and therefore any indirect impacts from the future use of the New Zoning Code outside the Downtown Plan Area would be speculative. The New Zoning Code only applies to properties where a community plan is updated or amended to utilize the new zoning, which would require environmental review pursuant to CEQA. Future environmental review of a proposed community plan update or development project and associated zoning classifications would analyze potential community- and site-specific impacts to existing fire protection. Therefore, impacts related to fire protection and emergency services would be ***less than significant.***

### Mitigation Measures

Downtown Plan

No significant impacts related to fire protection facilities have been identified; therefore, mitigation is not required.

However, the construction of new fire protection facilities or expansion of existing facilities to serve the Downtown Plan Area would be required to incorporate applicable mitigation measures included in this EIR. These potentially include measures related to biological resources, cultural resources, hazards/hazardous materials, and noise.

New Zoning Code

This impact would be less than significant; therefore, mitigation is not required.

## CUMULATIVE IMPACTS

The geographic area to analyze cumulatively considerable impacts to fire protection services includes the entire City of Los Angeles as well as areas at the City's periphery that could potentially be affected by construction of a new facility at or near the City's corporate boundary. Citywide development through 2040 would add an estimated 293,000 new households, 659,000 new residents, and 345,000 new employees (SCAG 2016).

Cumulative development throughout Los Angeles would increase overall demand for fire protection service and may create the need for more fire fighters and potentially new facilities. Fire Station 39, located at 14115 Sylvan Street, Van Nuys, will move to its new location at 14615 Oxnard Street, Van Nuys, on or about July 1, 2019; however, no other new facilities are planned at this time, city-wide (LAFD 2019). Impacts associated with the addition of multiple fire protection facilities throughout the City are speculative since the size, location, and nature of needed new facilities is not known that this time. Nevertheless, the impacts of new facilities would be localized in nature and the addition of multiple new facilities in specific locations may have localized impacts, but would not result in significant additive or cumulative impacts (i.e., the addition of multiple fire protection facilities in various parts of the City would not result in additive effects at any given location).

Past development has occurred in accordance with the growth allowed under the City of Los Angeles General Plan, and all development in the City is required to maintain consistency with City of Los Angeles fire protection regulations. Future development in the Downtown Plan Area, as well as future development occurring within the entire LAFD service area, would be required to comply with all applicable LAFD fire code requirements associated with adequate fire access, fire flows, and number of hydrants as a condition of project approval. Additionally, any development project that would be located at distances that exceed response distance requirements would be required to undergo plan review by the Fire Chief, who would

determine the fire suppression measures that the development project would be required to implement. New development would be required to provide upgrades to the water distribution systems serving the LAFD service area in accordance with LAFD and/or Los Angeles Department of Water and Power (LADWP) requirements. As with the code requirements for fire access, fire flows, number of hydrants, and fire suppression measures, these upgrades would be addressed for new development in conjunction with individual project approvals. These requirements would reduce the demand for additional fire services. However, in the event the Downtown Plan would result in the need for new or expanded fire and emergency response facilities, the construction and operation of new facilities would not be expected to result in new or substantially different impacts from those impacts discussed in the other sections of this EIR, such as *traffic, air, noise*. Without information as to design, location of new or expanded LAFD facilities and their proximity to sensitive receptors, such impacts would be speculative at this time. Similarly, the construction and operation of new fire protection facilities in the Downtown Plan Area may have localized impacts, but individual facilities would not contribute to any additive cumulative or regional impacts. Therefore, the Downtown Plan's incremental effect related to fire service would not be cumulatively considerable.

The New Zoning Code only applies to properties where a community plan is updated or amended to utilize the new zoning so it would only apply to the Downtown Plan at this time. Therefore, projecting the location and type of any new fire protection facilities would be speculative. Future community plan updates and associated zoning classifications would, however, be required to adhere to existing state and local requirements related to the provision of fire protection facilities.

Based on the above information, the incremental effect of the Downtown Plan and New Zoning Code would not be cumulatively considerable and cumulative impacts would be ***less than significant.***

# *Police Protection*

# ENVIRONMENTAL SETTING

## CITYWIDE SETTING

The Los Angeles Police Department (LAPD) provides police protection services to the entire City of Los Angeles. Similar to the LAFD, the Los Angeles Police Department (LAPD) is comprised of four geographic bureaus (Valley, West, Central, and South) with 21 subdivisions. In 2017, the LAPD had 10,038 sworn police officers and 2,819 civilian personnel (LAPD 2017e).

The LAPD handles an estimated 2,981,238 telephone calls for service per year and approximately 1,270,278 are non-emergency related. According to the 2016 Crime Statistics summary, there were 28,084 violent crimes, 97,346 property crimes, and 119,955 arrests in 2016 (LAPD 2016).

## DOWNTOWN PLAN AREA SETTING

The Downtown Plan Area lies within the operational boundaries of the Central Bureau and straddles the boundaries of three divisions: most of the Downtown Plan Area lies in the service area of Division 1 (Central Area); the southeastern portion lies in the service area of Division 13 (Newton Area); and a small area in the northwest corner of the Downtown Plan Area lies in the service area of Division 11 (Northeast Area). Each division has its own police station that serves as the division's headquarters. Currently, the Central Station is at full capacity; office space for officers is limited and there is insufficient parking space for police vehicles (Ogaz 2017).

**Table 4.13-5** summarizes the stations serving the Downtown Plan Area and includes the current service population and service area for each division. **Table 4.13-6** summarizes current crime statistics for Divisions 1, 11, and 13. Typical crimes include homicide, rape, robbery, aggravated assault, burglary, larceny, motor vehicle theft, and arson.

**TABLE 4.13-5 LAPD STATIONS SERVING THE DOWNTOWN PLAN AREA**

| Division/Station | Address | Service Population | Service Area (sq. mi.) |
|---|---|---|---|
| Central Area | 251 E. 6th Street | 40,000 | 4.5 |
| Northeast Area | 3353 San Fernando Road | 250,000 | 29 |
| Newton Area | 3400 South Central Ave. | 150,000 | 9 |

**SOURCE**: LAPD 2017a, b, c

**TABLE 4.13-6 2016 CRIME STATISTICS**

| Division/Station | Violent Crimes[1] | Property Crimes[2] |
|---|---|---|
| Central Area | 1,702 | 4,377 |
| Northeast Area | 952 | 5,093 |
| Newton Area | 2,100 | 4,244 |

1. Violent crimes include homicide, rape, robbery, and aggravated assault.
2. Property crimes include burglary, motor vehicle theft, burglary/theft from motor vehicle, personal/other theft

**SOURCE**: LAPD 2016a

Response time represents the period of time elapsed from the initiation of an assistance call to the appearance of a police unit at the scene. The LAPD has a response time goal of seven minutes (Ogaz 2017). Currently, the average citywide response time is 6.1 minutes (SoCal Patch 2017). Unlike fire protection services, police units are most often in a mobile state; therefore, the distance between a police station and a project site is of little relevance. Instead, the number of deployed police officers and their proximity to crimes is more directly related to the response time.

The Central Area Station, which serves most of the Downtown Plan Area, employs 402 officers, about 313 of which are patrol and probation officers that take response calls (Ogaz 2017). This station currently serves a population of approximately 40,000 (LAPD 2017a); thus, there are about 78 police officers per 10,000 persons. This is above the 2015 national average number of officers per 10,000 persons (16.6) for jurisdictions with a population of over 500,000 and higher, and higher than the citywide 2015 average of 24.9 officers per 10,000 people (Governing 2015). The LAPD also uses technology to enhance strategic deployment of field officers in their service area (LAPD 2016b), which can help lower average response time. PredPol software predicts the times and places where crimes are most likely to occur based on historic data on the time, location, and type of crimes committed.

# REGULATORY FRAMEWORK

## STATE

### California Penal Code

All law enforcement agencies in California are organized and operated in accordance with the applicable provisions of the California Penal Code. This code sets forth the authority, rules of conduct, and training for peace officers. Under state law, all sworn municipal and county officers are state peace officers.

### California Constitution, Article XIII, Section 35

Section 35 of Article III of the California Constitution at subdivision (a)(2) provides: "The protection of the public safety is the first responsibility of local government and local officials have an obligation to give priority to the provision of adequate public safety services." Section 35 of Article XIII of the California Constitution was adopted by the voters in 1993 under Proposition 172. Proposition 172 directed the proceeds of a 0.50 percent sales tax to be used exclusively for local public safety services, including police. California Government Code Sections 30051-30056 provide rules to implement Proposition 172. Section 30056 provides that a city is not allowed to spend less of its own financial resources on its combined public safety services in any given year compared to its 1992-93 fiscal year. Therefore, an agency is required to use Proposition 172 to supplement its local funds used on police protection, as well as other public safety services. In City of Hayward v. Trustee of California State University (2015) 242 Cal. App. 4th 833, the court found that, Section 35 of Article XIII of the California Constitution requires local agencies to provide fire services and that it is reasonable to conclude that a lead agency will comply with that provision and ensure that public services are provided. (See City of Hayward v. Trustee of California State University (2015) 242 Cal. App. 4th 833, 847 stating "the city has a constitutional obligation to provide adequate fire protection services".) It is reasonable to analogize that a similar analysis would apply to police services as Section 35 of Article XIII includes a responsibility for cities to give priority to public safety services, which includes police services.

# LOCAL

## City of Los Angeles General Plan, Framework and Safety Elements

Chapter 9, Infrastructure and Public Services of the Framework Element, includes goals, objectives, and policies applicable to police protection services. These are summarized in **Table 4.13-7**. In addition, the Safety Element of the Los Angeles General Plan addresses natural hazard issues related to Los Angeles Police Department (LAPD) resources (e.g., traffic safety during or following a disaster) and recognizes that most jurisdictions rely on emergency personnel (police, fire, gas, and water) to respond to emergencies.

**TABLE 4.13-7 RELEVANT GENERAL PLAN POLICE PROTECTION GOALS, OBJECTIVES, AND POLICIES**

| **Framework Element – Chapter 9, Infrastructure and Public Services** | |
|---|---|
| Goal 9I | Every neighborhood in the City has the necessary police services, facilities, equipment, and manpower required to provide for the public safety needs of that neighborhood. |
| Objective 9.13 | Monitor and forecast demand for existing and projected police service and facilities. |
| Policy 9.13.1 | Monitor and report police statistics, as appropriate, and population projections for the purpose of evaluating police service based on existing and future needs. |
| Objective 9.14 | Protect the public and provide adequate police services, facilities, equipment and personnel to meet existing and future needs. |
| Policy 9.14.1 | Work with the Police Department to maintain standards for the appropriate number of sworn police officers to serve the needs of residents, businesses, and industries. |
| Policy 9.14.5 | Identify neighborhoods in Los Angeles where facilities are needed to provide adequate police protection. |
| Policy 9.14.7 | Participate fully in the planning of activities that assist in defensible space design and utilize the most current law enforcement technology affecting physical development. |
| Objective 9.15 | Provide for adequate public safety in emergency situations. |
| Policy 9.15.1 | Maintain mutual assistance agreements with local law enforcement agencies, State law enforcement agencies, and the National Guard to provide for public safety in the event of emergency situations. |

**SOURCE**: City of Los Angeles 2001

## City of Los Angeles Charter and Administrative and Municipal Codes

The law enforcement regulations, as well as the powers and duties of the LAPD, are outlined in the City of Los Angeles' Charter, Administrative Code, and the LAMC. Article V, Section 570 of the City of Los Angeles Charter gives power and duty to the LAPD to enforce the penal provisions of the Charter, City ordinances, and State and federal law. The Charter gives responsibility to LAPD officers to act as peace officers and to protect lives and property in case of disaster or public calamity. Chapter 11, Section 22.240 of the Los Angeles Administrative Code requires the LAPD to adhere to the State of California standards described in Section 13522 of the California Penal Code. Section 13522 charges the LAPD with the responsibility of enforcing all LAMC Chapter 5 regulations related to fire arms, illegal hazardous waste disposal, and nuisances (e.g., excessive noise), and with providing support to the Department of Building and Safety Code Enforcement inspectors and the LAFD in the enforcement of the City's Fire, Building, and Health Codes. The LAPD is also given the power and the duty to protect residents and property and to review and enforce specific security-related mitigation measures in regards to new development.

## Los Angeles Police Department (LAPD) Computer Statistics Unit (COMPSTAT) Program

The LAPD COMPSTAT was created in 1994 and implements the General Plan Framework goal of assembling statistical population and crime data to determine necessary crime prevention actions. This system implements a multi-layer approach to police protection services through statistical and geographical information system (GIS) analysis of growing trends in crime through its specialized crime control model.

COMPSTAT has effectively and significantly reduced the occurrence of crime in Los Angeles communities through accurate and timely intelligence regarding emerging crime trends or patterns (LAPD 2018).

### LAPD Guidelines and Plan Review

Projects subject to City review are required to develop an Emergency Procedures Plan to address emergency concerns and practices. The plan is subject to review by LAPD. In addition, projects are encouraged to comply with the LAPD's *Design Out Crime Guidelines*, which incorporates techniques of Crime Prevention Through Environmental Design (CPTED) and seeks to deter crime through the design of buildings and public spaces (LAPD 2017d). Specifically, projects are recommended to:

Provide on-site security personnel whose duties shall include but not be limited to the following:

- Monitoring entrances and exits;
- Managing and monitoring fire/life/safety systems;
- Controlling and monitoring activities in parking facilities;

Install security industry standard security lighting at recommended locations including parking structures, pathway options, and curbside queuing areas;

Install closed-circuit television at select locations including (but not limited to) entry and exit points, loading docks, public plazas and parking areas;

Provide adequate lighting of parking structures, elevators, and lobbies to reduce areas of concealment;

Provide lighting of building entries, pedestrian walkways, and public open spaces to provide pedestrian orientation and to clearly identify a secure route between parking areas and points of entry into buildings;

Design public spaces to be easily patrolled and accessed by safety personnel;

Design entrances to, and exits from buildings, open spaces around buildings, and pedestrian walkways to be open and in view of surrounding sites; and

Limit visually obstructed and infrequently accessed "dead zones."

# ENVIRONMENTAL IMPACTS

## THRESHOLDS OF SIGNIFICANCE

Based on Appendix G of the *CEQA Guidelines*, the Proposed Project would have a potentially significant impact if it would result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, or need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for police protection services.

While response times and standards for services are provided in the impact discussions below, they are provided for informational purposes only and to provide an indication of the potential need for new facilities, rather than as thresholds for significance.

## METHODOLOGY

The following analysis focuses on determining whether the Proposed Project would result in adverse physical impacts to the environment due to the expansion of existing police facilities or construction of new facilities. Whether additional facilities would be required is determined primarily by considering the

adequacy of existing police services, impacts of the Proposed Project on demand for police protection facilities, and input provided by the LAPD. The need for or deficiency in adequate police services in and of itself is not a CEQA impact, but a social or economic impact. (*City of Hayward v. B'd of Trustees* (2015) 242 Cal. App. 4th 833, 843). Any discussion in this EIR that relates solely to the level of police protection services provided to the residents or users of the Downtown Plan Area and its surrounding community, including any existing or future needs and deficiencies, is for informational purposes only. The ultimate determination of whether there is a significant impact related to police protection services is based on whether a significant impact will result from the construction of new or expanded police facilities. Whether provision of new or expanded facilities would result in substantial adverse environmental effects is evaluated by considering the physical context in which facilities would be built, constraints on the size and number of new and/or expanded facilities, and an analysis of potential environmental impacts that would result from their construction.

# PROJECT IMPACTS

| | |
|---|---|
| **Threshold 4.13-2** | Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for police protection? |

**Impact 4.13-2**

**Downtown Plan:** The Downtown Plan would accommodate residential, commercial, and light industrial development in the Downtown Plan Area, which would increase demand for police services and officers in order to maintain acceptable response times. However, due to existing limited capacity at police stations serving the Downtown Plan Area, growth under the Downtown Plan is anticipated to result in the need for new or expanded police facilities. However, based on the urbanized character of the Downtown Plan Area, it is anticipated that new or expanded facilities could be built without creating significant environmental impacts; therefore, impacts would be ***less than significant***.

**New Zoning Code:** The New Zoning Code does not include any standards that would result in impacts related to the provision of police protection facilities. The Proposed Project does not intend to implement the New Zoning Code outside of the Downtown Plan Area and therefore any indirect impacts from the future use of the New Zoning Code outside the Downtown Plan Area would be speculative. The impact would be ***less than significant***.

## Downtown Plan Impact

Construction

Construction related to future development within the Downtown Plan Area would have the potential to temporarily increase the demand on police services. Construction sites can pose a nuisance with respect to vandalism and theft. Road and lane closures due to construction activities related to individual development projects could affect response times of police vehicles. Traffic delays caused by potential closures could impede the ability of police vehicles to efficiently move along roadways to their destination. Additionally, temporary road closures may also result in detours that impact response time. Any development project that will cause temporary road closures is required to submit a plan to LADOT for approval to ensure any impacts are minimized and, if necessary, proper signage and flagmen provided to avoid impacts. Additionally, large projects are required to develop a construction staging and traffic management plan, as necessary, to ensure that emergency access is maintained and the construction sites are secure. Construction

of reasonably anticipated development under the Downtown Plan would not result in the need for new or physically altered governmental facilities to maintain police service levels and objectives.

Operation

The Downtown Plan would accommodate new residential, commercial, and light industrial development in the Downtown Plan Area, resulting in an estimated 176,000 additional residents (232 percent increase) and 86,000 additional employees (39 percent increase). A larger population could increase demand for LAPD services by increasing the opportunities for crime, though an increase in development intensity and residential density would not necessarily result in a directly proportional increase in crime. An area's crime rate is influenced by many factors, such as police presence, implementation of crime prevention measures, department funding, and socioeconomic factors. To ensure that necessary police services, facilities, and equipment are provided for the public safety needs of all neighborhoods, demand for existing and projected police services and facilities is monitored and forecasted by LAPD in order to maintain standards. Accordingly, as development occurs over the lifetime of the Downtown Plan, police protection service levels would continue to be evaluated and maintained by LAPD in accordance with existing policies, procedures and practices. Individual developments in the Downtown Plan Area would be required to incorporate design features to deter crime. The LAMC and Los Angeles Building Code (LABC) include recently adopted requirements regarding lighting and/ or security locks and devices for residential uses, as well as outdoor lighting requirements for a variety of uses (e.g., LABC Chapter 67, 1029, 8697)(Los Angeles Department of Building and Safety [LADBS] 2017). Additionally, LAPD would review development project applications to determine the types of design features that the development project would need to incorporate to deter crime, consistent with the techniques of CPTED.

Meeting service standard could be affected by increased roadway congestion. As discussed in Section 4.15, *Transportation and Traffic*, of this EIR, implementation of the Downtown Plan would result in land use intensification and an organized and coordinated development pattern that would increase accessibility of destinations while minimizing the related growth in vehicle trips and VMT per capita. While implementation of the Downtown Plan could impact segment-level LOS, there is not a direct relationship between predicted travel delay and emergency response times as California State law requires that drivers yield the right-of-way to emergency vehicles and remain stopped until the emergency vehicles have passed. Designated emergency and disaster routes within the Plan Area would be maintained. Generally, multi-lane arterial roadways allow emergency vehicles to travel at higher speeds and permit other traffic to maneuver out of the path of the emergency vehicle. On congested roadways, multi-lane arterial roadways with continuous center left-turn lanes facilitate emergency access when the thru lanes experience delays. Additionally, as previously mentioned under Existing Setting, various roadways within the Plan Area is equipped with FPS, a system that automatically turns traffic lights to green for emergency vehicles traveling on designated streets.

Additional demand for police service would need to be accommodated, at least in part, through the hiring of new patrol officers who would require office space and patrol cars. However, due to existing over-capacity issues and the age of existing facilities, the LAPD expects that replacement and expansion of existing facilities, or construction of new facilities, would be required to maintain adequate police service in the Downtown Plan Area through 2040 (Ogaz 2017). Although the exact types and locations of future new facilities are not known at this time, it is anticipated that new facilities would be community facilities similar to the Central Community Police Station located at 251 E. 6th Street. Such facilities could generally be accommodated in existing buildings or small new structures and could be developed without new significant environmental impacts beyond those described throughout this EIR. Police protection service levels would continue to be evaluated and maintained by LAPD in accordance with existing policies, procedures and practices as development occurs over the lifetime of the Downtown Plan.

Construction of new or expanded police stations would occur in an urban center and would be limited in number and size. New facilities would also be required to comply with applicable federal, State, and local regulations and policies discussed in this EIR, such as NPDES permit requirements, the City's Tree Ordinance and Noise Ordinance, and the California Building Code, including CALGreen requirements.

The environmental impacts of construction and operation of any new facility, as an allowed land use, have been evaluated throughout this EIR. Potential impacts to air, noise, traffic, as well as other impacts of new developments are discussed in the impact sections of this EIR and would not be different for the construction of a LAPD station/facility. It is not foreseeable that impacts from the construction or operation of new or expanded police facilities in the Downtown Plan Area would have greater or different impacts than those identified in this EIR for construction or operations. It is unlikely, but possible, that, similar to other types of development, the construction of new or expanded police protection facilities could contribute to the significant historic resource and construction noise impacts identified in sections 4.4, *Cultural Resources*, and 4.11, *Noise*, of this EIR. Should new facilities be needed, such facilities are anticipated to be infill developments surrounded by urban uses and would not require new or expanded infrastructure. Based on the urban character of the Downtown Plan Area, the construction of new police facilities or expansion of an existing facility would most likely result in a less-than-significant impact and or possibly qualify for an infill exemption. To the extent that any significant impacts could result from the unique characteristics of a specific project site, those impacts would be speculative at this time. Furthermore, although it is anticipated that needed new community facilities could be developed without significant environmental effects beyond those identified in this EIR, the construction a new LAPD facility or expansion of an existing facility would require project-specific environmental analysis under CEQA to address any site-specific environmental concerns. Therefore, impacts related to police protection services, would be ***less than significant***.

## New Zoning Code Impact

As discussed in Existing Conditions, the LAPD has 10,038 sworn police officers and 2,819 civilian personnel that serve a population of over 3.9 million people. The provision of new police protection facilities and increased demand for police protection is influenced by many factors, such as police presence, implementation of crime prevention measures, department funding, and socioeconomic factors. Future development has the potential to affect police protection services by adding additional people and structures within the City that require protection and by increasing roadway congestion that can reduce response times, which could in turn require the construction of new or altered existing facilities. However, the Proposed Project does not intend to implement the New Zoning Code outside of the Downtown Plan Area and therefore any indirect impacts from the future use of the New Zoning Code outside the Downtown Plan Area would be speculative.

As discussed in Section 3.7.4, there are many combinations of Form, Frontage, Standards, Use, and Density Districts that could be applied to properties to make a zone. Due to the modular nature of the new zoning, it is not known where or to what extent future development may occur. Projecting the location and type of future growth as a result of the New Zoning Code outside of the Downtown Plan Area would be speculative at this time as this Project only includes an update to the Downtown Community Plan. In addition, as required by the LAMC and LABC, individual developments are presently required to incorporate design features to deter crime (LADBS 2017). For example, as discussed in the Downtown Community Plan Impact, the LAMC and LABC include recently adopted requirements regarding lighting and/or security locks and devices for residential uses, as well as outdoor lighting requirements for a variety of uses.

Future environmental review of a proposed community plan update and associated zone districts would analyze potential community- and site-specific impacts to existing police protection. Any proposed development would undergo project-level environmental review under CEQA, and would be required to

comply with state and local requirements related to police protection. Therefore, impacts related to police protection services would be ***less than significant.***

### Mitigation Measures

Downtown Plan

No significant impacts related to police facilities have been identified; therefore, mitigation is not required.

However, the construction of new police facilities or expansion of existing facilities to serve the Downtown Plan Area would be required to incorporate applicable mitigation measures included in this EIR. These potentially include measures related to biological resources, cultural resources, hazards/hazardous materials, and noise.

New Zoning Code

This impact would be less than significant; therefore, mitigation is not required.

## CUMULATIVE IMPACTS

The geographic area to analyze cumulatively considerable impacts to police protection services includes the entire City of Los Angeles as well as areas at the City's periphery that could potentially be affected by construction of a new facility at or near the City's corporate boundary. Citywide development through 2040 would add an estimated 659,000 new residents, 293,000 new households, and 345,000 new employees (SCAG 2016).

As described above, development projects within the City, including the Downtown Plan Area, would be subject to review upon project submittal of the development application and may be required to provide security features, such as security cameras, private security services, and/or on-site police drop-in facilities that reduce the demand for police service. Future development would also be required to incorporate design elements relative to security, and semi-public and private spaces such as CPTED. These features may include, but not be limited to, access control to buildings, secured parking facilities, walls/fences with key systems, well-illuminated public and semi-public space designed with a minimum of dead space to eliminate areas of concealment, and location of toilet facilities or building entrances in high-foot traffic areas. These measures would minimize the overall increase in demand for police protection services. Nevertheless, cumulative development throughout Los Angeles would increase overall demand for police service and may create the need for more officers and potentially new facilities. However, environmental impacts associated with the construction of new or expanded facilities would not be expected to result in significant environmental effects and the impacts associated with the addition of police protection facilities are speculative since the size, location, and nature of needed new facilities is not known at this time. Any potential impacts of new facilities would be localized in nature and the addition of new facilities in specific locations would not result in significant cumulative impacts (i.e., the addition of multiple police protection facilities in various parts of the City would not result in additive effects at any given location). As demand for LAPD services increases, LAPD will act to maintain adequate service levels. In the event the Downtown Plan would result in the need for new or expanded LAPD facilities, the construction and operation of new facilities would not be expected to result in new or substantially different impacts from those impacts discussed in other sections of this EIR, such as traffic, air, noise. Without information as to design, location of new or expanded LAFD facilities and their proximity to sensitive receptors, such impacts would be speculative at this time. Furthermore, the construction and operation of new police facilities in the Downtown Plan Area may have localized impacts, but individual facilities would not contribute to any

additive or cumulative regional impacts. Therefore, the incremental effect of the Downtown Plan related to police facilities would not be cumulatively considerable.

The New Zoning Code only applies to properties where a community plan is updated or amended to utilize the new zoning so it would only apply to the Downtown Plan at this time. Therefore, projecting the location and type of any new police facilities would be speculative. Future community plan updates would, however, be required to adhere to existing state and local requirements related to the provision of police protection facilities.

Based on the above information, the incremental effect of the Downtown Plan and New Zoning Code related to police protection service would not be cumulatively considerable and cumulative impacts would be ***less than significant.***

# *Schools*

# ENVIRONMENTAL SETTING

## CITYWIDE SETTING

The Los Angeles Unified School District (LAUSD) serves an area totaling 710 square miles, including most of the City of Los Angeles and the entirety or portions of 26 cities and unincorporated areas of Los Angeles County (LAUSD 2017a). LAUSD enrolled 595,118 students in pre-K through 12th grade for the 2017-2018 school year, an additional 30,405 students in other types of classes, and 76,220 students in adult education courses (LAUSD 2017a). The District includes 19 primary schools, 448 elementary schools, 81 middle schools, 94 high schools, 54 option schools, 49 Magnet schools, 25 multi-level schools, 13 special education schools, 2 home/hospital schools, 177 K-12 Magnet centers (i.e., Magnet schools within regular campuses), 224 charter schools, and 120 other schools and centers.

LAUSD provides a number of programs that allow residents within LAUSD boundaries to attend schools outside of their residential community (LAUSD 2017b). Magnet schools offer a themed core-curriculum (e.g., business, communication arts, gifted/highly gifted/high ability, liberal arts, and visual and performing arts) and provide bus services for their students to promote greater ethnic and racial integration; the Capacity Adjustment Program (CAP) provides busing when a school reaches capacity and students need to be transported to another school; Permits with Transportation (PWT) provides busing for non-Anglo students to attend in a more integrated environment and vice versa; and Public School Choice/No Child Left Behind (PSC/ NCLB) offers busing for students who attend a Program Improvement School and wish to attend a non-Program Improvement School. Nevertheless, the majority of LAUSD students attend schools within their residential community. Enrollment is categorized as either "actual" or "resident" enrollment. As noted in **Table 4.13-8**, actual enrollment is the number of students actually attending the school at the start of the reported school year, including magnet students and resident enrollment is the total number of students living in the school's attendance area and who are eligible to attend at the start of the school year, plus any on-site magnet schools.

## DOWNTOWN PLAN AREA SETTING

LAUSD currently operates 20 elementary and middle schools whose attendance area includes the Downtown Plan Area; 12 of the schools are traditional elementary schools, five are traditional middle schools, two are primary centers (K or K-1), and one provides 2nd through 6th grade instruction. In addition, the Downtown Plan Area lies within five "school choice areas" that include an additional 18 schools. Of these schools, two are middle schools and 16 are high schools (LAUSD 2017c). Students residing within the attendance boundaries of any of the schools included in each "zone of choice" may attend any of the schools within that zone. **Figure 4.13-1** shows the location of these public schools. **Table 4.13-8** provides the names and locations of LAUSD schools serving the Downtown Plan Area, as well current and projected data for capacity, enrollment, seating overage, and overcrowding status; projections are for five years in the future (i.e., 2021-2022 school year). Enrollment and capacity numbers are based on data for the 2016-2017 school year and already take into account planned school building additions and portable classrooms on site (LAUSD 2017c).

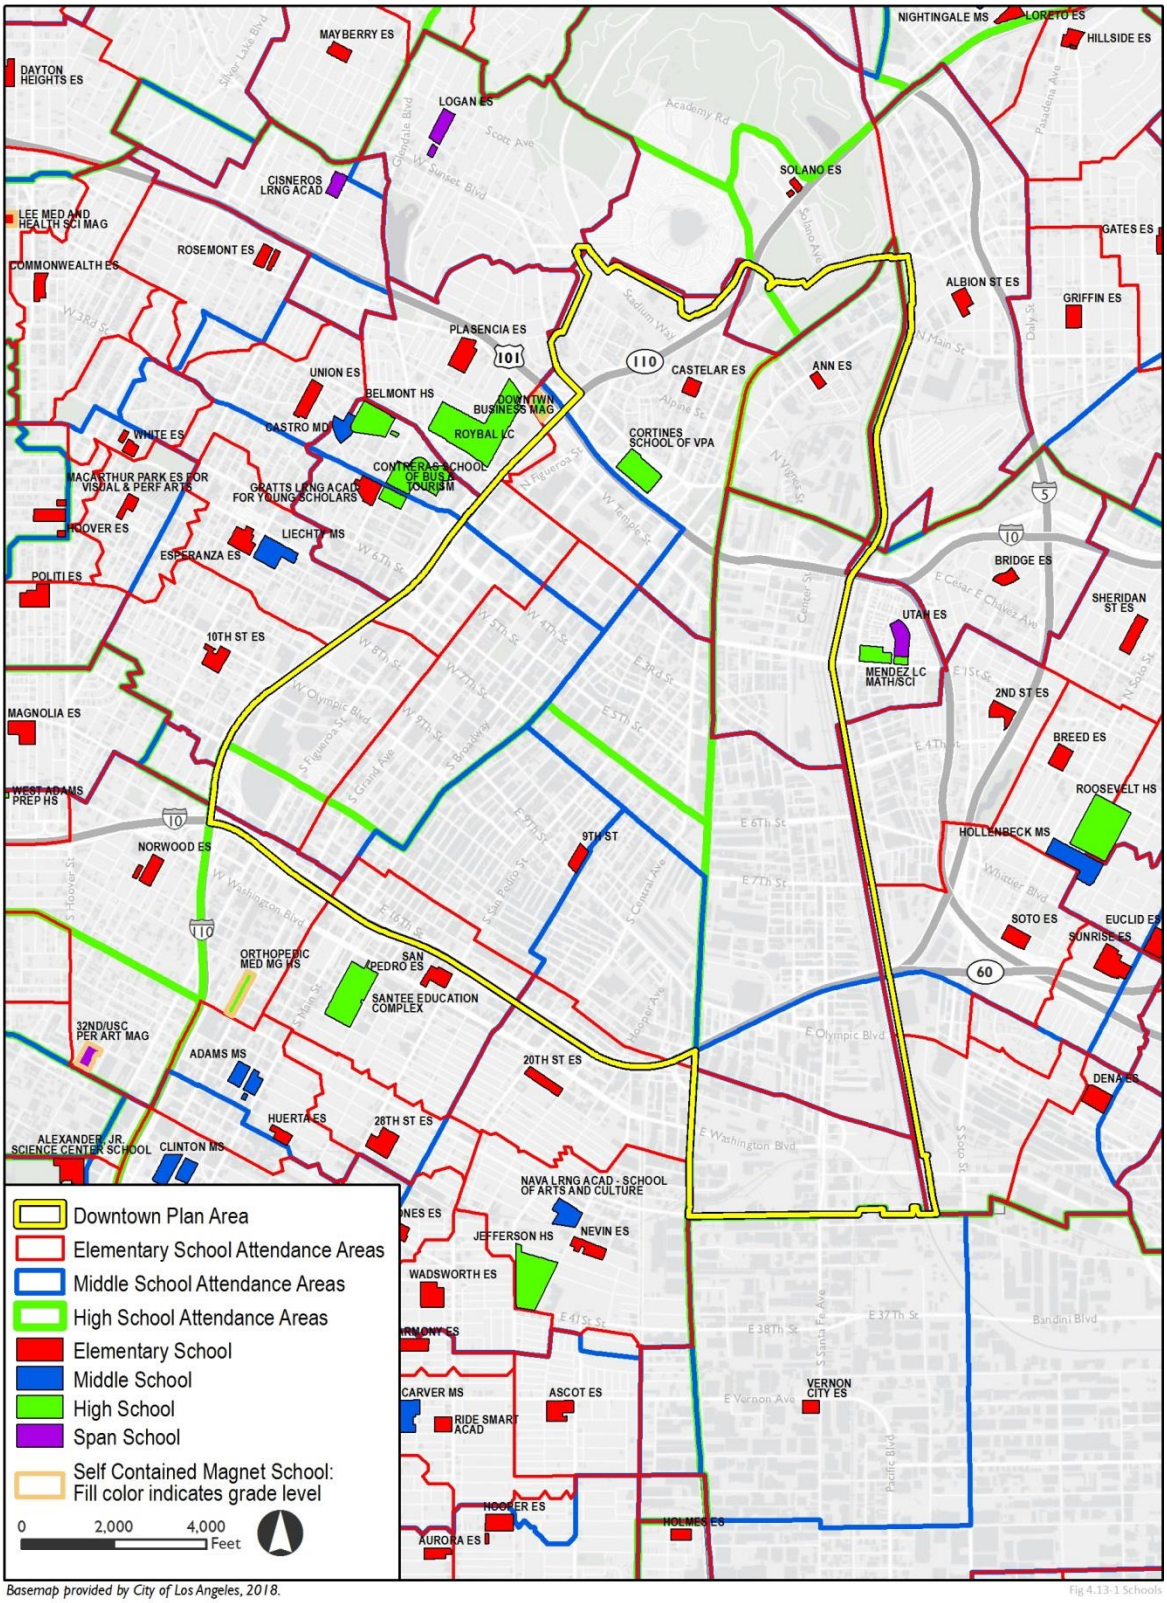
Notes:
Data is provided for the 2016-2017 School Year.
1. Capacity represents the maximum number of students the school can serve while operating on its current calendar.
2. Actual enrollment is the number of students actually attending the school at the start of the reported school year, including magnet students.
3. Resident enrollment is the total number of students living in the school's attendance area and who are eligible to attend at the start of the school year, plus any on-site magnet schools.
4. Seating overage or (shortage) = Capacity - Resident Enrollment
5. A school is considered overcrowded if the school is currently on a multi-track calendar, there is a currently a seating shortage, or there is currently an available capacity of less than or equal to a "safety margin" of 20 seats.
6. School planning capacity is based on the number of eligible classrooms and classroom utilization after implementing LAUSD operation goals, which include operating on a two-semester calendar and assumed budget resources that allow for reductions in class size. Includes capacity allocated to charter co-locations and magnet programs.
**SOURCE**: Los Angeles Unified School District 2017c

**Figure 4.13-1 Public Schools Serving the Downtown Plan Area**



*Basemap provided by City of Los Angeles, 2018.*

Enrollment and capacity data for the public schools serving the Downtown Plan Area indicate that the area's schools are already over-burdened. Currently, ten schools and four zones of choice are overcrowded (i.e., have a seating shortage or a safety margin of less than 20 seats). In total, area schools currently have a deficit of 1,742 seats for middle school students, and a deficit of 279 seats for high school students; there are, however, 530 seats available for Elementary and Pre-K. Seating availability is calculated using residential enrollment numbers, which includes the total number of students eligible to attend a school, rather than actual enrollment numbers. Currently, all schools are able to accommodate actual enrollment.

Projected enrollment and capacity data are also provided in **Table 4.13-8** for a five-year horizon. School capacity is projected to decrease for all schools in five years. This does not indicate a reduction in available school facilities, but rather an anticipated decrease in classroom utilization due to implementation of LAUSD operational goals and availability of budgetary resources to support smaller class sizes. In addition, resident enrollment is expected to decrease based on recent enrollment trends (LAUSD 2017c). Under the future scenario, an additional two elementary schools and one zone of choice would experience overcrowding, resulting in a total of 12 schools and five zones of choice potentially facing seating shortages.

# REGULATORY FRAMEWORK

## STATE

### California Government Code Section 65995 (California Government Code, Title 7, Chapter 4.9)

California Government Code Section 65995 authorizes school districts to collect impact fees from developers of new residential and commercial/industrial building space. Section 65995 was established under the School Facilities Act of 1986 and refined and amended by the Leroy F. Greene School Facilities Act of 1998 (Senate Bill 50 [SB 50]) to provide further guidance and restrictions on fee limits and fee types. The maximum fees authorized under SB 50 apply to zone changes, general plan amendments, zoning permits and subdivisions. The payment of school impact fees by developers are deemed to provide full and complete mitigation of school facilities impacts, notwithstanding any contrary provisions in CEQA or other State or local laws. The Los Angeles Unified School District (LAUSD) determines fees annually in accordance with California Government Code Section 65995.

### California Education Code

School facilities and services are subject to the rules and regulations of the California Education Code and governance of the State Board of Education (SBE). The SBE is the 11-member governing and policymaking body of the California Department of Education (CDE) that sets Kindergarten through 12$^{th}$ Grade (K–12) education policy in the areas of standards, instructional materials, assessment, and accountability.

### California Department of Education (CDE)

The CDE is the government agency responsible for public education throughout the state. With the State Superintendent of Public Instruction, the CDE is responsible for enforcing education law and regulations and for continuing to reform and improve public elementary school, secondary school, childcare programs, adult education, and preschool programs. The department oversees funding, and student testing and achievement levels for all state schools. A sector of the CDE, the SBE is the governing and policy making sector responsible for education policies regarding standards, instructional materials, assessment, and accountability. The CDE's mission is to provide leadership, assistance, oversight, and resources so that every Californian has access to an education that meets world-class standards. The core purpose of the CDE

is to lead and support the continuous improvement of student achievement, with a specific focus on closing achievement gaps.

### Assembly Bill 149 and 2071 – Open Enrollment Policy

The open enrollment policy is a state-mandated policy that enables students located in the LAUSD to apply to any regular, grade-appropriate LAUSD school with designated "open enrollment" seats. Open enrollment seats are granted through an application process that is completed before the school year begins. Under the Open Enrollment Policy, students living in a particular school's attendance area are not displaced by a student requesting an open enrollment transfer to that school.

### Class Size Reduction Kindergarten-University Public Education Facilities Bond Act of 1998

Proposition 1A, the Class Size Reduction Kindergarten-University Public Education Facilities Bond Act of 1998 (Ed. Code, Section 100400–100405) is a school construction funding measure that was approved by the voters on the November 3, 1998 ballot. This Act created the School Facility Program where eligible school districts may obtain state bond funds.

## LOCAL

### Los Angeles Citywide General Plan Framework (Framework Element)

Chapter 9, Infrastructure and Public Services of the Framework Element includes goals, objectives, and policies applicable to public schools; these are summarized in **Table 4.13-9**.

**TABLE 4.13-9 RELEVANT GENERAL PLAN SCHOOL GOALS, OBJECTIVES, AND POLICIES**

| **Framework Element – Chapter 9 Infrastructure and Public Services** | |
|---|---|
| Goal 9N | Public schools that provide a quality education for all of the City's children, including those with special needs, and adequate school facilities to serve every neighborhood in the City so that students have an opportunity to attend school in their neighborhoods. |
| Objective 9.31 | Work constructively with the Los Angeles Unified School District to monitor and forecast school service demand based upon actual and predicted growth. |
| Policy 9.31.1 | Participate in the development of, and share demographic information about, population estimates. |
| Objective 9.32 | Work constructively with Los Angeles Unified School District to promote the siting and construction of adequate school facilities phased with growth. |
| Policy 9.32.1 | Work with the Los Angeles Unified School District to ensure that school facilities and programs are expanded commensurate with the City's population growth and development. |
| Policy 9.32.2 | Explore creative alternatives for providing new school sites in the City, where appropriate. |
| Policy 9.32.3 | Work with LAUSD to explore incentives and funding mechanisms to provide school facilities in areas where there is a deficiency in classroom seats. |
| Objective 9.33 | Maximize the use of local schools for community use and local open space and parks for school use. |
| Policy 9.33.1 | Encourage a program of decision-making at the local school level to provide access to school facilities by neighborhood organizations. |
| Policy 9.33.2 | Develop a strategy to site community facilities (libraries, parks, schools, and auditoriums) together. |

**SOURCE**: City of Los Angeles 2001

**Los Angeles Unified School District (LAUSD).**

Although the California public school system is under the policy direction of the Legislature, the CDE relies on local control for the management of school districts. In allocating resources among the schools of the district, school district governing boards and district administrators must not only follow the law but also set the educational priorities for their schools.

LAUSD 2016-2019 Strategic Plan.

The LAUSD 2016-2019 Strategic Plan outlines LAUSD's fundamental strategy, objectives and key initiatives. The plan is intended to cultivate common understanding and coherence, and to empower all stakeholders to take action toward creating a district of graduates. The Strategic Plan also provides the prioritized framework from which LAUSD will work (LAUSD 2016a).

LAUSD Choices Program.

LAUSD provides education choices including magnet and permits with transportation (PWT) programs to students residing within the LAUSD boundaries. Students interested in enrolling in LAUSD magnet and PWT programs are required to apply through LAUSD eChoices. Magnet schools under the Choice Program include business, communication arts, center for enriched studies, gifted/highly gifted/high ability, liberal arts, magnet schools assistance program, public service, science/technology/engineering/math, and visual and performing arts (LAUSD 2016b).

# ENVIRONMENTAL IMPACTS

## THRESHOLDS OF SIGNIFICANCE

Based on Appendix G of the *CEQA Guidelines*, the Proposed Project would have a potentially significant impact if it would result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, or need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios or other performance objectives for schools.

## METHODOLOGY

The following analysis focuses on determining whether the Proposed Project would result in adverse physical impacts to the environment due to the expansion of existing school facilities or construction of new facilities. Whether additional facilities would be required is determined primarily by considering the adequacy of existing school facilities, impacts of the Proposed Project on demand for school facilities, and applicable regulations and policies that would influence future provision of school facilities and allow for mitigation of potential environmental impacts.

The legal practice guide, "CEB, Practice under the California Environmental Quality Act" provides the following discussion on impacts to schools:

- State and local agencies may not deny either legislative or adjudicative approvals on the basis of a refusal to pay fees in excess of those limits (Government Code Section 65995).
- The statutes also significantly limit the application of CEQA to school facilities impact issues. The fees set forth in Government Code Section 65996 constitute the exclusive means of both

"considering" and "mitigating" school facilities impacts of projects (Government Code Section 65996(a)).

In Goleta Union Sch. Dist. v Regents of Univ. of Cal. (1995) 37 CA 4th 1025, the court held that school overcrowding is a social impact and does not require analysis in an EIR and mitigation, unless the overcrowding is linked to physical environmental effects (such as new school construction). Similarly, in *Chawanakee Unified Sch. Dist. v County of Madera* (2011) 196 CA 4th 1016, the court held that because the methods in the statute are the exclusive means of "considering" impacts on schools, an EIR need not describe and analyze a development's impacts on schools (citing this text). However in this case, the court also ruled that the reach of the statute is limited to impacts "on" schools and does not extend to impacts on the non-school physical environment, even though they may be "related" to schools in some way. The implications of this ruling are uncertain, however, because the court did not consider the effect of Government Code Section 65996(b), which states that the statute provides full school facilities mitigation notwithstanding CEQA, or of Government Code Section 65996(c), which defines a school facility as "any school-related consideration relating to a school district's ability to accommodate enrollment."

Based on the above, for purposes of this EIR, an impact on schools would occur if the Proposed Project promotes growth patterns resulting in the need for and/or the provision of new or physically altered public school facilities (including charter schools), the construction of which would cause significant environmental impacts in order to maintain service, or other performance objectives. To the extent that the Proposed Project causes impacts to classroom sizes or school service impacts that results in the construction of new facilities or alterations to existing facilities, and the impact from that construction results in a potential impact to the environment, that is a CEQA impact that needs to be assessed in this EIR. Any discussion in this EIR that relates solely to the level of school services provided to the residents of the Downtown Plan Area, including any existing or future needs and deficiencies, is for informational purposes only. The ultimate determination of whether there is a significant impact related to schools is based on whether a significant impact will result from the construction of new or expanded school facilities.

The discussion of impacts to public schools addresses impacts for the Downtown Plan Area. Public school service needs are dependent on the size of the service population and the geographic area served. This analysis estimates the number of students that would be generated by reasonably anticipated development with the Proposed Project using LAUSD student generation rates and assesses whether existing and planned LAUSD school facilities expected to serve the Downtown Plan Area would have sufficient available capacity to accommodate the students (LAUSD 2008). If there would not be sufficient available capacity, the EIR will consider whether new school facilities will be needed, and whether the construction of the school facilities will result in a significant impact.

# PROJECT IMPACTS

| | |
|---|---|
| **Threshold 4.13-3** | Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service or other performance objectives for public schools? |

**Impact 4.13-3** **Downtown Plan:** The Downtown Plan would not directly affect local schools, but the Downtown Plan would allow for development that would increase the student population of the Downtown Plan Area and would create the need for new or expanded school facilities. However, based on the urbanized character of the Downtown Plan Area, it is anticipated that new or expanded school facilities could be built without creating significant environmental impacts. Therefore, the

Downtown Plan impacts resulting from the provision of school facilities would be ***less than significant*.**

**New Zoning Code:** The New Zoning Code does not include any standards that would result in impacts related to the provision of school facilities. The Proposed Project does not intend to implement the New Zoning Code outside of the Downtown Plan Area. Therefore, any indirect impacts from the future use of the New Zoning Code outside the Downtown Plan Area would be speculative. The impact would be ***less than significant.***

## Downtown Plan Impact

The Downtown Plan would accommodate new residential development, resulting in about 97,000 new housing units (a 291 percent increase) and 176,000 additional residents (a 232 percent increase). Non-residential uses, including commercial, industrial and public facility uses, would result an approximately 173,000 sf of new development (a 115 percent increase). As summarized in **Table 4.13-10**, residential and non-residential development accommodated by the Downtown Plan would result in approximately 51,885 new students by 2040. Of this total, an estimated 26,537 would enroll in elementary school, 8,054 would enroll in middle school, 15,361 would enroll in high school, and 1,932 would enroll in special day classes.

**TABLE 4.13-10 ANTICIPATED STUDENT GENERATION IN THE DOWNTOWN PLAN AREA**

| | | Student Generation | | | | |
|---|---|---|---|---|---|---|
| | Units | Elementary School (TK-5) | Middle School (6-8) | High School (9-12) | SDC | Total Students Generated |
| Residential [1] | 99,608 du | 22,601 | 6,086 | 12,909 | 1,932 | 43,528 |
| Non-Residential [2] | 172,649,288 sf | 3,936 | 1,968 | 2,452 | | 8,356 |
| **Total Students Generated by the Downtown Plan** | | **26,537** | **8,054** | **15,361** | **1,932** | **51,885** |

Note: du = dwelling units; sf = square feet; TK = Transitional Kindergarten; SDC = Specialized Day Care

Totals may not add up due to rounding.

[1] Student generation rates for residential use is based on Level 1 – Developer Fee Justification Study for Los Angeles Unified School District (LAUSD 2017d). Residential Generation Rates: Elementary: 0.2269/du, Middle School: 0.0611/du, High School: 0.1296 /du, SDC: 0.0194/du

[2] Student generation rates for non-residential use is based on the average of office and retail/service student generation rates for a conservative estimate, taken from the LAUSD Commercial/Industrial Development School Fee Justification Study, September 2010 (LAUSD 2010). Non-residential Generation Rates: Elementary: 0.0228/1,000 sf, Middle School: 0.0114/1,000 sf, High School: 0.0142/1,000 sf. Non-residential uses include commercial, industrial, and public facilities.

As shown in **Table 4.13-8**, existing public pre-K and elementary schools serving the Downtown Plan Area currently have the capacity to accommodate an additional 530 students; however, middle and high schools have a deficit of available seats and LAUSD does not plan to build new school facilities to serve the Downtown Plan Area for at least the next five years (LAUSD 2017c). However, to help relieve schools that are operating at or above capacity, LAUSD also employs the LAUSD Choices Program that provides education choices including magnet and PWT programs to students residing within the LAUSD boundaries. Magnet schools under the Choice Program include business, communication arts, center for enriched studies, gifted/highly gifted/high ability, liberal arts, magnet schools assistance program, public service, science/technology/engineering/math, and visual and performing arts. In addition, independent Charter Schools that operate through LAUSD also help alleviate schools that are operating at or over capacity.

It is reasonably foreseeable that over the 20-year plan horizon the reasonably anticipated development from the Proposed Project would result in the need for and construction of new or expanded schools. If new or expanded schools are determined to be necessary during the life of the Proposed Project, such facilities would occur where allowed under the designated land use and/or in proximity to residential uses. The

environmental impacts of the construction and operation of new facilities, as an allowed land use, have been evaluated throughout this EIR. Specifically, the EIR analyzes anticipated effects of the Downtown Plan related to air quality, noise, traffic, utilities, and other environmental impact areas. It is not foreseeable that impacts from building new schools or new additions to schools in the Downtown Plan Area would have greater or different impacts than those identified in this EIR for construction or operations. Depending on the location of new schools, if they are determined to be needed, impacts related to particular locations could occur, however such impacts are too speculative to assess without information as to design, location and proximity to the population to be served. Should new facilities be needed, such facilities are anticipated to be infill developments surrounded by urban uses, and would not require new or expanded infrastructure. Based on the urban location and size, the construction of new schools or expansion of an existing facility could result in less than significant impacts and or possibly qualify for an infill exemption. To the extent that any significant impacts could result from the unique characteristics of a specific project site, or specific characteristics of a given school (e.g. night lighting, performance spaces), those impacts would be speculative at this time. Furthermore, in the event that LAUSD constructs a new school or physically alter an existing facility, a project-specific environmental analysis would be required under CEQA to address site-specific environmental concerns.

All development in California is subject to California Government Code Section 65995, which allows LAUSD to collect impact fees from developers of new residential and commercial/industrial space. These fees are collected on residential and commercial development and may be used to pay for all of the following: land (purchased or leased) for school facilities, design of school facilities, permit and plan checking fees, construction or reconstruction of school facilities, testing and inspection of school sites and school buildings, furniture for use in new school facilities, and interim school facilities (purchased or leased) to house students generated by new development while permanent facilities are constructed. Such development would assist in funding efforts necessary to alleviate school overcrowding and would ensure that new development under the Downtown Plan would bear its fair share of the cost of accommodating additional students. Based on all of the above, impacts would be ***less than significant***.

## New Zoning Code Impact

As discussed in the Environmental Setting, the LAUSD serves an area totaling 710 square miles, including most of the City of Los Angeles. The District includes 19 primary schools, 448 elementary schools, 81 middle schools, 94 high schools, 54 option schools, 49 Magnet schools, 25 multi-level schools, 13 special education schools, 2 home/hospital schools, 177 K-12 Magnet centers, 224 charter schools, and 120 other schools and centers. Future development may create the need for new or physically altered school facilities when residential dwelling units are constructed and student population increases beyond existing capacity. However, the Proposed Project does not intend to implement the New Zoning Code outside of the Downtown Plan Area and therefore any indirect impacts from the future use of the New Zoning Code outside the Downtown Plan Area would be speculative. Therefore, the construction of new school facilities would not be required.

As discussed in Section 3.7.4, there are many combinations of Form, Frontage, Standards, Use, and Density Districts that could be applied to properties to make a zone. However, due to the modular nature of the new zoning, it is not known where or to what extent future development may occur. Projecting the location and type of future growth as a result of the New Zoning Code outside of the Downtown Plan Area would be speculative at this time as no development is being proposed.

Future environmental review of a proposed community plan update and associated zone districts would analyze potential community- and site-specific impacts to existing schools. Therefore, impacts related to schools would be ***less than significant.***

### Mitigation Measures

Downtown Plan

No significant impacts related to schools have been identified; therefore, mitigation is not required.

However, the construction of new schools or expansion of existing facilities to serve the Downtown Plan Area would be required to incorporate applicable mitigation measures included in this EIR. These potentially include measures related to biological resources, cultural resources, hazards/hazardous materials, and noise.

New Zoning Code

This impact would be less than significant; therefore, mitigation is not required.

## CUMULATIVE IMPACTS

The geographic area to analyze cumulatively considerable impacts to schools includes the entire school district which includes the entire City as well as adjacent areas that are served by LAUSD that could be affected by the construction of new school facilities. Citywide growth through 2040 is projected to add an estimated 659,000 new residents, 293,000 new households, and 345,000 new employees (SCAG 2016).

Cumulative development throughout Los Angeles would increase overall demand for public schools and potentially create a need for new facilities. As with the Downtown Plan, the construction and operation of new or expanded facilities throughout the LAUSD may have significant environmental effects; however, because the size, nature, and location of facilities that may be constructed in the future is not known at this time, analysis of the potential impacts of new schools would be speculative. The impacts of individual schools would generally be localized in nature and would not contribute substantially to any cumulative districtwide impacts. The Downtown Plan would contribute to increases in enrollment at LAUSD schools, but impacts related to the development of schools would be primarily restricted to the Downtown Plan Area and Downtown Plan Area developers would be subject to mandatory school impact fees. Depending on the design and location of new schools, if they are determined to be needed, construction and operational impacts (such as traffic, noise, and lighting) could occur. However, impacts related to specific locations would be speculative at this time and would be generally consistent with other allowed development analyzed in this EIR. Furthermore, the construction and operation of new or expanded school facilities in the Downtown Plan Area may have localized impacts, but individual facilities would not contribute to any additive cumulative or regional impacts. Therefore, the incremental effect of the Downtown Plan with respect to schools would not be cumulatively considerable.

As discussed above, the New Zoning Code applies to properties where a community plan is updated or amended to utilize the new zoning and, therefore, would only apply to the Downtown Plan Area at this time. It is not known where or to what extent future development throughout the City may occur, but future community plan updates to which the New Zoning Code would apply would be required to adhere to existing state and local requirements related to the provision of public schools.

Based on the above information, the incremental effect of the Proposed Project with respect to schools would not be cumulatively considerable and Cumulative impacts would be ***less than significant***.

# *Libraries*

# ENVIRONMENTAL SETTING

## CITYWIDE SETTING

The Los Angeles Public Library (LAPL) provides library services to the City of Los Angeles. The Central Library, which is located within the Downtown Plan Area, serves as the library system's headquarters. In addition, the LAPL operates 72 community branches (LAPL 2015). The LAPL collection includes more than 6.5 million items, including digital and print items that are borrowed more than 15 million times a year. The library system also offers an array of other services to the LA community, such as homework help, story-time, professional development services, lecture series, music and arts events, and a summer reading series for kids. In total, LAPL offers more than 18,000 public programs a year (LAPL 2015).

LAPL members have access to materials housed at libraries throughout the LAPL system through the library loan program and can pick up materials at whichever library is most convenient. Every branch library offers free wi-fi and use of computer workstations that provide Internet access; the ability to search the LAPL online catalog; access to subscription databases, word processing and language learning tools, and historic document and photograph collections; and access to specially designed websites for children, teens, and Spanish speakers.

## DOWNTOWN PLAN AREA SETTING

The Downtown Plan Area contains the Central Library, located on 630 W 5$^{th}$ Street, and two community branch libraries: the Little Tokyo Branch Library, located on 203 S Los Angeles Street, and the Chinatown Branch Library, located on 639 N Hill Street. One other community branch library is located less than a mile from the Downtown Plan Area boundary: the Pico Union Branch Library, located on 1030 S Alvarado Street. The Central Library is the third largest central library in the nation and contains more than 2.6 million books, 10,000 magazine subscriptions, as well as language learning and multi-media materials (LAPL 2017). It served over 2 million visitors in fiscal year 2011-2012 and circulated 1.2 million items. The 538,000-square foot building includes galleries for exhibitions, an auditorium for events, a cafeteria, store, and 255 public access computers.

The Little Tokyo Branch Library is housed in a 12,500 square-foot (sf) facility containing an extensive collection of Japanese materials. The Little Tokyo branch attracts people from throughout the Los Angeles area and the Southern California region, particularly on weekends (Sherod 2017). Like the Little Tokyo library, the Chinatown Branch Library attracts people from throughout Southern California due to its extensive collection of Chinese materials (e.g., magazines, newspapers, books, movies) and programs geared to first-generation Chinese Americans or recent immigrants, such as a bi-lingual Chinese citizenship class (Liang 2017). The library houses over 80,000 print items in a 14,500 sf building (Liang 2017).

# REGULATORY FRAMEWORK

### Los Angeles Public Library (LAPL) Branch Facilities Plan

In 1988, the LAPL Board of Commissioners adopted the *Branch Facilities Plan* to guide the construction, maintenance, and operation of libraries within the City. The Plan is composed of two elements: (1) the Criteria for New Libraries, and (2) the Proposed Project List. The first element sets standards for selection

of future library sites and the second lists proposed projects to renovate existing libraries or construct new facilities. According to the current Plan, service criteria are based on floor area required to serve varying amounts of residential population. Current LAPL branch building size standards are presented in **Table 4.13-11**.

**TABLE 4.13-11 LAPL BRANCH FACILITIES SITE SELECTION CRITERIA**

| Population Served | Size of Facility (square feet) |
|---|---|
| Above 45,000 | 14,500 |
| Below 45,000 | 12,500 |
| Regional Branch | 20,000 |

**SOURCE**: LAPL 2015

The Branch Facilities Plan also sets the following site selection criteria:

- When a community reaches a population of 90,000, an additional branch should be considered for the area
- One-story library buildings with interior layouts must be designed to accommodate the disabled, and to have electronic technology, substantial shelving and seating capacities, and have a community meeting room
- Good visibility and street access
- Easily accessible by car, by bus and on foot
- Take into consideration the relative locations of all schools served by the branch
- Take into consideration the relative locations of all neighboring branch libraries

All of the projects identified under the Branch Facilities Plan were completed by October 2008. The Board of Library Commissioners adopted a fully revised Plan on February 8, 2007 with a new Projects List and updated standards.

Proposition 1, a $53.4 million Branch Libraries Facilities Bond, was approved in 1989. Proposition 1 proposed obtaining new sites for building, renovating, and expanding libraries that were unable to serve the community sufficiently and/or were damaged by the Whittier earthquake. Additional funds were allocated by the Community Development Block Grant Award of federal funds from the California State Library Proposition 85, and from Friends of the Library Groups, totally $108 million. A total of 29 libraries were built under the 1989 Bond Program. Proposition DD, or the 1998 Library Facilities Bond, was approved in 1998 and authorized $178.3 million in bonds for funding the construction, renovation, improvement, or expansion of 32 new branch libraries. In 2011, Measure L increased the allocation of City funds to the library system. Measure L restored library hours of operation and services which were reduced during the recession, over a period of time without raising taxes. Measure L also funded the opening of the Central Library and eight regional branch libraries on Sundays.

### Los Angeles Public Library Strategic Plan 2015-2020

The LAPL Strategic Plan 2015-2020 (the "Plan"), adopted in 2015, sets goals to increase the number of people who use library services and actively promote and market programs and services to increase overall engagement with the library. Libraries are increasingly providing for online resources, ebooks, and other technology, allowing patrons to use library services off-site and thereby reduce the need for physical facilities. With the passage of Measure L, the LAPL is offering enhanced programs, expanded collections, additional technology, an expanded digital presence, and increased opportunities for connection within and

between communities. Measure L, approved by City voters on March 8, 2011, amends the City Charter to incrementally increase the amount the City is required to dedicate annually from its General Fund to LAPL to an amount equal to 0.03 percent of the assessed value of all property in the City, and incrementally increase LAPL's responsibility for its direct and indirect costs until it pays for all of its costs. The Plan is comprised of the following six goals to achieve the increased use of local libraries:

**Goal 1**: Cultivate and inspire young readers

**Goal 2**: Nurture student success

**Goal 3**: Champion literacy and lifelong learning

**Goal 4**: Contribute to L.A.'s economic growth

**Goal 5**: Stimulate the imagination

**Goal 6**: Strengthen community connections and celebrate L.A.

### City of Los Angeles General Plan Framework

Chapter 9 of the Framework Element includes objectives and policies applicable to library services. The objectives applicable to libraries are presented in **Table 4.13-12**.

**TABLE 4.13-12 RELEVANT GENERAL PLAN LIBRARY GOALS, OBJECTIVES, AND POLICIES**

| **Framework Element – Chapter 9 Infrastructure and Public Services** | |
|---|---|
| Objective 9.20 | Adopt a citywide library service standard by the year 2000. |
| Objective 9.21 | Ensure library services for current and future residents and businesses. |
| **SOURCE**: Los Angeles 2001 | |

# ENVIRONMENTAL IMPACTS

## THRESHOLDS OF SIGNIFICANCE

According to CEQA Guidelines, Appendix G, the Proposed Project would have a potentially significant impact if it would result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, or need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for other public facilities, such as libraries.

## METHODOLOGY

The following analysis focuses on determining whether the Proposed Project would result in adverse physical impacts to the environment due to the expansion or construction of new library facilities. Whether additional facilities would be required is determined primarily by considering the adequacy of existing library services, impacts of the Proposed Project on demand for library services, and input provided by LAPL staff.

The need for or deficiency in library facilities to serve the residents or users of the Downtown Plan Area or the City is not in and of itself a CEQA impact, but a social or economic impact. (City of Hayward v. B'd of Trustees (2015) 242 Cal.App. 4th 833, 843). To the extent that the Proposed Project causes a need for the construction of new library facilities or additions to existing facilities, and the impact from that

construction results in a potential impact to the environment that is a CEQA impact that needs to be assessed in this EIR. Any discussion in this EIR that relates solely to the level of library services provided to the residents or users of the Plan Area and its surrounding community, including any existing or future needs and deficiencies, is for informational purposes only. The ultimate determination of whether there is a significant impact related to library services is based on whether a significant impact will result from the construction of new or altered library facilities as a result of the implementation of the Proposed Project.

This analysis estimates the number of residents that would be generated by implementation of the Proposed Project and assesses whether existing and planned public libraries expected to serve the Downtown Plan Area would have sufficient available capacity to accommodate additional users and whether new facilities would need to be constructed, the construction of which would cause significant environmental impacts.

# PROJECT IMPACTS

| | |
|---|---|
| **Threshold 4.13-4** | Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for libraries? |

**Impact 4.13-4**

**Downtown Plan:** The Downtown Plan would increase demand for library facilities. However, the Downtown Plan Area is well-served by library facilities and would not require the construction of new or expanded facilities. Impacts would be ***less than significant.***

**New Zoning Code:** The New Zoning Code does not include any standards that would result in impacts related to the provision of libraries. The Proposed Project does not intend to implement the New Zoning Code outside of the Downtown Plan Area and therefore any indirect impacts from the future use of the New Zoning Code outside the Downtown Plan Area would be speculative. The impact would be ***less than significant***.

## Downtown Plan Impact

Downtown Plan development would add an estimated 176,000 residents and 86,000 employees to the Downtown Plan Area. Many of the Downtown Plan Area's future residents and employees would likely use the LAPL system, potentially increasing the number of library facility users. However, 75% of L.A. residents visit the library less than once a month, and 18% have not visited a public library more than once in the last five years (LAPL 2015). Thus, an increase in residents is unlikely to result in a substantial increase in annual visits to library facilities. Demand for library facilities may also be offset over time due to increased use of digital materials available through LAPL's online catalog; circulation of e-media is expected to increase from 2,200,000 in 2014 to 3,000,000 in 2020 (LAPL 2015).

The Downtown Plan Area is well-served by existing library facilities, primarily because it contains the Central Library, which attracts roughly two million visitors a year. This facility is housed in a building over 500,000 square feet in size and has seating for 1,400 people and nearly 89 miles of shelving. The two branch libraries in the Downtown Plan Area are also unique in that they largely serve specific cultural communities rather than specific geographical communities (Sherod 2017, Liang 2017); the Chinatown Branch offers an extensive collection of Chinese materials and programming geared for Chinese language speakers, while the Little Tokyo Branch offers an extensive collection of Japanese materials and programming geared to Japanese speakers. Both libraries attract visitors from throughout Southern California (Sherod 2017, Liang 2017).

The Downtown Plan Area would accommodate approximately 252,000 persons. Based on the site selection criteria of 90,000 persons per library branch, as identified in the Branch Facilities Plan, the three existing libraries serving the Downtown Plan Area would accommodate a population up to 270,000 persons. Because Downtown Plan development is not expected to cause an exceedance of capacity at existing facilities in the Downtown Plan Area and is not expected to generate a substantial demand for the unique collections and programs of the community branch libraries serving the Downtown Plan Area, it is unlikely that expansion or construction of new library facilities would be required.

If new library facilities are determined to be necessary at some point in the future, such facilities would occur where allowed under the designated land use. The environmental impacts of the construction and operation of new facilities, as an allowed land use, have been evaluated throughout this EIR. It is not foreseeable that impacts from building or upgrading libraries in the Downtown Plan Area would have greater or different impacts than those identified in this EIR for construction or operations. Potential impacts to air, noise, traffic, as well as other impacts of new developments are discussed in the impact sections of this EIR, and they would not be any different for a library facility. The Plan Area is urbanized and new facilities would not involve expansion of the urban sphere beyond current boundaries and, thus, there would be no need for new or expanded infrastructure. Therefore, the Downtown Plan would not result in adverse physical impacts associated with the provision of new or expanded library facilities. The impact conclusion would be ***less than significant.***

## New Zoning Code Impact

As discussed in the Setting, the LAPL operates 72 community branches and includes more than 6.5 million items that serve a population of over 3.9 million people. Per the LAPL Branch Facilities Plan, an additional community branch should be considered for the area when a community reaches a population of 90,000. However, the Proposed Project does not intend to implement the New Zoning Code outside of the Downtown Plan Area and therefore any indirect impacts from the future use of the New Zoning Code outside the Downtown Plan Area would be speculative. Therefore, the construction of new library facilities would not be required.

As discussed in Section 3.7.4, there are many combinations of Form, Frontage, Standards, Use, and Density Districts that could be applied to properties to make a zone. However, due to the modular nature of the new zoning, it is not known where or to what extent future development may occur. Projecting the location and type of future growth as a result of the New Zoning Code outside of the Downtown Plan Area would be speculative at this time as this Project only includes the application of new zoning to land within the Downtown Plan Area.

Future environmental review of a proposed community plan update and associated zoning classifications would analyze potential community- and site-specific impacts to existing libraries. Therefore, impacts related to libraries would be ***less than significant.***

## Mitigation Measures

No significant impacts related to libraries have been identified; therefore, mitigation is not required for either the Downtown Plan or the New Zoning Code.

Downtown Plan

However, the construction of new libraries or expansion of existing facilities to serve the Downtown Plan Area would be required to incorporate applicable mitigation measures included in this EIR. These potentially include measures related to biological resources, cultural resources, hazards/hazardous materials, and noise.

New Zoning Code

This impact would be less than significant; therefore, mitigation is not required.

# CUMULATIVE IMPACTS

The geographic area to analyze cumulatively considerable impacts to libraries includes the entire City of Los Angeles as well as areas at the City's periphery that could potentially be affected by construction of a new facility at or near the City's corporate boundary. Citywide growth through 2040 is projected add an estimated 659,000 new residents, 293,000 new households, and 345,000 new employees (SCAG 2016).

Cumulative development throughout Los Angeles would increase overall demand for library facilities and potentially create a need for new facilities. Environmental impacts associated with the construction of new or expanded facilities may have significant environmental effects. Such impacts would be addressed, as necessary, as part of project-level environmental review of individual new or expanded facilities, but cannot be predicted with any certainty at this time since the size and locations of new facilities are not currently known. The impacts of new facilities would be localized in nature and the addition of new facilities in specific locations would not result in significant cumulative impacts. The Downtown Plan would incrementally contribute to this overall cumulative impact by increasing demand for library facilities, but its contribution would not be considerable since development facilitated by the Downtown Plan would not require the construction of new or expanded facilities. Moreover, as previously discussed, 75 percent of the City's residents visit the library less than once a month, and 18 percent have not visited a public library more than once in the last five years. Furthermore, demand for library facilities may also be offset over time due to increased use of digital materials available through LAPL's online catalog; circulation of e-media is expected to increase from 2,200,000 in 2014 to 3,000,000 in 2020. However, in the event new facilities are determined to be necessary at some point in the future, such facilities would occur where allowed under the designated land use and would be generally consistent with other allowed development analyzed in this EIR. Therefore, the incremental effect of the Downtown Plan with respect to library facilities would not be cumulatively considerable.

The New Zoning Code would only apply to the Downtown Plan Area at this time. Any cumulative impacts related to future updates of other community plans would be speculative. Additionally, future community plan updates would be required to adhere to existing state and local requirements related to the provision of library facilities.

Based on the above information, the incremental effect of the Downtown Plan and New Zoning Code with respect to libraries would not be cumulatively considerable and cumulative impacts would be ***less than significant***.

# 4.14 RECREATION

This section evaluates potential impacts to recreational resources. Topics addressed include the potential deterioration of existing facilities and necessity for new recreational facilities. Impacts related to recreation are evaluated based on the adequacy of existing and planned facilities and any additional demand generated by future development.

# ENVIRONMENTAL SETTING

## CITYWIDE EXISTING AND PLANNED PARKS

The City of Los Angeles Department of Recreation and Parks (DRP) owns and operates parks and recreational facilities throughout the City. City park and recreation facilities include over 16,000 acres of parkland with over 444 park sites, including hundreds of athletic fields, 422 playgrounds, 321 tennis courts, 184 recreation centers, 72 fitness areas, 62 swimming pools and aquatic centers, 30 senior centers, 26 skate parks, 13 golf courses, 12 museums, and nine dog parks (DRP 2017a). The DRP also maintains 13 lakes, 92 miles of hiking trails, and operates 187 summer youth camps.

In 2012, the DRP launched the 50 Parks Initiative based on findings in the 2009 *Citywide Community Needs Assessment* indicating that park facilities are not equitably distributed across the City and that many communities do not have parks within a reasonable distance. The 50 Parks Initiative seeks to build 50 parks in densely-populated neighborhoods or communities currently lacking sufficient park space and recreational facilities (DRP 2017b).

As discussed further below under Regulatory Framework, the City of Los Angeles Public Recreation Plan states that in order to meet long-range local recreational standards, the City should maintain a minimum of two acres of neighborhood facilities and two acres of community recreational facilities for every 1,000 persons, or a combination of neighborhood and community facilities adding up to four acres. Pocket parks are another type of recreational facility not specifically addressed in the City's Recreation Plan; however, pocket parks have been used to meet City residents' recreational needs in urban settings where space and the ability to develop new neighborhood parks are limited.

### Park Planning Efforts

2009 Citywide Community Needs Assessment

The Department of Recreation and Parks conducted the *Citywide Community Needs Assessment* as the first step in the preparation of a Citywide Recreation and Parks Master/Strategic Plan and a Five-year Capital Improvement Plan. The Needs Assessment identifies, quantifies, and preliminarily prioritizes the tremendous need for recreation and open space in the City. A high-level review was also performed of the Department's facilities in an attempt to address the various facilities needing improvements to meet current and future needs, prevent future maintenance problems, and offer positive alternatives to an increasingly dense and urbanized population.

Los Angeles Countywide Comprehensive Parks & Recreation Needs Assessment

The Parks & Recreation Needs Assessment, adopted in May 2016, documents existing parks and recreation facilities in the cities and unincorporated communities of Los Angeles County and uses the data to

determine the scope, scale, and location of park needs in Los Angeles County. The Parks & Recreation Needs Assessment also provides a framework for considering parks as key infrastructure; uses a new series of metrics to determine park needs; supports a need-based allocation of funding for parks and recreation; and emphasizes community priorities and deferred maintenance projects.

## Downtown Plan Area Existing and Planned Parks

**Table 4.14-1** summarizes the parks that would serve the Downtown Plan Area, including parks within and near the Downtown Plan Area. Listed parks include both existing parks and two sites that have been secured or are in the process of being acquired for the purpose of constructing new facilities under the 50 Parks Initiative described above under Citywide Existing and Planned Parks: Albion Riverside Park, located immediately adjacent to the northeast tip of the Downtown Plan Area, and Ord and Yale Street Park, located in Chinatown in the northern portion of the Downtown Plan Area (DRP 2012). **Tables 4.14-2** and **4.14-3** below provide the addresses for the two proposed parks. Including the planned Ord and Yale Street Park, there are 14 parks in the Downtown Plan Area, of which ten are pocket parks, two are neighborhood parks, and two are community parks. In total, parks in the Downtown Plan Area provide 86.03 acres of park land. Including the planned Albion Riverside Park, an additional three community parks are located with a half-mile of the Downtown Plan Area boundary, and five neighborhood parks and one regional park are located within two miles of the Downtown Plan Area boundary. These parks provide an additional 774.65 acres of recreational land. **Figure 4.14-1** maps the locations of existing and planned parks in and near the Downtown Plan Area and shows their location relative to land uses proposed in the Downtown Plan. The numbers on the map correspond to the figure numbers assigned to each park in **Table 4.14-1**.

In total, existing parks in and in the vicinity of the Downtown Plan Area provide 853.8 acres of recreational land. Of this total, community, and neighborhood parks (i.e., non-regional parks) account for 244.35 acres, pocket parks account for 9.45 acres, and one regional park (Elysian Park) accounts for 600 acres. A 6.3-acre neighborhood park and a .058-acre pocket park are planned. When completed, these facilities would bring overall parkland to 860.68 acres. Based on the existing Downtown Plan Area population of 76,000, the Downtown Plan Area is currently served by approximately 3.2 acres of neighborhood and community parks per 1,000 residents. Including the planned neighborhood park, there would be about 3.3 acres of neighborhood and community parks per 1,000 residents. Including existing and planned pocket parks, there would be about 3.4 acres of non-regional parks per 1,000 residents (see **Table 4.14-2)**. The Downtown Plan Area currently does not meet the City's 4 acres per 1,000 residents goal for neighborhood and community facilities.

**TABLE 4.14-1 PARKS AND RECREATIONAL FACILITIES SERVING THE DOWNTOWN PLAN AREA**

| Figure No. | Name | Location | Acreage | Park Type |
|---|---|---|---|---|
| **Parks in the Downtown Plan Area** | | | | |
| 1 | 6th and Gladys Park | 6th & Gladys St. | 0.3 | Pocket |
| 2 | Alpine Recreation Center | 817 Yale St. | 1.0 | Pocket |
| 3 | Arts District Park | 501 S Hewitt St | 0.5 | Pocket |

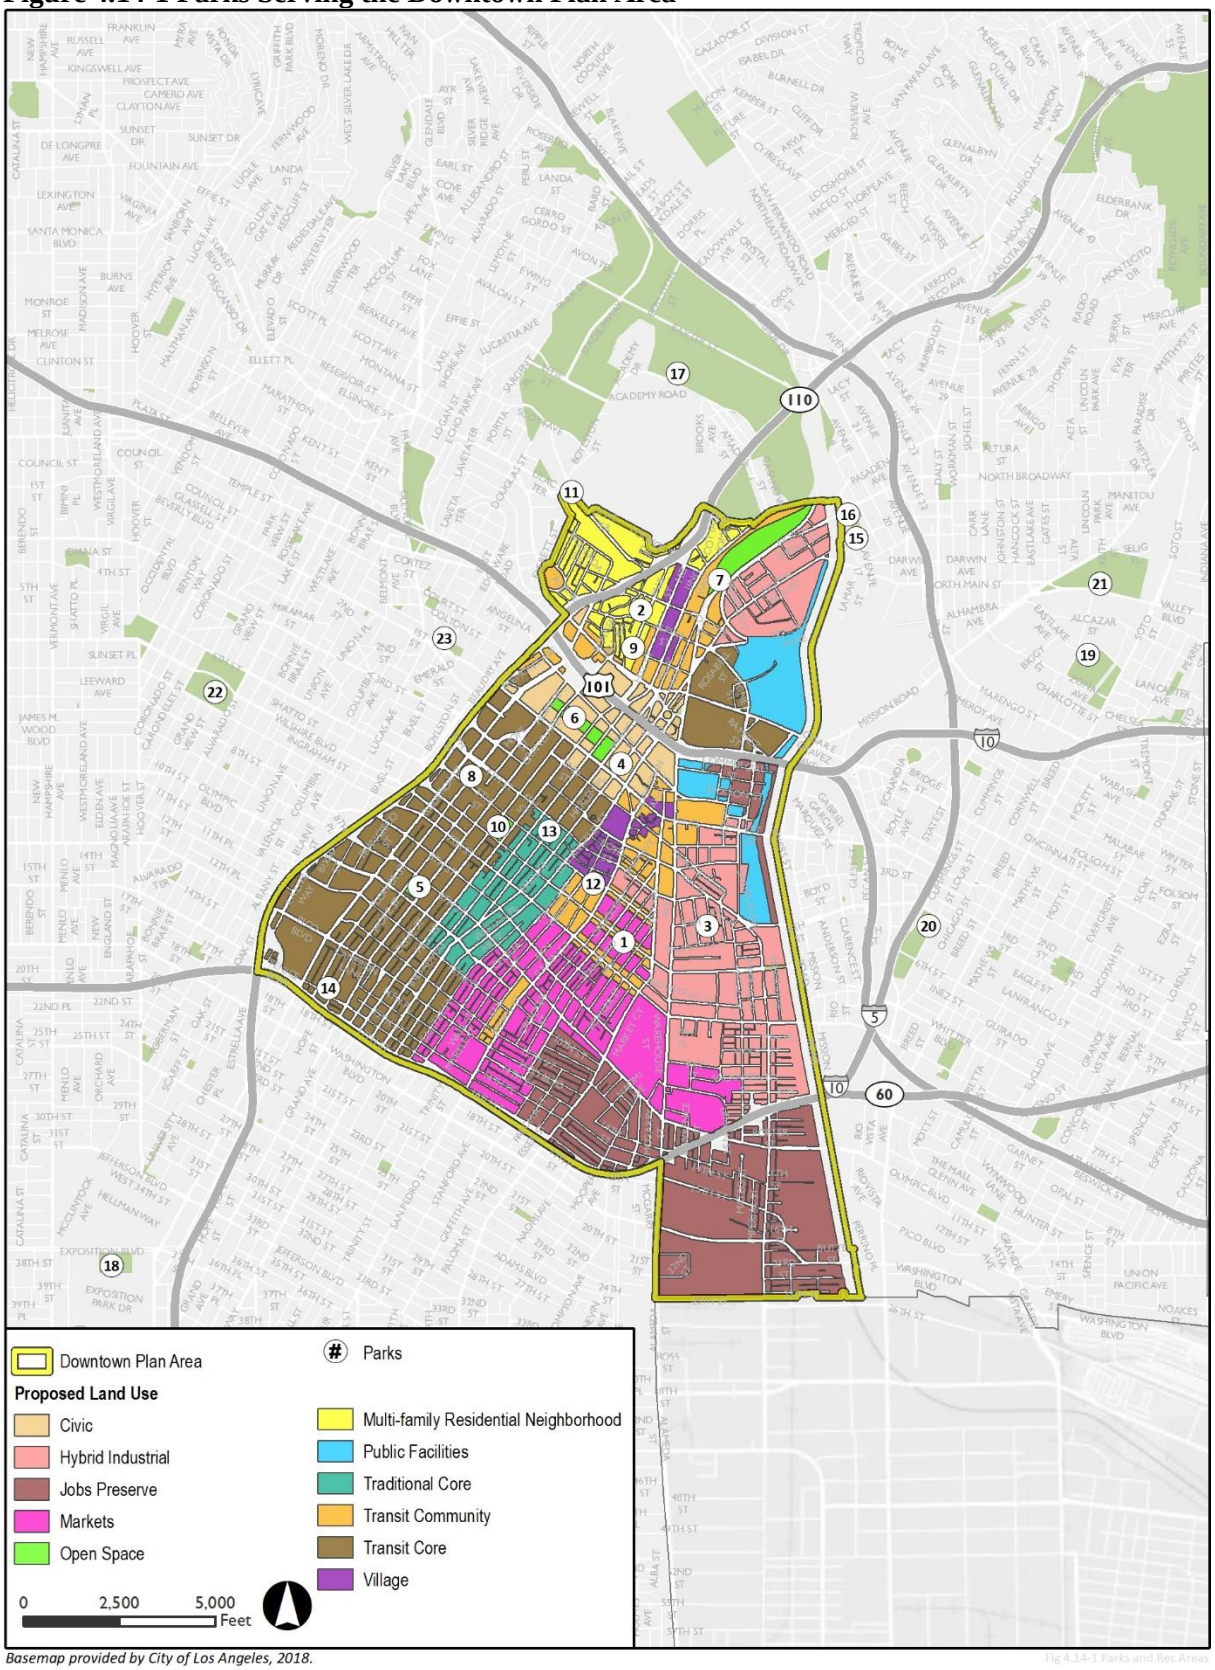
**Figure 4.14-1 Parks Serving the Downtown Plan Area**



*Basemap provided by City of Los Angeles, 2018.*

**TABLE 4.14-2 EXISTING DEMAND FOR RECREATIONAL FACILITIES**

| Non-Regional Park Acreage | Acres per 1,000 Persons | Goal | Meets Goal? |
|---|---|---|---|
| Neighborhood/Community Only<br>Existing<br>Existing + Planned | <br>3.2<br>3.3 | 4 acres of Neighborhood and Community Facilities per 1,000 persons | No |
| Neighborhood, Community & Pocket<br>Existing<br>Existing + Planned | <br>3.3<br>3.4 | | |

Acres per 1,000 persons based on the total acreages from **Table 4.14-1** and the current Downtown Plan Area population of 76,000. The City's 4 acres per 1,000 residents goal relates to non-regional parks does not specifically include pocket parks so totals have been provided both with and without pocket parks.

# REGULATORY FRAMEWORK

## STATE

### Quimby Act

The California State Legislature established the Quimby Act and codified it as California Government Code Section 66477 in 1965. The Quimby Act allows the legislative body of a city or county to establish an ordinance requiring the dedication of land, payment of fees in lieu thereof, or a combination of both, for the provision of parks or recreational facilities as a condition to the approval of a tentative tract map or parcel map. LAMC establishes the Quimby in-lieu fees for subdivisions with 50 units or more and provides guidance for park land dedication in accordance with the Quimby Act. LAMC also establishes a park mitigation fee for residential projects that are not subdivision projects, which are non-Quimby impact fees.

### State Public Park Preservation Act of 1971 (PRC Section 5400–5409)

This act provides for no net loss of parkland and facilities by prohibiting cities and counties from acquiring any real property that is in use as a public park for any non-park use unless compensation or land, or both, are provided to replace the parkland acquired.

## CITYWIDE

### City of Los Angeles General Plan, Framework Element and Service Systems Element-Public Recreation Plan

The Public Recreation Plan of the General Plan Service Systems Element identifies existing recreational facilities and parks in the City of Los Angeles and categorizes parks into three types: neighborhood, community, and regional. Ideally, neighborhood parks have a service radius of approximately half a mile and are pedestrian-accessible without crossing a major arterial street or highway/freeway. Community parks have a service radius of two miles and are easily accessible to the area served. Regional parks provide specialized recreational facilities and/or attractions and have a service radius encompassing the entire Los Angeles region.

The Public Recreation Plan also provides the City's park standards expressed in area of parkland per population. The standards are 2 acres of neighborhood park and 2 acres of community park per 1,000 residents for, or 4 acres of some combination of neighborhood and community parks per 1,000 residents,

and a minimum of six acres of regional recreational facilities for every 1,000 residents for long-range needs; a minimum of one acre of neighborhood and community parks for every 1,000 residents to meet short- and intermediate-range standards and the overall provision of one acre of land per 1,000 residents for total recreational facilities. Per the Public Recreation Plan, neighborhood parks are defined as having a service radius of a one-half-mile and a desirable size of at least five acres (ideally 10 acres); community parks are defined as having a service radius of two miles and a desirable size of at least 15 acres (ideally 20 acres); and regional parks are defined as serving the city and region and a size of over 50 acres (Los Angeles 1980). The Public Recreation Plan also states that the types of amenities (e.g., recreation center, gym, basketball courts, etc.) offered on public parks and recreation land should be considered when determining the adequacy of park space.

### LAMC Chapter II, Section 21.10.3(a)(1)

Under LAMC Chapter II, Section 21.10.3(a)(1) (Dwelling Unit Construction Tax), the City imposes a tax of $200 on every person who constructs or causes to be constructed any new dwelling unit in which the person has an equity or title. The tax is paid to the Department of Building and Safety and placed into a "Park and Recreational Sites and Facilities Fund" to be used exclusively for the acquisition and development of park and recreational sites. If a developer has already paid Quimby fees, or has dedicated in lieu parkland or recreational facilities, the park fees required may be reduced accordingly.

### City of Los Angeles General Plan Framework

Chapter 9 of the City's Framework Element includes objectives and policies applicable to parks, which are summarized in **Table 4.14-3**.

**TABLE 4.14-3 RELEVANT GENERAL PLAN PARK GOALS, OBJECTIVES, AND POLICIES**

| **Framework Element – Chapter 9, Infrastructure and Public Services** | |
|---|---|
| Policy 9.23.2 | Prioritize the implementation of recreation and park project in areas of the City with the greatest existing deficiencies. |
| Policy 9.23.5 | Re-evaluate the current park standards and develop modified standards which recognize urban parks, including multi-level facilities, smaller sites, more intense use of land, public/private partnerships and so on. |
| Policy 9.23.7 | Establish guidelines for developing non-traditional public park spaces like community gardens, farmer's markets, and public plazas. |
| Policy 9.24.1 | Phase the development of new programs and facilities to accommodate projected growth. |

**SOURCE**: City of Los Angeles, The Citywide General Plan Framework, An Element of the City of Los Angeles General Plan, re-adopted 2001.

# ENVIRONMENTAL IMPACTS

## THRESHOLDS OF SIGNIFICANCE

Based on Appendix G of the *CEQA Guidelines*, the Proposed Project would have significant impacts related to parks and recreational facilities if it would:

- Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated (Threshold 4.14-1)
- Include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment (Threshold 4.14-2)

- Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, or need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for parks. (Threshold 4.14-3)

# METHODOLOGY

An impact related to recreation would occur if the Downtown Plan promotes growth patterns resulting in:

- The need for and/or the provision of new or physically altered park, the construction of which would cause significant environmental impacts in order to maintain service ratios, response times, or other performance objectives, or
- The increased use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated.

The need for or deficiency in park facilities to serve the residents or users of the Downtown Plan Area or the City is not in and of itself a CEQA impact, but a social or economic impact (*City of Hayward v. Board of Trustees* (2015) 242 Cal.App. 4th 833, 843). To the extent that the Downtown Plan causes a need for additional recreational services and facilities and that results in the construction of new facilities or additions to existing facilities and the impact from that construction results in a potential impact to the environment that is an environmental impact under CEQA that needs to be assessed in this EIR. Additionally, the deterioration of existing recreational facilities and parks caused by the Downtown Plan or New Zoning Code is an environmental impact under CEQA that needs to be assessed in the EIR. Any discussion in this EIR of social or economic impacts that relates solely to the level of recreational services provided to the residents or users of the Downtown Plan Area and its surrounding community, including any existing or future needs and deficiencies, is not determinant on its own of environmental impacts under CEQA, unless those social or economic impacts result in physical impacts. The ultimate determination of whether there is a significant impact related to park/recreational services is based on whether a significant physical impact to the environment would result from the construction of new or altered park/recreational facilities or where existing park and recreational facilities would be substantially physically deteriorated as a result of the implementation of the Downtown Plan or New Zoning Code.

This analysis estimates the number of residents that would be generated by implementation of the Proposed Project and assesses whether existing and planned public parks would have sufficient available capacity to accommodate additional users and whether new facilities would need to be constructed, the construction of which would cause significant environmental impacts; and whether the Proposed Project would result in substantial physical deterioration of park/recreational facilities.

# PROJECT IMPACTS

| | |
|---|---|
| **Threshold 4.14-1** | Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated? |

**Impact 4.14-1** **Downtown Plan:** Reasonably anticipated development from the Downtown Plan would increase the use of existing park and recreational facilities in and adjacent to the Downtown Plan Area. Due to the substantial population growth that would result from implementation of the Downtown Plan and lack of development capacity for new parks in the Downtown Plan Area, Downtown Plan implementation could accelerate the deterioration of existing parks in and around

the Downtown Plan Area. Such impacts to existing recreational facilities would be ***significant and unavoidable***.

**New Zoning Code:** Due to the modularity of the New Zoning Code, it is not known where or to what extent future development may occur, and therefore any impacts on the use of existing neighborhood and regional parks or other recreational facilities would be speculative. The Proposed Project does not intend to implement the New Zoning Code outside of the Downtown Plan Area and therefore any indirect impacts from the future use of the New Zoning Code outside the Downtown Plan Area would be speculative. The impact would be ***less than significant*** citywide.

## Downtown Plan Impact

Downtown Plan development is anticipated to increase the population of the Downtown Plan Area from 76,000 to 252,000 by 2040. This increase in population would augment the use of existing and planned parks and recreational facilities in and near the Downtown Plan Area, particularly in areas that are designated for residential development under the Downtown Plan. The following land use designations proposed in the Downtown Plan would support residential development: Medium Residential Neighborhood, Villages, Community Center, Transit Core, and Traditional Core. All of these uses would support higher-density, multi-unit residential uses and would be spread throughout the Central City Community Plan Area and the northern portion of the Central City North Community Plan Area. Limited residential development would also be supported by the Markets and Hybrid Industrial land use designations. As shown in **Figure 4.14-1**, all existing recreational facilities in and near the Downtown Plan Area are within the service radius of proposed land uses that support residential development. Thus, Downtown Plan development and associated population growth and park use would contribute to the deterioration of the existing and planned recreational facilities listed in **Table 4.14-1**.

Developers of future residential projects in the Downtown Plan Area would be required to pay park mitigation fees (for non-subdivision projects) or dedicate land or pay Quimby in-lieu fees (for subdivision projects). Park fee amounts are reviewed and updated annually by the City. Payment of impact fees and the anticipated enhancement or maintenance of facilities with funds provided by these fees would help offset the deterioration of existing recreation facilities. The Downtown Plan promotes the provision of publicly accessible open space by offering development incentives for projects in exchange for providing community benefits such as affordable housing, community facilities and open space. The Downtown Plan would also include policies to support the provision of new recreational facilities, such as the following:

- **LU 25.3.** Promote the conversion of targeted alleys into active, recreational, and pedestrian-oriented spaces.
- **LU 29.9.** Enhance the public realm, with inviting streets, pathways, and a variety of publicly accessible open spaces for recreation, rest, and gathering.
- **LU 29.11.** Coordinate with residents and community organizations to provide opportunities for daytime activities in the neighborhood with recreational centers, libraries, and managed open spaces with engaging and culturally relevant programming
- **LU 37.2.** Encourage innovative methods to incorporate onsite landscaping, as well as open and recreational space on projects with high lot coverage.

Additional Downtown Plan policies supporting the preservation and provision of new parks are listed below under the discussion of Thresholds 4.14-2 and 4.14-3.

Existing regulations and Downtown Plan policies would provide funding for the provision of new recreational facilities and some Downtown Plan policies would also support the maintenance of existing facilities. However, as discussed in the Setting, existing and planned parks serving the Downtown Plan Area currently fail to meet the City's four acres per 1,000 residents goal for neighborhood and community parks; therefore, although recreational needs are often met in different ways in highly urban settings (e.g., use of private gymnasiums and recreational facilities, use of public rights-of-way for walking and jogging), the more than threefold increase in population accommodated by the Downtown Plan combined with the constraints on new park development in Downtown Los Angeles (discussed under Impacts 4.14-2 and 4.14-3 below) would be expected to substantially increase demands upon existing recreational facilities. All of the parks listed in **Table 4.14-1** could be adversely affected by the increase in population for the Downtown Plan Area, which may cause and accelerate deterioration of those existing parks. Impacts related to the deterioration of existing parks would be ***potentially significant***.

## New Zoning Code Impact

As described in the Existing Conditions, there are over 16,000 acres of recreational facilities and 444 park sites owned and operated by the City. The 2012 DRP 50 Parks Initiative indicated that park facilities are not equitably distributed across the City and that many communities do not have parks within a reasonable distance. The New Zoning Code Form Districts would include requirements for outdoor amenity spaces that are common to tenants of a building, with incentives to make the spaces publicly accessible through the outdoor amenity space standards and through the community benefits system. These incentives to create privately-owned public space may provide relief from overuse of any existing facilities. As such, there is potential for future development in some areas of the City to result in more publicly available open space. In addition, the New Zoning Code would incorporate the requirements of the Quimby Act which requires that developers of future residential projects pay park mitigation fees (for non-subdivision projects), or dedicate land or pay Quimby in-lieu fees (for subdivision projects).

However, projecting the location and type of future growth as a result of the New Zoning Code outside of the Downtown Plan Area and any impacts (adverse or beneficial) would be speculative at this time as the Proposed Project only includes an update to the Downtown Plan. Future environmental review of a proposed community plan update and associated zoning districts would analyze potential community- and site-specific impacts to existing neighborhood and regional parks or other recreational facilities. As such, impacts would be ***less than significant.***

## Mitigation Measures

Downtown Plan

Because of the lack of available space to develop new parks to serve the anticipated population growth in the Downtown Plan Area, feasible mitigation beyond the policies and initiatives included in the Downtown Plan to enhance Downtown Plan Area recreational opportunities, as described above, is not available. Therefore, this impact would be unavoidably significant.

New Zoning Code

None required.

## Significance After Mitigation

Downtown Plan

Because mitigation is not available to address the impact related to deterioration of existing parks, this impact would be ***significant and unavoidable***.

New Zoning Code

Not applicable.

| | |
|---|---|
| **Threshold 4.14-2** | Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment? |
| **Threshold 4.14-3** | Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, or need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for parks? |

**Impact 4.14-2, 4.14-3**

**Downtown Plan:** Reasonably expected development from the Downtown Plan would increase demand for recreational and park facilities that serve the Downtown Plan Area and would require the construction of new and expanded facilities to meet City park standards. However, based on the urban nature of the Downtown Plan Area and the presence of constraints to the development of large park facilities, the construction and operation of new facilities would not be expected to result in significant environmental impacts. Impacts would be ***less than significant***.

**New Zoning Code:** Due to the modularity of the New Zoning Code, it is not known where or to what extent future development may occur. Therefore, impacts related to the construction or expansion of recreational facilities regarding substantial adverse physical impacts associated with the provision of new or physically altered parks and recreational facilities would be speculative. The Proposed Project does not intend to implement the New Zoning Code outside of the Downtown Plan Area and therefore any indirect impacts from the future use of the New Zoning Code outside the Downtown Plan Area would be speculative. The impact would be ***less than significant*** citywide.

## Downtown Plan Impact

As discussed under Impact 4.14-1, future Downtown Plan Area development would increase the population of the Downtown Plan Area by an estimated 176,000 residents, thereby increasing use and demand for parks and recreational facilities. The current Downtown Plan Area's park ratio, not including the two proposed, unbuilt parks, falls below the City standard with 3.2 acres of park per 1,000 residents. In addition, the population of the Downtown Plan Area is expected to increase to approximately 252,000 by 2040 with implementation of the Downtown Plan. Without the construction of new parks, this would further reduce the park ratio to approximately 1.0 acre per 1,000 residents. Approximately 750 acres of new parkland would be needed in the Downtown Plan Area by 2040 to meet the City's park acreage goal.

The Downtown Plan includes a number of policies to support the development of additional park facilities, including the following:

- SO Goal 1. A well maintained, accessible, and highly utilized open space system and public realm network that serves that growing population of downtown residents, workers, and visitors.
- Policy SO 1.2. Prioritize the development of public open space in underserved communities to improve access to open space.
- Policy SO 1.3. Support the creation of different open space typologies, such as parkets, dog parks, and other facilities, to serve a variety of users and needs.
- Policy SO 1.8. Support the development of catalytic new parks and reinvestment into existing parks. Namely:
    - Pershing Square
    - Park 101
    - 6th Street Park
    - A new large park in the Fashion District
- Gil Lindsey Plaza

Based on the City's four acres of neighborhood and community parks per 1,000 persons goal, development facilitated by the Downtown Plan would generate demand for up to 750 acres of new park to meet City standards. For this reason and because Downtown Plan policies support the development of new park facilities, the Downtown Plan is anticipated to result in the construction of new recreational facilities. However, several constraints would limit the number and size of new park facilities constructed in the Downtown Plan Area, including the following:

1. A scarcity of vacant or underused land
2. High cost of real estate in Downtown Los Angeles
3. Competition with other identified community priorities, such as affordable housing

The 50 Parks Initiative exemplifies the kind of park facilities the City is currently implementing and is likely to continue implementing in the dense urban areas of Los Angeles. Most of the parks are pocket parks less than an acre in size with playground structures and exercise machines. These parks typically include zero or minimal structures and green space, and, because they are intended to serve the local community and be accessible by foot and bike, do not provide parking (Ferguson et al. 2014). The construction and operation of such small-scale facilities would be expected to have minimal environmental impacts. For example, it is anticipated that these parks would be located on vacant lots lacking biological or cultural resources; generate minimal vehicle traffic to the site, which would limit air quality, greenhouse gas, noise, and transportation impacts; and be able to accommodate a limited number of people due to their small size, which would reduce park noise levels.

Construction of new of new or expanded neighborhood or pocket park facilities to serve the Downtown Plan Area would occur in an urban center. Construction of new parks would be required to comply with applicable federal, State, and local regulations and policies discussed in this EIR, such as NPDES permit requirements, the City's Tree Ordinance and Noise Ordinance, and the California Building Code, including CALGreen requirements.

Potential environmental impacts of construction and operation of any new parks, as an allowed land use, have been evaluated throughout this EIR. Construction and operational impacts to air, noise, traffic, as well as other impacts of new developments are discussed throughout this EIR. It is not foreseeable that impacts

from the construction of new or expanded parks in the Downtown Plan Area would have greater or different impacts than those identified in this EIR for construction or operations. Similar to other types of development, the construction of new or expanded park facilities could contribute to the significant historic resource and construction noise impacts identified in sections 4.4, *Cultural Resources*, and 4.11, *Noise*, of this EIR. Based on the urban location and the limited land available, the construction of a new park facilities would likely qualify for an infill exemption or result in less–than-significant impacts with standard regulatory compliance measures and project specific design features or project specific mitigation measures identified through a project EIR or mitigated negative declaration. To the extent that any significant impacts could result from the unique characteristics of a specific site, those impacts would be speculative at this time. Furthermore, the construction of a new park facility or expansion of an existing park facility would require a project-specific environmental analysis under CEQA to address any site-specific environmental concerns. Therefore, impacts related to fire protection and emergency services would be ***less than significant.***

## New Zoning Code Impact

The New Zoning Code Form Districts would include requirements for outdoor amenity spaces that are common to tenants of a building, with incentives to make the spaces publicly accessible through the outdoor amenity space standards and through the community benefits system. As such, the future application of the new Form Districts outside of the Downtown Plan Area has the potential to result in more privately-owned public space. In addition, the New Zoning Code would incorporate the requirements of the Quimby Act which requires that developers of future residential projects pay park mitigation fees (for non-subdivision projects), or dedicate land or pay Quimby in-lieu fees (for subdivision projects). However, the New Zoning Code only applies to properties where a community plan is updated or amended to utilize the new zoning, which would require environmental review pursuant to CEQA. The Proposed Project does not propose to implement the New Zoning Code outside of the Downtown Plan Area. Future site-specific approvals may be evaluated with consideration of the EIR under CEQA rules for subsequent approvals.

Projecting the location and type of future growth as a result of the New Zoning Code outside of the Downtown Plan Area would be speculative at this time as this Project only includes an update to the Downtown Plan. In the event that a future proposed park would have the potential for significant environmental effects, the park would need to undergo project-level environmental review under CEQA. As such, the impact would be ***less than significant***.

## Mitigation Measures

Downtown Plan

None required.

New Zoning Code

None required.

# CUMULATIVE IMPACTS

The geographic area to analyze cumulatively considerable recreation impacts includes the entire City of Los Angeles and surrounding areas. The *Los Angeles Countywide Comprehensive Park & Recreation Needs Assessment*, published in May 2016 by the Los Angeles County Department of Parks and Recreation (LA County DPR), evaluated recreational needs in Los Angeles County, including the City of Los Angeles (LA County DPR 2016). The report identifies many areas of the City as having a "Very High" park need (average of 0.7 acres per 1,000 residents of park land) or "High" park need (average of 1.6 acres per 1,000 residents).

## Substantial Deterioration of Existing Parks

Future citywide development is expected to increase the City's residential population from just over 4 million persons in 2017 (DOF 2017) to more than 4.6 million persons in 2040 (SCAG 2016), an increase of about 600,000 residents. This increase would exacerbate the existing need for new or expanded recreational facilities over time. In the absence of new parks, the citywide increase in park demand would be expected to accelerate the deterioration of existing parks, which would be a potentially significant cumulative impact.

As discussed under Impact 4.14-1, the Downtown Plan would result in a potentially significant impact related to the deterioration of existing parks serving the Downtown Plan Area since there is not adequate space to provide sufficient park acreage to meet the projected increase in demand for parks based on the City's adopted standards. This would constitute a cumulatively considerable contribution to the significant cumulative impact related to park deterioration. The New Zoning Code, on the other hand, would not accommodate any specific development and would only be applied when a community plan is updated or through other discretionary review processes. Regardless, no provision of the New Zoning Code would be expected to increase demand for recreational facilities. Thus, this component of the Proposed Project would not contribute to this significant cumulative impact.

The Downtown Plan would make a substantial contribution to cumulative park impacts; thus, its cumulative impact is ***significant and unavoidable***.

## Construction/Expansion of Parks

With respect to the construction of new parks, the City is currently in the process of constructing new parks and recreational facilities to serve its residents, as exemplified by the 50 Parks Initiative, and is anticipated to continue to do so in the future to meet increasing demand for parks. Expansion or construction of new pocket, neighborhood, community, and regional parks, or other recreational facilities, would have physical impacts to the environment (e.g., emissions of air pollutants, aesthetics impacts, noise impacts) that may be cumulatively significant. However, the any prediction of the precise impact of these parks is speculative since the size, nature, and location of any new parks are not known at this time.

As discussed under Impacts 4.14-2 and 4.14-3, the Downtown Plan would not result in a significant impact because it would not involve the development of new parks with the potential to result in significant environmental effects. As such, the Downtown Plan would not substantially contribute to the potentially significant cumulative impact associated with new park construction. Similarly, the New Zoning Code would not involve any new park construction and, thus, would not contribute to this potentially significant cumulative impact. Cumulative impacts are ***less than significant***.

# 4.15 TRANSPORTATION AND TRAFFIC

This chapter provides an overview of existing and potential future transportation and mobility conditions in the Downtown Plan Area. Topics addressed in this chapter include the environmental setting, circulation and mobility systems, regulatory framework, thresholds of significance, methodology, and mitigation measures related to transportation impacts.

# ENVIRONMENTAL SETTING

## EXISTING ENVIRONMENTAL SETTING

### Overview

Citywide Overview

The City of Los Angeles circulation system facilitates travel by multiple modes including walking, bicycling, public transit, and motor vehicles and includes an extensive network of freeways, highways, and local streets. (City of Los Angeles 2015a). These transportation networks, services, and systems are described in more detail in the following sections.

Downtown Plan Area Overview

The Downtown Plan Area is the Central City and Central City North Community Plan Areas (CPA), which covers the Downtown area of the City of Los Angeles. The analysis evaluates the transportation network within the boundaries of the Downtown Plan Area as well as the surrounding transportation network that could be potentially impacted by the Project. For the purposes of the EIR transportation impact analysis, Existing Conditions (baseline) is defined as Year 2017, which corresponds to the date of the release of the Downtown Plan Notice of Preparation (NOP).

Downtown Los Angeles, like many other urban areas throughout the country, experiences significant traffic congestion. Despite an extensive street network and transit options, vehicular circulation continues to deteriorate due to historical over-reliance on the car as the primary mode of transportation. The combination of many regional destinations, oversaturated roadways, and unreliable travel times for autos and bus transit underlie the need for creating a transportation network for the Downtown Plan Area that will better serve all modes of transportation, improve the efficiency of the overall system, and enhance the livability along major boulevards.

The Downtown Plan Area is served by a network of primarily gridded arterials, though the grid is less defined in the Central City North CPA. Rapid and local bus transit lines operate on most major and minor arterials. Metro, the primary transit provider in the region, also maintains a number of subway and light rail routes, including the Red Line, Purple Line, Gold Line, Blue Line, and Expo Line[1]. Metrolink regional commuter rail is available at Union Station, which serves the regional county area. Pedestrian facilities primarily consist of sidewalks adjacent to roadways, and a limited bicycle network is provided. The transportation network in the Downtown Plan Area is primarily auto- and bus transit-oriented.

[1] Starting as of late 2019,the Red Line is known as B Line, the Purple Line is known as the D Line, the Gold Line is known as the L Line, the Blue Line is known as the A Line, and the Expo line is known as the E Line.

Regional access is provided by the Ventura Freeway (US-101), the Santa Ana Freeway (I-5), the Santa Monica Freeway (I-10), and the Harbor Freeway (I-110/SR-110). There are several key boulevards and avenues, as well as collector and local streets.

**Highway and Street System**

Citywide Highway and Street System

The roadway network in the City includes seven freeways that traverse the approximately 472 square miles of the City's land area and connect the City to its outer regions. They include Interstate 5, 10, 105, 110, 210, 405, and US Highway 101. The City also includes 11 state highways (SR) including SR 1, 2, 47, 60, 90, 103, 110, 118, 134, 170, and 187 (City of Los Angeles 2015a).

The City contains over 7,500 miles of public streets that accommodate motorized vehicles, including private motorized vehicles, taxis, freight vehicles, and transit vehicles. Pedestrian and bicyclist travel are also important components of the local roadway network. A majority of roadways in the City are aligned on a grid system (City of Los Angeles 2015a). Below is a brief description of the types of facilities in the City based on the City's Mobility Plan 2035 and Complete Streets Design Guide (Los Angeles 2015).

- **Boulevard I (Major Highway Class I).** Class I Boulevards are generally defined as having three to four lanes in each direction along with a median turn lane. The width of a Class I Boulevard is usually 100 feet, with a typical sidewalk width of 18 feet and a target operating speed of 35 miles per hour (mph).
- **Boulevard II (Major Highway Class II).** Class II Boulevards are generally defined as having two to three lanes in each direction along with a median turn lane. The width of a Class II Boulevard is usually 80 feet, with a typical sidewalk width of 15 feet and a target operating speed of 35 mph.
- **Avenue I (Secondary Highway).** Class I Avenues typically have one to two lanes in each direction, a roadway width of 70 feet, a sidewalk width of 15 feet and a target operating speed of 35 mph. An Avenue I typically includes streets with a high amount of retail uses and local destinations.
- **Avenue II (Secondary Highway).** Avenue II streets usually have one to two lanes in each direction, with a typical roadway width of 56 feet, a typical sidewalk width of 15 feet and a target operating speed of 30 mph. Such streets are typically located in parts of the City with dense active uses, and a lively pedestrian environment.
- **Avenue III (Secondary Highway).** Avenue III streets are defined to have one to two lanes in each direction, with a roadway width of 46 feet, a sidewalk width of 15 feet, and a target operating speed of 25 mph. This classification was developed to maintain roadway width in older, more historic parts of the City.
- **Collector Street.** Collector Streets generally have one travel lane in each direction, with a roadway width of 40 feet and a sidewalk width of 13 feet. The target operating speed for Collector Streets is 25 mph. Such streets are typically intended for vehicle trips that start or end in the immediate vicinity of the street.
- **Industrial Collector Street.** Industrial Collector Streets vary from normal collector streets in that larger curb returns are incorporated to allow for the wider turning radii of trucks.
- **Local Street Standard.** Local Street Standard roadways typically have one lane in each direction, and are designed to have a 36-foot width, 12-foot sidewalks, and a target operating speed of 20 mph. Such streets are not designed for through traffic; rather, their focus is to allow access to and from destination points. Unrestricted parking is typically available on both sides of the street.

- **Local Street Limited.** Local Street Limited roadways typically have one lane in each direction, and are designed to have a 30-foot width, 10-foot sidewalks, and a target operating speed of 15 mph.
- **Industrial Local Street.** Although similar to the normal local streets, Industrial Local Streets differ primarily in width for the purpose of providing adequate space for trucks to maneuver. The typical roadway width for an Industrial Local Street is 44 feet, with 10-foot sidewalks and a target operating speed of 20 mph.
- **Pedestrian Walkway.** Pedestrian Walkways are designed for pedestrian use but are also appropriate for slow-moving bicyclists. Pedestrian Walkways have a width of 10 to 25 feet.
- **Shared Street.** Shared Streets provide a slow-speed environment where cars, bike, pedestrians, and scooters are able to comfortably utilize the street. Shared Streets have a minimum width of 20 feet with 5-foot buffer zones and a target operating speed of 5 mph.
- **Access Roadway.** Access Roadways are designed to have a width of 20 feet and are limited to private streets only that access no more than four dwelling units and are a maximum of 300 feet in length.
- **One-Way Service Road – Adjoining Arterial Street.** One-Way Service Roads typically have a width of 12 to 18 feet with a 3-foot curb separation from arterial streets.
- **Bi-Directional Service Road – Adjoining Arterial Streets.** Bi-Directional Service Roads typically have a width of 20 to 28 feet with a 3-foot curb separation from arterial streets.
- **Hillside Collector Street.** Hillside Collector Streets vary from normal collector streets in that sidewalks have a width of 5 feet and the target operating speed is 15mph. On-street parking is provided on both sides of the street.
- **Hillside Local Street.** Hillside Local Streets vary from normal local streets in that sidewalks have a width of 4 feet and the target operating speed is 15 mph. On-street parking is provided on both sides of the street.
- **Hillside Street Standard.** Hillside Street Standard roadways typically have one lane in each direction and are designed to have a 28-foot width, 4-foot sidewalks, and a target operating speed of 10 mph. On-street parking is provided on one side of the street.
- **Hillside Street Limited.** Hillside Street Limited roadways typically have one land in each direction and are designed to have a 20-foot width, 3-foot sidewalks, and a target operating speed of 10 mph. On-street parking is provided on one side of the street.
- **Modified Streets.** Many streets are identified under a specific roadway classification, but with a modification generally due to available width on smaller, historic streets. In these cases, typical number of lanes and traffic volumes are similar to the non-modified versions, but lane widths or available parking may be diminished.
- **Signalized Intersections and Traffic Control Devices.** The City of Los Angeles' Automated Traffic Surveillance and Control (ATSAC) system is a computer-based traffic signal control system that monitors traffic conditions and system performance to allow ATSAC operations to manage signal timing to improve traffic flow conditions. This system allows monitoring and control of the signal from a central Traffic Operations Center at City Hall. The importance of linking to the ATSAC system is the ability to coordinate the signals in relationship with other signals along a travel corridor. Signal coordination minimizes delay due to stops and enhances vehicle flow. Studies by LADOT and independent third parties have shown that the ATSAC system reduces congestion and increases average travel speeds (LADOT 2016a). The Adaptive Traffic Control System (ATCS) is an enhancement to ATSAC and provides fully traffic-adaptive signal control based on real-time traffic conditions. In addition, LADOT staff can manually adjust traffic signals

remotely from the department's command center to respond to collisions, weather, special events, and other emergencies. All signalized intersections in the Downtown Plan Area are currently operating under the City's ATSAC system and ATCS control.

Downtown Plan Area Highway and Street System

The roadway network in the Downtown Plan Area ranges from major freeways, such as US-101, I-5, I-10, and I-110/SR-110, to neighborhood-serving local roadways. **Figure 4.15-1**, Roadway Network, displays the roadways within the Downtown Plan Area and illustrates the classification of roadway facilities. The Downtown Plan Area contains the following types of facilities based on the City's Mobility Plan 2035 and Complete Streets Design Guide as described above: Boulevard I, Boulevard II, Avenue I, Avenue II, Avenue III, Collector Street, Local Street, and Modified Streets.

**Existing Transportation Operations**

This section presents existing transportation conditions by applying the newly approved method of studying vehicle miles traveled (VMT) to evaluate significant traffic impacts under CEQA. VMT is a measure of the number of miles driven within a defined area and are based on the number of vehicle trips (VT) multiplied by the average trip length in miles for various trip types. To obtain an average VMT per service population, the total VMT is divided by the total population and employees within the area of analysis. The section that follows provides a brief summary of these characteristics for the City of Los Angeles, and provides a detailed summary of these characteristics for the Downtown Plan Area. For more information on the use of VMT as an impact threshold, see the *Environmental Impacts* section.

Citywide Existing Transportation Operations

The City of Los Angeles' Travel Demand Forecasting Model estimates the mode split of existing (2017) peak period trips. It is estimated that nearly 80 percent of peak period person trips are made by automobile, over 13 percent by walking, almost 5 percent by transit, and over 1 percent by bicycle.

Downtown Plan Area Existing Transportation Operations

*Vehicle Miles Traveled*

The trip generation estimated by the Travel Demand Forecasting (TDF) model was categorized according to the origin and destination of each trip. In the following discussion regarding VMT calculation using origins and destinations, internal trips are referred to with an "I" and external trips are referred to with an "X". Internal-to-internal (II) trips remain within the Downtown Plan Area. Internal-to-external (IX) trips originate within the Downtown Plan Area and terminate at an outside destination. External-to-internal (XI) trips originate outside the Downtown Plan Area and terminate within it. The VMT calculation accounts for all internal (II) trips and trips that begin or end (IX or XI) within the Downtown Plan Area, as these trips are generated by or attracted to land uses within the Downtown Plan area. The travel behavior effects of land use and network changes within Downtown can be understood by measuring the VMT of trips originating in and/or destined for the Downtown Plan Area.

VMT is reported as Total Daily VMT per Service Population, which equates to all VMT for the Plan Area divided by the number of people living and working within the Plan Area. For more information on the use of VMT and service population, see the *Environmental Impacts* section.

An alternative method for measuring VMT is known as the "boundary method", which accounts for all vehicle miles traveled strictly within the border of a defined area. This method would include VMT for trips passing through, but not originating in or destined for, the Downtown Plan Area. Although a valid method for measuring VMT, it less effectively measures the regional travel effects of Downtown land uses,

**Figure 4.15-1 Existing Roadway Network**

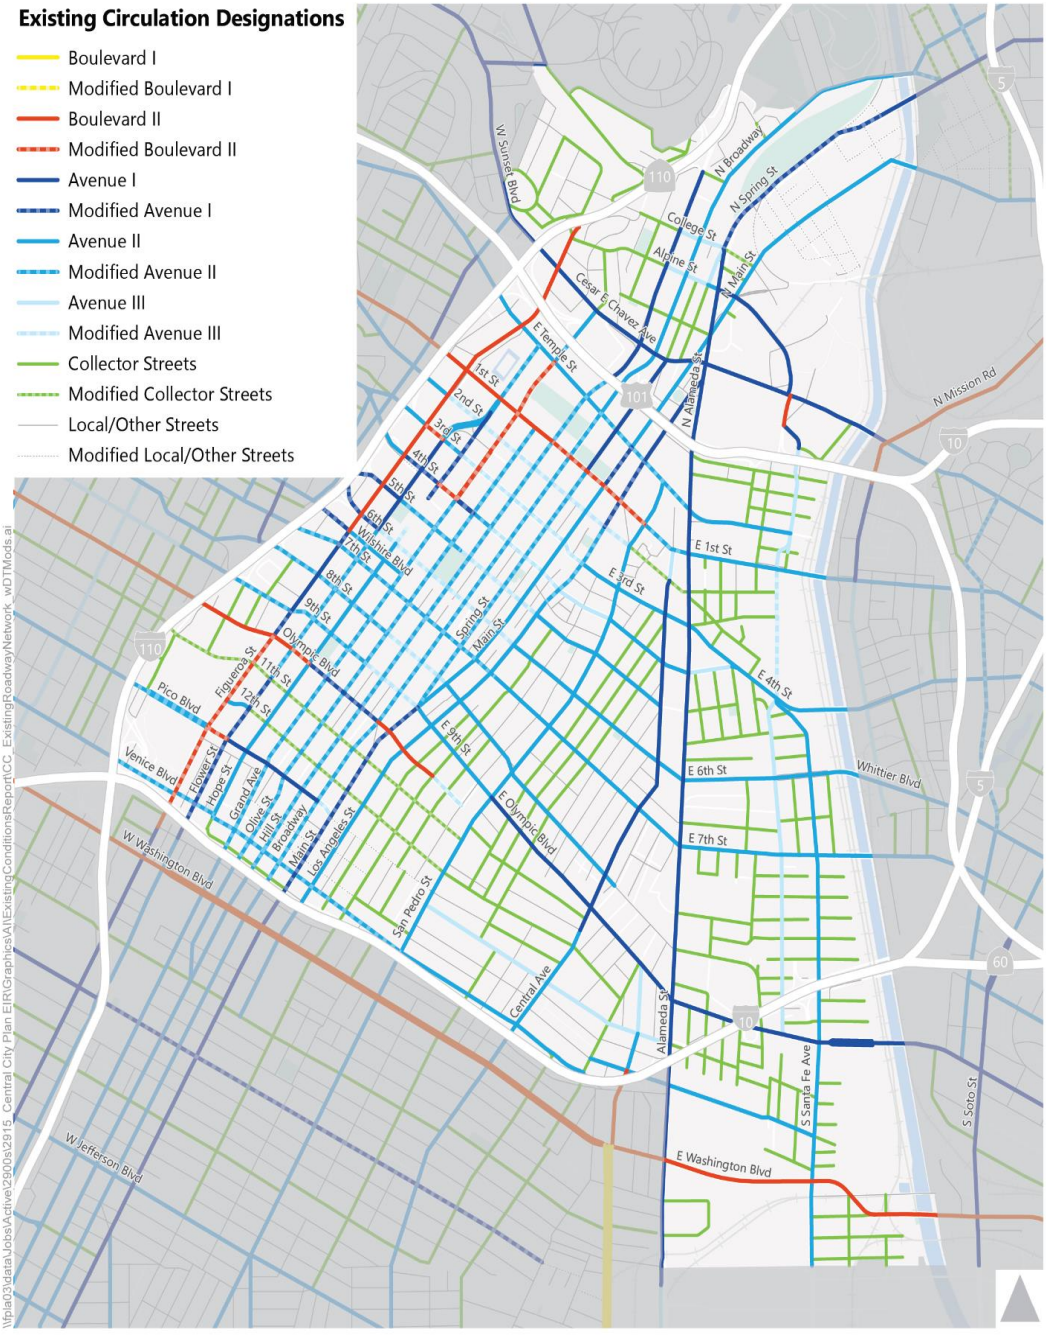

Figure 4.15-1
Existing Roadway Network

and includes travel that passes through Downtown, which is unrelated to the Community Plan land uses. This method was not used to calculate VMT for the purposes of this report.

The tables below summarize the travel characteristics under Existing Conditions for the Downtown Plan Area. **Table 4.15-1** presents the model estimates of vehicle mode split for automobiles, transit, bicycles and walk trips. According to model estimates, approximately 28% of all trips within the Downtown Plan Area are made by transit, walking or biking. This is 8% more than trips across the City of Los Angeles at large.

**TABLE 4.15-1 2017 MODE SPLIT**

| Travel Mode | Downtown Plan Area Percentage (%) | Citywide Percentage (%) |
|---|---|---|
| Automobile | 72% | 80% |
| Non-Automobile (transit/bike/walk) | 28% | 20% |
| **SOURCE**: Fehr & Peers, *Downtown Subarea TDF Model*, 2019. | | |

**Table 4.15-2** summarizes the Daily vehicle trips (VT) and VMT within the Downtown Plan Area. **Table 4.15-3** summarizes the Daily vehicle trips (VT) and VMT Citywide. **Table 4.15-4** summarizes the Daily vehicle trips (VT) and VMT Regional-wide based on 2016 SCAG TDF model.

**TABLE 4.15-2 2017 DOWNTOWN PLAN DAILY VEHICLE TRIPS AND VEHICLE MILES TRAVELED**

| Transportation Metrics | Daily Total |
|---|---|
| Vehicle Trips (VT) | 758,000 |
| Total Vehicle Miles Traveled (VMT) | 5,767,000 |
| Vehicle Miles Traveled per Service Population | 19.6 |
| **SOURCE**: Fehr & Peers, *Downtown Subarea TDF Model*, 2019. | |

**TABLE 4.15-3 2017 CITYWIDE DAILY VEHICLE TRIPS AND VEHICLE MILES TRAVELED**

| Transportation Metrics | Daily Total |
|---|---|
| Vehicle Trips (VT) | 17,197,000 |
| Total Vehicle Miles Traveled (VMT) | 133,424,000 |
| Vehicle Miles Traveled per Service Population | 23.1 |
| **SOURCE**: Fehr & Peers, *Downtown Subarea TDF Model*, 2019. | |

**TABLE 4.15-4 2016 SCAG REGIONWIDE DAILY VEHICLE TRIPS AND VEHICLE MILES TRAVELED**

| Transportation Metrics | Daily Total |
|---|---|
| Vehicle Trips (VT) | 82,283,000 |
| Total Vehicle Miles Traveled (VMT) | 908,573,000 |
| Vehicle Miles Traveled per Service Population | 33.9 |
| **SOURCE**: Fehr & Peers, *SCAG 2016 RTP Model*, 2016. | |

The Daily VMT generated by uses from, to, and within the Downtown Plan Area is approximately 5,767,000 miles, which equates to 19.6 VMT per service population. Citywide, the TDF Model estimates a total of 17,197,000 daily vehicle trips for a total of 133,424,000 daily vehicle miles traveled. This results in an average daily VMT per service population of 23.1. Regional-wide, the SCAG Model estimates a total of 82,283,000 daily vehicle trips for a total of 908,573,000 daily vehicle miles traveled. This results in an average daily VMT per service population of 33.9.

*Level of Service (LOS)*

Another way to understand existing traffic conditions is to study existing traffic volumes with an analysis of the operating conditions, indicated through volume-to-capacity (V/C) ratios and Level of Service (LOS). LOS was used previously as the primary method for determining CEQA transportation-related impacts but is now being used for informational purposes. Recent changes in state legislation and the related guidance from OPR have moved analysis to VMT in order to support statewide GHG goals and encourage multi-modality in our cities. Traditional mitigation measures to address increases in vehicle delay often involved increasing capacity (i.e., the width of a roadway or intersection), which has the potential to induce more trips/VMT and does not support State goals.

As an informational metric, LOS is a measure used to describe the condition of traffic flow, ranging from excellent conditions at LOS A to overloaded conditions at LOS F. LOS can be determined by dividing the number of vehicles (i.e., volume (V)) by roadway capacity (C), and the resulting V/C ratio is then used to obtain the corresponding LOS. To determine the operations of the roadway network during peak commute hours, a LOS analysis was conducted for the roadways in the Downtown Plan Area.

The highest peak period traffic volume during the AM peak period (6AM – 9 AM) or PM peak period (3 PM – 7PM) on roadways within the Downtown Plan Area are displayed in **Figure 4.15-2** and **Figure 4.15-3**, AM Peak Period Level of Service and PM Peak Period Level of Service, respectively. It should be noted that because traffic volumes are a result of the collective travel choices of thousands of individual drivers, variation in the daily and peak period volumes on any given facility is both expected and observed. The Federal Highway Administration (FHWA) guidelines recommend traffic models are calibrated to within 7 to 15% for freeway and arterial volumes to account for this regular variation. This range is based on studies that show that this range represents the average daily fluctuation in traffic for major roadways. Accordingly, the estimates of both existing and future conditions are subject to regular variation due to fluctuations in travel demand (or the travel choices of the thousands of individual drivers using the Downtown Plan Area roadways).

The LOS of the study corridors was determined based on the V/C ratio using the Downtown Plan subarea TDF model. This ratio was calculated by comparing peak period traffic volumes to the roadway capacity for each facility. The roadway capacities reflect the operating characteristics of the study corridors, such as functional classifications, number of lanes, and travel speeds. Functional classification is a scale that determines the vehicles-per-lane-per-hour capacity; higher classifications generally have more and wider lanes and are designed to facilitate a higher volume of vehicles per hour. **Table 4.15-5** summarizes the typical travel conditions for the roadway network (using a weighted average V/C ratio) and the percentage of roadway segments operating at LOS E or F. The weighted average V/C ratio represents typical travel conditions for the roadway network in the Downtown Plan Area.

**TABLE 4.15-5 EXISTING 2017 ROADWAY SEGMENT LEVEL OF SERVICE (LOS)**

| Transportation Metrics | Analyzed Time Period | |
|---|---|---|
| | AM Peak Period | PM Peak Period |
| Weighted Average V/C | 0.63 (LOS B) | 0.65 (LOS B) |
| Percentage (%) of Street Segments at LOS E or F | 14% | 16% |
| **Weighted Average V/C by Facility Type** | | |
| Avenue | 0.63 (LOS B) | 0.65 (LOS B) |
| Boulevard | 0.64 (LOS B) | 0.68 (LOS B) |
| Local / Collector | 0.57 (LOS A) | 0.58 (LOS A) |

**SOURCE**: Downtown Subarea TDF Model, Fehr & Peers, 2019.

Approximately 14-16% of the roadways operate at an LOS E or F during the AM and PM peak periods. The weighted average V/C ratio is 0.63 (LOS B) in the AM peak period and 0.65 (LOS B) in the PM peak period. As a general matter, this means approximately 14-16% of the road network (Avenues, Boulevards, and Local/Collector streets) in the Central City and Central City North area experiences substantial delay during the peak period, and while much of the network is far from reaching the limits of its capacity.

## Reliability

Citywide and Downtown Plan Area Reliability

The VMT results presented in this section reflect typical weekday (Tuesday through Thursday) conditions within the Los Angeles Model and the Downtown Plan Area without major incidents and under mild weather conditions. Atypical traffic conditions, such as a collision on the freeway, rainy weather or a special event, can impact travelers in a given plan area. The reliability of the roadway network can be impacted by these occurrences and is a common frustration for drivers. The bus transit system can also be affected by these events.

## Emergency Access

Citywide Emergency Access

California state law requires that drivers yield the right-of-way to emergency vehicles and remain stopped until the emergency vehicles have passed. Generally, multi-lane roadways allow the emergency vehicles to travel at higher speeds and permit other traffic to maneuver out of the path of the emergency vehicle. In addition, the LAFD in collaboration with LADOT has developed a Fire Preemption System (FPS), a system that automatically turns traffic lights to green for emergency vehicles travelling on designated streets in the City (LADOT 2016a). The City has over 205 miles of routes equipped with FPS (LAFD 2008).

Within the City of Los Angeles, fire prevention and suppression and emergency medical services are provided by the LAFD. Public protection service and law enforcement are provided by LAPD. New development projects in the City may increase the demand for fire protection and emergency medical services, and the LAFD evaluates new project impacts on a project-by-project basis. Consideration is given to project size and components, required fire-flow, response time and distance for engine and truck companies, fire hydrant sizing and placement standards, access, and potential to use or store hazardous materials (Los Angeles 2006). The adequacy of emergency service may be influenced by factors such as staffing levels, emergency response times, and technology improvements, management strategies, and mutual aid agreements. Every year, LAFD assesses its resources and reallocates them based on demand and need citywide. The provision of new fire stations varies as a function of not only the geographic distribution of physical stations but also due to the availability of fire trucks, ambulances, and other equipment as well as access to reciprocal agreements with neighboring jurisdictions. The City requires that development plans be submitted to the City for review and approval to ensure that new development has adequate access, including driveway access and turning radius in compliance with existing City regulations.[2]

**Figure 4.15-2 Existing AM Peak Period Level of Service**

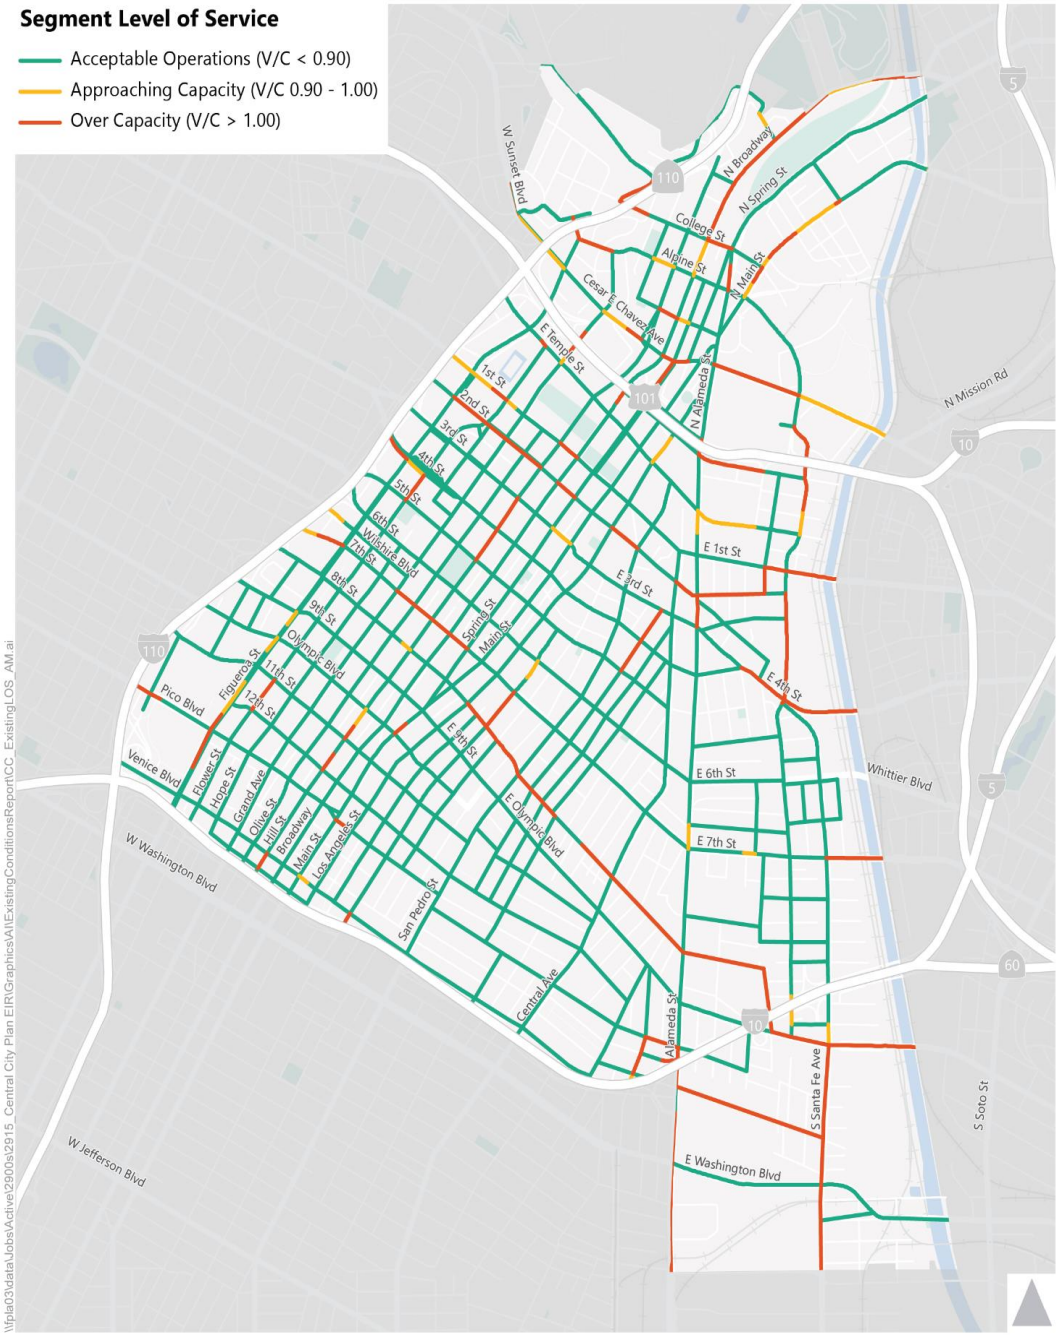

Figure 4.15-2

Existing AM Peak Period Level of Service

**Figure 4.15-3 Existing PM Peak Period Level of Service**

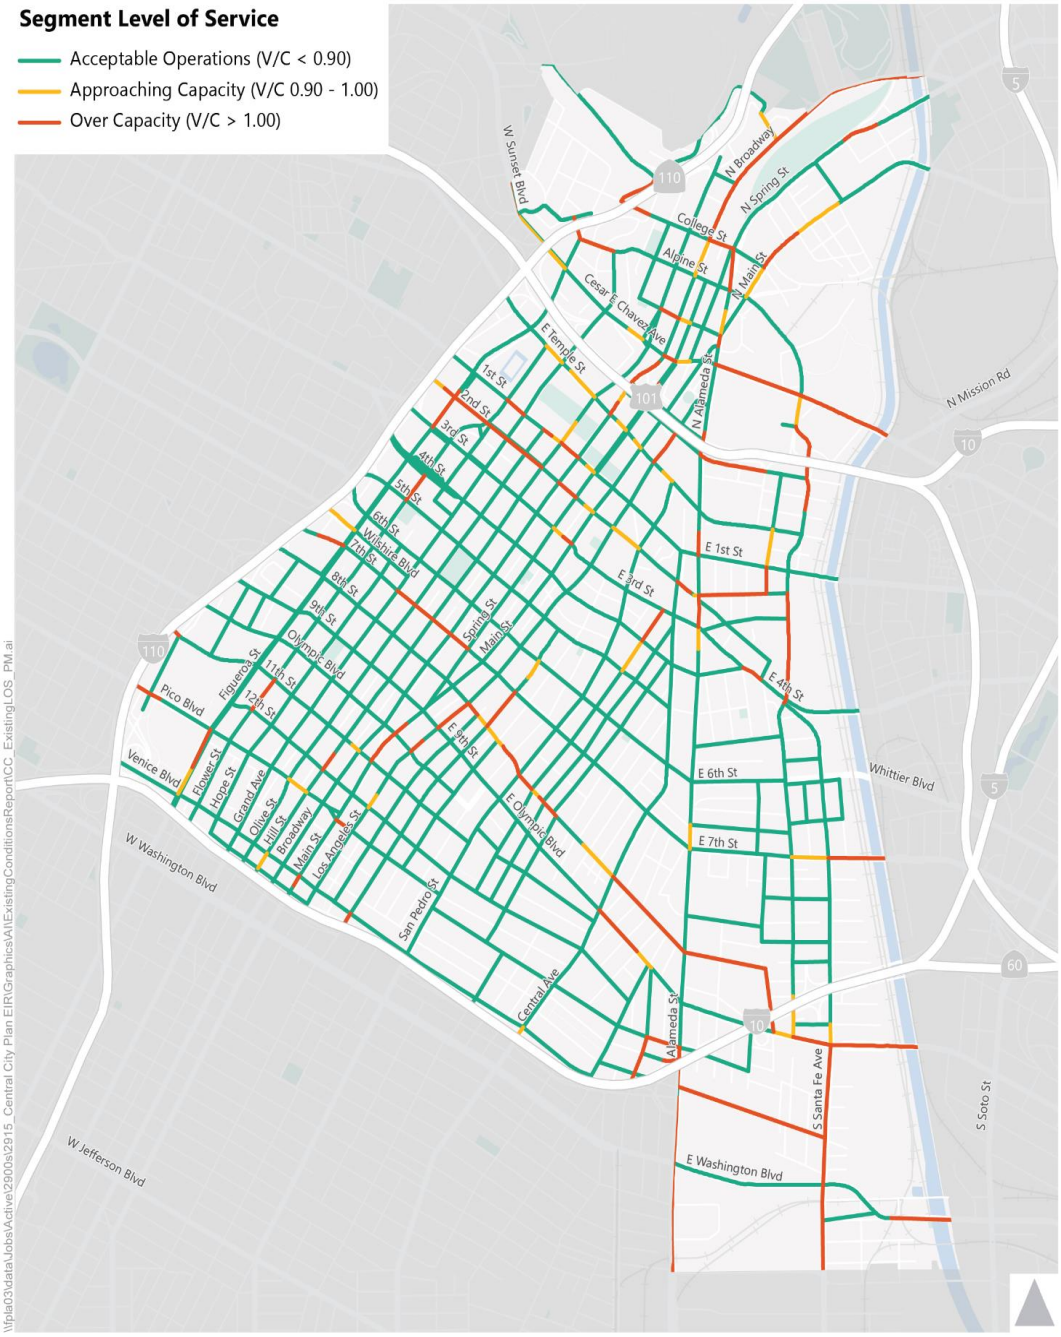

Figure 4.15-3

Existing PM Peak Period Level of Service

Downtown Plan Area Emergency Access

As discussed above, multi-lane roadways allow emergency vehicles to travel at higher speeds and allow other traffic to maneuver out of the path of emergency vehicles. Within the Downtown Plan Area, multi-lane roadways include:

**North-South Multi-Lane Roadways**

- Figueroa Street*
- Flower Street*
- Hope Street
- Grand Avenue
- Olive Street
- Hill Street
- Broadway †
- Spring Street*
- Main Street* †
- Los Angeles Street
- San Pedro Street
- Central Avenue
- Alameda Street

**East-West Multi-Lane Roadways**

- Sunset Boulevard/Cesar Chavez Avenue
- Temple Street
- 1st Street
- 3rd Street*
- 4th Street*
- 5th Street*
- 6th Street*†
- Wilshire Boulevard
- 7th Street
- 8th Street*†
- 9th Street*†
- Olympic Boulevard
- 11th Street*
- 12th Street*
- Pico Boulevard
- Venice Boulevard
- Washington Boulevard

*One-way roadways with multiple lanes
†Roadways with segments that narrow or change from one-way to two-way

Additionally, the US-101, I-110 and I-10 freeways provide primary emergency access to and from locations within the Downtown Plan Area. Secondary emergency access routes include Sunset Boulevard/Cesar Chavez Avenue, 1st Street, Figueroa Street, San Pedro Street, and Alameda Street.

**Table 4.15-6**, following, identifies the existing fire stations in the Plan Area and provides the 2019 average response times for Non-EMS and EMS calls.

**TABLE 4.15-6 LAFD FIRE STATIONS SERVING THE DOWNTOWN PLAN AREA**

| Fire Station | Address | LAFD Community | 2019 Average Response Times (mins) /a/ | |
|---|---|---|---|---|
| | | | Non-EMS | EMS |
| 3 | 108 N Fremont Ave, Los Angeles, CA 90012 | Central Bureau | **06:02** | **06:44** |
| 4 | 450 E Temple St, Los Angeles, CA 90012 | Central Bureau | **6:09** | **6:26** |
| 9 | 430 East 7th Street Los Angeles, CA 90023 CA | Central Bureau | **06:23** | **06:39** |
| 10 | 1335 South Olive Street Los Angeles, CA 90015 CA | Central Bureau | **06:23** | **06:23** |
| 17 | 1601 South Santa Fe Avenue Los Angeles, CA 90021 CA | Central Bureau | **06:23** | **06:39** |

**Note**: Non-EMS = fire and other services; EMS = Emergency Medical Services

## Public Transit Service

Citywide Public Transit Service

The primary origin/destination for transit in Downtown Los Angeles and the city at large is Los Angeles Union Station. Located in the north east portion of the Downtown Plan area, Union Station was built in 1939 to serve as a terminal for local railroads. Today, it serves as a major transportation hub for the region, with Metro, Metrolink, and Amtrak train service, as well as bus service from multiple operators.

Services are provided by multiple transit operators, including Metro Rail, Rapid buses, Express buses, Local buses, LADOT Commuter Express buses, Downtown Area Short Hop (DASH) buses, and other local operators. Below are brief descriptions of the transit operators that provide service within the City:

*Metro*

Metro is the primary transit operator in Los Angeles County, providing bus, light rail, and subway services as described below.

- Rail & Bus Rapid Transit: There are two Metro heavy rail lines (Red and Purple), four Metro light rail lines (Blue, Green, Gold, Expo) and two bus rapid transit (BRT) lines (Orange and Silver) operating in exclusive rights-of-way. Headways for Metro rail and bus rapid transit lines are typically as frequent as 15 minutes or less. Bicycles are allowed in designated areas on Metro trains at no extra charge.
- Rapid, Express & Local Bus Lines: Metro also operates approximately 180 bus routes in mixed traffic, with services varying considerably in speed, frequency and capacity. Headways for Metro Rapid buses are typically 10 minutes during peak hours, and 20 minutes during off-peak times. Metro Express buses operate during peak hours only. All buses are equipped with two bicycle racks at the front of the bus, and bicyclists may load their bicycles on the rack when there is space available at no extra charge. If the rack is full, bicyclists are asked to wait for the next bus.

*LADOT*

LADOT provides local Downtown Area Short Hop (DASH) buses and Commuter Express bus services in the City of Los Angeles. DASH operates 32 community circulator routes covering Downtown Los Angeles and many outlying communities within the City. DASH buses provide local access in addition to first/last-mile connections to and from Metro Rail stations. Headways for DASH buses vary between 5-20 minutes depending on the selected route. The Commuter Express operates 14 routes, making a limited number of stops and transporting passengers between Downtown Los Angeles and other major centers within the City. Most Commuter Express routes operate during the peak hours only in the peak direction. All LADOT buses are equipped with three bicycle racks at the front of the bus, and bicyclists may load their bicycles on the rack when there is space available at no extra charge. If the rack is full, bicyclists are asked to wait for the next bus.

*Metrolink*

Metrolink operates on seven routes across six-counties, including Los Angeles, Orange, Riverside, San Bernardino, Ventura, and a portion of northern San Diego County. Each Metrolink train accommodates three bicycles on the lower level at no extra charge. To accommodate more bicycles on select trains, "bike cars" (identified with yellow decals on the side of the train) have been added to hold up to nine bikes on the lower level. All Metrolink lines operate during the peak hours only in the peak direction. The following Metrolink services operate within and through the City:

- Antelope Valley Line
- Inland Empire – Orange County Line
- Orange County Line
- Riverside Line
- San Bernardino Line
- Ventura County Line
- 91/Perris Valley Line

*Amtrak – Pacific Surfliner*

Amtrak is a nationwide rail network, serving more than 500 destinations in 46 states, the District of Columbia and three Canadian provinces. The Pacific Surfliner, which operates within and through the Downtown Plan Area, connects San Luis Obispo and San Diego through Los Angeles and Santa Barbara. This line offered 11 daily round-trip services between San Diego and Los Angeles as of 2017, and five between Santa Barbara and San Diego. Each Amtrak train can accommodate 6 bicycles per train and must be stored in designated racks. Passengers are recommended to make reservations for bicycle racks at no extra cost.

*LAX FlyAway – Union Station*

The LAX FlyAway buses offer daily, regularly scheduled round-trips between each terminal at LAX and six locations (Hollywood, Long Beach, Orange Line, Union Station, Van Nuys, and Westwood). FlyAway buses provide services every 30 minutes to an hour. Bicycle racks are not provided on these buses. In Downtown Los Angeles, Flyaway buses depart from Union Station at the Patsaouras Transit Plaza on the east side of the facility.

*Other Transit Operators*

There are several other transit operators with routes throughout the City: Antelope Valley Transit Authority, Foothill Transit, Gardena GTrans, Greyhound Buses, Montebello Bus Lines, Orange County Transit Authority Express, Santa Clarita Transit Commuter Express, Santa Monica Big Blue Bus, and Torrance Transit.

Downtown Plan Area Public Transit Service

**Figure 4.15-4**, Existing Transit Service, shows Metro and LADOT transit service coverage in the Downtown Plan Area.

*Metro*

The following Metro lines currently provide transit service in and through the Downtown Plan Area:

**Metro Rail**

- Red Line, Purple Line, Blue Line, Expo Line, Gold Line

**Metro Bus Rapid Transit (with exclusive rights-of-way)**

- Silver Line

**Metro Rapid Lines (in mixed traffic)**

- 704
- 720
- 728
- 733
- 745
- 760
- 770
- 794

**Metro Express Lines (peak-hours only)**

- 442
- 460
- 487/489

**Metro Local Lines**

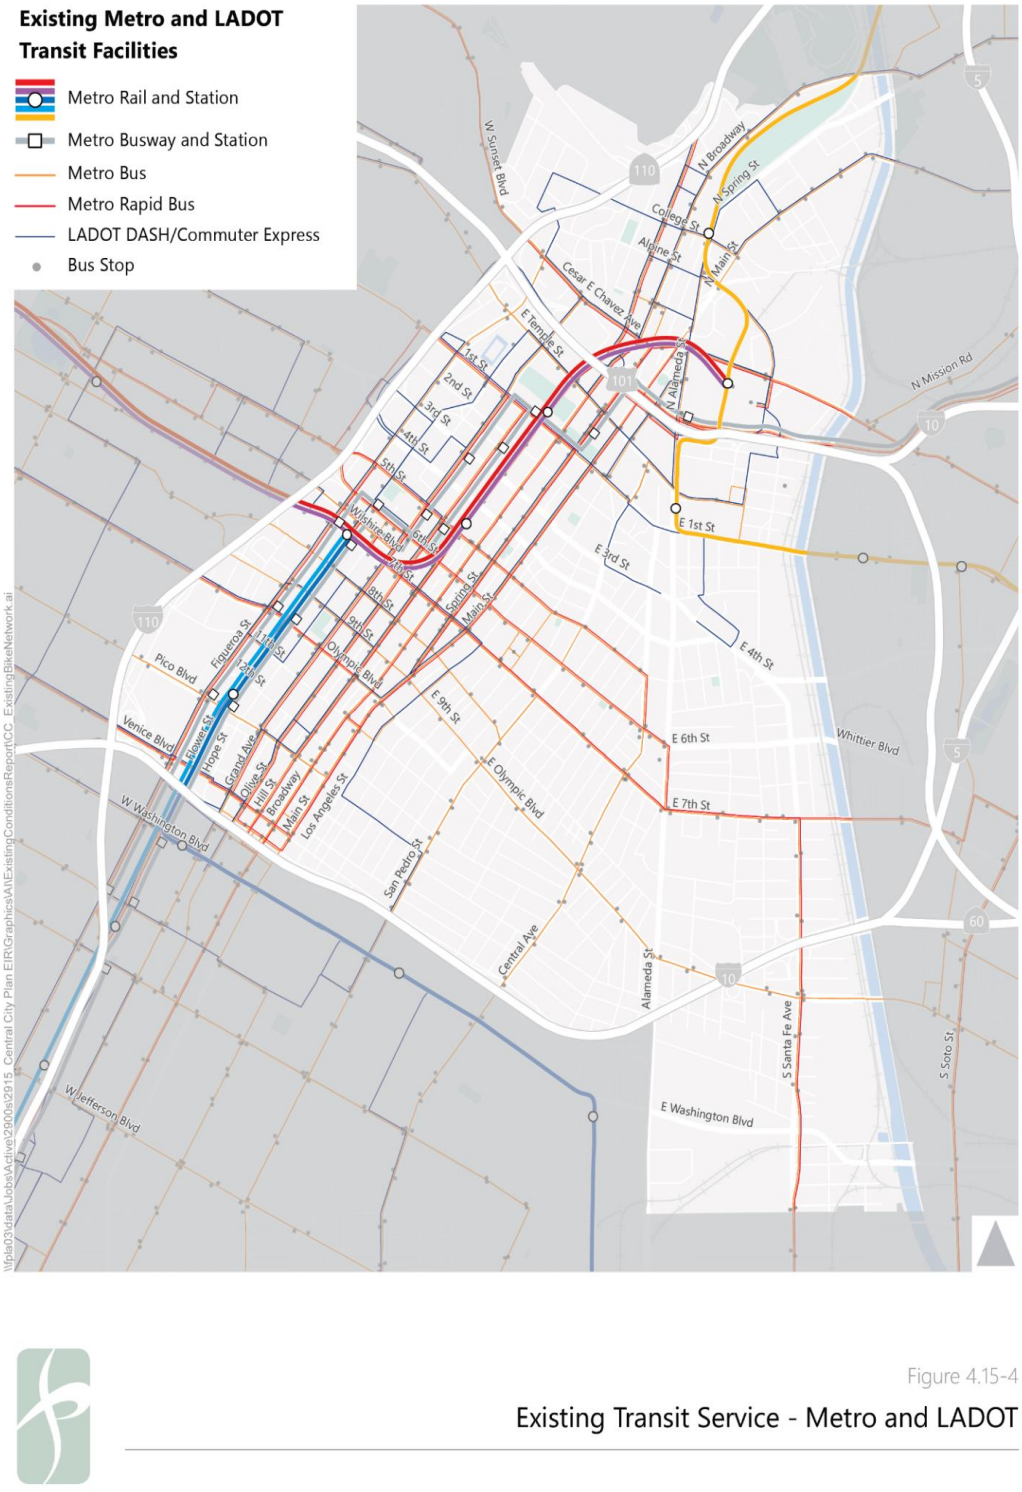
- 2/302
- 4
- 10
- 14
- 16/17/316
- 18
- 20
- 28
- 30/330
- 33
- 35
- 37
- 38
- 40
- 45
- 48
- 51/52/351
- 53
- 55/355
- 60
- 62
- 66
- 68
- 70
- 71
- 76
- 78/79/378
- 81
- 83
- 90/91
- 92
- 94
- 96

*LADOT*

The following LADOT services operate within and through the Downtown Plan Area:

- DASH A (Little Tokyo, City West)
- DASH B (Chinatown, Financial District)
- DASH D (Union Station, South Park)
- DASH E (City West, Fashion District)
- DASH F (Financial District, Exposition Park, USC)
- DASH Lincoln Heights/Chinatown
- DASH Commuter Express 409, 419, 422, 423, 431, 437, 438, 448, 534

**Figure 4.15-4 Existing Transit Service – Metro and LADOT**



Note: This map represents the Existing Conditions year for the purposes of this study as 2017, consistent with the analysis for the scoping year of the project. DASH lines may have since been updated.

*Other Transit Operators*

Other transit operators with routes to and from Downtown Los Angeles include:

- Antelope Valley Transit Authority, Route 785
- Foothill Transit, Lines 493, 495, 497, 498, 499, 699
- Gardena GTrans, Line 1X
- Greyhound Buses, Los Angeles Bus Station
- Montebello Bus Lines, Route 40, 50 and 90
- Orange County Transit Authority Express, Route 701 and 721
- Santa Clarita Transit Commuter Express, Route 799/794
- Santa Monica Big Blue Bus, Rapid 10
- Torrance Transit, Line 4X

## Bicycle and Pedestrian Facilities

Citywide Bicycle and Pedestrian Facilities

The City's existing bicycle network consists of approximately 500 miles of on- and off-street facilities including approximately 58 miles of Class I bikeways (bicycle paths), 324 miles of Class II bikeways (bicycle lanes), and 121 miles of Class III bikeways (bicycle routes and bicycle friendly streets) (City of Los Angeles 2015a). Bicycle facilities are defined as off-street bicycle paths (Class I), on-street signed and striped bicycle lanes (Class II), on-street signed bicycle routes (Class III), and protected bicycle lanes or cycle tracks (Class IV). The design features of the various types of bicycle facilities are summarized below.

- **Bicycle Path:** A paved pathway separated from motorized vehicular traffic by an open space or barrier and either within the highway rights-of-way or within an independent alignment. Bicycle paths may be used by bicyclists, skaters, wheelchairs users, joggers, and other non-motorized users. Caltrans refers to this facility as Class I Bikeway, which "provides a completely separated right-of-way for the exclusive use of bicycles and pedestrians with cross flow of motorists minimized."
- **Buffered Bike Lanes:** Buffered bicycle lanes provide on-street right-of-way in the form of a painted buffer that directs motorists to travel away from the bike lane and provides room for bicyclists to pass another bicyclist without entering the adjacent motor vehicle travel lane. A buffered bicycle lane is considered a Class II bikeway.
- **Bicycle Lane:** A striped lane for 1-way bicycle travel on a street or highway. Caltrans refers to this facility as a Class II bikeway.
- **Bicycle Route:** is a shared roadway specifically identified for use by bicyclists, providing a superior route based on traffic volumes and speeds, street width, directness, and/or cross-street priority, denoted by signs only. Caltrans refers to this facility as a Class III Bikeway.
- **Protected Bicycle Lane (Cycle Track):** A bicycle lane that provides further protection from other travel lanes with a physical roadway intervention. This is considered a Class IV Bikeway.

Pursuant to the California Vehicle Code, bicycles are allowed on any street within the local street system. Pursuant to Los Angeles City Code, bicycles are also allowed on the sidewalk (LAMC 56.15). Bicyclists are able to bring their bikes on board transit in designated areas on Metro trains and on most Metro and LADOT buses on bicycle racks at the front of the bus at no extra cost (City of Los Angeles 2015a). Metrolink and Amtrak also allow bicycles on board.

There are approximately 40,000 intersections in the City, of which 4,300 are signalized and approximately 22,000 contain marked crosswalks (City of Los Angeles 2015a). Conditions vary widely in terms of sidewalk condition, pavement marking visibility, and obstructions in the sidewalk realm. An estimated 42%

of the City's 10,750 miles of sidewalks are in disrepair (Times 2012). In April 2015, the City of Los Angeles agreed to spend $1.3 billion over the next 30 years to fix sidewalks throughout the City and produce two reports per year to document its progress in repairing substandard sidewalks.

Pedestrian travel in the City varies based on the circulation network in any given area. Areas that have pedestrian-oriented uses fronting the sidewalk offer a pedestrian-friendly atmosphere whereas other areas characterized by long blocks fronting surface parking lots and industrial land uses offer little pedestrian amenities. In general, sidewalks range from 10 to 12 feet wide. The City of Los Angeles General Plan designates commercial and neighborhood activity centers that are characterized by ground floor retail and service uses oriented to pedestrians along the sidewalk as Pedestrian Priority Street segments. Pedestrian Priority Street segments are recommended to have wider sidewalks of 15 to 17 feet in width and other pedestrian friendly features such as curb side parking, wide crosswalks with a minimum width of 15 feet, and traffic signal modifications (City of Los Angeles 2015a).

Downtown Plan Area Bicycle and Pedestrian Facilities

The Downtown Plan Area includes of a network of bicycle facilities; pedestrian facilities primarily consist of sidewalks adjacent to roadways. Pedestrian access to transit in the Downtown Plan Area ranks above average for major transit stops/stations in Los Angeles County, with an average rating of 98 out of 100, as reported by WalkScore.com (WalkScore 2018). Walk Score is a company that provides walk scores, transit scores, and bike scores for neighborhoods ranging from 0-100. A walk score is created by assessing the walkability of an area dependent upon how many errands can be completed by foot. Walking routes available in the area are assessed. Amenities with a five-minute walk proximity are scored the highest. Bike scores are created by evaluating available bicycle infrastructure available in an area, frequency of hills, the number of bicycle commuters, and road connectivity. All four components are weighted equally to create a bike score. Bicycle access to major transit stops in the area is less robust, receiving an average score of 78 out of 100, as reported by WalkScore.com. Most roadways are aligned on a grid system providing multiple route options for traveling throughout the Downtown Plan Area.

Within the Downtown Plan Area, there are several existing bicycle facilities in addition to bicycle racks provided at various public and private locations throughout the Downtown Plan Area. **Figure 4.15-5**, Existing Bicycle Network, shows the locations of the existing bicycle facilities within the Downtown Plan Area.

The pedestrian network includes sidewalks, crosswalks, and curb ramps, as well as pedestrian amenities such as street trees and benches in some areas. Similar to many areas in the City, the Downtown Plan Area has an aging network of pedestrian facilities including sidewalks of varying widths. Many areas have pedestrian-friendly features such as curb-side parking, wide crosswalks at most major intersections and traffic signal modifications to ensure longer pedestrian crossing times, where warranted.

**Special Event Transportation Operations**

Citywide Special Event Transportation Operations

Special events such as the Los Angeles Marathon, Chinese New Year Festival & Parade, AIDS/Lifecycle bike ride, CicLAvia, weekly farmers' markets, organized marches, races, block parties and similar events frequently require partial or full closure of city streets, including sidewalks and crosswalks, for periods of several hours to several days at a time.

Downtown Plan Area Special Event Transportation Operations

In addition to Citywide street closures, several destinations within the Downtown Plan Area host special events that attract large crowds. These venues include but are not limited to:

*L.A. LIVE*

L.A. LIVE is a sports and entertainment district that surrounds Staples Center, Microsoft Theater, and the Los Angeles Convention Center. Situated along Figueroa Street, between Olympic Boulevard and Pico Boulevard, the campus is a destination for sports and music venues, with some of the city's iconic restaurants, museums, nightclubs, hotels and movie theaters. Venues include the Microsoft Theater, a 7,100-seat capacity theater for concerts and awards shows, and The Novo by Microsoft, a 2,300-person entertainment and event space. The district provides several parking garage structures for visitors. Specific parking structures are recommended depending on restaurant, movie or event parking.

Visitors are encouraged to take advantage of several transportation options to L.A. LIVE. Access by public transportation include the Metro Blue or Expo Line to Pico Station or the Metro Red or Purple Line to 7th St/Metro Center Station. Metro Bus lines 30, 81, 442, 260, the Silver Line, and DASH Bus Route F provide services that stop near the district. Free connections to the Metro bus and rail lines for Metrolink riders is provided on weekends. For bicyclists, bike racks are available in the East Garage, located at Olympic Blvd and Francisco Street.

*STAPLES Center*

The STAPLES Center, located at 1111 S Figueroa Street, is most notable as the home of four professional sports franchises—NBA's Los Angeles Lakers and Los Angeles Clippers, NHL's Los Angeles Kings, and WNBA's Los Angeles Sparks. With a seating capacity of 20,000, the arena has also been known to host several high-profile events ranging from professional sports, live music, family shows, boxing and special events. It puts on approximately 250 events and attracts over 4 million guests annually. There are 3,300 on-site parking spaces at STAPLES Center-owned parking lots, and additional parking is available on nearby lots within a short walking distance. These lots may also be shared by L.A. LIVE visitors. Public transportation access for the STAPLES Center visitors is similar for those visiting L.A. Live.

*Los Angeles Convention Center*

The Los Angeles Convention Center (LACC) located at 1201 South Figueroa Street is a leading destination for conventions, trade shows, and exhibitions that hosts approximately 350 events and attracts more than 2 million visitors annually. The LACC complex is incorporated into the L.A. Live entertainment campus and has been known to host several high-profile entertainment events, including the Emmy Awards Governors Ball, the Grammy Awards Celebration, and the BET Experience. Situated where the I-110 and I-10 freeways meet, LACC provides convenient access by car with 5,400 available on-site parking spaces, with additional parking available in surrounding structures and surface lots shared by L.A. LIVE visitors. Public transportation access for LACC visitors is similar for those visiting L.A. Live.

*Los Angeles State Historic Park*

Los Angeles State Historic Park is located at 1245 North Spring Street and sits on 34 acres of open space directly adjacent to Chinatown. Reopened in April 2017, the park continues to host several outdoor concerts, weekend-long music festivals, evening movie screenings, educational events and exhibitions, craft fairs, and other special events. Additionally, visitors just wishing to enjoy the park can wander and hike its pathways, go for a bike ride, and enjoy a view of Downtown.

The park is accessible by the Metro Gold Line to the Chinatown stop, and Metro Bus lines 76 (Main & Anne stop), 84, 83, and 81. By car, nearby on-street parking and off-street lots are available.

**Figure 4.15-5 Existing Bicycle Network**

Figure 4.15-5
Existing Bicycle Network

*Civic Center*

The Civic Center includes the Los Angeles Street Civic Building, Los Angeles City Hall, the Los Angeles Police Department Headquarters, the Los Angeles Department of Transportation, and the United States District Courthouse, Metro Detention Center, Japanese American National Museum, Geffen Contemporary, and Los Angeles Fire Station No. 4. Civic Center primarily serves government employees but includes museums within its vicinity.

Civic Center is accessible by Metro Red and Purple Lines, multiple Metro bus lines, LADOT Commuter Express, DASH, Foothill Transit, Torrance Transit, and Antelope Valley Transit Authority bus lines.

*Pershing Square*

Pershing Square located at 532 South Olive Street is a small public park on square block in size in downtown Los Angeles. Pershing Square hosts a variety of public events, including an eight-week free summer concert series, an annual outdoor ice skating rink November through January of each year, and an outdoor farmer's market on Wednesdays.

Pershing Square is accessible by Metro Red and Purple Lines, Metro bus lines, DASH, Foothill Transit, and the Antelope Valley Transit Authority bus lines.

*Grand Park*

Grand Park is located at 200 N Grand Avenue and sits on 12 acres of open space directly adjacent to Los Angeles City Hall. Grand Park is divided into four distinct areas featuring amenities such as restored historic Arthur J. Will Memorial Fountain with a new wade-able membrane pool, a small intimate performance lawn, a community terrace, and a grand event lawn.

Grand Park is accessible by Metro Red and Purple Lines, Metro bus lines, DASH, Foothill Transit, and the Antelope Valley Transit Authority bus lines.

*Olympics 2028*

The City of Los Angeles has agreed to host the 2028 Olympic and Paralympic Games. Los Angeles will maximize its existing sports infrastructure all over the city to ensure a sustainable long-term impact on the city. The City of Los Angeles had a goal of completing twenty-eight new transportation infrastructure by 2028.

# REGULATORY FRAMEWORK

## FEDERAL

### Americans with Disabilities (ADA) Act of 1990

Titles I, II, III, and V of the ADA have been codified in Title 42 of the United States Code, beginning at Section 12101. Title III prohibits discrimination based on disability in "places of public accommodation" (businesses and non-profit agencies that serve the public) and "commercial facilities" (other businesses). The regulation includes Appendix A through Part 36 (Standards for Accessible Design), establishing minimum standards for ensuring accessibility when designing and constructing a new facility or altering an existing facility. Examples of key guidelines include detectable warnings for pedestrians entering traffic where there is no curb, a clear zone of 48 inches for the pedestrian travel way, and a vibration-free zone for pedestrians.

## STATE

### Complete Streets Act

Assembly Bill 1358, the Complete Streets Act (Government Code Sections 65040.2 and 65302), was signed into law by Governor Arnold Schwarzenegger in September 2008. As of January 1, 2011, the law requires cities and counties, when updating the part of a local general plan that addresses roadways and traffic flows, to ensure that those plans account for the needs of all roadway users. Specifically, the legislation requires cities and counties to ensure that local roads and streets adequately accommodate the needs of bicyclists, pedestrians and transit riders, as well as motorists.

At the same time, the California Department of Transportation (Caltrans), which administers transportation programming for the State, unveiled a revised version of Deputy Directive 64 (DD-64-R1 October 2008), an internal policy document that now explicitly embraces Complete Streets as the policy covering all phases of state highway projects, from planning to construction to maintenance and repair.

### Complete Streets Directive

California Department of Transportation (Caltrans) enacted Complete Streets: Integrating the Transportation System (Complete Streets Directive) in October 2008, which required cities to plan for a "balanced, multimodal transportation network that meets the needs of all users of streets" (Caltrans 2014a). A complete street is a transportation facility that is planned, designed, operated, and maintained to provide safe mobility for all users, including bicyclists, pedestrians, transit vehicles, truckers, and motorists, appropriate to the function and context of the facility. Every complete street looks different, according to its context, community preferences, the types of road users, and their needs.

### Statewide Transportation Improvement Program (STIP)

Caltrans administers transportation programming for the State. Transportation programming is the public decision-making process that sets priorities and funds projects envisioned in long-range transportation plans. It commits expected revenues over a multi-year period to transportation projects. The STIP is a multi-year capital improvement program of transportation projects on and off the State Highway System, funded with revenues from the State Highway Account and other funding sources.

## Senate Bill (SB) 743

SB 743 directs the Office of Planning and Research (OPR) to develop revisions to the California Environmental Quality Act (CEQA) Guidelines by July 1, 2014 to establish new criteria for determining the significance of transportation impacts and define alternative metrics for traffic LOS. On September 27, 2013, California Governor Jerry Brown signed SB 743 into law and started a process that changes transportation impact analysis as part of CEQA compliance. These changes will include elimination of auto delay, level of service (LOS), and other similar measures of vehicular capacity or traffic congestion as a basis for determining significant impacts for land use projects and plans in California. Further, parking impacts are not considered significant impacts on the environment for particular types of development projects within certain infill areas with nearby frequent transit service. According to the legislative intent contained in SB 743, these changes to current practice were necessary to "…more appropriately balance the needs of congestion management with statewide goals related to infill development, promotion of public health through active transportation, and reduction of greenhouse gas emissions."

On January 20, 2016, OPR released the Revised Proposal on Updates to the CEQA Guidelines on Evaluating Transportation Impacts in CEQA, which was an update to Updating Transportation Impacts Analysis in the CEQA Guidelines, Preliminary Discussion Draft of Updates to the CEQA Guidelines Implementing Senate Bill 743, which had been released August 6, 2014.

In November 2017, OPR submitted the final guidelines to the Natural Resources Agency. The subsequent "rulemaking" process took just over one year, with the guidelines certified and adopted in December 2018. SB 743 will now go into effect, with agencies having an opt-in period until July 1, 2020.

## Parking Cash Out

Assembly Bill (AB) 2109, is a state law requiring employers of 50 or more employees who lease their parking and subsidize any part of their employee parking to offer their employees the opportunity to give up their parking space and rideshare to work instead. In return for giving up their parking space, the employer pays the employee the cost of the parking space.

## Assembly Bill 32 (AB32) and Senate Bill 375 (SB 375)

With the passage of AB 32, the Global Warming Solutions Act of 2006, the State of California committed itself to reducing statewide greenhouse gas (GHG) emissions to 1990 levels by 2020. The California Air Resources Board (California ARB) is coordinating the response to comply with AB 32.

On December 11, 2008, California ARB adopted its Proposed Scoping Plan for AB 32. This scoping plan included the approval of SB 375 as the means for achieving regional transportation-related GHG targets. SB 375 provides guidance on how curbing emissions from cars and light trucks can help the state comply with AB 32.

There are five major components to SB 375. First, regional GHG emissions targets: California ARB's Regional Targets Advisory Committee guides the adoption of targets to be met by 2020 and 2035 for each Metropolitan Planning Organization (MPO) in the state. These targets, which MPOs may propose themselves, are updated every eight years in conjunction with the revision schedule of housing and transportation elements.

Second, MPOs are required to prepare a Sustainable Communities Strategy (SCS) that provides a plan for meeting regional targets. The SCS and the Regional Transportation Plan (RTP) must be consistent with each other, including action items and financing decisions. If the SCS does not meet the regional target, the MPO must produce an Alternative Planning Strategy that details an alternative plan to meet the target.

Third, SB 375 requires that regional housing elements and transportation plans be synchronized on 8-year schedules. In addition, Regional Housing Needs Assessment (RHNA) allocation numbers must conform to the SCS. If local jurisdictions are required to rezone land as a result of changes in the housing element, rezoning must take place within three years.

Fourth, SB 375 provides CEQA streamlining incentives for preferred development types. Certain residential or mixed-use projects qualify if they conform to the SCS. Transit-oriented developments (TODs) also qualify if they (1) are at least 50% residential, (2) meet density requirements, and (3) are within 0.5 mile of a transit stop. The degree of CEQA streamlining is based on the degree of compliance with these development preferences.

Finally, MPOs must use transportation and air emissions modeling techniques consistent with guidelines prepared by the California Transportation Commission (CTC). Regional Transportation Planning Agencies, cities, and counties are encouraged, but not required, to use travel demand models consistent with the CTC guidelines.

### California Vehicle Code (CVC)

The CVC provides requirements for ensuring emergency vehicle access regardless of traffic conditions. Sections 21806(a)(1), 21806(a)(2), and 21806(c) define how motorists and pedestrians are required to yield the right-of-way to emergency vehicles.

## REGIONAL

A number of regional improvement plans affect transportation in the City of Los Angeles. They include the Los Angeles County Congestion Management Program (CMP) and the Long Range Transportation Plan (LRTP) prepared by Los Angeles County Metropolitan Transportation Authority (Metro), the RTP/SCS, the Regional Transportation Improvement Plan (RTIP), prepared by the Southern California Association of Governments (SCAG), and the City of Los Angeles General Plan, which includes the Mobility Plan 2035.

### Metro 2009 Long Range Transportation Plan

The 2009 LRTP includes funding for general categories of improvements, such as Arterial Improvements, Non-motorized Transportation, Rideshare and Other Incentive Programs, Park-and-Ride Lot Expansion, and Intelligent Transportation System (ITS) improvements for which Call for Project Applications can be submitted for projects in Los Angeles County. Metro also has a Short Range Transportation Plan to define the near-term (through year 2024) transportation priorities in Los Angeles County. In addition to the regional transportation plans, Metro has recently adopted a Complete Streets Policy and a First Last Mile Strategic Plan.

### Metro Complete Streets Policy

Metro's recently adopted Complete Streets policy is reinforcing the California Complete Streets Act (AB 1358). Effective January 1, 2017, Metro is requiring that all local jurisdictions within LA County must adopt a Complete Streets Policy, an adopted city council resolution supporting Complete Streets, or an adopted general plan consistent with the California Complete Streets Act of 2008 in order to be eligible for Metro capital grant funding programs, starting with the 2017 grant cycles.

### Metro Short Range Transportation Plan (SRTP)

The 2014 Metro SRTP is a 10-year action plan that guides future Metro programs and projects through 2024 and advances Metro towards the long-term goals identified in the 2009 Metro LRTP. The SRTP identifies the short-term challenges, provides an analysis of our financial resources, proposes action plans

for the public transportation and highway modes, and includes other project and program initiatives. In addition, it addresses sustainability, future funding strategies, and lastly, measures the Plan's performance (Metro 2014).

### Southern California Association of Governments 2016-2040 Regional Transportation Plan and Sustainable Communities Strategy and Regional Transportation Improvement Program.

SCAG adopted the 2016-2040 RTP/SCS in April 2016. The RTP/SCS is a planning document required under state and federal statute that encompasses the SCAG region, including six counties: Los Angeles, Orange, San Bernardino, Riverside, Ventura, and Imperial. The RTP/SCS forecasts long-term transportation demands and identifies policies, actions, and funding sources to accommodate these demands. The RTP/SCS consists of the construction of new transportation facilities, transportation systems management strategies, transportation demand management and land use strategies. The RTIP, also prepared by SCAG based on the RTP/SCS, lists all of the regional funded/programmed improvements over a 6-year period.

## LOCAL

### City of Los Angeles General Plan Framework and Safety Elements

The Citywide General Plan Framework (Framework), an element of the City of Los Angeles General Plan, is a guide for Community Plans to implement growth and development policies by providing a comprehensive long-range view of the City as a whole. It provides a comprehensive strategy for accommodating long-term growth should it occur as predicted. Chapter 9 Infrastructure and Public Services of the Framework Element addresses fire prevention, fire protection and emergency medical services provided to the City. The Safety Element of the General Plan identifies existing police, fire, and emergency services and the service needs of the City of Los Angeles in the event of a natural disaster. The Safety Element goals, objectives, policies, and programs are broadly stated to reflect the comprehensive scope of the Emergency Operations Organization (EOO), which is the program that implements the Safety Element. The Framework and Safety Elements include goals, objectives, and policies that are applicable to emergency services.

### Los Angeles Municipal Code

LAMC Section 12.26 contains required Transportation Demand Management (TDM) and Trip Reduction Measures. TDM is defined as the alteration of travel behavior through programs of incentives, services, and policies, including encouraging the use of alternatives to single-occupant vehicles such as public transit, cycling, walking, carpooling/vanpooling and changes in work schedule that move trips out of the peak period or eliminate them altogether (as in the case in telecommuting or compressed work weeks). Trip Reduction is defined as reduction in the number of work-related trips made by single-occupant vehicles. Specific requirements for developments of various sizes are summarized from the code below:

- Development in excess of 25,000 square feet of gross floor area shall provide a bulletin board, display case, or kiosk (displaying transportation information) where the greatest numbers of employees are likely to see it. The transportation information displayed should include, but is not limited to current routes and schedules for public transit serving the site; telephone numbers for referrals on transportation information including numbers for the regional ridesharing agency and local transit operations; ridesharing promotion material supplied by commuter-oriented organizations; regional/local bicycle route and facility information; and a listing of on-site services or facilities that are available for carpoolers, vanpoolers, bicyclists, and transit riders.

- Development in excess of 50,000 square feet of gross floor area shall provide the above plus: (1) designated parking areas for employee carpools and vanpools as close as practical to the main pedestrian entrance(s) of the building(s); (2) one permanent, clearly identified (signed and striped) carpool/vanpool parking space for the first 50,000 to 100,000 square feet of gross floor area and one additional permanent, clearly identified (signed and striped) carpool/vanpool parking space for any development over 100,000 square feet of gross floor area; and (3) parking spaces clearly identified (signed and striped) shall be provided in the designated carpool/vanpool parking area at any time during the building's occupancy sufficient to meet employee demand for such spaces. Absent such demand, parking spaces within the designated carpool/vanpool parking area may be used by other vehicles and other amenities.
- Development in excess of 100,000 square feet of gross floor area shall provide the above plus: (1) a safe and convenient area in which carpool/vanpool vehicles may load and unload passengers other than in their assigned parking area; (2) sidewalks or other designated pathways following direct and safe routes from the external pedestrian circulation system to each building in the development; (3) possible bus stop improvements; and (4) safe and convenient access from the external circulation system to bicycle parking facilities on-site.
- The LAMC is currently undergoing a comprehensive update to all Zoning Code sections as part of the re:code LA effort. re:code LA, which started in 2013 and will continue through 2020, will update the Zoning Code to make the Code more streamlined, visual, and easy to use. The existing Zoning Code regulations are not being repealed as part of this Project. The existing Zoning Code will continue to be located in Chapter 1 of the Los Angeles Municipal Code, while the New Zoning Code will be located in a new Chapter 1A of the Los Angeles Municipal Code. Relevant components of re:code LA are described in detail in Chapter 3.0, *Project Description*.

## City of Los Angeles Mobility Plan 2035

The City updated the Transportation Element of the City's General Plan, now referred to as Mobility Plan 2035 or MP 2035, to reflect policies and programs that lay the policy foundation for safe, accessible, and enjoyable streets for pedestrians, bicyclists, transit users, and vehicles throughout the City of Los Angeles. The MP 2035 and Final EIR were adopted on August 11, 2015. MP 2035 is compliant with the 2008 Complete Streets Act (AB 1358), which mandates that the circulation element of a city's General Plan be modified to plan for a balanced, multimodal transportation network that meets the needs of all users of streets, roads, and highways, defined to include motorists, pedestrians, bicyclists, children, persons with disabilities, seniors, movers of commercial goods, and users of public transportation, in a manner that is suitable to the rural, suburban, or urban context of the general plan. The goals and objectives of MP 2035 that are relevant to the Proposed Project are as follows:

- **Safety First:** focuses on topics related to crashes, speed, protection, security, safety, education, and enforcement.
    - Objective: Vision Zero: Decrease transportation related fatality rate to zero by 2035.
- **World Class Infrastructure:** focuses on topics related to the Complete Streets Network (walking, bicycling, transit, vehicles, green streets, and goods movement), Great Streets, Bridges, Street Design Manual, and demand management.
    - Objective: Provide 95% on-time arrival reliability of buses traveling on the Transit Enhanced Network by 2035. Establish an off-peak 5-minute bus frequency on 25% of the Transit Enhanced Network by 2035.
    - Objective: Increase vehicular travel time reliability on all segments of the Vehicle Enhanced Network by 2035.

  - Objective: Maintain the Automated Traffic Control Surveillance and Control System (ATSAC) Communications Network.
- **Access for all Angelenos**: focuses on topics related to affordability, least cost transportation, land use, operations, reliability, demand management, and community connections.
  - Objective: Ensure that 90% of households are within one mile of the Transit Enhanced Network by 2035.
  - Objective: Ensure that 90% of all households have access within one-half mile of high quality bicycling* facilities by 2035 (*protected bicycle lanes, paths, and neighborhood enhanced streets).
  - Objective: Increase the combined mode split of persons who travel by walking, bicycling or transit to 50% by 2035.
- **Collaboration, Communication & Informed Choices:** focuses on topics related to real-time information, open source data, transparency, monitoring, reporting, emergency response, departmental and agency cooperation and data base management.
  - Objective: Install street parking occupancy-detection capability at 50% of on-street parking locations by 2035.
  - Objective: Implement coordinated wayfinding at all major transit stations by 2035.
- **Clean Environment and Healthy Communities:** focuses on topics related to environment, health, clean air, clean fuels and fleets, and open street events.
  - Objective: Decrease vehicle miles traveled (VMT) per capita by 5% every five years, to 20% by 2035.
  - Objective: Meet a 9% per capita GHG reduction for 2020 and a 16% per capita reduction for 2035 (SCAG RTP).
  - Objective: Reduce the number of unhealthy air quality days to zero by 2025.

California's Complete Streets Act (AB 1358) was signed into law in 2008 and mandates that complete street policies and standards be incorporated into a city's general plan. The idea behind Complete Streets is to make streets safe, comfortable, and convenient for people of all mode types. Mobility Plan 2035 also sets forth street designations and related standards in a Complete Street Design Guide. The Guide provides a compilation of design concepts and best practices that promote the major tenets of Complete Streets, safety and accessibility. The Guide is not meant to supersede existing technical standards provided for in other City or national manuals. Rather, it is meant to supplement existing engineering practices and requirements in order to meet the goals of Complete Streets.

Due to specific site and operational characteristics associated with any given street, any proposed street improvement project must still undergo detailed technical analyses by the appropriate city departments. Overall, this Design Guide will indoctrinate the concept of Complete Streets into Los Angeles' present and future street design so that all stakeholders are able to plan for, implement, and maintain safe and accessible streets for everyone.

## Great Streets for Los Angeles/LADOT Strategic Plan

In September 2014, the Mayor's Office and LADOT released the Great Streets for Los Angeles, LADOT's first strategic plan to turn the city's essential infrastructure -- its streets and sidewalks -- into safer, more livable 21st century public spaces that accommodate everyone who uses them. The plan builds upon Mayor Garcetti's Great Streets Initiative, which looks at Los Angeles's streets as valuable assets that can help revitalize neighborhoods across the City and make it easier for Angelenos to get around whether they walk,

bike, drive, or take transit. The plan also stresses the importance of working closely with other city and regional agencies, such as the Bureau of Street Services and Metro, to improve safe, accessible transportation services and infrastructure.

The plan focuses on Mayor Garcetti's priorities of making the city safe, prosperous, and livable with a well-run government and includes the following key goals:

- **Vision Zero:** Eliminate traffic deaths by 2025 and design streets to increase the safety of pedestrians, including adding 100 new high-visibility continental crosswalks.
- **Great Streets:** Implement changes to the 15 Great Street corridors and launch programs to reduce dangerous speeding in residential neighborhoods. Increase bike infrastructure and launch a regional bikeshare program. Expand bus service and improve its quality and connectivity with surrounding neighborhoods.
- **A 21st Century DOT:** Streamline LADOT's operations to implement needed safety and mobility projects quickly and efficiently. Enhance technologies to manage traffic, meters, and parking operations.
- **World-Class Streets for a World-Class Economy:** Real-time traffic information and more efficient allocation of the street to support local foot traffic and better manage freight traffic. Build Great Streets for vibrant and prosperous neighborhood business districts.

## Los Angeles Department of Transportation (LADOT)

As part of project review, LADOT determines whether a project requires a traffic study and evaluates project site plans to ensure that they follow standard engineering practice and City design regulations. In 2019, LADOT published the Transportation Assessment Guidelines (TAG) to effectuate a review process that advances the City's vision of developing a safe, accessible, well-maintained, and well-connected multimodal transportation network. The TAG to replaces the former Transportation Impacts Study Guidelines to clarify the new transportation impact methodology using vehicle miles traveled (VMT). On July 30, 2019, the City adopted VMT as the transportation impact criteria under CEQA in compliance with SB 743.

The TAG establishes the methodology that transportation planning practitioners are to follow to understand VMT impacts of land use and transportation investment decisions. Through the TAG, LADOT also provides direction on to evaluate potential operational constraints that land use projects may impose on circulation, access, and safety, and how to address those constraints so that LADOT can deliver a safe, livable, and well-run transportation system in the city and region.

## Los Angeles Fire Department (LAFD) Strategic Plan 2018-2020

The Strategic Plan focuses on nine goals and corresponding strategic actions that guide the LAFD. The primary goals that apply to the Proposed Project include providing exceptional public safety and emergency service and implementing and capitalizing on advanced technologies. Some of the key priorities associated with these goals include:

- Improving response times by utilizing data and metrics to identify gaps in LAFD's response strategies and exploring response time improvements through dialogue, cognitive inquiry, innovation, and follow-up;
- Delivery of emergency medical services by expanding LAFD Emergency Medical Service (EMS) response capabilities for special events and addressing period of high vehicle traffic; and

- Implementing advanced technologies by developing performance metrics, tracking standards, data collection, analysis and reporting procedures (FireStatLA).
- The Strategic Plan also focuses on the development of an even more professional workforce and promotion of a positive work environment to address risk management issues and strengthening community relationships to improve preparedness and enhance resiliency during emergency events.

# ENVIRONMENTAL IMPACTS

This section explains the metrics used to measure the impacts of the Proposed Project to VMT. The metrics used are from the proposed CEQA Guidelines from the California State Office of Planning and Research (OPR) from December 2018.

## HISTORY

Senate Bill 743 directed OPR to "prepare, develop, and transmit to the Secretary of the Natural Resources Agency for certification and adoption proposed revisions to the guidelines adopted pursuant to Section 21083 establishing criteria for determining the significance of transportation impacts of projects within transit priority areas… Upon certification of the guidelines by the Secretary of the Natural Resources Agency pursuant to this section, automobile delay, as described solely by LOS or similar measures of vehicular capacity or traffic congestion within a transit priority area, shall not support a finding of significance pursuant to this division…"[3]

On January 20, 2016, OPR updated the CEQA Guidelines "Revised Proposal on Updates to the CEQA Guidelines on Evaluating Transportation Impacts in CEQA," the evaluation of vehicle miles traveled (VMT) was recognized as "generally the most appropriate measure of transportation impacts." OPR also states that lead agencies may tailor their analysis to include other measures.

On November 2017, OPR proposed a new section, 15064.3, to help determine the significance of transportation impacts. This section was updated July 2, 2018 and finalized on December 28, 2018 with criteria for analyzing transportation impacts and is seen below in the section *Thresholds of Significance*. Its purpose is to describe specific elements for considering the transportation impacts of a given project given the use of VMT as the primary measurement.

Per the guidance from OPR, "a lead agency may elect to be governed by the provisions of this section immediately. Beginning on July 1, 2020, the provisions of this section shall apply statewide" (CNRA 2018). In order to comply with the guidelines understood to become the standard in our state, this EIR evaluates vehicle trips and VMT consistent with the intent of SB 743. This EIR also includes vehicular level of service (LOS) for its primary impacts for historical comparison and informational purposes. As discussed below, it is also considered for its secondary impacts to emergency services under Threshold 4.15-4.

### PERFORMANCE METRICS

The current metrics shift the focus from level of service (LOS) to vehicle trips (VT) and vehicle miles traveled (VMT). These are defined as follows, with methodology specifics outlined in the following *Methodology* section:

**Vehicle Trips (VT).** VT are defined as the number of trips undertaken in an automobile, such as in single occupancy vehicles, private automobiles, and vehicles that contain two or more travelers, such as carpools,

[3] SB 743, 2013-2014 CA State Cong. § 386 (2013)

taxis, or ride-share vehicles. A reduction in VT over time can be used as an indicator of reduced reliance on the automobile as well as an indicator of more travel by carpools.

**Vehicle Miles Traveled (VMT).** VMT is a measurement of miles traveled (e.g., private automobiles, trucks and buses) by all land uses (e.g., residential, retail, office) in the Downtown Plan Area. To compare scenarios, VMT per service population is used. A reduction in VMT overall and in VMT per service population can be used as an indicator of reduced reliance on vehicular travel, primarily by private automobiles.

**Service Population.** Service Population is the sum of population and employment. It is used in this study to represent both residents and employees. Some VMT metrics focus on VMT per capita and VMT per employee as separate markers of these indications; however, VMT per service population showcases the effects of all vehicular movement in an area. It includes not only trips that are attracted and produced by home and work trips, but those that fit in neither category (i.e. school to grocery store) as well as truck trips. It is therefore more representative of the effect of users and trips on the roadways in this CPA.

# THRESHOLDS OF SIGNIFICANCE

In accordance with Appendix G of the aforementioned CEQA Guidelines, the Proposed Project would have a significant impact related to transportation if it would:

- Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadways, bicycle and pedestrian facilities (Threshold 4.15-1).
- Conflict or be inconsistent with CEQA Guidelines Section 15064.3, Subdivision (b) (Threshold 4.15-2).
- Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment) (Threshold 4.15-3).
- Result in inadequate emergency access (Threshold 4.15-4).

Text of CEQA Guidelines Section 15064.3, Subdivision (b):

***Land Use Projects.*** *Vehicle miles traveled exceeding an applicable threshold of significance may indicate a significant impact. Generally, projects within one-half mile of either an existing major transit stop or a stop along an existing high-quality transit corridor should be presumed to cause a less than significant transportation impact. Projects that decrease vehicle miles traveled in the project area compared to existing conditions should be presumed to have a less than significant transportation impact.*

***Transportation Projects.*** *Transportation projects that reduce, or have no impact on, vehicle miles traveled should be presumed to cause a less than significant transportation impact. For roadway capacity projects, agencies have discretion to determine the appropriate measure of transportation impact consistent with CEQA and other applicable requirements. To the extent that such impacts have already been adequately addressed at a programmatic level, such as in a regional transportation plan EIR, a lead agency may tier from that analysis as provided in Section 15152.*

***Qualitative Analysis.*** *If existing models or methods are not available to estimate the vehicle miles traveled for the particular project being considered, a lead agency may analyze the project's vehicle miles traveled qualitatively. Such a qualitative analysis would evaluate factors such as the availability of transit, proximity to other destinations, etc. For many projects, a qualitative analysis of construction traffic may be appropriate.*

***Methodology.*** *A lead agency has discretion to choose the most appropriate methodology to evaluate a project's vehicle miles traveled, including whether to express the change in absolute terms, per capita, per household or in any other measure. A lead agency may use models to estimate a project's vehicle miles traveled, and may revise those estimates to reflect professional judgment based on substantial evidence. Any assumptions used to estimate vehicle miles traveled and any revisions to model outputs should be documented and explained in the environmental document prepared for the project. The standard of adequacy in Section 15151 shall apply to the analysis described in this section.*

The Proposed Project would have an impact related to transportation if it would result in VMT per service population that exceeded an applicable threshold of significance. OPR recommends that a per capita or per employee VMT that is fifteen percent below that of existing development regionally may be a reasonable threshold. However, the "region" identified for the City of Los Angeles is the six-county SCAG region, which is very large and not representative of the Downtown Plan area. Holding this Plan Area to that as a threshold would not accurately disclose a relevant change in VMT outputs to the Plan, as it is significantly lower than the region's VMT already. Additionally, the use of per capita and per employee is not as representative of all travel in the area as per service population. As "CEQA generally defers to lead agencies on the choice of methodology to analyze impacts" (OPR 2018), the City of Los Angeles is choosing to use the following as part of a two-pronged threshold:

- The Proposed Project would result in average total VMT per service population in the plan horizon year that exceeds 15% below the regional average total VMT per service population from the most recent regional metric available.
- The Proposed Project would result in average total VMT per service population in the plan horizon year that exceeds the average total VMT per service population for the "project area" for the baseline year.

# METHODOLOGY

The transportation analysis for the Downtown Plan component of the Proposed Project has been developed through a process that includes the use of the City of Los Angeles Travel Demand Forecasting (TDF) Model and developing the Downtown Subarea Travel Demand Forecasting (TDF) Model for the analysis of the 2017 baseline year and the future 2040 scenario, as well as the use of the SCAG TDF Model for the analysis of the 2016 SCAG RTP/SCS to represent the region. This *Methodology* section describes the procedures used to assess impacts on the transportation system. It includes an overall discussion of methodology and assumptions, followed by a discussion of how the Proposed Project is expected to perform in comparison to the thresholds described above. Citywide impacts of the New Zoning Code are assessed qualitatively for each threshold.

## Study Area and Reporting Framework

The Downtown Plan Area is defined by the boundaries of the Central City and Central City North Community Plan Areas in the City of Los Angeles, as shown in **Figure 4.15-6**. This study is defined by the potential impacts of the Proposed Project to transportation and its related elements in the study area, which includes the CPA, the City, and the surrounding areas.

## VMT Methodology

In order to determine whether the socio-economic and transportation network included in the Downtown Plan would result in an impact (as outlined in the *Environmental Impacts* section previously), VMT calculated for 2017 Baseline and 2016 SCAG Region is compared to the 2040 Downtown Plan. This is calculated using the following outputs from the City of Los Angeles, Downtown Subarea, and SCAG TDF Models.

**Figure 4.15-6 Central City and Central City North Community Plan Areas**

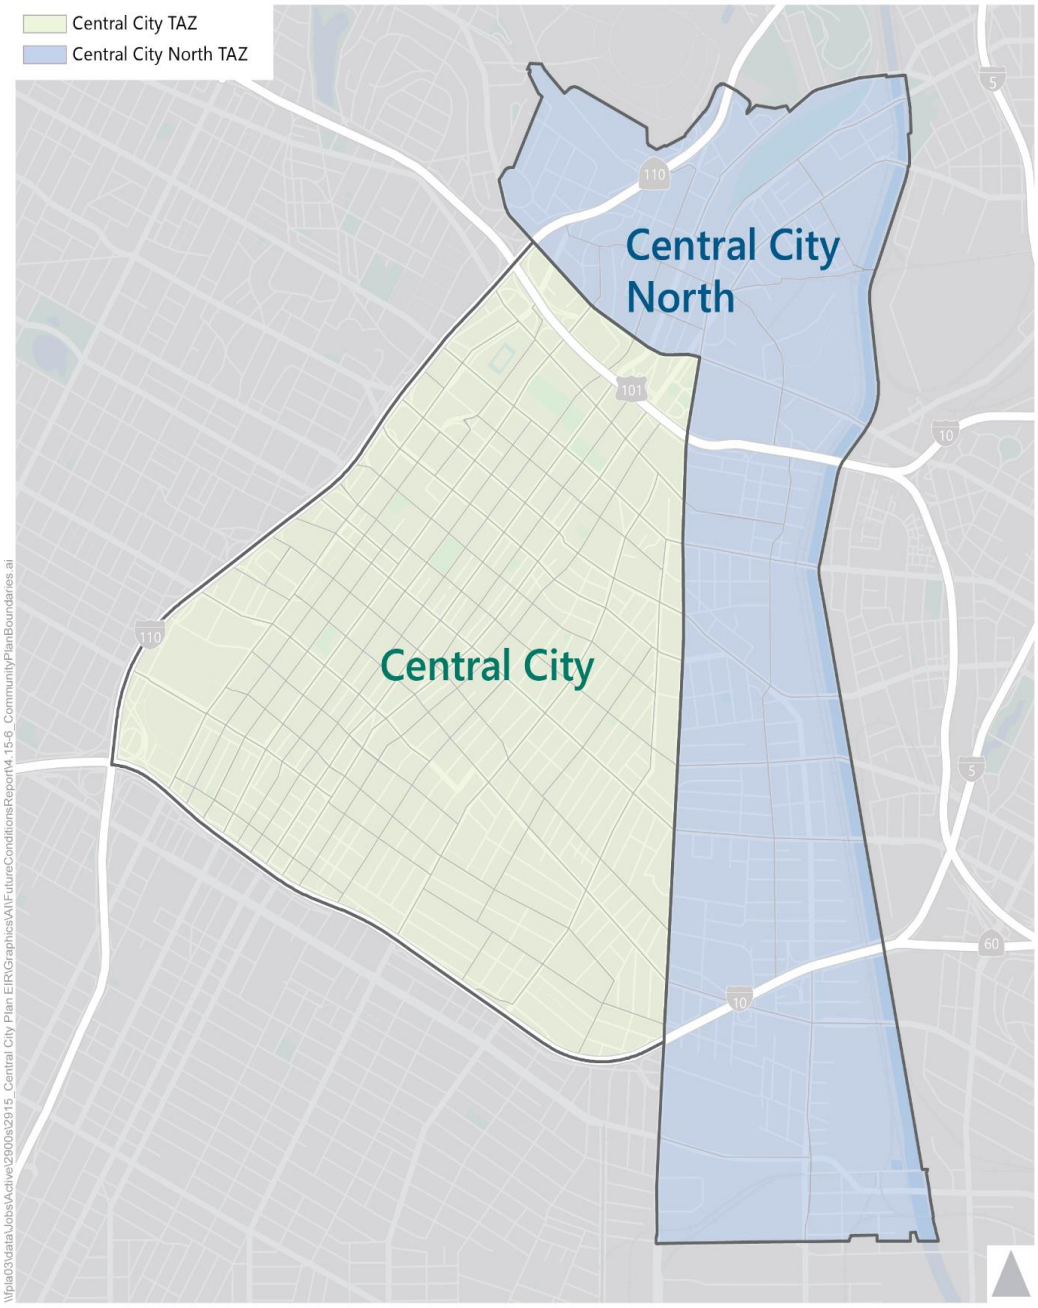


Figure 4.15-6

Central City and Central City North Community Plan Areas

## Vehicle Trips (VT)

Vehicle Trips are defined as the number of trips undertaken in an automobile or a truck, such as in single-occupancy private automobiles, vehicles that contain two or more travelers, such as carpools, taxis, or ride-share vehicles, and trucks including light truck, medium truck, and heavy truck. While the total number of vehicle trips is expected to increase as growth occurs in the Downtown Area and in the region, a reduction in vehicle trips per service population over time can be used as an indicator of reduced reliance on the automobile as well as an indicator of more travel by walk, bike, take transit, carpools, etc. A reduction in the number of vehicle trips per service population also helps meet the State's goal of reducing GHG emissions, as mandated by AB 32 and SB 375. An increase in the number of daily vehicle trips per service population would be an undesirable outcome of the Downtown Plan, but would not constitute a significant impact.

Vehicle trips are calculated from outputs of the Downtown TDF model and SCAG TDF model. With estimated population relevant to each model's year, household and employment values input into each model Traffic Analysis Zone (TAZ), the models develop a vehicle trip calculation for the Downtown Area and SCAG Region. A Traffic Analysis Zone is a spatial unit that includes socioeconomic data such as population, households, and employees of a particular region.

## Vehicle Miles Traveled (VMT)

VMT is a measurement of miles traveled (e.g., private automobiles, trucks and buses) generated by all land uses (e.g., residential, retail, office). While the total VMT is expected to increase as growth occurs in the Downtown Area and in the region, a reduction in VMT per service population over time can be used as an indicator of reduced reliance on the automobile. Reducing VMT helps meet the State's goals of reducing GHG emissions, as mandated by AB 32 and SB 375. Any increase in the total number of VMT per service population would be an undesirable outcome of the Downtown Plan, and would constitute an impact. VMT was forecasted for the Plan Area with the Downtown Subarea TDF model.

For this analysis, VMT is reported as Total Daily VMT per Service Population. The Total Daily VMT per Service Population is the total VMT divided by the number of people living or working within the community plan area. This VMT is generated by both downtown residents and employees within downtown as well as travel between downtown and other areas.

The reported VMT results include both personal vehicles and truck VMT. The VMT calculation accounts for internal trip ends and trips that begin or end within the Downtown Area, as these trips are generated by or attracted to land uses within the Downtown Area. The travel behavior effects of land use changes in Downtown can be understood by measuring the VMT of trips originating in and/or destined for the Downtown Area and comparing them to the 2017 Baseline and 2016 SCAG Region outputs.

VMT is calculated by multiplying the vehicle trip length by the number of trips estimated through the Downtown TDF model. VMT takes in consideration population, household, and employment values, as well as travel patterns of origins and destinations, including all of these inputs in the Downtown and SCAG TDF models, which makes them sensitive to each land use and network scenario tested.

## Roadway Segment and Freeway Mainline Level of Service Methodology

In addition to the VMT methodology, the Downtown Plan component of the Proposed Project was also analyzed using LOS changes on road segments, as described below. As discussed above, under SB 743, LOS as metric for traffic congestion is not used to determine CEQA impacts. However, congestion may still be considered for safety and therefore, this information is used to inform the analysis related to

emergency access in Impact Threshold 4.15-4, as well as for informational and historical comparison purposes.

LOS is a qualitative measure used to describe the condition of traffic flow, ranging from excellent conditions at LOS A to overloaded conditions at LOS F. LOS definitions for street segments are summarized in **Table 4.15-7.** LOS can be determined by dividing demand V/C, and the resulting V/C ratio is then used to obtain the corresponding LOS. The capacity values for analyzed roadway segments were obtained from the Downtown Subarea TDF Model.

**TABLE 4.15-7: ROADWAY SEGMENT LEVEL OF SERVICE (LOS) DEFINITIONS**

| Level of Service (LOS) | Volume to Capacity Ratio (V/C) | Description |
|---|---|---|
| A | 0.00 – 0.60 | Excellent operation. All approaches to the intersection appear quite open, turning movements are easily made, and nearly all drivers have freedom of operation. |
| B | >0.60 – 0.70 | Very good operation. Many drivers begin to feel somewhat restricted within platoons of vehicles. This represents stable flow. An approach to an intersection may occasionally be fully utilized and traffic queues start to form. |
| C | >0.70 – 0.80 | Good operation. Occasionally drivers may have to wait more than 60 seconds, and back-ups may develop behind turning vehicles. Most drivers feel somewhat restricted. |
| D | >0.80 – 0.90 | Fair operation. Cars are sometimes required to wait more than 60 seconds during short peaks. There are no long standing traffic queues. This level is typically associated with design practice for peak periods. |
| E | >0.90 – 1.00 | Poor operation. Some long-standing vehicular queues develop on critical approaches to intersections. Delays may be up to several minutes. |
| F | >1.00 | Forced flow. Represents jammed conditions. Backups from locations downstream or in the cross street may restrict or prevent movement of vehicles out of the intersection approach lanes; therefore, volumes carried are not predictable. Potential for stop and go type traffic flow. |

**SOURCE**: Transportation Research Board, *Highway Capacity Manual, Special Report 209*, Washington, D.C., 2000.

Plans that involve large areas and are not expected to be fully implemented until 2040 or beyond are not analyzed effectively by detailed intersection V/C analyses. In addition, detailed roadway designs for improvements to individual intersections are not yet available. Consequently, roadway segment analysis is commonly used to determine the average service capacity of the roadway network. Street segment capacity impacts are generally evaluated in program-level analyses (such as community plans or long-range development projects) for which details regarding specific land use types, sizes, project access points, etc., are not known.

LOS can be determined by dividing the number of vehicles (i.e., volume (V)) by roadway capacity (C), and the resulting V/C ratio is then used to obtain the corresponding LOS. The volume-weighted V/C ratio is used in order to obtain aggregate statistics regarding the transportation conditions, allowing a comparison of different scenarios and alternatives. The weighted average V/C ratio represents typical travel conditions for the roadway network in the Downtown Plan Area. The volume-weighted average V/C ratio is calculated by taking the volume of each street segment and multiplying it by its corresponding V/C ratio. This is divided by the sum of the total volumes, and essentially represents the average V/C ratio for the roadway network in the Downtown Plan Area.

## Travel Demand Model Development

The City of Los Angeles TDF Model provides the ability to evaluate the transportation system, use performance indicators for land use and transportation alternatives, provide information on regional pass-through traffic versus locally generated trips, and graphically display these results. The model considers forecast growth in City of Los Angeles and surrounding areas, including special generators, such as airports and universities, and is sensitive to emerging land use trends through improved sensitivity to built environment variables. The model forecasts AM and PM peak period and daily vehicle and transit flows on the transportation network in the City. In essence, the travel demand model serves as a tool to implement, manage and monitor the City of Los Angeles' transportation plans, projects, and programs, providing a suitable starting point for additional refinement as part of a more local application, such as the Downtown Plan.

The potential impacts associated with implementation of the Downtown Plan are evaluated using a refined version of the City of Los Angeles' Travel Demand Model within the Downtown Plan area and the adjacent Boyle Heights Plan Area. The reason for including refinements to the Boyle Heights Plan Area is that both Community Plans are being developed in conjunction, and as such the future network modifications for each Plan Area were included in the each other's refining process. The Downtown Subarea Travel Demand Forecasting Model (referred to as the Downtown Subarea Model) utilizes the TransCAD Version 7.0 R4 Build 12410 modeling software (consistent with the citywide model). The Downtown Subarea Model builds on the citywide model update and refines the level of detail within the Downtown Area for improved sensitivity in measuring the effect of land use development and transportation network changes. The model has a future horizon year of 2040 and was designed to produce daily and AM and PM peak hour vehicle and transit flows on roadways within the Downtown Plan Area based on comprehensive land use and socioeconomic data (SED) and uses a conventional 4-step process of trip generation, trip distribution, modal split and assignment. For modeling purposes, the Los Angeles model area is divided into 4,192 Transportation Analysis Zones (TAZs) and the Downtown Plan Area is divided into 233 TAZs, each with corresponding SED and connections to the roadway and transit networks.

The Downtown Subarea Model was built from the City of Los Angeles model (consistent with 2016-2040 RTP/SCS model) and contains City of Los Angeles SED and updates to the transportation network based on Mobility Plan 2035, which is discussed in detail in the section below titled *Downtown Plan Mobility Network*. The Downtown Subarea Model was used to generate the 2017 Baseline and 2040 Downtown Plan data for the transportation impact analysis. The Downtown Subarea Model Development Report is contained in Appendix K. The SCAG TDF Model, developed by SCAG, was used to generate the 2016 SCAG Region scenario.

## Impact Analysis

The purpose of the transportation analysis is to identify potential transportation system deficiencies resulting from vehicle trips generated by the employment and population growth anticipated under the Downtown Plan and the proposed transportation network improvements, and to identify feasible mitigation measures. The Downtown Plan is a long-term plan that will be implemented over many years in conjunction with already approved development projects in the study area, and regional growth and transportation projects outlined in the 2016-2040 RTP/SCS. The Downtown Plan is represented by the 2040 Downtown Plan scenario and is compared to 2017 Baseline and 2016 SCAG Region scenarios in order to show the potential impacts of the plan.

The Downtown Subarea Model is built upon and includes the entirety of the City of Los Angeles Travel Demand Forecasting Model, which is consistent with the 2016-2040 SCAG RTP/SCS model and includes all reasonably foreseeable development and regional transportation improvements for the year 2040 in the City of Los Angeles as well as the adjacent Cities, such as West Hollywood, Burbank and Glendale. Thus,

the Downtown Subarea Model includes the regional growth forecast for both inside and outside of the Plan area for the purpose of analyzing 2040 Downtown Plan conditions. The Downtown Subarea Model refines the level of detail within the Plan Area for improved sensitivity in measuring the effects of land use and transportation network changes for the 2040 Downtown Plan.

The analysis tools used to forecast future travel patterns are long-range models of travel demand. Long-range travel demand models primarily focus on forecasting auto use, with limited sensitivity to other modes of travel such as transit, bicycling, and walking. This is consistent with the traffic forecasting methods used by most cities and is consistent with the state of the transportation and traffic engineering practice. Recently, new travel behavior trends have emerged that traditional travel demand models are not designed to accommodate. Transportation and traffic experts continue to evaluate the anticipated longevity of these trends and the impact they may have on travel behavior in the future. Factors that affect long-term trends in travel behavior include recessionary effects on employment, changes in younger generations' interest in driving and vehicle ownership, baby boomer retirement choices and their continued participation in the workforce, increasing preference across generations for urban living, fuel prices, increased availability of on-demand delivery of goods and services, and greater travel options through autonomous vehicles and shared use mobility (e.g., Lyft, Uber, bikeshare programs).

The transportation analysis approach used in this EIR applies established traffic forecasting tools that have been empirically proven and previously accepted under CEQA. However, these may prove to be conservative if some of the recent trends in travel persist. It is not clear what direction the trends will take at this point. VMT per capita has been generally dropping since around 2004 but increased for many decades prior. If the trends toward higher levels of walking, bicycling, and transit use exceed what is forecast in the EIR, this could result in fewer driving-related impacts than the plan conservatively accounts for in the EIR. It is possible, however, that innovations in autonomous and driverless vehicles, transportation network companies (e.g., Lyft and Uber), and same-day delivery will increase future VMT per capita. A variety of factors contribute to VMT, and transportation technologies along with demographic trends will influence future travel behavior. It would be speculative to make assumptions about how these new technologies and changes in transportation may affect travel behavior long-term; therefore, the methodologies and travel forecasts applied in this analysis rely on the state-of-the-practice at this time as previously accepted under CEQA.

## Downtown Plan Mobility Network

Mobility Plan 2035 (MP 2035) is the Mobility Element of the City of Los Angeles' General Plan. MP 2035 provides the framework for future community plan updates, which take a closer look at the transportation system in specific areas of the City and recommend more detailed implementation strategies to be realized by 2035. The MP 2035 reflects policies and programs that lay the foundation for safe, accessible, and enjoyable streets for pedestrians, bicyclists, transit users, and vehicles throughout the City of Los Angeles, including the Downtown Plan Area. MP 2035 was adopted by the City in August 2015 and updated in 2016. It is compliant with the 2008 Complete Streets Act (AB 1358), which mandates that the circulation element of a City's General Plan be modified to plan for a balanced, multimodal transportation network that meets the needs of all users of streets, roads, and highways, defined to include motorists, pedestrians, bicyclists, children, persons with disabilities, seniors, movers of commercial goods, and users of public transportation, in a manner that is suitable to the rural, suburban, or urban context of the general plan.

The transportation improvements planned for the Downtown Plan primarily originated from the MP 2035. The enhanced network treatments envisioned through MP 2035 were reviewed and refined to complement the anticipated growth areas as well as the Downtown Plan's goals and policies. Since MP 2035 does not prescribe or mandate how the enhanced network treatments are implemented within each community plan, the refinements to the enhanced network treatments primarily consisted of developing potential implementation options within the Downtown Plan Area.

The Downtown Plan Transportation Improvement Project List is presented in **Table 4.15-8**. The Project List is not exhaustive but is representative of the types of improvements proposed for inclusion in the Community Plan. In addition, the Downtown Plan would not, itself, entitle or otherwise approve any transportation projects. Nevertheless, potential impacts of implementing the transportation improvements contained in the Project Lists were analyzed at a programmatic level as part of the Downtown Plan. Similar to the MP 2035, the Downtown Plan does not prescribe how the enhanced network treatments will be implemented within each community plan. Therefore, the enhanced network treatments in the Plan Area were reviewed in relation to the roadway characteristics, such as roadway width, right-of-way, street designations and adjacent land uses. **Figure 4.15-5**, Downtown Plan Network, shows the following enhanced network treatments for roadways in the Downtown Plan. The Downtown Plan Network in the Downtown Plan Area reflects the refinements to MP 2035 (**Table 4.15-9**).

- **Bicycle Enhanced Network (BEN)**
  - Tier 1 Protected bike lane: bicycle facilities with a physical separation from the vehicular lanes
  - Tier 2 bike lane: bicycle lanes painted on the roadway and adjacent to vehicular lanes, anticipated to be built by 2035
  - Tier 3 bike lane: bicycle lanes painted on the roadway and adjacent to vehicular lanes, not anticipated to be built by 2035
- **Transit Enhanced Network (TEN)**
  - Moderate: stop enhancements and increased service; bus operates in mixed-flow with vehicles
  - Moderate Plus: moderate treatments, plus peak-period bus-only lanes
  - Comprehensive: moderate treatments, plus full-time bus-only lanes
- **Vehicle Enhanced Network (VEN)**
  - Peak period or full-time parking and turning movement restrictions

## Parking

Parking deficits are not CEQA impacts. They are considered socio-economic impacts, rather than impacts on physical environment as defined by CEQA, unless there are secondary impacts, such as safety impacts.

**TABLE 4.15-8 DOWNTOWN PLAN TRANSPORTATION IMPROVEMENT PROJECT LIST**

| Project Location | Endpoints | Project Description |
|---|---|---|
| Figueroa St | 10 FWY to 7th St | BEN: Protected bike lane; TEN: Comprehensive treatments |

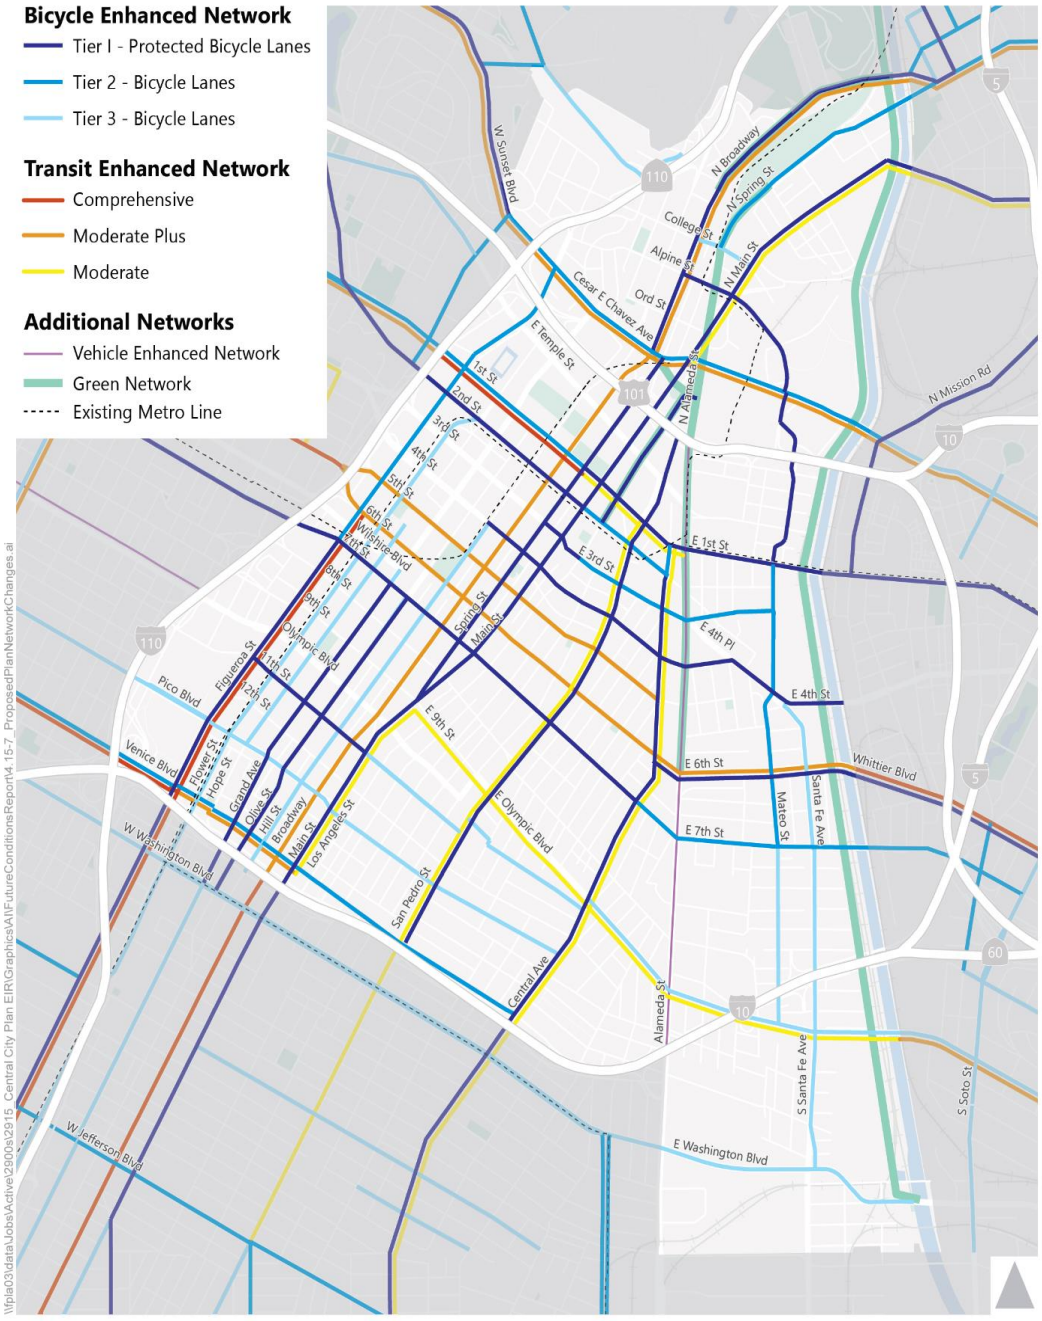

Figure 14.5-7
2040 Proposed Plan Network

# PROJECT IMPACTS

The impacts and mitigation discussion presented below reflects proposed CEQA requirements as finalized on December 28, 2018. Delay-based metrics are included in some cases for informational purposes, and are not discussed in mitigation.

| | |
|---|---|
| **Threshold 4.15-1** | Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadways, bicycle and pedestrian facilities |

**Impact 4.15-1**

**Downtown Plan:** The Downtown Plan would not conflict with adopted City and state policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance of safety of such facilities. This impact would be ***less than significant.***

**New Zoning Code:** The New Zoning Code does not include any standards that would conflict with the goals and policies of the MP 2035 or SCAG 2016-2040 RTP/SCS. Furthermore, due to the modularity of the New Zoning Code, it is not known where or to what extent future development may occur. The Proposed Project does not intend to implement the New Zoning Code outside of the Downtown Plan Area and therefore any indirect impacts from the future use of the New Zoning Code outside the Downtown Plan Area would be speculative. This impact would be ***less than significant***.

## Downtown Plan Impact

The Downtown Plan seeks to enhance access to all modes in the local circulation system, improving access on transit, roadways, bicycle and pedestrian facilities. This is accomplished through applying new land use and zoning regulations to encourage mixing and scales of use as well as site design supportive of all modes. The Downtown Plan also implements MP 2035 with a refined lens on the Downtown Area, and is consistent with the objectives of the SCAG 2016-2040 RTP/SCS.

The types of transportation improvements envisioned as part of the Downtown Plan are within the framework established in MP 2035. The proposed updates to the Plan are consistent with the City's municipal approach to transportation planning and apply such principles to the Downtown Plan. The proposed mobility improvements would provide transportation options and accommodations for multiple modes of travel (i.e., transit, bicycle, pedestrian, and vehicle) as part of the transportation system.

In addition to MP 2035, the Downtown Plan would support the City's Plan for a Healthy LA by creating more opportunities for people to live and work in areas of the City where travel by active transportation can be part of daily life. The implementation of active transportation facilities is anticipated to improve safety and is in alignment with the City's Vision Zero Action Plan. The existing subway stations create opportunities for the City to further enhance first- and last-mile opportunities through the creation of mobility hubs. In addition, individual development projects will need to adhere to the requirements in LADOT's recently adopted Transportation Assessment Guidelines. The Downtown Plan would not conflict with adopted City and state policies, plans or programs regarding public transit, bicycle, or pedestrian facilities. Therefore, a ***less than significant impact*** related to consistency with other plans with respect to this impact category may occur.

## New Zoning Code Impact

The New Zoning Code would provide zone districts for a range of densities, ranging from no maximum density required to restricting the permitted density to one unit per lot, which could be applied elsewhere in the City through future community plan updates or amendments. As such, due to the modulatory nature of the New Zoning Code, it is not known where or to what extent future development and associated circulation may occur as application of the New Zoning Code would be driven by the policy intent and vision of future community plan updates and amendments.

Further, the content of the New Zoning Code would not repeal, amend, or conflict with existing policies related to the circulation system, such as the Transportation Demand Management (TDM) ordinance. The intent of the existing TDM standard is to reduce vehicle trips generated by development by encouraging the use of alternatives to single-occupant vehicles, which is consistent with the goals and policies of MP 2035 and the SCAG 2016-2040 RTP/SCS, and is an implementation program of the MP 2035. No substantive changes to the content or standards of the existing TDM standards are proposed as part of the Proposed Project; however, the Department of City Planning is, through a separate effort, updating the TDM ordinance.

The New Zoning Code includes zoning districts that, if applied outside the Downtown Plan Area, have the ability to implement the goals and policies of MP 2035, the SCAG 2016-2040 RTP/SCS, and other plans, policies, and ordinances discussed above in the Regulatory Framework section. For example, most of the new Form, Frontage, Standards, Use, Density Districts and Development Standards sets intended for application in the Downtown Plan Area are tailored for application near transit and have the potential to reduce vehicular traffic and accommodate multiple modes of transportation. In addition, many new Use Districts encourage a wide-range of uses within the same geographic area. This has the potential to result in residential uses near commercial and employment uses which would encourage more walking and biking, consistent with the objectives of MP 2035 and the SCAG 2016-2040 RTP/SCS. In areas where there are existing transit facilities, locating a wide-range of uses in the same area has the potential to result in enhanced access to transit to a variety of employment, shopping, entertainment, and residential uses.

Many parts of the Downtown Plan Area are served by high-quality transit and other multi-modal options. A potential reduction in off-street parking may result in a reduction to VMT, as it encourages other modes of transportation such as transit, bicycling, and walking.

If applied outside of the Downtown Plan Area, the New Zoning Code has the potential to implement the goals and policies of MP 2035, SCAG 2016-2040 RTP/SCS, and other plans, policies, and ordinances discussed above in the Regulatory Framework section. However, the Proposed Project does not intend to implement the New Zoning Code outside of the Downtown Plan Area and therefore any indirect impacts from the future use of the New Zoning Code outside the Downtown Plan Area would be speculative. Further, the New Zoning Code only applies to properties where a community plan is updated or amended to utilize the new zoning, which would require environmental review pursuant to CEQA. Future environmental review of a proposed community plan update and associated zone changes would analyze potential conflicts with MP 2035 and the SCAG 2016-2040 RTP/SCS. The impact would be ***less than significant.***

## Mitigation Measures

Significant impacts have not been identified; therefore, mitigation is not required for either the Downtown Plan or the New Zoning Code.

| **Threshold 4.15-2** | Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b) |
|---|---|

**Impact 4.15-2**

**Downtown Plan:** The Downtown Plan would not conflict with CEQA Guidelines section 15064.3, subdivision (b) related to VMT thresholds. There would be ***no impact.***

**New Zoning Code:** The New Zoning Code does not include any standards that would conflict or be inconsistent with the VMT projections established in the SCAG 2016-2040 RTP/SCS, pursuant to CEQA Guidelines section 15064.3. Furthermore, due to the modularity of the New Zoning Code, it is not known where or to what extent future development may occur. The Proposed Project does not intend to implement the New Zoning Code outside of the Downtown Plan Area and therefore any indirect impacts from the future use of the New Zoning Code outside the Downtown Plan Area would be speculative. This impact would be ***less than significant***.

## Downtown Plan Impact

The Downtown Plan would have an impact if its VMT exceeds either of the following:

- The Downtown Plan results in average VMT per service population for the 2040 Downtown Plan that exceeds 15% below the regional average total VMT per service population from 2016 SCAG Region.
- The Downtown Plan results in average total VMT per service population for the 2040 Downtown Plan that exceeds the average total VMT per service population for the Downtown Plan Area from 2017 Baseline.

**Table 4.15-10** shows vehicle trips and VMT for the 2016 SCAG Region conditions and 2040 Downtown Plan conditions, and **Table 4.15-11** shows vehicle trips and VMT for the 2017 Baseline conditions and 2040 Downtown Plan conditions.

**TABLE 4.15-10 FUTURE TOTAL VEHICLE MILES TRAVELED (VMT) COMPARED TO 2016 SCAG REGION**

| Metric | 2016 SCAG Region Conditions | 2040 Downtown Plan Conditions | Percent Difference |
|---|---|---|---|
| Total Daily VT | 82,283,000 | 1,375,000 | N/A* |
| Total Daily VT per Service Population | 3.1 | 2.5 | -19% |
| Total Daily VMT | 908,573,000 | 8,842,000 | N/A* |
| **Total Daily VMT per Service Population** | **33.9** | **15.9** | **-53%** |

**SOURCE**: Fehr & Peers, 2019. SCAG 2016 RTP 2016 Base Year Model, 2016.
** Notes: Comparison here is not applicable as the conditions represented come from different geographic areas, the SCAG region and the Downtown Plan Area respectively*

| TABLE 4.15-11 FUTURE TOTAL VEHICLE MILES TRAVELED (VMT) COMPARED TO 2017 BASELINE | | | |
|---|---|---|---|
| **Metric** | **2017 DT Plan Baseline Conditions** | **2040 Downtown Plan Conditions** | **Percent Difference** |
| Total Daily VT | 758,000 | 1,375,000 | 81% |
| Total Daily VT per Service Population | 2.6 | 2.5 | -4% |
| Total Daily VMT | 5,767,000 | 8,842,000 | 53% |
| **Total Daily VMT per Service Population** | **19.6** | **15.9** | **-19%** |
| **SOURCE**: Fehr & Peers, 2019. | | | |

Given that service population VMT for the Downtown Plan is more than 15% below the 2016 SCAG Region and less than the 2017 Baseline for the Downtown Plan Area, the Downtown Plan would have ***no impact***.

## New Zoning Code Impact

As discussed above under Impact 4.15-1, the New Zoning Code includes new Form, Frontage, Standard, Use, and Density Districts tailored for application near transit that have the potential to reduce vehicular traffic and accommodate multiple modes of transportation. In addition, new Use Districts encourage a wide-range of uses within the same geographic area, which has the potential to result in residential uses near commercial and employment uses which would encourage more walking and biking. In areas where there are existing transit facilities, locating a wide-range of uses in the same area has the potential to result in enhanced access to transit to a variety of employment, shopping, entertainment, and residential uses.

If applied outside of the Downtown Plan Area, these different Form, Frontage, Standards, Use, Density Districts and Development Standards sets could result in reduced VMT. However, the New Zoning Code only applies to properties where a community plan is updated or amended to utilize the new zoning, which would require environmental review pursuant to CEQA. Future environmental review of a proposed community plan update or amendment and associated zone changes would analyze potential impacts related to conflicts with the projected VMT, during which community-specific reasonably anticipated development would be estimated and the effect on VMT would be evaluated. Like the Downtown Plan, it is expected that the development capacity of communities undergoing future community plan updates and amendments would be developed in accordance with SCAG VMT projections and the proposed vision for the community as established in the City's adopted General Plan Framework Element and MP 2035. Further, the Proposed Project does not intend to implement the New Zoning Code outside of the Downtown Plan Area and therefore any indirect conflicts or inconsistencies with SCAG VMT projections from the future use of the New Zoning Code outside the Downtown Plan Area would be speculative. The impact would be ***less than significant***.

## Mitigation Measures

Significant impacts have not been identified; therefore, mitigation is not required for either the Downtown Plan or the New Zoning Code.

| **Threshold 4.15-3** | Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment) |
|---|---|

**Impact 4.15-3**

**Downtown Plan:** The Downtown Plan would not substantially increase hazards due to geometric design features (such as sharp curves or dangerous intersections) or incompatible uses. However, there could be safety impacts related to off ramp queuing as growth occurs pursuant to the Plan. This impact would be ***significant and unavoidable.***

**New Zoning Code:** The New Zoning Code does not include any standards that would substantially increase hazards due to a geometric design feature or incompatible uses. Furthermore, due to the modularity of the New Zoning Code, it is not known where or to what extent future development may occur. The Proposed Project does not intend to implement the New Zoning Code outside of the Downtown Plan Area and therefore any indirect impacts from the future use of the New Zoning Code outside the Downtown Plan Area would be speculative. This impact would be ***less than significant***.

## Downtown Plan Impact

The Downtown Plan describes the reasonably expected future development for a portion of the City and does *not* constitute a commitment to any project-specific development within the Downtown Area. Furthermore, none of the regulations included in the Downtown Plan would promote sharp curves, dangerous intersections, or incompatible uses that could present safety hazards. Rather, numerous policies and programs included in the Downtown Plan emphasize transportation safety for all people using the transportation system, support implementation of transportation treatments that are designed to improve roadway safety and help implement other City initiatives (such as Vision Zero or Safe Routes to School) which aim to improve the safety of the City's transportation facilities.

None of the transportation system improvements envisioned in the Downtown Plan or Project List would introduce new safety hazards or incompatible uses at intersections or along roadway segments, as most would be designed to improve safe circulation and access to the transit stations for all users. The multi-modal improvements envisioned in the Downtown Plan are intended to help minimize conflicts between pedestrians and vehicles. Furthermore, design standards in the Downtown Plan are intended to limit the number, width, and location of new driveways along major streets and in areas of high pedestrian activity, thereby improving pedestrian safety.

The implementation of bicycle and pedestrian facilities identified in the Downtown Plan and Project List are anticipated to improve the safety of bicyclists and pedestrians. Automobile speed is a major factor in the severity of collisions with bicyclists and pedestrians, the most vulnerable roadway users. Collisions with a vehicle traveling at 20 miles per hour result in a five percent pedestrian fatality rate, and fatalities increase to 40, 80 and 100 percent when the vehicle speed increases to 30, 40 and 50 mph, respectively (USDOT 1999). Bicycle lanes, when accompanied by travel lane reductions can help reduce overall vehicle speeds (FWHA). When modified from four travel lanes to two travel lanes with a two-way left-turn lane, research along 45 corridors throughout the country has found a range of 19 to 47 percent reduction in all roadway crashes. The upgrade to fully protected bicycle lanes or cycle tracks has been shown to reduce the risk of injury by 90 percent (Teschke 2012).

The bicyclist and pedestrian improvements associated with the Downtown Plan and Project List are also anticipated to increase the number and visibility of bicyclists and pedestrians on the City's transportation network. Of 68 cities across California with highest per capita pedestrian and bicycle collisions, per capita injury rates to pedestrians and bicyclists are shown to fall precipitously as the number of bicyclists

increases, revealing a non-linear relationship between bicycle safety and the level of bicycling (Jacobsen 2003). This study showed as much as an eight-fold variation of collisions (expressed as a percentage of those that bike or walk to work) in comparing low and high bicycling cities. The underlying reason for this pattern is that motorists drive slower when bicyclists and pedestrians are visible either in number or frequency and drive faster when few pedestrians and bicyclists are present, resulting in higher overall travel speeds. This effect of modified driving behavior is consistent with other research focused on 24 California cities that shows that higher bicycling rates among the population generally show a much lower risk of fatal crashes for all road users (Marshall et.al 2011). Comparing these low versus high bicycling communities, there was a ten-fold reduction in fatality rate for motorists, and eleven-fold reduction in fatality rate for pedestrians, and an almost fifty-fold reduction in fatality rate for bicyclists.

The Downtown Plan is responding to changing demographics, a younger population desirous of safe and accessible active transportation options (bike, walk), a growing number of residents and employees seeking alternatives to the car, and an aging population that may need to rely more and more on transportation alternatives to the automobile. In 2030, senior citizens will make up 1/5 of Los Angeles County's population. This older population (as well as children and the disabled) will benefit from longer pedestrian crossing times, shorter street crossing distances, wider, shaded sidewalks, street benches, increased transit service and separated bicycle facilities. Ultimately, nothing in the Downtown Plan is expected to significantly reduce pedestrian mobility, including but not limited to the disabled, those with strollers, and bus riders.

Freeway Analysis

As part of individual development project entitlements, the Interim Guidance for Freeway Safety Analysis released by LADOT in May 2020 requires that individual land use projects evaluate the potential for safety impacts related to freeway off ramp queuing. The specific concern relates to the possibility that the speed differential between vehicles traveling on freeway mainlines (the 5, 10, 110, and 101 Freeways, in particular) and vehicles queuing at freeway off-ramps may create the potential for collisions if drivers on the freeway mainline lack sufficient time to slow or stop once they are aware of a queuing situation. Generally speaking, it is anticipated that freeway mainline traffic would slow at times when high levels of off ramp queuing occurs and that the speed differential would be sufficiently small that mainline drivers would have sufficient warning about a queuing situation; however, it is possible that queuing at individual off ramps could occur at times when mainline traffic congestion is low, thus creating a potential safety issue. Because the Downtown Plan is programmatic in nature, it does not include specific development projects or details about the size, nature, or location of individual developments. In addition, future traffic levels and speeds at individual off ramps in and near the Downtown Plan Area cannot be predicted with any degree of certainty at this time because it is not known how conditions may change over an approximately 20-year period and what measures the City and Caltrans may implement to address any off ramp queuing issues that arise. Therefore, any detailed analysis of potential future impacts related to off ramp queuing would be speculative. Nevertheless, queuing-related safety issues could potentially arise as additional development occurs in the Downtown Plan Area, although it is anticipated that the City and Caltrans would address any such issues as they arise, it cannot be determined with certainty that queuing-related safety issues would not occur. As such, safety impacts related to off ramp queuing as growth occurs pursuant to the Plan are ***potentially s****ignificant*.

## New Zoning Code Impact

The New Zoning Code does not propose any specific development or transportation system improvement. The New Zoning Code would not substantially increase hazards due to a design feature or incompatible uses. The New Zoning Code would introduce a range of Form, Frontage, Standards, Use, and Density Districts that could be applied in a manner that would encourage a mix of land uses near transit, bicycle, and pedestrian facilities, which has the potential to place additional bicyclists and pedestrians near existing

roads. However, the parking and access standards also provide adequate and safe arrangement of pedestrian circulation facilities, driveways, and parking and loading space. For example, in certain Development Standard Sets that limit the amount of parking required and prioritize walking and biking, the New Zoning Code would require pedestrian connections in long blocks to facilitate pedestrian movement and contribute to a pedestrian-friendly environment. The New Zoning Code also includes parking and access standards that encourage cross-access. Cross-access would provide internal vehicular circulation to facilitate movement of vehicles from lot to lot without generating additional turning movements on public streets. Cross-access is also encouraged for pedestrian facilities which would avoid internal cross-access hazards.

Prior to issuance of a building permit, the City Bureau of Engineering and Department of Transportation requires that future projects submit a parking and driveway plan that incorporates design features intended to reduce collisions. The New Zoning Code would not repeal, amend, or conflict with existing regulations and uniformly applied development regulations, such as those required by the City, intended to avoid potential hazards. As such, it is not foreseeable that the New Zoning Code would increase hazards to bicyclists or pedestrians from the Form, Frontage, Standards, Use, and Density District provisions.

The New Zoning Code would provide a range of Form, Frontage, Standards, Use, Density Districts and Development Standards sets that could be applied elsewhere in the City through future community plan updates or amendments. However, due to the modulatory of the New Zoning Code, it is not known where or to what extent future development may occur. Projecting the location and type of future growth would be speculative at this time; therefore, impacts cannot be identified. The Proposed Project does not intend to implement the New Zoning Code outside of the Downtown Plan Area and therefore any indirect impacts from the future use of the New Zoning Code outside the Downtown Plan Area would be speculative. It is anticipated that as community plans are revised and amended, the roadway network in each community planning area would be refined in concert with land use changes. Without such detail, it is not possible, using available traffic analysis procedures, to estimate some types of impacts. Further, the New Zoning Code only applies to properties where a community plan is updated or amended to utilize the new zoning, which would require environmental review pursuant to CEQA. Future environmental review of a proposed community plan update and associated zone changes would analyze if the zoning applied would substantially increase hazards due to a geometric design feature or incompatible uses. The impact would be ***less than significant***.

## Mitigation Measures

Significant and unavoidable impacts have been identified in relation to the potential for project-specific ramp queuing safety impacts as growth occurs pursuant to the Plan. Potential mitigation may include transportation demand management strategies to reduce a project's trip generation, investments to active transportation infrastructure, or transit system amenities, and/or operational changes to the ramp terminal such as lane reassignment, traffic signalization, signal phasing or timing modifications, etc. However, without specific information on where safety impacts may occur as a result of freeway off ramp queuing, it is not possible to identify appropriate mitigation measures. Therefore, no feasible mitigation can be identified for the Downtown Plan. It is anticipated that subsequent land use development projects that are seeking approval under the plan study freeway queuing and safety impacts in more detail per the Interim Guidance for Freeway Safety Analysis.

## Significance After Mitigation

Impacts related to highway safety as a result of design features or incompatible uses would be ***significant and unavoidable***. All other safety related issues from hazards are ***less than significant***.

| **Threshold 4.15-4** | Result in inadequate emergency access |
|---|---|

**Impact 4.15-4** **Downtown Plan:** The Downtown Plan would not result in inadequate emergency access. This impact would be ***less than significant.***

**New Zoning Code:** The New Zoning Code does not include any standards that would result in inadequate emergency access. Furthermore, due to the modularity of the New Zoning Code, it is not known where or to what extent future development may occur. The Proposed Project does not intend to implement the New Zoning Code outside of the Downtown Plan Area and therefore any indirect impacts from the future use of the New Zoning Code outside the Downtown Plan Area would be speculative. This impact would be ***less than significant***.

## Downtown Plan Impacts

In the City of Los Angeles, fire prevention and suppression and emergency medical services are provided by the LAFD. Public protection service and law enforcement are provided by LAPD. This impact analysis provides an evaluation of impacts to emergency services as they relate to transportation. (EIR Section 4.14 considers the impacts to emergency services and whether that will result in impacts to the environment from the construction of new fire or emergency service or police facilities.) For individual development projects, this impact criterion considers whether a project would have adequate access to emergency services based on the road configuration and project design. At the Downtown Plan level, individual project design level details, such as location of driveway location and design, are unknown. Therefore, the Draft EIR does not consider impacts to emergency access to particular properties in the Downtown Plan Area or particular streets based on roadway configurations. The Draft EIR considers, at the detail available, the reasonably foreseeable impacts to roadway congestion from the Downtown Plan and the associated impacts to emergency access from any forecasted congestion.

Therefore, the discussion will first consider the Downtown Plan' impacts to roadway congestion using levels of services (LOS) and volume-to-capacity (V/C) criteria when compared to existing conditions (2017) and then discuss the emergency access impacts associated with roadway congestion.

Roadway Congestion

Many factors influence the LOS and V/C analysis including, but not limited to, land use patterns, the relationship between land use and transportation, how transportation treatments are designed within the existing roadways, how and where the Downtown Plan directs anticipated growth within the Plan Area, and growth anticipated in the region surrounding the Plan Area.

*Land Use Patterns*

Where and how the Downtown Plan directs anticipated growth in relation to transportation will affect transportation use; therefore, land use patterns are factored into the analysis of the circulation system. The Downtown Plan would create new housing and employment opportunities, mostly in areas around existing transit systems.

*Regional Background Growth*

On a regional level, traffic in the Downtown Plan Area is anticipated to increase in conjunction with regional population, housing, and employment growth projected to occur in the future by SCAG. This growth will occur with or without implementation of the Downtown Plan. The background growth influences the transportation analysis by accounting for the increased activity levels under Downtown Plan conditions, although those increases would occur with or without the Plan. Background growth is included

in the Downtown TDF Model, which is built from the City of Los Angeles Model as described in the Model Development Report included in the Appendix K.

*Level of Analysis*

At the aggregate Plan scale, the traffic operation results reflect the impacts related to the Downtown Plan and the number of vehicle travel lanes. However, turn lanes, signal timings, and driveways are not accounted for in the analysis at this scale. Each of these features has the potential to affect operations, delay, VMT, and rerouting of traffic at the neighborhood level. Plans that involve large areas and are not expected to be fully implemented until Year 2040 or beyond are not analyzed effectively by detailed intersection V/C analyses. Consequently, roadway segment analysis is commonly used to determine the average service capacity of the roadway network. Street segment capacity impacts are generally evaluated in program-level analyses (such as community plans or long-range development projects) for which details regarding specific land use types, sizes, project access points, etc., are not known (Los Angeles 2006).

*Circulation System Analysis*

As identified above, two criteria (weighted average V/C ratio and the number of street segments at LOS E or F) are used to evaluate the impacts of the Downtown Plan when compared to Existing conditions. **Table 4.15-12** presents the volume-weighted V/C ratios and LOS results for the AM peak period. With the implementation of the Downtown Plan and regional growth anticipated in Year 2040, the weighted V/C ratio worsens from 0.626 (LOS B) to 0.921 (LOS E). The percentage of roadway segments operating at LOS E or F also increases from 15% to 44%. **Table 4.15-13** presents the volume-weighted V/C ratios and LOS results for the PM peak period. With the implementation of the Downtown Plan and regional growth anticipated in Year 2040, the weighted V/C ratio worsens from 0.648 (LOS B) to 0.965 (LOS E). The percentage of roadway segments operating at LOS E or F also increases from 16% to 48%.

**TABLE 4.15-12 AM PEAK PERIOD ROADWAY OPERATIONS**

| Transportation Metrics | 2017 Baseline | 2040 Downtown Plan |
|---|---|---|
| Weighted Average V/C | 0.626 (LOS B) | 0.921 (LOS E) |
| Percentage (%) of Street Segments at LOS E or F | 15% | 44% |
| Percentage (%) of Center-Line Miles at LOS E or F | 17% | 43% |
| **Weighted Average V/C by Facility Type** | | |
| Boulevard/Parkway | 0.635 (LOS B) | 0.924 (LOS E) |
| Avenue | 0.632 (LOS B) | 0.937 (LOS E) |
| Local / Collector | 0.576 (LOS A) | 0.818 (LOS D) |

Emergency Access Impacts Associated with Roadway Congestion

Within the City of Los Angeles, fire prevention and suppression and emergency medical services are provided by the LAFD. Public protection service and law enforcement are provided by LAPD.

While the Downtown Plan would impact segment-level LOS as shown above, there is not a direct relationship between predicted travel delay and response times as California state law does require drivers to yield the right-of-way to emergency vehicles and even permits emergency vehicles to use opposing lane of travel, the center turn lanes, or bus-only lanes. LAFD in collaboration with LADOT has developed a Fire Preemption System (FPS), a system that automatically turns traffic lights to green for emergency vehicles traveling on designated streets in the City. (LAFD 2008a). The City of Los Angeles has over 205 miles of routes equipped with FPS. In some instances, roadway reconfigurations with the implementation of the transportation improvements as part of the enhanced network treatments could improve emergency access. For example, a roadway reconfiguration could improve emergency access where a bus-only lane or a contiguous center left-turn lane is introduced where it did not exist. Emergency vehicles are permitted to use bus-only lanes for local access to emergency destinations. People traveling by bicycle are required to pull to the side of the road to yield access to emergency providers regardless if they are traveling in a bus-only lane or in a standard travel lane. It is more likely that when in route to an emergency incident, general traffic will be expected to merge into the bus-only lane, permitting the emergency vehicle to pass in the through lane to the left. Emergency responders also routinely use the center left-turn lanes, or even travel in opposing travel lanes if needed. Generally, multi-lane roadways allow the emergency vehicles to travel at higher speeds and permit other traffic to maneuver out of the path of the emergency vehicle.

Knowing exactly how fire and emergency service response times will be affected calls for a great deal of speculation. As explained above, it is not possible to exactly predict the Downtown Plan impacts at the street level. This is one factor as to why it is not possible to forecast response times. The other is that, as explained above, the relationship between emergency access and traffic and potential impacts associated with emergency access is complex and involves factors such as the following:

- The proximity of LAFD and LAPD (and other) facilities to those they serve.
- The staffing and equipment at fire stations.
- The opportunity for emergency responders to use alternative routes in an area.
- The specific street configuration. LAFD, in cooperation with LADOT and LADCP, actively participates in the design of specific roadway changes in order to ensure adequate fire/emergency access is maintained. LAFD, in reviewing street and right-of-way projects, comments on particular

street configuration designs, and will raise concerns if roadways present particular access challenges, and can recommend no changes be done at all or alternative changes be undertaken if fire and emergency access are particularly impacted.

- As identified in the Thresholds Guide (Los Angeles 2006), on any given project review, LAFD can implement project specific mitigation requirements, such as requiring fire retardant landscaping, prohibiting construction in fire hazard areas, requiring design features that reduce fire potential and developing emergency response plans.
- The changing demand for service is complex. For example, with increasing populations there may be more density and more construction, though new buildings are constructed in accordance with increasingly stringent building and fire codes making them safer and more resistant to fires, such as requiring fire sprinklers. The population is aging, which may increase demand for service. But it is also feasible that the population may not need additional service, as healthcare and other technologies evolve and are improved.
- Future factors that could increase efficiencies in response, including improvements in technology and management, such as changes in deployment of equipment and staff and mutual aid agreements.

As discussed in Section 4.13, *Public Services*, LAFD has a Constitutional mandate to provide fire services as, "the protection of the public safety is the first responsibility of local government." Cal. Const. Art. XIII, Sec. 35, subd. (a)(2). LAFD "preserves life and property, promotes public safety and fosters economic growth through a commitment to prevention, preparedness, response and recovery as an all risk life safety response provider." It is the nation's second busiest provider of Emergency Medical Services (EMS); more than 85% of LAFD's daily responses are related to EMS. The types of medical response calls received range from minor cuts to trauma and heart attacks. The call volume for structure and brush fires is less frequent.

In 2015, LAFD published a Strategic Plan 2015-2017, A Safer City, that focuses on nine goals and corresponding strategic actions that would guide the LAFD for the next three years (LAFD 2015). The primary goals that are applicable to the Project include providing exceptional public safety and emergency service and implementing and capitalizing on advanced technologies. Some of the key priorities associated with these goals include:

- Improving response times by utilizing data and metrics to identify gaps in LAFD's response strategies and exploring response time improvements through dialogue, cognitive inquiry, innovation, and follow-up;
- Delivery of emergency medical services by expanding LAFD EMS response capabilities for special events and addressing periods of high vehicle traffic; and
- Identifying and implementing advanced technologies to support and improve performance metrics, tracking standards, data collection, analysis and reporting procedures (FireStatLA).

The LAFD Strategic Plan also focuses on the development of an even more professional workforce, promotion of a positive work environment to address risk management issues and strengthening community relationships to improve preparedness and enhance resiliency during emergency events.

In 2018, LAFD released the new Strategic Plan 2018-2020, A Safer City 2.0, which reports that since the previous Strategic Plan was released, LAFD has hired hundreds of new firefighters, implemented the Four Bureau Reorganization, and created innovative resources such as the Advanced Provider Response Unit (APRU), the Sober Response Unit and the Fast Response Vehicle program as well as other pilot programs (LAFD 2018). The new Strategic Plan has updated goals that are more refined. The five goals are 1) Provide exceptional public safety and emergency service, 2) Embrace a healthy, safe and productive work

environment, 3) Capitalize on Advanced Technology, 4) Enhance LAFD sustainability and community resiliency, and 5) Increase opportunities for personal growth and professional development. Goal 1 includes improving emergency response times, the delivery of EMS, resource deployment and readiness to respond to disasters. Goal 1 includes an objective to complete the Standards of Cover deployment analysis to determine the optimal distribution and concentration of resources and ensure a safe and effective response force for fire suppression, EMS and specialty response situations. The recommendations from the Standards of Cover are expected to be identified based on different geographic areas in the City; the Standards of Cover study was funded in the City's 2019-2020 budget and is expected to be completed within the next few years (LAFD 2019).

In the interim, LAFD has been implementing innovative resources and pilot programs especially in relation to public health. By addressing EMS related incidents with new resources, such as specialized medical units, other resources, such as fire engines and fire trucks and associated personnel, would be able to respond to other incidents, such as fires or other emergencies. This strategy is for better resource deployment and to help reduce response times. In the Downtown Plan Area, Fire Station #4 has a Sober Response Unit, which consists of a physician's assistant or nurse practitioner working alongside a firefighter paramedic as well as a social worker. This unit can provide medical treatment in the field, such as stitches and lab work, and determine if patients can be treated in the field without being transported to a hospital, or connect patients directly to a mental health facility or sobering center (LAFD 2020).

In 2015, Planning Department staff discussed the LAFD Strategic Plan and its relationship to growth and traffic with LAFD staff in order to understand how LAFD responds to growth and changes in traffic (LAFD 2015a). LAFD advised that although increasing congestion is a factor in how they address emergency response, their ongoing planning efforts, including the LAFD Strategic Plan take into account such increases in congestion and LAFD continues to plan for and maintain public safety and emergency service as required. LAFD monitors any impact on-the-ground implementation of the Downtown Plan may have on response times and make adjustments as necessary. These adjustments may or may not include redeploying resources, adding staff or building new fire stations. In the summer of 2019, Planning Department staff met with LAFD staff on the same topic due to public comments received about congestion and emergency response (LAFD 2019a). LAFD staff indicated that there are ongoing assessments of increases in call load or types of calls throughout the City, and LAFD continuously makes resource and deployment adjustments to address these changes, such as hiring additional medical personnel, acquiring new apparatus or flex staffing of personnel during the busiest hours of the day. LAFD staff said incremental changes are currently being addressed but the pending Standards of Cover is expected to have new recommendations for the long term. The Standards would include levels of staffing of firefighters and other personnel, target response times, new facilities and apparatus needed by geography, and address a City where development is expected to become denser and taller around transit infrastructure systems.

LAFD has some adopted response times that are consistent with the response times stated in the National Fire Protection Association guidelines, including call processing, turnout for EMS and non-EMS calls, and travel. LAFD holds regular FireStat meetings to review response times throughout the City. These meetings include battalion chiefs and captains from the four Geographic Bureaus (Central, South, Valley, and West) and the Administrative Bureaus in the City, and uses the FireStat data to exercise performance management and spot trends to adjust practices, methods or identify other solutions to maintain response times. Metrics are compared between stations and even across shifts or platoons to determine if there is an issue and to continue always to work on reducing all response times to get closer to the NFPA guidelines. If response times are shown to be increasing, battalion chiefs and captains will be tasked with identifying the reason and put in place mediations to resolve the issue. For example, if it is shown that one platoon is managing a four-minute average response and another platoon at the same station in similar conditions has an average response time of four and a half minutes, the responsible officers for the station will need to determine why one platoon is doing better than another, such as whether one platoon is taking a different route, and resolve

the differences to improve the slower numbers. If the factors are external to LAFD, LAFD will coordinate with other City departments, such as LADOT or ITA to adjust street light timing, or look for completely new solutions, in order to improve response times. In general, LAFD is constantly monitoring FireStat and utilizing all available resources so that appropriate and feasible response times are being maintained.

Many members of the public focus on response times as operational measures to assess system performance (Fitch 2005) or believe that faster response times mean better patient outcome. Nationwide, the most widely referenced response time standard for advanced life support (ALS) incidents in urban settings has been for emergency responders to respond within 8 minutes and 59 seconds, when including call processing time, for 90 percent of incidents. The National Fire Protection Association *1710 Standard for the Organization and Deployment of Fire Suppression Operations, Emergency Medical Operations and Special Operations to the Public by Career Fire Departments* is for an ALS unit to respond within 8 minutes to 90 percent of incidents, without including call processing time (Fitch, 2010). This response goal time has been commonly cited since Dr. Mickey Eisenberg published a study in 1979, which concluded that survival from cardiac arrest is maximized if the time between collapse to receiving CPR is four minutes and the time from collapse to receiving definitive care (e.g. defibrillation) is 8 minutes, which has led to a widespread goal of an 8-minute response for ALS units responding to life-threatening emergencies (Blanchard et al., 2012).

LAFD publishes average operational response times citywide and by specific fire stations online through FIRESTATLA (http://www.lafd.org/fsla/stations-map), and was the first fire agency in the United States to release response times to the public (Los Angeles 2019). ALS operational response times are provided for the full calendar year (January through December) starting with the year 2016; when this document was prepared in September 2019, the data available through FIRESTATLA online for 2019 was January through August. Operational response time is the time interval that starts when first contact is made (either through 911 or the fire dispatch center) and ends when the first Standard Unit arrives on-scene. A Standard Unit has the capacity or equipment to administer the full suite of lifesaving services (LAFD 2019b). Average ALS operational response times for the City and for the five stations in the Downtown Plan Area is less than the 8 minute 59 seconds standard, including call processing time. See **Table 4.15-14**.

**TABLE 4.15-14 LOS ANGELES FIRE DEPARTMENT RESPONSE TIMES**

| Year | Station 3<br>108 N Fremont Ave, Los Angeles, CA 90012 | Station 4<br>450 E Temple St, Los Angeles, CA 90012 | Station 9<br>430 East 7th Street Los Angeles, CA 90023 | Station 10<br>1335 South Olive Street Los Angeles, CA 90015 CA | Station 17<br>1601 South Santa Fe Avenue Los Angeles, CA 90021 CA |
|---|---|---|---|---|---|
| 2016 | 5:23 | 5:30 | 4:40 | 5:15 | 5:40 |
| 2017 | 5:40 | 5:30 | 4:49 | 5:29 | 5:35 |
| 2018 | 5:39 | 5:43 | 4:52 | 5:35 | 5:37 |
| 2019 /a/ | 5:48 | 5:36 | 4:47 | 5:33 | 5:45 |

/a/ Metrics for 2016, 2017, and 2018 are for January-December; for 2019, the available months were January-November when sourced in December 2019.
**SOURCE:** LAFD, FIRESTATLA, 2019.

From the data, the average operational response times for ALS incidents for the five fire stations in the Plan Area have generally slightly increased in recent years, but remain under the 8 minutes 59 seconds standard. Based on all of the above, it is not reasonably foreseeable that the City will not continue to stay below the 8 minutes and 59 second standard for average emergency response times in the Plan Area in consideration of the increasing congestion in the Plan Area identified above. It is reasonably foreseeable that LAFD will continue to meet its own mission statement and constitutional mandate to provide necessary fire and emergency services to the residents and visitors of the City. LAFD is currently preparing a Standards of Cover that will establish the City's response time standard and identify the facilities, equipment and staff to maintain that response time, including in consideration of increasing congestion identified above.

Additionally, LAFD continues to develop, obtain and innovate new methods, resources and equipment to meet the needs of the City for fire and emergency response, including in the Plan Area. Based on the above, the impact of the Downtown Plan on emergency medical services and fire protection and police protection would be ***less than significant***.

### New Zoning Code Impact

The New Zoning Code would not result in inadequate emergency access. The City requires that development plans be submitted to the City for review and approval to ensure that new development has adequate access, including driveway access and turning radius in compliance with existing regulations. In addition, many roadway configurations shown in the City's Complete Streets Design Guide would include continuous center left turn lanes, which facilitate emergency access when the thru lanes experience delays. The New Zoning Code would not repeal, amend, or conflict with existing regulations and uniformly applied development regulations, such as those required by the City, intended to avoid inadequate emergency access.

The primary Development Standard Set being used in the Downtown Plan Area has no minimum parking requirements and allows for off-site parking for both non-residential and residential uses which, if applied outside of the Downtown Plan Area, has the potential to lead to additional, unintended congestion as drivers search for parking. If this Standard Set were to be applied in areas that are not served by high-quality transit, it is possible that its application could contribute to congestion. However, it is speculative as to if and where this Development Standard Set would be applied outside of the Downtown Plan Area.

The New Zoning Code would provide a range of Form, Frontage, Standards, Use, Density Districts and Use Development Standards sets that could be applied elsewhere in the City through future community plan updates or amendments. However, due to the modulatory of the New Zoning Code, it is not known where or to what extent future development may occur and if there would be any effects to emergency access. Projecting the location and type of future growth would be speculative at this time; therefore, impacts cannot be identified. The Proposed Project does not intend to implement the New Zoning Code outside of the Downtown Plan Area and therefore any indirect impacts from the future use of the New Zoning Code outside the Downtown Plan Area would be speculative. It is anticipated that as community plans are revised and amended, the roadway network in each community planning area would be refined in concert with land use changes. Without such detail, it is not possible, using available traffic analysis procedures, to estimate some types of impacts. Further, the New Zoning Code only applies to properties where a community plan is updated or amended to utilize the new zoning, which would require environmental review pursuant to CEQA. Future environmental review of a proposed community plan update and associated zone changes would analyze if the zoning applied would result in inadequate emergency access. The impact would be ***less than significant.***

### Mitigation Measures

No significant impact has been identified; therefore, mitigation is not required for either the Downtown Plan or the New Zoning Code.

## CUMULATIVE IMPACTS

Cumulative transportation and traffic impacts consider regional population, housing and employment growth projections prepared by SCAG and found in the 2016-2040 RTP as well as growth anticipated in the Downtown Plan Area. The RTP also includes a Sustainable Communities Strategy (SCS) that provides guidance on land use planning and transportation to ensure that the region meets CARBs region-specific GHG reduction goals. The RTP also includes large-scale transportation improvements to show how linking transportation and land use planning can reduce automobile trips and greenhouse gas emissions. The 2016-

2040 RTP/SCS identifies transportation corridors and transit routes, High Quality Transit Areas (HQTAs), and a variety of strategies to be employed across the region.

## MP 2035 and SCAG 2016-2040 RTP/SCS Consistency

The adopted City of Los Angeles Mobility Plan 2035 (MP 2035) could have overlapping impacts with the Downtown Plan. In August 2015, the City of Los Angeles adopted MP 2035. MP 2035 (formerly the Transportation Element of the City's General Plan) is the transportation blueprint for the City of Los Angeles. MP 2035 identifies a number of changes to the City's circulation system, including policies, an Enhanced Complete Street System, an Action Plan, a Complete Streets Design Guide, and a revised Bicycle Plan, all of which will influence the network conditions in the Plan Area and adjacent areas in the City of Los Angeles.

MP 2035 provides the framework for future community plans and specific plans, which take a closer look at the transportation system in specific areas of the City and recommend more detailed implementation strategies to realize MP 2035. MP 2035 was prepared in compliance with the 2008 Complete Streets Act, which mandates that the circulation element of a city's General Plan be modified to plan for a balanced, multimodal transportation network that meets the needs of all users of streets, roads, and highways, defined to include motorists, pedestrians, bicyclists, children, persons with disabilities, seniors, movers of commercial goods, and users of public transportation, in a manner that is suitable to the rural, suburban, or urban context of the general plan.

The Downtown Plan contains a Project List that reflects the vision of MP 2035 and the analysis above considers two options for implementing MP 2035 in the Downtown Plan Area; however, the Future transportation impact analysis does not reflect full buildout of MP 2035 in adjacent areas of the City of Los Angeles. In the remaining portion of the City of Los Angeles outside the Plan Area, buildout of MP 2035 was not included in the Future with Downtown Plan analysis because, although MP 2035 has been adopted, the timing of implementation has not yet been identified. However, the cumulative impacts analysis evaluates the impacts of the Downtown Plan in conjunction with full buildout of MP 2035 throughout the City of Los Angeles.

The New Zoning Code would only apply to the Downtown Plan Area at this time and would apply to the remainder of the City only at such time as applicable community plan updates or amendments are adopted. Regardless, no provision of the New Zoning Code would conflict with the goals and policies of the MP 2035 or SCAG 2016-2040 RTP/SCS. Neither the Downtown Plan nor the New Zoning Code would have a cumulatively considerable impact related to MP 2035 or SCAG 2016-2040 RTP/SCS consistency. Cumulative impacts are ***less than significant***.

## CEQA Guidelines Section 15064.3, Subdivision (b) Consistency

The Downtown Plan meets the City adopted threshold of not exceeding baseline conditions, and therefore does not create a transportation impact itself. While this Plan cannot be used to determine the impact of individual development projects or adjacent community plans, the inclusion of the regionally used future forecasts accounts for potential cumulative impacts in this analysis. Therefore, the Downtown Plan would not have a substantial contribution to any cumulative impacts related to the VMT projections, and would therefore maintain consistency with CEQA Guidelines Section 15064.3, Subdivision (b).

Due to the modulatory of the New Zoning Code, it is not known where or to what extent future development may occur, therefore no specific transportation and traffic impacts would occur. Further, projecting the location and type of future growth would be speculative at this time as future application of the New Zoning Code would be driven by the policy intent and vision of future community plan updates and amendments. Future community plan updates or amendments would be required in order to apply the New Zoning Code

to other parts of the City, which would include environmental review and calculate VMT based on the density and intensity proposed. The Proposed Project does not intend to implement the New Zoning Code outside of the Downtown Plan Area and therefore any indirect impacts from the future use of the New Zoning Code outside the Downtown Plan Area would be speculative. Therefore, the New Zoning Code would not have a cumulatively considerable impact related to consistency with VMT projections. Cumulative impacts are ***less than significant***.

### Hazards Due to a Geometric Design Feature or Incompatible Uses

The Downtown Plan does not include any elements that would promote sharp curves, dangerous intersections, or incompatible uses that could present safety hazards, and promotes policies and programs to encourage safety of users across all modes. Although the Downtown Plan describes a reasonably expected future and cannot constitute a commitment to any project-specific development, individual projects would be expected to align with the safety principles of the Downtown Plan as well. However, queuing-related safety issues could potentially arise as additional development occurs in the Downtown Plan Area and elsewhere in the region and, although it is anticipated that the City and Caltrans would address any such issues as they arise, it cannot be determined with certainty that queuing-related safety issues would not occur. Thus, cumulative impacts related to freeway off ramp queuing are considered significant and unavoidable and the Downtown Plan may make a cumulatively considerable contribution to freeway safety impacts.

The New Zoning Code would only apply to the Downtown Plan Area at this time and would apply to the remainder of the City only at such time as applicable community plan updates or amendments are adopted. Regardless, no provision of the New Zoning Code would result in hazards due a geometric design feature or incompatible use. For these reasons, cumulative impacts related to transportation safety as a result of design features or incompatible uses would not be significant and the New Zoning Code would not have a substantial contribution to any cumulative impact related to transportation safety.

Cumulative impacts related to queuing-related safety issues are ***significant and unavoidable.*** All other cumulative impacts related to transportation hazards are ***less than significant.***

### Emergency Access

The Downtown Plan would increase traffic in the Downtown Plan Area, which could result in potential delays for emergency vehicles. However, while the MP2035 includes proposed roadway changes, they do not provide intersection-level detail in the Plan Area. It is feasible that some of these improvements to the network would provide benefits to emergency access as well. As noted above, the Department of City Planning staff have discussed the LAFD Strategic Plan and its relationship to growth and traffic with LAFD staff. While LAFD acknowledged the possible effects of congestion on their efforts, their ongoing planning efforts and new Strategic Plan consider increased congestion and the possible adjustments necessary. These adjustments may include redeploying resources, adding staff, or building new fire stations as deemed necessary. LAFD will continue to monitor growth in the Downtown Plan Area and any impact they identify will be addressed when needed. Therefore, the Downtown Plan would not have a cumulatively considerable impacts related to emergency access.

The New Zoning Code would only apply to the Downtown Plan Area at this time and would apply to the remainder of the City only at such time as applicable community plan updates or amendments are adopted. Regardless, no provision of the New Zoning Code would result in inadequate emergency access. For these reasons, cumulative impacts related to emergency access would not be significant and neither the Downtown Plan nor the New Zoning Code would not have a cumulatively considerable impact related to emergency access. Cumulative impacts are ***less than significant.***

# 4.16 TRIBAL CULTURAL RESOURCES

This section provides an overview of tribal cultural resources and evaluates impacts associated with the Proposed Project. The Proposed Project is evaluated in terms of whether implementation of the Central City and Central City North Community Plans (Downtown Plan) Update and New Zoning Code would impact tribal cultural resources.

# ENVIRONMENTAL SETTING

## EXISTING CONDITIONS

For a full discussion of the prehistoric and ethnographic setting of the Downtown Plan Area, see Section 4.4, *Cultural Resources*.

### Native American Consultation/Sacred Lands Files

The City of Los Angeles prepared and mailed AB 52 notification letters to each tribe listed by the NAHC on August 8, 2017. These letters are included in Appendix L. No responses were received within the 30-day consultation window or as of the date of this EIR.

Citywide Sacred Lands Files

The AB 52 notification letter mailed to each tribe listed by the NAHC on August 8, 2017 included project details related to the citywide provisions. As discussed above, no responses were received within the 30-day consultation window or as of the date of this EIR.

While the Citywide provisions of the New Zoning Code would be adopted as part of this Project and apply Citywide, a Sacred Lands File request was not completed for the entire City of Los Angeles. This is because the New Zoning Code would only be operative in other parts of the City once property is rezoned as part of a community plan update process. A future community plan update would entail a Community Plan amendment and rezoning, and associated environmental analysis, during which a Sacred Lands File request would be completed.

Downtown Plan Sacred Lands Files

A Sacred Lands File request was completed for the Downtown Plan Area with positive results. The results were provided by the Gabrielino Band of Mission Indians – Kizh Nation, who did not respond to the City's AB 52 notification letter. Given the location of the Downtown Plan Area, the results likely refer to the approximate location of *Yangna*, an ethnographic village site thought to be located near the present-day location of Los Angeles Union Station.

# REGULATORY FRAMEWORK

This section includes a discussion of the applicable laws governing tribal cultural resources, which must be adhered to before and during implementation of the proposed project.

# CITYWIDE

## Assembly Bill 52

As of July 1, 2015, California Assembly Bill 52 of 2014 (AB 52) was enacted and expands CEQA by defining a new resource category, "tribal cultural resources." Assembly Bill 52 establishes that "A project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment" (PRC Section 21084.2). It further states that the lead agency shall establish measures to avoid impacts that would alter the significant characteristics of a tribal cultural resource, when feasible (PRC Section 21084.3). PRC Section 21074 (a)(1)(A) and (B) defines tribal cultural resources as "sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe" and is:

a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or

b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

In recognition of California Native American tribal sovereignty and the unique relationship of California local governments and public agencies with California Native American tribal governments, and respecting the interests and roles of project proponents, it is the intent of AB 52 to:

1) Recognize that California Native American prehistoric, historic, archaeological, cultural, and sacred places are essential elements in tribal cultural traditions, heritages, and identities.

2) Establish a new category of resources in CEQA called "tribal cultural resources" that considers the tribal cultural values in addition to the scientific and archaeological values when determining impacts and mitigation.

3) Establish examples of mitigation measures for tribal cultural resources that uphold the existing mitigation preference for historical and archaeological resources of preservation in place, if feasible.

4) Recognize that California Native American tribes may have expertise with regard to their tribal history and practices, which concern the tribal cultural resources with which they are traditionally and culturally affiliated. Because CEQA calls for a sufficient degree of analysis, tribal knowledge about the land and tribal cultural resources at issue should be included in environmental assessments for projects that may have a significant impact on those resources.

5) In recognition of their governmental status, establish a meaningful consultation process between California Native American tribal governments and lead agencies, respecting the interests and roles of all California Native American tribes and project proponents, and the level of required confidentiality concerning tribal cultural resources, at the earliest possible point in CEQA environmental review process, so that tribal cultural resources can be identified, and culturally appropriate mitigation and mitigation monitoring programs can be considered by the decision making body of the lead agency.

6) Recognize the unique history of California Native American tribes and uphold existing rights of all California Native American tribes to participate in, and contribute their knowledge to, the environmental review process pursuant to CEQA.

7) Ensure that local and tribal governments, public agencies, and project proponents have information available, early in CEQA environmental review process, for purposes of identifying and addressing potential adverse impacts to tribal cultural resources and to reduce the potential for delay and conflicts in the environmental review process.

8) Enable California Native American tribes to manage and accept conveyances of, and act as caretakers of, tribal cultural resources.

9) Establish that a substantial adverse change to a tribal cultural resource has a significant effect on the environment.

AB 52 also establishes a formal consultation process for California tribes regarding those resources. The consultation process must be completed before a CEQA document can be adopted or certified. AB 52 requires that lead agencies "begin consultation with a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project." Native American tribes to be included in the process are those that have requested notice of projects proposed within the jurisdiction of the lead agency.

## DOWNTOWN PLAN AREA

No additional regulatory framework information is required. As discussed in the Regulatory Framework subsection of Section 4.4, *Cultural Resources*, CEQA requires a lead agency to determine whether a project could have a significant effect on tribal cultural resources (PRC Section 21074 [a][1][A]-[B]). CEQA Guidelines Section 15064.5 also prescribes a process and procedures for addressing the existence or probable likelihood of Native American human remains, as well as the unexpected discovery of any human remains during implementation of a project. This includes consultations with appropriate Native American tribes.

# ENVIRONMENTAL IMPACTS

## THRESHOLDS OF SIGNIFICANCE

The following thresholds of significance were developed based on Appendix G of the CEQA Guidelines. The Proposed Project would have a significant impact to tribal cultural resources if it would:

- Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:
- Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or
- A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe (Threshold 4.16-1).

# METHODOLOGY

The methodologies employed for the tribal cultural resources impacts analyses are described in the Regulatory Setting and Thresholds, above.

# PROJECT IMPACTS

| | |
|---|---|
| **Threshold 4.16-1** | Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:<br>· Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or<br>· A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe. |

**Impact 4.16-1**

**Downtown Plan:** New reasonably anticipated development from the Downtown Plan would involve ground disturbance with the potential to disturb as yet undiscovered tribal cultural resources. However, impacts would be ***less than significant with mitigation incorporated*.**

**New Zoning Code:** The New Zoning Code would not cause a substantial adverse change in the significance of a tribal cultural resource and the content of the New Zoning Code would not repeal, amend, or conflict with existing regulations intended to avoid impacts. Due to the modularity of the New Zoning Code, it is not known where or to what extent future development may impact tribal resources. Projecting the location and type of future growth would be speculative. The Proposed Project does not intend to implement the New Zoning Code outside of the Downtown Plan Area and therefore any indirect impacts from the future use of the New Zoning Code outside the Downtown Plan Area would be speculative. The impact would be ***less than significant***.

## Downtown Plan Impact

Effects on tribal cultural resources are only known once a specific development has been proposed because the effects are highly dependent on both the individual development site conditions and the characteristics of the proposed activity. Future discretionary development under the Downtown Plan that is subject to CEQA must comply with the requirements of AB 52, including consultation with California Native American tribes as each project is proposed which may result in the identification of tribal cultural resources. As described in Section 4.4, *Cultural Resources*, Los Angeles has a long history of Native American occupation; therefore, tribal resources could be present and development activities that could be accommodated under the Downtown Plan would have the potential to significantly impact tribal cultural resources. The Sacred Lands File search conducted for the Plan Area was positive and the Tongva ethnographic village site of Yangna is thought to be located near Union Station, so although no tribes responded to the AB 52 letters sent for the Downtown Plan and thus no tribal cultural resources have been

identified in the Downtown Plan Area, tribal cultural resources are potentially present. As such, grading and excavation associated with individual development projects that disturb previously undisturbed soils could potentially encounter intact tribal cultural resources. Individual discretionary projects that are subject to CEQA would be subject to AB 52 Native American consultation requirements and, as appropriate, analysis of and/or monitoring for cultural resources. However, "by right" projects would not be subject to either AB 52 or CEQA. Therefore, impacts to tribal cultural resources would be ***potentially significant.***

## New Zoning Code Impact

As described in Section 4.4, *Cultural Resources*, Los Angeles has a long history of Native American occupation; therefore, the potential exists for tribal cultural resources to be present. The New Zoning Code would provide options for a range of densities and intensities that could be applied elsewhere in the City through future community plan updates or amendments. However, due to the modularity of the New Zoning Code, it is not known where or to what extent future development may occur. Projecting the location and type of future growth would be speculative at this time therefore, impacts cannot be identified. Additionally, the Proposed Project does not intend to implement the New Zoning Code outside of the Downtown Plan Area and therefore any indirect impacts from the future use of the New Zoning Code outside the Downtown Plan Area would be speculative.

The New Zoning Code does not include any standards or provisions that would cause a substantial adverse change in the significance of a tribal cultural resource. Further, the content of the New Zoning Code would not repeal, amend, or conflict with existing regulations and uniformly applied development standards and policies, such as those within AB 52 and the California Public Resources Code as discussed in Regulatory Setting, intended to avoid these effects.

The New Zoning Code only applies to properties where a community plan is updated or amended to utilize the new zoning, which would require environmental review pursuant to CEQA. Future environmental review of a proposed community plan update and associated zone changes would analyze potential community- and site-specific impacts, during which a Sacred Lands File request would be completed. Future community plan updates and associated zone changes that may occur would also be required to comply with the requirements of AB 52, including consultation with California Native American tribes as future discretionary projects subject to CEQA are proposed which may result in the identification of tribal cultural resources. A ***less than significant impact*** would occur.

## Mitigation Measures

Downtown Plan

Individual projects subject to CEQA would be required to adhere to Assembly Bill 52 and discretionary projects would be subject to mitigation measures 4.4-2(a), (b), (c) and (d) in Section 4.4, *Cultural Resources*. In addition, the following measures are required for projects in the Downtown Plan Area.

### 4.16-1(a) Native American Consultation and Monitoring for Discretionary Projects

For all discretionary projects where excavation could extend below previously disturbed levels, notification shall be provided to California Native American tribes that are traditionally and culturally affiliated with the geographic area of the project site and have submitted a written request to the Department of City Planning to be notified of proposed projects in that area. If the potential for tribal resources exists, excavation in previously undisturbed soils shall be monitored by a qualified tribal monitor. If tribal resources are discovered during excavation, grading, or construction activities, work shall cease in the area of the find until an appropriate Tribal Representative has evaluated the find. Construction personnel shall not collect or move any tribal resources. Construction activity may continue unimpeded on other portions

of the project site. Any tribal resources shall be treated with appropriate dignity and protected and preserved as appropriate.

**4.16-1(b) Notices for Non-Discretionary Projects**

For all projects not subject to 4.16-1(a) that are seeking excavation or grading permits, the Department of Building and Safety shall issue the following notice and obtain an acknowledgment of receipt of the notice from applicants:

- Several federal and state laws regulate the treatment of tribal resources and make it a criminal violation to destroy those resources. These include, but are not limited to:
    - California Penal Code Section 622.5 provides the following: "Every person, not the owner thereof, who willfully injures, disfigures, defaces, or destroys any object or thing of archeological or historical interest or value, whether situated on private lands or within any public park or place, is guilty of a misdemeanor."
    - Public Resources Code Section 5097.5 (a) states, in part, that:

      No person shall knowingly and willfully excavate upon, or remove, destroy, injure, or deface, any historic or prehistoric ruins, burial grounds, archaeological or vertebrate paleontological site, including fossilized footprints, inscriptions made by human agency, rock art, or any other archaeological, paleontological or historical feature, situated on public lands, except with the express written permission of the public agency having jurisdiction over the lands.

- Best practices to ensure that tribal cultural resources are not damaged include but are not limited to the following steps:
    - A qualified tribal monitor or archaeologist qualified to identify tribal resources would monitor excavation and grading activities in soils that have not been previously disturbed, to identify, record, and evaluate the significance of any archaeological finds during construction.
    - If tribal resources are uncovered (in either a previously disturbed or undisturbed area), all work ceases in the area of the find until an appropriate Tribal Representative has evaluated the find or, if no Tribal Representative is identified, the qualified archaeologist has evaluated the find in accordance with federal, state, and local guidelines.
    - The found deposits shall be treated with appropriate dignity and protected and preserved as appropriate with the agreement of the Tribal Representative and in accordance with federal, state, and local guidelines.
    - An agreement will be reached with the Tribal Representative to mitigate or avoid any significant impacts to identified tribal cultural resources.
    - The location of the find of tribal cultural resources and the type and nature of the find will not be published beyond providing it to public agencies with jurisdiction or responsibilities related to the resources, the qualified archaeologist, and tribal representatives.
    - Absent an agreement with the Tribal Representative, as provided in Public Resources code Section 21083.2, archaeological resources should be preserved in place or left in an undisturbed state. When preserving in place or leaving in an undisturbed state is not possible, excavation should not occur unless testing or studies already completed have adequately recovered the scientifically consequential information form and about the resource and this determination is document by a qualified archaeologist.
    - Personnel of the project shall not collect or move any archaeological or tribal resources or associated materials, or publish the location of tribal cultural resources.

- Construction activity may continue unimpeded on other portions of the project site if cleared by the Tribal Representative or qualified archaeologist.
- Construction activities in the area where resources were found may commence once the identified resources are properly assessed and processed by a Tribal Representative or, if not Tribal Representative is identified, a qualified archaeologist.

New Zoning Code

None required.

### Significance after Mitigation

Downtown Plan

Implementation of the above measures, in combination with **Measures 4.4-2(a)** through **(d)** in Section 4.4, *Cultural Resources*, would reduce impacts to tribal cultural resources to a less than significant level by requiring a process to identify and, if necessary, avoid and/or recover identified tribal cultural resources throughout the Downtown Plan Area, including areas where resources have been previously identified. The impact would be ***less than significant with mitigation*** incorporated.

New Zoning Code

Not applicable.

## CUMULATIVE IMPACTS

Cumulative development citywide could disturb areas that may potentially contain tribal cultural resources. The potential for impacts from individual developments is site-specific and depends on the location and nature of each individual development proposal. All future development projects, including projects in the Downtown Plan Area, would continue to be subject to existing federal, state, and local requirements and discretionary projects may be subject to project-specific mitigation requirements under CEQA. It is anticipated that significant cumulative tribal cultural resource impacts can be avoided both Citywide and in the Downtown Plan Area. The New Zoning Code would only apply to the Downtown Plan Area at this time and would not involve any new development or infrastructure that could disturb tribal cultural resources. Further, projecting the location and type of future growth would be speculative at this time as future application of the New Zoning Code would be driven by the policy intent and vision of future community plan updates and amendments. Based on this information, the incremental effect of the Downtown Plan and New Zoning Code to tribal resources would not be cumulatively considerable and cumulative impacts would be ***less than significant***.

This page intentionally left blank.

# 4.17 UTILITIES AND SERVICE SYSTEMS

This section describes the utilities and service systems and evaluates the construction and operational impacts associated with the Downtown Plan and the New Zoning Code. Topics addressed include wastewater, water, and solid waste.

## *Wastewater and Stormwater Drainage*

## ENVIRONMENTAL SETTING

### EXISTING CONDITIONS

#### Citywide Wastewater System

The City of Los Angeles sewer system includes more than 6,600 miles of sewers serving a population of more than four million. The Los Angeles sewer system is comprised of three systems: Hyperion Sanitary Sewer System, Terminal Island Water Reclamation Plant Sanitary Sewer System, and Regional Sanitary Sewer System. To comply with Waste Discharge Requirements (WDRs), a Sewer System Management Plan (SSMP) was prepared for each of these systems (LADPW 2017).

The Hyperion Sanitary Sewer System is the largest of the City's three sanitary sewer systems. An average wastewater flow rate of approximately 300 mgd is generated by the system, which includes the Donald C. Tillman Water Reclamation Plant and the Los Angeles-Glendale Water Reclamation Plant. The Donald C. Tillman Water Reclamation Plant serves the area between Chatsworth and Van Nuys in the San Fernando Valley. The Los Angeles-Glendale Water Reclamation Plant is located in the San Fernando Valley and services the communities in east San Fernando Valley that are both within and outside of the City limits. Approximately 60 mgd is treated at Donald C. Tillman and Los-Angeles Glendale Water Reclamation Plants. All other flows in the system, and the biosolids from the Donald C. Tillman and Los-Angeles Glendale Water Reclamation Plants that are returned to the collection system, are treated at the Hyperion Water Reclamation Plant (HWRP) located in Playa Del Rey (LADPW 2017b). The HWRP has a treatment capacity of 450 million gallons per day (mgd) and was designed to accommodate a maximum peak wet weather flow of 800 mgd. On average, approximately 275 million gallons of wastewater enter the HWRP on a dry weather day (LADPW 2018). The HWRP performs pretreatment of wastewater (i.e., the removal of large objects), followed by primary and secondary treatments (i.e., elimination of harmful biological contents). In January 2019, an SSMP was prepared for the Hyperion Sanitary Sewer System pursuant to the State Water Resources Control Board's (SWRCB) May 2, 2006 Statewide General Waste Discharge Requirements (WDRs) (LASAN 2019).

The Terminal Island Water Reclamation Plant Sanitary Sewer System covers residential areas in San Pedro, Harbor City, and parts of Wilmington; and industrial areas on Terminal Island (LADPW 2017c). The Terminal Island Water Reclamation Plant has the capability to provide high quality tertiary treatment for up to 30 mgd and currently treats approximately 15 mgd. Sixty percent of the incoming flow to the plant comes from nearby industries while the remaining forty percent is from residential areas.

The Regional Sanitary Sewer System serves the Harbor Gateway, an area approximately five square-miles (LADPW 2017d). Wastewater generated in the service area is processed at the Los Angeles County Sanitation Districts' Joint Water Pollution Control Plant located in the City of Carson.

The wastewater collection system pipelines range in diameter from six inches to 150 inches and consist of approximately 6,700 miles of primary and secondary sewers. The sewer system consists of primary sewers (16-inches and larger in diameter) and secondary sewers (less than 16-inches in diameter). The secondary sewers provide service to property laterals and feed into the primary sewer lines. Primary sewers discharge into trunk, interceptor, and outfall pipes. Tributaries to interceptor sewer systems are called sewer reaches. Sewer reaches are usually named after the street to which their alignment is closest. Primary sewers have pipes with a diameter of 15 inches or more and are found in all sewer reaches. Interceptor sewer systems consist of large sewer pipelines that control the conveyance of wastewater to treatment plants.

To assess and maintain the condition of this expansive system, the City actively conducts an ongoing dry- and wet-weather flow monitoring program. There are 30 automatic "real time" flow monitors and 74 additional "near time" monitors located in the primary sewer system. The monitors use either telephone lines to send data to a central location or staff will download data in the field. Additionally, flow gauging is performed at over 600 strategic locations throughout the City's secondary sewer system on either a quarterly, semi-annual, or annual cycle to monitor flow depth.

New and rehabilitated sewers and pump stations are planned, designed, and constructed to meet the highest performance standards in the industry in accordance with the City's Sewer Design Manual. The Sewer Design Manual is a comprehensive set of criteria for planning and designing of new sewers, pump stations, force mains, and appurtenances, and for the rehabilitation of existing sewers. In conjunction with the Sewer Design Manual, the City also maintains Standard Plans, which are used to provide consistency and quality in design. All system components are designed to meet permit requirements of the various federal, state, and local agencies thereby ensuring that projects benefit from the input of all affected and interested parties, including the communities.

The Sewer Design Manual and Standard Plans are updated, maintained, and administered by LASAN. For all projects, LASAN is responsible for determining the sewer capacity availability for new sewer connections for residential, commercial, and industrial developments. This function is part of an overall sewer connection permitting process that involves a combined effort by LASAN and Bureau of Engineering (BOE) personnel. In issuing a sewer connection permit, the BOE Development Services Division determines if further investigation is needed to evaluate the capacity of an existing sewer line to handle the additional flow from the proposed development or project and take appropriate preemptive action to attenuate potential emergency sewer overflow incidences in the future. In addition to preemptive sewer monitoring and permitting activities, the LASAN Wastewater Collection Systems Division also maintains up-to-date Sanitary Sewer Overflow Response and Reporting Procedures. The procedures outline the necessary actions to provide immediate response to sewage overflows. It is City policy that, "[e]very reported sewage spill affecting public or private property within the City of Los Angeles shall be acted upon by the Division." Crew leaders are immediately notified upon receipt of a reported potential sewer overflow and are instructed to respond immediately.

The effect of stringent monitoring practices and sewer design standards are apparent in that the City has not experienced any wet-weather overflows since major relief sewers were completed in 2006. However, some dry-weather overflows still occur occasionally due to tree roots, grease blockages, landslides, and vandalism. Despite these irregular overflow occurrences, the system currently has sufficient capacity to handle peak dry-weather flows.

Sewer capacity planning is prioritized based on two ratios of sewer flow to sewer capacity (d/D): a Trigger ratio and a Relief ratio. Trigger flow is the quantity of flow, that once reached, would initiate planning for a relief or a replacement sewer. The buffer capacity is defined as the product of the estimated years to complete a new sewer project and the rate of recent flow increases in the sewer being evaluated. The Relief d/D is currently 0.75 across the City (i.e., when a sewer is at 75 percent of capacity) for all existing sewers, the Trigger d/D varies on a project by project basis because each project's tributary area has its own unique

characteristics such as population growth projection, commercial and industrial discharge forecast, and other contributing factors that determine how quickly flows are projected to increase over time. The Sewer Design Manual requires all new sewers to meet a d/D of 0.5 for the projected design year (i.e., that they be at no more than 50 percent of capacity in their design year).

### Downtown Plan Area Wastewater Generation and Conveyance

The Downtown Plan Area is served by the Hyperion Sanitary Sewer System and is served by a network of local, interceptor, relief, outfall and trunk sewers that convey flow from residential, business and commercial properties to the HWRP. Underground pipes range from as small as 6 inches in diameter to as large as 14 feet in diameter. The backbone of the system, the North Outfall Sewer (NOS), was built in the 1920s. Due in part to the age of the Downtown Plan Area sewer system, ongoing maintenance and replacement of sewer lines is needed. The Wastewater Capital Improvement Program (WCIP) identifies capital projects developed for the City's wastewater facilities (LA Sanitation & Environment 2018). The WCIP is developed for 10-year periods and was last updated in Fiscal Year 2017/2018 for projects through 2026/2027. The WCIP includes replacement, rehabilitation, and expansion of the City's wastewater treatment and collection system facilities. The WCIP identifies a number of sewer line projects in the Downtown Plan Area (https://www.lacitysan.org/cs/groups/public/documents/document/y250/mdm1/~edisp/cnt035434.pdf).

The estimated wastewater generation of existing land uses in the Downtown Plan Area is shown in **Table 4.17-1**. Existing development in the Downtown Plan Area generates an estimated 21 mgd of wastewater. Wastewater generated by the Downtown Plan Area represents approximately 4.6 percent of the Hyperion Treatment Plant's (HTP's) current wastewater treatment capacity of 450 mgd.

**TABLE 4.17-1 CURRENT WASTEWATER GENERATED IN THE DOWNTOWN PLAN AREA**

| Land Use | Dwelling Units or Jobs in Plan Area | Daily Wastewater Generation Rate (gpd/unit) | Wastewater Generation (gpd) |
|---|---|---|---|
| Single-family[1] | 6,733 du | 155.1 | 1,044,288 |
| Multi-family[1] | 26,932 du | 149.1 | 4,015,561 |
| Commercial | 154,674 jobs | 64.4 | 9,961,006 |
| Industrial | 29,126 jobs | 132.4 | 3,856,282 |
| Public Facilities | 35,084 jobs | 50 | 1,754,200 |
| **Total** | | | **20,631,338** |

**NOTES:**
du = dwelling unit (2017 baseline numbers actually represent households, which is slightly different than dwelling units insofar as households do not include vacant units. For consistency, the unit of measurement for households is denoted as dwelling units).
gpd – gallons per day
Totals may not add up due to rounding.
1. Single-family and multi-family units were estimated by assuming that 20 percent of total household units are single-family and 80 percent are multi-family.

**SOURCE:** Wastewater is assumed to be 100% of indoor water use. Per Exhibit 2D of the 2015 UWMP, indoor water use constitutes the following percentages of overall water use: Residential single family – 46%; Residential multi-family – 68%; Commercial – 76%; Industrial – 98%; and Government – 59%.

Storm Water and Urban Runoff

The Downtown Plan Area is an urban center that is primarily paved. Consequently, most storm water and urban runoff travels along the area's roadways and is captured by storm drains and catch basins. The City is served by an extensive urban drainage system comprised of more than 30,000 catch basins and 100 miles of open channels (City of Los Angeles 2018a). Even on the driest days, tens of millions of gallons flow through the City's storm water system. On rainy days, flows can increase to as much as 10 billion gallons

(City of Los Angeles 2018b). Storm water captured by the City's drainage system is channeled into Santa Monica and San Pedro Bays, where it is discharged without treatment (City of Los Angeles 2018b). The City's Stormwater Program focuses on flood control and pollution abatement and oversees the City's compliance with federal, state, and local regulations to reduce the amount of stormwater pollution. Regulations to reduce and prevent stormwater pollution are discussed in greater detail in Section 4.9, *Hydrology and Water Quality*.

Water Quality and Flow Monitoring

Los Angeles is constantly monitoring the infrastructure to ensure reliable service. Dischargers are regulated under Waste Discharge Requirements (WDRs) and are required to "self -monitor," that is, to collect regular samples of their effluent and receiving waters according to a prescribed schedule to determine facility performance and compliance with their requirements. In addition to self-monitoring by dischargers, the Los Angeles Regional Water Quality Control Board (LARWQCB) makes unannounced inspections and collects samples to determine compliance with discharge requirements and receiving water objectives and to provide data for enforcement actions. The LARWQCB also responds to a variety of incidents, including accidental and illegal discharges of oil from offshore pipelines, oily waste discharges, and dumping in the storm drains. Each regional board in the state prepares a biennial Water Quality Assessment Report using data collected by regional planning, permitting, surveillance, and enforcement programs. The regional reports contain inventories of the pollutants in the major water bodies of the region.

The Flow Monitoring Expansion Program helps operations and maintenance to manage the conveyance system. Flow data is gathered to support resource allocation. There are 120 permanent monitors and 50 temporary monitors that continually measure flow quantities at major sewers.

# REGULATORY FRAMEWORK

## LOCAL

### Integrated Resources Plan

In 2006, the City approved the Integrated Resources Plan, which incorporates a Wastewater Facilities Plan. The Integrated Resources Program was developed to meet future wastewater needs of more than 4.3 million residents expected to live in the City by 2020 (LADPW 2006). To meet future demands posed by increased wastewater generation, the City has chosen to expand its current overall treatment capacity, while maximizing the potential to reuse recycled water through irrigation, and other approved uses.

### City of Los Angeles Municipal Code

The LAMC Chapter V (Public Safety and Protection) describes different categories of wastewater discharge and peak flow (the maximum 5-minute rate of wastewater flow). In addition, the LAMC identifies permitted regulations related to industrial wastewater. LAMC Chapter XII (The Water Conservation Plan of the City of Los Angeles) also defines recycled water as treated wastewater suitable for direct beneficial use, or controlled use, as approved by the California Department of Public Health.

In addition to LAMC requirements, the City establishes design criteria for sewer systems to assure that new infrastructure provides sewer capacity and operating characteristics to meet City Standards (Bureau of Engineering Special Order No. SO06-0691). Per the Special Order, laterals sewers, which are sewers 18 inches or less in diameter, must be designed for a planning period of 100 years. The Special Order also requires that sewers be designed so that the peak dry weather flow depth during their planning period shall not exceed one-half the pipe diameter (City of Los Angeles 2006).

LAMC Sections 64.11 and 64.12 require approval of a sewer permit, also called an "S" Permit, prior to connection to the wastewater system. Each new connection is assessed a Sewerage Facilities Charge, which is deposited in the City's Sewer Construction and Maintenance Fund for wastewater-related purposes, including but not limited to industrial waste control and water reclamation purposes. LAMC Section 64.15 requires that a Sewer Capacity Availability Request (SCAR) be performed by the Department of Building and Safety when a sewer permit is sought for a new connection to the City's wastewater system, or in the event that a proposed increase in discharge to a public wastewater line or proposed future development is anticipated to generate 10,000 gallons or more of wastewater per day. A SCAR evaluates the existing wastewater collection system to determine whether adequate capacity exists to convey project-related wastewater to the appropriate treatment plant. If capacity is available, the Department of Building and Safety accepts project plans and specifications for plan check; otherwise, projects are placed on a waiting list to receive an allocation of forthcoming capacity, or applicants are required to construct a connection to the nearest wastewater line with available capacity. The Department of Building and Safety accepts project plans and specification for plan check if the project is on the waiting list, although the project may not connect to the City's wastewater system until capacity is available and a sewer permit is available.

## City of Los Angeles General Plan

The City of Los Angeles General Plan Framework Element (Framework), adopted in December 1996, and readopted in August 2001, sets forth a citywide comprehensive long-range growth strategy and defines citywide policies regarding land use, housing, urban form, neighborhood design, open space and conservation, economic development, transportation, infrastructure, and public services. Framework land use policies are implemented at the community level through community plans and specific plans. The applicable policies that are related to the City utilities and services systems, including wastewater, are listed in **Table 4.17-2**.

## Storm Water and Urban Runoff

Regulations related to storm water are discussed in Section 4.9, *Hydrology and Water Quality.*

**TABLE 4.17-2 RELEVANT GENERAL PLAN UTILITIES AND SERVICE SYSTEMS GOALS, OBJECTIVES, AND POLICIES**

| Goal/Objective/Policy | Goal/Objective/Policy Description |
|---|---|
| **FRAMEWORK ELEMENT – CHAPTER 9 INFRASTRUCTURE AND PUBLIC SERVICES** | |
| Goal 9C | Adequate water supply, storage facilities, and delivery system to serve the needs of existing and future residents and businesses. |
| Objective 9.1 | Monitor and forecast demand based upon actual and predicted growth. |
| Policy 9.1.2 | Monitor wastewater generation. |
| Objective 9.2 | Maintain the wastewater collection and treatment system, upgrade it to mitigate current deficiencies, and improve it to keep pace with growth as measured by the City's monitoring and forecasting efforts. |
| Policy 9.6.1 | Pursue funding strategies which link the sources of revenues for stormwater system improvement to relevant factors including sources of runoff and project beneficiaries. |
| Policy 9.2.1 | Collect and treat wastewater as required by law and Federal, State, and regional regulatory agencies. |
| Policy 9.2.2 | Maintain wastewater treatment capacity commensurate with population and industrial needs. |
| Policy 9.3.1 | Reduce the amount of hazardous substances and the total amount of flow entering the wastewater system. |
| Objective 9.8 | Monitor and forecast water demand based upon actual and predicted growth. |
| Policy 9.8.1 | Monitor water usage and population and job forecast to project future water needs. |

**TABLE 4.17-2 RELEVANT GENERAL PLAN UTILITIES AND SERVICE SYSTEMS GOALS, OBJECTIVES, AND POLICIES**

| Goal/Objective/Policy | Goal/Objective/Policy Description |
|---|---|
| Objective 9.9 | Manage and expand the City's water resources, storage facilities, and water lines to accommodate projected population increases and new or expanded industries and businesses. |
| Policy 9.9.1 | Pursue all economically efficient water conservation measures at the local and statewide level. |
| Policy 9.9.7 | Incorporate water conservation practices in the design of new projects so as not to impede the City's ability to supply water to its other users or overdraft its groundwater basins. |
| Objective 9.10 | Ensure that water supply, storage, and delivery systems are adequate to support planned development. |
| Policy 9.10.1 | Evaluate the water system's capability to meet water demand resulting from the Framework Element's land use patterns. |
| Policy 9.10.2 | Solicit public involvement, when appropriate, in evaluating options for the construction of new and/or expansion of existing water facilities. |
| Objective 9.11 | Ensure, to the maximum extent possible, the continued provision of water capacity, quality and delivery after an earthquake or other emergency. |
| Policy 9.11.1 | Provide for the prompt resumption of water service with adequate quantity and quality of water after an emergency. |
| Goal 9D | An integrated solid waste management system that maximizes source reduction and materials recovery and minimizes the amount of waste requiring disposal. |
| Goal 9E | Adequate Recycling Facility Development - expanded siting of facilities that enhance the City's reduction, recycling and composting efforts using methods and strategies that are economically, socially, and politically acceptable. |
| Goal 9F | Adequate collection, transfer and disposal of mixed solid waste - the City shall seek to ensure that all mixed solid waste that cannot be reduced, recycled or composted is collected, transferred and disposed of in a manner that minimizes adverse environmental impacts. |
| Goal 9G | An environmentally sound solid waste management system that protects public health, safety, and natural resources and minimizes adverse environmental impacts. |
| Goal 9H | A cost-effective solid waste management system that emphasizes source reduction, recycling, reuse, and market development and is adequately financed to meet operational and maintenance needs. |

**SOURCE**: City of Los Angeles, *City of Los Angeles General Plan*, *Safety Element*, adopted 1996; *Conservation Element*, adopted 2001,;and *Framework Element*, re-adopted 2001.

# ENVIRONMENTAL IMPACTS

## THRESHOLDS OF SIGNIFICANCE

The following thresholds of significance were developed in accordance with CEQA Guidelines Appendix G. Impacts would be significant if either the Downtown Plan or the New Zoning Code would:

- Require or result in the relocation or construction of new or expanded wastewater treatment, the construction or relocation of which could cause significant environmental effects (Threshold 4.17-1)
- Result in a determination by the wastewater treatment provider which serves or may serve the project that has adequate capacity to serve the project’s projected demand in addition to the provider’s existing commitments (Threshold 4.17-2)

- Require or result in the relocation or construction stormwater drainage facilities, the construction or relocation of which could cause significant environmental effects (Threshold 4.17-3)

# METHODOLOGY

The analysis of the Proposed Project's impacts with respect to wastewater focuses on whether existing and projected infrastructure capacities or supplies would be sufficient to meet future demands associated with anticipated development, including impacts associated with building new facilities to meet future demand. Project-generated demands were calculated using existing level of development in the Downtown Plan Area, 2040 Reasonably anticipated development in the Downtown Plan Area, and utility rates per development unit (e.g., water use per dwelling unit). The impact is the net change relative to existing conditions (i.e., 2040 with Downtown Plan conditions – baseline conditions).

Water demand rates were obtained from the LADWP's 2015 Urban Water Management Plan (UWMP), Exhibit 2H and Exhibit 2K (LADWP 2016a). Per Exhibit 2D of the 2015 UWMP, indoor water use constitutes the following percentages of overall water use: Residential single family – 46%; Residential multi-family – 68%; Commercial – 76%; Industrial – 98%; and Government – 59%. It was assumed that 20 percent of existing residential development is single-family and 80 percent is multifamily. This provides a conservative estimate as the Downtown Plan Area contains few single-family residential areas and single-family units have higher average utility usage rates than multi-family units. It was also assumed that the number of single-family homes would remain constant under future conditions relative to baseline conditions and all new residential development through 2040 would be multifamily.

State and local policies, plans, initiatives, and projects, such as SBX7-7, SB 1016, Emergency Water Conservation Plan, RENEW LA Plan and Ordinance 181519, as discussed above under Regulatory Setting, are in place or are anticipated to be implemented over the project's time horizon that would reduce utility consumption rates over time. However, baseline rates were used to calculate projected usage in 2040, as it is speculative to assume the decreases that would result from their implementation. The one exception is for water as the 2015 UWMP provides project water use rates for 2040. These projected rates incorporate savings from codes and ordinances currently in place, but do not take into consideration planned projects, future policies, or initiatives (LADWP 2016a), and therefore, also provide a conservative estimate of future consumption. A qualitative discussion of planned capacity-building or supply-enhancing projects is included in the analysis.

Consistent with the Population and Housing analysis, citywide impacts are analyzed assuming growth and demands placed on utilities and service systems based on SCAG projections.

# PROJECT IMPACTS

| | |
|---|---|
| **Threshold 4.17-1** | Require or result in the relocation or construction of new or expanded wastewater treatment facilities, the construction or relocation of which could cause significant environmental effects |
| **Threshold 4.17-2** | Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments |

**Impact 4.17-1, 4.17-2** **Downtown Plan:** Implementation of the Downtown Plan would increase demand for wastewater collection and treatment. Implementation of the Downtown Plan is anticipated to increase wastewater generation in the Downtown Plan Area by 23 mgd above baseline conditions. The HWRP would be able to adequately treat project-generated sewage and the treatment requirements of the RWQCB would

not be exceeded; therefore, impacts to wastewater facilities would be ***less than significant.***

**New Zoning Code:** The New Zoning Code does not include any standards that would result in an increased demand for wastewater collection and treatment. Further, the Proposed Project does not intend to implement the New Zoning Code outside of the Downtown Plan Area and therefore any indirect impacts related to wastewater collection and treatment from the future use of the New Zoning Code outside the Downtown Plan Area would be speculative. Therefore, the impact would be ***less than significant*** citywide.

## Downtown Plan Impact

**Table 4.17-3** summarizes projected wastewater generation for the Downtown Plan Area in 2040 with implementation of the Downtown Plan. As indicated in the table, total wastewater generation in 2040 is estimated to be 38 mgd. Reasonably anticipated development under the Downtown Plan through 2040 would generate just under 18 mgd of wastewater, which is an increase of about 81 percent compared to the baseline generation of just under 21 mgd.

The HWRP, which ultimately treats the City's sewage, is operating at 175 mgd below capacity on an average dry weather day (LADPW 2018). The projected net increase of just under 18 mgd generated by growth under the Downtown Plan represents about 10 percent of the plant's available capacity. Therefore, the HTP has sufficient available treatment capacity to serve reasonably foreseeable development in the Downtown Plan Area. The HWRP would be able to adequately treat project-generated sewage in addition to currently generated sewage, and the treatment requirements of the RWQCB would not be exceeded. Therefore, it is not foreseeable that implementation of the Downtown Plan would require construction of a new or expanded wastewater treatment plant.

As discussed above under *Regulatory Setting*, reasonably anticipated growth under the Downtown Plan would occur in compliance with the requirements of LAMC 64.11, 64.12 and 64.15, which establishes City standards related to wastewater discharge, peak flow and sewer capacity. Sewer pipeline upgrades would be necessary as development occurs in the Downton Plan Area. As discussed in the Setting, the identifies a number of sewer line projects in the Downtown Plan Area. Such upgrades would likely occur within existing utility easements and would not result in new areas of disturbance. All upgrades would be subject to subsequent environmental review, wherein potential site- or project-specific impacts, if any, would be addressed. Routine infrastructure projects involving replacing or upgrading wastewater conveyance facilities generally include the preparation of a ND/MND and in some cases may possibly qualify for a Categorical Exemption (e.g., CEQA Guidelines Section 15302). The environmental impacts of the construction and operation of these new or upgraded facilities would be localized in nature and consistent with the impacts that have been evaluated throughout this EIR. To the extent that any significant impacts could result from the unique characteristics of a specific site, those impacts would be speculative at this time.

The City is proactively undertaking capital improvement projects to not only maintain the existing infrastructure but also enhance and expand capacity of treatment plants. Such projects would include rehabilitating old sewer mains and maintenance holes and replacing aging equipment and structures at treatment and pumping plants. As detailed in the Setting, the City maintains the WCIP, which contains the capital projects and estimated costs for the renewal of the City's infrastructure at 10-year intervals.

**TABLE 4.17-3 ESTIMATED WASTEWATER GENERATION FOR THE DOWNTOWN PLAN AREA**

| Land Use | Dwelling Units or Jobs | Wastewater Generation Rate (gpd/unit) | Wastewater Generation (gpd) |
|---|---|---|---|
| Single-family Residential | 6,733 du | 144.3 | 972,000 |
| Multi-family Residential | 126,540 du | 137.9 | 17,450,000 |
| Commercial | 249,279 jobs | 59.8 | 14,907,000 |
| Industrial | 33,735 jobs | 123 | 4,150,000 |
| Public Facilities | 21,716 jobs | 46.4 | 1,008,000 |
| Total 2040 with Downtown Plan Wastewater Generation | | | 38,485,000 |
| Current Wastewater Generation | | | 20,631,000 |
| **Net Change in Wastewater Generation** | | | **17,854,000** |

Notes: Wastewater generation numbers are rounded to the nearest thousand. Totals may not add up due to rounding.
gpd – gallons per day
du – dwelling units
sf – square feet
**SOURCE:** Wastewater is assumed to be 100% of indoor water use. Per Exhibit 2D of the 2015 UWMP, indoor water use constitutes the following percentages of overall water use: Residential single family – 46%; Residential multi-family – 68%; Commercial – 76%; Industrial – 98%; and Government – 59%.Per the UWMP, per unit water demand is forecast to decline over time; the forecast 2040 rates are assumed to apply to new development.

The LASAN Wastewater Engineering Services Division is responsible for determining sewer capacity availability for new sewer connections for residential, commercial, and industrial developments. Thus, all development activities that require sewer connection permits are evaluated under the purview of existing capacity of sewer lines in the development site's vicinity at the time of development. By doing so, each new development must adhere to the most current Sewer Design Manual specifications as well as appropriate Standard Plan requirements. The Sewer Design Manual and Standard Plan are continuously updated to incorporate the most recent industry practices and materials ensuring appropriate measures are taken to accommodate any potential project. The City also has immediate response and reporting procedures in place to attend to any unexpected sewer overflows. The procedures are maintained in the Wastewater Collection Systems Division's up-to-date Sanitary Sewer Overflow Response and Reporting Procedures. Moreover, the City proactively monitors the sewer system to preemptively identify and resolve deficiencies before they become problematic. System deficiencies in need of rehabilitation are then included in the WCIP, which are attended to according to their associated priority ranking. The City would require that localized system deficiencies are adequately addressed by the responsible project. Any future upgrades would be designed in accordance with applicable provisions of the Municipal Code and to the satisfaction of the City Engineer.

Upgrades to sewer lines may cause temporary localized disturbance of roads, which may require re-routing of traffic and localized temporary increases in congestion, as well as temporary increases in air pollutant emissions and noise. However, such impacts would be within what is described in this EIR and upgrades would not result in long-term effects. As discussed above, any upgrades would be subject to subsequent environmental review, wherein potential site- or project-specific impacts, if any, would be addressed accordingly. Therefore, impacts related to construction of wastewater conveyance system upgrades would be ***less than significant***.

## New Zoning Code Impact

Future development has the potential to affect wastewater collection and treatment services by adding additional people and structures within the City that would increase wastewater generation, which could in

turn require the construction of new or altered facilities. However, the Proposed Project does not intend to implement the New Zoning Code outside of the Downtown Plan Area and therefore any indirect impacts from the future use of the New Zoning Code outside the Downtown Plan Area would be speculative. The New Zoning Code only applies to properties where a community plan is updated or amended to utilize the new zoning, which would require environmental review pursuant to CEQA. Future environmental review of a proposed community plan update or amendment and associated zone districts would analyze potential community-specific impacts to wastewater collection and treatment services.

The New Zoning Code's landscape provisions would refer to LA Sanitation's Low Impact Development requirements and implementation of the New Zoning Code would not be expected to detrimentally affect wastewater treatment or result in the need for new facilities. The New Zoning Code would also refer to the Model Water Efficient Landscape Ordinance, which requires that new construction projects develop water budgets for landscaping, reduction of erosion and irrigation related runoff, utilization of recycled water if available, irrigation audits, and development of requirements for landscape and irrigation design, and scheduling of irrigation based on localized climate. Further, the content of the New Zoning Code would not repeal, amend, or conflict with existing regulations and uniformly applied development regulations, such as Special Order No. SO06-0691 and other requirements discussed in Regulatory Setting, intended to avoid wastewater collection and treatment demand effects. As the Proposed Project does not intend to implement the New Zoning Code outside of the Downtown Plan Area, impacts would be ***less than significant***.

## Mitigation Measures

No significant impacts have been identified; therefore, mitigation is not required for either the Downtown Plan or the New Zoning Code.

| | |
|---|---|
| **Threshold 4.17-3** | Require or result in the relocation or construction of stormwater drainage facilities, the construction or relocation of which could cause significant environmental effects |

**Impact 4.17-3**

**Downtown Plan:** Implementation of the Downtown Plan would not require construction of new stormwater drainage facilities or expansion of existing facilities; impacts to water drainage facilities would be ***less than significant.***

**New Zoning Code:** The New Zoning Code does not include any standards that would require construction of new storm water drainage facilities or expansion of existing facilities. Further, the Proposed Project does not intend to implement the New Zoning Code outside of the Downtown Plan Area and therefore any indirect impacts regarding water drainage facilities from the future use of the New Zoning Code outside the Downtown Plan Area would be speculative. Therefore, the impact would be ***less than significant*** citywide.

## Downtown Plan Impact

As discussed in Section 4.9, *Hydrology and Water Quality*, of this Draft EIR, implementation of the Downtown Plan would not result in a substantial increase in impervious surfaces. Accordingly, reasonably anticipated growth under the Downtown Plan would not cause a substantial increase in the peak flow rates or volumes that would exceed the drainage capacity of existing stormwater facilities. Compliance with the City's Low Impact Development (LID) Ordinance would further ensure that any future development resulting from the Downtown Plan would not require construction of new stormwater drainage facilities and or expansion of existing facilities beyond specific improvements needed for individual development projects. In the long-term, redevelopment of properties in the Downtown Plan Area would improve surface

water quality by replacing older development with new development that incorporates LID methods. Therefore, impacts related to water drainage facilities would be ***less than significant***.

### New Zoning Code Impact

Future development outside the Downtown Plan Area has the potential to affect storm water drainage facilities by adding additional people and structures within the City which could in turn require the construction of new or altered facilities. However, the Proposed Project does not intend to implement the New Zoning Code outside of the Downtown Plan Area and therefore any indirect impacts from the future use of the New Zoning Code outside the Downtown Plan Area would be speculative. Therefore, the construction of new or altered storm water drainage facilities would not be required at this time.

The New Zoning Code would incorporate required water quality and storm water management features into the overall site and landscape design and would not be expected to detrimentally affect storm water drainage facilities. As discussed above, the New Zoning Code would reference the Model Water Efficient Landscape Ordinance. The New Zoning Code also requires all on-site automobile parking areas to be drained to collect, retain, and infiltrate surface water on-site and aims to facilitate the implementation of rainwater catchment devices as they are exempt from rooftop screening requirements, which has the potential to decrease storm water rates and volumes.

The New Zoning Code only applies to properties where a community plan is updated or amended to utilize the new zoning, which would require environmental review pursuant to CEQA. Future environmental review of a proposed community plan update and associated zone changes would analyze potential community- and site-specific impacts to existing storm water drainage facilities. Any proposed development would undergo project-level environmental review under CEQA, and would be required to comply with state and local requirements related to storm water drainage, such as the City's LID Ordinance. The Proposed Project does not intend to implement the New Zoning Code outside of the Downtown Plan Area and therefore any indirect impacts from the future use of the New Zoning Code outside the Downtown Plan Area would be speculative. As the Proposed Project does not intend to implement the New Zoning Code outside of the Downtown Plan Area, the impact would be ***less than significant***.

### Mitigation Measures

No significant impacts have been identified; therefore, mitigation is not required for either the Downtown Plan or the New Zoning Code.

## CUMULATIVE IMPACTS

The geographic area to analyze cumulatively considerable impacts to wastewater and/or storm drains includes the entire City of Los Angeles and immediately adjacent areas served by common infrastructure. Cumulative development throughout Los Angeles would add both dwelling units and non-residential development to the City. Citywide development through 2040 would add approximately 659,000 new residents, 293,000 new households, and 345,000 new employees (SCAG 2016). Cumulative impacts from this development are discussed below by impact area.

### Wastewater

Growth anticipated by the Downtown Plan and citywide cumulative growth would generate an increase in wastewater. Total water demand projected by the City's 2015 UWMP accounts for population growth within its jurisdictional boundaries, which is based on SCAG's demographic data and the 2012 RTP. As discussed in Section in 4.12, *Population and Housing*, the Downtown Plan would allow for an additional 176,000 persons, 99,000 housing units, and 86,000 jobs to the Downtown Plan Area. The updates to the

existing Downtown Plan would accommodate a development capacity consistent with long-range SCAG growth projections.

The City of Los Angeles is served by four water reclamation plants, which include the HWRP, the Terminal Island Reclamation Plant, the Donald C. Tillman Water Reclamation and the Glendale Water Reclamation Plant. Combined these reclamation plants have capacity to treat 580 mgd (649,684 afy) of wastewater citywide (LADPW 2018). According to the 2015 UWMP, average dry-weather wastewater influent projections for the City's wastewater treatment plants are expected to increase by approximately 20 percent over the next 25 years. Wastewater treatment projections of average dry-weather flows through 2040 for all four wastewater treatment plants total approximately 478.5 mgd (536,000 afy). Wastewater treatment projections of average dry-weather flows through 2040 for the HWRP are projected to be 366 mgd (410,000 afy), an increase of 91 mgd relative to baseline average dry-weather flows (275 mgd) (LADWP 2016a). Growth anticipated by the Downtown Plan would increase wastewater generation by approximately 18 mgd, which comprises approximately 4 percent of citywide treatment capacity and 5 percent of projected wastewater treatment for the HWRP. Citywide growth would further increase wastewater generation, but such increases would not approach overall treatment capacity. Therefore, the cumulative increase in wastewater generation would not exceed the capacity of the City's wastewater treatment plants. Additionally, the City's 2006 Integrated Resources Plan incorporates a Wastewater Facilities Plan to meet future wastewater needs through the expansion of overall treatment capacity, maximizing the potential to reuse recycled water and implementation of new water conservation and technology programs (LADPW 2006).

Growth anticipated by the Downtown Plan and citywide cumulative growth would contribute to an anticipated citywide increase in wastewater flow and place added demands on the wastewater conveyance system as future development takes place with the implementation of the Downtown Plan. Development under the Downtown Plan could require the construction of new or upgraded wastewater facilities. Such upgrades would likely occur within existing utility easements and would not result in new areas of disturbance. Construction of new or expanded conveyance facilities may be needed as a result of reasonably foreseeable development and, as discussed above, the City's WCIP identifies a number of sewer line projects in the Downtown Plan Area. The City would require that localized system deficiencies are adequately addressed by the responsible project. Any future upgrades would be designed in accordance with applicable provisions of the Municipal Code and to the satisfaction of the City Engineer.

Routine infrastructure projects involving replacement or upgrade of sewer lines generally result in the preparation of a Mitigated Negative Declaration (MND) or, in some cases, a Categorical Exemption. The City's MNDs for sewer line replacements indicate typical less than significant construction-related impacts, including air quality, noise, and transportation impacts. The environmental impacts of the construction and operation of sewer lines would be consistent with the impacts evaluated throughout this EIR. Specifically, the EIR analyzes anticipated effects of citywide growth related to air quality, noise, traffic, and other environmental impact areas. To the extent that any significant impacts could result from the unique characteristics of a specific project or site, those impacts are too speculative to analyze at this time. As necessary based on project and site characteristics, any such upgrades would be subject to subsequent environmental review, wherein potential impacts, if any, would be addressed accordingly. Regardless, impacts associated with construction of new facilities would be limited to the area in which the specific construction activity is occurring and would not contribute to any cumulative or citywide environmental impacts.

As discussed under Impact 4.17-1 and 4.17-2, the New Zoning Code would only apply to the Downtown Plan Area at this time and would apply to other areas of the City only when applicable community plans are updated. Any cumulative impacts related to future updates of other community plans would be speculative. Additionally, future community plan updates would be required to adhere to existing state and local requirements related to wastewater treatment and conveyance. As discussed for the Downtown Plan,

individual infrastructure improvements needed citywide may result in site-specific temporary impacts related to traffic, air quality, and noise, but such impacts would be limited to the area of the construction activity and would not create any cumulative or citywide impacts.

Based on the above information, the incremental effects of the Downtown Plan and New Zoning Code related to wastewater treatment and conveyance would not be cumulatively considerable and cumulative impacts would be ***less than significant***.

### Stormwater Drainage

Continued compliance with the City's Low Impact Development (LID) Ordinance for all new development would ensure that any future development in Los Angeles would not increase demands on stormwater drainage facilities and or expansion of existing facilities beyond specific improvements needed for individual development projects. As with the Downtown Plan Area, long-term redevelopment of properties throughout the City would improve surface water quality by replacing older development with new development that incorporates LID methods. The New Zoning Code does not include any provisions that would increase stormwater runoff or otherwise adversely affect stormwater drainage facilities. Therefore, cumulative impacts related to stormwater drainage facilities would be ***less than significant***.

# *Water Supply*

# ENVIRONMENTAL SETTING

## CITYWIDE SETTING

### Los Angeles Department of Water and Power

The Los Angeles Department of Water and Power (LADWP) is responsible for providing water supply to the City while complying with County, State, and Federal regulations. According to the City's 2015 Urban Water Management Plan (UWMP), which is further discussed below under *Regulatory Framework*, the primary LADWP sources of water supplies are water purchased from the Metropolitan Water District (MWD), imported surface water, and local groundwater. Recycled water projects are progressing and expected to be a greater portion of LADWP water supply in the future. Overall, these sources of water provide the necessary water to meet LADWP's water supply needs. In 2015 total water demand totaled 513,540 acre-feet per year (afy). The 2015 UWMP water demand projection for 2040 is approximately 675,700 afy, based on normal weather conditions, and 709,500 afy, based on dry year conditions (LADWP 2016a).

The Los Angeles Aqueduct (LAA) has historically been the primary source of the City's water supply. In recent years, however, the amount of water supplies from the LAA has been limited due to environmental concerns, and the City's water supply relied heavily (average of 57 percent in recent years) on the purchased water from MWD delivered from the Colorado River or the Sacramento-San Joaquin Delta. Local ground water has been a reliable water source, providing an average of 12 percent of the total water supply, but there have been concerns in recent years due to declining groundwater level and contamination issues. The City's recycled water supply is limited to specific projects within the City at this time (LADWP 2016a).

### Los Angeles Aqueduct

The LAA system extends approximately 340 miles from the Mono Basin to the City. From 1995 through 2004, the LAA supplied about half of the City's water needs. The City owns approximately 312,000 acres of property in the Owens Valley and appropriates groundwater from its lands in the Owens Valley pursuant to a long-term groundwater management plan with Inyo County (LADWP 2016a).

The LAA conveys snowmelt runoff from the eastern Sierra Nevada Mountains and water supplies are supplemented by groundwater pumping. LAA supplies fluctuate from year to year due to varying annual snowfall and hydrological conditions. In recent years, the LAA supplies have decreased because of environmental obligations to dedicate water resources to mitigate groundwater pumping in the Owens Valley, restore the water level of Mono Lake, and mitigate dust emissions from Owens Lake. The Runoff Forecast Model and the Los Angeles Aqueduct Simulation Model (LAASM) was used jointly to predict water available from the LAA. Absent any system improvements, average long-term LAA delivery over the next 25 years is expected to be 278,000 AFY, with a decline to 267,000 due to climate change impacts. However, by 2024, with the completion of a Master Project, LAA delivery will increase to 286,000 due to conserved water at Owens Lake (LADWP 2016a).

### Local Groundwater

In addition to groundwater extraction from nine wellfields throughout the Owens Valley, the LADWP extracts from three local groundwater basins: San Fernando, Sylmar, and Central. The LADWP plans to continue future pumping from the local basins, with limitations based on water quality and overdraft

protection. The LADWP's groundwater pumping strategy is based on a "safe yield" strategy, in which the amount of water removed over a period of time equals the amount of water entering the groundwater basin through native and imported groundwater recharge. Further, protection from potential overdraft conditions is provided by the court-appointed Los Angeles River Area Watermaster for the San Fernando and Sylmar Basins, and a court-appointed Watermaster Panel for the Central Basin (LADWP 2016a). Annually, the Watermaster prepares a Watermaster Service Report indicating groundwater extractions, replenishment operations, imported water use, recycled water use, finances of Watermaster services, administration of the water exchange pool, and significant water-related events in the Central Basin. Additionally, a long-term groundwater management agreement between the City and Inyo County ensures the protection of LADWP's groundwater resources in Owens Valley from overdraft conditions.

Local groundwater provides approximately 11 percent of the total water supply for the City and has provided nearly 30 percent of the supply in drought years. On average, about 80 percent of the LADWP's groundwater supply is extracted from the Upper Los Angeles River Area, while the Central Basin provides 20 percent (LADWP 2013). The Upper Los Angeles River Area has four local groundwater basins:

- San Fernando
- Sylmar
- Verdugo
- Eagle Rock

The average LADWP San Fernando, Sylmar, and Eagle Rock basin entitlements under the judgment are 87,000 acre-feet per year, 7,140 acre-feet per year, and 500 acre-feet per year, respectively (LADWP 2016a). In addition, as of October 2013, LADWP accumulated nearly 537,453 acre-feet of stored water credits in the San Fernando Basin. This stored water credit is water that LADWP can withdraw from the basin during normal and dry years or in an emergency. The Central Basin Judgment entitlement for the LADWP is 15,000 acre-feet per year. The West Coast Basin Judgment entitles LADWP to approximately 1,503 acre-feet per year. LADWP does not currently exercise its water rights in the West Basin (LADWP 2016a).

LADWP plans to continue production from its groundwater basins in the coming years to offset reductions in imported supplies. Extraction from the basins is, however, limited by water quality and overdraft protection. Both LADWP and the California Department of Water Resources have programs in place to monitor wells to prevent overdrafting.

In response to contamination issues and declining groundwater levels, the LADWP is working to clean up the San Fernando Basin's groundwater and is making investments to recharge local groundwater basins through stormwater recharge projects, while collaborating on the rehabilitation of aging stormwater capture and spreading facilities, with the long-range goal of increasing the contribution of groundwater to overall City water supplies.

## Recycled Water

LADWP restores wastewater to a level of quality specified by the California Department of Health Services and distributes it for landscaping and industrial uses. The sustainability of the City's water supplies is dependent on the City's ability to maximize water conservation and increase recycled water use. LADWP uses recycled water produced by four wastewater treatment plants: Hyperion Treatment Plant, Terminal Island Water Reclamation Plant, Donald C. Tillman Water Reclamation Plant, and the Los Angeles-Glendale Water Reclamation Plant. Currently recycled water provides approximately two percent to the City's water supply (LADWP 2016a). The City's goal is to increase the use of recycled water to 75,400 acre-feet per year by 2040. Water recycling and reuse is reducing Southern California's demand for potable water.

### Purchased Water

The remainder of the City's water demand is supplied by purchases from MWD. The Metropolitan Water District imports its water supplies from Northern California through the State Water Project's California Aqueduct and from the Colorado River by way of the MWD's Colorado River Aqueduct. LADWP is one of 26 member agencies that have preferential rights to purchase water from the MWD. LADWP has a preferential right to purchase water from the MWD pursuant to MWD Act Section 135. As a percentage of the City's total water supply, purchases of MWD water have historically varied from 4 percent in 1983-84 to 71 percent in 2008-09, with a five-year average 52 percent between 2005-06 and 2009-10. The City relies on the MWD even more in dry years and has increased its dependence in recent years as LAA supply has been reduced. Although the City plans to reduce its reliance on MWD supply, it has made significant investments in the MWD anticipating that the City will continue to rely on the wholesaler to meet its current and future supplemental water needs. The 2015 UWMP projects that LADWP's reliance on the MWD water supplies will be reduced significantly, from the five-year average of 57 percent of total demand to 11 percent under average weather conditions by 2040 (LADWP 2016a).

### Water Conveyance Facilities

As detailed in the LADWP's 2016 Water Infrastructure Plan, water supply to the City is provided by LADWP's water infrastructure system. LADWP's infrastructure and conveyance system includes 6,730 miles of mainline pipelines less than 20 inches in diameter, 550 miles of trunk lines greater than 20 inches in diameter, 123 tanks and reservoirs, 94 pumping stations, 24 chlorination stations, 328 regulator and relief stations, and 60,115 fire hydrants.

### Water Conservation

Los Angeles consistently ranks among the lowest in per person water consumption when compared to California's largest cities (LADWP 2016a). This is accomplished through water metering, water rationing, public awareness and incentives, industrial process water use efficiency, and other policies, programs and ordinances. As a result of water conservation measures, the City has reduced its water usage by 31 percent during FY2014/2015 compared to FY 2006/2007 (LADWP 2016a). Furthermore, state legislation, which postdates several City water conservation ordinances, has strengthened the City's commitment to water conservation and provides added assurance that the City will continue its leadership role in managing demand for water in the near and distant future.

## DOWNTOWN PLAN AREA SETTING

**Table 4.17-4** shows the estimated daily water demand associated with existing land uses in the Downtown Plan Area. Under existing conditions, Downtown Plan Area development generates demand for an estimated 28 mgd or 31,570-acre feet per year (afy). Of this total, residential uses account for about 29 percent and non-residential uses account for about 71 percent.

**TABLE 4.17-4 CURRENT WATER DEMAND IN THE DOWNTOWN PLAN AREA**

| Land Use | Dwelling Units or Jobs in Plan Area | Daily Water Use Rate (gpd/unit) | Daily Water Demand (gpd) | Annual Water Demand (afy) |
|---|---|---|---|---|
| Single-family[1] | 6,733 du | 337.2 | 2,270,368 | 2,543 |
| Multi-family[2] | 26,932 du | 219.3 | 5,906,188 | 6,616 |
| Commercial | 154,674 jobs | 84.7 | 13,100,888 | 14,675 |
| Industrial | 29,126 jobs | 135.1 | 3,934,923 | 4,408 |
| Public Facilities | 35,084 jobs | 84.7 | 2,971,615 | 3,329 |
| **Total** | | | **28,183,980** | **31,570** |

**NOTES:**
du - dwelling units
gpd – gallons per day
afy – acre feet per year (1 af = 325,850 gallons)
Totals may not add up due to rounding.
1. Single-family and multi-family units were estimated by assuming that 20 percent of total household units are single-family and 80 percent are multi-family.
2. Rates for multi-family residential include 0.3 gal/unit for landscaping, per Exhibits 2H and 2K of the 2015 UWMP

**SOURCE:** Water demand rates were obtained from the LADWP's 2015 Urban Water Management Plan (UWMP), Exhibit2H (LADWP 2016a)

# REGULATORY FRAMEWORK

## FEDERAL

### Clean Water Act

The primary goals of the Federal Clean Water Act (CWA), 33 USC §§ 1251, et seq. (CWA) are to restore and maintain the chemical, physical, and biological integrity of the nation's waters and to make all surface waters fishable and swimmable. The CWA forms the basic national framework for the management of water quality and the control of pollutant discharges. The CWA sets forth a number of objectives in order to achieve the above- mentioned goals. The CWA objectives include regulating pollutant and toxic pollutant discharges; providing for water quality which protects and fosters the propagation of fish, shellfish and wildlife; developing waste treatment management plans; and developing and implementing programs for the control of non-point sources pollution.

### Safe Drinking Water Act

The Safe Drinking Water Act (SDWA), enacted in 1974, ensures the quality of drinking water. The law requires actions to protect drinking water and its sources (e.g., rivers, lakes, reservoirs, springs and groundwater wells) and applies to public water systems that have at least 15 service connections or serve at least 25 people for at least 60 days a year. It authorizes the United States Environmental Protection Agency (USEPA) to set national standards for drinking water to protect against health effects from exposure to naturally-occurring and man-made contaminants. In addition, the USEPA works with states, localities and water suppliers that implement the standards. USEPA standards are set under the National Primary Drinking Water Regulations (NPDWR), which include legally enforceable primary standards and treatment techniques that apply to public water systems. Primary standards and treatment techniques protect public health by limiting the levels of contaminants, Maximum Contaminant Levels (MCLs), in drinking water. The MCL is the highest level of contaminant that is allowed in drinking water at a level that is not anticipated to produce adverse health effects after a lifetime of exposure, based upon toxicity data and risk assessment principles. Secondary standards are non-enforceable guidelines regulating contaminants that

may cause cosmetic effects (such as skin or tooth discoloration) or aesthetic effects (such as taste, odor, or color) in drinking water. USEPA does not enforce these "secondary maximum contaminant levels" (SMCLs). They are established only as guidelines to assist public water systems in managing their drinking water for aesthetic considerations, such as taste, color, and odor.

# STATE

## Senate Bills 610 and 221, Water Supply Assessment and Verification

Senate Bills (SB) 610 and 221 amended State law, effective January 1, 2002, to improve the link between the information on water supply availability and certain land use decisions made by cities and counties. Both statutes require detailed information regarding water availability to be provided to city and county decision-makers prior to approval of specified large (greater than 500 dwelling units or 500,000 square feet of commercial space) development projects. Both statutes also require this detailed information to be included in the administrative record that serves as the evidentiary basis for an approval action by the city or county on such projects. Under SB 610 water assessments must be furnished to local governments for inclusion in any environmental documentation for certain projects as defined in Water Code 10912 subject to the California Environmental Quality Act (CEQA). Under SB 221 approval by a city or county of certain residential subdivisions requires an affirmative written verification of sufficient water supply.

## Senate Bill X7-7, Water Conservation Act

The Water Conservation Act of 2009 (SB X7-7), effective November 9, 2009, requires each urban retail water supplier to develop urban water use targets and agricultural water suppliers to implement efficient water management practices. SB X7-7 aims to achieve a 20 percent reduction in urban per capita water use by December 31, 2020. Certain provisions of the law are implemented through public processes administered by the Department of Water Resources (DWR). AB 1420 (2007) requires DWR to convene an Independent Technical Panel to develop new Demand Management Measures and technologies and approaches. AB 1404 (2007) requires agricultural water suppliers to submit aggregated farm-gate delivery annual reports to DWR.

## Porter-Cologne Water Quality Control Act

The State of California is authorized to administer Federal or State laws regulating water pollution within the State. The Porter-Cologne Water Quality Control Act (Water Code §§ 13000, et seq.) includes provisions to address requirements of the CWA. These provisions include National Pollutant Discharge Elimination System (NPDES) permitting, dredge and fill programs, and civil and administrative penalties. The Porter-Cologne Act is broad in scope and addresses issues relating to the conservation, control, and utilization of the water resources of the State. Additionally, the Porter-Cologne Act states that the quality of all the waters of the State (including groundwater and surface water) must be protected for the use and enjoyment by the people of the State.

## Governor’s Declaration of a State of Emergency

On January 17, 2014, the governor proclaimed a state of emergency due to drought conditions. This proclamation directs all local urban water suppliers and municipalities immediately implement their local water shortage contingency plans. In response to the proclamation, the City and the LADWP activated the Water Conservation Response Unit to implement the Emergency Water Conservation Plan (EWCP).

On May 9, 2016 the governor signed Executive Order B-37-16 that established a new water use efficiency framework for California. The order bolstered the state’s drought resilience and preparedness by establishing longer-term water conservation measures that include permanent monthly water use reporting,

new urban water use targets, reducing system leaks and eliminating clearly wasteful practices, strengthening urban drought contingency plans and improving agricultural water management and drought plans. Based on monthly water use reporting, the majority of urban water suppliers reported sufficient supplies to meet demand in three additional dry years and are not subject to state conservation mandates. On February 8, 2017 the State Water Resources Control Board (SWRCB) adopted an emergency water conservation regulation to amend and extend the May 2016 regulation. The amended regulation allows certain suppliers the opportunity to submit or resubmit their water supply reliability assessments by March 15, 2017 and does not require mandatory conservation unless water suppliers determine that they have a shortfall. Prohibitions against home owners associations penalizing homeowners for certain outdoor conservation practices during a declared drought remain and similar requirements are extended to cities and counties. The extension maintains urban water supplier monthly reporting and basic water conservation measures. Accordingly, the SWRCB will separately take action to make reporting and wasteful water practices permanent.

On April 7, 2017, Executive Order **B-40-17** ended the drought state of emergency in all California counties except Fresno, Kings, Tulare, and Tuolumne, where emergency drinking water projects will continue to help address diminished groundwater supplies. It maintains water reporting requirements and prohibitions on wasteful practices.

### Making Water Conservation a California Way of Life.

In May of 2016, Governor Brown signed Executive Order B-37-16 that instructed State agencies to help Californians adopt permanent changes to use water more wisely. This Executive Order laid out a framework for moving the State from temporary, emergency water conservation measures to a more durable approach customized to the unique conditions of each local water agency. This report builds upon the Executive Order and provides recommendations for how to implement long-term improvements to water supply management that support water conservation.

### Urban Water Management Planning Act

In 1983, the California Legislature enacted the Urban Water Management Planning Act (Water Code, Section 10610 et seq.), which requires urban water suppliers to develop water management plans to actively pursue the efficient use of available supplies. Every five years, water suppliers are required to develop Urban Water Management Plans (UWMPs) to identify short-term and long-term water demand management measures to meet growing water demands.

### Title 20, California Code of Regulations (CCR) Section 1605.1

Mandates water conservation by establishing efficiency standards that give the maximum flow rate of all new shower heads, lavatory, sink faucets, and tub spout diverters.

### Water Conservation in Landscaping Act

In 2006, this Act was enacted by the California Legislature to resolve outdoor water waste through improvements in irrigation efficiency and selection of plants requiring less water. This Act required an update to the existing local Model Water Efficiency Landscape Ordinance.

### California Green Building Code (California Code of Regulations [CCR], Title 24)

California Code of Regulations Title 24 Part 6: *California's Energy Efficiency Standards for Residential and Nonresidential Buildings* (Title 24), was first adopted in 1978 in response to a legislative mandate to reduce California's energy consumption. Specifically, new development projects constructed within California after January 1, 2017 are subject to the mandatory planning and design, energy efficiency, water

efficiency and conservation, material conservation and resources efficiency, and environmental quality measures of the California Green Building Standards (CalGreen) Code (California Code of Regulations [CCR], Title 24, Part 11). The outdoor water use standards of the CalGreen Code, which requires a 20 percent reduction in indoor water use, are already addressed by the City's Water Conservation Ordinance.

# REGIONAL

## Regional Water Quality Control Board

The LARWQCB is one of nine State Regional Water Quality Control Boards (RWQCB) that are under the purview of the State Water Quality Control Board (SWQCB). The SWRCB sets statewide policy and, together with the 9 State RWQCBs, implements State and federal laws and regulations that pertain to water quality. The LARWQCB implements State and federal laws and regulations within its jurisdiction and continuously maintains its Water Quality Control Plan (WQCP).

# LOCAL

## City of Los Angeles General Plan

Applicable policies related to the City utilities and services systems, including water supply, are listed in **Table 4.17-2**.

## Emergency Water Conservation Plan

The EWCP is found in Los Angeles Municipal Code (LAMC) Chapter XII, Article I. The purpose of the EWCP is to provide a mandatory water conservation plan to minimize the effect of a water shortage to City water users. The provisions outlined within the EWCP are intended to significantly reduce the consumption of water over an extended period of time, thereby extending the available water required for the City water users while reducing the hardship of the City and the general public to the greatest extent possible. The EWCP contains five water conservation phases, which correspond with the severity of water shortage. Each increase in phase corresponds with more stringent water conservation measures (LADWP 2010). Phase I of the EWCP requires a number of water-saving measures including prohibiting hose watering of driveway and associated walkways; requiring decorative fountains to use recycled water, and repairing water leaks in a timely manner. The City imposes additional mandatory water use restrictions as a result of drought conditions. As of April 2016, the mayor approved an amendment to the EWCP that would increase fines for water wasters during periods of severe drought and will encourage conservation by the City's largest residential users (LADWP 2016b).

## Model Water Efficient Landscape Ordinance

In 2009, the City adopted the Model Water Efficient Landscape Ordinance in compliance with the State Water Conservation in Landscaping Act. This Ordinance requires development of water budgets for landscaping, reduction of erosion and irrigation related runoff, utilization of recycled water if available, irrigation audits, development of requirements for landscape and irrigation design, and scheduling of irrigation based on localized climate for new construction and redevelopment projects. The City requires automatic sprinkler systems to be installed to irrigate landscaping during morning hours or during the evening to reduce water losses from evaporation.

### Best Management and Low Impact Development Practices

As discussed further in Section 4.9, *Hydrology and Water Quality*, of this EIR, Chapter VI, *Public Works and Property* of the LAMC requires permits and oversee the implementation of any land use or development involving grading activities, or the construction of new structures or paving. Article 4 *Sewers, Water Courses and Drains* and Article 4.4, *Stormwater and Urban Runoff Pollution Control*, of the LAMC establishes minimum standards, guidelines, and/or criteria for specific discharges, connections, and/or Best Management Practices (BMPs). Additional measures are required by the City, when applicable, to prevent or reduce the discharge of pollutants to achieve water quality standards and receiving water limitations. Article 4.4 includes prohibitions for illicit discharges to enter the MS4 and requires implementation of BMPs and Low Impact Development (LID) practices (City of Los Angeles 2017). In addition, the City requires all construction activities and facility operations to be consistent with the landscape ordinance (Ordinance No. 170,978) as well as other related requirements, outlined in Chapter XII, *The Water Conservation Plan of the City of Los Angeles*, and the *Planning and Land Development Handbook for Low Impact Development (LID)*. The *Handbook* is a tool for developers to comply with the requirements of the City's Stormwater Program. The handbook summarizes the City's project review and permitting process, identifies stormwater mitigation measures, and references source and treatment control BMP information. The latest edition was adopted on May 9, 2016 (Los Angeles 2016).

### Water Efficiency Requirements Ordinance

In 2009, the City further increased its water efficiency mandates with the adoption of the Water Efficiency Requirements Ordinance. This Ordinance establishes water efficiency requirements for new developments and renovations of existing buildings by requiring installation of high efficiency plumbing fixtures in all residential and commercial buildings.

### Retrofit on Resale Ordinance

In 1988, the City adopted a plumbing retrofit ordinance to mandate the installation of conservation devices in all properties and to require water-efficient landscaping in all new construction. The ordinance was amended in 1998, requiring the installation of ultra-low-flush toilets and water saving showerheads in single- and multi-family residences prior to resale. LADWP has explored the expansion of the City's Retrofit on Resale Ordinance to include non-residential properties.

### Supply Ordinance No. 165004 Conservation

Adopted in 1989, this Ordinance effectively reduces citywide water consumption by requiring new buildings to install water conservation fixtures, such as ultra-low-flush toilets, urinals, taps, and showerheads, and plumbing fixtures which reduce water loss from leakage in order to obtain building permits in the City of Los Angeles. In addition, there are provisions requiring xeriscaping – the use of low-maintenance, drought-resistant plants.

### 2017 Los Angeles Amendment Green Building Code, No. 184691.

The purpose of the Green Building Program is to reduce the use of natural resources, create healthier living environments and minimize the negative impacts of development on local, regional, and global ecosystems. The program consists of a Standard of Sustainability and Standard of Sustainable Excellence. The program addresses five key areas: (1) Site: location, site planning, landscaping, storm water management, construction and demolition recycling; (2) Water Efficiency: efficient fixtures, wastewater reuse, and efficient irrigation; (3) Energy & Atmosphere: energy efficiency, and clean/renewable energy; (4) Materials & Resources: materials reuse, efficient building systems, and use of recycled and rapidly renewable materials; and (5) Indoor Environmental Quality: improved indoor air quality, increased natural lighting,

and improved thermal comfort/control. The Green Building Code also requires incorporation of water conservation measures into the construction and design of new buildings, additions, and alterations valued at over $200,000 (LADWP 2016b).

## Los Angeles Department of Water and Power 2015 Urban Water Management Plan

The 2015 UWMP, the water supply planning document for the City prepared by LADWP, presents the basic policy principles that guide LADWP's decision-making process to secure a sustainable water supply for Los Angeles. The 2015 UWMP forecasts future water demands and water supplies under average and dry year conditions; identifies future water supply projects such as recycled water; provides a summary of water conservation BMPs; and provides a single and multi-dry year management strategy. The 2015 UWMP serves as a master plan for water supply and resources management consistent with the City's goals and policy objectives; and provides full compliance with the requirements of the Urban Water Management Planning Act. As shown in **Table 4.17-5**, the forecasted water demand for year 2040 under a single dry year scenario is projected to be 709,500 afy.

**TABLE 4.17-5 SERVICE AREA RELIABILITY ASSESSMENT FOR SINGLE DRY YEAR**

| | Single Dry Year (FY2014-15) Fiscal Year Ending June 30 | | | | |
|---|---|---|---|---|---|
| **Demand and Supply Projections (in acre-feet)** | **2020** | **2025** | **2030** | **2035** | **2040** |
| Total Water Demand[1] | 642,400 | 676,900 | 685,500 | 694,900 | 709,500 |
| pLAn Water Demand Target | 485,600 | 533,000 | 540,100 | 551,100 | 565,600 |
| **Existing/Planned Supplies** | | | | | |
| Conservation [Additional Active[2] and Passive[3] after FY 14/15] | 156,700 | 143,700 | 145,100 | 143,500 | 143,500 |
| Los Angeles Aqueduct[4] | 32,200 | 51,900 | 51,400 | 51,000 | 50,600 |
| Groundwater[5] [Net] | 112,670 | 110,670 | 106,670 | 114,670 | 114,070 |
| Recycled Water | | | | | |
| ● Irrigation and Industrial Use | 19,800 | 29,000 | 39,000 | 42,200 | 45,400 |
| ● Groundwater Replenishment | 0 | 30,000 | 30,000 | 30,000 | 30,000 |
| Stormwater Capture | | | | | |
| ● Stormwater Reuse [Harvesting] | 100 | 200 | 300 | 300 | 400 |
| ● Stormwater Recharge [Increased Pumping] | 2,000 | 4,000 | 8,000 | 15,000 | 15,000 |
| Subtotal | 323,470 | 369,470 | 380,470 | 396,670 | 398,970 |
| **MWD Water Purchases** | | | | | |
| With Existing/Planned Supplies | 318,930 | 307,430 | 305,030 | 298,230 | 310,530 |
| **Total Supplies** | **642,400** | **676,900** | **685,500** | **694,900** | **709,500** |
| **Potential Supplies** | | | | | |
| Water Transfers[6] | 40,000 | 40,000 | 40,000 | 40,000 | 40,000 |
| Subtotal | 40,000 | 40,000 | 40,000 | 40,000 | 40,000 |
| **MWD Water Purchases** | | | | | |
| With Existing/Planned/Potential Supplies | 278,930 | 267,430 | 265,030 | 258,230 | 270,530 |
| **Total Supplies** | **642,400** | **676,900** | **685,500** | **694,900** | **709,500** |

**NOTES:**
1. Total Demand with existing passive conservation.
2. Cumulative hardware savings since late 1980s reached 118,034 afy by 2014-15.
3. Additional non-hardware conservation required to meet water use reduction goals set in the Sustainable City pLAn.
4. LADWP anticipates conserving 20,000 afy of water usage for dust mitigation on Owens Lake after the Master Project is implemented in FY 2023-24. Los Angeles Aqueduct supply is estimated to decrease 0.1652% per year due to climate change impact.
5. Net GW excludes Stormwater Recharge and Groundwater Replenishment supplies that contribute to increased pumping. The LADWP Groundwater Remediation project in the San Fernando Basin is expected in operation in 2021-22. Storage credit of 5,000 AFY will be used to maximize pumping in 2019-20 and thereafter. Sylmar Basin production will increase to 4,170 AFY from 2015-16 to 2038-39 to avoid the expiration of stored water credits, then go back to its entitlement of 3,570 AFY in 2039-40.
6. Potential water transfer occurs in dry years with stored water acquired in average and wet years.

**SOURCE:** LADWP's 2015 Urban Water Management Plan (UWMP), Exhibit ES-R (LADWP 2016a)

# ENVIRONMENTAL IMPACTS

## THRESHOLDS OF SIGNIFICANCE

The following thresholds of significance were developed in accordance with CEQA Guidelines Appendix G. Impacts would be significant if either the Downtown Plan or the New Zoning Code would:

- Require or result in the relocation or construction of new or expanded water facilities, the construction or relocation of which could cause significant environmental effects (Threshold 4.17-4); and/or
- Have insufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years (Threshold 4.17-5)

## METHODOLOGY

The analysis of the Proposed Project's impacts with respect to water quality and supply focuses on whether existing and projected infrastructure capacities or supplies would be sufficient to meet future demands associated with forecast development, including impacts associated with building new facilities to meet future demand. Project-generated demands were calculated using existing level of development in the Downtown Plan Area, forecast level of development in the Downtown Plan Area in 2040, and utility rates per development unit (e.g., water use per dwelling unit). The impact is the net change relative to existing conditions (i.e., 2040 with Downtown Plan conditions – baseline conditions).

Water demand rates were obtained from the LADWP's 2015 UWMP, Exhibit 2H and Exhibit 2K (LADWP 2016a). Rates for multi-family residential include 0.3 gal/unit for landscaping, per Exhibits 2H and 2K of the 2015 UWMP. It was assumed that 20 percent of existing residential development is single-family and 80 percent is multifamily. This provides a conservative estimate as the Downtown Plan Area contains few single-family residential areas and single-family units have higher average utility usage rates than multi-family units. It was also assumed that the number of single-family homes would remain constant under future conditions relative to baseline conditions and all new residential development through 2040 would be multifamily.

State and local policies, plans, initiatives, and projects, such as SBX7-7, SB 1016, Emergency Water Conservation Plan, RENEW LA Plan and Ordinance 181519, as discussed above under Regulatory Setting, are in place or are anticipated to be implemented over the project's time horizon that would reduce utility consumption rates over time. However, baseline rates were used to calculate projected usage in 2040, as it is speculative to assume the decreases that would result from their implementation. The one exception is for water as the 2015 UWMP provides project water use rates for 2040. These projected rates incorporate savings from codes and ordinances currently in place, but do not take into consideration planned projects, future policies, or initiatives (LADWP 2016a), and therefore, also provide a conservative estimate of future consumption. A qualitative discussion of planned capacity-building or supply-enhancing projects is included in the analysis.

Consistent with the Population and Housing Analysis, citywide impacts are analyzed assuming growth and demands placed on utilities and service systems based on SCAG projections.

# PROJECT IMPACTS

| | |
|---|---|
| **Threshold 4.17-4** | Require or result in the relocation or construction of new or expanded water facilities, the construction or relocation of which could cause significant environmental effects |
| **Threshold 4.17-5** | Have insufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years |

**Impact 4.17-4, 4.17-5** **Downtown Plan:** Implementation of the Downtown Plan is forecast to increase water demand in the Downtown Plan Area by approximately 25 mgd (28,000 afy), an increase of 90 percent from existing conditions. Based on the City's 2015 UWMP, adequate water supply exists to meet projected demand through the year 2040; impacts to water supply would be ***less than significant*** Downtown.

**New Zoning Code:** The New Zoning Code does not include any standards that would result in increased water demand. The Proposed Project does not intend to implement the New Zoning Code outside of the Downtown Plan Area and therefore any indirect impacts relating to water supply from the future use of the New Zoning Code outside the Downtown Plan Area would be speculative. Therefore, there would be no new population that would increase water demand. Therefore, the impact would be ***less than significant*** citywide.

## Downtown Plan Impact

Water Supplies

**Table 4.17-6** summarizes estimated water demand for the Downtown Plan Area in 2040 with implementation of the Downtown Plan. As indicated in the table, total water demand in 2040 is estimated to be 53 mgd, or 60,000 afy. New development forecast under the Downtown Plan through 2040 would generate an estimated demand of 25 mgd, or 28,000 afy, which is an increase of about 90 percent compared to the baseline generation of 28 mgd, or 32,000 afy.

Per the 2015 UWMP, current water supplies, planned future water conservation efforts, and planned future water supplies will enable LADWP to reliably provide water that meets the demands of the City for a 25-year planning horizon (through 2040). The 2015 UWMP indicates that water deliveries to the City totaled 513,540 afy in 2015. Projected total water demand for the City under average year conditions for year 2040 is 675,700 afy. Projected total water demand for the City for 2040 under single/multiple dry years conditions is 709,500 afy. The 2015 UWMP projects an increase of 195,960 afy (38 percent) in water demand between 2015 and 2040, under single/multiple dry year conditions. The projected net increase in water demand of 28,000 afy generated by new development facilitated by the Downtown Plan would represent about 14 percent of the forecasted water demand increase through 2040. The 2015 UWMP water demand projections are based on SCAG demographic data and population projections and the 2012 Regional Transportation Plan (RTP). As discussed in Section 4.12, *Population and Housing*, updates to the existing Downtown Plan would accommodate a development capacity consistent with long-range SCAG growth projections. Because the water demand projections for the Downtown Plan Area have been accounted for in the 2015 UWMP, and adequate supply would be available to meet estimated demand of the Downtown Plan Area during normal and single dry year conditions and multiple dry years up to the year 2040, impacts would be less than significant.

**TABLE 4.17-6 ESTIMATED WATER DEMAND IN THE DOWNTOWN PLAN AREA**

| Land Use | Dwelling Units or Jobs in Plan Area | Daily Water Use Rate (gpd/unit) | Daily Water Demand (gpd) | Annual Water Demand (afy) |
|---|---|---|---|---|
| Single-family Residential | 6,733 du | 313.8 | 2,113,000 | 2,000 |
| Multi-family Residential | 126,540 du | 202.8 | 25,662,000 | 29,000 |
| Commercial | 249,279 jobs | 78.7 | 19,618,000 | 22,000 |
| Industrial | 33,735 jobs | 125.5 | 4,234,000 | 5,000 |
| Public Facilities | 21,716 jobs | 78.7 | 1,709,000 | 2,000 |
| Total 2040 with Downtown Plan Water Demand | | | 53,336,000 | 60,000 |
| Current Water Demand | | | 28,184,000 | 32,000 |
| **Net Change in Water Demand** | | | **25,152,000** | **28,000** |

**NOTES:**
Water demand numbers are rounded to the nearest thousand. Totals may not add up due to rounding.
du – dwelling unit
gpd – gallons per day
afy – acre feet per year (1 af = 325,850 gallons)
**SOURCE:** Water demand rates were obtained from the LADWP's 2015 Urban Water Management Plan (UWMP), Exhibit 2K (LADWP 2016a). Per the UWMP, per unit water demand is forecast to decline over time; the forecast 2040 rates are assumed to apply to new development.

As discussed in the *Regulatory Setting,* new development facilitated by the Downtown Plan would be required to comply with the City's water conservation ordinances, such as the Model Water Efficient Landscape Ordinance, which requires that new construction projects develop water budgets for landscaping, reduction of erosion and irrigation related runoff, utilization of recycled water if available, irrigation audits, development of requirements for landscape and irrigation design, and scheduling of irrigation based on localized climate. Compliance with the Water Efficiency Requirements Ordinance and Supply Ordinance No. 165004 would require new buildings to install water conservation fixtures, such as ultra-low-flush toilets, urinals, taps, and showerheads, and plumbing fixtures in order to obtain building permits in the City of Los Angeles. As a result, impacts related to water supplies under the Downtown Plan would be ***less than significant***.

Impacts from Construction of Facilities

As development occurs incrementally throughout the Downtown Plan Area, upgrades to water conveyance facilities may be required. LADWP installs and maintains the water distribution system. The 2016-2017 LADWP Water Infrastructure Plan establishes goals and targets for replacing and/or upgrading infrastructure. Through infrastructure projects, the LADWP would replace or upgrade major system components that are outdated or malfunctioning. With approximately 7,200 miles of water pipes citywide, LADWP plans to replace approximately 500 miles in the next 10 years giving the highest priority to pipes with high risk of failure.

The precise location and connection would need to be determined at the time development is proposed. Should any new connections or upgrades be required, such upgrades would be subject to subsequent environmental review. Any future line size modifications or connections would be designed in accordance with applicable provisions of the Municipal Code. In coordination with the LADWP, project applicants are required to identify specific on- and off-site improvements needed to ensure that impacts related to water supply and conveyance demand/pressure requirements are addressed prior to issuance of a certificate of occupancy. Water supply and conveyance demand/pressure clearance from LADWP are required at the time that a water connection permit application is submitted. In addition, the City requires applicants to coordinate with the LAFD and Building and Safety Department to ensure that existing and/or planned fire

hydrants are capable of meeting fire flow demand/pressure requirements. The issuance of building permits is dependent upon submission, review, approval, and testing of fire flow demand and pressure requirements, as established by the LAFD and Building Safety Department prior to occupancy.

Development under the Downtown Plan could require the construction of new or upgraded water distribution facilities. However, if new facilities are determined to be necessary at some point in the future, the construction of such infrastructure would not be expected to result in significant environmental impacts since it typically involves replacement of lines in the same locations as existing lines. Routine infrastructure projects involving replacing or upgrading water distribution facilities, such as trunk lines, generally include the preparation of a ND/MND and in some cases may possibly qualify for a Categorical Exemption (e.g., CEQA Guidelines Section 15302). The environmental impacts of the construction and operation of these new or upgraded facilities are consistent with the impacts that have been evaluated throughout this EIR. Specifically, the EIR analyzes anticipated effects of citywide growth related to air quality, noise, traffic, and other environmental impact areas. To the extent that any significant impacts could result from the unique characteristics of a specific site, those impacts would be speculative at this time. Any such upgrades would be subject to subsequent environmental review, wherein potential impacts, if any, would be addressed. Therefore, impacts related to the construction of new water conveyance infrastructure and water treatment facilities or expansion of existing facilities under the Downtown Plan would be ***less than significant.***

## New Zoning Code Impact

Future development has the potential to affect existing water supplies by adding additional people and structures within the City which could in turn generate the need for new or expanded entitlements. The New Zoning Code would allow for a variety of new zone districts that could be applied elsewhere in the City through future community plan updates or amendments. The New Zoning Code includes Density Districts ranging from those allowing one dwelling unit per lot to those that limit density indirectly through floor area maximums. If future community plan updates apply Form Districts that allow for intensive development and Density Districts that allow for high density development, it is possible that new population and development could create the need for new or expanded entitlements. However, the Proposed Project does not intend to implement the New Zoning Code outside of the Downtown Plan Area. Therefore, analyzing direct or indirect water demand impacts based off of the new Zoning Code would be speculative. Further, the New Zoning Code would include landscaping requirements that refer to the City's Low Impact Development requirements with the intent to improve site permeability and reduce storm water runoff.

The New Zoning Code only applies to properties where a community plan is updated or amended to utilize the new zoning, which would require environmental review pursuant to CEQA. Future environmental review of a proposed community plan update or amendment and associated zoning classifications would analyze potential community- and site-specific impacts related to water supplies. Future environmental review of proposed community plan update and amendment would be analyzed for consistency with the UWMP. Further, the content of the New Zoning Code would not repeal, amend, or conflict with existing regulations and uniformly applied development regulations, such as the Model Waste Efficient Landscape and Water Efficiency Requirements ordinances, intended to avoid increased water demand effects. It is also expected that the development capacity of communities undergoing future community plan updates and amendments would be developed in accordance with SCAG projections which would ensure proper planning to address potential increased water demand. As the Proposed Project does not intent to implement the New Zoning Code outside of the Downtown Plan Area, the impact would **be less than significant**.

## Mitigation Measures

No significant impacts have been identified; therefore, mitigation is not required for either the Downtown Plan or the New Zoning Code.

# CUMULATIVE IMPACTS

The geographic area to analyze cumulatively considerable impacts to water includes the entire City of Los Angeles. Cumulative development throughout Los Angeles would add both dwelling units and non-residential development to the City. Citywide development through 2040 would add approximately 659,000 new residents, 293,000 new households, and 345,000 new employees (SCAG 2016). Cumulative impacts from this development are discussed below by impact area.

Total water demand projected by the City's 2015 UWMP accounts for population growth within its jurisdictional boundaries, which is based on SCAG's demographic data and the 2012 RTP. Per the 2015 UWMP, demographic projections for the LADWP service area include a population of 4,441,545 persons, 1,713, 651 housing units and 2,000,667 jobs (LADWP 2016a). As shown in **Table 4.17-5**, projected total water demand for the City for 2040 under single/multiple dry year conditions is 709,500 afy. Per the 2015 UWMP, based on current water supplies, planned future water conservation and planned future water supplies, LADWP will be able to reliably provide water to meet the demands of the City for the 25-year planning horizon identified in the 2015 UWMP. Therefore, cumulative development would not result in a cumulatively significant impact with respect to water supply.

Cumulative impacts related to water supply are ***less than significant.***

As discussed in Section 4.12, *Population and Housing*, and under Impact 4.17- and 4.17-2, the update to the existing Downtown Plan would provide for a development capacity consistent with long-range SCAG growth projections; therefore, implementation of the Downtown Plan would result in an increase in water demand consistent within UWMP projections. The New Zoning Code would only apply to the Downtown Plan Area at this time and would apply to other areas of the City only when applicable community plans are updated. Any cumulative impacts related to future updates of other community plans as a result of the New Zoning Code would be speculative; however, as discussed above, the 2015 UWMP water demand projections are based on SCAG population projections so since the UWMP forecasts adequate water supplies based on these projections water supply shortages are not anticipated. Additionally, future community plan updates would be required to adhere to existing state and local requirements related to water supply.

The increase in water demand could potentially increase pressure on the City's water infrastructure, including water mainline and trunk lines. In 2016, LADWP prepared a Water Infrastructure Plan, which addresses the City's long-term goals for replacing the City's water infrastructure. The report states that LADWP plans to replace approximately 500 miles of leak-prone and high-risk water mainlines in the next 10 years, and LADWP is increasing the rate at which they replace water distribution mainline to bring the pipe replacement cycle closer to the expected pipe life cycle by year 2020. The upgrading and replacement of the City's water infrastructure generally result in the preparation of an MND or, in some cases, a Categorical Exemption. The City's MNDs for water line replacements typically indicate less-than-significant impacts, including air quality, noise, and traffic impacts. The environmental impacts of the construction and operation of water lines are localized in nature and consistent with the impacts evaluated throughout this EIR. Specifically, the EIR analyzes anticipated effects of citywide growth related to air quality, noise, traffic, and other environmental impact areas. To the extent that any significant impacts could result from the unique characteristics of a specific project site, those impacts are too speculative to analyze at this time. Therefore, the Proposed Plan would not make a cumulatively considerable contribution to impacts related to water conveyance.

Based on the above information, the incremental effect of the Downtown Plan and New Zoning Code related to water supply or conveyance would not be cumulatively considerable and cumulative impacts would be ***less than significant***.

# *Solid Waste*

# ENVIRONMENTAL SETTING

## CITYWIDE SETTING

Solid waste management, including collection and disposal services and landfill operation in Los Angeles is administered by various public agencies and private companies. Refuse on public streets is collected by the City Department of Public Works Bureau of Sanitation (LASAN) and disposed of at City operated landfills. LASAN provides collection services primarily to single-family residences and some of the smaller multi-family residences, collecting over one million tons of refuse annually from 750,000 customers including single- and small multi-family residences, averaging 6,652 tons per day (LADPW 2017a). The City is also responsible for collecting waste from the City Hall complex, some public buildings, parks, and fire stations. Large multi-family residences, such as apartment complexes and condominiums, and commercial and industrial buildings, contract with a private company to collect and transport their materials for disposal or recycling (LADPW 2013a).

Waste generated by construction and the majority of multi-family residential sources and all commercial and industrial sources is collected by private contractors. Private contractors can dispose of waste at a City-operated landfill or a landfill of their choosing. On April 15, 2014, the Mayor and City Council approved the ordinance that established the Zero Waste LA Franchise System, which allows the City to establish an exclusive franchise system with 11 zones. With a single trash hauler responsible for each zone, the franchise system allows for the efficient collection and sustainable management of solid waste resources and recyclables. The Franchise System serves all users within a zone that are not serviced by LASAN, and became operational in July, 2017.

As of 2012, the City achieved a diversion rate of 76.4 percent (LADPW 2013b). As discussed further under *Regulatory Framework*, per the Solid Waste Integrated Resources Plan (SWIRP), landfill solid waste disposal for the City of Los Angeles totaled 2,849,237 annual tons in 2010. Assuming no additional programs are implemented to reduce waste and that the City maintains its 2010 baseline diversion rate (72 percent), citywide disposal is projected to increase by 10 percent to 3,121,937 annual tons by 2030 (LADPW 2013a).

### Landfills

Solid waste generated in Los Angeles is sent to waste disposal sites (i.e., landfills) operated by the City and County as well as by private companies. In addition, transfer stations temporarily store debris until larger haul trucks are available to transport the materials directly to the landfills. **Table 4.17-7** lists the city in which each landfill is located, permitted capacity, remaining capacity, permitted daily intake capacity, and the average daily volume of solid waste received for each of the landfills serving the City of Los Angeles (County of Los Angeles 2017). The Commerce Refuse to Energy Facility and the Southeast Resource Recovery Facility extend the landfill capacity by combusting solid waste and selling energy generated by combustion to local utility companies. While neither facility currently encounters maximum capacity issues, both are restricted in regards to the daily amount and type of solid waste that they can accept and process. Another alternate solid waste disposal method includes recycling businesses, with the most notable location being the Azusa Reclamation facility. The City is primarily served by the Sunshine Canyon Landfill, which accepts residential, commercial, and construction waste (LADWP 2017). As shown in **Table 4.17-7**, the combined daily intake capacity of landfills serving the City of Los Angeles is 45,540 tons per day and the average disposal intake is 19,143 tons per day. Based on the County of Los Angeles CIWMP

2016 Annual Report, available capacity from Nonhazardous Solid Waste Landfills is expected for the next 15 years (CIWMP projections extend to 2031) and no new landfills are expected to be permitted during that time (Los Angeles County 2017).

**TABLE 4.17-7 SOLID WASTE FACILITIES SERVING THE CITY OF LOS ANGELES**

| Facility Name | Landfill Site Location | Remaining Capacity (tons)[1] | Permitted Daily Intake Capacity (tons/day) | 2016 Average Disposal (tons/day) |
|---|---|---|---|---|
| Antelope Valley | Palmdale | 12,888,361 | 1,800 | 1,582 |
| Calabasas | Agoura | 5,951,595 | 3,500 | 951 |
| Chiquita Canyon[2] | Castaic | 48,114,000 | 12,000 | 4,544 |
| Lancaster | Lancaster | 10,445,200 | 3,000 | 550 |
| Sunshine Canyon | Los Angeles | 62,108,650 | 12,100 | 7,496 |
| Scholl Canyon[3] | Glendale | 4,080,222 | 3,400 | 1,122 |
| Commerce Refuse to Energy Facility/b/ | Commerce | N/A | 1,000 | 370 |
| Southeast Resource Recovery Facility/b/ | Long Beach | N/A | 2,240 | 1,345 |
| Azusa Land Reclamation | Azusa | 56,335,860 | 6,500 | 1,183 |
| **Totals** | | **199,923,888** | **45,540** | **19,143** |

**NOTES**:
1. Remaining capacity as of December 2016.
2. Chiquita Canyon reached its fill capacity limits in June 2016. However, the landfill is proposed to be expanded. The values provided for remaining capacity and permitted daily capacity are for the proposed Chiquita Canyon Landfill Expansion. /b/Transforms Solid Waste into Energy.
3. Scholl Canyon Landfill is proposed to be expanded. Expansion would provide an additional 5.5 or 8.0 million tons of remaining capacity.

**SOURCE:** County of Los Angeles 2017.

### Recycling Facilities

Waste generated in the City may also be diverted from landfills and recycled. In 2000, the City had a diversion rate of approximately 58.8 percent (LADPW 2001). In 2001, the City adopted a 70 percent diversion rate goal by the year 2020. The City revised the diversion rate goal to 75 percent by 2013, and the City adopted a new goal of Zero Waste by the year 2025. By the end of 2011, the City achieved a diversion rate of 76.4 percent (LADPW 2013b).

## DOWNTOWN PLAN AREA SETTING

As shown in **Table 4.17-8**, existing development in the Downtown Plan Area currently generates an estimated 1,071 tons of solid waste per day or 390,771 tons per year. The current solid waste generation calculation for the Downtown Plan Area does not take into account diversion of solid waste from landfills. Assuming the current 72 percent diversion rate, solid waste generated in the Downtown Plan Area that is actually sent to area landfills totals about 109,416 tons.

**TABLE 4.17-8 CURRENT SOLID WASTE GENERATION IN THE DOWNTOWN PLAN AREA**

| Land Use | Dwelling Units (du[1]) or Jobs in Plan Area | Annual Waste Generation Rate | Annual Waste Generation (tons) | Daily Waste Generation (tons) |
|---|---|---|---|---|
| Single-family Residential | 6,733 du | 1.17 ton/du[1] | 7,878 | 22 |
| Multi-family Residential | 26,932 du | 0.46 ton/du | 12,389 | 34 |
| Commercial | 105,376,578 sf | 3.01 ton/1,000 sf | 317,183 | 869 |
| Industrial | 40,101,581 sf | 1.24 ton/1,000 sf | 49,726 | 136 |
| Public Facilities | 3,865,922 sf | 0.93/1,000 sf | 3,595 | 10 |
| **Total** | | | **390,771** | **1,071** |

**NOTES**:
du – dwelling units
sf – square feet
lbs – pounds
Totals may not add up due to rounding.

# REGULATORY FRAMEWORK

## FEDERAL

Federal Agencies and Regulations. Title 40 Code of Federal Regulations, Part 258 Subtitle D of the Resource Conservation and Recovery Act (RCRA) establishes minimum location standards for siting municipal solid waste landfills. Because California laws and regulations governing the approval of solid waste landfills meet the requirements of Subtitle D, the USEPA delegated the enforcement responsibility to the State of California.

## STATE

### California Integrated Waste Management Act of 1989 (Assembly Bill 939)

The California Integrated Waste Management Act of 1989, which is commonly known as Assembly Bill (AB) 939, was the first recycling legislation in the country to mandate recycling diversion goals. This Act, codified into the PRC, emphasized a reduction of waste disposed in California landfills by requiring cities and counties to reduce the production of, recycle, and reuse solid waste. To achieve a reduction of waste in California landfills, AB 939 required all city and county plans to include a waste diversion schedule with the goals to divert 25 percent of solid waste from landfills by 1995 and divert 50 percent of solid waste from landfills by the year 2000. Recently, a number of changes to the municipal solid waste diversion requirements under this Act were adopted, including a revision to the statutory requirement of 50 percent diversion of solid waste. Under these provisions, local governments are required to continue to divert 50 percent of all solid waste after January 1, 2000.

### Assembly Bill 341

The purpose of AB 341 is to reduce GHG emissions by diverting commercial solid waste to recycling efforts and to expand the opportunity for additional recycling services and recycling manufacturing facilities in California. In addition to Mandatory Commercial Recycling, AB 341 sets a statewide goal for 75 percent disposal reduction by the year 2020.

### Senate Bill 1016

Senate Bill (SB) 1016 requires expressing the 50 percent solid waste diversion requirement established by AB 939 in pounds per person per day. SB 1016 changed the CalRecycle review process for each municipality's integrated waste management plan. After an initial determination of diversion requirements in 2006 and establishing diversion rates for subsequent calendar years, the Board reviews a jurisdiction's diversion rate compliance in accordance with a specified schedule. Beginning January 1, 2018, the Board will be required to review a jurisdiction's source reduction and recycling element and hazardous waste element once every two years.

## LOCAL

### City of Los Angeles Solid Waste Integrated Resources Plan

The City of Los Angeles Solid Waste Integrated Resources Plan (SWIRP), prepared by the Bureau of Sanitation, is a 20-year master plan to reduce waste, increase recycling, and manage trash in the City. The SWIRP outlines the City's objectives to provide sustainability, resource conservation, source reduction, recycling, renewable energy, maximum material recovery, public health and environmental protection for solid waste management planning through 2030 with a goal of a "zero waste city". Although the City of Los Angeles SWIRP is a long-term overarching plan to manage solid resources, it also encompass all of the solutions and programs currently in place within the City by addressing all solid waste generators within the City, including residential, commercial, industrial, and institutional uses. In addition, the SWIRP process identifies the number, types, and size of new solid waste disposal facilities that the City will need in the future. Per the SWIRP, landfill solid waste disposal for the City of Los Angeles totaled 2,849,237 annual tons in 2010. The SWIRP provides the projected solid waste quantities by generator sector based on projected changes in population and employment provided by SCAG. Assuming no additional programs are implemented to reduce waste and that the City maintains its 2010 baseline diversion rate (72 percent), citywide disposal is projected to increase by 10 percent to 3,121,937 annual tons by 2030 (LADPW 2013a).

### Recovering Energy, Natural Resources and Economic Benefit from Waste for Los Angeles (RENEW LA Plan)

A resource management blueprint called RENEW LA was adopted by the City Council in February 2006. This 20-year plan is the blueprint that will guide the City in reducing the use of landfills by maximizing recycling and reuse, and converting much of the solid waste that currently would go to landfills into clean energy and/or valuable raw materials. Many of the plan components have been, and continue to be implemented.

### Citywide Construction and Demolition (C&D) Waste Recycling Ordinance (Ordinance 181519)

On March 5, 2010, the City Council adopted the Citywide C&D Waste Recycling Ordinance (Ordinance 181519) that requires all mixed C&D waste generated within City limits be taken to City certified C&D waste processors. All haulers and contractors responsible for handling C&D waste must obtain a Private Solid Waste Hauler Permit prior to collecting, hauling and transporting C&D waste and C&D waste can

only be taken to City certified C&D Processing Facilities. Among the various purposes of this program is the goal of maintaining an open and competitive market for all companies providing solid waste and disposal services in the City, and to mandate the recycling of construction and demolition waste.

### City of Los Angeles General Plan

The applicable policies that are related to the City utilities and services systems, including solid waste and recycling, are listed in **Table 4.17-2**.

### Citywide Recycling Chute Ordinance (Ordinance 181227)

On July 7, 2010, the City Council approved the Citywide Recycling Chute Ordinance that requires all new development projects, all existing multi-family residential development projects of four or more units where the addition of floor area is 25 percent or more, and all other existing development projects where the addition of floor area is 30 percent or more, to provide an adequate recycling area or room for the collection and loading of recyclable materials. When a new development project provides a trash chute, or an existing development project adds a trash chute, a recycling chute shall also be provided in both cases. Recycling chutes shall be clearly marked "recycling only" at every point of entry.

### Zero Waste LA Franchise System

Zero Waste LA Franchise System is a public-private partnership to address three-million tons of waste disposed yearly by City of Los Angeles businesses, consumers, and residents. The Zero Waste LA Franchise System was approved by City Council in April 2014 and expected to go into full effect by July 2017. As part of the program, the City is divided in to 11 zones that are served by a single trash hauler that would allow for the efficient collection and sustainable management of solid waste resources and recyclables. LASAN solid waste collection services will continue to be provided to current City customers, including the collection of bulky items from all residents. Zero Waste LA goals include the following:

- Reduction of landfill disposal by 1,000,000 tons per year by 2025;
- Transparent and predictable solid waste and recycling service rates for the next 10-20 years;
- Quality customer service standards with LASAN monitoring and enforcement;
- Franchise hauler accountability for program outcomes and customer satisfaction through a series of measures implemented by LASAN, up to and including liquidated damages;
- Compliance with environmental regulations, including mandatory commercial and organics recycling;
- Investment of over $200 million in new and improved solid resources infrastructure;
- Clean fuel vehicles; and
- Decrease and recycling of food waste and increase in food rescue.

# ENVIRONMENTAL IMPACTS

## THRESHOLDS OF SIGNIFICANCE

The following thresholds of significance were developed in accordance with CEQA Guidelines Appendix G. Impacts would be significant if either the Downtown Plan or the New Zoning Code would:

- Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals (Threshold 4.17-6)
- Not comply with federal, state, and local management and reduction statutes and regulations related to solid waste (Threshold 4.17-7)

## METHODOLOGY

The analysis of the Proposed Project's impacts to solid waste focuses on whether the project would impair attainment of solid waste reduction goals by generating solid waste in excess of local standards or in excess of infrastructure capacities, or would not comply with solid waste management and reduction regulations. Project-generated demands were calculated using existing level of development in the Downtown Plan Area, forecast level of development in the Downtown Plan Area in 2040, and utility rates per development unit. The impact is the net change relative to existing conditions (i.e., 2040 with Downtown Plan conditions – baseline conditions).

Waste generation rates were obtained from CalEEMod. It was assumed that 20 percent of existing residential development is single-family and 80 percent is multifamily. This provides a conservative estimate as the Downtown Plan Area contains few single-family residential areas and single-family units have higher average utility usage rates than multi-family units. It was also assumed that the number of single-family homes would remain constant under future conditions relative to baseline conditions and all new residential development through 2040 would be multifamily.

Consistent with the Population and Housing Analysis, citywide impacts are analyzed assuming growth and demands placed on utilities and service systems based on SCAG projections.

## PROJECT IMPACTS

| | |
|---|---|
| **Threshold 4.17-6** | Would the Proposed Project generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals |

**Impact 4.17-6**

**Downtown Plan:** Implementation of the Downtown Plan would generate an increase of approximately 1,133 tons of solid waste per day above existing conditions that would need to be disposed of at local landfills. However, projected future solid waste generation would remain within the capacity of landfills serving the City; therefore, impacts would be ***less than significant*** for the Downtown Plan.

**New Zoning Code:** The New Zoning Code does not propose new development or include any standards that would generate solid waste. Further, the Proposed Project does not intend to implement the New Zoning Code outside of the Downtown Plan Area and therefore any indirect impacts related to landfill capacity from the future use of the New Zoning Code outside the Downtown Plan Area

would be speculative. Therefore, the impact would be ***less than significant*** citywide.

## Downtown Plan Impact

As shown in **Table 4.17-9**, reasonably foreseeable development under the Downtown Plan would increase the amount of solid waste generated in the Downtown Plan Area by approximately 1,133 tons per day, or 413,534 tons per year, above existing conditions. The calculation for the Downtown Plan does not take into consideration current and planned City programs to divert solid waste from landfills. For example, compliance with LAMC Section 66.32 would ensure that at least 50 percent of the demolition and construction waste generated by development under the Downtown Plan would be diverted from landfills serving the City. In addition, the City will continue to implement waste reduction policies set forth by the RENEW LA Plan and the Framework Element. Based on the City's current 72 percent diversion rate, the amount of additional waste that would be sent to landfills is about 318 tons per day or 116,070 tons per year.

As shown in **Table 4.17-7**, the combined daily intake capacity of landfills serving the Plan Area is 45,540 tons per day and the average disposal intake is 19,143 tons per day. Therefore, available capacity (26,397 tons per day) can accommodate the estimated daily solid waste that would be generated in the Downtown Plan Area. Assuming no diversion, the increase in Downtown Plan Area generated solid waste would represent about 4 percent of the total available daily capacity.

Based on the County of Los Angeles Countywide Integrated Waste Management Plan (CIWMP) 2018 Annual Report (County of Los Angeles 2019), Los Angeles County would be able to meet the disposal needs of all County jurisdictions through the 15-year planning period for six of seven scenarios considered. Although daily capacity at area landfills is currently available (as noted above), the CIWMP Annual Report concludes that reliance on existing permitted County landfill capacity alone is insufficient to meet the County's long-term disposal needs; however, under the "status quo" scenario (i.e., solid waste disposed will continue to be managed by existing permitted in-County disposal infrastructure and available out-of-County landfill capacity and diversion efforts by individual jurisdictions continue, resulting in a countywide diversion rate of 65 percent) and each of the other scenarios contemplated in the CIWMP Annual Report, no shortfall in capacity is expected. The "status quo" scenario is conservative insofar as it assumes no new waste reduction programs or disposal facilities and no increase in waste diversion. Based on these facts, sufficient permitted capacity is anticipated to be available to accommodate the Downtown Plan Area's solid waste disposal needs and impacts related to solid waste would be ***less than significant***.

## New Zoning Code Impact

New development has the potential to affect existing solid waste disposal rates by adding additional people and structures in the City, which could in turn generate solid waste disposal over the capacity of local landfills. However, the Proposed Project does not intend to implement the New Zoning Code outside of the Downtown Plan Area and therefore any indirect impacts from the future use of the New Zoning Code outside the Downtown Plan Area would be speculative. As no quantifiable amount of construction or demolition would occur; no waste would be generated at this time.

The New Zoning Code only applies to properties where a community plan is updated or amended to utilize the new zoning, which would require environmental review pursuant to CEQA. Future environmental review of a proposed community plan update or amendment and associated zone districts would analyze potential community- and site-specific impacts related to solid waste disposal needs. As the Proposed Project does not intend to implement the New Zoning Code outside of the Downtown Plan Area, impacts would be ***less than significant.***

**TABLE 4.17-9 ESTIMATED SOLID WASTE GENERATION IN THE DOWNTOWN PLAN AREA**

| Land Use | Dwelling Units or Square Feet | Annual Waste Generation Rate | Annual Waste Generation (tons) | Daily Waste Generation (tons) |
|---|---|---|---|---|
| Single-family Residential | 6,733 du | 1.17 ton/du | 7,878 | 22 |
| Multi-family Residential | 126,540 du | 0.46 ton/du | 58,208 | 159 |
| Commercial | 199,504,737 sf | 3.01 ton/1,000 sf | 600,509 | 1,645 |
| Industrial | 76,758,424 sf | 1.24 ton/1,000 sf | 95,180 | 261 |
| Public Facilities | 45,730,208 sf | 0.93 ton/1,000 sf | 42,529 | 117 |
| Total 2040 Downtown Plan Area Solid Waste Generation | | | 804,305 | 2,204 |
| Current Solid Waste Generation | | | 390,771 | 1,071 |
| **Net Change in Waste Generation** | | | **413,534** | **1,133** |

**NOTES:**
Waste generation (tons) was rounded to the nearest whole number. Totals may not add up due to rounding.
du – dwelling unit
sf – square feet
[1] Converted from CalEEMod default data of 0.41 tons/resident, assuming a persons per unit rate of 2.86 for City of Los Angeles (California Department of Finance (DOF). 2018. E-5 Population and Housing Estimates for Cities, Counties, and the State, 2011-2018 with 2010 Census Benchmark. http://www.dof.ca.gov/Forecasting/Demographics/Estimates/E-5/ (accessed April 2019))
**SOURCE:** CalEEMod Land Use SubType

## Mitigation Measures

No significant impacts have been identified; therefore, mitigation is not required for either the Downtown Plan or the New Zoning Code.

| **Threshold 4.17-7** | Would the Proposed Project not comply with federal, state, and local management and reduction statutes and regulations related to solid waste |
|---|---|

**Impact 4.17-7**

**Downtown Plan:** Development under the Downtown Plan would comply with applicable solid waste policies and objectives from the SWIRP and RENEW LA Plan as well as local ordinances; impacts would be ***less than significant*** Downtown.

**New Zoning Code:** The New Zoning Code does not include any standards that would affect existing waste disposal. The Proposed Project does not intend to implement the New Zoning Code outside of the Downtown Plan Area and therefore any indirect impacts regarding solid waste from the future use of the New Zoning Code outside the Downtown Plan Area would be speculative. Additionally, the content of the New Zoning Code would not repeal, amend, or conflict with existing waste diversion requirements intended to avoid these effects. Therefore, the impact would be ***less than significant*** citywide.

## Downtown Plan Impact

Future development in the Downtown Plan Area would be required to comply with LAMC Section 66.32 regarding demolition activities. Compliance with LAMC Section 66.32 would ensure that at least 50 percent of the demolition and construction waste generated by future development would be diverted from landfills serving the City of Los Angeles. Additionally, implementation of the Downtown Plan would be consistent

with all waste reduction goals set forth by SWIRP, RENEW LA Plan, and the Framework Element, which are discussed in the Regulatory Setting. The Downtown Plan would not conflict with any solid waste policies and objectives in the SWIRP or Framework Element.

All solid waste-generating activities in the City of Los Angeles are subject to the requirements set forth in AB 939 and other local ordinances, such as LAMC Section 66.32. As discussed in the Setting, the City already exceeds State goals with respect to reduction of solid waste generation and diversion of solid waste from landfills. Therefore, because future development permitted under the Downtown Plan would comply with applicable solid waste policies and objectives, impacts related to compliance with federal, state, and local statutes and regulations related to solid waste would be ***less than significant***.

### New Zoning Code Impact

The New Zoning Code does not include any standards or provisions that would affect existing waste disposal. The Proposed Project does not intend to implement the New Zoning Code outside of the Downtown Plan Area and therefore any indirect impacts related to waste disposal from the future use of the New Zoning Code outside the Downtown Plan Area would be speculative. Further, the content of the New Zoning Code would not repeal, amend, or conflict with existing regulations and uniformly applied development policies, such as AB 939, C&D Waste Recycling Ordinance, and Recycling Chute Ordinance, as discussed in Regulatory Setting, intended to avoid these effects.

The New Zoning Code only applies to properties where a community plan is updated or amended to utilize the new zoning, which would require environmental review pursuant to CEQA. Future environmental review of a proposed community plan update or amendment and associated zone changes would analyze potential community- and site-specific solid waste disposal impacts. The impact would be ***less than significant.***

### Mitigation Measures

No significant impacts have been identified; therefore, mitigation is not required for either the Downtown Plan or the New Zoning Code.

## CUMULATIVE IMPACTS

The geographic area to analyze cumulatively considerable impacts to solid waste includes the entire City of Los Angeles. Cumulative development throughout Los Angeles would add both dwelling units and non-residential development to the City. Citywide development through 2040 would add approximately 659,000 new residents, 293,000 new households, and 345,000 new employees (SCAG 2016). Cumulative impacts from this development are discussed below by impact area.

Cumulative citywide development would increase solid waste disposal at local landfills. Landfill solid waste disposal for the City of Los Angeles totaled 2,849,237 annual tons in 2010 (10,959 daily tons) (LADPW 2013a). The SWIRP provides the projected solid waste quantities by generator sector based on --projected changes in population and employment provided by SCAG. Assuming that no additional programs are implemented to reduce waste and that the City maintains its 2010 baseline diversion rate (72 percent), citywide disposal is projected to increase by 10 percent to 3,121,937 tons annually by 2030 (12,007 tons daily) (LADPW 2013a). This would not cause existing landfills serving the City of Los Angeles to exceed their combined daily intake capacity of 45,540 tons per day (see **Table 4.17-7**). As noted under Impact 4.17-6, the County's CIWMP 2018 Annual Report concludes that reliance on County landfills alone would not provide adequate capacity through 2033, the status quo scenario (which includes continued export of some waste to out-of-County landfills, but no new waste diversion programs or facility

expansions) provides adequate solid waste disposal capacity to meet future demand. Consequently, waste disposal capacity is adequate to meet cumulative solid waste disposal projections.

The Downtown Plan Area would contribute 10 percent of citywide disposal in 2030, as it would generate 414,000 tons annually in 2040 (approximately 1,133 tons daily). As discussed under Impact 4.17-6 and above, solid waste generated citywide and in the Downtown Plan Area would not exceed the available daily capacity of landfills serving the City and the County's CIWMP 2018 Annual Report forecasts adequate capacity through at least 2033 under the status quo scenario. The New Zoning Code would only apply to the Downtown Plan Area at this time and would apply to other areas of the City only when applicable community plans are updated. Any cumulative impacts related to future updates of other community plans would be speculative, however, as discussed above, the SWIRP solid waste generation projections are based on SCAG population projections so since the SWIRP forecasts adequate solid waste disposal capacity based on these projections, solid waste disposal capacity exceedances are not anticipated. Additionally, future community plan updates would be required to adhere to existing state and local requirements related to solid waste disposal.

Based on the above information, the incremental effect of the Downtown Plan and New Zoning Code related to solid waste disposal facilities would not be cumulatively considerable and cumulative impacts would be ***less than significant***.

# *Electric Power, Natural Gas, and Telecommunications Facilities*

# ENVIRONMENTAL SETTING

The environmental setting for electrical power and natural gas is described in Section 4.5, Energy. The environmental setting for telecommunications is described below.

## CITYWIDE SETTING

There are 42 cellular towers that serve the City of Los Angeles. Cellular towers that serve the City are located in the following cities/communities.

- Catalina Island (4)
- Gorman (3)
- Palos Verdes (3)
- Palmdale (3)
- Glendale (2)
- Los Angeles (2)
- Pearblossom (2)
- San Pedro (2)
- Acton
- Agua Dulce
- Altadena
- Arcadia
- Azusa
- Calabasas
- Chatsworth
- Commerce
- Glendora
- Lancaster
- Long Beach
- Malibu
- Pacific Palisades
- Pomona
- Pasadena
- Rolling Hills
- Santa Clarita
- Santa Monica
- Saugus

Range and service for an individual tower can vary; therefore, the towers described above likely serve cities outside of Los Angeles County. All cellular towers and equipment are managed by private telecommunications service providers under the jurisdiction of the Federal Communications Commission (FCC).

## DOWNTOWN PLAN AREA SETTING

The Downtown Plan Area is served by several cellular towers. The cellular towers closest to the Downtown Plan area are located at 5701 S. Eastern Avenue in Commerce, California approximately five miles southeast, 933 S. Raymond Avenue in Pasadena, California approximately five miles northeast, 2061 Pasa Glen Drive in Glendale, California approximately nine miles north, and 11789 Pico Boulevard in Santa

Monica, California approximately 10 miles west (City of Los Angeles 2018c). Service from an individual cellular tower can range and service is not necessarily provided by the closest cellular tower; therefore, other cellular towers in Los Angeles County likely provide service to the Downtown Plan Area.

# REGULATORY FRAMEWORK

The regulatory framework for electrical power and natural gas is described in Section 4.5, Energy. The regulatory framework for telecommunications is described below.

## FEDERAL

The Federal Communications Commission (FCC) requires all new cellular tower construction to be approved by the state or local authority for the proposed site and comply with FCC rules involving environmental review. Additionally, the Telecommunications Act of 1996 requires construction of new cellular towers to comply with the local zoning authority.

## STATE

### Senate Bill 649

Senate Bill 649 (SB 649) requires small cellular installations be on vertical infrastructure and on property outside of public rights-of-way. The installation is required to comply with all applicable federal, state, and local health and safety regulations. Additionally, cellular equipment that is no longer in use is required to be removed at no cost to the City.

## LOCAL

### City of Los Angeles Municipal Code Section 10.5.4

Section 10.5.4 of the City's Municipal Code states that telecommunications providers are required to comply with all city, state, and federal regulations during installation and operation of equipment. Additionally, each lease, sublease, or license facilitated by telecommunications providers are required to seek approval from the City.

# ENVIRONMENTAL IMPACTS

## THRESHOLDS OF SIGNIFICANCE

The following threshold of significance was developed in accordance with CEQA Guidelines Appendix G. Impacts would be significant if either the Downtown Plan or the New Zoning Code would:

- Require or result in the relocation or construction of new or expanded electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects (Threshold 4.17-8)

## METHODOLOGY

The analysis of the Proposed Project's impacts related to the potential construction and relocation of electric power, natural gas, and telecommunications facilities focuses on whether existing and projected

infrastructure capacities or supplies would be sufficient to meet future demands associated with forecast development and, if not, whether the construction of needed new or expanded facilities would result in significant environmental effects.

Project-generated demands were calculated based on the existing level of development in the Downtown Plan Area and the forecast level of development in the Downtown Plan Area in 2040. However, cellular towers vary in range of service and maximum number of users. Therefore, this analysis qualitatively evaluates need for additional telecommunication facilities.

# PROJECT IMPACTS

| | |
|---|---|
| **Threshold 4.17-8** | Require or result in the relocation or construction of new or expanded electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects |

**Impact 4.17-8**

**Downtown Plan:** Implementation of the Downtown Plan would generate energy and telecommunications demand. Forecast demand may require the construction of new energy or telecommunication facilities or the expansion of such facilities, but the construction of such facilities is not expected to result in significant environmental effects. This impact would be ***less than significant***.

**New Zoning Code:** The New Zoning Code would not require or result in the construction of new or expanded energy or telecommunication facilities. The Proposed Project does not intend to implement the New Zoning Code outside of the Downtown Plan Area. Therefore any indirect impacts from the future use of the New Zoning Code outside the Downtown Plan Area would be speculative. This impact would be ***less than significant.***

## Downtown Plan Impact

Electrical Power

As shown in **Table 4.5-6** and **Table 4.5-7** in Section 4.5, *Energy*, implementation of the Downtown Plan would result in an approximately 31 percent decrease in per capita electricity consumption and a 19 percent decrease in per capita natural gas consumption compared to 2017 baseline conditions. Implementation of the Downtown Plan may require construction of new or expanded energy facilities to meet future energy needs in the Downtown Plan Area, including electrical transmission and distribution infrastructure and natural gas facilities (e.g., storage, pipelines).

As discussed in the *Environmental Setting*, the LADWP utilizes a long-term planning process to plan for increased energy demand in the future with its publication of ten-year Transmission Plans. The most recent, LADWP's *2016 Final Power Integrated Resource Plan* (IRP), identifies actions that are central to the continued reliability of the LADWP Power System while meeting all regulatory requirements. The 2016 IRP provides detailed analysis and results of several new IRP resource cases, which investigated the economic and environmental impact of an increased RPS of 55 percent by 2030 and 65 percent by 2036, local solar, energy storage, and various levels of transportation electrification within a 20-year horizon.

In order to achieve 100 percent renewable energy generation, the LADWP is two years ahead of schedule for early coal replacement by 2025, accelerating its RPS to 50 percent by 2025, 55 percent by 2030, and 65 percent by 2036. In addition, the LADWP is implementing a strategy of 15 percent energy efficiency by 2020, repowering coastal in-basin generating units with new, highly efficient units by 2029 to provide grid reliability and critical ramping capability, accelerating electric transportation to absorb GHG emission from

the transportation sector, and investing in a Power System Reliability Program to maintain a robust and reliable Power System. In order to achieve these renewable energy source goals, the LADWP has implemented the following projects and programs that introduce added transmission capacity to meet anticipated future growth, which would be accommodated by the Downtown Plan:

- Barren Ridge Renewable Transmission Project; in service as of 2016.
  - 2,000 Megawatts (MW) of added transmission capacity.
- Moapa Southern Paiute Solar, LLC (Moapa) Solar; in service as of 2016.
  - 250 MW of added solar energy supply.
- Heber-1 Geothermal; in service as of 2016.
  - 35 MW of added geothermal energy supply.
- Springbok 1 and 2 Solar; in service as of 2016.
  - 105 MW and 155 MW of added solar energy supply, respectively.
- RE Cinco Solar; in service as of 2016.
  - 60 MW of added solar energy supply.
- Springbok 3 Solar; expected in-service status in 2017.
  - 90 MW of added solar energy supply.
- Solar Incentive Program; 1999 to present.
  - Funding to support installation of 181 MW of operational net-metered solar at over 24,500 customer locations as of November 2016.

Although the introduction of new renewable energy sources is expected to meet energy demands associated with future population growth, many renewable energy sources reduce a power grid's baseload reliability due to the fluctuating nature of energy captured (i.e., solar energy is only accumulated during optimum sunlight hours and conditions while energy is consumed 24 hours a day). To meet this challenge, the LADWP's 2016 Power Infrastructure Plan states the following long-term goals to diversify energy generation sources, improve energy storage capabilities, and secure energy reliability in the future (LADWP 2015):

- Replace/overhaul four units of thermal generation, one unit of large hydro, and two units of small hydro annually by 2020.
- Replace two generator step-up transformers and two generator station transformers annually by 2020.
- Repower Harbor, Haynes, and Scattergood as determined through the LADWP's once-through cooling (OTC) policy by 2029.
- Complete modernization of all Castaic units by 2017.
- Complete refurbished work to extend life of the three Gorge plants for another 30 years.

The California Independent System Operator Corporation's (Cal-ISO) 2016-2017 Transmission Plan also provides a comprehensive evaluation of the ISO transmission grid to identify upgrades needed to successfully meet California's policy goals, in addition to examining conventional grid reliability and requirements. The Cal-ISO 2016-2017 Transmission Plan is a ten-year planning document that assesses California's energy supply capability and reliability and has identified the need for two supply reliability projects, both of which are located in the Southern California Electric (SCE) service area.

No system improvements have specifically been identified as needed to meet new policy-driven or economic-driven demands. Nevertheless, reasonably anticipated growth in the Downtown Plan Area would contribute to the need for distribution infrastructure improvements and expansions. Such expansions would result in temporary construction-related impacts pertaining to such issues as transportation, air quality, and noise. These impacts are anticipated to be within the parameters of what is described in this EIR and any new or expanded facilities, the construction of which may result in impacts beyond those identified herein, would be subject to further environmental review under CEQA. Impacts would be ***less than significant***.

Natural Gas

As shown in **Table 4.5-7** in Section 4.5, *Energy*, natural gas use in the Downtown Plan Area with the implementation of the Downtown Plan is estimated to account for less than 0.2 percent of statewide demand for natural gas. The Downtown Plan would be within the projected available supply for natural gas and the current trend of energy efficient practices, increased use of renewable power, and a decreased use of natural gas would further reduce future energy demands. Nevertheless, reasonably anticipated development in the Downtown Plan Area may necessitate the construction of new or expanded natural gas distribution facilities. Such expansions would result in temporary construction-related impacts pertaining to such issues as transportation, air quality, and noise. These impacts are anticipated to be within the parameters of what is described in this EIR and any new or expanded facilities, the construction of which may result in impacts beyond those identified herein, would be subject to further environmental review under CEQA. Impacts would be ***less than significant***.

Telecommunications

As discussed in Section in 4.12, *Population and Housing*, reasonably anticipated development in the Downtown Plan Area would allow for an additional 176,000 persons, 97,000 housing units, and 86,000 jobs. The telecommunication requirements for the Downtown Plan Area are expected to evolve as development increases and technologies change. Construction of additional telecommunications facilities or upgrades to existing facilities to meet Downtown Plan Area demands would be undertaken by private telecommunication service providers in accordance with applicable federal, state, and local regulations. No restrictions on the ability to provide adequate telecommunication service are anticipated, but new or expanded facilities may be needed to meet increased demand in the Downtown Plan Area. Such expansions would result in temporary construction-related impacts pertaining to such issues as transportation, air quality, and noise. These impacts are anticipated to be within the parameters of what is described in this EIR and any new or expanded facilities, the construction of which may result in impacts beyond those identified herein, would be subject to further environmental review under CEQA. Impacts would be ***less than significant.***

## New Zoning Code Impact

The New Zoning Code would not require or result in the construction of new or expanded electrical, natural gas, or telecommunication facilities and no specific energy facilities are proposed to be constructed as part of the Proposed Project. The New Zoning Code would include a range Density Districts, ranging from those in which density is limited indirectly by floor area maximums to restricting the permitted density to one unit per lot, which has the potential to increase population such that there would be an increase in demand for energy facilities. However, due to the modulatory of the New Zoning Code, it is not known where or to what extent future development may occur and if it would result in the demand for new or expanded energy facilities or the location thereof as application of the New Zoning Code would be driven by the policy intent and vision of future community plan updates and amendments.

The Proposed Project does not intend to implement the New Zoning Code outside of the Downtown Plan Area and therefore any indirect impacts from the future use of the New Zoning Code outside the Downtown

Plan Area would be speculative. Further, the New Zoning Code only applies to properties where a community plan is updated or amended to utilize the new zoning, which would require environmental review pursuant to CEQA. Future environmental review of a proposed community plan update and associated zone changes would analyze if the zoning applied would result in impacts related to the construction of new electrical, natural gas, and telecommunication facilities or the expansion of such facilities. The impact would be ***less than significant.***

### Mitigation Measures

No significant impacts have been identified; therefore, mitigation is not required for either the Downtown Plan or the New Zoning Code.

## CUMULATIVE IMPACTS

The geographic area to analyze cumulatively considerable impacts related to electrical power, natural gas, and telecommunications includes the entire City of Los Angeles. Cumulative development throughout Los Angeles would add both dwelling units and non-residential development to the City. Citywide development through 2040 would add approximately 659,000 new residents, 293,000 new households, and 345,000 new employees (SCAG 2016). Cumulative impacts associated with the construction of new or expanded electrical, natural gas, and telecommunications facilities necessitated by this development are discussed below by impact area.

### Electrical Power

Citywide development through 2040 would cumulatively increase demand for electrical power. However, as discussed above, LADWP's 2016 Final Power IRP identifies actions that would achieve the continued reliability of the LADWP Power System throughout the LADWP service area while meeting all regulatory requirements. The Downtown Plan would contribute to the overall citywide demand for electrical power, but would not result in an exceedance of existing or planned system capacity. The New Zoning Code would only apply to the Downtown Plan Area at this time and would apply to other areas of the City only when applicable community plans are updated. Future community plan updates would be required to adhere to existing state and local requirements related to electrical power.

New or expanded facilities for the generation, transmission, storage, and distribution of electricity may be needed to meet increased citywide demand. Impacts associated with the construction of new facilities would depend on the location, size, and nature of such facilities, but would primarily consist of temporary construction-related impacts pertaining to such issues as transportation, air quality, and noise. These impacts are anticipated to be within the parameters of what is described in this EIR and any new or expanded facilities, the construction of which may result in impacts beyond those identified herein, would be subject to further environmental review under CEQA.

Based on the above information, the incremental effect of the Downtown Plan and New Zoning Code related to the provision of electrical power infrastructure would not be cumulatively considerable and cumulative impacts would be ***less than significant***.

### Natural Gas

Citywide development through 2040 would cumulatively increase demand for natural gas. However, as discussed above, the current trend of energy efficient practices, increased use of renewable power, and a decreased use of natural gas would further reduce future energy demands. Natural gas use in the Downtown Plan Area is estimated to account for less than 0.2 percent of statewide demand for natural gas and would not exceed the projected available supply for natural gas or require the construction of new or expanded

natural gas facilities. The New Zoning Code would only apply to the Downtown Plan Area at this time and would apply to other areas of the City only when applicable community plans are updated. Future community plan updates would be required to adhere to existing state and local requirements related to natural gas.

New or expanded facilities for the transmission and distribution of natural gas may be needed to meet increased citywide demand. Impacts associated with the construction of new facilities would depend on the location, size, and nature of such facilities, but would primarily consist of temporary construction-related impacts pertaining to such issues as transportation, air quality, and noise. These impacts are anticipated to be within the parameters of what is described in this EIR and any new or expanded facilities, the construction of which may result in impacts beyond those identified herein, would be subject to further environmental review under CEQA.

Based on the above information, the incremental effect of the Downtown Plan and New Zoning Code related to the provision of natural gas infrastructure would not be cumulatively considerable and cumulative impacts would be ***less than significant***.

### Telecommunications

Citywide development through 2040 would cumulatively increase demand for telecommunication service. However, as discussed above, the City is well served by telecommunications facilities and no restrictions on the expansion of service as necessary to meet future demands is anticipated anywhere in the City, including the Downtown Plan Area. The New Zoning Code would only apply to the Downtown Plan Area at this time and would apply to other areas of the City only when applicable community plans are updated. Future community plan updates would be required to adhere to existing state and local requirements related to telecommunication service.

New or expanded telecommunication facilities may be needed to meet increased citywide demand. Impacts associated with the construction of new facilities would depend on the location, size, and nature of such facilities, but would primarily consist of temporary construction-related impacts pertaining to such issues as transportation, air quality, and noise. These impacts are anticipated to be within the parameters of what is described in this EIR and any new or expanded facilities, the construction of which may result in impacts beyond those identified herein, would be subject to further environmental review under CEQA.

Based on the above information, the incremental effect of the Downtown Plan and New Zoning Code related to the provision of telecommunication infrastructure would not be cumulatively considerable and cumulative impacts would be ***less than significant***.

# 4.18 EFFECTS FOUND NOT TO BE SIGNIFICANT

This section addresses issues for which the Downtown Plan and New Zoning Code were determined to have no potential for significant effects. The items discussed below are included in the environmental checklist in Appendix G of the CEQA Guidelines. Items not addressed in this section are addressed in Sections 4.1 through 4.17 of this EIR.

## AGRICULTURE AND FORESTRY RESOURCES

Thresholds of significance for agricultural and forest resource impacts focus on conflicts with existing zoning for agricultural or forest uses and Williamson Act contracts, and the potential to involve any changes in the existing environment that could result in conversion of farmland or forest land to non-agricultural or non-forest use. Specific questions pertaining to agricultural and forest resources from Appendix G of the CEQA Guidelines are as follows:

- Would the project convert Prime Farmland, Unique Farmland, Farmland of Statewide Importance (Farmland), as shown on maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?
- Would the project conflict with existing zoning for agricultural use or a Williamson Act contract?
- Would the project conflict with existing zoning for or cause rezoning of forest land (as defined in Public Resources Code Section 12220(g)); timberland (as defined by Public Resources Code Section 4526); or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?
- Would the project result in the loss of forest land or conversion of forest land to non-forest use?
- Would the project involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use?

### DOWNTOWN PLAN IMPACT

The Downtown Plan Area encompasses Downtown Los Angeles, an area that is urbanized and fully developed. No portion of the Downtown Plan Area is mapped on the Department of Conservation's (DOC) Farmland Mapping and Monitoring Program (FMMP), since the Downtown Plan Area is entirely developed and contains no agricultural land (DOC 2017). Per the Department of Conservation's Los Angeles County Williamson Act Map, the entire Downtown Plan Area is located in Non-Enrolled Land, which is defined as land not enrolled in Williamson Act contract (DOC 2016). Implementation of the Downtown Plan would have no impact on existing agricultural resources, would not result in the conversion of agricultural farmland, and would not be located on Williamson Act contract land.

Per the City of Los Angeles Conservation Element, the only substantial conifer and big tree forests in the vicinity of Los Angeles are located outside the City's boundaries in the Angeles National Forest and on the north slope of the Santa Susana Mountains (2001). As discussed in Section 4.3, *Biological Resources*, the Downtown Plan Area includes street trees and some heritage trees in public parks. However, these individual trees species are planted, nonnative trees that do not constitute forests. Because no forests are located in or adjacent to the Downtown Plan Area, the Downtown Plan would have no impact to forest land or forestry resources.

## NEW ZONING CODE IMPACT

No portion of the City is mapped on the DOC FMMP (DOC 2017). Per the DOC Los Angeles County Williamson Act Map, the entire City is located in Non-Enrolled Land, which is defined as land not enrolled in Williamson Act contract (DOC 2016). The City's Conservation Element notes that one parcel in the City is identified as unique farmland. The parcel is located within a portion of Pierce College and is related to the college's educational curriculum (City of Los Angeles 2001). As discussed above, the only substantial conifer and big tree forests in the vicinity of Los Angeles are located outside the City's boundaries in the Angeles National Forest and on the north slope of the Santa Susana Mountains (2001).

Due to the modularity of the New Zoning Code, it is not known where or to what extent future development may occur. Projecting the location and type of future growth would be speculative. However, since the Downtown Plan Area does not contain farmland or forest resources, adoption of the New Zoning Code would not impact these resources. Future application of the New Zoning Code could occur in or adjacent to the identified unique farmland area and adjacent to forest boundaries. However, the Proposed Project does not intend to implement the New Zoning Code outside of the Downtown Plan Area.

In addition, the New Zoning Code only applies to properties where a community plan is updated or amended to utilize the new zoning, which would require environmental review pursuant to CEQA. Future environmental review of a proposed community plan update and associated zone changes would analyze potential community- and site-specific impacts to agricultural and forest resources, if applicable. A less than significant impact to agricultural and forest resources would occur.

# MINERAL RESOURCES

Thresholds of significance for mineral resource impacts focus on whether the Proposed Project could result in the loss of availability of known mineral resources. Specific questions from Appendix G of the CEQA Guidelines are as follows:

- Would the project result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?
- Would the project result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?

## DOWNTOWN PLAN IMPACT

The Surface Mining and Reclamation Act of 1975 (SMARA) requires the state geologist (Division of Mines and Geology) to identify and classify all mineral deposits in California. In 1979, the state Board of Mining and Geology adopted guidelines that require local general plans to reference identified mineral deposits and sites that are identified for conservation. In addition, the Board identified urban areas where irreversible land uses (development with structures) preclude mineral extraction.

Although the Downtown Plan Area is urbanized, the Mineral Resources Map from the City of Los Angeles' Conservation Element shows the majority of the Downtown Plan Area as being located in Mineral Resource Zone (MRZ)-2 (City of Los Angeles 2001). An MRZ-2 area is "an area underlain by mineral deposits where geologic data indicate that significant measured or indicated resources are present or where adequate information indicates that significant mineral deposits are present or where it is judged that a high likelihood for their presence exists." Per the most recent Department of Conservation's Active Mine Operations Map, there are no active mine operations in the Downtown Plan Area (Division of Mine Reclamation 2017). The

nearest active mine, Mid City Granite, is located approximately 15 miles away from the Downtown Plan Area.

## Mineral Extraction

As stated above, there are no active mines in the Downtown Plan Area and the Downtown Plan would not facilitate any new mining activity. The MRZ-2 areas mapped within the Downtown Plan Area are currently fully developed with residential, commercial, and industrial uses, as well as freeways and streets. According the California Department of Conservation Division of Mines and Geology's *Guidelines for Classification and Designation of Mineral Lands*, the uses listed below fall under the category of Economic Exclusion, which are land uses that are considered generally incompatible with mining and have been excluded from areas containing available aggregate resources:

A. Residential areas, and areas committed to residential development
B. Commercial areas with land improvements (buildings)
C. Industrial areas (buildings and adjacent needed storage and parking facilities)
D. Major public or private engineering project including freeways, railroads, and major power transmission lines
E. Small areas isolated by urbanization (Division of Mines and Geology).

Resource recovery does not currently occur in the Downtown Plan Area, and as a result of the aforementioned development, these areas are economically excluded, and not considered aggregate resource areas by the California Department of Conservation, Division of Mines and Geology.

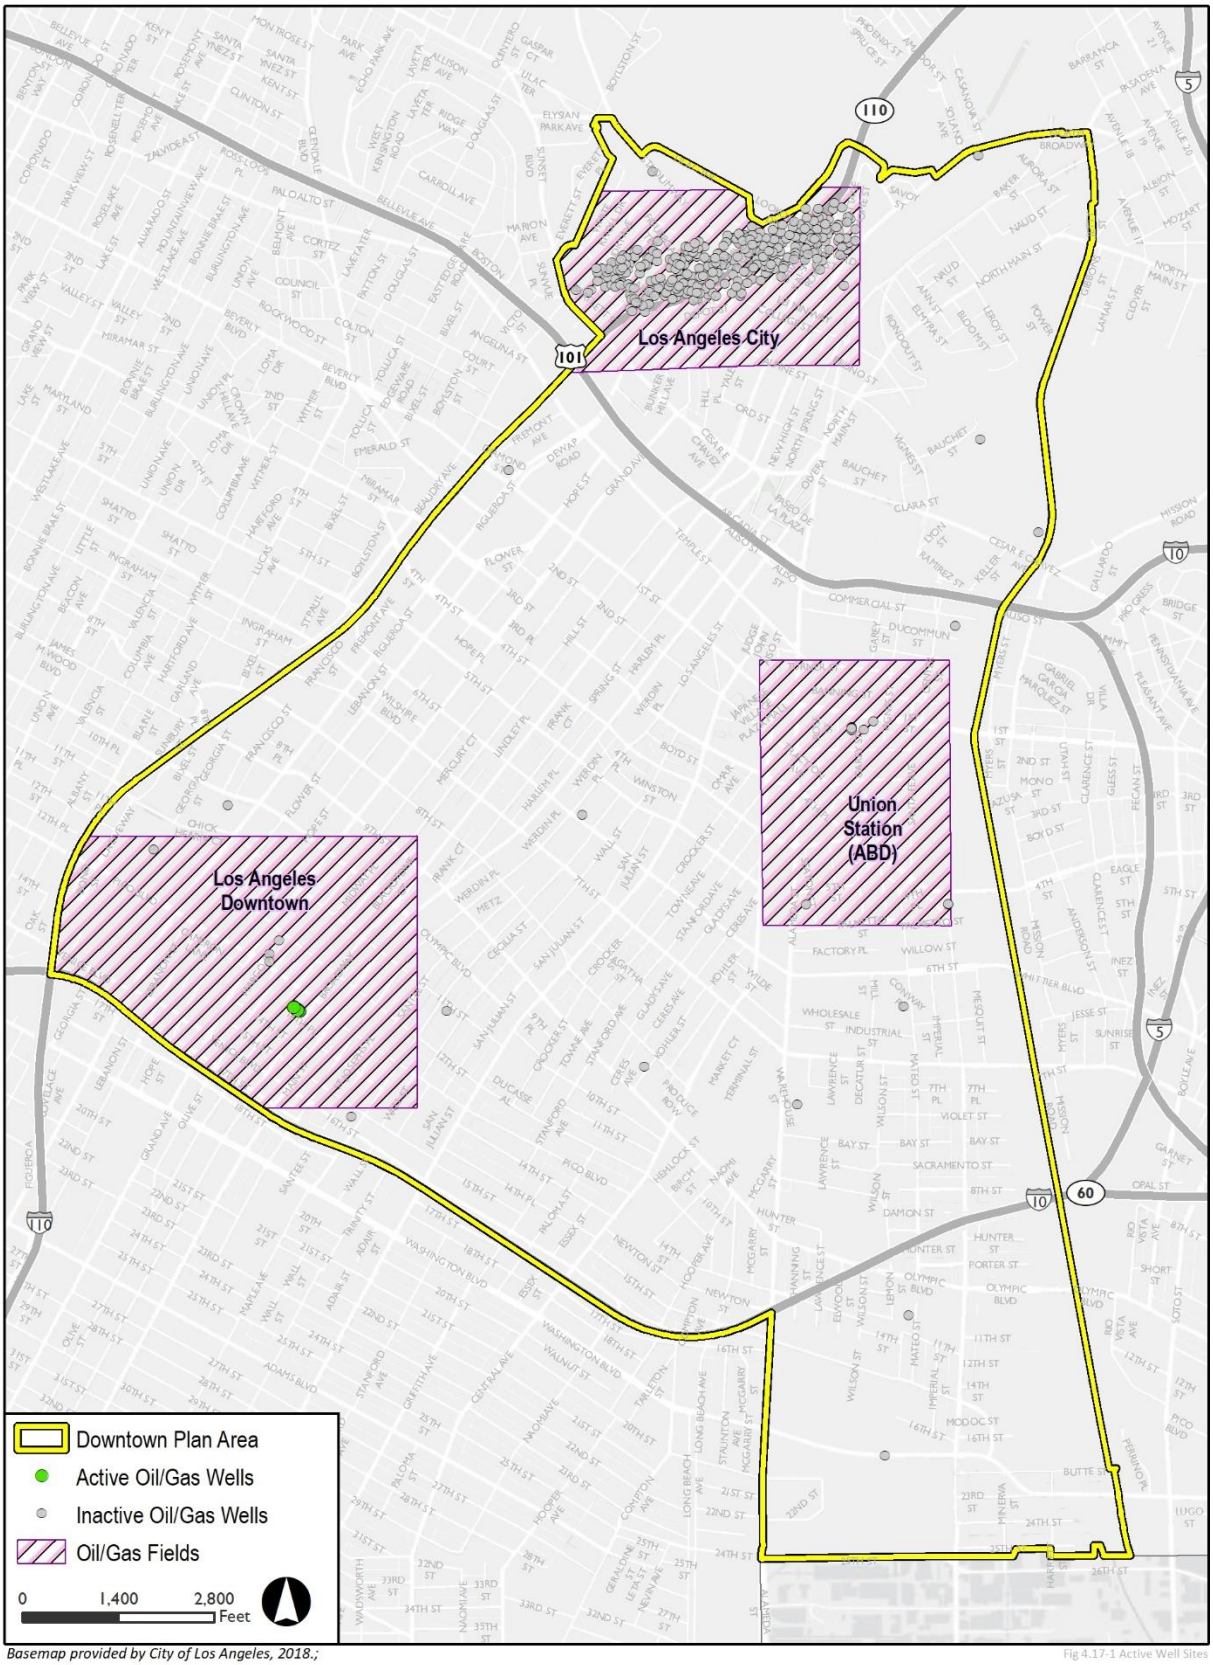
The existing Conservation Element has policies that pertain to the loss of a known and/or locally important mineral resource. These policies include Conservation Element Sand and Gravel Resources Policies 1 and 2, which seek to implement the provisions of the SMARA (Public Resources Code Sections 2710 et seq.) so as to establish extraction operations at appropriate sites; to minimize operation impacts on adjacent uses, ecologically important areas and groundwater; to protect the public health and safety; and require appropriate restoration, reclamation and reuse of closed sites. The Downtown Plan Area does not contain any sand or gravel resources and thus would not hinder extraction of such resources. No conflict with Conservation Element objectives or policies would result from Plan implementation.

## Oil Deposits

Los Angeles is located in Oil and Gas District 1, which covers the following counties: Los Angeles, Orange, San Bernardino, Riverside, San Diego, and Imperial. Per the Department of Oil, Gas, and Geothermal Resources, the active wells and field sites in the Downtown Plan Area are shown in **Figure 4.18-1**. The Downtown Plan Area contains State Designated Oil Fields and Oil Drilling Districts, including a portion of the Los Angeles City Oil Field located south of Dodger Field, the Los Angeles Downtown Oil Field, and Union Station Oil Field.

As of May 2017, the Downtown LA Oil Field contains eight scattered wells producing oil and gas, and the City Oil Field contains ten (DOGGR 2017). The most recent Annual Report from the DOGGR, states that the Los Angeles City and Downtown Oil Fields produced over 52,000 bbl of oil and 34,873 Mcf of natural gas in 2015 (DOGGR 2015). Per the DOGGR Well Finder, all Union Station wells are currently plugged and out of production (DOGGR 2014). The current oil and gas extraction in the Downtown Plan Area oil fields represents 0.2 percent of District 1 total annual oil production and about 0.3 percent of District 1 natural gas production. This amount of oil and natural gas produced in the Downtown Plan Area is not vital to the sustainability of the state or region.

**Figure 4.18-1 Oil Fields and Active Wells Sites**



*Basemap provided by City of Los Angeles, 2018.;*
*Additional data provided by California Department of Conservation DOGGR, 2017.*

Conservation Element Oil and Gas policies 1, 2, and 3 intend to conserve petroleum resources and enable appropriate, environmentally sensitive extraction of petroleum deposits so as to protect petroleum resources for the use of future generations, and to reduce the City's dependency on imported petroleum and petroleum products. The Downtown Plan would not preclude continued oil extraction from existing Downtown Plan Area wells, but Plan implementation would likely phase out oil production over time through voluntary action as Downtown Plan Area development occurs. This phase out would not conflict with City policy because continued oil extraction in the urbanized Downtown Plan Area would not be consistent with the objective of conducting environmental sensitive extraction and because, as discussed above, current oil extraction in the Downtown Plan Area is not vital to meeting the state's or region's energy needs. Moreover, as discussed in Section 4.5, *Energy*, Plan implementation would generally reduce energy demand by facilitating energy-efficient infill and mixed-use development that would comply with City green building requirements and minimize per capita vehicle miles traveled (VMT).

Potential hazards associated with development or construction on or adjacent to active oil fields are discussed in Section 4.6, *Hazards and Hazardous Materials*.

## NEW ZONING CODE IMPACT

Although the City is urbanized, the Mineral Resources Map from the City of Los Angeles' Conservation Element shows the majority of the eastern area of the City as being located in Mineral Resource Zone (MRZ)-2, which are areas that contain identified mineral deposits or where there is a high likelihood for their presence (City of Los Angeles 2001). Per the Department of Conservation's Mines Online database, there are six mine operations in the City (Division of Mine Reclamation 2016). Five are located in the eastern San Fernando Valley and one is located north of Griffith Park. Of the five located in eastern San Fernando Valley, two are active mines, one has been reclaimed, one has been closed with no intent to resume, and one is exempt. There are also 20 oil fields within the City; however, many have been depleted and extraction from them is complete. The Wilmington field is one of the largest oil fields in the state and produces approximately 54,600 barrels of oil per day (City of Los Angeles 2001).

Due to the modularity of the New Zoning Code, it is not known where or to what extent future development may occur. Projecting the location and type of future growth would be speculative. Use Districts created by the New Zoning Code neither encourage or discourage the extraction of mineral resources.

In addition, the Proposed Project does not intend to implement the New Zoning Code outside of the Downtown Plan Area and therefore any indirect impacts related to mineral resources from the future use of the New Zoning Code outside the Downtown Plan Area would be speculative. While there are mineral resources located in the City, the New Zoning Code could only be applied when a community plan is updated or amended to utilize the new zoning, which would require environmental review, pursuant to CEQA. Future environmental review of a proposed community plan update and associated zone changes would analyze potential impacts to mineral resources. Implementation of the New Zoning Code would have a less than significant impact on existing mineral resources and would not result in the loss of availability of a known mineral resource.

# WILDFIRE

Thresholds of significance in Appendix G for wildfire focus on impacts that could occur on lands in very high fire severity zones. There are no high fire severity zones in the Downtown Plan Area. Therefore, there are no impacts from wildfire from Downtown Plan. Additionally, for the New Zoning Code, as discussed throughout the EIR, implementation is through future community plans and any impact related to wildfire impacts from implementation of the new code would be speculative. Impacts are less than significant.

# 5.0 ALTERNATIVES

## 5.1 INTRODUCTION

As required by Section 15126.6 of the CEQA Guidelines, a range of reasonable alternatives to the Proposed Project that would attain most of the basic project objectives, but would avoid or substantially lessen any of its significant environmental effects must be examined. The primary purpose of analyzing alternatives for a project is to identify and disclose ways to mitigate or avoid the significant effects that a project may have on the environment (Public Resources Code Section 21002.1). Key provisions of the CEQA Guidelines pertaining to alternatives analysis are summarized below.

- The discussion of alternatives shall focus on alternatives to the project, including alternative locations that are capable of avoiding or substantially lessening any significant effects of the project, even if these alternatives would impede to some degree the attainment of the project objectives, or would be more costly (CEQA Guidelines Section 15126.6(b)).

- The EIR shall include a brief discussion of the rationale for selecting alternatives to be discussed and should identify any alternatives that were considered but were rejected as infeasible during the scoping process and briefly explain the reason underling the lead agency's decision. Among others, the following factors may be used to eliminate alternatives from detailed consideration in an EIR: (1) failure to meet most of the basic project objectives; (2) infeasibility; or (3) inability to avoid significant environmental impacts (CEQA Guidelines Section 15126.6(c)).

- The No Project Alternative shall be evaluated along with its impacts. The "no project" alternative analysis shall discuss existing conditions at the time the Notice of Preparation is published, as well as what would reasonably be expected to occur in the foreseeable future if the project were not approved, based on current plans and consistent with available infrastructure and community services (CEQA Guidelines Section 15126.6(e)(2)).

- When the project involves an update to an existing land use or regulatory plan, the "no project" alternative will be the continuation of the existing plan, policy or operation into the future (CEQA Guidelines Section 15126.6(e)(3)(A)).

- The range of alternatives required in an EIR is governed by a "rule of reason." Therefore, the EIR must evaluate only those alternatives necessary to permit a reasoned choice. The alternatives shall be limited to ones that would avoid or substantially lessen any of the significant effects of the proposed project (CEQA Guidelines Section 15126.6(f)).

- For alternative locations, only locations that are feasible and would avoid or substantially less any of the significant effects of the project need be considered for inclusion in the EIR (CEQA Guidelines Section 15126.6(f)(2)(A)).

- An EIR need not consider an alternative whose effects cannot be reasonably ascertained and whose implementation is remote and speculative (CEQA Guidelines Section 15126.6(f)(3)).

- The evaluation of alternatives would include sufficient information about each alternative to allow meaningful evaluation, analysis, and comparison with the proposed project. A matrix displaying the major characteristics and significant effects of each alternative may be used to summarize the

comparison. If an alternative would cause one or more significant effects in addition to those that would be caused by the project as proposed, the significant effects of the alternative shall be discussed, but in less detail than the significant effects of the proposed project (CEQA Guidelines Section 15126.6(d)).

- CEQA Guidelines Section 15126.6(a) states:

  *An EIR shall describe a range of reasonable alternatives to the project, or to the location of the project, which would feasible attain most of the basic project objectives, but would substantially lessen any of the significant effects of the project," and specifies that "An EIR need not consider every conceivable alternative to a project. Rather, it must consider a reasonable range of potentially feasible alternatives that will foster informed decision-making and public participation. An EIR is not required to consider alternatives which are infeasible."*

- CEQA Guidelines Section 15126.6(f)(1) explains that:

  *…factors that may be taken into account when addressing the feasibility of alternatives are site suitability, economic viability, availability of infrastructure, general plan consistency, other plans or regulatory limitations, jurisdictional boundaries…and whether the proponent can reasonably acquire, control or otherwise have access to the alternative sites…*

Based on the above, this section identifies, describes, and evaluates a reasonable range of project alternatives with the same focus as the Proposed Project. It is intended to inform the public and decision-makers about the comparative effects of alternatives that address concerns raised by the public during the outreach process and identified in this EIR. The analysis is particularly focused on alternatives that could achieve most of the basic project objectives while reducing or avoiding the Proposed Project's significant environmental effects.

As noted in Section 4 of this EIR, the unavoidably significant effects of the Proposed Project after implementation of all feasible mitigation measures are:

- **Air Quality**: Criteria Air Pollutant Emissions Exceed Standards related to Construction for NOx, $PM_{2.5}$, $PM_{10}$; related to Operation for VOC, $PM_{10}$, and $PM_{2.5;}$ ; expose Sensitive Receptors to substantial pollutant concentrations related to Operations (Distribution Centers); cumulative impact related to construction emissions of $NO_X$, $PM_{10}$, and $PM_{2.5}$ and cumulative impact related to operational emissions for VOCs, $PM_{10}$, and $PM_{2.5}$; cumulative impacts related to operational emissions of toxic air contaminants

- **Cultural resources**: Historical resources; Cumulative Historical Resources

- **Noise**: Construction-related noise and vibration impacts; Cumulative Construction-related noise and vibration impacts

- **Recreation**: Deterioration of existing parks; cumulative deterioration of parks

- **Transportation**: Safety impacts related to off-ramp queuing; cumulative safety impacts related to off-ramp queuing

The following issues were found to have impacts that would be reduced to a less-than-significant level with implementation of mitigation measures:

- **Air Quality:** Construction-related emissions of toxic air contaminants
- **Biological Resources:** Habitat Modification (nesting birds)
- **Cultural Resources:** Archaeological Resources
- **Geology:** Paleontological Resources
- **Hazards and Hazardous Materials:** Hazardous Materials within ¼-Mile of School, Hazardous Materials Sites
- **Tribal Cultural Resources:** Tribal Cultural Resources

See **Table ES-3** in the Executive Summary (Chapter 2), for the proposed mitigation measures.

# 5.2 PROJECT OBJECTIVES

CEQA requires an EIR to include a statement of the objectives sought by a project proponent, in this case the City of Los Angeles. The statement of objectives should include the underlying purpose of the project.

## UNDERLYING PURPOSE OF THE PROJECT

The underlying purpose of the Downtown Plan is to plan for and accommodate foreseeable growth in the City, including the Downtown Plan Area, consistent with the growth strategies of the City as provided in the Framework Elements, as well as the policies of SB 375 and the Southern California Association of Governments' (SCAG) Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS).

The underlying purpose of the New Zoning Code is to create the tools necessary to implement community visions expressed in adopted plans, including the Downtown Plan. The modular zoning tools of the New Zoning Code are designed to be adaptable to future needs throughout the City.

The Primary Objectives of the Proposed Project are to:

- **Primary Objective 1:** Accommodate employment, housing, and population growth projections forecasted through the planning horizon year of 2040 to ensure that Downtown Plan Area continues to grow in a sustainable, equitable, healthy, and inclusive manner, consistent with the City of Los Angeles General Plan Framework Element, by focusing new job-generating uses and residential development around transit stations.
- **Primary Objective 2:** Provide for economic diversification and reinforce the Downtown Plan Area as a primary center of employment for the City and the Southern California region.
- **Primary Objective 3:** Build upon Downtown's role as a regional transportation center by allowing for intensive development throughout the Plan Area, and concentrating development opportunity immediately surrounding the transit stations with an appropriate range of building sizes and mix of uses.
- **Primary Objective 4:** Promote a mode-shift from private automobile usage and foster a transit, bicycle, and pedestrian supportive environment.

- **Primary Objective 5:** Reduce vehicle miles traveled to meet the goals of the Senate Bill 375, Senate Bill 743, and California Assembly Bill 32 to reduce carbon emissions.
- **Primary Objective 6:** Support a growing residential population by expanding the areas where housing is permitted and allowing for a full range of housing options.
- **Primary Objective 7:** Celebrate and reinforce the character of each of the neighborhoods in the Plan Area.
- **Primary Objective 8:** Provide a set of implementation tools that are responsive to the range of physical and functional needs across the Plan Area, and enable the creation of similar tools across the City.

The Secondary Objectives of the Proposed Project are to:

- **Secondary Objective 1:** Refine and expand a system that links development with public benefits to deliver community amenities in the Downtown Plan Area, and is adaptable to the policy needs across the City.
- **Secondary Objective 2:** Maintain a meaningful amount of the Plan Area that is dedicated to production and high-intensity traditional industry.
- **Secondary Objective 3:** Promote a mix of land uses that fosters sustainability, equity, community, neighborhood density, and healthy living.
- **Secondary Objective 4:** Identify appropriate locations for housing and establish zoning tools that encourage a range of unit typologies.
- **Secondary Objective 5:** Ensure new development provides the appropriate range of outdoor amenity space and other recreational options to tenants and property owners.
- **Secondary Objective 6:** Support and sustain Downtown's ongoing revitalization.

# 5.3 SELECTION OF ALTERNATIVES FOR ANALYSIS

The following analysis considers four alternatives, including the CEQA-required "no project" alternative. As required by CEQA, this section also includes a discussion of the "environmentally superior alternative" among those studied. The alternatives are listed below:

- Alternative 1: Reduced Development Potential
- Alternative 2: Housing Redistribution
- Alternative 3: Increased Development Potential
- Alternative 4: No Project

EIR alternatives analyses is required to focus on alternatives that reduce or avoid the unavoidably significant environmental impacts of the Proposed Project and feasibly attain obtain most of the Proposed Projects basic objectives. Because no significant and unavoidable impacts were identified for the New Zoning Code, consideration of alternatives to that component of the Proposed Project is not warranted. The Downtown Plan's unavoidably significant impacts are to those associated with temporary (construction-related) and long-term air pollutant emissions, exposing sensitive receptors to the operation related

pollutants from distribution centers, the possible loss of historical resources, safety issues related to off ramp queuing, temporary construction-related noise and vibration, and deterioration of existing parks. Impacts identified as significant, but that can be reduced to a less than significant level with proposed mitigation measures include those related to exposure of sensitive receptors to construction-related substantial pollutant concentrations, biological resources (nesting birds), archaeological resources, paleontological resources, hazardous sites, and tribal cultural resources. All these potential impacts could be reduced to some degree by limiting the amount of development in the Downtown Plan Area; however, outside of a moratorium on new development, none of the impacts could be reduced to below a level of significance. Moreover, limiting development in the Downtown Plan Area may simply divert more growth and development to other areas of the City, thus increasing the potential for similar impacts in other areas of the City. Diverting growth and development to other areas that have few transit options may increase overall regional air pollutant emissions and vehicle miles traveled (VMT) compared to focusing more development in the Downtown Plan Area.

**Table 5-1** shows the housing, population and employment projections under each alternative and the percentage of growth projected from 2017 through 2040, over existing baseline conditions, for each alternative.

**TABLE 5-1 HOUSING, POPULATION AND EMPLOYMENT GROWTH PROJECTIONS**

| | Total Summary for 2040 [1] | | | Percent Growth 2017-2040 | | |
|---|---|---|---|---|---|---|
| **Scenario** | **Housing (du)** | **Population (person)** | **Employment (job)** | **Housing** | **Population** | **Employment** |
| Existing 2017 Conditions | 34,000* | 76,000 | 219,000 | -- | -- | -- |
| SCAG 2016 RTP/SCS | 96,000* | 189,000 | 257,000 | 182% | 149% | 17% |
| Downtown Plan | 133,000 | 252,000 | 305,000 | 291% | 232% | 39% |
| Alternative 1 | 97,000 | 183,000 | 290,000 | 185% | 141% | 32% |
| Alternative 2 | 127,000 | 241,000 | 297,000 | 274% | 217% | 36% |
| Alternative 3 | 139,000 | 263,000 | 364,000 | 309% | 246% | 66% |
| Alternative 4 | 59,000 | 112,000 | 278,000 | 74% | 47% | 27% |

**Notes**:
du = dwelling unit; * For conservative purposes, this number represents households and do not include vacant units [1] Numbers are rounded to thousand.

# 5.4 ANALYSIS METHODOLOGY

Feasible alternatives that address the City's need to accommodate foreseeable growth in the City and Downtown Plan Area are evaluated herein. The analysis compares the impacts of the Proposed Project to those of each alternative, concluding whether the alternative's impact would be less than, similar to, or greater than that of the Proposed Project. The analysis also concludes whether the alternative would either create or avoid a significant impact and discusses what, if any, mitigation would be required for the alternative.

# 5.5 COMPARATIVE IMPACT ANALYSIS

## ALTERNATIVE 1: REDUCED DEVELOPMENT POTENTIAL

### Alternative Description

The "Reduced Development Potential" Alternative involves reducing the maximum FAR in subareas in the Traditional Core, Community Center, Markets, and Hybrid Industrial General Plan Designations to a maximum of 3.0:1 FAR and 6.0:1 FAR but retains the story limitations associated with these designations. Alternative 1 would also reduce base FAR in the transit Core to 6:1. **Figure 5-1** shows the changes in FAR under the Reduced Development Potential Alternative compared to the Downtown Plan. Alternative 1 assumes that the reasonable anticipated development capacity of the Downtown Plan Area would be reduced compared to the Downtown Plan. As shown in **Table 5-1**, under Alternative 1 the Downtown Plan Area is projected to reach a population of 183,000 residents, 97,000 housing units, and 290,000 jobs by 2040. SCAG projects growth of the Downtown Plan Area to reach 189,000 residents, 96,000 housing units, and 257,000 jobs by 2040. Under Alternative 1, population growth in the Downtown Plan Area would fall below SCAG's forecasts by approximately 6,000 residents, while housing and employment projections would exceed projections by approximately 1,000 housing units and 33,000 jobs, respectively.

Alternative 1 was selected because it was expected to incrementally reduce or avoid the significant unavoidable impacts of the Downtown Plan with regard to historical resources, construction noise, construction vibration and deterioration of existing parks as well as the Downtown Plan's significant, but mitigable impacts related to biological, archaeological and paleontological resources, and hazardous materials while still meeting most of the basic project objectives, including: providing for economic diversification and reinforcement of the Downtown Plan Area as a primary center of employment (Primary Objective 2); building upon Downtown's role as a regional transportation center by allowing for intensive development throughout the Plan Area and concentrating development opportunity immediately surrounding the transit stations (Primary Objective 3); promoting a mode-shift from private automobile usage while fostering a transit, bicycle, and pedestrian supportive environment (Primary Objective 4); reducing vehicle miles traveled to meet the goals of the Senate Bill 375, Senate Bill 743, and California Assembly Bill 32 to reduce carbon emissions (Primary Objective 5; supporting a growing residential population by expanding the areas where housing is permitted and allowing for a full range of housing options (Primary Objective 6); celebrating and reinforcing the character of each of the neighborhoods in the Plan Area (Primary Objective 7); providing a set of implementation tools that are responsive to the range of physical and functional needs across the Plan Area (Primary Objective 8); refining and expanding a system that links development with public benefits to deliver community amenities in the Downtown Plan Area, and is adaptable to the policy needs across the City (Secondary Objective 1); maintaining a meaningful amount of the Plan Area for production and high-intensity traditional industry (Secondary Objective 2); promoting a mix of land uses that fosters sustainability, equity, community, neighborhood density, and healthy living (Secondary Objective 3); identifying appropriate locations for housing and establishing zoning tools that encourage a range of unit typologies (Secondary Objective 4); ensuring that new development provides the appropriate range of outdoor amenity space and other recreational options to tenants and property owners (Secondary Objective 5); and supporting and sustaining Downtown's ongoing revitalization (Secondary Objective 6).

As identified above, Alternative 1 would meet all of the objectives of the Downtown Plan. However, it would meet Primary Objective 2 to reinforce the Downtown Plan Area as a primary center of employment for the City and the Southern California region to a lesser degree than the Downtown plan due to the reduced development potential in comparison to the Downtown Plan. Because capacity for development around transit under Alternative 1 would be less than that of the Downtown plan, it would not allow for the same

high intensity of development as the Downtown Plan. Therefore, Alternative 1 would only partially meet Primary Objective 3, of concentrating growth near transit. For these same reasons, Alternative 1 would not meet Primary Objective 4 of reducing VMT to the same degree as the Downtown Plan. Opportunities for public benefits would also be less than that of the Plan, and therefore, this Alternative would meet Secondary Objective 1 to a lesser degree than that of the Downtown Plan. As discussed below, Alternative 1 would result in incrementally greater impacts than the Downtown Plan with respect to transportation/traffic.

## Impact Analysis

Aesthetics

Compared to existing conditions, either Alternative 1 or the Downtown Plan would generally allow buildings of greater height, scale and intensity. However, both Alternative 1 and the Downtown Plan include height limits in certain areas to promote context-sensitive development. Compared to the Downtown Plan, Alternative 1 would reduce the maximum FAR in Traditional Core, Community Center, Markets, and Hybrid Industrial General Plan Designations to a maximum FAR of 3.0:1 FAR and 6.0:1 and reduce the base FAR in the transit Core to 6:1. Compared to the Downtown Plan, Alternative 1 would result in less intense development in these areas, though it would still involve substantial visual changes to existing neighborhoods and the potential alteration of historical resources. Because building heights would be similar to those allowed under the Downtown Plan, impacts to scenic vistas would be similar and less than significant. In addition, as with the Downtown Plan, increased building heights compared to existing conditions near residential and other sensitive uses may increase shading in portions of the Downtown Plan Area. Any new development would be implemented in accordance with applicable state and local plans, policies and guidelines, including but not limited to the City's General Plan Framework, Conservation Element, Mobility Plan 2035, the Downtown Design Guide and provisions of the LAMC as it relates to development standards, visual character and historical resources. As with the Downtown Plan, development accommodated by Alternative 1 could introduce new sources of light and glare in the Downtown Plan Area. However, most of the Downtown Plan Area already experiences high levels of nighttime lighting and glare so any additional lighting would be incremental. Future development would also comply with applicable regulations regarding permitted lighting and glare. Similarly, development in the Downtown Plan Area accommodated by Alternative 1 may increase shading and shadows in specific locations; however, shadows would be limited to the immediate area of each new development and would be typical of highly urbanized neighborhoods. Overall, development accommodated by Alternative 1 may benefit, and would generally enhance, the visual character of the Downtown Plan Area. Therefore, as with the Downtown Plan, impacts related to aesthetics would be less than significant.

Air Quality

Alternative 1 would accommodate less development and associated growth than the Downtown Plan. Alternative 1 would result in 36,000 fewer housing units (-27%), 69,000 fewer residents (-27%), and 15,000 fewer jobs (-5%) through 2040 than the Downtown Plan. Like the Downtown Plan, Alternative 1 would not increase reasonably anticipated development in the Downtown Plan Area in a way that would be inconsistent with SCAG's growth forecasts for the City; therefore, Alternative 1 would not conflict with the AQMP. It would, however accommodate less overall growth in the Downtown Plan Area than would the Downtown Plan; as such, it would attain to a lesser degree the policy goals of the RTP/SCS, AQMP, and City General Plan Framework Element and Air Quality Element as well as the Downtown Plan, specifically, the policies and goals related to concentrating development in areas with access to transit and reducing VMT and associated emissions than would the Downtown Plan. Therefore, as with the Downtown Plan, impacts related to conflicting with or obstructing implementation of an applicable air quality plan would be less than significant.

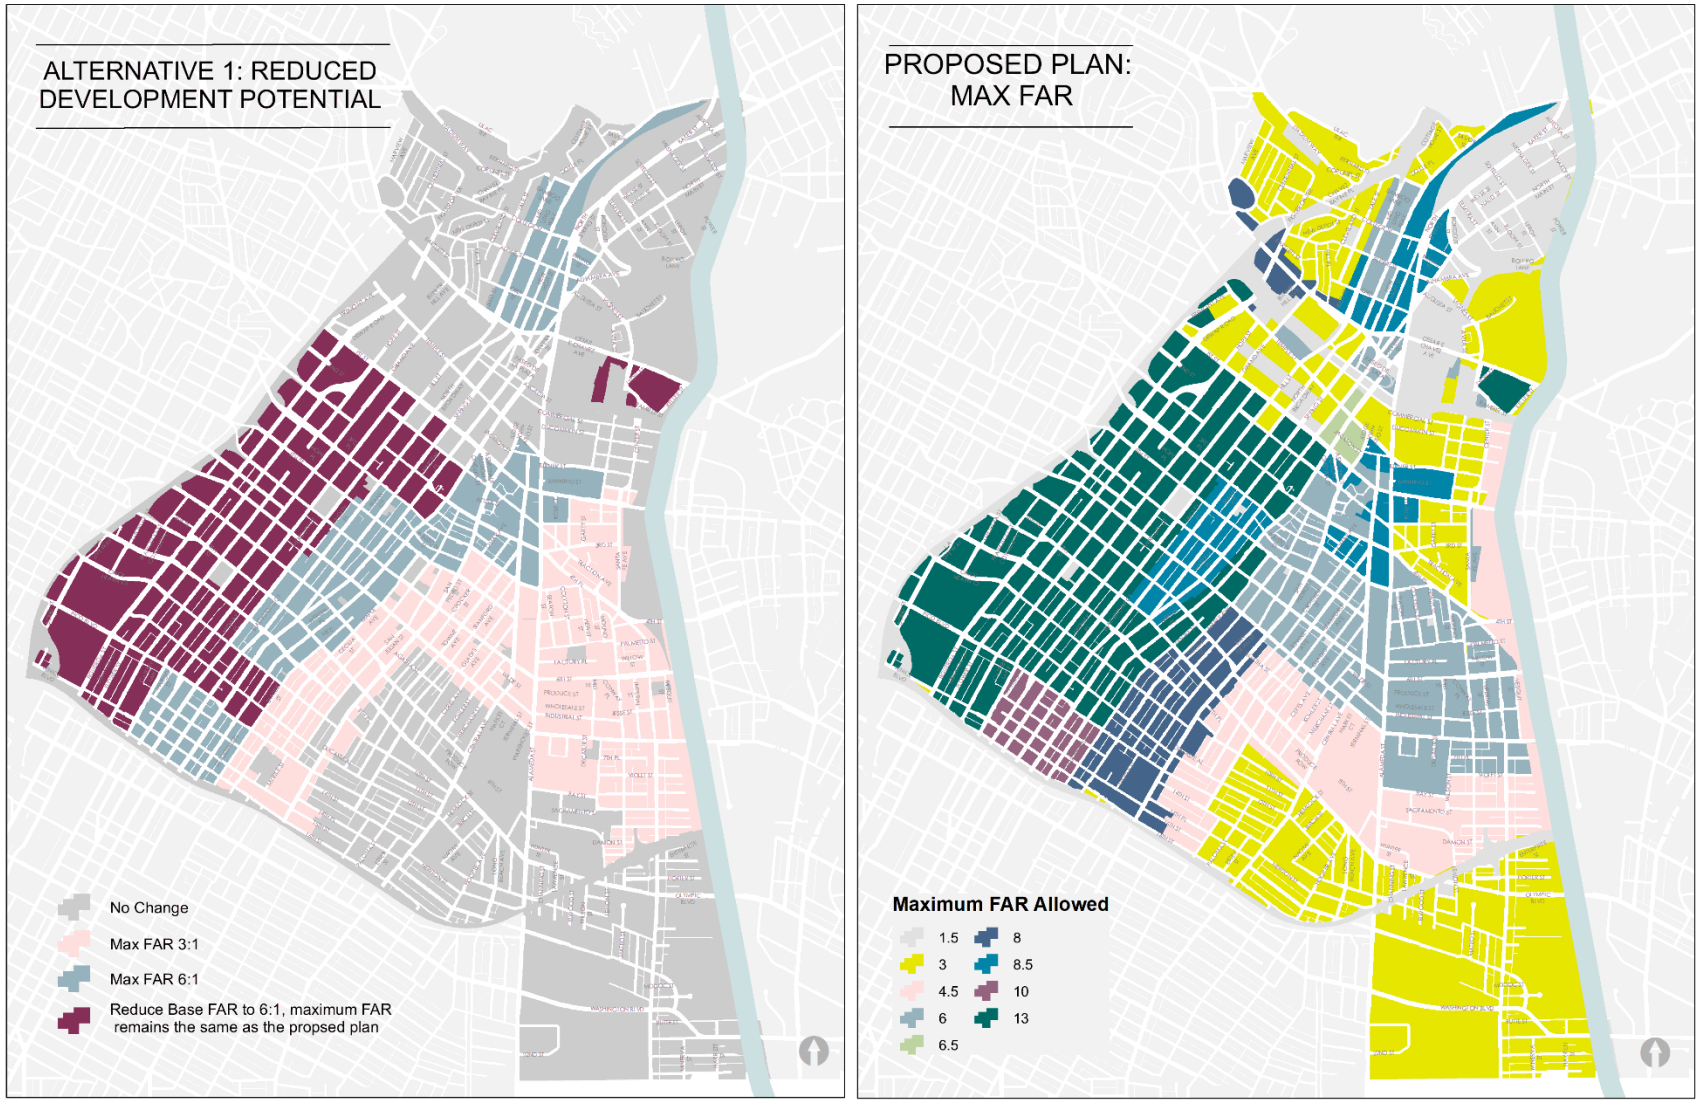
Less construction may occur overall under Alternative 1, as compared to the Downtown Plan. Alternative 1 would result in fewer overall emissions of $NO_X$ and $PM_{10}$ and $PM_{2.5,}$ but maximum daily emissions would be about the same because the nature and magnitude of individual construction projects would be similar and would still exceed regional and local significance thresholds. Similarly, because less development would occur under Alternative 1 it is reasonable to assume that operational emissions would be less as compared to the Downtown Plan. Nonetheless, as discussed in Section 4.2, *Air Quality*, and shown in **Table 4.2-11**, future daily regional emissions from mobile sources under implementation of the Downtown Plan is generally expected to decrease relative to existing emissions. This is largely a result of improvements in vehicular engine efficiency technologies and fuel pollutant concentrations resulting from more stringent statewide regulations that are projected to occur between existing conditions and 2040. Because increasingly stringent state regulations related to energy efficiency and emissions control will continue to apply regardless of whether the Downtown Plan is adopted, it is reasonable to assume that under Alternative 1 future daily regional emissions from mobile sources would similarly decrease relative to existing emissions due to improvements in vehicular engine efficiency technologies and fuel pollutant concentrations. As with the Downtown Plan, impacts related to construction emissions would be significant and unavoidable.

Alternative 1 would accommodate 27% less housing and 5% fewer jobs than the Downtown Plan. Nevertheless, because a 99 percent reduction from Downtown Plan VOC emissions would be needed to reduce emissions to below the SCAQMD daily threshold, the increase in development in the Downtown Plan Area accommodated by Alternative 1 would result in daily emissions of VOC that would exceed the SCAQMD regional significance thresholds due to increased use of consumer products and increased energy demand, similar to the Downtown Plan. In addition, future development in the Downtown Plan Area accommodated by Alternative 1 would foreseeably result in daily emissions of $PM_{10}$ and $PM_{2.5}$ from area sources and mobile sources (brake and tire wear) that would exceed SCAQMD regional significance thresholds since emissions under Alternative 1 is not anticipated to drop by 61 percent ($PM_{10}$) and 68 percent ($PM_{2.5}$) that is needed to stay under SCAQMD thresholds. Mitigation Measure 4.2-2 would be applied to the Alternative but similarly would not be expected to reduce impacts to less than significant since emissions would remain above SCAQMD thresholds. As with the Downtown Plan, impacts related to operational emissions would be significant and unavoidable.

Impacts to sensitive receptors from construction would be potentially significant, but application of **Mitigation Measures 4.2-2**, would reduce impacts to less than significant. As with the Downtown Plan, impacts associated with Alternative 1, including impacts related to toxic air contaminants (TACs) from distribution center truck activity, would be significant as the Alternative would still allow distribution centers in parts of the Plan Area intended for industrial uses. **Mitigation Measure 4.2-3** would apply to the Alternative 1, but without specific project details impacts to sensitive receptors would be significant and unavoidable. As with the Downtown Plan, impacts related to odors would be less than significant.

Alternative 1 may result in less development in the Downtown Plan Area and thus, lower construction and operational emissions in the Plan Area, as compared to the Downtown Plan; however, emissions would still exceed significance thresholds. It should again be noted that although Alternative 1 would accommodate less development than the Downtown Plan in the Downtown Plan Area, limiting growth Downtown may cause more growth to occur elsewhere in the City or region in locations that have less access to transit and less of a mix of jobs and housing. As a result, overall citywide and regional VMT and associated emissions may incrementally increase under this scenario.

**Figure 5-1 Alternative 1 Reduced Development Potential**



Biological Resources

The Downtown Plan Area is urbanized and generally lacks riparian habitat, wetlands, wildlife corridors and habitat that would support special status plant or animal species. The Los Angeles River, as well as small portions of parks and open space, trees and minor urban landscaping are the only sources of biological habitat in and around the Downtown Plan Area. Both the Downtown Plan and Alternative 1 prioritize infill development in already urbanized area of the City, thus minimizing development in areas of potential native biological habitat or wildlife corridors. Similar to the Downtown Plan, Alternative 1 would not foreseeably result in modification of the Los Angeles River because neither scenario includes components that would directly affect the Los Angeles River. Although implementation of Alternative 1 would accommodate less development capacity and associated growth than the Downtown Plan, development would occur within the same footprint as Downtown Plan Area and would not interfere with natural resources, degrade the sustainability of natural resources in the region, disrupt existing open space or encroach upon any natural settings. Alternative 1 would not conflict with goals, policies, and programs of the General Plan Framework or the City Conservation Element. Any new development has the potential to disturb nesting birds and or protected trees in the Downtown Plan Area. Therefore, future development would require adherence to the federal Migratory Bird Treaty Act (MBTA) and/or California Fish and Game Code (CFGC) regulations, and the LAMC Tree Preservation Ordinance (177,404). Alternative 1's impacts related to biological resources would be about the same as those of the Downtown Plan and less than significant with implementation of **Mitigation Measures 4.3-1(a)** and **(b)**.

Cultural Resources

The Downtown Plan Area, which is expected to experience substantial new development, includes a high concentration of historical resources. Compared to the Downtown Plan, Alternative 1 would accommodate less overall development, including in areas where historical resources are present. Therefore, the number of future projects affecting historical resources would likely be smaller and impacts to historical resources from Alternative 1 would be less than that of the Downtown Plan. Future development in the Downtown Plan Area would continue to be subject to existing federal, state, and local requirements regarding cultural resources and human remains and discretionary projects may be subject to project-specific mitigation requirements under CEQA. However, although these regulations would provide certain protections for significant historical resources, individual developments allowed by either Alternative 1 or the Downtown Plan could potentially cause a substantial adverse change in or disturbance of historical resources as defined in CEQA Guidelines Section 15064.5. As with the Downtown Plan, impacts to historical resources would be significant and unavoidable under Alternative 1.

Similar to the Downtown Plan, Alternative 1 may result in disturbance of areas that potentially contain archaeological resources and/or human remains. As with the Downtown Plan, **Mitigation Measures 4.4-2(a), (b), (c)** and **(d)**, in combination with existing regulatory requirements, would reduce Alternative 1 impacts to archaeological resources to a less than significant level. Similar to the Downtown Plan, Alternative 1 impacts to human remains would be less than significant based on anticipated compliance with existing regulations.

Energy

Alternative 1 would accommodate 36,000 fewer housing units (-27%), 69,000 fewer persons (-27%), and 15,000 fewer jobs (-5%) through 2040 than the Downtown Plan. Therefore, it is reasonable to assume that implementation of Alternative 1 would result in less overall energy consumption than the Downtown Plan. As discussed under **Impact 4.5-1**, in Section 4.5, *Energy*, (**Table 4.5-5** through **Table 4.5-7**) implementation of the Downtown Plan would increase energy consumption in the Downtown Plan Area above 2017 baseline conditions. However, per capita electricity and natural gas consumption would be lower in 2040 as compared to 2017 baseline conditions. The lower energy use per capita can be attributed

to the fact that implementation of the Downtown Plan would lower per capita VMT due to the location of jobs and housing in close proximity to each other and creation of substantial opportunities to use such transportation modes as transit, bicycling, and walking. Although Alternative 1 would result in less energy consumption in the Downtown Plan Area, the lower concentration of growth/development in the Downtown Plan Area may result in higher levels of growth in other areas of the City where transit availability is lower and per capita VMT is higher. In this way, Alternative 1 may contribute to greater overall regional energy use than would the Downtown Plan. Like the Downtown Plan, however, Alternative 1 would not result in inefficient, wasteful, or unnecessary consumption of energy resources. In addition, neither Alternative 1 nor the Downtown Plan would conflict with applicable federal, state, and local energy conservation policies aimed at decreasing reliance on fossil fuels and increasing reliance on renewable energy sources. Overall, impacts would be less than significant under either Alternative 1 or the Downtown Plan.

Geology and Soils

Alternative 1 would generally accommodate development within the same footprints as the Downtown Plan. Any new development in the Downtown Plan Area would be exposed to existing geologic and soil hazards, but would not increase the potential for such hazards or create new hazards. Compliance with existing regulatory requirements and policies, including the LAMC and California Building Code (CBC) would reduce impacts from adverse effects related to seismic activity and ground shaking, liquefaction, on or off-site landslides, ground failure; or adverse effects related to expansive soil, or to a geologic unit or soil that is unstable or would become unstable as a result of the project and result in landslide, lateral spreading, liquefaction or collapse. In some cases, future development in the Downtown Plan Area may reduce the potential for property damage and/or safety concerns by replacing older structures with new structures built to current seismic standards. Erosion would be addressed through adherence to Best Management Practices (BMPs), as required by the NPDES Construction General Permit and the Los Angeles Municipal Code (LAMC). Similar to the Downtown Plan, Alternative 1 would have the potential to disturb paleontological resources. As with the Downtown Plan, geology and soils impacts would be less than significant under Alternative 1 with adherence to regulatory code requirements and **Mitigation Measures 4.6-6 (a), (b)** and **(c)** related to paleontological resources.

Greenhouse Gas Emissions

Alternative 1 would result in 36,000 fewer housing units (-27%), 69,000 fewer persons (-27%), and 15,000 fewer jobs (-5%) through 2040 than the Downtown Plan. Development under either Alternative 1 or the Downtown Plan would generate GHG emissions through individual project construction and operation. GHG emissions would be generated by direct sources such as motor vehicles, natural gas consumption, solid waste handling/treatment, and indirect sources such as electricity generation. As shown in **Table 4.7-4** in Section 4.7, *Greenhouse Gas Emissions*, implementation of the Downtown Plan would result in a 24 percent increase in total GHG emissions in the Downtown Plan Area by 2040 as compared to baseline conditions, but a 62 percent reduction in per capita GHG emissions. The reduction in per capita GHG emissions can be attributed to a combination of state-mandated GHG emission reduction strategies and the fact that implementation of the Downtown Plan would lower per capita VMT due to the location of jobs and housing in close proximity to each other and creation of substantial opportunities to use such transportation modes as transit, bicycling, and walking. It is reasonable to assume that under Alternative 1 future overall Downtown Plan Area emissions would be higher than baseline emissions and that per capita emissions would also be lower. Compared to what would occur under the Downtown Plan, overall Downtown Plan Area emissions would be slightly lower due to the overall reduction in development potential, but per capacity emissions would be slightly higher.

It should be noted that because Alternative 1 would accommodate less overall growth in the Downtown Plan Area than the Downtown Plan would, it may push more population growth to other areas of the City or region where fewer transit options are available and distances between housing, jobs, and services are

greater. As a result, accommodating less development Downtown under Alternative 1 may incrementally increase overall citywide or regional GHG emissions related to VMT and Alternative 1 would not be as consistent with AB 32, SB 32, SB 375 (through demonstration of conformance with the 2016–2040 RTP/SCS), the Sustainable City pLAn and GreenLA as the Downtown Plan.

Nevertheless, neither Alternative 1 nor the Downtown Plan would conflict with state, regional, or local plans or policies related to GHG emissions or climate change. To the contrary, either Alternative 1 or the Downtown Plan would generally implement plans and policies aimed at GHG emissions reduction by accommodating relatively high density, mixed-use development in an area that is well served by transit, thus reducing per capita VMT. Alternative 1's impact would be greater than that of the Downtown Plan, though less than significant.

Hazards and Hazardous Materials

General Plan designations under either Alternative 1 or the Downtown Plan would maintain existing light and heavy industrial uses in the southeastern portion of the Downtown Plan Area, but would expand the mix of uses in the Markets and Hybrid Industrial designation areas to include commercial and residential uses. Although certain heavy industrial facilities would remain and hazardous materials would continue to be transported through the Downtown Plan Area, neither Alternative 1 nor the Downtown Plan would substantially increase hazardous material risks from transport, use or disposal based on the extensive existing regulations of hazardous materials. Consequently, as with the Downtown Plan, impacts related to the routine transport, use, or disposal of hazardous materials or upset or accident conditions involving hazardous materials would be less than significant.

Similar to the Downtown Plan, there would be no or less than significant impacts related to airports, wildfires or emergency management plans because there are no airports, private airstrips, or wildlands in or near the Downtown Plan Area and development under Alternative 1 would not interfere with circulation plans or emergency management plans.

As with the Downtown Plan, redevelopment, renovation, and demolition of structures built before 1979 under Alternative 1 could potentially involve asbestos or lead but asbestos and lead would not be released into the atmosphere with compliance of existing regulations. In addition, future development could potentially occur in Methane Zones and Methane Buffer Zones and near oil wells. Compliance with applicable regulations would reduce such impacts to a less than significant level. Like the Downtown Plan, grading and construction activity could potentially result in the release of soil and/or groundwater contamination, which could potentially affect schools or involve a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, create a significant hazard to the public or the environment. However, with imposition of **Mitigation Measures 4.8-4(a)** and **4.8-4(b)** to Alternative 1 impacts would be less than significant. Overall impacts associated with Alternative 1 would be similar to, but slightly less than, those of the Downtown Plan since the overall level of development would be lower.

Hydrology and Water Quality

The Downtown Plan Area is urbanized and almost entirely paved and developed, with the exception of parks, green spaces, and the Los Angeles River, which is located on the eastern boundary of the Downtown Plan Area. Alternative 1 would generally accommodate development in the same footprints as the Downtown Plan. Alternative 1 would accommodate slightly less overall development than the Downtown Plan and, like the Downtown Plan, would not substantially alter drainage patterns or result in substantial erosion, siltation, or flooding on- or off-site. All new development would be subject to federal, state, and local requirements that prevent violations of water quality standards or waste discharge requirements and support the preservation and expansion of pervious surfaces. In addition, any new development projects

would be required to incorporate BMPs to manage stormwater and reduce runoff during construction and operation, and industrial sources would be subject to additional stormwater management and discharge requirements under the National Pollutant Discharge Elimination System (NPDES) program for industrial uses. Compliance with the City's Low Impact Development (LID) Ordinance would further ensure that any future development under Alternative 1 would not require construction of new stormwater drainage facilities and or expansion of existing facilities beyond specific improvements needed for individual development projects. In the long-term, redevelopment of properties in the Downtown Plan Area would improve surface water quality by replacing older development with new development that incorporates LID methods. Overall impacts associated with Alternative 1 would be similar to those of the Downtown Plan and less than significant.

Land Use and Planning

Similar to the Downtown Plan, Alternative 1 would generally allow greater building heights, scale and intensity than currently exists in portions of the Downtown Plan Area, Alternative 1 involves reducing the maximum FAR in subareas in the Transit Community, Traditional Core, Markets, and Hybrid Industrial General Plan designations to a maximum of 3.0:1 FAR and 6.0:1 FAR. Either Alternative 1 or the Downtown Plan would accommodate high-intensity transit-oriented infill development. Like the Downtown Plan, Alternative 1 would be generally consistent with 2016-2040 RTP/SCS policies related to the provision of high intensity and transit-oriented development as well as with the City's General Plan and Framework Element, Mobility Plan 2035, and Housing Element 2013-2021. However, as discussed under *Air Quality*, Alternative 1 may implement 2016-2040 RTP/SCS, AQMP, and Air Quality Element policies related to concentrating development near transit and reducing regional VMT to a lesser degree than the Downtown Plan since the lower overall development totals may result in increased development elsewhere in the City and incrementally higher regional VMT. Like the Downtown Plan, Alternative 1 would not physically divide an established community or conflict with an applicable habitat conservation plan or natural community conservation plan. Overall, Alternative 1's impacts would be similar to those of the Downtown Plan and less than significant.

Noise

New sensitive uses accommodated under either Alternative 1 or the Downtown Plan could be exposed to ambient noise that is in the "normally unacceptable" to "clearly unacceptable" range based on noise level/land use compatibility standards in the Noise Element of the City's General Plan. However, new development would be required to take measures to reduce interior noise levels to below 45 dBA CNEL.

Future development Downtown would include mechanical equipment, loading, trash pick-up, and other noise-generating activities. However, such activities would be typical of the urban environment in the Downtown Plan Area. In addition, on-site activities would be required to comply with applicable provisions of the LAMC. As with the Downtown Plan, traffic-related noise may increase by more than 3 dBA in some locations, but resulting noise levels would not be in the "normally unacceptable" range. Thus, permanent noise increases due to operational activities accommodated by Alternative 1 would be less than significant.

Future construction activity would be required to comply with appropriate Regulatory Compliance Measures as well as LAMC Chapter 41.40, Section 112.05 and **Mitigation Measure 4.11-1.** Compared to the Downtown Plan, duration of construction and use of heavy duty equipment in the Alternative 1 scenario would be less than the Downtown Plan due to reduced overall development potential. Therefore, construction noise impacts from Alternative 1 is likely to be less than that of the Downtown Plan. Nevertheless, maximum noise levels generated by construction equipment under Alternative 1 could potentially involve two subterranean levels or more, construction durations of 18 months or more, use of large, heavy-duty equipment rated 300 horsepower or greater, or the potential for impact pile driving. Therefore, although the overall impact generated by temporary construction noise resulting from

implementation of Alternative 1 would be less than that of the Downtown Plan, the impact would remain significant and unavoidable.

Any future construction activity, specifically pile driving, could potentially generate vibration exceeding the 90 VdB threshold for buildings extremely susceptible to building damage (e.g., historical structures). Although mitigation is available to minimize the potential effects of vibration, it cannot be assured that construction-related vibration would not result in building damage. Thus, although Mitigation Measures 4.11-2(a) and 4.11-2(b) would reduce impacts to the degree feasible, Alternative 1 would result in a significant and unavoidable impact related to construction vibration. Overall impacts from Alternative 1 would, however, be incrementally less than those of the Downtown Plan.

It is not anticipated that new development in the Downtown Plan Area would involve activities that would result in substantial operational vibration (e.g., blasting operations). As with the Downtown Plan, operational groundborne vibration in the vicinity of new development under Alternative 1 would be primarily generated by vehicular travel on the local roadways. According to the FTA *Transit Noise and Vibration Impact Assessment* guidance document, rubber tires and suspension systems dampen vibration levels from trucks to a level that is rarely perceptible (2006). Accounting for additional vehicle trips that would be accommodated by the Alternative 1, traffic vibration levels would be similar to existing conditions and not perceptible by sensitive receptors. Therefore, similar to the Downtown Plan, impacts related to operational vibration under Alternative 1 would be less than significant.

Similar to the Proposed Project, Alternative 1 would have no impacts related to airport noise.

Population and Housing

Projected growth under Alternative 1 would fall below SCAG's 2040 population forecast by approximately 6,000 persons (-3%) but would exceed housing and employment forecasts by 1,000 dwelling units (1%), and 33,000 jobs (13%), respectively. Projected growth under the Downtown Plan would exceed SCAG's 2040 growth projections by 63,000 persons (33%), 37,000 dwelling units (39%), and 48,000 jobs (19%). Although the population forecast for this alternative is slightly less than under the RTP/SCS, Alternative 1 would increase the development capacity of the Downtown Plan Area in a manner generally consistent with SCAG's housing and job projections for the Downtown Plan Area. Like the Downtown Plan, Alternative 1 would also concentrate forecast growth in an area with a mix of jobs and housing and with good transit access. Like the Downtown Plan, Alternative 1 would not induce substantial population growth inconsistent with regional growth plans.

Alternative 1 would accommodate new development and redevelopment projects in the Downtown Plan Area that would likely result in displacement of existing housing units and residents. However, like the Downtown Plan, it would substantially increase the housing stock of the Downtown Plan Area overall. Therefore, implementation of Alternative 1 would allow for additional construction of housing in an urban center, which would help to offset housing displacement that may occur.

Similar to the Downtown Plan, Alternative 1 would accommodate growth generally in line with regional projections and would accommodate housing that more than offsets any displaced housing. Therefore, as with the Downtown Plan, population and housing impacts would be less than significant under Alternative 1.

Public Services

Alternative 1 would result in 36,000 fewer housing units (-27%), 69,000 fewer persons (-27%), and 15,000 fewer jobs (-5%) by 2040 than the Downtown Plan. With respect to fire and police services, either scenario would increase demand for fire and police protection service in the Downtown Plan Area. This may result in the need for new or expanded fire and police facilities. Based on the urbanized character of the Downtown

Plan Area, it is anticipated that new or expanded facilities could be built without creating significant environmental impacts. Depending on the location or nature of new facilities, the construction of needed new facilities could potentially result in impacts. However, like the Downtown Plan, those impacts would be consistent with those already identified in this EIR for construction or operations. Project-specific environmental analysis under CEQA would be required to address any site-specific environmental concerns. With respect to schools, as summarized in **Table 5-2**, residential and non-residential development accommodated by Alternative 1 would result in approximately 35,821 new students by 2040. This is about 31 percent fewer students than would be added under the Downtown Plan. Both Alternative 1 and the Downtown Plan would create the need for new or expanded school facilities. However, under either scenario developers would be required to pay school impact fees. As with the Downtown Plan, any impacts associated with new school construction would be similar to those analyzed and identified in the EIR for other types of development, any site-specific impacts would be speculative and would be addressed by LAUSD as part of a project-level CEQA review.

**TABLE 5-2 ALTERNATIVE 1 ANTICIPATED STUDENT GENERATION IN THE DOWNTOWN PLAN AREA**

| | | Student Generation | | | | |
|---|---|---|---|---|---|---|
| | Units | Elementary School (TK-5) | Middle School (6-8) | High School (9-12) | SDC | Total Students Generated |
| Residential[1] | 63,030 du | 14,302 | 3,851 | 8,169 | 1,223 | 27,544 |
| Non-Residential[2] | 171,004,047 sf | 3,899 | 1,949 | 2,428 | -- | 8,277 |
| **Total Students Generated by Alternative 1** | | **18,200** | **5,801** | **10,597** | **1,223** | **35,821** |

Note: du = dwelling units; sf = square feet; TK = Transitional Kindergarten; SDC = Specialized Day Care

Totals may not add up due to rounding.

[1] Student generation rates for residential use is based on Level 1 – Developer Fee Justification Study for Los Angeles Unified School District (LAUSD 2017d). Residential Generation Rates: Elementary: 0.2269/du, Middle School: 0.0611/du, High School: 0.1296 /du, SDC: 0.0194/du

[2] Student generation rates for non-residential use is based on the average of office and retail/service student generation rates for a conservative estimate, taken from the LAUSD Commercial/Industrial Development School Fee Justification Study, September 2010 (LAUSD 2010). Non-residential Generation Rates: Elementary: 0.0228/1,000 sf, Middle School: 0.0114/1,000 sf, High School: 0.0142/1,000 sf. Non-residential uses include commercial, industrial, and public facilities.

With respect to libraries, either scenario would increase demand for library facilities. The Downtown Plan Area is well served by library facilities and would not require the construction of new or expanded facilities.

Overall impacts related to public services would be similar to, but slightly lower than, those of the Downtown Plan and would be less than significant. The lower overall amount of development in the Downtown Plan Area may result in more growth/development elsewhere in the City with unknown impacts related to public services.

Recreation

Implementation of Alternative 1 would involve less overall development and associated population increases than would occur under the Downtown Plan; nevertheless, as with the Downtown Plan, new development would increase the use of existing park and recreational facilities throughout the City, including in and around adjacent to the Downtown Plan Area. Total, pocket, community, and neighborhood parks (i.e., non-regional parks) currently provide 244.35 acres of land in the Downtown Plan Area. Under Alternative 1, the Downtown Plan Area population is projected to increase to approximately 183,000 residents by 2040, thereby decreasing the ratio of parks to residents to approximately 1.4 acre per 1,000 residents. Approximately 490 acres of new parkland would be needed in the Downtown Plan Area by 2040 to meet the City's park acreage standards under Alternative 1. Future development accommodated by the Downtown Plan would increase the population of the Downtown Plan Area to an estimated 252,000

residents, thereby decreasing the ratio of parks to residents to approximately 1.0 acre per 1,000 residents. Approximately 764 acres of new parkland would be needed in the Downtown Plan Area by 2040 to meet the City's park acreage standards under the Downtown Plan. Alternative 1 would require approximately 36 percent less parkland than the Downtown Plan. Because opportunities for new parks are limited, neither Alternative 1 nor the Downtown Plan would result in significant impacts related to the development and construction of new parks. However, either scenario would have potentially significant impacts related to the deterioration of existing parks due to the increase in population in the Downtown Plan Area.

Developers of residential projects would be required to pay park impact fees, dedicate land, include outdoor amenity spaces, or pay in-lieu Quimby fees to fund new park and recreational facilities. This would partially mitigate deterioration of facilities by providing funds for new facilities. However, due to the substantial population growth that would result from future development, and lack of development capacity for new parks in the Downtown Plan Area, implementation of either Alternative 1 or the Downtown Plan could accelerate the deterioration of existing parks in and around the Downtown Plan Area. Although Alternative 1's impact would be less than the Downtown Plan's impacts related to the deterioration of existing parks, impacts to existing recreational facilities would remain significant and unavoidable under either Alternative 1 or the Downtown Plan. Impacts related the construction of new parks would remain less than significant.

Transportation/Traffic

With respect to transportation, a significant impact would occur if the total daily VMT per service population under the Downtown Plan, or a proposed alternative, were to increase above the 2017 Baseline Condition or if there is inconsistency with the SCAG 2016 RTP/SCS. As shown in **Table 5-3,** VMT per service population under Alternative 1 would be 17.0, while the 2017 Baseline per service population VMT in the Downtown Plan Area is 19.6. Thus, per capita VMT under Alternative 1 would not exceed the 2017 Plan Baseline Condition threshold. Compared to the 2016 SCAG Region Conditions, Alternative 1 has lower vehicle trips per service population (2.6 versus 3.1) and lower VMT per service population (17.0 versus 35.4). Therefore, as with the Downtown Plan, impacts would be less than significant. However, the beneficial impacts to VMT would not be as great with Alternative 1 compared to the Downtown Plan.

Similar to the Downtown Plan, Alternative 1 would not result in significant impacts related to increased hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment), or result in inadequate emergency access. However, as with the Downtown Plan, freeway off ramp queuing-related safety issues could potentially arise as additional development occurs in the Downtown Plan Area, which could make a significant and unavoidable impact to freeway safety.

Alternative 1 includes the network enhancements identified in MP 2035 and incorporated into the Downtown Plan.

**TABLE 5-3 COMPARISON BETWEEN EXISTING TRAFFIC CONDITIONS, THE DOWNTOWN PLAN AND ALTERNATIVE 1**

| Transportation Metric | Threshold | | Downtown Plan (2040) | Alternative 1 |
|---|---|---|---|---|
| | 2016 SCAG Region Conditions | 2017 Downtown Plan Area Baseline Conditions | | |
| Total Daily VT | 82,283,000 | 758,000 | 1,375,000 | 1,212,000 |
| Total Daily VT per Service Population | 3.1 | 2.6 | 2.5 | 2.6 |
| Total Daily VMT | 948,656,000 | 5,767,000 | 8,842,000 | 8,031,000 |
| **Total Daily VMT per Service Population** | **35.4** | **19.6** | **15.9** | **17.0** |

**SOURCE**: Fehr & Peers, February 2019.

Tribal Cultural Resources

Development activities that include ground disturbance have the potential to significantly impact tribal cultural resources. The Sacred Lands File search conducted for the Downtown Plan Area was positive and the Tongva ethnographic village site of Yangna is thought to be located near Union Station. Effects on tribal cultural resources are only known once a specific development has been proposed because the effects are highly dependent on both the individual development site conditions and the characteristics of the proposed activity. Alternative 1 would generally accommodate development in the same areas that could be developed under the Downtown Plan. Although less development is expected under this Alternative which could result in incrementally fewer impacts. Although neither Alternative 1 nor the Downtown Plan includes specific development projects, new development accommodated by either scenario may disturb areas that potentially contain tribal resources. Similar to the Downtown Plan, all future development projects would continue to be subject to existing federal, state, and local requirements and discretionary projects, subject to CEQA review would be required to comply with AB 52, which for projects relying on a [mitigated] negative declaration or an EIR, includes consultation with California Native American tribes. Overall, like the Downtown Plan, impacts under Alternative 1 would be potentially significant. However, implementation of **Mitigation Measures 4.4-2(a)** through **4.4-2(d)** in Section 4.4, *Cultural Resources* and **4.16-1 (a)** and **(b)** in Section 4.16, *Tribal Cultural Resources*, would reduce Alternative 1 impacts to a less than significant level. Therefore, similar to the Downtown Plan, Alternative 1's impact would be less than significant with mitigation incorporated.

Utilities and Service Systems

Alternative 1 would result in 36,000 fewer housing units (-27%), 69,000 fewer persons (-27%), and 15,000 fewer jobs (-5%) through 2040 than the Downtown Plan. **Table 5-4** indicates that implementation of Alternative 1 would increase wastewater generation in the Downtown Plan Area by approximately 12 million gallons per day (mgd) above baseline conditions, which represents about 7 percent of the HWRP's excess capacity. As shown in **Table 4.17-3** in Section 4.17, *Utilities and Service Systems*, projected development in the Downtown Plan Area with implementation of the Downtown Plan would generate an estimated 18 mgd of wastewater, which would represent about 10 percent of the Hyperion Water Reclamation Plant's (HWRP) excess capacity of 175 mgd. As such, Alternative 1 would generate approximately 33 percent less additional wastewater as compared to the Downtown Plan. Therefore, the HWRP would have sufficient available treatment capacity to serve the Downtown Plan Area under Alternative 1. In addition, the HWRP would be able to adequately treat future project-generated sewage under Alternative 1 and the treatment requirements of the RWQCB would not be exceeded so new or expanded treatment facilities would not be needed. Expansion/replacement of Downtown Plan Area

conveyance infrastructure may be needed and various facility improvements are already planned. Temporary traffic, air quality, and noise impacts associated with construction of such improvements would be within the parameters described for the Downtown Plan. Continued compliance with the City's Low Impact Development (LID) Ordinance for all new development would ensure that any future development under Alternative 1 would not increase demands on stormwater drainage facilities or create the need for expansion of existing facilities beyond specific improvements needed for individual development projects. As with the Downtown Plan, impacts associated with Alternative 1 would be less than significant.

**TABLE 5-4 ALTERNATIVE 1 PROJECTED WASTEWATER GENERATION**

| Land Use | Dwelling Units or Jobs | Wastewater Generation Rate (gpd/unit) | Wastewater Generation (gpd) |
|---|---|---|---|
| Single-family Residential | 6,733 du | 144.3 | 972,000 |
| Multi-family Residential | 89,962 du | 137.9 | 12,406,000 |
| Commercial | 229,638 jobs | 59.8 | 13,732,000 |
| Industrial | 33,163 jobs | 123 | 4,079,000 |
| Public Facilities | 26,633 jobs | 46.4 | 1,236,000 |
| Total 2040 with Alternative 1 Wastewater Generation | | | 32,425,000 |
| Current Wastewater Generation | | | 20,631,000 |
| **Net Change in Wastewater Generation** | | | **11,793,000** |

Notes: Wastewater generation numbers are rounded to the nearest thousand. Totals may not add up due to rounding.
gpd – gallons per day
du – dwelling units
sf – square feet
**SOURCE:** Wastewater is assumed to be 100% of indoor water use. Per Exhibit 2D of the 2015 UWMP, indoor water use constitutes the following percentages of overall water use: Residential single family – 46%; Residential multi-family – 68%; Commercial – 76%; Industrial – 98%; and Government – 59%.Per the UWMP, per unit water demand is forecast to decline over time; the forecast 2040 rates are assumed to apply to new development.

With respect to water demand, per the 2015 Urban Water Management Plan (UWMP), current water supplies, planned future water conservation efforts, and planned future water supplies will enable Los Angeles Department of Water and Power (LADWP) to reliably provide water that meets the demands of the City for a 25-year planning horizon (through 2040), based on SCAG's population projections. The 2015 UWMP projects an increase of 195,960 acre feet per year (afy) (38 percent) in water demand between 2015 and 2040, under single/multiple dry year conditions. As shown in **Table 5-5**, the projected net increase in water demand of 17 mgd, or 18,486 afy, generated by new development accommodated by Alternative 1 would represent about 9 percent of the forecasted citywide water demand increase through 2040. As shown in **Table 4.17-6,** in Section 4.17, *Utilities and Service Systems*, projected growth in the Downtown Plan Area with implementation of the Downtown Plan would generate an estimated demand of 25 mgd, or 28,000 afy, which would represent about 14 percent of the forecasted citywide water demand increase through 2040. As such, Alternative 1 would demand approximately 34 percent less water as compared to the Downtown Plan. As with the Downtown Plan, water supplies would be adequate to meet projected demand through 2040 for Alternative 1 and development of new water supplies would not be necessary. Expansion/replacement of water distribution infrastructure may be needed, but temporary traffic, air quality, and noise impacts associated with construction of such improvements would be within the parameters described for the Downtown Plan. As with the Downtown Plan, impacts associated with Alternative 1 would be less than significant.

**TABLE 5-5 ALTERNATIVE 1 PROJECTED WATER DEMAND**

| Land Use | Dwelling Units or Jobs | Daily Water Use Rate (gpd/unit) | Daily Water Demand (gpd) | Annual Water Demand (afy) |
|---|---|---|---|---|
| Single-family Residential | 6,733 du | 313.8 | 2,113,000 | 2,367 |
| Multi-family Residential | 89,962 du | 202.8 | 18,244,000 | 20,436 |
| Commercial | 229,638 jobs | 78.7 | 18,072,000 | 20,244 |
| Industrial | 33,163 jobs | 125.5 | 4,162,000 | 4,662 |
| Public Facilities | 26,633 jobs | 78.7 | 2,096,000 | 2,348 |
| Total 2040 with Alternative 1 Demand | | | 44,688,000 | 50,057 |
| Current Water Demand | | | 28,184,000 | 31,570 |
| **Net Change in Water Demand** | | | **16,504,000** | **18,486** |

Notes: Numbers are rounded to the nearest thousand. Totals may not add up due to rounding.
du – dwelling unit
gpd – gallons per day
afy – acre feet per year (1 af = 325,850 gallons)
**SOURCE:** Water demand rates were obtained from the LADWP's 2015 Urban Water Management Plan (UWMP), Exhibit2K (LADWP 2016). Per the UWMP, per unit water demand is forecast to decline over time; the forecast 2040 rates are assumed to apply to new development.

As shown in **Table 4.17-7** in Section 4.17, *Utilities and Service Systems*, the combined daily intake capacity of landfills serving the Plan Area is 45,540 tons per day and the average disposal intake is 19,143 tons per day, resulting in an available capacity of 26,397 tons per day. As shown in **Table 5-6**, implementation of Alternative 1 would generate an increase of approximately 1,073 tons of solid waste per day above existing conditions, which would represent about 4 percent of the total available daily capacity (26,397 ton per day) at local landfills. As shown in **Table 4.17-9**, of Section 4.17, *Utilities and Service Systems*, development accommodated by the Downtown Plan would increase the amount of solid waste generated in the Downtown Plan Area by approximately 1,133 tons per day, or 413,534 tons per year, above existing conditions. The estimated daily solid waste that would be generated in the Downtown Plan Area would represent approximately 4 percent of the available intake capacity of landfills serving the Downtown Plan Area. Alternative 1 would generate approximately 5 percent less waste as compared to the Downtown Plan. Based on the County of Los Angeles Countywide Integrated Waste Management Plan (CIWMP) 2018 Annual Report, sufficient permitted capacity is available to accommodate the County's long-term disposal needs under the status quo. Therefore, similar to the Downtown Plan, new or expanded facilities would not be needed and impacts would be less than significant.

Electrical and natural gas supplies are not expected to be adversely affected by development under Alternative 1, but improvements to Downtown Plan Area distribution and telecommunication facilities may be needed. Temporary traffic, air quality, and noise impacts associated with construction of such improvements would be within the parameters described for the Downtown Plan. As with the Downtown Plan, impacts associated with Alternative 1 would be less than significant.

**TABLE 5-6 ALTERNATIVE 1 PROJECTED SOLID WASTE GENERATION**

| Land Use | Dwelling Units or Square Feet | Annual Waste Generation Rate | Annual Waste Generation (tons) | Daily Waste Generation (tons) |
|---|---|---|---|---|
| Single-family Residential | 6,733 du | 1.17 ton/du | 7,878 | 22 |
| Multi-family Residential | 26,932 du | 0.46 ton/du | 41,383 | 113 |
| Commercial | 105,376,578 sf | 3.01 ton/1,000 sf | 595,515 | 1,632 |
| Industrial | 40,101,581 sf | 1.24 ton/1,000 sf | 95,198 | 261 |
| Public Facilities | 3,865,922 sf | 0.93/1,000 sf | 42,529 | 117 |
| Total 2040 Alternative 1 Solid Waste Generation | | | 782,502 | 2,144 |
| Current Solid Waste Generation | | | 390,771 | 1,071 |
| **Net Change in Waste Generation** | | | **391,731** | **1,073** |

Notes: Waste generation (tons) was rounded to the nearest whole number. Totals may not add up due to rounding.

du – dwelling unit

sf – square feet

E-5 Population and Housing Estimates for Cities, Counties, and the State, 2011-2018 with 2010 Census Benchmark. http://www.dof.ca.gov/Forecasting/Demographics/Estimates/E-5/ (accessed April 2019))

**SOURCE:** CalEEMod Land Use SubType.

### Conclusion

The Reduced Development Potential Alternative would accommodate less development overall and thus accommodate less growth in the Downtown Plan Area, as compared to the Downtown Plan. Due to reduced FARs and lower development potential under Alternative 1 in comparison to the Downtown Plan, fewer historical resources are likely to be disturbed, and impacts related to historical resources would be less than that of the Downtown Plan. Similarly, reduced development potential under Alternative 1 compared to the Downtown Plan, would result is lesser impacts related to construction noise, construction vibration, and deterioration of existing parks under Alternative 1 than that of the Downtown Plan. Nevertheless, despite accommodating less development capacity as compared to the Downtown Plan, Alternative 1 would result in the same impact conclusions as the Downtown Plan in all impact categories. Therefore, while significant impacts would be less under Alternative 1, impacts related to historical resources, air quality, construction noise and vibration, transportation safety impacts related to freeway off-ramp queuing, and recreational facilities would remain significant and unavoidable.

## ALTERNATIVE 2: HOUSING REDISTRIBUTION

### Alternative Description

Alternative 2 would modify the Downtown Plan land use mix by expanding the areas where housing is permitted within the Markets and Production General Plan designations on the south-central portion of the Downtown Plan Area. This Alternative was included to meet the request of community groups and to consider an option with a different mix of housing types and locations where more housing is provided in the immediate vicinity of Downtown Plan Area jobs. Under this alternative, the Industrial-Mixed Hybrid 1 (IH1) Use District would be applied to areas that are proposed as Industrial-Mixed Use 2 (IX2), in which the only type of housing allowed is through conversion of existing buildings to Joint Living and Work Quarters, and Restricted Light Industrial (MR1), which does not permit any type of housing. HI1 allows

for adaptive reuse to housing, joint living and work quarters, and construction of new live/work units, in addition to a range of commercial and light industrial uses. Under this Alternative, the area with 8.0:1 maximum FAR in the Downtown Plan would be reduced to 4.5:1 and the area with 3:1 maximum FAR would be increased to 4.5:1, to promote a more compatible scale of development between residential, and hybrid industrial uses. Alternative 2 reduces the total number of housing units, as compared to the Downtown Plan, based on anticipated mix of units and allocation of housing and commercial uses in the areas where housing would be allowed. **Figure 5-2** shows the changes under Alternative 2 compared to the Downtown Plan.

As shown in **Table 5-1**, under Alternative 2 the Downtown Plan Area is projected to reach a population of 241,000 residents, 127,000 housing units, and 297,000 jobs by 2040. SCAG projects growth of the Downtown Plan Area to reach 189,000 residents, 96,000 housing units, and 257,000 jobs by 2040. Therefore, Alternative 2 would accommodate SCAG's population, housing and job growth forecasts in the Downtown Plan Area. Alternative 2 would accommodate less overall development and associated growth than the Downtown Plan. Alternative 2 would result in 6,000 fewer housing units (-5%), 11,000 fewer persons (-4%), and 8,000 fewer jobs (-3%) through 2040 than the Downtown Plan.

Under Alternative 2, the Downtown Plan Area would have reduced development capacity, as compared to the Downtown Plan. Therefore, Alternative 2 was selected because it was expected to incrementally reduce the significant unavoidable impacts of the Downtown Plan with regard to historical resources, construction noise, construction vibration, and deterioration of existing parks as well as the Downtown Plan's significant, but mitigable impacts related to biological, archaeological and paleontological resources, and hazardous materials while still meeting all of the basic project objectives, including: accommodating employment, housing, and population growth projections (Primary Objective 1); providing for economic diversification and reinforcement of the Downtown Plan Area as a primary center of employment (Primary Objective 2); building upon Downtown's role as a regional transportation center by allowing for intensive development throughout the Downtown Plan Area and concentrating development opportunity immediately surrounding the transit stations (Primary Objective 3); promoting a mode-shift from private automobile usage while fostering a transit, bicycle, and pedestrian supportive environment (Primary Objective 4); reducing vehicle miles traveled to meet the goals of the Senate Bill 375, Senate Bill 743, and California Assembly Bill 32 to reduce carbon emissions (Primary Objective 5; supporting a growing residential population by expanding the areas where housing is permitted and allowing for a full range of housing options (Primary Objective 6); celebrating and reinforcing the character of each of the neighborhoods in the Downtown Plan Area (Primary Objective 7); providing a set of implementation tools that are responsive to the range of physical and functional needs across the Downtown Plan Area (Primary Objective 8); refining and expanding a system that links development with public benefits to deliver community amenities in the Downtown Plan Area, and is adaptable to the policy needs across the City (Secondary Objective 1); maintaining a meaningful amount of the Downtown Plan Area for production and high-intensity traditional industry (Secondary Objective 2); promoting a mix of land uses that fosters sustainability, equity, community, neighborhood density, and healthy living (Secondary Objective 3); identifying appropriate locations for housing and establishing zoning tools that encourage a range of unit typologies (Secondary Objective 4); ensuring that new development provides the appropriate range of outdoor amenity space and other recreational options to tenants and property owners (Secondary Objective 5); and supporting and sustaining Downtown's ongoing revitalization (Secondary Objective 6). Alternative 2 would not meet certain project objectives regarding accommodating jobs and includes housing in areas with lower levels of transit service.

Although Alternative 2 would meet all objectives, it would meet certain objectives to a lesser degree than would the Downtown Plan due to the overall reduced development potential in comparison to the Downtown plan and introduction of residential uses in a portion of the plan area reserved for employment uses under the Downtown Plan. These include Primary Objective 1, which aims to focus new job-generating uses and residential development around transit stations; Primary Objective 3, which aims to allow for

intensive development throughout the Plan Area, and concentrating development opportunity immediately surrounding the transit stations with an appropriate range of building sizes and mix of uses; Primary Objective 4, which aims to Promote a mode-shift from private automobile usage and foster a transit, bicycle, and pedestrian supportive environment; and Primary Objective 5, which aims to Reduce vehicle miles traveled. Similar to Alternative 1, because of the reduced development potential under Alternative 2, generation of public benefits would be less than that of the Plan, and therefore, would also meet Secondary Objective 1 to a lesser degree than that of the Downtown Plan.

As discussed below, Alternative 2 would result in incrementally greater impacts than the Downtown Plan with respect to transportation/traffic.

## Impact Analysis

Aesthetics

Compared to existing conditions, either Alternative 2 or the Downtown Plan would allow greater overall scale and intensity. However, unlike the Downtown Plan, Alternative 2 would modify the Downtown Plan land use mix by expanding the areas where housing is permitted in the Markets and Production General Plan designations on the south-central portion of the Downtown Plan Area. Under this alternative, the Industrial-Mixed Hybrid 1 (IH1) Use District would be applied to areas that are proposed as Industrial-Mixed Use 2 (IX2), which would allow for conversion to Joint Living and Work Quarters only, and Restricted Light Industrial (MR1), which does not permit any type of housing. IH1 allows for adaptive reuse to housing, joint living and work quarters, and construction of new live/work units, in addition to a range of commercial and light industrial uses. This alternative would also apply a maximum 4.5:1 FAR capacity to areas that are proposed as 3.0:1, 4.5;1, and 8.0:1 FAR under the Downtown Plan. Overall, Alternative 2 would accommodate less intense development and associated growth than would occur under the Downtown Plan. Because building heights would be similar to those allowed under the Downtown Plan, impacts to scenic vistas would be similar and less than significant. Although the proposed changes to General Plan designations and development intensity have the potential to change the visual character of existing neighborhoods and historical settings, impacts may occur to a lesser extent, as compared to the Downtown Plan. Nevertheless, new development would be implemented in accordance with applicable state and local plans, policies and guidelines, including but not limited to the City's General Plan Framework, Conservation Element, Mobility Plan 2035, relevant specific plans, the Downtown Design Guide and provisions of the LAMC as they relate to development standards, visual character, and historical resources.

As with the Downtown Plan, development accommodated by Alternative 2 could introduce new sources of light and glare in the Downtown Plan Area. However, development in a majority of the Downtown Plan Area already experiences high levels of nighttime lighting and glare, such that any additional lighting would be incremental. In addition, future development would comply with applicable regulations regarding permitted lighting and glare. Similarly, development in the Downtown Plan Area accommodated by Alternative 2 may increase shading and shadows in specific locations; however, shadows would be limited to the immediate area of each new development and would be typical of highly urbanized neighborhoods.

Overall, development accommodated by Alternative 2 may benefit, and would generally enhance, the visual character of the Downtown Plan Area. Therefore, as with the Downtown Plan, impacts related to aesthetics would be less than significant.

Air Quality

Alternative 2 would accommodate less overall development and associated growth than would the Downtown Plan. Alternative 2 would result in 6,000 fewer housing units (-5%), 11,000 fewer persons (-

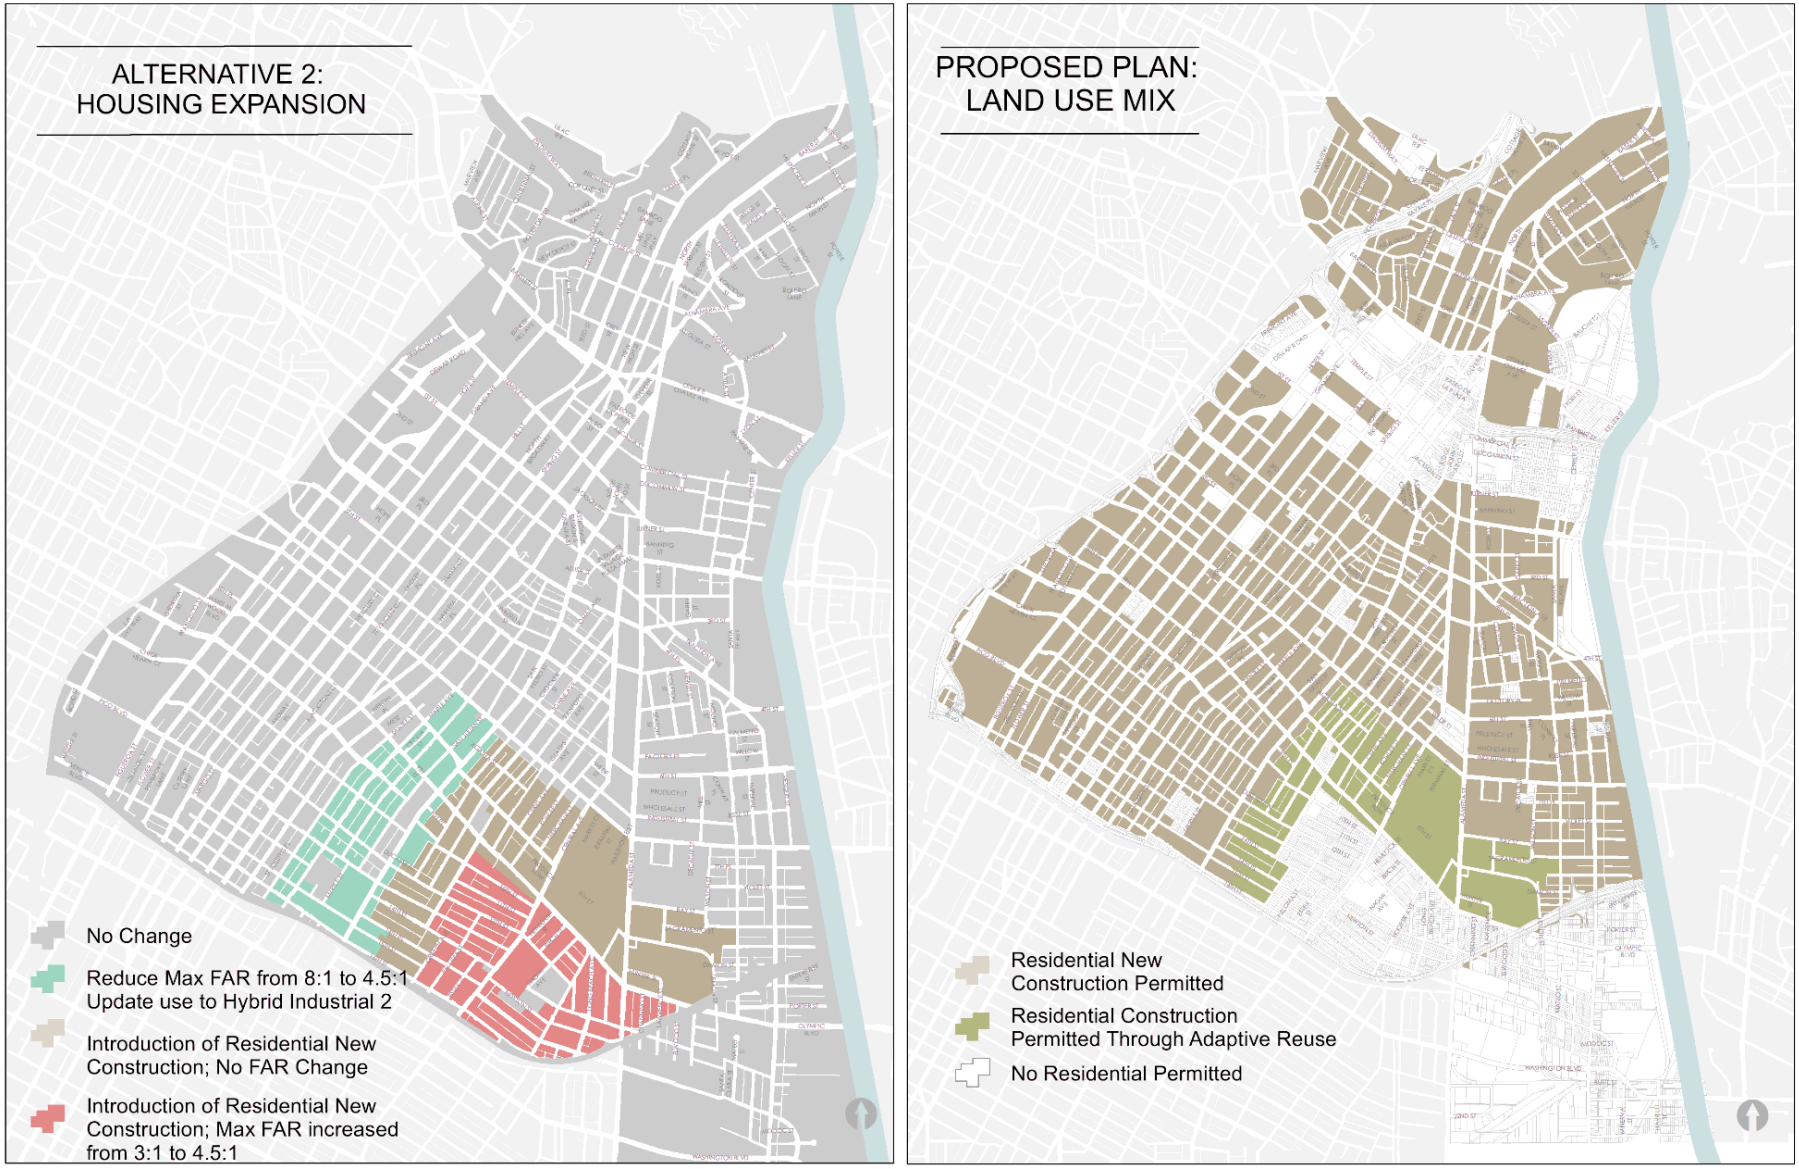
4%), and 8,000 fewer jobs (-3%) than would otherwise occur under development accommodated by the Downtown Plan for year 2040. Like the Downtown Plan, Alternative 2 would not increase reasonably anticipated development in the Downtown Plan Area in a way that would be inconsistent with SCAG's growth forecasts for the City; therefore, Alternative 2 would not conflict with the AQMP. Alternative 2 would, however, accommodate less overall growth in the Downtown Plan Area than would the Downtown Plan. As such, it would attain to a lesser degree the policy goals of the RTP/SCS, AQMP, and City General Plan Framework Element and Air Quality Element goals related to concentrating development in areas with access to transit and reducing vehicle miles traveled and associated emissions than would the Downtown Plan. Therefore, as with the Downtown Plan, impacts related to conflicting with or obstructing implementation of an applicable air quality plan would be less than significant.

Although slightly less construction may occur under Alternative 2 as compared to the Downtown Plan, maximum daily emissions would be the same because the nature and magnitude of individual construction projects would be similar. Because reasonably foreseeable development under the Downtown Plan would generate construction emissions of $NO_X$ that exceed SCAQMD regional and local significance thresholds, and emissions of $PM_{10}$ and $PM_{2.5}$ that exceed SCAQMD LSTs, it is reasonable to assume that this development under this alternative would do the same. Because Alternative 2 includes less overall development capacity than the Downtown Plan, it is reasonable to assume that operational emissions would be less than what would occur under the Downtown Plan. As discussed in Section 4.2, *Air Quality*, and shown in **Table 4.2-11**, future daily regional emissions from mobile sources under implementation of the Downtown Plan are generally expected to decrease relative to existing emissions. This is largely a result of improvements in vehicular engine efficiency technologies and fuel pollutant concentrations that are projected to occur between existing conditions and 2040 resulting from more stringent statewide regulations. Because increasingly stringent state regulations related to energy efficiency and emissions control will continue to apply under this alternative or the Downtown Plan, it is reasonable to assume that, under Alternative 2, future daily regional transportation-related emissions would also generally decrease relative to existing conditions due to improvements in vehicular engine efficiency technologies and fuel pollutant concentrations. As with the Downtown Plan, impacts related to construction emissions would be significant and unavoidable.

Alternative 2 would accommodate 5% less housing and 3% fewer jobs than the Downtown Plan. Thus, emissions would be slightly lower than under the Downtown Plan. Nevertheless, because a 99 percent reduction in VOC emissions compared to the Downtown Plan would be needed to bring emissions under the SCAQMD threshold, the increase in development in the Downtown Plan Area accommodated by Alternative 2 would result in daily emissions of VOC that would exceed the SCAQMD regional significance thresholds due to expanded use of consumer products and increased energy demand, similar to the Downtown Plan. In addition, future development in the Downtown Plan Area accommodated by Alternative 2 would foreseeably result in daily emissions of $PM_{10}$ and $PM_{2.5}$ from area sources and mobile sources (brake and tire wear) that would exceed the SCAQMD regional significance thresholds since Alternative 2 is not anticipated to result in 61 percent reduction in $PM_{10}$ emissions and a 68 percent reduction in $PM_{2.5}$ emissions that would be needed to bring emissions under SCAQMD thresholds. Mitigation Measure 4.2-2 would be applied to the Alternative 2 but similarly would not be expected to reduce impacts to a less than significant level. As with the Downtown Plan, impacts related to operational emissions would be significant and unavoidable.

Impacts to sensitive receptors from construction would be potentially significant, but application of **Mitigation Measures 4.2-2**, would reduce impacts to less than significant. As with the Downtown Plan, impacts associated with Alternative 1, including impacts related to toxic air contaminants (TACs) from distribution center truck activity, would be significant as the Alternative would still allow distribution centers in parts of the Downtown Plan Area intended for industrial uses. **Mitigation Measure 4.2-3** would apply to the Alternative 2, but without specific project details impacts to sensitive receptors would be

**Figure 5-2 Alternative 2: Housing Redistribution**



significant and unavoidable. As with the Downtown Plan, impacts related to odors would be less than significant.

It should be noted that limiting growth Downtown as would occur under Alternative 2 may cause more growth to occur elsewhere in the City or region in locations that have less access to transit and less of a mix of jobs and housing. As a result, overall citywide and regional VMT and associated emissions may incrementally increase under this scenario.

Biological Resources

The Downtown Plan Area is urbanized and generally lacks riparian habitat, wetlands, wildlife corridors and habitat that would support special status plant or animal species. The Los Angeles River, as well as small portions of parks and open space, trees and minor urban landscaping are the only sources of biological habitat in and around the Downtown Plan Area. Both the Downtown Plan and Alternative 2 prioritize infill development in already urbanized area of the City, thus minimizing development in areas of potential native biological habitat or wildlife corridors. Similar to the Downtown Plan, Alternative 2 would not foreseeably result in modification of the portions of the Los Angeles River because neither plan includes components that would affect the existing use, zoning, or land use designation of the Los Angeles River. Although implementation of Alternative 2 would involve less development capacity and associated growth than would occur under the Downtown Plan, any new development has the potential to disturb sensitive plant or animal species such as nesting birds and heritage or protected trees in the Downtown Plan Area. Therefore, any future development would require adherence with the federal MBTA and/or CFGC regulations, and the LAMC Tree Preservation Ordinance (177,404). In addition, Alternative 2 would not interfere with natural resources, degrade the sustainability of natural resources in the region, disrupt existing open space or encroach upon any natural settings. Therefore, Alternative 2 would not conflict with goals, policies, and programs of the General Plan Framework or the City Conservation Element. As with to the Downtown Plan, Alternative 2's impacts related to biological resources would be less than significant with implementation of **Mitigation Measures 4.3-1(a)** and **(b)**.

Cultural Resources

The Downtown Plan Area, which is expected to experience substantial new development, includes a high concentration of historical resources. Similar to the Downtown Plan, Alternative 2 may result in demolition or alteration of a historical resource or its setting or disturb areas that may potentially contain archaeological resources and/or human remains. Although Alternative 2 would accommodate less development and associated growth than the Downtown Plan, it would expand the areas where housing is permitted in the Markets and Production General Plan designations on the south-central portion of the Downtown Plan Area. All future development projects would continue to be subject to existing federal, state, and local requirements regarding cultural resources and human remains and discretionary projects may be subject to project-specific mitigation requirements under CEQA. As with the Downtown Plan, existing requirements and **Mitigation Measures 4.4-2(a)**, **(b)**, **(c)**, and **(d)** would reduce impacts to archaeological resource impacts to a less than significant level. Although existing regulations provide certain protections for significant historical resources, individual developments allowed under either Alternative 2 or the Downtown Plan could potentially cause a substantial adverse change in or disturbance of historical resources as defined in CEQA Guidelines Section 15064.5. Therefore, as with the Downtown Plan, impacts to historical resources would be significant and unavoidable under Alternative 2.

Similar to Downtown Plan, Alternative 2 impacts to human remains would be less than significant based on anticipated compliance with existing regulations.

Energy

Alternative 2 would accommodate less overall development and associated growth than would the Downtown Plan. Alternative 2 would result in 6,000 fewer housing units (-5%), 11,000 fewer persons (-4%), and 8,000 fewer jobs (-3%) than would otherwise occur under development accommodated by the Downtown Plan for year 2040. Therefore, it is reasonable to assume that implementation of Alternative 2 would result in less energy consumption than implementation of the Downtown Plan. As discussed under **Impact 4.5-1**, in Section 4.5, *Energy*, (**Table 4.5-5** through **Table 4.5-7**) implementation of the Downtown Plan would result in increased energy consumption in the Downtown Plan Area above 2017 baseline conditions. However, the Downtown Plan would result in lower per capita electricity and natural gas consumption for year 2040, as compared to year 2017 baseline conditions. The lower energy use per capita that would occur under the Downtown Plan can be attributed to the fact that implementation of the Downtown Plan would lower per capita VMT due to the location of jobs and housing in close proximity to each other and creation of substantial opportunities to use such transportation modes as transit, bicycling, and walking. Although Alternative 2 may result in less overall energy consumption in the Downtown Plan Area than would the Downtown Plan, it would accommodate less intense development and would increase per capita VMT as compared to the Downtown Plan, thereby incrementally increasing energy consumption on a per capita basis. Nevertheless, like the Downtown Plan, Alternative 2 would not result in inefficient, wasteful, or unnecessary consumption of energy resources. In addition, neither Alternative 2 nor the Downtown Plan would conflict with applicable federal, state, and local energy conservation policies aimed at decreasing reliance on fossil fuels and increasing reliance on renewable energy sources. Overall, impacts would be less than significant under Alternative 2, similar to those of the Downtown Plan.

Geology and Soils

Like the Downtown Plan, Alternative 2 would generally accommodate development in the same footprints as existing structures in the Downtown Plan Area. New development in the Downtown Plan Area would be exposed to existing geologic and soil hazards; however, it would not increase the potential for such hazards or create new hazards. Compliance with existing regulatory requirements and policies, including the LAMC and the CBC would reduce adverse effects related to seismic activity and ground shaking, liquefaction, on or off-site landslides, ground failure; or adverse effects related to expansive soil or to a geologic unit or soil that is unstable or would become unstable as a result of the project and result in landslide, lateral spreading, liquefaction or collapse. In some cases, future development in the Downtown Plan Area may reduce the potential for property damage and/or safety concerns by replacing older structures with new structures built to current seismic standards. Similar to the Downtown Plan, Alternative 2 would have the potential to disturb paleontological resources. As with the Downtown Plan, geology and soils impacts would be less than significant under Alternative 2 with adherence to regulatory code requirements and **Mitigation Measures 4.6-6(a), (b)** and **(c)** related to paleontological resources.

Greenhouse Gas Emissions

Alternative 2 would accommodate less overall development and associated growth than would the Downtown Plan. Alternative 2 would result in 6,000 fewer housing units (-5%), 11,000 fewer persons (-4%), and 8,000 fewer jobs (-3%) through 2040 than the Downtown Plan. Development accommodated by either Alternative 2 or the Downtown Plan would generate GHG emissions through individual project construction and operation. GHG emissions would specifically arise from direct sources such as motor vehicles, natural gas consumption, solid waste handling/treatment, and indirect sources such as electricity generation. Section 4.7, *Greenhouse Gas Emissions*, **Table 4.7-4** compares current annual GHG emissions for the Downtown Plan Area to 2040 emissions. Implementation of the Downtown Plan would result in a 24 percent increase in total GHG emissions in the Downtown Plan Area by 2040 and a 62 percent decrease in per capita GHG emissions, above 2017 baseline conditions. The reduction in per capita GHG emissions below baseline conditions can be attributed to a combination of state-mandated GHG emission reduction

strategies and the fact that implementation of the Downtown Plan would lower per capita VMT due to the location of jobs and housing in close proximity to each other and creation of substantial opportunities to use such transportation modes as transit, bicycling, and walking. It is reasonable to assume that under Alternative 2 future per capita emissions would also be lower than existing 2017 baseline emissions due to improved energy efficiency and reduced per capita VMT, but may be slightly higher than per capita GHG emissions under the Downtown Plan. Thus, the per capita and net reduction in GHG emissions under Alternative 2 would be consistent with regional, state, and federal efforts to reduce climate impacts from development and transportation. As with the Downtown Plan, impacts would be less than significant under Alternative 2.

It should be noted that because Alternative 2 would accommodate less overall growth in the Downtown Plan Area than the Downtown Plan would, it may push more population growth to other areas of the City or region where fewer transit options are available and distances between jobs, housing, and services are greater. As a result, accommodating less development Downtown under Alternative 2 may incrementally increase overall citywide or regional GHG emissions related to VMT and Alternative 2 would not be as consistent with AB 32, SB 32, SB 375 (through demonstration of conformance with the 2016–2040 RTP/SCS), the Sustainable City pLAn and GreenLA as the Downtown Plan. Impacts would be greater than those of the Downtown Plan, though still less than significant.

Hazards and Hazardous Materials

General Plan designations proposed by the Downtown Plan and Alternative 2 would maintain existing light and heavy industrial uses in the southeastern portion of the Downtown Plan Area but would expand the mix of uses in the Markets and Hybrid Industrial designation areas to include commercial and residential uses. Under this alternative, the Industrial-Mixed Hybrid 1 (IH1) Use District would be applied to areas that are proposed as Industrial-Mixed Use 2 (IX2) which would allow for conversion to Joint Living and Work Quarters only, and Restricted Light Industrial (MR1), which does not permit any type of housing. IH1 allows for adaptive reuse to housing, joint living and work quarters, and construction of new residential units as long a base amount of floor area is set aside for employment-generating uses, in addition to a range of commercial and light industrial uses. Although certain heavy industrial facilities would remain and hazardous materials would continue to be transported through the Downtown Plan Area, neither Alternative 2 nor the Downtown Plan would substantially increase hazardous material risks from transport, use or disposal based on the extensive existing regulations of hazardous materials. Consequently, as with the Downtown Plan, impacts related to the routine transport, use, or disposal of hazardous materials or upset or accident conditions involving hazardous materials would be less than significant.

Similar to the Downtown Plan, there would be no or less than significant impacts related to airports, or emergency management plans because there are no airports, private air strips, or wildlands in or near the Plan Area and development under Alternative 2 would not interfere with circulation plans or emergency management plans.

Operational activities associated with development accommodated by Alternative 2 would not create increased potential for upset or accident conditions involving hazardous materials release; however, redevelopment, renovation, and demolition of structures built before 1979 could potentially involve asbestos or lead but asbestos and lead would not be released into the atmosphere with compliance of existing regulations. In addition, future development would potentially occur in Methane Zones and Methane Buffer Zones and near oil wells. Compliance with applicable regulations would reduce such impacts to a less than significant level. As with the Downtown Plan, grading and construction activity could potentially result in the release of soil and/or groundwater contamination, which could potentially affect schools or involve a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, create a significant hazard to the public or the environment. However, with imposition of **Mitigation Measures 4.8-4(a)** and **4.8-4(b)** to Alternative 2 impacts would be less than

significant. Overall impacts associated with Alternative 2 would be similar to, but slightly less than, those of the Downtown Plan since the overall level of development would be lower.

Hydrology and Water Quality

The Downtown Plan Area is urbanized and almost entirely paved and developed except for parks, green spaces, and the Los Angeles River, which is located on the eastern boundary of the Downtown Plan Area. Similar to the Downtown Plan, Alternative 2 would generally accommodate development within the same footprints as existing structures in the Downtown Plan Area. Therefore, implementation of Alternative 2 would not substantially alter drainage patterns that would result in substantial erosion, siltation, or flooding on- or off-site. Any new development would be subject to federal, state, and local requirements that prevent violations of water quality standards or waste discharge requirements and support the preservation and expansion of pervious surfaces. In addition, any new development projects would be required to incorporate Best Management Practices to manage stormwater and reduce runoff during construction and operation, and industrial sources would be subject to additional stormwater management and discharge requirements under the NPDES program for industrial uses. Compliance with the City's LID Ordinance would further ensure that any future development would not require construction of new stormwater drainage facilities and or expansion of existing facilities beyond specific improvements needed for individual development projects. In the long-term, redevelopment of properties in the Downtown Plan Area would improve surface water quality by replacing older development with new development that incorporates LID methods. Therefore, Alternative 2 would result in less than significant impacts with respect to hydrology and water quality, similar to the Downtown Plan.

Land Use and Planning

Similar to the Downtown Plan, Alternative 2 would allow greater scale and intensity than currently exists in portions of the Downtown Plan Area. However, Alternative 2 would modify the Downtown Plan land use mix by expanding the areas where housing is permitted in the Markets and Production General Plan Designations on the south-central portion of the Downtown Plan Area. Under this alternative, the Industrial-Mixed Hybrid 1 (IH1) Use District would be applied to areas that are proposed as Industrial-Mixed Use 2 (IX2), which would allow for conversion to Joint Living and Work Quarters only, and Restricted Light Industrial (MR1), which does not permit any type of housing. IH1 allows for adaptive reuse to housing, joint living and work quarters, and construction of new residential units as long a base amount of floor area is set aside for employment-generating uses, in addition to a range of commercial and light industrial uses. This alternative would also apply a maximum 4.5:1 FAR to areas that are proposed as 3.0:1, 4.5:1, and 8.0:1 under the Downtown Plan.

Like the Downtown Plan, Alternative 2 would be generally consistent with 2016-2040 RTP/SCS policies related to the provision of high intensity and transit-oriented development as well as with the City's General Plan and Framework Element, Mobility Plan 2035, and Housing Element 2013-2021. However, as discussed under *Air Quality*, Alternative 2 may implement to a lesser degree the 2016-2040 RTP/SCS, AQMP, and Air Quality Element policies related to concentrating development near transit and reducing regional VMT than the Downtown Plan because of the slight de-emphasis on concentrating housing near transit and because the lower overall development totals may result in increased development elsewhere in the City and incrementally higher regional VMT. Like the Downtown Plan, Alternative 2 would not physically divide an established community. Overall, Alternative 2's impacts would be similar to those of the Downtown Plan and less than significant.

Noise

New sensitive uses accommodated by either Alternative 2 or the Downtown Plan would be exposed to ambient noise that is in the "normally unacceptable" to "clearly unacceptable" range based on noise

level/land use compatibility standards in the Noise Element of the City's General Plan. However, exposure of new development to ambient noise would not increase noise and all new development would be required to take measures to reduce interior noise levels to below 45 dBA.

Any future development Downtown would include mechanical equipment, loading, trash pick-up, and other noise-generating activities. However, such activities would be typical of the urban environment in the Downtown Plan Area. In addition, any on-site activities would be required to comply with applicable provisions of the LAMC. As with the Downtown Plan, traffic-related noise may increase by more than 3 dBA in some locations, but resulting noise levels would not be in the "normally unacceptable" range. Thus, permanent noise increases due to operational activities accommodated by Alternative 2 would be less than significant.

Future construction activity would be required to comply with appropriate Regulatory Compliance Measures as well as LAMC Chapter 41.40, Section 112.05 and **Mitigation Measure 4.11-1.** Compared to the Downtown Plan, duration of construction and use of heavy duty equipment in the Alternative 2 scenario would be less than the Downtown Plan due to reduced overall development potential. Therefore, construction noise impacts from Alternative 2 is likely to be less than that of the Downtown Plan. Nevertheless, maximum noise levels generated by construction equipment under Alternative 2 could potentially involve two subterranean levels or more, construction durations of 18 months or more, use of large, heavy-duty equipment rated 300 horsepower or greater, or the potential for impact pile driving. Therefore, although the overall impact generated by temporary construction noise resulting from implementation of Alternative 2 would be less than that of the Downtown Plan, the impact would remain significant and unavoidable.

Any future construction activity, specifically pile driving, could potentially generate vibration exceeding the 90 VdB threshold for buildings extremely susceptible to building damage (e.g., historical and fragile structures). Although mitigation is available to minimize the potential effects of vibration, it cannot be assured that construction-related vibration would not result in building damage. Thus, both Alternative 2 and Downtown Plan would result in a significant and unavoidable impact related to construction vibration.

It is not anticipated that the operation of new development in the Downtown Plan Area would involve activities that would result in substantial vibration levels (e.g., blasting operations). Like the Downtown Plan, operational groundborne vibration in the vicinity of new development associated with Alternative 2 would be primarily generated by vehicular travel on the local roadways. According to the FTA *Transit Noise and Vibration Impact Assessment* guidance document, rubber tires and suspension systems dampen vibration levels from trucks to a level that is rarely perceptible (2006). Traffic-related vibration levels would be similar to existing conditions and not perceptible by sensitive receptors. Therefore, impacts related to operational vibration under the Downtown Plan would be less than significant.

Similar to the Proposed Project, Alternative 2 would have no impacts related to airport noise.

Similar to the Proposed Project, the impact generated by temporary construction noise and vibration resulting from implementation of Alternative 2 would be significant and unavoidable.

Population and Housing

Projected growth under Alternative 2 would exceed SCAG's 2040 population forecast by approximately 52,000 persons (28%) 31,000 dwelling units (32%), and 40,000 jobs (16%). Therefore, Alternative 2 would increase the development capacity of the Downtown Plan Area in a manner this is consistent with SCAG's growth projections for the Downtown Plan Area and, like the Downtown Plan, would concentrate forecast growth in an area with a mix of jobs and housing and with good transit access. Alternative 2 would accommodate less overall development capacity and associated growth than would the Downtown Plan.

Alternative 2 would result in 6,000 fewer housing units (-5%), 11,000 fewer persons (-4%), and 8,000 fewer jobs (-3%) through 2040 than the Downtown Plan. Like the Downtown Plan, Alternative 2 would not induce substantial population growth inconsistent with the regional growth plans.

Alternative 2 would modify the Downtown Plan land use mix by expanding the areas where housing is permitted in the Markets and Production General Plan Designations on the south-central portion of the Downtown Plan Area. Under this alternative, the Industrial-Mixed Hybrid 1 (IH1) Use District would be applied to areas that are proposed as Industrial-Mixed Use 2 (IX2) which would allow for conversion to Joint Living and Work Quarters only, and Restricted Light Industrial (MR1), which does not permit any type of housing. IH1 allows for adaptive reuse to housing, joint living and work quarters, and construction of new residential units as long a base amount of floor area is set aside for employment-generating uses, in addition to a range of commercial and light industrial uses. Although Alternative 2 would accommodate new development and redevelopment projects in the Downtown Plan Area that would likely result in some displacement of existing housing units and residents, it would substantially increase the housing stock of the Downtown Plan Area overall. Therefore, similar to the Downtown Plan Alternative 2 would allow for additional construction of housing in an urban center. As with the Downtown Plan, population and housing impacts would be less than significant under Alternative 2.

Public Services

Alternative 2 would result in 6,000 fewer housing units (-5%), 11,000 fewer persons (-4%), and 8,000 fewer jobs (-3%) through 2040 than the Downtown Plan. However, the increased growth under either scenario may require additional public facilities to service residents as a result of an increased density from infill development. With respect to fire and police services, either scenario would accommodate new development that would increase demand for fire and police protection service in the Downtown Plan Area and may create the need for new or expanded fire and police facilities. Based on the urbanized character of the Downtown Plan Area, it is anticipated that new or expanded facilities could be built without creating significant environmental impacts. However, depending on the location or nature of new facilities, the construction of needed new facilities could potentially result in impacts already identified in this EIR for construction or operations. However, project-specific environmental analysis under CEQA would be required to address any site-specific environmental concerns.

With respect to schools, as summarized in **Table 5-7**, residential and non-residential development accommodated by Alternative 2 would result in an estimated 49,134 new students. Of this total, an estimated 25,109 would enroll in elementary school, 7,670 would enroll in middle school, 14,545 would enroll in high school, and 1,804 would enroll in special day classes. Overall Alternative 2 would result in approximately 5 percent fewer students than would the Downtown Plan. As such, Alternative 2 would create the need for new or expanded school facilities, but to a lesser extent than the Downtown Plan. Developers would be required to pay school impact fees. As with the Downtown Plan, any impacts associated with new school construction would be similar to those analyzed and identified in the EIR for other types of development, any site-specific impacts would be speculative and would be addressed by LAUSD as part of a project-level CEQA review.

With respect to libraries, either Alternative 2 or the Downtown would increase demand for library facilities. However, the Downtown Plan Area is well-served by library facilities and would not require the construction of new or expanded facilities. Compared to the Downtown Plan, Alternative 2 would accommodate less intense development and associated growth in the Downtown Plan Area, thus requiring fewer public services. This may, however, divert growth to other areas of the City, resulting in the need for expansion of public services in other areas of the City as development would continue elsewhere to accommodate SCAG's housing and population projections.

Overall, impacts under Alternative 2 would be less than significant, similar to those of the Downtown Plan.

**TABLE 5-7 ALTERNATIVE 2 ANTICIPATED STUDENT GENERATION IN THE DOWNTOWN PLAN AREA**

| | Units | Student Generation | | | | |
|---|---|---|---|---|---|---|
| | | Elementary School (TK-5) | Middle School (6-8) | High School (9-12) | SDC | Total Students Generated |
| Residential[1] | 93,314 | 21,173 | 5,701 | 12,093 | 1,810 | 40,778 |
| Non-Residential[2] | 172,649,288 | 3,936 | 1,968 | 2,452 | -- | 8,356 |
| **Total Students Generated by Alternative 2** | | **25,109** | **7,670** | **14,545** | **1,810** | **49,134** |

Note: du = dwelling units; sf = square feet; TK = Transitional Kindergarten; SDC = Specialized Day Care

Totals may not add up due to rounding.

[1] Student generation rates for residential use is based on Level 1 – Developer Fee Justification Study for Los Angeles Unified School District (LAUSD 2017d). Residential Generation Rates: Elementary: 0.2269/du, Middle School: 0.0611/du, High School: 0.1296 /du, SDC: 0.0194/du

[2] Student generation rates for non-residential use is based on the average of office and retail/service student generation rates for a conservative estimate, taken from the LAUSD Commercial/Industrial Development School Fee Justification Study, September 2010 (LAUSD 2010). Non-residential Generation Rates: Elementary: 0.0228/1,000 sf, Middle School: 0.0114/1,000 sf, High School: 0.0142/1,000 sf. Non-residential uses include commercial, industrial, and public facilities.

Recreation

Alternative 2 would accommodate less development and associated growth than would the Downtown Plan. Nevertheless, any new development would increase the use of existing park and recreational facilities throughout the City, including in and around adjacent to the Downtown Plan Area. The City of Los Angeles Public Recreation Plan states that in order to meet long-range local recreational standards, the City should maintain a minimum of two acres of neighborhood facilities and two acres of community recreational facilities for every 1,000 persons, or a combination of neighborhood and community facilities adding up to four acres. Under Alternative 2, the population of the Downtown Plan Area is projected to increase to approximately 241,000 residents by 2040, thereby decreasing the ratio of parks to residents to approximately 1.1 acre per 1,000 residents. Approximately 720 acres of new parkland would be needed in the Downtown Plan Area under Alternative 2 to meet the City's park acreage standards. Future development accommodated by the Downtown Plan would increase the population of the Downtown Plan Area to an estimated 252,000 residents, thereby reducing the ratio of parks to residents to approximately 1.0 acre per 1,000 residents. Approximately 764 acres of new parkland would be needed in the Downtown Plan Area by 2040 to meet the City's park acreage standards under the Downtown Plan. Therefore, Alternative 2 would require approximately five percent less parkland than the Downtown Plan and would have incrementally less impacts related to the deterioration of existing park to recreation facilities. Because opportunities for new parks are limited, neither Alternative 2 nor the Downtown Plan would result in significant impacts related to the development and construction of new parks.

Developers of residential projects would be required to pay park impact fees, dedicate land, include outdoor amenity spaces, or pay in-lieu Quimby fees to fund new park and recreational facilities. Nevertheless, due to the substantial population growth that would result from future development and lack of development capacity for new parks in the Downtown Plan Area, implementation of either Alternative 2 or the Downtown Plan could accelerate the deterioration of existing parks in and around the Downtown Plan Area. Such impacts to existing recreational facilities would be significant and unavoidable under either Alternative 2 or the Downtown Plan. Impacts related the construction of new parks would remain less than significant.

Transportation/Traffic

With respect to transportation, a significant impact would occur if the total daily VMT per service population under the Downtown Plan, or a proposed alternative, were to increase above the 2017 Baseline

Condition or if there is inconsistency with the SCAG 2016 RTP/SCS. As shown in Error! Reference source not found., VMT per service population under Alternative 2 would be 16.1, while the 2017 Baseline per service population VMT in the Downtown Plan Area is 19.6. Thus, per capita VMT under Alternative 2 would not exceed the 2017 Plan Baseline Condition threshold. Compared to the 2016 SCAG Region Conditions, Alternative 2 has lower vehicle trips per service population (2.5 versus 3.1) and lower VMT per service population (16.1 versus 35.4). Therefore, as with the Downtown Plan, impacts would be less than significant. However, the beneficial impacts to VMT would not be as great with Alternative 2 compared to the Downtown Plan.

**TABLE 5-8 COMPARISON BETWEEN EXISTING TRAFFIC CONDITIONS, THE DOWNTOWN PLAN AND ALTERNATIVE 2**

| Transportation Metric | Threshold | | Downtown Plan (2040) | Alternative 2 |
|---|---|---|---|---|
| | 2016 SCAG Region Conditions | 2017 Plan Baseline Conditions | | |
| Total Daily VT | 82,283,000 | 758,000 | 1,375,000 | 1,337,000 |
| Total Daily VT per Service Population | 3.1 | 2.6 | 2.5 | 2.5 |
| Total Daily VMT | 948,656,000 | 5,767,000 | 8,842,000 | 8,670,000 |
| **Total Daily VMT per Service Population** | **35.4** | **19.6** | **15.9** | **16.1** |

**SOURCE**: Fehr & Peers, February 2019.

Similar to the Downtown Plan, Alternative 2 would not result in significant impacts related to plan consistency, increased hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment), or result in inadequate emergency access. However, as with the Downtown Plan, freeway off-ramp queuing-related safety issues could potentially arise as additional development occurs in the Downtown Plan Area, which could have a significant and unavoidable impact to freeway safety impacts.

Alternative 2 includes the network enhancements identified in MP 2035 and incorporated into the Downtown Plan.

Tribal Cultural Resources

Development activities that include ground disturbance activities have the potential to significantly affect tribal cultural resources. The Sacred Lands File search conducted for the Downtown Plan Area was positive and the Tongva ethnographic village site of Yangna is thought to be located near Union Station. Effects on tribal cultural resources are only known once a specific development has been proposed because the effects are highly dependent on both the individual development site conditions and the characteristics of the proposed activity. Similar to the Downtown Plan, Alternative 2 would generally accommodate development in the same footprints as existing structures in the Downtown Plan Area. Although neither the Downtown Plan nor Alternative 2 includes specific development projects, new development accommodated under either scenario may disturb areas that potentially contain tribal resources. Similar to the Downtown Plan, all future development projects would continue to be subject to existing federal, state, and local requirements and discretionary projects, subject to CEQA review would be required to comply with AB 52, which for projects relying on a [mitigated] negative declaration or an EIR, includes consultation with California Native American tribes. Overall, as with the Downtown Plan, impacts under Alternative 2 would be potentially significant. However, implementation of **Mitigation Measures 4.4-2 (a)**, **(b)**, **(c)**, and **(d)** in Section 4.4, *Cultural Resources* and **4.16-1 (a) and (b)** in Section 4.16, *Tribal Cultural Resources*, would

reduce Alternative 2's impacts to a less than significant level. Therefore, as with the Downtown Plan, Alternative 2 would have a less than significant impact with mitigation incorporated.

Utilities and Service Systems

Alternative 2 would accommodate less overall development and associated growth than the Downtown Plan. Alternative 2 would result in 6,000 fewer housing units (-5%), 11,000 fewer persons (-4%), and 8,000 fewer jobs (-3%) through 2040 than the Downtown Plan. **Table 5-9** indicates that implementation of Alternative 2 would increase wastewater generation in the Downtown Plan Area by approximately 16 mgd above baseline conditions, which represents about 9 percent of the HWRP excess capacity of 175 mgd. As shown in **Table 4.17-3,** in Section 4.17, *Utilities and Service Systems***,** projected wastewater generation for the Downtown Plan Area in 2040 with implementation of the Downtown Plan would generate an estimated 18 mgd of wastewater, which would represent about 10 percent of the HWRP's excess capacity of 175 mgd. Alternative 2 would therefore generate approximately 11 percent less wastewater as compared to the Downtown Plan. The HWRP would have sufficient available treatment capacity to serve Downtown Plan Area development under Alternative 2. In addition, the HWRP would be able to adequately treat future project-generated sewage under Alternative 2 and the treatment requirements of the RWQCB would not be exceeded so new or expanded treatment facilities would not be needed. Expansion/replacement of Downtown Plan Area conveyance infrastructure may be needed and various facility improvements are already planned. Temporary traffic, air quality, and noise impacts associated with construction of such improvements would be within the parameters described for the Downtown Plan. Continued compliance with the City's Low Impact Development (LID) Ordinance for all new development would ensure that any future development under Alternative 2 would not increase demands on stormwater drainage facilities and or expansion of existing facilities beyond specific improvements needed for individual development projects. As with the Downtown Plan, impacts associated with Alternative 2 would be less than significant.

**TABLE 5-9 ALTERNATIVE 2 PROJECTED WASTEWATER GENERATION**

| Land Use | Dwelling Units or Jobs | Wastewater Generation Rate (gpd/unit) | Wastewater Generation (gpd) |
|---|---|---|---|
| Single-family Residential | 6,733 du | 144.3 | 972,000 |
| Multi-family Residential | 120,246 du | 137.9 | 16,582,000 |
| Commercial | 237,249 jobs | 59.8 | 14,187,000 |
| Industrial | 33,373 jobs | 123 | 4,105,000 |
| Public Facilities | 26,464 jobs | 46.4 | 1,228,000 |
| Total 2040 with Alternative 2 Wastewater Generation | | | 37,074,000 |
| Current Wastewater Generation | | | 20,631,000 |
| **Net Change in Wastewater Generation** | | | **16,442,000** |

Notes: Wastewater generation numbers are rounded to the nearest thousand. Totals may not add up due to rounding.
gpd – gallons per day
du – dwelling units
sf – square feet
**SOURCE:** Wastewater is assumed to be 100% of indoor water use. Per Exhibit 2D of the 2015 UWMP, indoor water use constitutes the following percentages of overall water use: Residential single family – 46%; Residential multi-family – 68%; Commercial – 76%; Industrial – 98%; and Government – 59%.Per the UWMP, per unit water demand is forecast to decline over time; the forecast 2040 rates are assumed to apply to new development.

With respect to water demand, per the 2015 Urban Water Management Plan, current water supplies, planned future water conservation efforts, and planned future water supplies will enable Los Angeles Department

of Water and Power (LADWP) to reliably provide water that meets the demands of the City for a 25-year planning horizon (through 2040), based on SCAG's population projections. The 2015 UWMP projects an increase of 195,960 afy (38 percent) in citywide water demand between 2015 and 2040, under single/multiple dry year conditions. **Table 5-10** indicates that the projected net increase in water demand of 23 mgd, or 26,051 afy, generated by new development under Alternative 2 would represent about 13 percent of the forecasted citywide water demand increase through 2040. As shown in **Table 4.17-6,** in Section 4.17, *Utilities and Service Systems*, estimated water demand for the Downtown Plan Area with implementation of the Downtown Plan would be 25 mgd, or 28,000 afy. This would represent about 14 percent of the forecasted citywide water demand increase through 2040. Alternative 2 would demand approximately 8 percent less water as compared to the Downtown Plan. Therefore, water supplies are adequate to meet projected demand through 2040 for Alternative 2 and development of new water supplies would not be necessary. Expansion/replacement of water distribution infrastructure may be needed, but temporary traffic, air quality, and noise impacts associated with construction of such improvements would be within the parameters described for the Downtown Plan. As with the Downtown Plan, impacts associated with Alternative 2 would be less than significant.

**TABLE 5-10 ALTERNATIVE 2 PROJECTED WATER DEMAND**

| Land Use | Dwelling Units or Jobs in Plan Area | Daily Water Use Rate (gpd/unit) | Daily Water Demand (gpd) | Annual Water Demand (afy) |
|---|---|---|---|---|
| Single-family Residential | 6,733 | 313.8 | 2,113,000 | 2,367 |
| Multi-family Residential | 120,246 du | 202.8 | 24,386,000 | 27,316 |
| Commercial | 237,249 jobs | 78.7 | 18,671,000 | 20,915 |
| Industrial | 33,373 jobs | 125.5 | 4,188,000 | 4,691 |
| Public Facilities | 26,464 jobs | 78.7 | 2,083,000 | 2,333 |
| Total 2040 with Alternative 2 Demand | | | 51,441,000 | 57,622 |
| Current Water Demand | | | 28,184,000 | 31,570 |
| **Net Change in Water Demand** | | | **23,257,000** | **26,051** |

Notes: Water demand numbers are rounded to the nearest thousand. Totals may not add up due to rounding.
du – dwelling unit
gpd – gallons per day
afy – acre feet per year (1 af = 325,850 gallons)
**SOURCE:** Water demand rates were obtained from the LADWP's 2015 Urban Water Management Plan (UWMP), Exhibit2K (LADWP 2016). Per the UWMP, per unit water demand is forecast to decline over time; the forecast 2040 rates are assumed to apply to new development.

As shown in **Table 4.17-7** in Section 4.17, *Utilities and Service Systems*, the combined daily intake capacity of landfills serving the Plan Area is 45,540 tons per day and the average disposal intake is 19,143 tons per day, resulting in an available capacity of 26,397 tons per day. As shown in **Table 5-11**, implementation of Alternative 2 would generate an increase of approximately 1,139 tons of solid waste per day above existing conditions, which would represent about 4 percent of the total available daily capacity (26,397 ton per day) at local landfills. As shown in **Table 4.17-9** in Section 4.17, *Utilities and Service Systems*, development accommodated by the Downtown Plan would increase the amount of solid waste generated in the Downtown Plan Area by approximately 1,133 tons per day, or 413,534 tons per year, above existing conditions. This would also represent approximately 4 percent of the available intake capacity of landfills serving the Downtown Plan Area. Based on the County of Los Angeles Countywide Integrated Waste Management Plan (CIWMP) 2018 Annual Report, sufficient permitted capacity is available to accommodate the County's long-term disposal needs under the status quo. Therefore, similar to the Downtown Plan, new or expanded facilities would not be needed and impacts would be less than significant.

Electrical and natural gas supplies are not expected to be adversely affected by development under Alternative 2, but improvements to Downtown Plan Area distribution and telecommunication facilities may be needed. Temporary traffic, air quality, and noise impacts associated with construction of such

improvements would be within the parameters described for the Downtown Plan. As with the Downtown Plan, impacts associated with Alternative 2 would be less than significant.

**TABLE 5-11 ALTERNATIVE 2 PROJECTED SOLID WASTE GENERATION**

| Land Use | Dwelling Units or Square Feet | Annual Waste Generation Rate | Annual Waste Generation (tons) | Daily Waste Generation (tons) |
|---|---|---|---|---|
| Single-family Residential | 6,733 du | 1.17 ton/du | 7,878 | 22 |
| Multi-family Residential | 120,246 du | 0.46 ton/du | 55,313 | 152 |
| Commercial | 202,938,587 sf | 3.01 ton/1,000 sf | 610,845 | 1,674 |
| Industrial | 72,516,161 sf | 1.24 ton/1,000 sf | 89,920 | 246 |
| Public Facilities | 45,730,208 sf | 0.93/1,000 sf | 42,529 | 117 |
| Total 2040 Alternative 2 Solid Waste Generation | | | 806,485 | 2,210 |
| Current Solid Waste Generation | | | 390,771 | 1,071 |
| **Net Change in Waste Generation** | | | **415,714** | **1,139** |

Notes: Waste generation (tons) was rounded to the nearest whole number. Totals may not add up due to rounding.

du – dwelling unit

sf – square feet

### Conclusion

The Housing Redistribution Alternative would result in slightly less development and growth in the Downtown Plan Area, as compared to the Downtown Plan. Nevertheless, Alternative 2 would result in the same impact conclusions as the Downtown Plan in all impact categories. Although significant impacts would be less under Alternative 2, unavoidable significant impacts under this Alternative would still occur with respect to historical resources, air quality, construction noise and vibration, transportation safety impacts related to freeway off-ramp queuing and recreational facilities, and transportation, as with the Downtown Plan.

## ALTERNATIVE 3: INCREASED DEVELOPMENT POTENTIAL

### Alternative Description

The "Increased Development Potential" Alternative would permit greater development capacity in the Markets and Community Center area, in exchange for a higher requirement for the provision of public benefits. Under this alternative, the Industrial-Mixed Use 2 (IX2), in which the only type of housing allowed is through conversion of existing buildings to Joint Living and Work Quarters, would be applied to areas that are proposed as Restricted Light Industrial (MR1), where no housing is allowed under the Downtown Plan. This alternative would raise the maximum FAR to 10.0:1 in areas that are proposed as 3:1, 4.5:1, 6.0:1 and 8.5:1. The FAR would also be raised to a maximum of 13.0:1 in areas that are proposed as 8.0:1 and 10.0:1. **Figure 5-3** shows the changes under the Increased Development Potential Alternative compared to the Downtown Plan. Alternative 3 was included to inform decision makers and foster public participation

on an alternative that could result in higher community benefits by allowing for greater development capacity in the Downtown Plan Area.

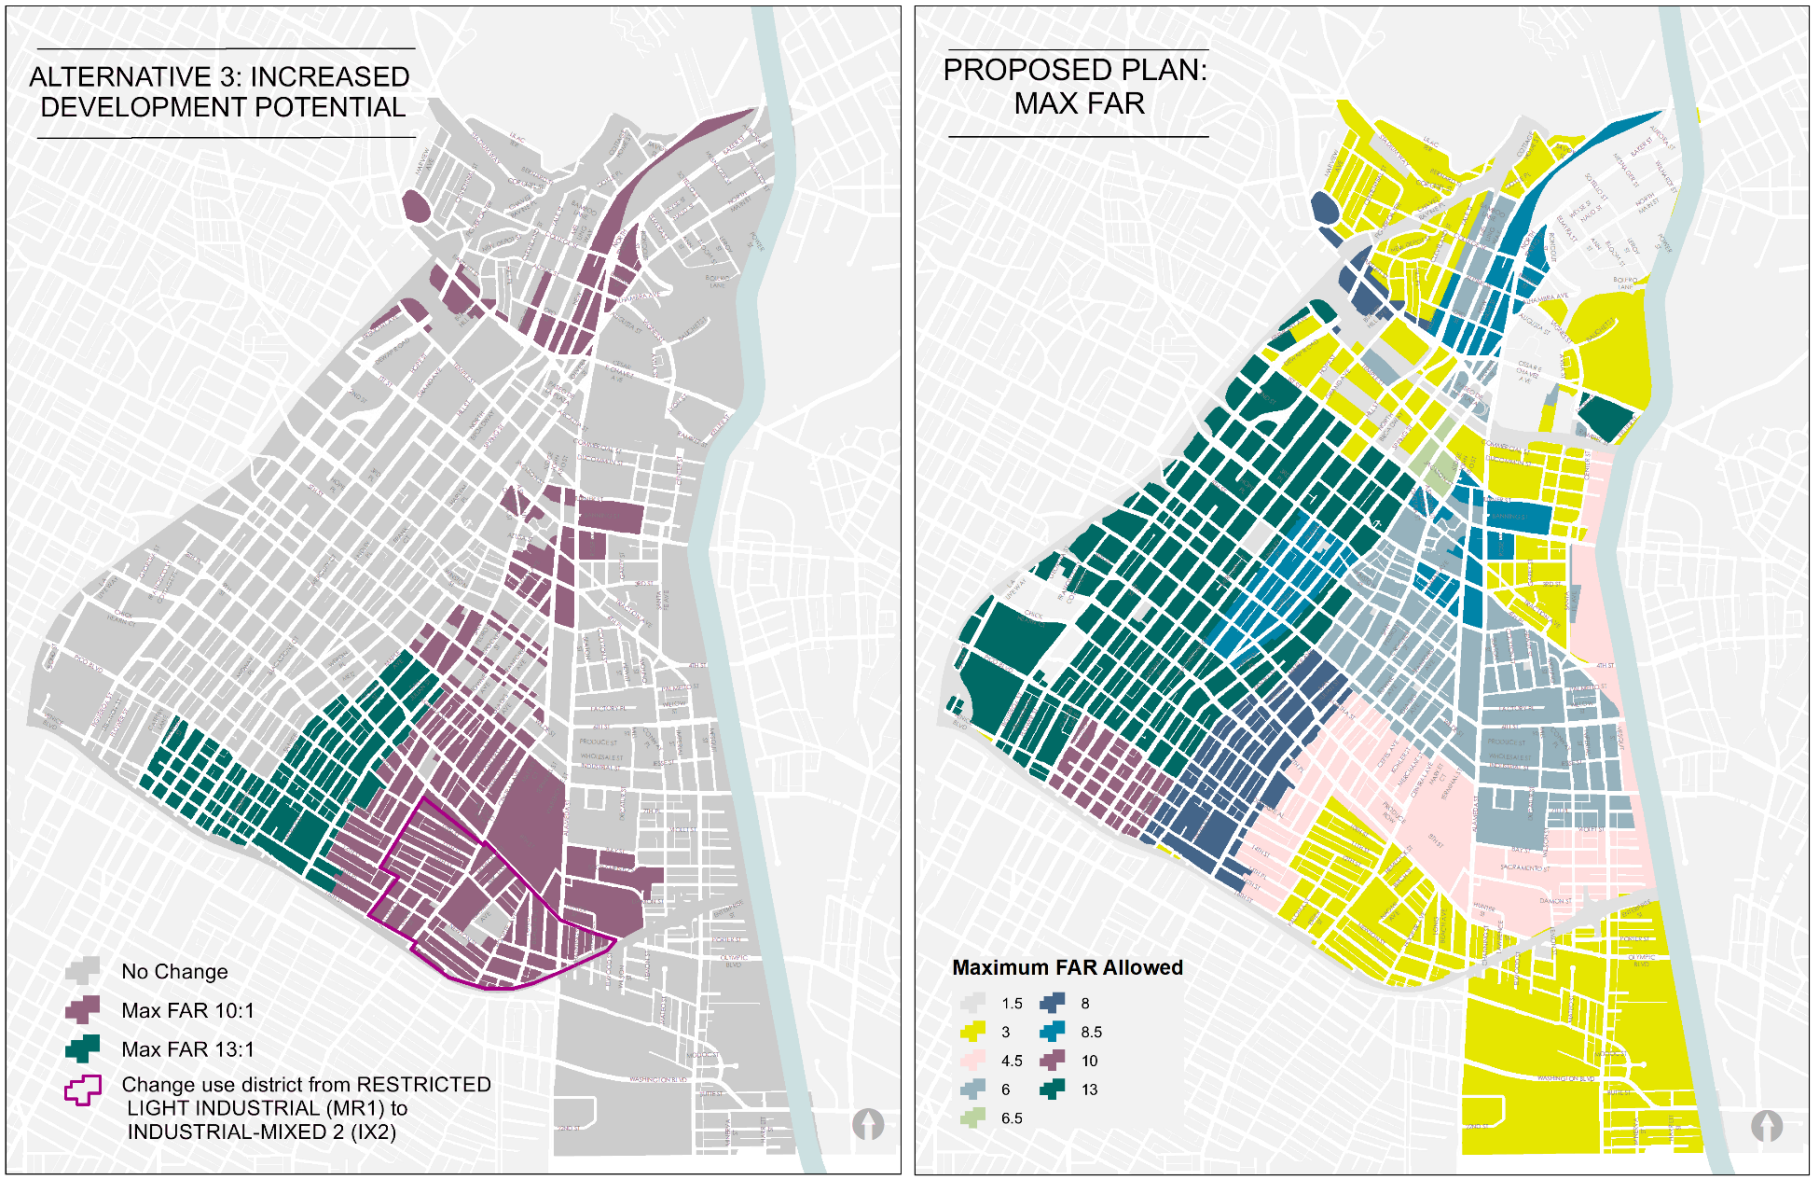
As shown in **Table 5-1**, under Alternative 3 the Downtown Plan Area is projected to have a population of 263,000 residents, with 139,000 housing units and 364,000 jobs in 2040. SCAG projects a Downtown Plan Area population of 189,000 residents in 2040 along with 96,000 housing units and 257,000 jobs. Therefore, Alternative 3 would exceed SCAG's population, housing and job growth forecasts in the Downtown Plan Area. Alternative 3 would result in 6,000 more housing units (5%), 11,000 more persons (4%), and 59,000 more jobs (19%) by 2040 as compared to the Downtown Plan. Because Alternative 3 would increase the development capacity and associated growth in the Downtown Plan Area, as compared to the Downtown Plan, it may also result in greater environmental impacts related to aesthetics, cultural resources, air quality and greenhouse gas emissions, energy, public services and utilities in the Downtown Plan Area. In addition, air quality and greenhouse gas emissions, and energy consumption may decrease elsewhere in the City as a function of reduced VMT as population, housing, and job growth is further concentrated in the Downtown Plan Area.

Alternative 3 would be subject to the escalating bonus system, which dictates that as the FAR capacity increases, greater benefits must be provided. The Increased Development Potential Alternative meets the project objectives to support the delivery of public benefits in the form of affordable housing, open space, preservation, community facilities, and public realm improvements, but does not meet objectives to concentrate development in the most transit served areas.

Under Alternative 3, the Downtown Plan Area would have increased development capacity, as compared to the Downtown Plan. Therefore, it may result in incrementally greater impacts in the Downtown Plan Area, including the significant unavoidable impacts of the Downtown Plan with regard to historical resources, construction noise, construction vibration, deterioration of existing parks, and traffic safety to highway off-ramps as well as the Downtown Plan's significant, but mitigable impacts related to air quality, biological, archaeological and paleontological resources, and hazardous materials. On the other hand, further concentrating development in the Downtown Plan Area may limit development elsewhere in the City, with reductions in environmental impacts regionally. Specifically, this alternative may help reduce overall regional VMT and associated air pollutant and GHG emissions compared to the Downtown Plan by further increasing future development in areas with good transit access and where housing, jobs, and amenities are in close proximity to one another.

Alternative 3 was selected to consider its potential regional benefits and because it would meet all of the basic project objectives, including: accommodating employment, housing, and population growth projections (Primary Objective 1); providing for economic diversification and reinforcement of the Downtown Plan Area as a primary center of employment (Primary Objective 2); building upon Downtown's role as a regional transportation center by allowing for intensive development throughout the Plan Area and concentrating development opportunity immediately surrounding the transit stations (Primary Objective 3); promoting a mode-shift from private automobile usage while fostering a transit, bicycle, and pedestrian supportive environment (Primary Objective 4); reducing vehicle miles traveled to meet the goals of the Senate Bill 375, Senate Bill 743, and California Assembly Bill 32 to reduce carbon emissions (Primary Objective 5; supporting a growing residential population by expanding the areas where housing is permitted and allowing for a full range of housing options (Primary Objective 6); Celebrate and reinforce the character of each of the neighborhoods in the Plan Area (Primary Objective 7); providing a set of implementation tools that are responsive to the range of physical and functional needs across the Plan Area (Primary Objective 8); refining and expanding a system that links development with public benefits to deliver community amenities in the Downtown Plan Area, and is adaptable to the policy needs across the City (Secondary Objective 1); maintaining a meaningful amount of the Plan Area for production and high-intensity traditional industry (Secondary Objective 2); promoting a mix of land uses that fosters sustainability, equity, community, neighborhood density, and healthy living (Secondary Objective 3;

**Figure 5-3 Alternative 3: Increased Development Potential**



identifying appropriate locations for housing and establishing zoning tools that encourage a range of unit typologies (Secondary Objective 4); ensuring that new development provides the appropriate range of outdoor amenity space and other recreational options to tenants and property owners (Secondary Objective 5); and supporting and sustaining Downtown's ongoing revitalization (Secondary Objective 6).

Although Alternative 3 would generally meet all objectives, it may meet certain objectives to a lesser or greater degree than the Downtown Plan would. It would meet Primary Objective 2 to reinforce the Downtown Plan Area as a primary center of employment for the City and the Southern California region to a greater degree than the Downtown Plan, due to the overall increase in development potential compared to the Downtown Plan. For the same reasons, public benefits would be more than that of the Plan and would meet Secondary Objective 1 to a greater degree than the Downtown Plan. Although Alternative 3 would allow for more development capacity around transit, it would also increase capacity elsewhere in the Plan Area, and growth would likely be spread out. Therefore, Alternative 3 would only partially meet Primary Objective 3, of concentrating growth near transit with an appropriate range of building sizes and mix of uses.

As discussed below, Alternative 3 would result in incremental greater impacts than the Downtown Plan with respect to aesthetics, air quality, cultural resources, hazards/hazardous materials, noise, public services, recreation, transportation/traffic, and utilities/service systems.

## Impact Analysis

Aesthetics

Compared to existing conditions, either Alternative 3 or the Downtown Plan would generally allow greater scale and intensity, Alternative 3 would permit greater development than the Downtown Plan in Markets, Community Center and some portion of the Production area, in exchange for a higher requirement for the provision of public benefits. Under this alternative, the maximum FAR would be raised to 10.0:1 in areas that are proposed as3:1, 4.5:1, 6.0:1 and 8.5:1. The FAR would also be raised to a maximum of 13.0:1 in areas that are proposed as 8.0:1 and 10.0:1 under the Downtown Plan. Compared to the Downtown Plan, Alternative 3 may result in incrementally greater impacts to visual character, obstruction of scenic views, alterations of historical resource and shading effects, due to increased development intensity and changes to land use designations. Nevertheless, future development would be implemented in accordance with applicable state and local plans, policies and guidelines including but not limited to the City's General Plan Framework, Conservation Element, Mobility Plan 2035, relevant specific plans, the Downtown Design Guide and provisions of the LAMC as it relates to development standards, visual character and historical resources. As with the Downtown Plan, Alternative 3 could introduce new sources of light and glare in the Downtown Plan Area. However, development in most of the Downtown Plan Area already experiences high levels of nighttime lighting and glare, such that any additional effects would be incremental. In addition, future development would comply with applicable regulations regarding permitted lighting and glare. Similarly, development in the Downtown Plan Area accommodated by Alternative 3 may increase shading and shadows in specific locations; however, shadows would be limited to the immediate area of each new development and would be typical of highly urbanized neighborhoods. Overall, development accommodated by Alternative 3 would result in less than significant aesthetic impacts similar to those of the Downtown Plan.

Air Quality

Alternative 3 would accommodate greater overall development and associated growth than the Downtown Plan. Alternative 3 would result in an increase of 6,000 housing units (5%), 11,000 persons (4%), and 59,000 jobs (19%) through 2040 than the Downtown Plan. Like the Downtown Plan, Alternative 3 would not increase reasonably anticipated development in the Downtown Plan Area in a way that would be

inconsistent with SCAG's growth forecasts for the City; therefore, Alternative 3 would not conflict with the AQMP. Because Alternative 2 would accommodate more overall growth in the Downtown Plan Area than would the Downtown Plan, and would attain to a greater degree the policy goals of the RTP/SCS, AQMP, and City General Plan Framework Element and Air Quality Element goals related to concentrating development in areas with access to transit and reducing vehicle miles traveled and associated emissions than would the Downtown Plan. Therefore, as with the Downtown Plan, impacts related to conflicting with or obstructing implementation of an applicable air quality plan would be less than significant.

Maximum daily construction emissions would be similar to what would occur under the Downtown Plan since the types and magnitudes of individual construction projects would be similar. As with the Downtown Plan, it is reasonable to assume that development would result in construction emissions of $NO_X$ that exceed SCAQMD regional and local significance thresholds, and emissions of $PM_{10}$ and $PM_{2.5}$ that exceed SCAQMD LSTs. Because development capacity would increase under Alternative 3, it is reasonable to assume that operational emissions would also increase compared to the Downtown Plan. Nonetheless, as discussed in Section 4.2, *Air Quality*, and shown in **Table 4.2-11**, future daily regional emissions from mobile sources under implementation of the Downtown Plan is generally expected to decrease relative to existing emissions due primarily to more stringent statewide regulations. It is reasonable to assume that under Alternative 3 future daily regional emissions would generally decrease relative to existing emissions due to improvements in vehicular engine efficiency technologies and fuel pollutant concentrations. As with the Downtown Plan, impacts related to construction emissions would be significant and unavoidable.

The increase in development in the Downtown Plan Area accommodated by Alternative 3 would result in daily emissions of VOC that would exceed the SCAQMD regional significance thresholds due to heavily expanded use of consumer products and increased energy demand, similar to the Downtown Plan. In addition, future development in the Downtown Plan Area accommodated by Alternative 3 would result in daily emissions of $PM_{10}$ and $PM_{2.5}$ from area sources and mobile sources (brake and tire wear) that would exceed the SCAQMD regional significance thresholds. **Mitigation Measure 4.2-2** would be applied to this alternative but, similar to the Downtown Plan, would not be expected to reduce impacts to a less than significant level. As with the Downtown Plan, impacts related to construction emissions would be significant and unavoidable.

As with the Downtown Plan, impacts associated with Alternative 1, including impacts related to toxic air contaminants (TACs) from distribution center truck activity, would be significant as the alternative would still allow distribution centers in portions of the Downtown Plan Area intended for industrial uses. Mitigation Measure 4.2-3 would apply to the Alternative, but without specific project details impacts to sensitive receptors would be significant and unavoidable. As with the Downtown Plan, impacts related to odors would be less than significant.

It should be noted that because Alternative 3 would accommodate more development than the Downtown Plan in the Downtown Plan Area, it may limit growth that would occur elsewhere in the City or region in locations that have less access to transit and less of a mix of jobs and housing. As a result, overall citywide and regional VMT and associated emissions may incrementally lessen under this scenario.

Biological Resources

The Downtown Plan Area is urbanized and generally lacks riparian habitat, wetlands, wildlife corridors and habitat that would support special status plant or animal species. The Los Angeles River, as well as small portions of parks and open space, trees and minor urban landscaping are the only sources of biological habitat in and around the Downtown Plan Area. Both the Downtown Plan and Alternative 3 prioritize infill development in already urbanized area of the City, thus, minimizing development in areas of potential native biological habitat or wildlife corridors. As with the Downtown Plan, Alternative 3 would not foreseeably result in modification of the portions of the Los Angeles River because neither plan includes

components that would affect the existing use, zoning, or land use designation of the Los Angeles River. As with the Downtown Plan, any new development has the potential to disturb sensitive plant or animal species such as nesting birds and heritage or protected trees in the Downtown Plan Area. Therefore, future development would require adherence with federal MBTA and/or the CFGC regulations, and the LAMC Tree Preservation Ordinance (177,404). In addition, Alternative 3 would not interfere with natural resources, degrade the sustainability of natural resources in the region, disrupt existing open space or encroach upon any natural settings. Therefore, Alternative 3 would not conflict with goals, policies, or programs of the General Plan Framework or the City Conservation Element. As with the Downtown Plan, Alternative 3, impacts related to biological resources would be less than significant with implementation of **Mitigation Measures 4.3-1(a)** and **(b)**.

Cultural Resources

The Downtown Plan Area, which is expected to experience substantial new development, includes a high concentration of historical resources. Alternative 3 would permit greater scale and intensity in these areas than would the Downtown Plan and, therefore, may result in greater impacts to cultural resources, including demolition or alteration of a historical resource or its setting, or disturb areas that may potentially contain archaeological resources and/or human remains. Future developments in the Downtown Plan Area would continue to be subject to existing federal, state, and local requirements regarding cultural resources and human remains and may be subject to project-specific mitigation requirements under CEQA. As with the Downtown Plan, existing requirements and **Mitigation Measures 4.4-2(a)**, **(b)**, **(c)** and **d** would reduce impacts to archaeological resource associated with Alternative 3 to a less than significant level. Similar to Downtown Plan, Alternative 1 impacts to human remains would be less than significant based on anticipated compliance with existing regulations.

Although existing regulations provide certain protections for significant historical resources, individual developments allowed by either Alternative 3 or the Downtown Plan could potentially cause a substantial adverse change in or disturbance of historical resources as defined in CEQA Guidelines Section 15064.5. Therefore, as with the Downtown Plan, impacts to historical resources would be significant and unavoidable under Alternative 3, and incrementally greater with Alternative 3.

Energy

Alternative 3 would accommodate greater overall development and associated growth than the Downtown Plan. Alternative 3 would result in an increase of 6,000 housing units (5%), 11,000 persons (4%), and 59,000 jobs (19%) than would otherwise occur under development accommodated by the Downtown Plan for year 2040. Therefore, it is reasonable to assume that overall, implementation of Alternative 3 would result in greater overall energy consumption as compared to the Downtown Plan. As discussed under **Impact 4.5-1** in Section 4.5, *Energy*, (**Table 4.5-5** through **Table 4.5-7**) implementation of the Downtown Plan would result in increased energy consumption in the Downtown Plan Area above 2017 baseline conditions. However, the Downtown Plan would result in lower per capita electricity and natural gas consumption for year 2040, as compared to 2017 baseline conditions. The lower per capita energy use that would occur can be attributed to the fact that implementation of the Downtown Plan would lower per capita VMT due to the location of jobs and housing in close proximity to each other and creation of substantial opportunities to use such transportation modes as transit, bicycling, and walking. Although Alternative 3 may result in greater energy consumption in the Downtown Plan Area overall, the higher overall development intensity may reduce per capita VMT and energy consumption in the City and region. Thus, Alternative 3 may result in incrementally reduced impacts with respect to the inefficient, unnecessary, or wasteful direct or indirect consumption of energy. Like the Downtown Plan, Alternative 3 would not result in energy demands that exceed the existing or planned capacity for the service area or the wider Southern California region. Neither Alternative 3 nor the Downtown Plan would conflict with applicable federal, state, and local energy conservation policies aimed at decreasing reliance on fossil fuels and increasing

reliance on renewable energy sources. Overall, impacts would be less than significant under Alternative 3, as with the Downtown Plan.

Geology and Soils

As with the Downtown Plan, Alternative 3 would generally accommodate development in the same footprints as existing structures in the Downtown Plan Area. Any new development in the Downtown Plan Area would be exposed to existing geologic and soil hazards; however, it would not increase the potential for such hazards or create new hazards. Compliance with existing regulatory requirements and policies, including the LAMC and CBC would reduce impacts from adverse effects related to seismic activity and ground shaking, liquefaction, on or off-site landslides, ground failure; or adverse effects related to expansive soil, or to a geologic unit or soil that is unstable or would become unstable as a result of the project and result in landslide, lateral spreading, liquefaction or collapse. In some cases, future development in the Downtown Plan Area may reduce the potential for property damage and/or safety concerns by replacing older structures with new structures built to current seismic standards. Similar to the Downtown Plan, Alternative 3 would have the potential to disturb paleontological resources. As with the Downtown Plan, geology and soils impacts would be less than significant under Alternative 3 with adherence to regulatory code requirements and **Mitigation Measure 4.6-1(a), (b)** and **(c)** related to paleontological resources.

Greenhouse Gas Emissions

Alternative 3 would accommodate more development and associated growth than the Downtown Plan. Implementation of Alternative 3 would result in an increase of 6,000 housing units (5%), 11,000 persons (4%), and 59,000 jobs (19%) through 2040 beyond that anticipated under the Downtown Plan. Either the Downtown Plan or Alternative 3 would generate GHG emissions through individual project construction and operation. *Section 4.7, Greenhouse Gas Emissions*, **Table 4.7-4** compares current annual GHG emissions for the Downtown Plan Area to 2040 emissions. Implementation of the Downtown Plan would result in a 24 percent increase in total GHG emissions in the Downtown Plan Area by 2040 and a 62 percent reduction in per capita GHG emissions, compared to 2017 baseline conditions. The reduction in per capita GHG emissions below baseline conditions can be attributed to a combination of state-mandated GHG emission reduction strategies and the fact that implementation of the Downtown Plan would lower per capita VMT due to the location of jobs and housing in close proximity to each other and creation of substantial opportunities to use such transportation modes as transit, bicycling, and walking. It is reasonable to assume that under Alternative 3 future per capita emissions would also be lower than existing 2017 baseline emissions due to improved energy efficiency and reduced per capita VMT. Thus, the per capita and net reduction in GHG emissions under Alternative 3 would demonstrate compliance with regional, state, and federal efforts to reduce climate impacts from development and transportation. Although Alternative 3 may result in greater GHG emissions in the Downtown Plan Area, the more intense development under Alternative 3 may contribute to an incremental reduction in Citywide and regional GHG VMT and related GHG emissions by concentrating more future growth in an area well served by transit and where housing, jobs, and services are in close proximity to one another. Overall, impacts would be less than significant under Alternative 3, as with the Downtown Plan.

Hazards and Hazardous Materials

General Plan designations under Alternative 3 and the Downtown Plan would maintain existing light and heavy industrial uses in the southeastern portion of the Downtown Plan Area but would expand the mix of uses in the Markets and Hybrid Industrial designation area to include commercial and residential uses. Although certain heavy industrial facilities would remain and hazardous materials would continue to be transported through the Downtown Plan Area, neither Alternative 3 nor the Downtown Plan would substantially increase hazardous material risks from transport, use or disposal based on the extensive

existing regulations of hazardous materials. As such, as with the Downtown Plan, impacts related to the routine transport, use, or disposal of hazardous materials or upset or accident conditions involving hazardous materials would be less than significant.

Similar to the Downtown Plan, there would be no or less than significant impacts related to airports, or emergency management plans because there are no airports, private airstrips, or wildlands in or near the Plan Area and development under Alternative 3 would not interfere with circulation plans or emergency management plans.

Redevelopment, renovation, and demolition of structures built before 1979 could potentially involve asbestos or lead but asbestos and lead would not be released into the atmosphere with compliance of existing regulations. In addition, future development would potentially occur in Methane Zones and Methane Buffer Zones and near oil wells. Compliance with applicable regulations would reduce such impacts to a less than significant level. As with the Downtown Plan, grading and construction activity could potentially result in the release of soil and/or groundwater contamination, which could potentially affect schools or involve a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, create a significant hazard to the public or the environment. However, with imposition of **Mitigation Measures 4.8-4(a)** and **4.8-4(b)** to Alternative 3 impacts would be less than significant. Overall impacts associated with Alternative 3 would be similar to, but slightly higher than, those of the Downtown Plan since the overall level of development would be greater.

Hydrology and Water Quality

The Downtown Plan Area is urbanized and almost entirely paved and developed except for parks, green spaces, and the Los Angeles River, which is located on the eastern boundary of the Downtown Plan Area. Similar to the Downtown Plan, Alternative 3 would generally accommodate development within the same footprints as existing structures in the Downtown Plan Area. Therefore, implementation of Alternative 3 would not substantially alter drainage patterns that would result in substantial erosion, siltation, or flooding on- or off-site. Any new development would be subject to federal, state, and local requirements that prevent violations of water quality standards or waste discharge requirements and support the preservation and expansion of pervious surfaces. In addition, any new development projects would be required to incorporate Best Management Practices to manage stormwater and reduce runoff during construction and operation, and industrial sources would be subject to additional stormwater management and discharge requirements under the NPDES program for industrial uses. Compliance with the City's LID Ordinance would further ensure that any future development would not require construction of new stormwater drainage facilities and or expansion of existing facilities beyond specific improvements needed for individual development projects. In the long-term, redevelopment of properties in the Downtown Plan Area would improve surface water quality by replacing older development with new development that incorporates LID methods. Therefore, Alternative 3 would result in less than significant impacts with respect to hydrology and water quality, similar to those of the Downtown Plan.

Land Use and Planning

As with the Downtown Plan, Alternative 3 would allow development of greater scale and intensity than currently exists in portions of the Downtown Plan Area. Alternative 3 would include greater development capacity than the Downtown Plan in the proposed Market and Community Center areas, in exchange for a higher requirement for the provision of public benefits. Under this alternative, the maximum FAR would be raised to 10.0:1 in areas that are proposed as 3:1, 4.5:1, 6.0:1 and 8.5:1 under the Downtown Plan. The FAR would also be raised to a maximum of 13.0:1 in areas that are proposed as 8.0:1 and 10.0:1. **Figure 5-3** shows the changes under the Increased Development Potential Alternative compared to the Downtown Plan. Alternative 3 would be subject to an escalating bonus system, which dictates that as the FAR capacity increases, there is a greater provision of benefits that must be provided. Thus, Alternative 3 would support

the delivery of public benefits in the form of affordable housing, open space, preservation, community facilities, and public realm improvements.

Compared to the Downtown Plan, Alternative 3 would increase development intensity and related growth in the Downtown Plan Area. This may meet objectives related to reinforcing the Downtown Plan Area as a primary center of employment for the City and the Southern California region to a greater degree than the Downtown Plan. In addition, by concentrating more development Downtown, this alternative may incrementally reduce growth elsewhere in the City where transit options and mixed uses are more limited. Either Alternative 3 or the Downtown Plan would be consistent with policies and objectives contained in the 2016-2040 RTP/SCS with respect to high density, transit-oriented development. Similar to the Downtown Plan, Alternative 3 would also be generally consistent with the City's General Plan and Framework Element, Mobility Plan 2035, Air Quality Element and Housing Element 2013-2021. Like the Downtown Plan, Alternative 3 would not physically divide an established community or conflict with an applicable habitat conservation plan or natural community conservation plan. As with the Downtown Plan, impacts would be less than significant under Alternative 3.

Noise

New sensitive uses accommodated by either Alternative 3 or the Downtown Plan would be exposed to ambient noise that is in the "normally unacceptable" to "clearly unacceptable" range based on noise level/land use compatibility standards in the Noise Element the City's General Plan. However, exposure of new development to ambient noise would not increase noise and all new development would be required to take measures to reduce interior noise levels to below 45 dBA.

Any future development in the Downtown Plan Area would include mechanical equipment, loading, trash pick-up, and other noise-generating activities. However, such activities would be typical of the urban environment within the Downtown Plan Area. In addition, any on-site activities would be required to comply with applicable provisions of the LAMC. As with the Downtown Plan, traffic-related noise may increase by more than 3 dBA in some locations, but resulting noise levels would not be in the "normally unacceptable" range. Thus, permanent noise increases due to operational activities accommodated by Alternative 3 would be less than significant.

Future construction activity would be required to comply with appropriate Regulatory Compliance Measures as well as LAMC Chapter 41.40, Section 112.05 and **Mitigation Measure 4.11-1.** Compared to the Downtown Plan, duration of construction and use of heavy duty equipment in the Alternative 3 scenario would be higher than the Downtown Plan due to greater overall development potential. Therefore, construction noise impacts from Alternative 3 is likely to be more than that of the Downtown Plan. Similar to the Downtown Plan, maximum noise levels generated by construction equipment under Alternative 3 could potentially involve two subterranean levels or more, construction durations of 18 months or more, use of large, heavy-duty equipment rated 300 horsepower or greater, or the potential for impact pile driving. Therefore, the impact would remain significant and unavoidable.

Future construction activity, specifically pile driving, could potentially generate vibration exceeding the 90 VdB threshold for buildings extremely susceptible to building damage (e.g., historical and fragile structures). Although mitigation is available to minimize the potential effects of vibration, it cannot be assured that construction-related vibration would not result in building damage. Thus, either Alternative 3 or Downtown Plan would result in a significant and unavoidable impact related to construction vibration.

It is not anticipated that new development in the Downtown Plan Area would involve activities that would result in substantial vibration levels (e.g., blasting operations). As with the Downtown Plan, operational groundborne vibration in the vicinity of new development associated with Alternative 3 would be primarily generated by vehicular travel on the local roadways. According to the FTA *Transit Noise and Vibration*

*Impact Assessment* guidance document, rubber tires and suspension systems dampen vibration levels from trucks to a level that is rarely perceptible (2006). Accounting for additional vehicle trips that would be accommodated by the Alternative 3, traffic vibration levels would be similar to existing conditions and not perceptible by sensitive receptors. Therefore, impacts related to operational vibration would be less than significant.

Similar to the Proposed Project, Alternative 1 would have no impacts related to airport noise.

Population and Housing

Projected growth under Alternative 3 would exceed SCAG's 2040 population forecast by approximately 74,000 persons (39%) 43,000 dwelling units (45%), and 107,000 jobs (42%). Alternative 3 would also accommodate an increase of 6,000 housing units (5%), 11,000 persons (4%), and 59,000 jobs (19%) than would be accommodated through 2040 under the Downtown Plan. Therefore, like the Downtown Plan, Alternative 3 would increase the development capacity of the Downtown Plan Area in a manner that accommodates SCAG growth projections for the Downtown Plan Area. To an even greater degree than the Downtown Plan, Alternative 3 would concentrate forecast growth in an area with a mix of jobs and housing and with good transit access.

Alternative 3 would be subject to an escalating bonus system, which dictates that as the FAR capacity increases, there is a greater provision of benefits that must be provided. Thus, Alternative 3 would support the delivery of public benefits, including affordable housing.

Although Alternative 3 would accommodate new development and redevelopment projects in the Downtown Plan Area that would likely result in some displacement of existing housing units and residents, it would substantially increase the housing stock of the Downtown Plan Area overall. Therefore, Alternative 3 would allow for additional construction of housing in an urban center, which would offset displacement of existing housing throughout the City. As with the Downtown Plan, population and housing impacts would be less than significant under Alternative 3.

Public Services

Alternative 3 would accommodate more overall development and associated growth than the Downtown Plan. Alternative 3 would result in an increase of 6,000 housing units (5%), 11,000 persons (4%), and 59,000 jobs (19%) beyond that anticipated through 2040 under the Downtown Plan. With respect to fire and police services, either scenario would accommodate new development that would increase demand for fire and police protection service in the Downtown Plan Area. This may result in the need for new or expanded fire and police facilities. Based on the urbanized character of the Downtown Plan Area, it is anticipated that new or expanded facilities could be built without creating significant environmental impacts. However, depending on the location or nature of new facilities, the construction of needed new facilities could potentially result in impacts already identified in this EIR for construction or operations. However, project-specific environmental analysis under CEQA would be required to address any site-specific environmental concerns.

With respect to schools, as summarized in **Table 5-12** residential and non-residential development accommodated by Alternative 3 would result in an estimated 56,082 new students by 2040. Of this total, an estimated 28,628 would enroll in elementary school, 8,817 would enroll in middle school, 16,600 would enroll in high school, and 2,037 would enroll in special day classes. Alternative 3 would result in approximately 8 percent increase in students as compared to the Downtown Plan. As such, Alternative 3 would accommodate development that would increase the student population of the Downtown Plan Area and would create the need for new or expanded school facilities, but to a greater extent than the Downtown Plan. As with the Downtown Plan, developers would be required to pay applicable school impact fees. As

with the Downtown Plan, any impacts associated with new school construction would be similar to those analyzed and identified in the EIR for other types of development, any site-specific impacts would be speculative and would be addressed by LAUSD as part of a project-level CEQA review.

**TABLE 5-12 ALTERNATIVE 3 ANTICIPATED STUDENT GENERATION IN THE DOWNTOWN PLAN AREA**

| | | Student Generation | | | | |
|---|---|---|---|---|---|---|
| | Units | Elementary School (TK-5) | Middle School (6-8) | High School (9-12) | SDC | Total Students Generated |
| Residential[1] | 105,017 | 23,828 | 6,417 | 13,610 | 2,037 | 45,892 |
| Non-Residential[2] | 210,524,997 | 4,800 | 2,400 | 2,989 | -- | 10,189 |
| **Total Students Generated by Alternative 3** | | **28,628** | **8,817** | **16,600** | **2,037** | **56,082** |

Note: du = dwelling units; sf = square feet; TK = Transitional Kindergarten; SDC = Specialized Day Care

Totals may not add up due to rounding.

[1] Student generation rates for residential use is based on Level 1 – Developer Fee Justification Study for Los Angeles Unified School District (LAUSD 2017d). Residential Generation Rates: Elementary: 0.2269/du, Middle School: 0.0611/du, High School: 0.1296 /du, SDC: 0.0194/du

[2] Student generation rates for non-residential use is based on the average of office and retail/service student generation rates for a conservative estimate, taken from the LAUSD Commercial/Industrial Development School Fee Justification Study, September 2010 (LAUSD 2010). Non-residential Generation Rates: Elementary: 0.0228/1,000 sf, Middle School: 0.0114/1,000 sf, High School: 0.0142/1,000 sf. Non-residential uses include commercial, industrial, and public facilities.

With respect to libraries, either Alternative 3 or the Downtown Plan would increase demand for library facilities. However, the Downtown Plan Area is well served by library facilities and would not require the construction of new or expanded facilities.

Compared to the Downtown Plan, Alternative 3 would accommodate more intense development and associated growth, thus requiring more public services Downtown. However, this may reduce development elsewhere in the City, resulting in less need for expansion of public services in other areas. Overall, impacts under Alternative 3 would be less than significant, as with the Downtown Plan.

Recreation

Alternative 3 would accommodate more development and associated growth than the Downtown Plan. As with the Downtown Plan, any new development would increase the use of existing park and recreational facilities throughout the City, including in and around adjacent to the Downtown Plan Area. The City of Los Angeles Public Recreation Plan states that in order to meet long-range local recreational standards, the City should maintain a minimum of two acres of neighborhood facilities and two acres of community recreational facilities for every 1,000 persons, or a combination of neighborhood and community facilities adding up to four acres. Under Alternative 3, the Downtown Plan Area population is projected to increase to approximately 263,000 residents by 2040, thereby decreasing the ratio of parks to residents to approximately 0.98 acre per 1,000 residents. Approximately 793 acres of new parkland would be needed in the Downtown Plan Area to meet the City's park acreage standards under Alternative 3. Future development accommodated by the Downtown Plan would increase the population of the Downtown Plan Area to an estimated 252,000 residents, thereby decreasing the ratio of parks to residents to approximately 1.0 acre per 1,000 residents. Approximately 764 acres of new parkland would be needed in the Downtown Plan Area by 2040 to meet the City's park acreage standards under the Downtown Plan. Approximately four percent more parkland would be needed to meet City standards than under the Downtown Plan. Therefore, impacts to park and recreation facilities would be incrementally greater under Alternative 3.

Developers of residential projects would be required to pay park impact fees, dedicate land, include outdoor amenity spaces, or pay in-lieu Quimby fees to fund new park and recreational facilities. This would partially

mitigate impact related to the deterioration of facilities. Nevertheless, due to the substantial population growth that would result from future development and lack of development capacity for new parks in the Downtown Plan Area, implementation of either Alternative 3 or the Downtown Plan could accelerate the deterioration of existing parks in and around the Downtown Plan Area. Such impacts to existing recreational facilities would be significant and unavoidable under either Alternative 3 or the Downtown Plan. Impacts related to construction of new parks would remain less than significant.

Transportation/Traffic

With respect to transportation, a significant impact would occur if the total daily VMT per service population under the Downtown Plan, or a proposed alternative, were to increase above the 2017 Baseline Condition or if there is inconsistency with the SCAG 2016 RTP/SCS. As shown in **Table 5-13**, VMT per service population under Alternative 3 would be 16.5, while the 2017 Baseline per service population VMT in the Downtown Plan Area is 19.6. Thus, per capita VMT under Alternative 2 would not exceed the 2017 Plan Baseline Condition threshold. Compared to the 2016 SCAG Region Conditions, Alternative 2 has lower vehicle trips per service population (2.5 versus 3.1) and lower VMT per service population (16.5 versus 35.4). Therefore, as with the Downtown Plan, impacts would be less than significant. However, the beneficial impacts to VMT in the Downtown Plan Area would not be as great with Alternative 3 compared to the Downtown Plan. On the other hand, accommodating more development in the Downtown Plan Area would be expected to generally reduce future development in other portions of the City/region, thereby placing more development in an area with good transit access and housing, jobs, and amenities in close proximity to one another. From a regional perspective, this would be expected to reduce overall VMT.

**TABLE 5-13 COMPARISON BETWEEN EXISTING TRAFFIC CONDITIONS, THE DOWNTOWN PLAN AND ALTERNATIVE 3**

| Transportation Metric | Threshold | | Downtown Plan (2040) | Alternative 3 |
|---|---|---|---|---|
| | 2016 SCAG Region Conditions | 2017 Plan Baseline Conditions | | |
| Total Daily VT | 82,283,000 | 758,000 | 1,375,000 | 1,582,000 |
| Total Daily VT per Service Population | 3.1 | 2.6 | 2.5 | 2.5 |
| Total Daily VMT | 948,656,000 | 5,767,000 | 8,842,000 | 10,317,000 |
| **Total Daily VMT per Service Population** | **35.4** | **19.6** | **15.9** | **16.5** |

**SOURCE**: Fehr & Peers, February 2019.

As with the Downtown Plan, Alternative 3 would not result in significant impacts related to plan consistency, increased hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment), or result in inadequate emergency access. However, as with the Downtown Plan, freeway off ramp queuing-related safety issues could potentially arise as additional development occurs in the Downtown Plan Area, which could make a significant and unavoidable impact to freeway safety impacts.

Alternative 3 includes the network enhancements identified in MP 2035 and incorporated in the Downtown Plan.

Tribal Cultural Resources

Development activities that include ground disturbance activities have the potential to significantly affect tribal cultural resources. The Sacred Lands File search conducted for the Downtown Plan Area was positive and the Tongva ethnographic village site of Yangna is thought to be located near Union Station. Effects on

tribal cultural resources are only known once a specific development has been proposed because the effects are highly dependent on both the individual development site conditions and the characteristics of the proposed activity. Although neither the Downtown Plan nor Alternative 3 includes specific development projects, any new development accommodated by either scenario may disturb areas that potentially contain tribal resources. Alternative 3 could have incrementally greater impacts to the Downtown Plan as it would have greater development. As with the Downtown Plan, all future development projects would continue to be subject to existing federal, state, and local requirements and discretionary projects subject to CEQA review would be required to comply with AB 52, which for projects relying on a [mitigated] negative declaration or an EIR, includes consultation with California Native American tribes.. Overall, as with the Downtown Plan, impacts under Alternative 3 would be potentially significant. However, implementation of **Mitigation Measures 4.4-2 (a)**, **(b)**, **(c)**, and **(d)** in Section 4.4, *Cultural Resources* and **4.16-1 (a)** and **(b)** in Section 4.16, *Tribal Cultural Resources*, would reduce Alternative 3 impacts to a less than significant level. Therefore, as with the Downtown Plan, impacts associated with Alternative 3 would be less than significant with mitigation incorporated.

Utilities and Service Systems

Alternative 3 would accommodate more development and associated growth than the Downtown Plan. Alternative 3 would result in an increase of 6,000 housing units (5%), 11,000 persons (4%), and 59,000 jobs (19%) beyond that anticipated through 2040 under the Downtown Plan. As shown in **Table 5-14**, implementation of Alternative 3 would increase wastewater generation in the Downtown Plan Area by approximately 26 mgd, which represents about 15 percent of the HWRP excess capacity of 175 mgd. As shown in **Table 4.17-3** in Section 4.17, *Utilities and Service Systems,* projected wastewater generation for the Downtown Plan Area with implementation of the Downtown Plan would generate an estimated 18 mgd of wastewater. This would represent about 10 percent of the HWRP excess capacity of 175 mgd. Alternative 3 would generate approximately 44 percent more wastewater as compared to the Downtown Plan. Nevertheless, the HWRP would have sufficient available treatment capacity to serve the Downtown Plan Area under Alternative 3. In addition, the HWRP would be able to adequately treat future project-generated sewage under Alternative 3 and the treatment requirements of the RWQCB would not be exceeded so new or expanded treatment facilities would not be needed. Expansion/replacement of Downtown Plan Area conveyance infrastructure may be needed and various facility improvements are already planned. Temporary traffic, air quality, and noise impacts associated with construction of such improvements would be within the parameters described for the Downtown Plan. Continued compliance with the City's Low Impact Development (LID) Ordinance for all new development would ensure that any future development under Alternative 3 would not increase demands on stormwater drainage facilities and or expansion of existing facilities beyond specific improvements needed for individual development projects. As with the Downtown Plan, impacts associated with Alternative 3 would be less than significant.

With respect to water demand, per the 2015 Urban Water Management Plan, current water supplies, planned future water conservation efforts, and planned future water supplies will enable LADWP to reliably provide water that meets the demands of the City for a 25-year planning horizon (through 2040), based on SCAG's population projections. The 2015 UWMP projects an increase of 195,960 afy (38 percent) in water demand between 2015 and 2040, under single/multiple dry year conditions. As shown in **Table 5-15**, the projected net increase in water demand of 37,891 afy generated by new development accommodated by Alternative 3 would represent about 19 percent of the forecasted water demand increase through 2040. As shown in **Table 4.17-6** in Section 4.17, *Utilities and Service Systems,* estimated water demand for the Downtown Plan Area with implementation of the Downtown Plan would be 25 mgd, or 28,000 afy, which would represent about 14 percent of the forecasted citywide water demand increase through 2040. Development under Alternative 3 would demand approximately 36 percent more water than development anticipated under the Downtown Plan. Nevertheless, water supplies would be adequate to meet projected demand through 2040 for Alternative 3 and development of new water supplies would not be necessary.

**TABLE 5-14 ALTERNATIVE 3 PROJECTED WASTEWATER GENERATION**

| Land Use | Dwelling Units or Jobs | Wastewater Generation Rate (gpd/unit) | Wastewater Generation (gpd) |
|---|---|---|---|
| Single-family Residential | 6,733 du | 144.3 | 972,000 |
| Multi-family Residential | 131,949 du | 137.9 | 18,196,000 |
| Commercial | 240,909 jobs | 59.8 | 14,406,000 |
| Industrial | 96,383 jobs | 123 | 11,855,000 |
| Public Facilities | 26,464 jobs | 46.4 | 1,228 |
| Total 2040 with Alternative 3 Wastewater Generation | | | 46,657,000 |
| Current Wastewater Generation | | | 20,631,000 |
| **Net Change in Wastewater Generation** | | | **26,025,000** |

Notes: Wastewater generation numbers are rounded to the nearest thousand. Totals may not add up due to rounding.

gpd – gallons per day

du – dwelling units

sf – square feet

**SOURCE:** Wastewater is assumed to be 100% of indoor water use. Per Exhibit 2D of the 2015 UWMP, indoor water use constitutes the following percentages of overall water use: Residential single family – 46%; Residential multi-family – 68%; Commercial – 76%; Industrial – 98%; and Government – 59%.Per the UWMP, per unit water demand is forecast to decline over time; the forecast 2040 rates are assumed to apply to new development.

**TABLE 5-15 ALTERNATIVE 3 PROJECTED WATER DEMAND**

| Land Use | New Dwelling Units (du) or Jobs in Plan Area | Daily Water Use Rate (gpd/unit) | Daily Water Demand (gpd) | Annual Water Demand (afy) |
|---|---|---|---|---|
| Single-family Residential | 6,733 du | 313.8 | 2,113,000 | 2,367 |
| Multi-family Residential | 131,949 du | 202.8 | 26,759,000 | 29,974 |
| Commercial | 240,909 jobs | 78.7 | 18,960,000 | 21,237 |
| Industrial | 96,383 jobs | 125.5 | 12,096,000 | 13,549 |
| Public Facilities | 26,464 jobs | 78.7 | 2,083,000 | 2,333 |
| Total 2040 with Alternative 3 Demand | | | 62,010,000 | 64,461 |
| Current Water Demand | | | 28,184,000 | 37,891 |
| **Net Change in Water Demand** | | | **33,826,000** | **37,891** |

Notes: Water demand numbers are rounded to the nearest thousand. Totals may not add up due to rounding.

du – dwelling unit

gpd – gallons per day

afy – acre feet per year (1 af = 325,850 gallons)

**SOURCE:** Water demand rates were obtained from the LADWP's 2015 Urban Water Management Plan (UWMP), Exhibit2K (LADWP 2016). Per the UWMP, per unit water demand is forecast to decline over time; the forecast 2040 rates are assumed to apply to new development.

Expansion/replacement of water distribution infrastructure may be needed, but temporary traffic, air quality, and noise impacts associated with construction of such improvements would be within the parameters described for the Downtown Plan. As with the Downtown Plan, impacts associated with Alternative 3 would be less than significant. It should also be noted that accommodating more development Downtown may reduce development elsewhere in the City, thus offsetting any increase in water demand in the Downtown Plan Area.

As shown in **Table 4.17-7** in Section 4.17, *Utilities and Service Systems*, the combined daily intake capacity of landfills serving the Downtown Plan Area is 45,540 tons per day and the average disposal intake is 19,143 tons per day, resulting in an available capacity of 26,397 tons per day. As shown in **Table 5-16**, Alternative 3 would generate an increase of approximately 1,287 tons of solid waste per day, which would represent about 5 percent of the total available daily capacity (26,397 ton per day) at local landfills. As shown in **Table 4.17-9** in Section 4.17, *Utilities and Service Systems*, development accommodate by the Downtown Plan would increase the amount of solid waste generated in the Downtown Plan Area by an estimated 1,133 tons per day, or 413,534 tons per year. This represents approximately 4 percent of the available intake capacity of landfills serving the Downtown Plan Area. Alternative 3 would generate approximately 13 percent more waste as compared to the Downtown Plan. Based on the County of Los Angeles Countywide Integrated Waste Management Plan (CIWMP) 2018 Annual Report, sufficient permitted capacity is available to accommodate the County's long-term disposal needs under the status quo. Sufficient permitted capacity is available to accommodate the Downtown Plan Area's solid waste disposal needs. As with the Downtown Plan, solid waste generation under Alternative 3 would remain within the capacity of waste disposal facilities and new or expanded facilities would not be needed. Impacts would be less than significant.

**TABLE 5-16 ALTERNATIVE 3 PROJECTED SOLID WASTE GENERATION**

| Land Use | Dwelling Units or Square Feet | Annual Waste Generation Rate | Annual Waste Generation (tons) | Daily Waste Generation (tons) |
|---|---|---|---|---|
| Single-family Residential | 6,733 du | 1.17 ton/du[1] | 7,878 | 22 |
| Multi-family Residential | 131,949 du | 0.46 ton/du | 60,697 | 166 |
| Commercial | 203,261,906 sf | 3.01 ton/1,000 sf | 611,818 | 1,676 |
| Industrial | 110,876,964 sf | 1.24 ton/1,000 sf | 137,487 | 377 |
| Public Facilities | 45,730,208 sf | 0.93/1,000 sf | 42,529 | 117 |
| Total 2040 Alternative 3 Solid Waste Generation | | | 806,409 | 2,357 |
| Current Solid Waste Generation | | | 390,771 | 1,071 |
| **Net Change in Waste Generation** | | | **469,638** | **1,287** |

Notes: Waste generation (tons) was rounded to the nearest whole number. Totals may not add up due to rounding.

du – dwelling unit

sf – square feet

[1] Converted from CalEEMod default data of 0.41 tons/resident, assuming a persons per unit rate of 2.86 for City of Los Angeles (California Department of Finance (DOF). 2018. E-5 Population and Housing Estimates for Cities, Counties, and the State, 2011-2018 with 2010 Census Benchmark. http://www.dof.ca.gov/Forecasting/Demographics/Estimates/E-5/ (accessed April 2019))

**SOURCE:** CalEEMod Land Use SubType.

Electrical and natural gas supplies are not expected to be adversely affected by development under Alternative 3, but improvements to Downtown Plan Area distribution and telecommunication facilities may be needed. Temporary traffic, air quality, and noise impacts associated with construction of such

improvements would be within the parameters described for the Downtown Plan. As with the Downtown Plan, impacts associated with Alternative 3 would be less than significant.

### Conclusion

Alternative 3 would accommodate increased development overall compared to the Downtown Plan and thus more growth in the Downtown Plan Area. Nevertheless, Alternative 3 would result in the same impact conclusions as the Downtown Plan in all impact categories. Unavoidable significant impacts under this alternative would relate to historical resources, air quality, construction noise and vibration, recreational facilities, and traffic safety related to highway off-ramps, and due to higher overall development these impacts would occur to a greater degree than under the Downtown Plan.

## ALTERNATIVE 4: NO PROJECT ALTERNATIVE

### Alternative Description

The "No Project" alternative involves continued implementation of the existing Central City and Central City North Community Plans. This alternative assumes that the City's existing plans and policies would continue to accommodate development in accordance with existing General Plan designations. As shown in **Table 5-1**, under current plans the Downtown Plan Area is projected to accommodate a population of 112,000 residents, 59,000 housing units, and 278,000 jobs by 2040. SCAG projects growth of the Downtown Plan Area to reach 189,000 residents, 96,000 housing units, and 257,000 jobs by 2040. Therefore, population and housing growth in the Downtown Plan Area would fall below SCAG's forecasts under current plans, while forecast employment growth would be accommodated. Overall, current land use patterns limit population and housing growth in the Downtown Plan Area, as compared to the Downtown Plan, and would likely cause development to occur elsewhere in the region to meet the 2040 SCAG projections for population and housing. This may increase regional emissions of air pollutants and greenhouse gases as well as increased regional energy consumption, VMT, and population displacement.

Alternative 4 was selected because it meets CEQA's requirement to study a "no project" alternative. The analysis of Alternative 4 treats the alternative as a "new" project similar to the other alternatives and discusses both potentially "significant" impacts and mitigation requirements. However, it should be recognized that Alternative 4 would not actually require any new discretionary approval from the City and, therefore, would not technically have any new impacts under CEQA, nor would the City would have a mechanism for imposing the mitigation measures proposed for the Proposed Project and other project alternatives.

Alternative 4 would meet some of the basic project objectives, including: providing for economic diversification and reinforcement of the Downtown Plan Area as a primary center of employment (Primary Objective 2); building upon Downtown's role as a regional transportation center by allowing for intensive development throughout the Plan Area and concentrating development opportunity immediately surrounding the transit stations (Primary Objective 3); promoting a mode-shift from private automobile usage while fostering a transit, bicycle, and pedestrian supportive environment (Primary Objective 4); reducing vehicle miles traveled to meet the goals of the Senate Bill 375, Senate Bill 743, and California Assembly Bill 32 to reduce carbon emissions (Primary Objective 5; supporting a growing residential population by expanding the areas where housing is permitted and allowing for a full range of housing options (Primary Objective 6); celebrating and reinforcing the character of each of the neighborhoods in the Plan Area (Primary Objective 7); maintaining a meaningful amount of the Plan Area for production and high-intensity traditional industry (Secondary Objective 2); Alternative 1 would partially meet the objective of accommodating employment, housing, and population growth projections (Primary Objective 1); however, as noted above, population growth forecast under this alternative is slightly less than SCAG's forecast.

Due to limitations placed on development in the Downtown Plan Area under existing plans and policies, Alternative 4 would not be consistent with Primary Objective 1, which aims to accommodate employment, housing, and population growth projections forecasted through the planning horizon year of 2040 and Primary Objective 8, which aims to provide a set of implementation tools that are responsive to the range of physical and functional needs across the Plan Area, and across the City. It would also fail to fulfill the following secondary objectives: refining and expanding a system that links development with public benefits to deliver community amenities in the Downtown Plan Area, and is adaptable to the policy needs across the City (Secondary Objective 1); promoting a mix of land uses that fosters sustainability, equity, community, neighborhood density, and healthy living (Secondary Objective 3); identifying appropriate locations for housing and establishing zoning tools that encourage a range of unit typologies (Secondary Objective 4); ensuring that new development provides the appropriate range of outdoor amenity space and other recreational options to tenants and property owners (Secondary Objective 5); and supporting and sustaining Downtown's ongoing revitalization (Secondary Objective 6).

Although Alternative 4 would partially fulfill other objectives, it would meet the following primary objectives to a lesser degree than the Downtown Plan would: Primary Objective 3, which aims to concentrate development opportunities immediately surrounding the transit stations with an appropriate range of building sizes and mix of uses; Primary Objective 4, which aims to promote a mode-shift from private automobile usage and foster a transit, bicycle, and pedestrian supportive environment; Primary Objective 5, which aims to reduce VMT to meet the goals of the Senate Bill 375, Senate Bill 743, and California Assembly Bill 32; and Objective 6, which aims to support a growing residential population by expanding the areas where housing is permitted and allowing for a full range of housing options.

As discussed below, Alternative 4 would incrementally increase impacts related to transportation as compared to the Downtown Plan and would have the same significant and unavoidable impacts to air quality, historic resources, construction noise and vibration, recreation and transportation safety related to freeway off-ramps.

## Impact Analysis

Aesthetics

Under Alternative 4, development would continue under current planned land use patterns in the Downtown Plan Area. Existing development primarily consists of commercial and industrial land uses with small-scattered pockets of open space parks and residential areas. Structures in the Downtown Plan Area currently range from low-rise structures in industrial zones to high-rise structures located primarily in the commercial-zoned financial district. Compared to the Downtown Plan designations, Alternative 4 would generally accommodate less overall building height, scale and intensity.

The current General Plan designations would generally accommodate development with less overall height, scale and intensity, as compared to the Downtown Plan, and thus may result in fewer changes in visual character, obstruction of scenic views, alterations of historical resource and shading effects. Nevertheless, any development would be implemented in accordance with applicable state and local plans, policies and guidelines including, but not limited to, the City's General Plan Framework, Conservation Element, Mobility Plan 2035, relevant specific plans, the Downtown Design Guide and provisions of the LAMC as it relates to development standards, visual character and historical resources. Like the Downtown Plan, Alternative 4 could introduce new sources of light and glare in the Downtown Plan Area. However, development in most of the Downtown Plan Area already experiences high levels of nighttime lighting and glare, such that any additional effects would be incremental. In addition, future development would comply with applicable regulations regarding permitted light and glare. Similarly, development in the Downtown Plan Area accommodated by Alternative 4 may increase shading and shadows in specific locations; however, shadows would be limited to the immediate area of each new development and would be typical

of highly urbanized neighborhoods. Overall, similar to the Downtown Plan, development accommodated by Alternative 4 may benefit, and would generally enhance, the visual character of the Downtown Plan, and impacts related to aesthetics would be less than significant

Air Quality

Alternative 4 would accommodate less overall development and associated growth than the Downtown Plan. Alternative 4 would result in 74,000 fewer housing units (-56%), 140,000 fewer residents (-56%), and 27,000 fewer jobs (-9%) through 2040 than would be anticipated under the Downtown Plan. Like the Downtown Plan, Alternative 4 would not increase reasonably anticipated development in the Downtown Plan Area in a way that would be inconsistent with growth forecasts and, therefore, would not exceed the assumptions in the AQMP. However, the reduced level of growth in the Downtown Plan Area under Alternative 4 would likely mean that more growth would occur elsewhere in the City or region. This may increase regional impacts related to air quality as a function of VMT if growth occurs in areas with fewer transit options and longer distances between jobs, housing, and services. Like the Downtown Plan, Alternative 4 would not increase reasonably anticipated development in the Downtown Plan Area in a way that would be inconsistent with SCAG's growth forecasts for the City; therefore, Alternative 4 would not conflict with the AQMP. However, because Alternative 4 would accommodate less overall growth in the Downtown Plan Area than would the Downtown Plan, it would attain the policy goals of the RTP/SCS, AQMP, and City General Plan Framework Element and Air Quality Element goals related to concentrating development in areas with access to transit and reducing VMT and associated emissions to a lesser degree. Therefore, as with the Downtown Plan, impacts related to conflicting with or obstructing implementation of an applicable air quality plan would be less than significant.

Although less construction may occur overall under Alternative 4 as compared to the Downtown Plan, maximum daily emissions would be similar to what would occur under the Downtown Plan since the nature and magnitude of individual construction projects would be similar. Therefore, it is reasonable to assume that development would result in construction emissions of $NO_X$ that exceed SCAQMD regional and local significance thresholds, and emissions of $PM_{10}$ and $PM_{2.5}$ that exceed SCAQMD LSTs. Similarly, because less development would occur under Alternative 4, it is reasonable to assume that overall operational emissions would be less as compared to the Downtown Plan. Nevertheless, because a 99 percent reduction in VOC emissions would be needed to bring VOC emissions under the SCAQMD threshold, the increase in development in the Downtown Plan Area accommodated by Alternative 4 could result in daily emissions of VOC that would exceed the SCAQMD regional significance thresholds due to expanded use of consumer products and increased energy demand, similar to the Downtown Plan. In addition, future development in the Downtown Plan Area accommodated by Alternative 4 would result in daily emissions of NOx, $PM_{10}$ and $PM_{2.5}$ from area sources and mobile sources (brake and tire wear) that would exceed the SCAQMD regional significance thresholds since Alternative 4 is not anticipated to result in 61 percent reduction in $PM_{10}$ emissions and 68 percent reduction in $PM_{2.5}$ emissions that would be needed to bring emissions under SCAQMD thresholds. Mitigation measures required for the Downtown Plan would also reduce impacts associated with this alternative. However, because this alternative would not be subject to mitigation measures proposed in the Downtown Plan, criteria pollutant emissions would be potentially higher than the Downtown Plan. Additionally, exposure of sensitive receptors to temporary construction emissions could be significant and unavoidable without the mitigation measure and impacts from toxic air contaminants (TACs) from distribution center truck activity would be greater than that of the Downtown Plan Area. Exposure to odors would also be similar to the less than significant impact identified for the Downtown Plan. As with the Downtown Plan, impacts related to construction and operational emissions, and as well exposure of sensitive receptors to temporary construction emissions would be significant and unavoidable.

Biological Resources

The Downtown Plan Area is urbanized and generally lacks riparian habitat, wetlands, wildlife corridors and habitat that would support special status plant or animal species. The Los Angeles River, as well as small portions of parks and open space, trees and minor urban landscaping are the only sources of biological habitat in and around the Downtown Plan Area. Current City Plans and the Downtown Plan prioritize infill development, thus minimizing development in areas of potential native biological habitat or wildlife corridors. Implementation of current plans, like the Downtown Plan, would not foreseeably result in modification of the portions of the Los Angeles River, as neither plan would include components that would affect the existing use, zoning, or land use designation of the Los Angeles River. Although implementation of Alternative 4 would involve less overall development and associated growth than the Downtown Plan, any new development has the potential to disturb sensitive plant or animal species such as nesting birds and heritage or protected trees in the Downtown Plan Area. Therefore, any future development would require adherence with the federal MBTA, the CFGC, and the LAMC Tree Preservation Ordinance (177,404). Alternative 4 would not interfere with natural resources, degrade the sustainability of natural resources in the region, disrupt existing open space or encroach upon any natural settings. Therefore, Alternative 4 would not conflict with goals, policies, and programs of the General Plan Framework or the City Conservation Element. **Mitigation Measures 4.3-1(a)** and **(b)** would also reduce potential disturbance of nesting birds under Alternative 4. However, because Alternative 4 would not be subject to mitigation measures proposed for the Downtown Plan, the potential to disturb nesting birds would be greater than under the Downtown Plan and would be significant and unavoidable.

Cultural Resources

The Downtown Plan Area, which is expected to experience substantial new development, includes a high concentration of historical resources. As with the Downtown Plan, Alternative 4 may result in demolition or alteration of historical resources or their setting or disturb areas that may potentially contain archaeological resources. Alternative 4 would accommodate development consistent with current land use designation and patterns and, as such, may result in slightly reduced impacts to historical resources and associated settings as compared to the Downtown Plan. Either Alternative 4 or the Downtown Plan would have the potential to disturb archaeological resources and/or human remains. All future development projects would continue to be subject to existing federal, state, and local requirements with respect to cultural resources and discretionary projects may be subject to project-specific mitigation requirements under CEQA. As with the Downtown Plan, implementation of **Mitigation Measures 4.4-2(a)**, **(b)**, and **(c)** and **(d)** would reduce the potential to disturb archaeological resources and human remains. However, because this alternative would not be subject to mitigation measures proposed in the Downtown Plan, the potential for disturbance would be greater than under the Downtown Plan and would be significant and unavoidable. In addition, although existing regulations provide certain protections for significant historical resources, individual developments allowed by Alternative 4 could potentially cause a substantial adverse change in or disturbance of historical resources as defined in CEQA Guidelines Section 15064.5. However, because this alternative would not be subject to mitigation measures proposed for the Downtown Plan, the potential for disturbance of cultural resources would be greater than under the Downtown Plan, and significant and unavoidable.

Energy

As compared to the Downtown Plan, development under Alternative 4 would result in less transportation energy use and less electricity and natural gas consumption than the Downtown Plan in 2040. However, on a per capita basis, Alternative 4 would result in more transportation energy use and more electricity and natural gas consumption than the Downtown Plan for year 2040. In addition, Alternative 4 would result in 2040 per capita electricity and natural gas consumption higher than under 2017 baseline conditions, while the Downtown Plan would result in lower per capita electricity and natural gas consumption in 2040 as

compared to year 2017 baseline conditions. The lower per capita energy use that would occur under the Downtown Plan can be attributed in part to the fact that implementation of the Downtown Plan would lower per capita VMT due to the location of jobs and housing in close proximity to each other and creation of substantial opportunities to use such transportation modes as transit, bicycling, and walking.

Because Alternative 4 would consume less energy overall, but more energy than the Downtown Plan on a per capita basis, it may result incrementally greater impacts with respect to the inefficient, unnecessary, or wasteful direct or indirect consumption of energy as compared to the Downtown Plan. Nevertheless, as with the Downtown Plan, Alternative 4 would not result in energy demands that exceed the existing or planned capacity for the service area or the wider Southern California region. In addition, neither Alternative 4 nor the Downtown Plan would conflict with applicable federal, state, or local energy conservation policies aimed at reducing reliance on fossil fuels and increasing reliance on renewable energy sources. Overall, impacts would be less than significant under Alternative 4, as with the Downtown Plan.

Geology and Soils

Implementation of the City's current General Plan and Downtown Plan would generally accommodate development in the same footprints as existing structures in the Downtown Plan Area. Any new development in the Downtown Plan Area under either Alternative 4 or the Downtown Plan would be exposed to existing geologic and soil hazards; however, it would not increase the potential for such hazards or create new hazards. Compliance with existing regulatory requirements and policies, including the LAMC and CBC would reduce impacts from adverse effects related to seismic activity and ground shaking, liquefaction, on or off-site landslides, ground failure; or adverse effects related to expansive soil,or to a geologic unit or soil that is unstable or would become unstable as a result of the project and result in landslide, lateral spreading, liquefaction or collapse. In some cases, future development in the Downtown Plan Area may reduce the potential for property damage and/or safety concerns by replacing older structures with new structures built to current seismic standards. Similar to the Downtown Plan, Alternative 1 would have the potential to disturb paleontological resources. Implementation of **Mitigation Measures 4.6-1(a), (b)** and **(c)** would reduce the potential to disturb or damage paleontological resources. However, because this alternative would not be subject to mitigation measures proposed for the Downtown Plan, the potential for disturbance of paleontological resources would be greater than under the Downtown Plan, and significant and unavoidable.

Greenhouse Gas Emissions

Development accommodated by either Alternative 4 or the Downtown Plan Alternative would generate GHG emissions through individual project construction and operation. GHG emissions would be generated by direct sources such as motor vehicles, natural gas consumption, solid waste handling/treatment, and indirect sources such as electricity generation. Section 4.7, *Greenhouse Gas Emissions*, **Table 4.7-4** compares current annual GHG emissions for the Downtown Plan Area to 2040 emissions with and without the Downtown Plan. Implementation of Alternative 4 would result in a 3 percent reduction in total GHG emissions in the Downtown Plan Area in 2040 and a 34 percent reduction in per capita GHG emissions compared to 2017 baseline conditions. Implementation of the Downtown Plan would result in a 24 percent increase in total GHG emissions in the Downtown Plan Area in 2040 and a 62 percent reduction in per capita GHG emissions. Under either Alternative 4 or the Downtown Plan, future per capita emissions would be lower than under 2017 baseline emissions due to improved energy efficiency and reduced per capita VMT. The per capita reduction in GHG emissions demonstrates compliance with regional, state, and federal efforts to reduce climate impacts from development and transportation. Overall, impacts would be less than significant under Alternative 4, as with the Downtown Plan.

Although Alternative 4 would result in fewer GHG emissions than the Downtown Plan in the Downtown Plan Area, it would accommodate less intense development and associated growth in the Downtown Plan

Area, which may result in more population and housing growth elsewhere in the City and region where fewer transit options are available and the distances between residences, jobs, and services are greater. As a result, overall citywide and regional GHG emissions as a function of VMT may increase and Alternative 4 would not be as consistent with AB 32, SB 32, SB 375 (through demonstration of conformance with the 2016–2040 RTP/SCS), the Sustainable City pLAn and GreenLA as the Downtown Plan. Overall GHG emissions would be incrementally greater than those of the Downtown Plan.

Hazards and Hazardous Materials

Development under the City's General Plan would continue under the current planned land use pattern in the City, whereas the Downtown Plan would maintain existing light and heavy industrial uses in the southeastern portion of the Downtown Plan Area but expand the mix of uses in the Markets and Hybrid Industrial designation areas to include commercial and residential uses. Alternative 4 would involve no change to planned land use patterns and would involve less overall development capacity and associated growth than would occur under the Downtown Plan. Similar to the Downtown Plan, operational activities associated with development under Alternative 4 would not create increased potential for upset or accident conditions involving hazardous materials release from transport, use or disposal. As such, as with the Downtown Plan, impacts related to the routine transport, use, or disposal of hazardous materials or upset or accident conditions involving hazardous materials would be less than significant.

Similar to the Downtown Plan, this alternative would pose no or less than significant issues related to airports or emergency management plans because there are no airports or private airstrips in or near the Plan Area, and development under Alternative 4 would not interfere with circulation plans or emergency management plans. No wildland fire hazard areas are present Downtown; therefore, no impacts related to wildland fire risks would occur.

As with the Downtown Plan, redevelopment, renovation, and demolition of structures built before 1979 could potentially involve asbestos or lead but asbestos and lead would not be released into the atmosphere with compliance of existing regulations. In addition, future development would potentially occur in Methane Zones and Methane Buffer Zones and near oil wells. Grading and construction activity could also potentially result in the release of soil and/or groundwater contamination, which could potentially affect schools. Compliance with applicable regulations would reduce such impacts to a less than significant level. As with the Downtown Plan, grading and construction activity could potentially result in the release of soil and/or groundwater contamination, which could potentially affect schools or involve a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, create a significant hazard to the public or the environment. Overall impacts associated with Alternative 4 would be similar to, but slightly less than, those of the Downtown Plan since the overall level of development would be lower. As with the Downtown Plan, impacts related to the potential disturbance of contaminated soils would be significant. Adherence to **Mitigation Measures 4.8-4(a)** and **4.8-4(b),** as discussed in Section 4.8, *Hazards and Hazardous Materials*, would reduce impacts related to contaminated soils. However, because this alternative would not be subject to mitigation measures proposed in the Downtown Plan, the potential for exposure to contaminants to the public due to possible construction on hazardous sites, and release of hazardous emissions which could potentially affect schools would be greater than under the Downtown Plan and would be significant and unavoidable.

Hydrology and Water Quality

The Downtown Plan Area is urbanized and almost entirely paved and developed except for parks, green spaces, and the Los Angeles River, which is located on the eastern boundary of the Downtown Plan Area. Alternative 4 would accommodate development in a manner consistent with current land use patterns and, therefore, would not substantially alter drainage patterns or result in substantial erosion, siltation, or flooding on- or off-site. Development accommodated by the either Alternative 4 or the Downtown Plan

would be subject to federal, state, and local requirements that prevent violations of water quality standards or waste discharge requirements and support the preservation and expansion of pervious surfaces. In addition, new development projects under either Alternative 4 or the Downtown Plan would be required to incorporate Best Management Practices to manage stormwater and reduce runoff during construction and operation, and industrial sources would be subject to additional stormwater management and discharge requirements under the NPDES program for industrial uses. Compliance with the City's LID Ordinance would further ensure that any future development resulting from either this alternative or the Downtown Plan would not require construction of new stormwater drainage facilities and or expansion of existing facilities beyond specific improvements needed for individual development projects. In the long-term, redevelopment of sites in the Downtown Plan Area under either Alternative 4 or the Downtown Plan would improve surface water quality by replacing older development with new development that incorporates LID methods. Therefore, like the Downtown Plan, Alternative 4 would not adversely affect conditions with respect to hydrology and water quality and impacts would be less than significant.

Land Use and Planning

Under Alternative 4, development would continue under current planned land use patterns in the City. This alternative would not accommodate the greater building heights, scale and intensity that could occur in portions of the Downtown Plan Area under the Downtown Plan, especially in areas with proposed Transit Core, Hybrid Industrial, and Transit Community designations. Like the Downtown Plan, Alternative 1 would be generally consistent with 2016-2040 RTP/SCS policies related to the provision of high intensity and transit-oriented development as well as with the City's General Plan and Framework Element, Mobility Plan 2035, and Housing Element 2013-2021. However, as discussed under *Air Quality*, Alternative 4 may implement 2016-2040 RTP/SCS, AQMP, and Air Quality Element policies related to concentrating development near transit and reducing regional VMT to a lesser degree than the Downtown Plan since the lower overall development totals may result in increased development elsewhere in the City and incrementally higher regional VMT. Like the Downtown Plan, Alternative 4 would not physically divide an established community or conflict with an applicable habitat conservation plan, natural community conservation plan. Overall, like the Downtown Plan, this alternative would not conflict with land use plans and policies or divide a community. Overall, impacts related to land use would be less than significant under Alternative 4, as with the Downtown Plan.

Noise

New sensitive uses accommodated by either Alternative 4 or Downtown Plan would be exposed to ambient noise that is in the "normally unacceptable" to "clearly unacceptable" range based on noise level/land use compatibility standards in the Noise Element the City's General Plan. However, exposure of new development to ambient noise would not increase noise and new development would be required to incorporate methods to reduce interior noise levels to below 45 CNEL.

Any future development Downtown would include mechanical equipment, loading, trash pick-up, and other noise-generating activities. However, such activities would be typical of the urban environment in the Downtown Plan Area. In addition, any on-site activities would be required to comply with applicable provisions of the LAMC. Future development accommodated by either Alternative 4 or the Downtown Plan would also increase vehicle trips in the Downtown Plan Area that would generate mobile noise. However, mobile noise would not increase noise levels to be within the "normally unacceptable" category for land uses adjacent to affected corridors. Permanent noise increases due to stationary and mobile operational activities would be similar to those of the Downtown Plan.

All construction would be required to comply with the appropriate Regulatory Compliance Measures as well as LAMC Chapter 41.40, Section 112.05. Nevertheless, maximum noise levels generated by construction equipment under Alternative 4 could potentially involve two subterranean levels or more,

construction durations of 18 months or more, use of large, heavy-duty equipment rated 300 horsepower or greater, or the potential for impact pile driving. In addition, **Mitigation Measure 4.11-1** for the Downtown Plan would not apply. Therefore, impacts from temporary construction noise resulting from implementation of Alternative 4 would be significant and unavoidable and be greater than that of the Downtown Plan.

Any future construction activity, specifically pile driving, could potentially generate vibration exceeding the 90 VdB threshold for buildings extremely susceptible to building damage (e.g., historical structures). Although mitigation is available to minimize the potential effects of vibration, it cannot be assured that construction-related vibration would not result in building damage. Mitigation Measure 4.11-2(a) and (b) would not apply and thus, construction-related vibration would be greater to that of the Downtown Plan, and significant and unavoidable impact.

It is not anticipated that new development in the Downtown Plan Area would involve activities that would result in substantial vibration levels (e.g., blasting operations). Like the Downtown Plan, operational groundborne vibration in the vicinity of new development associated with Alternative 4 would be primarily generated by vehicular travel on the local roadways. According to the FTA *Transit Noise and Vibration Impact Assessment* guidance document, rubber tires and suspension systems dampen vibration levels from trucks to a level that is rarely perceptible (2006). Accounting for additional vehicle trips that would be accommodated by Alternative 4, traffic vibration levels would be similar to existing conditions and not perceptible.

Similar to the Proposed Project, Alternative 4 would have no impacts related to airport noise.

Population and Housing

Projected growth under Alternative 4 would fall below SCAG's 2040 population forecast by approximately 77,000 persons (-41%), 37,000 dwelling units (-39%) but would exceed employment forecasts by 21,000 jobs (8%), respectively. The population forecast for Alternative 4 is less than under SCAG's RTP/SCS, but Alternative 4 would concentrate forecast growth in an area with a mix of jobs and housing and with good transit access. As such, although it would not implement RTP/SCS policies related to jobs/housing balance and concentrating growth and development near transit to the same degree that the Downtown Plan would, it would not result in significant impacts related population or housing growth. Alternative 4 would have less potential to displace housing than the Downtown Plan, but would also include less replacement housing. Like the Downtown Plan, Alternative 4 would result in an overall increase in housing that would more than offset any housing displacement that may occur. It should be noted, however, that limiting housing development in the Downtown Plan Area as would occur under Alternative 4 may result in increased housing development elsewhere in the City, which could potentially increase displacement of existing housing in other Los Angeles neighborhoods. Like the Downtown Plan, Alternative 4 would not induce substantial population growth inconsistent with the regional growth plans. Overall, impacts related to population and housing would be less than significant under Alternative 4, as with the Downtown Plan.

Public Services

Implementation of Alternative 4 would involve less overall development and associated growth than the Downtown Plan. Nevertheless, the increased growth under either scenario may require additional public facilities to serve new residents. With respect to fire and police services, either Alternative 4 or the Downtown Plan would accommodate new development that would increase demand for fire and police protection service. This may result in the need for new or expanded fire and police facilities. Based on the urbanized character of the Downtown Plan Area, it is anticipated that new or expanded facilities could be built without creating significant environmental impacts. Depending on the location or nature of new facilities, the construction of needed new facilities could potentially result in impacts; however, like the Downtown Plan, those impacts would be consistent with those already identified in this EIR for

construction or operations. Project-specific environmental analysis under CEQA would be required to address any site-specific environmental concerns.

With respect to schools, as summarized in **Table 5-17**, residential and non-residential development accommodated by Alternative 4 would result in approximately 16,9178 new students by 2040. Of this total, an estimated 8,505 would enroll in elementary school, 2,921 would enroll in middle school, 4,999 would enroll in high school, and 493 would enroll in special day classes. Overall Alternative 4 would result in approximately 69 percent less students as compared to the Downtown Plan. As such, Alternative 4 would accommodate development that would increase the student population of the Downtown Plan Area and would create the need for new or expanded school facilities, but to a lesser extent than the Downtown Plan. As with the Downtown Plan, developers would be required to pay applicable school impact fees. As with the Downtown Plan, any impacts associated with new school construction would be similar to those analyzed and identified in the EIR for other types of development, any site-specific impacts would be speculative and would be addressed by LAUSD as part of a project-level CEQA review.

**TABLE 5-17 ALTERNATIVE 4 ANTICIPATED STUDENT GENERATION IN THE DOWNTOWN PLAN AREA**

| | | Student Generation | | | | |
|---|---|---|---|---|---|---|
| | Units | Elementary School (TK-5) | Middle School (6-8) | High School (9-12) | SDC | Total Students Generated |
| Residential[1] | 25,429 du | 5,770 | 1,554 | 3,296 | 493 | 11,112 |
| Non-Residential[2] | 119,942,669 sf | 2,735 | 1,367 | 1,703 | -- | 5,805 |
| **Total Students Generated by the No Project Alternative** | | **8,505** | **2,921** | **4,999** | **493** | **16,918** |

Note: du = dwelling units; sf = square feet; TK = Transitional Kindergarten; SDC = Specialized Day Care

Totals may not add up due to rounding.

[1] Student generation rates for residential use is based on Level 1 – Developer Fee Justification Study for Los Angeles Unified School District (LAUSD 2017d). Residential Generation Rates: Elementary: 0.2269/du, Middle School: 0.0611/du, High School: 0.1296 /du, SDC: 0.0194/du

[2] Student generation rates for non-residential use is based on the average of office and retail/service student generation rates for a conservative estimate, taken from the LAUSD Commercial/Industrial Development School Fee Justification Study, September 2010 (LAUSD 2010). Non-residential Generation Rates: Elementary: 0.0228/1,000 sf, Middle School: 0.0114/1,000 sf, High School: 0.0142/1,000 sf. Non-residential uses include commercial, industrial, and public facilities.

With respect to libraries, either Alternative 4 or the Downtown Plan would increase demand for library facilities. However, the Downtown Plan Area is well served by library facilities and would not require the construction of new or expanded facilities.

Overall, impacts related to public services would be less than significant under Alternative 4, as with the Downtown Plan.

Recreation

Implementation of Alternative 4 would involve less overall development and associated population increases than the Downtown Plan. However, any new development would increase the use of existing park and recreational facilities throughout the City, including in and around adjacent to the Downtown Plan Area. The City of Los Angeles Public Recreation Plan states that in order to meet long-range local recreational standards, the City should maintain a minimum of two acres of neighborhood facilities and two acres of community recreational facilities for every 1,000 persons, or a combination of neighborhood and community facilities adding up to four acres. Under Alternative 4, the Downtown Plan Area population is projected to increase to approximately 112,000 residents, thereby reducing the ratio of parks to residents to approximately 2.18 acres per 1,000 residents. Approximately 203 acres of new parkland would be needed in the Downtown Plan Area by 2040 to meet the City's park acreage standards under Alternative 4. Under

the Downtown Plan, the population of the Downtown Plan Area would increase to an estimated 252,000 residents, thereby reducing the ratio of parks to residents to approximately 1.0 acre per 1,000 residents. Approximately 764 acres of new parkland would be needed in the Downtown Plan Area by 2040 to meet the City's park acreage standards under the Downtown Plan.

Developers of residential projects would be required to pay park impact fees, dedicate land, include outdoor amenity spaces, or pay in-lieu Quimby fees to fund new park and recreational facilities. This would partially mitigate impacts related to deterioration of facilities. However, due to the substantial population growth that would result from future development and lack of development capacity for new parks in the Downtown Plan Area, implementation of either Alternative 4 or Downtown Plan could accelerate the deterioration of existing parks in and around the Downtown Plan Area. This potential would be incrementally less for Alternative 4. As with the Downtown Plan, Alternative 4 would not be expected to result in the construction of substantial new park acreage. As with the Downtown Plan, impacts related to deterioration of parks would be significant and unavoidable.

Transportation/Traffic

As shown in **Table 5-18**, VMT per service population under Alternative 4 would not exceed the 2017 baseline condition threshold. Compared to the 2016 SCAG region condition, Alternative 4 would have lower vehicle trips per service population (2.7 versus 3.1) and lower VMT per service population (18.9 versus 35.4). Compared to the 2017 baseline condition, Alternative 4 would have higher daily vehicle trips per service population (2.7 versus 2.6), but lower VMT per service population (18.9 versus 19.6). Alternative 4 would not have the beneficial impacts to VMT of the Downtown Plan.

**TABLE 5-18 COMPARISON BETWEEN EXISTING TRAFFIC CONDITIONS FOR THE DOWNTOWN PLAN AND ALTERNATIVE 4**

| Transportation Metric | Threshold | | Downtown Plan (2040) | Alternative 4 |
|---|---|---|---|---|
| | 2016 SCAG Region Conditions | 2017 Plan Baseline Conditions | | |
| Total Daily VT | 82,283,000 | 758,000 | 1,375,000 | 1,045,000 |
| Total Daily VT per Service Population | 3.1 | 2.6 | 2.5 | 2.7 |
| Total Daily VMT | 948,656,000 | 5,767,000 | 8,842,000 | 7,372,000 |
| **Total Daily VMT per Service Population** | **35.4** | **19.6** | **15.9** | **18.9** |

**SOURCE**: Fehr & Peers, February 2019.

As with the Downtown Plan, Alternative 4 would not increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment), or result in inadequate emergency access. However, as with the Downtown Plan, freeway off ramp queuing-related safety issues could potentially arise as additional development occurs in the Downtown Plan Area. As with the Downtown Plan, this would result in significant and unavoidable impacts to freeway safety impacts. Alternative 4 includes the network enhancements and street designations identified in MP 2035. However, it does not assume amendments to the MP 2035 that are proposed as part of the Downtown Plan.

Tribal Cultural Resources

As described in Section 4.4, *Cultural Resources*, Los Angeles has a long history of Native American occupation, and any development activities that include ground disturbance have the potential to significantly impact tribal cultural resources. Effects on tribal cultural resources are only known once a specific development has been proposed because the effects are highly dependent on both the individual

development site conditions and the characteristics of the proposed activity. The Sacred Lands File search conducted for the Downtown Plan Area was positive and the Tongva ethnographic village site of Yangna is thought to be located near Union Station. Development accommodated by either Alternative 4 or the Downtown Plan may disturb areas that potentially contain tribal resources. Similar to the Downtown Plan, all future development projects under Alternative 4 would continue to be subject to existing federal, state, and local requirements and discretionary projects, subject to CEQA review would be required to comply with AB 52, which for projects relying on a [mitigated] negative declaration or an EIR, would require consultation with California Native American tribes. Implementation of **Mitigation Measures 4.4-2 (a)**, **(b)**, **(c)**, and **(d)** in Section 4.4, *Cultural Resources,* and **Measures 4.16-1(a)** and **(b)** in Section 4.16-1, *Tribal Cultural Resources*, would reduce the potential to disturb tribal cultural resources. However, this alternative would not be subject to mitigation measures proposed in the Downtown Plan. Therefore, the potential for disturbance of tribal cultural resources would be greater than under the Downtown Plan and significant and unavoidable.

Utilities and Service Systems

Implementation of Alternative 4 would involve less overall development and associated growth than the Downtown Plan. Alternative 4 would result in 74,000 fewer housing units (-56%), 140,000 fewer residents (-56%), and 27,000 fewer jobs (-9%) than would be added through 2040 under the Downtown Plan. As shown in **Table 4.17-3,** in Section 4.17, *Utilities and Service Systems***,** projected wastewater generation for the Downtown Plan Area in 2040 with implementation of the Downtown Plan. would generate an estimated 18 mgd of wastewater, which would represent about 10 percent of the HWRP excess capacity of 175 mgd. By comparison, **Table 5-19** indicates that implementation of Alternative 4 would increase wastewater generation in the Downtown Plan Area by approximately 7 million gallons per day mgd, which represents about 4 percent of the HWRP excess capacity of 175 mgd. Alternative 4 would generate approximately 61 percent less wastewater as compared to the Downtown Plan. Therefore, as with the Downtown Plan, the HWRP would have sufficient available treatment capacity to serve the Downtown Plan Area under Alternative 4. In addition, the HWRP would be able to adequately treat future project-generated sewage under Alternative 4 and the treatment requirements of the RWQCB would not be exceeded so new or expanded treatment facilities would not be needed. Expansion/replacement of Downtown Plan Area conveyance infrastructure may be needed and various facility improvements are already planned. Temporary traffic, air quality, and noise impacts associated with construction of such improvements would be within the parameters described for the Downtown Plan. Continued compliance with the City's Low Impact Development (LID) Ordinance for all new development would ensure that any future development under Alternative 2 would not increase demands on stormwater drainage facilities and or expansion of existing facilities beyond specific improvements needed for individual development projects.

With respect to water demand, per the 2015 Urban Water Management Plan, current water supplies, planned future water conservation efforts, and planned future water supplies will enable LADWP to reliably provide water that meets the demands of the City for a 25-year planning horizon (through 2040), based on SCAG's population projections. The 2015 UWMP projects an increase of 195,960 afy (38 percent) in water demand between 2015 and 2040, under single/multiple dry year conditions. As shown on **Table 5-20**, the projected net increase in water demand of 9,947 afy generated by new development accommodated by Alternative 4 would represent about 5 percent of the forecasted water demand increase through 2040. By comparison, as shown in **Table 4.17-6,** in Section 4.17, *Utilities and Service Systems*, estimated water demand for the Downtown Plan Area in 2040 with implementation of the Downtown Plan would be 25 mgd, or 28,000 afy. This represents about 14 percent of the forecasted citywide water demand increase through 2040. Alternative 4 would demand approximately 64 percent less water as compared to the Downtown Plan. Therefore, as with the Downtown Plan, adequate water supply exists to meet projected demand through the year 2040 for Alternative 4 and development of new water supplies would not be necessary. Expansion/replacement of water distribution infrastructure may be needed, but temporary traffic, air

quality, and noise impacts associated with construction of such improvements would be within the parameters described for the Downtown Plan.

**TABLE 5-19 ALTERNATIVE 4 PROJECTED WASTEWATER GENERATION**

| Land Use | Dwelling Units or Jobs | Wastewater Generation Rate (gpd/unit) | Wastewater Generation (gpd) |
|---|---|---|---|
| Single-family Residential | 6,733 du | 144.3 | 972,000 |
| Multi-family Residential | 52,361 du | 137.9 | 7,221,000 |
| Commercial | 169,955 jobs | 59.8 | 10,163,000 |
| Industrial | 51,689 jobs | 123 | 6,358,000 |
| Public Facilities | 56,795 jobs | 46.4 | 2,635,000 |
| Total 2040 with Alternative 4 Wastewater Generation | | | 27,348,513 |
| Current Wastewater Generation | | | 20,631,000 |
| **Net Change in Wastewater Generation** | | | **6,717,175** |

Notes: Wastewater generation numbers are rounded to the nearest thousand. Totals may not add up due to rounding.

gpd – gallons per day

du – dwelling units

**SOURCE:** Wastewater is assumed to be 100% of indoor water use. Per Exhibit 2D of the 2015 UWMP, indoor water use constitutes the following percentages of overall water use: Residential single family – 46%; Residential multi-family – 68%; Commercial – 76%; Industrial – 98%; and Government – 59%.Per the UWMP, per unit water demand is forecast to decline over time; the forecast 2040 rates are assumed to apply to new development.

**TABLE 5-20 ALTERNATIVE 4 PROJECTED WATER DEMAND IN THE DOWNTOWN PLAN AREA**

| Land Use | Dwelling Units or Jobs in Plan Area | Daily Water Use Rate (gpd/unit) | Daily Water Demand (gpd) | Annual Water Demand (afy) |
|---|---|---|---|---|
| Single-family Residential | 6,733 du | 313.8 | 2,113,000 | 2,367 |
| Multi-family Residential | 52,361 du | 202.8 | 10,619,000 | 11,895 |
| Commercial | 169,955 jobs | 78.7 | 13,375,000 | 14,982 |
| Industrial | 51,689 jobs | 125.5 | 6,487,000 | 7,266 |
| Public Facilities | 56,795 jobs | 78.7 | 4,470,000 | 5,007 |
| Total 2040 with Alternative 4 Demand | | | 37,064,000 | 41,517 |
| Current Water Demand | | | 28,184,000 | 31,570 |
| **Net Change in Water Demand** | | | 8,880,000 | **9,947** |

Notes: Water demand numbers are rounded to the nearest thousand. Totals may not add up due to rounding.

du – dwelling unit

gpd – gallons per day

afy – acre feet per year (1 af = 325,850 gallons)

**SOURCE:** Water demand rates were obtained from the LADWP's 2015 Urban Water Management Plan (UWMP), Exhibit2K (LADWP 2016). Per the UWMP, per unit water demand is forecast to decline over time; the forecast 2040 rates are assumed to apply to new development.

As shown in **Table 4.17-7** in Section 4.17, *Utilities and Service Systems*, the combined daily intake capacity of landfills serving the Downtown Plan Area is 45,540 tons per day and the average disposal intake is 19,143 tons per day, resulting in an available capacity of 26,397 tons per day. As shown in **Table 5-21,** implementation of Alternative 4 would generate an increase of approximately 421 tons of solid waste per day above existing conditions, which would represent about 2 percent of the total available daily capacity (26,397 ton per day) at local landfills. As shown in **Table 4.17-9** in Section 4.17, *Utilities and Service Systems*, development accommodated by the Downtown Plan would increase the amount of solid waste generated in the Downtown Plan Area by approximately 1,133 tons per day, or 413,534 tons per year, above existing conditions. This would represent approximately 4 percent of the available intake capacity of landfills serving the Downtown Plan Area. Alternative 4 would generate approximately 63 percent less waste as compared to the Downtown Plan. Based on the County of Los Angeles Countywide Integrated Waste Management Plan (CIWMP) 2018 Annual Report, sufficient permitted capacity is available to accommodate the County's long-term disposal needs under the status quo. Sufficient permitted capacity is available to accommodate the Downtown Plan Area's solid waste disposal needs. Therefore, as with the Downtown Plan, implementation of Alternative 4 would result in solid waste generation that would remain within the capacity of waste disposal facilities serving the City. Therefore, similar to the Downtown Plan, new or expanded facilities would not be needed.

**TABLE 5-21 ALTERNATIVE 4 PROJECTED SOLID WASTE GENERATION**

| Land Use | Dwelling Units or Square Feet | Annual Waste Generation Rate | Annual Waste Generation (tons) | Daily Waste Generation (tons) |
|---|---|---|---|---|
| Single-family Residential | 6,733 du | 1.17 ton/du[1] | 7,878 | 22 |
| Multi-family Residential | 52,361 du | 0.46 ton/du | 24,086 | 66 |
| Commercial | 107,372,768 sf | 3.01 ton/1,000 sf | 323,192 | 885 |
| Industrial | 125,352,077 sf | 1.24 ton/1,000 sf | 155,437 | 426 |
| Public Facilities | 36,561,904 sf | 0.93/1,000 sf | 34,003 | 93 |
| Total 2040 Alternative 4 Solid Waste Generation | | | 544,595 | 1,492 |
| Current Solid Waste Generation | | | 390,771 | 1,071 |
| **Net Change in Waste Generation** | | | **153,824** | **421** |

Notes: Waste generation (tons) was rounded to the nearest whole number. Totals may not add up due to rounding.
du – dwelling unit

Electrical and natural gas supplies are not expected to be adversely affected by development under Alternative 4, but improvements to Downtown Plan Area distribution and telecommunication facilities may be needed. Temporary traffic, air quality, and noise impacts associated with construction of such improvements would be within the parameters described for the Downtown Plan.

Overall, impacts related to utilities and service systems would be less than significant under Alternative 4, as with the Downtown Plan.

### Conclusion

Alternative 4 would include less development capacity overall and thus less growth in the Downtown Plan Area, as compared to the Downtown Plan. Nevertheless, as with the Downtown Plan, this alternative would have the potential to disturb cultural and tribal cultural resources, contaminated sites, and nesting birds and would also generate air pollutant emissions and construction noise and vibration exceeding applicable thresholds. Finally, similar to the Downtown Plan, it may lead to the deterioration of existing parks in and around the Downtown Plan Area and result in safety related impacts due to highway off-ramp queuing. Because this alternative would not be subject to mitigation measures proposed in the Downtown Plan, the level of impact would be greater than under the Downtown Plan despite the lower overall intensity of development in the Downtown Plan Area under this alternative and would have additional significant and unavoidable impacts to biological resources (nesting birds), archaeological, paleontological, hazardous (contaminated sites), and tribal resources. In addition, limiting development potential Downtown may induce higher levels of growth in other areas of the City and region that have fewer transit options and longer distances between housing, jobs, and services. As such, Alternative 4 may incrementally increase regional traffic and related air pollutant and GHG emissions.

## ENVIRONMENTALLY SUPERIOR ALTERNATIVE

CEQA requires identification of the environmentally superior alternative among the options studied. In general, the environmentally superior alternative is the alternative that would be expected to generate the fewest adverse impacts. If the No Project Alternative (Alternative 4) is identified as environmentally superior, then another environmentally superior alternative shall be identified among the other alternatives.

As shown in **Table 5-22**, alternatives 1, 2, and 4 would all incrementally reduce impacts for multiple issue areas compared to the Downtown Plan. This is because these alternatives would all reduce overall development levels in the Downtown Plan Area. However, none of these alternatives would avoid any of the significant and unavoidable impacts of the Downtown Plan. Alternative 4 would involve the lowest overall level of growth and development in the Downtown Plan Area. However, because Alternative 4 would not be subject to mitigation measures proposed in the Downtown Plan, it may result in higher greater overall impacts than the Downtown Plan for certain issues. In addition, by limiting growth in the Downtown Plan Area, Alternative 1 could cause more forecast growth and associated development to occur in other areas of the City or region that have less access to transit and longer distances between housing, jobs, and services. In this way, Alternative 4 may also result in greater overall regional VMT and associated air pollutant and GHG emissions.

Among the other alternatives, Alternative 1 would involve the least growth and development and would be subject to the mitigation measures included in this EIR. Thus, it would result in the fewest impacts in the Downtown Plan Area. Based on the ability to result in reduced environmental impacts and meet project objectives, the Reduced Development Potential (Alternative 1) is the Environmentally Superior Alternative.

**TABLE 5-22 IMPACT COMPARISON OF ALTERNATIVES**

| Issue | Alternative 1: Reduced Development Capacity | Alternative 2: Housing Redistribution | Alternative 3: Increased Development Potential | Alternative 4: No Project |
|---|---|---|---|---|
| Aesthetics | + | + | - | + |
| Air Quality | **+** | **+** | **-** | **=** |
| Biological Resources | + | + | - | **-** |
| Cultural Resources | **+** | **+** | **-** | **=** |
| Energy | + | + | - | - |
| Geology and Soils | + | + | - | **-** |
| Greenhouse Gas Emissions | + | + | - | + |
| Hazards/Hazardous Materials | + | + | - | **=** |
| Hydrology/Water Quality | = | = | = | = |
| Land Use and Planning | = | = | = | = |
| Noise | **+** | **+** | **-** | **=** |
| Population and Housing | = | = | = | = |
| Public Services | + | + | - | + |
| Recreation | **+** | **+** | **-** | **+** |
| Transportation/Traffic | **-** | **-** | **-** | **-** |
| Tribal Cultural Resources | + | + | - | **=** |
| Utilities/Service Systems | + | + | - | + |

+ Superior to the proposed project (reduced level of impact)

- Inferior to the proposed project (increased level of impact)

= Similar level of impact to the proposed project

Significant and unavoidable impacts are bolded and red. Note that for Alternative 4, impacts would not technically be "significant" under CEQA since that alternative involves continued implementation of the existing Central City and Central City North community plans, impacts are identified as "significant and unavoidable" if the physical effect associated with the alternative would be equivalent to a "significant impact" if the alternative involved a new discretionary action.

# 5.6 ALTERNATIVES CONSIDERED BUT REJECTED

Section 15126.6 (c) of the *CEQA Guidelines* requires that an EIR identify those alternatives that were considered but rejected by the lead agency because they either did not meet the objectives of the project, were considered infeasible, or would not avoid or substantially lessen one or more significant effects of the proposed project. Alternative 3 addresses increased housing development as was suggested during EIR scoping. No other alternatives were identified that would feasibly attain most of the basic project objectives but would also avoid or substantially lessen the significant effects of the project. Outside of a complete moratorium on new development, none of the impacts could be reduced to below a level of significance. Any demolition or construction activity in the Downtown Plan Area would have the potential to adversely

affect historical resources or generate significant construction-related noise. In addition, because of the Downtown Plan Area already fails to meet City park standards, any population growth Downtown would exacerbate this condition and could potentially result in significant impacts related to deterioration of existing parks. With respect to air quality VOC emissions associated with projected growth in the Downtown Plan Area under the Downtown Plan are estimated at 5,004 pounds per day, more than 90 times the 55 pounds per day VOC threshold. Moreover, as previously noted, limiting development in the Downtown Plan Area may simply divert more growth and development to other areas of the City, thus increasing the potential for similar impacts in other areas and increasing overall Citywide and regional VMT and associated air pollutant and GHG emissions.

# 6.0 OTHER CEQA CONSIDERATIONS

Section 15126 of the California Environmental Quality Act (CEQA) Guidelines requires that all phases of a project must be considered when evaluating its impact on the environment. As part of this analysis, in addition to the impact analysis done in Chapter 4 and the alternative analysis in Chapter 5, the EIR must also analyze and identify (1) significant irreversible environmental changes that would result from implementation of the Proposed Project, (2) growth-inducing impacts of the Proposed Project, and (3) any secondary impacts from the proposed mitigation measures identified in Chapter 4. These impacts are analyzed in this Chapter.

## 6.1 SIGNIFICANT IRREVERSIBLE ENVIRONMENTAL EFFECTS

Section 15126.2(c) of the CEQA Guidelines requires a discussion of any significant irreversible environmental changes that would be caused by the proposed project. Specifically, Section 15126.2(c) states:

> *Uses of nonrenewable resources during the initial and continued phases of the project may be irreversible since a large commitment of such resources makes removal or nonuse thereafter unlikely. Primary impacts and, particularly, secondary impacts (such as highway improvement which provides access to a previously inaccessible area) generally commit future generations to similar uses. Also irreversible damage can result from environmental accidents associated with the project. Irreversible commitments of resources should be evaluated to assure that such current consumption is justified.*

Generally, a project would result in significant irreversible environmental changes if any of the following would occur:

- The primary and secondary impacts would generally commit future generations to similar uses;
- The project would involve a large commitment of nonrenewable resources;
- The project involves uses in which irreversible damage could result from any potential environmental accidents associated with the project; or
- The proposed consumption of resources is not justified (e.g., the project involves the wasteful use of energy).

Resources that would be consumed as a result of implementation of the Downtown Plan and New Zoning Code include water, electricity, natural gas, and fossil fuels; however, the amount and rate of consumption of these resources would not result in significant environmental impacts related to the unnecessary, inefficient, or wasteful use of resources (see Chapters 4.5, *Energy*, and 4.17, *Utilities and Service Systems*). In addition, construction activities related to the reasonably expected development would result in the irretrievable commitment of nonrenewable energy resources, primarily in the form of fossil fuels (including fuel oil), natural gas, and gasoline for automobile and construction equipment. However, use of such resources would not be unusual as compared to other construction projects and would not susbstantially affect the availability of such resources.

With respect to operation activities, compliance with applicable building codes, as well as mitigation measures, would ensure that natural resources are conserved or recycled to the maximum extent feasible. It is also likely that in response to GHG reduction mandates, new technologies or systems will emerge, or

will become more cost-effective or user-friendly, that will further reduce the reliance of Downtown Plan Area development upon nonrenewable natural resources. However, even with implementation of conservation measures, consumption of natural resources would generally increase with implementation of the Downtown Plan and New Zoning Code due to population increases.

In summary, implementation of the Downtown Plan and New Zoning Code would involve irreversible environmental changes to existing natural resources, such as the commitment of energy and water resources as a result of the operation and maintenance of future development. However, neither the Downtown Plan nor the New Zoning Code would involve wasteful or unjustifiable use of energy or other resources, and energy conservation efforts would also occur with new construction. New development accommodated by the Downtown Plan and New Zoning Code would be constructed and operated in accordance with specifications contained in Title 24 of the California Code of Regulations and local green building requirements, as discussed in Section 4.5, *Energy*. Therefore, the use of energy related to the Downtown Plan and New Zoning Code would occur in an efficient manner.

## 6.2 GROWTH INDUCING IMPACTS

Section 15126.2(d) of the CEQA Guidelines requires that growth inducing impacts of a proposed project be considered. Growth inducing impacts are characteristics of a project that could directly or indirectly foster economic or population growth or the construction of additional housing, either directly or indirectly, in the surrounding environment. According to the CEQA Guidelines, such projects include those that would remove obstacles to population growth (e.g., a major expansion of a wastewater treatment plant). In addition, as set forth in the CEQA Guidelines, increases in the population may tax existing community service facilities, requiring construction of new facilities that could cause significant environmental effects. The CEQA Guidelines also state that it must not be assumed that growth in an area is necessarily beneficial, detrimental, or of little significance to the environment. Generally, a project is considered to result in growth inducing effects if it results in one of the following:

- The extension of infrastructure (sewer, water, etc.) to an area currently undeveloped and/or lacking adequate infrastructure, thus removing an obstacle to growth; and/or
- The provision of housing or employment to an area currently undeveloped or lacking in adequate housing or employment.

The Downtown Plan Area is an urbanized community with road, water, sewer, storm drain, and other infrastructure in place. Although the Downtown Plan would include certain utility upgrades, such upgrades are specifically intended to accommodate the growth planned for the Downtown Plan Area and would not induce growth outside the Downtown Plan Area. Rather, the Downtown Plan is specifically intended to concentrate development in an area that is already served by infrastructure in order to ensure that infrastructure is utilized efficiently and in a manner that reduces the environmental impacts of development.

As analyzed in Chapter 4.12, *Population, Housing, and Employment*, of this EIR, the Downtown Plan and New Zoning Code would accommodate substantial growth in population and employment in the Downtown Plan Area. However, such growth would not induce growth outside the Downtown Plan Area beyond what is anticipated to result from the Downtown Plan itself. To the contrary, by concentrating growth in the Downtown Plan Area, it is anticipated that implementation of the Downtown Plan would actually limit growth in other areas of the City to some degree. Because growth in the Downtown Plan Area would involve high density, mixed-use infill development in an area that is well-served by transit, it is actually anticipated to reduce per capita vehicle miles traveled (VMT) and associated air pollutant and GHG emissions relative to development in other areas of the City. Further, concentrating development in the urbanized Downtown Plan Area would generally avoid impacts to agricultural, biological, and mineral resources while

redevelopment of properties with new development built to current standards would generally improve surface water quality and reduce the potential for substantial seismic damage.

Neither the Downtown Plan nor the New Zoning Code would result in unplanned growth; rather, both components of the Proposed Project would ensure that projected growth is accommodated. In conclusion, the Downtown Plan and New Zoning Code are anticipated to satisfy a portion of the anticipated population growth in the region in an efficient manner consistent with state, regional and City policies. The Downtown Plan would be consistent with the projected growth forecast for the Los Angeles region and regional policies to reduce urban sprawl. To that end, it would efficiently utilize existing infrastructure, reduce regional congestion, and improve air quality.

# 6.3 POTENTIAL SECONDARY EFFECTS

CEQA Guidelines Section 15126.4(a)(1)(D) states that, "[i]f a mitigation measure would cause one or more significant effects in addition to those that would be caused by the project as proposed, the effects of the mitigation measures shall be discussed but in less detail than the significant effects of the project as proposed." In accordance with the Guidelines, the following provides a discussion of the potential impacts that could occur from implementation of the proposed mitigation measures.

**Downtown Plan:**

**Air Quality**

**Mitigation Measure 4.2-2** would reduce regional and local emissions generated by various construction activities, including equipment operation and truck trips, through best management practices. Implementation of this measure would have a beneficial impact on reducing air quality impacts and would not result in adverse secondary impacts. **Mitigation Measure 4.2-3** would require health risk assessment and, as necessary, limitations and design features to avoid significant health risks. This mitigation measure is a procedural actions that would not result in physical changes in the environment that could result in secondary impacts.

**Biological Resources**

**Mitigation Measures 4.3-1(a)** and **4.3-1(b)** require development projects on certain sites to conduct pre-construction bird nest surveys to ensure that sensitive species and/or habitats are not adversely affected. This mitigation measure is a procedural action that would not result in physical changes in the environment that could result in secondary impacts.

**Cultural Resources**

**Mitigation Measures 4.4-2(a)**, **4.4-2(b)**, **4.4-2(c),** and **4.4-2(d)** would provide for the recovery of any significant archaeological resources that cannot be preserved in place. These mitigation measures are procedural actions that would not result in physical changes in the environment that could result in secondary impacts.

**Geology**

**Mitigation Measures 4.6-6(a), 4.6-6(b)**, and **4.6-6(c)** would ensure that potential paleontological resources are identified and either further avoided or recovered. These mitigation measures are procedural actions that would not result in physical changes in the environment that could result in secondary impacts.

**Hazards and Hazardous Materials**

**Mitigation Measures 4.8-4(a)** and **4.8-4(b)** would require preliminary investigation for hazardous materials potential on all Downtown Plan Area excavation and grading. These mitigation measures are procedural actions that would not result in physical changes in the environment that could result in secondary impacts. Any potential remediation of contamination would be required to comply with regulations and regulatory agency oversight, which may require subsequent environmental review. Any impacts from remediation would be speculative at this time.

**Noise**

Mitigation Measure **4.11-1** involves specific construction-related measures to substantially reduce noise levels. Mitigation Measures **4.11-2(a)** and **4.11-2(b)** involve specific construction-related measures to substantially reduce vibration levels. These measures would not result in additional secondary impacts. The potential use of some measures, such as sound barriers and building designs, could affect the visual environment. However, the potential visual effects from this mitigation measure are expected to be similar to the effects that have been evaluated in the Aesthetics section of this EIR. No adverse secondary impacts would result from these measures.

**Tribal Resources**

Mitigation Measures **4.16-1(a) and 4.16-1(b)** would ensure that tribal resources are identified and either further avoided or recovered. These mitigation measures are procedural actions that would not result in physical changes in the environment that could result in secondary impacts.

**New Zoning Code:**

No Mitigation Measures were identified.

# Joe Power, AICP CEP

SENIOR PRINCIPAL

Joe Power is a Principal and Planning Manager with Rincon Consultants. He has over 27 years of experience in the planning field and has managed or primarily authored successful planning and environmental and planning studies on projects ranging from affordable housing to urban redevelopment to citywide transportation systems. Mr. Power has prepared numerous CEQA and NEPA environmental documents and is an expert in interpreting state and federal planning and environmental law, as well as in developing environmental documentation that is informative, readable, and legally defensible. He has prepared specialized technical reports on a range of planning and environmental topics, including noise, air quality, greenhouse gases, sustainability, and water supply. Mr. Power is a skilled public presenter and moderator, having facilitated public workshops for various General Plan Elements and EIRs, and conducted professional presentations at both the California and National American Planning Association conferences.

## EDUCATION

MA, Architecture and Urban Planning, UCLA Graduate School of Architecture and Urban Planning (1991)

BA, Urban and Economic Geography, University of Georgia (1985)

## AFFILIATIONS

American Planning Association

American Institute of Certified Planners # 010273

- *Certified Environmental Planner*

## DETAILED PROJECT EXPERIENCE

### DEVELOPMENT

**Los Angeles County Community Development Commission - CEQA/NEPA Review, Los Angeles County, California**
Mr. Power oversees Rincon's contract to provide as needed NEPA/ CEQA documentation and consulting services to the Los Angeles Community Development Commission. He has managed the preparation of the majority of NEPA-required environmental documentation for projects proposed under the CDBG Program within unincorporated Los Angeles County and 48 cooperating cities within the County during this timeframe. Rincon's involvement in this program has included preparation of well over 500 ERR documents prepared in compliance with 24 CFR Part 58. Mr. Power also prepares and provides technical review for the required NEPA documentation for the CDC's Neighborhood Stabilization Program (NSP).

**Program Manager, NEPA Environmental Review Services On-Call Contract, City and County of San Francisco Mayor's Office of Housing and Community Development**
Rincon Consultants is in the first year of the second consecutive five-year contract with the City and County of San Francisco's Mayor's Office of Housing and Community Development to provide as needed NEPA documentation. As part of this contract, Mr. Power has overseen preparation of several ERRs required by HUD and described in 24 CFR Part 58, including preparation of CEs and EAs. The contract also includes preparation of EISs, as appropriate.

**Project Manager, Palisades Bluffs Improvement Project CEQA/NEPA Compliance, Santa Monica, California**
Mr. Power was the project manager in charge of preparing the CEQA and NEPA documentation for the Palisades Bluffs Improvement Project for the City of Santa Monica. The bluffs extend about 1.6 miles along Pacific Coast Highway (PCH) from the McClure Tunnel northwest to the City's northern limits. Palisades Park, which sits atop the bluff, has been an important recreational and visual resource for the City for over 100 years. A Mitigated Negative Declaration (MND) was completed per CEQA guidelines and a Categorical Exemption (CE) and a series of Technical Studies were completed for NEPA. The technical studies included traffic, earth resources and

geotechnical constraints, biological and historical resources, noise and visual resources.

## PROJECT EXPERIENCE

### TRANSPORTATION

- Principal, Alamitos Avenue "Road Diet" Improvements Project Focused EIR

### DEVELOPMENT

- Over 100 NEPA EAs for affordable housing, commercial rehabilitation, and infrastructure projects, Los Angeles County CDC
- Over 50 NEPA CEs for affordable housing projects, Santa Barbara County Housing Authority
- Principal, City of Long Beach, Outlets at the Pike Initial Study, Long Beach, California (2014)
- Principal, City of Long Beach, Civic Center Supplemental EIR, Long Beach, California (2015-2016)
- Long Beach North Village Redevelopment Project EIR, City of Long Beach
- Principal, City of Long Beach, Thomas Safran Senior Housing Project EIR, City of Long Beach, California (2012-2013)
- UPS Ontario Expansion Project, Ware Malcomb
- Principal, City of Long Beach, Press-Telegram EIR Addendum, City of Long Beach, California (2012)
- Principal, City of Long Beach, Auto Nation Automobile Auction EIR, City of Long Beach, California (2012)
- Principal, City of Long Beach, Downtown Plan FEIR Long Beach, California (2011-2012)

# Shannon Carmack

PRINCIPAL/ARCHITECTURAL HISTORY PROGRAM MANAGER

Shannon Carmack is a Principal and the Architectural History Program Manager for Rincon Consultants. Ms. Carmack has more than 19 years of professional experience providing cultural resources management and historic preservation planning for large-scale and high-profile projects. She has worked throughout California in numerous sectors including local planning, development/construction, public utilities, Department of Defense, transportation, recreation, and education. Ms. Carmack prepares documentation to satisfy CEQA/NEPA, Section 106, and Local Historic Preservation Ordinances. She also provides reports and studies that are in compliance with the Secretary of the Interior's (SOI) Standards for the Treatment of Historic Properties (Standards) and the California Historic Building Code. She has developed and implemented successful mitigation for countless projects that included Historic American Building Survey (HABS) documentation, oral histories and interpretive programs. Ms. Carmack meets and exceeds requirements in the Secretary of the Interior's Professional Qualification Standards in Architectural History and History.

## EDUCATION

B.A., History, emphasis in American History, California State University, Long Beach (2007)

## SPECIALIZED EDUCATION/ TRAINING

Green Strategies for Historic Buildings, National Preservation Institute (2008)

CEQA Workshop Training, AEP (2007)

Oral History Methods, CSU Long Beach (2005)

Identification and Evaluation of Mid-20th Century Buildings, National Preservation Institute (2004)

Section 4(f) Cultural Resources Compliance for Transportation Projects, National Preservation Institute (2003)

## PROJECT EXPERIENCE

- City of Ventura – 867 East Main Street Historic Building Assessment, Ventura, California
- City of San Buenaventura Housing Authority– Cultural Resources Assessment Report for the Willett Ranch Project, Ventura, California

- Metro Crenshaw/LAX Transit Corridor EIR Cultural Resources Services; Los Angeles, California
- Olympic Boulevard and Mateo Street Improvements; Los Angeles, California
- Port of Los Angeles Berths 167-169 Rehabilitation Project; Los Angeles, California
- Metro Regional Connector Transit Corridor Project; Los Angeles, California
- Port of Los Angeles Al Larson Boat Shop Historic Assessment; Los Angeles, California
- ACE San Gabriel Trench Project Cultural Resources Services; Los Angeles County, California
- Interstate 5 Improvement Project; Cities of La Mirada, Cerritos, Norwalk, Downey and Santa Fe Springs, Los Angeles County, California

## DETAILED PROJECT DESCRIPTIONS

**Fagan Canyon Project; City of Santa Paula, Ventura County**
Served as architectural historian for project that included the redevelopment of a historic cattle ranch property. Conducted field surveys, historic research, oral histories, and prepared DPRs and a technical report that included methods, findings and an impacts assessment. The ranch residence was found to be historically significant for its design by Austen Pierpont, former owner/operator of the locally significant Pierpont Inn.

**TY Lin International, Cabrillo Blvd Rail Bridge Replacement, Santa Barbara, California**

Ms. Carmack is responsible for the preparation and management of the cultural reports and studies conducted for the project. The Cabrillo Rail Bridge Project involves pedestrian and bicycle Improvements on Cabrillo Boulevard, between US-101 and the intersection of Cabrillo Boulevard and Los Patos Way. The project will include the replacement of the UP Railroad Overhead bridge over Cabrillo Boulevard and retirement of the existing UP Overhead Bridge along with construction of a round-a-bout at Cabrillo Boulevard and Los Patos Way. The bicycle improvements will consist of a new Class 1 bike path under the new UP Overhead Bridge, connecting the existing bike path to the Beachway bike path. Rincon is providing environmental (CEQA/NEPA) and Caltrans coordination assistance on this project, including Section 106 compliance. The project is located within a City Historic District with contributing elements located within the project APE.

# Lindsey Sarquilla, MESM

SENIOR ENVIRONMENTAL PLANNER

Lindsey Sarquilla is a Senior Environmental Planner within Rincon's Environmental Sciences and Planning group. In this capacity, she is responsible for managing and preparing CEQA and NEPA documentation, as well as technical air quality, greenhouse gas (GHG) emissions, health risk, and noise impact analyses. Her experience includes a wide range of technical environmental and planning studies across the state involving land and infrastructure development, seaports, urban redevelopment, solar power facilities, oil extraction and refining facilities, landfills, general plans and specific plans, climate action plans, and other long-range planning documents. Ms. Sarquilla is experienced with a variety of air pollutant and GHG emissions models, including AERMOD, HARP 1 and 2, the CalEEMod land use emissions forecast tool, and the California Air Resources Board's Mobile Source Emissions Inventory (EMFAC). She is also experienced with the Federal Highway Administration's Traffic Noise Model and Roadway Construction Noise Model, as well as noise protocols in use by a variety of agencies, including the Environmental Protection Agency, the Federal Transit Administration, and the Department of Housing and Urban Development.

# Steven Treffers, MHP

SENIOR ARCHITECTURAL HISTORIAN

Mr. Treffers is a senior architectural historian with Rincon's Cultural Resources Group. With nearly 10 years of professional experience and a Master's in historic preservation from the University of Southern California, School of Architecture, he meets and exceeds the Secretary of the Interior's Professional Qualification Standards for History and Architectural History. He has a wide range of experience with projects requiring historic resources compliance with Section 106 of the National Historic Preservation Act, California Environmental Quality Act, and local ordinances. With extensive experience in Southern California, Mr. Treffers has overseen and contributed to numerous projects for the Los Angeles Bureau of Engineering. For these efforts, Mr. Treffers has managed and conducted historic resource surveys, and coordinated directly with state and local agencies. Both professionally and as a former commissioner on the South Pasadena Cultural Heritage Commission, Mr. Treffers has also worked closely with design teams on projects involving alterations to historic resources to ensure compliance with SOI Standards and applicable design guidelines. As a result, he has extensive experience identifying character-defining features, reviewing architectural drawings, and collaborating with local governments, stakeholders, architects, and engineers to meet project objectives while retaining those elements that convey the reason for a historic resource's significance.

## EDUCATION

M.H.P., Historic Preservation; University of Southern California, Los Angeles; 2012

Graduate Certificate Program, Architecture & Urbanism; University of Southern California, Los Angeles; 2011

B.A., European History; University of California, Santa Cruz; 2003

## TRAININGS

Section 106 Compliance Training; Society for American Archaeology 2014

CEQA Training, California Preservation Foundation; 2015

## CERTIFICATIONS/ REGISTRATIONS

Meets and exceeds requirements in the Secretary of the Interior's Professional Qualification Standards in Architectural History and History

# Hannah G. Haas, M.A., RPA

ARCHAEOLOGIST & PROJECT MANAGER

Ms. Haas is an Archaeologist at Rincon Consultants. Her responsibilities include performing archaeological and cultural resources survey, archaeological testing and monitoring, and the preparation of technical reports. Ms. Haas received her Masters of Liberal Arts and Sciences in Anthropology from San Diego State in 2017. Her research focused on California's Northern Channel Islands and historical ecology. Ms. Haas has over five years of experience working in cultural resources management conducting projects in compliance with the California Environmental Quality Act (CEQA), Section 106 of the National Historic Preservation Act (NHPA), and the National Environmental Policy Act (NEPA). She has worked on more than 130 projects and served as lead author of more than 90 cultural resources technical reports. Ms. Haas uses her academic training and professional experience to ensure that all cultural resources components of projects are satisfactorily conducted.

## PROJECT EXPERIENCE

- Cultural Resources Specialist and Report Author, Brannan-Andrus Levee Maintenance District Levee Repair Project, Isleton, Sacramento County, CA – Conducted cultural resources records search, pedestrian survey, and Native American scoping and served as primary author of a technical report. – Client: Robertson-Bryan, Inc.
- Cultural Resources Specialist, Mokelumne Trail Project, Brentwood, Contra Costa County, CA – Conducted cultural resources records search, pedestrian survey, and prepared cultural resources section of EIR addendum. – Client: Circlepoint
- Cultural Resources Specialist and Report Author, Grand Avenue Improvement Project, Oakland, Alameda, CA –As Author, prepared resource documentation and Caltrans style technical reports, including an ASR, HRER, and HPSR. The work was performed for compliance with Section 106 of the NHPA. Client: City of Oakland
- Cultural Resources Specialist and Report Author, Lakeside Green Streets Improvement Project, Oakland, Alameda County, CA - -- As Author, prepared resource documentation and Caltrans style technical reports, including an ASR, HRER, and HPSR. The work was performed for compliance with Section 106 of the NHPA. Client: City of Oakland
- Cultural Resources Specialist, Dexter Canyon Bridge Replacement Project, Santa Clara County, CA – Conducted cultural resources records search and technical memorandum. Client: Fall Creek Engineering, Inc.
- Cultural Resources Specialist, Cultural Resources Records Search for the SJSU End Zone Project, San Jose, Santa Clara County, CA – Conducted cultural resources records search and prepared technical memorandum. Client: San Jose State University
- Cultural Resources Specialist, Cultural Resource Study for the Milpitas Recycled Water Pipeline Project, Milpitas, Santa Clara County, CA – Conducted cultural resources records search, Native American scoping, and served as primary author of CEQA+ format technical report. Client: RMC Water and Environment

- Cultural Resources Specialist, 3001 El Camino Real Project, Palo Alto, Santa Clara County, California – Managed cultural resources study, conducted cultural resources records search, provided AB 52 assistance to City, and prepared technical memorandum. Client: City of Palo Alto
- Cultural Resources Specialist, 2755 El Camino Real Project, Palo Alto, Santa Clara County, California – Managed cultural resources study, conducted cultural resources records search, provided AB 52 assistance to City, and prepared technical memorandum. Client: City of Palo Alto
- Cultural Resource Specialist, Environmental Impact Report for the Bay Fair BART Transit Oriented Development Specific Plan, San Leandro, Alameda County, California – Client: City of San Leandro
- Cultural Resources Specialist, Initial Study/Mitigated Negative Declaration for the 22626 4th Street Project, Hayward, Alameda County, CA – Managed cultural resources tasks and prepared technical memorandum and Cultural and Tribal Cultural Resources sections of IS/MND. Client: City of Hayward
- Cultural Resources Specialist, Initial Study/Mitigated Negative Declaration for the Gading Road Project, Hayward, Alameda County, CA – Managed cultural resources tasks and prepared technical memorandum and Cultural and Tribal Cultural Resources sections of IS/MND. Client: City of Hayward
- Cultural Resource Specialist and Report Author, Upper Sand Creek Basin Expansion Project, Antioch, Contra Costa County, CA – Monitored grading and excavation in Sand Creek and prepared negative findings technical memorandum. Client: Top Grade Construction
- Cultural Resources Specialist, Environmental Impact Report for the City of Novato General Plan Update, Novato, Marin County, California – Prepared Cultural and Tribal Cultural resources section of EIR. Client: City of Novato
- Cultural Resources Specialist, 7701 Redwood Avenue Hotel Project, Novato, Marin County, California – Conducted Native American scoping and prepared technical memorandum. Client: City of Novato
- Cultural Resources Specialist, Residence Inn Project, Novato, Marin County, California – Conducted pedestrian survey, archival research, Native American scoping and prepared technical memorandum and cultural and tribal cultural resources sections of IS/MND. Client: City of Novato
- Cultural Resource Specialist and Report Author for the Morro Bay Harborwalk Project, Morro Bay, County of San Luis Obispo, CA – As Author, prepared resource documentation and Caltrans style technical reports, including an ASR, HRER, and HPSR. The work was performed for compliance with Section 106 of the NHPA. Client: Caltrans
- Cultural Resources Specialist, Hollister Avenue Widening Project, Goleta and Santa Barbara, Santa Barbara County, CA- As Author, prepared resource documentation and Caltrans style technical reports, including an ASR, HRER, and HPSR, and aided in the preparation of an Archaeological Resources Evaluation Proposal. Excavation at the project site is ongoing. The work is being performed for compliance with Section 106 of the NHPA. Client – County of Santa Barbara
- Cultural Resources Specialist, Clark Avenue Interchange PEAR Project, Santa Barbara County, CA – As Author, prepared resource documentation and Caltrans style technical reports, including an ASR, HRER, and HPSR. The work was performed for compliance with Section 106 of the NHPA. Client: County of Santa Barbara
- Cultural Resources Specialist, State Route 1/State Route 166 Intersection Widening and Improvements Project, Santa Barbara County, CA – As Author, prepared resource documentation and Caltrans style technical reports, including an ASR, HRER, and HPSR. The work was performed for compliance with Section 106 of the NHPA. Client: Psomas Engineering
- Cultural Resources Specialist, State Route 166 and Black Road Improvements Project, Santa Maria, Santa Barbara County, CA– As Author, prepared resource documentation and Caltrans style technical reports, including an ASR, HRER, and HPSR. The work was performed for compliance with Section 106 of the NHPA. Client: Psomas Engineering
- Cultural Resources Specialist, State Route 91 and Beach Boulevard project, Santa Ana, Orange County, CA – A Cultural Resources Specialist, conducted archaeological fieldwork and prepared Caltrans Style HRCR. The work was performed for compliance with CEQA. Client: Kimley-Horn and Associates.

Yara Fisher has led teams developing comprehensive plans and environmental documents for a variety of local, regional, and private clients. Many of these projects have focused on long range housing, transportation and infill planning efforts and their associated Program EIR. Her experience ranges from general plans, zoning ordinances, housing elements, specific plans, and climate action plans/strategies to environmental documentation and climate change mitigation strategies for a variety of private, local, and regional planning projects. Her environmental experience includes the preparation and management of program- and project-level environmental impact reports, mitigated negative declarations, and other tiered documents required under CEQA. She has been with AECOM since 1998.

**Project Experience**

City of Pasadena General Plan Implementation, City of Pasadena, CA
Ms. Fisher is assisting the City of Pasadena in preparing environmental documentation for eight Specific Plans, tiering from the prior General Plan EIR. As part of a broader team updating the Specific Plans, Ms. Fisher oversaw environmental staff and subconsultants, directing the technical work for successful completion of eight Addenda. [2019-ongoing]

Community Plans and New Zoning Code EIR, City of Los Angeles, CA
Ms. Fisher managed the preparation of Citywide program-level impact analyses for the re:code LA effort within the Downtown Community Plan EIR. Re:code LA is a program to comprehensively revise the City of Los Angeles Zoning Code. The re:code LA program will amend the text of the Los Angeles Municipal Code (LAMC) to replace the City's existing Zoning Ordinance (Chapter 1 of the LAMC) with a New Zoning Code. The new Zoning Code will be implemented through community plan updates. The New Zoning Code will include, among other

provisions, new zone classifications and revised/reorganized development standards and requirements for new zone classifications. This effort was involved extensive collaboration with staff and consultants in preparing the environmental anlaysis. (2017-ongoing)

**Los Angeles County, Housing Element,**
**Los Angeles County, CA**
As project manager, Ms. Fisher oversaw the preparation of the 2008–2014 Los Angeles County Housing Element. Working closely with Veronica Tam & Associates and numerous county staff, Ms. Fisher helped deliver a quality product on time and within budget. A huge component of this effort was identifying suitable vacant and underutilized sites to allow of the housing units needed to meet the Regional Housing Needs Assessment. In addition to a comprehensive update of all element sections, a major component of this work program was developing an organizational structure and format that complemented the draft general plan.

**UCSD Long Range Development Plan and EIR, San Diego, CA.** Principal-in-Charge of the preparation of a program-level EIR for UCSD's Long Range Development Plan (LRDP). Working closely with Campus Planning Staff, she also assisted with the drafting and formatting of the LRDP, which establishes the development and growth parameters for the campus in light of UC Regents' goals for the statewide educational system. The EIR addressed impacts associated with the Plan in light of its surrounding communities and coastal resources. The Plan and EIR included a detailed greenhouse gas emissions analysis and reduction strategy to address implementation of the LRDP. The EIR also included a VMT analysis for the years 2025 and 2035, one of the first VMT analyses prepared for a UC campus. *AEP and APA Award winning project.* [2016-2018]

City of Imperial Beach Local Coastal Program Update and Climate Action Plan, Imperial Beach, CA. Project Director for the development of the City's first Sea Level Rise adaptation framework and Climate Action Plan. This includes leading efforts to translate the City's 2016 Sea Level Rise Vulnerability Assessment into Sea Level Rise adaptation policies for the City's Local Coastal Program and General Plan Update as well as the corresponding Implementation Plan. As part of this effort, AECOM also developed a Sea Level Rise checklist for the City to guide the selection of particular adaptation strategies over time that are fiscally and economically sustainable and preserve beaches and private property. She also oversaw the development of the Negative Declaration to support the project. {2017 - 2020]

**County of San Diego Advance Planning and Environmental Services**
**San Diego County, CA**
Through an on-call contract with the County of San Diego Planning and Development Services Department, Yara prepared updated sections of the Land Development Code related to the County's affordable housing and density bonus programs. Through an on-call with Department of General Services she also assisted the County with obtaining entitlements for an affordable housing community. The site was a commercially zoned surplus County property located within the City of San Diego within a Transit Priority Area and Community Commercial Core. The goal was to entitle the site and prep it through demolition activities to allow an affordable housing developer to be able to process a future affordable housing project ministerially through the City of San Diego. She also oversees adjunct staffing services for a variety of staff working on efforts ranging from Code Compliance to preparation of the Alpine Community Plan Supplemental EIR.

**City of San Marcos, General Plan, Zoning Ordinance, and Program EIR, San Marcos, CA**
As project manager, Ms. Fisher led a team of community outreach specialists, sustainability planners, and environmental analysts in a comprehensive update to this general plan and zoning ordinance. The program included an extensive public outreach program, including a website, newsletters, a General Plan Advisory Committee, extensive stakeholder engagement with Palomar College and CSU San Marcos, youth outreach, and public workshops. The land use alternatives process was informed by the AECOM's Sustainable Systems Integration Model (SSIM), which helped highlight key sustainability factors. As a tandem process, the Zoning Ordinance was also updated to reflect a form-based approach to development in targeted mixed use areas. Ms. Fisher also led the Program EIR. The General Plan won a local and State APA award for comprehensive planning for a small jurisdiction. [2010 – 2013**]**

University Innovation District (UID). Chula Vista, CA. Strategic CEQA Advisor for HomeFed, who was proposing a re-envisioned University Innovation District in co-operation with the City of Chula Vista. The UID provided a flexible zoning approach to developing a mix of campus, housing, and industrial uses. CEQA guidance included an evaluation of options for tiering from three previously certified environmental impact reports within the UID area. [2020]

**Port of San Diego Master Plan Update, San Diego, CA.** Project Manager for the Port Master Plan update. Ms. Fisher is

leading a team of community planners, economists, urban designers, coastal policy planners, and mobility experts to comprehensively update the Port's Master Plan. This work program builds upon an extensive stakeholder and strategic visioning process with the intent of developing a modern, streamlined Port Master Plan document to meet Coastal Act requirements as well as facilitate future project implementation. The updated Plan includes refined land and water uses as well as Baywide and District-level policies to increase coastal access and recreation opportunities consistent with the District's goals. A unique aspect of this effort was developing a dynamic model to plan and evaluate scenarios within each of the Districts ten Planning Districts. [2015-2017]

**Civic San Diego, Environmental Services, San Diego, CA**
Project manager and staff liaison for the processing of environmental projects for Civic San Diego. Primary tasks include the preparation of CEQA secondary studies, which tier off of the previously adopted master EIR and subsequent EIR for redevelopment in downtown San Diego. Other environmental documentation and general environmental consulting services were also provided, ranging from CEQA exemptions, revised secondary study content and format, and addendums to previously certified EIRs, including the greenhouse gas analysis and Addendum for the Ballpark Village project, a multi-use development oriented to Petco Park in downtown San Diego. Since 2003, Ms. Fisher has assisted Civic San Diego in the processing of more than 100 publicly and privately initiated projects. [2003 – 2019]

**City of La Mesa GHG Inventory, CAP, and General Plan EIR**
Project Manager for a unique and collaborative shared work approach with City staff preparing an updated GHG inventory, CAP, and Program EIR for their Centennial General Plan. The work program included an update to the previously prepared International Council for Local Government Initiatives (ICLEI) GHG inventory, making refinements to the municipal operations assumptions as well as addressing communitywide emissions generated by vehicular traffic, energy, and water use. The inventory was used to refine General Plan policies related to the City's sustainability goals as well as support the GHG emissions analysis within the Program EIR. The Program EIR covered all environmental topics and was completed in a cost efficient manner using a mix of AECOM and City staff resources. The Plan and Program EIR were unanimously approved/certified with no legal challenge to either document. Following adoption of the General Plan, Ms. Fisher assisted the team with development of the CAP and a Supplemental Focused EIR. [2012-2018]

**City of San Diego, Old Town and Midway Community Plan Updates and Program EIR, San Diego, CA**
Ms. Fisher led parallel updates to the Old Town and Midway Community Plans. In the heart of San Diego, these Community Plan areas are within the coastal zone and include regional destinations such as Lindbergh Field, Old Town Historic State Park, and the Sports Arena. Transportation and transit planning, creating linkages to historic resources and open spaces, and balancing regional needs with those who live and work in the areas are key considerations in the updates of these Community Plans. The team for the Community Plan updates and EIR included outreach specialists, urban designers, sustainability planners, land planners, historic designers, mobility experts, and environmental resource specialists. The marriage of these specialties afforded a comprehensive approach to planning and environmental review for these two important areas of San Diego. [2010 – 2018**]**

**City of West Hollywood General Plan Noise Element, CAP, and Program EIR**
Project Manager for completion of the General Plan Noise Element, Climate Action Plan and Program EIR for the City of West Hollywood's updated General Plan. The team coordinated closely with City staff and their consultant team to complete the City's first CAP as well as a comprehensive Program-level EIR for the two planning documents. The General Plan, CAP, and EIR were unanimously approved by the decision-makers and no legal challenge was brought. [2009-2013]

**SANDAG RCP and RTP/SSCS Planning And Environmental Services, San Diego, California**
For many years, Ms. Fisher has provided a variety of services in support of SANDAG's Regional Comprehensive Plan (RCP) and Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) efforts. She was Project Manager for the Program EIRs for the most recent RCP, as well as the two most recent RTP/SCS documents. The RTP/SCS EIRs provided a program-level analysis of impacts related to regional growth and multi-modal transportation improvements for the entire San Diego region. Impacts were detailed for three separate time periods – 2020, 2035, and 2050. In response to input received from the public and decision makers throughout development of the RTP/SCS and EIR, the EIR also provided an extensive analysis of alternatives to the project. To meet statutory deadlines, development of the EIR was fast-tracked once the preferred RTP/SCS was established.

Recently, Ms. Fisher assisted SANDAG in updating the project evaluation criteria and plan performance measures for San Diego Forward. The goal of this work effort is to identify criteria and measures that best allow the public and decision makers to evaluate how well regional plan alternatives and the preferred plan meet the agency's established objectives.

Yara was also Project Manager for the SANDAG TOD Implementation Strategy. This work effort involves identifying key factors that affect the viability and ultimate success of TOD, with case studies both locally and nationally. The goal of this effort is to identify prioritized actions for SANDAG and its member agencies to implement that will facilitate TOD. These collaborative processes with SANDAG staff have provided Ms. Fisher deep knowledge of the SANDAG region's environmental, political, and planning context, as well as an understanding of the resources and tools available to analyze land use, transportation, and environmental impacts throughout the region. [2008 – 2016]

**Town & Country Hotel and TOD Master Plan and EIR, San Diego, CA**

Project Director and EIR task manager for the revitalization of the Town & Country hotel and mixed use transit oriented development project located in Mission Valley, San Diego. The project included the development of a comprehensive Master Plan, supporting technical studies, and a project-level EIR for the Town & Country project. The project reconfigured the existing convention center and hotel to included 700 units, nearly 200,000 square feet of convention space, and incorporated 4.3 acres of park and 840 residential units to complement the nearby amenities of Fashion Valley Transit Center and San Diego River. [2014-2018]

**County of San Diego San Dieguito LCP, LUP, and IP.**

Project Director for the San Dieguito Local Coastal Program, Land Use Plan, and Implementation Plan for the County of San Diego. With this effort, Ms. Fisher oversaw a team of coastal and resiliency planners to update the existing 2011 LCP in conformance with the California Coastal Act to reflect current circumstances and new scientific information, including new understandings and concern for the effects of climate change and sea-level rise. The project included analysis of the portion of the unincorporated County located within the Coastal Zone (CZ) and the development of related policy for: land use and development standards, public access and recreation, scenic/visual resources, archaeological/paleontological resources, water quality, agricultural resources, sensitive habitats, climate change, hazards, and steep slopes. Concurrently, AECOM also worked closely with County staff to develop the Implementation Plan for the LUP.

**City of Imperial Beach, Commercial/Mixed-Use Zoning Review, Zoning Amendments and EIR, Imperial Beach, CA**

Project manager and advisor for a review of the commercial zoning and mixed-use overlays within the city's coastal zone, including preparation of a Program EIR. The city initiated this project because recent mixed-use projects have not achieved city design and economic development goals. The team was composed of urban designers, mobility/parking planners, zoning experts, environmental analysts, and economists to assess the existing zoning and development trends to craft hybrid traditional and form-based zoning amendments that better achieve the community's vision. [2008 – 2013**]**

**Chollas Triangle Community Plan Update EIR San Diego, CA**

Managed the preparation of a program-level EIR for the Mid-City Communities Plan—Chollas Triangle, General Plan Amendment and Rezone project. The project proposed a General Plan amendment, Mid-City Communities Plan amendment, and a rezone to implement a new land use designation within Chollas Triangle to allow for the site to develop as a mixed-use neighborhood village. The project also included the vacation of a roadway to allow for development of passive park space adjacent to Chollas Creek. (2014-2015)

**City of Long Beach, Downtown Community Plan and Program EIR, Long Beach, CA**

Project advisor who assisted in developing overall approach and development standards for this plan, as well as overseeing a Program EIR to facilitate tiering. The Community Plan combines form-based design guidelines and development standards intended to facilitate and incentivize revitalization in the downtown. The framework for development focuses growth and density near transit, while ensuring transition areas to the surrounding communities. A graphic approach to design guidelines and standards are provided to illustrate key components of a pedestrian-friendly downtown, including topics such as building massing, mixed-use development, and the design of street frontage and streetscape. A key component of this process is the development of a Program EIR that will ensure a streamlined environmental process for future development. [2007 – 2013**]**

**Carson Shell Revitalization Project Specific Plan Carson, CA**

Project manager for the environmental documentation for the Carson Revitalization Project located in the City of Carson. The 448 acre property is the site of a former refinery and the underutilized areas of the property have been planned for revitalization with new light industrial and business park land uses coordinated with continuation an expansion of some of the current onsite fuel distribution operations. The AECOM team, working closely with Shell and the City of Carson, prepared a Specific Plan identifying six separate revitalization areas for future retail, industrial and manufacturing land uses. Also included was an expansion of the petroleum and renewable fuel storage and distribution capacity and a site for a solar power generation facility. [2009-2015]

**St. Paul's Cathedral Redevelopment Project EIR, San Diego, CA**
Project manager for the development of a project-level EIR for the St. Paul's Cathedral Redevelopment project, which rehabilitated and expanded the historic St. Paul's Cathedral and developed two residential towers on adjacent parcels next to Balboa Park. Key issues addressed in the EIR included historic resources, aesthetics and light and glare, and traffic. [2009-2011]

**Irvine Planning Areas 1, 2, and 9 EIR, Irvine, CA**
Project manager responsible for peer review services, overall project management, and document preparation and distribution of a program EIR. This work program also involved community outreach such as public noticing, the scoping meeting, and a community workshop. The project consisted of a general plan amendment and zone change for Irvine Planning Areas 1, 2, and 9. Total development proposed was 4,310 dwelling units and 200,000 square feet of community commercial development in combined Planning Areas 1 and 2. The project also included a transfer of dwelling units from Planning Area 1 to Planning Area 9 to replace approximately 2.6 million square feet of research and industrial development in Planning Area 9. All CEQA Guideline issue areas were addressed in the technical reports and EIR. [2004**]**

**Grant-Tucker Properties/County of San Diego, Albertsons EIR, Alpine, CA**
Assistant project manager who prepared an EIR for the proposed Alpine Village Center (Albertson's) located in the unincorporated community of Alpine. The proposed project involved the construction of an approximately 73,000-square-foot neighborhood commercial shopping center complex on an approximately 9.65-acre site. The project includes a supermarket, retail shops, fast-food restaurant, service station, and mini mart. Issues examined in the EIR were land use, traffic, air quality, noise, biological resources, public services and utilities, visual aesthetics, and hydrology/water quality. During this EIR program, acted as primary author and coordinator between county staff, the client, and subconsultants. [1999– 2001**]**

**City of Laguna Hills, General Plan Update and Program EIR, Laguna Hills, CA**
Ms. Fisher managed the general plan update, Housing Element, and Program EIR. Laguna Hills is a master planned community in Orange County, California, focusing on opportunities for strategic infill development that will help the city achieve its community-building and economic development goals. The city is particularly interested in increasing community interaction, encouraging healthy lifestyles, and establishing a distinct sense of place. Ms. Fisher leaded the team of land planners, economic/ fiscal consultants, circulation experts, urban designers, and environmental specialists to identify key opportunity areas for redevelopment and community enhancement that will help the city achieve its vision for the future. She also lead the preparation of the Program EIR and its associated technical studies. [2007 – 2009**]**

**City of Downey, Zoning Ordinance, Downey, CA**
Project manager who assisted in comprehensively updating the zoning ordinance. A key component of this work program was drafting regulations and incentives to support community sustainability. In addition to developing new mixed-use regulations, the code addressed small wind generators, solar access, permeable paving, community gardens, farmers markets, tree preservation, and green roofs. [2009**]**

**City of San Diego, General Plan Program EIR, San Diego, CA**
Ms. Fisher assisted the city in preparing a program EIR analyzing the impacts associated with adoption and implementation of the city's updated general plan. As part of this role, Ms. Fisher oversaw multiple AECOM and city staff in the preparation of each section of the EIR. She also provided third-party review of sections drafted by city staff, providing overall strategy and direction for preparing a legally defensible Program EIR. Two important components of this work program were assisting with the development of a program-level analysis and mitigation that reflected the city's many policies, programs, and implementation plans, and drafting global warming analysis and mitigation that reflected a balance

between the city's and Attorney General's goals for global warming analyses. [2007 – 2008**]**

**City of Salinas, Zoning Ordinance, Salinas, CA**
Assistant project manager and primary author who assisted the city in comprehensively updating its zoning ordinance to reflect current city policy and administrative procedures, new technology, and changes in state and local laws. A major component of this work program was drafting New Urbanism regulations and a Transfer of Development Rights ordinance to reflect the goals and polices of a recently updated general plan. Drafting of the New Urbanism regulations and design standards included extensive community outreach and a hybrid traditional/form-based approach to development regulations. [2005**]**

**City of El Centro, Zoning Ordinance, El Centro, CA**
Project manager for an update to the City of El Centro's Zoning Ordinance. A primary goal of the work program was to provide consistency between the newly updated general plan and the zoning ordinance. Other aspects of the work program included creating a more readable and user-friendly document that included updated terms and recent changes to state law. Ms Fisher was responsible for leading public brainstorming and study sessions to ensure adequate input was received from the community and decision makers. As part of the zoning ordinance update, the city's sign ordinance was also revised. [2004 – 2005**]**

**City of Richmond, Zoning Ordinance, Richmond, CA**
Project advisor for a comprehensive update to this zoning ordinance. Ms. Fisher's role in this work program involved a detailed and critical review of the city's zoning ordinance and several specific plans to determine the appropriate approach for meeting the city's goals. As part of the community outreach process, opportunities for form-based zoning were identified in several distinct areas of the community. Ms. Fisher oversaw these efforts and provided technical review and quality assurance for the prepared documents. [2005]

**City of Rancho Santa Margarita, Zoning Ordinance, Rancho Santa Margarita, CA**
Project manager and author of the City of Rancho Santa Margarita's first zoning ordinance. Preparation of the ordinance involved drafting regulations that improved upon the numerous existing planned community texts, and existing codified and un-codified ordinances. The ordinance is user-friendly with liberal use of illustrations to clarify terms, development standards, and zoning concepts. The document establishes consistent, effective administrative procedures using graphic charts and provides highly illustrative examples of planning and design standards reflecting the city's general plan vision. [2003**]**

**City of Aliso Viejo Zoning Ordinance, Aliso Viejo, CA**
Project manager and primary author of the City of Aliso Viejo's first Zoning Ordinance. Preparation of the zoning ordinance involved simplifying regulations and land use categories from numerous planned community texts. The ordinance also addressed several unique environmental conditions, including location within the coastal zone, high fire hazards areas, scenic corridors, and flooding. [2003**]**

**City of Holtville, Zoning Ordinance, Holtville, CA**
Primary author of an updated zoning ordinance for the City of Holtville in Imperial County. The update objectives were to ensure consistency with the city's general plan, meet requirements of California planning and zoning law, and provide land development regulations that ensure high-quality future developments. [2000**]**

**City of Long Beach, Framework Element, Long Beach, CA**
Long Beach is undertaking a general plan update with a focus on establishing integrated development strategies for infill opportunity areas. At the heart of the effort will be a framework that incorporates citywide mobility, urban design, sustainability, and preservation strategies. The main component of this framework is context sensitive, form-based place types that guide desirable development types and intensities to appropriate opportunity areas. As urban and environmental planner, Ms. Fisher primarily worked on developing an innovative implementation program that kept the Framework Element at the forefront of all major planning decisions. [2008**]**

**City of Seaside, General Plan and EIR, Seaside, CA**
Assistant project manager for this general plan program, responsible for coordination of the general plan update, Housing Element, and preparation of the associated EIR. Located in Monterey County, Seaside has a population of approximately 32,000 residents and now includes about 6.2 square miles of the former Fort Ord military base. The acquisition of the Fort Ord property brought new opportunities and challenges for the coastal community that had to be addressed by the updated general plan. A primary purpose of the general plan was to comprehensively address issues, opportunities, and constraints facing both the established portion of Seaside and the newly acquired portions of the former Fort Ord military base. Along with the required elements, the general plan program focused on redevelopment/revitalization, urban design, and economic

development for areas within the older portion of the community, Seaside Proper. HCD certified the 2002–2007 housing element. [2006]

**City of San Juan Capistrano, General Plan and EIR, San Juan Capistrano, CA**
Project planner and coauthor who assisted in the preparation of a general plan update and EIR for the historical community of San Juan Capistrano in South Orange County. The program included a substantial community participation and vision building component. The revised plan includes the seven mandatory elements required by state law, as well as several optional elements: cultural resources, community design, growth management, parks and recreation, public facilities, and flood plain management. Using ArcView and other computer techniques developed by P&D, land use and circulation components were carefully analyzed and matched. Orange County APA Award-Winning Project. [2001 – 2002]

**City of Salinas, General Plan and EIR, Salinas, CA**
Project planner and coauthor of a general plan and associated program EIR for a compact city surrounded by land in agricultural production. To address substantial growth pressures and the city's interest in preserving agricultural land, the Salinas General Plan program included a substantial community participation program to identify goals, policies, and a preferred land use plan, which ultimately supported more compact, traditional neighborhood development patterns. Major issues addressed in the general plan and analyzed in the EIR included agricultural preservation, compatibility between agricultural and urban development, community design and livability, water supply and quality, and the conservation of open space and natural resources. [2000 – 2006]

**City of Rancho Santa Margarita, General Plan and EIR, Rancho Santa Margarita, CA**
Project planner and coauthor of the first general plan for the newly incorporated City of Rancho Santa Margarita, the 33rd city in Orange County. With a population of about 42,300, Rancho Santa Margarita consists of several pre-incorporation large-scale planned communities. The general plan includes innovative planning policy and programs designed to actively manage the community's future and ensure its sustainability. Also one of the primary authors of the city's first HCD-certified housing element and program EIR. [2000 – 2002]

**City of Aliso Viejo, General Plan and EIR, Aliso Viejo, CA**
As a project planner, Ms. Fisher assisted with project start-up for the first general plan for the City of Aliso Viejo. Her responsibilities included preparation for and leading of community meetings, leading the visioning process, and helping design the format and content for the general plan. Ms. Fisher also provided peer review of the planning document and associated EIR. Orange County APA Award-Winning Project. [ 2001 – 2003]

**City of San Jacinto, General Plan and EIR, San Jacinto, CA**
Project manager and coauthor of an updated general plan, housing element, and associated program EIR for the City of San Jacinto located in Riverside County. A major issue addressed in the general plan and analyzed within the EIR was traffic and circulation, as several alternative alignments for State Route 79 were considered. Other issues analyzed were land use, prime agricultural resources and Williamson Act lands, biological resources, historical resources, and aesthetics. The housing element was successfully certified by HCD while achieving the city's goals for maintaining its rural character. [2002 – 2004]

**City of Los Altos, General Plan and Mitigated Negative Declaration (MND), Los Altos, CA**
Project planner and environmental analyst who assisted in the preparation of an updated general plan for the City of Los Altos in Santa Clara County, as well as the associated MND. The community of Los Altos is concerned to maintain and enhance its quality of life and create a more livable city. The team included Dan Burden of Walkable Communities and focuses on how the quality of life and livability can be improved by creating safe and convenient local access throughout the city with improvements to the walking and bicycling system, as well as through traffic calming. [2000]

**Padre Dam Municipal Water District, Riverview Water District, Lakeside Water District Upper San Diego River Municipal Service Review (MSR)/Sphere of Influence (SOI) Update/Reorganization Study, San Diego County, CA**
Project manager for this project, which involved a detachment of the Lakeside and Riverview districts from Padre Dam and subsequent reorganization to join Lakeside and Riverview Water districts into one successor agency. The studies required approval of the districts and the San Diego Local Formation Commission. [2003 – 2005]

**City of Salinas, Boronda Crossing Precise Plan, Salinas, CA**

Project manager who helped the City of Salinas successfully complete a revised precise plan for a 41.5-acre property. The purpose of the amended precise plan was to remove auto-related restrictions and allow a general retail shopping center. Coordinated the effort so that the precise plan comprehensively addressed land use, design, engineering, and infrastructure requirements for developing the site with a maximum of 540,000 square feet of retail uses, including restaurants, big box retail, and auto dealerships. Primary issues addressed include drainage/hydrology, compatibility with surrounding uses, circulation, and public services. [2005**]**

**Westmount Properties/DD&E, Calexico Specific Plans, Calexico, CA**
As project manager, provided direct oversight of the preparation of three Specific Plans (Las Ventanas, Los Lagos, and Rancho Diamante) on parallel processing tracks through Calexico. Combined, the three Specific Plans provided the planning tools necessary to develop 1,746 acres of land with approximately 7,200 housing units, regional- and neighborhood-serving commercial, schools, parks, and other public facilities and infrastructure. [2005 – 2007**]**

**Westmount Properties/DD&E, Waterford/ Anderson Specific Plan, El Centro, CA**
Project manager for this Specific Plan, which established the framework for development of 1,056-acre area within the City of El Centro's Sphere of Influence and in proximity to the Imperial Valley Mall. The proposed Specific Plan included land use, design, and infrastructure standards to allow the development of a pedestrian-friendly community with 5,500 dwelling units, including age-restricted units. [2005**]**

**County of San Diego Department of Public Works, Ramona Air Center EIR, Ramona, CA**
Ms. Fisher was project manager for a project-level EIR analyzing the impacts of a proposed public/private aviation facility within the Ramona Airport Master Plan area. Ramona Airport is a 362-acre facility owned and operated by the County of San Diego Department of Public Works that averaged 165,000 flight operations in 2007. The proposed public and private aviation uses required an amendment to the Airport Layout Plan and a thru-the-fence agreement with the Federal Aviation Administration. The EIR analyzed all environmental issue areas identified in CEQA Guidelines Appendix G. [2006 – 2010**]**

**City of Lake Forest, Road Landscape and Improvement Project EIR, El Toro, CA**
Project planner who assisted in completing a second-tier EIR for improvements to El Toro Road based on the earlier first-tier EIR prepared for the El Toro RDA Specific Plan. This EIR focused on environmental impacts (both construction and operational impacts) and necessary mitigation for planned improvements to El Toro Road segments and interchanges. Specific environmental issues analyzed were land use and planning, traffic/circulation, air quality, noise, hazardous materials, geotechnical, water quality, drainage, aesthetics, and public services and utilities. [2003**]**

**City of Santee, Trolley Square Commercial Center EIR, Santee, CA**
Project environmental analyst and primary author of an EIR for a commercial and entertainment center of approximately 360,000 square feet located in the Santee Town Center. The project was developed around a light rail and bus station and included a 24-screen theater complex, retail, restaurants, a 30,000-square-foot public library and up to 100 units of housing for older adults. Major issues analyzed in the EIR were traffic/circulation and public transit operations, land use, compatibility, flight safety and noise from a nearby airport, air quality, biology, geology/soils, and hydrology. [2000– 2001**]**

**City of Santee, Square Revised EIR, Santee, CA**
Project planner who prepared a revised EIR to address the revisions to the proposed Santee Trolley Square project. The major revision to the project was the removal of a formerly proposed 20-screen multiplex theater and replacement with two large retail anchors, increasing the overall square footage of the project. The revised project included a commercial center anchored by a 126,000-square-foot Target with a 9,350-square-foot garden center. An 86,000-square-foot major retail pad is also proposed for Kohl's. An additional 165,143 square feet of retail uses and 43,000 square feet of restaurant uses are proposed. A 30,000-square-foot city library is also proposed. Issues addressed in the EIR included land use, traffic, noise, air quality, biology, geology, hydrology/water quality, and public services and utilities. [2001– 2002**]**

**County of San Diego, Valley Center Septic Moratorium/ Policy I-78 Amendment EIR, San Diego County, CA**
Project environmental analyst who assisted in the preparation of a program EIR for a 14,000-acre area in the Valley Center portion of San Diego County. The program EIR evaluated the impacts of lifting a 20-year sewer moratorium, in addition to amending existing county policies for the provision of small

wastewater (package) treatment plants and septic systems. Coordinated with P&D's GIS mapping department to prepare quantified buildout assumptions and analysis. Issues addressed in the EIR included land use, circulation, noise, biology, archaeology, water quality, public services/facilities, growth inducing, and cumulative effects. [1998 – 2000**]**

**County of San Diego, Environmental Services, San Diego County, CA**
Project environmental analyst who provided general environmental services to the County of San Diego to assist its Department of Planning and Land Use with processing of land use applications. These land use applications included subdivision maps, conditional use permits, variances, and others. Environmental documentation included initial studies, mitigated negative declarations, exemptions, and other county-required materials. [1998 – 2000**]**

**City of Escondido, Promenade Center/Citracado Middle School EIRs, Escondido, CA**
Project environmental analyst and primary author of EIRs for two closely related, but separate projects. The first project involved redevelopment of the existing 24-acre Del Dios Middle School site at I-15 and Valley Parkway in Escondido into the second phase of the Promenade Shopping Center. With more than 260,000 square feet of floor area, Promenade II will include either traditional retail uses or a multiscreen theater complex with ancillary uses. Critical environmental issues included traffic, air quality, noise, and aesthetics. The second project involved development of the 1,200-student Citracado Middle School by the Escondido Union School District as a replacement for the Del Dios Middle School. The new school was proposed to be located at Del Dios Highway and Citracado Parkway on an undeveloped 34.2-acre site. Critical issues analyzed in the EIR included compatibility with surrounding residential uses, biological and archaeological resources, grading, noise, and traffic. [2000**]**

**City of Carlsbad, Oaks North Specific Plan, Carlsbad, CA**
Coauthor of an EIR for a project involving three major components:

- Development of the Carlsbad Oaks North Specific Plan
- Construction and operation of a 1.3-mile-long extension of Faraday Avenue (a four-lane arterial roadway connecting the cities of Carlsbad and Vista)
- Construction and operation of an 11,700-foot-long segment of the South Agua Hedionda Trunk Sewer

The specific plan proposes industrial uses and supporting infrastructure on a 414-acre site. The project will impact sensitive biological habitats including coastal sage scrub, scrub oak chaparral, southern coast live oak, riparian forest, and wetlands. Impacts to these habitats require permitting from the US Army Corps of Engineers, US Fish and Wildlife Service, and California Department of Fish and Game. A key component of the work program is a proactive approach to identify the least damaging alternatives for the roadway and sewer as required by section 404 of the Clean Water Act. Issues addressed in the EIR included biological resources, cultural resources, hydrology/water quality, traffic/ circulation, land form alternation, geology/soils, noise and air quality. [1999 – 2000**]**

**City of Carlsbad, Municipal Golf Course EIR, Carlsbad, CA**
Project environmental analyst who assisted in the preparation of the EIR for the Carlsbad Municipal Golf Course. Located on approximately 350 acres of land west of Palomar Airport and east of the LegoLand theme park, the project includes an 18-hole championship course, 22,000-square-foot clubhouse, driving range, shooting range (for law enforcement personnel), 6 acres of golf-related commercial, and approximately 11 acres of light industrial. Environmental issues addressed in the EIR included biological resources, traffic/circulation, air quality, hydrology/water quality, water resources, public services and utilities, cultural resources, landform alteration, electromagnetic fields (EMF) hazards from overhead electrical transmission lines, and agricultural resources. [1999 – 2000**]**

**City of Escondido, General Plan Update EIR, Escondido, CA**
Project environmental analyst who assisted in the preparation of a program EIR. The general plan update involved a combination of private requests for land use changes on specific properties, consideration of land use alternatives initiated by the city council, amendment of several quality-of-life standards for city facilities, and miscellaneous policy revisions. The EIR was prepared in a format to allow flexibility for decision makers and in selecting any combination of general plan amendments. The EIR was completed on a fast-track schedule to allow the city to place the amendments on the November 2000 ballot for citizen approval. [1999 – 2000**]**

**County of San Diego, North Edgemoor Initial Environmental Study, Santee, CA**
Project environmental analyst who prepared an Initial Environmental Study for the county-owned North Edgemoor

property. The property is approximately 33 acres and is the potential future site of a county-run skilled nursing hospital and senior housing facility. To obtain state funding for the project, the county was required to complete an application package that included an assessment of the feasibility of developing the project at that location with respect to environmental constraints. Primary author of a detailed initial environmental study of the property focusing on biological resources, cultural resources, traffic/circulation, noise, land use, geology, hydrology, and hazardous materials. The document was prepared on a fast-track (6-week) schedule to meet the state's application deadline for funding. [2000]

**Los Angeles County, Housing Element, Los Angeles County, CA**
As project manager, Ms. Fisher oversaw the preparation of the 2008–2014 Los Angeles County Housing Element. Working closely with Veronica Tam & Associates and numerous county staff, Ms. Fisher helped deliver a quality product on time and within budget. In addition to a comprehensive update of all element sections, a major component of this work program was developing an organizational structure and format that complemented the draft general plan. [2008]

**City of Carmel-by-the-Sea, Housing Element, Carmel, CA**
Project manager who coordinated the preparation of the 2002–2007 Housing Element. Carmel is a small coastal community of 5,000 residents located in Monterey County. Because limited land is available for additional residential development, the city was particularly interested in using second units and residential units located above commercial development to meet its regional housing need allocation. To assist in this task, AECOM assisted in the preparation, coding, and analysis of two separate surveys of commercial and residential property owners to identify the rental structure and potential incentives for property owners to provide residential units above commercial and/or second units. [2001 – 2002]

**City of Yuma, Consolidated Plan/AI, Yuma, AZ**
Project manager who coordinated the preparation of a Consolidated Plan and Analysis of Impediments to Fair Housing choice (AI). The project also involved coordination with the Housing Element. The Consolidated Plan included housing and community development needs assessment, a 5-year strategy to address the identified needs, and a 1-year action plan to allocate Community Development Block Grant/Home funds. To identify needs and housing conditions in the community, assisted in the preparation, implementation, and analysis of a week-long windshield survey of housing, property maintenance, and infrastructure conditions. [2000]

**San Diego County, Consortium Consolidated Plan, San Diego County, CA**
Project planner who assisted in the preparation of a Five-Year Consolidated Plan for the San Diego County Consortium. The consortium consists of seven participating cities in the unincorporated portion of the county. The consortium receives approximately $6.5 million in Community Development Block Grant funds, $3.6 million in HOME funds, and $230,000 in ESG funds. To comply with Housing and Urban Development regulations, the consortium is required to prepare a 5-year Consolidated Plan identifying its housing and community development needs and the planned use of the funds in addressing the identified needs. P&D conducted a resident survey and a service provider survey to solicit public input on needs and preferred uses of the funds. [2008]

**City of Corona, Housing Element Update, Corona, CA**
Coauthor of an update to the City of Corona's Housing Element to cover the periods 2000–2005 and 2005–2010. The work programs included a review and update to background information, population projections, dwelling units and market data, accomplishments, the Regional Housing Needs Assessment and evaluation of residential sites, and an update to the housing plan. [2000 – 2005]

**City of National, City Consolidated Plan, National City, CA**
Primary author of the 5-year Consolidated Plan and Action Plan for National City for the use of Community Development Block Grant and HOME funds. The Consolidated Plan included an assessment of housing and community development needs in the city, and a 5-year strategy to address the needs. The One-Year Action Plan detailed the city's specific actions to address the priority needs. [2000]

**City of La Mesa, Consolidated Plan, La Mesa, CA**
Project planner and primary preparer of the La Mesa Consolidated Plan for the 2000–2005 period. The city receives Community Development Block Grant funds annually from Housing and Urban Development and participates in the San Diego HOME Consortium. The Consolidated Plan preparation was built on the Housing Element. [2000]

**Imperial County, Housing Element, Imperial County, CA**
Project planner who coordinated the update program and also served as coauthor of the county's 2000–2005 Housing Element. This update of the county's Housing Element included

a comprehensive update of the housing needs assessment as the basis for the element's program strategy for expenditure of housing funds. Existing programs were also revised and augmented to meet identified housing needs. [2000**]**

**City of Holtville, Housing Element, Imperial County, CA**
Project planner who prepared the 2000–2005 Housing Element for the City of Holtville, a community of 5,500 in the Imperial Valley. Prepared an update of the city's zoning ordinance concurrently, coordinating changes in the ordinance with actions needed to successfully implement the housing element. [2000**]**

**City of Brawley, Housing Element, Imperial County, CA**
Project planner who prepared the 2000–2005 Housing Element for the City of Brawley in Imperial County. Key areas addressed in the Housing Element included evaluation of potential residential sites illustrated in the Land Use Element, opportunities to fulfill a portion of the city's site requirements through committed assistance permitted under Assembly Bill 438, and past housing accomplishments. [2000**]**

**City of National City, Housing Element, CA**
Project planner who assisted in the preparation of the 1999–2004 Housing Element for the City of National City in San Diego County. Under Assembly Bill 1715, the city was able to self-certify the housing element. [1999 – 2000**]**

BS, City and Regional Planning, California Polytechnic State University, San Luis Obispo, 2014

**Years of Experience**
With AECOM: 6
With Other Firms: 0

**Professional Affiliations**
Association of Environmental Professionals, San Diego Chapter Newsletter Editor

Erin Phillips is an environmental planner who has worked on a variety of projects involving California Environmental Quality Act (CEQA)/National Environmental Policy Act (NEPA) compliance. Ms. Phillips specializes in addressing land use and planning impacts as evident by her experience completing various community plan and zoning ordinance environmental documents.

**Project Experience**

**County of San Diego Planning & Development Services, Land Development Code Update, San Diego, California.** Deputy project manager for the preparation of CEQA compliance documentation to analyze adopting and implementing an update to the County's Land Development Code, which includes the County's Zoning Ordinance. Responsible for drafting a baseline assessment memorandum to understand changes since approval of the General Plan as well as CEQA tiering opportunities. Also involves preparation of an Initial Study to determine impacts and the type of CEQA compliance documentation required. [Present]

**City of Los Angeles Planning Department, Zoning Code Update Environmental Impact Report, Los Angeles, California.** Deputy project manager for the preparation of an Environmental Impact Report to qualitatively analyze adopting and implementing a new zoning code for the City of Los Angeles. Responsible for drafting the basic arguments table to layout the method for analyzing each resource topic as well as authoring a majority of the CEQA sections. [Present]

**City of Pasadena, Specific Plan Update Addenda, Pasadena, California.** Primary environmental analyst for the preparation of several addenda to the 2015 City of Pasadena General Plan Update Environmental Impact Report. Responsible for determining changed existing conditions via preparation of a baseline assessment memorandum and background technical studies related to infrastructure and utilities, cultural resources, and transportation. [Present]

**County of San Diego Department of General Services, Clairemont Mesa Community Plan Amendment, San Diego, California.** Planner assisting in the preparation of a community plan amendment to allow for a future affordable, multifamily residential development on a site currently zone for commercial-only use. Responsible for drafting and assembling the amendment application package, background research and coordination, and drafting changes to the Clairemont Mesa Community Plan. [September 2018-February 2020]

**County of San Diego Department of General Services, Family Court Demolition and Ground Lease Project – CEQA Consistency Analysis, San Diego, California.** Environmental analyst for the preparation of a CEQA Consistency Analysis analyzing impacts associated with the demolition of existing structures, approval of a ground lease to convey property to a developer, and future construction and operation of a mixed-use, multi-family affordable housing development. Tiered off the Downtown Community Plan Environmental Impact Report to satisfy CEQA. [March 2018-April 2018]

**Caydon USA, California Theatre, CEQA Consistency Analysis, San Diego, California.** Primary environmental analyst and project manager for the preparation of a CEQA Consistency Analysis analyzing potential impacts associated with a proposed mixed use development. Tiered off the City of San Diego's Downtown Community Plan, General Plan, and Climate Action Plan EIR's to satisfy CEQA. [Present]

**Heidelberg Law Office, 4th and J, CEQA Consistency Analysis, San Diego, California.** Primary environmental analyst and project manager for the preparation of a CEQA Consistency Analysis analyzing potential impacts associated with a proposed hotel development. Tiered off the City of San Diego's Downtown Community Plan, General Plan, and Climate Action Plan EIR's to satisfy CEQA. [Present]

**City of San Diego Planning Department, Midway and Old Town Community Plan Updates – Program Environmental Impact Reports, San Diego, California.** Deputy project manager for the preparation of two Environmental Impact Reports analyzing updates to the existing community plans, which involved rezoning and amending the Land Development Code. Analyzed land use, transportation/circulation, hydrology/water quality, public services and facilities, public utilities, and alternatives. Responsible for day to day coordination with the client and other project team members. [February 2017 – February 2018]

**City of San Diego Planning Department, University Community Plan Amendment – Program Environmental Impact Report, San Diego, California.** Environmental analyst for the preparation of an Environmental Impact Report analyzing the amendment of the existing community plan, which involved the removal of roadway widening and bridge projects. Involved in addressing client and public review comments. [April 2016 – November 2016]

**Civic San Diego, Hilltop and Euclid Disposition and Development Agreement & Purchase and Sale Agreement, CEQA Consistency Analysis, San Diego, California.** Environmental analyst for the preparation of the CEQA Consistency Analysis analyzing potential impacts associated with the approval of the agreements to convey property to private develops for future construction of a mixed-use, multi-family affordable housing development and a market rate residential development. Tiered off the Southeastern San Diego and Encanto Neighborhoods Community Plan Update Programmatic Environmental Impact Report. [August 2017-November 2017]

**San Diego County Water Authority, As-Needed Environmental Services Contract, San Diego, California.** Serves as deputy project manager for tasks under AECOM's as-needed environmental services contract with the Water Authority, assisting in a range of projects for the Water Resources Department. Responsible for providing support on environmental-compliance strategy related to the Water Authority's Natural Community Conservation Plan/Habitat Conservation Plan. Also assists with a host of CEQA documentation tasks related to pipeline relining projects, pump station construction and modification, habitat revegetation, and emergency repairs. Involved in various contract management tasks and invoicing. [2017-2020]

- Multimodal Corridor Planning
- Transportation Demand Management
- Travel Demand Modeling
- Land Use and Transportation
- Traffic Analysis

## ABOUT

John has over 20 years of experience in transportation planning and engineering, both in England and in the United States. As a transport planner, John has research and analysis experience in both the private and academic sectors. John is knowledgeable in multi-disciplinary transportation and research projects, including multi-modal transportation planning projects and travel demand forecasting. He has authored numerous reports, managed and participated in a large range of transportation planning, traffic engineering, and parking studies for both private and public clients in Southern California and Hawaii. He also has extensive experience in conducting parking and circulation studies, traffic impact studies, downtown parking studies, long-range transportation plans, corridor studies and specific plans. John has worked with interdisciplinary teams to develop consensus on a wide range of transportation improvements.

## SELECTED PROJECT EXPERIENCE

**Downtown Community Plan**
Fehr & Peers is currently working on the Downtown Community Plan Update for the City of Los Angeles. This community plan was initiated as part of an ongoing process to update all 35 community plans in the city by 2024, and serves as an example to future community plan updates in both analysis format and integration of latest city initiatives. Fehr & Peers is leading the transportation element of the plan, using the travel demand forecasting (TDF) model our team built for the City to regional and local specifications to analyze the changes estimated to take place with the adoption of the plan, including network, socio-economic, and zoning updates. John is serving as Principal-in-Charge on this project.

**DTLA Mobility Investment Plan**
Fehr & Peers is leading a team to support the City in developing the DTLA Mobility Investment Plan (MIP), a project that is reliant on technical objectivity for Downtown Los Angeles that is built upon stakeholder interests and acceptance. It is particularly dependent on addressing the community's mobility needs through engagement designed to obtain input from many diverse segments of the community. John is serving as Principal-in-Charge on this project.

**Burbank Impact Fee Study**
Fehr & Peers, as part of a team, is preparing an updated impact fee study for the City of Burbank. In a shift from the existing fee program, the updated transportation section will focus on multi-modal improvement projects instead of auto-oriented infrastructure projects. The fee update will also shift from a trip-based fee to a VMT-based fee in accordance with SB 743. This process including reviewing the projects on the City's existing Infrastructure Blueprint and assisting the project team with the identification of new transportation projects for the updated fee program.

Fehr & Peers is conducting a nexus analysis to relate the needs for the identified transportation improvements to new development in the study area. The fee study establishes a reasonable relationship between new development, the proportion of expected vehicle trips, and congestion levels attributable to new development, and the necessary roadway, sidewalk, bike lane or other transportation improvements that will be funded by the development impact fee program. The City of Burbank's Travel Demand Model, which Fehr & Peers developed, will be used to ascertain the portion of traffic/VMT that is attributed to new trips generated by new development in the City. John is serving as Principal-in-Charge on this project.

**Pasadena Travel Demand Forecasting Model**
Fehr & Peers developed a travel demand model for the City of Pasadena to be used as a tool in the evaluation of Land Use and Mobility Element land use scenarios and transportation system alternatives. The model will provide the ability to evaluate transportation system network and modal alternatives and assess various performance indicators for land use and transportation alternatives.

The travel forecasts will be used to estimate the effectiveness of the proposed Land Use and Mobility Element policies on the transportation system. As envisioned, the model will also be sensitive enough for traffic impact analysis purposes – for project and cumulative impacts. John was the Principal-in-Charge on this project.

**Expo Corridor Transit Neighborhood Plans**
Fehr & Peers served the City of Los Angeles in their "Transit Neighborhood Planning" for 10 future light rail stations along the Crenshaw and Expo lines. The project included new land use and streetscape regulations, general plan amendments, and specific plans for five of the stations. Our approach to trip generation, parking demand estimation, and transportation evaluation was informed by the City's new and innovative approaches to transportation evaluation contained in the LA2B update to the circulation element.

Fehr & Peers' combination of experience with market based private development impact analysis and our citywide efforts on the Mobility Element came together to meet the City's desire to incentivize an appropriate mix and density of land uses, foster economic development, improve ridership, provide and maintain affordable housing, and enhance the quality of the built environment. John was the Project Manager on this project.

**Infill and Complete Streets - Capturing VMT Impacts and Benefits to CEQA, City of Los Angeles**
The City of Los Angeles is shifting from an auto-oriented metropolis to a city built around transit, compact transit-oriented development, and multi-modal "Complete Streets" which emphasize all travel modes. However, these dynamic policy shifts have been significantly impeded by requirements under CEQA to mitigate automobile delay. The City wants to seize the historic opportunity, mandated by SB 743, to realign the environmental review processes with policies that support infill development and Complete Streets transportation projects.

Fehr & Peers was selected to work closely with the LADCP and LADOT to develop new VMT-based CEQA thresholds and to update the tools necessary to implement the new procedures. In addition to developing the new thresholds, Fehr & Peers is updating the City's travel demand model, which John is overseeing, and developing a sketch model tool to perform project-level VMT analysis; quantifying the parking demand and vehicle trip reduction benefits for mixed-use projects, creative office buildings, market rate housing, and affordable housing, and Transportation Demand Management (TDM) strategies. The affordable housing sites are broken down based on population and location. Fehr & Peers is educating city staff, private developers, and the community about the new impact review methodology through an engaging public outreach program.

**West Hollywood SB 743 Implementation**
Fehr & Peers is assisting the City of West Hollywood with SB 743 Implementation. We are providing knowledge and insight that will allow the City to be well prepared for a transition to Vehicle Miles Traveled (VMT) as its primary transportation impact metric for CEQA analysis, marrying the State's objectives to encourage transportation efficient development with the City's own goals and objectives.

The primary tasks involve developing the methodology for vehicle miles traveled assessment, helping the City with VMT screening options and impact thresholds for both land use and transportation projects, evaluating case studies for specific land uses, development of a VMT impacts and mitigation assessment tool and ultimately developing new transportation guidelines. John is serving as Principal-in-Charge on this project.

**NOTICE OF PREPARATION OF A COMBINED DRAFT ENVIRONMENTAL IMPACT REPORT AND NOTICE OF SCOPING MEETING FOR UPDATES TO THE CENTRAL CITY AND CENTRAL CITY NORTH COMMUNITY PLANS, AND AMENDMENTS TO THE CITY OF LOS ANGELES MUNICIPAL CODE TO ADOPT A NEW ZONING CODE FOR THE CENTRAL CITY AND CENTRAL CITY NORTH COMMUNITY PLAN AREAS (AS PART OF THE *RE:CODE LA* PROJECT)**

**TO:** Agencies, Organizations, and Interested Parties **DATE: February 6, 2017**

The City of Los Angeles Department of City Planning (DCP), as the Lead Agency under the California Environmental Quality Act (CEQA), will prepare an Environmental Impact Report (EIR) for a Project to: (1) update the Central City Community Plan and the Central City North Community Plan (Downtown Plans), (2) amend the City of Los Angeles Municipal Code (LAMC) to adopt new zoning regulations for the Downtown Plan Area as part of the **re:code LA** program (Downtown Zoning Code); and (3) make all other necessary amendments to the Framework Element, Mobility Plan, and other General Plan elements, specific plans, the LAMC, and other ordinances to implement the above.

More details on the Project are provided below. The City is requesting identification of environmental issues and information that you or your organization believes should be considered in the EIR.

## NOTICE OF SCOPING MEETING

Pursuant to California Public Resources Code Section 21083.9 and California Code of Regulations, Title 14 ("CEQA Guidelines") Section 15082, the Lead Agency will conduct a scoping meeting for the purpose of soliciting oral and written comments from interested parties requesting notice, responsible agencies, agencies with jurisdiction by law, trustee agencies, and involved federal agencies, as to the appropriate scope and content of the EIR.

## SCOPING MEETING

Date: Thursday, February 16, 2017
Time: 5:00 PM - 7:00 PM
Place: Caltrans District 7 Building – Conference Room #01.037
100 S. Main St.
Los Angeles, CA 90013

*As a covered entity under Title II of the Americans with Disabilities Act, the City of Los Angeles does not discriminate. The meeting facility and its parking are wheelchair accessible. Sign language interpreters, assistive listening devices, or other auxiliary aides and/or services may be provided upon request. Other services, such as translation between English and other languages, may also be provided upon request. To ensure availability of services, please make your request no later than three working days (72 hours) prior to the meeting calling Tal Harari at (213) 978-1204.*

## RESPONSIBLE AND TRUSTEE AGENCIES

The City requests your agency's views on the scope and content of the environmental information relevant to your agency's statutory responsibilities in connection with the Project, in accordance with the CEQA Guidelines, Section 15082(b). Your agency will need to use the EIR prepared by the City when considering any permits or other project

approvals that your agency must issue. As such, your responses to this Notice of Preparation (NOP), at a minimum should identify: (1) The significant environmental issues and reasonable alternatives and mitigation measures that your agency will need to have explored in the EIR; and (2) Whether your agency will be a responsible or trustee agency for this project.

**REVIEW AND RESPONSE PERIOD**

**February 6, 2017 to March 6, 2017.**

Pursuant to CEQA Guidelines, Section 15082(b), responses to this NOP must be provided during this response period.

**PROJECT LOCATION**

The Project location is the Central City Community Plan Area and the Central City North Community Plan Area ("Downtown Plan Area" or "Project Area"). The Downtown Plan Area is geographically contiguous, sharing a common boundary along Alameda Street. The Central City Community Plan Area is comprised of approximately 2,161 acres, and is generally bounded on the north by Sunset Boulevard/Cesar Chavez Avenue, on the south by the Santa Monica Freeway (Interstate 10), on the west by the Harbor Freeway (Interstate 110), and on the east by Alameda Street. Immediately to the east of Alameda Street is the Central City North Community Plan Area. The Central City North Community Plan Area is comprised of approximately 2,005 acres, and is generally bounded on the north by Stadium Way, Lilac Terrace, and North Broadway, on the south by the City of Vernon, on the west by Alameda Street, and on the east by the Los Angeles River. The Project Area is bordered by the communities of Boyle Heights, Silver Lake-Echo Park, Westlake, Southeast and South Los Angeles, and the City of Vernon. The Downtown Plan Area boundaries are shown in **Figure 1**. The Downtown Plan Area is shown within a regional context in **Figure 2**.

**PROJECT BACKGROUND**

The Central City and Central City North Community Plans are two of 35 Community Plans, which comprise the Land Use Element of the City's General Plan. The Land Use Element is one of the seven State-mandated elements of the General Plan that also include open space, transportation, conservation, housing, noise, and safety. The Downtown Community Plans are being updated consistent with California Government Code Section 65302, which identifies the seven required elements of a General Plan. Community Plans are intended to promote an arrangement of land uses, streets, and services in the Project Area to encourage economic vitality, social and physical well-being, and promote the general health, safety, welfare and convenience of people who live and work in the Project Area.

The Project is part of the City of Los Angeles New Community Plan Program, a program to update each of the City's 35 Community Plans. The Central City Community Plan was last updated in 2001, and the Central City North Community Plan was last updated in 2000. Since then, substantial changes have occurred, most notably, completion of the Metro Gold and Expo Lines, and implementation of the Metro Bike share system; completion of large-scale commercial and residential developments; future plans and infrastructural improvements to be accommodated such as the Los Angeles Streetcar, Metro Regional Connector, and High Speed Rail; and new growth forecasts through the year 2040, released by the Southern California Association of Governments. As further described below, the Downtown Plans will rezone land in the Downtown Plan Area to make the Downtown Zoning Ordinance operative.

The Downtown Zoning Code is a portion of the **re:code LA** program. **re:code LA** is a program to comprehensively revise the City of Los Angeles Zoning Code. In summary, the **re:code LA** program will amend the text of the LAMC to replace the City's existing Zoning Ordinance (Chapter 1 of the LAMC) with a new City zoning ordinance (New Zoning Ordinance) and the community plan update process will apply the zoning regulations to land in the Project Area. The New Zoning Ordinance will include, among other provisions, new zone classifications and revised/reorganized development standards and requirements for those new zone classifications. The New Zoning Ordinance and zone classifications are further described below.

Based on the size and scale of the City and the current Zoning Ordinance, the **re:code LA** program is a relatively substantial undertaking. It is expected that parts of the **re:code LA** program will be adopted and implemented at different times. Specifically, the New Zoning Ordinance will not be adopted all at once and even when adopted, will not be made operative in all parts of the City all at once. Some elements of the New Zoning Ordinance that will be applicable citywide will need to be adopted to use the New Zoning Ordinance anywhere. These elements include definitions, administrative rules, and development standards. These elements will be adopted before or simultaneously with the first ordinance to implement the New Zoning Ordinance zone classifications. On the other hand, new zones (or zone module types, as further described below) are expected to be adopted at different times. Finally, even when the New Zoning Ordinance is adopted into the LAMC, none of the new zones, and their respective development standards and requirements, will be operative for any property in the City until that property is rezoned and the relevant community plan is amended to allow that new zoning classification. It is expected that rezoning and plan amendments to implement the New Zoning Code throughout the City will occur with Community Plan Updates or other citywide or area-wide planning and zoning efforts.

For this Project, the City expects to implement the **re:code LA** program in the Downtown Plan Area with a Downtown Zoning Code. The Downtown Zoning Code will include: (1) new zone classifications (or zone module types for zone classifications) for the Downtown Plans and Project Areas; and (2) if not previously adopted at the time of Project approval, those elements of the New Zoning Ordinance that are required to utilize the new zones, such as definitions and development standards, including standards that may be utilized citywide. The Project does not include rezoning land outside of the Downtown Plan Area or amending any community plans other than the Central City Community Plan and the Central City North Community Plan.

**PROJECT DESCRIPTION**

The proposed Project includes the updates to the Downtown Plans, adoption of the Downtown Zoning Code, and the adoption of necessary revisions and any other amendments necessary to implement the above, including amendments to other General Plan elements (such as, Mobility and Framework), the LAMC, specific plans, and other ordinances to implement those updates. The following describes in more detail the updates to the Downtown Plans and the adoption of the Downtown Zoning Code:

Downtown Plans

The updates to the Downtown Plans will reflect a future vision for Downtown, and are intended to guide development through the year 2040, and revise the existing Central City Community Plan and Central City North Community Plan. Community Plans are also intended to guide development by informing the general public of the City's broad planning goals, policies, and objectives, as well as specific development standards for the Project area. The Downtown Plans would allocate land for the range of uses that Downtown will need through 2040, including land for jobs, housing, parks and open space (as available and feasible), and civic functions, and would improve the link between land use and transportation in a manner that is consistent with the General Plan Framework Element. Collectively, the Downtown Community Plans' goals, objectives, policies, and programs articulate the policy direction that the City will promote for the duration of the Plans. It includes amending the Zoning Map to rezone the Project Area with new zone classifications developed for the Downtown Plans.

Downtown Zoning Code

As discussed above, the Project also includes the adoption of the Downtown Zoning Code. The Downtown Zoning Code refers to several amendments to the LAMC to implement the updates to the Downtown Plans and **re:code LA** in the Project Area.

The new **re:code LA** zoning system is modular. Zoning classifications require the bundling of several designations to make a zone. These designations include the following modules: Context, Form District, Frontage, and Use District.

The *Contex*t module is comprised of regulations meant to enhance the existing or establish new development patterns of an area where applied. Such Context regulations could include grading quantities, landscaping, and potentially new minimum parking requirements. Context also sets the range of Form Districts, and Frontages available for the area.

The *Form District* module governs the shape and size of buildings by regulating lot size and site coverage, building placement, bulk, and mass.

The *Frontage* module governs how a site or building addresses the street or right of way by regulating ground floor story height, the amount of transparency (such as windows) required, pedestrian entry requirements and spacing, and allowable building elements (such as canopies).

The *Use District* module establishes which uses and activities are allowed on a site. Each use will have a corresponding definition and any relevant standards, either maintained from the current Zoning Code or newly established standards.

In any community plan update, there are many potential combinations of Context, Form District, Frontage, and Use District module types that can be applied to properties to make a zone.

To implement the updates to the Downtown Plans and **re:code LA** in the Downtown Plan Area, certain Context, Form District, Frontage, and Use District module types are proposed to be added to the LAMC. These module types will be used for rezoning property in the Downtown Plan Area. As the system is modular, it is possible for some of these Context, Form District, Frontage, and Use District module types developed for the Downtown Zoning Ordinance to be used in other parts of the City in various combinations in the future when community plans are updated and properties rezoned.

If not already adopted at the time of Project approval, the Project will also include the adoption of citywide elements of the New Zoning Code, including: citywide development standards (such as parking stall dimensions, grading haul route standards, minimum pedestrian walkways, and others); definition of terms; rules of measurement (such as how to measure lot width and building height); possible land use incentive system(s), modifications to existing nonconforming provisions; maintenance of current rules for division of land; creation of new streetscape and maintenance of street improvement requirements; establishment of new overlay districts; and potentially new minimum parking requirements. These regulations will only be operative in other parts of the City when property is rezoned and other community plans are amended. This is expected to occur through future community plan updates.

Project Objectives
The primary objectives of the Project will be to:

- Ensure that Downtown can continue to grow in a sustainable, equitable, healthy, and inclusive manner;
- Reinforce the role of Downtown as the primary jobs center for the City, County, and the Southern California region;
- Expand and support a growing residential population;
- Celebrate and reinforce the character of each individual neighborhood;
- Promote a transit, bicycle, and pedestrian friendly environment; and
- Refine and expand a system that links development with public benefits to deliver community amenities in the Downtown Plan Area.

Elements of the proposed Project to implement these objectives include the following:

- Amend the text of the Downtown Plans to revise the stated plan policies and objectives;
- Amend the land use map of the Downtown Plans to implement the new policies and objectives, including amendments to establish plan consistency with the new Downtown Zoning Code zones;
- Adopt the Downtown Zoning Code;
- Amend the Zoning Map to rezone Downtown with new downtown zone classifications;
- Integrate regulations of the existing Specific Plans and Planning Overlays into the new Downtown Zoning Code; and
- Amend the General Plan Framework, Mobility Plan and other Citywide General Plan Elements, and ordinances, as necessary.

**ISSUES TO BE ADDRESSED IN THE EIR**

Based on the project description and the Lead Agency's understanding of the environmental issues associated with the Proposed Project, the following topics will be analyzed in the EIR:

- Aesthetics
- Air Quality
- Biological Resources
- Cultural Resources
- Geology and Soils
- Greenhouse Gas Emissions
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Land Use and Planning
- Mineral Resources
- Noise
- Population and Housing
- Public Services
- Recreation
- Transportation/Circulation
- Utilities, Energy and Service Systems

The EIR will analyze the reasonably foreseeable indirect physical changes to the environment in the above topic areas caused by the Project, including the updates to the Downtown Plans, the adoption of the Downtown Code, and any other necessary amendments to plans or the LAMC.

To the extent that the Downtown Zoning Code includes zoning module types or citywide standards and regulations that may in the future be used in other parts of the City, indirect impacts to the environment from those provisions is speculative. This is due to both the modularity of the system (zone module types can be combined to make many different zones) and the fact that none of the components of the new zoning will be available for use on a property until a community plan update or other planning process has introduced the new zones to an area. Additionally, as stated above, additional zoning classifications (ie.module types) will be created in the future through the **re:code LA** program to meet the needs of other parts of the City. Any application of any part of the Downtown Zoning Code outside of the Downtown Plan Area would require a Community Plan amendment, rezoning, and new environmental analysis. The EIR will consider and discuss whether any impacts from the use of the Downtown Zoning Code outside the Downtown Plan Area is reasonably foreseeable, and if so, the EIR will analyze those impacts.

Alternatives to be analyzed in the EIR are to be defined and analyzed consistent with the requirements of CEQA Guidelines, Section 15126.6. The specific alternatives to be evaluated in will include a "No Project" alternative, as required by CEQA, and may include alternative land use configurations.

**DOCUMENT AVAILABILITY**

The Notice of Preparation can be viewed on the Downtown Community Plan program website at: www.dtla2040.org. It can also be viewed on the City of Los Angeles Department of City Planning website at: www.planning.lacity.org. To locate a copy of the Notice of Preparation online, click on Environmental Review on the left side of the Department of City Planning website and then click on the Notice of Preparation & Public Scoping Meetings link.

**SUBMITTAL OF WRITTEN COMMENTS**

The Lead Agency solicits comments regarding the scope, content and specificity of the EIR from all interested parties requesting notice, responsible agencies, agencies with jurisdiction by law, trustee agencies, and involved agencies. Please send written/typed comments (including a name, telephone number, and contact information) to the following:

City of Los Angeles, Department of City Planning
ATTN: Bryan Eck, City Planner
Case Numbers: CPC-2017-432-CPU; ENV-2017-433-EIR
200 N. Spring Street, Room 667
Los Angeles, CA 90012

Phone: (213) 978-1304
Fax: (213) 978-1334
E-mail: bryan.eck@lacity.org

In accordance with CEQA Section 15082, this Notice of Preparation is being circulated for a 30-day comment period. The City of Los Angeles requests that written comments be provided at the earliest possible date, but no later than **5:00 p.m. on March 6, 2017.**

For more information about the Downtown Plans and Downtown Zoning Code, please visit http://dtla2040.org and http://recode.la/.

**ALL INTERESTED PARTIES ARE INVITED TO ATTEND THE PUBLIC SCOPING MEETING TO ASSIST IN IDENTIFYING ISSUES TO BE ADDRESSED IN THE EIR. ATTENDEES WILL HAVE AN OPPORTUNITY TO PROVIDE INPUT TO THE CONSULTANTS PREPARING THE EIR.**

200 N. Spring Street, Room 667
Los Angeles, CA 90012

We write to comment on environmental review scoping for the updates of two community plans in Downtown Los Angeles (DTLA 2040). Abundant Housing LA is a volunteer organization that supports more housing in Los Angeles. We encourage the Department of City Planning to study a "high housing alternative" - that is, an alternative that allows for significantly more zoned housing capacity, more new housing units, and higher potential population growth in downtown LA than the expected growth rate of approximately 70,000 housing units. We believe that a higher housing/ population growth alternative will be the environmentally superior alternative, because adding denser, transit-accessible housing in Downtown LA will reduce VMT, reduce greenhouse gas emissions, reduce air pollution, save energy, and reduce water use.

Before turning to the positive environmental impacts of allowing more housing in Downtown LA, we would like to address concerns that it is appropriate to study a higher housing alternative because this might 'induce' growth above what is currently projected to occur. Zoning in and of itself cannot induce population growth. Zoning can only artificially cap housing, and thereby exclude residents who might wish to stay in or move to area; or allow sufficient space for changing demand, which can shift based on economic and demographic and lifestyle factors. We believe that allowing sufficient space for growth and change is better policy from both a housing and environmental perspective than artificially capping supply.

Artificially capping housing supply in downtown Los Angeles will harm the city and region's environment and human health. This is because living in denser. transit accessible areas is environmentally superior to living in lower-density, auto-dependent places. Households living in exurban locations in the LA region drive up to 47% more than equivalent households in more central, transit-rich neighborhoods. http://www.dot.ca.gov/newtech/researchreports/reports/2016/CA16-2832_FinalReport.pdf The negative environmental impacts associated with preventing more homes in downtown LA therefore include higher VMT, more greenhouse gas emissions and more air pollution with local and regional impacts including nitrous oxides, sulfur dioxides, carbon monoxide, PM10 and PM2.5. These increased emissions will harm human health.

Artificially capping housing supply in downtown Los Angeles will also waste energy, further harming the climate and increasing negative environmental externalities associated with fossil fuel extraction and generation. Residents of multi-family buildings use significantly less energy per unit than residents of single family houses. https://www.arb.ca.gov/research/apr/past/10-323h.pdf Because all new housing in downtown LA will be multi-family, while there will be

mix of single family and multi-family construction in other parts of the city and region, increasing zoned housing capacity in Downtown LA is a good way to reduce energy use and reduce emissions of greenhouse gases and pollution.

Artificially capping housing supply in downtown Los Angeles will also waste water. Residents of all multi-family homes in Los Angeles use less water than residents of all single family homes, even though there are approximately twice as many multi-family units. http://www.latimes.com/visuals/graphics/la-me-g-aa2-snapshot-water-usage-20150109-htmlstory.html Because all new housing in downtown LA will be multi-family, while there will be mix of single family and multi-family construction in other parts of the city and region, increasing zoned housing capacity in Downtown LA is a good way to reduce water use.

Our colleague Shane Phillips has submitted scoping comments that reference sub-geographies within the Downtown LA plan areas. We support his suggestions for these sub-areas.

Thank you for considering our views as you prepare to conduct an environmental analysis of DTLA2040.

Mark Vallianatos on behalf of Abundant Housing LA

Hi Allan,

Thank you for the valuable feedback. Regardless of the nomenclature, the support and protection of the important historic resources of Downtown Los Angeles is important

component of the future plan and these will be studied as part of the Environmental Impact Report. I appreciate your involvement.

Best,
Bryan

> It was a pleasure to meet you last Thursday at the Scoping Meeting on the Downtown Plan environmental impact report. With reference to our discussion and my written and oral request that the Higgins Building being placed in the Traditional Core and not the Transit Core, I recall your concerns that there was not "enough teeth going northward from Fourth Street to embrace the Higgins Building" (Forgive me if my paraphrase might be inaccurate).
>
> The heart of the Traditional Core as expressed in the language of this zone by the City Planning Department is that it is a "Rich collection of historically significant buildings." Historically, the Higgins building in my opinion has been erroneously excluded from being in the Historic Core.
> My review of the buildings included in the Traditional zone if you extend it northward from Fourth Street to 2nd Street running from the west side of Broadway to Los Angeles Street encompasses a wealth of historically significant architectural treasures:
>
> 1. Our Higgins Building at 2nd and Main, a Cultural Monument of Los Angeles, for which we will be applying for registration on on the National Register of Historic Places. This is one of the premier examples of Beaux Art Architecture west of the Mississippi.
>
> 2. St. Vibiana across the street built in 1876, a masterpiece of Italianate architecture which is on the National Register.
>
> 3. The Bradbury Building at 3rd and Broadway, which is on the National Register and certainly one of the most unique old buildings in downtown Los Angeles.
>
> 4. The St. George Hotel built in 1903, just east of Main Street on 3rd.
>
> 5. Grand Central Market, on Broadway near 3rd, flourishing since 1917 as a unique market place and downtown tourist attraction.
>
> 6. Million Dollar Theater, just North of the Grand Central Market, built in 1917, is the Grand Daddy of opulent downtown theaters.
>
> 7. The Douglas Building on Spring just north of 3rd, built in 1898, is one of the oldest adaptive reuse buildings in downtown.
>
> 8. Biddy Mason Park, at 333 S. Spring Street is an historic pedestrian park chronicling the achievement of the African-American 19th Century midwife and Philanthropist, Biddy Mason.

9. The Downtown Independent Theater at 251 S. Main Street, built on the bones of the old Arrow Theater, in 1925, where there has been a theater since that time.

10. The 5 story “Pope of Broadway” mural of Anthony Quinn, just restored on the Victor Clothing Building at 240 South Broadway, while painted in 1984, certainly adds coloratura to the area.

In sum, the area I argue should be part of the Traditional core certainly meets the Planning Department’s historically significant criteria for this zone. I would ask that you revisit this request and change your zone classification to include this area.

Thank you,

Allan Harris
Chair
Higgins Loft Neighborhood Impact Committee

**Re: Notice of Preparation (NOP) of a combined Draft Environmental Impact Report (EIR) for Updates to the Central City and Central City North Community Plans**

**Case Numbers: CPC-2017-432-CPU; ENV-2017-433-EIR**

Dear Bryan,

The Central City East Association (CCEA), via this letter, is providing written comments as requested in the abovementioned NOP. CCEA represents residents, businesses, social service providers and property owners in a 40-block district that occupies more than 260 acres in the heart of Downtown Los Angeles.

Our stakeholders are diverse. They include institutions that have had a home in CCE for more than a hundred years, providing services to those most in need, stepping up when none other in the region will. We have long-established businesses that have steadfastly contributed to the economy of Downtown Los Angeles, during days of boom or bust. We welcome residents that consider CCE a safe harbor in times of need and distress. We are proud of our eclectic, albeit disparate, mix of uses and see in our future a more considered and thoughtful approach to new users and uses.

We would like to congratulate the City on commencing the community plan update. It has been a long time coming and we wholeheartedly support your efforts. As the City begins its environmental analysis we would like you to strongly consider:

- Prioritizing the review and rethink of outdated land use policies that have seen districts like CCE disproportionately bear decades of debilitating, unintended consequences of past decisions.
- New and non-traditional approaches to embedding flexibility in land use and urban design policies that will allow appropriate new uses to already mixed districts like CCE.

- CCE is a neighborhood where people live and work. It deserves similar levels of investment and attention as all others neighborhoods where people live and work.

As you are aware, CCEA completed its own planning study in 2015, which we have shared with you. We are more than appreciative of the feedback and involvement of City Planning staff at that time and look forward to reciprocating in a similar manner. We hope to rigorously review and provide constructive feedback when the draft EIR is circulated for public review.

Thanks very much for your consideration and for the opportunity to provide input.

Sincerely,

Estela Lopez, Executive Director

February 1, 2016

Mr. Bryan Eck
Mr. Nick Maricich
Los Angeles City Planning Department
City Hall
200 N. Spring Street
Los Angeles, CA 90012

Dear Bryan and Nick:

The Central City East Association (CCEA) is pleased to present you with the completed Central City East Planning Study, commissioned by CCEA and performed by AECOM. The study's purpose was to fill a void of information about Central City East. Its role as the region's hub of social and recovery services, as important as that is, presents only one facet of a community that is surrounded by an urban environment in transition. This study's intention is to go beyond the current headlines to spur stakeholders and policy makers into a thoughtful and practical conversation about the future of Central City East.

For nearly three decades, CCEA has served as the principal voice and advocate of industrial property and business owners in this 260-acre district of Downtown Los Angeles. CCEA, a California non-profit corporation, also administers the Downtown Industrial Business Improvement District. This study was funded by property owners in the area, with assistance from the City Department of Workforce Development.

Guarav Srivastava, Principal at AECOM Design + Planning, led our effort and served as principal-in-charge of the study. AECOM undertook a similar effort in 2014 sponsored by the Southern California Association of Governments (SCAG) to prepare a vision plan for the Downtown Los Angeles Neighborhood Council (DLANC). AECOM's 2012 study for the Fashion District BID just south of Central City East addressed head-on the challenges of industrial land use and the pressures of transition.

The Central City East study included separate interviews with three distinct stakeholder groups: property owners, residents and social service providers.

The conclusions drawn from these interviews were interesting and in some instances unexpected:

1. Reverse the unequitable distribution of improvements to Downtown's public realm. Central City East lacks infrastructure oriented towards pedestrians. For instance, there are few crosswalks and few traffic signals that interrupt the flow of traffic on the Fifth/Sixth streets couplet.

2. Diversify housing to include affordable, mixed income, mixed-collar, multi-generational. Deliberately clustering residents by income, whether affluent or poor, is always bad planning policy. In this particular case, Central City East has devolved into a district that is separate, avoided and ignored.

3. Blur boundaries to create better connections with neighboring districts. The wall created along Alameda Street preventing Fifth Street from crossing Central Avenue has had the effect of a dam, preventing a natural flow and connection through Downtown to the Arts District and the Los Angeles River.

A study of this type would typically address elements important to the future development of a community such as land use, urban design, transportation, sustainability and branding. In Central City East, however, formidable challenges stand in the way of forward planning and visioning. For decades, the result has been inaction. This study attempts to focus on a few, targeted and achievable goals that hold the possibility of beginning to reverse decades of neglect and disinvestment in the public realm.

One example is zoning. The "M" zone has had the practical effect of freezing the area in time. Relatively little traditional manufacturing remains. These uses abandoned Downtown decades ago. Most of the current uses in the district are related to food, cold storage and textile storage.

An area frozen in time is an area doomed to fail.

Change is inevitable. All neighborhoods in Los Angeles have a dynamism that is inherent in place and this neighborhood should be no different. In light of the City's limited resources to address the complexity of Central City East, CCEA undertook this study and respectfully presents its findings to the City Planning Department for inclusion in its efforts to update the Central City Community Plan.

Thank you for your consideration.

Sincerely,

Mark Shinbane, Chairman
Central City East Association

EXHIBIT “A”

Dear Mr. Eck, February 20, 2017

It was a pleasure to meet you last Thursday at the Scoping Meeting on the Downtown Plan environmental impact report meeting. With reference to our discussion and my written and oral request the the Higgins Building being placed in the Traditional Core and not the Transit Core, I recall your concerns that there was not “enough teeth going northward from Fourth Street to embrace the Higgins Building” (Forgive me if my paraphrase might be inaccurate).

The heart of the Traditional Core as expressed in the language of this zone by the City Planning Department is that it is a “Rich collection of historically significant buildings.” Historically, the Higgins building in my opinion has been erroneously excluded from being in the Historic Core. My review of the buildings included in the Traditional zone if you extend it northward from Fourth Street to 2nd Street running from the west side of Broadway to Los Angeles Street encompasses a wealth of historically significant architectural treasures:

1. Our Higgins Building at 2nd and Main, a Cultural Monument of Los Angeles, for which we will be applying for registration on on the National Register of Historic Places. This is one of the premier examples of Beaux Art Architecture west of the Mississippi.

2. St. Vibiana across the street built in 1876, a masterpiece of Italianate architecture which is on the National Register.

3. The Bradbury Building at 3rd and Broadway, which is on the National Register and certainly one of the most unique old buildings in downtown Los Angeles.

4. The St. George Hotel built in 1903, just east of Main Street on 3rd.

5. Grand Central Market, on Broadway near 3rd, flourishing since 1917 as a unique market place and downtown tourist attraction.

6. Million Dollar Theater, just North of the Grand Central Market, built in 1917, is the Grand Daddy of opulent downtown theaters.

7. The Douglas Building on Spring just north of 3rd, built in 1898, is one of the oldest adaptive reuse buildings in downtown.

8. Biddy Mason Park, at 333 S. Spring Street is an historic pedestrian park chronicling the achievement of the African-American 19th Century midwife and Philanthropist, Biddy Mason.

9. The Downtown Independent Theater at 251 S. Main Street, built on the bones of the old Arrow Theater, in 1925, where there has been a theater since that time.

10. The 5 story “Pope of Broadway” mural of Anthony Quinn, just restored on the Victor Clothing Building at 240 South Broadway, while painted in 1984, certainly adds coloratura to the area.

In sum, the area I argue should be part of the Traditional core certainly meets the Planning Department’s historically significant criteria for this zone. I would ask that you revisit this request and change your zone classification to include this area.

Thank you,

Allan Harris
Chair
Higgins Loft Neighborhood Impact Committee

City of Los Angeles, Department of City Planning
ATTN: Bryan Eck, City Planner
Case Numbers:
CPC2017 432CPU; ENV2017 433EIR
200 N. Spring Street, Room 667
Los Angeles, CA 9001

**This is the response of Allan Harris and Cheryl Younger, 108 West 2nd Street Unit 1002, Los Angeles CA 90012, to the request for comments about the preparation of an EIR for the Central City Community Plan and new Zoning Code The Higgins Building is located at 108 West 2nd Street. Built in 1910 as a classic Beaux Arts building, it is a Cultural monument of the City of Los Angeles The Building consists of 135 residential condominium units and seven commercial units.**

**1. Community Plan.**

**A. We object to the inclusion of the Higgins Building in the Central City Community Plan as part of the Transit Zone, urging that it is properly included in the Traditional Zone. Argument in support of this position is attached in the Letter of Allan Harris to Bryan Eck of the Los Angeles Department of City Planning dated February 20, 2017, attached as Exhibit "A" hereto.**

**B. Creation of a Bradbury, St. Vibiana, St. George Hotel, Higgins Building, City Hall Historic District.**

**We believe that the city should create a Bradbury, St. Vibiana, St. George Hotel, Higgins Building, City Hall Historic District. Argument in support of this proposal is contained in a monograph written by Allan Harris, Chair of the Higgins Loft Neighborhood Impact Committee, attached hereto as Exhibit "B" hereto.**

**2. Scope of EIR. The following planning concerns should be addressed in the EIR:**

**A. Parking. The recent building of large buildings downtown has reduced the number of accessible and affordable parking facilities for downtown residents. The Department of City Planning should consider the demand for future parking which is available and affordable. The creation of a Municipal Parking Authority should be considered.**

**B. Population size and density. The optimal population and density for a fully built downtown should be considered and achieved. Overbuilding and the Manhattanization of downtown should be avoided. The tipping point of building**

**and population growth beyond which the quality of life deteriorates should be addressed.**

**C. Control of excessively tall buildings. Downtown is sufficiently built up that each section of the downtown has its own scale and character. Out of scale buildings that destroy the character of individual sections should be avoided.**

**Additionally, the effect of large and tall buildings on air quality, air flow and future climate temperature increase should be considered.**

**D. Increased Community control over development. The profit concerns of developers should not dictate what gets built. Community opinion as to design, size, scale and amenities should be given a voice. Giving greater voting control to Neighborhood Councils as to these matters would help.**

**E. Protecting the aesthetics of City Hall. Recent proposals in the area of City Hall of buildings far in excess of the height of City Hall, 28 stories, are troubling. The City Hall is a wonderful aesthetic feature of Los Angeles. Not only just in many movies, it stands perpetually as a splendid example of our city and its architectural beauty. Restrictions against buildings of the size that would mar its majesty in our skyline and view shed should be prohibited.**

**Respectfully Submitted,**

**Allan Harris**
**Cheryl Younger**

EXHIBIT “B”

City Planners:

A call for a Bradbury, Vibiana, St. George Hotel, Higgins, City Hall Historic District.

Downtown Los Angeles is a precious, fragile area. It has historic jewels which if not cared for properly will be forever lost. If you look at St. Vibiana’s Cathedral today, you will see a perfect example of careless planning. The beautiful 1876 Italianate church has been dwarfed and eaten up by an eight story modern “money-strocity” apartment building sandwiched next to it on its Southside.

Across the street, Joe’s Auto Park, has served a 30-day wrecking ball notice on the Independent Theater, a performance space with roots back to 1925, The Smell, the Iconic Indie music venue, and the Nueva Jalisco, the first and only Latino Vaquero Gay Bar in the city. What’s in store for these historic properties does not require a gaze into a Chrystal ball. With 30 plus story high rise developments on the drawing boards for 4th and Hill, and 4th and Broadway, you can visualize the next megalopian high rise sweeping away these treasures with the building of another mindless giant.

Just to the North stands the majestic Los Angeles City Hall, immortalized in not only countless movies, but in beautiful continuity to the mesmerized gaze of our community. Stand atop the plaza at the Chandler Opera House and look east to the triumph of Grand Park as it sweeps down the mall culminating in City Hall. The park and mall are examples of planning at its most successful level. Walk south from City Hall and view the Los Angeles Police Administration Building and the Cal-Trans Building, heartening examples of contemporary architecture.

Cross the street, and the Higgins Building, a Los Angeles Cultural Historic Monument, a classic example of Beaux Arts Design constructed in 1910, stands proudly at the corner of 2nd and Main.

This is all a wonderful patrimony; but if Joes’s Lot building plans between Spring and Main and for most of that area between 2nd and 3rd, destroys the smaller historic buildings and erects a sterile, high rise behemoth on that large lot, consider the irreparable damage in the context of city aesthetics.

Will there be a giant high rise rival that impairs the view and singular majesty of City Hall. Will the Higgins Building be marginalized as an aesthetic also ran like Vibiana? When the large parking lot is gone, where will commuters looking to access our burgeoning transit system at the Regional Connectors new station at 2nd and Spring, park their cars?

Historic Districts preserve the architectural and cultural achievements that make great cities so venerable. Across the globe, sensible city planners have saved their “Olde Townes”. From

Tokyo and Shanghai to Boston and Philadelphia, historic districts have received their sacrosanct timeless status.

Therefore, I call upon City Planners to save the area Northward from 3rd Street to City Hall, and bordered by Broadway to Los Angeles Streets, creating a Bradbury, Vibiana, St. George Hotel, Higgins Building, City Hall Historic District. Earmark the Joe's Parking Lot by way of eminent domain for a large park with underground parking and you will create a planning triumph that will rival Grand Park. If you have ever stood on the steps of the Philadelphia Museum of Art and looked towards City Hall or trod the Great mall in Washington, you will know the thrill of timeless planning excellence. Los Angeles can achieve the same success.

The purpose of the Historic District is to save existing buildings from destruction through development and to preserve the historic character of the area from any development, high-rise or otherwise, that would be esthetically and culturally deleterious to the unique character of the existing neighborhood.

Let me finish on a personal note for the Higgins Building at 2nd and Main where I reside. For some inexplicable reason the Higgins Building never winds up in the Historic Core where it rightfully belongs. In the proposed City Plan the same error is made. It is historically and architecturally part of the historic core and should belong in it. Therefore, Vibiana, The St. George Hotel, and the Higgins building should be moved to the downtown Traditional Core and not the Transit Core.

Sincerely,
Allan M. Harris

**RE: NOP for Downtown Plan updates and re:code la project**

Dear Mr Eck:

Please find a list of issues for consideration in the DEIR and re-code process. I am a downtown resident heartened by the area's resurgence but appalled by the City's lack of coherent urban planning. I will not raise the standard issues of density, location, transportation, and overall community character. Rather, I will focus on factors suffering from neglect yet important to quality of life.

**1) Incompatible uses**

Downtown is currently plagued by the casual admixture of residential and bars/clubs/bars masquerading as restaurants. In order to protect residents from associate noise and disturbance, alcohol service in such locations should be restricted to particular hours, e.g., 10 PM or 12 AM. Beer and wine only is far less a problem that full alcohol. Restrictions favored by alcohol vendors, such as "food with liquor" requirements are, as a practical matter, unenforceable and an cynical deceit. I speak from experience. The DEIR should evaluate a range of options to reduce the impacts of incompatible use due to alcohol service. Designation of *non-residential* entertainment districts is one approach.

**2) Noise from amplified music in business establishments**

Music should never spill out onto the street. It *must* be completely contained within the business itself, and never allowed to emerge via a patio or sidewalk or open door. The DEIR should evaluate a range of options to reduce the impacts of such noise and to ensure enforceability.

**3) Noise transmittal in buildings**

Multiunit construction standards are grossly insufficient for noise transmittal between units. With most new construction wood or steel rather than concrete, "double drywall" is the standard, and it *does not work*. There are many available construction techniques and materials that codes should require. Quality of life in multiunit buildings is incomparably increased by sound isolation. It is cost effective for the benefits. The DEIR should evaluate a range of options to strengthen building codes for residential buildings.

**4) Architectural design**

The majority of new architecture in downtown is hack work. High rises are banal and the standard 4-5 story buildings are run-of-the-mill mediocrities, in effect a new generation of the Los Angeles multifamily junkscape, which has taken different forms over the decades. The DEIR should assess the feasibility of a design review board, perhaps under the auspice of SciArc.

On a related matter, the City should rethink its requirement for "public art." It is a cost of business that has not reliably delivered benefits commensurate with the cost. On the other hand, the one athing that has turned out well, overall, is mural art on the sides of buildings, freeway infrastructure, etc. Indeed, many murals have become iconic for the City. The City should form a relationship with the Los Angeles Mural Conservancy to bring more mural art forward, and the DEIR should consider shifting the public art requirement to murals.

Also, it would be better to focus on quality landscaping and landscape design as opposed to sculpture and other artworks of debatable taste and quality. The rocks and plantings in the new Blossom Chinatown apartments courtyard are an example of a success. The DEIR should explore standards for landscape design and the use of a review committee.

**6) Signage**

Billboards, particularly digital, are egregious destroyers of public ambiance and public space. They are also safety and traffic hazards due to forced distraction. The DEIR should fully evaluate the aesthetic, cultural, and safety impacts, and *prohibit* such signage.

Please consider these issues. The Planning Department will have to lead the way – though what I have seen to date from the Planning Department in the ongoing billboard fiasco provides scant comfort. Only strong staff recommendations can survive a City Council so heavily influenced by developers, labor unions, and sign companies.

Please retain me on mailing and distribution lists for this project, including CEQA documents and public hearings. Acknowledgment of receipt of these comments is requested by return email. Thank you in advance.

Sincerely,

Dan Silver

RE: Central City and Central City North
Community Plan and Update
SCH# 2017021024
GTS# 07-LA-2017-00625ME NOP

Dear Ms. Elk:

Thank you for including the California Department of Transportation (Caltrans) in the environmental review process for the above referenced project. The proposed project intends to update the Downtown Community Plans, and the adoption of necessary amendments to the land use, zoning, community plan text, and other ordinances to implement those updates.

The California Department of Transportation (Caltrans) as the State agency is responsible for the planning, operations, and maintenance of State highways and have similar transportation goals with the City In the spirit of mutual and collaborative planning, we offer our expertise in the areas of transportation modeling, mainline freeway analysis, system and corridor planning, environmental and community impact assessment, as well as identifying critical operational deficiencies affecting freeway congestion, speed, and delay.

"Caltrans is particularly interested in the transportation planning roles of local plans and suggests that the following areas be emphasized.

- Coordination of planning efforts between local agencies and Caltrans districts.
- Preservation of transportation corridors for future system improvements; and
- Development of coordinated transportation system management plans that achieve the maximum use of present and proposed infrastructure."

Due to new developments increasing the use of local and regional roadways, the circulation element can identify strategies the City will pursue to maintain good levels of service. We request inclusion in the environmental review process of land use projects within the County General Plan area and all projects that have the potential to significantly impact traffic conditions on State highways. To avoid delays and any misunderstandings in the traffic impact analysis, we request to be involved in its development.

Please be aware that the thresholds for significance on State highway facilities are different than those applied in the Los Angeles County Management Program (CMP). For State thresholds and guidance on

the preparation of acceptable traffic studies, please refer to the Statewide Guide for the preparation of Traffic Impact Studies.

Additionally, if significant impacts are anticipated on the State highway system the Department can work with the City and applicants to identify appropriate traffic mitigation measures. Traffic mitigation alternatives may include vehicular demand reducing strategies, such as incentives for commuters to use transit i.e. park-and-ride lots, discounts on monthly bus and rail passes, vanpools, etc. A transportation fund mechanism similar to the West LA TIMP is recommended for Central City Community Plan.

Caltrans is aware of the critical relationship between land use and transportation. The quality of the State transportation system operation can affect the quality of the local circulation system operation. The Circulation Element of the General Plan needs to be consistent with the Land-Use and Housing Elements of the General Plan.

We recommend that special attention be given to the jobs-and-housing balance concept. Communities with predominantly residential allocations should be encouraged to set aside areas for office, commercial/retail, and open space uses. Benefits of balanced communities include: reduction of long morning and evening commutes on State highways, shorter trips which in turn would reduce the consumption of fuel and air pollutants. It may also change direction of trips. Instead of most traffic traveling in one direction during peak periods, some trips may be diverted in the opposite direction. Other land use strategies may include Transit-Oriented Developments (TODs).

Continued high growth is expected for Los Angeles County, which will have impacts to our State transportation facilities. For large development projects, we ask that efforts be made to provide affordable housing for young workers and seniors to ensure that substantial numbers of employees can afford to purchase homes and live within proposed projects. We also ask that project proponents be encouraged to provide job information on jobs provided along with housing development phases.

We look forward to reviewing the traffic study. We expect to receive a copy from the State Clearinghouse when the Draft EIR is completed. However, to expedite the review process, and clarify any misunderstandings, you may send a copy in advance to the undersigned

If you have any questions, please feel free to contact Miya Edmonson the project coordinator at (213) 897-6536 and refer to GTS# 07-LA-2017-00625ME.

Sincerely,

DIANNA WATSON, Branch Chief
LD-IGR/CEQA Review

To: bryan.eck@lacity.org
Cc: gkrajeck@aol.com

Mr. Bryan Eck
Department of City Planning
200 N Spring St CH Room 667
Los Angeles CA 90012

Dear Bryan,
As a resident and homeowner who has lived in DTLA since 2006 I participated in many planning meetings with the former CRA when DTLA was in the beginning stages of massive growth. I notice that little, if any, of the early community input is included in the planning decisions as put forth in your new EIR Planning proposal nor in the development projects that have been approved over the last decade.

It is important that you hold community meetings and ask what residents and stakeholders want, but the reality is, the developers are the ones making the decisions and their development decisions are based on quick profit and with no intention of creating innovative living neighborhoods. Meanwhile the elected officials and neighborhood representatives have little incentive to demand thoughtful long-term urban planning.

Your job is to make sure all of this new development turns into viable communities and not future ghettos. Several of the members from SP-DTLA and area residents and stakeholders went to the EIR Scoping meeting but the staff in attendance were not aware of many details regarding the proposed changes.

Here are some comments regarding the EIR scoping meeting draft plans:

- Call the traditional zone the Historic Core as it has always been called. The Historic Core name more accurately reflects the architecture and the history of the area and has significant impact and importance for the Historic Core and the Historic Core Overlay. Calling it a different name will only cause confusion with past plans.

- The Historic Core Overlay seems to be missing in these draft planning documents and should be included.

- Enforce a "zone of respect" around historic monuments and buildings. These DTLA historic buildings are a major incentive for people to come downtown to live, work, and for entertainment.

- Extend the traditional zone i.e.: Historic Core to City Hall - or at least, up to and include 2nd street and in particular the Higgins Building.

- Extend the traditional zone i.e. Historic Core to include the entire blocks between Hill and Broadway and include Spring, and Main to Los Angeles Streets.

- Where are the parks and open spaces and public spaces for all the tenants and residents that will be living in the new apartments? Include open space and public space and plazas in the plan (and with new developments).

- Add more parks.

- Where is the innovative architecture? All the new buildings look the same (even if the tops are not flat).
Eight to ten stories of parking with 20-50 stories of a steel and glass box on top - with no plazas or public spaces or art.

-Include more interesting and innovative designs for approved projects and include public spaces.

- Do not allow more than one building per design - no more cookie-cutter buildings covering block after block especially in the Historic Core and most notably on Broadway.

- What will this downtown look like in 10-50 years?
What kind of neighborhoods are you creating?

This is such an exciting opportunity to create a living innovative well-designed downtown. Don't allow it to turn into mundane thoughtless infill and don't destroy the historic buildings by overshadowing them with dismal new structures that obstruct and possibly damages the historic architectural treasures we are so fortunate to have in our midst.

Please make sure that I am personally notified of all the future opportunities to shape the specifics of the plan.

Sincerely,

Geralynn Krajeck

200 N. Spring Street, Room 667
Los Angeles, CA 90012

Dear Mr. Eck:

Thank you for notifying the California High-Speed Rail Authority (Authority) of the preparation of an Environmental Impact Report (EIR) for a Project to update the Central City Community Plan and the Central City North Community Plan (Downtown Plans) and adopt new zoning regulations as part of the re:code LA program. We appreciate the city's efforts to plan for the future of downtown Los Angeles and look forward to working with you to leverage land use opportunities around Los Angeles Union Station (LAUS), which high-speed rail plans to share in the future. We appreciate inclusion in your planning and environmental review processes and acknowledge the efforts the City has made to include local stakeholders like the Authority in the development of the City's vision for downtown Los Angeles. Our response to the Notice of Preparation (NOP) is to express support for updating the Downtown Plans and share information about the Authority's environmental studies.

The exciting location covered by the Downtown Plans includes El Pueblo, Chinatown, Little Tokyo, the Civic Center, Boyle Heights, the Arts District, Bunker Hill, Los Angeles State Historic Park, and the Los Angeles River. This historic and diverse part of Los Angeles is on the cusp of transformation. The Authority has already committed to partnering with local stakeholders on several ongoing activities:

- The Union Station/Civic Center Exploratory Taskforce (Taskforce) to implement the Los Angeles Union Station/Civic Center Sustainable and Equitable Transit Oriented Community Study (Grant Study) which is being funded by Southern California Association of Governments (SCAG) in partnership with Los Angeles County Metropolitan Transportation Authority (Metro).
- A proposal to the Environmental Protection Agency to complete environmental site assessments and site planning on properties around LAUS in order to prepare parcels for redevelopment (funding announcement expected in spring 2017), in partnership with Metro and Los Angeles – San Diego – San Luis Obispo Rail Corridor Agency (LOSSAN Agency).

- Planning and environmental review for the Link Union Station project that will construct new run-through tracks over the US-101 freeway, reconfigure the station entry tracks and station platform area, construct a new passenger concourse, construct a new loop track, and provide accommodation for high-speed rail at LAUS in the future, in partnership with Metro.
- Collaboration on the One Water LA initiative and Los Angeles River revitalization efforts in partnership with the City of Los Angeles family.

These efforts will coordinate and harness multi-jurisdictional planning and infrastructure investments to create actionable strategies that support equity, sustainability, housing, jobs, and mobility. We support high-value investment in the Union Station/Civic Center area occurring in a manner that matches the vision for a vibrant, mixed-use, walkable and bikeable place that transforms the existing underutilized land into a regional destination anchored by robust transportation choices and creative, educational, and economic vitality. We look forward to coordinating with you on these exciting and important initiatives as you work to update the Downtown Plans. We encourage the City to consider and analyze land use scenarios that take full advantage of the unique conditions around LAUS in order to accommodate growth and economic development for the benefit of downtown Los Angeles and the Southern California region.

The Authority plans to circulate the Burbank to Los Angeles and Los Angeles to Anaheim Draft Environmental Impact Reports/Environmental Impact Statements (Draft EIR/EIS) in 2017 and our current projection is to complete the environmental process in 2018. The Authority is committed to working closely with you and your planning and environmental consultant team to provide information about the high-speed rail project. We appreciate your support and coordination as we prepare the Authority's EIR/EIS documents.

If you have any questions or concerns, please contact me or Michelle Boehm, Southern California Regional Director, at (213) 628-8024 or michelle.boehm@hsr.ca.gov.

To: Bryan Eck <bryan.eck@lacity.org>

Hi Bryan,

This is a comment on behalf of Little Tokyo Community Council for the Draft Environmental Impact Report for the Downtown Community Plans, City Case No. CPC-2017-432-CPU & ENV-2017-433-EIR.

The Little Tokyo Community Council is the 501(c)(3) nonprofit community coalition of businesses, residents, community and religious institutions, and other vested stakeholders in the Little Tokyo community, with 90+ members. We serve as an advocate on behalf of the Little Tokyo community and provide an inclusive space so that Little Tokyo can speak with one voice to affect positive change for Little Tokyo.

LTCC has worked with the Department of City Planning and other city entities for several years now, partnering to create shared goals for planning projects so as to ensure mutual benefits. We appreciate this strong working relationship, as well as the interconnectedness of issues between the Little Tokyo community and larger Downtown area.

In regards to the EIR Scoping for the Downtown Community Plans, we have three main comments.

1. We urge that the EIR of the Downtown Community Plans include a robust and comprehensive displacement analysis. We understand this is research already taken place in order to evaluate Measure JJJ and determining areas of Los Angeles where we have lost population due to a variety of factors including the rise in housing costs. However, more research and analysis is needed. Please include small businesses in this displacement study, and include this in the Population and Housing section - this is very important for Little Tokyo.

2. We ask that the Department of City Planning include an evaluation of the Downtown Community Plans' consistency with Measure JJJ in order to not have to make further changes down the line and create a Community Plan that can work to promote density with equity incentives.

3. We would like the EIR to assess the impact of implementing a new zoning code (re:Code). In particular, we would like to know the risk of the implementation of a new zone designation and how it would change the base allowable density if and how it would interfere with the density bonus and other affordable housing incentive programs.

4. As with all city-initiated planning processes, we encourage a robust and thorough community engagement process, that centers the existing communities and their needs and visions. We recommend community and neighborhood specific meetings for the various Downtown stakeholders, and on behalf of Little Tokyo, will be expecting coordination and communication as this process continues.

Thank you for your consideration. I'm happy to be reached for any additional comments.

Thanks,
Kristin

# LTSC Public Comment for the Downtown Community Plan Draft EIR Scoping

**Rey Fukuda Salinas** <rfukuda@ltsc.org> Mon, Mar 6, 2017 at 4:38 PM
To: Bryan Eck <bryan.eck@lacity.org>
Cc: Tal Harari <tal.harari@lacity.org>, Kristin Fukushima <kristin@littletokyola.org>, Grant Sunoo <gsunoo@ltsc.org>

Bryan,
This is a comment on behalf of Little Tokyo Service Center for the Draft Environmental Impact Report for the Downtown Community Plans, City Case No. CPC-2017-432-CPU & ENV-2017-433-EIR.

The Little Tokyo Service Center is a Community Development Corporation (LTSC CDC), whose mission is to meet the critical needs of people and to build community. Founded in 1979, LTSC CDC, has been an important resource for the residents of a diverse community. LTSC CDC is a nonprofit charitable organization serving Asian and Pacific Islanders throughout Los Angeles County who are in need, especially those facing language or cultural gaps, financial need, or physical disabilities. Our offices and roots are based in Little Tokyo, and we are very much invested in the future development of Little Tokyo and the broader Downtown area. In regards to the EIR Scoping for the Downtown Community Plans, we have three main comments.

1. We urge that the EIR of the Downtown Community Plans include a robust and comprehensive displacement analysis. We understand this is research already taken place in order to evaluate Measure JJJ and determining areas of Los Angeles where we have lost population due to a variety of factors including the rise in housing costs. A similar study could be included and could be deepened since it is in a focused area.

2. We ask that the Department of City Planning include an evaluation of the Downtown Community Plans' consistency with Measure JJJ in order to not have to make further changes down the line and create a Community Plan that can work to promote density with equity incentives.

3. We would like the EIR to assess the impact of implementing a new zoning code (re:Code). In particular, we would like to know the risk of the implementation of a new zone designation and how it would change the base allowable density, and if and how it would interfere with the density bonus and other affordable housing incentive programs.

Thank you for your consideration. I'm happy to be reached for any questions.

–
sincerely,

Subject: Mack Urban: Central City Community Plan Update - EIR Scope Comments
To: Bryan Eck <bryan.eck@lacity.org>

**Good Afternoon Bryan,**

**We look forward to working with the Planning Department regarding the ongoing updates to the Central City Community Plan, revisions to the Downtown Zoning Code, and amendments to the General Plan Elements.**

**Towards this end, please find herewith our comments pertaining to the EIR Scoping Meeting convened on February 16th, 2017.**

**We will gladly make ourselves available to meet and discuss any questions you may have regarding our comments and to give you feedback and input along the way.**

**Best Regards,**

Attention: Mr. Bryan Eck, City Planner

Re: Central City Community Plan Update; EIR Scope Comments
Case Nos.: CPC-2017-432-CUP; ENV-2017-433-EIR

Dear Mr. Eck:

Thank you for this opportunity to comment on the scope of the environmental review for the Central City Community Plan Update.

Mack Urban is a diversified real estate developer with large-scale residential developments in Los Angeles and Seattle. We purchased six acres of land in the South Park neighborhood of Downtown Los Angeles in 2013. The five development sites can accommodate up to 1,900 residential units with full amenities and ample open spaces. We presently have two major residential projects under construction in South Park, which we refer to as Sites 1 and 4, and which are described below. Mack Urban also owns three additional sites in South Park (referred to as Sites 1A, 2 and 3), which we are presently planning with a goal of submitting for entitlements in the near future.

Based on our experience with developing Sites 1 and 4, and our plans for Sites 1A, 2 and 3, we want to provide you with our thoughts regarding the Central City Community Plan Update as well as its associated programs, such as the Downtown Zoning Code and re-code LA. We believe that this experience can be very useful to the Planning Department as it updates the Community Plan and creates the Downtown Zoning Code.

A. Development of Site 1 and Site 4.

By way of background, Sites 1 and 4 are presently under construction. The following is a summary of these projects:

(1) Site 1 Project Description. Site 1 is located on the property bounded by Grand Avenue on the west, 12th Street on the south, the alley between Grand

Avenue and Olive Street on the east, and an adjacent property to the north (its location is shown on the map attached as Exhibit 1). Site 1 is 1.74 acres in size. It is zoned [Q]R5-4D-O and is presently designated for High Density Residential land use in the Central City Community Plan. Mack Urban is presently constructing a 38-story residential mixed-use building that will include 536 apartment units with the following unit mix: 23 studios, 371 one-bedrooms, 139 two-bedrooms, and 3 penthouse units. The apartment building will be 392 feet tall and the project will have an FAR of 6.66:1. The project includes 14,061 square feet of ground floor retail space.

The project has a total of 53,000 square feet of open space including an 8,650 square foot park located on the northern portion of the site and a 5,374 square foot mid-block paseo connecting Grand Avenue to the interior alley. The project has extensive amenities including a fitness center, locker rooms, pool, spa, indoor and outdoor lounges, business center, yoga room, outdoor seating areas, and meeting and dining rooms.

The project will be parked on-site at the rate of 1 space for each unit with 3 or less habitable rooms, 1.25 parking spaces for each unit with more than 3 habitable rooms, and 1 space for each 1,000 square feet of commercial space, subject to a 15% reduction in required parking for meeting bicycle parking requirements. The parking structure will include approximately 801 parking spaces and has 2 levels below grade and 4 levels above ground level retail. The project will incorporate a portion of the adjacent alley as a paseo, which is being vacated pursuant to a tract map.

(2) Site 4 Project Description. Construction of the Site 4 project is nearing completion, with a certificate of occupancy expected to be issued in April 2017. This project is bordered by Pico Boulevard on the south, Olive Street on the west, Hill Street on the east, and adjacent properties to the north (its location is shown on the map attached as Exhibit 1). The project incorporates the vacation of the alley separating the two parts of the project to create shared open space and the opportunity for a paseo connecting Pico Boulevard and 12th Street. Site 4 is approximately 1.86 acres in size. The project is zoned C2-4D-O, which allows an FAR of up to 6.0:1, and is designated Regional Center Commercial in the Central City Community Plan.

The Site 4 project consists of a 7-story residential mixed-use building that will include 362 apartment units with the following unit mix: 105 studios, 193 one-bedrooms, 58 two-bedrooms, and 6 three-bedroom units. The apartment building will be up to 90 feet tall and the project will have an FAR of 4.12:1. The project includes 4,000 square feet of ground floor retail space.

The Site 4 project has a total of 37,025 square feet of open space, including a 6,532 square foot area with a park, residential lobby amenities, and dog runs on the

ground floor. The project has extensive amenities including a gym, locker room, indoor lounge, outdoor courtyard with barbeque stations, and a business center.

The Site 4 project will be parked on-site at the rate of 1 space for each unit with 3 or less habitable rooms, 1.25 parking spaces for each unit with more than 3 habitable rooms, and 1 space for each 1,000 square feet of commercial space, subject to a 15% reduction in required parking for meeting bicycle parking requirements. The parking structure will include approximately 382 parking spaces and has 2 levels below grade.

B. Critical Site 1 and Site 4 Development Policies:

As noted above, the development of Sites 1 and 4 are excellent case studies involving the policies affecting residential development in South Park. The following is a summary of the factors that were necessary for their development:

(1) Base Level of FAR. In the case of Site 1, the project site was zoned for a maximum of 6.0:1 FAR for the project site. As to Site 4, the site was zoned for up to 6:1 FAR. Without each site having entitlements for a substantial minimum FAR, the projects would not have been economically feasible.

(2) TFAR. In the case of Site 1, the ability to increase the floor area of the project by the use of TFAR allowed us to receive 49,999 square feet of floor area using the streamlined process of a director's determination, which substantially improved the project's feasibility.

(3) Downtown Housing Incentives. The Greater Downtown Housing Incentive provisions greatly benefited both projects, particularly the elimination of the density limitation for residential development and the yard requirements, the method for calculating buildable area, and the flexibility with respect to common or private open space.

(4) Parking Requirements. The reduced parking requirements in the Central City area are particularly important for the feasibility of these projects. However, in light of the public transit options available and the walkability of downtown Los Angeles, it is clear that the parking requirements can be reduced further as well as more flexibility provided for off-site parking options.

(5) Floor Area Averaging. The ability to average the floor area ratio across multiple sites in a unified development under Section 12.24.W(19) is also very useful in creating integrated developments with paseos and other pedestrian linkages.

Without these beneficial provisions, we would not have been able to develop Site 1 with the height, density and open space that make this a unique project. We strongly urge the City to retain these beneficial policies in the Downtown Zoning Code.

At the same time, there are numerous Zoning Code provisions that constrained the Site 1 and Site 4 projects, including the following:

(1) Tree Requirements. Both projects were subject to an unrealistic requirement for a large number of trees on the site, which in the case of Site 1 were 167 trees.

(2) Alley Vacations. Both projects include the creation of paseos and shared open space by the vacation of an alley. However, both projects experienced difficulties in obtaining the necessary approvals from various City departments in order to vacate and transform the alleys with enhanced paving, landscape, and lighting consistent with the Green Alley Pilot Project Designation.

(3) Street Scape Plan. South Park lacks a uniform street scape plan with tree plantings, street furniture, and other features that are necessary to unify the appearance of different projects through the area. A uniform street scape plan for South Park would greatly improve the visual sense of neighborhood for the area. Both projects also experienced difficulties in obtaining the necessary approvals from various City departments in order to expand the urban forest downtown by maximizing the number of street trees and selecting tree species providing a canopy for pedestrians.

(4) Parking Requirements. As noted above, the Planning Department should explore additional ways to reduce the on-site parking requirements in South Park.

(5) Downtown Design Guide and Street Standards. Although the Downtown Design Guide and Street Standards include important standards, the Planning Department and Transportation Department staff should have greater flexibility in allowing exceptions to the Guidelines and updated Street Standards when a better solution is demonstrated or where the Guideline is not relevant.

(6) Environmental Review. The Site 1 and Site 4 projects were entitled through the use of a Mitigated Negative Declaration. We hope that the program EIR being prepared for the Community Plan Updates will provide the opportunity to allow subsequent individual projects to use the program EIR to streamline environmental review.

We urge the Planning Department to address these issues in the Downtown Zoning Code.

C. Mack Urban's Future South Park Projects.

As noted above, Mack Urban is planning the development of three other nearby sites in South Park, designated Sites 1A, Site 2 and Site 3. All of these sites are shown

on the map attached as Exhibit A. Although our planning for these sites is still preliminary, we want to describe these sites and provide you with a summary of our current thinking about their development.

(1) Site 1A. Site 1A is approximately 17,933 square feet in area and is located at the northwest corner of Olive Street and 12th Street. Site 1A is zoned C2-4D-O, with a maximum FAR of 6:1, and is designated Regional Center Commercial in the Central City Community Plan. Site 1A is adjacent to Site 1, across the alley that separates the two. Site 1A was entitled with Site 1 as part of a unified mixed-use development. Despite the 6.0:1 FAR, because Site 1A is relatively small and constrained as to parking, it presents a number of development challenges. Mack Urban is presently considering a hotel for Site 1A as the second phase of the unified development, with approximately 215 rooms that would be built to at least a 6.0:1 FAR.

(2) Site 2. Site 2 is 36,120 square feet in area. It is located at the southwest corner of Olive Street and 11th Street and is adjacent to the northern portion of Site 1, thereby creating the opportunity to connect these projects by converting the alley to a paseo. Site 2 is zoned C2-4D-O, with a maximum FAR of 6.0:1, and is designated Regional Center Commercial in the Central City Community Plan.

Mack Urban is considering developing this site with a residential mixed-use tower of up to 50 stories, with ground floor retail, approximately 720,000 square feet of gross residential floor area, and approximately 570 dwelling units.

(3) Site 3. Site 3 is 46,807 square feet in area. It is located at the southeast corner of Olive Street and 11th Street and directly across Olive Street from Site 2. Site 3 is zoned C2-4D-O, with a maximum FAR of 6:1, and is designated Regional Center Commercial in the Central City Community Plan.

We are presently studying this site for an 8-story, mid-rise residential development with ground floor retail, approximately 210,000 square feet of gross residential floor area and 215 dwelling units. However, we may elect to pursue entitlements for a high-rise tower on this site.

Under these preliminary studies, the total gross residential floor area of Site 2 and Site 3 would be approximately 970,000 square feet and would yield a combined FAR of approximately 10.0:1. As a result, an approval of a substantial TFAR would be required and the projects may need to be entitled as a unified project in order to average the floor area across both parcels.

As noted above, it is essential that a sufficiently high FAR be provided for these sites because it is necessary to permit these sites to be developed to their full potential.

We recommend that the existing "D" condition limitations be removed and the original 13.0:1 FAR be restored for these sites.

We ask that you consider the above-mentioned entitlement approvals and intended development of all our South Park sites to make sure that the Central City Community Plan Update, as well as the Downtown Zoning Code, Downtown Design Guide, and Downtown Street Standards do not inadvertently make these sites non-conforming. We look forward to working with you on the development of the Central City Community Plan, the Downtown Zoning Code, and the future planning and entitlements of the Mack Urban Sites 1A, 2, and 3 in South Park.

Very Truly Yours,

Mark Wareham

**RE: Notice of Preparation of a Combined Draft Environmental Impact Report for Updates to the Central City and Central City North Community Plans, and Amendments to the City of Los Angeles Municipal Code to Adopt a New Zoning Code for the Central City and Central City North Community Plan Areas (as part of the *Re:CodeLA* Project)**

Dear Mr. Eck

Thank you for the opportunity to comment on the Central City and Central City North Community Plan Updates project. This letter conveys recommendations from the Los Angeles County Metropolitan Transportation Authority (Metro) concerning issues that are germane to our agency's statutory responsibility in relation to our facilities and services that may be affected by the proposed project.

Metro is committed to working with stakeholders across the County to support the development of transit oriented communities (TOCs). TOCs are built by considering transit within a broader community and creating vibrant, compact, walkable, and bikeable places centered around transit stations and hubs with the goal of encouraging the use of transit and other alternatives to driving. Metro looks forward to collaborating with local municipalities, developers, and other stakeholders in their land use planning and development efforts, and to find partnerships that support TOCs across Los Angeles County.

**Project Location**

The Project location is the Central City Community Plan Area and the Central City North Community Plan Area ("Downtown Plan Area" or "Project Area"). The Downtown Plan Area is geographically contiguous, sharing a common boundary along Alameda Street. The Central City Community Plan Area (CPA) is comprised of approximately 2,161 acres, and is generally bounded on the north by Sunset Boulevard/Cesar Chavez Avenue, on the south by the Santa Monica Freeway (Interstate 10), on the west by the Harbor Freeway (Interstate 110), and on the east by Alameda Street. Immediately to the east of Alameda Street is the Central City North CPA. The Central City North CPA is comprised of approximately 2,005 acres, and is generally bounded on the north by Stadium Way, Lilac Terrace, and North Broadway, on the south by the City of Vernon, on the west by Alameda Street, and on the east by the Los Angeles River. The Project Area is bordered by the communities of Boyle Heights, Silver Lake-Echo Park, Westlake, Southeast and South Los Angeles, and the City of Vernon.

**Project Description**

The proposed Project includes the updates to the Downtown Plans, adoption of the Downtown Zoning Code, and the adoption of necessary revisions and any other amendments necessary to implement the above, including amendments to other General Plan elements (such as Mobility and Framework), the LAMC, specific plans, and other ordinances to implement those updates.

**Metro Comments**

*Bus Operations*

Several Metro bus lines operate within the CPAs. For example, in the Central City CPA, Metro operates bus lines on Alameda Street, Los Angeles Street, Temple Street, Main Street, Spring Street, Broadway, Hill Street, Olive Street, Grand Avenue, Figueroa Street, 1st Street, 5th Street, 6th Street, Wilshire Boulevard, 7th Street, 8th Street, 9th Street, Olympic Boulevard, & Pico Boulevard. In the Central City North CPA, Metro operates bus lines on Santa Fe Avenue, Olympic Boulevard, 1st Street, Main Street, Vignes Street, College Street, Broadway, and Hill Street. The CPAs represent the core of Metro's bus system, it is vital that these bus lines are considered as these updates are developed.

Many residents and businesses in the CPAs rely on Metro's bus service as their primary mode of transport, it is critical to maintain reliability and predictability for patrons. Metro strongly recommends that bus operations be considered as any roadway modifications are advanced, in particular those that result in roadway narrowing and/or travel lane reductions.

Metro requests that the City continue to coordinate with Metro prior to advancing any improvements that may affect bus operations. Metro supports active transportation and improved first/last mile connections. However, it is critical that bus operations be taken into consideration as projects are advanced. We welcome the ongoing coordination with the City of Los Angeles and improving multi-modal connections.

Additionally, Metro has standard language that relates to construction activity adjacent to bus transit facilities. Please ensure that existing Metro bus stops and Metro bus layover zones are maintained. Furthermore, Metro recommends that the Community Plans include language that informs future development activity within the Community Plan of Metro's notification procedures and considerations for projects located in close proximity to a Metro facility that may impact Metro bus operations.

*Metro Rail Operations*

Several Metro light rail lines (Blue, Expo, Gold, Purple, & Red) currently operate weekday peak service as often as every five minutes in both directions and trains may operate, in and out of revenue service, 24 hours a day, seven days a week in the ROW proximate to the CPAs. Additionally, the Regional Connector (under construction) will run in underground tunnels within the CPAs. Metrolink lines run to and from Union Station as well. Metro has an Adjacent Construction Design Manual that describes the Metro's development project review process and considerations for project siting as it relates to Metro facilities. Metro suggests that the project sponsor include policy language or guidance in the Community Plans that clearly denotes development occurring within 100 feet of a Metro facility will require Metro review and approval, including compliance with Metro's Development Guidelines, that a

recorded Noise Easement Deed in favor of Metro is required, and that any noise mitigation required for projects must be borne by the developers of those projects and not Metro. In particular, because of the proximity to the Metro light rail lines, increased traffic at railroad grade crossings must be considered. Provisions for transit priority treatments should be considered to make the development welcoming to transit access.

Furthermore, the West Santa Ana Branch (WSAB) is exploring an alignment along Alameda Street and 7th Street as an alternative in the environmental study. This should be coordinated as part of the Community Plan process and any development project design and construction in this vicinity should be coordinated with Metro's West Santa Ana Branch Team. Please contact Fanny Pan, Senior Director, at 213-922-3070 for all WSAB coordination efforts.

*Transit Orientation and Active Transportation*

Metro strongly recommends that the Community Plans include a minimum five (5) foot setback from the Metro ROW to ensure that property owners can maintain their property without entering Metro property. Additionally, policies should encourage transit-supportive public realm improvements, such as wide sidewalks, bicycle facilities with safe connections to/from transit, bus shelters, comfortable seating, landscaping (i.e., street trees that provide continuous shade along transit access routes); way finding signage (directing pedestrians to transit stops and stations, and from transit facilities to points of interest in the surrounding neighborhood); and enhanced, ADA-compliant street crossing elements adjacent to transit stops and stations (i.e., enhanced crosswalks, crossing signals, and accessible ramps).

To further advance first last mile connections within the CPAs, Metro recommends that the Community Plan Updates include the Connect US Action Plan. The Connect US Action Plan (Connect US) is a community-driven active transportation plan that prioritizes pedestrian and bicyclist connections to and from Los Angeles Union Station, the 1st/Central Regional Connector Station, and the surrounding historic and culturally significant communities. Connect US was developed in partnership with Metro, the City of Los Angeles, and community stakeholders. Connect US includes a series of active transportation improvements that can be implemented within the existing City of Los Angeles public-right-of-way. Metro strongly recommends that the Connect US Action Plan be embedded within and adopted within the Community Plan Updates or that a comparable path to adoption is identified.

*Los Angeles Union Station*

Los Angeles Union Station (LAUS) is the hub and the underpinning element of Metro's public transportation system. The LAUS property is cited within the Central City North Community Plan Area and is adjacent to the Central City Community Plan Area. Metro appreciates that the DTLA 2040 effort highlights the robust and significant transportation infrastructure that is in place and under construction in the Plan Areas. Metro supports the creation of General Plan Land Use Designations that prioritize growth around transit infrastructure such as the Transit Core (with the highest allowable FAR of all designations) and Transit Edge designations. Additionally, Metro supports the inclusion of a core principle that calls for *'Promoting a transit, bicycle, and pedestrian friendly environment'* and the creation of linkages between districts, the Connect US Action Plan is an example of how this can be achieved in the Plan Areas.

Consistent with the creation of the Transit Core and Transit Edge land use designations and the existing Framework Element of the General Plan, Metro would like to recommend that policy language is included in the Plans that speak to the significance that prioritizing growth near transit and advancing comprehensive transit supportive planning efforts have on increasing public transit ridership. Please refer to the Transit Supportive Planning Toolkit, a research-based online resource that identifies10 characteristics of transit supportive places for additional information. The Toolkit can be found at metro.net/projects/tod-toolkit/.

Metro looks forward to continuing to collaborate with the City to effectuate policies and implementation activities that promote transit and active transportation supportive communities. If you have any questions regarding this response, please contact Elizabeth Carvajal at 213-922-3084 or by email at DevReview@metro.net. Metro looks forward to reviewing the Draft Community Plans and the Draft EIR. Please send the documents to the following address:

**NOISE EASEMENT DEED**

For valuable consideration, receipt of which is hereby acknowledged, **(Name of Owner)**, a _____ , for themselves, their heirs, administrators, executors, successors, assigns, tenants, and lessees do hereby grant, bargain, sell, and convey to the **LOS ANGELES COUNTY METROPOLITAN TRANSPORTATION AUTHORITY,** a public agency existing under the authority of the laws of the State of California ("Grantee"), its successors and assigns, for the use and benefit of the public and its employees, a perpetual, assignable easement in that certain real property in the City of Los Angeles, County of Los Angeles, State of California described in Exhibit "A" attached hereto and incorporated herein by this reference,

Said easement shall encompass and cover the entirety of the Grantors' Property having the same boundaries as the described Property and extending from the sub-surface upwards to the limits of the atmosphere of the earth, the right to cause in said easement area such noise, vibrations, fumes, dust, fuel particles, light, sonic disturbances, and all other effects that may be caused or may have been caused by the operation of public transit vehicles traveling along the Project right of way.

Grantor hereby waives all rights to protest, object to, make a claim or bring suit or action of any purpose, including or not limited to, property damage or personal injuries, against Grantee, its successors and assigns, for any necessary operating and maintenance activities and changes related to the Project which may conflict with Grantors' use of Grantors' property for residential and other purposes, and Grantors hereby grants an easement to the Grantee for such activities.

The granting of said Easement shall also establish the Grantors' right to further modify or develop the Property for any permitted use. However, Grantor's rights of development shall not interfere with the continued operation of Grantee's Project.

It is understood and agreed that these covenants and agreements shall be permanent, perpetual, will run with the land and that notice shall be made to and shall be binding upon all heirs, administrators, executors, successors, assigns, tenants and lessees of the Grantor. The Grantee is hereby expressly granted the right of third party enforcement of this easement.

IN WITNESS WHEREOF, the undersigned has caused its/their signature to be affixed this day of _____, 20___

Velma C. Marshall
Deputy Executive Officer - Real Estate

# ADJACENT CONSTRUCTION DESIGN MANUAL

## 1.0 INTRODUCTION

1.1 Parties planning construction over, under or adjacent to a Metropolitan Transportation Authority (MTA) facility or structure are advised to submit for review seven (7) copies of their drawings and four (4) copies of their calculations showing the relationship between their project and the MTA facilities, for MTA review. The purpose of the MTA review is to reduce the chance of conflict, damage, and unnecessary remedial measures for both MTA and the parties. Parties are defined as developers, agencies, municipalities, property owners or similar organizations proposing to perform or sponsor construction work near MTA facilities.

1.2 Sufficient drawings and details shall be submitted at each level of completion such as Preliminary, In-Progress, Pre-final and Final, etc. to facilitate the review of the effects that the proposed project may or may not have on the MTA facilities. An MTA review requires internal circulation of the construction drawings to concerned departments (usually includes Construction, Operations, Maintenance, and Real Estate). Parties shall be responsible for all costs related to drawing reviews by MTA. MTA costs shall be based upon the actual hours taken for review at the hourly rate of pay plus overhead charges. Drawings normally required for review are:

A. Site Plan

B. Drainage Area Maps and Drainage Calculations

C. Architectural drawings

D. Structural drawings and calculations

E. Civil Drawings

F. Utility Drawings

G. Sections showing Foundations and MTA Structures

H. Column Load Tables

I. Pertinent Drawings and calculations detailing an impact on MTA facilities

J. A copy of the Geotechnical Report.

K. Construction zone traffic safety and detour plans: Provide and regulate positive traffic guidance and definition for vehicular and pedestrian traffic adjacent to the construction site to ensure traffic safety and reduce adverse traffic circulation impact.

L. Drawings and calculations should be sent to:

**MTA Third Party Administration (Permits Administration)**
**Los Angeles County Metropolitan Transportation Authority**
One Gateway Plaza
Los Angeles, California 90012

1.3 If uncertainty exists on the possible impacts a project may have on the MTA facilities, and before submitting a formal letter requesting a review of a construction project adjacent to the Metro System, the party or his agent may contact the MTA Third Party Administrator (Permits ). The Party shall review the complexity of the project, and receive an informal evaluation of the amount of detail required for the MTA review. In those cases, whereby it appears the project will present no risk to MTA, the Third Party Administrator (Permits) shall immediately route the design documents to Construction, Operations, Maintenance, and Real Estate departments for a preliminary evaluation. If it is then confirmed that MTA risk is not present, the Administrator shall process an approval letter to the party.

1.4 A period of 30 working days should be allowed for review of the drawings and calculations. Thirty (30) work days should be allowed for each successive review as required. It is noted that preliminary evaluations are usually produced within 5 working days.

1.5 The party shall reimburse the MTA for any technical review or support services costs incurred that are associated with his/her request for access to the Metro Rail System

1.6 The following items must be completed before starting any construction:

A. Each part of the project's design may be reviewed and approved by the MTA. The prime concern of the MTA is to determine the effect of the project on the MTA structure and its transit operations. A few of the other parts of a project to be considered are overhead protection, dust protection, dewatering, and temporary use of public space for construction activities.

B. Once the Party has received written acceptance of the design of a given project then the Party must notify MTA prior to the start of construction, in accordance with the terms of acceptance.

1.7 Qualified Seismic, Structural and Geotechnical Oversight

The design documents shall note the name of the responsible Structural Engineer and Geotechnical Engineer, licensed in the State of California.

## 2.0 REVIEW PROCEDURE

2.1 All portions of any proposed design that will have a direct impact on an MTA facility or structure will be reviewed to assure that the MTA facility or structure is not placed in risk at any time, and that the design meets all applicable codes and criteria. Any portion of the proposed design that is to form part of an MTA controlled area shall be designed to meet the MTA Design Criteria and Standards.

2.2 Permits, where required by the local jurisdiction, shall be the responsibility of the party. City of L.A. Dept. of Bldg. and Safety and the Bureau of Engineering permit review shall remain in effect. Party shall refer to MTA Third Party Administration policies and procedures, THD5 for additional information.

2.3 Monitoring of the temporary support of excavation structures for adjacent construction shall be required in all cases for excavations within the geotechnical zone of influence of MTA structures. The extent of the monitoring will vary from case to case.

2.4 Monitoring of the inside of MTA tunnels and structures shall be required when the adjacent

excavation will unload or load the MTA structure or tunnel. Monitoring of vertical and horizontal distortions will include use of extensometers, inclinometers, settlement reference points, tiltmeters, groundwater observation wells, tape extensometer anchor points and load cells, as appropriately required. Acceptable limits of movement will depend on groundwater conditions, soil types and also the length of service the stations and tunnels have gone through. Escorts will be required for the survey parties entering the Metro operating system in accordance with MTA Operating Rules and Procedures. An MTA account number will be established and the costs for the escort monitoring and surveying service will be billed directly to the party or his agent as in section 1.2.

2.5 The calculations submitted for review shall include the following:

A. A concise statement of the problem and the purpose of the calculation.

B. Input data, applicable criteria, clearly stated assumptions and justifying rationale.

C. References to articles, manuals and source material shall be furnished with the calculations.

D. Reference to pertinent codes and standards.

E. Sufficient sketches or drawing references for the work to be easily understood by an independent reviewer. Diagrams indicating data (such as loads and dimensions) shall be included along with adequate sketches of all details not considered standard by MTA.

F. The source or derivation of all equations shall be shown where they are introduced into the calculations.

G. Numerical calculations shall clearly indicate type of measurement unit used.

H. Identify results and conclusions.

I. Calculations shall be neat, orderly, and legible.

2.6 When computer programs are used to perform calculations, the following information shall accompany the calculation, including the following:

A. Program Name.

B. Program Abstract.

C. Program Purpose and Applications.

D. Complete descriptions of assumptions, capabilities and limitations.

E. Instructions for preparing problem data.

F. Instructions for problem execution.

G. List (and explanation) of program acronyms and error messages.

H. Description of deficiencies or uncorrected errors.

I. Description of output options and interpretations.

J. Sample problem(s), illustrating all input and output options and hardware execution statements. Typically, these problems shall be verified problems.

K. Computer printout of all supporting calculations.

L. The "User's Manual" shall also include a certification section. The certification section shall describe the methods and how they cover the permitted options and uses of the program.

2.7 Drawings shall be drawn, to scale, showing the location and relationship of proposed adjacent construction to existing MTA structures at various stages of construction along the entire adjacent alignment. The stresses and deflections induced in the existing MTA structures should be provided.

2.8 The short-term and long-term effects of the new loading due to the adjacent construction on the MTA structures shall be provided. The soil parameters and other pertinent geotechnical criteria contained in existing contract documents for the affected structure, plus any additional conditions shall be used to analyze the existing MTA structures.

2.9 MTA structures shall be analyzed for differential pressure loadings transferred from the adjacent construction site.

## 3.0 MECHANICAL CRITERIA

3.1 Existing services to MTA facilities, including chilled water and condenser water piping, potable and fire water, storm and sanitary sewer, piping, are not to be used, interrupted nor disturbed without written approval of MTA.

3.2 Surface openings of ventilation shafts, emergency exits serving MTA underground facilities, and ventilation system openings of surface and elevated facilities are not to be blocked or restricted in any manner. Construction dust shall be prevented from entering MTA facilities.

3.3 Hot or foul air, fumes, smoke, steam, etc., from adjacent new or temporary facilities are not to be discharged within 40 feet of existing MTA ventilation system intake shafts, station entrances or portals. Tunnel ventilation shafts are both intake and discharge structures.

3.4 Clear access for the fire department to the MTA fire department connections shall be maintained at all times. Construction signs shall be provided to identify the location of MTA fire department connections. No interruption to fire protection water service will be permitted at any time.

3.5 Modifications to existing MTA mechanical systems and equipment, including ventilation shafts, required by new connections into the MTA System, shall only be permitted with prior review and approval by MTA. If changes are made to MTA property as built drawings shall be provided reflecting these changes.

At the option of MTA, the adjacent construction party shall be required to perform the field tests necessary to verify the adequacy of the modified system and the equipment performance. This verification shall be performed within an agreed time period jointly determined by MTA and the Party on a case by case basis. Where a modification is approved, the party shall be held responsible to maintain original operating capacity of the equipment and the system impacted by the modification.

## 4.0 OPERATIONAL REQUIREMENTS

### 4.1 GENERAL

A. Normal construction practices must be augmented to insure adequate safety for the general public entering Metro Stations and riding on Metro Trains and Buses. Design of a building, structure, or facility shall take into account the special safety considerations required for the construction of the facility next to or around an operating transit system.

B. Projects which require working over or adjacent to MTA station entrances shall develop their construction procedures and sequences of work to meet the following minimum requirements:

1. Construction operations shall be planned, scheduled and carried out in a way that will afford the Metro patrons and the general public a clean, safe and orderly access and egress to the station entrance during revenue hours.

2. Construction activities which involve swinging a crane and suspended loads over pedestrian areas, MTA station entrances and escalators, tracks or Metro bus passenger areas shall not be performed during revenue hours. Specific periods or hours shall be granted on a case-by-case basis.

3. All cranes must be stored and secured facing away from energized tracks, when appropriate.

4. All activity must be coordinated through the MTA Track Allocation process in advance of work activity.

### 4.2 OVERHEAD PROTECTION - Station Entrances

A. Overhead protection from falling objects shall be provided over MTA facilities whenever there is possibility, due to the nature of a construction operation, that an object could fall in or around MTA station entrances, bus stops, elevators, or areas designed for public access to MTA facilities. Erection of the overhead protection for these areas shall be done during MTA non-revenue hours.

1. The design live load for all overhead protection shall be 150 pounds per square foot minimum. The design wind load on the temporary structures shall be 20 pounds per square foot, on the windward and leeward sides of the structure.

2. The overhead protection shall be constructed of fire rated materials. Materials and equipment shall not be stored on the completed shield. The roof of the shield shall be constructed and maintained watertight.

B. Lighting in public areas and around affected MTA facilities shall be provided under the overhead protection to maintain a minimum level of twenty-five (25) footcandles at the escalator treads or at the walking surface. The temporary lighting shall be maintained by the Party.

C. Wooden construction fencing shall be installed at the boundary of the areas with public access. The fencing shall be at least eight-feet high, and shall meet all applicable code requirements.

D. An unrestricted public access path shall be provided at the upper landing of the entrance escalator-way in accordance with the following:

1. A vertical clearance between the walking surface and the lowest projection of the shield shall be 8'-0".

2. A clear pedestrian runoff area extending beyond the escalator newel shall be provided, the least dimension of which shall be twenty (20) feet.

3. A fifteen (15) foot wide strip (other than the sidewalk) shall be maintained on the side of the escalator for circulation when the escalator is pointed away from a street corner.

4. A clear path from any MTA emergency exit to the public street shall be maintained at all times.

E. Temporary sidewalks or pedestrian ways, which will be in use more than 10 days, shall be7constructed of four (4") inch thick Portland cement concrete or four(4") inches of asphaltic concrete placed and finished by a machine.

4.3 OVERHEAD PROTECTION - Operating Right-of-Way Trackage

A. MTA Rail Operations Control Center shall be informed of any intent to work above, on, or under the MTA right-of-way. Crews shall be trained and special flagging operations shall be directed by MTA Rail Operations Control Center. The party shall provide competent persons to serve as Flaggers. These Flaggers shall be trained and certified by MTA Rail Operations prior to any work commencing. All costs incurred by MTA shall be paid by the party.

B. A construction project that will require work over, under or adjacent to the at grade and aerial MTA right-of-way should be aware that the operation of machinery, construction of scaffolding or any operation hazardous to the operation of the MTA facility shall require that the work be done during non-revenue hours and authorized through the MTA Track Allocation process.

C. MTA flagmen or inspectors from MTA Operations shall observe all augering, pile driving or other work that is judged to be hazardous. Costs associated with the flagman or inspector shall be borne by the Party.

D. The party shall request access rights or track rights to perform work during non-revenue hours. The request shall be made through the MTA Track Allocation process.-

4.4 OTHER METRO FACILITIES

A. Access and egress from the public streets to fan shafts, vent shafts and emergency exits must be maintained at all times. The shafts shall be protected from dust and debris. See

Exhibit A for details.

B. Any excavation in the vicinity of MTA power lines feeding the Metro System shall be through hand excavation and only after authorization has been obtained through the MTA Track Allocation process. MTA Rail Operations Control Center shall be informed before any operations commences near the MTA power system.

C. Flammable liquids shall not to be stored over or within 25 feet horizontally of MTA underground facilities. If installed within 25 to 100 feet horizontally of the structure, protective encasement of the tanks shall be required in accordance with NFPA STD 130. Existing underground tanks located within 100 feet horizontally of MTA facilities and scheduled to be abandoned are to be disposed of in accordance with Appendix C of NFPA STD 130. NFPA STD 130 shall also be applied to the construction of new fuel tanks.

D. Isolation of MTA Facilities from Blast

Subsurface areas of new adjacent private buildings where the public has access or that cannot be guaranteed as a secure area, such as parking garages and commercial storage and warehousing, will be treated as areas of potential explosion. NFPA 130, Standard for Fixed Guideway Transit Systems, life safety separation criteria will be applied that assumes such spaces contain Class I flammable, or Class II or Class III Combustible liquids. For structural and other considerations, isolation for blast will be treated the same as seismic separation, and the more restrictive shall be applied.

**E. Any proposed facility that is located within 20 feet radius of an existing Metro facility will require a blast and explosion study and recommendations to be conducted by a specialist who is specialized in the area of blast force attenuation. This study must assess the effect that an explosion in the proposed non-Metro facility will have on the adjacent Metro facility and provide recommendations to prevent any catastrophic damage to the existing Metro facility. Metro must approve the qualifications of the proposed specialist prior to commencement of any work on this specialized study.**

4.5 SAFETY REGULATIONS

A. Comply with Cal/OSHA Compressed Air Safety Orders Title 8, Division 1, Chapter 4, Subchapter 3. Comply with California Code of Regulations Title 8, Title 29 Code of Federal Regulations; and/or the Construction Safety and Health Manual ( Part F ) of the contract whichever is most stringent in regulating the safety conditions to be maintained in the work environment as determined by the Authority. The Party recognizes that government promulgated safety regulations are minimum standards and that additional safeguards may be required

B. Comply with the requirements of Chemical Hazards Safety and Health Plan, (per 29 CFR 1910.120 entitled, ( Hazardous Waste Operations and Emergency Response) with respect to the handling of hazardous or contaminated wastes and mandated specialty raining and health screening.

C. Party and contractor personnel while within the operating MTA right-of-way shall

coordinate all safety rules and procedures with MTA Rail Operations Control Center.-

D. When support functions and electrical power outages are required, the approval MUST be obtained through the MTA Track Allocation procedure. Approval of the support functions and power outages must be obtained in writing prior to shutdown.

## 5.0 CORROSION

### 5.1 STRAY CURRENT PROTECTION

A. Because stray currents may be present in the area of the project, the Party shall investigate the site for stray currents and provide the means for mitigation when warranted.

B. Installers of facilities that will require a Cathodic Protection (CP) system must coordinate their CP proposals with MTA. Inquiries shall be routed to the Manager, Third Party Administration.

C. The Party is responsible for damage caused by its contractors to MTA corrosion test facilities in public right-of-way.

Re: SCH# 2017021024 Central City and central City North Community Plan Update and Environmental Impact Report, Los Angeles County.

Dear Mr. Eck:

The Native American Heritage Commission (NAHC) has reviewed the Notice of Preparation (NOP) prepared for the project referenced above.

The California Environmental Quality Act (CEQA)[1], specifically Public Resources Code section 21084.1, states that a project that may cause a substantial adverse change in the significance of a historical resource is a project that may have a significant effect on the environment.[2] If there is substantial evidence, in light of the whole record before a lead agency, that a project may have a significant effect on the environment, an environmental impact report (EIR) shall be prepared.[3] In order to determine whether a project will cause a substantial adverse change in the significance of a historical resource, a lead agency will need to determine whether there are historical resources with the area of project effect (APE).

CEQA was amended in 2014 by Assembly Bill 52. (AB 52).[4] **AB 52 applies to any project for which a notice of preparation or a notice of negative declaration or mitigated negative declaration is filed on or after July 1, 2015.** AB 52 created a separate category for "tribal cultural resources"[5], that now includes "a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment.[6] Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource.[7] Your project may also be subject to **Senate Bill 18 (SB 18)** (Burton, Chapter 905, Statutes of 2004), Government Code 65352.3, if it also involves the adoption of or amendment to a general plan or a specific plan, or the designation or proposed designation of open space. **Both SB 18 and AB 52 have tribal consultation requirements**. Additionally, if your project is also subject to the federal National Environmental Policy Act (42 U.S.C. § 4321 et seq.) (NEPA), the tribal consultation requirements of Section 106 of the National Historic Preservation Act of 1966[8] may also apply.

**Consult your legal counsel about compliance with AB 52 and SB 18 as well as compliance with any other applicable laws.**

Agencies should be aware that AB 52 does not preclude agencies from initiating tribal consultation with tribes that are traditionally and culturally affiliated with their jurisdictions before the timeframes provided in AB 52. For that reason, we urge you to continue to request Native American Tribal Consultation Lists and Sacred Lands File searches from the NAHC. The request forms can be found online at: http://nahc.ca.gov/resources/forms/. Additional information regarding AB 52 can be found online at http://nahc.ca.gov/wp-content/uploads/2015/10/AB52TribalConsultation_CalEPAPDF.pdf, entitled "Tribal Consultation Under AB 52: Requirements and Best Practices".

The NAHC recommends lead agencies consult with all California Native American tribes that are traditionally and culturally affiliated with the geographic area of your proposed project as early as possible in order to avoid inadvertent discoveries of Native American human remains and best protect tribal cultural resources.

A brief summary of portions of AB 52 and SB 18 as well as the NAHC's recommendations for conducting cultural resources assessments is also attached.

Please contact me at katy.sanchez@nahc.ca.gov or call (916) 373-3712, if you have any questions.

Sincerely,

Katy Sanchez

Katy Sanchez
Associate Environmental Planner

[3] Pub. Resources Code § 21080 (d); Cal. Code Regs., tit. 14, § 15064 subd.(a)(1); CEQA Guidelines § 15064 (a)(1)
[4] Government Code 65352.3
[5] Pub. Resources Code § 21074
[6] Pub. Resources Code § 21084.2
[7] Pub. Resources Code § 21084.3 (a)
[8] 154 U.S.C. 300101, 36 C.F.R. § 800 et seq.

**Pertinent Statutory Information:**

**Under AB 52:**
AB 52 has added to CEQA the additional requirements listed below, along with many other requirements:
Within fourteen (14) days of determining that an application for a project is complete or of a decision by a public agency to undertake a project, a **lead agency** shall provide formal notification to a designated contact of, or tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice.
A **lead agency** shall begin the consultation process within 30 days of receiving a request for consultation from a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project.[9] and **prior to the release of a negative declaration, mitigated negative declaration or environmental impact report**. For purposes of AB 52, "consultation shall have the same meaning as provided in Gov. Code § 65352.4 (SB 18).[10]
The following topics of consultation, if a tribe requests to discuss them, are mandatory topics of consultation:

a. Alternatives to the project.
b. Recommended mitigation measures.
c. Significant effects.[11]

1. The following topics are discretionary topics of consultation:
   **a.** Type of environmental review necessary.
   **b.** Significance of the tribal cultural resources.
   **c.** Significance of the project's impacts on tribal cultural resources.

If necessary, project alternatives or appropriate measures for preservation or mitigation that the tribe may recommend to the lead agency.[12]
With some exceptions, any information, including but not limited to, the location, description, and use of tribal cultural resources submitted by a California Native American tribe during the environmental review process **shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public, consistent with Government Code sections 6254 (r) and 6254.10.** Any information submitted by a California Native American tribe during the consultation or environmental review process shall be published in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public.[13]
If a project may have a significant impact on a tribal cultural resource, **the lead agency's environmental document shall discuss** both of the following:

a. Whether the proposed project has a significant impact on an identified tribal cultural resource.
b. Whether feasible alternatives or mitigation measures, including those measures that may be agreed to pursuant to Public Resources Code section 21082.3, subdivision (a), avoid or substantially lessen the impact on the identified tribal cultural resource.[14]

Consultation with a tribe shall be considered concluded when either of the following occurs:

a. The parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or
b. A party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached.[15]

Any mitigation measures agreed upon in the consultation conducted pursuant to Public Resources Code section 21080.3.2 **shall be recommended for inclusion in the environmental document and in an adopted mitigation monitoring and reporting program**, if determined to avoid or lessen the impact pursuant to Public Resources Code section 21082.3, subdivision (b), paragraph 2, and shall be fully enforceable.[16]
If mitigation measures recommended by the staff of the lead agency as a result of the consultation process are not included in the environmental document or if there are no agreed upon mitigation measures at the conclusion of consultation, or if consultation does not occur, and if substantial evidence demonstrates that a project will cause a significant effect to a tribal cultural resource, **the lead agency shall consider feasible mitigation** pursuant to Public Resources Code section 21084.3 (b).[17]
An environmental impact report **may not be certified**, nor may a mitigated negative declaration or a negative declaration be adopted unless one of the following occurs:

**a.** The consultation process between the tribes and the lead agency has occurred as provided in Public Resources Code sections 21080.3.1 and 21080.3.2 and concluded pursuant to Public Resources Code section 21080.3.2.
**b.** The tribe that requested consultation failed to provide comments to the lead agency or otherwise failed to engage in the consultation process.
**c.** The lead agency provided notice of the project to the tribe in compliance with Public Resources Code section 21080.3.1 (d) and the tribe failed to request consultation within 30 days.[18]

***This process should be documented in the Tribal Cultural Resources section of your environmental document.***

**Under SB 18:**
Government Code § 65352.3 (a) (1) requires consultation with Native Americans on general plan proposals for the purposes of "preserving or mitigating impacts to places, features, and objects described § 5097.9 and § 5091.993 of the Public Resources Code that are located within the city or county's jurisdiction. Government Code § 65560 (a), (b), and (c) provides for consultation with Native American tribes on the open-space element of a county or city general plan for the purposes of protecting places, features, and objects described in Sections 5097.9 and 5097.993 of the Public Resources Code.

---

[9] Pub. Resources Code § 21080.3.1, subds. (d) and (e)
[10] Pub. Resources Code § 21080.3.1 (b)
[11] Pub. Resources Code § 21080.3.2 (a)
[12] Pub. Resources Code § 21080.3.2 (a)
[13] Pub. Resources Code § 21082.3 (c)(1)
[14] Pub. Resources Code § 21082.3 (b)
[15] Pub. Resources Code § 21080.3.2 (b)
[16] Pub. Resources Code § 21082.3 (a)
[17] Pub. Resources Code § 21082.3 (e)
[18] Pub. Resources Code § 21082.3 (d)

- SB 18 applies to **local governments** and requires them to contact, provide notice to, refer plans to, and consult with tribes prior to the adoption or amendment of a general plan or a specific plan, or the designation of open space. Local governments should consult the Governor's Office of Planning and Research's "Tribal Consultation Guidelines," which can be found online at: https://www.opr.ca.gov/docs/09_14_05_Updated_Guidelines_922.pdf
- Tribal Consultation: If a local government considers a proposal to adopt or amend a general plan or a specific plan, or to designate open space it is required to contact the appropriate tribes identified by the NAHC by requesting a "Tribal Consultation List." If a tribe, once contacted, requests consultation the local government must consult with the tribe on the plan proposal. **A tribe has 90 days from the date of receipt of notification to request consultation unless a shorter timeframe has been agreed to by the tribe.**[19]
- There is no Statutory Time Limit on Tribal Consultation under the law.
- Confidentiality: Consistent with the guidelines developed and adopted by the Office of Planning and Research,[20] the city or county shall protect the confidentiality of the information concerning the specific identity, location, character, and use of places, features and objects described in Public Resources Code sections 5097.9 and 5097.993 that are within the city's or county's jurisdiction.[21]
- Conclusion Tribal Consultation: Consultation should be concluded at the point in which:
    - The parties to the consultation come to a mutual agreement concerning the appropriate measures for preservation or mitigation; or
    - Either the local government or the tribe, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached concerning the appropriate measures of preservation or mitigation.[22]

**NAHC Recommendations for Cultural Resources Assessments:**

- Contact the NAHC for:
    - A Sacred Lands File search. Remember that tribes do not always record their sacred sites in the Sacred Lands File, nor are they required to do so. A Sacred Lands File search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with the geographic area of the project's APE.
    - A Native American Tribal Contact List of appropriate tribes for consultation concerning the project site and to assist in planning for avoidance, preservation in place, or, failing both, mitigation measures.
        - The request form can be found at http://nahc.ca.gov/resources/forms/.
- Contact the appropriate regional California Historical Research Information System (CHRIS) Center (http://ohp.parks.ca.gov/?page_id=1068) for an archaeological records search. The records search will determine:
    - If part or the entire APE has been previously surveyed for cultural resources.
    - If any known cultural resources have been already been recorded on or adjacent to the APE.
    - If the probability is low, moderate, or high that cultural resources are located in the APE.
    - If a survey is required to determine whether previously unrecorded cultural resources are present.
- If an archaeological inventory survey is required, the final stage is the preparation of a professional report detailing the findings and recommendations of the records search and field survey.
    - The final report containing site forms, site significance, and mitigation measures should be submitted immediately to the planning department. All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum and not be made available for public disclosure.
    - The final written report should be submitted within 3 months after work has been completed to the appropriate regional CHRIS center.

**Examples of Mitigation Measures That May Be Considered to Avoid or Minimize Significant Adverse Impacts to Tribal Cultural Resources:**

- Avoidance and preservation of the resources in place, including, but not limited to:
    - Planning and construction to avoid the resources and protect the cultural and natural context.
    - Planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria.
- Treating the resource with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following:
    - Protecting the cultural character and integrity of the resource.
    - Protecting the traditional use of the resource.
    - Protecting the confidentiality of the resource.
- Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places.
- Please note that a federally recognized California Native American tribe or a non-federally recognized California Native American tribe that is on the contact list maintained by the NAHC to protect a California prehistoric, archaeological, cultural, spiritual, or ceremonial place may acquire and hold conservation easements if the conservation easement is voluntarily conveyed.[23]
- Please note that it is the policy of the state that Native American remains and associated grave artifacts shall be repatriated.[24]

The lack of surface evidence of archaeological resources (including tribal cultural resources) does not preclude their subsurface existence.

---

[19] (Gov. Code § 65352.3 (a)(2)).
[20] pursuant to Gov. Code section 65040.2,
[21] (Gov. Code § 65352.3 (b)).
[22] (Tribal Consultation Guidelines, Governor's Office of Planning and Research (2005) at p. 18).
[23] (Civ. Code § 815.3 (c)).
[24] (Pub. Resources Code § 5097.991).

- Lead agencies should include in their mitigation and monitoring reporting program plan provisions for the identification and evaluation of inadvertently discovered archaeological resources.[25] In areas of identified archaeological sensitivity, a certified archaeologist and a culturally affiliated Native American with knowledge of cultural resources should monitor all ground-disturbing activities.
- Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the disposition of recovered cultural items that are not burial associated in consultation with culturally affiliated Native Americans.
- Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the treatment and disposition of inadvertently discovered Native American human remains. Health and Safety Code section 7050.5, Public Resources Code section 5097.98, and Cal. Code Regs., tit. 14, section 15064.5, subdivisions (d) and (e) (CEQA Guidelines section 15064.5, subds. (d) and (e)) address the processes to be followed in the event of an inadvertent discovery of any Native American human remains and associated grave goods in a location other than a dedicated cemetery.

[25] per Cal. Code Regs., tit. 14, section 15064.5(f) (CEQA Guidelines section 15064.5(f)).

Subject: Scoping Meeting EIR for ReCoding LA
To: bryan.eck@lacity.org

Hi, Bryan

Will this meeting be recorded? I probably won't be able to make it to Downtown LA.

Thank you in advance for responding. I just want to make sure there are provisions in the new code that allow for heliports in downtown LA.

Best, Ricarda

**RE: SCAG Comments on the Notice of Preparation of a Draft Environmental Impact Report for the Central City and Central City North Community Plan Update [SCAG NO. IGR9164]**

Dear Mr. Eck,

Thank you for submitting the Notice of Preparation of a Draft Environmental Impact Report for the Central City and Central City North Community Plan Update ("proposed project") to the Southern California Association of Governments (SCAG) for review and comment. SCAG is the authorized regional agency for Inter-Governmental Review (IGR) of programs proposed for Federal financial assistance and direct Federal development activities, pursuant to Presidential Executive Order 12372. Additionally, SCAG reviews the Environmental Impact Reports of projects of regional significance for consistency with regional plans pursuant to the California Environmental Quality Act (CEQA) and CEQA Guidelines.

SCAG is also the designated Regional Transportation Planning Agency under state law, and is responsible for preparation of the Regional Transportation Plan (RTP) including the Sustainable Communities Strategy (SCS) pursuant to Senate Bill (SB) 375. As the clearinghouse for regionally significant projects per Executive Order 12372, SCAG reviews the consistency of local plans, projects, and programs with regional plans.[1] Guidance provided by these reviews is intended to assist local agencies such as local jurisdictions and project proponents to take actions that help contribute to the attainment of the regional goals and policies in the RTP/SCS.

SCAG staff has reviewed the Notice of Preparation of a Draft Environmental Impact Report for the Central City and Central City North Community Plan Update. The proposed project includes an update to the Downtown Community Plans, adoption of the Downtown Zoning Code, and the adoption of necessary revisions, amendments, specific plans, and other ordinances that will guide development through year 2040 in the 4,166 acre Downtown Plans area.

**When available, please send environmental documentation to *SCAG's office in Los Angeles or by email to au@scag.ca.gov* providing, at a minimum, the full public comment period for review.** If you have any questions regarding the attached comments, please contact the Inter-Governmental Review (IGR) Program, attn.: Anita Au, Assistant Regional Planner, at (213) 236-1874 or au@scag.ca.gov. Thank you.

Sincerely,

Ping Chang

Ping Chang
Acting Manager, Compliance and Performance Monitoring

[1] Lead agencies such as local jurisdictions have the sole discretion in determining a local project's consistency with the 2016 RTP/SCS for the purpose of determining consistency for CEQA. Any "consistency" finding by SCAG pursuant to the IGR process should not be construed as a determination of consistency with the 2016 RTP/SCS for CEQA.

**COMMENTS ON THE NOTICE OF PREPARATION OF A DRAFT ENVIRONMENTAL IMPACT REPORT FOR THE CENTRAL CITY AND CENTRAL CITY NORTH COMMUNITY PLAN UPDATE [SCAG NO. IGR9164]**

## CONSISTENCY WITH RTP/SCS

SCAG reviews environmental documents for regionally significant projects for their consistency with the adopted RTP/SCS. For the purpose of determining consistency with CEQA, lead agencies such as local jurisdictions have the sole discretion in determining a local project's consistency with the RTP/SCS.

### 2016 RTP/SCS GOALS

The SCAG Regional Council adopted the 2016 RTP/SCS in April 2016. The 2016 RTP/SCS seeks to improve mobility, promote sustainability, facilitate economic development and preserve the quality of life for the residents in the region. The long-range visioning plan balances future mobility and housing needs with goals for the environment, the regional economy, social equity and environmental justice, and public health (see http://scagrtpscs.net/Pages/FINAL2016RTPSCS.aspx). The goals included in the 2016 RTP/SCS may be pertinent to the proposed project. These goals are meant to provide guidance for considering the proposed project within the context of regional goals and policies. Among the relevant goals of the 2016 RTP/SCS are the following:

| SCAG 2016 RTP/SCS GOALS | |
|---|---|
| RTP/SCS G1: | *Align the plan investments and policies with improving regional economic development and competitiveness* |
| RTP/SCS G2: | *Maximize mobility and accessibility for all people and goods in the region* |
| RTP/SCS G3: | *Ensure travel safety and reliability for all people and goods in the region* |
| RTP/SCS G4: | *Preserve and ensure a sustainable regional transportation system* |
| RTP/SCS G5: | *Maximize the productivity of our transportation system* |
| RTP/SCS G6: | *Protect the environment and health for our residents by improving air quality and encouraging active transportation (e.g., bicycling and walking)* |
| RTP/SCS G7: | *Actively encourage and create incentives for energy efficiency, where possible* |
| RTP/SCS G8: | *Encourage land use and growth patterns that facilitate transit and active transportation* |
| RTP/SCS G9: | *Maximize the security of the regional transportation system through improved system monitoring, rapid recovery planning, and coordination with other security agencies** |
| | *SCAG does not yet have an agreed-upon security performance measure. |

For ease of review, we encourage the use of a side-by-side comparison of SCAG goals with discussions of the consistency, non-consistency or non-applicability of the goals and supportive analysis in a table format. Suggested format is as follows:

| SCAG 2016 RTP/SCS GOALS | | |
|---|---|---|
| | Goal | Analysis |
| RTP/SCS G1: | *Align the plan investments and policies with improving regional economic development and competitiveness* | *Consistent: Statement as to why;*<br>*Not-Consistent: Statement as to why;*<br>*Or*<br>*Not Applicable: Statement as to why;*<br>*DEIR page number reference* |
| RTP/SCS G2: | *Maximize mobility and accessibility for all people and goods in the region* | *Consistent: Statement as to why;*<br>*Not-Consistent: Statement as to why;*<br>*Or*<br>*Not Applicable: Statement as to why;*<br>*DEIR page number reference* |
| etc. | | etc. |

## 2016 RTP/SCS STRATEGIES

To achieve the goals of the 2016 RTP/SCS, a wide range of land use and transportation strategies are included in the 2016 RTP/SCS. Technical appendances of the 2016 RTP/SCS provide additional supporting information in detail. To view the 2016 RTP/SCS, please visit: http://scagrtpscs.net/Pages/FINAL2016RTPSCS.aspx. The 2016 RTP/SCS builds upon the progress from the 2012 RTP/SCS and continues to focus on integrated, coordinated, and balanced planning for land use and transportation that the SCAG region strives toward a more sustainable region, while the region meets and exceeds in meeting all of applicable statutory requirements pertinent to the 2016 RTP/SCS. These strategies within the regional context are provided as guidance for lead agencies such as local jurisdictions when the proposed project is under consideration.

## DEMOGRAPHICS AND GROWTH FORECASTS

Local input plays an important role in developing a reasonable growth forecast for the 2016 RTP/SCS. SCAG used a bottom-up local review and input process and engaged local jurisdictions in establishing the base geographic and socioeconomic projections including population, household and employment. At the time of this letter, the most recently adopted SCAG jurisdictional-level growth forecasts that were developed in accordance with the bottom-up local review and input process consist of the 2020, 2035, and 2040 population, households and employment forecasts. To view them, please visit http://www.scag.ca.gov/Documents/2016GrowthForecastByJurisdiction.pdf. The growth forecasts for the region and applicable jurisdictions are below.

| | Adopted SCAG Region Wide Forecasts | | | Adopted City of Los Angeles Forecasts | | |
|---|---|---|---|---|---|---|
| | Year 2020 | Year 2035 | Year 2040 | Year 2020 | Year 2035 | Year 2040 |
| Population | 19,663,000 | 22,091,000 | 22,138,800 | 4,017,000 | 4,442,500 | 4,609,400 |
| Households | 6,458,000 | 7,325,000 | 7,412,300 | 1,441,400 | 1,618,900 | 1,690,300 |
| Employment | 8,414,000 | 9,441,000 | 9,871,500 | 1,899,500 | 2,104,100 | 2,169,100 |

## MITIGATION MEASURES

SCAG staff recommends that you review the Final Program Environmental Impact Report (Final PEIR) for the 2016 RTP/SCS for guidance, as appropriate. SCAG's Regional Council certified the Final PEIR and adopted the associated Findings of Fact and a Statement of Overriding Considerations (FOF/SOC) and Mitigation Monitoring and Reporting Program (MMRP) on April 7, 2016 (please see: http://scagrtpscs.net/Pages/FINAL2016PEIR.aspx). The Final PEIR includes a list of project-level performance standards-based mitigation measures that may be considered for adoption and implementation by lead, responsible, or trustee agencies in the region, as applicable and feasible. Project-level mitigation measures are within responsibility, authority, and/or jurisdiction of project-implementing agency or other public agency serving as lead agency under CEQA in subsequent project- and site- specific design, CEQA review, and decision-making processes, to meet the performance standards for each of the CEQA resource categories.

**Notice of Preparation of a Draft Environmental Impact Report for the Central City and Central City North Community Plan Update Project (Case Numbers: CPC-2017-432-CPU; ENV-2017-433-EIR)**

The South Coast Air Quality Management District (SCAQMD) staff appreciates the opportunity to comment on the above-mentioned document. The SCAQMD staff's comments are recommendations regarding the analysis of potential air quality impacts from the proposed project that should be included in the Draft Environmental Impact Report (EIR). Please send the SCAQMD a copy of the Draft EIR upon its completion. Note that copies of the Draft EIR that are submitted to the State Clearinghouse are not forwarded to SCAQMD. Please forward a copy of the Draft EIR directly to SCAQMD at the address in our letterhead. **In addition, please send with the Draft EIR all appendices or technical documents related to the air quality, health risk, and greenhouse gas analyses and electronic versions of all air**

The SCAQMD staff recognizes that there are many factors Lead Agencies must consider when making local planning and land use decisions. To facilitate stronger collaboration between Lead Agencies and the SCAQMD to reduce community exposure to source-specific and cumulative air pollution impacts, the SCAQMD adopted the Guidance Document for Addressing Air Quality Issues in General Plans and Local Planning in 2005. This Guidance Document provides suggested policies that local governments can use in their General Plans or through local planning to prevent or reduce potential air pollution impacts and protect public health. The SCAQMD staff recommends that the Lead Agency review this Guidance Document as a tool when making local planning and land use decisions. This Guidance Document is available on SCAQMD's website at: http://www.aqmd.gov/home/library/documents-support-material/planning-guidance/guidance-document. Additional guidance on siting incompatible land uses (such as placing homes near freeways or other polluting sources) can be found in the California Air Resources Board's *Air Quality and Land Use Handbook: A Community Perspective*, which can be found at: http://www.arb.ca.gov/ch/handbook.pdf.

The SCAQMD has also developed both regional and localized significance thresholds. The SCAQMD staff requests that the Lead Agency compare the emission results to the recommended regional significance thresholds found here: http://www.aqmd.gov/docs/default-source/ceqa/handbook/scaqmd-air-quality-significance-thresholds.pdf. In addition to analyzing regional air quality impacts, the SCAQMD staff recommends calculating localized air quality impacts and comparing the results to localized significance thresholds (LSTs). LSTs can be used in addition to the recommended regional significance thresholds as a second indication of air quality impacts when preparing a CEQA document. Therefore, when preparing the air quality analysis for the proposed project, it is recommended that the Lead Agency perform a localized analysis by either using the LSTs developed by the SCAQMD or performing dispersion modeling as necessary. Guidance for performing a localized air quality analysis can be found at: http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/localized-significance-

**Mitigation Measures**

In the event that the proposed project generates significant adverse air quality impacts, CEQA requires that all feasible mitigation measures that go beyond what is required by law be utilized during project construction and operation to minimize or eliminate these impacts. Pursuant to CEQA Guidelines §15126.4 (a)(1)(D), any impacts resulting from mitigation measures must also be discussed. Several resources are available to assist the Lead Agency with identifying possible mitigation measures for the proposed project, including:

- Chapter 11 of the SCAQMD *CEQA Air Quality Handbook*
- SCAQMD's CEQA web pages available here: http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/mitigation-measures-and-control-efficiencies.
- SCAQMD's Rule 403 – Fugitive Dust, and the Implementation Handbook for controlling construction-related emissions and Rule 1403 – Asbestos Emissions from Demolition/Renovation Activities
- SCAG's MMRP for the 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy available here: http://scagrtpscs.net/Documents/2016/peir/final/2016fPEIR_ExhibitB_MMRP.pdf.
- CAPCOA's *Quantifying Greenhouse Gas Mitigation Measures* available here: http://www.capcoa.org/wp-content/uploads/2010/11/CAPCOA-Quantification-Report-9-14-Final.pdf.

**Data Sources**

SCAQMD rules and relevant air quality reports and data are available by calling the SCAQMD's Public Information Center at (909) 396-2039. Much of the information available through the Public Information Center is also available via the SCAQMD's webpage (http://www.aqmd.gov).

**Notice of Preparation of a Draft Environmental Impact Report for the Central City and Central City North Community Plan Update Project (Case Numbers: CPC-2017-432-CPU; ENV-2017-433-EIR)**

The South Coast Air Quality Management District (SCAQMD) staff appreciates the opportunity to comment on the above-mentioned document. The SCAQMD staff's comments are recommendations regarding the analysis of potential air quality impacts from the proposed project that should be included in the Draft Environmental Impact Report (EIR). Please send the SCAQMD a copy of the Draft EIR upon its completion. Note that copies of the Draft EIR that are submitted to the State Clearinghouse are not forwarded to SCAQMD. Please forward a copy of the Draft EIR directly to SCAQMD at the address in our letterhead. **In addition, please send with the Draft EIR all appendices or technical documents related to the air quality, health risk, and greenhouse gas analyses and electronic versions of all air quality modeling and health risk assessment files. These include emission calculation spreadsheets and modeling input and output files (not PDF files). Without all files and supporting documentation, SCAQMD staff will be unable to complete our review of the air quality analyses in a timely manner. Any delays in providing all supporting documentation will require additional time for review beyond the end of the comment period.**

**Air Quality Analysis**

The SCAQMD adopted its California Environmental Quality Act (CEQA) Air Quality Handbook in 1993 to assist other public agencies with the preparation of air quality analyses. The SCAQMD staff recommends that the Lead Agency use this Handbook as guidance when preparing its air quality analyses. Copies of the Handbook are available from the SCAQMD's Subscription Services Department by calling (909) 396-3720. More recent guidance developed since this Handbook was published is also available on SCAQMD's website at: http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/ceqa-air-quality-handbook-(1993). The SCAQMD staff also recommends that the Lead Agency use the CalEEMod land use emissions software. This software has recently been updated to incorporate up-to-date state and locally approved emission factors and methodologies for estimating pollutant emissions from typical land use development. CalEEMod is the only software model maintained by the California Air Pollution Control Officers Association (CAPCOA) and replaces the now outdated URBEMIS. This model is available free of charge at: www.caleemod.com.

Adopted on March 3, 2017, the 2016 Air Quality Management Plan (2016 AQMP) is a regional blueprint for achieving air quality standards and healthful air in the South Coast Air Basin. Built upon the progress in implementing the 2007 and 2012 AQMPs, the 2016 AQMP provides a regional perspective on air quality including the challenge of achieving 45% additional NOx reductions in 2023 and 55% in 2031 that are needed for ozone attainment. The 2016 AQMP is available on SCAQMD's website at: http://www.aqmd.gov/home/library/clean-air-plans/air-quality-mgt-plan.

The SCAQMD staff recognizes that there are many factors Lead Agencies must consider when making local planning and land use decisions. To facilitate stronger collaboration between Lead Agencies and the SCAQMD to reduce community exposure to source-specific and cumulative air pollution impacts, the SCAQMD adopted the Guidance Document for Addressing Air Quality Issues in General Plans and Local Planning in 2005. This Guidance Document provides suggested policies that local governments can use in their General Plans or through local planning to prevent or reduce potential air pollution impacts and protect public health. The SCAQMD staff recommends that the Lead Agency review this Guidance Document as a tool when making local planning and land use decisions. This Guidance Document is available on SCAQMD's website at: http://www.aqmd.gov/home/library/documents-support-material/planning-guidance/guidance-document. Additional guidance on siting incompatible land uses (such as placing homes near freeways or other polluting sources) can be found in the California Air Resources Board's *Air Quality and Land Use Handbook: A Community Perspective*, which can be found at: http://www.arb.ca.gov/ch/handbook.pdf.

The SCAQMD has also developed both regional and localized significance thresholds. The SCAQMD staff requests that the Lead Agency compare the emission results to the recommended regional significance thresholds found here: http://www.aqmd.gov/docs/default-source/ceqa/handbook/scaqmd-air-quality-significance-thresholds.pdf. In addition to analyzing regional air quality impacts, the SCAQMD staff recommends calculating localized air quality impacts and comparing the results to localized significance thresholds (LSTs). LSTs can be used in addition to the recommended regional significance thresholds as a second indication of air quality impacts when preparing a CEQA document. Therefore, when preparing the air quality analysis for the proposed project, it is recommended that the Lead Agency perform a localized analysis by either using the LSTs developed by the SCAQMD or performing dispersion modeling as necessary. Guidance for performing a localized air quality analysis can be found at: http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/localized-significance-thresholds.

When specific development is reasonably foreseeable as result of the goals, policies, and guidelines in the proposed project, the Lead Agency should identify any potential adverse air quality impacts and sources pf air pollution that could occur using its best efforts to find out and a good-faith effort at full disclosure in the Draft EIR. The degree of specificity will correspond to the degree of specificity involved in the underlying activity which is described in the Draft EIR (CEQA Guidelines Section 15146). When quantifying air quality emissions, emissions from both construction (including demolition, if any) and operations should be calculated. Construction-related air quality impacts typically include, but are not limited to, emissions from the use of heavy-duty equipment from grading, earth-loading/unloading, paving, architectural coatings, off-road mobile sources (e.g., heavy-duty construction equipment) and on-road mobile sources (e.g., construction worker vehicle trips, material transport trips). Operation-related air quality impacts may include, but are not limited to, emissions from stationary sources (e.g., boilers), area sources (e.g., solvents and coatings), and vehicular trips (e.g., on- and off-road tailpipe emissions and entrained dust). Air quality impacts from indirect sources, such as sources that generate or attract vehicular trips, should be included in the analysis. Furthermore, for phased projects where there will be an overlap between construction and operation, the air quality impacts from the overlap should be combined and compared to the SCAQMD's regional operational thresholds to determine significance.

In the event that the proposed project generates or attracts vehicular trips, especially heavy-duty diesel-fueled vehicles, it is recommended that the Lead Agency perform a mobile source health risk assessment. Guidance for performing a mobile source health risk assessment ("*Health Risk Assessment Guidance for Analyzing Cancer Risk from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis*") can be found at: http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/mobile-source-toxics-analysis. An analysis of all toxic air contaminant impacts due to the use of equipment potentially generating such air pollutants should also be included.

**Mitigation Measures**

In the event that the proposed project generates significant adverse air quality impacts, CEQA requires that all feasible mitigation measures that go beyond what is required by law be utilized during project construction and operation to minimize or eliminate these impacts. Pursuant to CEQA Guidelines §15126.4 (a)(1)(D), any impacts resulting from mitigation measures must also be discussed. Several resources are available to assist the Lead Agency with identifying possible mitigation measures for the proposed project, including:

- Chapter 11 of the SCAQMD *CEQA Air Quality Handbook*
- SCAQMD's CEQA web pages available here: http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/mitigation-measures-and-control-efficiencies.
- SCAQMD's Rule 403 – Fugitive Dust, and the Implementation Handbook for controlling construction-related emissions and Rule 1403 – Asbestos Emissions from Demolition/Renovation Activities
- SCAG's MMRP for the 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy available here: http://scagrtpscs.net/Documents/2016/peir/final/2016fPEIR_ExhibitB_MMRP.pdf.
- CAPCOA's *Quantifying Greenhouse Gas Mitigation Measures* available here: http://www.capcoa.org/wp-content/uploads/2010/11/CAPCOA-Quantification-Report-9-14-Final.pdf.

**Data Sources**

SCAQMD rules and relevant air quality reports and data are available by calling the SCAQMD's Public Information Center at (909) 396-2039. Much of the information available through the Public Information Center is also available via the SCAQMD's webpage (http://www.aqmd.gov).

The SCAQMD staff is available to work with the Lead Agency to ensure that project air quality and health risk impacts are accurately evaluated and mitigated where feasible. If you have any questions regarding this letter, please contact me at lsun@aqmd.gov or call me at (909) 396-3308.

Sincerely,

*Lijin Sun*

# Fwd: DTLA 2040 EIR scoping period comments

**Bryan Eck** <bryan.eck@lacity.org> Mon, Mar 6, 2017 at 9:40 AM
To: Tal Harari <tal.harari@lacity.org>

---------- Forwarded message ----------

Subject: DTLA 2040 EIR scoping period comments
To: Bryan Eck <bryan.eck@lacity.org>

Hi Bryan,

Below are my comments for the scoping period of the DTLA 2040 EIR, including both environmentally-focused comments as well as more general requests:

1. When studying carbon emissions impacts, do not study downtown LA (or even LA as a whole) as a closed system. Carbon emissions anywhere contribute to global concentrations everywhere, so we need to compare growth in downtown to a baseline in which housing will be built *somewhere* no matter what. In other words, if we don't build housing in DTLA, the people who would live in that unit don't disappear from the planet, and wherever they *do* end up moving will probably result in higher per-capita emissions than if they live in DTLA. To understand the true consequences of any limitations on housing development in downtown, we must evaluate impacts on a global scale. This should be a relatively simple process where average carbon emissions per household (adjusted for household size) are contrasted between new high-density multifamily units in LA and new housing being built elsewhere as overflow from high-cost low-supply markets, in places like San Bernardino and Riverside Counties, Nevada, Arizona, Texas, etc.

2. Study comparative environmental and traffic impacts assuming that the future zoning will include dramatic cuts in parking requirements—ideally removing them entirely. Then actually make those cuts, of course. This will not only reduce environmental impact, but will lower costs in a way that promotes more people moving to Los Angeles.

3. Also study vehicle-miles traveled (VMT) benefits and associated environmental protection in a few ways. More people living near transit and jobs should increase transit ridership, walking, and bicycling; more jobs and other destinations closer to more homes should mean less car dependence; fewer homes built in suburbs and adjacent counties should reduce per-capita VMT from commuting into the area (at least from so great a distance).

4. Include a "high population/household growth" scenario for if housing and population growth exceeds expectations, which is entirely possible (and something we should actually promote in downtown).

5. Evaluate the environmental impacts of preserving the land in the southeast of downtown purely for jobs/manufacturing versus a housing/jobs hybrid zone. This will most likely show that maintaining a status quo with low job density and extremely limited housing will have negative environmental impacts on the region and global carbon emissions, relative to a scenario in which housing as well as higher-job-density commercial uses are allowed in southeast downtown. This is not a request to open up southeast downtown to housing exclusively, which could result in jobs completely disappearing from the area because of the relative value of residential versus commercial uses. Developers may be required to provide 1 or 2 FAR of commercial uses as a prerequisite for including any housing, if we decide that promoting job-producing uses in certain areas is a priority. Regardless, we should evaluate an option in which housing is allowed and promoted in southeast DTLA, at least north of the 10 freeway, in some meaningful capacity.

6. No zone in the proposed updates should have a maximum FAR of less than 6.0. If lower maximum FARs are maintained, their impact on global carbon emissions and total (nationwide) VMT should be assessed.

7. The statement that "Markets" areas should only have "limited multi-family residential and live/work" is problematic, because this is a very large area that will never hope to have multiple floors of commercial uses in every building. It should be opened up to allow more residential use and only require ~1 FAR of commercial use.

8. The area around the Little Tokyo Metro station should be all Transit Core, or at least Transit Edge. I recognize that the "Villages" area is currently a market area, but this is a use that should be allowed to evolve and could certainly be maintained while allowing for significant additional above-ground-floor uses. One way to preserve character while allowing greater density is simply to increase the FAR of the Villages areas but include special design requirements that facilitate market-like ground-level uses.

9. The Hybrid Industrial should nix its requirements for exclusively live/work units, as the majority of these are almost certainly not used for any "work"—they're just homes that are designed somewhat differently than typical multifamily units, and are therefore more expensive. If we feel that there is value in producing additional live/work units, we should set a target and require that all multifamily units be built as live/work units until that goal is reached, and then allow any future units to be built as normal apartments or condos. Several thousand live/work units should be more than adequate to serve the community of makers that might hope to use them, and since they rent at a premium, those that actually want to use them for work should have no trouble securing them. Building every single unit as a live/work is environmentally wasteful as well as more expensive for the end-user.

10. We should look at preserving the areas that are currently zoned for Public Facilities and converting them to Open Space zones rather than commercial, residential, or industrial uses. Rezoning and then trying to acquire land for parks in the future will be much more expensive and therefore likely to result in less open space for downtown residents, workers, and visitors.

Thank you,

Shane Phillips

**Commenter**

I am retired scientist/engineer/project manager employed by URS Corp.(=AECOM), Parsons Pasadena, and Dubai UAE Ports and Free Zones for more than 40 year professional experiences, with many other consultancies worldwide. My degrees include BS-MS-PhD in geology and zoology. Work background began in 1972 with preparation of the newly required Environmental Impact Report and Statement under the initial CEQA and NEPA requirements and provided the primary focus for 40 years preparing/reviewing/managing more than 400 EIRs/EISs/EAs/MNDs. I have been an owner-occupant/resident of NELA and Pasadena and member of LA-32 and Historic Highland Park Neighborhood Councils.

As an employee of Parsons, I was Environmental Controls Supervisor PDCD, Construction Management for Downtown LA, RTD/MTA Red Line Phase 1 during 1984-90. I was also environmental resources specialist for the Master Plan for Dubai UAE and later directly as technical adviser for Dubai World development of Coastal/Islands Free Zone and Development in Dubai (e.g., Palms 1-3, Port Rashid, Port of Jebel Ali, World Islands, etc.).

Similarly with Parsons, I was environment resources specialist.planner, and engineer for infrastructure plans for Cairo Egypt, Aleppo/Lattakia Syria, Medan Indonesia, Kota Kinabalu/Kauntan/Sandakan Malaysia, Majuro Marshall Island, etc.).

Thank you for the opportunity to submit comments for scoping of the Draft Environmental Impact Report (DEIR) of the Central City/Downtown Community Plan(s) Project(s).

Scoping Comments: In accordance with CEQA Section 15082, the Notice of Preparation for the Downtown Los Angeles..., and these written comments are provided today before 5:00 pm March 6, 2017.

**GENERAL SCOPING COMMENTS**

**Major Issues**

1. Project Description
   Clearly state the proper title of the Project, e.g., Downtown or Central City.
   Separate proposed revised Zoning from Land Uses conditions, setting, and assessments.
   Clearly separate all approved Specific Plan areas from the Project (e.g., Cornfield Arroyo Specific Plans) OR clearly indicated that the Specific Plans shall be revised consistent with provisions of the Zoning and Plans, including changing of existing ordinances.

2. Project Policies, Goals, Objectives, Purposes and Needs
   Provide improved Project Objectives which is/can be quantified and scheduled in order to clearly develop and compare alternatives and achievement of objectives by the proposed Project.

Provide Objectives separately for Zoning issues as new zoning conditions are distinctly different from the proposed land use categories of the Community Plans.

3. Projections – CalifDeptOfFinance. > SoCalAssocGovt. > LA County > LA City > Dept. of City Planning
   Provide a comprehensive process for the allocations of population/household/jobs from the SCAG down to areas of current and proposed Specific, Community, and General Plans and specific responsibilities for those applied to these Plans (and specifics for each of the two Plan areas and the Specific Plans.
   As projections include allocation of "Jobs" and thereby employment, such projections clearly have economic/financial implications beyond simple numbers (e.g., salaries/wages, income classes, and affordability) and changes from current/past census levels. Provide appropriate population, employment, household incomes, and affordability factors in Sector Setting-Assessment-Mitigation.
4. Financials/Economics/Economic Development - The DEIR must clearly provide the financial and economic setting for the existing and projected populations, households, and employment. Assessments also reference "feasible" (e.g., NOP p.3/3: "as available and feasible") for various project conditions, alternatives, and mitigation measures. Provide appropriate financial and economic aspects for any use of "Feasible" or "Feasibility" within any Sector Setting-Assessment-Mitigation or other CEQA sections.
5. General Plan Programmatic EIR for Zoning - Provide a Programmatic EIR for Zoning and separate Project Specific EIR for Community Plan areas and existing Specific Plan(s) within the Project specific area.
6. DEIR-Objectivity/Numerical-Quantitative – Based on the large and complex nature of the "Project", the entire project must be provided in a digital GIS/OnLine Model similar to LA City-ZIMAS planning equivalent, which could become a "demo"/pioneer example for all other Community Plans and the updated Zoning requirements.

**Alternatives**

7. Higher Metro Center #1 -- All Zoning – add 5 floors for all proposed parcels west of Alameda and south of US-101 and 3 floors for all parcels east of Alameda and north of US-101.
8. Metro Neighborhoods #2 -- All Zoning within ≥15 acres (800-1320ft x same) for new Specific Plan Areas (50-100 areas) with height of highest existing "spot" building in specific areas (equal to 01012017 before the Ordinance).

**Mitigation Measures**

9. Provide/include Draft Mitigation Monitoring and Reporting Plan in DEIR.
   Provide clear feasibility analyses for all mitigation measures.

**Commenting/Participation System**

10. As First Major Update, Provide an Open publicly accessible integrated WWW Page for Rezoning/New Landuse Revision (Equivalent to Zimas = "PLUMAS" for Community/District Plans and General Plan).
    Provide with links to General Plan and ReZoning for weekly updated status maps and texts.
    Provide zoning, historic/current-status links to related Re-Zone, Community and Specific Plan Pages.
    Provide Community Advisory Panel for each Plan area throughout CEQA process.

**Maximum Density**

11. Provide estimates of maximum population, households, jobs, and other factors based on proposed Plans and zonings and prospective variations based on 2007-2017 variation achievement (e.g., median and 85%ile increases in floor areas, FARs, building heights, etc.).

**Sector Issues**

DTLA2040 WWW pages provide a "Pseudo-Initial Study" without direct incorporation with the NOP although referenced and linked. Withdraw/revise/recirculation NOP with appropriate Initial Study(ies), thorough studies, checklists, significance, and mitigation for Re-Zoning and for Community Plan(s).

**Aesthetics/Recreation Services** – Provide viewsheds for LA River and Elysian Hills as to their views of existing and future of DTLA and as to views of these resources from DTLA towers of >10 floors.
Provide viewshed to/from LA River and proposed building envelope east of Alameda.

**Cultural Resources** – Provide paleontological resources setting for bedrock and those for older alluvial area within 50ft depth of surface.

Provide Archaeological, and Historical Resources as may be indicated must be reviewed, including compared to available 1923 and 1928 and subsequent thereafter aerial-photos.

Provide locations and conditions of the oldest 100 extant structures and parcels.

**Geology-Seismicity-Mineral Resources**

Provide maps and sections for Alluvium and Bedrock at surface and within 100ft of surface.

Provide maps and section for Groundwater Recharging/Forced Infiltration, Storage, and Outflow from the Plans' areas and their relationships to the LA River

Seismicity and Structural Assignments - Provide inventory and locations of all recorded seismic events including SCEC and USGS files and relate to the closest structural features, including blind/buried faults.

Ground Gas/Methane Zones - Provide surface zonal demarcations and their associated historic oil fields in DTLA (e.g., Union Station, LA Downtown, etc.) and their known leases. Provide current subsurface properties demarcations and owners related to the surface zones.

**Hazardous Materials** – 1923-1972 aerial photos show railroad and other industrial land uses related to potential sources of hazardous materials and wastes due to local disposal, uses, and spillage/releases.

Provide known historic locations for Railroad - Cornfields

Coal Gasification Plant Site (Piper Center)

Lumber Yard and Preservative-Creosoting Pits

Chemical plants (using products delivered by RR and conveyed from the Gasification Plant).

**Hydrology and LID and Groundwater Recharge** – Provide historic/current recharge from City and LA River.

Delineate on map ancestral river floodplain and recharging zones and related land uses as shown in historic aerial photos.

**Land Uses**

Provide maps/envelope images for current occupied, under-construction/permitted, current zoning/specific plans, and then for proposed and alternative plans/zonings.

Provide estimated residential, commercial, and industrial floor areas maps for current occupied, under-construction/permitted, current zoning/specific plans, and then for proposed and alternative plans/zonings.

Provide listing and map of all Spot Zoning/Plan Variances/Amendments involving amendments of any approved plans since the last approved Plan(s)

Provide map of all Block-Building Splits (e.g, single block with >1 zoning categories) and Frontage Equivalence (e.g., major arterial with >1 zoning on either side of arterial).

Provide map of all parking facilities and lot and their current and Project zoning and planning.

**Infrastructure - Services and Utilities**

Provide maps and system networks for current, under-construction/permitted, and Project/Alternatives utilities and services and inventory as to date of installation, expected operating lifetime, service capacity, and percentage services for current, permitted, and projected floor areas, populations, etc..

Drainage-Sewerage-Water Supply; above/below ground Electrical-Gas.

Provide maps of existing available (un-occupied/used) transmission space (e.g., space under 7th street for new storm drains).

Provide maps of all abandoned pipes, cables, or other transmission systems and access-portals.

**Infrastructure - Transportation**

Provide maps of all historic, current. and proposed (e.g., Meaure M/RTP/LTP) surface and subsurface rail facilities and yards.

Provide system maps, including crossings/junctions/stops/stations.

Provide historic, current, and projected road-transits routes/intersections for Metro and LACity DOT if more than three (3) routes and provide locations and areas of all road-transit maintenance facilities.

**Socio-Economics**

California Department of Finance provided basic inputs to Southern California Association of Governments which were referenced in the DTLA2040-WWW Page and were assigned the 2040 SocioEcon factors of 125,000pop, 70,000 hhd., and 55,000 jobs.

Central City New Community Plan Program page 1. Summary of Public Input Received in Initial Community Outreach Meetings - Economic Development.

Provide a thorough and comprehensive financial, economic, and income assessment for current and proposed/alternative Community Plans, including all mentioned/stated "Initial Meeting" issues related to the SCAG process/products and to Zoning and Plans.

EIR SCOPING MEETING FOR THE UPDATES TO THE DOWNTOWN COMMUNITY PLANS & AMENDMENTS TO THE LAMC AS PART OF RE: CODE LA

* * * * *

MR. RILY: My name is Justin Rily. I'm a stakeholder and a downtown resident of Los Angeles, Downtown LA.

I want to put on the record today that, when we're looking at -- we're doing the guidelines to put this idea, um, the zones.

With respect to, when you look at downtown, there is definitely a historical zone, from Olympic Boulevard up to First Street, you know, over to Hill and then Spring that -- that boxed area has a lot of historical buildings.

Cities like Paris and Philadelphia have put into their code, um, language that protects viewsheas, sidelines around historical buildings and monuments that still allows development, but they give specific guideline to protect them.

And so there's -- there's some different setbacks, from development, that surroundings historical buildings.

///

///

* * * * *

My name is Alberto Ortega. I'm here with -- regarding the, um -- the new -- how we -- how we do planning for the city.

And one of my concerns is how do we do plan around historical, um, buildings and look historical corridors?

And how do we, kind of, um, marry new growth with the historic core, um, without putting oversized buildings to cloud, shadow on them and just, kind of, scenic look?

The other thing is I would like to see how it's more friendlier, to the public, to get more involved. Seems like it's more towards developers than it is for the common folk.

And I would like to see a, um, like a bridge, where we work altogether and have input on how we build the city of LA.

* * * * *

My name is Bill Cooper, and I live and work in downtown. And I would like to propose a serious zone, um, around our historic monuments, around our most

precious buildings, like they do in Paris, Europe, so you don't have, like, um, you know, a 40-foot sky scraper up against Big Ben, for example.

That's it.

* * * * *

My name is Mark Chatoff, owner and, um -- of California Flower Mall, which is a flower market, in downtown Los Angeles. I have had the building with many uses, over the last 30 years.

And, um, okay. This is -- I'm also -- I'm also a board member of the fashion district. I've been on and off the board, for over 20 years, since it's inception.

The fashion district needs as much help from the city, as far as zoning, as possible. I'm very concerned about the FAR. And I appreciate there's been some changes, but I think it needs be looked at closely or closer.

And, um, we need -- I -- I would like to see a more aggressive FAR application. I also feel San Pedro Street is a major thoroughfare. It's ingress and egress into downtown Los Angeles, especially for the fashion district.

And that street needs to be looked at as a -- as a transportation corridor, because it's heavily used in and out of downtown. It's one of the major streets that gets you in and out.

There's also a piece of land, which is owned by the LA County, on the corner of 8th and San Pedro, which would be a great project for a gateway project, a beautification project, an entrance into the district.

And that also should be looked at as a -- a beautification project or a pocket park of some sort. Um, Dukes Leaker, which is on 8th Street, is also -- has been around for a long time, and it's servicing the homeless alcoholic problem.

And it's also one of the first liquor stores that's in the district. That needs to be looked at, and they're likely to be looked at. It's not a good neighbor. Hasn't been for a long time. And it's causing problems for the district and also exacerbating the current homeless issues that we currently have.

Okay. Let's see what else I can think of. I own the property -- it's been in the family, since the -- since the '50s, and we've done business in Los Angeles, under many different formats; in the textile business, now, we're in the floral business. Used to be an electronic business. Used to be a

manufacturing company called American Sample Company.

Now it's currently California Flower Mall. I've also converted the building into other uses over -- throughout the years, to find its best use.

But this is a terrific opportunity, to take it into the next level and really build something that's quite spectacular on that quadrant of the city.

I welcome and am available for any further input, and I have lots of time and experience on the ground here. And I want to be a part of this process.

* * * * *

My name is Sissy Trinh and I represent the Southeast Asian Committee Alliance. And so we represent youth and families in China Town, Lincoln heights and Solano Canyon.

So we're very concerned about how the city is planning out the development of these communities. Um, the reason we're here is because we would ask that the City Planning Department look into studying the impacts of displacement on, um, the environment, as part of the EIR.

Because we believe that displacement will actually increase greenhouse gasses. The vast majority

of residents in China Town and Solano Canyon are transit dependant.

We did a study, where we found that a third of working adults, in China Town, actually walked. So these are people who live and work in China Town. And so we want to see displacement studied from a residential and a small-business perspective.

The other thing that we're concerned about is, if the city plans on up zoning the base density, a lot of state density bonus laws allows for developers to build beyond what they're currently allowed to, in exchange for affordable housing.

If the city increases the base density, then we're giving away all the incentives for building affordable housing. And, especially, we need housing affordability, at the deepest affordability levels. So incentives for extremely low-income families.

Again, these are people who walk to work, who are poor transit users. We have some of the highest rates of transit usage in the city. And so displacing them will increase, as I said, greenhouse gases, which is an environmental issue.

That's it.

///

///

* * * * *

My name is Frank Lee. I just wanted to come, in the possibility of including legacy businesses in the EIR. Um, even without an historic designation, I think it's important to realize what cultural resources that some businesses are to the communities, and to be mindful of changing the zoning or the land-use designation that would affect these businesses.

And, when analyzing the esthetic impacts or the visual impacts of the new community plan, I think it's really important to, not only go by the existing design overlays, but also to take into consideration, um, some of the -- the esthetics, outside of a design, because design overlays could be outdated or lenient with some developments.

I think I'm done.

* * * * *

My name is Rey, R-e-y, Fukuda, F-u-k-u-d-a.

And I'd like to comment on, um, including in the cultural resource section of the EIR, um, the impacts and affects on local small businesses, religious institutions, and cultural institutions, um, and

including in the population and housing section of the EIR, the need for studying existing affordable housing, including, um, SRO's and naturally occurring affordable housing and making sure that there's no loss overall, loss in existing affordable housing in any future development.

Um, in land use and planning or maybe the traffic section; to include being able to replace, to some extent, public parking. Um, because areas, particularly China Town and Little Tokyo, are regional centers.

They are regional economic development neighborhoods. So not everyone who comes, um, uses public transit. And I think that's it. Oh, I'm sorry. Just a little bit more.

To make sure that, if we're allowing existing or even more floor-area ratio, to make sure that it requires a community process and public benefits, such as, affordable housing, public parking, public art and anything else the community finds sufficient.

* * * * *

My name is Jan Fukuhara. I'd like to make a comment, under the transportation circulation category

of the proposed EIR.

Let's see. The question is how does the proposed recoding, um, increase density, without accounting for compatible modalities of transport?

I understand the appropriateness of scale for developers building in the area, specifically, Little Tokyo, per the permitted density.

But, regarding future allowances, I would like to, um, ask that the planners do take into account the fact that Little Tokyo, under your proposed planning, is considered a village, with a 4 to 1 to 6 to 1 density.

But recent, private development has actually increased density, without increasing compatibility modes of transport, including access to public parking, bike ways, and pedestrians, especially, pedestrian crossings and safe walks.

* * * * *

My name is John Malpede, M-a-l-p-e-d-e.

And I was -- I was talking to the, um -- the environmental consultant company, who is writing the plan or the report and, um, he was showing me the stuff on the map over there, including the criterion for the report, which are land use and planning.

And, um, one of -- under that, one of things they want to void is, um, physical division of the established communities. And his example was a freeway running through something.

So, um, I've worked in Skid Row, for a long time. And that is -- that is a community. Most of the people have lived there many -- four or fives time as many people live in residences, as live on the streets.

And it's a -- and most of those people have lived there for a long time. It's, actually, a dynamic neighborhood, when people get off the streets and into housing.

So, in the plan, it looks like they're going to create -- and since it's always been the only housing you could have there was for people of very low income people, designed to get people house or unhoused. And that's been true, since the '70s.

The first -- when the adaptive use ordinance came in, there were a few buildings, within the area east of Main and the west of, um, San Pedro or Central, rather, that were then -- that had people with other income levels. But, for the most part, they're people of very low, low income.

So the plan looks like it's going to create a living -- people living there with many different

incomes. And that's going to -- to, it seems like, it runs the risk of the physical division of the established community, especially since, according to the plan, height levels are not so high.

So it's not like it's going to be that much denser. But it is -- it is -- it runs the risk of disrupting that community. And I think that community is a -- is a -- is a unique community.

For example, it has a super sophisticated recovery consciousness because some of the -- in fact, there's, like, 80 recovering meetings that happen within the confines of Skid Row. Not in programs, but resident-organized meetings by people who are in recovery, in the 12-Step programs each week.

So -- so that's a very sophisticated and unique recovery culture in that neighborhood. And it would be a shame to see that, um -- and, you know, endangered and physically divided.

Then the other -- the other -- the second plan was in the environmental study. The concern is population and housing, population and growth and the displacement of people who are living there.

So, again, I think we don't want to see the displacement of this -- the people who are -- who are now living in the neighborhood. And like I said,

three-quarters of the people are permanently housed.

And they benefit, not only from the recovery culture that I mentioned, but the other mental-health services, health clinics and all that. And, actually, just the community ties that exist.

So we don't want to see the existing -- it would be, um -- that we don't want to see that jeopardized. And that seems to be one of the environmental criteria.

And then last thing I'll just say, it's a unique neighborhood that serves -- it's a resource for all of Southern California. And it should be recognized as a neighborhood and one that has a unique and positive vibe.

* * * * *

My name is Joshua Crowell. I live in the historic core, and there are just four points. I am overall very supportive of the proposal. But just, kind of, four years of critique.

One. The jobs preserved. I -- I don't agree with that. I think we should allow a more organic process. It's one thing not to -- no one's advocating to kick out the manufacturing jobs, but to impose that

kind of requirement to that area.

And I don't agree with -- um, if it -- if it is, in fact, not hospitable to residential use, as I'm told, well then, there's no need for the requirement. So I don't really see the purpose of it.

Two. I heard that part -- the type of goal, the direction seems to be to be withdrawing parking minimums throughout most of the downtown. And I would very much agree with that. I just hope, actually, all of downtown would have no minimum parking requirements.

Three. I disagree with the notion of designating, kind of, an entertainment district versus other kinds of districts. I think we should streamline the process for small business owners, to get their licenses, whether it be food, liquor and whatnot.

And that should be streamlined pretty much everywhere in the downtown area. So that that kind of amenity is enjoyed by everyone in downtown and they don't have to all be concentrated in one place.

And, in fact, that would only encourage concentrating, for instance, bars in one place. That would actually be more detrimental than having them spread out.

And then -- let's see. I have one more. Oh, yes. On paseos, that would we required to for really

large buildings. I don't think -- I think they're kind of useless, unless they're also occupied by businesses and, therefore, have people walking through them and using them -- the spaces regularly.

Otherwise, they'll just be empty and wind swept and potentially dangerous. And the same with various public places -- spaces are required -- that would be required.

I think that there needs to be a type of business or economic commercial use also involved with it, in order to give it life, energy and also safety and traffic.

So those are my comments.

* * * * *

My name is Eunha, E-u-n-h-a. Last name Choi, C-h-o-i.

And, um, the sense I get, from speaking with various representatives here is that they are going to emphasize these designs of creating very intentional districts.

So they were speaking about having a district area that is devoted for entertainment. And one of the purposes they're doing that is to enable businesses to

open up, get their licenses, liquor, wine, whatever they need to, more quickly.

And even though I support the not ı of simplifying the process for businesses to open up, getting their license, without having to wait two years, which I hear is the average these days, I think the idea of having them concentrated would be detrimental to how neighborhoods, especially, in urban centers, cities that want to be urbanized and densified and want to have lively places, dynamic places of all times of the day.

It would be detrimental to enable that, to create that. So having areas that are heavily residential would get quiet at night, right? And then the areas that are heavily entertainment purpose or business areas would get busy at night.

So I feel, like, the -- the notion of enabling businesses to open up, by creating these very intentional districts, would be, sort of, continuing the flaws of downtown, in the past, which is to have areas that are the flower district, the -- the clothing -- the fashion district, the jewelry district.

And it seemed that the intention was to get away from that. And in doing this, it would be, sort of, going back to that. So that -- and, again, having paseos, as public spaces, would be a great idea, as they

seem to be wanting to do, between large developments, or even, when they are trying to activate, for instance, the alleys that we have right now. They're pretty much dead space.

But having them, without incentivizing businesses to be there so that they would -- they would, um -- um, attract people to come at all times of day, again, would be, sort of, creating these dead zones, where people would not have any, sort of, um, purposes to go.

So the paseos are a great idea, to the extent that they are the right incentives for different businesses to open up.

Thank you so much.

(The proceedings were concluded at 7:00 P.M.)

I, MARIA L. WALLACE, undersigned, a Certified Shorthand Reporter, of the State of California, do hereby certify:

That the foregoing proceedings were taken before me at the time and place herein set forth; that a record of the comments were made by me, using machine shorthand, which was thereafter transcribed by me, and is a true record of the comments given.

IN WITNESS WHEREOF, I have this date subscribed my name _____.

Methodology

# APPENDIX METHODOLOGY

## POPULATION, HOUSING AND EMPLOYMENT

This section describes the data sources and methodologies employed in the identification of the Draft EIR Existing Conditions and Future Projections, both of which are used to assess potential impacts of the Proposed Plan. This section also explains how reasonably expected population, housing, and employment under the Proposed Plan are derived and how the Proposed Plan addresses anticipated growth.[1]

The Draft EIR evaluates the potential environmental impacts related to anticipated changes in population, housing and employment based upon information from a variety of sources including, the United States Census Bureau (U.S. Census), California Department of Finance (DOF), California Employment Development Department (EDD), the Southern California Association of Governments (SCAG), the City of Los Angeles Department of City Planning (DCP), the City of Los Angeles General Plan Framework Element (Framework) and associated documents. Since each of these sources may use different methods of data collection and analysis and/or different timeframes, the data do not always arrive at precisely the same results. Accordingly, the demographic data used in the analysis may vary somewhat, depending upon the source cited. Despite the variations, the data used in this Draft EIR represent the best available data sources during the Draft EIR preparation and provide a reasonable estimate of the population, housing, and employment characteristics of the Downtown Community Plan Area (CPA).

## EXISTING CONDITIONS

Existing Conditions or Baseline Conditions for the purposes of environmental analysis of a community plan update, can be described in demographic terms (population, housing, and employment) or in terms of development characteristics (square feet of development, height of structures or number of housing units). The City has the discretion to determine the best data source for Existing Conditions. For Existing

Conditions, DCP, as the City's professional planning agency and the department responsible for reviewing and preparing the Draft EIR, uses demographic data that is published and referenced public data used by multiple agencies in planning for the City and region. Obtaining accurate development characteristics at the parcel level for each Community Plan Area has in recent decades became possible through geographic information systems (GIS), however the technology still presents practical difficulties in verifying precise, detailed data at the lot and parcel level for CPAs for a city the size of Los Angeles. The size of the City at over 478 square miles (including 5 square miles of water area) results in duplicate, incomplete, and/or unverified data that is time and cost prohibitive to verify at present. Reasonable efforts are made to collect and use the most complete and current data at the time of the Draft EIR analysis recognizing the constraints, limitations and margins of error associated with data sources.

---

[1] Nothing in this document is intended to contradict or control the particular data or methodology used in the EIR. This methodology was developed by DCP in its review and preparation of Draft EIRs for the Community Plan Update program and is provided in the appendices to supplement and support the Draft EIR

The leading source of demographic data is the U.S. Census. While Census data is typically the most reliable representation of socioeconomic data, such as housing and population, for discrete geographic areas, it is only available on a decennial basis, i.e., 2000, 2010, and 2020. While it is preferable to utilize decennial census data for analysis, it is not always possible to align planning processes with the release of decennial census data. Consequently, other sources are consulted to employ the most current information as well as to provide a benchmark for the Existing Condition year. In the interim years, the U.S. Census Bureau gathers more detailed socioeconomic data through other surveys, such as the American Community Survey (ACS) program, which provides data on an annual basis for certain geographies. For example, the ACS provides annual estimates for incorporated cities but does not provide annual estimates for Community Plan Areas. There is a lag time between when the data is collected and when it is released for both Census products. Both the decennial Census and ACS data are subject to sampling variability.

SCAG, as the Regional Transportation Planning Agency (RTPA) and the Metropolitan Planning Organization (MPO), publishes demographic estimates and projections through the long-range Regional Transportation Plan/ Sustainable Communities Strategy (RTP/SCS), which is updated by SCAG every four years. Census and ACS data are utilized by SCAG to prepare regional demographic estimates and forecasts. In addition to estimating existing demographics, the RTP/SCS provides a vision for future transportation investments throughout the region. Using demographic growth forecasts and economic trends that project out over a 20-year period or "horizon," typically, the RTP/SCS considers the role of transportation in regional planning in the broader context of economic, environmental, and quality-of-life goals for the region. Therefore, SCAG data are often utilized by planning agencies in the region for consistency with the goals and demographic data of the RTP/ SCS.

## ■ Baseline Existing Conditions (SCAG)

SCAG is the regional demographer for a six-county region that includes Los Angeles County. In that capacity it has an established methodology for estimating population, housing, and employment for the regio and for projecting future population, housing, and employment at a jurisdictional or citywide level. SCAG utilizes various sources to determine existing or baseline population, housing and employment. This method is used for deriving annual estimates of population, housing, and employment for years that are not a Census year.

SCAG's small area growth forecasting process is applied to develop baseline year estimates and future year socioeconomic data at the Transportation Analysis Zone (TAZ) level. The approach is utilized by SCAG to distribute jurisdictional level population, housing and employment estimates and projections into TAZs. Population figures are estimates derived from households and are generally viewed to be a more accurate representation at a jurisdictional level where multiple data sources are consulted. It is generally less precise to estimate population numbers for smaller areas, and or for areas where boundaries do not precisely match census reporting divisions, such as at the Community Plan Area level than at recognized jurisdictional boundary levels.

The following is the list of SCAG data sources and diagram of SCAG's process excerpted from the 2016 RTP/SCS Background Document Report.

*SCAG DATA SOURCES:*

*SCAG's existing land use data*

*SCAG's General Plan Database, processed based on jurisdictional General Plans*

*SCAG's 2012 RTP/SCS growth forecast*

*SCAG's 2016 RTP/SCS jurisdictional level population, household and employment*

*2013 Longitudinal Employer-Household Dynamics (LEHD), Origin-Destination, Employment Statistics from the Census Bureau*

*Employment Development Department (EDD) 2012, 3rd quarter jurisdictional jobs by sector*

*2011 InfoGroup firm-based employment data*

*SCAG Intergovernmental Review (IGR) data*

*Digital Mapping Product (DMP) parcel data (2010-2012) and new construction data (2010-2012)*

## ■ How DCP Verifies Existing Conditions

DCP has regularly tracked growth and development activity in the City. As part of the regional planning process, local planning departments (including DCP) work together with SCAG to develop demographic estimates for the City of Los Angeles and the Southern California region approximately every four years. SCAG publishes regional transportation and sustainability plans (RTP/ SCSs) every four years. SCAG's Regional Council adopted the most recent RTP/SCS - the 2016 RTP/SCS -in April 2016[1]. However, the cycles of RTP preparation do not regularly coincide with the release of Census data. Because of the time involved in preparing the RTP/SCS, there is a lag between the time the Census data is released or demographic estimate is prepared and the time that SCAG makes demographic estimates available through the RTP/SCS. An additional lag occurs between the time the Planning Department receives SCAG 's demographics estimates for the baseline and forecasts for the horizon year, and the time a draft community plan and EIR are completed. Therefore, interpolations of data utilizing a previous point in time and future point may be necessary.

Furthermore, the DCP 's planning process for the community plan updates is comprehensive, the updates are long-term projects that take several years to complete. The planning process focuses on addressing land use changes at the parcel level to both resolve inconsistencies in land use regulations as well as to fulfill City objectives. For the Downtown Community Plan Update, the Notice of Preparation (NOP) was released in 2017, and the 2016/2040 SCAG RTP/SCS data was used to inform the baseline existing conditions. The latest available Decennial Census data was for the year 2010. The 2010 Census data provides a snapshot in time and is used as a reference to benchmark data along with other sources. Given the number of years that have lapsed between the release of the 2010 Census and the present, the Census data no longer reflects the best available data for 2017, the NOP publication year. Growth has occurred in the years after the Great Recession and consequently, more recent 2017 SCAG RTP/SCS data[2] is utilized for Existing Conditions.

Although CEQA does not require a lead agency to change the baseline year for Draft EIR analysis every time a government agency at the state, federal, or local level issues a projection for a future condition or issues an estimate for those years subsequent to the Draft EIR baseline year, the DCP does review new data or projections released subsequent to the publication of the NOP to verify that it would not substantively affect the analysis or conclusions for significant impacts that are correlated or reliant upon population, housing or employment data. For instance, the City used Los Angeles County Assessor data to benchmark and analyze the general distribution patterns and totals for housing estimates in the Downtown Plan Area (CPA). This system of utilizing SCAG data and comparing or benchmarking it with other available data represents a best practice approach to obtaining and using complete and most current data. Multiple sources were also consulted (i.e. Employment Development Department, Longitudinal

[2] As the 2016 RTP/SCS utilizes a baseline year of 2012, 2017 baseline year demographic estimates were interpolated (an annual average growth rate was applied) to estimate existing conditions. The interpolation method was corroborated by SCAG as a suitable methodology to estimate existing conditions.

[1] SCAG has prepared a draft 2020 RTP/SCS, but the update has not been adopted as of April 2020.

Employer-Household Dynamics (LEHD), Origin-Destination, and American Community Survey, Business Installment data from InfoGroup) to verify demographic totals for the Community Plan Area. See Table 1. These sources are used as benchmarks or control totals whereas Assessor data is used for distribution because it is regularly updated and available at small geographic levels.

**Table 1: Comparison of Demographic Estimates for the Downtown CPA**

| Data Source | Households | Population | Employment |
|---|---|---|---|
| 2010 Census | 26,000 | 60,000 | n/ a |
| SCAG 2017 (interpolated) | 34,000 | 76,000 | 219,000 |
| ACS (2013 - 2017 average)[1] | 31,000 | 64,000 | n / a |
| LEHD (2017) | n/ a | n / a | 322,730[2, 3] |
| Assessor Parcel Data (2017) | 29,000 | n/ a | |

Note: A lag time for the public release of most of the data sources, such as Census, ACS and LEHD, is typical. All numbers are rounded to the nearest one thousand.

1. US Census Bureau, 2013 -2017 American Community Survey
2. On the Map Application for 2017, https://onthemap.ces.census.gov/, accessed August, 2018.
3. The estimated total does not include self-employed jobs but includes multiple jobs held by one person

# FUTURE PROJECTIONS

The Downtown Community Plan Update is intended to plan for anticipated growth by 2040 (the planning horizon year), and consequently uses the adopted 2016-2040 SCAG RTP/SCS (2016 RTP/SCS) as a resource for both the baseline (also called Existing Conditions) population, housing and employment estimates and future projections for the 2040 horizon year.

The 2016 RTP/SCS projection for 2040 factors in recent and past trends, key demographic and economic assumptions, and local, regional, state or national policies. The Great Recession had a significant impact on household, population, and employment trends. Growth is still anticipated in SCAG's six-county region but at a slower pace. SCAG's projection assumes that regional growth will be approximately 0.7 percent per year on average for households and population. Employment is forecast to grow two percent each year until 2020, before stabilizing at 0.7 percent per year.[2]

## ■ Projections (SCAG)

SCAG prepares regional and jurisdictional forecasts or projections. Regional employment forecasts are based on a set of national employment forecasts using a shift-share model. The population forecast uses the cohort-component model, which adds to the existing population conditions the projected number of persons living in group quarters, births, and persons moving into the region and subtracts the number of

[2] 2016 RTP/SCS Demographics Growth Forecast Appendix, April 2016, accessed March 3, 2020, http://scagrtpscs.net/Documents/2016/final/f2016RTPSCS_DemographicsGrowthForecast.pdf

projected deaths and persons moving out of the region. Households are forecast by multiplying the projected residential population by projected headship rates, or the share of householders in population cohorts based on age-sex-racial/ethnic specific household formation levels. Regional demographic-economic assumptions were also considered in the forecasts and cover issues such as fertility rate, domestic migration, international immigration, and labor force participation rates.

For the jurisdictional forecast, also known as small area forecast, SCAG derives household growth rates and household sizes based on historical trends and the amount of potential development from jurisdictions' general plans and land uses. Population projections are based on household growth and size. Future employment numbers for jurisdictions are based on the share of the county's employment by sector. The major data sources used to develop the jurisdictional forecast include: California Department of Finance (DOF) population and household estimates; California Employment Development Department (EDD) jobs reported by industry; 2010 Census and the latest American Community Survey (ACS) data; Regional Housing Needs Assessment (RHNA) growth projections for 2014 through 2021; and 2014 Business Installment data from infoGroup. Local jurisdictions also provided input and comments to SCAG and adjustments were made.

For the City of Los Angeles, SCAG distributes the total citywide number among all of the city's Community Plan Areas by Transportation Analysis Zones (TAZs), again derived from past trends and building upon/compared to TAZ projections of previous adopted Regional Transportation Plans. DCP reviews the proposed SCAG projections based on knowledge of the Community Plan Area and may give feedback based on local knowledge of development trends and development activity observed during the process of developing the RTP/SCS and its projections. An example of input could be advising SCAG to reflect growth in areas with existing or planned transit infrastructure, areas with flexible land use regulations that can allow higher levels of growth and away from hillsides or historic single-family neighborhoods. This local feedback can also include further input based on the effects of local policymaking, such as General Plan or Community Plan updates, and the mandates of federal and state plans, which are also taken into consideration during the local review process.

See the following SCAG publications for the methodology employed to determine estimates of population, housing, and employment data for the region:

- http://scagrtpscs.net/Documents/2016/final/f2016RTPSCS_SCSBackgroundDocumentation.pdf
- http://scagrtpscs.net/Documents/2016/final/f2016RTPSCS_DemographicsGrowthForecast.pdf

## ■ How Community Plans Consider SCAG Projections

The City of Los Angeles uses SCAG's projections to plan for the future. The Department of City Planning considers SCAG projections for housing, population, and employment as targets in its long- range planning efforts for Community Plan Areas when updating community plans. SCAG provides the demographic expertise in developing regional and citywide projections and works with DCP planners and demographers to refine those projections and their distribution throughout the city, as described previously. At a minimum, community plan updates meet SCAG projections for the City and each CPA but in some cases may exceed those projections for certain CPAs depending on circumstances such as market demand, development trends, new legislation, the introduction of transit or other infrastructure, etc. This may occur because the available data or information SCAG used during the time it prepared projections changed or because new information became available later. In this respect, the most recently

adopted SCAG projections are viewed as targets, and DCP ultimately determines the distribution of citywide growth through adherence to the General Plan Framework and Community Plans goals, objectives, and policies while the citywide projections are being accommodated. This means individual Community Plan growth projections by SCAG may be redistributed between Community Plan areas to meet the SCAG Citywide growth projections.

The table on the next page compares the allocations of population estimates by seven geographic planning areas within the City of Los Angeles for 2017, and the population projections at the horizon year 2040. Using SCAG's 2016 RTP/SCS as the source, the City of Los Angeles as a whole is projected to grow by 17% in population during this time (4,609,000/3,950,000), which over the course of 23 years, is approximately 0.7% growth per year.

The table indicates that the Central Los Angeles Geographic Planning Area, which includes the Downtown (Central City & Central City North), Westlake, Wilshire and Hollywood CPAs, is currently home to approximately 18% of the citywide population, and it is projected that in 2040 the region will be home to approximately 20% of the citywide population.

It is generally assumed that CPAs would continue to grow consistent with SCAG assumptions of approximately 0.7% growth per year on average across the region and would still need to accommodate at least marginal levels of growth (i.e., it was not assumed that any CPAs would have less population than current existing conditions levels).

## HOW GROWTH IS ADDRESSED THROUGH PLANNING AND ZONING

In preparing community plan updates, land use and zoning changes are proposed that will allow for projected growth to be accommodated while meeting the policies of the Framework Element and the Sustainable Community Strategies. During the planning process, technical land use analysis including the study of development trends, and consideration of General Plan policies is conducted to identify appropriate locations and levels of future development. DCP evaluates the geographic distribution of land use designations and zoning within a Community Plan Area to see where development potential is warranted. Some areas are expected to remain largely unchanged over time, such as open space areas, and public facilities. In other areas, development could occur as infill development and re-development, such as in multi-family residential areas. There are also some areas where development is directed, such as near transit stations and major corridors with bus lines, in order to increase access to transit, reduce vehicle miles of travel and thereby reduce greenhouse gas emissions and advance the climate change goals of the city and the region. Land use designation and/or zoning are applied to implement the updated land use policies of the City and the Downtown Community Plan.

Under the New Zoning Code, new developments would be subject to form and frontage regulations that are designed to achieve compatibility with the existing visual character of each of the neighborhoods within the Downtown Plan Area. Specifically, building height limitations and step-back requirements, where appropriate, would help to provide cohesive height and bulk transitions across future structures within the Downtown Plan Area.

A new project must meet the use and design regulations established in the New Zoning Code and comply with applicable Environmental Protection Standards to receive approval. Some of the design requirements will result from the planning process and some will result from the environmental review process.

For example, regulations set through the zoning could include limitations on building height or step-back requirements in certain specific areas of the Plan Area. An environmental standard might require shielding of light source so as to direct light away from adjacent residential uses. These are examples that represent the types and range of regulations that can be applied to reduce potential impacts of new development.

For projects within a CPIO District, new development will be subject to CPIO regulations and standards. The CPIO Districts establish regulations many of which are intended to avoid undesirable effects of new development and projects will be required to comply with those regulations. Planners will review most projects in CPIO areas through a ministerial process. As is the case citywide, where projects exceed the Site Plan Review (SPR) threshold, discretionary review will be applied. Projects meet the threshold when they exceed 50,000 net square feet or 50 net dwelling units.

## PROPOSED PLAN'S REASONABLE ANTICIPATED DEVELOPMENT

After preparing the Community Plan Update, separate from the demographic projections is the determination of the Reasonable Anticipated Development of the Community Plan Update, or what is reasonably expected to be built out under the Proposed Plan during the planning horizon. On a citywide basis, DCP's goal is to align citywide Reasonable Expected Development for all of the Community Plans with the total SCAG projection for the City to be consistent with other departments and agencies who plan for and provide public services and infrastructure to the city.

Planners use their educational and professional experience and expertise of land use and zoning standards to make assumptions about where development is likely to occur and at what scale, and create assumptions about the amount of residential, commercial, and industrial development that will occur during the life of the plan to determine the Reasonable Anticipated Development.

These assumptions are established through extensive research and analysis of existing development trends, existing conditions on the ground, project entitlement and building permit data, geographic and historic constraints, age of existing buildings, and the development potential between the existing built conditions and what uses and development intensities the new regulations would allow. Factors such as existing and planned infrastructure improvements are also considered.

Although the Project Planners do significant research relying on a multitude of data sets and market trends are considered while establishing assumptions, determining the Reasonable Anticipated Development involves making a lot of assumptions. Although the Planning Team are experts on the Community Plan Area and on the City’s land use and zoning plans and laws, the Proposed Plan, with its policies, zoning, and land use changes do not grant permits for or construct any developments. Future unforeseen market changes that either incentivize or inhibit development are unknown at this time, leaving uncertainty in the process of developing assumptions. The Planning Team, including City Planners, Senior City Planners, and a Principal City Planner,

use their expertise and the data sets available at the time of EIR preparation to inform the assumptions used in this analysis. These data sets include, but are not limited to the following:

- Real world conditions through field surveys by the Project Planners of every block of the Plan Area to assess vacancy and existing uses
- Assessor data for the entire Plan Area to determine existing unit counts and existing uses
- Uses (residential, commercial, industrial) and development intensities (height, density, FAR) allowed by the existing General Plan land use designations, zoning, and any zoning overlays and Specific Plans.
- Planning entitlements and building permits to assess market trends
- Proposed General Plan land use designations and General Plan objectives and policies and Zoning regulations for the Proposed Plan and Draft EIR Alternatives
- Other applicable regulations or physical conditions that could constrain potential development (such as, historic preservation protections, topography, flood plains, sensitive habitats, institutional facilities, open space)
- Other State or local programs or regulatory schemes active in the Plan Area that are intended to incentivize or facilitate potential development (such as, Community Benefits Programs, reductions in parking near transit infrastructure, tax incentive areas)

Utilizing these data sets and its collective expertise, the Community Planning team make and apply assumptions to the acreage within the Community Plan area, to determine the amount of Reasonable Anticipated Development from the Proposed Plan of residential units and non-residential square footage (commercial and industrial) that could be built during the life of the plan. For example, residential land area is multiplied by dwelling units per acre to generate an assumed dwelling unit count, and non-residential land area is multiplied by development potential, applying industry standards of employment density to calculate the total number of employees.

Ultimately, market factors dictate the level of development that occurs. Experience shows that only a percentage of the properties within a CPA will be redeveloped within the horizon year, typically 20- 25 years, and that even the sites that do redevelop are not always developed to maximum levels allowed by the by-right zoning and various incentive systems available. For this reason, 100 percent build out is a theoretical scenario and is not analyzed, but rather a more reasonable expected level of development is used both to guide proposed land use changes and analyze the potential environmental impacts of those changes. Community planners conduct the analysis of Reasonable Anticipated Development to analyze what level of development would reasonably occur during the life of the plan. While some jurisdictions may conduct a “full build out” analysis, the Downtown Community Plan Area is a highly urbanized area where the most common form of development is infill development. Conducting a full build out analysis would require making the unreasonable assumption that each parcel that is not already fully built out to the Proposed Plan’s density and intensity will be wholly redeveloped during the 20 year life of the plan. This is unrealistic due to development constraints including existing historic structures and recently completed developments that are unlikely to be redeveloped. Additionally, it does not reconcile with historic development patterns in the City. A number of factors serve to constrain development, including:

- Physical site constraints (topography, geology, etc.)
- Zoning regulations (requirements for open space, yards, setbacks and height that sometimes limit the maximum development on a site to levels below what the zoning would otherwise permit)

- Public review process
- Environmental factors and constraints (adjacent uses, sensitive uses, local, state and federal laws)
- Historic preservation goals and regulations
- Historical development patterns
- Land values
- Market factors, (economy, financial lending practices, etc.)

DCP considers these factors in using its best judgement, based on the education, experience and knowledge of its Planning Team, to determine the Reasonably Anticipated Development for the Proposed Plan. Revisions to the Reasonably Anticipated Development from the onset of the Community Plan Update may occur considering the multi-year time frame that community plans take to update.

Chapter 1

# INTRODUCTION & COMMUNITY PROFILE

DRAFT Summer 2020

THIS PAGE IS INTENTIONALLY LEFT BLANK

# READERS' GUIDE

The Community Plan is a document that represents the land use vision and values for a distinct geography. A main function of the Community Plan is to guide decision-making with respect to land uses. This includes guidance for legislative decisions, such as adoption of overlay zones or supplemental development regulations, as well as amendments to the land use or zoning maps. The goals and policies, together with the General Plan map are intended to guide decision-making. Community Plan goals and policies are intended to be supportive of one another. However, it is important to recognize that goals and policies are sometimes in competition and may entail trade-offs. The singular pursuit of one goal or policy may, in some cases, inhibit the achievement of other goals or policies. For example, the Community Plan includes policies that recognize the need to minimize water consumption in light of limited water resources. However, to eliminate the watering of sites being graded for permitted development or to eliminate landscape irrigation may conflict with objectives relating to maintenance of air quality or community design and beautification. Thus, when implementing the Community Plan, decision-makers must strike a balance between competing goals and policies, recognizing that all objectives cannot be fully implemented all the time. In relation to any decision, some goals and policies may be more compelling than others. It is up to the decision-makers to balance and weigh the applicability and merits of the goals and policies on any given project, program, or action. Ultimately, the Community Plan's goals, policies, and programs are intended to provide guidance, and shall be interpreted as directory, unless expressly indicated as mandatory by an asterisk (*). Compliance with the land use General Plan Land Use Map is mandatory.

**Goals**

A goal is a statement that describes a desired future condition or "end" state. Goals are change and outcome oriented, achievable over time, though not driven by funding. Each goal in the Community Plan begins with an abbreviated chapter title followed by the number of the goal (e.g.LU.1).

**Policies**

A policy is a clear statement that guides a specific course of action for decision makers to achieve a desired goal. Policies may refer to existing programs or call for the establishment of new ones. Each policy in the Plan is labeled with the abbreviated chapter title, the goal they refer to, and a unique number (e.g., LU.1.1).

**Programs**

An implementation program is an action, procedure, program or technique that carries out goals and policies. Implementation programs are comprehensive in nature, encompassing amendments of existing and preparation of new plans, ordinances, and development and design standards; modification of City procedures and development review and approval processes; and interagency coordination. Completion of a recommended implementation program will depend on a number of factors such as citizen priorities, finances, and staff availability. These recommendations are suggestions to future City decision makers as ways to implement the goals and policies contained in this Community Plan. The listing of recommended implementation programs in the Community Plan does not obligate the City to accomplish them. Chapter 5 contains a list of all the Community Plan's implementation programs. They are grouped by general topic and individually numbered (e.g., P1).

# PLAN VISION

The Downtown Community Plan envisions a sustainable, equitable, and inclusive future for Downtown.

A strong core is important to the health of the City. This Plan will promote a dynamic, healthy, and sustainable Downtown core that is well connected to and supports the City of Los Angeles and the region.

This Plan seeks to accommodate anticipated growth through 2040 while creating a livable and healthy community for workers, residents, and visitors. The goals and policies described in this Plan focus on continuing Downtown's remarkable renaissance and promoting it as a center of innovation in the public and private realms. This Plan also seeks to address many of the challenges facing Downtown and the larger region, such as climate change, housing demand and affordability, and a shifting economy, through strategies that guide thoughtful growth. These strategies promote the physical development of Downtown; improve access to jobs,open space, services, and cultural resources; and provide housing for all income levels.

DRAFT Summer 2020

# BACKGROUND AND RELATIONSHIP TO THE OTHER PLANS

Since the previous Plan updates in 2000 and 2003, Downtown has grown by approximately 26,000 people and continues to accommodate a significant portion of citywide residential and commercial growth. Guiding that growth in a thoughtful manner toward the most transit-served areas will be crucial to achieving and maintaining equitable economic prosperity. California State Legislation such as the Complete Streets Act of 2007 (Assembly Bill 1358) and Landmark Land Use and Greenhouse Gas State Law of 2008 (Senate Bill 375) established greenhouse gas reduction and better integration of multimodal transportation and land use planning as statewide priorities.

This Plan provides strategies to promote compact development and increase mobility options by planning for more jobs, housing, and amenities in close proximity to transportation resources and each other.

The Downtown Community Plan constitutes one of thirty-four plans that comprise the City's General Plan Land Use Element. Including a number of Elements, such as Framework, Mobility, Open Space, and Safety, the General Plan is the City's fundamental policy document and defines how physical and economic resources are to be managed and utilized over time. Decisions by the City with regard to the use of its land, the design and character of buildings and open spaces, the conservation of existing and provision of new housing, and the provision of supporting infrastructure are specifically guided by the General Plan Land Use Element.

In addition to the Land Use Element, the City has adopted a Framework Element of the General Plan that establishes how Los Angeles will grow in the future, providing a citywide context for updates to Community Plans and the citywide elements.

The Framework is focused around seven guiding principles: grow strategically; conserve existing residential neighborhoods; balance the distribution of land uses; enhance neighborhood character through better development standards; create more small parks, pedestrian districts, and public plazas; improve mobility and access; and identify a hierarchy of commercial districts and centers.

The development pattern described in the Framework Element provides direction and guidance for Downtown's continued evolution, accommodating the highest development densities in the City and functioning as the principal transportation hub for the region. The growth strategy emphasizes the expansion of new housing opportunities and services within Downtown and capitalizes on the diversity of the City's population. Further discussions regarding the relationship between the Downtown C ommunity Plan and the City's General Plan can be found in Appendix A.

The Community Plan's importance lies in its ability to shape positive community change and foster sustainable land use patterns while balancing the character of the community with citywide policies and regional initiatives. The process of developing the Downtown Community Plan was a multi-year collaborative effort in which broad public participation was obtained through a series of meetings and workshops where stakeholders provided input and recommendations.

DRAFT Summer 2020

# COMMUNITY PROFILE

The Downtown Community Plan Area is the birthplace of Los Angeles and contains some of the oldest structures of the City. From a small pueblo and agricultural community, to a railroad and manufacturing hub, to a commercial and cultural capital, Downtown has always represented the heart of the Los Angeles region.

Today, Downtown has grown to become a collection of distinctive but interconnected and walkable neighborhoods that sit at the confluence of the region's growing transportation system. An international center for art, culture, business, and entertainment, as well as a governmental, commercial, manufacturing and jobs oriented center for the City of Los Angeles and the region, the Plan Area is also home to a growing residential population.

## DOWNTOWN TODAY IS:

### RICH IN HISTORY

There are **190 Historic Cultural Monuments**, and **4 Designated Historic Districts** in Downtown.

### WELL CONNECTED BY TRANSIT

The City's Rail Infrastructure Converges in Downtown **40% of all Metro Rapid Bus Lines serve Downtown.**

### A GROWING RESIDENTIAL COMMUNITY

Since 2010, Approximately **15,000 Units Have Been Added in Downtown.**

### A CLUSTER OF INDUSTRIES

Downtown Represents **1% of the Land Area and 12% of the Jobs Within the City of Los Angeles**.

The Top Job Industries in Downtown Are **Professional, Scientific & Tech Services, Retail Trade, and Public Administration**.

# GUIDING PRINCIPLES

The following core principles represent the long-term priorities for the Downtown Community Plan

### ACCOMMODATE ANTICIPATED GROWTH IN AN INCLUSIVE, EQUITABLE, SUSTAINABLE, AND HEALTHY MANNER

- Concentrating growth near transit
- Identifying strategies for inclusive growth
- Promoting infill development
- Elevating design expectations

### SUPPORT AND SUSTAIN DOWNTOWN'S ONGOING REVITALIZATION

- Promoting innovation for decades to come
- Creating well-designed buildings that continue to develop the skyline
- Celebrating history, culture, community, and the arts
- Reinforcing Downtown as a destination

### REINFORCE DOWNTOWN'S JOBS ORIENTATION

- Encouraging synergy through a greater mix of uses
- Identifying locations where commercial activity is preferred
- Establishing locations with a baseline of productive uses
- Creating a job sanctuary

### GROW AND SUPPORT THE RESIDENTIAL BASE

- Expanding areas where housing is allowed
- Intensifying housing where appropriate
- Allowing a full range of housing options
- Expanding areas for adaptive reuse and conversion to joint live/work

*Image: Brittany Arceneaux*

## PROMOTE A TRANSIT, BICYCLE, AND PEDESTRIAN-FRIENDLY ENVIRONMENT

Prioritizing pedestrian safety and human comfort

Improving connectivity and internal circulation within Downtown

Increasing dedicated bike infrastructure

Expanding transit service

Eliminating parking minimums and managing parking effectively

## STRENGTHEN NEIGHBORHOOD CHARACTER

Reusing, protecting and preserving existing structures that characterize unique urban development patterns

Supporting streets that encourage community and human interaction

Developing a palette of regulations and design guidelines that reinforce distinct places

## CREATE LINKAGES BETWEEN DISTRICTS

Finding opportunities within a community benefits program for the development of new publicly accessible open space

Requiring high quality streets and pedestrian linkages

Treating the streets as Downtown's living room

Encouraging places for people to gather and interact

## CREATE A WORLD-CLASS PUBLIC REALM

Supporting the development of catalytic major public realm improvements

Promoting sustainable public realm improvements

Encouraging the development of high quality publicly accessible open spaces

Supporting the development of nontraditional open spaces

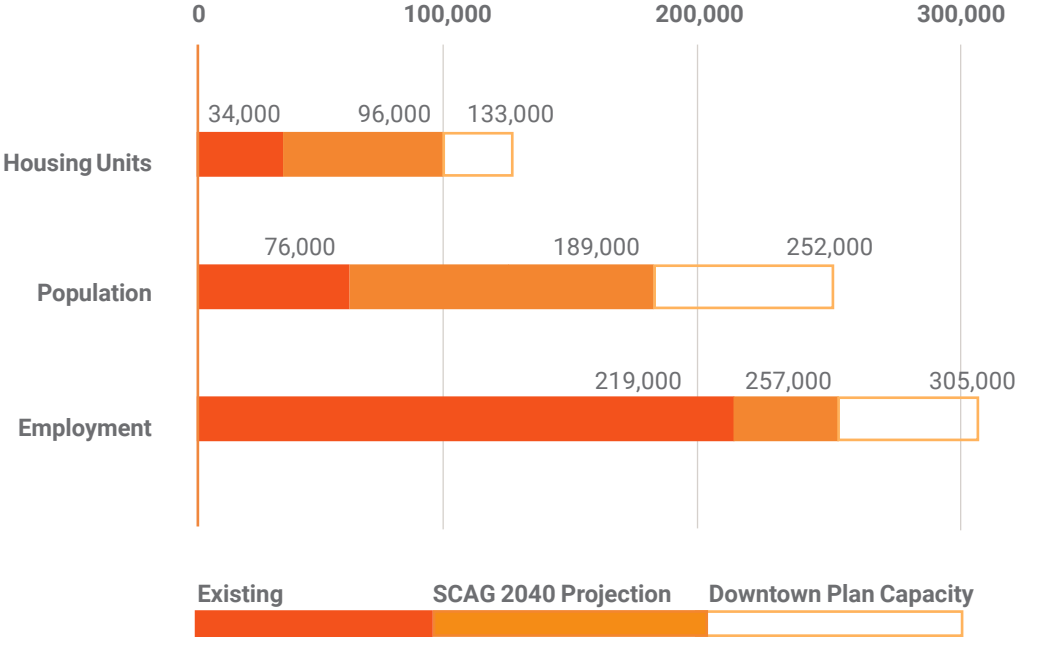
Ensuring that open space, recreation, and park spaces are well-maintained

# TRENDS AND PROJECTIONS

The State of California requires that regions plan for changes in population, housing, and employment. If growth is projected, each City must accommodate a share of the region's anticipated growth. These projections are developed by the Southern California Association of Governments (SCAG), which forecasts population and job growth for the cities and counties in the six-county Southern California region.

The City must then accommodate, or create the "capacity" for these projected levels of population, housing, and employment through its Community Plans. SCAG's 2040 population and housing forecasts for Los Angeles' Community Plan Areas are based on a number of factors, including historic and recent growth trends. The Department of City Planning allocates the citywide population and housing forecasts, consistent with the Framework Element and other City policies.

TABLE 1.1: PROJECTIONS & PLAN CAPACITY*



*Plan capacity is the reasonable expected development anticipated to occur as a result of the proposed Plan by the Plan's horizon year.

# GENERAL PLAN LAND USE DESIGNATIONS CREATING DOWNTOWN PLACES

General Plan Land Use Designations express a variety of goals, policies, and zoning tools to support each condition. The proposed General Plan Land Use Designations reflect the relationship between land use, physical built form, and functional aspects that differentiate one area from another. Each designation includes a description of the range of intensity, height, and typical uses that characterize an area, contributing to its identity and sense of place.

**Description**

## Transit Core

**516**
*Net Acres*

**16%**
*of Plan Area*

Transit Core areas are dense centers of activity built around regional transit hubs that provide easy access for pedestrians, transit users, and cyclists to a variety of experiences and activities. These places provide a high-energy urban experience, with towers activated by ground-floor retail that engages and invites pedestrians. Buildings have high-quality design and provide visual interest. Enhanced streetscapes, paseos, and alleys create a seamless network of walkable paths that balance the high-intensity built environment. A diverse mix of office, residential, retail, cultural, and entertainment uses makes these places centers of activity around the clock.

## Traditional Core

**126**
*Net Acres*

**4%**
*of Plan Area*

Traditional Core places have a time-honored urban development pattern and a rich collection of historically-significant buildings. The protection, restoration, and reuse of these structures is a priority. New development responds to this predominant urban form, contributing to the pedestrian-oriented environment with active alleys and inviting shopfronts. Historic design features and blocks are built out edge-to-edge, contributing to a distinctive sense of place. Residences and offices above entertainment venues, neighborhood-serving stores, and restaurants draw local, regional, and international visitors, supporting activity around the clock.

## Community Center

**195**
*Net Acres*

**6%**
*of Plan Area*

Community Center areas are complete urban neighborhoods & vibrant centers of activity. Often located around secondary transit nodes, these areas have a regular street grid and active alleys. Low and Mid-rise buildings have strong street walls and active ground floors reinforcing the urban character of these areas. Key pathways between regional transit resources and adjacent activity centers enhance the pedestrian experience and provide clear wayfinding between adjacent places. Residential, office, and community commercial uses are integrated to create balanced centers of activity. High-quality streetscapes and public spaces provide amenities to workers, residents, and visitors and promote a pedestrian-friendly environment.

**Max FAR represents the maximum achievable Floor Area Ratio for each General Plan Land Use Designation within the Downtown Community Plan. Max FAR for individual sites is determined by the applied zoning.*

DRAFT Summer 2020

| | Description |
|---|---|
| **Hybrid Industrial**<br>**425**<br>*Net Acres*<br>**13%**<br>*of Plan Area*<br> | *Hybrid Industrial places have a distinct urban form characterized by medium and low scale development with an industrial legacy. High-quality new construction and repurposed structures collectively promote a resourceful approach to urban development that can evolve over time. These areas preserve productive activity and prioritize space for employment, including light industrial, new industry, commercial, and vertically-integrated businesses, with careful introduction of live-work uses. The industrial legacy is reflected with a network of irregular streets, punctuated by occasional passageways. The street, block and building patterns have evolved into an inviting environment for pedestrians and cyclists.* |
| **Markets**<br>**389**<br>*Net Acres*<br>**12%**<br>*of Plan Area*<br> | *Market areas are comprised of medium-scale buildings that accommodate wholesale, commercial, retail, limited housing, and goods movement activities. As bustling centers of commercial activity, these places are characterized by porous, fine-grained blocks – each with its own mini-economy of specialized commercial offerings. At each of these nodes, local and regional patrons spill out from the storefronts on to sidewalks and active alleys, creating a high-energy street life that is sustained throughout much of the day and night. Adaptive-reuse and rehabilitation of existing structures and warehouses maintains the unique character and supports sustainable development.* |
| **Villages**<br>**85**<br>*Net Acres*<br>**3%**<br>*of Plan Area*<br> | *Villages are characterized by fine-grained and porous development patterns. Retail uses on the ground floors of active streets and alleys in these areas provides a lively and safe pedestrian atmosphere. A range of housing types for all incomes and family sizes are integrated with commercial uses such as restaurants, retail, services, and small professional offices to create complete neighborhoods. These walkable centers serve as historic and cultural regional niche market destinations. Adaptive reuse of historic structures and infill development on small lots is responsive to the historic and cultural legacy of these areas.* |
| **Medium Neighborhood Residential**<br>**100**<br>*Net Acres*<br>**3%**<br>*of Plan Area*<br> | *Neighborhood residential areas are traditional, walkable, and compact places with flexible buildings that accommodate multi-generational populations. A limited number of small, local-serving commercial establishments are integrated into the residential fabric. Buildings are oriented toward the street with traditional neighborhood features, such as stoops and small landscaped yards, which contribute to an inviting public realm. These areas accommodate pedestrians, cyclists, and local traffic. These urban neighborhoods are adjacent and connected to commercial and employment centers.* |

**Max FAR represents the maximum achievable Floor Area Ratio for each General Plan Land Use Designation within the Downtown Community Plan. Max FAR for individual sites is determined by the applied zoning.*

**Description**

## Production

**557**
*Net Acres*

**17%**
*of Plan Area*

*Production areas protect and sustain industrial activity while serving as a regional jobs base for a range of training skills and education levels. Buildings in these areas are flexible, high-quality structures that accommodate evolving and innovative industries including light assembly and manufacturing, clean technology, incubators, and research & development facilities. The large-format structures in flexible lot configurations balance goods movement, loading, and distribution needs with pedestrian-scaled design that supports a healthy environment for all users.*

## Open Space

**214**
*Net Acres*

**7%**
*of Plan Area*

*Open Space areas provide opportunities for passive and active outdoor recreation, public gathering, and education. These places function to preserve scenic, cultural, or ecologically important areas. While Open Space land is generally natural in character, it can also accommodate public amenities such as bathrooms and community gathering spaces, as well as limited accessory vending.*

## Public Facilities

**428**
*Net Acres*

**13%**
*of Plan Area*

*Public Facilities areas are home to governmental, institutional, and cultural functions for the City and provide for the use and development of land owned by a government agency. This includes facilities that are owned and operated by Federal, State, or local governments, public utilities, or joint public and private developments, which are used to provide governmental or public services. Public Facilities serve as centers of democratic practice and public life. A variety of structures, site layouts, and building designs flexibly support civic activity, facilitate internal circulation, and contribute to an active public realm. Public spaces are prevalent and integral to these places, creating a lively atmosphere with frequent programming and public events. Land uses include government offices, libraries, schools, medical facilities, and service systems to support quality of life within the City. Retail, office, hotel, and limited residential uses are integrated with civic uses, encouraging street life and extending hours of activity beyond the work day.*

## Public Facilities - Freeways

**197**
*Net Acres*

**6%**
*of Plan Area*

*Public Facilities-Freeways comprises land dedicated to freeways that exist within the Plan Area, including storage and parking uses, that is owned by the California Department of Transportation (Caltrans).*

**Max FAR represents the maximum achievable Floor Area Ratio for each General Plan Land Use Designation within the Downtown Community Plan. Max FAR for individual sites is determined by the applied zoning.*

DRAFT Summer 2020

*Image: Shutterstock*

Chapter 2

# LAND USE & URBAN FORM

The land use and urban form strategies in this chapter establish and celebrate a range of Downtown Places. While the Plan promotes a vision for each place, the range of Downtown places together form a complete community - one that is an economic and cultural center and the civic heart of Los Angeles, with a growing residential base.

This chapter defines goals and policies for the Downtown Places that characterize the Community Plan area, including: Transit Core, Traditional Core, Community Center, Public Facilities, Hybrid Industrial, Markets, Villages, Production, and Neighborhood Residential places, as well as Plan area-wide goals and policies for land use, urban form, housing, economic development, historic preservation, health, and sustainability. Together, these goals and policies envision a sustainable, equitable, and inclusive Downtown.

The identification of Downtown Places helps to apply goals and policies for areas within Downtown that have similar physical and functional characteristics. Among each Downtown Place are neighborhoods, each with its own history and built environment. A neighborhood description and policies for each follow the Downtown Place to which it most closely relates.

Planning for variation of scale, character, housing options, and mix of uses will accommodate projected growth while maintaining the qualities that make each Downtown place unique. Additionally, this ensures that growth is planned sustainably and that the built form will continue to flexibly accommodate a changing environment.

# DOWNTOWN WIDE GOALS AND POLICIES

The primary purpose of a Community Plan document is to provide a long term vision for land use, growth and development in each community of Los Angeles. Land use planning can address an expansive range of interrelated topics that shape the quality of life within a community, including access to employment opportunities, housing options, services, amenities and transportation options, as well as environmental and economic sustainability.

The policies in the following section articulate a Downtown-wide strategy for land use planning that will accommodate projected growth while celebrating and reinforcing Downtown's unique places by encouraging the highest intensity development and most expansive mix of uses in areas that are served by high-frequency transit service, promoting flexibility, and supporting a high-quality built environment.

## HOUSING AND COMPLETE NEIGHBORHOODS

This Plan envisions a community in which residents can both live and work, and have access to the retail and services needed on a daily basis.

To achieve this, policies emphasize the creation of housing that is safe, livable, and affordable to a full range of income levels. The Plan expands areas where housing is allowed, intensifies development where appropriate, and expands areas where adaptive reuse of structures into housing is permitted.

Plan policies recognize that communities are built on foundations that extend beyond the walls of our homes. A high-quality public realm with safe physical connections to a variety of experiences and activities makes Downtown an attractive place to work and visit, as well as to live.

Finally, the Plan seeks to create a balance between housing and jobs in Downtown, providing the opportunity for people to live and work in proximity to one another. This can reduce driving and congestion, provide stability for residents, and promote an improved quality of life.

**LU GOAL 1**

A SUSTAINABLE, INNOVATIVE, AND DIVERSIFIED DOWNTOWN FOR ALL THAT OFFERS A FULL RANGE OF OPPORTUNITIES AND EXPERIENCES.

LU 1.1

Ensure the development of complete neighborhoods with diverse uses and resilient infrastructure, parks, streetscapes, transit, and community amenities.

LU 1.2

Create zoning tools to provide for a diverse and inclusive Downtown through a range of housing and employment options

LU 1.3
Establish an incentive zoning system that delivers public benefits such as affordable housing, public open space, historic preservation, and community facilities to Downtown communities.

LU 1.4
Support the expansion of uses that provide access to arts, culture, and entertainment for people throughout the region.

LU 1.5
Facilitate public community events and outdoor recreation in Downtown's underserved communities by reducing administrative and financial challenges such as permitting fees and process.

LU 1.6
Encourage accessibility and amenities for children and seniors in housing developments.

## LU GOAL 2

HOUSING PRODUCTION AND PRESERVATION THROUGH PUBLIC AND PRIVATE ACTION THAT RESULTS IN A HOUSING SUPPLY TO MEET PROJECTED GROWTH IN A MANNER THAT IS SAFE, LIVABLE, AND AFFORDABLE TO A FULL RANGE OF INCOME LEVELS; REINFORCES THE CHARACTER OF NEIGHBORHOODS; AND ADDS TO THE VITALITY OF DOWNTOWN.

LU 2.1
Foster an equitable and inclusive Downtown, with housing options that can accommodate the fullest range of economic and social needs.

LU 2.2
Provide incentives and simplify zoning regulations where possible to expedite the production of housing.

LU 2.3
Expand the areas where housing is permitted to meet projected housing needs.

LU 2.4
Encourage a mix of rental and ownership housing and facilitate the development of affordable housing and permanent supportive housing.

LU 2.5.
Expand the areas where the Adaptive Reuse Ordinance can be utilized.

LU 2.6
Develop further incentives and simplify zoning regulations to expedite the rehabilitation and conversion of historic buildings into a variety of housing types including, live/work units, micro-units, and multi-bedroom units for families in order to support a range of household types.

LU 2.7
Promote preservation and maintenance of existing housing stock at the foundation of the community's affordable housing supply.

LU 2.8
Prioritize use of surplus public land for development of housing that is predominantly affordable, except where surplus land is not suitable for residential uses.

## LU GOAL 3

ACCESSIBLE, HEALTHY, AND SAFE HOUSING OPPORTUNITIES AFFORDABLE TO LOW INCOME HOUSEHOLDS.

LU 3.1
Recognize additional housing unit options to accommodate a variety of household sizes, including larger households, such as those with children, multigenerational living, and special needs populations.

LU 3.2
Facilitate the preservation of existing residential units, and avoid displacement of current Downtown residents.

LU 3.3
Foster healthy communities composed of mixed-income housing in proximity to transit, jobs, amenities, services, cultural resources, and recreational facilities.

LU 3.4
Disaggregate the cost of parking from the cost of housing and eliminate residential parking requirements to allow flexibility and reduce the cost of housing.

LU 3.5
Support community land trusts as a tool for producing affordable housing options.

LU 3.6
Coordinate with nonprofits and community-land trusts to take advantage of off-site acquisition options.

LU 3.7
Promote safe building practices that support healthy homes and support the rights of tenants to live in habitable housing

LU 3.8
Foster effective collaboration and coordination between public agencies and community organizations to identify displacement concerns and efficiently respond with resources and strategies.

LU 3.9
Facilitate the renewal of existing affordable housing covenants and promote opportunities for acquisition of units with expiring covenants by affordable housing developers, community-based organizations, or community land trusts to preserve affordability.

**LU GOAL 4**

A DIVERSITY OF HOUSING OPTIONS THAT SUPPORTS THE CO-LOCATION OF HOUSING WITH A RANGE OF USES.

LU 4.1
Balance housing and employment uses to encourage vibrancy and reinforce Downtown as a community, as well as a destination.

LU 4.2
Find opportunities to create affordable housing options for middle income and workforce populations.

LU 4.3
Promote shared on-site amenities, including usable open space in new development projects.

LU 4.4
Encourage the co-location of schools, childcare facilities, and additional community services with housing and office uses.

LU 4.5
Encourage the creation of residential buildings that can be adaptable over time to accommodate changes in unit types, sizes, living arrangements, and a mix of uses.

LU 4.6
Incentivize the creation of housing options that are affordable to and occupied by low income households, especially housing at the deepest levels of affordability, near transit.

## ECONOMIC DEVELOPMENT

Fostering the development and vigor of Downtown's employment base and providing for the economic security and comfort of Downtown's residents are efforts that reinforce one another. Each plays a part in encouraging both economic opportunity and economic equity. As such, economic development encompasses more than fiscal growth, but also economic inclusiveness and sustainability.

The following section includes economic development goals emphasizing the need for a broad-based economy that fosters a diversity of industry sectors from advanced manufacturing to creative office.

Policies address this by establishing locations that maintain a baseline of productive and job-generating floor area, and creating areas that prioritize employment and production activities. Policies identify the power of partnership between educational institutions and local employers, to offer workers in a range of industries a promising entry into the workforce. This section further calls for expanding the areas where a mix of employment and other uses are permitted; creating a balance of jobs, housing, and other uses to promote prosperity across Downtown.

### LU GOAL 5

A BROAD-BASED ECONOMY THAT LEVERAGES DOWNTOWN'S CENTRAL LOCATION, LAND USE MIX, AND INFRASTRUCTURE TO FOSTER A DIVERSITY OF INDUSTRY SECTORS AND BUSINESS SIZES.

LU 5.1
Promote Downtown as the primary regional center for employment by dedicating and prioritizing space for jobs across a variety of enterprises.

LU 5.2
Promote a pluralistic economy by supporting dynamic partnerships among local academic institutions government, businesses, and nonprofit organizations

LU 5.3
Make Downtown economically competitive through improvements to the public realm.

LU 5.4
Support efforts to expand Convention Center business and position the City to host world class events like the Olympic Games.

### LU GOAL 6

A CENTER OF WORLD-CLASS INNOVATION, ENTREPRENEURSHIP, AND NEW MARKETS THAT REFLECT AND STRENGTHEN THE CULTURAL DIVERSITY OF DOWNTOWN.

LU 6.1
Promote Downtown as a destination for entrepreneurship, research and development, and creativity.

LU 6.2
Support Downtown's existing and emerging innovation community, by encouraging synergy and collaboration between businesses and educational institutions.

LU 6.3
Recognize creative arts, culture, neighborhood character, dynamic public spaces, and diverse populations as significant components of Downtown's economic ecosystem, and support programs and developments that seek to enhance these resources.

LU 6.4
Reinforce Downtown as a location that leverages the physical concentration of businesses, knowledge, technological advances, and social capital to foster diversity and inclusion.

LU 6.5
Create flexible zoning tools that can respond to future innovation while supporting communities current needs

LU 6.6
Encourage art production and exhibitions spaces that are accessible and affordable to community based artists

LU 6.7
Support community ownership of creative space, including incubators, studio space, and art production and exhibition space.

## LU GOAL 7

AN ECONOMY THAT IS RESILIENT TO MARKET CHANGES AND EVOLUTION.

LU 7.1
Ensure Downtown's built environment welcomes a range of industry and business types as market needs evolve over time, while supporting existing community serving small businesses.

LU 7.2
Facilitate the widest array of land uses and activities, with the ability to generate and support regional levels of commerce and tourism.Foster long-term success with an ecosystem that accommodates both industrial and professional office sectors for future generations.

LU 7.3
Engage and support small businesses so that they may remain resilient through market evolution, contributing to business continuity.

## LU GOAL 8

AN ENVIRONMENT CHARACTERIZED BY EQUITY AND ECONOMIC OPPORTUNITY.

LU 8.1
Improve economic opportunity through local hiring, living wage provisions, job resource centers and job training, and supporting workforce development programs and partnerships.

LU 8.2
Increase the availability of resources and programs to support existing small businesses, new business startups, and local entrepreneurs.

LU 8.3
Cultivate a prosperous and complete community in Downtown that provides an opportunity for local employees in all sectors to live and work in close proximity.

LU 8.4
Expand access to employment opportunities with improved physical connections to and within Downtown and expanded transit service to employment districts.

LU 8.5
Facilitate the location of extension and satellite educational campuses within Downtown.

LU 8.6
Encourage mixed-use and commercial development to provide retail spaces conducive to community serving small businesses and business incubation.

LU 8.7
Support street vending and create vending districts to increase access to economic opportunity and healthy food, and reinforce Downtown's active street life.

LU 8.8
Foster opportunities for individuals facing barriers to employment, including persons experiencing homelessness, single parents, persons receiving public assistance, persons without a GED or high school diploma, persons with a criminal record, and veterans.

## URBAN FORM

The design of the built environment guides the way that pedestrians and users experience their communities. Downtown contains a spectrum of forms that express the cultural, historic, and functional characteristics of its many neighborhoods. This urban fabric has helped to shape Downtown's identity as a walkable, compact, and active place.

The Plan envisions a Downtown that supports its legacy forms, while elevating the standard of design for new development and encouraging innovation. The Plan seeks to guide building and site design in a manner that facilitates pedestrian connectivity and ensures that the built environment can support vibrant, urban street life.

### LU GOAL 9

DEVELOPMENT PATTERNS THAT CREATE A CONNECTED AND SEAMLESS EXPERIENCE WHILE REINFORCING THE IDENTITY OF DOWNTOWN'S SPECIAL PLACES.

LU 9.1
Strategically concentrate the highest densities and intensities within the Plan area to respond to historic development patterns and match infrastructure investment.

LU 9.2
Reinforce the distinct qualities of each neighborhood, and ensure that growth complements and is compatible with existing character and historic resources; and supports community needs.

LU 9.3
Plan for a connected network of districts that together provide a full range of services and amenities to support workers, residents, and visitors Downtown.

LU 9.4
Support infill development that responds and contributes to neighborhood character.

LU 9.5
Encourage building design in transitional areas that complements and bridges the character of adjacent districts for more seamless transitions.

### LU GOAL 10

AN URBAN FORM THAT CONNECTS PEOPLE AND PLACES AND CREATES A WALKABLE ENVIRONMENT.

LU 10.1
Require active ground floors and street frontages that improve walkability and connectivity, especially between transit stations and nearby destinations.

LU 10.2
Encourage development that is well integrated with the public realm to create an inviting urban environment.

LU 10.3
Incentivize the inclusion of paseos through large sites to improve pedestrian access.

LU 10.4
Encourage building design that connects and orients people toward destinations and activity centers.

LU 10.5
Prohibit pedestrian bridges unless they are necessary to provide access to public buildings, address physical constraints, or provide safe linkages between institutional buildings such as hospitals and schools.

LU 10.6
Require that pedestrian bridges minimize visual impacts, be architecturally integrated into building design, connect with public entrances, incorporate lighting and directional signage, and include maintenance and safety programs.

LU 10.7
Limit the impact of pedestrian bridges on public streets and infrastructure below them and incorporate improvements to public streets.

LU 10.8
Promote compact development and encourage walking, biking, and transit use by encouraging no or minimal parking, when possible.

LU 10.9
Encourage underground parking, when provided, to increase the amount of above grade building square footage dedicated to active uses and to improve the pedestrian environment.

LU 10.10
Wrap with active uses or fully screen above grade parking with architectural features in mixed use, residential, or commercial developments to enhance the pedestrian environment.

LU 10.11
Line the ground floor of stand-alone garages with active uses and require that upper levels be screened to increase street life and pedestrian activity, and improve the aesthetic quality of buildings and neighborhoods.

LU 10.12
Ensure that signs contribute positively to the urban fabric, complement neighborhood character, and are oriented towards pedestrians.

LU 10.13
Consideration of new sign districts should be limited to entertainment focused areas with regional draws.

LU 10.14
Discourage hostile architecture and other urban design elements that prevent inclusive and equitable use of public space.

## LU GOAL 11

A BUILT ENVIRONMENT THAT IS SUSTAINABLE AND ADAPTABLE OVER TIME.

LU 11.1
Anticipate the evolution of land use needs to support a greater diversity of activity by facilitating new development that is flexible and can accommodate changing uses over time.

LU 11.2
Encourage efficient building techniques and sustainable materials to guide lasting development that minimize adverse effects on the environment.

LU 11.3
Encourage flexible parking structure design to facilitate possible future conversion of parking areas to active uses and create zoning flexibility to allow by-right conversion in the future.

# HISTORIC AND CULTURAL RESOURCES

The following section includes goals and policies that call for the continued presence and enhancement of Downtown's historic resources.

As the birthplace of the City, Downtown has developed a rich heritage that is reflected in its neighborhoods, institutions, art, community, and culture. Another key component of Downtown's legacy is its buildings. The built environment mirrors the waves of development and change in arenas such as architecture, transportation, social history, politics, industry, entertainment, and others. As the community and built environment evolve, it is important to preserve this heritage and the history that accompanies it to maintain a sustained sense of place and expression of Downtown's distinct past.

Policies address this by calling for the preservation and restoration of Downtown's historic resources, strengthening the visibility of these assets, and encouraging institutions and organizations to coalesce in an effort to make these histories publicly accessible.

## LU GOAL 12

AN ENVIRONMENT CHARACTERIZED BY A RICH COLLECTION OF HISTORIC BUILDINGS, SITES, AND RESOURCES.

LU 12.1
Protect and support the rehabilitation of historic resources designated at the local, state, or national level.

LU 12.2
Incentivize the preservation, rehabilitation, and adaptive reuse of one of the largest and most distinguished stock of historic buildings in the United States for a variety of uses.

LU 12.3
Prevent the unnecessary loss of resources of historic significance, special character, cultural, or social significance.

LU 12.4
Support existing and future policy that is intended to enhance, restore and activate those resources that have been designated as resources through the Los Angeles Historic Resources Survey.

LU 12.5
Encourage incorporation of existing buildings in new development as feasible and appropriate.

LU 12.6
Administer the allocation of the Arts Development Fee Credits in coordination with community-based organizations and artists and engage community residents in the development of the Final Art Plan.

## LU GOAL 13

HISTORIC RESOURCES ARE HIGHLIGHTED AND RECOGNIZABLE.

LU 13.1
Strengthen the awareness of historic resources by supporting the implementation of a unified set of informational and wayfinding signs that provide a description of these sites.

LU 13.2
Support local institutions' and organizations' efforts to advocate for, educate, and share the legacy of historic and cultural resources.

LU 13.3
Support existing and future efforts that are intended to enhance, restore, and activate historic resources.

LU 13.4
Promote community participation and input in cultural and historic preservation efforts.

LU 13.5
Partner with community organizations and local residents to identify and protect cultural resources and assets.

**LU GOAL 14**

AN EVOLVING DOWNTOWN COMMUNITY THAT MAINTAINS A POSITIVE CONTINUITY WITH THE PAST.

LU 14.1
Ensure that where new development occurs, it complements the physical qualities and distinct features of existing historic resources.

LU 14.2
Retain the integrity of historic resources, while achieving a balance between preservation and the need to accommodate housing and jobs in Downtown.

LU 14.3
Preserve and promote the distinct qualities and features of historically and culturally significant neighborhoods and communities.

LU 14.4
Encourage innovative design that creates the preservation-worthy buildings of the future.

LU 14.5
Support efforts to preserve and restore the rich inventory of culturally significant murals and public art found throughout Downtown.

LU 14.6
Encourage new development to incorporate culturally relevant and community-driven public art along building facades and in outdoor areas.

## WELLNESS AND SUSTAINABILITY

The policies included in this Plan lay the foundation to support healthier communities through a strategy that directs growth in a sustainable manner. The Plan calls for efficient use of land that supports walking, bicycling, and access to transit, reducing energy consumption, and fostering environments for active and passive recreation. This Plan envisions a Downtown that is comfortable, accessible, and safe for all as it continues to grow and thrive. In addition, it is important to incorporate design, infrastructure, and services that can remain resilient in the face of changing technologies and climates.

The following section includes goals emphasizing the need for a resilient urban landscape with strategies that consider pedestrian comfort, safety, and wellness of residents, workers, and visitors, while responding to the specific physical and cultural characteristics of each neighborhood.

**LU GOAL 15**

A SUSTAINABLE ENVIRONMENT THAT SUPPORTS A HEALTHY DOWNTOWN COMMUNITY.

LU 15.1
Plan for sustainable land use patterns that leverage transit and open space resources and access to housing and jobs to improve the overall quality of the environment.

LU 15.2
Promote public health and environmental sustainability outcomes consistent with the City's Plan for Healthy Los Angeles and the Sustainable City pLAn.

LU 15.3
Create a network of well-maintained public and private green infrastructure by incentivizing the use of trees, eco roofs, vertical gardens, stormwater facilities, and landscaped amenity areas.

LU 15.4
Facilitate access to affordable, healthy, and fresh food for all Downtown residents and support community serving small businesses that sell affordable, fresh, and culturally relevant foods

LU 15.5
Encourage the use of native flora that maximizes the capture of pollutants near freeways and industrial facilities.

LU 15.6
Encourage sustainable building design and construction standards that can increase building energy and water efficiency.

## LU GOAL 16
A RESILIENT DOWNTOWN.

LU 16.1
Implement strategies such as expanding shade cover and more efficient water use to lessen the urban heat island effect and increase reliance on renewable energy sources.

LU 16.2
Seek opportunities to underground utility lines infrastructure in sidewalks to support disaster preparedness, improve the quality of the urban environment, and reduce barriers to pedestrians.

LU 16.3
Support the expansion and redundancy of utility capacity to accommodate a range of activities over time.

LU 16.4
Support systems that symbiotically reduce waste and capitalize on the multi-functionality of spaces.

LU 16.5
Support Citywide water use reduction goals by focusing on water management practices, and stormwater capture and treatment in Downtown that can increase can local water supply.

LU 16.6
Prioritize infrastructure and landscape treatments that absorb pollutants and support stormwater infiltration.

LU 16.7
Reduce the urban heat island effect by installing cool pavement and cool roofs throughout Downtown.

LU 16.8
Encourage the implementation of renewable energy source target programs, including the Los Angeles Department of Water and Power 2016 Final Power Integrated Resource Plan (IRP), to improve environmental resilience.

LU 16.9
Support local, regional, state, and federal programs seeking to reduce greenhouse gas emissions, in an effort to minimize pollution sources and to improve air quality.

LU 16.10
Encourage building design that promotes earthquake resilience so that buildings remain usable after earthquakes

LU 16.11
Identify areas and buildings as resiliency centers for public use during future climate events and other emergencies.

## LU GOAL 17
LEGIBLE AND COMFORTABLE SPACES TO ENGAGE IN PHYSICAL ACTIVITY, EXPERIENCE NATURE AND FIND RESPITE.

LU 17.1
Promote a pedestrian environment that enhances thermal, visual, and audible comfort and provides opportunities for resting and socializing.

LU 17.2
Maintain and expand the tree canopy to provide shade, improve air and water quality, reduce heat-island effect, and create habitat for birds and pollinators.

LU 17.3
Cultivate urban habitat for animals and plants and increase opportunities to experience nature in Downtown's urban environment.

LU 17.4
Provide space for recreational facilities for the health and enjoyment of Downtown workers, residents, and visitors.

LU 17.5
Encourage trees and architectural elements that provide shade; cooling stations; and seating areas for pedestrians along primary corridors in Downtown.

# DOWNTOWN PLACES GOALS AND POLICIES

The General Plan Land Use Designations established by this plan recognize the distinction of Downtown's varied and unique places. These General Plan Designations identify areas of common policy vision in terms of physical built form and the functional uses that differentiate one area from another. These places vary in the height, land use, massing, and feel of the buildings along the street.

This section provides policies that represent a vision for the use of land and configuration of the built environment for each General Plan Land Use Designation. The strategies for each General Plan Land Use Designation implement the Plan's Guiding Principles by including policies that:

- Accommodate anticipated growth through 2040 in an inclusive, equitable, sustainable, and healthy manner while supporting and sustaining Downtown's ongoing revitalization
- Reinforce Downtown's jobs orientation
- Grow and support the residential base
- Strengthen neighborhood character

Within each "Downtown Place" are a range of neighborhoods, each with their own unique identity. Neighborhoods often embody varied characteristics and as such extend across multiple General Plan Land Use Designations. To support the defining characteristics of these neighborhoods and enhance their distinct qualities as they evolve, the Plan provides for an additional more granular layer of neighborhood policies, relating to specific opportunities and concerns, beyond the policies developed for each designation. Following the vision for each Downtown Place, are a series of policies specific to those neighborhoods and districts which are partially or wholly within the related General Plan Designation.

## TRANSIT CORE

**LU GOAL 18**

DENSE CENTERS OF EMPLOYMENT, HOUSING, AND ENTERTAINMENT USES WITH THE HIGHEST INTENSITY OF DEVELOPMENT, WELL-SERVED BY A CONVERGENCE OF MULTIPLE TRANSIT LINES.

LU 18.1
Implement zoning regulations that allow the greatest intensity and density of uses; eliminate barriers and create incentives that ensure maximum development potential, especially of mixed-income and affordable housing, near transit investment and regional attractions.

LU 18.2
Ensure a vibrant mixture of land uses, including office, hotel, retail, residential, cultural, and entertainment, that together reinforce Downtown as the primary center of urban activity in the Southern California region.

LU 18.3
Encourage the redevelopment of underutilized buildings and properties to accommodate demand for housing and jobs that contribute to a vibrant Downtown.

**LU GOAL 19**

THE PRIMARY ECONOMIC, SOCIAL, AND CULTURAL FOCAL POINT OF LOS ANGELES THAT SERVES THE REGION, STATE, NATION, AND WORLD. A CENTER FOR INNOVATION AND A DESIRABLE PLACE FOR BUSINESSES AND INSTITUTIONS TO LOCATE.

LU 19.1
Promote the preservation, restoration, and adaptive reuse of existing structures and the development of new structures with a diversity of uses and an emphasis on regional office, hotel, and commercial uses.

LU 19.2
Prioritize space for employment, retail, and entertainment uses, supported by an enhanced public realm, to attract and sustain workers.

LU 19.3
Expand the range of incentives to facilitate the adaptive reuse of existing structures into commercial and hotel uses.

LU 19.4
Reinforce clusters of commercial activity and office uses, and maintain each cluster's predominant activity without losing the essential urban qualities that a mix of uses can provide.

LU 19.5
Recognize and support the cluster of corporate, financial, professional services, and business-related uses.

## LU GOAL 20

A VARIETY OF HOUSING OPTIONS FOR A RANGE OF INCOME LEVELS, SUPPORTED BY SERVICES AND AMENITIES, INTEGRATED INTO A MIXED-USE COMMUNITY.

LU 20.1
Encourage the development and preservation of sustainable and complete neighborhoods, where workers and residents have safe and convenient access to jobs, open space, commercial services, and amenities.

LU 20.2
Create a range of housing options that supports a diversity of housing needs and affordability levels, in a manner that contributes to a resilient community.

LU 20.3
Expand the hours of commercial activity, services, and amenities to support Downtown's residents, workers, and visitors.

## LU GOAL 21

DISTINCTLY URBAN NEIGHBORHOODS THAT HAVE THE HIGHEST LEVELS OF PEDESTRIAN ACTIVITY, WELL-DESIGNED BUILDINGS THAT MEET THE SKY TO CREATE AN INTERESTING SKYLINE, AND GROUND FLOORS THAT MEET THE STREET TO CONTRIBUTE TO A VIBRANT PUBLIC REALM.

LU 21.1
Encourage well-designed, intensive development that contributes to a safe and inviting pedestrian realm and includes substantial benefits that reinforce Downtown's character and enhance livability.

LU 21.2
Foster and reinforce a cohesive, pedestrian-friendly, and inviting streetscapes that promote walking, bicycling, and transit use. Encourage the creative infill of landscaped setbacks and inoperative spaces, such as those resulting from inconsistent streetwalls.

LU 21.3
Pursue the implementation of a legible and consistent wayfinding system that guides pedestrians to destinations of interest and transit portals, such as Metro Stations.

LU 21.4
Create new mid-block crossings that provide access to a safe pedestrian network in locations with large blocks and high foot traffic.

LU 21.5
Promote the activation of ground floors of buildings and public plazas with enlivening uses such as kiosks and shops to create a lively urban environment and seamless interaction between private open space and sidewalks.

LU 21.6
Encourage new developments to contribute to the pedestrian and open space network with publicly accessible plazas and paseos. Design these spaces with appropriate shade and landscaping.

LU 21.7
Develop well-designed towers that include upper floor building design and rooflines that create visual interest and contribute to a distinctive skyline.

GOAL 21

## TRANSIT CORE NEIGHBORHOOD POLICIES

### Financial Core

As the corporate heart of Los Angeles, the Financial Core is home to high-rise offices, residential buildings, hotels, as well as some of the City's most significant destinations and historic buildings.

LU 21.8
Improve pedestrian orientation of the district by requiring consistent 15-foot minimum width sidewalks, active ground floor uses, and streetscape improvements that provide rich and varied pedestrian amenities on Olive and Hill streets.

### Bunker Hill

Bunker Hill serves as both a center for office activity and a cultural corridor that integrates commercial and residential uses.

LU 21.9
Encourage an active, walkable environment through building design that incorporates active ground floor uses and streetscape elements that provide an enhanced pedestrian experience.

LU 21.10
Ameliorate past automobile centric form by breaking up large blocks and finding opportunities to connect the street grid.

### South Park

South Park is recognized to be a thriving residential mixed-use community, supported by commercial, office, and medical uses integrated into a walkable and transit accessible neighborhood.

LU 21.11
Seek opportunities to adapt alleys into sustainable, safe, inviting, and vibrant spaces that function as publicly accessible open space and pedestrian paths of travel, while accommodating necessary vehicular and loading functions.

LU 21.12
Facilitate efforts to improve transit operations at the Pico Station through signal priority for transit vehicles and grade separation of transit facilities.

LU 21.13
Advance efforts to develop Hope Street as an enhanced shared street.

LU 21.14
Ensure an adequate supply of hotel rooms to improve Los Angeles's competitiveness and ability to capture convention business.

### Union Station

Union Station is a regional transportation hub, home to local, regional, and national transit providers. As the regional transportation system expands, the Station will continue to evolve as a transit center and a mixed use destination.

LU 21.15
Encourage a mix of uses that intensifies and activates Union Station and surrounding neighborhoods.

LU 21.16
Advance efforts to plan for the future integration of high speed rail and other transit projects, such as the West Santa Ana Branch line and Link US, to reinforce Union Station and Downtown as the hub of regional transit.

LU 21.17
Support the implementation of the ConnectUS Action Plan to improve pedestrian and cyclist linkages between Union Station and surrounding districts.

### Convention Center and LASED

The expanded Convention and Exhibition Center is situated on 63 acres close to the Downtown hotel cluster and the Financial Core. Strategically, it is located at the hub of the regional transit system, the Interstate Freeway System, and in relatively close proximity to the Los Angeles International Airport.

GOAL 21

The Staples Arena is located adjacent to the Convention Center. This sports and entertainment complex houses a 20,000 seat arena as well as other entertainment and retail uses. The Los Angeles Sports and Entertainment District Specific Plan (LASED), located immediately east and north of the Staples Arena, provides development regulations and incentives to support a successful and sustainable convention center area, and sports and entertainment district for the City and for the region.

LU 21.18
Support the objectives, policies, and implementation of the LASED.

LU 21.19
Encourage a smooth transition between the LASED and surrounding neighborhoods, with pedestrian connections, and a balance of regional-serving uses nearest the Convention Center and neighborhood-serving uses on the eastern side of the district.

LU 21.20
Support expansion of and improvements to the Los Angeles Convention Center, including streetscape enhancements and existing and future plazas on the site, to foster maximum urban activity and economic impact of the visitor and convention sector.

LU 21.21
Continue to foster the LASED as a twenty-four-hour visitor destination.

LU 21.22
Encourage the development of multi-use facilities and the shared use of facilities and venues that generate year-around activity.

## TRADITIONAL CORE

### LU GOAL 22

INFILL DEVELOPMENT AND ADAPTIVE REUSE OF HISTORIC STRUCTURES RESPECT THE EXISTING CONDITION OF TRADITIONAL DEVELOPMENT PATTERNS. DEVELOPMENT CONTRIBUTES TO A PEDESTRIAN-FRIENDLY ENVIRONMENT, ACCOMMODATING RESIDENTIAL, ENTERTAINMENT, RETAIL, AND OFFICE USES.

LU 22.1
Create a streamlined process to ensure adaptive reuse of existing structures is the preferred development option.

LU 22.2
Remove prohibitive regulations to ensure maximum use of small or narrow infill sites for contextual new development or use as creative open space.

LU 22.3
Expand the range of uses permitted through adaptive reuse to include commercial reuse that encourages preservation and responds to market changes.

### LU GOAL 23

A COLLECTION OF NEIGHBORHOOD SHOPS, AMENITIES, PROFESSIONAL AND CREATIVE OFFICES AND REGIONAL ENTERTAINMENT DESTINATIONS, OFFERING A RANGE OF EMPLOYMENT OPPORTUNITIES.

LU 23.1
Support emerging markets and productive functions, including live/work uses, in existing and new structures.

LU 23.2
Promote nighttime activities and retail to support local employees and make the area attractive for businesses to locate.

LU 23.3
Recognize the importance of the historic building stock to the film industry and facilitate filming activities in these areas.

## LU GOAL 24

A VARIETY OF RESIDENTIAL OPTIONS SUPPORTS AN ESTABLISHED, SUSTAINABLE, AND MULTIGENERATIONAL RESIDENTIAL COMMUNITY IN EXISTING AND NEW STRUCTURES.

LU 24.1
Provide space for residential uses, supported by neighborhood-serving amenities.

LU 24.2
Encourage usable outdoor open space that is accessible to the public as part of new development.

LU 24.3
Expand housing unit types and sizes to accommodate a range of lifestyles and household formations.

## LU GOAL 25

THE LEGACY OF THE TRADITIONAL CORE IS REINFORCED BY NEW DEVELOPMENT THAT IS WELL-INTEGRATED INTO THE HISTORIC FABRIC.

LU 25.1
The existing built environment will be supported by prioritizing public benefits that favor preservation, renovation and adaptive reuse, and new construction that is responsive to and respectful of traditional building forms.

LU 25.2
Reinforce traditional urban forms through a combination of form regulations and frontage typologies.

LU 25.3
Promote the conversion of targeted alleys into active, recreational, and pedestrian-oriented spaces.

LU 25.4
Encourage the development of a public realm that enhances linkages between major historic landmarks, entertainment attractions, and regional-serving uses.

GOAL 25

## TRADITIONAL CORE NEIGHBORHOOD POLICIES

### Broadway

The Broadway corridor is home to the highest concentration of historic movie palaces in the world, known as the Broadway Theater District, and a concentration of dynamic retail and entertainment uses. Efforts support the ongoing revitalization of this corridor with activation of vacant buildings and increased nighttime and entertainment uses. Additionally, Broadway functions as a major transit corridor hosting bus, streetcar, and rail connections.

LU 25.5
Encourage the development of visitor-serving and entertainment uses that contribute to an active street life and nightlife.

LU 25.6
Support existing and future revitalization efforts to expand the sidewalk for pedestrian and recreational use, as well as streetscape and landscape improvements in conjunction with major transit expenditures.

### Historic Core

The Historic Core has one of the largest collections of historic buildings not just in Downtown Los Angeles, but in the country, with a number of Historic Cultural Monuments, and a National Register Historic District; including the Spring Street Financial District.

GOAL 25

Characterized by multi-story and elaborately ornamented Beaux Arts facades originally built for banks, financial services, and garment manufacturing, these buildings have been converted to residential lofts, showrooms, and office spaces with active street-level uses.

LU 25.7
Implement zoning regulations that contribute to the distinct, fine-grained commercial activity along the Spring Street and Main Street corridors.

LU 25.8
Focus on the revitalization of Los Angeles Street as a main pedestrian path and retail corridor connecting Little Tokyo and the Fashion District.

## COMMUNITY CENTER

### LU GOAL 26

COMPLETE NEIGHBORHOODS THAT WELCOME WORKERS AND RESIDENTS.

LU 26.1
Allow for compact development patterns, creating opportunity for small and mid-size businesses and a full range of residential unit sizes.

LU 26.2
Prioritize underutilized lots for reinvestment and redevelopment that anticipates evolution to a greater diversity of industries and jobs.

LU 26.3
Create an inviting environment characterized by dense urban development and activated by a diverse mix of uses to anchor the local ecology of businesses and residents.

LU 26.4
Orient lobbies and primary pedestrian entrances as close to adjacent transit portals as possible, to maximize location and encourage transit use.

### LU GOAL 27

AREAS WITH A RANGE OF COMMUNITY-SCALED COMMERCIAL ESTABLISHMENTS AND PROFESSIONAL OFFICES THAT OFFER OPPORTUNITIES FOR SMALL BUSINESSES.

LU 27.1
Foster a wide range of community-serving commercial uses.

LU 27.2
Provide opportunities for new businesses by prioritizing medium- and small-scale establishment sizes.

LU 27.3
Encourage supportive neighborhood commercial uses that cater to local employees and make the area attractive to employers

## LU GOAL 28

ACCESSIBLE RESIDENTIAL COMMUNITIES FOR A BROAD RANGE OF INCOMES AND HOUSEHOLD SIZES WITH INTEGRATED SERVICES AND AMENITIES.

LU 28.1
Promote services and amenities embedded within residential development, such as healthy, affordable, and culturally relevant food options, childcare facilities, and neighborhood serving uses.

LU 28.2
Encourage mixed-income and affordable housing in close proximity to transit, jobs, amenities, and services.

LU 28.3
Support the development of housing options that can accommodate a range of household sizes and promote multigenerational living in Downtown.

## LU GOAL 29

NEIGHBORHOODS WITH AN INVITING URBAN FORM THAT FOSTERS LONG-STANDING COMMUNITIES.

LU 29.1
Apply form regulations that encourage medium-scale development reflective of the surrounding community.

LU 29.2
Establish connections between common or publicly accessible open spaces to create a seamless pedestrian realm that extends and builds upon existing corridors, and provides key linkages between districts.

LU 29.3
Create strong mid-block pedestrian connections that extend and build upon the existing pedestrian network.

LU 29.4
Improve the public realm and activate ground floors to encourage street life and establish smooth transitions between adjacent neighborhoods.

LU 29.5
Strengthen pedestrian connections to transit facilities and centers of activity with improved signage and wayfinding.

GOAL 29

### COMMUNITY CENTER NEIGHBORHOOD POLICIES

**Chinatown, Little Tokyo:** See Villages

**Fashion District:** See Markets

**Skid Row and Central City East**

Skid Row is a unique residential neighborhood that has long served people in need. The community is home to family and social services, permanent supportive housing, single room occupancy hotels, as well as homeless community members. There are opportunities to support Skid Row residents and the local community by establishing physical infrastructure capable of facilitating a variety of human services, employment opportunities, housing options, arts and cultural activities, and recreational opportunities.

Central City East is characterized by wholesale, warehousing, and distribution uses, as well as retail and commercial marketplaces.

LU 29.6
Foster a mix of uses that contribute to a livable community that prioritizes housing at all levels of affordability, employment opportunities, daily amenity and service needs, educational and vocational facilities, as well as a variety of public gathering spaces.

LU 29.7
Encourage the creation of a range of housing options, including social service housing, permanent supportive housing, a full spectrum of affordable housing, and workforce housing

GOAL 29

LU 29.8
Promote a variety of housing options for the diversity of the Skid Row community, including families, veterans, seniors, women, local workers, and those who benefit from and need access to the area's supportive services.

LU 29.9
Enhance the public realm, with safe and inviting streets, pathways, and a variety of publicly accessible open spaces for recreation, rest, gathering, and access to public restrooms.

LU 29.10
Support neighborhood stabilization by promoting local enterprise, local business hiring, and encouraging partnerships with academic institutions and community organizations to develop job training programs.

LU 29.11
Coordinate with residents and community organizations to provide opportunities for daytime activities in the neighborhood with recreational centers, libraries, and managed open spaces with engaging and culturally relevant programming.

LU 29.12
Seek opportunities to meet basic needs by improving sanitation— including public restrooms, hygiene stations, and public water fountains— as part of new development and open spaces.

LU 29.13
Develop a comprehensive wayfinding program that identifies the neighborhood and highlights its history and culture and incorporates the work of local artists.

LU 29.14
Target San Pedro, 3rd, 4th, 5th, 6th, and 7th streets for improvements to increase safety, connectivity, and access for the Skid Row community.

LU 29.15
Support the efforts of City, State, and Federal agencies and local institutions to promote a safe, clean, and habitable environment for Skid Row residents.

LU 29.16
Recognize the significant role that San Julian Park and Gladys Park serve as public realm assets and symbols of local history. Support efforts to memorialize such assets and sustain their presence in the community.

LU 29.17
Promote public spaces that allow people to gather, recreate, and hold festivals that showcase the history and artistic expression of the Skid Row community.

LU 29.18
When redevelopment occurs, extend Fifth St. between Central Ave. and Alameda St. to improve connectivity between Central City East and the Arts District.

# HYBRID INDUSTRIAL

## LU GOAL 30

DIVERSE LAND USES WELCOME SUSTAINABLE NEW AND ADAPTIVE REUSE STRUCTURES THAT ACCOMMODATE A RANGE OF HYBRID INDUSTRIAL AND PRODUCTIVE ACTIVITIES.

LU 30.1
Encourage the development of flexible spaces that can accommodate a variety of productive industries.

LU 30.2
Ensure a thoughtful mix of land uses including amenities to serve the evolving creative employee base and live/work community.

## LU GOAL 31

HYBRID INDUSTRIAL PLACES PROVIDE SPACE FOR IN-HOME PRODUCTION, LIGHT INDUSTRIAL AND CREATIVE ACTIVITY, AND NEW INDUSTRIES THAT ENCOURAGE INNOVATION AND BRING FLEXIBILITY AND RESILIENCY TO THE CITY ECONOMY.

LU 31.1
Prioritize space for jobs and employment activity in Hybrid Industrial areas.

LU 31.2
Support the integration of production and employment activities with live/work uses when compatible.

LU 31.3
Create an environment that facilitates innovation, new industry, and start-ups.

LU 31.4
Support the advancement of the cleantech ecosystem and emerging CleanTech corridor.

LU 31.5
Promote opportunities for resource and knowledge sharing, collaboration, and coordination among local businesses and industries.

LU 31.6
Establish the potential for vertical integration of industry and maximize agglomeration benefits by permitting a mix of uses and building forms that facilitate activities throughout a product lifecycle.

LU 31.7
Create opportunity for spaces that are affordable and accessible to start-ups, and a range of business sizes and industry sectors.

LU 31.8
Promote building design with high ceilings and interior spaces that can accommodate a wide variety of productive uses, including manufacturing, fabrication, and research and development.

## LU GOAL 32

THE HOUSING STOCK REINFORCES AND COMPLEMENTS THE PRODUCTIVE, ENTREPRENEURIAL, AND CREATIVE FOCUS OF HYBRID INDUSTRIAL AREAS.

LU 32.1
Implement live/work housing options that can accommodate a range of productive activities, and allow units to function as an incubator for new businesses.

LU 32.2
Promote affordability through the development of a range of unit sizes and incentives for on-site covenanted affordable live/work units .

LU 32.3
Enhance livability by expanding access to commercial and institutional services and amenities.

LU 32.4
Cultivate a live/work residential community by requiring a minimum amount of production space in new development projects to support the maker economy and innovation.

## LU GOAL 33

HYBRID INDUSTRIAL ENVIRONMENTS HAVE DISTINCT VISUAL AND PHYSICAL FEATURES THAT REFLECT AN INDUSTRIAL LEGACY.

LU 33.1
Reuse, protect, and preserve existing structures that characterize the unique form and development patterns present in Hybrid Industrial places.

LU 33.2
Foster the development of durable and flexible buildings that support a range of creative and productive activities, and offer live/work opportunities.

LU 33.3
Encourage retail and restaurant uses in partnership with productive uses to promote extended hours of activity.

LU 33.4
Support walkable neighborhoods with an active and livable street life that is shared by all modes, including pedestrians, cyclists, and transit users.

LU 33.5
Promote an enhanced public realm and network of pedestrian paths that connect neighboring resources, such as parks to the Los Angeles River.

GOAL 33

### HYBRID INDUSTRIAL NEIGHBORHOOD POLICIES

**Arts District**

As a formerly industrial and wholesale district, the Arts District first began to evolve into a neighborhood as artists began using industrial buildings as working and living spaces. The community has since evolved into a hub of galleries, educational institutions, creative production and light industry uses, commercial and retail uses, and business incubation spaces.

LU 33.6
Support affordable housing options for artists.

LU 33.7
Introduce shared street typologies for Arts District streets that preserve historic industrial characteristics while promoting access and safety for all users.

LU 33.8
Promote productive, creative, manufacturing, fabrication, and light industrial activities as a principal characteristic of the Arts District neighborhood.

LU 33.9
Encourage the development of live/work housing that accommodates the changing way in which people work and live in the twenty-first century.

LU 33.10
Identify key public access points to the Los Angeles River and support improved connections between the Arts District and recreation opportunities.

**Cornfield Arroyo Seco**

The Cornfield Arroyo Seco area is in the northeastern portion of the Plan area and is governed by the Cornfield Arroyo Seco Specific Plan. It establishes development regulations and an incentive system to encourage residential, live/work, commercial, and industrial employment uses with an emphasis on affordability, alternative transportation options, and sustainability.

LU 33.11
Support the objectives, policies, and ongoing implementation of the Cornfield Arroyo Seco Specific Plan.

## MARKETS

### LU GOAL 34

MARKETS ARE CHARACTERIZED BY ADAPTABLE AND FLEXIBLE STRUCTURES THAT ARE ABLE TO ACCOMMODATE DIVERSE LAND USES, INCLUDING LIVE/WORK, RETAIL, WHOLESALE, AND CREATIVE INDUSTRY.

LU 34.1
Encourage flexible structures that co-locate fabrication, distribution, retail, and living spaces in one building.

LU 34.2
Promote industry clusters and reinforce sub-market economic identities while allowing for residential, hotel, and institutional uses in targeted areas to increase activity throughout the day and night.

LU 34.3
Support active uses and programming that foster economic activity throughout the day and night and extend the area's hours of activity.

LU 34.4
Promote public realm improvements as new development occurs, such as new open space and pedestrian amenities, to support a high-energy street environment.

### LU GOAL 35

CENTERS OF COMMERCIAL AND MANUFACTURING ACTIVITY, INCLUDING WHOLESALE, RETAIL, SHOWROOMS, DESIGN, AND PROFESSIONAL OFFICE, THAT ARE WELCOMING TO NEW INDUSTRIES AND BUSINESS MODELS.

LU 35.1
Support the development of new industries and employers in Market areas with flexible land use categories that allow spaces for mixed uses and the co-location of productive uses and limited living uses.

LU 35.2
Promote jobs-generating uses with work spaces that are flexible and have capacity to house a range of industries over time.

LU 35.3
Allow a combination of residential hotel, live/work, retail, creative office, wholesale, assembly, heavy commercial, light manufacturing, and warehousing, institutional, or urban agriculture to function in close proximity and in the same structure.

LU 35.4
Reinforce the distinct mix of commercial and wholesale uses that characterize the area and support its regional draw.

### LU GOAL 36

RESIDENTIAL USES ARE WELL-INTEGRATED WITH COMMERCIAL USES AND HELP TO ENHANCE ECONOMIC VIBRANCY, SUPPORT THE LOCAL FASHION INDUSTRY, AND EXTEND HOURS OF ACTIVITY.

LU 36.1
Introduce and expand live/work uses through adaptive reuse and new construction as appropriate, where residents have the ability to be productive and run a business from within their residence.

LU 36.2
Recognize and foster a community of residents engaged in creative and innovative activity and professions.

## LU GOAL 37

UNIQUE ORIENTATION AND PHYSICAL LEGACY OF MARKET AREAS IS PRESERVED AND SUPPORTED BY FEATURES SUCH AS MARKET HALLS, ACTIVATED ALLEYS, AND OUTDOOR COMMERCIAL ACTIVITY.

LU 37.1
Apply zoning tools that provide capacity for manufacturing, warehousing, and distribution activity at the ground level, and accommodate residential and commercial activities in the upper levels.

LU 37.2
Encourage innovative methods to incorporate on-site landscaping, as well as open and recreational space on projects with high lot coverage.

LU 37.3
Expand the amount of open space resources with parks, paseos, parklets, and enhanced pedestrian amenities on public streets.

LU 37.4
Increase porosity and connectivity on development sites through a network of pedestrian paths.

LU 37.5
Promote commercial activity and walkability along streets and key alleyways.

LU 37.6
Encourage active ground floor uses and pedestrian improvements to support walkability.

LU 37.7
Recognize the parking needs of the wholesale industry and encourage shared parking facilities that can serve multiple establishments.

LU 37.8
Apply form regulations that reinforce the unique functional characteristics of existing structures, composed of active shopfronts and alleys, interior markets, and bazaars.

LU 37.9
Identify key alleys for conversion to active, recreational and pedestrian-oriented spaces, to support the blend of commercial activities present in Markets areas.

GOAL 37

### MARKETS NEIGHBORHOOD POLICIES

Skid Row and Central City East: See Community Center

**Fashion District and South Markets**

A highly diverse major fashion, retail, wholesale distribution, and creative center, this area is the hub for garment sales, retailing, manufacturing, the flower wholesale industry, and regional distribution.

LU 37.10
Support specialty industry clusters, such as fashion and flowers, while allowing for evolution and innovation.

LU 37.11
Improve the pedestrian network and public realm through enhanced streetscapes, lighting, landscaping, shading, and public gathering areas.

# VILLAGES

## LU GOAL 38

COMPACT AND POROUS CENTERS WITH INFILL DEVELOPMENT AND ADAPTIVE REUSE OF EXISTING AND HISTORIC STRUCTURES.

LU 38.1
Encourage infill development that is context-sensitive and reinforces the village aspects of these areas, such as inward orientation and pedestrian passageways.

LU 38.2
Promote a mix of residential and commercial uses to reinforce compact and walkable neighborhoods.

LU 38.3
Support multi-generational communities that include culturally relevant and linguistically accessible local services, recreational facilities, and urban design that accommodates people of all ages, incomes, and levels of mobility.

## LU GOAL 39

CLUSTERS OF SPECIALTY RETAIL, COMMERCIAL BUSINESSES, AND INSTITUTIONAL USES AT A NEIGHBORHOOD SCALE WITH A REGIONAL DRAW.

LU 39.1
Encourage specialty commercial uses that provide neighborhood services and have a regional draw.

LU 39.2
Cultivate and facilitate an environment that is supportive of community serving small businesses and create programs for their retention and sustainability.

LU 39.3
Regulate the size of individual retail establishments and limit incursion of formula retail establishments to preserve the fine-grained scale and character of small businesses in villages.

LU 39.4
Support accessibility to affordable retail options, such as grocery stores and goods and services used on a daily basis.

LU 39.5
Encourage the establishment of neighborhood land trusts in areas with long-standing businesses vulnerable to changes in market conditions to improve local control.

## LU GOAL 40

COMPLETE COMMUNITIES THAT PROVIDE A VARIETY OF SERVICES AND HOUSING TYPES FOR ALL INCOME LEVELS AND AGES.

LU 40.1
Provide incentives for rehabilitation and conservation of existing housing to support livable, affordable, inclusive, and sustainable neighborhoods.

LU 40.2
Facilitate new construction and preservation of existing housing that is accessible to all income levels and ages.

LU 40.3
Support the location of community facilities, such as childcare, grocery stores, senior services, supportive services, and additional amenities in Village areas.

LU 40.4
Support affordable housing for seniors with space for in-home care facilities and intergenerational living and encourage the creation of adaptable residential buildings to accommodate aging populations.

## LU GOAL 41

NEIGHBORHOODS THAT FEATURE AND SUSTAIN UNIQUE SCALE, BLOCK PATTERNS, AND CULTURAL DESIGN ELEMENTS. INTERNAL AND EXTERNAL SPACES ARE WOVEN TOGETHER BY A SERIES OF INFORMAL PATHWAYS, GUIDING USERS THROUGH A NETWORK OF VIBRANT COMMERCIAL ACTIVITIES.

LU 41.1
Apply form regulations that encourage pedestrian-scale development and respect the character of Village areas.

LU 41.2
Preserve the fine-grain character of villages through narrow building facades and frequent building entrances.

LU 41.3
Encourage the development of pedestrian paseos and internal courtyards to allow for internal circulation.

LU 41.4
Require activated ground floors to support pedestrian activity along key corridors.

LU 41.5
Support an improved public realm, including a range of open space types that can offer opportunities for culturally relevant and multi-generational recreation, rest, and social interaction.

GOAL 41

## VILLAGES NEIGHBORHOOD POLICIES

### Little Tokyo

Little Tokyo is a historic-cultural neighborhood and symbolic center for the Japanese-American community. The neighborhood contains a variety of religious and cultural institutions and a mix of residential, commercial, and institutional uses. Small scale shops, restaurants, and storefronts contribute to the pedestrian-oriented nature of the area.

GOAL 41

LU 41.6
Maintain and strengthen the pedestrian elements in Little Tokyo by preserving existing internal pedestrian pathways, establishing commercial uses on the ground floor of all buildings, and supporting the creation of mid-block paseos.

LU 41.7
Retain, support, and reinforce the historic and cultural elements of Little Tokyo, including the businesses and cultural institutions within the community.

LU 41.8
Complete the Little Tokyo Pedestrian Spine to enhance connectivity in Little Tokyo.

LU 41.9
Support the advancement and expansion of a performance and creative arts corridor along Judge John Aiso Street as it continues south to San Pedro Street, linking institutions such as East West Players with the Japanese American Cultural & Community Center and Aratani Theater.

### Chinatown

Chinatown is a historic-cultural neighborhood with a variety of legacy businesses and institutions. The neighborhood is home to a long-standing multi-generational residential community, a variety of small and family-owned businesses, family associations, and institutions that serve the Chinese American, as well as other immigrant, communities. The historic neighborhood is characterized by walkable commercial corridors and internally oriented courtyard developments. A Metro Gold Line station sits at the northeastern corner of the neighborhood, and there has been a growing cluster of restaurant and nighttime activity.

GOAL 41

LU 41.10
Support and reinforce the historic and cultural components of Chinatown, including architectural design, and the long-standing local businesses and legacy institutions that serve the local community.

LU 41.11
Encourage nighttime activity in the commercial core of Chinatown by supporting community events and businesses to remain active throughout extended hours of the day and night.

LU 41.12
Promote courtyard-style commercial developments that are characteristic of the area and reinforce the neighborhood's historic pedestrian orientation and reflect the community's cultural heritage.

**Toy District**

The Toy District is a predominantly wholesale and retail district, distinct among other neighborhoods for its unique scale and uniform development pattern. The collection of narrow blocks consist of one and two story brick buildings with many storefront entrances, creating a system of narrow and curving pedestrian alleys.

LU 41.13
Facilitate new development that will reinforce patterns of bay entrances and fine-grained retail spaces within the Toy District.

LU 41.14
Prohibit alley vacations and street vacations to protect small blocks and lots.

LU 41.15
Encourage access to buildings from alleys, when feasible, along with primary street entrances.

LU 41.16
Promote a mix of uses that will facilitate extended hours of activity in the Toy District.

## MEDIUM NEIGHBORHOOD RESIDENTIAL

### LU GOAL 42

A RANGE OF HOUSING OPTIONS AND LIMITED COMMERCIAL OPPORTUNITIES IN APPROPRIATELY SCALED INFILL DEVELOPMENT.

LU 42.1
Allow for development intensities that expand opportunities for housing, while retaining the character of multi-family residential areas.

LU 42.2
Encourage compact development, offering a range of housing choices with access to small-scale neighborhood businesses to improve access to basic goods and services.

### LU GOAL 43

RESIDENTIAL COMMUNITIES ARE WELL-CONNECTED TO NEIGHBORHOOD SCALE BUSINESSES AND SURROUNDING JOB CENTERS THAT PROVIDE EMPLOYMENT OPPORTUNITIES, COMMUNITY SERVICES, AND AMENITIES FOR THE RESIDENT POPULATION.

LU 43.1
Allow for the strategic location of small-scale neighborhood businesses so that they are safely and easily accessible to the residential community.

LU 43.2
Ensure that neighborhoods are well connected to adjacent employment hubs that provide services, amenities, and employment opportunities to the local community.

**LU GOAL 44**

COMMUNITIES PRODUCE A VARIETY OF QUALITY HOUSING OPTIONS AT A RANGE OF INCOME LEVELS, AND PRESERVE THE EXISTING BUILDING STOCK. PRODUCTION OF NEW HOUSING IS CONSISTENT WITH THE PREDOMINANT FORM AND SCALE.

LU 44.1
Facilitate the location of a range of housing types that sustain multigenerational residential communities.

LU 44.2
Promote the supply of larger units suitable for households with children.

**LU GOAL 45**

MULTI-FAMILY HOUSING IS RESPONSIVE TO THE SURROUNDING CONTEXT AND NATURAL TOPOGRAPHY AND IS ARRANGED IN A WALKABLE AND WELL-CONNECTED ENVIRONMENT THAT RESPECTS THE NATURAL TOPOGRAPHY.

LU 45.1
Ensure new development reinforces the existing fine-grain development pattern and building orientation, while appropriately responding to grade changes.

LU 45.2
Treat the relationship of the building to the sidewalk through thoughtful application of architectural features, such as landscaped setbacks, focal entryways, and stoops.

GOAL 45

## NEIGHBORHOOD RESIDENTIAL NEIGHBORHOOD POLICIES

### Victor Heights/Figueroa Terrace

Victor Heights and Figueroa Terrace are primarily multi-family neighborhoods nestled along the hills northwest of the Downtown core. The walkable communities consist of buildings that range from one and two story multiplexes to multi-unit apartments, as well as a Metropolitan Water District building that was converted into apartment uses.

LU 45.3
Maintain walkability and support development that evokes the distinct architectural and site design features of these communities.

## PRODUCTION

### LU GOAL 46

DISTRIBUTION OF LAND USES ENHANCES INVESTMENT OPPORTUNITIES IN INDUSTRIAL AREAS, AND SUPPORTS THE EMPLOYMENT AND ENTREPRENEURIAL NEEDS OF THE CITY AND THE REGION.

LU 46.1
Facilitate the location of traditional industrial activity, in addition to clean technology, incubator businesses, and emerging industries in Production areas.

LU 46.2
Support the expansion of utility capacity to accommodate a range of industrial activities over time.

### LU GOAL 47

VIBRANT CENTERS OF EMPLOYMENT FOR A DIVERSITY OF SKILLS AND INDUSTRIAL SECTOR ACTIVITIES, INCLUDING PRODUCTION, DISTRIBUTION, WHOLESALE, AND MANUFACTURING. THESE AREAS ACCOMMODATE SHIFTING AND NEW INDUSTRY, MAINTAINING EFFICIENT USE OF HIGH-QUALITY AND FLEXIBLE STRUCTURES.

LU 47.1
Prioritize space for jobs by preserving existing industrial functions, allowing production sectors to cluster, and facilitating goods movement with access to freeways and transportation corridors.

LU 47.2
Accommodate industry changes with flexible structures and infrastructure.

LU 47.3
Encourage the provision of jobs for a range of skills and experience levels.

LU 47.4
Facilitate easy access and direct connections to rideshare facilities.

LU 47.5
Stabilize industrial businesses by limiting commercial establishments as accessory to heavy industrial and goods movement activity.

LU 47.6
Position the area as an attractive location for emerging industries such as biomedical, clean technology, and advanced manufacturing though flexible zoning tools and investment in infrastructure.

LU 47.7
Support and reinforce the ecosystem of industry clusters while integrating new employment uses and economic activities.

### LU GOAL 48

RESILIENT, SUSTAINABLE, AND FLEXIBLE STRUCTURES CONTRIBUTE TO A GENERAL URBAN INDUSTRIAL DEVELOPMENT PATTERN AND SUPPORT GOODS MOVEMENT ACTIVITIES.

LU 48.1
Support the co-location of businesses to complement industrial activity.

LU 48.2
Guide the development of structures that are oriented and conducive to goods movement and new industry, while balancing pedestrian needs, and supporting transit use.

LU 48.3
Balance flexible, large lot configurations that sustain industrial activity, while still improving the way in which structures meet the streets and contribute to a safe street environment that can accommodate users other than trucks.

LU 48.4
Enhance the public realm and improve transit connections to neighboring places.

LU 48.5
Encourage tree planting and landscaped screening in areas with industrial uses to improve air quality.

LU 48.6
Encourage a smooth transition between predominantly industrial areas and adjacent district.

## PUBLIC FACILITIES

**LU GOAL 49**

CIVIC PLACES FUNCTION AS A COHESIVE AND SYMBOLIC FOCUS OF GOVERNANCE AND CULTURE. NEW DEVELOPMENT MAINTAINS AND REINFORCES THE CEREMONIAL FOCUS OF CIVIC PLACES.

LU 49.1
Promote Downtown as an attractive home for civic, cultural, and other institutional uses to reinforce the area's identity.

LU 49.2
Diversify land uses to encourage a broad range of activities and expanded businesses hours.

LU 49.3
Utilize historic buildings to accommodate institutional, commercial, and residential uses.

LU 49.4
Promote infill development on surface parking lots and other underutilized spaces.

**LU GOAL 50**

CIVIC PLACES ARE A MAJOR CENTER OF INSTITUTIONAL, CULTURAL, AND CIVIC JOBS FOR THE CITY AND COUNTY. LOCAL RETAIL AND RESTAURANT BUSINESSES PROVIDE ADDITIONAL EMPLOYMENT OPPORTUNITIES.

LU 50.1
Promote governmental, institutional, and cultural uses that are jobs generators and provide a range of employment opportunities for a diversity of skill levels.

LU 50.2
Allow for the integration of private office uses in Civic Places to expand the mix of uses and hours of activity.

LU 50.3
Support the introduction of services and amenities to support workers, residents, and visitors in Civic places.

## LU GOAL 51

THOUGHTFUL ADDITION OF NEW HOUSING PROMOTES THE VITALITY OF CIVIC AREAS, AND ALLOWS RESIDENTS TO BENEFIT FROM THE AREA'S CONVENIENT ACCESS TO EMPLOYMENT, CULTURAL, AND ENTERTAINMENT USES.

LU 51.1
Expand the supply of housing to complement and enhance the surrounding neighborhoods and promote more activity and vibrancy for more hours of the day.

LU 51.2
Promote uses that support the residential and employee base, including neighborhood services, amenities, and entertainment uses.

LU 51.3
Maintain a high standard for the provision of affordable and workforce housing on publicly owned land in Civic areas, such that these areas serve as models for the rest of the City.

## LU GOAL 52

CREATIVE AND FLEXIBLE BUILDING DESIGN FOR CIVIC AND INSTITUTIONAL USES ENCOURAGE THE DESIGN OF ICONIC STRUCTURES THAT INTEGRATE PUBLIC SPACES AND ARE WELCOMING TO THE PUBLIC.

LU 52.1
Improve, maintain, and develop grand public spaces that can accommodate and connect a range of cultural and democratic activities.

LU 52.2
Facilitate the location of cultural and institutional uses that provide services and amenities for Downtown residents in Civic areas.

LU 52.3
Support programming and partnerships between private entities and public agencies that activate Civic areas and help reinforce Downtown as the civic and cultural center of Los Angeles.

LU 52.4
Include commercial and retail uses in new institutional buildings, as well as programming to activate ground floor spaces to increase pedestrian activity throughout the day and night and encourage social interaction.

LU 52.5
Locate and design civic, institutional, and cultural buildings, and public spaces, to be easily accessible to pedestrians, cyclists, and transit users.

LU 52.6
Reinforce the many transit options in Civic areas by taking a transportation demand management approach to new development, and making transit use the most compelling alternative for employees, visitors, and residents.

LU 52.7
Support public events and programming that draw people to civic spaces, especially at night and on weekends.

DRAFT Summer 2020

GOAL 52

## NEIGHBORHOODS

### Civic Center

The Civic Center is home to Federal, State, County, and local government agencies and is the second largest concentration of governmental offices in the country. It contains civic and architectural landmarks, as well as one of Downtown's primary open spaces, Grand Park. The Civic Center Master Plan effort is intended to centralize government offices to make efficient use of the Civic Center area, while creating the ability to incorporate a wider range of land uses in this neighborhood.

LU 52.8
Encourage a diverse set of activities and uses, including educational institutions, office, retail, hotel, and limited residential to expand the hours of activity and contribute to a more vibrant Civic Center.

LU 52.9
Support the objectives of the Civic Center Master Plan.

LU 52.10
Ensure that new structures are respectful of and responsive to City Hall as a primary focal point.

### El Pueblo

El Pueblo de Los Angeles Historical District, also known as El Pueblo de Nuestra Señora la Reina de Los Angeles del Rio de Porciuncula is the birthplace of the City of Los Angeles. The historic district sits between the Civic Center and Union Station, and is the site of the original pueblo, and serves as a commercial and social center.

LU 52.11
Preserve the legacy of this area, and ensure future development provides clear access to the historic district.

LU 52.12
Encourage more active nighttime uses as residential uses are introduced in adjacent areas.

LU 52.13
Reinforce the historic character and low-scale form of El Pueblo.

*Image: Cory Gruenfeld*

Chapter 3

# MOBILITY & CONNECTIVITY

Mobility is critical to support the diverse range of places and activities Downtown. Providing safe and convenient multimodal access throughout Downtown's districts addresses several of the guiding principles of this Plan. A safe, accessible circulation system reinforces land use policies and connects people to jobs, homes, and services. Respectively, land use and urban design policies can support a range of inclusive mobility options by creating a more bicycle, pedestrian, and transit friendly environment.

The mobility system should be human focused. Safety and comfort for all users is a primary priority of the Downtown mobility system. Ensuring safety will improve access and health outcomes Downtown. Several streets in the Plan areas are identified on the City's high injury network, demonstrating the need for enhanced safety improvements. Encouraging more people to walk, bike, or take transit will help to make Downtown a more sustainable community by reducing pollution and greenhouse gas emissions and reinforcing sustainable land use policies.

Walking should be the primary form of mobility within Downtown's districts and pedestrian friendly design is a priority throughout Downtown. Every person in Downtown is, at some point, a pedestrian, as every trip begins and ends with walking. On certain corridors, identified as primary streets, a higher standard of pedestrian friendly design will be required.

An enhanced pedestrian environment will not only improve safety and access, but will also support economic growth. Bustling and vibrant sidewalks are integral to the character of many of Downtown's districts, enhancing residential communities and

supporting commercial vitality. Investments in pedestrian, bicycle, and transit infrastructure will facilitate creative exchange and will improve access to businesses and institutions for customers and employees, helping to make Downtown an attractive location.

# GOALS AND POLICIES

### MC GOAL 1

A SAFE TRANSPORTATION SYSTEM THAT ACCOMMODATES THE NEEDS OF ALL PEOPLE.

MC 1.1
Implement physical improvements and education programs to ensure safe access throughout Downtown's districts for users of all ages and abilities.

MC 1.2
Prioritize safety improvements on the High Injury Network as designated by LADOT to achieve high impact reductions in injuries and fatalities.

MC 1.3
Implement calm street design and enforcement of speed limits to support economic vitality and improve safety on Downtown streets.

MC 1.4
Support the collection of safety data and the implementation of data driven safety improvements to best inform future projects and programs in the Downtown area.

MC 1.5
Facilitate the development of Safe Routes to School programs to ensure safe, multimodal access to Downtown schools.

### MC GOAL 2

AN INTEGRATED AND SUSTAINABLE DOWNTOWN CIRCULATION SYSTEM THAT PROVIDES ACCESS BETWEEN DISTRICTS THROUGH PHYSICAL CONNECTIONS AND INFORMATION.

MC 2.1
Establish a mode share goal of 75% for transit, walking, and biking for the year 2040 to improve the sustainability of Downtown's mobility network and increase access for residents, workers, and visitors.

MC 2.2
Implement strategies to reduce vehicle miles travelled per capita.

MC 2.3
Support the development of mobility hubs at key destinations such as commercial, entertainment, and institutional centers, as well as at transfer points to inform Downtown residents, workers, and visitors about and provide access to a variety of mobility options.

MC 2.4
Promote the use of technologies that can facilitate multimodal travel by improving wayfinding and access to transit schedules, especially for visitors and new users of the Downtown transit system.

MC 2.5
Facilitate integration between different modes of travel to create a seamless experience as users switch between modes and to promote transit use and active transportation.

MC 2.6
Improve access to community services and amenities such as recreational facilities, cultural and educational institutions, medical services, and healthy, fresh food.

MC 2.7
Increase access and mobility for disadvantaged groups and aging populations through safe and affordable mobility options.

DRAFT Summer 2020

MC 2.8
Target critical east-west corridors, such as First St., Fourth St., and Seventh St. for improvements to increase connectivity within Downtown and to surrounding areas such as Central City West and Boyle Heights.

MC 2.9
Target critical north-south corridors, such as North Broadway and San Pedro Street for dedicated improvements to increase connectivity within Downtown and with the adjoining communities.

MC 2.10
Strengthen pedestrian and bicycle connections to the river to provide access to open space and recreation.

MC 2.11
Seek opportunities to extend streets as large blocks are redeveloped to improve connectivity when transitioning to commercial and residential uses.

## MC GOAL 3

A SAFE AND INVITING PEDESTRIAN ENVIRONMENT.

MC 3.1
Implement a coordinated Pedestrian-First District that employs expanded use of Leading Pedestrian Intervals, scramble crosswalks, and right turns limitations on red, and other interventions to improve pedestrian safety and encourage pedestrian activity.

MC 3.2
Encourage the installation of curb ramps, signalized crosswalks, and other pedestrian safety improvements throughout Downtown.

MC 3.3
Prioritize pedestrian safety for construction detours, first contain construction staging onsite, then consider using parking and travel lanes before significantly disrupting pedestrian routes.

MC 3.4
Enhance the pedestrian experience between major destinations and transit stations through improved streetscapes and wayfinding programs.

MC 3.5
Include pedestrian crossing phases at all signalized intersections and eliminate the use of "beg buttons" to ensure dedicated crossing time for pedestrians and reduce conflicts between modes.

MC 3.6
Construct mid-block crosswalks in places with high pedestrian volumes or long distances between crosswalks.

## MC GOAL 4

A SAFE AND INTEGRATED BICYCLE NETWORK THAT PROVIDES ACCESS TO TRANSIT AND KEY DESTINATIONS.

MC 4.1
Promote the development of protected bicycle facilities, with dedicated signals, along key corridors to improve safety, comfort, and access for cyclists of all abilities.

MC 4.2
Encourage residential and office buildings to provide bicycle related amenities such as repair stations and showers to facilitate cycling for residents, workers, and visitors.

MC 4.3
Support the expansion of Bike Share throughout Downtown and adjacent areas, especially as a means to connect areas that are less served by transit.

MC 4.4
Facilitate the integration of bikes on transit to improve first-last mile connections.

MC 4.5
Identify gaps in bicycle facilities and prioritize network completion to achieve significant gains in bicycle mode share.

DRAFT Summer 2020

# MOBILITY & CONNECTIVITY

The Mobility & Connectivity goals and policies establish that a safe and accessible circulation system is critical to support the range of places and activities Downtown, regardless of age, ability, or transportation mode. This graphic exhibits key strategies discussed throughout the Chapter, which are intended to support a range of inclusive mobility options by creating a more bicycle, pedestrian, and transit friendly environment.

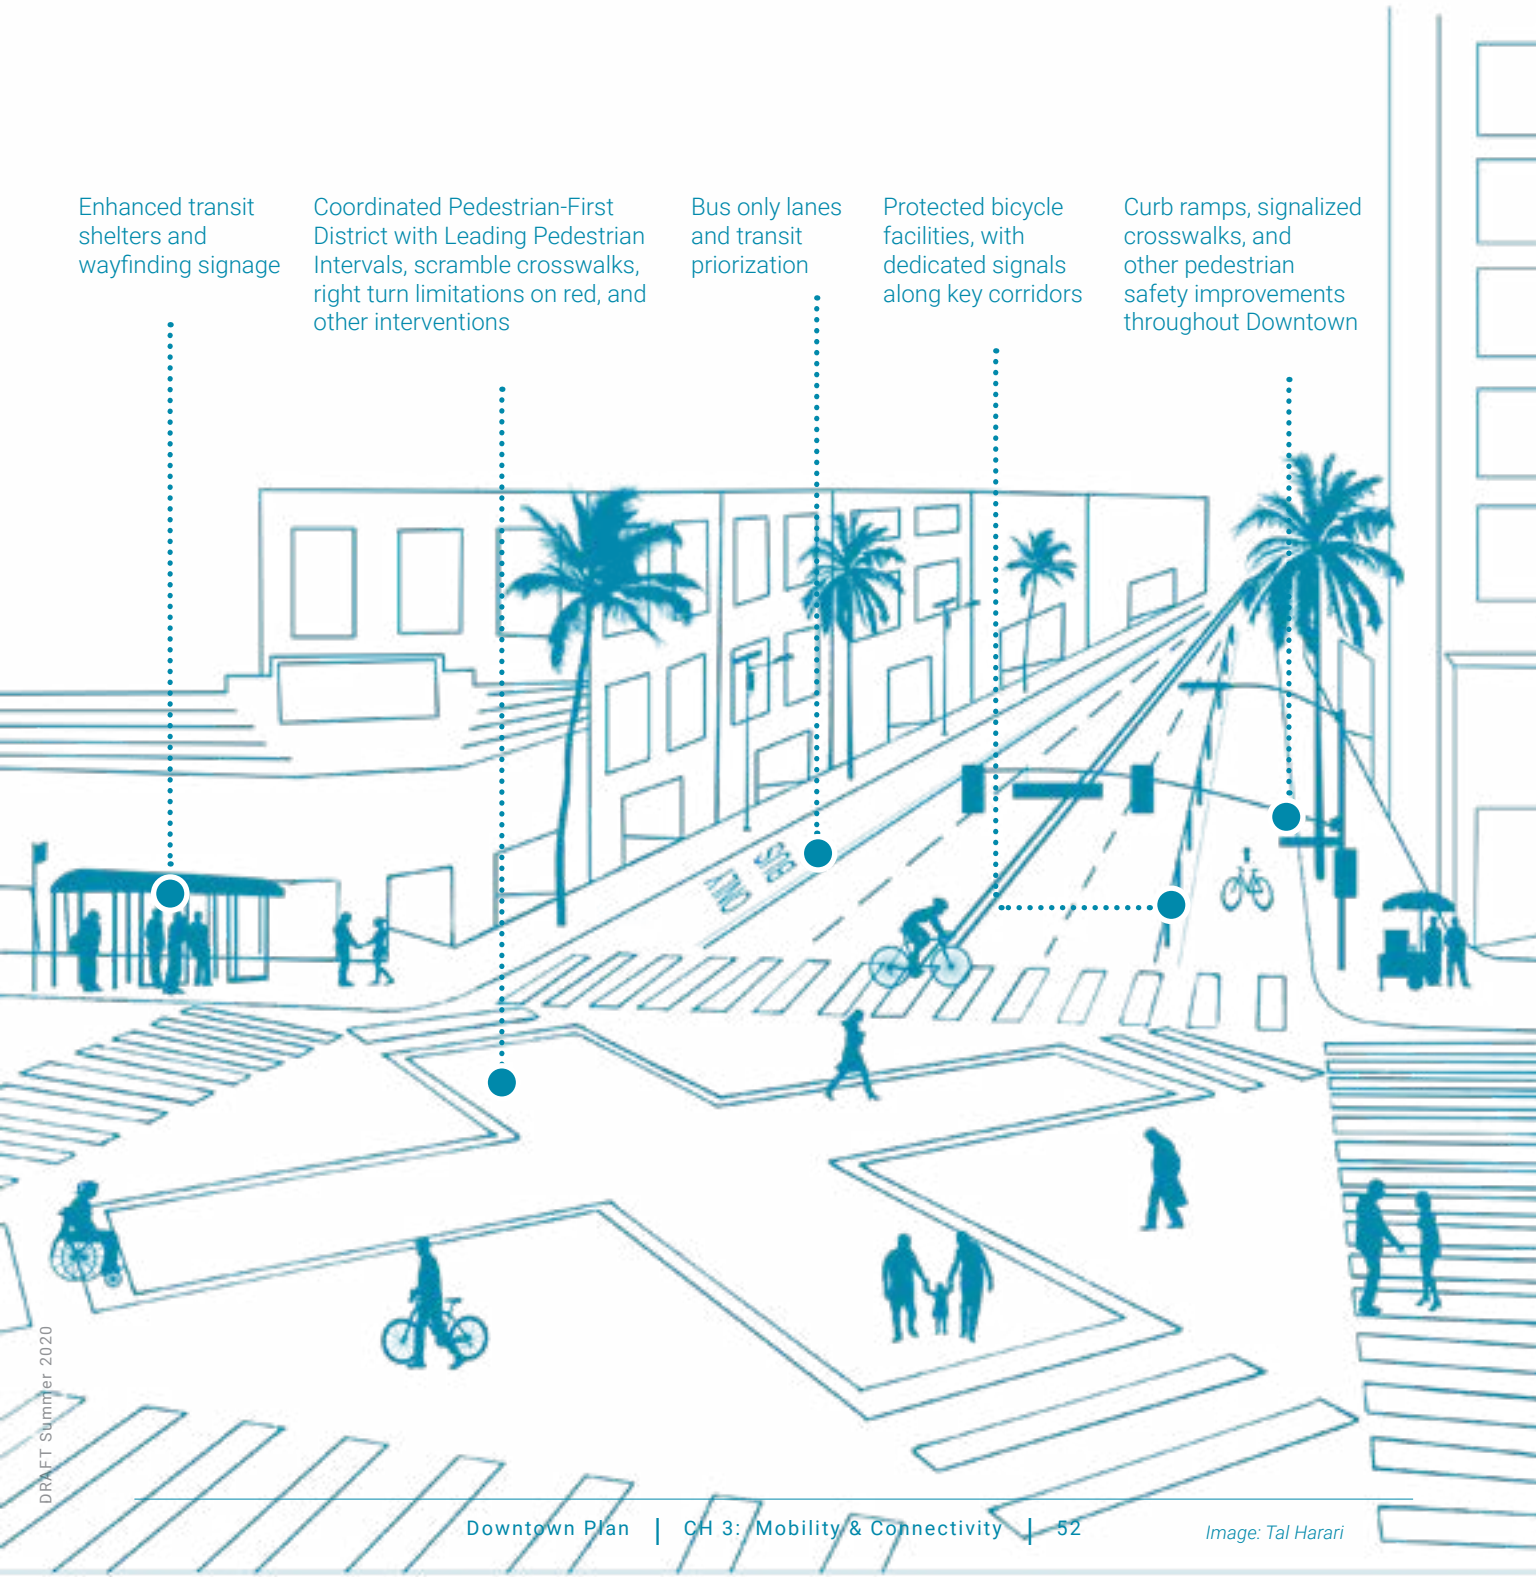


*Image: Tal Harari*

DRAFT Summer 2020

## MC GOAL 5

A COMPREHENSIVE TRANSIT SYSTEM THAT CONNECTS DOWNTOWN'S DISTRICTS AND DOWNTOWN TO COMMUNITIES THROUGHOUT THE REGION.

MC 5.1
Support major regional rail infrastructure projects, such as Link US and California High Speed Rail that will improve connectivity between Downtown and the surrounding region and reduce travel times.

MC 5.2
Improve weekend and night DASH service to better serve residential, entertainment, and cultural uses.

MC 5.3
Enhance wayfinding information that directs transit users to centers of activity and facilitates pedestrian connections.

MC 5.4
Extend DASH service to activity centers with few fixed transit stations, such as the Fashion District, the Arts District, and Central City East.

MC 5.5
Facilitate the development of the Downtown Streetcar System to better connect districts.

MC 5.6
Encourage the integration of information and payment systems across different transit service providers to provide a seamless experience for transit riders.

MC 5.7
Find opportunities to install elongated transit curb extensions and islands along key corridors to facilitate transit boarding and reduce conflicts with other modes. Consider temporary platform products only when phased implementation is a project consideration.

MC 5.8
Foster the expansion of light and heavy rail transit service to Eastern Downtown, through projects such as the West Santa Ana Branch Line and extension of the Red and Purple Lines, to serve the expanding resident, worker, and visitor populations.

## MC GOAL 6

AN EFFICIENT PARKING SYSTEM THAT ENCOURAGES NON-VEHICULAR TRAVEL AND SERVES THE NEEDS OF A RANGE OF USERS.

MC 6.1
Eliminate parking minimums Downtown to encourage non-vehicular travel, increase affordability, and improve design outcomes.

MC 6.2
Prioritize short term parking for visitors, then parking for residents, and finally parking for commuters.

MC 6.3
Price parking appropriately to encourage efficient turnover of spaces.

MC 6.4
Promote shared and publicly accessible parking to create a more flexible and efficient parking system that serves multiple users.

MC 6.5
Require that parking be unbundled from purchase price and lease rates in order to create mobility options and to encourage other modes of travel and increase affordability at all levels.

MC 6.6
Include square footage dedicated to above ground parking in the calculation of floor area to discourage over-parking and promote pedestrian friendly design.

MC 6.7
Create a parking management organization to direct efficient use of Downtown's parking resources and reduce the need for new parking facilities.

## MC GOAL 7

A VEHICULAR TRANSPORTATION NETWORK THAT ENCOURAGES SHARING, GREATER EFFICIENCIES, AND IS BALANCED WITH OTHER MODES.

MC 7.1
Balance vehicular circulation with other modes of transportation to improve safety and sustainability for all Downtown stakeholders.

MC 7.2
Efficiently use curb space to facilitate ridesharing and connections to other modes.

MC 7.3
Encourage projects to include designated spaces for rideshare vehicles and pickup/drop off zones.

MC 7.4
Expand programs that offer access to carpools and vanpools for Downtown workers to reduce the commute mode share of single occupancy vehicles.

## MC GOAL 8

AN EFFICIENT GOODS MOVEMENT SYSTEM THAT SUPPORTS ECONOMIC ACTIVITY DOWNTOWN.

MC 8.1
Promote urban curbside loading rules such as off-peak loading hours, curbside flex zones, and mid-street loading to reduce conflicts between modes on streets.

MC 8.2
Encourage the location of loading facilities zones and utilities in alleys to reduce conflicts between modes and create more public space on sidewalks.

MC 8.3
Preserve truck access in industrial areas and balance with pedestrian and cyclist safety to support economic activity.

DRAFT Summer 2020

Chapter 4

# PUBLIC REALM & OPEN SPACE

As Downtown grows, there is a need for more high quality public spaces for residents, workers, and visitors. Improving the public realm will help to make Downtown more livable, sustainable, and healthier and will support economic development. Public space should be accessible to all and provide benefits to all Downtown stakeholders.

Open space should be defined broadly and creatively Downtown. There is a need for a variety of types of open spaces and recreational opportunities. Traditional parks of different sizes, plazas, parklets, and streets can all serve important roles in the open space network. In Downtown, it may be difficult to find land for traditional open spaces, therefore streets, alleys, and plazas are important opportunities to create more usable open space. The Department of City Planning Health Atlas shows that Plan Area is underserved by parks.

In Downtown, streets are an important part of the open space network. Streets are not just paths of travel, but are also gathering spaces. Much of the public life in Downtown happens on the street and community is built on the street. Sustainable streetscape treatments can improve public health and mitigate environmental impact.

# GOALS AND POLICIES

**PO GOAL 1**

A WELL MAINTAINED, ACCESSIBLE, AND HIGHLY UTILIZED OPEN SPACE SYSTEM AND PUBLIC REALM NETWORK THAT SERVES THE GROWING POPULATION OF DOWNTOWN RESIDENTS, WORKERS, AND VISITORS.

PO 1.1
Find opportunities to create new parks and other open spaces through tools such as the transfer of development rights, public outdoor amenity space incentives, and non-traditional interventions in the public right-of-way, and as a part of major public and private projects.

PO 1.2
Prioritize the development of public open space in underserved communities to improve access to open space.

PO 1.3
Support the creation of different open space typologies, such as parklets, dog parks, and other facilities, to serve a variety of users and needs.

PO 1.4
Encourage the development of active and welcoming publicly accessible private spaces through zoning incentives to increase access to open space.

PO 1.5
Ensure that publicly accessible private open spaces are connected to and clearly accessible from the street with signage that indicates public access and hours of operation.

PO 1.6
Improve access to existing public spaces through enhanced wayfinding, lighting, and mobility network connections.

PO 1.7
Support the development of catalytic new parks and reinvestment in existing public spaces. Namely:

- Pershing Square
- Park 101
- 6th Street Parc
- A new large park in the Fashion District
- Gil Lindsey Plaza

PO 1.8
Support the on-going maintenance and programming of neighborhood serving parks

**PO GOAL 2**

STREETS THAT SERVE AS GATHERING SPACES AS WELL AS PATHS OF TRAVEL.

PO 2.1
Encourage the development of improved streetscapes throughout Downtown's districts that complement and support community character.

PO 2.2
Adapt streets that are not critical to vehicular circulation to increase right-of way use for pedestrian circulation.

PO 2.3
Facilitate commercial activity in the Frontage Zone of sidewalks that supports pedestrian activity.

PO 2.4
Support the utilization of remnant spaces such as odd angle intersections and dead-end streets as public open space.

## PO GOAL 3

A SUSTAINABLE OPEN SPACE NETWORK AND PUBLIC REALM THAT EMPHASIZES HUMAN HEALTH AND COMFORT.

PO 3.1
Encourage design features of both private and public open spaces that reduce polluted runoff, maximize groundwater recharge, and reduce the heat-island effect.

PO 3.2
Encourage the use of native and drought tolerant plant species to improve sustainability.

PO 3.3
Require that public spaces are well lit and visible to ensure that they are safe and inviting.

PO 3.4
Facilitate the development of open spaces that can also improve access to fresh foods for Downtown residents, workers, and visitors.

PO 3.5
Support the development of sports and fitness facilities to improve community health.

PO 3.6
Promote a public realm equipped with durable and flexible infrastructure, landscaping materials, and recreational equipment that can adapt to changing conditions and community needs.

PO 3.7
Encourage partnerships for stewardship and maintenance through volunteer opportunities to expand opportunities for stakeholder engagement and ensure that public spaces are well maintained.

## PO GOAL 4

PUBLIC SPACES THAT HELP CREATE AND MAINTAIN COMMUNITY.

PO 4.1
Support and maintain programming of public and publicly accessible private spaces to serve community interests and attract visitors.

PO 4.2
Facilitate the integration of locally produced and community oriented public art projects and cultural programming into public spaces to reinforce community character.

PO 4.3
Maintain and expand the use of public spaces as centers of democratic practice.

PO 4.4
Promote green spaces as inviting urban streetscapes that attract and serve all those who visit, live, and work in Downtown.

PO 4.5
Enhance the urban environment with increased open space and streetscapes that encourage pedestrian activity.

PO 4.6
Encourage the development of community-initiated and supported open spaces such as community gardens and orchards.

PO 4.7
Plan and design flexible public spaces that can accommodate a range of active and passive activities over time for users of all ages.

# ALLEYS

Alleys have traditionally been the primary location for utilitarian functions needed to support commercial, industrial, and residential activities in an urban context. These functions can include deliveries, loading, parking entrances, waste collection, emergency access, and public utilities. Often termed "back of house" uses, these are necessary for the daily function of urban areas. Loading in alleys reduces conflicts between delivery vehicles and road users by keeping sidewalks, bicycle facilities, and on-street parking spaces clear. This has helped to make the streets safer, less congested, and more pleasant.

While providing space for "back of house" activities will remain the primary function of alleys, facilitating other activities has become an increasingly desirable role for alleys. Alleys have the potential to be multi-purpose spaces, offering the benefits of paths of connection, gathering spaces, and sustainable practices, while still serving vehicle traffic when appropriate. There are a variety of interventions that can increase the livability and expand the utility of Downtown alleys. The following section provides guidance for how to convert existing alleys into livable urban spaces that can expand Downtown's public realm network.

### ALLEY AND PASSAGEWAY RENOVATION TYPOLOGIES

The objective of alley improvements is to contribute to an interconnected pattern of streets and open space through thoughtful consideration and renovation of the alley network. Any passageway chosen for improvement should include conversion to permeable paving, as consistent with the City's Low Impact Development (LID) Ordinance and Bureau of Engineering Standard Plans. The appropriate level of additional improvements for each alley is dependent upon the existing context, including the land uses, existing or future opportunity for mid-block connections, and proximity to other public open spaces. The following types of alleys and passageways provide benchmark descriptions of potential improvements. A combination of these typologies can be implemented as deemed appropriate.

### CONNECTING ALLEYS

Connecting alleys link destinations and points of interest for pedestrians and bicyclists and are closed to vehicles. This typology can offer through-block connections in areas with superblocks and dense development patterns, to expand the non-motorized transportation network and enhance walkability. Connecting alleys incorporate basic capital improvements such as landscaping, as well as aesthetic improvements such as public art, murals and enhanced pedestrian lighting to make the alley accessible and inviting.

### SHARED ALLEYS

Shared alleys provide a safe path of travel for pedestrians, bicyclists, and limited shared use by vehicles. While vehicles cannot use the alley for parking, this typology provides the opportunity for businesses and residential buildings that rely on alleys for loading and unloading, as well as vehicular access, to remain unaffected. Shared alleys have limited space for programming and activation, but contribute to the safety of its users with infrastructural and design interventions. This includes paving and landscaping, bollards and defined paths for pedestrians, bicycle infrastructure, enhanced lighting, and public art.

### ACTIVE ALLEYS

Active alleys create new destinations that revolve around and are supported by public gathering in areas with limited parks and open space. These alleys are closed to vehicles, and prioritize pedestrians and bicyclists for the purpose of placemaking. This typology provides opportunity for existing commercial businesses to extend their activity onto the alley with kiosks, outdoor dining, and creative programming. Interventions may include landscaping and drought-tolerant plants, seating, enhanced lighting, shade structures, and façade improvements.

### POTENTIAL INTERVENTIONS

Additional sustainability and design interventions may include:

- Drought tolerant landscaping
- Bioswales
- Recycling and trash cans
- Dog waste station
- Wayfinding and signage
- Pedestrian lighting
- Public art, murals, green walls
- Drinking fountains
- Walking and jogging paths
- Bicycle infrastructure
- Restaurant and retail kiosks
- Seating

# ALLEYS

**PO GOAL 5**

PUBLIC OPEN SPACE THAT IS INVITING AND ENGAGING FOR COMMUNITY GATHERING AND RECREATION.

PO 5.1
Develop design guidelines to promote alleys as shared, and multipurpose public spaces that are welcoming to a range of users.

PO 5.2
Encourage the use of creative lighting, public art, and seating treatments.

PO 5.3
Foster a commercial presence, including kiosks, dining, and retail vending, where appropriate.

PO 5.4
Provide family-friendly activities and spaces, as well as programming for children, youth, and seniors.

PO 5.5
Support walkability and safety with appropriate lighting, and legible wayfinding.

**PO GOAL 6**

OPPORTUNITIES FOR ENVIRONMENTALLY SUSTAINABLE BEST MANAGEMENT PRACTICES THAT CONTRIBUTE TO AN INVITING AND WELCOMING PUBLIC REALM.

PO 6.1
Require sustainable best practices relating to pollution reduction, stormwater management, heat reduction, and material recycling.

PO 6.2
Encourage landscaping of alleys with native plants.

PO 6.3
Identify a range of permeable paving solutions for different alley typologies.

PO 6.4
Honor existing historical features and support context sensitive design.

PO 6.5
Support and facilitate the integration of public art and community engagement in alley projects.

PO 6.6
Secure resources and entities that may include surrounding businesses, Business Improvement Districts, and Community Stewardship Projects responsible for the maintenance and upkeep of proposed alleys prior to their implementation.

**PO GOAL 7**

PASSAGEWAYS ARE SHARED BY A RANGE OF TRAVEL MODES AND USERS.

PO 7.1
Implement non-standard treatments in alleys that can allow for use by pedestrians, bicyclists, and motorists.

PO 7.2
Respect existing back of house uses, including vehicular access, loading and unloading, and utilities. Maintain the ability for alleys to accommodate these uses to minimize curb cuts on streets and increase space for pedestrians on sidewalks.

PO 7.3
Maintain safety for all users, with appropriate traffic control features and ADA accessibility.

PO 7.4
Maintain public access to alleys and prohibit the vacation of alleys and passageways for private use, unless required for institutional uses.

DRAFT Summer 2020

# THE LOS ANGELES RIVER

Through revitalization efforts, the Los Angeles River can become the City's living, green spine that connects nature and communities, providing space for active and passive recreation. While the River is constrained by rail tracks through the Plan area, there is the potential to increase visual and physical access from surrounding communities.

These rail lines play an essential role in the local economy and in the movement of goods, services, and passengers through the region. As the revitalization of the River continues, plans should integrate the demand for continued rail service while minimizing barriers to River access for active transportation, recreational opportunities, and habitat restoration.

*Source: LA Bureau of Engineering*

# THE LOS ANGELES RIVER

**PO GOAL 8**

CONNECTED INFRASTRUCTURE THAT RESPECTS AND PRESERVES DIVERSIFIED ECONOMIC ACTIVITIES WHILE ENHANCING RECREATIONAL OPPORTUNITIES.

PO 8.1
Maintain functional use of the rail facilities, while allowing for bold and innovative design along parcels adjacent to the Los Angeles River (River).

PO 8.2
Accommodate major regional rail connection projects such as Link US, High Speed Rail, and the West Santa Ana Branch Line.

PO 8.3
Encourage employment opportunities compatible with the River as an environmental and recreational amenity.

PO 8.4
Identify physical interventions, such as decking over rail lines that can improve connectivity and access to the River.

PO 8.5
Integrate direct visual access to the River in building design and site planning in the form of paseos, plazas, and open space facilities.

PO 8.6
Enhance wayfinding information that directs people to the river and facilitates connections.

**PO GOAL 9**

A RESOURCE THAT ACCOMMODATES ACTIVE TRANSPORTATION AND RECREATION.

PO 9.1
Support infrastructure improvements to accommodate future passenger and transportation services and capacity needs, while ensuring the River functions as a public open space.

PO 9.2
Activate space adjacent to the Los Angeles River with active and passive recreational amenities and access points to the River.

PO 9.3
Design streets and sidewalks so that pedestrians, bicyclists, transit riders, transit vehicles, and automobile traffic can coexist safely with strategies such as Slow Street design.

PO 9.4
Support the recommendations of the Los Angeles River Design Guidebook.

**PO GOAL 10**

A CORRIDOR THAT SUPPORTS A FUNCTIONAL HABITAT, AND SUPPORTS GROUNDWATER RECHARGE WHERE APPROPRIATE.

PO 10.1
Support the implementation of the Los Angeles River Revitalization Master Plan and the Los Angeles River Ecosystem Restoration Project.

PO 10.2
Emphasize multiple-benefit approaches that simultaneously incorporate flood storage, water quality treatment, habitat improvement, and increasing native vegetation biodiversity.

PO 10.3
Encourage the use of native plants in landscaping design near the River.

PO 10.4
Encourage the use of native and drought tolerant plants in landscaping near the River, to support the habitat and migration of local species

*Image: Cory Gruenfeld*

Chapter 5

# IMPLEMENTATION

The Community Plan establishes a comprehensive and long-range vision for the future of Downtown. The goals and policies presented by the Plan express this vision and guide its implementation, which occurs through both private developments and public investments. The Community Plan generally identifies policies that are limited to the authorities that can be implemented under the jurisdiction of the City of Los Angeles (all departments) and does not prescribe the actions of other agencies such as the City's school districts.

The Community Plan is implemented through a variety of methods, which include: Community Plan policies and the accompanying General Plan Map (which designates land for the range of uses and intensities needed to achieve Plan goals and policies); zoning and other City ordinances; and Community Plan programs. The Plan policies and zoning ordinances adopted along with the Community Plan represent implementation methods that go into effect upon adoption of the Plan and can be implemented directly by the City. Community Plan Programs are programs that identify strategic actions that the City and other public agencies can take to implement the Plan. The implementation of these programs tends to rely on coordination among City Departments and between the City and external agencies, often requires approval and allocation of funding by the City Council and other decision makers, and are expected to occur over the life of the Plan. This chapter discusses how the Community Plan policies and programs are implemented in land use decision making. In particular, this chapter details existing and aspirational future programs, shown in a series of tables, which implement the goals and policies found throughout the Community Plan.

# THE IMPLEMENTATION PROCESS

The goals and policies in the Downtown Plan are implemented through a variety of actions, including regulation and development review; financing and budgeting; and interdepartmental and interagency coordination.

Many Community Plan policies are implemented through regulations, such as zoning, adopted by the City based on the City's "police power" to protect the public health, safety, and welfare of its citizens. City ordinances also create a development review process that provides for City review of individual project proposals and authorizes the City to approve, deny, or condition projects based on their consistency with the Community Plan. Some development review programs, such as the California Environmental Quality Act (CEQA) mandated by the State, are ongoing and will continue to be used as a tool for land use decision-making. Other programs are implemented at the time of Community Plan adoption, such as changes to zoning regulations, community plan implementation overlay districts, supplemental use districts, specific plans, and design overlays. Coordination among City departments is critical to the successful implementation of many Community Plan policies, such as park planning and streetscape improvements. While the Community Plan policies and implementation programs are limited to authorities that can be implemented under the jurisdiction of the City of Los Angeles, implementation of some Plan policies may also require coordination and joint actions with numerous local, regional, state, and federal agencies. These agencies provide services, facilities, or funding and administer regulations that directly or indirectly affect many issues addressed in the Community Plan. These external governmental agencies, such as the California Department of Transportation (CALTRANS), the Los Angeles Unified School District, water service providers, the Los Angeles County Metropolitan Transit Authority (METRO), among others, also look to the Community Plans for their planning and guidance in decision-making.

The Plan is comprised of the following implementation features: goals and policies used as guidance for decisions on projects that have the potential to affect significant change in an area, General Plan Land Use Designations, zones that apply the desired land use regulations to property throughout Downtown, development incentives that are intended to generate affordable housing and other public benefits in exchange for greater development rights, and the Downtown Design Guide. The following section provides a description of each of the Community Plan's implementation features, followed by a brief explanation of the process for amending the Community Plan.

## GOALS AND POLICIES

The Community Plan's goals and policies play an important role in shaping decisions around land use and public infrastructure.

The Community Plan can be used by the public, staff and ultimately decision-makers to guide and inform the land use decision making process. City actions on discretionary projects involving land use require a finding that the action is consistent or in conformance with the General Plan. Department of City Planning staff and City Planning Department decision makers, such as the Director of Planning, Area and City Planning Commissions, and zoning administrators, among others, refer to and cite policies from the Community Plan text and the Land Use Map of the Community Plan when making findings of consistency on land use decisions. The goals and policies of the Community Plan are particularly important when development projects are proposed that are beyond the scope of the underlying zoning regulations.

## GENERAL PLAN LAND USE DESIGNATIONS

Regulating the use and development of land is an important means by which the City exercises its authority to protect the public health, safety, and welfare of its citizens. General Plan Land Use Designations, adopted as the General Plan Map for this Plan, set the permitted range of intensities, uses, and densities, where applicable in the Plan Area. Each General Plan Land Use Designation corresponds to a set of form and use districts that apply regulations at the parcel level.

## ZONING REGULATIONS

The Community Plan's primary implementation feature is the comprehensive package of zoning regulations that govern how land can be used and developed throughout Downtown. The zone assigned to each property prescribes the physical parameters new structures must adhere to, the types of uses that can occur, and the intensity that each use can occur. The zones and supporting development standards adopted as part of the Community Plan are effectuated as ordinances in Los Angeles Municipal Code. The parameters of each zone assigned in Downtown have been strategically devised to ensure that they shape development in a manner that is compatible with the vision established by the Plan. The Plan's zoning regulations are implemented incrementally as each proposed building project and land use change within Downtown is evaluated by the City for approval. The City applies zoning regulations as one of the primary metrics for evaluating whether a project or proposal is appropriate for a particular location. Projects that comply (or are seeking to comply) with the applicable zoning standards are deemed non-discretionary, meaning they do not require deliberation by a designated decision-maker or body. In most cases non-discretionary or "by-right" projects are reviewed solely by the Los Angeles Department of Building and Safety, where the majority of the development regulations enacted by the Plan are enforced. Projects that surpass a specified size or scope must undergo Site Plan Review by the Department of City Planning where the applicable zoning standards are applied accordingly.

## COMMUNITY BENEFITS SYSTEM

This Plan establishes allowable development ranges through base and maximum Floor Area Ratios (FAR) assigned to each zone. Maximum FAR may be achieved through participation in the various incentive systems described in Article 20 of the LAMC. Development exceeding base development rights may be permitted, in accordance with these systems, to meet the primary objectives of this Plan by producing a range of public benefits including affordable housing, publicly accessible open space, community facilities, and historic preservation.

## DOWNTOWN DESIGN GUIDE

The Downtown Design Guide, another important implementation feature of the Community Plan, provides guidance beyond zoning to support the vision of this Plan. The Guide offers direction at the Downtown wide level, as well as specific provisions for certain neighborhoods and special contexts, ensure that projects contribute a pedestrian friendly environment and reinforce neighborhood character.

## COMMUNITY PLAN AMENDMENTS

Changes to the Community Plan may be proposed from time to time to address changing conditions, new opportunities, and unforeseen circumstances. As such, the Community Plan must be a living, flexible document, allowing for changes that ultimately assist in enhancing and implementing the community's vision. It is necessary, therefore, to establish a fair, orderly, and well-defined process to govern how amendments occur.

Community Plans are part of the City's General Plan and thus, any changes to the Community Plan are considered General Plan amendments. Amendments may propose a change in the General Plan designation for a particular property or changes to the Community Plan's policies and text. Amendments to the General Plan are subject to an established public review process.

# IMPLEMENTATION PROGRAMS

Coordination among City departments and external agencies is critical to the successful implementation of many Community Plan policies, such as park planning and streetscape improvements. While many Community Plan policies are implemented through land use regulations and incentives enforced by the City based on its mandate to protect the health, safety and welfare of its inhabitants, implementation of some Plan policies may also require coordination and joint actions with numerous local, regional, state, and federal agencies. These agencies provide services, facilities, or funding and administer regulations that directly or indirectly affect many issues addressed in the Community Plan. These external governmental agencies, such as the California Department of Transportation (CALTRANS), the Los Angeles Unified School District, water service providers, the Los Angeles County Metropolitan Transit Authority (METRO), among others, also look to the Community Plans for their planning and guidance in decision making. This section provides a series of tables describing the implementation programs that fall beyond the immediate scope of this Community Plan to implement directly but are essential to achieving the Plan's long range goals and policies.

## SOURCES OF FUNDING

It is important to note that program implementation is contingent on the availability of adequate funding, which is likely to change over time due to economic conditions, the priorities of federal, state and regional governments and funding agencies, and other conditions. The programs should be reviewed periodically and prioritized, where and when necessary, to reflect funding limitations.

## READER'S GUIDE TO THE IMPLEMENTATION TABLES

The tables provided in this section organize programs into two broad categories: existing programs and resources, and future programs. Existing programs and resources are currently in effect and may already be playing an important role in addressing one or more of the plan's objectives. The list identifies opportunities to expand or continue existing programs in the Plan Area. Future programs are included as an advisory resource directed at public agencies responsible for devising improvements or prioritizing projects within Downtown. Future programs described in the tables are aspirational and are put forth for further consideration as part of the ongoing effort to implement the Plan.

The tables identify each program with a distinct reference number (i.e. P1), followed by a description of the intent and scope of the program, and a reference to the Community Plan policies that the program is expected to implement. Lastly, the tables identify the agency primarily responsible for implementing the program, as well as any agencies necessary for supporting in the program's implementation.

# ACRONYMS FOR AGENCIES

**BSL - Bureau of Street Lighting**

**BOE - Bureau of Engineering**

**BOS - Bureau of Sanitation**

**BOSS - Bureau of Street Services**

**CAO - City Administrative Officer**

**Cal-DOC - California Department of Corrections**

**CalHFA - California Housing Finance Agency**

**CalTrans - California Department of Transportation**

**CD - Council District**

**CDD - Community Development Department**

**CoDRP - County Department of Recreation and Parks**

**DCP - Department of City Planning**

**DOD - Department on Disability**

**DPW - Department of Public Works**

**DPSS - Department of Public Social Services**

**DTSC - Department of Toxic Substance Control**

**EMD - Emergency Management Department**

**EWDD - Employment and Workforce**

**HCIDLA - Los Angeles Housing and Community Investment Department**

**LA-DLA - Los Angeles Designated Local Authority**

**LADBS - Los Angeles Department of Building and Safety**

**LADOA - Los Angeles Department of Aging**

**LADOT - Los Angeles Department of Transportation**

**LADWP - Los Angeles Department of Water and Power**

**LAFD - Los Angeles Fire Department**

**LAFPC - Los Angeles Food Policy Council**

**LAHD - Los Angeles Housing Department**

**LAPD - Los Angeles Police Department**

**LAPL - Los Angeles Public Library Development Department**

**LAUSD - Los Angeles Unified School District**

**METRO - Metropolitan Transit Authority**

**NC - Neighborhood Council**

**OHR - Office of Historic Resources**

**RAP - Recreation and Parks**

**SAN - Bureau of Sanitation**

**SCAG - Southern California Association of Governments**

DRAFT Summer 2020

# FUTURE IMPLEMENTATION ACTIONS

## ESTABLISHED PROGRAMS

| Program Number | Description | Policy Reference | Coordinating Agency |
|---|---|---|---|
| **P1** | **Survey LA Findings - Eligible Historic Resources:** The findings of the Los Angeles Historic Resources Survey (SurveyLA) identify numerous potential historic resources throughout the Downtown Community Plan Area. Encourage protection of the resources through further study and historic designation (if eligible) of these sites. | LU 12.2; LU 12.3; LU 12.4; LU 13.3 | |
| **P2** | **Healthy Corners:** A Healthy Corners Program incentivizes the creation of neighborhood markets throughout Downtown which offer fresh and healthy produce. Coordinate with the Los Angeles Food Policy Council to expand the Neighborhood Market Conversion program and promote investment in new grocery locations via FreshWorks fund. | LU 15.4 | LAFPC<br>California Fresh-Works |
| **P3** | **Brownfield Remediation:** Remediation and redevelopment of existing brownfields throughout Downtown through the City of Los Angeles' Brownfields Program. Identify additional funding sources for site remediation activities, such as the remediation programs under the RCRA (Resources Conservation and Recovery Act) and the CERCLA/Superfund. | LU 15.1 | LAPW<br>BOS |
| **P4** | **Cool Pavement:** The City of Los Angeles Bureau of Street Services cool pavement pilot program seeks to fight urban heat, leading to cooler streets with less need for indoor air conditioning. Utilize cool pavement on surfaces and throughout Downtown's built environment to support livability and comfort. | LU 16.7; PO 6.1 | BSS |
| **P5** | **First-mile, Last-mile:** Metro's First Last Mile Strategic Plan identifies barriers in planning and implementing improvements for first and last mile (FLM) portion of an individual's trip, and provides a vision for addressing FLM improvements in a systematic way. Implement the infrastructural improvements and enhancement in the Downtown Plan Area. | LU 8.4; MC 1.1; MC 2.1; MC 2.2; MC 2.5; MC 2.7; MC 3.1; MC 3.2; MC 3.4; MC 3.5; MC 3.6; MC 4.4 | Metro |
| **P6** | **Mobility Hubs:** Identify priority locations in Downtown for the installation of Mobility Hubs with multi-modal supportive infrastructure and place-making strategies to create activity centers that maximize FLM connectivity. | MC 2.3; MC 2.4; MC 2.5; MC 4.2; MC 5.6; MC 7.3; LU 51.4 | Metro<br>LADOT |

DRAFT Summer 2020

| Program Number | Description | Policy Reference | Coordinating Agency |
|---|---|---|---|
| **P7** | **DASH Service:** Encourage the revision of DASH services to reach areas of Downtown with public transportation service gaps, and expansion of DASH service hours to nights and weekend throughout all of Downtown. | LU 8.4; MC 5.2; MC 5.4 | LADOT |
| **P8** | **People Street Pedestrian Plazas and Parklets:** People Street is a program of the Los Angeles Department of Transportation (LADOT) that seeks to transform underused areas of the public right of way into active, vibrant, and accessible public space. Encourage partnerships between LADOT and community partners in Downtown to apply for approval to create Plazas or Parklet projects that enhance quality of life. | LU 17.4; LU 29.2; LU 29.9; LU 38.4; LU 41.3; LU 45.5; LU 45.5; PO 1.1; PO 1.2; PO 2.4 | LADOT |
| **P9** | **LA Express Park:** Implement the City's Express Park Program in Downtown, a demand-based parking meter program that uses technology to increase the availability of limited parking spaces, reduce traffic congestion and air pollution, and encourage the use of alternative modes of transportation. | MC 6.2; MC 6.3 | LADOT<br>LADPW<br>Mayor's Office<br>Metro |
| **P10** | **Safe Routes to School:** Caltran's "Safe Routes to School" programs implements safety design interventions to improve traffic safety for youth near schools. Prioritize Castellar Elementary in Downtown Los Angeles as a candidate for the LADOT and Metro Safe Routes to School K-12 Network Program. | MC 1.5; MC 2.6; MC 3.2 | LADOT<br>LAUSD<br>Caltrans<br>Metro |
| **P11** | **LA RiverWay:** Consistent with the LA River Revitalization Master Plan and associated design and implementation plans, restore and revitalize an 11-mile stretch of the Los Angeles River, while prioritizing public access to this public resource in densely populated communities such as Downtown. | LU 17.3; LU 37.5; PO 9.4 ; PO 10.1; PO 10.2 | LACDPW, BOE, RAP<br>Mayor's Office, Arts Parks, and River Committee, LA River Cooperation Committee US Army Corps of Engineers |
| **P12** | **Park 101:** Support the implementation of PARK 101, an urban design plan and sustainability strategy to cap the 101 Freeway in Downtown Los Angeles with a publicly accessible park, thus reconnecting the city's historic civic, cultural, and financial core with neighboring districts north of the freeway. | LU 29.2; LU 33.1; PO 1.7 | Mayor's Office<br>Council Office<br>Caltrans<br>LADOT |
| **P13** | **Pershing Square Renew:** Support the efforts of Pershing Square Renew Inc., a nonprofit that partners with government, community, and business leaders in Downtown Los Angeles to redesign Pershing Square into a world-class public space that facilitates connections between adjacent areas and serves as a place for gathering within the City's urban center. | LU 25.4; PO 1.7 | Mayor's Office<br>Council Office<br>RAP |

DRAFT Summer 2020

# PROPOSED PROGRAMS

| Program Number | Description | Policy Reference | Coordinating Agency |
|---|---|---|---|
| **Land Use & Urban Form:** Housing & Complete Neighborhoods | | | |
| **P14** | **First Right of Refusal:** Explore the creation of Citywide first right of refusal provisions to ensure tenants of any residential unit subject to the Rent Stabilization Ordinance (RSO) or an On-Site Restricted Affordable Unit that is demolished or vacated for purposes of a proposed development project shall be granted First Right of Refusal for the replacement units. | LU 3.2; LU 3.3 | HCIDLA |
| **P15** | **No Net Loss Program:** Explore the creation of a Citywide no net loss program to minimize the displacement of residents and ensure that there is no loss of affordable rental housing, covenanted or not, including affordable rent-stabilized units, in targeted Transit Oriented District (TOD) geographies. This can be achieved through preservation of existing affordable housing, covenanted or not, or the production of new affordable housing. | LU 3.2; LU 3.3 | HCIDLA<br>City Attorney |
| **P16** | **Land Value Tax:** Study the feasibility of an annual tax on the rental value of vacant land that is based on the permitted land use to encourage activation and development of underutilized land in urban areas, particularly near public transit infrastructure. | LU 18.3; LU 26.2; LU 30.4 | CAO<br>Mayor |
| **P17** | **Community Land Trust (CLT):** Encourage partnerships that seek to implement community land trust projects. A CLT is a community-based non-profit organization designed to ensure community stewardship of land by purchasing or holding land and removing it from the speculative real estate market. | LU 3.5; LU 3.6; LU 43.5 | Council Office<br>CAO |
| **P18** | **Citywide Inclusionary Housing Policy:**The Community Plan supports efforts to adopt citywide inclusionary zoning housing requirements to increase the stock of affordable housing while preventing further concentration of poverty within one community by providing housing opportunities for low income households throughout the City. | LU 3.3 | HCIDLA |
| **Land Use & Urban Form:** Jobs & Economic Development | | | |
| **P19** | **Small Business Assistance Portal:** Promote agency programs that assist small and legacy business owners, such as low-interest loans, management programs, business retention programs, and business incubation centers. | LU 7.4; LU 8.2; LU 43.2; LU 43.3; LU 46.2; LU 47.1 | CAO<br>EWDD |

| Program Number | Description | Policy Reference | Coordinating Agency |
|---|---|---|---|
| **P20** | **Business Outreach and Mentorship Programs:** Develop partnerships to create business outreach programs targeting local schools for student and adult participation in business apprenticeship and internship programs, as well as work with the LAUSD's Mentorship Programs. | LU 5.2; LU 6.2; LU 8.1; LU 29.10; LU 51.3 | LAUSD<br>EWDD LA Chamber of Commerce |
| **P21** | **Downtown Community Benefit Fund:** Develop a Downtown Community Benefits Fund that is integrated into the Community Benefits Program and can be applicable to Downtown projects that have satisfied minimum onsite benefit requirements; and that directs funding to infrastructure investments, and services in disadvantaged communities within and adjacent to Downtown. | | |
| **Land Use & Urban Form:** Wellness and Sustainability | | | |
| **P22** | **Air-Quality Monitoring:** Explore the creation of an air quality monitoring program that uses metrics such as PM10 and ozine to identify ambient level pollutants and their location on a neighborhood level. | LU 16.9; LU 34.3 | AQMD |
| **P23** | **Street Tree Tracking:** Create a publicy accessible database that displays the tree types within the City's public rights-of-way. Identify goals for an equitable tree canopy in Downtown, to address climate-reslience and the effects of urban heat island. | LU 15.3; LU 15.5; LU 16.6; LU 17.2; LU 17.5 | BSS |
| **Mobility & Connectivity** | | | |
| **P24** | **Pedestrian Priority District:** Conduct a study for a potential pedestrian priority district in Downtown where enhanced pedestrian safety improvements and innovative treatments are implemented. These treatements include scramble crosswalks, raised crosswalks, and right turn on red prohibitions in order to reinforce pedestrian safety and comfort. | LU 17.1; LU 21.4; LU 29.3; MC 1.1; MC 1.2; MC 1.4; MC 3.1; MC 3.4; MC 3.5; MC 3.6 | LADOT<br>BOE<br>BSS |
| **P25** | **Wayfinding Program:** Develop and implement a unified signage wayfinding program for Downtown that identifies neighborhoods, important destinations, historic resources and information, privately-owned publicly accessible open spaces, community facilities, and mobility options. | LU 13.1; LU 21.3; LU 25.4; LU 29.5; LU 29.13; MC 2.4; MC 3.4; PO 1.5; PO 5.5 | BOE<br>BSS<br>LADOT |
| **P26** | **Arts District Shared Streets:** Develop standards for historic industrial shared streets, which have been identified in the Arts District, that enhance neighborhood character and protect the safety of all users. | LU 37.8; MC 2.10 | BOE<br>BSS<br>SAN<br>LADOT |

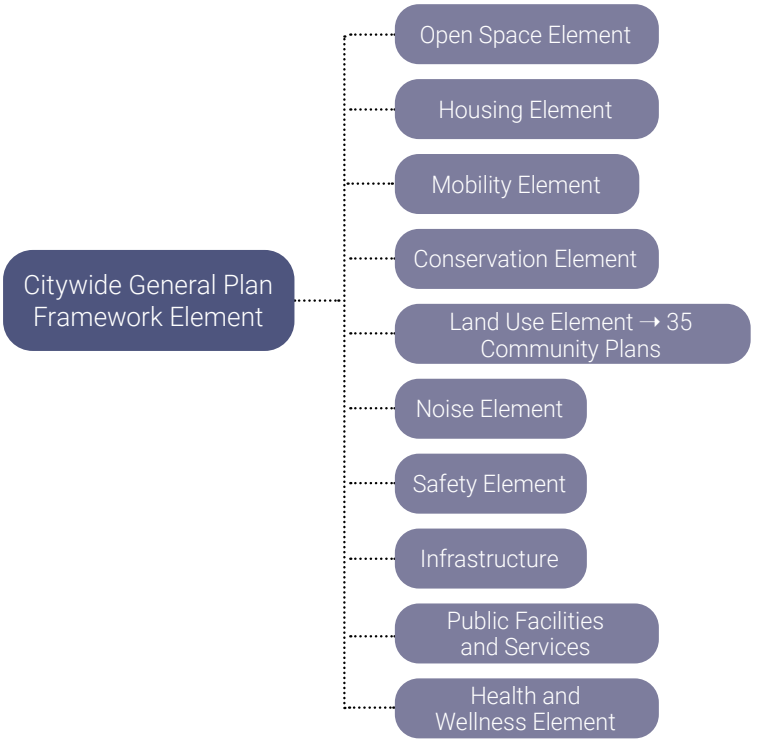
# RELATIONSHIP TO OTHER PLANS

DRAFT Summer 2020

## RELATIONSHIP TO THE GENERAL PLAN

California state law requires that cities prepare and adopt a comprehensive, integrated, long-term General Plan to direct future growth and development. The General Plan is the fundamental document of a city. It defines how a city's physical and economic resources are to be managed and utilized over time. Decisions by a city with regard to the use of its land, design and character of buildings and open spaces, conservation of existing and provision of new housing, provision of supporting infrastructure and public and human services, and protection of residents from natural and man-caused hazards are guided by the General Plan.

State law requires that the General Plan contain seven elements: land use, transportation, housing, conservation, open space, noise, and safety. Cities may also choose to incorporate additional elements to more directly address other locally significant issues. There must be internal consistency among the elements. In Los Angeles, thirty-five Community Plans, comprise the City's land use element. In addition, the City has adopted the "Framework Element," discussed below.



## CITYWIDE GENERAL PLAN FRAMEWORK ELEMENT

The City's General Plan Framework Element is the citywide plan that established the guide for how Los Angeles will grow in the future. Adopted in 1996, the Framework Element is a strategy for long-range growth and development, setting a citywide context for the update of Community Plans and citywide elements. The Framework Element responds to State and Federal mandates to plan for the future by providing goals, policies, and objectives on a variety of topics, such as land use, housing, urban form, open space, transportation, infrastructure, and public services. The Framework Element's key guiding principles, summarized below, are advanced at the community-level through the Community Plans.

Our City's commercial areas serve a variety of roles and functions, from small neighborhood gathering places with local cafes and shops to major job centers and entertainment hubs. Although these areas are typically designated for commercial use, they contain residential and mixed use buildings as well.

## FRAMEWORK ELEMENT GUIDING PRINCIPLES

*Grow strategically.* Should the City's population continue to grow, as is forecasted by the Southern California Association of Governments (SCAG), growth should be focused in a number of higher-intensity commercial and mixed-use districts, centers, and boulevards, particularly in proximity to transportation corridors and transit stations. This type of smart, focused growth links development with available infrastructure and encourages more walkable, transit-friendly neighborhoods, helping to ease our reliance on the automobile, and minimize the need for new, costly infrastructure.

*Conserve existing residential neighborhoods.* By focusing much of the City's growth in centers and along commercial corridors, the City can better protect the existing scale and character of nearby single- and multi-family neighborhoods. The elements that contribute to the unique character of different residential neighborhoods should be identified and preserved whenever possible.

*Balance the distribution of land uses.* Maintaining a variety of land uses is crucial to the long-term sustainability of the City. Commercial and industrial uses contribute to a diverse local economy, while residential uses provide necessary housing for the community. Integrating these uses within smaller geographical areas can better allow for a diversity of housing types, jobs, services, and amenities.

*Enhance neighborhood character through better development standards.* Better development standards are needed to both improve the maintenance and enhancement of existing neighborhood character, and ensure high quality design in new development. These standards are needed for all types of development; residential, commercial, and industrial uses.

*Create more small parks, pedestrian districts, and public plazas.* While regional parks and green networks are an important component of the City's open space strategy, more small-scale, urban open spaces must be developed as well, as they are crucial to the quality of life of the City's residents. There are many opportunities at the community level to create public "pocket" parks as part of new developments, to enhance pedestrian orientation in key commercial areas, and to build well-designed public plazas.

*Improve mobility and access.* The City's transportation network should provide adequate accessibility to jobs, services, amenities, open space, and entertainment, and maintain acceptable levels of mobility for all those who live, work, travel, or move goods in Los Angeles. Attainment of this goal necessitates a comprehensive program of physical infrastructure improvements, traffic systems management techniques, and land use and behavioral changes that reduce vehicle trips. An emphasis should be placed on providing for and supporting a variety of travel modes and users of all ages and abilities, including walking, bicycling, public transit, and driving.

*Identify a hierarchy of commercial districts and centers.* The Framework Element provides an overall structure and hierarchy for the City's commercial areas. This hierarchy, has helped shape the development and urban form of the City and will continue to do so in the future. Understanding this hierarchy helps us better understand the roles that these different types of "activity centers" play within our communities so that their unique characteristics can be enhanced.

## RELATIONSHIP TO OTHER AGENCY PLANS

There are a variety of non-City agencies and organizations that function within the Downtown Community Plan Area. In varying degrees, these agencies through research and advocacy, guide and influence planning decisions across a wide spectrum of interests affecting land use within the Community Plan Area. In each case, the community plans and use of land by other agencies must be consistent with the Community Plan in which they are located.

This required consistency holds true for redevelopment and capital improvement programs, development entitlements, and other actions pertaining to the City's physical development. Relevant plans in the Downtown Community Plan include Redevelopment Project Areas.

### *Los Angeles County Metropolitan Transportation Authority (Metro).*

The Los Angeles County Metropolitan Transportation Authority is the state chartered regional transportation planning and public transportation operating agency for the County of Los Angeles. The agency develops and oversees transportation plans, policies, funding programs, and both short-term and long-range solutions that address the County's increasing mobility, accessibility and environmental needs. The Downtown Community Plan Area is the heart of the regional transit system and is served by the Exposition Line (Expo Line), Blue, and Gold light rail transit lines, the Red and Purple heavy rail transit lines, the Silver bus rapid transit line, and many local and rapid bus lines. Metro operates the seven Metro transit stations in the Downtown Community Plan Area.

### *CRA/LA, A Designated Local Authority (DLA).*

DLA is the successor to the former Los Angeles Community Redevelopment Agency, the public agency established in 1948 pursuant to California State Law (Code Section 33000), to attract private investment into economically depressed communities. Although ABx1-26 dissolved the Agency in 2012, the land use authorities granted in the Redevelopment Project Area Plans remain effective and will continue to be administered by the DLA.

### *The Chinatown Redevelopment Plan*

The Chinatown Redevelopment Plan designates land uses and specifies the Agency's powers and requirements in Plan implementation. The Redevelopment Plan Area is generally bounded by Cesar E Chavez Avenue to the south, Solano Avenue to the north, Alameda Street to the east, and shares the Downtown Plan Area boundary to the west.

### *The City Center Redevelopment Plan*

The City Center Redevelopment Plan designates land uses, specifies the Agency's powers and requirements in Redevelopment Plan implementation, identifies distinct development areas within the Redevelopment Plan Area (i.e., City Markets, South Park, Historic Downtown), and includes specific requirements for development within the Redevelopment Plan Area. The Redevelopment Plan Area is generally bounded to the south by the I-10; to the west by Figueroa Street, Grand Avenue, and Hill Street; to the north by Second Street; and to the east by Los Angeles Street, San Pedro Street, Stanford Avenue, and Griffith Avenue.

### *The Central Industrial Redevelopment Plan*

The Central Industrial Redevelopment Plan designates land uses and specifies the Agency's powers and requirements in Redevelopment Plan implementation, and includes specific requirements for development within the Redevelopment Plan Area. The Redevelopment Plan Area encompasses most of the area bounded to the south by the I-10; to the west by Stanford Avenue and San Pedro Street; to the north by

Third Street; and to the east by Alameda Street. It also encompasses an irregularly shaped area that is generally bounded by Washington Boulevard to the south, the train tracks paralleling the Los Angeles River to the east, Third Street to the North, and Lemon Street, Wilson Street, and Alameda Street to the west.

*Los Angeles Unified School District (LAUSD) .*

LAUSD currently operates seven K-12 schools in the Downtown Community Plan Area. In addition, LAUSD operates adult education programs and administrative offices within the Downtown Community Plans Area. The LAUSD develops an annual Planning and Development Branch Strategic Execution Plan, which describes goals and progress for school site planning. However, City Planning review and approval are not required prior to LAUSD obtaining necessary permits.

## RELATIONSHIP TO SPECIFIC PLANS AND OVERLAY ZONES

There are several specific plans, supplemental use districts and overlay zones that apply to the Plan area. These planning tools customize the regulations of the Los Angeles Municipal Code to plan the land use of specific geographic areas. The Downtown CPA contains three specific plans, one supplemental use district, and five overlay zones.

*The Alameda District Specific Plan (ADP)*

The Alameda District Specific Plan (ADP) applies to a northeastern portion of the Central City North Community Plan area and includes Los Angeles Union Station. It is generally bounded by Alameda St., North Main St., Vignes St., and the Santa Ana 1-5/101 Freeway. The ADP encourages a pedestrian-oriented and mixed-use business district that is supported by an intermodal transportation center. Encourages hotels, retail, entertainment, housing, cultural, and transit-related functions in medium and high density development.

*The Cornfield Arroyo Seco Specific Plan (CASP)*

The Cornfield Arroyo Seco Specific Plan (CASP) applies to a northeastern portion of the Central City North Community Plan area, just south of the Los Angeles State Historic Park (the Cornfield) and north of the ADP. It establishes four zones to facilitate a mix of light industrial, production, and public-serving uses with new commercial, retail, and residential uses. The zones utilize a system of floor area ratio minimums and density bonus options to incentivize development that provides community benefits, such as affordable housing.

*The Los Angeles Sports and Entertainment District (LASED)*

The Los Angeles Sports and Entertainment District (LASED) Specific Plan applies to the southwest portion of the Central City Community Plan area. It seeks to expand the City's economic base and make Downtown a regional entertainment destination with regulations and incentives to promote tourism and entertainment. The LASED allows for mixed-use, hotel, office, commercial, retail, residential, live theaters, sound stages, and open space uses. It includes streetscape design guidelines and parking strategies for adequate and efficient use of space and resources in Downtown's entertainment district.

*The Broadway Streetscape Master Plan*

The Broadway Streetscape Master Plan applies to Broadway between 1st Street and 12th Street within the Central City Community Plan area. The Streetscape Master Plan was established to create a multi-modal, pedestrian focused street that can support and revitalize the historic theater district. The Streetscape guidelines call for expanded sidewalks with street elements and limited landscaping to enhance pedestrian interest and activity along the street.

### *The Downtown Design Guide Urban Design Standards and Guidelines ("Downtown Design Guide")*

The Downtown Design Guide Urban Design Standards and Guidelines ("Downtown Design Guide") applies to a majority of the Downtown Community Plan area, excluding the Production and Multi-Family Residential areas. The Downtown Design Guide is a set of urban design standards and guidelines to enhance building design and create a high-quality and consistent public realm that emphasizes walkability, sustainability, and transit use in Downtown. The Guide includes standards and guidelines at the Downtown-wide and neighborhood specific levels.

### *The Downtown Street Standards*

The Downtown Street Standards apply to the Central City Community Plan area and were developed and adopted in tandem with the first version of the Downtown Design Guide, in 2009. The Street Standards establish a street hierarchy and guidance to balance traffic flow, pedestrian walkability, bicycle routes, and access to create more context-sensitive, complete streets within Downtown. The document consists of a series of cross sections establishing future curb and property lines, and in some cases additional sidewalk easements.

### *The Broadway Sign Supplemental Use District (Broadway Sign District)*

The Broadway Sign Supplemental Use District (Broadway Sign District) applies to the same portion of Broadway as the Broadway CDO and the Streetscape Master Plan, which is along Broadway between 1st Street and 12th Street. It includes standards for the design, placement, and orientation of signs along Broadway. The Sign District allows and provides guidance for sign types that are currently on Broadway but are not allowed by the existing Code regulation. It also includes an incentive program to spur building activity, revitalization, and to fund streetscape improvements.

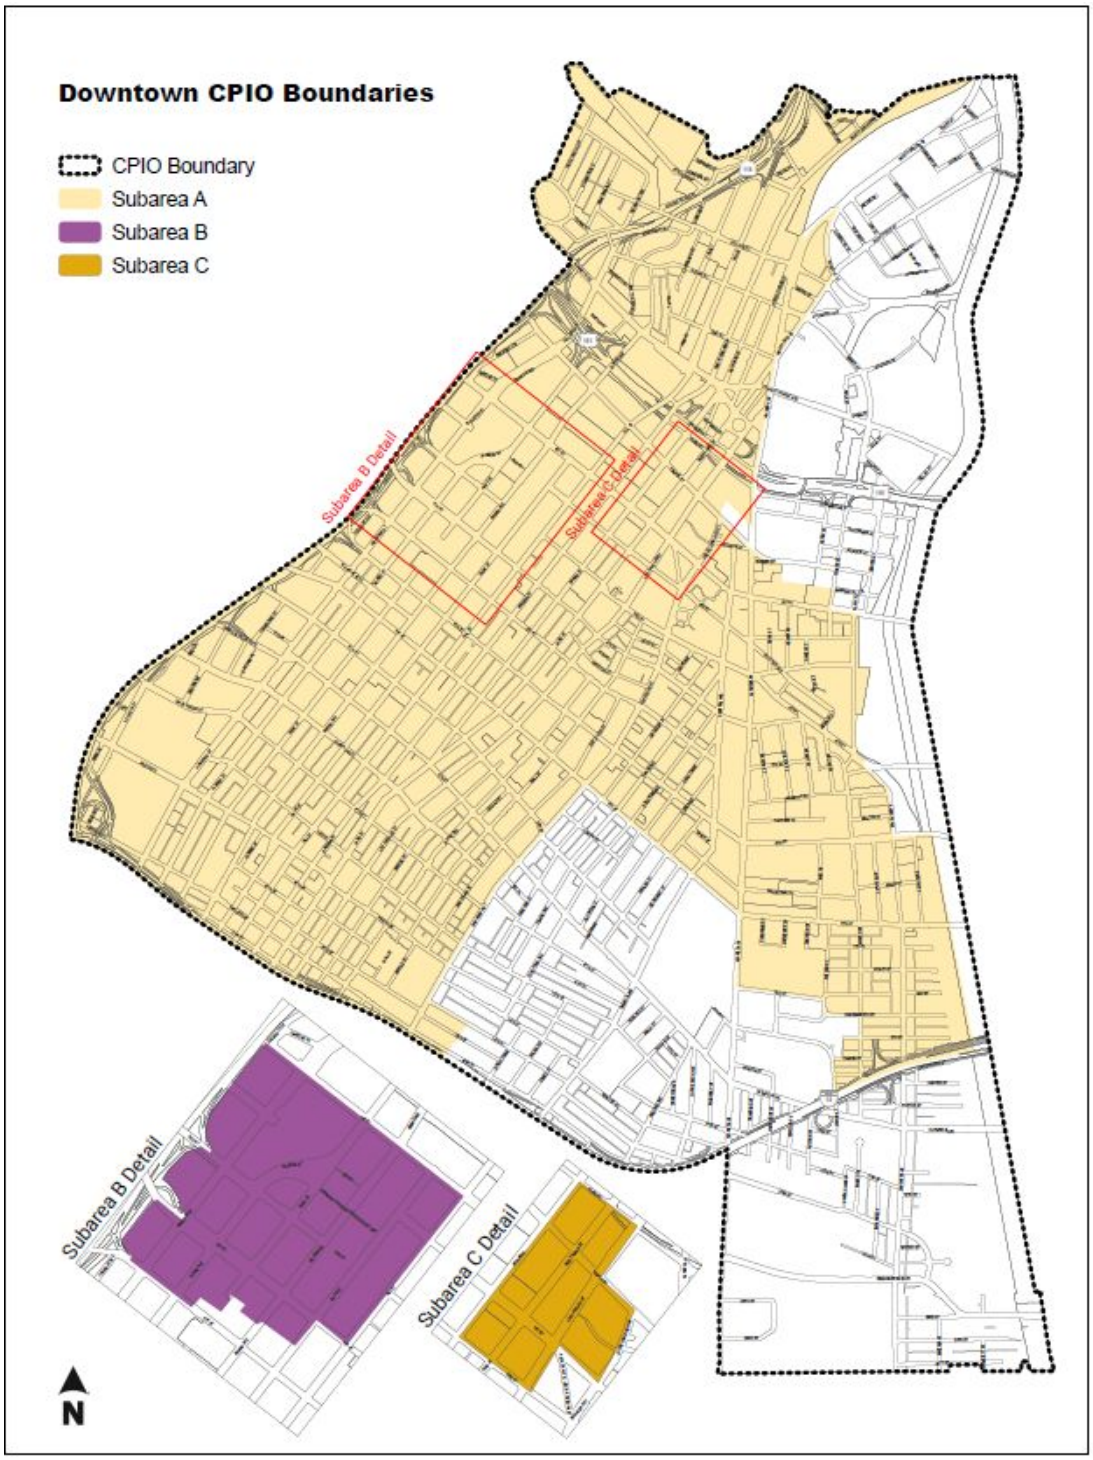
# CHAPTER I – FUNCTION OF THE CPIO DISTRICT

## I –I. Section I-1. DOWNTOWN CPIO DISTRICT AUTHORITY AND BOUNDARIES

Pursuant to Los Angeles Municipal Code (LAMC) Chapter 1A Section 8.2.2, the City Council establishes the Downtown Community Plan Implementation Overlay District (Downtown CPIO District). The boundaries of the Downtown CPIO District are identical to the boundaries shown in Figure 1.

**Figure 1. Downtown Community Plan Implementation Overlay District Boundaries**



## I –II. Section I-2. PURPOSE

The purposes of the Downtown CPIO District are as follows:

**A.** To implement the goals and policies of the Downtown Community Plan.

**B.** To create building floor area and height incentives tailored to the neighborhood context and development patterns.

**C.** To encourage housing that is affordable to a variety of income levels and household types.

**D.** To create approval processes for development projects that enable infill development with positive community impacts.

**E.** To promote access to public open space and community facilities that meet the needs of the community.

**F.** To promote the overall health and sustainability of the community that resides, works, and recreates in the Community Plan Area.

**G.** To preserve and protect neighborhood identity, including protecting cultural and historic resources and distinctive character defining elements of existing urban form.

**H.** To promote strong urban design and ensure that development enhances the aesthetic character of the community; and maintains appropriate land uses.

## I –III. Section I-3. SUBAREAS

The Downtown CPIO District contains three Subareas as shown on Figure 1 and as precisely delineated by solid boundary lines on the CPIO District Boundary Maps, attached to the Ordinance establishing the Downtown CPIO District. The Subareas are contiguous or non-contiguous parcels characterized by common overarching Community Plan themes, goals, and policies, and are grouped by a common boundary. The Subareas are described below.

**Community Benefits Program Subarea A**

The Community Benefits Program (CBP) Subarea A strives to introduce more Mixed-income and 100 Percent Affordable housing, provide access to public open space and community facilities, and facilitate the preservation and rehabilitation of historic resources in the Community Plan Area. This Subarea includes a tiered incentive structure that prioritizes Mixed-income and 100 Percent Affordable Housing. Within the Subarea, unique zones tailor the incentives to the surrounding context, offering greater intensities of FAR and height around fixed rail transit stations and bus corridors, and considering the identity of neighborhoods.

**Bunker Hill Pedestrian Plan Subarea B**

The purpose of Subarea B is to implement the previously adopted Bunker Hill Specific Plan for an integrated network of pedestrian linkages throughout the Bunker Hill area. Subarea B shows the general location of the pedestrian linkages. The network of linkages, and the provisions hereinafter set forth to implement such a network, shall be applicable to all Projects and to all properties within Subarea B.

**Civic Center Development Standards Subarea C**

The purpose of Subarea C is to implement development standards for the Civic Center Master Plan Area. These standards regulate projects that may be built upon City-owned properties located in proximity to City Hall, and aim to achieve an active and world-class Civic Center environment.

## I –IV. Section I-4. DEFINITIONS

**“100 Percent Affordable Housing”** shall mean a project in which 100 percent of the residential dwelling units, excluding any manager unit(s), are Restricted Affordable Units.

**“Above-Moderate Income”** shall mean persons and families whose incomes do not exceed 150 percent of area median income, adjusted for family size.

**"At-Risk Affordable Unit"** shall mean any residential dwelling unit that receives government assistance under prescribed federal, State, and/or local programs, or any combination of rental assistance and is eligible to convert to market rate due to termination (opt-out) of a rent subsidy contract, prepayment of a subsidized mortgage, or expiration of rental restrictions. These assistance programs include, but are not limited to, Housing Choice Vouchers [formerly Section 8], project-based rental assistance, subsidized mortgage programs (e.g., FHA), or expiring rent/deed restrictions with the use of State or local funding programs, including Community Redevelopment Agency Covenants.

**"Community Land Trust"** shall mean a California nonprofit corporation that: (1) has no part of its net earnings inuring to the benefit of any member, founder, contributor, or individual; (2) is neither sponsored by, controlled by, nor under the direction of a for-profit organization; (3) has a corporate membership of adult residents of a particular geographic area as described in the bylaws of the corporation; (4) has a board of directors that: (A) includes a majority of members who are elected by the corporate membership; (B) includes representation by persons occupying and/or leasing any structural improvements on the land; and (C) includes representation by persons residing within the geographic area specified in the bylaws of the corporation who neither lease land from the corporation nor occupy structural improvements

controlled by the corporation; (5) acquires and retains parcels of land, primarily for conveyance under long-term ground leases; (6) transfers ownership of many or all of the structural improvements located on such leased parcels to the lessees; and (7) retains a preemptive option to purchase such structural improvements at a price determined by formula that is designed to ensure that the improvements remain affordable to low and moderate income households in perpetuity.

**"Developer"** shall mean the owner of the Project and, if different from the owner, any person, firm, partnership, association, joint venture, corporation, or any entity or combination of entities which develops or causes to be developed the residential housing project and, if applicable, provides off-site affordable units, together with their successors and assigns, but does not include a lender, any governmental entity or the general contractor working for any developer.

**“Eligible Historic Resources”** shall mean a building, structure, object, site, landscape, or natural feature identified as an individual resource or as a contributor to a historic district under a local, state or federal designation program; or identified as a contributor to an eligible historic through SurveyLA (The Los Angeles Historic Resources Survey), or another historical resource survey, completed after the effective date of the CPIO, and completed by a person meeting the Secretary of the Interior’s Professional Qualification Standards for Historic Preservation and accepted as complete by the Director, in consultation with the Office of Historic Resources (OHR). This term does not include a non-contributor to an eligible historic district.

**“Mixed-income Housing”** shall mean a project comprising a mix of market-rate and Restricted Affordable Units.

**"Project"** Within Subarea A, a “Project” shall mean any construction, erection, alteration of, or addition to a structure that would exceed the Base Floor Area and Base Height allowances authorized under the subject site Form District.

Within Subareas B & C, a “Project” shall mean any activity that requires the issuance of a building, grading, demolition, or change of use permit, unless the activity consists solely of interior tenant improvements, rehabilitation, or repair work.

Within all Subareas, a “Project” shall also mean the installation of any Conventional Plastic Faced Box or Cabinet Sign; any Formed Plastic Faced Box or Injection Molded Plastic Sign, Any Luminous Vacuum Formed Letter Sign, and/or any Animated or Flashing Sign. Furthermore, a “Project” shall also mean the installation of signs on any structure or site that has received approval under LAMC Chapter 1A Section 16.05 following the effective date of this CPIO.

**“Public Benefits”** shall mean improvements, facilities, resources, and services beyond affordable housing for the benefit and enjoyment of the general public, pursuant to LAMC Chapter 1A Section 9.3

**"Restricted Affordable Unit"** shall mean a Dwelling Unit for which rental or mortgage amounts are restricted so as to be affordable to and occupied by Deeply Low, Extremely Low, Low, Moderate, and Above Moderate households, as determined by the Los Angeles Housing and Community Investment Department or its successor agency.

## I –V. Section I-5. RELATIONSHIP TO OTHER ZONING REGULATIONS

**A.** For properties within the boundaries of the Downtown Community Plan, where this CPIO applies, the Citywide Transit Oriented Communities Guidelines (TOC) shall not be superseded by the provisions and requirements contained within this ordinance.

**B.** Nothing in the Downtown CPIO District is intended to override or conflict with any regulations in the LAMC or other ordinance establishing a park or Quimby fee or park or open space dedication requirement, including any provisions related to credits or fee and dedication calculations.

**C.** For projects participating in the Community Benefits Program, Restricted Affordable Units provided through the Affordable Housing Local Incentive Program pursuant to Chapter II, Section 2 shall be deducted from a project's required Affordable Housing Linkage Fee.

**D.** Nothing in this Downtown CPIO District is intended to override or conflict with any regulations in the LAMC that would otherwise require a Conditional Use Permit.

**E.** Nothing in this Downtown CPIO District is intended to override or conflict with any bicycle parking regulations.

**F.** Nothing in this Downtown CPIO District is intended to override or conflict with the regulations set forth in LAMC Chapter 1A Section 9.B.1 that provide bonuses, waivers and incentives for certain affordable housing projects.

**G.** Nothing in this Downtown CPIO District is intended to override or conflict with the regulations set forth in a Community Design Overlay or Sign District applicable to a subject site.

**H.** Any reference to a section of the LAMC made in this CPIO shall be automatically updated in the event that the LAMC is re-numbered, or re-organized.

## I –VI. Section I-6. REVIEW PROCEDURES

**A. Prohibition of Issuance of DBS Permits Prior to CPIO Approval.** The Department of Building and Safety (DBS) shall not issue a permit for any Project as defined in this CPIO within a Downtown CPIO District Subarea (in whole or in part), unless the Project has been reviewed and approved in accordance with this Section I-6.

**B. Filing Requirements for Multiple Approvals.** When an applicant applies for any discretionary approval for a property located (in whole or in part) in a CPIO District Subarea, the applicant shall also apply for a CPIO Approval pursuant to Subsection C, below. A CPIO Adjustment or a CPIO Exception shall be a project adjustment or project exception for purposes of LAMC Chapter 1A Section 13.6, and shall be processed pursuant to the procedures in LAMC Chapter 1A Section 13.6, if applicable.

**C. CPIO Approval.** All Discretionary Projects within a Downtown CPIO District Subarea (in whole or in part), Projects seeking additional development rights within Subarea A, and all projects (ministerial and discretionary) within Subareas C and D shall obtain an Administrative Clearance to demonstrate compliance with the Downtown CPIO District, unless a Director's Determination is required under subsection C.3. An application for a CPIO Approval shall be reviewed and approved pursuant to LAMC Chapter 1A Section 13.5.1, including as its requirements are modified and supplemented below:

1. **Content of Application for a CPIO Approval.** In addition to any other information or documents required under LAMC Chapter 1A Section 13.5.1, an applicant shall provide, at a minimum, two sets of detailed permit drawings and any other exhibits deemed necessary to demonstrate compliance with all applicable provisions of the CPIO District. Each application submitted for a CPIO Adjustment, or a CPIO Exception shall clearly identify and list all of the adjustments and exceptions requested.
2. **Administrative Clearance.** In addition to the requirements in LAMC Chapter 1A Section 13.5.1, the following shall apply:

    a. **Director Approval.** The Director shall grant an Administrative Clearance after reviewing the Project and finding that it is in compliance with all applicable provisions of the Downtown CPIO District as indicated by a plan

stamped by the Department of City Planning.

**b. Non-Appealable Ministerial Approval.** The approval of an Administrative Clearance is not subject to appeal and is not discretionary for purposes of CEQA Guidelines Sections 15060(c)(1) and 15268.

**c. Scope of Review and Non-Conforming Uses.**

**i.** In reviewing a Project for an Administrative Clearance, the Director shall review the Project for compliance with those regulations that are applicable to the proposed scope of construction or use.

**ii.** Non-conforming uses shall comply with LAMC Chapter 1A Section 12.6, except as noted in this ordinance.

**3. Director's Determination**. In addition to the requirements in Section I-6 C.2 above, and LAMC Chapter 1A Section 13.4.5, projects providing Public Benefits under Chapter II – 3 of this CPIO shall file for a Director's Determination.

**a. Community Plan Implementation Overlay Director's Determination - Director Authority with Appeals to the Area Planning Commission.** The Director or the Director's designee shall have initial decision-making authority to grant a CPIO Director's Determination, with an appeal to the Area Planning Commission in accordance with the procedures set forth in LAMC Chapter 1A Section 13.4.5

**b. Limitations.** A Director's Determination shall be solely for the purpose of approving Public Benefits Incentive Programs pursuant to LAMC Chapter 1A Section 9.3.

**c. Findings.** The Director's Determination shall include written findings in support of the determination. In order to approve a proposed project pursuant to this subsection, the Director must find that:

**i.** The project, as approved, is consistent with the purpose and intent of the CPIO and substantially complies with the applicable CPIO regulations;

**ii.** Conditions have been incorporated into the Determination that will ensure the ongoing use or operation of the Public Benefit.

**iii.** The facilities proposed by a project utilizing a Public Benefit Program under Section II – 3 B. Publicly Accessible Outdoor Amenity Space or C. Community Facilities serve the needs of the surrounding residents, employees, and visitors; and do not result in an over-concentration of any one service or amenity.

**d. CEQA.** Approval of a CPIO Director's Determination is a discretionary approval for purposes of CEQA Guidelines Section 15060(c)(1).

**4. CPIO Adjustments**. In addition to the requirements in LAMC Chapter 1A Section 13.6.4, the following shall apply:

**a. Eligible Regulations.** Development regulations contained in Chapter IV of this CPIO are eligible for a CPIO Adjustment pursuant to this Section I-6.C.4. Projects seeking relief from a Subarea regulation that is not eligible (or further eligible) for a CPIO Adjustment may seek relief with a - CPIO Exception.

**b. CEQA.** Approval of a CPIO Adjustment is a discretionary approval for purposes of CEQA Guidelines Section 15060(c)(1).

**5. CPIO Exceptions.** In addition to the requirements in LAMC Chapter 1A Section 13.6.5, the following shall apply:

**a. Eligible Regulations.** Development regulations contained in Chapters III and IV of this CPIO are eligible for a CPIO Exception pursuant to this Section I-6.C.5.

**b. CEQA.** Approval of a CPIO Exception is a discretionary approval for purposes of CEQA Guidelines Section 15060(c)(1).

**c. Supplemental Development Regulations.** All Projects shall comply with all applicable supplemental development regulations in the applicable CPIO Subarea, unless a CPIO Adjustment or CPIO Exception is permitted and obtained or the Project falls within the category of Projects described in Section I-5.G of this CPIO District. Images and figures provided in the CPIO District are illustrative only and are not intended to establish supplemental development regulations.

## I –VII. Section I-7. SIGN STANDARDS

**A. CONCEPTUAL SIGN PLAN** All projects requesting Project Review pursuant to LAMC Chapter 1A Section 13.4.4, shall submit a Conceptual Sign Plan for the entire project and are subject to the standards below.

**1.** The Conceptual Sign Plan shall identify all sign types that can be viewed from the street, sidewalk or public right-of-way. The intent of the Conceptual Sign Plan is to ensure a cohesive, integrated sign program so that all individual tenant signs will contribute to and create strong project identity. The Conceptual Sign Plan shall include:

**a.** A site plan identifying the general location of all signs and showing its location in relation to structures, walkways and landscaped areas; and

**b.** A schematic elevation of each building façade identifying the general placement, size, and sign area of all sign types.

**2.** No permits for individual signs shall be issued until the applicant has submitted detailed sign plans to the Department of City Planning, showing substantial compliance with the Conceptual Sign Plan, including:

**a.** A matrix describing general characteristics of each sign type, sign name or number, illumination, dimensions, and quantity; and

**b.** A scaled elevation of each sign type showing overall dimensions, sign copy, typeface, materials, colors and form of illumination.

**B. Prohibited Signs**

**1.** Within CPIO Subareas A, B, and C, the following signs are prohibited:

**a.** Conventional plastic faced box or cabinet signs;
**b.** Formed plastic faced box or injection molded plastic signs;
**c.** Luminous vacuum formed letters; and
**d.** Animated or flashing signs (real-time information signs are permitted)

**C. Sign Illumination and Animation**

**1.** Within CPIO Subareas A, B, and C, signs shall adhere to the following illumination and animation standards:

**a.** Signs shall use appropriate means of illumination. These include: neon tubes, fiber optics, incandescent lamps, cathode ray tubes, shielded spotlights and wall wash fixtures.

**b.** Signs may be illuminated during the hours of operation of a business, but not later than 2 a.m. or earlier than 7 a.m. Signs for 24-hour uses, such as hotels, are exempt from these limited hours of illumination.

## I –VIII. Section I-8. ENVIRONMENTAL STANDARDS PROCEDURES

The Environmental Standards in Appendix A are included in the Downtown CPIO District to implement the Mitigation & Monitoring Program included as part of the Downtown Community Plan update and reviewed in the City of Los Angeles Downtown Community Plan Environmental Impact Report (Case No. ENV-2017-433-EIR), certified on XX, XX, XXXX.

Any Discretionary Project within the CPIO Boundaries shall comply with all applicable Environmental Standards as set forth in Appendix A, subject to the following rules.

**A. Applicability of Environmental Standards.** A Project does not need to comply with any Environmental Standard that is not relevant to the scope of activities involved with the Project. For example, a Project that proposes only minor façade alterations and no grading shall not be subject to Environmental Standards that apply to grading activities (such as noise and vibration standards). The decision maker, in his or her reasonable

discretion, shall determine those Environmental Standards that apply to a particular Project.

**B.** **Plans.** Compliance with all applicable Environmental Standards listed in Appendix A shall be demonstrated on the plans as project features (that is, features that are physically built into the Project such as an air filtration system) or as operational features listed on a sheet within the plans (that is, features that are carried out either during the construction of the Project, or over the life of the project, such as the use of paints, sealants, and other building materials that yield low air pollutants).

**C.** **Modification of Environmental Standards**. Modifications of Environmental Standards do not require the processing of a CPIO Adjustment or CPIO Exception. The decision maker may modify or dispense with an Environmental Standard listed in Appendix A.

## I –IX. Section I-9. USE OF BEST PRACTICE APPENDICES

The Best Practices in Appendices B, C, D, and E of this CPIO are not mandatory for Projects requiring an Administrative Clearance, Director's Determination, CPIO Adjustment, or CPIO Exception pursuant to Section I-6.C . of this CPIO, or any other Discretionary application filed within the CPIO Boundaries. The Best Practice Appendices provide resources that encourage livable and sustainable development in Downtown Los Angeles.

Nothing in this section, the Downtown CPIO District, or any other applicable citywide design guidelines, shall allow decision makers to approve, deny, or condition a discretionary approval based on these best practices.

## I –X. Section I-10. CEQA CLEARANCE

For purposes of CEQA compliance for subsequent projects approved with a CPIO Approval, including, but not limited to, consideration of a CEQA clearance pursuant to Government Code Section 65457, Public Resources Code Section 21155.4; or CEQA Guidelines, Sections 15183 or 15183.3, the Downtown CPIO District shall operate and be treated as a specific plan, zoning ordinance, and a prior plan level decision for which an EIR was certified.

## I –XI. Section I-11. SEVERABILITY

If any portion, subsection, sentence, clause or phrase of this ordinance is for any reason held by a court of competent jurisdiction to be invalid, such a decision shall not affect the validity of the remaining portions of this ordinance. The City Council hereby declares that it would have passed this ordinance and each portion or subsection, sentence, clause and phrase herein, irrespective of the fact that any one or more portions, subsections, sentences, clauses or phrases be declared invalid.

# CHAPTER II – COMMUNITY BENEFITS STANDARDS SUBAREA

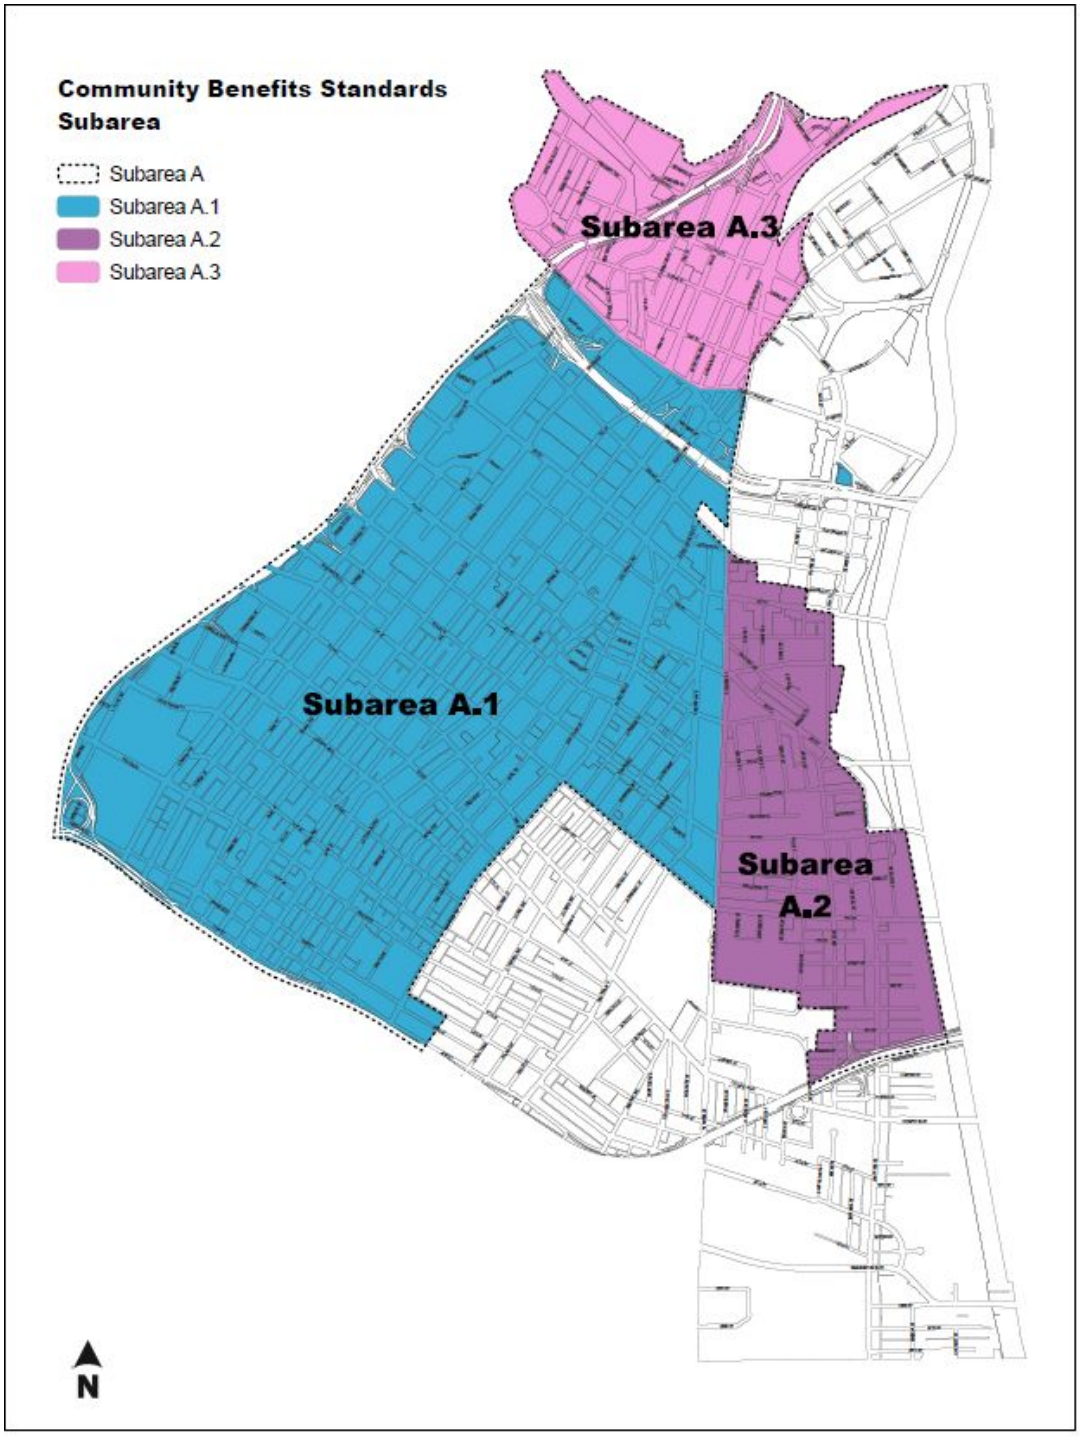
## COMMUNITY BENEFITS PROGRAM SUBAREA

A – DOWNTOWN COMMUNITY BENEFITS PROGRAM SUBAREA A

## OVERVIEW

The Community Benefits Program (CBP) Subarea A strives to introduce more affordable housing development, provide access to public open space and community facilities, and facilitate the preservation and rehabilitation of historic resources in the Plan Area. This Subarea includes a tiered incentive structure that prioritizes Mixed-income and 100 Percent Affordable housing. Within the Subarea, there are three subsections that tailor the incentives to the surrounding context, offering greater intensities of FAR and height around fixed rail transit stations and bus corridors, and reinforcing the identity of neighborhoods.

**Figure 2. - Downtown Community Benefits Program Subarea Map**



## II – I. 1. COMMUNITY BENEFITS STANDARDS

**A. Relief.** Requirements of this Chapter shall not be eligible for a CPIO Adjustment pursuant to Section I-6 C.4 or a CPIO Exemption Section I-6 C.5.

**B. Pro Rata Share.** Projects may seek less than the full increment of FAR available through the incentives in this Chapter provided that they provide a proportional share of community benefits and meet the minimum requirements below.

## II – II. 2. LOCAL AFFORDABLE HOUSING INCENTIVE PROGRAM PURSUANT TO LAMC CHAPTER 1A 9.3.2

### A. Requirements

1. **On-Site Restricted Affordable Units**. Within the boundaries of this CPIO Subarea, a Housing Development shall provide Restricted Affordable Units at rates outlined in Set E of LAMC Chapter 1A Section 9.3.2.B. The minimum number of Restricted Affordable Units shall be calculated based upon the base number of units in the final project.

2. **Calculation of base residential units**. To determine the number of base units for purposes of calculating the required number of Restricted Affordable Units pursuant to A.1 above, follow the steps outlined below:

    **a.** Calculate the average unit size in the proposed project by dividing the total proposed residential square feet by the total number of proposed units.

    **b.** Calculate the total base residential square feet by taking the lesser of the following:

        **i.** The total square feet allowed under the Base Maximum FAR; or

        **ii.** The total proposed residential square feet in the project

    **c.** Divide the base residential square feet as calculated in (b) by the average unit size in (a). This is the base number of units that shall be used for purposes of determining the number of affordable units.

    **d.** For purposes of this calculation, in no instance shall the average unit size be greater than 1,500 square feet.

    **e.** A project may adjust the size of units and residential square feet up to 10% without recalculating base units after an application has been deemed complete.

**B. Off-site Construction**. The affordability provisions of this Section may be satisfied by constructing off-site affordable units at the following rate:

No less than the same number of on-site affordable units, at the same or greater mix of unit type and affordability levels as provided in Section 11-2A, off-site units must be provided within the boundaries of the Downtown Community Plan Area. The off-site units created pursuant to this paragraph must be on a site that is zoned for residential development at a density to accommodate at least the number of otherwise required units; is suitable for development of the units in terms of configuration, physical characteristics, location, access, adjacent uses and other relevant planning and development criteria; and environmental review has been completed to the satisfaction of the City prior to acceptance of the site by the City. The development of off-site affordable units shall include integration of community space and services as required by the Housing and Community Investment Department for comparable affordable housing development. The first Certificate of Occupancy for the off-site units shall be issued prior to or concurrent with the first Certificate of Occupancy for the original Project. In no event shall the Certificate of Occupancy for the market rate units for the original project be issued prior to the Certificate of Occupancy for the affordable off-site units. Individual affordable units constructed as part of an off-site project under this Section shall not receive development subsidies from any Federal, State or local program established for the purpose of providing affordable housing, and shall not be counted to satisfy any affordable housing requirement for the off-site development. Other units in the same offsite project may receive such subsidies. In addition, subsidies may be used, only with the express written permission by the Department of Housing and Community Investment, to deepen the affordability of an affordable unit beyond the level of affordability required by this Section.

**C. Off-site Acquisition.** The affordability provisions of this Section may be satisfied by the acquisition of property containing At-Risk Affordable Units and converting the units to non-profit, Community Land Trust, and/or tenant ownership prior to issuance of the Certificate of Occupancy for the original Project. Prior to transferring ownership to a qualified entity, the At-Risk Affordable Units shall achieve a minimum of a C2 rating based on the Fannie Mae Uniform Appraisal Dataset Property Condition Ratings, as assessed and certified by the Housing and Community Investment Department (HCID), or as required by HCID to be completed by the Developer and subsequently certified by HCID. Any entity taking ownership of At-Risk Affordable Units pursuant to this Section shall record an affordability covenant guaranteeing affordability to Deeply Low, Extremely Low, Very Low, Lower, or Moderate Income Households. The number of At Risk Affordable Units that must be acquired and converted to non-profit or tenant ownership under this subdivision shall be as follows:

No less than the same number of on-site affordable units, at the same or greater mix of unit type and affordability levels as provided in Section II – 2A of this CPIO District; and

Properties acquired must be located within the boundaries of the Downtown Community Plan Area.

All other units located on the subject property shall be restricted to no more than 150% AMI.

In no circumstances shall existing tenants be evicted from existing units. If existing tenants do not meet the income restriction above, the unit shall not be income restricted until the unit is vacant.

**D. In-Lieu Fee.** The affordability provisions of this Section may be satisfied by the payment of a fee to the City of Los Angeles Downtown Affordable Housing Trust Fund in lieu of constructing the affordable units within the Project. The in lieu fee shall be determined by the City based on the following:

The number of units equivalent to 1.1 times the required number of on-site affordable units pursuant to Section II-2A, in the same proportion of affordability, multiplied by the applicable Affordability Gap, as defined in LAMC Chapter 1A Section 13.3.1.E.4.

The fee is due and payable to the City of Los Angeles Downtown Affordable Housing Trust Fund at the time of and in no event later than issuance of the first building permit, concurrent with and proportional to project phases. The Developer shall have an option to defer payment of all or a portion of the fee upon agreeing to pay a Deferral Surcharge, with the fee and the Deferral Surcharge due and payable at the time of and in no event later than issuance of the Certificate of Occupancy. The Deferral Surcharge will be assessed at the Wall Street Journal Prime Rate plus 200 basis points at the time such fee is due, at the issuance of the building permit. The Deferral Surcharge fee shall be deposited into the Downtown Affordable Housing Trust Fund and accounted for and used as provided in Section (c).

**E. Dwelling Unit Mix and Location.** For sites located in Subarea A.3, a minimum of 30% of the total dwelling units for an Eligible Housing Development shall be two bedrooms or greater.

**F. Additional Incentives.** In addition to the FAR and height bonus identified in LAMC Chapter 1A Section 9.3.2, a Housing Development Project shall be granted two additional incentives.

**Building Width.** See LAMC Chapter 1A Section 2.C.6

**a.** For all Eligible Housing Development Projects, up to a 20% increase in maximum building width may be granted.

**Lot Coverage.** See LAMC Chapter 1A Section 2.C.2

**b.** For all Eligible Housing Development Projects, up to a 20% increase in maximum lot coverage may be granted.

**Lot Width.** See LAMC Chapter 1A Section 2.C.1

**c.** For all Eligible Housing Development Projects, up to a 20% decrease in required minimum lot width may be granted.

**Averaging of Floor Area.** See LAMC Chapter 1A Section 2.C.4.

**d.** A Housing Development Project that is located on two or more adjacent parcels may average the Floor Area over the project site provided that:

**i.** The proposed use is permitted by the Use District of each parcel; and

**ii.** No further lot line adjustment or any other action that may cause the Housing Development Project site to be subdivided subsequent to this grant is permitted

**II – III. 3. PUBLIC BENEFITS INCENTIVE PROGRAMS PURSUANT TO LAMC CHAPTER 1A Section 9.3 to promote the production of improvements, facilities, resources, and services beyond affordable housing for the benefit and enjoyment of the general public.**

**A. Transfer of Development Rights for Historic Preservation.**

1. **Purpose**. The purpose of the Transfer of Development Rights program is to facilitate the preservation of Historic Resources within Subarea A.2, while enabling development rights to be utilized on more appropriate sites.
2. **Applicability**. The procedures contained in this subsection apply exclusively to properties within Subarea A.2 subject to the eligibility requirements and other regulations below.
3. **Eligibility**. A transfer of unused Floor Area, including Bonus FAR, from a Donor Site to a Receiver Site is permitted, provided the transfer is in conformance with the following rules for transfer:
   - **a.** The Donor Site is designated as a Los Angeles Historic-Cultural Monument, a Contributing Structure to a City Historic Preservation Overlay Zone, is listed in or formally determined eligible for the California Register of Historical Resources or the National Register of Historic Places, or is identified as a contributor to a historic district or individual resource by SurveyLA, or another historical resource survey completed, completed after the effective date of the CPIO by a person meeting the Secretary of the Interior's Professional Qualification Standards for Historic Preservation and accepted as complete by the Director, in consultation with the Office of Historic Resources (OHR).
   - **b.** The Donor Site has unused Floor Area under its Base FAR and/or Bonus FAR pursuant to Article 2 (Form).
   - **c.** A Receiver Site may receive all available unused Floor Area from the Donor Site, including the Donor Site's Bonus FAR, at a 1:1 ratio (i.e., for every square-foot transferred from a Donor Site a receiver Site gets one square-foot) up to the receiver Site's allotted Bonus FAR.
   - **d.** The receiver site shall not demolish any Historic resource, as defined above.
4. **Process**. To utilize a Transfer of Development Rights, an application must be filed pursuant to LAMC Section 13.4.5 (Director Determination). In addition, the following requirements shall apply:
   - **a.** The applicant shall consult with the Department of City Planning, Office of Historic resources to identify, with respect to the Donor Site, the significant

historic features that are required to be maintained, and to identify any rehabilitation work required to be completed.

**b.** A Preservation Plan and easement, pursuant to Subdivision e.2. below, shall be completed prior to the completion of the Director Determination process.

**c.** Following the issuance of a Director Determination, and prior to the issuance of building permits for a project utilizing a Transfer of Development Rights, all fee owners of the Donor Site(s) and receiver Site(s) involved shall execute a covenant and agreement in a form designed to run with the land and be binding on future owners, assigns and heirs and which is satisfactory to the Department of City Planning. The applicant shall record the covenant in the county recorder's Office and shall file certified copies with the Departments of City Planning and Building and Safety.

- **i.** Donor Site Covenant: The covenant on a Donor Site shall acknowledge the reduced Floor Area to the extent unused permitted Floor Area was transferred to a receiver Site(s), and the location of the receiver Site(s).
- **ii.** Receiver Site Covenant: The covenant on a receiver Site shall acknowledge the increased Floor Area to the extent unused permitted Floor Area was transferred from a Donor Site(s), and the location of the Donor Site(s).
- **iii.** Covenant Applicability: The covenants shall apply as long as the transferred Floor Area is being utilized by the Receiver Site. If the Receiver Site is no longer utilizing the transferred Floor Area, the owner of the Receiver Site may apply to terminate the covenant.

**d.** Preservation Plan and Easement: The Donor Site shall execute a Preservation Plan and easement, with the following minimum standards:

i. The Preservation Plan and easement shall be executed with the Department of city Planning, Office of Historic resources or a qualified non-profit Historic Preservation Organization, or other entity of the city's choosing, and;

ii. The Preservation Plan and easement shall address, at a minimum:

1) Maintenance of the resource, the property, and significant historic features;
2) Additions and alterations to the resource and/or significant elements of any building and the property;
3) Demolition of the resource and/or significant elements of any building and the property;
4) Required rehabilitation work to any significant historic features;
5) Required rehabilitation work must be completed within 10 years of the recordation of the Preservation easement.
6) Inspections to ensure compliance with the Preservation easement. Inspections must occur at minimum once every 5 years, however the number of inspections may be increased as part of the Preservation Plan and easement;
7) Other standards and requirements as required by the Director of Planning;

8) Fines and penalties for violating any section of the Preservation Plan and easement.The Preservation Plan and easement shall apply as long as the transferred Floor Area is utilized on the receiver Site.If the owners of the Historic resource that is the subject of the Preservation Plan and easement have violated the Plan and easement, the owners of the resource shall pay a fine equal to ten (10) times the value of the application fee and cumulative inspection fees paid.

**II – IV. 4. Publicly Accessible Outdoor Amenity Space pursuant to LAMC Chapter 1A 9.3.3.**

**A.** For every additional 4% of lot area dedicated as publicly accessible open space, above the subject site's required Lot Amenity Space, eligible projects may obtain an additional 1.0:1 FAR for either of the following:

**1.** Land dedicated for public open space, in consultation with the Department of Recreation and Parks.

**2.** On-site publicly accessible open space, constructed in accordance with the requirements listed below:

**a.** At least one public restroom shall be provided within or adjacent to and directly accessible from the publicly accessible open space. Signage shall indicate that the restroom is available for public use.

**b.** At least one of the amenity options listed below shall be provided within or adjacent to the publicly accessible open space:

i. Outdoor exercise equipment available for public use
ii. Sport courts available for public use
iii. Dog run available for public use
iv. Children's play area available for public use
v. Community garden available for public use

**c.** At least 20% of the publicly accessible open space shall be shaded. Percentage shading shall be the shadow cast on the publicly accessible open space measured at noon (12:00 p.m.).

**II – V. 5. Community Facilities pursuant to LAMC Chapter 1A 9.3.4**

**A.** For every 2.5% of incremental bonus floor area above a minimum of 5,000 square feet, dedicated to one of the following, eligible projects may obtain an additional 1.0:1 FAR:

**1.** LAUSD or public charter Schools and public Libraries pursuant to LAMC Chapter 1A Section 9.3.4.B.5

**2.** Social Services pursuant to LAMC Chapter 1A Section 9.3.4.B.6

**3.** Public facilities pursuant to LAMC Chapter 1A Section 9.3.4.B.7

**4.** Regional Mobility Hubs as specified in the Mobility Hubs Reader's Guide

**B.** For sites located in Subarea A.2, Employment Centers, projects in which a minimum of 50% of the total Floor Area, inclusive of any bonus floor area, contains non-residential uses, excluding uses in the Eating and Drinking Establishments, Personal Services, and Retail Sales use groups, may obtain additional floor area up to 4.0:1 FAR.
On-site provision of Child Care services pursuant to LAMC Chapter 1A Section 9.3.4.B.1

1. A Housing Development must fully utilize the Local Affordable Housing Incentive Program pursuant to LAMC Chapter 1A 9.3.2 before obtaining Floor Area through this incentive.

**II – VI.** **6. Additional On-Site Restricted Affordable Units.**

**A.** A Housing Development may exceed the bonus FAR received through the Local Affordable Housing Incentive Program up to the maximum bonus FAR by an additional 1.0:1 FAR for each increase in the amount of on-site restricted affordable units according to the following percentages: 3% Deeply Low, Extremely Low Income, or Very Low Income; or 4.5% Low Income, Moderate Income (for sale or rent), or Above Moderate Income (for sale or rent).

**II – VII.** **7. Height Incentives for non-residential projects.** A non-residential project receiving at least 1.0:1 FAR through any of the Public Benefits Incentive Programs above shall be eligible for the maximum bonus height in the Form District.

**II – VIII.** **8. Community Benefits Fund.** Projects that have satisfied minimum onsite or commensurate benefits under Sections II-III through II-V, may achieve additional floor area by submitting payment to a Community Benefits Fund. *Procedures involving the implementation of the Community Benefits Fund are forthcoming. (See Program P21 of the Community Plan Text for additional information).*

**A.** For Housing Development Projects, a project must meet the requirements of the Local Affordable Housing Incentive Program and provide Public Benefits up to an FAR equivalent to one-half of the delta between 1.35 times the Base Maximum FAR, and the Bonus Maximum FAR.

**B.** For non-residential projects, a project must provide Public Benefits up to an FAR equivalent to one-half of the delta between the Base Maximum FAR, and the Bonus Maximum FAR.

**II – IX.** **9. Buildable Area Calculation.** For a project on a lot designated, in whole or in part, as Transit Core by the General Plan Land Use Map the Maximum Bonus Floor Area Ratio shall be calculated by including the lot area plus the area between the exterior lot lines and the centerline of any abutting public right-of-way. For a development project to be eligible:

**A.** A Housing Development must fully utilize the Local Affordable Housing Incentive Program pursuant to LAMC Chapter 1A 9.3.2

**B.** A non-residential project must obtain at least 1.0:1 FAR through any of the Public Benefits Incentive Programs above.

**II – X.** **10. Project Review Threshold.** For a project participating in the Community Benefits Program that meets the minimum requirements of Chapter II above, the threshold for project review pursuant to LAMC Chapter 1A Section 13.4.4 shall be five hundred residential dwelling units or 500,000 square feet of non-residential development.

# CHAPTER III – BUNKER HILL DEVELOPMENT STANDARDS SUBAREA

## BUNKER HILL DEVELOPMENT STANDARDS SUBAREA

B – BUNKER HILL DEVELOPMENT STANDARDS SUBAREA B

## OVERVIEW

The purpose of this Subarea is to maintain an integrated network of pedestrian linkages throughout the Bunker Hill area, as initially established under Ordinance 182576. Figure 3 shows the general location of the pedestrian linkages. The network of linkages, and the provisions hereinafter set forth to implement such a network, shall be applicable to all projects and to all properties within the Subarea, as more particularly designated in Figure 1.

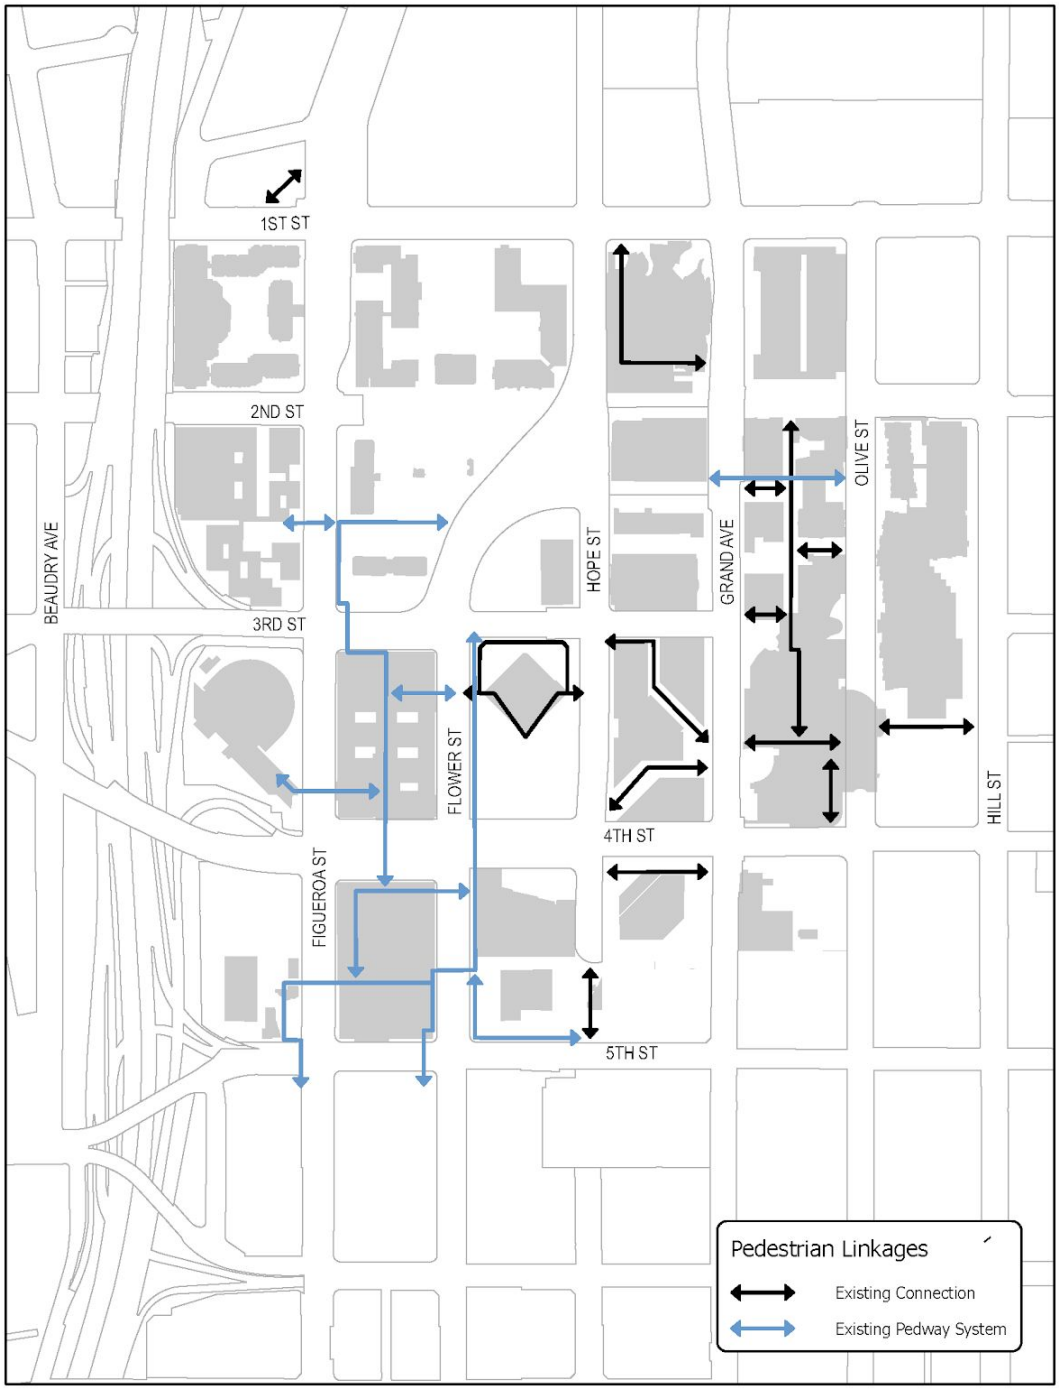
**III – I.** **Maintenance of Existing Easements for Pedestrian Walkways**. Existing public easements for Pedestrian Walkways must be maintained unless an equivalent pedestrian easement is provided, subject to the Director's approval. Existing public easements shall be maintained in accordance with the following:

**A.** The Pedestrian Corridor shall be open to the public between the hours of 5 a.m. and 10:30 p.m., but may be closed outside of such hours.

**B.** The use of any components of the Pedestrian Corridor by the public shall not be revoked by the owner of any building without the prior written approval of the Director and the City Engineer. This Section does not supersede the City's right-of-way vacation process. Such approval shall be given only if (1) the buildings or other improvements to be served by such components have been demolished, or (2) a particular component presents a danger to public safety.

**1.** Any changes in the approximate location of the Pedestrian Corridor shall be subject to the Director's approval upon a finding that any such change will provide equal or better pedestrian access and safety.

**Figure 3. – Bunker Hill Pedestrian Linkages**



# CHAPTER IV – CIVIC CENTER DEVELOPMENT STANDARDS SUBAREA

## CIVIC CENTER DEVELOPMENT STANDARDS SUBAREA

C – CIVIC CENTER DEVELOPMENT STANDARDS SUBAREA C

## OVERVIEW

The purpose of this is to implement development standards for the Civic Center Master Plan Area. These standards regulate projects that may be built upon City-owned properties located in proximity to City Hall, and aim to achieve an active and world-class Civic Center environment. Additionally, these standards ensure that new development responds to the surrounding context, especially Los Angeles City Hall.

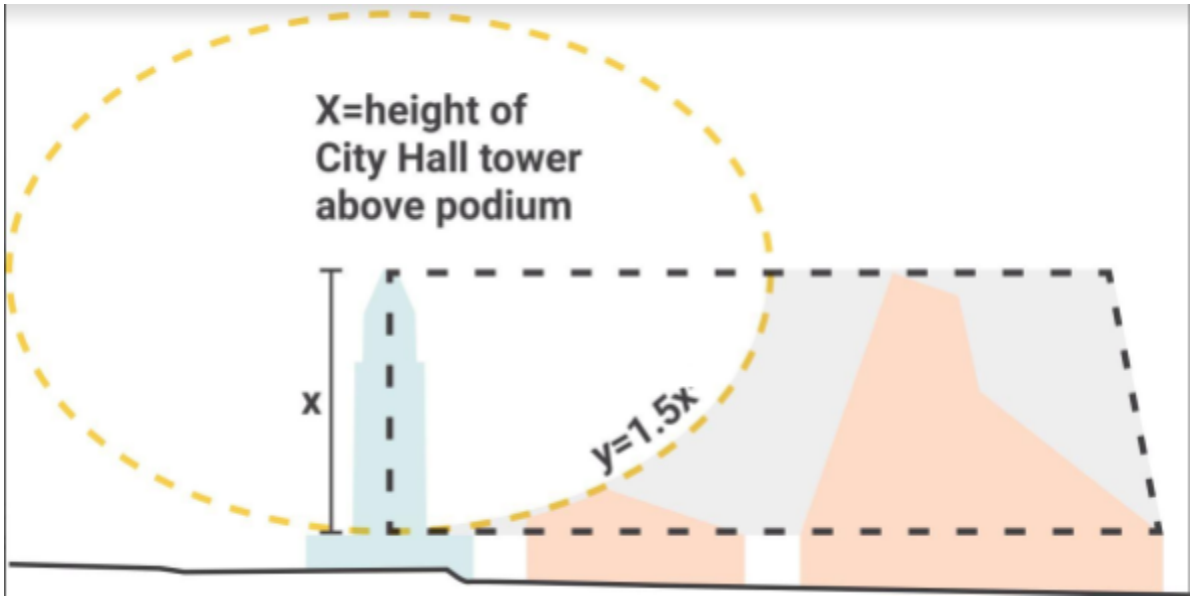
**IV – I. Scale and Massing of New Development. New development in the Civic Center Subarea shall** respect City Hall's prominence as the District's iconic building by complying with the following development standards:

**A. Building Height**

**1.** No portion of any building shall exceed the absolute height of Los Angeles City Hall.

**2.** In addition to the general height limit, buildings are subject to a height limit relative to their distance to City Hall's tower. Buildings shall not exceed an elliptical height plane as described by Figure 4 below. The elliptical height plane has a height-to-width ratio of one times City Hall's tower height by one and a half times said height.

**Figure 4. Elliptical Height Plane.**



**IV – II. Transfer of Floor Area.** Any owner(s) of a legally defined lot located within Subarea A may transfer unused permitted floor area to another legally defined lot within Subarea C, pursuant to the procedures of this section.

**A. Floor Area.** Total floor area in the Civic Center Subarea shall not exceed a ratio of 6.5:1. Individual sites within the subarea may exceed a floor area ratio of 6.5:1 through a transfer of floor area.

**B. Limitation.** Any project constructed with transferred floor area must comply with all regulations set forth in this Subarea.

**C. Procedures.** Projects seeking the transfer of unused permitted floor area, within the floor area cap, shall apply for an Administrative Clearance pursuant to the provisions of Section I-6 C.2 of this CPIO.

# APPENDIX A – ENVIRONMENTAL STANDARDS

## OVERVIEW

As described in Section I-8 of the CPIO District, these Environmental Standards are included to implement the Mitigation & Monitoring Program included as part of the Downtown Community Plan update and reviewed in the Downtown Environmental Impact Report (Case No. ENV-2017-433-EIR), certified by the City Council.

In addition to Projects in Subareas that are required to comply with these Environmental Standards, any other discretionary project in the boundaries of the Downtown Community Plan Area that seeks to rely on the Downtown EIR for its CEQA clearance (including through tiering, preparing an addendum, supplemental EIR or a statutory infill exemption), may incorporate or impose the following Environmental Standards on the project. Compliance may be achieved through covenant, conditions, plan notations, or other means determined reasonably effective by the Director of Planning or the decision-maker.

[MITIGATION MEASURES / ADDITIONAL ENVIRONMENTAL STANDARDS FORTHCOMING]

ARTICLE 1.

# INTRODUCTORY PROVISIONS

# PREFACE

This Chapter 1A of the Los Angeles Municipal Code serves as the new Zoning Code, a comprehensive update of the City's zoning system. The new Zoning Code will be applied incrementally on a geographic basis through the update of the City's community plans. In drafting the revised plans, the new zoning tools provided in this Chapter 1A will be applied to properties within each community plan area.

Eventually, Chapter 1A will supercede and serve as the only Zoning Code for Los Angeles. However in the interim, until all the community plans have been updated and properties remapped using the new zoning system, properties in community plan areas not yet updated will be regulated by the provisions of the Zoning Code found in existing Chapter 1 . Only when the entire City has been rezoned using the new zoning in this Chapter 1A will Chapter 1 be removed from the Los Angeles Municipal Code.

## SEC. 1.3.1. OPENING PROVISIONS

### A. Title

This document is the "Zoning Code of the City of Los Angeles," and is referred to or cited throughout the document as "this Chapter". This Chapter is a part of the Los Angeles Municipal Code which is referred to or cited throughout the document as "this Code."

### B. Intent

**1.** The intent of this Chapter is to implement the City's General Plan, Community Plans, and any other policy documents pertaining to planning, land use, and urban design.

**2.** This Chapter regulates the development and uses allowed on property subject to this Chapter.

**3.** This Chapter is intended to:

**a.** Provide zoning options that realize a wide variety of community visions established in plans throughout the City.

**b.** Provide clear standards and consistent procedures for appropriate and effective public involvement in land use and development decisions.

**c.** Promote sustainable building and site design practices.

**d.** Provide standards for compatible transitions of use, building scale, and height between existing and new development.

**e.** Provide building form and site design standards that address the public aspects of private development and how building form, placement, and uses contribute to the quality of the public realm.

**f.** Provide access and parking standards that appropriately balance a wide variety of pedestrian and vehicular needs and result in safe pedestrian environments of the highest quality.

**g.** Promote sustainable building, site, and landscape design practices that advance the livability, function, and beauty of Los Angeles.

**h.** Provide opportunities for diverse housing options.

**i.** Provide standards for a variety of development patterns that emphasize connectivity between our mobility networks.

## SEC. 1.3.2. APPLICATION OF THIS CHAPTER

### A. Territorial Application

1. This Chapter refers only to the omission or commission of acts within the territorial limits of the City and that territory outside of this City over which the City has jurisdiction or control by virtue of the Constitution, Charter or any law, or by reason of ownership or control of property.

2. *Article 13* (Administration) applies to all land use and development in the City, including those areas in which Chapter 1 (General Provisions and Zoning) of this Code is still in effect. The remainder of this Chapter applies to development with zone designations set out in this Chapter, and does not include those areas in which Chapter 1 (General Provisions and Zoning) of this Code is still in effect.

3. Chapter 1 (General Provisions and Zoning) of this Code does not apply to those areas in which this Chapter is applicable, unless expressly stated in this Chapter.

### B. Required Conformance

1. All buildings, structures or land, in whole or in part, shall be used or occupied in conformance with this Chapter.

2. Any Project Activity, as outlined in *Sec.14.1.17.* (Project Activities), in whole or in part, shall be done so in conformance with this Chapter.

3. The provisions of this Chapter apply to all buildings, structures or land owned, operated or controlled by any person, corporation or to the extent permitted by law, or governmental agency.

4. In the event that any provision of the Chapter conflicts with Article 7 (Fire Code) of Chapter 5 (Public Safety and Protection) of this Code, Article 7 (Fire Code) of Chapter 5 (Public Safety and Protection) of this Code shall prevail.

### C. Certificate Of Occupancy

No vacant land shall be occupied or used, except for agricultural uses, and no building erected or structurally altered shall be occupied or used until a certificate of occupancy shall have been issued by the Superintendent of Building.

#### 1. Certificate of Occupancy for a Building

**a.** A certificate of occupancy for a new building or the enlargement or alteration of an existing building shall be applied for coincident with the application for a building permit. The certificate of occupancy shall be issued after the request for it has been made in writing to the Superintendent of Building after the erection, enlargement or alteration of the building or part of the building has been completed in conformity with the provisions of these regulations. Pending the issuance of a regular certificate, a temporary certificate of occupancy may be issued by the Superintendent of Building for a period not to exceed

six months, during the completion of alterations or during partial occupancy of a building pending its completion. Such temporary certificate shall not be construed as in any way altering the respective rights, duties, or obligations of the owners or of the City relating to the use or occupancy of the premises or any other matter covered by this Chapter, and such temporary certificate shall not be issued except under such restrictions and provisions as will adequately insure the safety of the occupants.

**b.** No excavation for any building shall be started before application has been made for a certificate of occupancy.

### 2. Certificate of Occupancy for Off-Site Parking, Alleys, Loading Zones, & Residential Planned Developments

**a.** Whenever the automobile parking spaces which are required for a building by the provisions of this Chapter, are provided on a lot other than the one on which the building is located, the certificate of occupancy for said building shall be valid only while such parking spaces are being so maintained and shall bear a notation to that effect. Said certificate shall be kept posted in a conspicuous place in the building. The Superintendent of Building shall keep a record of each lot on which required automobile parking spaces are provided for a building located on another lot, and whenever the Superintendent of Building finds that such automobile parking spaces are no longer so maintained, the Superintendent of Building shall notify the persons having custody of the building of that fact. If at any time such automobile parking spaces are not being maintained, the certificate of occupancy shall automatically be canceled and said building shall not thereafter be occupied or used until the required automobile parking spaces are again provided and a new certificate is issued.

**b.** Whenever a lot abutting a public alley in a Commercial or Commercial-Mixed Use District is developed and used solely for dwelling or apartment house purposes with no more than 20 dwelling units on the lot and no loading space is provided, the certificate of occupancy for any building thereon shall be valid only while all the buildings on said lot are maintained for said use and the certificate shall bear a notation to that effect. If at any time any of the buildings on said lot are structurally altered or enlarged, or the use thereof is changed to a hospital, hotel, institution, commercial or industrial purposes, or a dwelling or apartment house so as to exceed 20 dwelling units on the lot, the certificate shall automatically be canceled and none of the buildings on said lot shall thereafter be occupied or used until the required loading space is provided and a new certificate is issued.

**c.** Wherever authority is granted to permit the sale of a lot in a residential planned development contingent upon the possession of an interest in common areas and facilities which are appurtenant to said lot, the Certificate of Occupancy for buildings on said lot shall be valid only while said interest is held by the owner. Said interest may be through shares of stock or voting membership in an owners association.

### 3. Certificate of Occupancy for Land

A certificate of occupancy for the use of vacant land or a change in the character of the use of land, including the construction of tennis or paddle tennis courts, as herein provided, shall be applied for before any such land shall be occupied or used for any purpose except that of tilling the soil and the growing therein of farm, garden or orchard products; and a certificate of occupancy shall be issued after the application has been made, provided such use is in conformity with the provisions of this Code.

### 4. Certificate of Occupancy - Contents - Filing Fee

The certificate of occupancy shall state that the building or proposed use of a building or land conforms to the provisions of this Chapter. A record of all certificates shall be kept on file in the office of the Superintendent of Building, and copies shall be furnished, on request, to any person having a proprietary or tenancy interest in the building or land affected. A fee shall be charged for each original certificate of occupancy as established in Chapter 9 (Building Regulations) of this Code.

### 5. Plats

All applications for a certificate of occupancy shall be made on a form to be furnished by the Superintendent of Building, and shall contain accurate information and dimensions as to the size and location of the lot, the size and location of the buildings or structures on the lot, the dimensions of all yards and open spaces, and such other information as may be necessary to provide for the enforcement of these regulations. Where complete and accurate information is not readily available from existing records, the Superintendent of Building may require the applicant to furnish a survey of the lot prepared by a licensed surveyor. The applications and plats shall be kept in the office of the Superintendent of Building, and the duplicate copy shall be kept at the building at all times during construction.

### 6. Recorded Agreements

Whenever a recorded agreement(s) is required as part of the approval of a project as a prerequisite to the issuance of the required building permit or certificate of occupancy, the owner(s) of said lot(s) shall record an agreement in the Office of the County Recorder of Los Angeles County, California, as a covenant running with the land for the benefit of the City of Los Angeles, providing that such owner or owners shall continue to maintain conformance with such agreement(s) so long as the building or use they are intended to serve is maintained.

## D. Interpretation

### 1. Control Over Less Restrictive Laws and Regulations

Unless otherwise stated, if any condition or requirement imposed by this Chapter is more restrictive than a condition or requirement imposed by any other City law, rule or regulation of any kind, the more restrictive condition or requirement governs.

#### 2. State & Federal Law

This Chapter shall comply with State and Federal law.

#### 3. Text and Graphics

Illustrations, graphics, and photographs are included in this Chapter only to assist users in understanding the intent and requirement of the text. In the event that a conflict occurs between the text of this Chapter and any illustrations, graphics, or photographs, the text shall prevail.

#### 4. Effect of Heading

See Sec. 11.00.(f) (Heading, Effect of) of Chapter 1 (General Provisions and Zoning) of this Code.

#### 5. References to Other Laws

In addition to the provisions of Sec. 11.05. (Effect of Renumbering or Redesignation of Provisions or Sections in Statutes or Codes of the State of California Which Are Referred to in the Los Angeles Municipal Code) of Chapter 1 (General Provisions and Zoning) of this Code, whenever a provision of this Chapter refers to any other part of the Chapter or to any other law, the reference will be deemed to apply to any subsequent amendment of that law.

### E. Effect of Adoption on Past Actions and Obligations

See Sec. 11.00.(d) (Effect of Code on Past Actions and Obligations Previously Accrued) of Chapter 1 (General Provisions and Zoning) of this Code.

### F. Inconsistent Permit or License

See Sec. 11.02. (Inconsistent Permits and Licenses) of Chapter 1 (General Provisions and Zoning) of this Code.

## SEC. 1.3.3. SEVERABILITY

See Sec. 11.00.(k) (Validity of Code) of Chapter 1 (General Provisions and Zoning) of this Code.

# DIV. 1.4. ZONING CODE ATLAS

## SEC. 1.4.1. GENERAL

### A. Purpose

The land use and development regulations outlined in this Chapter provide responsive zoning solutions to many planning policy objectives. Typically, these provisions apply in a geographically-specific manner through mapped zoning districts, specific plans, supplemental districts, special districts, and other types of land designations. This collection of public right-of-way and parcel-specific maps is referred to as the Zoning Code Atlas. Zoning Code Atlas maps ("atlas maps") enable the City to effectively coordinate the application of regulations by establishing zoning districts, specific plans, supplemental districts, or other land designations through which geographic planning objectives can be addressed and further enhance the regulatory tools provided by this Chapter.

### B. Maintenance and Access

#### 1. Adoption and Maintenance of Atlas Maps

Atlas maps shall be created pursuant to *Sec. 13B.1.3.* (Zoning Code Amendment) and amended as established for each Atlas Map.

##### a. Atlas Maps

The maps established in this Division, maintained by the City of Los Angeles Department of City Planning ("City Planning"), published as layers of digital files that are part of its Geographic Information Systems database, shall:

**i.** Delineate the boundaries of the various zoning districts, specific plans, supplemental districts, special districts, and other types of land designations through which regulations in this Chapter are made applicable.

**ii.** Include all matters, notations, and representations.

**iii.** Be adopted and approved, incorporated herein and made a part hereof, and collectively constitute the official Zoning Code Atlas.

##### b. Record of Changes

All changes to atlas maps shall be made by updating the digital file for each change with the date of the change. All amendments to official atlas maps shall be maintained by the Department, and made available to the public. Atlas maps shall be marked pursuant to a system of identification established by City Planning.

##### c. Scale of Map

Atlas maps shall be maintained in the City's adopted datum, maintained by the Department of Public Works, Bureau of Engineering. Where a boundary is not a street, alley or lot line,

or where property indicated on the atlas map is not subdivided into lots and blocks, the boundary on the atlas map is determined by the scale and projection contained on the map and any meta-data included as part of the Geographic Information Systems database file.

#### d. Land Base Dataset

The Department of Public Works, Bureau of Engineering is responsible for reviewing identifying, and updating the City's public and private land records, and establishes and maintains the City's land base dataset used by City Planning. City Planning shall make the necessary adjustment to the Zoning Code Atlas as updates to the land base dataset are issued.

#### e. Annexations

If the City's jurisdiction is amended, changes in the atlas map shall be identified by updating the Geographic Information Systems database file with the date of the change.

### 2. Accessing Atlas Maps

Zoning Code Atlas Maps can be accessed electronically through City Planning's Zoning Information and Map Access System (ZIMAS), or on the Zoning Code Atlas in the Department's Map Gallery on the Department website. Hard copies of Zoning Code Atlas maps can be made available by visiting one of City Planning's Development Services Centers and making a reproduction request with payment of any applicable fees.

## SEC. 1.4.2. ZONING MAP

## A. APPLICABILITY

### 1. Zoning Districts

In order to regulate the use and development of property, as provided for in this Chapter, land is designated with the following districts for zoning purposes. The first "bracket set" contains the zoning districts that determine the built environment, and the second "bracket set" contains the zoning districts that determine the types of activities on a lot. Although the zoning districts may refer or have standards that are tied to other districts, each is independent and are combined in response to the variety of planning needs found throughout the City.

**[Form – Frontage – Standards] [Use – Density]**

**a.** "Form" districts are outlined in *Article 2*.

**b.** "Frontage" districts are outlined in *Article 3*.

**c.** Development Standards ("Standards") districts are outlined in *Article 4*.

**d.** "Use" districts are outlined in *Article 5*.

**e.** "Density" districts are outlined in *Article 6*.

### 2. Alternate Typologies

The zoning districts established in this Chapter recognize that, in general, the physical form of development need not be determined by its use. There are certain cases, however, in which the physical form that development takes is directly tied to a specific use or activity. In those cases, *Article 7* (Alternate Typologies) outlines a series of regulatory solutions that overrides specific regulations otherwise addressed by zoning districts applied to a lot. Each alternate typology establishes eligibility parameters for each option, and what metrics it supersedes from the applicable zoning districts.

### 3. Specific Plans & Supplemental Districts

In addition to the provisions of Subdivision 1. (Zoning Districts) above, additional regulations may be applied as outlined in *Article 8* (Specific Plans & Supplemental Districts). These are represented in a third bracket set of the zoning using the acronym "SP" for specific plans or the acronyms established for the respective supplemental district. The third bracket set may include multiple specific plans or supplemental districts separated by a "-".

### 4. Special Districts

In order to achieve specific planning objectives in designated areas having unique characteristics, special districts may replace the zoning and supplemental districts established in Subdivisions 1. (Zoning Districts) and 3. (Specific Plans & Supplemental Districts) above. Special districts respond to unique conditions and stipulate land use and development requirements and/or incentives tailored to distinctive qualities that may not lend themselves to the regulations established in this Chapter, except as outlined within each special district.

The special districts outlined below shall serve as the designated zone, in lieu of zoning districts, specific plans, and supplemental districts, where applied.

#### a. "FWY" Freeways

The "FWY" Freeway Special District is intended to regulate property owned by the California Department of Transportation (Caltrans). To the extent that Caltrans is using or building on State-owned property for highway purposes, it will be immune from the regulations established in this Chapter. However, when Caltrans property is being used wholly or in part for other purposes, the following limitations on development and use shall apply.

##### i. Development of Caltrans Land

Development of land is limited to a maximum floor area of 50 percent of the lot area.

##### ii. Use of Caltrans Land

The use of Caltrans land for non-highway purposes shall be limited to those listed below, and only permitted by approval of the City Planning Commission, pursuant to *Sec. 13B.2.3.* (Class 3 Conditional Use Permit), and is limited to the following uses. In

addition to the findings outlined in *Sec. 13B.2.3.* (Class 3 Conditional Use Permit), the City Planning Commission shall also determine that in approving the proposed use, the project will not expose the general public to prolonged or sustained health and safety impacts.

**a)** Civic

**b)** Nature Conservation Area

**c)** Parking

**d)** Park and Open Space

**e)** Public Safety Facility

**f)** Car Wash

**g)** Vehicle Sales and Rental, including: Used Vehicle Sales, Light; Vehicle Sales and Rental, Light; and Vehicle Sales and Rental, Heavy

**h)** Vehicle Storage, including: Official Police Garage; Vehicle Storage, Light; Vehicle Storage, Heavy

**i)** Self-Service Storage

**j)** General Storage, except Cargo Container Storage Yard

#### iii. Sale of Caltrans Land

In the event Caltrans property is sold to another party, the limitations established in this Paragraph shall continue to apply unless the "FWY" Freeway Special District designation has been changed to a zone pursuant to *Sec. 13.B.1.4.* (Zone Change).

### b. "SL" Ocean - Submerged Land

The "SL" Ocean - Submerged Land Special District is intended to regulate the Los Angeles City seacoast and off-shore water and underwater areas. These areas constitute a unique and important geographical and scenic resource, utilized for shipping, industry, commerce, residence and recreation.

Offshore zoning is a related and appropriate extension of city planning and zoning principles and practices on land. Their basic purpose is to protect all users of affected land from the recognized problems and depreciation brought about by unregulated development. Particular purposes in Los Angeles include (1) protection of the recreational, residential and scenic uses of coast areas, now much in demand for these uses and with greater demand forecast for the future; (2) preservation of the near seaward prospect of residential zones along the coast, where this outlook constitutes part of the environment and value of overlooking onshore properties and (3) provision

for such other uses as benefit the public and City without significant impairment of these recreational and residential uses.

To permit new coastline or off-shore developments of conflicting type which are not essential to the public interest and could jeopardize or downgrade existing recreational and residential users, would not constitute proper consideration of public necessity, convenience, general welfare and good zoning practice.

To realize the purposes enumerated above, in accordance with established city planning principles, practice and supportive zoning, certain general objectives shall be met and certain specific requirements are normally necessary for the constructive control of off-shore activities, whether achieved by zone change, variance, supplemental district or otherwise.

### i. General Provisions

**a)** There shall be no chemical and biological contamination, visual clouding or soiling of urban coastline, beaches or offshore waters by industrial/commercial uses.

**b)** Installations on-shore, temporary or relatively permanent, shall be of such size, nature, location and spacing that they do not significantly interfere with or adversely affect the residential and recreational use, operation, environment or enjoyment of coastline and off-shore areas.

**c)** The preservation of urban coastline and off-shore areas, above and below water level, in the natural state or for recreation and residence, should take precedence if their function and enjoyment are threatened by additional potentially conflicting off-shore uses which are not clearly of greater public necessity and interest.

**d)** Any shoreline industrial/commercial uses should be of limited and designated duration, with provision for complete removal of installations and restoration of the prior or natural state after expiration of the permissible time period, unless such removal and restoration are unnecessary to maintain desirable recreational and residential environment.

**e)** No industrial/commercial operations should be undertaken where or when they may cause significant alterations to the underlying geologic stability of other areas, offshore and onshore, or otherwise bring about undesirable changes of basic topographical condition.

**f)** Piers, jetties, causeways, human-made islands, bridges or other connective structures should be prohibited, except when they enhance the recreational/ residential environment.

**g)** Emission of smoke, steam, chemical, odor, sound, artificial light of other form of atmospheric pollutant or environmental impairment from any seaside industrial/ commercial installation or facility should be controlled to fulfill the purposes of this zoning.

**h)** No provision of off-shore urban zoning should conflict with State, Federal or international rights or control established by law within the same geographical areas.

#### ii. Development of Ocean - Submerged Land

**a)** Any development on property of any kind within an "SL" Ocean - Submerged Land special district shall be permitted only by approval of the City Planning Commission, pursuant to *Sec. 13B.2.3.* (Class 3 Conditional Use Permit).

**b)** No piers, jetties, man-made islands, floating installations or the like are permitted in connection with any permitted uses unless authorized under the provisions of *Sec. 13B.2.3.* (Class 3 Conditional Use Permit).

#### iii. Use of Ocean - Submerged Land

No property of any kind within the "SL" Ocean - Submerged Land special district shall be used except for the following uses, or when a supplemental district is created by the provisions of Article 8 (Specific Plans & Supplemental Districts), provided, however, that in no event shall any property be used for surface-type operations (either above or below water level) relating to oil drilling and production of oil, gas or hydrocarbons.

**a)** Navigation

**b)** Commercial Shipping

**c)** Fishing

**d)** Recreation

**e)** Any use required by any trust or legislative grant to the City of Los Angeles.

### 5. Zoning of Annexed or Unzoned Land

**a.** All land or territory annexed to the City after the effective date of this Chapter is automatically classified [HV3-DF1-1][RL1-1L] unless the City Council specifically determines otherwise.

**b.** The City Council may establish specific zoning by ordinance for land or territory to be annexed. The zoning ordinance may be adopted concurrently with the annexation. Unless the specific zoning is established by ordinance, the Zoning Map shall be amended to indicate the land or territory annexed as [HV3-DF1-1][RL1-1L] without additional proceedings.

**c.** Any land or territory in the City not indicated on the Zoning Map as being in any zone will be construed as being classified in the most restrictive zone that exists on an adjacent lot on the same side of the street, or a lot on the opposite side of the street or highway of the subject land or territory, and the Zoning Map shall be amended to indicate that zone without additional proceedings.

## B. BOUNDARIES

### 1. Street, Alley or Lot Lines

Zone boundaries occur at street, alley, or lot lines unless otherwise shown on the Zoning Map, using the land base dataset, and where the indicated boundaries on the Zoning Map are approximately a street, alley or lot line, the street, alley or lot line are the boundaries of the zone.

### 2. Street or Right-of-Way

**a.** A street, alley, railroad or railway right-of-way, watercourse, channel, or body of water included on the Zoning Map shall, unless otherwise indicated, be included within the zone boundaries of the adjoining property on either side of the street, alley, railroad or railway right-of-way, watercourse, channel or body of water.

**b.** Where the street, alley, right-of-way, watercourse, channel, or body of water serves as a boundary between two or more different zones, a line midway in the street, alley, right-of-way, watercourse, channel, or body of water, and extending in the general direction of its long dimension is the boundary between zones.

### 3. Vacated Street or Alley

**a.** In the event a dedicated street or alley shown on the Zoning Map is vacated, the property formerly in the street or alley shall be included within the zone of the adjoining property on either side of the vacated street or alley.

**b.** In the event the street or alley was a zone boundary between two or more different zones, the new zone boundary is the former centerline of the vacated street or alley.

## C. AMENDMENTS

### 1. Zone Changes

#### a. Process

At the direction of City Council, pursuant to *Sec. 13B.1.4.* (Zone Change), the Director of Planning is authorized to revise the Zoning Map. At the direction of City Council for the adoption of a specific plan, pursuant to *Sec. 13B.1.2.* (Specific Plan Adoption/Amendment), the Director of Planning is authorized to revise the Zoning Map. No unauthorized person may alter or modify the Zoning Map.

## 2. Zone Boundary Adjustments

### a. Process

Whenever public necessity, convenience, general welfare or good zoning practice justifies the action, the Director of Planning may approve, conditionally approve, or deny a zone boundary adjustment, pursuant to *Sec. 13B.5.2.* (Adjustment), and make minor adjustments to the location of a zone boundary to carry out the intent of this Section when:

**i.** Property as shown on the Zoning Map has been divided or approved for division into parcels or lots and blocks by a final parcel or tract map, and the parcel or lot and block arrangement does not conform to that anticipated when the zone boundaries were established;

**ii.** Property was redivided or approved for subdivision by a final parcel or tract map action into a different arrangement of lots and blocks than indicated on the Zoning Map; or

**iii.** Where uncertainty exists in applying the provisions of this Subdivision or where revision is necessary to correct dimensional or mapping errors, the Director of Planning may determine the location of the zone boundary.

### b. Limitation

Zone boundary adjustments permitted pursuant to this Subdivision are limited to a distance of no more than 50 feet. When the adjustment is requested prior to recordation, the Director of Planning's decision does not become effective until after the parcel map or final tract map has been recorded with the Office of the County Recorder.

### c. Dedications

The Director of Planning may require that the abutting streets, alleys, or highways be dedicated and improved in conformance with the standards for improvement of streets, alleys, and highways, if it is determined that traffic on the abutting streets, alleys or highways will be increased or impeded as a result of the zone boundary adjustment. An offer to dedicate or filing of a bond in conformance with *Sec. 10A.1.3.* (Dedication Procedure) and *Sec. 10A.1.4.* (Improvement Procedure) may be construed as compliance with these requirements.

### d. Zoning Map

The Zoning Map shall conform with the Director of Planning's decision after the conditions are imposed, if any.

## SEC. 1.4.3. PRIMARY STREET MAP

### A. APPLICABILITY

Each lot shall have at least one primary street lot line based on a set of criteria established in *Section 14A.1.12.B.* (Lot Line Determination; Primary Street Lot Line). However, a side street lot line may be re-designated into a primary street lot line when the adjacent right-of-way has been established as a primary street on the Primary Street Map.

### B. BOUNDARIES

The Primary Street Map is composed of street segments made up of a line midway in the street, alley, railroad or railway right-of-way, watercourse, channel, or body of water, and extending in the general direction of its longest dimension between each intersection of each midway in the street, alley, railroad or railway right-of-way, watercourse, channel, or body of water.

### C. AMENDMENTS

At the direction of City Council pursuant to *Sec. 13B.1.3.* (Zoning Code Amendment), the Director of Planning is authorized to revise the Primary Street Map. No unauthorized person may alter or modify the Primary Street Map.

## SEC. 1.4.4. HILLSIDE AREA MAP

### A. APPLICABILITY

The Hillside Area Map identifies lots with topographical features subject to additional regulations intended to address the specific nature of hillside development. These additional regulations are outlined in this Chapter and are applicable by reference to this Atlas Map.

### B. BOUNDARIES

Any land designated, using the Bureau of Engineering land base dataset, as "Hillside Area" as shown in the shaded portion of the Hillside Area Map.

### C. AMENDMENTS

At the direction of City Council pursuant to *Sec. 13B.1.3.* (Zoning Code Amendment), the Director of Planning is authorized to revise the Hillside Area Map. No unauthorized person may alter or modify the Hillside Area Map.

## SEC. 1.4.5. TARGETED PLANTING AREAS MAP

### A. APPLICABILITY

Lots identified as being within an identified planting area, as established in Subsection B. (Boundaries) below, on the Targeted Planting Areas Map shall comply with the corresponding planting requirements in a separate regulatory document named "Department of City Planning -

Targeted Planting Areas Guide" (Planting Guide) as established and amended by the City Planning Commission pursuant to *Sec. 13.B.1.5.* (Policy Action).

## B. BOUNDARIES

Any land designated, using the Bureau of Engineering land base dataset, as any of the following planting area designations in the Planting Area Map.

### 1. River Planting Area

Plants in these areas, and outlined in this category in the Planting Guide, shall be limited to:

**a.** Native plants that occur naturally in a given geographic area, which can be trees, flowers, grasses, or any other plants, included in the California Native Plant Library.

**b.** Species included in the Watershed Wise Plant List published by the Council for Watershed Health.

**c.** Species included in the Los Angeles County River Master Plan's Landscaping Guidelines and plant palettes comprised primarily of native plants suitable for a riparian habitat.

### 2. Filtration Planting Area

Trees planted in these areas, and outlined in this category in the Planting Guide, shall be low in water use, low in biogenic emissions, high in carbon and particulate matter filtration qualities and retain foliage for more than six months of the year.

## C. AMENDMENTS

At the direction of City Council pursuant to *Sec. 13.3.3.* (Zoning Code Amendment), the Director of Planning is authorized to revise the Targeted Planting Areas Map. No unauthorized person may alter or modify the Targeted Planting Areas Map.

# SEC. 1.4.6. COASTAL ZONE MAP

## A. APPLICABILITY

The Coastal Zone Map is the land and water area boundaries established by the State Legislature as defined in the "Coastal Zone" definition in Section 30103 of Division 20 (California Coastal Act) of the California Public Resources Code. This map is intended to facilitate the implementation of the applicable provisions of the California Coastal Act.

## B. BOUNDARIES

### 1. Coastal Zone

The "Coastal Zone" shall mean land and water area within the City specified on maps prepared by the California Coastal Commission, copies of which are on file with the Department of City Planning and the Office of City Engineer. Such "Coastal Zone" extends seaward to the City's outer limit of jurisdiction, and generally extends inland 1000 yards from the mean high tide line

of the sea. In significant coastal estuarine, habitat and recreational areas it extends inland to the first major ridgeline paralleling the sea or five miles from the mean high tide line of the sea, whichever is less, and in developed urban areas the zone extends inland 1000 yards.

### 2. Calvo Exclusion Area

The "Calvo Exclusion Area" shall mean land within the City as specified on maps prepared by the California Coastal Commission, copies of which are on file with the Department of City Planning.

## C. AMENDMENTS

This map is intended to reflect the most current Coastal Zone and Calvo Exclusion Area boundaries provided by the California Coastal Commission in order to implement the applicable provisions of Division 20 (California Coastal Act) of the California Public Resources Code. The Coastal Zone Map will be updated as Coastal Zone and Calvo Exclusion Area boundaries are updated and published by the California Coastal Commission.

# DIV. 1.5. EMERGENCY PROVISIONS

## SEC. 1.5.1. LOCAL EMERGENCY TEMPORARY REGULATIONS

### A. Declaration of Purpose

It is the purpose and objective of this Division to establish reasonable and uniform regulations to protect the public welfare and to provide a streamlined method for consideration of applications for temporary use approvals and other land use approvals in an emergency, such as fire, storm, severe earthquake, civil disturbance, or other disaster declared by the Governor.

### B. Long-Term Temporary Uses

#### 1. Authority of the Zoning Administrator

**a.** Regardless of any other provision of this Chapter to the contrary, the Zoning Administrator has the authority to approve the use of a lot in any zone for the temporary use of property which will aid in the immediate restoration of an area adversely impacted by a severe fire, storm, earthquake, similar natural disaster, or a civil or military disturbance, and declared by the Governor as an emergency area if the Zoning Administrator finds:

**i.** That the nature and short duration of the proposed temporary use assures that the proposed use will not be materially detrimental to the character of development in the immediate neighborhood;

**ii.** That the proposed use will not adversely affect the implementation of the General Plan or any applicable specific plan; and

**iii.** That the proposed use will contribute in a positive fashion to the reconstruction and recovery of areas adversely impacted during the emergency.

**b.** In making a determination pursuant to this Section, the Zoning Administrator shall balance the public interest and benefit to be derived from the proposed temporary use against the degree, significance of, and temporary nature of the inconvenience to be caused in the area where the temporary use is located. The Zoning Administrator may promulgate regulations and guidelines as are necessary and proper to administer the provisions of this Division.

#### 2. Conditions of Approval

**a.** In approving the location of any temporary use, the Zoning Administrator may impose conditions as the Zoning Administrator deems necessary to protect the peaceful and quiet enjoyment of nearby properties. The Zoning Administrator will also require the posting of a completion bond, or other guarantee satisfactory to the Zoning Administrator, to cover the cost of the removal of any improvements made to a site or cleaning of the site after termination of the temporary authorized use.

**b.** Furthermore, the Zoning Administrator will require termination of the temporary use within one year from the date of the approval of the temporary use, the removal of all temporary improvements on the site, and the restoration of the site to a permitted use within a reasonable period of time determined by the Zoning Administrator. Approval of any application for a temporary use does not result in any vested or nonconforming rights to carry on the temporary use after the term authorized.

**c.** The automobile parking design and improvement provisions of *Sec. 4C.2.4.* (Parking Area Design), *Sec. 4C.3.4.* (Surface Parking Lots), and *Sec. 4C.3.7.B.* (Buffers and Screens), and the yard requirements of this Chapter do not apply to temporary permits for public parking in the Residential Use Districts. However, in approving permits, the Zoning Administrator may impose those conditions as the Zoning Administrator deems necessary to protect the peaceful and quiet enjoyment of the subject and nearby properties.

### 3. Revocation

**a.** The Zoning Administrator may suspend or revoke any temporary use approval, if the Zoning Administrator determines that the temporary use bears no significant relation to the reconstruction and recovery of areas adversely impacted by the emergency, or that the conditions imposed on any temporary use approval have not been complied with, or that an unreasonable level of interference with the peaceful enjoyment of neighboring properties is created by the conduct of any authorized activity.

**b.** Prior to the revocation of a temporary use approval, the Zoning Administrator shall give written notice to the record owner or lessee to appear within 5 days, or less if justified by a threat to public health and safety, at a time and place fixed by the Zoning Administrator and show cause why the temporary use approval should not be revoked or why further conditions should not be imposed.

**c.** A determination of the Zoning Administrator pursuant to this Subsection may be appealed to the Area Planning Commission on a form prescribed by the Department of City Planning in accordance with the procedures described in this Section.

### 4. Other Permits and Licenses

This Division does not, except as stated here, modify or affect in any way the duty of any applicant to obtain any other permit or license which may be required under any other provision of this Chapter or State law.

### 5. Application

**a.** An application to allow any temporary use referred to in this Division shall be filed with the Department of City Planning upon forms and accompanied by data as the Department of City Planning may require.

**b.** The application may be filed by an owner or a lessee and shall be verified by the applicant attesting to the truth and correctness of all facts and information presented with, or contained in the application and shall also be signed by the owner of record of any site where the proposed temporary use will be located.

**c.** A copy of any application so filed shall be transmitted by the Department of City Planning to the Council Member of the district in which the proposed use would be located and to the Department of Transportation for their information.

### 6. Notice and Hearing

**a.** Upon the filing of a verified application, the Zoning Administrator shall set the matter for public hearing. Notice of the time, place, and purpose of the hearing shall be given by mailing a written notice at least 14 days prior to the date of the hearing to the applicant, to the owner of the subject property, to adjoining and abutting property owners, and to property owners directly across the street or alley from the subject property. For this notice, the following shall be used: the last known name and address of the property owners as shown upon the records of the City Engineer or the records of the County Assessor.

**b.** An application for a temporary use shall be set for public hearing unless the Zoning Administrator makes written findings, attached to the file involved, that the requested temporary use:

**i.** Will not have a significant effect on adjoining properties or on the immediate neighborhood; or

**ii.** Is not likely to evoke public controversy.

### 7. Time Limit

The Zoning Administrator shall make a determination within 30 days from the filing of a verified application. This time limit may be extended by mutual written consent of the applicant and Zoning Administrator.

### 8. Fee

An application for an approval pursuant to this Section does not require any filing fee.

### 9. Decisions by the Zoning Administrator

Decisions by the Zoning Administrator shall be supported by written findings of fact based upon written or oral statements and documents presented to the Zoning Administrator, which may include photographs, maps and plans, together with the results of the Zoning Administrator's investigations. Upon making a decision, the Zoning Administrator shall mail a copy of the written findings and decisions to the applicant, and to the other persons who were required to be notified under *Sec. 1.5.1.B.6. (Notice and Hearing)* above.

### 10. Decision Effective and Appeal

The decision of the Zoning Administrator is final, unless appealed, after an elapsed period of 10 days from the date of mailing a copy of the written findings and decision to the applicant. During this period, any person aggrieved by the decision may file a written appeal to the Area Planning Commission. The appeals shall set forth specifically the points at issue, the reasons for the appeal, and how the appellant believes there was an error or abuse of discretion by the Zoning Administrator. No fee will be charged for this appeal.

### 11. Failure to Act

If the Zoning Administrator fails to make a decision on a temporary land use application within the time limit specified in Subdivision 7. (Time Limit) above, then the applicant may file a request in the Office of Zoning Administration for a transfer of jurisdiction to the Area Planning Commission and for a decision by the Area Planning Commission on the original application. In that case, the Zoning Administrator will lose jurisdiction and the Area Planning Commission shall assume jurisdiction, provided, however, that the matter may be remanded to the Zoning Administrator or the Area Planning Commission may accept the applicant's request for withdrawal of the transfer of jurisdiction. In either case, the Zoning Administrator will regain jurisdiction for the time and purpose specified by the Area Planning Commission.

### 12. Transfer of Jurisdiction

When considering any matter transferred to its jurisdiction pursuant to *Sec. 1C.1.3.* (Special Provisions for Other Proceedings) because of the failure of the Zoning Administrator to act, the Area Planning Commission shall make its decision within 30 days after the request to transfer jurisdiction is filed. All decisions become final on the date of mailing a copy of the Area Planning Commission's decision to the applicant.

### 13. Record on Appeal

Within five days of receipt of the filing of an appeal, the case file of the Zoning Administrator appealed, and the appeal shall be delivered to the Area Planning Commission. At any time prior to the action by the Area Planning Commission on the appeal, the Zoning Administrator may submit supplementary pertinent information as the Zoning Administrator deems necessary or as may be requested by the Area Planning Commission.

### 14. Appeal Hearing Date-Notice

Upon receipt of the appeal, the matter shall be set for an Area Planning Commission hearing and notice shall be given by mail of the time, place and purpose of the hearing to the appellant, to the applicant, to the owner or owners of the property involved, to the Zoning Administrator and to any other interested party who has requested in writing to be so notified. This notice shall be in writing and mailed at least five days prior to the hearing.

### 15. Appeal Hearing Date-Continuance

Upon the date set for the hearing, the Area Planning Commission will hear the appeal, unless, for cause, the Area Planning Commission shall on that date continue the matter. No notice of continuance need be given if the order to continue is announced at the time for which the hearing was set.

### 16. Area Planning Commission Decision

**a.** When considering an appeal from an action by the Zoning Administrator, the Area Planning Commission shall make its decision within 15 days (in the case of a revocation, within 10 days) after the expiration of the appeal period, or within an extended period of time as may be mutually agreed upon in writing by the applicant and the Area Planning Commission. The Area Planning Commission shall base its decision only upon:

**i.** Evidence introduced at the hearing, or hearings, if any, before the Zoning Administrator, on the issue;

**ii.** The record, findings and determination of the Zoning Administrator; and

**iii.** The consideration of arguments, if any, presented to the Area Planning Commission orally or in writing.

**b.** If an applicant or aggrieved person wishes to offer into the proceedings any new evidence in connection with the matter, a written summary of that evidence, together with a statement as to why that evidence could not reasonably have been presented to the Zoning Administrator shall be filed with the Area Planning Commission prior to the hearing. If the Area Planning Commission fails to act on any appeal within the time limit specified in the Subsection, the determination of the Zoning Administrator is final.

**c.** The Area Planning Commission may modify or reverse the ruling, decision or determination appealed from only upon making findings indicating how the action of the Zoning Administrator was in error or constituted an abuse of discretion and shall make specific findings supporting any modification or reversal. The decision of the Area Planning Commission is final as of the date of its determination on the matter. After making a decision, a copy of the findings and determination shall be placed on file in the Department of City Planning and a copy of the determination shall be furnished to the applicant, the appellant, and the Department of Building and Safety.

## C. Special Provisions For Other Proceedings

**1.** Regardless of any provision of this Chapter or any other ordinance to the contrary, with respect to those uses, buildings and sites destroyed or damaged in connection with a declared emergency, and in the area covered by the declaration of emergency, the following exceptions apply:

**a.** Payment of all Department of City Planning and Zoning Administrator fees may be deferred until the applicant seeks any certificate of occupancy.

**b.** For applications relating to new actions pursuant to *Div. 13B.2.* (Quasi-Judicial Review), *Sec. 13B.4.5.* (Project Exception), *Article 12* (Nonconformities), and *Sec. 13B.5.3.* (Variance), any project permits pursuant to moratorium ordinances or interim control ordinances, and any revocation or modification proceedings:

**i.** If the law otherwise requires or authorizes a public hearing, the matter shall be set for public hearing unless the Zoning Administrator, the Area Planning Commission, the City Planning Commission, or Director of Planning, makes written findings, attached to the file involved, that the matter:

**a)** Will not have a significant effect on adjoining properties or on the immediate neighborhood; or

**b)** Is not likely to evoke public controversy.

**ii.** Provided, however, that no hearing will be waived in any proceeding involving:

**a)** Alcohol Sales, On-Site Consumption

**b)** Alcohol Sales, Off-Site Consumption

**c)** Swap Meets

**d)** Gun Sales

**e)** Alternative Financial Services

**f)** Vehicle Repair, Light

**g)** Vehicle Repair, Heavy

**iii.** When a matter is set for public hearing, written notice of the hearing shall be given to the applicant, the owner or owners of the property involved, and to the owners of all property within and outside of the City within 500 feet of the property involved.

**c.** Payment of the Affordable Housing Linkage Fee pursuant to Section 19.18. of Chapter 1 of this Code.

## D. Restoration of Damaged or Destroyed Buildings

### 1. Nonconforming

**a.** Regardless of any other provisions of this Division to the contrary, a building nonconforming as to use, yards, height, number of stories, lot area, floor area, density, loading space, parking, off-site signs, or other nonconforming provisions of this Code, which is damaged or destroyed as a result of the declared emergency may be repaired or reconstructed with the same nonconforming use, yards, height, number of stories, lot area, floor area, density, loading space, parking, or off-site signs as the original building. Provided, however, that repair or reconstruction shall be commenced within two years of the date of damage or destruction and completed within two years of obtaining a

permit for reconstruction. Provided, further, that neither the footing nor any portion of the replacement building may encroach into any area planned for widening or extension of existing or future streets as determined by the Department of City Planning upon the recommendation of the City Engineer.

**b.** The provisions of this Section supersede any interim control ordinances, interim plan revision ordinances, specific plans (excluding the South Central Alcohol Beverage Specific Plan, Ord. No. 171,681), and *Sec. 5C.1.1.* (Project Review Thresholds), and the City's hillside regulations under *Article 4* (Development Standards), except for those Fire Protection and Street Access standards). Regardless of any provision in this Section to the contrary, any existing provision of law regulating the issuance of building or demolition permits for buildings or structures currently with historical or cultural designations on the Federal, State and City lists remain in full force and effect. All historic preservation districts regulations continue in full force and effect with respect to the demolition, repair, and reconstruction of damaged or destroyed buildings or structures.

**c.** For purposes of this Subsection, a building or structure may only be demolished and rebuilt to its non-conforming status, relative to the provisions of this Chapter, any interim control ordinances, interim plan revision ordinances, specific plans (excluding the South Central Alcohol Beverage Specific Plan, Ord. No. 171,681), and *Sec. 5C.1.1.* (Project Review Thresholds), and the City's hillside regulations under *Article 4* (Development Standards), except for those fire protection and street access standards), if the building or structure is either destroyed or "damaged" in the following manner:

**i.** Any portion of the building or structure is damaged by earthquake, wind, flood, fire, or other disaster, in such a manner that the structural strength or stability of the building or structure is appreciably less than it was before the catastrophe and is less than the minimum requirements of this Code for a new building or structure of similar structure, purpose or location, as determined by the Department of Building and Safety; and

**ii.** The cost of repair would exceed 50 percent of the replacement cost of the building or structure, not including the value of the foundation system, as determined by the Department of Building and Safety.

**d.** Nothing here will be interpreted as authorizing the continuation of a nonconforming use beyond the time limits set forth in *Article 12* (Nonconformities) that were applicable to the site prior to the events which necessitated the declaration of the emergency.

**e.** If issues of interpretation relating to the above provisions arise, the Zoning Administrator is hereby authorized to resolve those issues in light of the scope and purposes of this Subsection.

### 2. Conditional Uses and Uses that Benefit the Public

**a.** Uses authorized by a Conditional Use Permit pursuant *Sec. 13B.2.1.* (Conditional Use Permit, Class 1), *Sec. 13B.2.2.* (Conditional Use Permit, Class 2), or *Sec. 13B.2.3.* (Conditional Use Permit, Class 3), or other procedure in effect at the time of authorization of the approved Conditional Use Permit, are hereby granted an exemption from the requirements of *Sec. 13B.5.4.* (Review or Modification of Entitlement), provided that the structures containing these uses are rebuilt as they lawfully existed prior to their destruction, with the same building footprint and height.

**b.** The following uses are considered to be of such importance and their expeditious replacement is of such value to the health and safety of the community that they are hereby granted an exemption from the requirements of *Sec. 13B.5.4.* (Review or Modification of Entitlement), provided that the structures containing these uses are rebuilt as they lawfully existed prior to their destruction, with the same building footprint and height.

**i.** All Public and Institutional Uses

**ii.** Airports

**iii.** Day Care Facilities

**iv.** Medical Facilities, including Ambulance Services, Hospices, and Hospitals

**c.** If issues of interpretation or administration relating to the above exemptions arise, the Director of Planning is authorized to resolve those issues in light of the scope and purposes of this Subsection.

**d.** As an exception to Subdivision 1. (Nonconforming) above and Paragraphs a. and b. above, the following five uses are not exempt from the provisions of this Chapter, interim control ordinances, specific plans, and interim plan revision ordinances:

**i.** Alcohol Sales, On-Site Consumption

**ii.** Alcohol Sales, Off-Site Consumption

**iii.** Swap Meets

**iv.** Gun Sales

**v.** Alternative Financial Services

**vi.** Vehicle Repair, Light

**vii.** Vehicle Repair, Heavy

### 3. Boulevard, Avenue, and Collector Street Dedication and Improvement

**a.** For any lot identified by the City as having sustained damage during and as a result of the situation causing the declared emergency, the issuance of a building permit for a new development on that site does not require improvement of frontage for boulevards, avenues, and collector streets widening purposes under *Article 10* (Streets and Parks).

**b.** Nothing here prevents a property owner from voluntarily improving the right-of-way and undertaking public improvements which conform to the applicable sections of this Chapter.

### 4. Zoning Administrator Adjustments

**a.** Regardless of any other provision of this Chapter, the Zoning Administrator may grant deviations of no more than ten percent from the City's floor area, height, yard, parking, and loading space requirements for buildings and structures damaged or destroyed in an emergency declared by the Governor when the deviations are necessary to accommodate the requirements of the Americans With Disabilities Act, Federal Fair Housing Amendments Act of 1988, the California Code of Regulations, Title 24, provided the Zoning Administrator finds:

**i.** That the deviations are not likely to cause an undue burden on nearby streets or neighboring properties;

**ii.** That the grant is not likely to evoke public controversy; and

**iii.** That the development cannot feasibly be designed to meet the requisite disabled access standards without the deviations.

**b.** Prior to acting on an application for a deviation, the Zoning Administrator shall give notice to all adjoining property owners and hold a public hearing. The Zoning Administrator may waive the public hearing if the Zoning Administrator makes the two findings in *Sec. 1C.1.3.A.2.* (Special Provisions for Other Proceedings). The notice and procedures provided in *Sec. 1C.1.2.* (Long-Term Temporary Uses) shall be followed for granting any deviation.

## E. Critical Response Facilities

### 1. Authority of the Department of Building and Safety

Regardless of any other provision of this Chapter to the contrary, the Department of Building and Safety will, during the first 6 months following the declaration of an emergency, have the authority to issue a temporary permit for the duration of the emergency, on any lot, regardless of zone, for any police, fire, emergency medical or emergency communications facility which will aid in the immediate restoration of an area adversely impacted by a severe fire, storm, earthquake, similar natural disaster, or a civil or military disturbance, and declared by the Governor as an emergency area, provided that the Department of Building and Safety maintains records of all temporary permits.

## F. Short-Term Temporary Uses

### 1. Authority of the Department of Building and Safety

Regardless of any other provision of this Chapter, the Department of Building and Safety will, during the first 6 months following the declaration of an emergency, have the authority to issue a temporary 90-day permit on any lot, regardless of zone, for any temporary use which will aid in the immediate restoration of an area adversely impacted by a severe fire, storm, earthquake, similar natural disaster, or a civil or military disturbance, and declared by the Governor as an emergency area, provided that the Department of Building and Safety maintains records of all temporary permits.

## G. Activation and Termination

The provisions of this Division are applicable to a particular area upon the declaration of an emergency by the Governor relating to that area, pursuant to Chapter 7 (California Emergency Services Act) of Division 1 (General) of Title 2 (Government of the State of California) of the California Government Code. The provisions of this Division cease to be applicable to a particular area two years following the date of declaration of emergency, and for one additional year if an extension is approved by the City Council, provided, however, that the provisions of this Division are considered as still remaining in full force and effect thereafter for the purpose of maintaining or defending any civil or criminal proceeding with respect to any right, liability or offense that may have arisen under the provisions of this Division during its operative period, or with respect to enforcing any condition of approval of the temporary permit. The City Council may also extend by resolution any other time limits in this Division for one additional year.

# DIV. 2A.1. INTRODUCTION

## SEC. 2A.1.1. PURPOSE

The purpose of this Article is to regulate the placement, scale and intensity of structures on a lot in order to ensure building forms are compatible with their context and promote projects that positively benefit the community.

## SEC. 2A.1.2. FORM APPLICABILITY

### A. General Project Applicability

All projects filed after the effective date of this Zoning Code must comply with the Form Standards in this Article, as further specified below.

#### 1. Project Activities

**a.** Form district standards apply to project activities as shown in the table below. More than one project activity may apply to a project (for example, an addition may also include the expansion of a use).

**b.** Where a rule is listed as generally applicable in the table below, the project activity shall meet the Form District rules within the Division. This general applicability may be further specified for each standard in the applicability provisions in *Part 2C* (Form Rules). Project applicability may also be modified by *Article 12* (Nonconformities). Where a Division of the Form District rules is listed as not applicable in the table below, the standards within the Division do not apply to the project activity.

**c.** For more information about project activities see *Sec. 14.1.17*.

| | | PROJECT ACTIVITIES | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| FORM DISTRICT RULES | | Subdivision | New Construction | Addition | Facade Alteration | Site Alteration | Relocation | Major Renovation | Minor Renovation | Change/Expansion of Use | Ordinary Maintenance & Repair |
| *Div. 2C.1* | **Lot Size** | ● | ○ | ○ | ○ | ○ | ● | ○ | ○ | ○ | ○ |
| *Div. 2C.2* | **Coverage** | ○ | ● | ● | ○ | ○ | ● | ○ | ○ | ○ | ○ |
| *Div. 2C.3* | **Amenity** | ○ | ● | ● | ○ | ● | ● | ● | ○ | ● | ○ |
| *Div. 2C.4* | **Floor Area Ratio & Height** | ○ | ● | ● | ○ | ○ | ● | ○ | ○ | ○ | ○ |
| *Div. 2C.5* | **Upper-Story Bulk** | ○ | ● | ● | ● | ○ | ● | ○ | ○ | ○ | ○ |
| *Div. 2C.6* | **Building Mass** | ○ | ● | ● | ● | ○ | ● | ○ | ○ | ○ | ○ |

● = Rules generally apply to this project activity
○ = Rules are not applicable

### 2. Nonconformity

For nonconforming lots, and lots with nonconforming site design, buildings, structures, or uses, no project activity may decrease the conformance with any Form standard in Article 2 unless otherwise specified by *Division 12.2 (Nonconforming Frontage)*. See the following examples:

**a.** A street-facing addition to the side of an existing building: Where this proposed addition increases the total building width beyond the maximum building width allowed by the applicable Form District, the addition is not allowed.

**b.** An addition to the top of an existing building: Where the height of the existing structure does not meet the Form District street step-back standard, all additional floor area shall be located behind the minimum step-back, but no modification is required to the existing upper stories.

## B. Applicable Components of Buildings and Lots

**1.** Form standards apply to all portions of a lot.

**2.** Form standards apply to all portions of buildings and structures on a lot.

**3.** Specific Form standards may further limit which components of buildings and lots are required to comply with the standard in *Part 2C* (Form Rules).

# SEC. 2A.1.3. RELATIONSHIP TO ZONE STRING

A zone is comprised of the following districts:

The Form District is a separate and independent component of each zone.

# SEC. 2A.1.4. HOW TO USE THIS ARTICLE

## A. Identify the Form District

The first component in a zone string identifies the Form District for a property.

## B. Form District Standards

Form Districts standards are outlined in *Part 2B (Form Districts)*. Each Form District page identifies the standards specific to that Form District.

## C. Interpreting Form District Standards

Each standard on a Form District page in *Part 2B (Form Districts)* provides a reference to *Part 2C (Form Rules)* where the standard is explained in detail.

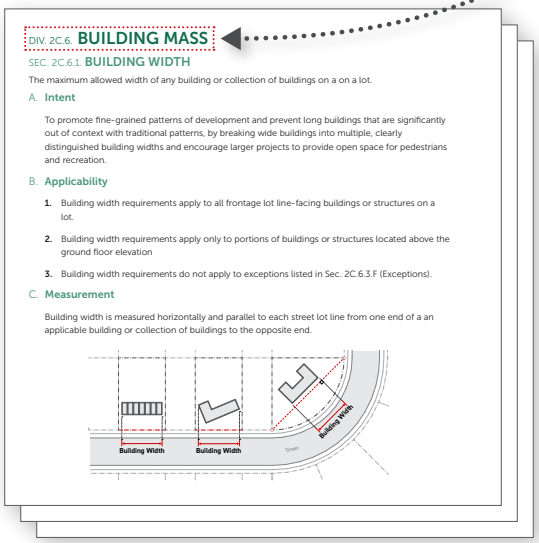
## Part 2C (Form Rules)



DIV. 2C.6. BUILDING MASS

SEC. 2C.6.1. BUILDING WIDTH

The maximum allowed width of any building or collection of buildings on a on a lot.

A. **Intent**

To promote fine-grained patterns of development and prevent long buildings that are significantly out of context with traditional patterns, by breaking wide buildings into multiple, clearly distinguished building widths and encourage larger projects to provide open space for pedestrians and recreation.

B. **Applicability**

1. Building width requirements apply to all frontage lot line-facing buildings or structures on a lot.
2. Building width requirements apply only to portions of buildings or structures located above the ground floor elevation
3. Building width requirements do not apply to exceptions listed in Sec. 2C.6.3.F (Exceptions).

C. **Measurement**

Building width is measured horizontally and parallel to each street lot line from one end of a an applicable building or collection of buildings to the opposite end.

## SEC. 2A.1.5. FORM DISTRICT NAMING CONVENTION

There are three different types of naming conventions for Form Districts. Each Form District name is composed of a variety of components that are specific to that district.

### A. Rural and Estate Form Districts

[Reserved]

### B. House Form Districts

[Reserved]

## C. All Other Form Districts

All other Form District names are composed of four components.

### 1. FAR Category

The first component of each Form District name is an FAR category. FAR categories group all districts within a range of maximum allowed FAR. FAR categories are organized as follows:

**a.** Very Low (>0.65-1.5 FAR)

**b.** Low (>1.5-4.0 FAR)

**c.** Medium (>4.0-6.0 FAR)

**d.** Medium Plus (>6.0-8.5 FAR)

**e.** High (>8.5-13.0 FAR)

### 2. Height Limit Category

The second component of each Form District name is a Height Limit category. Each Form District has either a specific height limit or no height limit. Height Limit categories are organized as follows:

**a.** Limited (limited height)

**b.** Unspecified (no height limit)

### 3. Building Width Category

The third component of each Form District name is a Building Width category. Building Width categories group all districts within a range of maximum allowed building width. Each Building Width category are organized as follows:

**a.** Narrow (25'-75')

**b.** Medium (100'-210')

**c.** Broad (280'-490')

**d.** Full (no building width maximum)

### 4. Variation Number

The last component of each Form District is a variation number. All Form Districts are numbered in the order they fall within this article. Variation number is not hierarchical.

Sec. 2C.6.3. Facade Break . . . . . 2-88

# DIV. 2C.1. LOT SIZE

## SEC. 2C.1.1. LOT AREA

The amount of land area within the boundaries of a lot.

### A. Intent

To ensure that newly established lots are consistent in size with surrounding lots.

### B. Applicability

1. Lot area requirements do not apply to lots established before the effective date of this Zoning Code unless otherwise vested (see *Vesting Tentative Tract Maps Sec. 11.2.2.* and Government Code Section 66412.6 and 66412.7).

2. Multiple parcels can be grouped together as a lot for the purpose of development when a Lot Tie Affidavit is filed and approved by the Department of Building and Safety.

### C. Standards

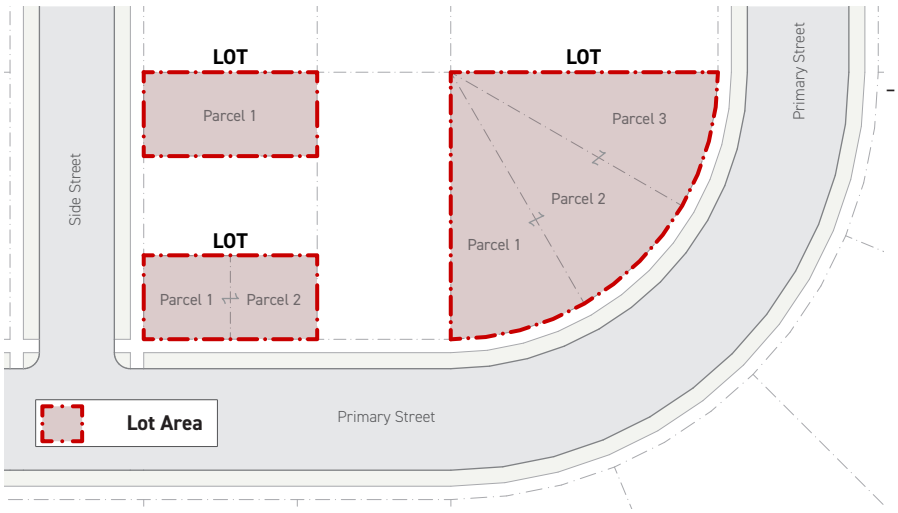
No lot may have an area less than the minimum established by Form District (Part 2B).

### D. Measurement

1. Lot area is measured as the total area within the boundary of a lot measured horizontally.

2. Lot area includes portions of a lot allocated for required easements.

3. Lot area includes all portions of a lot allocated to dedications of land (for example, additional right-of-way and required street corner dedications), except when such dedications occur during the subdivision process.



## E. Relief

1. A reduction in required lot size of 20% or less may be requested in accordance with *Sec. 13.7.2 (Adjustments)*.

2. A reduction in required lot size may be requested as a variance in accordance with *Sec. 13.7.3 (Variance)*.

## SEC. 2C.1.2. LOT WIDTH

The length of primary street lot lines bounding a lot.

### A. Intent

To ensure that newly established lots are consistent in width with surrounding lots.

### B. Applicability

1. Lot width requirements do not apply to lots established before the effective date of this Zoning Code unless otherwise vested (see *Vesting Tentative Tract Maps Sec. 11.2.2.* and Government Code Section 66412.6 and 66412.7).

2. Multiple parcels can be grouped together as a lot for the purpose of development when a Lot Tie Affidavit is filed and approved by the Department of Building and Safety.

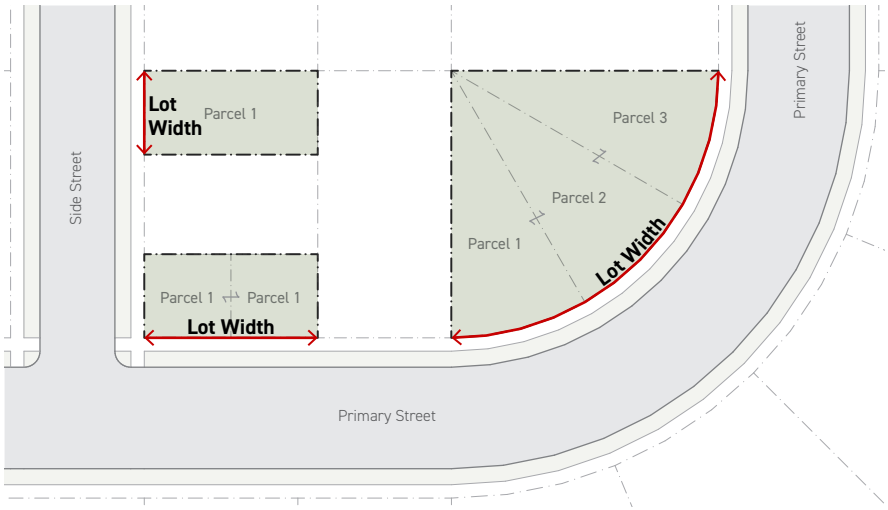
### C. Standards

No lot may have a width less than the minimum listed by Form District (Part 2B).

### D. Measurement

1. Lot width is measured following the geometry of all primary street lot lines that bound the lot.

2. Where a lot has two primary street lot lines facing different streets, both primary street lot lines shall meet the minimum lot width.



### E. Relief

1. A reduction in required lot width of 20% or less may be requested in accordance with *Sec. 13.7.2 (Adjustments).*

2. A reduction in required lot width may be requested as a variance in accordance with *Sec. 13.7.3 (Variance)*.

# DIV. 2C.2. COVERAGE

## SEC. 2C.2.1. BUILDING COVERAGE

The area of a lot covered by buildings or structures.

### A. Intent

To preserve open area on a lot by limiting the amount of buildings or structures that can cover a lot.

### B. Applicability

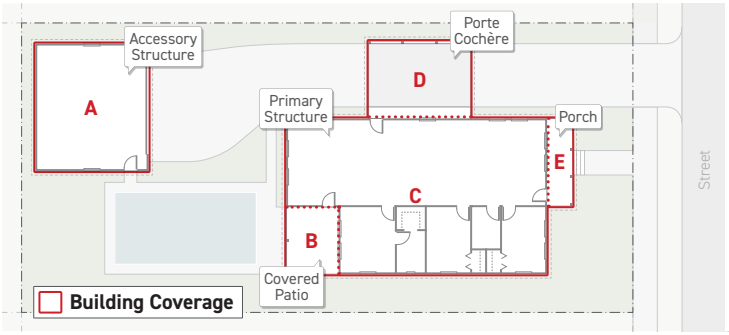
Building coverage requirements apply to all buildings and structures on a lot unless listed as an exception in *Sec. 2C.2.1.D (Exceptions)*.

### C. Standards

No lot may be covered with buildings or structures for an area greater than that listed by Form District.

### D. Measurement

**1.** Building coverage is measured by dividing the cumulative area of all buildings and structures on the lot by the lot area.



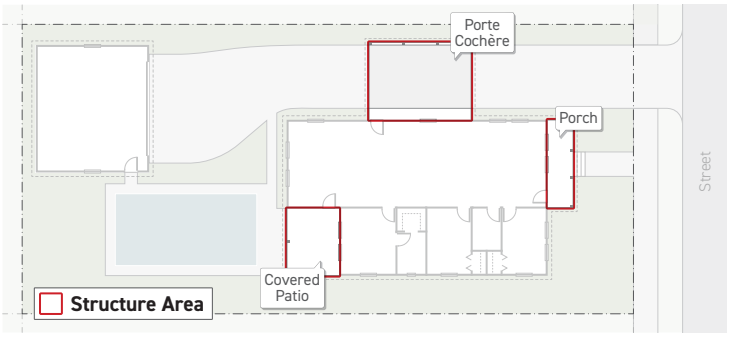
Area **A**
\+ Area **B**
\+ Area **C**
\+ Area **D**
\+ Area **E**

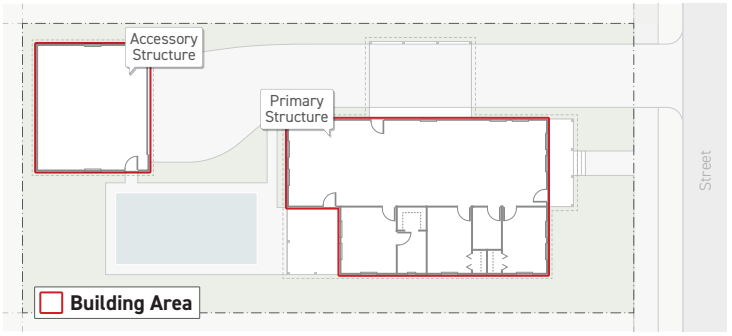
**Cumulative Area**

(Cumulative Area)
÷
(Total Site Area)

**Building Coverage**

**2.** Building or structure area is measured as the footprint of all buildings and structures more than 6 feet in height on the lot. For buildings, the area is measured from the outside face of the exterior wall of each building.



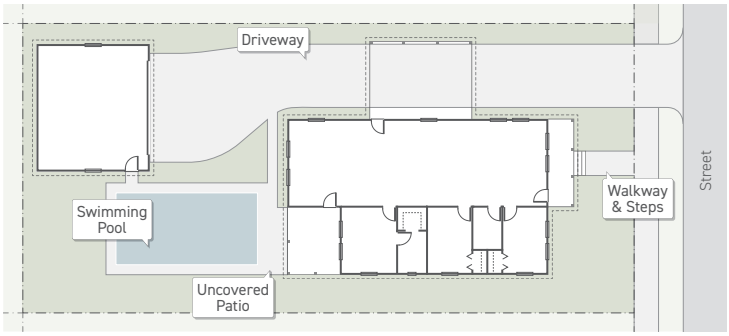


## E. Exceptions

1. Architectural details and roof projections that project 30 inches or less measured perpendicular from the exterior wall of a building are not included in the calculation of building or structure area.

2. Structures less than 6 feet in height, measured from adjacent grade are not included in the calculation of structure area.

3. Flatwork is not included in the calculation of building coverage.

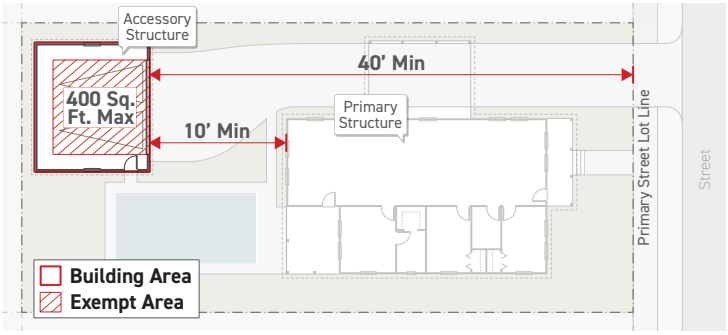


4. For one- or two-unit uses in an RL Use District, a maximum of 400 square feet per lot is exempt from the calculation of building or structure area provided the building or structure is:

   **a.** Used for parking;

   **b.** Detached from the primary building or structure a minimum of 10 feet; and

   **c.** Located a minimum of 40 feet from a primary street lot line.



## F. Relief

1. Increased building coverage of 20% or less may be requested in accordance with *Sec. 13.7.2 (Adjustments)*.

2. Increased building coverage may be requested or as a variance in accordance with *Sec. 13.7.3 (Variance)*.

## SEC. 2C.2.2. BUILDING SETBACKS

The area on a lot not intended for buildings and structures, includes primary street setbacks, side street setbacks, side setbacks, rear setbacks, alley setbacks, and special lot line setbacks.

### A. Intent

To provide open areas on the lot and help reduce the impact of buildings or structures on abutting sidewalks or neighboring developments.

### B. Applicability

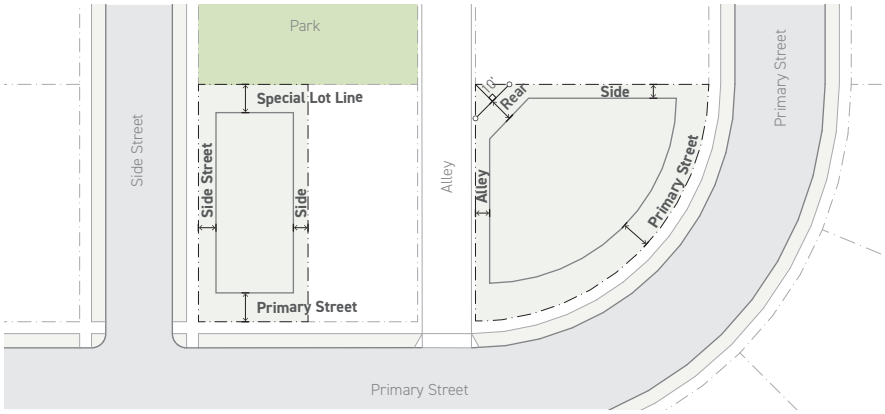
Building setback requirements apply to all buildings and structures on a lot unless listed as an exception in *Sec. 2C.2.2.E (Exceptions)*.

### C. Standards

All buildings and structures on the lot shall be located on or behind a minimum building setback, except where allowed in *Sec. 2C.2.2.E. (Exceptions)*.

### D. Measurement

All building setbacks are measured perpendicular to the applicable lot line:



1. A primary street setback is measured from the primary street lot line.
2. A side street setback is measured from the side street lot line.
3. A side setback is measured from the side lot line.
4. A rear setback is measured from the rear lot line.
    a. For the purpose of measuring rear setback on triangular or gore-shaped lots, the rear lot line is determined based on a line 10 feet wide, parallel to the primary street lot line that intersects two lot lines at its endpoints.
    b. Where the primary street lot line is not straight, the rear lot line must be parallel to a line connecting the end points of the primary street lot line.

5. A alley setback is measured from the alley lot line.

6. A special setback is measured from the special lot line.

## E. Exceptions

The following are allowed to encroach beyond the building setback as listed below:

| HORIZONTAL ENCROACHMENTS ALLOWED INTO SETBACKS | | | |
|---|---|---|---|
| | Primary / Side st, Special | Side / Rear | Alley |
| **Architectural Details** | | | |
| *Examples include: cornices, belt courses, sills, lintels, pilasters, pediments and chimneys* | | | |
| Encroachment (max) | 2' | 2' | 2' |
| Distance from lot line (min) | 0' | 2.5' | 0' |
| **Roof Projections** | | | |
| *Examples include: eaves, roof overhangs, gutters, awnings and canopies* | | | |
| Encroachment (max) | 2.5' | 2.5' | 2.5' |
| Distance from lot line (min) | 0' | 2.5' | 0' |
| **Unenclosed Structures (ground story)** | | | |
| *Examples include: porch, deck, stoop, landing platforms, gazebo, trellis, arbor, pergola* | | | |
| Encroachment (max) | 7' | 5' | 7' |
| Distance from lot line (min) | 0' | 2.5' | 2.5' |
| **Unenclosed Structures (above ground story)** | | | |
| *Examples include: balcony, upper-story light shelves, exterior stairways* | | | |
| Encroachment (max) | 5' | 3' | 3' |
| Distance from lot line (min) | 0' | 5' | 2.5' |
| **Enclosed, Projecting Structures** | | | |
| *Examples include: bay window, oriel window, sleeping porch, overhanging volume, enclosed balcony* | | | |
| Encroachment (max) | 2.5' | 1.5' | 2.5' |
| Distance from lot line (min) | 0' | 2.5' | 2.5' |
| **Mechanical Equipment (ground mounted)** | | | |
| *Examples include: gas meters, water softeners, HVAC equipment, cisterns, wind turbines and solar panels* | | | |
| Encroachment (max) | 1.5' | 2.5' | 2.5' |
| Distance from lot line (min) | 15' | 2.5' | 0' |
| **Mechanical Equipment (wall mounted)** | | | |
| *Examples include: electric meters, electrical panels, water heaters, and HVAC equipment* | | | |
| Encroachment (max) | 1.5' | 1.5' | 1.5' |
| Distance from lot line (min) | 15' | 2.5' | 0' |
| **Waste Enclosures** | | | |
| *Examples include: trash compactors, garbage, recycling and food waste and their associated screening* | | | |
| Encroachment (max) | 0' | unlimited | unlimited |
| Distance from lot line (min) | 15' | 2.5' | 0' |
| **Utility Equipment, Underground Structures, Flatwork, Fences and walls, Plants, Outdoor Furniture** | | | |
| Encroachment (max) | unlimited | unlimited | unlimited |
| Distance from lot line (min) | 0' | 0' | 0' |

See Sec. 14.1.5. (Horizontal Encroachments)

## F. Relief

1. A reduction in required setback of 20% or less may be requested in accordance with *Sec. 13.7.2 (Adjustments)* provided the resulting setback is at least 3 feet.

2. A setback reduction may be requested as a variance in accordance with *Sec. 13.7.3 (Variance)*..

# DIV. 2C.3. AMENITY

## SEC. 2C.3.1. LOT AMENITY SPACE

An area on a lot that is designated to be used for active or passive recreation, including common open space, private open space, pedestrian amenity space and privately-owned public space.

### A. Intent

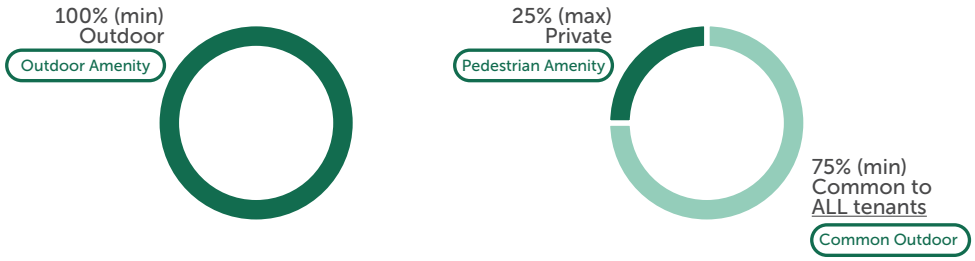
To provide adequate recreation and open space areas for residents and tenants, and to ensure such spaces are accessible, useable and safe.

### B. Applicability

1. Lot amenity space requirements apply to all portions of a lot.
2. If the lot amenity space requirement results in less than 400 square feet, no lot amenity space is required.

### C. Standards

1. The cumulative area of lot amenity space provided on a lot shall not be less than that listed by Form District.
2. Required lot amenity space shall be outdoors and meet the design standards in *Sec. 2C.3.3.A. (Outdoor Amenity Space)*.
3. A maximum of 25% of the total required lot amenity space can be private provided it meets the design standards in *Sec. 2C.3.3.E. (Pedestrian Amenity Space)*.
4. All required lot amenity space that is not private shall be readily accessible to all tenants and meet the design standards in *Sec. 2C.3.3.B. (Common Outdoor Amenity Space)*.



### D. Measurement

1. Lot amenity space is a percentage calculated by dividing the cumulative area of all lot amenity spaces by the lot area.
2. The minimum required lot amenity space is calculated by multiplying the minimum percentage listed in the Form District by the lot area.

3. Outdoor amenity space area meeting *Sec. 2C.3.3.F. (Privately-Owned Public Space)* counts as 1.25 square feet for every 1 square foot of required outdoor amenity space area.

### E. Relief

1. A reduction in required lot amenity space of 10% or less may be requested in accordance with *Sec. 13.7.2 (Adjustments)*.

2. A reduction in required lot amenity space may be requested as a variance in accordance with *Sec. 13.7.3 (Variance)*.

## SEC. 2C.3.2. RESIDENTIAL AMENITY SPACE

An area which is designed and intended to be used by occupants of dwelling units for recreational, domestic, or vocational purposes.

### A. Intent

To provide opportunities for residential amenities through shared facilities, activating outdoor areas and common indoor areas.

### B. Applicability

Residential amenity space requirements apply to all applications including 5 or more dwelling units on a lot.

### C. Standards

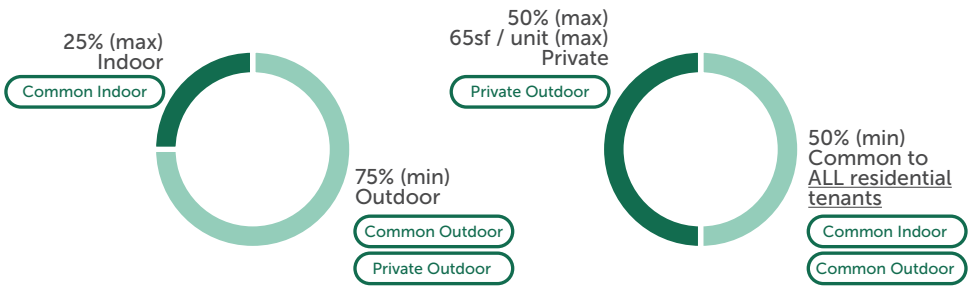
1. The cumulative area of residential amenity space provided on a lot shall not be less than that listed by Form District.

2. At least 75% of the required residential amenity space shall be outdoors and meet the design standards of either *Sec. 2C.3.3.B. (Common Outdoor Space)* or *Sec. 2C.3.3.C. (Private Outdoor Amenity Space)*.

3. A maximum of 65 square feet per dwelling unit of required residential amenity space may be private provided it meets the design standards in *Sec. 2C.3.3.C. (Private Outdoor Amenity Space)*.

4. No more than 50% of the total required residential amenity space may be private.

5. All required residential amenity space that is not private shall be readily accessible to all residential tenants and meet the design standards in either *Sec. 2C.3.3.B. (Common Outdoor Amenity Space)* or *Sec. 2C.3.3.D. (Common Indoor Amenity Space)*.



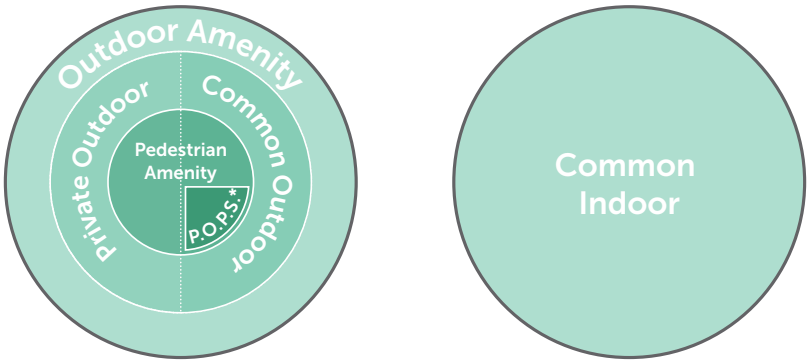
### D. Measurement

1. Residential amenity space is a percentage calculated by dividing the cumulative area of all residential amenity spaces by the total floor area allocated to dwelling units.
2. The minimum required residential amenity space is calculated by multiplying the total floor area allocated to dwelling units by the minimum percentage listed in Form District.
3. All lot amenity space provided may be credited towards the residential amenity space requirement.
4. Residential amenity space meeting *Sec. 2C.3.3.F. (Privately-Owned Public Space)* counts at a rate of 1.25 square feet for every 1 square foot of privately owned public space provided.

### E. Relief

1. A reduction in required residential amenity space of 10% or less may be requested in accordance with *Sec. 13.7.2 (Adjustments)*.
2. A reduction in required residential amenity space may be requested as a variance in accordance with *Sec. 13.7.3 (Variance)*.

## SEC. 2C.3.3. AMENITY DESIGN STANDARDS



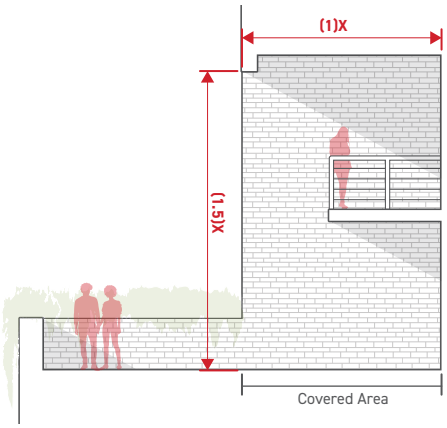
*P.O.P.S. = Privately-Owned Public Space

# A. Outdoor Amenity Space

## 1. General

**a.** Where an outdoor amenity space is enclosed, it cannot be covered. Where the outdoor amenity space is covered, it cannot be enclosed.

**b.** Outdoor amenity space that is covered shall have a minimum clear height of 1.5 times the depth of the covered area.



**c.** Outdoor amenity space located above the ground story may be required to set back from the roof edge - see *LAMC Sec. 57.317 (Rooftop Gardens and Landscaped Roofs)*.

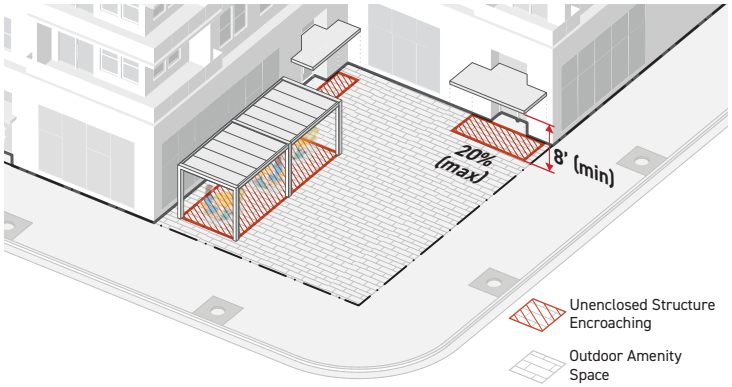
## 2. Encroachments

**a.** Only the following structures may encroach into an outdoor amenity space:

| ALLOWED HORIZONTAL ENCROACHMENTS | |
|---|---|
| **Architectural Details** | |
| *Examples include: cornices, belt courses, sills, lintels, pilasters, pediments and chimneys* | |
| Encroachment (max) | 2' |
| **Roof Projections** | |
| *Examples include: eaves, roof overhangs, gutters, awnings and canopies* | |
| Encroachment (max) | unlimited |
| **Unenclosed Structures** | |
| *Examples include: porch, deck, stoop, landing platforms, gazebo, trellis, arbor, pergola* | |
| Encroachment (max) | unlimited |
| **Enclosed, Projecting Structures** | |
| *Examples include: bay window, oriel window, sleeping porch, overhanging volume, enclosed balcony* | |
| Encroachment (max) | 2' |
| See Sec. 14.1.5. (Horizontal Encroachments) | |

**b.** Allowed encroachments shall cumulatively cover no more than 20% of any individual outdoor amenity space.

**c.** No allowed encroachment shall have a clear height of less than 8 feet, measured from the finished ground surface of the outdoor amenity space.



## B. Common Outdoor Amenity Space

**1.** Common outdoor amenity space shall meet *Sec. 2C.3.3.A. (Outdoor Amenity Space)*.

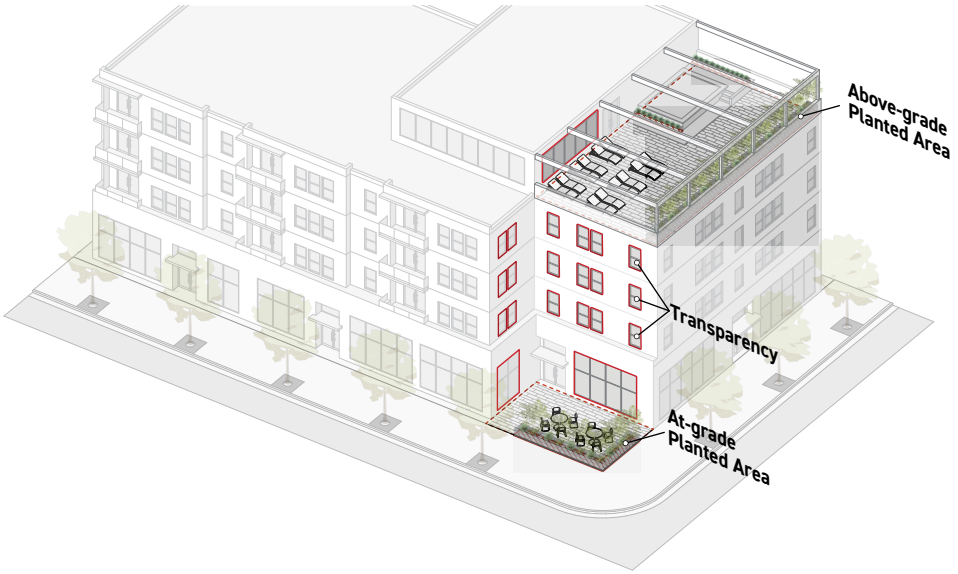
**2.** Common outdoor amenity space shall have a minimum area of 400 square feet and have no horizontal dimension less than 15 feet, measured perpendicular to any boundary of the space.

**3.** Building facades adjacent to common outdoor amenity space shall have a minimum transparency of 15% for each story. For measurement of transparency see *Sec. 3C.5. (Transparency)*.

**4.** At-grade, a minimum of 25% of the surface area of the common outdoor amenity space shall be planted area.

**5.** Above-grade, a minimum of 15% of the surface area of the common outdoor amenity space shall be planted area.

**6.** For every 400 square feet of common outdoor amenity space, 2 seats shall be provided. Seats may be permanent or movable. Two linear feet of bench or seat wall are counted as 1 seat.



## C. Pedestrian Amenity Space

[*See Div. 3C.2. (Build-To)* for additional provisions related to pedestrian amenity spaces].

**1.** Pedestrian amenity space shall meet *Sec. 2C.3.3.B. (Common Outdoor Amenity Space)* or *Sec. 2C.3.3.C. (Private Outdoor Amenity Space)*.

**2.** Pedestrian amenity space shall abut, and be directly accessible from, a public sidewalk or public way. The space shall not be separated from the public sidewalk or public access way by any structure or landscaping, with the exception of an A1 or A2 front yard privacy barrier - see *Sec. 4C.3.7.A. (Front Yard Privacy Screens)*.

**3.** Building facades adjacent to a pedestrian amenity space shall meet the applicable Frontage District standards - see *Article 3 (Frontage)*.

**4.** All non-planted areas shall be located within the allowed ground floor elevation range *(Sec. 3C.7. 2.)* listed by Form District - see *Part 2B (Form Districts)*.

**5.** Mechanical and utility equipment shall not be located within a pedestrian amenity space, or between a pedestrian amenity space and the adjacent building facade.

**6.** All mechanical exhaust outlets shall be located a minimum horizontal distance of 10 feet and a minimum vertical distance of 15 feet from a pedestrian amenity space.

**7.** The following lighting standards are required in any pedestrian amenity space.

**a.** A minimum average horizontal illumination of .75 footcandles.

**b.** A uniformity ratio of 3:1.

**c.** Luminaires shall be mounted no more than 10 feet above the finished floor or finished surface of the pedestrian amenity space.

## D. Privately-Owned Public Space

**1.** Privately-owned public space shall meet *Sec. 2C.3.3.E. (Pedestrian Amenity Space)*.

**2.** Privately-owned public space shall be made permanently available to the general public, at no cost, between the hours of 5:00 AM and 10:30 PM daily.

**3.** Signs shall be posted at every public entrance to the space in accordance with the Privately Owned Public Space Sign Standards as established by the City Planning Commission, pursuant to *Sec. 13.3.5. (Policy Action)*. Standards include, but are not limited to the following:

**a.** Minimum sign dimension, no less than 16 inches by 20 inches;

**b.** Sign location requirements;

**c.** Required posting of the hours of operation; and

**d.** Mandatory language regarding public access.

4. Privately-Owned Public Space may be eligible for credits towards the fee and dedication requirements outlined in *Div. 10.4 (Park Fee and Land Dedication)*.

## E. Relief

1. A deviation from any amenity space dimensional standard of 20% or less may be requested in accordance with *Sec. 13.7.2 (Adjustments)*.

2. A deviation from any amenity space standard may be requested as a variance in accordance with *Sec. 13.7.3 (Variance)*.

## F. Private Outdoor Amenity Space

1. Private outdoor amenity space shall meet *Sec. 2C.3.3.A. (Outdoor Amenity Space)*.

2. Private outdoor amenity space shall abut, and be directly accessible from, the assigned unit or units.

3. Unenclosed private outdoor amenity space shall have a minimum area of 50 square feet, and have no horizontal dimension less than 5 feet, measured perpendicular to any boundary of the space.

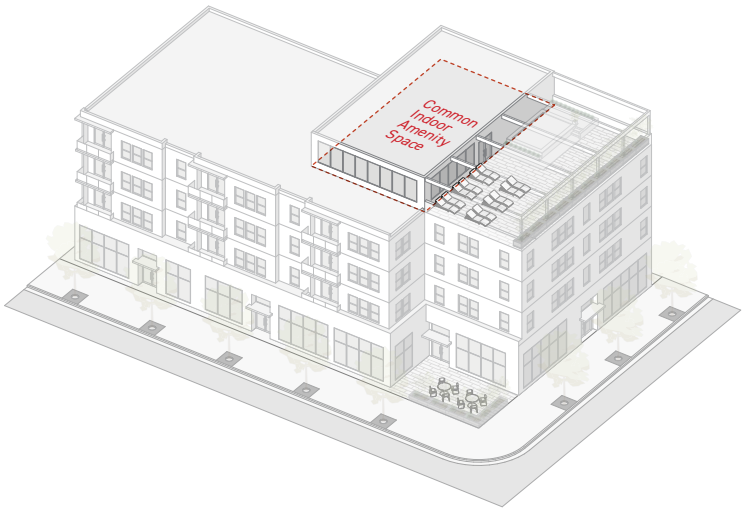
4. Enclosed private outdoor amenity space shall have no horizontal dimension less than 8 feet, measured perpendicular to any boundary of the space.

## G. Common Indoor Amenity Space

1. Common indoor amenity space can be covered and enclosed.

2. Common indoor amenity space shall have a minimum area of 400 square feet and no horizontal dimension less than 10 feet when measured perpendicular from any boundary of the open space.

3. Common indoor amenity space shall include amenities for residents.



# DIV. 2C.4. FLOOR AREA RATIO & HEIGHT

## SEC. 2C.4.1. FLOOR AREA RATIO (FAR)

Floor area ratio (FAR) is the measurement of a building's floor area in relation to the size of the lot that the building is located on.

### A. Intent

To regulate the bulk and massing of a buildings on a lot.

### B. Applicability

Floor area ratio standards apply to all portions of a lot and buildings and structures located on a lot provided it counts as floor area *Sec. 14.1.7. (Floor Area)*.

### C. Standards

#### 1. Base

A lot cannot exceed the maximum base floor area ratio without meeting *Article 9 (Pubic Benefit System)*.

#### 2. Bonus

A lot may exceed the base floor area ratio according to the maximum bonus floor area ratio as allowed in *Article 9 (Pubic Benefit System)*.

### D. Measurement

**1.** Floor area ratio is calculated by dividing the floor area on a lot by the lot area.

**2.** Generally, floor area is calculated as the sum of all interior floor space for each story of a building. For the measurement of floor area see *Sec. 14.1.7. (Floor Area)*.

**3.** For the purpose of calculating FAR, portions of a lot designated for private streets may be counted as lot. For measuring lot area see *Sec. 2C.1.1. (Lot Area)*.

**4.** In this Chapter (1A), lot area is the same as buildable area referred to in Section 104 (e) (Floor Area Restriction) of the City of Los Angeles Charter.

**5.** The Downtown Community Plan Implementation Overlay (CPIO) may define and measure buildable area differently than is outlined in this Section for the purpose of calculating the maximum floor area using bonus FAR.

### E. Relief

**1.** For Form Districts that do not include a bonus FAR, an increased FAR of no more than 10% may be requested in accordance with *Sec. 13.7.2 (Adjustments).*

**2.** An increased FAR may be requested as a variance in accordance with *Sec. 13.7.3 (Variance)*.

## SEC. 2C.4.2. HEIGHT IN FEET

The maximum height in feet of a building or structure.

### A. Intent

To provide adequate light and air, safety, and to protect the character of an area and the interests of the general public.

### B. Applicability

Building height in feet requirements apply to all buildings and structures on a lot where the Form District includes a height in feet standard unless listed as an exception in *Sec. 2C.4.3.E (Exceptions)*.

### C. Standards

#### 1. Base

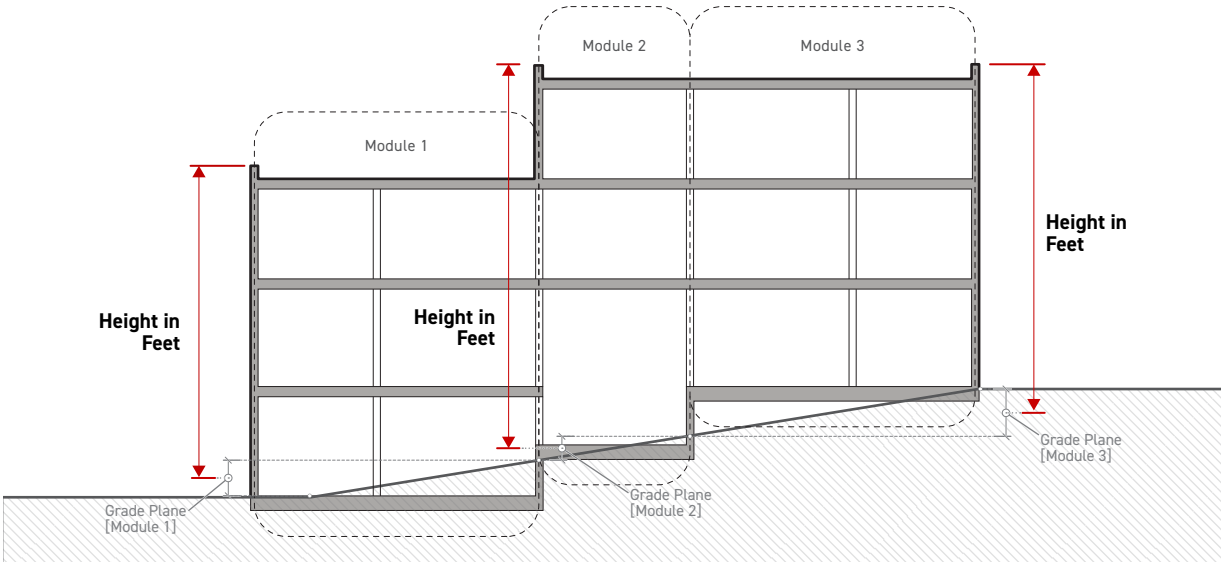
A building or structure cannot exceed the maximum base height in feet without meeting *Article 9 (Community Benefits Program)*.

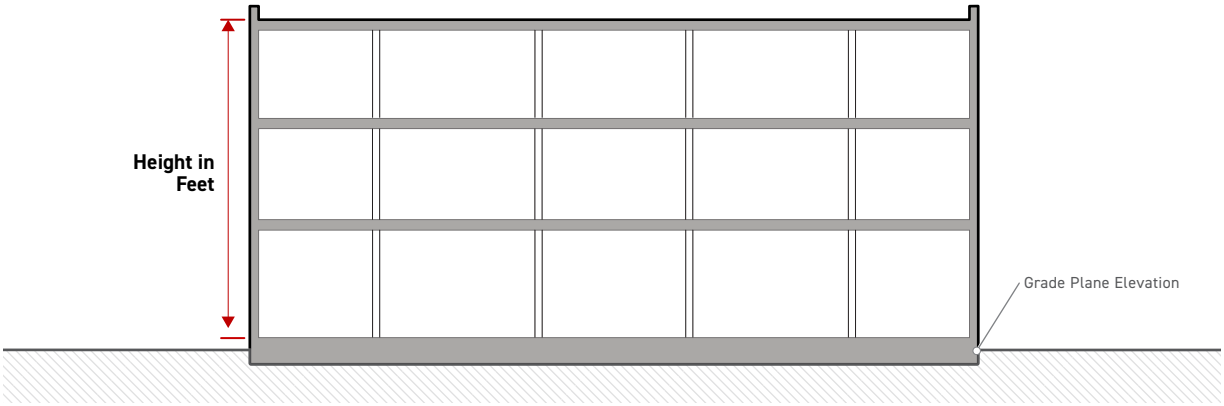
#### 2. Bonus

A building or structure may exceed the maximum base height in feet according to the maximum height in feet as allowed in *Article 9 (Community Benefits Program)*.

## D. Measurement

**1.** Maximum height in feet is measured as the vertical distance from *grade plane (Sec. 14.1.9.)* to the top of the roof structure. One or more grade plane module may be established for each building as shown below. See also *Sec. 14.1.9.2. (Grade Plane Module)*.





**2.** Regardless of established grade plane, buildings shall also comply with ground floor elevation standards in Frontage.

## E. Exceptions

The following are allowed to encroach beyond the maximum height in feet as listed below:

| ALLOWED VERTICAL ENCROACHMENTS | | | |
|---|---|---|---|
| | Form District Max Height | | |
| | 45' or less | 45' to 75' | 75' or More |
| **Mechanical Equipment (roof mounted)** | | | |
| *Examples include: HVAC equipment, water tanks, solar panels, exhaust ducts, and communication equipment* | | | |
| Encroachment (max) | 3' | 5' | 10' |
| Setback from roof edge (min) | 3' | 3' | 5' |
| **Architectural Elements** | | | |
| *Examples include: skylights, steeples, spires, belfries, cupolas, domes, flagpoles, and lighting* | | | |
| Encroachment (max) | 5' | 5' | 10' |
| Setback from roof edge (min) | 3' | 3' | 5' |
| **Vertical Circulation** | | | |
| *Examples include: Elevator room, and associated equipment, and stairway access to roof* | | | |
| Encroachment (max) | 10' | 10' | 10' |
| Setback from roof edge (min) | 5' | 5' | 5' |
| **Safety Barriers** | | | |
| *Examples include: Fencing, walls, parapets, railing, stairs* | | | |
| Encroachment (max) | 6' | 6' | 6' |
| Setback from roof edge (min) | 0' | 0' | 0' |
| **Unenclosed Structures** | | | |
| *Examples include: Shade structures, pergolas, rooftop bar, permanent seating, beehives, and cooking facilities* | | | |
| Encroachment (max) | 8 | 8 | 8' |
| Setback from roof edge (min) | 5' | 5' | 5' |
| **Flatwork** | | | |
| *Examples include: Decking, walkways, patios, planters* | | | |
| Encroachment (max) | 2.5' | 2.5' | 2.5 |
| Setback from roof edge (min) | 1' | 1' | 1' |
| **Plants** | | | |
| *Examples include: trees, shrubs, flowers, herbs, vegetables, grasses, ferns, moss* | | | |
| Encroachment (max) | unlimited | unlimited | unlimited |
| Setback from roof edge (min) | 1' | 1' | 1' |
| See Sec. 14.1.6. (Vertical Encroachments) | | | |

## F. Relief

1. Increased building height in feet of 20% or less may be requested in accordance with *Sec. 13.7.2 (Adjustments)*.

2. Increased vertical encroachments of 20% or less may be requested in accordance with *Sec. 13.7.2 (Adjustments)*.

3. Increased building height in feet or vertical encroachments may be requested as a variance in accordance with *Sec. 13.7.3 (Variance)*.

## SEC. 2C.4.3. HEIGHT IN STORIES

The allowed height of a building measured in stories.

### A. Intent

To provide adequate light and air, safety, and to protect the character of an area and the interests of the general public. Intended to help provide a variety in building heights and to help ensure that story heights are not reduced to fit within a maximum height in feet.

### B. Applicability

Building height in stories requirements apply to all buildings and structures on a lot where the Form District includes a height in stories standard unless listed as an exception in *Sec. 2C.4.3.E (Exceptions)*.

### C. Standards

#### 1. Base

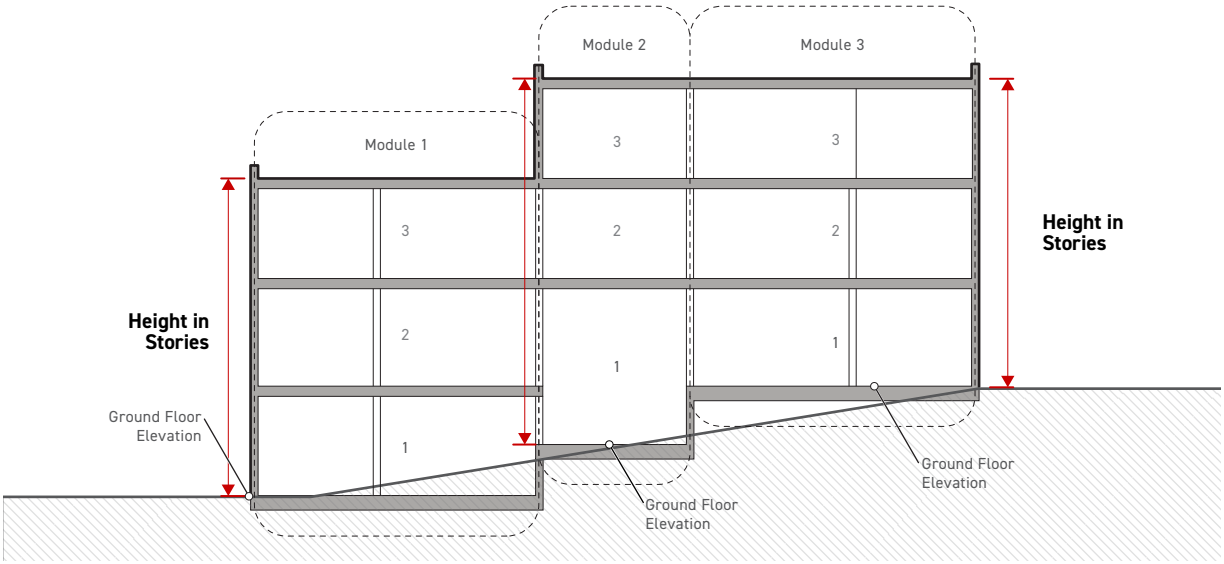
A building cannot exceed the maximum base height in stories without meeting *Article 9 (Community Benefits Program)*.

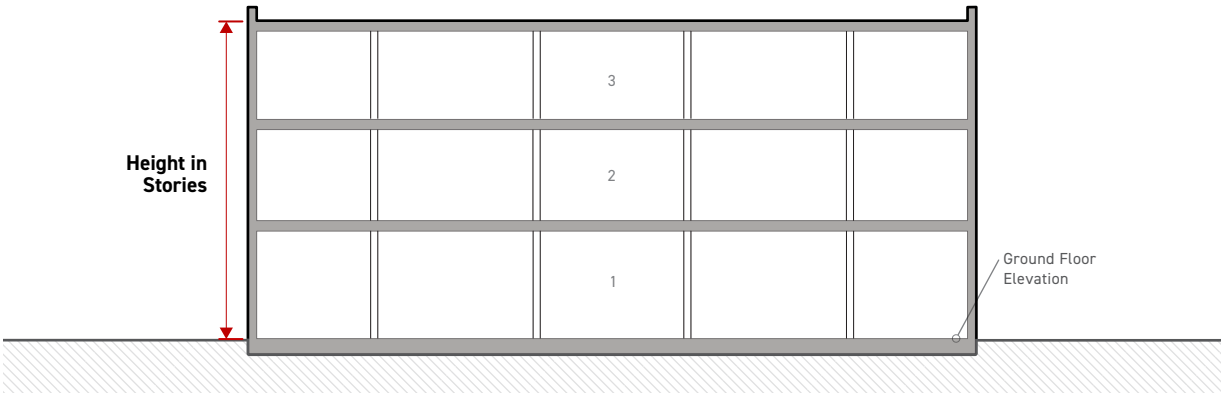
#### 2. Bonus

A building may exceed the maximum base height in stories according to the maximum height in stories as allowed in *Article 9 (Community Benefits Program)*.

## D. Measurement

**1.** The maximum height in stories is measured as the number of stories above the ground floor elevation for each module of the building as shown below. See also *Sec. 14.1.9.2. (Grade Plane Module)*.





**2.** For determining ground story see *Sec. 14.1.10. (Ground Story Determination)*.

## E. Exceptions

The following are allowed to encroach beyond the maximum height in stories as listed below:

| ALLOWED VERTICAL ENCROACHMENTS | | | |
|---|---|---|---|
| | Form District Max Height | | |
| | 6 Stories or More | 3 to 6 Stories | 3 Stories or Less |
| **Mechanical Equipment (roof mounted)** | | | |
| *Examples include: HVAC equipment, water tanks, solar panels, exhaust ducts, and communication equipment* | | | |
| Encroachment (max) | 10' | 5' | 3' |
| Setback from edge (min) | 5' | 3' | 3' |
| **Architectural Elements** | | | |
| *Examples include: skylights, steeples, spires, belfries, cupolas, domes, flagpoles, and lighting* | | | |
| Encroachment (max) | 10' | 5' | 5' |
| Setback from edge (min) | 5' | 5' | 3' |
| **Vertical Circulation** | | | |
| *Examples include: Elevator room, and associated equipment, and stairway access to roof* | | | |
| Encroachment (max) | 10' | 10' | 10' |
| Setback from edge (min) | 5' | 5' | 5' |
| **Safety Barriers** | | | |
| *Examples include: Fencing, walls, parapets, railing, stairs* | | | |
| Encroachment (max) | 6' | 6' | 6' |
| Setback from edge (min) | 0' | 0' | 0' |
| **Unenclosed Structures** | | | |
| *Examples include: Shade structures, pergolas, rooftop bar, permanent seating, beehives, and cooking facilities* | | | |
| Encroachment (max) | 8' | 8' | 8' |
| Setback from edge (min) | 5' | 5' | 5' |
| **Flatwork** | | | |
| *Examples include: Decking, walkways, patios, planters* | | | |
| Encroachment (max) | 2.5 | 2.5' | 2.5' |
| Setback from edge (min) | 1' | 1' | 1' |
| **Plants** | | | |
| *Examples include: trees, shrubs, flowers, herbs, vegetables, grasses, ferns, moss* | | | |
| Encroachment (max) | unlimited | unlimited | unlimited |
| Setback from edge (min) | 1' | 1' | 1' |
| See Sec. 14.1.6. (Vertical Encroachments) | | | |

## F. Relief

An increase in maximum height in stories may be requested as a variance in accordance with *Sec. 13.7.3 (Variance)*.

## SEC. 2C.4.4. MINIMUM HEIGHT IN STORIES

The minimum height in stories of a building.

### A. Intent

To provide a method of establishing a minimum level of intensity on a lot, and ensure that lots are not underdeveloped.

### B. Applicability

Minimum height in stories requirements apply to all buildings on a lot where the Form District includes a minimum height in stories standard.

### C. Standards

At least some portion of the lot shall contain floor area within a story according to the minimum story height.

### D. Measurement

For measurement of minimum height in stories see *Sec. 2C.4.3. (Height in Stories)*

### E. Relief

1. A reduction in minimum height in stories of 1 story may be requested in accordance with *Sec. 13.7.2 (Adjustments)*.
2. Reduced minimum height in stories may be requested only as a variance in accordance with *Sec. 13.7.3 (Variance)*.

# DIV. 2C.5. UPPER-STORY BULK

## SEC. 2C.5.1. BULK PLANE

A series of planes that limit the allowable volume of space a building or structure can occupy.

### A. Intent

To push taller buildings and structures towards the center of a lot and reduce looming impacts on neighboring properties, promoting privacy and solar access.

### B. Applicability

Bulk plane requirements apply to all buildings and structures on a lot.

### C. Standards

All buildings and structures shall fit entirely within the bulk plane, no encroachments are allowed. For encroachments into the maximum height in feet see *Sec. 2C.4.2.E. (Exceptions)*.

### D. Measurement

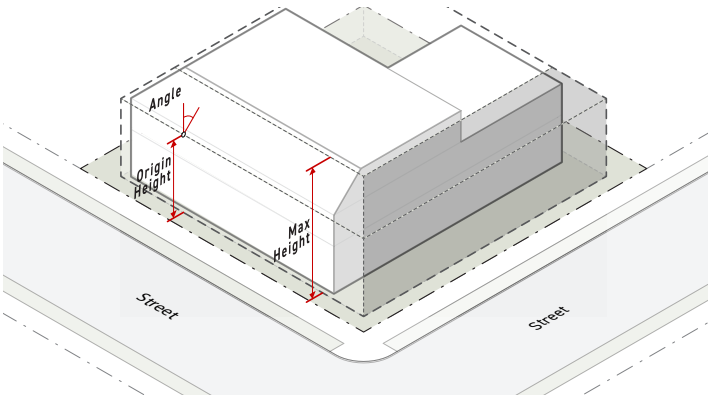
A bulk plane is measured vertically from all applicable lot line setbacks upwards to the origin height. Above the bulk plane origin height, the plane slopes inward at the angle specified by the bulk plane angle.

#### 1. Origin Height

The origin height is measured vertically from the minimum setback. Where no minimum setback is required, the origin height is measured vertically from the lot line.

#### 2. Angle

The angle of elevation is measured upward, where 0° would prohibit any height above the origin height and 90° allows continuous vertical height from a minimum setback to the maximum height allowed.



## E. Exceptions

Encroachments into the bulk plane are not allowed. For encroachments into the maximum height in feet see *Sec. 2C.4.2.E (Exceptions)*.

## F. Relief

1. Increased bulk plane origin height of 20% or less may be requested in accordance with *Sec. 13.7.2 (Adjustments)* or as a variance in accordance with *Sec. 13.7.3 (Variance)*.

2. Increased bulk plane angle may be requested only as a variance in accordance with *Sec. 13.7.3 (Variance)*.

## SEC. 2C.5.2. STREET STEP-BACK

A step-like recess in the massing of a building that requires that upper stories to pushed back from the lower stories from the street.

### A. Intent

To reduce the perceived bulk and mass of a building along facades facing public ways, ensuring a height along the street that is appropriate to its neighboring context, while allowing for additional building height.

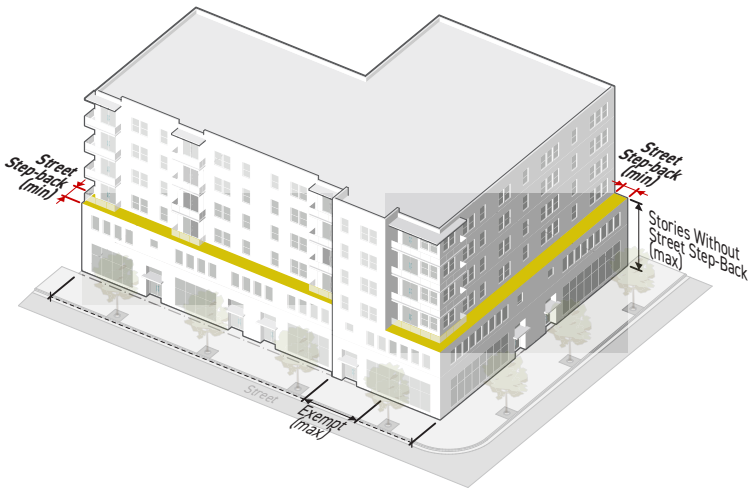
### B. Applicability

Street step-back requirements apply to all buildings or structures on a lot that face a frontage lot line unless listed as an exception in *Sec. 2C.5.2.E (Exceptions)*.

### C. Standards

The following standards shall be met for a minimum of 85% of the building length:

1. All stories above the maximum stories without street step-back shall be stepped back from the street-facing facade by at least the minimum street step-back depth.
2. No building or structure can extend into a minimum street step-back depth, except where allowed in *Sec. 2C.5.2.E. (Exceptions)*.
3. Buildings having a height less than the maximum stories without street step-back are not required to provide a street step-back.
4. Where a street step-back is required, no less than 2 stories without street step-back shall be provided.



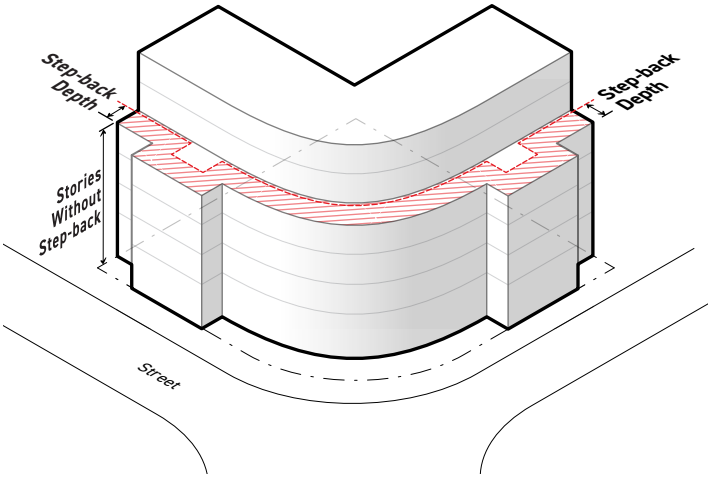
## D. Measurement

### 1. Stories Without Street Step-back

Stories without street step-back is measured according to *Sec. 2C.4.3. (Height in Stories)*.

### 2. Street Step-back Depth

The minimum street step-back depth is measured as the horizontal distance from the outermost edge of the building facade to the outermost edge of the facade of the stepped back stories.



## E. Exceptions

The following are allowed to encroach beyond the street step-back as listed below:

| ALLOWED HORIZONTAL ENCROACHMENTS | |
|---|---|
| **Architectural Details** | |
| *Examples include: cornices, belt courses, sills, lintels, pilasters, pediments and chimneys* | |
| Encroachment (max) | 2' |
| **Roof Projections** | |
| *Examples include: eaves, roof overhangs, gutters, awnings and canopies* | |
| Encroachment (max) | 2.5' |
| **Unenclosed Structures** | |
| *Examples include: porch, deck, stoop, landing platforms, gazebo, trellis, arbor, pergola* | |
| Encroachment (max) | 5' |
| **Enclosed, Projecting Structures** | |
| *Examples include: bay window, oriel window, sleeping porch, overhanging volume, enclosed balcony* | |
| Encroachment (max) | 2.5' |
| **Mechanical Equipment (wall and ground mounted)** | |
| *Examples include: gas meters, water softeners, HVAC equipment, cisterns, wind turbines and solar panels* | |
| Encroachment (max) | 1.5' |

See Sec. 14.1.5. (Horizontal Encroachments)

| ALLOWED VERTICAL ENCROACHMENTS | |
|---|---|
| **Mechanical Equipment** | |
| *Examples include: HVAC equipment, water tanks, solar panels, exhaust ducts, and communication equipment* | |
| Encroachment (max) | 5' |
| Setback from edge (min) | 3' |
| **Architectural Elements** | |
| *Examples include: skylights, steeples, spires, belfries, cupolas, domes, flagpoles, and lighting* | |
| Encroachment (max) | 5' |
| Setback from edge (min) | 2' |
| **Safety Barriers** | |
| *Examples include: Fencing, walls, parapets, railing, stairs* | |
| Encroachment (max) | 4' |
| Setback from edge (min) | 0' |
| **Unenclosed Structures** | |
| *Examples include: Shade structures, pergolas, rooftop bar, permanent seating, beehives, and cooking facilities* | |
| Encroachment (max) | 8 |
| Setback from edge (min) | 2' |
| **Flatwork** | |
| *Examples include: Decking, walkways, patios, planters* | |
| Encroachment (max) | 2.5' |
| Setback from edge (min) | 1' |
| **Plants** | |
| *Examples include: trees, shrubs, flowers, herbs, vegetables, grasses, ferns, moss* | |
| Encroachment (max) | unlimited |
| Setback from edge (min) | 1' |
| See Sec. 14.1.6. (Vertical Encroachments) | |

## F. Relief

1. A reduced street step-back depth of 20% or less may be requested in accordance with *Sec. 13.7.2 (Adjustments)* or as a variance in accordance with *Sec. 13.7.3 (Variance)*.

2. Increased stories without street step-back may be requested only as a variance in accordance with *Sec. 13.7.3 (Variance)*.

## SEC. 2C.5.3. HEIGHT TRANSITION

A reduction in the maximum height of building for a limited depth along shared lot lines.

### A. Intent

To prevent looming impacts and reduce the perceived bulk and mass of buildings from neighboring lots, while allowing for additional building height.

### B. Applicability

Height transition requirements apply to all buildings or structures on a lot that face an alley or common lot line unless listed as an exception in *Sec. 2C.5.3.E (Exceptions)*.

### C. Standards

**1.** All stories above the maximum stories without a height transition shall be setback from the from the applicable lot line by at least the minimum height transition depth.

**2.** If the entire building is set back from the applicable lot line by at least the minimum height transition depth, the facade may continue to the maximum allowed height without a setting back.

**3.** No building or structure can extend into a minimum height transition depth, except where allowed in *Sec. 2C.5.3.E. (Exceptions)*.

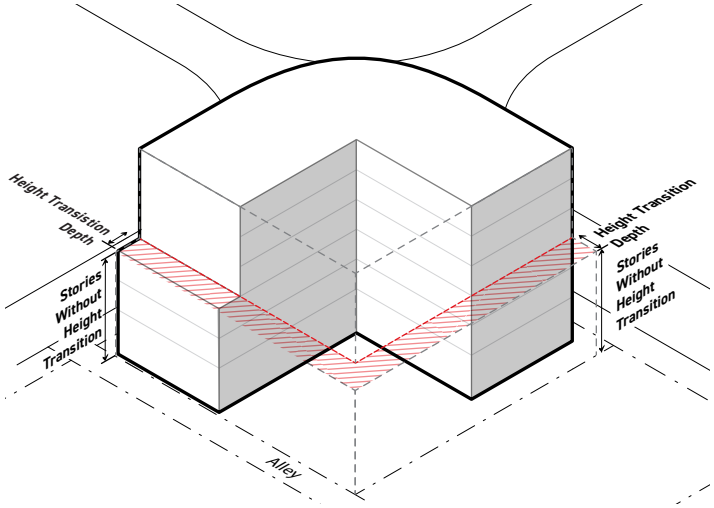
### D. Measurement

#### 1. Stories Without Height Transition

Stories without height transition is measured according to *Sec. 2C.4.3. (Height in Stories)*.

#### 2. Height Transition Depth

The minimum height transition depth is measured as the horizontal distance from the applicable lot line to the outer facade of stories above the maximum stories without height transition.



## E. Exceptions

The following are allowed to encroach beyond the height transition as listed below:

| ALLOWED HORIZONTAL ENCROACHMENTS | |
|---|---|
| **Architectural Details** | |
| *Examples include: cornices, belt courses, sills, lintels, pilasters, pediments and chimneys* | |
| Encroachment (max) | 2' |
| **Roof Projections** | |
| *Examples include: eaves, roof overhangs, gutters, awnings and canopies* | |
| Encroachment (max) | 2.5' |
| **Unenclosed Structures (all stories)** | |
| *Examples include: porch, deck, stoop, balcony, light shelves, exterior stairways* | |
| Encroachment (max) | 5' |
| **Enclosed, Projecting Structures** | |
| *Examples include: bay window, oriel window, sleeping porch, overhanging volume, enclosed balcony* | |
| Encroachment (max) | 2.5' |
| **Mechanical Equipment (ground and wall mounted)** | |
| *gas and electric meters, HVAC equipment, cisterns, wind turbines and solar panels, and water heaters* | |
| Encroachment (max) | 1.5' |
| See Sec. 14.1.5. (Horizontal Encroachments) | |

| ALLOWED VERTICAL ENCROACHMENTS | |
|---|---|
| **Mechanical Equipment** | |
| *Examples include: HVAC equipment, water tanks, solar panels, exhaust ducts, and communication equipment* | |
| Encroachment (max) | 5' |
| Setback from edge (min) | 3' |
| **Architectural Elements** | |
| *Examples include: skylights, steeples, spires, belfries, cupolas, domes, flagpoles, and lighting* | |
| Encroachment (max) | 5' |
| Setback from edge (min) | 2' |
| **Safety Barriers** | |
| *Examples include: Fencing, walls, parapets, railing, stairs* | |
| Encroachment (max) | 4' |
| Setback from edge (min) | 0' |
| **Unenclosed Structures** | |
| *Examples include: Shade structures, pergolas, rooftop bar, permanent seating, beehives, and cooking facilities* | |
| Encroachment (max) | 8 |
| Setback from edge (min) | 2' |
| **Flatwork** | |
| *Examples include: Decking, walkways, patios, planters* | |
| Encroachment (max) | 2.5' |
| Setback from edge (min) | 1' |
| **Plants** | |
| *Examples include: trees, shrubs, flowers, herbs, vegetables, grasses, ferns, moss* | |
| Encroachment (max) | unlimited |
| Setback from edge (min) | 1' |
| See Sec. 14.1.6. (Vertical Encroachments) | |

## F. Relief

1. A reduced height transition depth of 20% or less may be requested in accordance with *Sec. 13.7.2 (Adjustments)*.

2. A reduced height transition depth may be requested as a variance in accordance with *Sec. 13.7.3 (Variance)*.

3. Increased stories without height transition may be requested as a variance in accordance with *Sec. 13.7.3 (Variance)*.

# DIV. 2C.6. BUILDING MASS

## SEC. 2C.6.1. BUILDING WIDTH

The maximum allowed width of any building or collection of buildings on a on a lot.

### A. Intent

1. To promote fine-grained patterns of development and prevent long buildings that are significantly out of context with traditional patterns, by breaking wide buildings into multiple, clearly distinguished building widths.

2. To encourage larger projects to provide open space for pedestrians and recreation.

### B. Applicability

1. Building width requirements apply to all frontage lot line-facing buildings or structures on a lot.

2. Building width requirements apply only to portions of buildings or structures located above the ground floor elevation

3. Building width requirements do not apply to exceptions listed in *Sec. 2C.6.3.F (Exceptions*).

### C. Standards

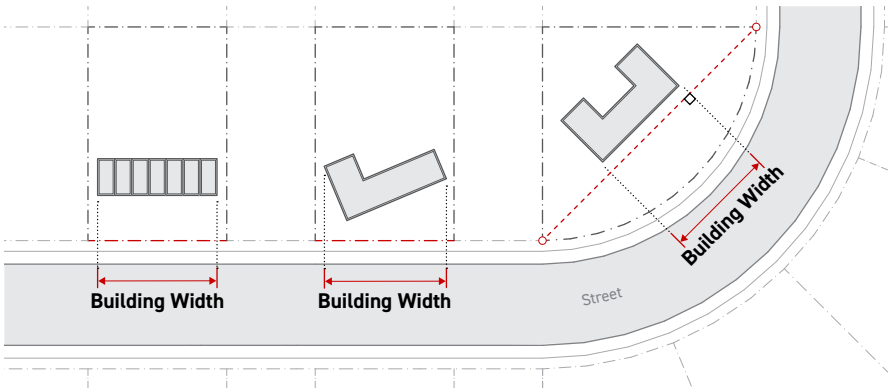
1. No applicable building or collection of buildings shall be wider than the maximum building width.

2. Any building on a corner lot, located within the build-to range area of overlap is allowed to exceed the maximum building width by a maximum of 40 feet along both primary and side street lot lines.

3. In order to establish buildings on a lot as separate buildings for the purpose of measuring building width, a building break meeting the standards in *Sec. 2C.2.6.1.E. (Building Break)* shall be provided between the structures.

### D. Measurement

Building width is measured horizontally and parallel to each street lot line from one end of a an applicable building or collection of buildings to the opposite end.

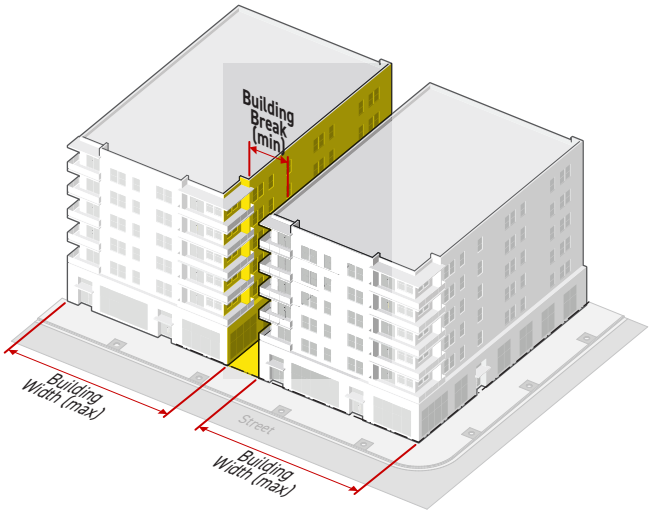


## E. Building Break

### 1. Standards

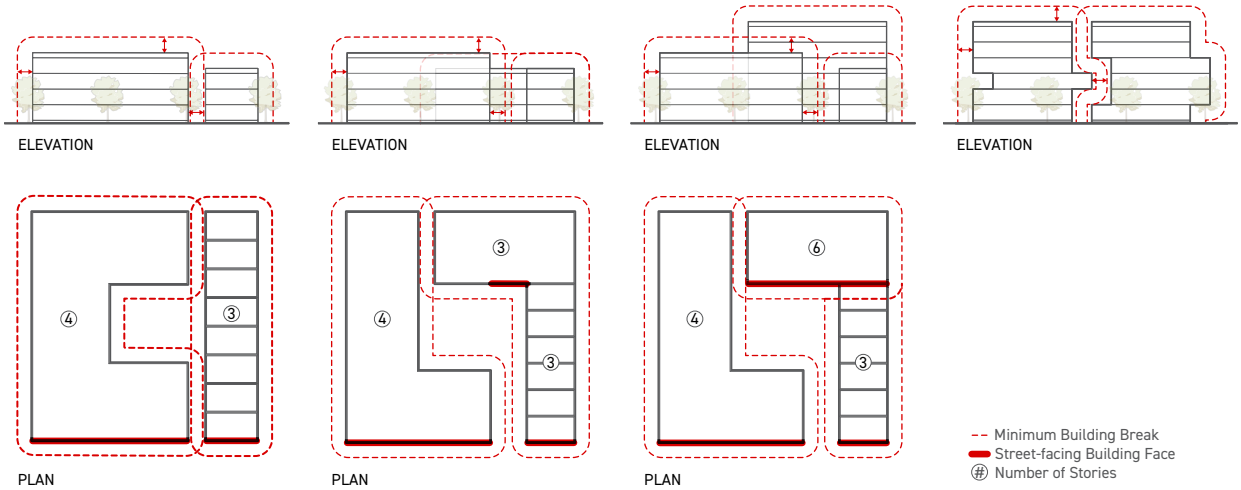
**a.** All buildings and collections of buildings shall be separated by at least the minimum building break dimension in order to establish them as separate buildings for the purpose of measuring building width.

**b.** No building or structure shall encroach into the building break, except where allowed in *Sec. 2C.6.2.F. (Exceptions)*.



### 2. Measurement

Building break is measured perpendicularly from all applicable building faces vertically and horizontally.



## F. Exceptions

### 1. Encroachments

The following are allowed to encroach beyond the building break as listed below:

| ALLOWED HORIZONTAL ENCROACHMENTS | |
|---|---|
| **Architectural Details** | |
| *Examples include: cornices, belt courses, sills, lintels, pilasters, pediments and chimneys* | |
| Encroachment (max) | 2′ |
| Clear width (min) | 3′ |
| **Roof Projections** | |
| *Examples include: eaves, roof overhangs, gutters, awnings and canopies* | |
| Encroachment (max) | 2.5′ |
| Clear width (min) | 3′ |
| **Unenclosed Structures** | |
| *Examples include: porch, deck, stoop, landing platforms, gazebo, trellis, arbor, pergola* | |
| Encroachment (max) | 5′ |
| Clear width (min) | 3′ |
| **Mechanical Equipment (ground and wall mounted)** | |
| *gas and electric meters, HVAC equipment, cisterns, wind turbines and solar panels, and water heaters* | |
| Encroachment (max) | 1.5′ |
| Clear width (min) | 3′ |
| See Sec. 14.1.5. (Horizontal Encroachments) | |

## 2. Building Break Open Space Alternative

As an alternative to a building break, a street-facing open space meeting the following standards shall be used to establish buildings or collections of buildings as separate buildings for the purpose of measuring building width:

**a.** Open space width shall be at least 2 times the minimum building break dimension listed in Form, measured parallel to the applicable street lot line.

**b.** Open space width shall not be greater than the maximum building width, measured parallel to the applicable street lot line.

**c.** Open space depth shall be at least 5 times the minimum building break dimension listed in Form, measured perpendicular to the applicable street lot line.

**d.** A minimum of 75% the open space area shall meet the design standards for *Sec. 2C.3.3.E. (Pedestrian Amenity Space)*.

**e.** Any portion of the open space may count toward lot amenity space *(Sec. 2C.3.1.)* and residential amenity space *(Sec. 2C.3.2.)* provided it meets all applicable standards.

## G. Relief

1. Increased building width of 20% or less may be requested in accordance with *Sec. 13.7.2 (Adjustments)*.
2. Increased building width may be requested as a variance in accordance with *Sec. 13.7.3 (Variance)*.
3. Reduced building break of 20% or less may be requested in accordance with *Sec. 13.7.2 (Adjustments)*.
4. Reduced building break may be requested as a variance in accordance with *Sec. 13.7.3 (Variance)*.

## SEC. 2C.6.2. FACADE WIDTH

The width of a street-facing building facade that is uninterrupted by a facade break.

### A. Intent

To add visual interest and reduce the perceived horizontal scale of facades along public ways by limiting the length of uninterrupted facades and breaking wide facades into multiple, clearly-distinguished facade widths, encouraging large projects to provide areas for pedestrians away from the clear path of the public sidewalk.

### B. Applicability

Facade width requirements apply to all buildings or structures on a lot that both face a frontage lot line and are located within 30 feet of the frontage lot line unless listed as an exception in *Sec. 2C.5.3.E (Exceptions)*.

### C. Standards

1. When a Form District limits facade width, no building facade shall be wider than the maximum facade width indicated by the Form District.

2. In order to establish facades as separate facades for the purpose of facade width, a facade break meeting the standards of *Sec. 2C.6.2.E. (Facade Break)*. shall be provided.

### D. Measurement

Facade width is measured horizontally, parallel to street lot lines, from the edge of each street-facing facade to the opposite edge of the facade.

## SEC. 2C.6.3. FACADE BREAK

The minimum recess required to establish a building width as separate facades for the purpose of measuring facade width.

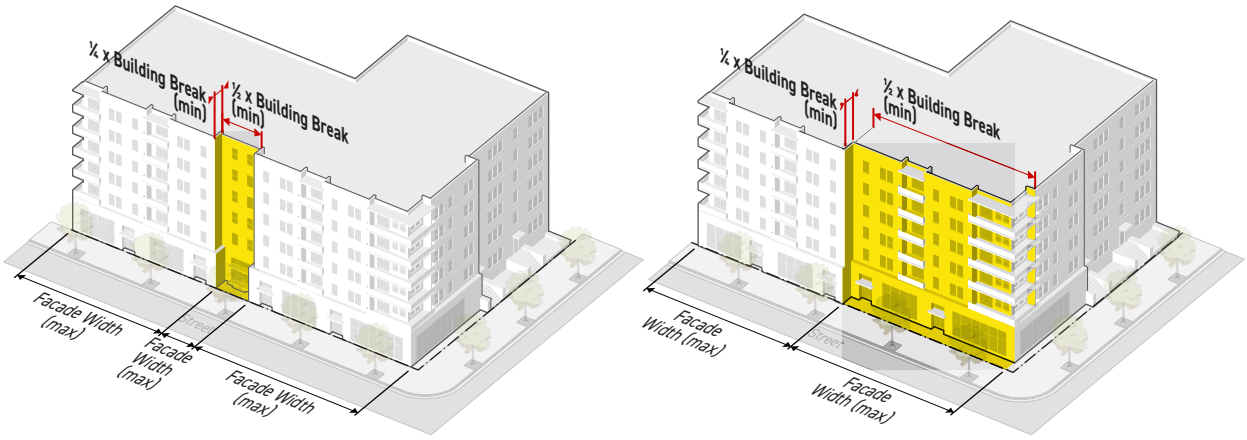
### 1. Standards

**a.** A facade break width shall be at least 0.5 the minimum building break.

**b.** A facade break width shall not be greater than the maximum facade width.

**c.** A facade break depth shall be at least 0.25 the minimum building break.

**d.** No structure or equipment shall encroach into a facade break, except where allowed in *Sec. 2C.6.2.F. (Exceptions)*.



### 2. Measurement

**a.** Facade break width is measured horizontally, parallel to street lot lines.

**b.** Facade break depth is measured horizontally, perpendicular to street lot lines.

## A. Exceptions

Roof projections may encroach into a facade break a maximum of 2.5 feet in depth, measured from the facade break-facing building face.

## B. Relief

**1.** Increased maximum facade width or reduction in minimum facade break of 20% or less may be requested in accordance with *Sec. 13.7.2 (Adjustments)*.

**2.** Deviation from maximum facade width and minimum facade break may be requested as a variance in accordance with *Sec. 13.7.3 (Variance)*

## SEC. 3B.6.1. PURPOSE

The purpose of this Article is to regulate the portions of a lot and exterior building facades that impact the public realm. Frontage Districts help ensure that projects respond to the public realm in a contextually appropriate manner. Districts range from minimal standards for Warehouse Frontages to a robust set of standards for Shopfront Frontages which require projects to support a high-quality public realm that is active, comfortable, safe and visually interesting, with strong connections between the public realm and uses inside buildings.

## SEC. 3B.6.2. FRONTAGE APPLICABILITY

### A. Project Applicability

All projects filed after the effective date of this Zoning Code must comply with the Frontage Standards in this Article, as further specified below.

#### 1. Project Activities

**a.** Frontage District standards apply to project activities as shown in the table below:

| | PROJECT ACTIVITIES | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| GENERAL FRONTAGE DISTRICT RULE | Subdivision | New Construction | Addition | Facade Alteration | Site Alteration | Relocation | Major Renovation | Minor Renovation | Change/Expansion of Use | Ordinary Maintenance and Repair |
| *Div. 3C.1* Build-To | ○ | ● | ● | ○ | ○ | ● | ○ | ○ | ○ | ○ |
| *Div. 3C.2* Parking | ○ | ● | ● | ○ | ● | ● | ● | ○ | ○ | ○ |
| *Div. 3C.3* Landscaping | ○ | ● | ● | ○ | ● | ● | ● | ○ | ○ | ○ |
| *Div. 3C.4* Transparency | ○ | ● | ● | ● | ○ | ● | ● | ○ | ○ | ○ |
| *Div. 3C.5* Entrances | ○ | ● | ● | ● | ○ | ● | ● | ○ | ○ | ○ |
| *Div. 3C.6* Ground Story | ○ | ● | ● | ○ | ○ | ● | ● | ○ | ○ | ○ |

● = Rule generally applies to this project activity

○ = Rule is not applicable

**b.** Character Frontage District standards apply to project activities as shown in the table below:

| CHARACTER FRONTAGE DISTRICT RULE | | PROJECT ACTIVITIES | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| | | Subdivision | New Construction | Addition | Facade Alteration | Site Alteration | Relocation | Major Renovation | Minor Renovation | Change/Expansion of Use | Ordinary Maintenance and Repair |
| *Div. 3D.1* | Build-To | ○ | ● | ● | ○ | ○ | ● | ○ | ○ | ○ | ○ |
| *Div. 3D.2* | Parking | ○ | ● | ● | ○ | ● | ● | ● | ○ | ○ | ○ |
| *Div. 3D.3* | Landscaping | ○ | ● | ● | ○ | ● | ● | ● | ○ | ○ | ○ |
| *Div. 3D.4* | Ground Floor Elevation | ○ | ● | ● | ● | ○ | ● | ● | ○ | ○ | ○ |
| *Div. 3D.5* | Story Height | ○ | ● | ● | ● | ○ | ● | ● | ○ | ○ | ○ |
| *Div. 3D.6* | Articulation | ○ | ● | ● | ● | ○ | ● | ● | ○ | ○ | ○ |
| *Div. 3D.7* | Features | ○ | ● | ● | ● | ○ | ● | ● | ○ | ○ | ○ |
| *Div. 3D.8* | Entrances | ○ | ● | ● | ● | ○ | ● | ● | ○ | ○ | ○ |
| *Div. 3D.9* | Transparency | ○ | ● | ● | ● | ○ | ● | ● | ○ | ○ | ○ |
| *Div. 3D.10* | Exterior Materials | ○ | ● | ● | ● | ○ | ● | ● | ○ | ○ | ○ |
| *Div. 3D.11* | Roof Design | ○ | ● | ● | ● | ○ | ● | ● | ○ | ○ | ○ |

● = Rule generally applies to this project activity

○ = Rule is not applicable

**c.** More than one project activity may apply to a project (for example, an addition may also include an expansion of use).

**d.** Where a rule is listed as generally applicable in the table below, the project activity shall meet the Frontage District rules within the Division. This general applicability may be further specified for each standard in the applicability provisions in *Part 3C* (Frontage Rules). Project applicability may also be modified by *Article 12* (Nonconformities). Where a Division of the Frontage District rules is listed as not applicable in the table below, the standards within the Division do not apply to the project activity.

**e.** For more information about project activities see *Sec. 14.1.17*.

### 2. Nonconformity

For nonconforming lots, and lots with nonconforming site design, buildings, structures, or uses, no project activity may decrease the conformance with any Frontage standard in Article 3 unless otherwise specified by *Division 12.3 (Nonconforming Frontage)*. See the following examples:

**a.** Closing in an existing window opening: Where this proposed facade modification reduces the amount of transparency below the minimum transparency required by the applicable Frontage District the facade modification is not allowed.

**b.** An addition or new detached structure to the side of a building: Where the applicable facades on the existing structure do not meet the Frontage District minimum transparency standard, all applicable facades of the addtion or new structure shall meet the minimum transparency standard but no modification is required to the existing facades.

## B. Applicable Components of Buildings and Lots

### 1. General

Frontage standards apply only to the applicable facades, applicable portions of a lot and applicable building depth as specified below. Specific Frontage standards may further limit which components of buildings and lots are required to comply with the standard within *Part 3C.* (Frontage Rules) and *Part 3D.* (Character Frontage Rules).

## 2. Applicable Facades

Frontage Standards may apply to the following facades:

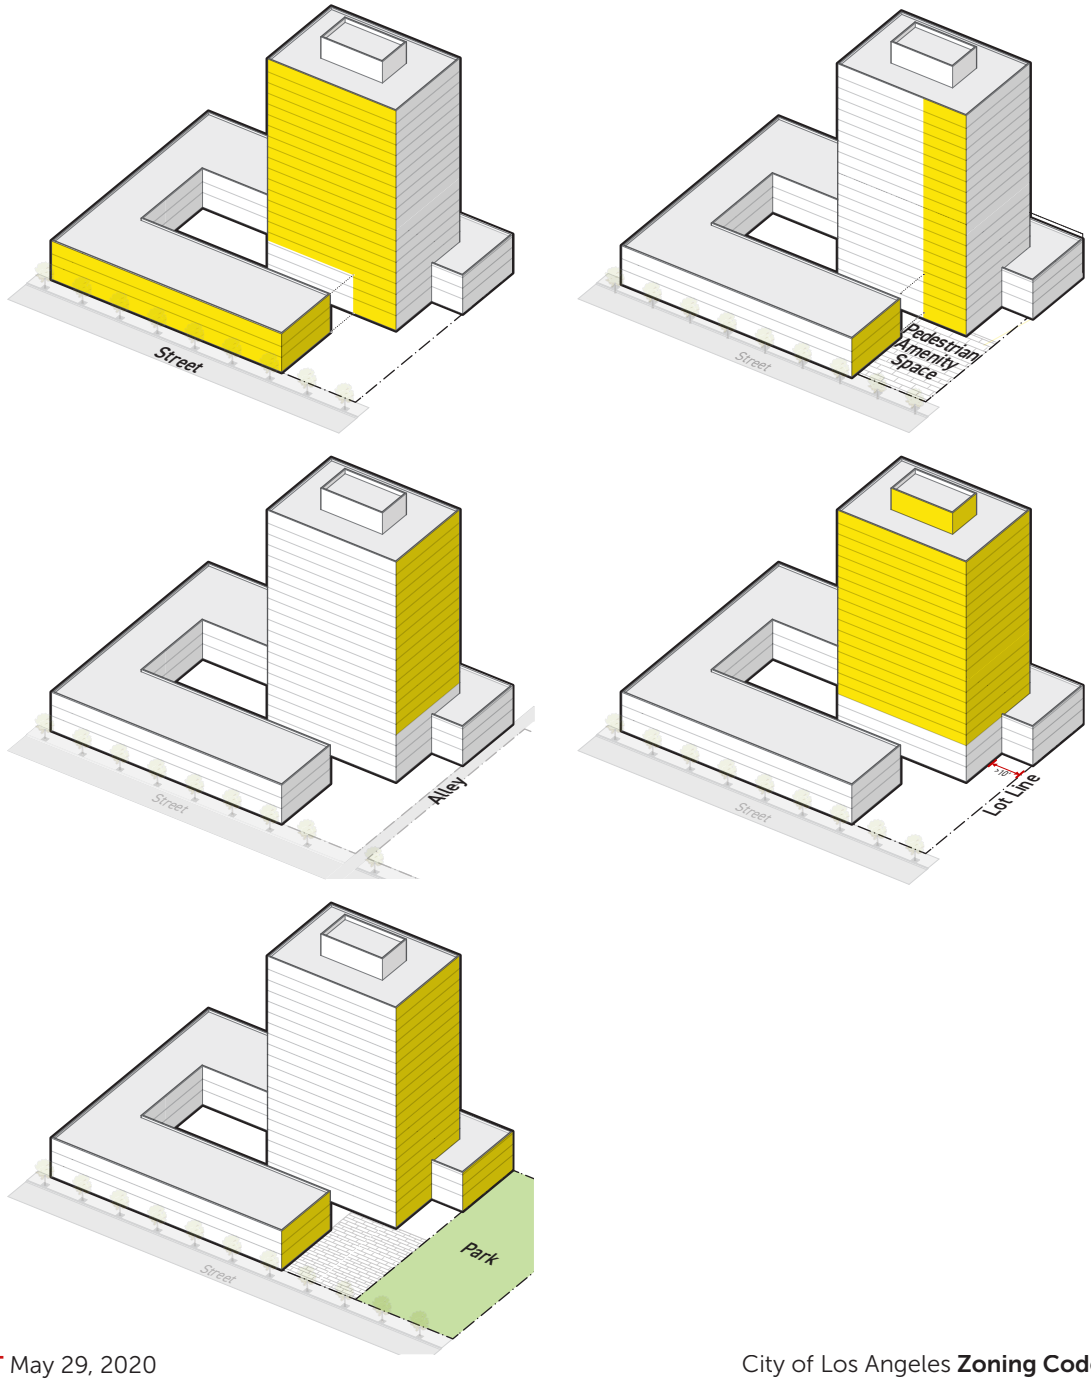
**a.** All street-facing facades. See also *Sec. 14.1.18 (Street-Facing)*.

**b.** All pedestrian amenity space-facing facades. See also *Sec. 14.1.16 (Pedestrian Amenity-Facing Facade)*.

**c.** All alley lot line-facing facades above 4 stories. *Sec. 14.1.13 (Lot Line-Facing)*.

**d.** All lot line-facing facades located 10 feet or more from the lot line above 3 stories. *Sec. 14.1.13 (Lot Line-Facing)*.

**e.** All special lot line-facing facades. *Sec. 14.1.13 (Lot Line-Facing)*.



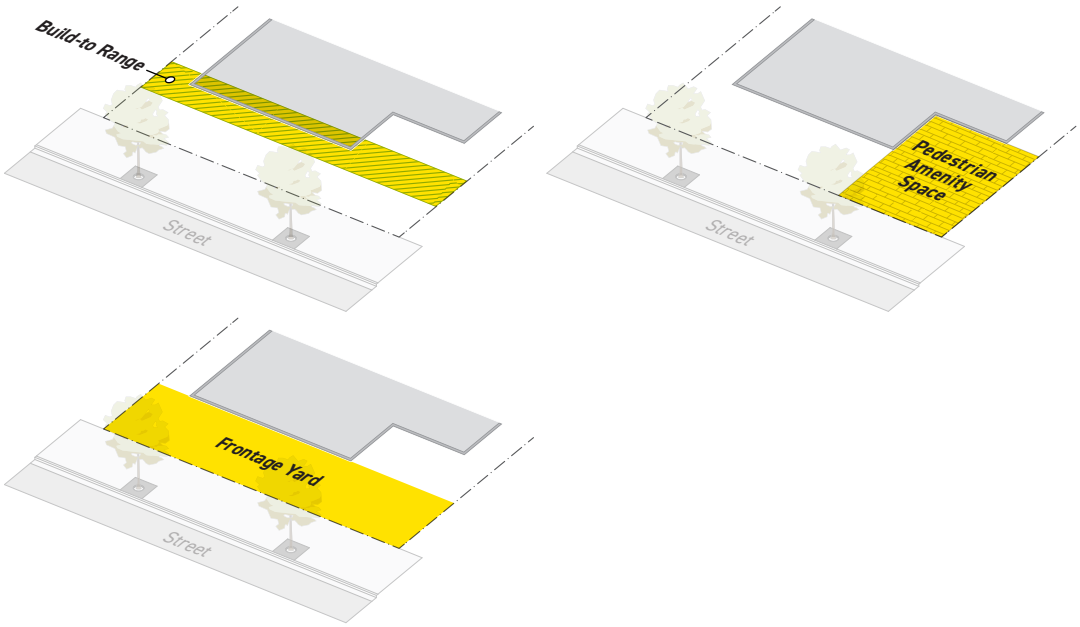
### 3. Applicable Portions of a Lot

Frontage Standards apply to the following portions of a lot:

**a.** Frontage yards. See also *Sec. 14.1.20.G. (Frontage Yard, Yard Designation)*.

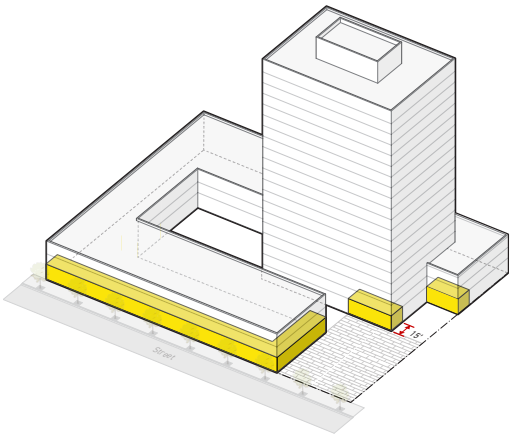
**b.** Pedestrian amenity spaces.

**c.** Build-to ranges



### 4. Applicable Building Depth

Frontage Standards apply to portions of a building interior located on ground story and within 15 feet of a frontage applicable facade.



## SEC. 3B.6.3. RELATIONSHIP TO ZONE STRING

A zone is comprised of the following districts:

The frontage district is a separate and independent component of each zone.

## SEC. 3B.6.4. HOW TO USE THIS ARTICLE

### A. Identify the Frontage District

The second component in a zone string identifies the Frontage District for a property.

### B. Frontage District Standards

Frontage District standards are outlined in *Part 3B* (Frontage Districts). Each Frontage District page identifies the standards specific to that Frontage District.

### C. Interpreting Frontage District Standards

Each standard on a Frontage District page in *Part 3B* (Frontage Districts) provides a reference to *Part 3C* (General Frontage Rules) or *Part 3D* (Character Frontage Rules), where the standard is explained in detail. *Part 3D* (Character Frontage Rules) may reference Part 3C (General Frontage Rules) for standards that are common to both Character Frontages and General Frontages.

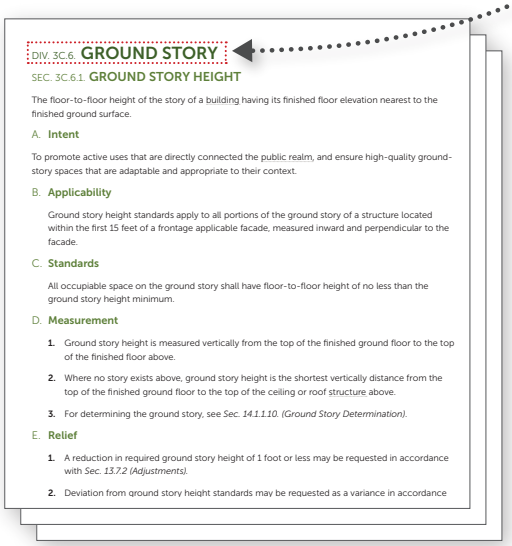
Learn More About Your Rules

## **Part 3C** (General Frontage Rules)



DIV. 3C.6. **GROUND STORY**

SEC. 3C.6.1. **GROUND STORY HEIGHT**

The floor-to-floor height of the story of a building having its finished floor elevation nearest to the finished ground surface.

A. **Intent**

To promote active uses that are directly connected the public realm, and ensure high-quality ground-story spaces that are adaptable and appropriate to their context.

B. **Applicability**

Ground story height standards apply to all portions of the ground story of a structure located within the first 15 feet of a frontage applicable facade, measured inward and perpendicular to the facade.

C. **Standards**

All occupiable space on the ground story shall have floor-to-floor height of no less than the ground story height minimum.

D. **Measurement**

1. Ground story height is measured vertically from the top of the finished ground floor to the top of the finished floor above.
2. Where no story exists above, ground story height is the shortest vertically distance from the top of the finished ground floor to the top of the ceiling or roof structure above.
3. For determining the ground story, see *Sec. 14.1.1.10. (Ground Story Determination).*

E. **Relief**

1. A reduction in required ground story height of 1 foot or less may be requested in accordance with *Sec. 13.7.2 (Adjustments).*
2. Deviation from ground story height standards may be requested as a variance in accordance

## **Part 3B** (Frontage Districts)

SEC. 3B.9.2. **HISTORIC CORE (CHC1)**

**A.** Intent

The Historic Core Character Frontage provides standards intended to reinforce the prevailing architectural characteristics of Downtown's Historic Core. With an architectural character established in the late 19th and early 20th centuries, key architectural characteristics of the Historic Core include grand entrances adorned with pillars and archways, highly decorative facades that clearly articulate the base, middle, and top layers of a building, deeply recessed windows, and flat roofs with prominent cornices. Buildings in the Historic Core adhere to a well-defined street wall with high ground floor activation. The Historic Core Character Frontage ensures new development contributes to the established architectural character of Downtown's Historic Core.

## **Part 3D** (Character Frontage Rules)

References to Part 3C

DIV. 3C.4. **TRANSPARENCY**

SEC. 3C.4.1. **TRANSPARENT AREA**

The amount of transparent area on a building facade.

A. **Intent**

To provide visual interest along the public realm and promote natural surveillance by encouraging visual connections between the public realm and the interior of a building.

B. **Applicability**

Transparency standards apply to all portions of a building or structure where frontage standards apply (*Sec. 3A.1.2.B*) with the exception of parking structure facades.

C. **Standards**

1. Each applicable facade shall provide no less than the minimum transparency listed in a Frontage district.
2. Window and door openings meeting the following requirements count toward transparent area:
   a. Interior walls, furniture and other interior visual obstructions shall not be located within 5 feet of any facade area counting toward transparent area. Distance from transparent area is measured perpendicular to the exterior face of the transparent area. Visual obstructions may be located five feet or greater from facade area counting toward transparent area.

DIV. 3D.9. **TRANSPARENCY**

SEC. 3D.9.1. **GROUND STORY**

A. **Intent**

To ensure projects are designed with ground story windows that reflect contributing buildings within their Survey LA Planning District or Historic District.

B. **Applicability**

Ground story transparency standards apply to all ground story frontage applicable facades (*Sec. 3A.1.2.B.2.*) with the exception of parking structure facades.

C. **Standards**

1. **Transparent Area**

   See *Sec. 3C.4.1. (Transparent Area)*

2. **Blank wall Width**

   See *Sec. 3C.4.2. (Blank wall Width)*.

3. **Window Recession**

   a. **Standards**

   All windows provided on applicable facades shall be recessed no less than the minimum depth specified in the Frontage District.

   b. **Measurement**

   Window recession depth is measured inward from the immediately surrounding facade surface, exclusive of trim or accessory projecting architectural details, to the outermost element of the window assembly.

4. **Bulkhead**

   A wall located beneath a display window on the ground story facade that serves to elevate a window above the exterior finished grade and the interior finished floor surface.

## SEC. 3B.6.5. FRONTAGE DISTRICT NAMING CONVENTION

All Frontage District names are composed of two components: frontage category and variation number.

### A. Frontage Category

The first component of each Frontage District is a Frontage category. Frontage categories group all districts with similar characteristics. Frontage categories are organized as follows:

1. Drive
2. Multi-Unit
3. General
4. Shopfront
5. Market
6. Large Format
7. Warehouse
8. Dual
9. Character

### B. Variation Number

The last component of each Frontage District is a Variation Number. All Frontage Districts are numbered in the order they fall within this article.

# DIV. 3C.1. DRIVE FRONTAGES

## SEC. 3C.1.1. DESCRIPTION

Drive Frontages control the location of vehicular access, require planted front yards and provide flexible provisions for privacy through a combination of setbacks and frontage yard fences and wall standards.

[Reserved]

# DIV. 3C.2. MULTI-UNIT FRONTAGES

## SEC. 3C.2.1. DESCRIPTION

Multi-Unit Frontages require higher ground floor elevations, relatively low transparency, and frequent entrance spacing. This allows for greater privacy for ground floor tenants while promoting natural surveillance of the public realm. Frequent entrances activate the public realm with pedestrian activity and visual interest.

# DIV. 3C.3. GENERAL FRONTAGES

## SEC. 3C.3.1. DESCRIPTION

General Frontages require moderate to high build-to widths while allowing a wide range of modifications for pedestrian amenity spaces. These frontage districts have a moderate transparency requirement with flexible entrance spacing standards while ensuring a high-quality pedestrian environment and providing flexibly for a variety of ground story tenants.

# DIV. 3C.4. SHOPFRONT FRONTAGES

## SEC. 3C.4.1. DESCRIPTION

Shopfront Frontages require high build-to widths, high levels of transparency, frequent entrance spacing and ground floor elevations at or near sidewalk grade. This promotes a legible street wall and activates the public realm with pedestrian activity and visual interest. The at-grade ground floor elevation allows for an increased connection between the interior uses and the pedestrian space.

# DIV. 3C.5. MARKET FRONTAGES

## SEC. 3C.5.1. DESCRIPTION

Market Frontages require high build-to widths and frequent entrances integrated as market stalls and shopfront bays. These entry feature options, paired with frequent entry spacing, activates the public realm with pedestrian activity and visual interest in areas where market stalls are the dominant pattern.

# DIV. 3C.6. LARGE FORMAT FRONTAGES

## SEC. 3C.6.1. DESCRIPTION

Large Format Frontages require moderate build-to widths and infrequent entrance spacing. These frontage districts are designed to accommodate large tenants and controlled access in a manner that promotes a walkable street edge.

[Reserved]

# DIV. 3C.7. WAREHOUSE FRONTAGES

## SEC. 3C.7.1. DESCRIPTION

The Warehouse Frontages have few standards and allow for a high level of flexibility. These frontage districts are designed for freight service. Warehouse Frontages are intended for areas where pedestrian-friendly environments are not a priority.

# DIV. 3C.9. CHARACTER FRONTAGES

## SEC. 3C.9.1. DESCRIPTION

Character Frontages provide standards for facade articulation, entry features, window design, siding materials, and roof form, in order to reinforce the prevailing architectural characteristics of the city's historically and culturally significant neighborhoods and districts.

# SEC. 3C.9.2. HISTORIC CORE (CHC1)

## A. Intent

The Historic Core Character Frontage provides standards intended to reinforce the prevailing architectural characteristics of Downtown's Historic Core. With an architectural character established in the late 19th and early 20th centuries, key architectural characteristics of the Historic Core include grand entrances adorned with pillars and archways, highly decorative facades that clearly articulate the base, middle, and top layers of a building, deeply recessed windows, and flat roofs with prominent cornices. Buildings in the Historic Core adhere to a well-defined street wall with high ground floor activation. The Historic Core Character Frontage ensures new development contributes to the established architectural character of Downtown's Historic Core.

# SEC. 3C.9.3. DAYLIGHT FACTORY (CDF1)

## A. Intent

The Daylight Factory Character Frontage provides standards intended to reinforce the prevailing architectural characteristics of the industrial districts established in the early 20th century. Warehouse and factory buildings in these industrial districts are characterized by large, symmetrical windows that extend nearly a full story in height, high ceilings on each story, brick and masonry façade materials, and flat roofs with parapets. Facades are articulated to establish uniformity through horizontal repetition. The Daylight Factory Character Frontage ensures new development contributes to the established architectural character of the city's early 20th century industrial districts.

# SEC. 3C.9.4. DAYLIGHT FACTORY / RIVER (CDR1)

## A. Intent

The Daylight Factory / River Character Frontage provides standards intended to support the activation of the Los Angeles River as a public amenity while reinforcing the prevailing architectural characteristics of the industrial districts established in the early 20th century along the River. Warehouse and factory buildings in these riverside industrial districts are characterized by large, symmetrical windows that extend nearly a full story in height, high ceilings on each story, brick and masonry façade materials, and flat roofs with parapets. Facades are articulated to establish uniformity through horizontal repetition. The Daylight Factory Character Frontage ensures new development contributes to the established architectural character of the city's early 20th century riverside industrial districts, while providing a strong and active presence along the Los Angeles River.

# DIV. 3D.1. BUILD-TO

## SEC. 3D.1.1. APPLICABLE STORIES

The number of stories that are required to meet build-to standards.

### A. Intent

To ensure that multi-story buildings locate upper stories along the street.

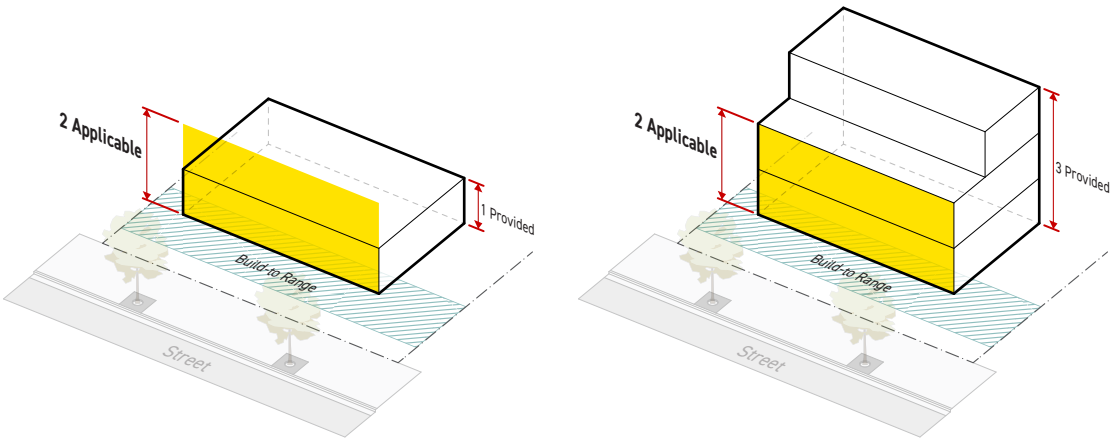
### B. Applicability

Build-to applicable stories standards apply to:

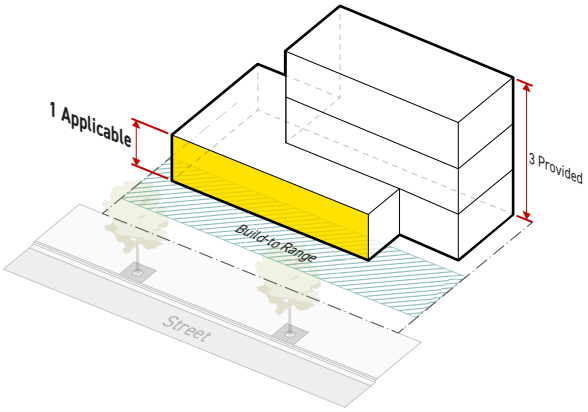
1. All portions of buildings and structures required to satisfy a minimum build-to width requirement.
2. All structures on a lot with floor area located above the ground story.

### C. Standards

1. Where minimum applicable stories are required, build-to standards apply to the ground story and any additional story provided on a lot, up to the minimum build-to applicable stories.



2. When no build-to height applicability is specified, build-to standards apply only to the ground story of a building.



## D. Measurement

For measuring height in stories, see *Div. 14A.1. (General Rules)*.

## E. Relief

1. A reduction in number of applicable stories of 1 story may be requested in accordance with *Sec. 13.7.2 (Adjustments)*.

2. A reduction in number of applicable stories may be requested as a variance in accordance with *Sec. 13.7.3 (Variance)*.

## SEC. 3D.1.2. BUILD-TO RANGE

The area on a lot between the minimum setback and the maximum setback specified for a district.

### A. Intent

To regulate the placement of buildings along a public realm such that buildings frame the public realm with a consistent street wall.

### B. Applicability

Build-to range standards apply to all portions of buildings and structures required to satisfy a minimum build-to width and applicable stories standards.

### C. Standards

**1.** Buildings shall occupy the build-to range for at least the minimum required build-to width.

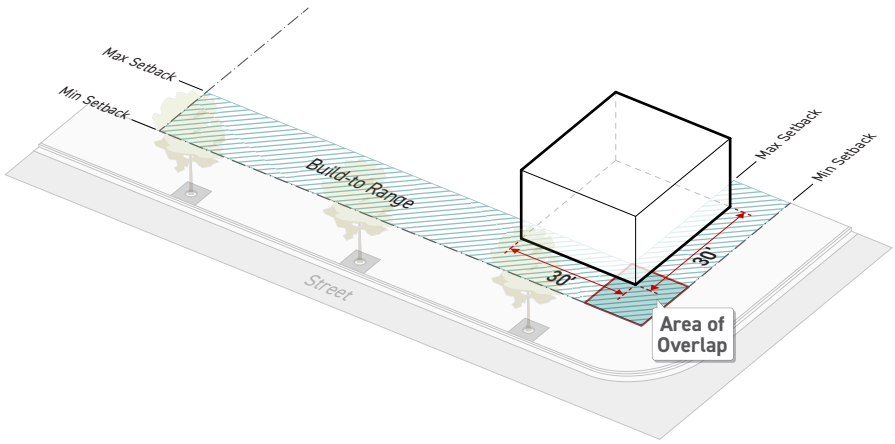
**2.** Buildings and structures are prohibited between a frontage lot line and the minimum dimension listed in the build-to range, except for the allowed setback encroachments in *Sec. 2C.2.2.E. (Exceptions)*.

**3.** Once the minimum build-to width standard has been satisfied, buildings and structures may occupy the area beyond the maximum setback.

**4.** On a corner lot where both frontage lot lines have build-to requirements, a building shall occupy a portion of the lot area where the build-to ranges of the two intersecting streets overlap, as described below:

**a.** The building shall occupy the build-to ranges for both frontage lot lines for a minimum of 30 feet from the corner. Distance is measured away from the corner, starting at the edge of the building occupying the area of overlap, parallel to the frontage lot line.

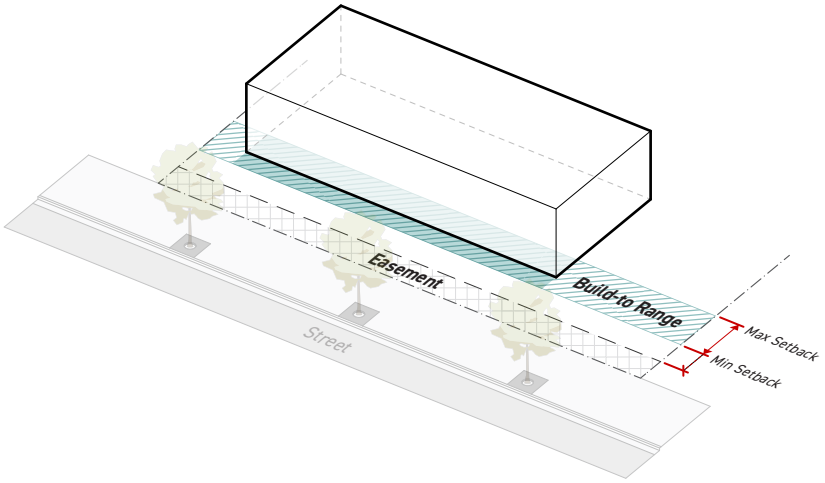
**b.** This standard does not apply when a pedestrian amenity space occupies some portion of the area of overlap and is being used as a pedestrian amenity allowance *Sec. 3C.2.4 (Pedestrian Amenity Allowance)*.



## D. Measurement

**1.** The minimum and maximum build-to range are measured perpendicular to the frontage lot line into the lot.

**2.** Where a lot includes an easement that abuts the frontage lot line, the applicant may choose to measure the required build-to range from the edge of the easement rather than the lot line, in which case the applicant shall show the easement on any site plan.

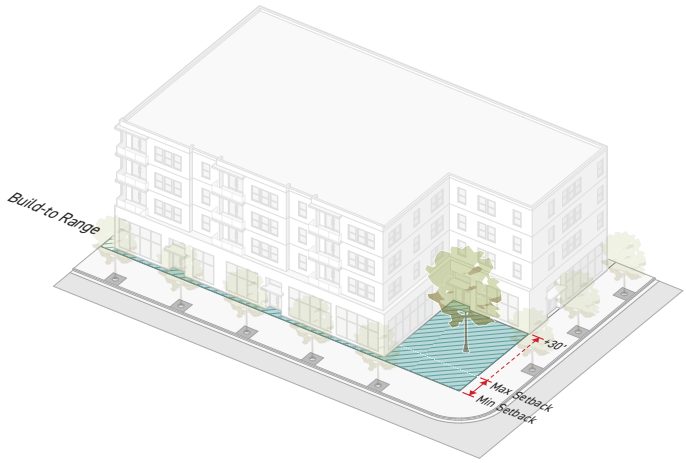


## E. Exceptions

See *Sec 3C.1.4 (Pedestrian Amenity Allowance)*.

## F. Relief

1. To preserve existing trees, the Zoning Administrator may grant relief from the maximum setback in the build-to range of 30 feet or less for the minimum width necessary to protect the tree, pursuant to *Section 13.7.2 (Adjustment)*.



**2.** An increase in maximum setback of 20% or reduction in minimum setback of 20% or less may be requested in accordance with *Sec. 13.7.2 (Adjustments)*.

**3.** A deviation from maximum build-to range or minimum setback may be requested as a variance in accordance with *Sec. 13.7.3 (Variance)*.

## SEC. 3D.1.3. BUILD-TO WIDTH

The minimum cumulative building width that shall occupy the build-to range, relative to the width of the lot at the street, alley or special lot line.

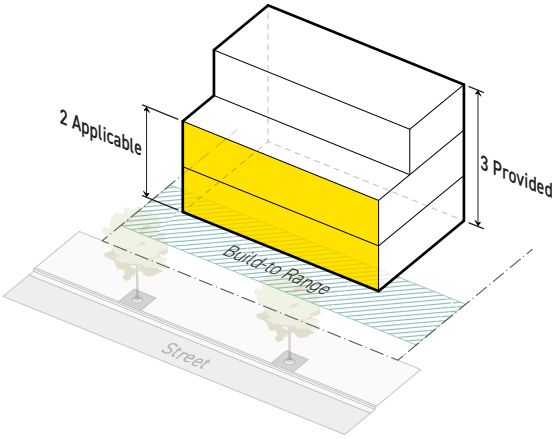
### A. Intent

To ensure that buildings enclose the public realm with a legible and consistent street wall, spatially defining an outdoor room and promoting a strong visual and physical connection between uses inside buildings and the public realm.

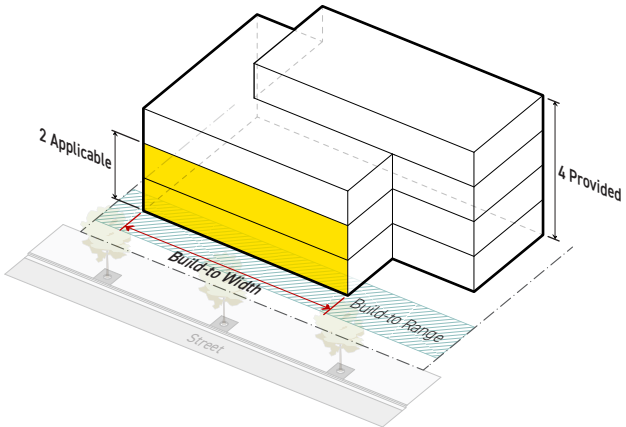
### B. Applicability

**1.** Build-to width standards apply to the following:

**a.** Where a minimum height standard is required in the applicable Form District, build-to width applies to all stories located above-grade up to the minimum height standard.



**b.** Where an applicable stories standard exists, build-to width applies to all stories located above-grade up to the applicable stories.

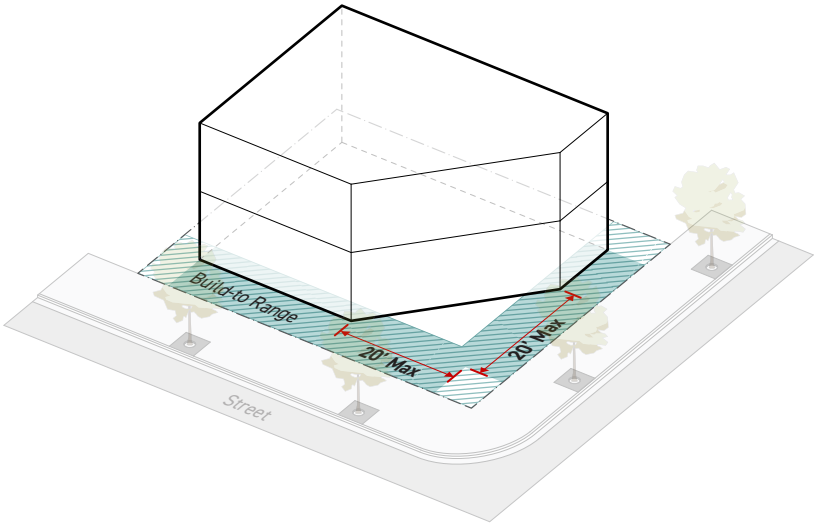


**c.** Where both an applicable stories standard and a minimum height standard are specified, build-to width applies to whichever standard requires the greatest number of stories located in the build-to zone.

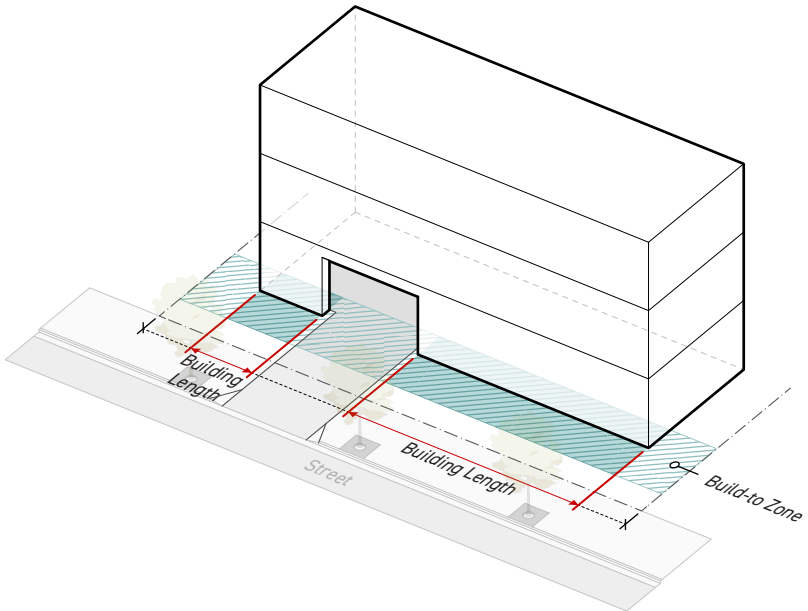
**d.** Where no applicable stories standard is specified in the applicable Frontage District and no minimum height standard is required in the applicable Form District, build-to width applies only to the ground story.

## C. Standards

**1.** A chamfered corner no more than 20 feet in width located on the ground story of a building and extending outside of the build-to range qualifies as building width in the build-to range. Chamfered corner width is measure parallel to the frontage lot line.

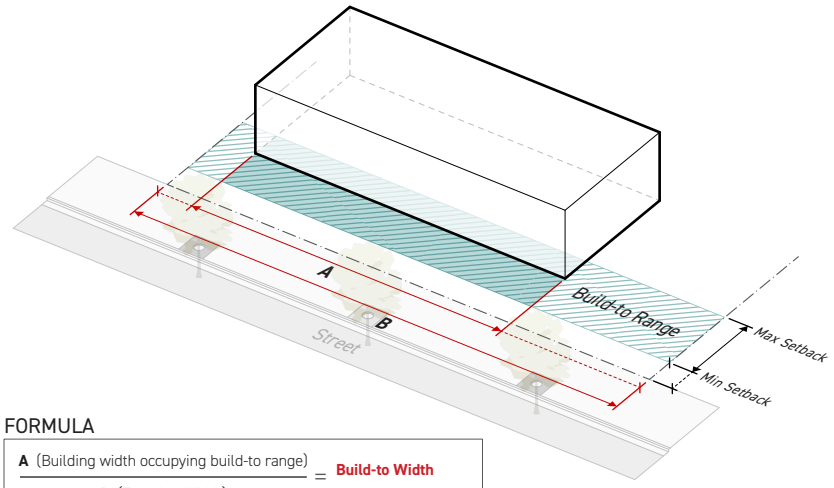


**2.** Portions of building width providing motor vehicle access to a motor vehicle use area through the ground story of a building do not qualify as building width in the build-to range.



## D. Measurement

The build-to width is a percentage measured as the sum of all building widths occupying the build-to range divided by the total lot width.



FORMULA

$$\frac{\text{A (Building width occupying build-to range)}}{\text{B (Total Lot Width)}} = \text{Build-to Width}$$

1. Building width is measured parallel to the frontage lot line. For measuring width of a complex building, see *Sec. 14A.1.15. (Parallel or Perpendicular to Street)*.

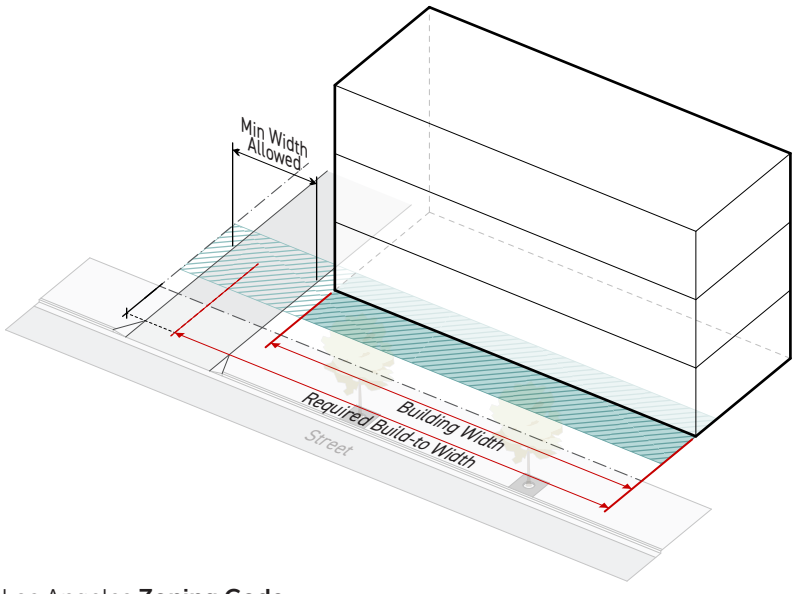
2. Lot width is measured along the frontage lot line. For measuring width of a complex lot, see *Sec. 14A.1.15. (Parallel or Perpendicular to Street)*.

## E. Exceptions

Where motor vehicle access to the lot is required by DOT to be taken through the frontage lot line and providing the access prohibits a building from achieving the required build-to width, a reduced build-to width may be allowed, provided the following:

1. The driveway is no wider than the minimum required width see Div. 4C.1. (Access).

2. The building conforms to the applicable build-to width standard to the greatest extent possible.



## F. Relief

1. A reduced minimum build-to width of 10% or less may be requested in accordance with *Sec. 13.7.2 (Adjustments)*.

2. A reduced minimum build-to width may be requested as a variance in accordance with *Sec. 13.7.3 (Variance)*.

## SEC. 3D.1.4. PEDESTRIAN AMENITY ALLOWANCE

The width of pedestrian amenity space in the build-to range that is allowed to count toward the build-to width requirement.

### A. Intent

To promote placemaking and public safety through the creation of active outdoor spaces as an extension of the sidewalk, providing natural surveillance, visual interest and activity to the amenity space as well as the public realm. The pedestrian amenity allowance provides flexibility to building and site design while maintaining standards essential for ensuring all projects contribute to defining a consistent and legible street wall.

### B. Applicability

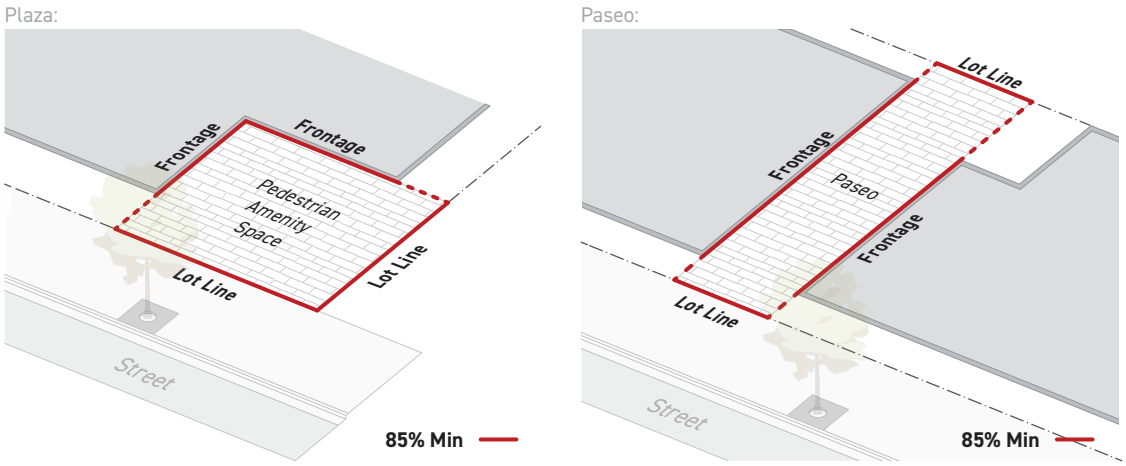
Pedestrian amenity build-to modification standards apply to the following:

1. Portions of buildings or structures required to meet the build-to width standard *(Sec. 3C.1.3.)*;
2. Pedestrian amenity space facing facades *(Sec. 14.1.14)*; and
3. Portions of the lot between front building facade and the frontage lot line for the width of the pedestrian amenity allowance provided.

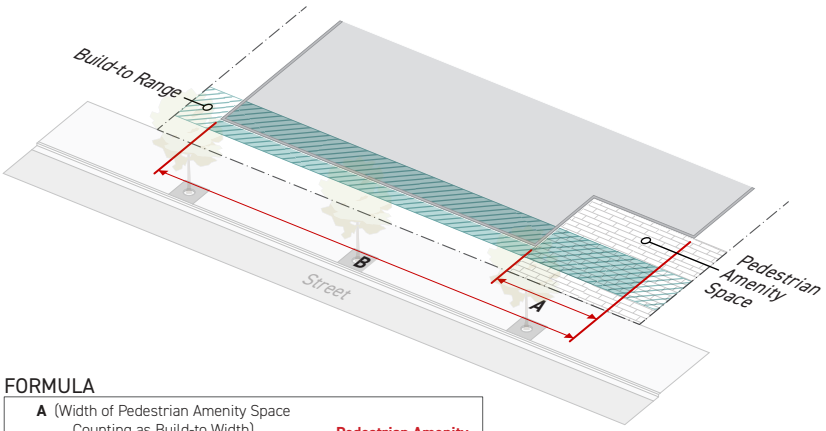
### C. Standards

Where allowed, pedestrian amenity spaces may substitute for the required build-to width for the maximum percentage of the lot width allowed by Frontage District provided they meet the following standards:

1. Meets the standards in *Sec. 2C.X.X. (Pedestrian Amenity Space).*
2. Pedestrian amenity spaces may be wider than the maximum allowed pedestrian amenity allowance, however, any part of the pedestrian amenity space width that exceeds the allowed pedestrian amenity allowance does not count toward the required building width in the build-to range.
3. To be eligible for pedestrian amenity allowance, a pedestrian amenity space shall meet the following standards:
   a. All standards for pedestrian amenity space in *Sec. 2C.3.3.E. (Pedestrian Amenity Space)*.
   b. A minimum of 85% of the pedestrian amenity space perimeter shall abut either a lot line or building facades meeting the applicable frontage district standards.



## D. Measurement



FORMULA

$$\frac{\text{A (Width of Pedestrian Amenity Space Counting as Build-to Width)}}{\text{B (Required Build-to Width)}} = \text{Pedestrian Amenity Allowance (\%)}$$

Pedestrian amenity allowance is measured as the cumulative width of pedestrian amenity spaces occupying the build-to range provided as a substitute for required building width in the build-to range, divided by the required build-to width.

1. Pedestrian amenity space width is measured parallel to the frontage lot line. For measuring width of a complex pedestrian amenity space, see *Sec. 14A.1.15. (Parallel or Perpendicular to Street)*.

2. For measuring the required build-to width, see *Sec. 3C.2.3. (Build-to Width)*.

## E. Relief

1. A deviation from any pedestrian amenity allowance dimensional standard of 10% or less may be requested in accordance with *Sec. 13.7.2 (Adjustments)*.

2. A reduced minimum build-to width may be requested as a variance in accordance with *Sec. 13.7.3 (Variance)*.

# DIV. 3D.2. PARKING

## SEC. 3D.2.1. FRONTAGE SETBACK

An area on a lot where motor vehicle use areas are prohibited, including primary street parking setbacks, side street parking setbacks and special lot line parking setbacks.

### A. Intent

To minimize the impact of motor vehicle dominated areas on the public realm and to promote a comfortable, safe, engaging and attractive streetscape with active uses and landscaping along the public realm.

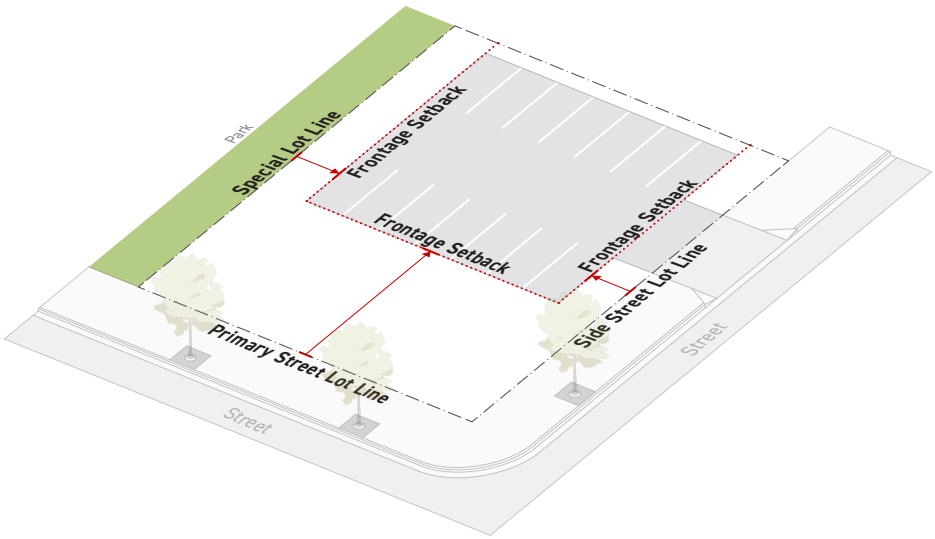
### B. Applicability

Frontage setback requirements apply to the ground story portions of structures and portions of lots designed or designated for motor vehicle uses; including but not limited to parking structures, parking stalls, drive lanes, loading, vehicular circulation areas, and drive-thru facilities.

### C. Standards

All applicable areas designated for motor vehicle use shall be located at or behind the required parking setback unless specifically stated as an exception below.

### D. Measurement



All frontage setbacks are measured perpendicular to the frontage lot line.

1. A primary street frontage setback is measured from the primary street lot line.
2. A side street frontage setback is measured from the side street lot line.
3. An alley frontage setback is measured from the alley lot line associated with a dual frontage.

4. A special frontage setback is measured from the lot line associated with a special lot line in a Dual Frontage or Character Frontage. Special lot lines include but are not limited to "River", "Park" and "Alley".

## E. Exceptions

A driveway providing access through a frontage setback may be allowed provided the following:

1. Motor vehicle access to the lot is required by DOT to be taken from the primary or side street.

2. The driveway is no wider than the minimum required width see *Div. 4C.1. (Access)*.

## F. Relief

1. A reduction in required frontage setback of 20% or less may be requested in accordance with *Sec. 13.7.2 (Adjustments)*.

2. A reduction in required frontage setback may be requested as a variance in accordance with *Sec. 13.7.3 (Variance)*.

# DIV. 3D.3. LANDSCAPING

## SEC. 3D.3.1. PLANTING AREA

The area on a lot designated and designed for plants.

### A. Intent

To support a comfortable, attractive and contextually appropriate streetscape along the public realm, while promoting infiltration, slowing stormwater runoff and offsetting urban heat island effect.

### B. Applicability

Planting area standards apply to frontage yards see *Sec. 14.1.1.21. (Yard Designation)*.

### C. Standards

1. Each Frontage yard shall provide a cumulative area of no less than the planting area required by *Frontage District (Part 3B)*.

2. All required planting area shall meet *Sec. 4C.6.4.C.2. (Planting Area)*.

### D. Measurement

1. Planting area is measured as a percentage calculated as the cumulative planting area located in a frontage yard or the abutting parkway divided by the total frontage yard area.

2. For frontage yard designation see *Sec. 14A.1.21 (Yard Designation)*.

### E. Exceptions

Where there is less than 3 feet between the building and the frontage lot line, planting area standards are not applicable.

### F. Relief

1. Planting area standards may be met through alternative compliance in accordance with Sec. 13.7.1 (Alternative Compliance).

2. A reduction in required planting area of 20% or less may be requested in accordance with *Sec. 13.7.2 (Adjustments)*.

3. A reduction in required planting area may be requested as a variance in accordance with *Sec. 13.7.3 (Variance)*.

## SEC. 3D.3.2. FRONTAGE YARD FENCE & WALL TYPE

Fences, walls and hedges allowed in a frontage yard.

### A. Intent

To provide visual interest along the public realm, ensure compatibility with the context and promote natural surveillance by restricting the barriers between the public realm and the interior of a building.

### B. Applicability

Allowed frontage yard fence and wall type standards apply to structures and hedges located in a frontage yard.

### C. Standards

1. Allowed frontage yard fence and wall types are hierarchical. Where a frontage yard fence and wall type with a higher number designator is allowed, all frontage yard fence and wall types having a lower number designator are also allowed.

2. No frontage yard fence and wall type with a greater number designator than the maximum allowed frontage yard fence and wall type may be located in the frontage yard.

3. For frontage yard fence and wall type standards specific to each frontage yard fence and wall type see *Sec. 4C.7.1.C.2. (Frontage Yard Fence and Wall Types)*.

### D. Measurement

1. For the measurement of fences and walls in the frontage yard, see *Sec. 4C.7.1.D. (Measurement, Frontage Yard Fences and Walls)*.

2. For the designation of the frontage yard, see *Sec. 14.1.1.21. (Yard Designation)*.

### E. Exceptions

Where required by the California Department of Alcohol and Beverage Control, a barrier of up to 45 inches in height is allowed regardless of the allowed frontage yard fence and wall type listed in a Frontage District.

### F. Relief

1. A deviation from any allowed frontage yard fence and wall type dimensional standard of 15% or less may be requested in accordance with *Sec. 13.7.2 (Adjustments).*

2. A deviation from any allowed frontage yard fence and wall type standard may be requested as a variance in accordance with *Sec. 13.7.3 (Variance)*.

# DIV. 3D.4. TRANSPARENCY

## SEC. 3D.4.1. TRANSPARENT AREA

The amount of transparent area on a building facade.

### A. Intent

To provide visual interest along the public realm and promote natural surveillance by encouraging visual connections between the public realm and the interior of a building.

### B. Applicability

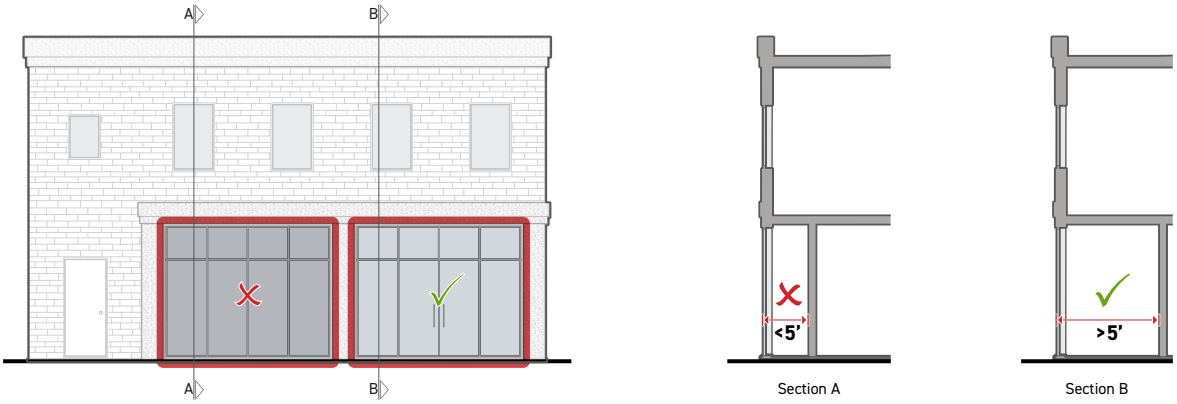
Transparency standards apply to all portions of a building or structure where frontage standards apply (*Sec. 3A.1.2.B*) with the exception of parking structure facades.

### C. Standards

**1.** Each applicable facade shall provide no less than the minimum transparency listed in a Frontage district.

**2.** Window and door openings meeting the following requirements count toward transparent area:

**a.** Interior walls, furniture and other interior visual obstructions shall not be located within 5 feet of any facade area counting toward transparent area. Distance from transparent area is measured perpendicular to the exterior face of the transparent area. Visual obstructions may be located five feet or greater from facade area counting toward transparent area.



Section A

Section B

**b.** The following visual obstructions may be located less than 5 feet from facade area counting toward transparent area:

**i.** Windows obscured by interior security gates and window displays may count toward transparent area provided a maximum of 25% of window area is visually obstructed for any individual window counting toward transparent area. For measuring visual obstruction see *Sec 14.1.14. (Opacity)*.

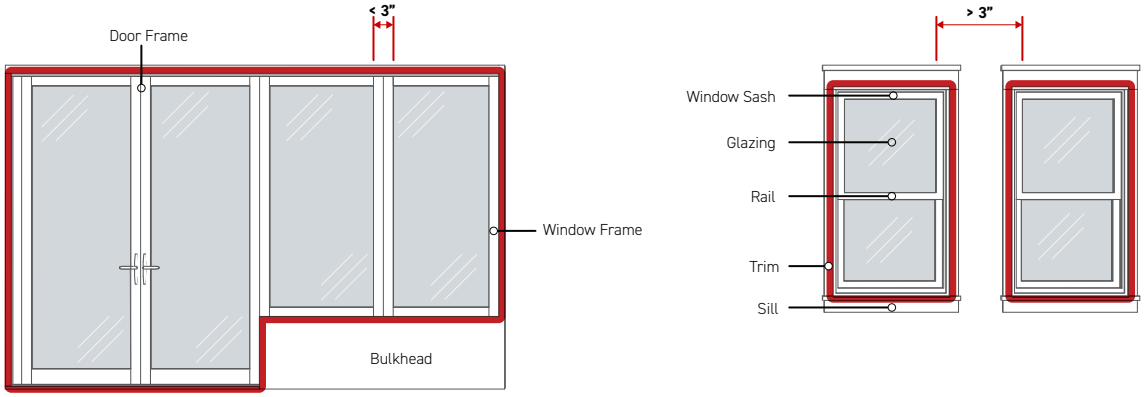
**ii.** Transparent area covered by window signs may count toward transparent area provided they are permitted by Development Standard District.

**iii.** Areas of transparency may be made temporarily opaque by window treatments such as operable sunscreen devices within the conditioned space during peak hours when the sun hits the applicable facade.

**c.** To be considered transparent, window and door glazing shall meet the following requirements:

| TRANSPARENT AREA STANDARDS | | |
|---|---|---|
| | Visible Light Transmittance | External Reflectance |
| Ground story | More than 60% | Less than 20% |
| Upper stories | More than 30% | Less than 40% |

**d.** In addition to glazing, muntins, mullions, widow sashes, window frames and door frames no more than 3 inches wide may be considered transparent area when integral to a window or door assembly with glazing meeting the requirements above.



## D. Measurement

### 1. Ground Story

**a.** Ground story transparency is measured as a percentage, calculated as the sum of all ground story facade area meeting the standards for transparent area divided by the total ground story facade area.

**b.** For the purpose of calculating ground story transparency, ground story facade area is measured in the following ways:

**i.** Ground story facade area is measured as the above-grade facade area between 0 and 12 feet above the top of the finished floor of the ground story.

**ii.** If the ground story height is less than 12 feet, the ground story facade area is measured as the total above-grade portion of a facade between the top of the finished floor of the ground story and the top of the finished floor above. When there is no story above, ground story height is measured to the top of the wall plate.

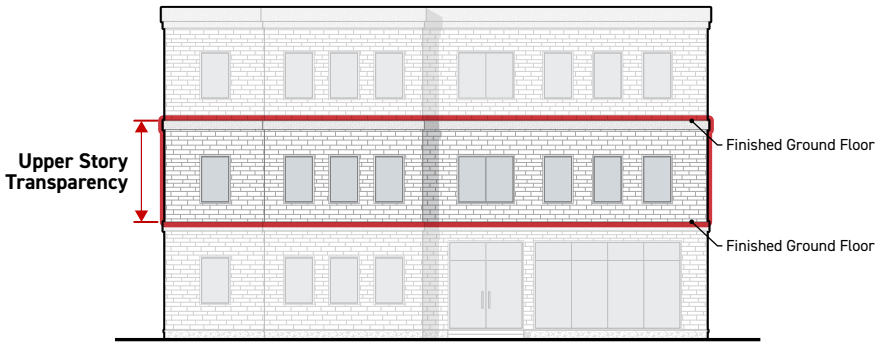
**iii.** No portion of a ground story located below finished grade is included in ground story facade area.

### 2. Upper Stories

**a.** Each upper story facade shall meet the required transparency standard independently.

**b.** Upper story transparency is measured as a percentage, calculated as the sum of all facade area meeting the standards for transparency divided by the total applicable facade area.

**c.** For the purpose of calculating upper story transparency, upper story facade area is measured the portion of a facade area between from the top of the finished floor for that story to the top of the finished floor above. When there is no story above, it is measured to the top of the wall plate.



## E. Relief

**1.** A deviation from required transparency of 10% or less may be requested in accordance with *Sec. 13.7.2 (Adjustments)*.

**2.** A deviation from required transparency standards may be requested as a variance in accordance with *Sec. 13.7.3 (Variance)*.

## SEC. 3D.4.2. BLANK WALL WIDTH

The portions of ground story building facades and foundation walls that do not include any window or door openings.

### A. Intent

To provide visual interest along the public realm and promote natural surveillance by limiting the area without visual connections between the public realm and the interior of a building.

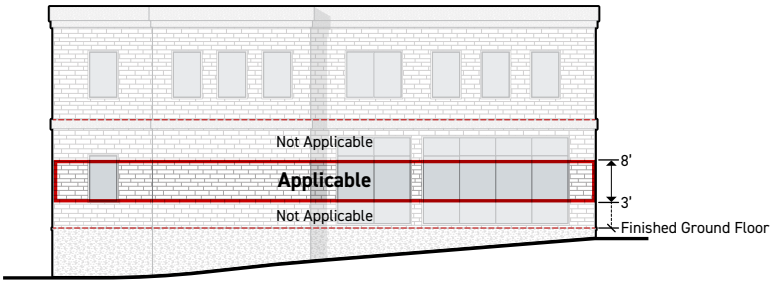
### B. Applicability

Blank wall standards apply to the following portions of a building or structure:

**1.** Portions of ground story facades that meet all of the following conditions:

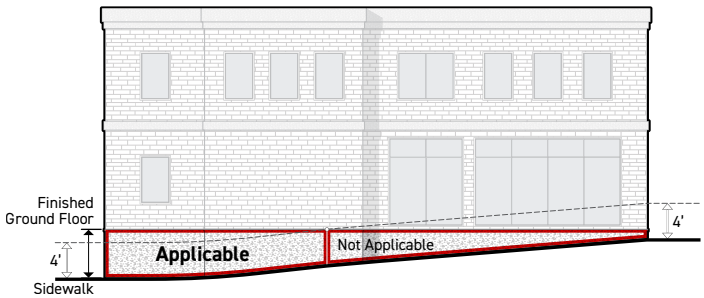
**a.** Are required to meet frontage standards. See *Sec. 3A.1.2.B (Frontage Applicable Facades)*.

**b.** Portions located between 3 feet and 8 feet from the finished ground floor elevation measured vertically.



**c.** Not a parking structure facade.

**2.** All portions of foundation walls that are required to meet frontage standards (*Sec. 3A.1.2.B*) and are exposed 4 feet in height or greater above sidewalk grade are applicable. If foundation walls are set back more than 10 feet from a sidewalk, exposed height is measured from the lowest elevation of finished grade within 5 feet, measured from and perpendicular to the foundation wall.



**3.** Blank wall standards do not apply to upper story facades.

## C. Standards

### 1. Blank Ground Story wall

Window and door openings meeting *Sec. 3C.5.1. (Transparent Area)* on ground story facades shall be separated a distance no greater than the maximum blank wall width unless a blank ground story wall treatment *(see Sec. 3C.4.2.E.3)* is applied.

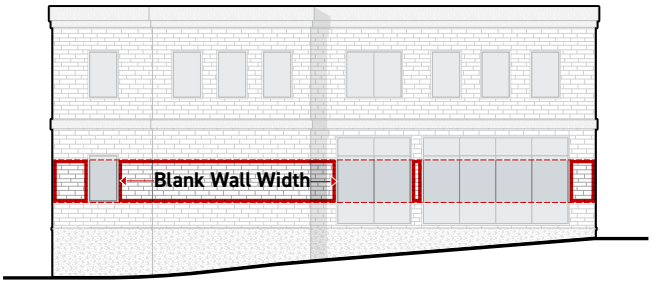
### 2. Blank Foundation wall

Applicable portions of foundation walls shall be no wider than the maximum blank wall width unless treated with a *blank foundation wall treatment (see Sec.3C.4.2.E.3)*.

## D. Measurement

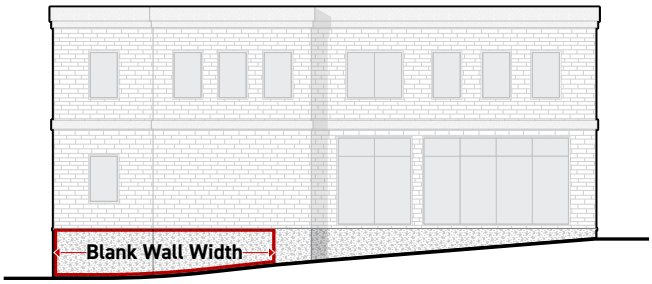
### 1. Blank Ground Story Wall

Blank wall width is measured horizontally and parallel to the frontage lot line from edge of transparent area to edge of transparent area and edge of transparent area to edge of ground floor facade.



### 2. Blank Foundation Wall

Blank wall width is measured horizontally for any individual width of applicable foundation wall that does not include transparent area (*Sec. 3C.5.1. (General)*).



## E. Exceptions

### 1. General

**a.** Ground story facades that exceed the maximum allowed blank wall width may apply one or more ground story blank wall treatment (Sec. 3C.4.2.E.1.b.) to the blank wall and double the allowed blank wall width.

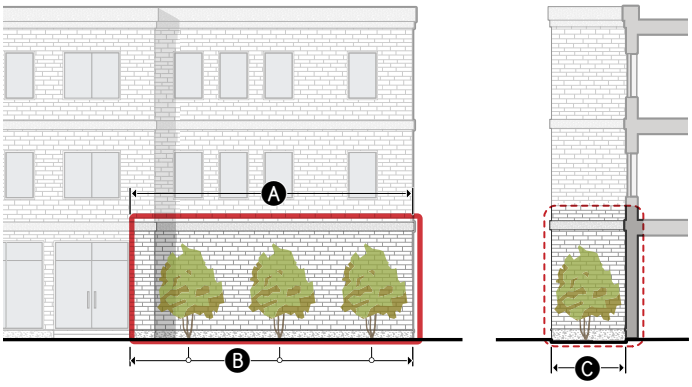
**b.** Facades designed with foundation walls that exceed the maximum allowed blank wall width may apply one or more blank foundation wall treatment (Sec. 3C.4.2.E.1.c.) to the blank foundation wall and double the allowed blank wall width.

**c.** All required plants shall meet the requirements in the following tables and also comply with *Div. 4C.3. (Landscape, Buffers, and Screens)*.

## 2. Ground Story Blank Wall Treatments

### a. Small Trees

Small trees planted between the blank wall and the public realm.

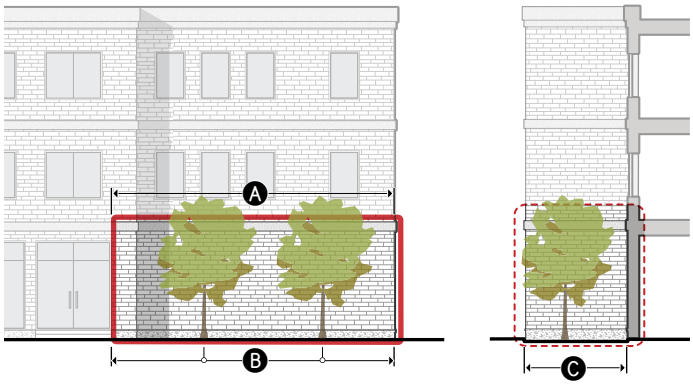


| DIMENSIONAL STANDARDS | | |
|---|---|---|
| A | **Treatment width** (min portion of blank wall) | 100% |
| | **Tree type** | Small species |
| B | **Planting frequency** (min avg.) | 5 per 100' |
| C | **Planting area depth** (min) | 7' |

*For additional landscaping standards *See Div. 4C.3.*

### b. Large Trees

Large trees planted between the blank wall and the public realm.



| DIMENSIONAL STANDARDS | | |
|---|---|---|
| A | **Treatment width** (min portion of blank wall) | 100% |
| | **Tree type** | Large species |
| B | **Planting frequency** (min avg.) | 3 per 100' |
| C | **Planting area depth** (min) | 15' |

*For additional landscaping standards *See Div. 4C.3.*

## c. Living Wall

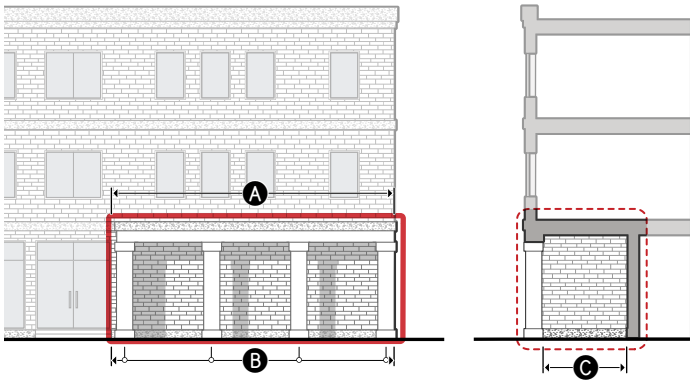
A permanently fixed assembly located between the blank wall and the public realm that supports plants, their growing medium and irrigation.

| DIMENSIONAL STANDARDS | |
|---|---|
| A **Treatment area** (min % of ground story facade with blank walls) | 75% |
| **Planting area depth** (min) | n/a |

*For additional landscaping standards *See Div. 4C.3.*

## d. Colonnade

A sequence of columns located between the blank wall and the public realm, providing an exterior occupiable space along the blank wall.



| DIMENSIONAL STANDARDS | |
|---|---|
| A **Treatment width** (min portion of blank wall) | 100% |
| B **Column frequency** (min avg.) | 1 per 20' |
| C **Clear depth** (min) | 6' |
| **Enclosure** (max) | 60% |

## 3. Blank Foundation Wall Treatment Options

### a. Foundation Planting

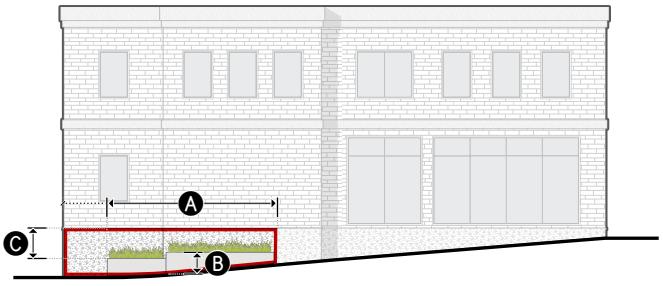
Large shrubs planted along the blank foundation wall.

| DIMENSIONAL STANDARDS | |
|---|---|
| A **Treatment width** (min portion of blank wall) | 75% |
| **Plant type** | Screening Plant |
| **Planting frequency** (min avg.) | 3 per 10' |
| **Planting area depth** (min) | 3' |

*For additional landscaping standards *See Div. 4C.3.*

### b. Planter

Permanent structure containing plants and their growing medium.

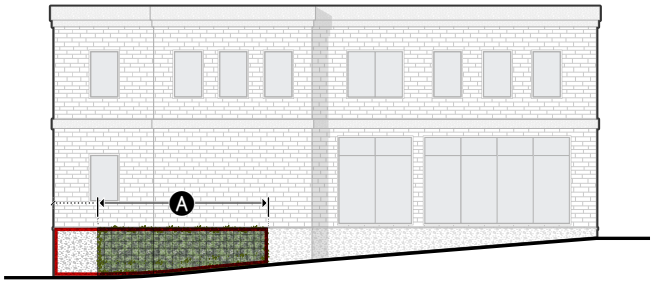


| DIMENSIONAL STANDARDS | |
|---|---|
| A **Treatment width** (min) | 75% |
| **Plant coverage** (min) | 75% |
| **Planting area depth** (min) | 2.5' |
| B **Height above sidewalk** (max) | 4' |
| C **Foundation wall reveal** (max) | 2' |

*For additional landscaping standards *See Div. 4C.3.*

## c. Green wall

A structure permanently attached to the blank foundation wall supporting climbing plants.

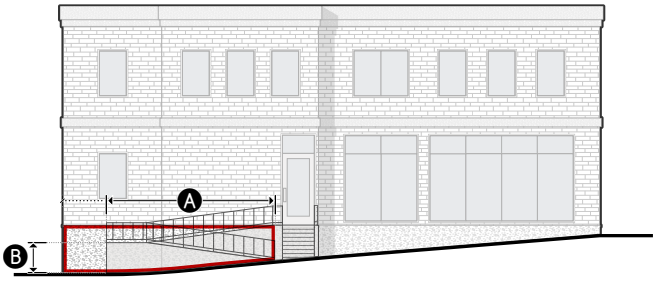


| DIMENSIONAL STANDARDS | |
|---|---|
| A Treatment area (min) | 75% |
| Planting area depth (min) | 1.5' |

*For additional landscaping standards *See Div. 4C.3.*

## d. Pedestrian Access

Stairs or ramps providing pedestrian access to a street-facing entrance.

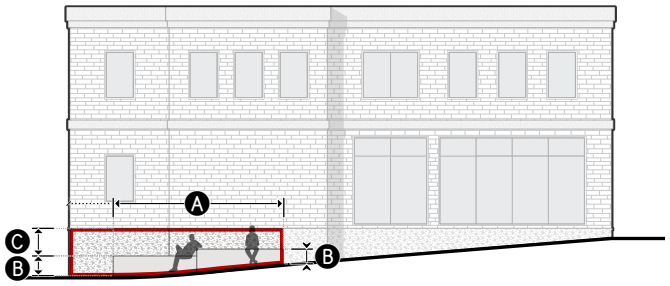


| DIMENSIONAL STANDARDS | |
|---|---|
| A Treatment width (min) | 75% |
| B Height above sidewalk (max) | 4' |
| Additional access standards | *See Div. 4C.1.* |

*For additional access standards *See Div. 4C.1.*

## e. Seating

A permanent structure designed and intended for public seating.



| DIMENSIONAL STANDARDS | |
|---|---|
| A Treatment width (min) | 75% |
| B Height above sidewalk (min/max) | 1.5'/3' |
| C Foundation wall reveal (max) | 3' |
| Seat depth (min) | 2' |

### 4. Blank Wall Treatment Measurements

#### a. Treatment width

Minimum treatment width is measured as a percentage, calculated as the cumulative width of blank wall treatments applied to a blank wall divided by the total width of the blank wall.

#### b. Treatment Area

Minimum treatment area is measured as a percentage, calculated as the cumulative area of blank wall treatments applied to a blank wall divided by the total area of the blank wall.

#### c. Tree type

Tree type is measured as small species or large species according to *Sec. 4C.6.4.C.3.a. (Types, Trees)*.

#### d. Plant type

Plant type is measured as screening plants, groundcover and turf plants, hedges, living walls or climbing plants according to *Sec. 4C.6.4. (Plant Design and Installation)*.

#### e. Plant Coverage

Minimum plant coverage is measured according to *Sec. 4C.6.X.X. (Standards, Planting Area)*.

#### f. Planting Frequency

Planting frequency is measured as a ratio of the minimum number of plants required over a specified width of treated blank wall. A minimum of one plant of the required plant type shall be provided regardless of the width of blank wall treatment.

#### g. Column Frequency

Minimum column frequency is measured as a ratio of the minimum number of columns required over a specified width of treated blank wall treatment. A minimum of two columns shall be provided regardless of the blank wall treatment width.

#### h. Planting Area Depth

Minimum planting area depth is measured as the horizontal dimension of growing medium at the narrowest point, measured perpendicular to the applicable street lot line. The planting area shall be open to the sky for at least the required planting area depth.

#### i. Clear Depth

Minimum clear depth is measured as the horizontal dimension of the occupiable portion of an architectural element at the narrowest point.

### j. Height Above Sidewalk

**i.** Height above sidewalk is measured vertically from adjacent sidewalk grade to the topmost point of the blank wall treatment along the entire treated portion of a blank foundation wall.

**ii.** For foundation walls located more than 10 feet from a sidewalk, maximum height above sidewalk is measured from the lowest elevation of finished grade within 5 feet, measured from and perpendicular to the foundation wall, to the topmost point of the blank wall treatment along the entire treated portion of a blank foundation wall.

### k. Foundation Wall Reveal

Foundation wall reveal is measured vertically from the top of a blank wall treatment to the finished ground floor elevation along the entire treated portion of a blank foundation wall.

### l. Seat Depth

Minimum seat depth is measured as the narrowest horizontal dimension of the area designed for public seating.

### m. Enclosure

Maximum enclosure is measured according to *Sec. 14.1.4. (Enclosure)*.

## F. Relief

**1.** Deviation from blank wall treatment standards may be requested in accordance with *Sec. 13.7.1 (Alternative Compliance).*

**2.** An increase in allowed blank wall width of 20% or less may be requested in accordance with *Sec. 13.7.2 (Adjustments).*

**3.** An increase in allowed blank wall width and blank wall treatment standards may be requested as a variance in accordance with *Sec. 13.7.3 (Variance)*.

# DIV. 3D.5. ENTRANCES

## SEC. 3D.5.1. STREET-FACING ENTRANCE

A door providing access and from the public realm to the interior of a building.

### A. Intent

To provide visual interest along the public realm, orient buildings to the public realm and promote greater use and activation of the public sidewalk by limiting the width of frontage without physical connections between the public realm and the interior of a building.

### B. Applicability

Street-facing entrance standards apply to all portions of buildings and structures where frontage standards are applicable (*Sec. 3A.1.2.B*).

### C. Standards

#### 1. General

To qualify as a street-facing entrance, building entrances shall meet the following standards:

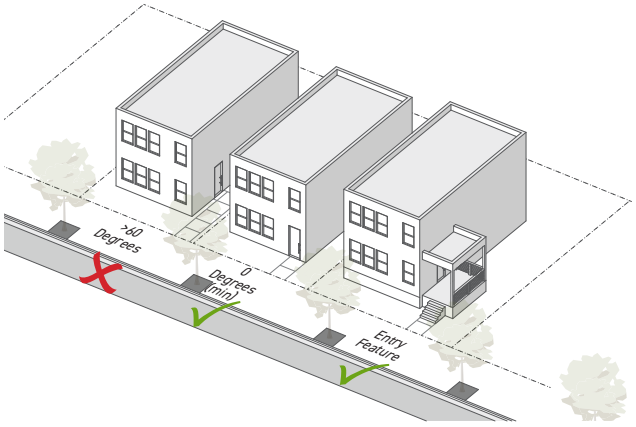
**a.** Located on the ground story facade,

**b.** Provide both ingress and egress pedestrian access to the ground story of the building.

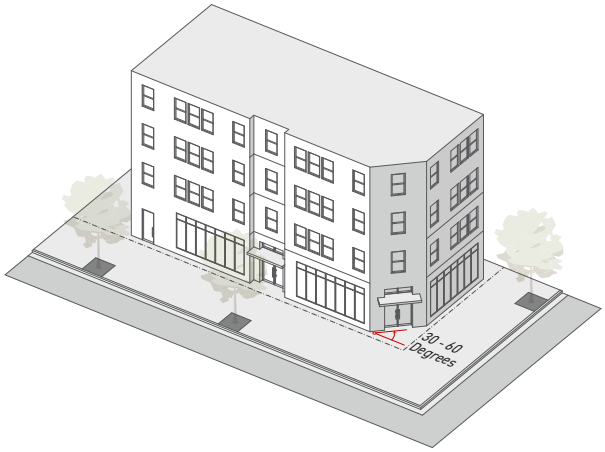
**c.** Remain operable at all times. Access may be controlled and limited to residents, or tenants.

**d.** Shall not provide access directly to motor vehicle use areas, utility areas or fire stairs.

**e.** Angled between 0 to 60 degrees, measured parallel to the frontage lot line.



**f.** On a corner lot, an entrance located adjacent to the street intersection and angled between 30 to 60 degrees, measured parallel to each street lot lines, may be used to meet the requirement for a street-facing entrance along both street frontages.



**g.** Non-required entrances are allowed in addition to required entrances.

## 2. Entrance Spacing

The distance between required street-facing entrances.

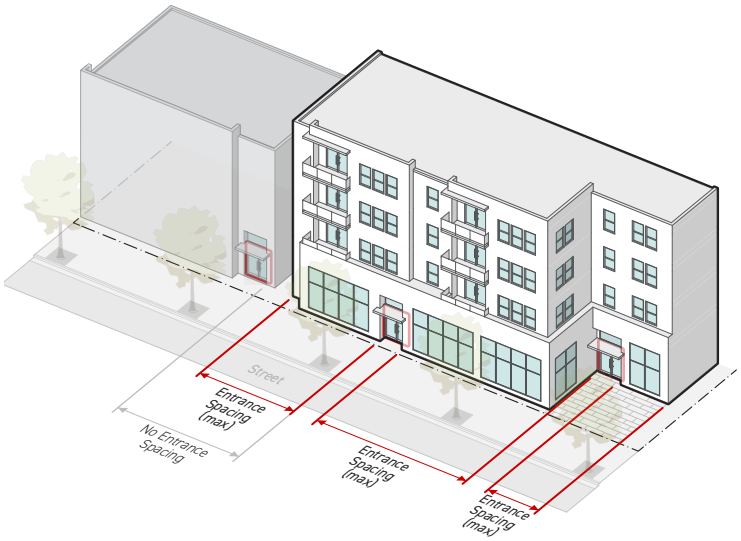
### a. Measurement

Maximum entrance spacing is the greatest horizontal distance from edge of door to edge of door and edge of door to edge of building, measured parallel to the frontage lot line.

### b. Standards

**i.** Street-facing entrances shall not be separated by a distance greater than the maximum allowed entrance spacing.

**ii.** The maximum entrance spacing requirements shall be met for each building, but are not applicable to adjacent or abutting buildings.



## D. Measurement

Street-facing entrance is measured as provided or not provided based on the presence of entrances meeting *Sec.3C .5.1.C.* above.

## E. Exceptions

Entrances that do not face a frontage lot line may count as a street-facing entrance provided they are directly accessed from a street-facing entry feature meeting the standards of *Sec. 3C.5.2. (Entry Feature).*

## F. Relief

1. Deviation from street facing entrance standards may be requested in accordance with *Sec. 13.7.1 (Alternative Compliance).*
2. An increase in entrance spacing of 20% or less may be requested in accordance with *Sec. 13.7.2 (Adjustments).*
3. Deviation from street-facing entrance and entrance spacing standards may be requested as a variance in accordance with *Sec. 13.7.3 (Variance)*.

## SEC. 3D.5.2. ENTRY FEATURE

Improved design standards applied to each entrance along the public realm.

### A. Intent

To provide architectural embellishment of entrances to promote inconspicuous wayfinding in the public realm, provide greater shelter and comfort to users, promote visual interest along the public realm and highlight the connection between the public and private realm to improve walkability.

### B. Applicability

Entry feature standards apply to all required street-facing entrances where entry features are required by Frontage District.

### C. Standards

#### 1. General

**a.** Each required street-facing entrance shall include an entry feature meeting the standards for one of the entry features options allowed by Frontage District.

**b.** Required entry features shall abut and provide direct access to a street-facing entrance.

**c.** Required entry features shall be directly accessible from the public realm associated with the frontage lot line.

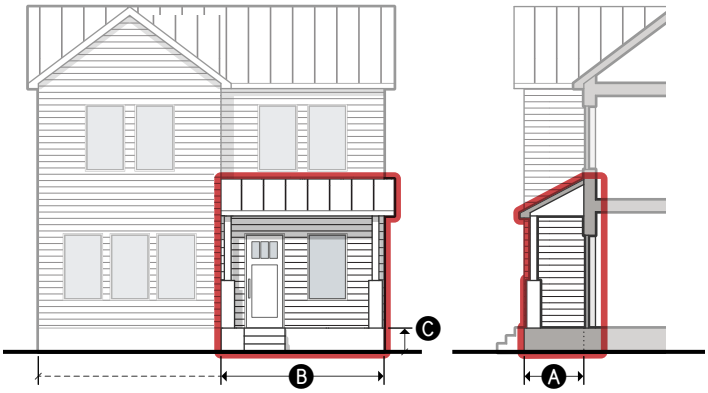
**d.** For street setback encroachment regulations, see *Sec. 2C.2.2.E. (Exceptions, Building Setbacks)*.

**e.** For encroachments into the public right-of-way, see *LAMC Ch. IX, Art. 1, Div. 32 (Encroachments into the Public Right-of-Way)*.

## 2. Entry Feature Options

### a. Porch

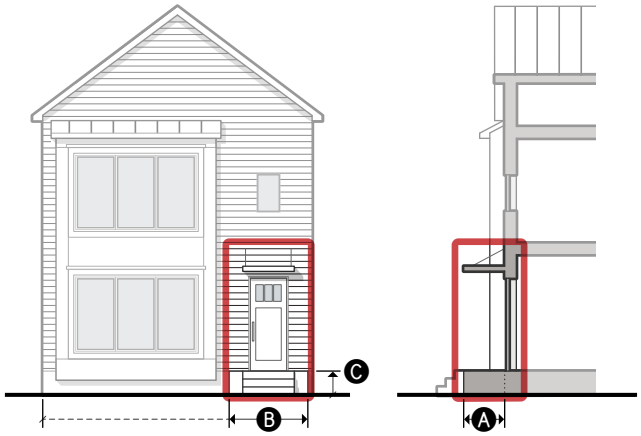
A wide, raised platform, projecting in front of a street-facing entrance, that is entirely covered but not enclosed.



| DIMENSIONAL STANDARDS | *Sec. 3.C.5.2.D* |
|---|---|
| Ⓐ **Depth** (min) | 4.5' |
| Ⓑ **Width** (min) | 30% |
| **Covered entrance** | n/a |
| **Covered area** (min) | 100% |
| Ⓓ **Finished floor elevation** (min/max) | 2'/5' |
| **Transparency** (min) | n/a |
| **Enclosure** (max) | 50% |

### b. Raised Entry

A raised platform accessed from an exterior staircase, providing covered access to a street-facing entrance.



| DIMENSIONAL STANDARDS | *Sec. 3.C.5.2.D* |
|---|---|
| Ⓐ **Depth** (min) | 3' |
| Ⓑ **Width** (min) | 4' |
| **Covered entrance** | Required |
| **Covered area** (min) | n/a |
| Ⓓ **Finished floor elevation** (min/max) | 2'/5' |
| **Transparency** (min) | n/a |
| **Enclosure** (max) | 50% |

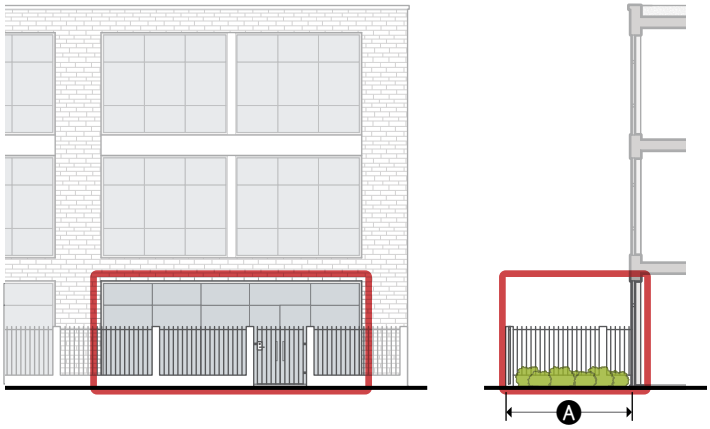
## c. Forecourt

A yard screened with a short wall, fence or hedge that provides significant privacy for ground story tenants located near sidewalk grade.

| DIMENSIONAL STANDARDS | Sec. 3.C.5.2.D |
|---|---|
| A **Depth** (min) | 8' |
| B **Width** (min) | 10' |
| **Covered entrance** | Required |
| **Covered area** (min) | n/a |
| C **Finished floor elevation** (min/max) | -2'/5' |
| **Transparency** (min) | n/a |
| **Fence or wall height** (min/max) | 2.5'/4' |

## d. River Yard

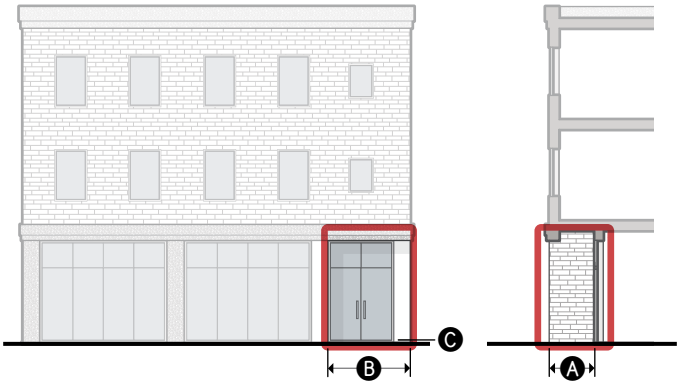
A yard located between a building and a river trail with direct pedestrian access from inside the building to the river trail.



| DIMENSIONAL STANDARDS | Sec. 3.C.5.2.D |
|---|---|
| A **Depth** (min) | 15' |
| **Width** (min) | 15' |
| B **Covered entrance** | Not required |
| **Covered area** (min) | n/a |
| **Finished floor elevation** (min/max) | n/a |
| **Transparency** (min) | n/a |
| **Fence or wall height** (max) | 6' |

## e. Recessed Entry

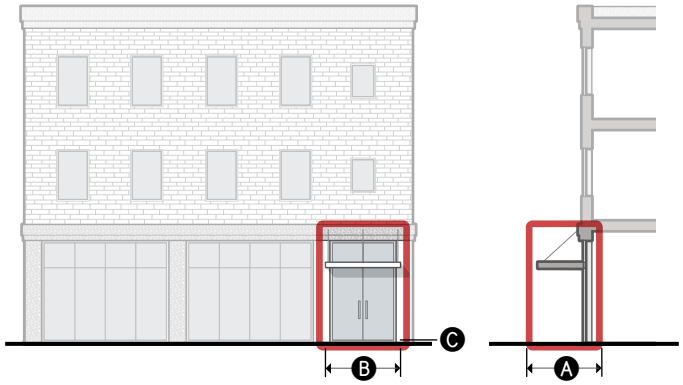
A space set behind the primary facade plane providing sheltered access to a street-facing entrance.



| DIMENSIONAL STANDARDS | *Sec. 3.C.5.2.D* |
|---|---|
| A Depth (min/max) | 3'/15' |
| B Width (min) | 5' |
| Covered entrance | Required |
| Covered area (min) | 100% |
| C Finished floor elevation (min/max) | -2'/5' |
| Transparency (min) | n/a |
| Enclosure (max) | 75% |

## f. Covered Entry

A space that provides sheltered access to an at-grade street-facing entrance with an overhead projecting structure.

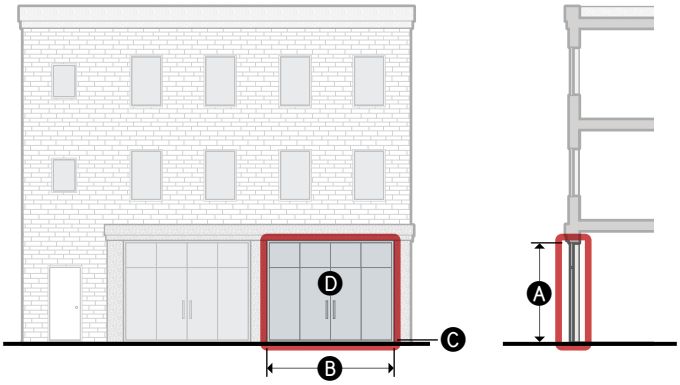


| DIMENSIONAL STANDARDS | *Sec. 3.C.5.2.D* |
|---|---|
| Depth (min) | n/a |
| Width (min) | n/a |
| Covered entrance | Required |
| Covered area (min) | n/a |
| C Finished floor elevation (min/max) | -2'/2' |
| Transparency (min) | n/a |
| Enclosure (max) | 50% |

*For encroachments into the public right-of-way, see *LAMC Ch. IX, Art. 1, Div. 32 (Encroachments into the Public Right-of-Way)*.

## g. Storefront Bay

A facade area with a high level of contiguous transparency accentuating an at-grade street-facing entrance.

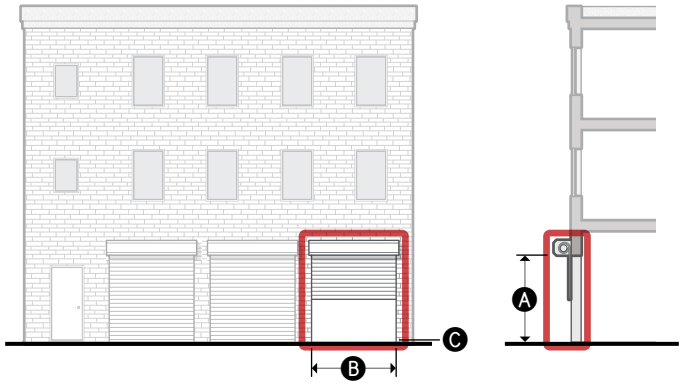


| DIMENSIONAL STANDARDS | | *Sec. 3.C.5.2.D* |
|---|---|---|
| A | Height (min) | 9' |
| B | Width (min) | 8' |
| | Covered entrance | Not required |
| | Covered area (min) | n/a |
| C | Finished floor elevation (min/max) | -2'/2' |
| D | Transparency (min) | 90% |
| | Fence or wall height (max) | 0' |

* A fence or wall a maximum of 42" in height is allowed only where required by the California Department of Alcohol and Beverage Control.

## h. Market Stall

A facade area equipped with an overhead door or operable facade that is open to the public realm during hours of operation.



| DIMENSIONAL STANDARDS | | *Sec. 3.C.5.2.D* |
|---|---|---|
| A | Height (min) | 7' |
| B | Width (min) | 6' |
| | Covered entrance | Not required |
| | Covered area (min) | n/a |
| C | Finished floor elevation (min/max) | -2'/5' |
| C | Transparency (min)* | n/a |
| | Fence or wall height (max) | 0' |

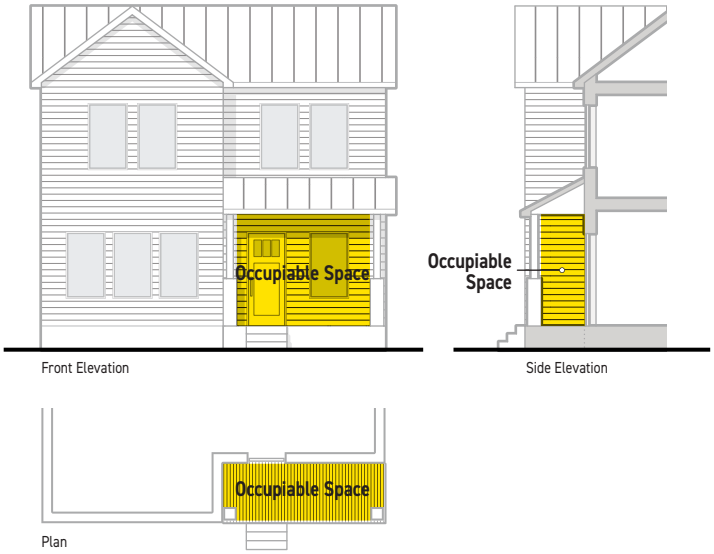
*A market stall does not count toward transparency unless it meets the standards for transparency area when shut.

## D. Measurement

### 1. General

**a.** Entry feature is measured as provided or not provided for each required street-facing entrance based on whether the design of a street-facing entrance meets the standards of an allowed entry feature for the applicable frontage district.

**b.** Entry feature standards are measured for the occupiable portion of an entry feature. Stairs and ramps used to access the entry feature are not considered occupiable space for the purpose of meeting entry feature standards.



### 2. Depth

Minimum depth is measured as the horizontal dimension at the narrowest point of an entry feature, measured perpendicular to the applicable street lot line.

### 3. Width

**a.** When specified in feet, width is measured as the total width of an entry feature or portion of a facade meeting the applicable entry feature standards, measured parallel to the applicable street lot line.

**b.** When specified as a percentage, width is measured as the total width of the entry feature divided by the total width of the building that the entry provides access to, measured parallel to the applicable street lot line. For measuring facade width, see *Sec. 2C.6.2. (Facade Width)*.

**c.** Where a minimum width and height are specified, the entry feature standards shall be met for a rectangular portion of a facade having a width no less than the minimum width and a height no less than the minimum height.

## 4. Height

**a.** Height is measured vertically from the finished floor to the top of the facade area meeting the applicable entry feature standards.

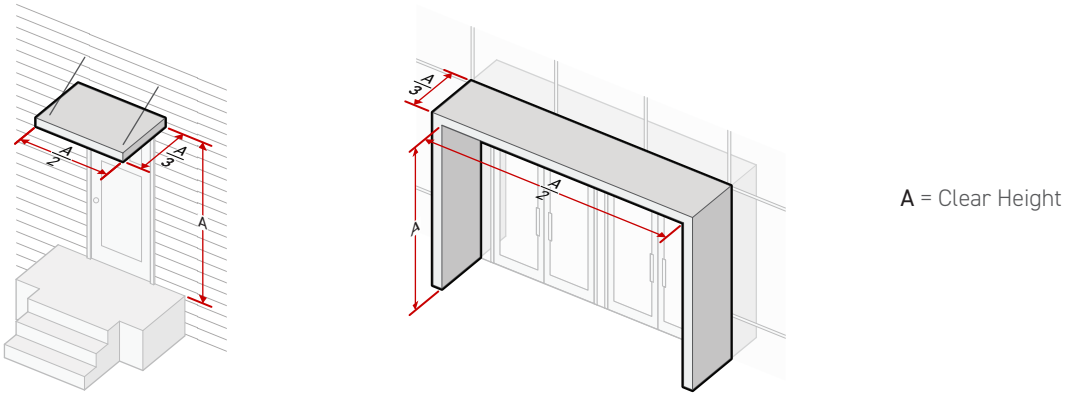
**b.** Where a minimum width and height are specified, the entry feature standards shall be met for a rectangular portion of a facade having a width no less than the minimum width and a height no less than the minimum height.

## 5. Covered Entrance

**a.** When required as a part of an entry feature; a canopy, roof or other sheltering structure shall cover the exterior area immediately abutting the associated street-facing entrance.

**b.** The minimum depth of the covered area shall be the clear height of the covered area divided by 3.

**c.** The minimum width of the covered area shall be the clear height of the covered area divided by 2.



## 6. Covered Area

Covered area is measured as the portion of an entry feature area that is covered by a canopy, roof or other sheltering structure, divided by the total entry feature area.For the measurement of covered area, see *Sec. 14.1.1.1. (Covered Area (%))*.

## 7. Finished Floor Elevation

Finished floor elevation is measured from the average sidewalk grade along the adjacent sidewalk to the top of the finished floor surface or ground surface of the entry feature. Where no sidewalk exists within 10 feet of the entry feature, finished floor elevation is measured from the average finished grade within 5 feet of the entry feature, measured perpendicular to the entry feature area.

### 8. Transparency

Transparency is measured as a percentage calculated as ground story transparency only for the portion of ground story facade area abutting the entry feature. For the measurement of ground story transparency, see *Div. 3C.4.1.C.1. (Ground Story)*.

### 9. Enclosure

For the measurement of enclosure, see *Sec. 14.1.1.4. (Enclosure)*.

### 10. Fence or Wall Height

Fence or wall height is measured according to *Sec. 4C.7.1.D. (Measurement, Frontage yard Fences and Walls)*.

## E. Relief

**1.** Deviation from entry feature option standards may be requested in accordance with *Sec. 13.7.1 (Alternative Compliance)*.

**2.** A deviation from entry feature dimensional standard of 15% or less may be requested in accordance with *Sec. 13.7.2 (Adjustments)*.

**3.** Deviation from any entry feature standard may be requested as a variance in accordance with *Sec. 13.7.3 (Variance)*.

# DIV. 3D.6. GROUND STORY

## SEC. 3D.6.1. GROUND STORY HEIGHT

The floor-to-floor height of the story of a building having its finished floor elevation nearest to the finished ground surface.

### A. Intent

To promote active uses that are directly connected the public realm, and ensure high-quality ground-story spaces that are adaptable and appropriate to their context.

### B. Applicability

Ground story height standards apply to all portions of the ground story of a structure located within the first 15 feet of a frontage applicable facade, measured inward and perpendicular to the facade.

### C. Standards

All occupiable space on the ground story shall have floor-to-floor height of no less than the ground story height minimum.

### D. Measurement

1. Ground story height is measured vertically from the top of the finished ground floor to the top of the finished floor above.
2. Where no story exists above, ground story height is the shortest vertically distance from the top of the finished ground floor to the top of the ceiling or roof structure above.
3. For determining the ground story, see *Sec. 14.1.1.10. (Ground Story Determination)*.

### E. Relief

1. A reduction in required ground story height of 1 foot or less may be requested in accordance with *Sec. 13.7.2 (Adjustments)*.
2. Deviation from ground story height standards may be requested as a variance in accordance with *Sec. 13.7.3 (Variance)*.

## SEC. 3D.6.2. GROUND FLOOR ELEVATION

The finished floor height associated with the story of a building having its finished floor elevation nearest to the finished ground surface.

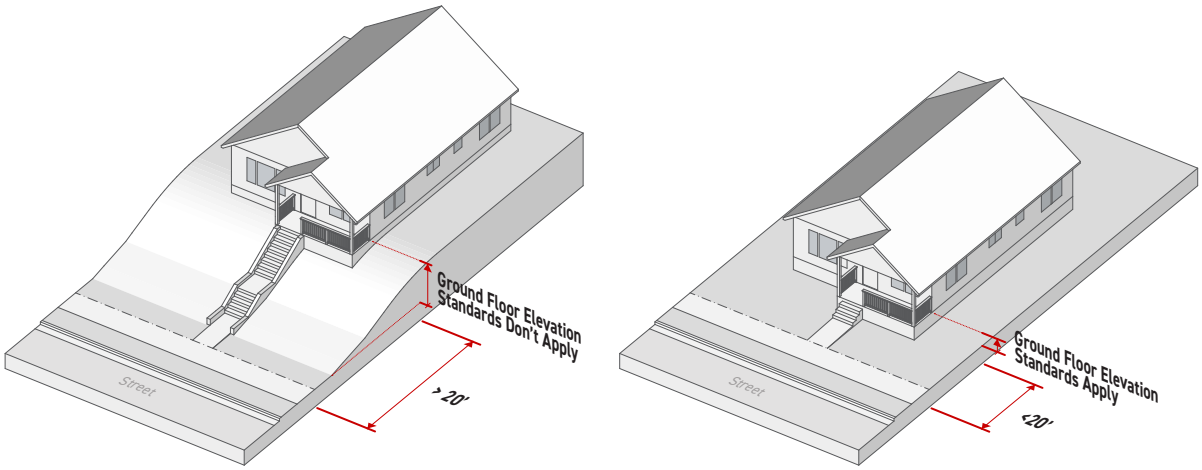
### A. Intent

To promote active uses that are directly connected the public realm, and ensure high-quality ground-story spaces that are adaptable and appropriate to their context.

### B. Applicability

1. For structures located less than 20 feet from the frontage lot line, all portions of the ground story located within the first 15 feet of a frontage applicable facade, measured inward and perpendicular to the frontage lot line, shall comply with ground floor elevation standards.

2. Ground floor elevation standards do not apply to structures located 20 feet or greater from the frontage lot line.



### C. Standards

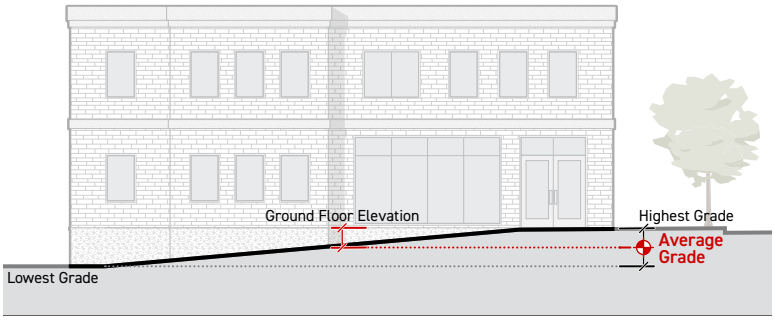
1. All occupiable space on the ground floor shall be located at an elevation no higher than the maximum ground floor elevation.

2. All occupiable space on the ground floor shall be located at an elevation no lower than the minimum ground floor elevation.

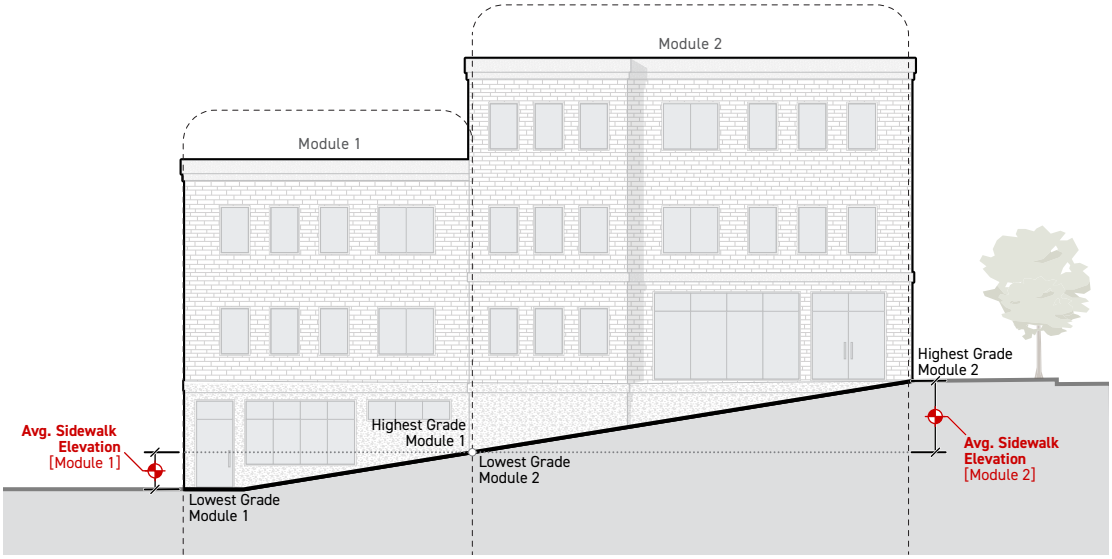
## D. Measurement

Ground floor elevation is measured vertically from the average elevation along the sidewalk to the top of the finished ground floor.

1. Average elevation along the sidewalk is measured as the average of the highest and lowest sidewalk elevation for the portion of the sidewalk located in front of the building.



2. For sloped lots, average elevation along the sidewalk may be measured individually for each module and calculated as the average of the highest and lowest sidewalk elevation for the potion of the sidewalk located in front of the building module.



## E. Relief

1. A deviation in minimum or maximum ground floor elevation of 10% or less may be requested in accordance with *Sec. 13.7.2 (Adjustments)*.

Deviation from ground story height standards may be requested as a variance in accordance with *Sec. 13.7.3 (Variance)*.

Sec. 3D.10.1. Principal materials . . . . . 3-112

Sec. 3D.10.2. Accessory materials . . . . . 3-114

**Div. 3D.11. Roof Design . . . . . 3-116**

Sec. 3D.11.1. Roof Form . . . . . 3-116

Sec. 3D.11.2. Roof Materials . . . . . 3-117

## DIV. 3E.1. BUILD-TO

*See Sec. 3C.1.*

## DIV. 3E.2. PARKING

*See Sec. 3C.2.*

## DIV. 3E.3. LANDSCAPING

*See Sec. 3C.3.*

## DIV. 3E.4. GROUND FLOOR ELEVATION

*See Sec. 3C.6.2.*

# DIV. 3E.5. STORY HEIGHT

## SEC. 3E.5.1. GROUND STORY HEIGHT

*See Sec. 3C.6.1.*

## SEC. 3E.5.2. UPPER STORY HEIGHT

The floor-to-floor height of any story of a building located above the ground story.

### A. Intent

To ensure upper story spaces and their associated facades are built in a way that reflect the scale and proportions of contributing buildings within their Survey LA Planning District or Historic District.

### B. Applicability

1. Upper story height standards apply to each story located above the ground story.
2. Only portions of upper stories located within the first 15 feet of a frontage applicable facade, measured inward and perpendicular to the facade, shall meet upper story height standards.

### C. Standards

All occupiable space located in applicable portions of upper stories shall have floor-to-floor height of no less than the upper story height minimum.

### D. Measurement

1. Upper story height is measured vertically from the top of the finished floor to the top of the finished floor above.
2. Where no story exists above, upper story height is the shortest vertical distance from the top of the finished floor to the top of the ceiling or roof structure above.

### E. Relief

1. A reduction in required upper story height of 1 foot or less may be requested in accordance with *Sec. 13.7.2 (Adjustments)*.
2. Deviation from upper story height standards may be requested as a variance in accordance with *Sec. 13.7.3 (Variance)*.

# DIV. 3E.6. ARTICULATION

## SEC. 3E.6.1. BASE, MIDDLE & TOP

The base, middle top articulation requirement is composed of three separate and coordinated articulating elements designed to visually break a building facade up into three separately legible layers.

### A. Intent

To visually break a building facade up into three separately legible building layers.

### B. Applicability

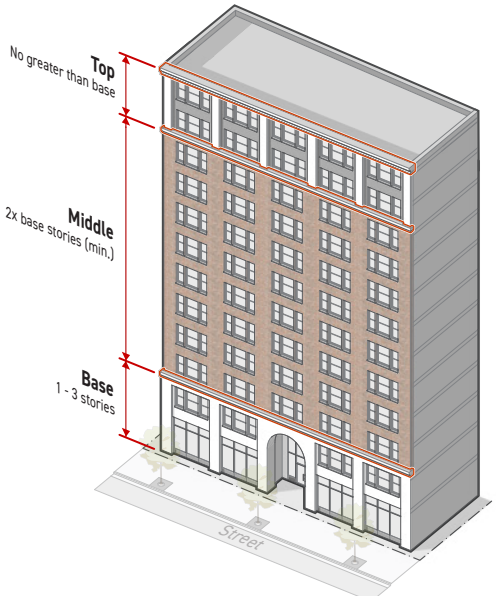
Base, middle and top standards apply to all *frontage applicable facades (Sec. 3A.1.2.B.2.)* where required by Character Frontage District.

### C. Standards

#### 1. General

One articulating element option *(Sec. 3D.6.5)* shall be provided for each building layer in accordance with the building layer standards below.

#### 2. Building Layers



##### a. Base

**i.** The base building layer shall include between 1 and 3 contiguous stories starting with the ground story and continuing upward.

**ii.** At least one of the following articulating elements shall be applied along the top of the base layer, creating a transition between the base and middle layers:

**a)** *Material change (Sec. 3D.6.5.C.)*,

**b)** *Belt course (Sec. 3D.6.5.D.)*, or

**c)** *Shopfront cornice (Sec. 3D.6.5.E.).*

**iii.** The articulating element shall extend for the full width of the facade and be located no higher than the top of the uppermost story included in the layer.

### b. Middle

**i.** The middle building layer shall include at least twice as many contiguous stories than the base building layer, starting at the top of the base layer and continuing upward.

**ii.** At least one of the following articulating elements shall be applied along the top of the middle layer, creating a transition between the middle and top layers:

**a)** *Material change (Sec. 3D.6.5.C.)*,

**b)** *Belt course (Sec. 3D.6.5.D.)*.

**iii.** The articulating element shall extend for the full width of the facade and be located no higher than the top of the uppermost story included in the layer.

### c. Top

**i.** The top building layer shall include at least 1 story and no more stories than the base building layer.

**ii.** All stories located in the top building layer shall be contiguous and include all stories between the top of the middle layer and the top of the topmost story in a building.

**iii.** A *roofline cornice (Sec. 3D.6.5.F.)* articulating element shall be applied to the top building layer.

**iv.** The roofline cornice shall extend for the full width of the facade and be located along the top of the topmost story included in the building layer.

## D. Measurement

For measurement of stories see *Sec. 2C.4.3. (Height in Stories)*.

## E. Exceptions

Where the Form District requires a street stepback depth of 10 feet or greater, the top building layer may terminate at the topmost story below the street stepback. No articulating element is required above the top building layer.

### F. Relief

1. A deviation from number of stories in building layers of 1 story may be requested in accordance with *Sec. 13.7.2 (Adjustments)*.

2. Deviation from any base, middle and top standard may be requested as a variance in accordance with *Sec. 13.7.3 (Variance)*.

## SEC. 3E.6.2. BASE-TOP

The base-top articulation requirement is composed of two separate and coordinated articulating elements designed to visually break a building facade up into two separately legible layers.

### A. Intent

To visually break a building facade up into two separately legible building layers.

### B. Applicability

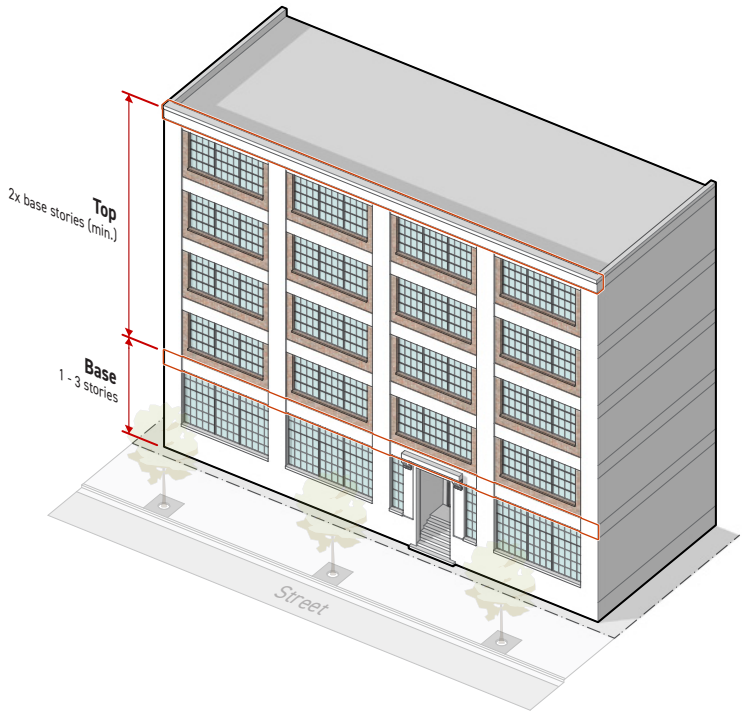
Base-top standards apply to all *frontage applicable facades (Sec. 3A.1.2.B.2.)*.

### C. Standards

#### 1. General

One articulating element option *(Sec. 3D.6.5)* shall be provided for each building layer in accordance with the building layer standards below.

#### 2. Building Layers



### a. Base

**i.** The base building layer shall include between 1 and 3 contiguous stories starting with the ground story and continuing upward.

**ii.** At least one of the following articulating elements shall be applied along the top of the base layer, creating a transition between the base and top layers:

**a)** *Material change (Sec. 3D.6.5.C.),*

**b)** *Belt course (Sec. 3D.6.5.D.)*, or

**c)** *Shopfront cornice (Sec. 3D.6.5.E.).*

**iii.** The articulating element shall extend for the full width of the facade and be located no higher than the top of the uppermost story included in the layer.

### b. Top

**i.** The top building layer shall include at least twice as many stories as the base building layer and include all remaining above-grade stories not included in the base building layer.

**ii.** A *roofline cornice (Sec. 3D.6.5.F.)* articulating element shall be applied to the top building layer.

**iii.** The roofline cornice shall extend for the full width of the facade and be located along the top of the topmost story included in the building layer.

## D. Measurement

For measurement of stories see *Sec. 2C.4.3. (Height in Stories)*.

## E. Exceptions

Where the Form District requires a street stepback depth of 10 feet or greater, the top building layer may terminate at the topmost story below the street stepback. No articulating element is required above the top building layer.

## F. Relief

**1.** A deviation from number of stories in building layers of 1 story may be requested in accordance with *Sec. 13.7.2 (Adjustments).*

**2.** Deviation from any base-top standard may be requested as a variance in accordance with *Sec. 13.7.3 (Variance)*.

## SEC. 3E.6.3. HORIZONTAL BANDS

A continuous band of material running horizontally across a facade.

### A. Intent

To separate and align windows on a building facade in a way that reflects the scale and proportions of contributing buildings within their Survey LA Planning District or Historic District.

### B. Applicability

Horizontal band standards apply to all *frontage applicable facades (Sec. 3A.1.2.B.2.)*.

### C. Standards

Horizontal bands shall meet the following standards:

1. Shall be no less than 8 inches and no greater than 36 inches in height,
2. Shall project no more than 12 inches from the immediately surrounding facade,
3. Shall extend uninterrupted for the full width of the facade, and
4. Shall be located at the top of all stories that do not have an *articulating element (Sec. 3D.6.5.)* applied.

### D. Measurement

1. Horizontal band height is measured vertically from the lowest point to the highest point of a horizontal band meeting the standards above.
2. Horizontal band projection is measured horizontally from and perpendicular to the immediately surrounding facade to the outermost point of a horizontal band meeting the standards above.

### E. Relief

1. A deviation from horizontal band dimensional standards of 10% or less may be requested in accordance with *Sec. 13.7.2 (Adjustments)*.
2. Deviation from any horizontal band standard may be requested as a variance in accordance with *Sec. 13.7.3 (Variance)*.

## SEC. 3E.6.4. VERTICAL BANDS

A continuous band of material running vertically up a facade.

### A. Intent

To separate and align windows on a building facade in a way that reflects the scale and proportions of contributing buildings within their Survey LA Planning District or Historic District.

### B. Applicability

Vertical band standards apply to all *frontage applicable facades (Sec. 3A.1.2.B.2.)*.

### C. Standards

Vertical bands shall meet the following standards:

1. Shall be no less than 8 inches and no greater than 36 inches in width,
2. Shall project no more than 36 inches from the immediately surrounding facade,
3. Shall extend the full height of the facade, only interrupted by horizontal bands or *articulating elements (Sec. 3D.6.5.)*.

### D. Spacing

1. Vertical bands shall be applied across the full width of a facade separated by no more than the maximum spacing and no less than the minimum spacing listed in Frontage District.
2. Vertical bands shall also be located at each corner of a building facade.

### E. Measurement

1. Vertical band width is measured parallel to the applicable facade and horizontally from one end of a vertical band meeting the standards above to the opposite end.
2. Vertical band projection is measured horizontally from the immediately surrounding facade to the outermost point of a vertical band meeting the standards above.
3. Vertical band spacing is measured horizontally and perpendicular to the applicable building facade from edge of vertical band to edge of vertical band.

### F. Relief

1. A deviation from vertical band dimensional standards of 10% or less may be requested in accordance with *Sec. 13.7.2 (Adjustments)*.
2. Deviation from any vertical band standard may be requested as a variance in accordance with *Sec. 13.7.3 (Variance)*.

## SEC. 3E.6.5. ARTICULATING ELEMENTS

Permanent architectural details used to embellish a facade design in order to accentuate an articulation technique or facade composition.

### A. Intent

To provide visual interest to the public realm and break a building facade up visually separate building layers, using architectural elements that reflects the scale and proportions of contributing buildings within their Survey LA Planning District or Historic District.

### B. Applicability

Articulating element standards apply to any architectural element used to meet an articulation standard required by Character Frontage District.

### C. Articulating Element Options

#### 1. Material Change

##### a. Standards

**i.** The principal exterior material applied to the building layer shall be different from the principal siding treatment applied to the abutting building layers.

**ii.** The principal exterior material shall be limited to those allowed by Frontage District.

**iii.** One of the following architectural details must be provided between building layers applying the material change articulating element:

**a)** A *belt course (Sec. 3D.6.5.D.)* located at the transition from one principal exterior material to the next, or

**b)** The building layer applying a material change articulating element shall be recessed or project from the abutting building layers at least 6 inches.

##### b. Measurement

**i.** For the purpose of measuring material change, principal exterior materials are considered different if they are entirely different materials, products having the same base material where the unit size or finish surface texture is visibly contrasting.

**ii.** Recessed building layers are measured horizontally from and perpendicular to the immediately surrounding facade to the outermost point of the recessed building layer facade.

**iii.** Projecting building layers are measured horizontally and perpendicular from the immediately surrounding facade to the innermost point of the projecting building layer facade.

### 2. Belt Course

A horizontal course projecting beyond the face of the surrounding building facade often shaped to mark a division in the facade wall.

#### a. Standards

A belt course shall meet the following standards:

**i.** Extend the full building width uninterrupted except by bisecting vertical bands.

**ii.** Have a consistent profile across the width of the building,

**iii.** Project a minimum of 2-inches from the immediately surrounding facade for some portion of the top 2 inches and the bottom 2 inches of the belt course profile,

**iv.** Have a height of no less than 12 inches if located on the first story. An additional 2 inches in height are required for each story that the belt course is located about the first story. The greatest required minimum height is 48 inches.

#### b. Measurement

**i.** Belt course height is measured vertically from the lowest point to the highest point of the belt course profile meeting the standards above.

**ii.** Projection is measured perpendicularly from the immediately surrounding facade to the outermost point of a belt course meeting the standards above.

### 3. Shopfront Cornice

A continuous molded projection located above a series of display windows on the ground story facade.

#### a. Standards

A shopfront cornice shall meet the following standards:

**i.** Extend uninterrupted for the full building width.

**ii.** Project a minimum of 4-inches from the immediately surrounding facade for some portion of the top 4 inches and the bottom 4 inches of the cornice profile,

**iii.** Have a height of no less than 12 inches.

#### b. Measurement

**i.** Shopfront cornice height is measured vertically from the lowest point to the highest point of the cornice profile meeting the standards above.

**ii.** Projection is measured perpendicularly from the immediately surrounding facade horizontally to the outermost point of a shopfront cornice meeting the standards above.

#### 4. Roofline Cornice

A continuous molded projection that crowns a wall, often as part of a parapet.

##### a. Standards

A roofline cornice shall meet the following standards:

**i.** Extend uninterrupted for the full building width.

**ii.** Project a minimum of 4-inches from the immediately surrounding facade for some portion of the top 4 inches of the cornice profile if located on the first, second or third stories. An additional 2 inches of projection are required for each story the roofline cornice is located above the third story. The greatest required minimum projection is 36 inches.

**iii.** Have a height of no less than 12 inches if located on the first, second or third story. An additional 2 inches in height are required for each story the roofline cornice is located above the third story. The greatest required minimum height is 48 inches.

##### b. Measurement

**i.** Roofline cornice height is measured vertically from the lowest point to the highest point of the cornice profile meeting the standards above.

**ii.** Projection is measured perpendicularly from the immediately surrounding facade horizontally to the outermost point of a roofline cornice meeting the standards above.

### D. Measurement

Articulating elements are measured as provided or not provided based on whether the applicable building layer facade applies an articulating element meeting the standards above.

### E. Relief

**1.** A deviation from articulating elements dimensional standards of 10% or less may be requested in accordance with *Sec. 13.7.2 (Adjustments).*

**2.** Deviation from any articulating elements standard may be requested as a variance in accordance with *Sec. 13.7.3 (Variance)*.

# DIV. 3E.7. FEATURES

## SEC. 3E.7.1. PROHIBITED FEATURES

### A. Intent

To ensure facades are built in a way that respects and reflects contributing buildings within their Survey LA Planning District or Historic District by limiting the use of architectural features that are inappropriate to their historic context.

### B. Applicability

Prohibited features standards apply to all *frontage applicable facades (Sec. 3A.1.2.B.2.)*.

### C. Standards

**1.** Where a Frontage District lists a feature as "prohibited", no applicable facade may include any variety of listed feature.

**2.** Where a Frontage District lists a feature as "allowed" or does not list a feature at all, no prohibited features standards limiting the use of the listed feature.

### D. Balcony

An exterior occupiable platform elevated above the ground enclosed by railings, parapet or other protective barrier.

#### 1. Standards

Where a Frontage District lists balcony as "prohibited":

**a.** No feature meeting the definition for balcony above may be included on an applicable facade.

**b.** Roof terraces that meet the definition of balcony may be allowed provided they are uncovered and do not project beyond the story immediately below.

#### 2. Measurement

Balconies are identified as present or absent based on whether an applicable facade includes a balcony as described above.

### E. Measurement

Prohibited features are measured as present or absent based on whether a prohibited feature is identified on an applicable facade.

### F. Relief

Deviation from any prohibited features standards may be requested as a variance in accordance with *Sec. 13.7.3 (Variance)*.

# DIV. 3E.8. ENTRANCES

## SEC. 3E.8.1. STREET-FACING ENTRANCE

*See Sec. 3C.5.1.*

## SEC. 3E.8.2. ENTRY FEATURE

*See Sec. 3C.5.2.*

## SEC. 3E.8.3. FOCAL ENTRY FEATURE

Improved design standards applied to the primary entrance along the public realm.

### A. Intent

To establish a hierarchy of entrances on a building facade where a focal entry feature is the visually dominant entrance supported by secondary entrances designed with entry features.

### B. Applicability

Where required by a Frontage District, Focal Entry standards apply to ground story, frontage lot line-facing facades.

### C. Standards

#### 1. General

**a.** No fewer focal entrances than required by Frontage District shall be provided for each provided building length.

**b.** Each required focal entry feature shall meet the standards for one of the *focal entry features options (Sec. 4D.7.3.C.2.)*.

**c.** Required focal entry features shall abut and provide direct access to a street-facing entrance.

**d.** Required focal entry features shall be directly accessible from the public realm associated with the frontage lot line.

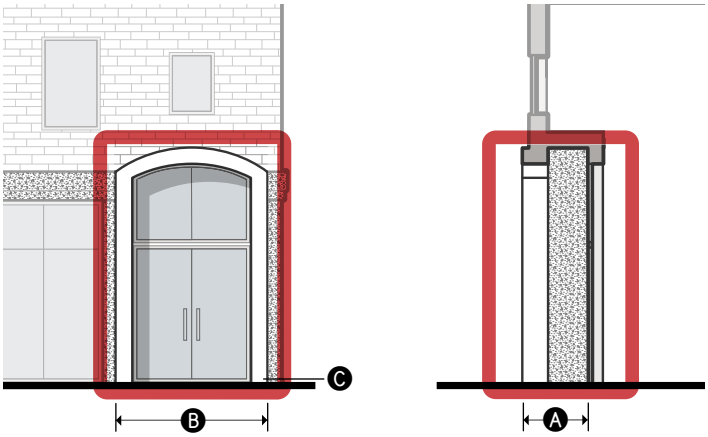
**e.** For street setback encroachment regulations, see *Sec. 2C.2.2.E. (Exceptions, Building Setbacks)*.

**f.** For encroachments into the public right-of-way, see *LAMC Ch. IX, Art. 1, Div. 32 (Encroachments into the Public Right-of-Way)*.

## 2. Focal Entry Feature Options

### a. Archway

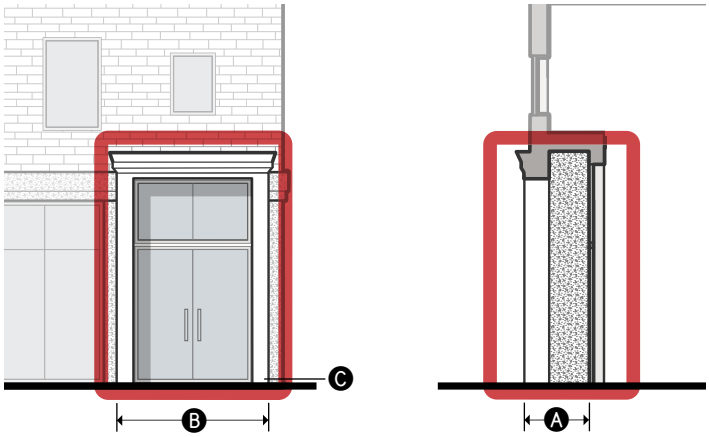
A curved symmetrical architectural detail spanning an opening to an exterior space set behind the primary facade plane providing sheltered access to a street-facing entrance.



| DIMENSIONAL STANDARDS | |
|---|---|
| A Depth (min) | 3' |
| B Width (min/max) | 8'/24' |
| Height (min) | 9' |
| Covered entrance | Required |
| Covered area (min) | 100% |
| C Finished floor elevation (min/max) | -2'/5' |
| Transparency (min) | 80% |
| Enclosure (max) | 75% |

### b. Architrave

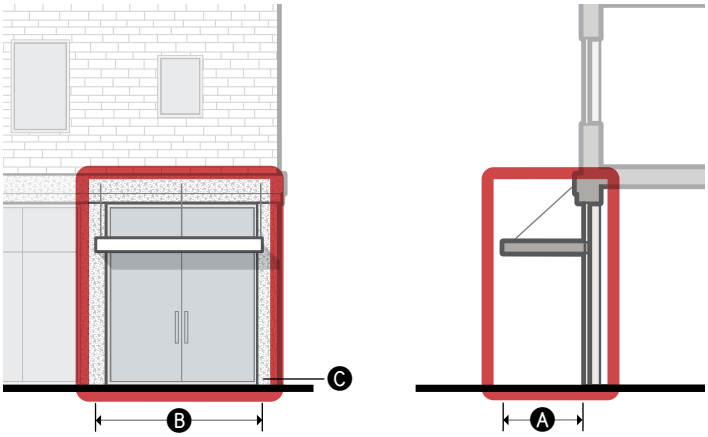
A decorative horizontal band above and connected to vertical bands framing an opening to an exterior space set behind the primary facade plane providing sheltered access to a street-facing entrance.



| DIMENSIONAL STANDARDS | |
|---|---|
| A Depth (min) | 3' |
| B Width (min/max) | 8'/24' |
| Height (min) | 9' |
| Covered entrance | Required |
| Covered area (min) | 100% |
| C Finished floor elevation (min/max) | -2'/5' |
| Transparency (min) | 80% |
| Enclosure (max) | 75% |

## c. Canopy

A space that provides sheltered access to an at-grade street-facing entrance with an overhead projecting structure.



| DIMENSIONAL STANDARDS | |
|---|---|
| Depth (min) | 4' |
| Width (min/max) | 8'/24' |
| Height (min) | 9' |
| Covered entrance | Required |
| Covered area (min) | n/a |
| C Finished floor elevation (min/max) | -2'/2' |
| Transparency (min) | n/a |
| Enclosure (max) | 50% |

*For encroachments into the public right-of-way, see *LAMC Ch. IX, Art. 1, Div. 32 (Encroachments into the Public Right-of-Way)*.

## D. Measurement

See *Sec. 3C.5.2.D. (Entry Feature Measurement)*.

## E. Relief

1. Deviation from focal entry feature option standards may be requested in accordance with *Sec. 13.7.1 (Alternative Compliance).*
2. A deviation from focal entry feature dimensional standard of 15% or less may be requested in accordance with *Sec. 13.7.2 (Adjustments).*
3. Deviation from any entry feature standard may be requested as a variance in accordance with *Sec. 13.7.3 (Variance)*.

# DIV. 3E.9. TRANSPARENCY

## SEC. 3E.9.1. GROUND STORY

### A. Intent

To ensure projects are designed with ground story windows that reflect contributing buildings within their Survey LA Planning District or Historic District.

### B. Applicability

Ground story transparency standards apply to all ground story frontage *applicable facades (Sec. 3A.1.2.B.2.)* with the exception of parking structure facades.

### C. Standards

#### 1. Transparent Area

See *Sec. 3C.4.1. (Transparent Area)*

#### 2. Blank wall Width

See *Sec. 3C.4.2. (Blank wall Width)*.

#### 3. Window Recession

##### a. Standards

All windows provided on applicable facades shall be recessed no less than the minimum depth specified in the Frontage District.

##### b. Measurement

Window recession depth is measured inward from the immediately surrounding facade surface, exclusive of trim or accessory projecting architectural details, to the outermost element of the window assembly.

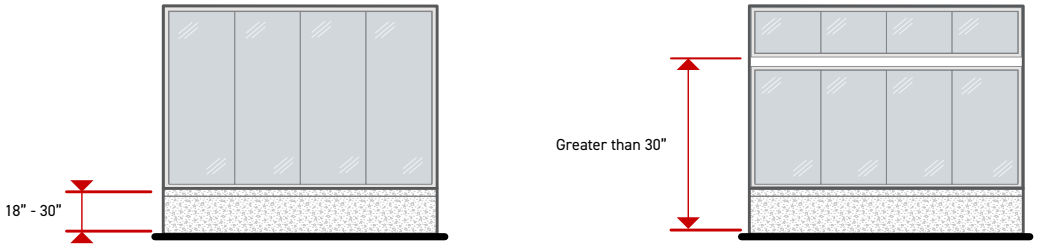
#### 4. Bulkhead

A wall located beneath a display window on the ground story facade that serves to elevate a window above the exterior finished grade and the interior finished floor surface.

### a. Standards

**i.** Where required by Frontage District, all ground story window openings located on applicable facades shall be elevated above the finished ground floor by no less than 18 inches and no more than 30 inches.

**ii.** Ground story window openings located entirely above another ground story window may be located greater than 30 inches from the ground story finished floor provided that no portion of the opening extends beyond the width of the lower window opening.



### b. Measurement

Bulkheads are measured as provided or not provided based on the compliance of all applicable windows with the standards above.

## 5. Symmetrical Lite Pattern

### a. Standards

All windows provided on applicable facades shall meet the following standards:

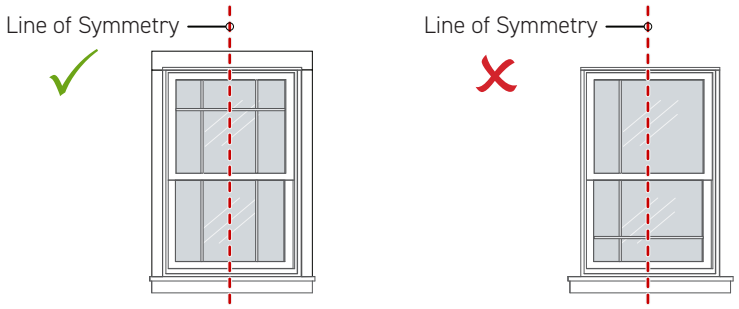
**i.** Divided-lite and simulated divided-lite windows shall have a composition of muntins or grills that display reflective symmetry.

**ii.** Operable windows shall have sashes that are generally reflectively symmetrical.

**iii.** Window assemblies sharing a window opening shall be composed in a way that reflective symmetry is displayed over entirety of the window opening.

#### b. Measurement

For the purpose of meeting symmetrical lite pattern standards, if a vertical line can be drawn through the window opening and the pattern and shape on both sides of the line appear approximately identical, the window or windows are considered in compliance with the symmetrical lite pattern standard.



### 6. Horizontal Sliding Windows

#### a. Standards

When prohibited by Frontage District, windows provided on applicable facades shall not include sashes that operate left to right or right to left.

#### b. Measurement

Horizontal sliding windows are measured as either present or absent.

### 7. Vinyl Windows

#### a. Standards

**i.** When prohibited by a Frontage District, windows assemblies provided on applicable facades shall not contain frames, sashes, rails, styles, muntins, mullions, or grills with a vinyl exterior finish.

**ii.** Other accessory window assembly components may be finished with vinyl products.

#### b. Measurement

Vinyl windows are measured as either present or absent.

## D. Relief

**1.** A deviation from ground story transparency dimensional standard of 15% or less may be requested in accordance with *Sec. 13.7.2 (Adjustments)*.

**2.** Deviation from any ground story transparency standard may be requested as a variance in accordance with *Sec. 13.7.3 (Variance)*.

# SEC. 3E.9.2. UPPER STORIES

## A. Intent

To ensure projects are designed with upper story windows that reflect contributing buildings within their Survey LA Planning District or Historic District.

## B. Applicability

Upper story transparency standards apply to all upper story frontage *applicable facades (Sec. 3A.1.2.B.2.)* with the exception of parking structure facades.

## C. Standards

### 1. Transparent Area

See *Sec. 3C.4.1. (Transparent Area)*

### 2. Window Recession

See Sec. 3D.8.1.E. (Window Recession, Ground Story Transparency)

### 3. Symmetrical Lite Pattern

See Sec. 3D.8.1.G. (Symmetrical Lite Pattern, Ground Story Transparency)

### 4. Sill

The bottommost horizontal exterior surface of a window opening including a ledge or other architectural detail that projects from the surrounding building facade.

#### a. Standards

**i.** When required by Frontage District, all windows provided on applicable facades shall include a sill, ledge or comparable architectural detail located at the bottommost exterior surface of a window opening.

**ii.** Required sills shall project a minimum of 1 inch beyond the immediately surrounding building facade.

**iii.** Required sills shall have a width of no less than the window opening.

#### b. Measurement

Sills are measured as provided or not provided based on the compliance of all applicable windows with the standards above.

### 5. Horizontal Sliding Windows

See *Sec. 3D.8.1.H. (Horizontal Sliding Windows, Ground Story Transparency)*

### 6. Vinyl Windows

See *Sec. 3D.8.1.I. (Vinyl Windows, Ground Story Transparency)*

## D. Relief

**1.** A deviation from upper story transparency dimensional standard of 15% or less may be requested in accordance with *Sec. 13.7.2 (Adjustments)*.

**2.** Deviation from any upper story transparency standard may be requested as a variance in accordance with *Sec. 13.7.3 (Variance)*.

# DIV. 3E.10. EXTERIOR MATERIALS

## SEC. 3E.10.1. PRINCIPAL MATERIALS

The building product used as the exterior wall finish material for the great majority of the exterior building facade.

### A. Intent

To visually unify the facade with a dominant material and ensure that building facades are finished with materials that are compatible with or reflective of contributing buildings in their SurveyLA Planning Area or Historic District.

### B. Applicability

All *frontage applicable facades (Sec. 3A.1.2.B.2.)* shall comply with principal material standards.

### C. Standards

#### 1. General

Applicable facades shall be finished in one of the principal material options listed in Frontage District for a minimum of 70% of the total applicable facade area.

#### 2. Principal Material Options

##### a. Brick

A rectangular unit made of hardened clay ranging from 1.5 to 8 inches in height and 3.5 to 16 inches in width, laid with mortar exposed between courses and brick units. Examples include solid brick construction, brick veneer and thin brick veneer. Other products required for installation that are visually subordinate to the brick are also allowed.

##### b. Solid Stone

Rock quarried and worked into a specific size and shape for use as a building material. Solid stone includes required mortar and other products required for installation that are visually subordinate to the stone product. Examples include solid stone construction, stone veneer and thin stone veneer. Solid stone excludes heavy aggregate concrete, terrazzo, engineered stone products and comparable materials.

##### c. Concrete

A cement based product either poured-in-place or pre-cast in a form or mold. Concrete includes engineered masonry products set in resin or cement. Other products required for installation that are visually subordinate to the concrete product are also allowed. Concrete Excludes fiber cement products.

#### d. Metal

Metal products design for architectural purposes. Examples include exposed structural steel, architectural metal panels and decorative metal products. Other products required for installation that are visually subordinate to the metal product are also allowed.

#### e. Wood

Tree-based products shaped into a particular shape and size for use as a building material. Examples include exterior plywood panels and solid wood products such as exposed structural lumber, panels, lap siding, vertical plank siding, horizontal plank siding and shingles. Other products required for installation that are visually subordinate to the wood product are also allowed. Wood excludes faux-wood products such as vinyl, aluminum and fiber cement products.

#### f. Glazed Tile

Ceramic tile having porcelain or natural clay body, glazed for surfacing walls, typically attached to an exterior wall with mortar and finished by filling joints between tiles with a cement or resin based grout product. Examples include small or large format tile and structural facing tile. Other products required for installation that are visually subordinate to the tile product are also allowed. Glazed tile excludes terracotta and other non-ceramic tile products.

## D. Measurement

1. Principal material coverage is calculated for each building width separately.
2. Principal material coverage is a percentage calculated by dividing the facade area covered in the principal material product divided by the total applicable facade area minus the facade area composed of window and door openings.
3. The principal material is measured as compliant or non-compliant based on whether it meets the standards and definition of one of the principal material options allowed by Frontage District.

## E. Relief

1. A deviation from the minimum principal material coverage standard of 10% or less may be requested in accordance with *Sec. 13.7.2 (Adjustments).*
2. Deviation from any principal material standard may be requested as a variance in accordance with *Sec. 13.7.3 (Variance)*.

# SEC. 3E.10.2. ACCESSORY MATERIALS

Building products used as an exterior wall finish material to accent or support the principal material.

## A. Intent

To visually unify the facade with a consistent material palette and ensure that building facades are finished with materials that are compatible with or reflective of contributing buildings in their SurveyLA Planning area or Historic District.

## B. Applicability

All *frontage applicable facades (Sec. 3A.1.2.B.2.)* shall comply with accessory material standards.

## C. Standards

### 1. General

**a.** Applicable facades shall be finished in one or more of the accessory material options listed in Frontage District cumulatively covering no more than 30% of the total applicable facade area.

**b.** All materials cumulatively covering more than 5% of the total applicable facade area are considered an accessory material.

### 2. Accessory Material Options

#### a. Brick

A rectangular unit made of hardened clay ranging from 1.5 to 8 inches in height and 3.5 to 16 inches in width, laid with mortar exposed between courses and brick units. Examples include solid brick construction, brick veneer and thin brick veneer. Other products required for installation that are visually subordinate to the brick are also allowed.

#### b. Solid Stone

Rock quarried and worked into a specific size and shape for use as a building material. Solid stone includes required mortar and other products required for installation that are visually subordinate to the stone product. Examples include solid stone construction, stone veneer and thin stone veneer. Solid stone excludes heavy aggregate concrete, terrazzo, engineered stone products and comparable materials.

#### c. Concrete

A cement based product either poured-in-place or pre-cast in a form or mold. Concrete includes engineered masonry products set in resin or cement. Other products required for installation that are visually subordinate to the concrete product are also allowed. Concrete Excludes fiber cement products.

#### d. Metal

Metal products design for architectural purposes. Examples include exposed structural steel, architectural metal panels and decorative metal products. Other products required for installation that are visually subordinate to the metal product are also allowed.

#### e. Wood

Tree-based products shaped into a particular shape and size for use as a building material. Examples include exterior plywood panels and solid wood products such as exposed structural lumber, panels, lap siding, vertical plank siding, horizontal plank siding and shingles. Other products required for installation that are visually subordinate to the wood product are also allowed. Wood excludes faux-wood products such as vinyl, aluminum and fiber cement products.

#### f. Glazed Tile

Ceramic tile having porcelain or natural clay body, glazed for surfacing walls, typically attached to an exterior wall with mortar and finished by filling joints between tiles with a cement or resin based grout product. Examples include small or large format tile and structural facing tile. Other products required for installation that are visually subordinate to the tile product are also allowed. Glazed tile excludes terracotta and other non-ceramic tile products.

### 3. Number of Accessory Materials

No more finishing materials than the maximum number of accessory materials listed in a Frontage District may be provided with the exception of trim, sills and other architectural details cumulatively covering no more than 5% of the total applicable facade area.

## D. Measurement

1. Accessory material coverage is calculated for each building width separately.
2. Accessory material coverage is a percentage calculated by dividing the facade area covered in the accessory material product divided by the total applicable facade area minus the facade area composed of window and door openings.
3. The accessory material is measured as compliant or non-compliant based on whether it meets the standards and definition of one of the accessory material options allowed by Frontage District.

## E. Relief

1. A deviation from the minimum accessory material coverage standard of 10% or less may be requested in accordance with *Sec. 13.7.2 (Adjustments).*
2. Deviation from any accessory material standard may be requested as a variance in accordance with *Sec. 13.7.3 (Variance)*.

# DIV. 3E.11. ROOF DESIGN

## SEC. 3E.11.1. ROOF FORM

The shape of the external upper covering of a building, including the frame for supporting the roofing.

### A. Intent

To ensure that building forms are compatible with or reflective of contributing buildings in their Survey LA Planning Area or Historic District.

### B. Applicability

Where specified by Frontage District, roof form standards apply to the primary roof forms of all frontage lot line facing buildings and structures on a lot.

### C. Standards

#### 1. General

All building and structure shall have a roof form listed as a roof form option in the applicable Frontage District.

#### 2. Roof Form Options

##### a. Flat

A roof with a maximum pitch of 2:12 (2 inch of vertical rise for every 12 inches of horizontal span) or less. Flat roof forms include roofs with parapets up to 6 feet in height.

### D. Measurement

**1.** Roof pitch is measured by calculating a roof's vertical rise in inches divided by a foot of its horizontal span and is represented as a ratio.

**2.** Roof form is measured as compliant or non-compliant based on whether it meets the standards and definition of one of the roof form options allowed by Frontage District.

### E. Exceptions

Roof form standards do not apply to accessory roof forms.

### F. Relief

**1.** A deviation from roof form dimensional standard of 10% or less may be requested in accordance with *Sec. 13.7.2 (Adjustments)*.

**2.** Deviation from any roof form standard may be requested as a variance in accordance with *Sec. 13.7.3 (Variance)*.

# SEC. 3E.11.2. ROOF MATERIALS

## A. Intent

To ensure that a building's roof finishing materials are visually compatible with or reflective of those of contributing buildings in their Survey LA Planning Area or Historic District.

## B. Applicability

Where specified by Frontage District, roof materials standards apply to the primary roof forms of all frontage lot line facing buildings and structures on a lot.

## C. Standards

No prohibited roof materials listed by Frontage District shall be used to finish a roof.

## D. Measurement

Roof materials are measured as compliant or non-compliant based on whether all applicable roofs meet the roof materials standards.

## E. Exceptions

Roof material standards do not apply to accessory roof forms.

## F. Relief

Deviation from roof materials standards may be requested as a variance in accordance with *Sec. 13.7.3 (Variance)*.

# DIV. 4A.1. INTRODUCTION

## SEC. 4A.1.1. PURPOSE

The purpose of this Article is to regulate site design, including location and characteristics of access, parking, landscape and site features. Development Standards Districts consist of a combination of regulations that are appropriate to a variety of contexts ranging from auto-oriented to pedestrian-oriented.

## SEC. 4A.1.2. DEVELOPMENT STANDARDS APPLICABILITY

### A. Project Applicability

All projects filed after the effective date of this Zoning Code shall comply with the Development Standards in this Article, as further specified below.

#### 1. Project Activities

Development Standards District standards apply to project activities as shown in the table below:

| | | PROJECT ACTIVITIES | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| DEVELOPMENT STANDARDS DISTRICT RULE | | Subdivision | New Construction | Addition | Facade Alteration | Site Alteration | Relocation | Major Renovation | Minor Renovation | Change/Expansion of Use | Ordinary Maintenance and Repair |
| *Div. 4C.1.* | **Pedestrian Access** | ○ | ● | ● | ● | ● | ● | ● | ○ | ○ | ○ |
| *Div. 4C.2.* | **Motor Vehicle Access** | ○ | ● | ● | ○ | ● | ● | ● | ○ | ○ | ○ |
| *Div. 4C.3.* | **Bicycle Parking** | ○ | ● | ● | ○ | ● | ● | ● | ○ | ○ | ○ |
| *Div. 4C.4.* | **Automobile Parking** | ○ | ● | ● | ○ | ● | ● | ○ | ○ | ● | ○ |
| *Div. 4C.5.* | **Transportation Demand Management** | ○ | ● | ● | ● | ● | ● | ● | ○ | ○ | ○ |
| *Div. 4C.6.* | **Plants** | ● | ● | ● | ● | ● | ● | ● | ○ | ○ | ○ |
| *Div. 4C.7.* | **Fences & Walls** | ● | ● | ● | ○ | ● | ● | ● | ○ | ● | ○ |
| *Div. 4C.8.* | **Screening** | ○ | ● | ● | ● | ● | ● | ● | ○ | ○ | ○ |
| *Div. 4C.9.* | **Grading** | ● | ● | ● | ○ | ● | ● | ○ | ○ | ○ | ○ |
| *Div. 4C.10.* | **Outdoor Lighting & Glare** | ○ | ● | ● | ● | ● | ● | ● | ○ | ○ | ○ |
| *Div. 4C.11.* | **Signs** | ○ | ● | ● | ● | ○ | ● | ● | ○ | ● | ○ |
| *Div. 4C.12.* | **Ridgeline Protection** | ● | ● | ● | ○ | ● | ● | ○ | ○ | ○ | ○ |
| *Div. 4C.13.* | **Environmental Protection** | ● | ● | ● | ○ | ● | ● | ○ | ○ | ○ | ○ |

● = Rule generally applies to this project activity
○ = Rule is not applicable

**a.** More than one project activity may apply to a project (for example, an addition may also include an expansion of use).

**b.** Where a rule is listed as generally applicable in the table below, the project activity shall meet the Development Standards District rules within the Division. This general applicability may be further specified for each standard in the applicability provisions in *Part 4C* (Development Standards Rules). Project applicability may also be modified by *Article 12* (Nonconformities). Where a Division of the Development Standards District rules is listed as not applicable in the table below, the standards within the Division do not apply to the project activity.

**c.** For more information about project activities see *Sec. 14.1.17*.

### 2. Nonconformity

For nonconforming lots and lots with nonconforming site design, buildings, structures, or uses, no project activity may decrease the conformance with any Development Standards standard in Article 4 unless otherwise specified by Division 12.5 (Nonconforming Development Standards). See the following examples:

**a.** Extending a fence in a front yard: Where the existing fence in a front yard is taller than the maximum height allowed by the frontage fences and wall type specified by Frontage District, all new portions of fence built in the front yard shall meet the maximum fence and wall height standard but no modification is required to the existing fence.

**b.** Converting a parking stalls to outdoor dining. Where the proposed site modification and change of use reduces the amount of parking below the minimum number of required parking stalls as specified by parking set, the project activities are not allowed.

## B. Applicable Components of Buildings and Lots

**1.** Development Standards apply to all portions of a lot.

**2.** Development Standards apply to all portions of buildings and structures on a lot.

**3.** Specific Development Standards Rules my further limiting which components of buildings and lots are required to comply with the standards in *Part 4C* (Development Standards Rules).

# SEC. 4A.1.3. RELATIONSHIP TO ZONE

A zone is comprised of the following districts, as established in *Sec. 1.4.2 (Zoning Map)* of this Chapter:

The Development Standards District is a separate and independent component of each zone.

## SEC. 4A.1.4. HOW TO USE THIS ARTICLE

### A. Identify the Development Standards District

The third component in a zone string identifies the Development Standards District for a property.

### B. Development Standards District Regulations

Development Standards District regulations are located in *Part 4B (Development Standards Districts)*. Each Development Standards District page identifies the requirements specific to that Development Standards District.

### C. Interpreting Development Standards District Regulations

Each standard on a Development Standards District page in *Part 4B (Development Standards Districts)* provides a reference to *Part 4C (Development Standards Rules)* where the standard is explained in detail.

## **Part 4B** (Development Standard Districts)

DIV. 4B.5. **DISTRICT 5**

SEC. 4B.5.1. **INTENT**

This Development Standards District supports areas where walking, biking, and public transit are the prioritized modes of transportation.

Pedestrian connections increase porosity in long blocks facilitating pedestrian movement and contributing to a pedestrian-friendly environment. No minimum parking is required, and when it is provided above-grade, it must meet high standards of design. On-site signs are sized and located to support a pedestrian-oriented public realm.

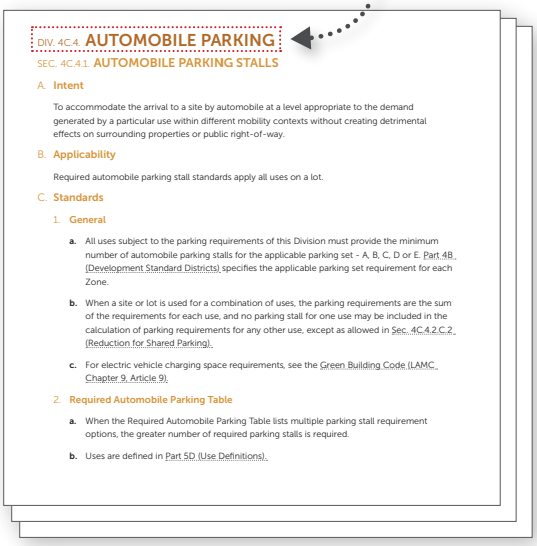
See Part 4C (Development Standard Rules) for additional development standards that apply.

**Learn More About Your Rules**

## **Part 4C** (Development Standard Rules)



DIV. 4C.4. **AUTOMOBILE PARKING**

SEC. 4C.4.1. **AUTOMOBILE PARKING STALLS**

A. **Intent**

To accommodate the arrival to a site by automobile at a level appropriate to the demand generated by a particular use within different mobility contexts without creating detrimental effects on surrounding properties or public right-of-way.

B. **Applicability**

Required automobile parking stall standards apply all uses on a lot.

C. **Standards**

1. **General**

**a.** All uses subject to the parking requirements of this Division must provide the minimum number of automobile parking stalls for the applicable parking set - A, B, C, D or E. Part 4B. (Development Standard Districts) specifies the applicable parking set requirement for each Zone.

**b.** When a site or lot is used for a combination of uses, the parking requirements are the sum of the requirements for each use, and no parking stall for one use may be included in the calculation of parking requirements for any other use, except as allowed in Sec. 4C.4.2.C.2. (Reduction for Shared Parking).

**c.** For electric vehicle charging space requirements, see the Green Building Code (LAMC, Chapter 9, Article 9).

2. **Required Automobile Parking Table**

**a.** When the Required Automobile Parking Table lists multiple parking stall requirement options, the greater number of required parking stalls is required.

**b.** Uses are defined in Part 5D (Use Definitions).

## SEC. 4A.1.5. DEVELOPMENT STANDARDS DISTRICT NAMING CONVENTION

All Development Standards District names are identified as a number. All Development Standards Districts are numbered in the order they fall within this article.

# PART 4B. DEVELOPMENT STANDARDS DISTRICTS

**Div. 4B.1. District 5 . . . . . 4-10**
Sec. 4B.1.1. Intent . . . . . 4-10
Sec. 4B.1.2. Standards . . . . . 4-10

**Div. 4B.2. District 6 . . . . . 4-11**
Sec. 4B.2.1. Intent . . . . . .4-11
Sec. 4B.2.2. Standards . . . . . .4-11

# DIV. 4B.1. DISTRICT 5

## SEC. 4B.1.1. INTENT

Development Standards District 5 prioritizes the pedestrian experience. Pedestrian access standards increase porosity in long blocks and ensure easy access from the public-right-of-way to building entrances, facilitating pedestrian movement. Parking for motor vehicles is not mandated, contributing to a dynamic and walkable environment. When parking is provided, it must meet high design standards to ensure pedestrian mobility, safety, and comfort are not hindered. On-site signs are sized and located to support a pedestrian-oriented public realm.

## SEC. 4B.1.2. STANDARDS

| | | |
|---|---|---|
| **PEDESTRIAN ACCESS** | Sec. 4C.1 | |
| Pedestrian access package | Package 1 | |
| Pedestrian passageway spacing | 350' | |
| **MOTOR VEHICLE ACCESS** | Sec. 4C.2 | |
| Motor vehicle access package | Package 1 | |
| Drive-through | Not Allowed | |

| Upper Stories | Wrapped | Adaptable |
| **SIGNS** | Sec. 4C.11 | |
| Sign package | 2 | |

See *Part 4C (Development Standards Rules)* for additional development standards that apply.

# DIV. 4B.2. DISTRICT 6

## SEC. 4B.2.1. INTENT

Development Standards District 6 enables the flexibility needed for a diversity of industries with changing demands. Standards for motor vehicle access are permissive and parking minimums are not mandated. On-site signs are sized and located to support a pedestrian-oriented public realm.

## SEC. 4B.2.2. STANDARDS

| | | |
|---|---|---|
| **PEDESTRIAN ACCESS** | Sec. 4C.1. | |
| Pedestrian access package | Package 4 | |

# DIV. 4C.1. PEDESTRIAN ACCESS

## SEC. 4C.1.1. PEDESTRIAN ACCESS PACKAGES

### A. Intent

To promote walkability, improve pedestrian access from the public realm to the interior of buildings, ensure that required entrances are conveniently and effectively accessible to pedestrians, and activate the public realm with building access points at a frequency appropriate to the context.

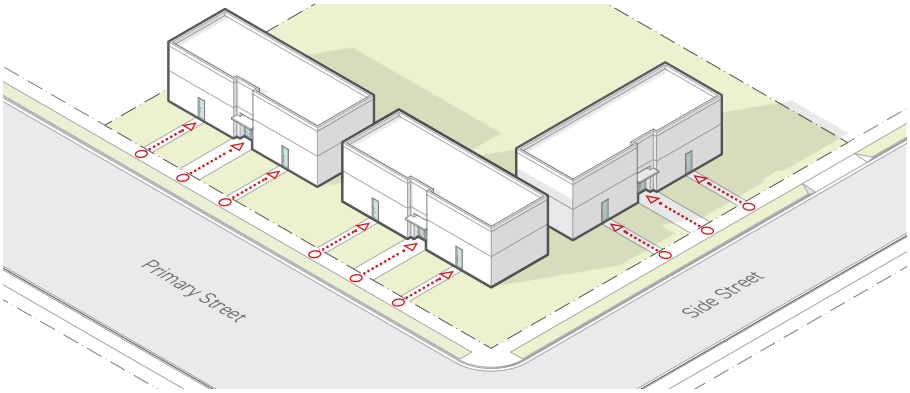
### B. Applicability-

Pedestrian access package standards apply to all street-facing entrances required by *Frontage District (Part 3B)* and all frontage yards. Applicable pedestrian access standards are determined by the pedestrian access package assigned by Development Standards District.

### C. Standards

#### 1. Pedestrian Access Package 1

A minimum of one *direct pedestrian accessway (Sec. 4C.1.2.C.2)* shall be provided to each street-facing entrance required by *Frontage District (Part 3B)*.

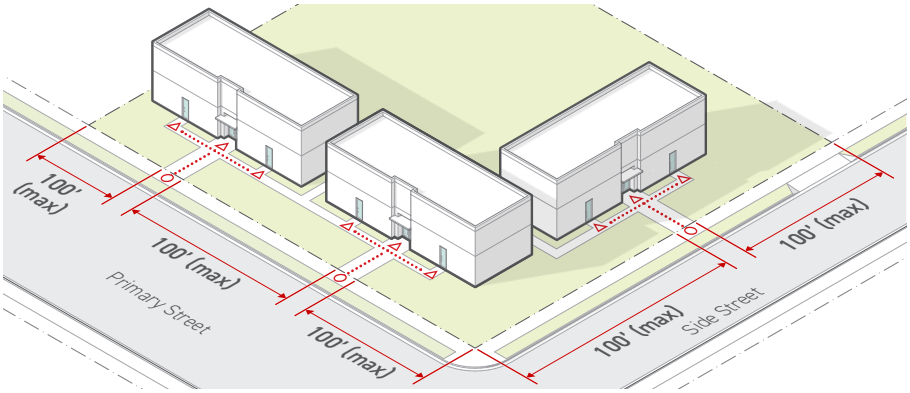


### 2. Pedestrian Access Package 2

**a.** A minimum of one *pedestrian accessway (Sec. 4C.1.2.C.1)* shall be provided for each frontage lot line.

**b.** Pedestrian accessway spacing shall be no more than 100 feet.

**c.** All required entrances shall be accessible from a pedestrian accessway.



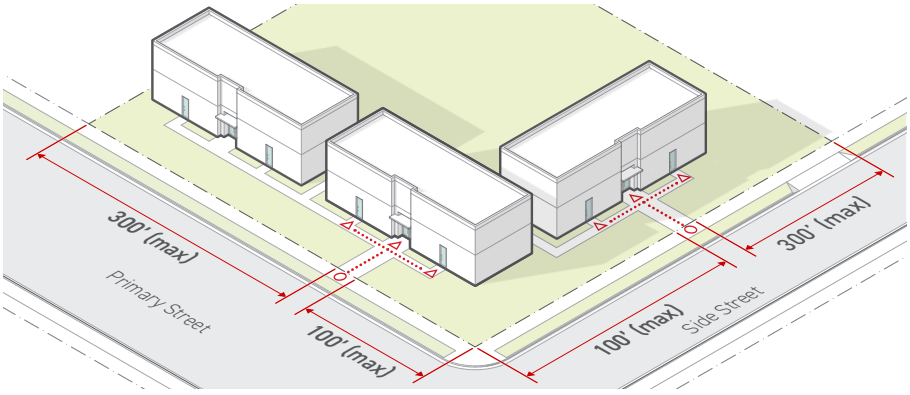
### 3. Pedestrian Access Package 3

**a.** A minimum of one *pedestrian accessway (Sec. 4C.1.2.C.1)* shall be provided for each frontage lot line.

**b.** Pedestrian accessway spacing shall be no more than 300 feet.

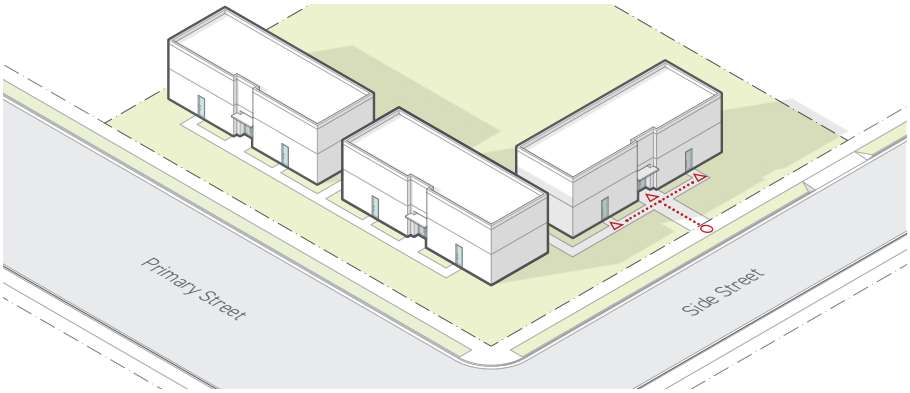
**c.** On corner lots, required pedestrian accessways on the primary street shall connect to the sidewalk along the primary street within 100 feet of the street intersection.

**d.** All required entrances shall be accessible from a pedestrian accessway.



### 4. Pedestrian Access Package 4

A minimum of one *pedestrian accessway (Sec. 4C.1.2.C.1)* shall be provided along the primary street or side street lot line.



### 5. Pedestrian Accessways

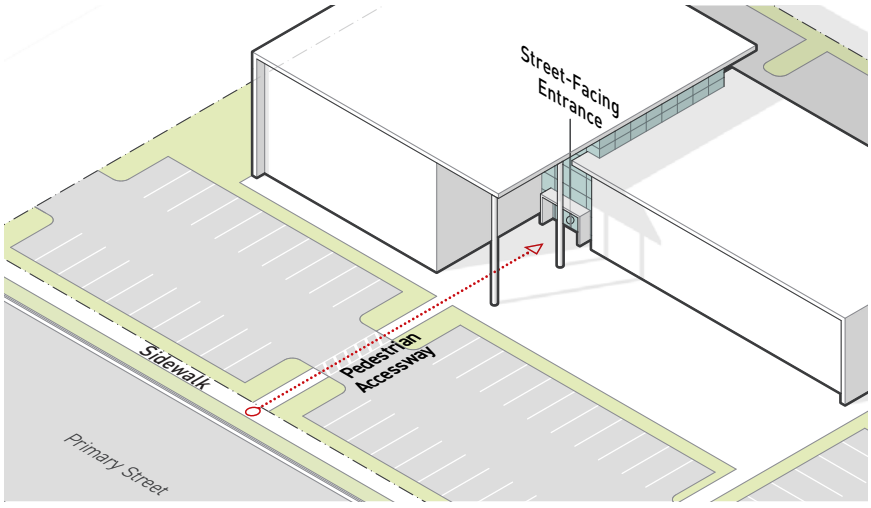
Pedestrian accessways shall meet the following standards:

**a.** Shall connect the sidewalk, or other publicly accessible pedestrian facility along the applicable frontage lot line, to a street-facing entrance required by *Frontage District (Part 3B)*.

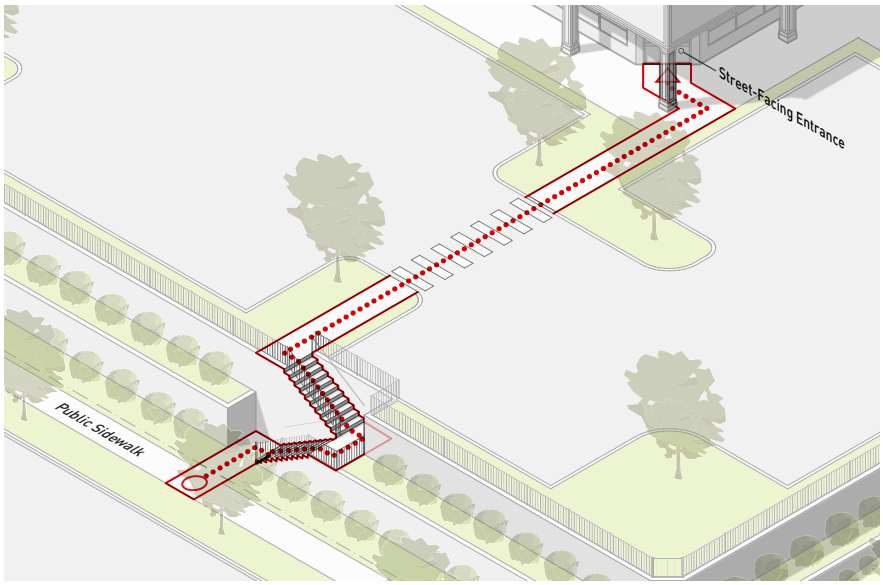
**b.** Shall be a minimum width of 4 feet.

**c.** Finished ground or floor surfaces shall be stable, firm and slip resistant in accordance with ADA floor and ground surface standards.

**d.** Shall be physically separated from and uninterrupted by *motor vehicle use areas* except where required to cross a drive aisle. Drive aisle crossings shall have the shortest practical crossing distance.



**e.** Where a retaining wall, open drainage, or similar obstacle interrupts a required pedestrian accessway, the pedestrian accessway shall continue through the obstacle.

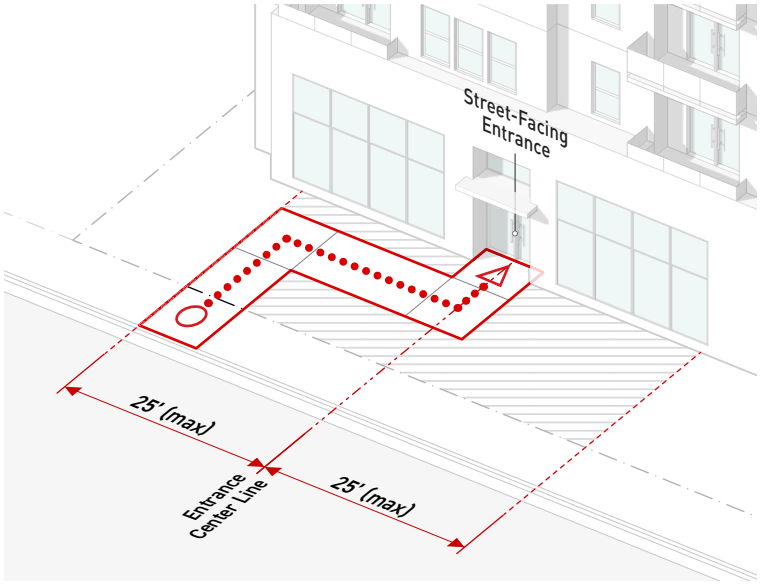


## 6. Direct Pedestrian Accessway

Direct pedestrian accessways shall meet following standards:

**a.** Shall comply with all pedestrian accessway standards (*Sec. 4C.1.2.C*).

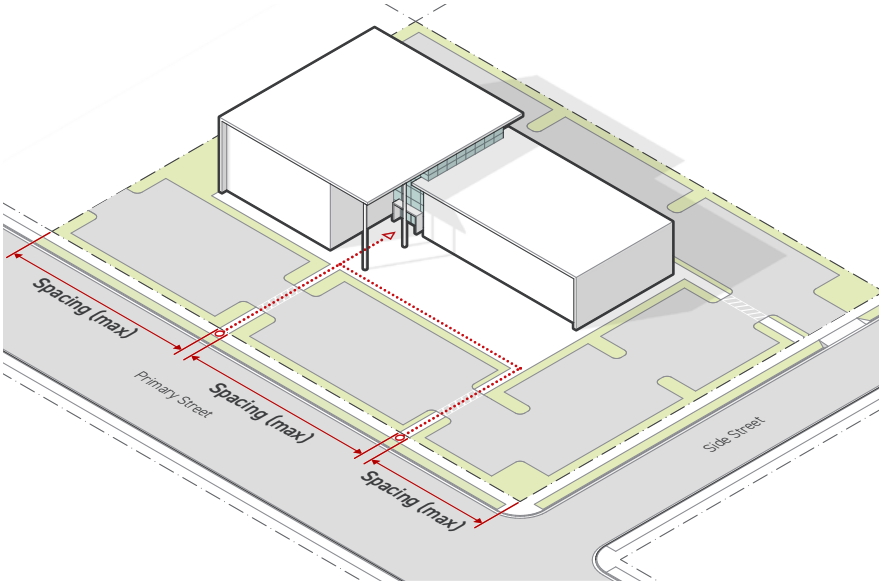
**b.** The connection to the public sidewalk shall be within 25 feet of the center of the street-facing entrance, measured parallel to the frontage lot line.



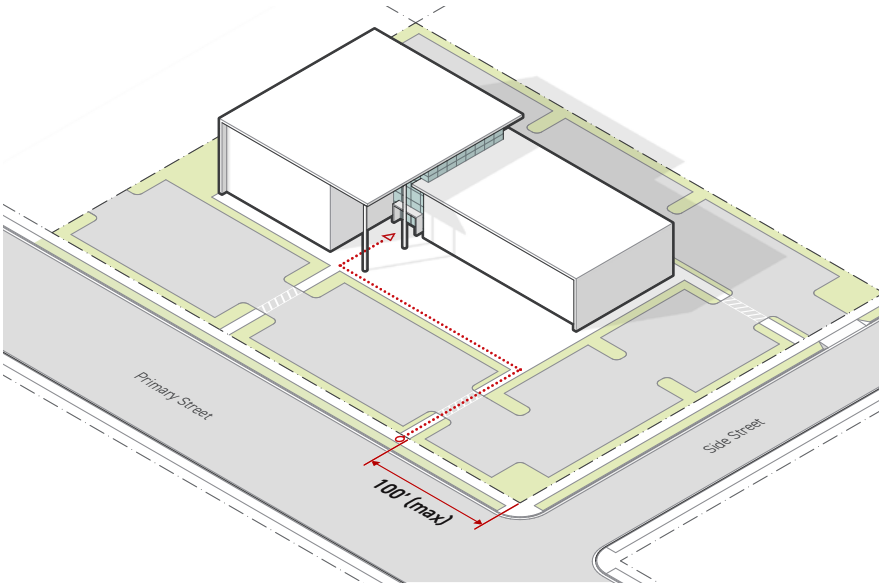
## D. Measurement

1. For frontage lot line see *Sec. 14.1.12 (Lot Line Determination)*.

2. Pedestrian accessway spacing is measured as the horizontal distance between pedestrian accessways measured along the frontage lot line from end of lot line to edge of pedestrian accessway and from edge of pedestrian accessway to edge of pedestrian accessway.



3. Pedestrian accessway distance from a street intersection is measured from the intersection of two street lot lines to the nearest edge of a pedestrian accessway measured parallel to the primary street lot line.



4. Pedestrian accessway width is measured from one edge of the accessway perpendicularly to the opposite edge.

## E. Relief

1. A deviation from any pedestrian access package dimensional standard of up to 10% may be requested in accordance with *Sec. 13B.5.2 (Adjustment)*.

2. A deviation from any pedestrian access package standard may be allowed as a variance in accordance with *Sec. 13B.5.3 (Variance)*.

## SEC. 4C.1.2. PEDESTRIAN PASSAGEWAY

A publicly accessible pedestrian pathway that bisects a lot and provides pedestrian circulation from one end of the lot to the opposite end.

### A. Intent

To promote walkability and improve convenient pedestrian circulation through large sites.

### B. Applicability

Pedestrian passageway standards apply only to lots that meet all of the following conditions:

**1.** Zoned with a Development Standards District that lists a maximum pedestrian passageway spacing,

**2.** Lot area greater than 30,000 square feet, and

**3.** Lot width greater than 300 feet.

**4.** Lot abuts a publicly accessible parcel, right-of-way or easement on at least two opposing lot lines.

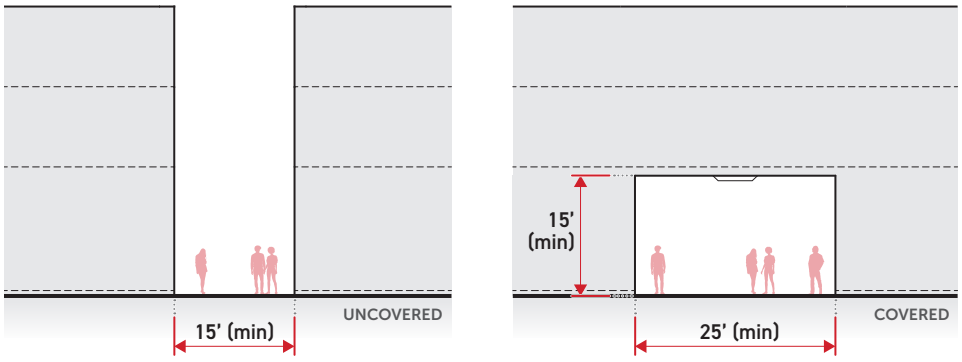
### C. Standards

#### 1. General

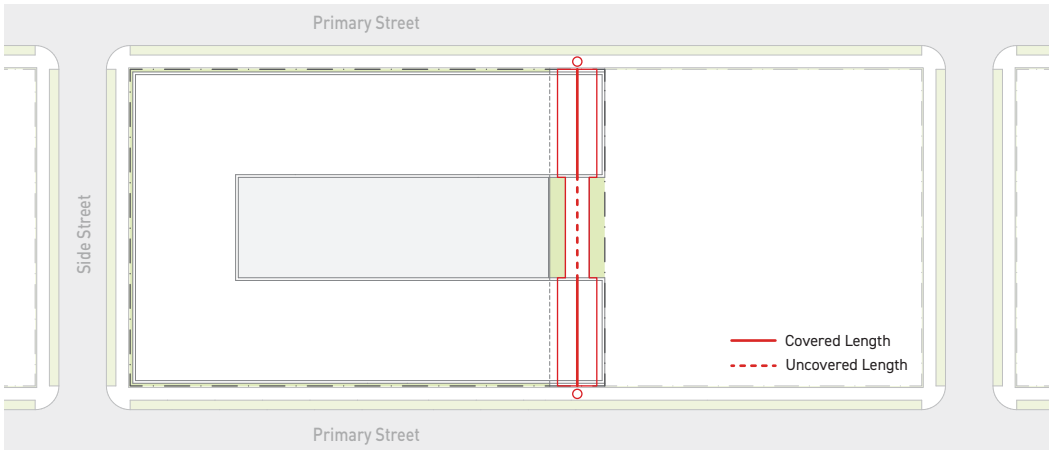
**a.** A pedestrian passageway shall provide a pathway meeting the following requirements:

**i.** Minimum width of 15 feet for uncovered portions and a minimum width of 25 feet for covered portions.

**ii.** Minimum clear height of 15 feet, with the exception of required luminaires.

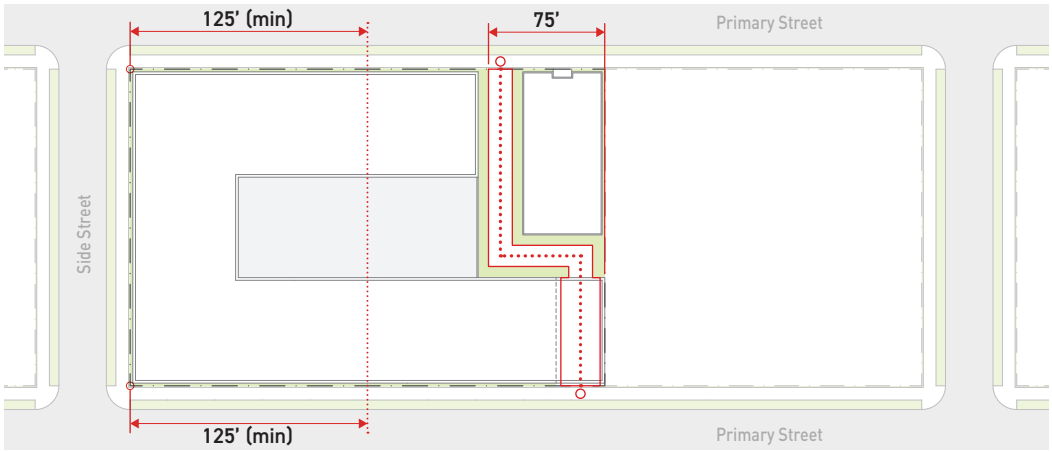


**iii.** Maximum of 125 linear feet of the total path may be covered, measured cumulatively.



**iv.** Shall connect from the pubic sidewalk on the primary street through the lot to the opposite lot line within 75 feet of the sidewalk access point, measured parallel to the primary street lot line.

**v.** Shall take access from the sidewalk a minimum of 125 feet from a street intersection.



**vi.** Where the lot line opposite the primary street lot line is adjacent to a publicly accessible space, the pathway shall connect to the publicly accessible space.

**vii.** The surface of the pathway shall be illuminated according to the following standards:

**a)** A minimum average horizontal illumination of .75 footcandles.

**b)** A uniformity ratio of 3:1.

**c)** Luminaires shall be mounted no more than 15 feet above the finished pathway surface.

**viii.** Shall be made permanently available to the general public, at no cost, between the hours of 5:00 AM and 10:30 PM daily. No gates or other like barriers may block any portion of a pedestrian passageway pathway during the required available hours.

**b.** All facades facing the pedestrian passageway pathway shall meet the side street transparency and entrance standards of the applicable Frontage District.

### 2. Spacing

**a.** Pedestrian passageway pathways shall not be separated by a distance greater than the maximum allowed pedestrian passageway spacing listed in Development Standards District.

**b.** The maximum pedestrian passageway spacing requirement shall be met for each lot individually and is not applicable to adjacent or abutting lots.

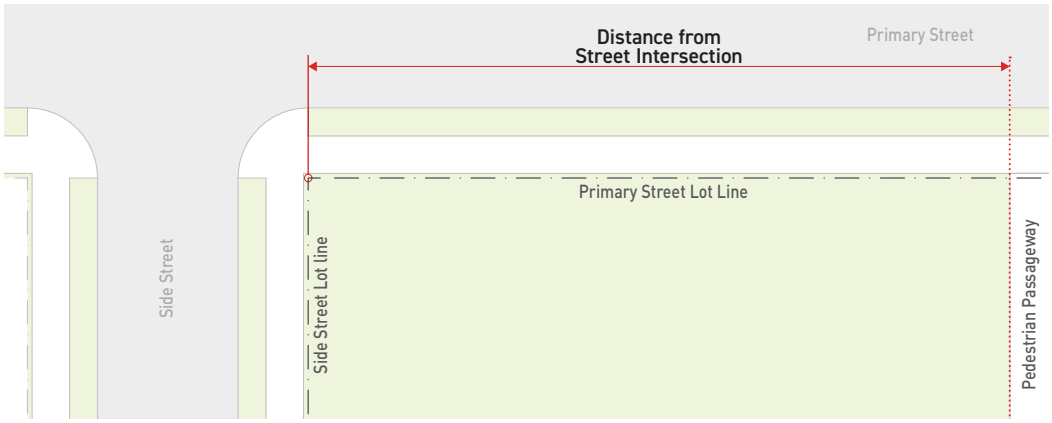
## D. Measurement

### 1. General

**a.** Pedestrian passageway pathway width is measured from one edge of the designated pathway perpendicularly to the opposite edge of the pathway.

**b.** The cumulative linear feet of covered pedestrian passageway path is measured along the centerline of the minimum pedestrian passageway path width. Where any portion of the width of the minimum path is not open to the sky, that portion of the centerline perpendicular to the covered area counts as covered length. The total covered length is calculated as the sum of all portions of the centerline considered covered.

**c.** Access distance from street intersection is measured from the point where two street lot lines intersect adjacent to a street corner to the nearest edge of a required pedestrian passageway pathway, measured along the primary street lot line.



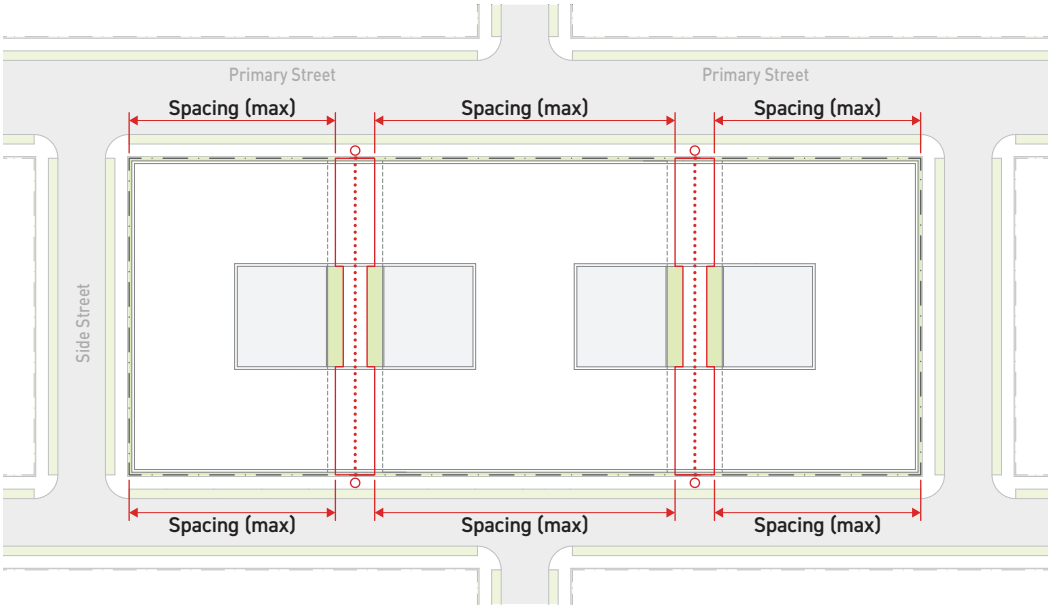
**d.** For average horizontal illumination see *Sec XX*.

**e.** For uniformity ratio see *Sec XX*.

**f.** Luminaire mounting height is measured from finished grade of the pathway immediately below the luminaire vertically to the underside of the lamp, bulb or light producing component.

### 2. Spacing

Pedestrian passageway spacing is measured as the horizontal distance between designated pedestrian passageway pathways measured at the primary street lot line from end of lot line to edge of pathway and from edge of pathway to edge of pathway.



## E. Relief

**1.** A deviation from any pedestrian passageway dimensional standard of up to 10% may be requested in accordance with *Sec. 13B.5.2 (Adjustment)*.

**2.** A deviation from any pedestrian passageway standard may be allowed as a variance in accordance with *Sec. 13B.5.3 (Variance)*.

# SEC. 4C.1.3. PEDESTRIAN BRIDGES & TUNNELS

## A. Intent

To limit the creation of new pedestrian bridges and tunnels that create an inhospitable environment for pedestrians at the street level, and to ensure that, in the event pedestrian bridges and tunnels are deemed necessary to the feasibility of a project, that they positively contribute to the public realm and general pedestrian safety.

## B. Applicability

Pedestrian bridges and tunnels standards are applicable to all pedestrian bridges and pedestrian tunnels included in a proposed project.

## C. Standards

### 1. General

The construction and operation of a pedestrian bridge or tunnel shall be authorized in accordance with *Sec. 13B.2.5. (Director Determination)*. In addition to the findings otherwise required by *Sec. 13B.2.5. (Director Determination)*, before granting approval, the Director shall find that the proposed pedestrian bridge or tunnels meets the performance criteria *(Sec. 4C.1.4.C.2)* and justification criteria *(Sec. 4C.1.4.C.3)* provided below. Additional conditions of approval may also be applied by the Director.

### 2. Performance Criteria

The proposed pedestrian bridge or tunnel meets all of the following performance criteria:

**a.** The design of the pedestrian bridge or tunnel is visually compatible with buildings involved and the surrounding environment.

**b.** The pedestrian bridge or tunnel does not have a detrimental effect on surrounding properties or public right-of-way.

**c.** The pedestrian bridge or tunnel includes features that enhance the streetscape and pedestrian safety.

**d.** The pedestrian bridge shall not include exterior signage.

**e.** Existing sidewalk widths shall not be reduced.

**f.** The pedestrian bridge or tunnel shall not detract from the intended use and activation of the public sidewalk.

### 3. Justification Criteria

The proposed pedestrian bridge or tunnel is justified by one or more of the following criteria:

**a.** The pedestrian bridge or tunnel is essential to the viability to one of the following uses:

**i.** Civic

**ii.** School

**iii.** Hospital

**iv.** Convention Center

**b.** The pedestrian bridge or tunnel is essential to the health and safety of occupants of the buildings it serves or the general public.

**c.** The pedestrian bridge or tunnel is essential to overcome physical constraints, such as grade changes or public infrastructure.

### 4. Additional Conditions of Approval

Additional Conditions of Approval may be imposed by the Director to ensure pedestrian bridge or tunnel does not detract from the pedestrian experience or have detrimental effect on surrounding properties or public right-of-way.

# DIV. 4C.2. MOTOR VEHICLE ACCESS

## SEC. 4C.2.1. AUTOMOBILE ACCESS PACKAGES

### A. Intent

To ensure vehicular access lanes are located as to minimize conflicts with pedestrians, cyclists, and vehicular traffic on the abutting public right-of-way and to avoid detrimental effects on the surrounding public realm, while providing sufficient access to parking and vehicle use areas.

### B. Applicability

Automobile vehicular access lane and access location standards are applicable wherever a project provides automobile access from a public right-of-way. Applicable automobile access standards are determined by the Automobile Access Package assigned by Development Standards District.

### C. Standards

## 1. Motor Vehicle Access Packages

### a. Package 1

| | 1-way | 2-way |
|---|---|---|
| VEHICULAR ACCESS LANES | | |
| **Width** (min/max) | 8'/12' | 16'/24' |
| **Quantity** (max) | 2 | 1 |
| **Spacing** (min) | 60' | 300' |
| ACCESS LOCATION | | |
| **Primary Street** | Limited | |
| **Side Street** | Limited | |
| **Alley** | Permitted | |
| **Shared Access Easement** | Permitted | |

See Sec. 4C.2.2. (Motor Vehicle Area Design) for additional standards that apply.

### b. Package 2

| | 1-way | 2-way |
|---|---|---|
| VEHICULAR ACCESS LANES | | |
| **Width** (min/max) | 8'/12' | 16'/24' |
| **Quantity** (max) | 2 | 1 |
| **Spacing** (min) | 60' | 300' |
| ACCESS LOCATION | | |
| **Boulevard or Avenue** | Limited | |
| **Collector or Local** | Limited | |
| **Alley** | Permitted | |
| **Shared Access Easement** | Permitted | |

See Sec. 4C.2.2. (Motor Vehicle Area Design) for additional standards that apply.

### c. Package 3

| | 1-way | 2-way |
|---|---|---|
| VEHICULAR ACCESS LANES | | |
| **Width** (min/max) | 8'/14' | 16'/28' |
| **Quantity** (max) | 2 | 1 |
| **Spacing** (min) | 60' | 300' |
| ACCESS LOCATION | | |
| **Boulevard or Avenue** | Limited | |
| **Collector or Local** | Permitted | |
| **Alley** | Permitted | |
| **Shared Access Easement** | Permitted | |

See Sec. *4C.2.2. (Motor Vehicle Area Design)* for additional standards that apply.

### d. Package 4

| | 1-way | 2-way |
|---|---|---|
| VEHICULAR ACCESS LANES | | |
| **Width** (min/max) | 8'/16' | 16'/32' |
| **Quantity** (max) | 2 | 1 |
| **Spacing** (min) | 60' | 300' |
| ACCESS LOCATION | | |
| **Boulevard or Avenue** | Permitted | |
| **Collector or Local** | Permitted | |
| **Alley** | Permitted | |
| **Shared Access Easement** | Permitted | |

See *Sec. 4C.2.2. (Motor Vehicle Area Design)* for additional standards that apply.

### 2. Vehicular Access Lanes

In addition to the vehicular access lane standards in a motor vehicle access package, all vehicular access lanes shall meet the following standards:

**a.** All vehicular access lane design and construction shall comply with the Bureau of Engineering Street Design Manual.

**b.** If a control gate is used to restrict entry to a parking facility, a minimum of one queuing space shall be provided in front of the control gate.

### 3. Access Location

#### a. Primary Street

Primary street access location standards apply to all vehicular access lanes with curb cuts along a primary street lot line regardless of street designation.

##### i. Limited

Where a motor vehicle access package lists "Limited" for primary street, access the following standards apply:

**a)** *Vehicular access lanes* with *curb cuts* along the public right-of-way are prohibited along *primary street lot lines* unless access along a *side street lot line*, *alley lot line* abutting an *improved alley*, or *common lot line* via a *shared access easement* does not exist or is determined infeasible by LADOT.

**b)** Where a *vehicular access lane* is required by *LADOT* to take access along a *primary street lot line*, the *vehicular access lane* shall meet the standards of *Sec. 4C.2.1.C.3.f. (Shared Access Easement)*.

##### ii. Permitted

Where a motor vehicle access package lists "Permitted" for primary street access, all vehicular access lanes shall meet the width, quantity, and spacing standards set by motor vehicle access package.

#### b. Side Street

Side street access location standards apply to all vehicular access lanes with curb cuts along a side street lot line regardless of street designation.

##### i. Limited

Where a motor vehicle access package lists "Limited" for side street access, vehicular access lanes with *curb cuts* along the public right-of-way are prohibited along *side street lot lines* unless access along an *alley lot line* abutting an *improved alley* does not exist or where *LADOT* required that a vehicular access lane is required to take access from a side street.

#### ii. Permitted

Where a motor vehicle access package lists "Permitted" for side street access, all vehicular access lanes shall meet the width, quantity, and spacing standards set by motor vehicle access package.

### c. Boulevard or Avenue

Boulevard or avenue access location standards apply to all vehicular access lanes with curb cuts along a street designated as boulevard or avenue regardless of lot line designation.

#### i. Limited

**a)** Where a motor vehicle access package lists "Limited" for boulevard or avenue street access, *vehicular access lanes* with *curb cuts* along the public right-of-way are prohibited along streets designated as *boulevard* or *avenue* unless access along a *collector, local street*, *improved alley*, or *common lot line* via a *shared access easement* does not exist or is determined infeasible by LADOT.

**b)** Where a *vehicular access lane* is required by *LADOT* to take access along a *boulevard* or *avenue*, the *vehicular access lane* shall meet the standards of *Sec. 4C.2.1.C.3.f. (Shared Access Easement)*.

#### ii. Permitted

Where a motor vehicle access package lists "Permitted" for boulevard or avenue access, all vehicular access lanes shall meet the width, quantity, and spacing standards set by motor vehicle access package.

### d. Collector or Local

Collector or local access location standards apply to all vehicular access lanes with curb cuts along a street designated as collector or local regardless of lot line designation.

#### i. Limited

Where a motor vehicle access package lists "Limited" for collector or local access, vehicular access lanes with *curb cuts* along the public right-of-way are prohibited along collector or local streets unless access from an *improved alley* does not exist or where *LADOT* required that a vehicular access lane is required to take access from a collector or local street.

#### ii. Permitted

Where a motor vehicle access package lists "Permitted" for collector or local access, all vehicular access lanes shall meet the width, quantity, and spacing standards set by motor vehicle access package.

### e. Alley

**i.** Vehicular access lanes taking access from an improved alley are permitted provided vehicular access lanes meet the width standards set by motor vehicle access package.

**ii.** Vehicular access lanes taking access from an improved alley are not limited in quantity or spacing.

### f. Shared Access Easement

A shared access easement may be provided where a vehicular access lane is otherwise prohibited along a primary street lot line, boulevard or avenue meeting the following standards:

**i.** Shall have a minimum width of 20 feet.

**ii.** Shall be designed to a target operating speed of 5 miles per hour.

**iii.** Shall execute a shared access easement acceptable to the city connecting to a minimum of one abutting lot sharing the same primary street. The connection to the abutting lot may be provided as a stub facilitating future connection.

**iv.** No shared street drive may be permitted on a lot that is served by an existing or planned shared access easement.

**v.** Vehicular access lanes that take access from a shared access easement are permitted in all motor vehicle access packages provided that the vehicular access lane is located behind the *parking frontage setback (Sec. 3C.2.1.)* specified in the *Frontage District (Part 3B)*.

**vi.** Vehicular access lanes that take access from a shared access easement are not limited in width, quantity or spacing.

## D. Measurement

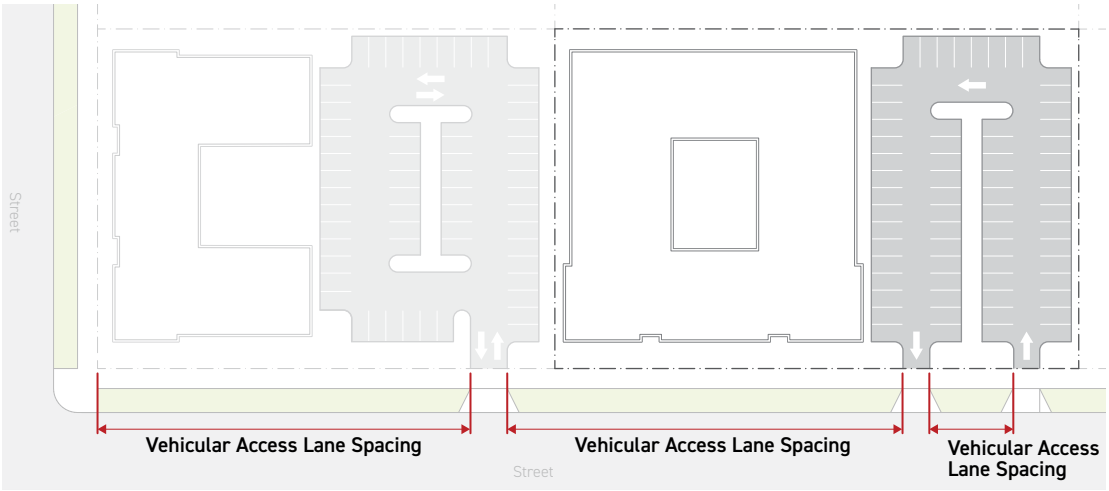
**1.** For determining primary and side street lot lines see *Sec. 14.1.12 (Lot Line Determination)*.

**2.** Street designation is determined by the community plan circulation map.

**3.** Vehicular access lane width is measured as the narrowest horizontal dimension from edge of vehicular access lane to edge of vehicular access lane excluding up to a 9 inches of curb on either side property line that access is taken through.

**4.** Vehicular access lane quantity is calculated as the total number of vehicular access lanes providing access to a lot.

5. Vehicular access lane spacing is measured along each street lot line from end of lot line to edge of vehicular access lane and from edge of vehicular access lane to edge of vehicular access lane. Vehicular access lane spacing includes vehicular access lane on other lots along the same *block face*.



## E. Relief

1. A deviation from any automobile vehicular access lane or access standard may be requested in accordance with *Sec. 13B.5.1. (Alternative Compliance)*.

2. A deviation from any vehicular access lane dimensional standard of up to 10% may be requested in accordance with *Sec. 13.7.2 (Adjustments)*.

3. A deviation from any automobile vehicular access lane or access standard may be allowed as a variance in accordance with *Sec. 13.7.3 (Variance)*.

# SEC. 4C.2.2. MOTOR VEHICLE USE AREA DESIGN

## A. Intent

To ensure motor vehicle use areas are designed in a manner that does not detract from the safety, comfort, or enjoyment of users of neighboring lots or the public realm.

## B. Applicability

**1.** Motor vehicle use area design standards apply to all lots that contain a motor vehicle use area.

**2.** Parking lots and parking structures are excluded from motor vehicle use area design standards.

## C. Standards

### 1. General

#### a. Screening

**i.** Where a motor vehicle use area faces a frontage lot line, common lot line or an alley lot line the entire length of the motor vehicle use area shall be screened.

**a)** A *Type B2 or B3 frontage screen (Sec. 4C.8.1.C.3)* is required along frontage lot lines where motor vehicle use areas face a frontage lot line.

**b)** A *Type C1 transition screen (Sec. 4C.8.2.C.3.a)* is required along common lot lines and alley lot lines where motor vehicle use areas face a common or alley lot line.

**ii.** Screens may only be located in a frontage yard where they comply with frontage yard fences and wall standards in *Frontage District (Part 3B)*.

#### b. Location

**a)** Motor vehicle use areas shall not be located in a frontage yard.

**b)** Motor vehicle use areas shall not be located in the area between a frontage lot line and the minimum parking frontage setback specified by *Frontage District (Part 3B)*.

### 2. Drive-Throughs

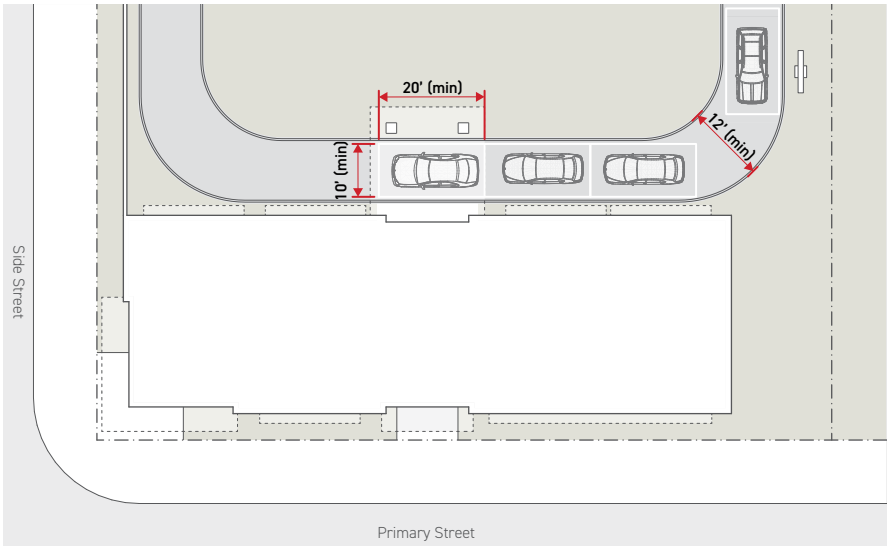
**a.** Where the *Development Standards District (Part 4B)* specifies that drive-throughs are not allowed, no drive-through may be provided on-site.

**b.** Where the *Development Standards District (Part 4B)* specifies that drive-throughs are allowed, drive-throughs may be provided on-site provided they meet the following standards:

**i.** Shall meet *Sec. 4C.2.2.C.1. (General Motor Vehicle Use Area Standards)*.

**ii.** Drive-through lanes may not encroach on or interfere with the use of sidewalks, drive aisles, loading areas or parking areas.

**iii.** Each drive-through queuing space shall be a minimum of 20 feet in length and 10 feet in width along straight segments of the drive-through lane. Drive-through lanes shall be a minimum of 12 feet in width along curved segments.



**iv.** All projects proposing drive-through lanes require additional review and approval by LADOT to ensure the site design does not cause detrimental impacts on traffic and circulation.

### 3. Loading Areas

**a.** Shall meet *Sec. 4C.2.2.C.1. (General Motor Vehicle Use Area Standards)*.

**b.** If determined necessary by LADOT adequate space shall be made available on-site for the unloading and loading of goods, materials, items or stock for delivery and shipping, otherwise on-site loading space is not required.

**c.** Loading and unloading activities are not permitted in non alley public streets, with the exception of loading areas designated by the City.

**d.** Loading and unloading activities may not encroach on or interfere with the use of sidewalks, drive aisles, queuing areas or parking areas.

## D. Measurement

**1.** For lot line determination see *Sec. 14.1.12 (Lot Line Determination)*.

**2.** For frontage yard designation see *Sec. 14.1.20.G. (Frontage yard)*.

**3.** For parking frontage setback see *Sec. 3C.2.1. (Frontage Setback, Parking)*.

**4.** Drive-through queuing space length is measured parallel to the drive-through lane from one end to the opposite end of the queuing space.

5. Drive-through queuing space width is measuredperpendicular to the queuing space length from one end to the opposite end of the queuing space.

## E. Relief

1. A deviation from any motor vehicle use area design dimensional standard of up to 10% may be requested in accordance with *Sec. 13B.5.2 (Adjustment)*.

2. A deviation from any motor vehicle use area design standard may be allowed as a variance in accordance with *Sec. 13B.5.3 (Variance)*.

# DIV. 4C.3. BICYCLE PARKING

## SEC. 4C.3.1. BICYCLE PARKING SPACES

### A. Intent

To promote bicycling as an alternative to automobile transportation, ensure safe, secure, accessible, and convenient storage of bicycles for all users.

### B. Applicability

**1.** Required bicycle parking spaces standards apply to all buildings, structures and all portions of a lot.

**2.** Projects undergoing a change of use are not required to provide additional bicycle parking. This includes adaptive reuse projects in accordance with *Sec. 9.4.5. (Downtown Adaptive Reuse Projects) and Sec. 9.4.6. (Downtown Adaptive Reuse Projects)*.

### C. Standards

Bicycle parking spaces are required determined by use according to the following provisions:

#### 1. Residential

##### a. Dwelling Units

For all residential buildings other than hotels and motels containing more than 3 dwelling units, long- and short-term bicycle parking shall be provided according to the ratios specified for each marginal increment of dwelling units specified below. A minimum of 2 short-term bicycle parking spaces shall be provided in all cases.

| RESIDENTIAL BICYCLE PARKING | | |
|---|---|---|
| Dwelling Units | Short-term Spaces *(Sec. 4C.3.2.)* | Long-term Spaces *(Sec. 4C.3.3.)* |
| **First 25** | 1/10 du | 1/du |
| **26th-100th** | 1/15 du | 1/1.5 du |
| **101st-200th** | 1/20 du | 1/2 du |
| **201st +** | 1/40 du | 1/4 du |

**i.** Developments that include individually accessed private garages for each unit are required to provide long-term bicycle parking.

**ii.** For all Senior Living housing, including Alzheimer's and Dementia Care Housing, Assisted Living, Eldercare Facility, Senior Independent Living, and Skilled Nursing Home, short-term bicycle parking shall be provided at a rate of 1 space per 10,000 square feet and long-term bicycle parking shall be provided at a rate of 1 space per 5,000 square feet. A minimum of 2 short-term and 2 long-term bicycle parking spaces shall be provided.

### b. Guest Rooms

All Apartment Hotels containing more than 5 guest rooms shall provide both short- and long-term bicycle parking, respectively, at a rate of 1 per 10 guest rooms. A minimum of 2 short-term and 2 long-term bicycle parking spaces shall be provided.

### c. Buildings with Dwelling Units and Guest Rooms

The total amount of bicycle parking for a building containing both dwelling units and guest rooms is calculated by adding the number of required bicycle parking spaces for dwelling units to the number of required bicycle parking spaces for guest rooms. Any combination that results in more than 5 combined dwelling units and guest rooms requires bicycle parking.

## 2. Public and Institutional, Commercial and Industrial Uses

Short- and long-term bicycle parking shall be provided as provided below.

**a.** For uses listed in the table below, a minimum of two short-term and two long-term bicycle parking spaces shall be provided.

**b.** After the first 100 bicycle parking spaces are provided, additional spaces may be provided at the minimum number required by the California Green Building Standards Code Section 5.106.4.

**PUBLIC, INSTITUTIONAL, COMMERCIAL & INDUSTRIAL BICYCLE PARKING**

| Land Use | Short-term Bicycle Parking *(Sec. 4C.3.2.)* | Long-term Bicycle Parking *(Sec. 4C.3.3.)* |
|---|---|---|
| **Public & Institutional Uses** | | |
| Public and Institutional Uses, Except as Listed Below: | 1/10,000 SF, 2 min | 1/5,000 SF, 2 min |
| School, K-12 | 4/classroom, 2 min | 1/10 classrooms, 2 min |
| School, Postsecondary | 1/500 SF or 1/50 fixed seats whichever is greater, 2 min | 1/1,000 SF or 1/100 fixed seats whichever is greater, 2 min |
| **Commercial Uses** | | |
| All Commercial Uses, Except as Listed Below: | 1/10,000 SF, 2 min | 1/10,000 SF, 2 min |
| Restaurants and Bars, General | 1/2,000 SF, 2 min | 1/2,000 SF, 2 min |
| Restaurant, Small (<1,000 SF) | 2 min | 2 min |
| Auditorium | 1/350 SF or 1/50 fixed seats whichever is greater, 2 min | 1/700 SF or 1/100 fixed seats whichever is greater, 2 min |
| Hotel (containing more than 5 Guest Rooms) | 1/Guest Room, 2 min | 1/Guest Room, 2 min |
| Motel (containing more than 5 Guest Rooms) | 1/Guest Room, 2 min | 1/Guest Room, 2 min |
| Office | 1/10,000 SF, 2 min | 1/5,000 SF, 2 min |

| PUBLIC, INSTITUTIONAL, COMMERCIAL & INDUSTRIAL BICYCLE PARKING | | |
|---|---|---|
| Land Use | Short-term Bicycle Parking *(Sec. 4C.3.2.)* | Long-term Bicycle Parking *(Sec. 4C.3.3.)* |
| Gym | 1/2,000 SF, 2 min | 1/2,000 SF, 2 min |
| Retail Stores, General | 1/2,000 SF, 2 min | 1/2,000 SF, 2 min |
| Retail, Furniture Stores | 1/10,000 SF, 2 min | 1/10,000 SF, 2 min |
| **Industrial Uses** | | |
| All Industrial Uses | 1/10,000 SF, 2 min | 1/10,000 SF, 2 min |

#### c. City Owned and Leased Buildings and Parking Lots

**i.** In all buildings or parking lots used by the City of Los Angeles for government purposes, including government office buildings, both short-term and long-term bicycle parking shall be provided at a rate of 10% of the required parking available on the site. However, short- and long-term bicycle parking can be no less than 5 spaces each for the entire site.

**ii.** Buildings and lots owned by the City of Los Angeles that are leased for private uses shall meet the bicycle parking required for commercial uses as detailed by Table in *Sec. 4C.3.1.C.2.*

#### d. Parks

**i.** For all Community Centers, Parks and Open Spaces, and School Playgrounds, short-term bicycle parking shall be provided at a rate of 10% of the required automobile parking with a minimum of five short-term bicycle parking spaces.

**ii.** For all Community Centers, Parks and Open Spaces, and School Playgrounds where no automobile parking is provided, at least 5 short-term bicycle parking spaces shall be provided, except that in park space of less than 2 acres in which there are no recreational facilities requiring building permits, no short-term bicycle parking is required.

**iii.** Long-term bicycle parking shall be provided as required in the *California Green Building Standards Code Section 5.106.4*.

#### e. Unmanned Facilities

No bicycle parking is required for unmanned facilities, such as stand-alone public restrooms in parks or unmanned cellular antenna facilities.

## D. Measurement

### 1. Multiple Uses

Where there is a combination of uses on a lot, the number of bicycle parking spaces required is the sum of the requirements of the various uses. The exceptions provided in *Sec. 4C.4.1.E.* for automobile parking also apply to bicycle parking.

### 2. Fractions

When the application of these regulations results in the requirement of a fractional bicycle space, any fraction up to and including one-half may be disregarded, and any fraction over one-half is construed as requiring one bicycle parking space.

## E. Relief

**1.** A deviation from any required bicycle parking dimensional standard of up to 10% may be requested in accordance with *Sec. 13B.5.2 (Adjustment)*.

**2.** A deviation from any required bicycle parking standard may be allowed as a variance in accordance with *Sec. 13B.5.3 (Variance)*.

# SEC. 4C.3.2. SHORT-TERM BICYCLE PARKING DESIGN

## A. Intent

To promote bicycling as an alternative to automobile transportation, ensure safe, secure, accessible, and convenient storage of bicycles for visitors and other short-term users, improve bicyclist access from the public realm to the interior of buildings, and ensure entrances are conveniently and effectively accessible to bicyclists.

## B. Applicability

Short-term bicycle parking design standards apply to all short-term bicycle parking spaces required by *Sec. 4C.3.1 (Required Bicycle Parking)*.

## C. Standards

### 1. General

**a.** Adequate lighting shall be provided to ensure safe access to bicycle parking facilities in accordance with *Section 4C.10.1 (Outdoor Lighting)*.

**b.** No rules that unreasonably interfere with the ability of bicyclists to safely and conveniently access bicycle parking are allowed. Unreasonable rules include shorter operating hours for short-term bicycle parking than for any building or automobile parking, prohibitions on walking of bicycles in pedestrian areas that provide access to bicycle parking, and prohibitions on bicycles in elevators where elevators are used to provide access to bicycle parking. The provisions of this section do not prohibit property owners from requiring bicycles to be walked in pedestrian-only areas.

### 2. Bicycle Parking Space Design

#### a. General

**i.** Bicycle share station docks counted toward the requirements for short-term bicycle parking spaces as permitted in *Section 4C.3.2.C.3.a.v* shall conform to *Section 4C.3.2.C.6*.

**ii.** Required short-term bicycle parking shall consist of bicycle racks that support the bicycle frame at two points. Racks that support only the wheel of the bicycle are not permissible.

**iii.** Racks shall allow for the bicycle frame and at least 1 wheel to be locked to the racks.

**iv.** The bicycle rack shall allow for the use of a cable as well as a U-shaped lock.

**v.** If bicycles can be locked to each side of the rack, each side can be counted toward a required space.

**vi.** Racks shall be securely anchored to a permanent surface.

**vii.** If more than 20 short-term bicycle parking spaces are provided, at least 50% shall be covered by a roof or overhang.

### b. Horizontal Storage

Short-term bicycle parking spaces shall be a minimum of 2 feet wide and 6 feet long.

**i.** Individual racks installed beside each other that allow bicycles to be locked to either side of the rack shall be spaced a minimum of 30 inches on center.

**ii.** Racks installed parallel to walls shall be a minimum of 30 inches from the wall, except that bicycle parking spaces providing a tray or channel for insertion of bicycle wheels may be placed a minimum of 20 inches from the wall, or 14 inches from the wall if such spaces are on the upper level of a stacked, two-tier rack.

**iii.** Bicycle parking spaces arranged in a vertically staggered layout that permits bicycles to be placed in and removed from each individual space without interference from bicycles in adjoining spaces may be spaced a minimum of 16 inches on center.

### c. Stacked Storage

Short-term bicycle parking may be mounted so that bicycles are stored in a stacked, two-tier layout, provided such parking is an attended bicycle facility where facility staff parks the bicycles, or such racks provide mechanical assistance for lifting the bicycle.

## 3. Siting Requirements

**a.** Required short-term bicycle parking shall be provided in one of the following locations:

**i.** On the same lot as the use for which it is intended to serve.

**ii.** In a parking facility serving that use.

**iii.** Immediately in front of a lot within the public right-of-way in accordance with *Sec. 4C.3.2.C.4 (Bicycle Parking in the* Public right-of-way*)*.

**iv.** In a city-funded bicycle corral in accordance with *Sec. 4C.3.2.C.5 (Bicycle Corrals).*

**v.** In a bicycle share station in accordance with *Sec. 4C.3.2.C.6 (Bicycle Share Stations)*.

**b.** Bicycle parking shall be located so as to allow bicyclists safe and convenient access to and from the site.

**c.** Bicyclists cannot be required to rely on stairways or escalators for access or to share access with motor vehicles.

**d.** Elevators providing access for bicyclists shall be sized to accommodate standard adult bicycle dimensions with both wheels on the floor (at least 6 feet by 2 feet).

**e.** Short-term bicycle parking shall be located so as to provide safe and convenient access to visitors.

**f.** For new construction, at least 50% of short-term bicycle parking shall be located outside buildings or parking structures; however, no more than 8 short-term bicycle parking spaces per 100 linear feet of street frontage are required to be outside.

**g.** All short-term bicycle parking spaces located inside the building or parking structure shall be located on the ground story with a direct pedestrian accessway to a public street.

**h.** For new developments, short-term bicycle parking shall be located to maximize visibility from a pedestrian entrance.

**i.** All short-term bicycle parking areas located within buildings or parking garages require signs meeting the following standards:

**i.** Permanently posted at each building entrance and each street entrance to the lot

**ii.** Legible and reflectorized.

**iii.** Indicate the availability and location of bicycle parking within the site.

**iv.** All signs shall comply with *Division 4C.12* of this Code.

**j.** Short-term bicycle parking spaces may be located no farther than 100 feet of *walking distance (Sec. 14.1.3)* from a pedestrian entrance that provides access to uses that requires the bicycle parking spaces.

**k.** For buildings with more than one pedestrian entrance, short-term bicycle parking shall be distributed in approximately equal proportions among all pedestrian entrances. In buildings with 3 or more pedestrian entrances, no more than 50% of all short-term bicycle parking spaces shall be assigned to a single pedestrian entrance.

### 4. Bicycle Parking in the Public right-of-way

**a.** Business operators or property owners may install their own racks within the public right-of-way unless a City owned rack already exists.

**b.** Business operators or property owners are responsible for applying for a permit with the Bureau of Engineering to install short-term bicycle parking within the public right-of-way. A Bureau of Engineering permit may be issued only after the business operator or property owner receives issuance of plan approval or a permit by LADOT pursuant to *LAMC Section 85.04 (Bicycle Infrastructure Zones)*.

**c.** All bicycle parking provided in the public right-of -way shall meet the rules and regulations set out by the *Bureau of Engineering Standard Plan S-671.*

**d.** Business operators or property owners who choose to install bicycle parking within the public right-of-way are responsible for maintaining the racks according to the standards set forth in a Covenant Maintenance Agreement with LADOT.

### 5. Bicycle Corrals

#### a. City-funded Bicycle Corrals

Any site located within 500 feet of a City funded bicycle corral may count up to 4 bicycle parking spaces within the bicycle corral towards their required short-term bicycle parking spaces.

#### b. Bicycle Corral Parking Incentive Program

**i.** Business operators or property owners may submit an application to LADOT to install and maintain their own bicycle corrals immediately in front of their property in the public right-of-way.

**ii.** Businesses or property owners who do so may count all the bicycle parking within the bicycle corral towards their required number of short-term bicycle parking spaces. In such cases, short-term bicycle parking installed in such a manner cannot be counted towards the bicycle parking requirements of surrounding businesses.

**iii.** Business operators or property owners shall pay the construction and maintenance costs of building said bicycle corrals.

**iv.** Multiple businesses or property owners may submit an application to LADOT as a group and split the costs to construct and maintain the corral.

**a)** In such cases, a single business is responsible for assuming the maintenance responsibilities detailed in a Covenant Maintenance Agreement as outlined below.

**b)** The business responsible for maintaining the bicycle corral may count the full amount of bicycle parking in the corral towards its short-term bicycle parking requirements.

**c)** All other businesses may count up to half of the bicycle parking spaces in the corral towards their required short-term bicycle parking spaces so long as they provide a financial contribution.

**v.** Business operators or property owners are responsible for applying for a permit with the Bureau of Engineering to install bicycle corrals within the public right-of-way.

**vi.** Business operators or property owners who choose to install bicycle corrals within the public right-of-way are responsible for maintaining the racks according to the standards set forth in a Covenant Maintenance Agreement with LADOT.

**vii.** If, for any reason, the responsibility for maintaining a bicycle corral is returned to the City of Los Angeles, it will be considered a City-funded bicycle corral.

**viii.** If, for any reason, the City determines that a bicycle corral shall be removed, business owners will no longer be able to count the spaces removed toward their required bicycle parking. In such cases, said businesses are required to provide any bicycle spaces lost in the removal of the corral. Failure to comply may result in the revocation of a business's Certificate of Occupancy and a fine for Code violation.

### 6. Bicycle Share Stations

**a.** Business operators or property owners may allow a bicycle share service provider to install one or more bicycle share stations on their property, provided that such bicycle share station is part of a bicycle share system approved by LADOT and complies with all location criteria established by LADOT for bicycle share stations.

**b.** Any site within 500 feet of a bicycle share station may count up to 4 bicycle share docks toward the required number of short-term bicycle parking spaces for a building or buildings on the same lot. In all cases, the number of bicycle share docks counted toward the required number of short-term bicycle parking spaces cannot exceed 10% of the total number of short-term bicycle parking spaces required for the subject site.

**c.** Where bicycle share docks are counted toward the required number of short-term bicycle parking spaces, residential and nonresidential uses may replace a percentage of the required automobile parking spaces with bicycle share docks in a manner consistent with the limitations and replacement ratio established in *Sec. 4C.4.2.C.3 (Reduction for Bicycle Parking).*

**d.** If, for any reason, bicycle share docks are removed, the associated land uses may no longer count the docks removed toward required bicycle parking and shall be required to replace the number of docks formerly counted toward required bicycle parking with an equivalent number of bicycle parking spaces.

### 7. Attended bicycle parking service

**a.** Pick-up and drop-off location shall either comply with *long-term bicycle parking siting requirements (Sec. 4C.3.3.C.3.)* or be co-located with a valet automobile parking pick-up or drop-off location provided on the same site for the subject use.

**b.** If some or all required short-term bicycle parking spaces are provided by means of an attended bicycle parking service, the service shall be available to building occupants at all times during the hours the building is in operation.

**c.** If, for any reason, an Attended bicycle parking service is discontinued, the associated land uses may no longer count the attended bicycle parking service toward the required number of bicycle parking spaces and shall provide a number of short-term bicycle parking spaces equivalent to the number formerly provided by the attended bicycle parking service.

## D. Measurement

[Reserved]

## E. Relief

1. An alternative to any short-term bicycle parking design standards may be requested in accordance with *Sec. 13B.5.1 (Alternative Compliance)*.
2. A deviation from any short-term bicycle parking design dimensional standard of up to 10% may be requested in accordance with *Sec. 13B.5.2 (Adjustment)*.
3. A deviation from any short-term bicycle parking design standard may be allowed as a variance in accordance with *Sec. 13B.5.3 (Variance)*.

# SEC. 4C.3.3. LONG-TERM BICYCLE PARKING DESIGN

## A. Intent

To promote bicycling as an alternative to automobile transportation, ensure safe, secure, accessible, and convenient storage of bicycles for tenants and other long-term users, improve bicyclist access from the public realm to the interior of buildings, and ensure entrances are conveniently and effectively accessible to bicyclists.

## B. Applicability

Long-term bicycle parking design standards apply to all long-term bicycle parking spaces required by *Sec. 4C.3.1 (Required Bicycle Parking Spaces)*.

## C. Standards

### 1. General

**a.** Adequate lighting shall be provided to ensure safe access to bicycle parking facilities in accordance with *Section 4C.10.1 (Outdoor Lighting)*.

**b.** No rules that unreasonably interfere with the ability of bicyclists to safely and conveniently access bicycle parking are allowed. Unreasonable rules include shorter operating hours for long-term bicycle parking than for any building or automobile parking, prohibitions on walking of bicycles in pedestrian areas that provide access to bicycle parking, and prohibitions on bicycles in elevators where elevators are used to provide access to bicycle parking. The provisions of this section do not prohibit property owners from requiring bicycles to be walked in pedestrian-only areas.

### 2. Bicycle Parking Space Design

#### a. General

**i.** Long-term bicycle parking shall be secured from the general public and enclosed on all sides and protect bicycles from inclement weather.

**ii.** Acceptable examples of long-term bicycle parking include bicycle lockers, bicycle rooms, bicycle cages, or commercially operated attended bicycle facilities.

**iii.** Except in the case of lockers and commercially operated attended bicycle parking, all long-term parking shall provide a means of securing the bicycle frame at two points to a securely anchored rack.

#### b. Horizontal Storage

Long-term bicycle parking spaces shall be sized to permit safe, efficient, and convenient access to each individual bicycle parking space without interference from bicycles in adjoining spaces, as described below:

**i.** Individual racks installed beside each other within bicycle rooms or bicycle cages that allow bicycles to be locked to either side of the rack shall be spaced a minimum of 30 inches on center.

**ii.** Racks installed parallel to walls shall be a minimum of 30 inches from the wall, with the exception that bicycle parking spaces that provide a tray into which the bicycle wheels may be inserted may be placed a minimum of 20 inches from the wall, or 14 inches from the wall if such spaces are on the upper level of a stacked, two-tier rack.

**iii.** Triangular lockers with varying widths may be used so long as the opening is at least 2 feet wide.

**iv.** Bicycle parking spaces arranged in a vertically staggered layout that permits bicycles to be placed in and removed from each individual space without interference from bicycles in adjoining spaces may be spaced a minimum of 16 inches on center.

**v.** If more than 20 long-term bicycle parking spaces are provided, a workspace of 100 square feet shall be provided adjacent to the long-term bicycle parking to allow bicyclists to maintain their bicycles. However, where long-term bicycle parking is provided in more than one location, a single workspace may be provided adjacent to the location with the greatest number of long-term bicycle parking spaces.

### c. Vertical Storage

Long-term bicycle parking may be mounted so that the bicycle is stored vertically. Such devices that hold the bicycle by the wheel shall be designed to support the bicycle without damaging the wheels. Vertically installed bicycle parking shall be a minimum of 4 feet deep and 6 feet in height.

### d. Stacked Storage

Long-term or short-term bicycle parking may be mounted so that bicycles are stored in a stacked, two-tier layout, provided such parking is an attended bicycle facility where facility staff parks the bicycles, or such racks provide mechanical assistance for lifting the bicycle.

## 3. Siting Requirements

**a.** Long-term bicycle parking spaces shall be provided in one of the following locations, or in a combination of the following locations:

**i.** On the ground floor within 100 feet of the major entrance to the lobby. There shall be safe and convenient access between the public right-of-way, the bicycle parking space, and the lobby area.

**ii.** In the off-street automobile parking area, subject to the following limitations:

**a)** Long-term bicycle parking inside a parking garage may be no more than 200 feet from a pedestrian entrance to the main building, and located so as to provide reasonably convenient access from the bicycle parking to the nearest walkway, ramp, or elevator providing access to the building.

**b)** Long-term bicycle parking inside a parking garage shall be located within the space available on the building's pedestrian entry level, after required handicapped-accessible parking stalls and other required elements have been provided. Remaining long-term bicycle parking may be provided on other levels of the parking garage in accordance with the provisions of this Subparagraph (iv).

**iii.** One level above or below the ground floor, within 100 feet of the elevator, ramp, walkway, or other building entrance on that story. In such cases, elevator or ramp access to the building shall be provided.

**iv.** Residential long-term bicycle parking may be provided in common storage facilities on residential floors in accordance with *Sec. 4C.3.3.C.2. (Bicycle Parking Space Design)*. If residential long-term bicycle parking is provided on residential floors, the amount of bicycle parking on each floor shall be equal to or greater than 50% of the number of dwelling units on the same floor.

**b.** For lots with multiple uses, long-term bicycle parking may be provided in one or more bicycle parking facilities within 200 feet of each use.

**c.** For lots with multiple buildings, required bicycle parking may be sited in one or more bicycle parking facilities within 200 feet of each building.

**d.** Bicycle parking shall be located so as to allow bicyclists safe and convenient access to and from the site.

**e.** Bicyclists cannot be required to rely on stairways or escalators for access or to share access with motor vehicles.

**f.** Elevators providing access for bicyclists shall be sized to accommodate standard adult bicycle dimensions with both wheels on the floor (at least 6 feet by 2 feet).

### 4. Showers and Personal Lockers

Showers and personal lockers are required for long-term bicycle parking in nonresidential uses in accordance with *LAMC Section 91.6307 (Shower and Locker Facilities)*. If showers and personal lockers are provided, such showers and personal lockers shall remain available for the use of building occupants, including residents and/or employees, arriving by bicycle.

### 5. Attended Bicycle Parking Service

**a.** Pick-up and drop-off location shall either comply with *long-term bicycle parking siting requirements (Sec. 4C.3.3.C.3)* or be co-located with a valet automobile parking pick-up or drop-off location provided on the same site for the subject use.

**b.** If some or all required bicycle parking spaces are provided by means of an attended bicycle parking service, the service shall be available to building occupants at all times during the hours the building is in operation.

**c.** If, for any reason, an attended bicycle parking service is discontinued, the associated land uses may no longer count the attended bicycle parking service toward the required number of bicycle parking spaces and shall provide a number of bicycle parking spaces equivalent to the number formerly provided by the attended bicycle parking service.

## D. Measurement

[Reserved]

## E. Relief

**1.** An alternative to any long-term bicycle parking design standards may be requested in accordance with *Sec. 13B.5.1 (Alternative Compliance)*.

**2.** A deviation from any long-term bicycle parking design *dimensional standard* of up to 10% may be requested in accordance with *Sec. 13B.5.2 (Adjustment)*.

**3.** A deviation from any long-term bicycle parking design standard may be allowed as a variance in accordance with *Sec. 13B.5.3 (Variance)*.

# DIV. 4C.4. AUTOMOBILE PARKING

## SEC. 4C.4.1. AUTOMOBILE PARKING STALLS

### A. Intent

To accommodate the arrival to a site by automobile at a level appropriate to the demand generated by a particular use within different mobility contexts without creating detrimental effects on surrounding properties or public right-of-way.

### B. Applicability

Required automobile parking stall standards apply to all uses on a lot determined by the automobile parking package assigned by Development Standards District.

### C. Standards

#### 1. General

**a.** All uses subject to the parking requirements of this Division shall provide the minimum number of automobile parking stalls for the applicable parking package- A, B, C, D or E. *Part 4B (Development Standards Districts)* specifies the applicable parking package requirement for each Zone.

**b.** When a site or lot is used for a combination of uses, the parking requirements are the sum of the requirements for each use, and no parking stall for one use may be included in the calculation of parking requirements for any other use, except as allowed in *Sec. 4C.4.2.C.2 (Reduction for Shared Parking).*

**c.** For electric vehicle charging space requirements, see the *Green Building Code (LAMC Chapter 9, Article 9)*.

#### 2. Required Automobile Parking Table

**a.** When the Required Automobile Parking Table lists multiple parking stall requirement options, the greater number of required parking stalls is required.

**b.** Uses are defined in *Part 5D (Use Definitions).*

-TABLE 1- **REQUIRED AUTOMOBILE PARKING**

| | PARKING PACKAGE | | | | |
|---|---|---|---|---|---|
| | A | B | C | D | E |
| **RESIDENTIAL USES** | | | | | |
| **Household Living, as listed below:** | | | | | |
| 1-Unit | 2/du | 2/du | 1/du | 1/du | -- |
| 2+ Units: | | | | | |
| 0-3 Habitable Rooms | 1/du | 1/du | 1/du | 0.5/du | -- |
| 4+ Habitable Rooms | 2/du | 2/du | 2/du | 1/du | -- |
| **Accessory Dwelling Unit** | 1/du | 1/du | 1/du | 1/du | -- |
| **Boarding or Apartment House, Fraternity/Sorority Housing, Live Work (including Joint Living and Work Quarters*)** | | | | | |
| 0-2 Habitable Rooms | 1/du | 1/du | 1/du | 0.5/du | -- |
| 3 Habitable Rooms | 1.5/du | 1.5/du | 1/du | 0.5/du | -- |
| 4+ Habitable Rooms | 2/du | 2/du | 2/du | 1/du | -- |
| **Apartment Hotel, Dormitory Room** | | | | | |
| First 30 rooms | 1/guest room | 1/guest room | 0.5/guest room | 0.25/guest room | -- |
| Next 30 rooms | 0.5/guest room | 0.5/guest room | 0.25/guest room | 0.25/guest room | -- |
| Remaining rooms | 0.25/guest room | 0.25/guest room | -- | -- | -- |
| **Community Care Facility (Licensed) and Substance Abuse Facility (Licensed)** | .2/resident over 7 residents, 2 min | .2/resident over 7 residents, 2 min | .1/resident over 7 residents, 1 min | .1/resident over 7 residents, 1 min | -- |
| **Mobilehome Park** | See Title 25 of the California Administrative Code | | | | |
| **Homeless Shelter** | 2/shelter | 2/shelter | -- | -- | -- |
| **Senior Living, as listed below:** | | | | | |
| Eldercare Facility | Sum of combination of uses below | | | | -- |
| Alzheimer's and Dementia Care Housing | 0.2/bed | 0.2/bed | 0.1/bed | 0.1/bed | -- |
| Assisted Living | 1/du or 1 per guest room | 0.75/du or 0.75 per guest room | 0.5/du or 0.5 per guest room | 0.25/du or 0.5 per guest room | -- |
| Senior Independent Living | 1/du | 0.75/du | 0.5/du | 0.25/du | -- |
| Skilled Nursing Home | 0.2/bed | 0.15/bed | 0.1/bed | 0.05/bed | -- |
| *The number of existing parking stalls shall count as the number of parking stalls required for the site for up to 8 Joint Living and Work Quarters units. | | | | | |
| **PUBLIC AND INSTITUTIONAL USES** | | | | | |
| **Civic, except as listed below:** | 2/1,000 SF | 1.5/1,000 SF | 1/1,000 SF | 0.5/1,000 SF | -- |

**"As required for building"** = required based on all uses within on-site buildings.

### 3. Public Benefit Projects

Projects participating in an Affordable Housing Incentive Program, Community Benefits Program, or a General Incentive Program included in Article 9, Public Benefit Systems, may qualify for reduced required parking as deemed eligible.

### 4. Substituting Required Automobile Parking with Bicycle Parking

**a.** Required automobile parking stalls may be substituted with bicycle parking at a ratio of 1 automobile parking stall for every 4 bicycle parking spaces provided the bicycle parking spaces meet the applicable requirements of Sec. 4C.3.1.C. (Required Bicycle Parking Spaces).

**b.** Nonresidential uses may substitute up to 20% of the required automobile parking with bicycle parking. When a nonresidential use is located within 1,500 feet of a major transit stop, up to 30% of the required automobile parking stalls may be substituted with bicycle parking.

**c.** Residential uses may substitute up to 10% of the required automobile parking with bicycle parking. When a residential use is located within 1,500 feet of a major transit stop, up to 15% of the required automobile parking stalls may be substituted with bicycle parking.

**d.** Projects participating in an Affordable Housing Incentive Program, Community Benefits Program, or a General Incentive Program included in Article 9, Public Benefit Systems, may substitute up to 30% of the required automobile parking with bicycle parking, as deemed eligible.

## D. Measurement

### 1. Square Feet

For the purpose of calculating *required automobile parking stalls (Sec . 4C.4.1*), square feet is calculated for the total floor area of all buildings on a site. The calculation of square feet includes the floor area of accessory buildings. For the calculation of floor area, see *Sec. 14.1.7. (Floor Area)*.

### 2. Fractional Space

When calculating *required automobile parking stalls (Sec . 4C.4.1)* results in the requirement of a fractional parking stall, any fraction up to and including one-half may be disregarded and any fraction over one-half will require one additional parking stall.

## E. Exception

### 1. Change of Use, Commercial Tenant Size

When allowed by the Development Standards District, change of use projects of a size equal to or less than the square footage threshold specified by the applicable Development Standards District are not required to provide additional automobile parking stalls to accommodate a general commercial use that would otherwise require more automobile parking stalls than exists on-site.

### 2. Small Commercial Tenant Space

Commercial tenant spaces with a floor area of 1,500 square feet or less and located on the ground floor of a building are exempt from parking requirements. This exemption is limited to two tenant spaces per lot.

### 3. Accessible Electric Vehicle Parking Stalls

An accessible parking stall with an access aisle served by electric vehicle supply equipment or an accessible parking stall with an aisle designated as a future electric vehicle charging space shall count as at least two standard automobile parking stall for the purpose of complying with any applicable minimum parking stall requirements of *Sec. 4C.4.1 (Automobile Parking Stalls)*.

### 4. Historic Buildings and Buildings Constructed Prior to July 1, 1974

No additional parking is required for uses occupying a building that meets one of the following criteria:

**a.** The building is Included on the National Register of Historic Places, including Contributing Buildings in National Register Historic Districts.

**b.** The building is listed in the California Register of Historical Resources.

**c.** The building is included in the City of Los Angeles List of Historic-Cultural Monuments.

**d.** The building is a Contributing Structure located in an Historic Preservation Overlay Zone (HPOZ).

**e.** The building was constructed prior to July 1, 1974.

### 5. ADUs

No parking is required for an ADU that meets any of the following criteria:

**a.** Located within one-half mile walking distance of a public transit. For this purpose, public transit means a location, including, but not limited to, a bus stop or train station, where the public may access buses, trains, subways, and other forms of transportation that charge set fares, run on fixed routes, and are available to the public.

**b.** Located within one block of a designated pick-up and drop-off location of a car share vehicle.

**c.** Located in an architecturally and historically significant district listed in or formally determined eligible for listing in the National Register of Historic Places or California Register of Historical Resources or located in any City Historic Preservation Overlay Zone.

**d.** Part of the proposed or existing primary residence or an accessory structure.

### F. Relief

1. A reduction in required automobile parking requirements may be requested in accordance with *Sec. 4C.4.2. (Alternative Parking Strategies)*.

2. A reduction in required automobile parking requirements of up to 20% may be requested in accordance with *Sec. 13.7.2 (Adjustments)*.

3. A deviation in required automobile parking requirements may be allowed as a variance in accordance with *Sec. 13.7.3 (Variance)*.

## SEC. 4C.4.2. ALTERNATIVE PARKING STRATEGIES

### A. Intent

To provide opportunities for projects to reduce the number of required automobile parking stalls through alternative methods of accommodating arrival to a site and reduce demand for automobile parking.

### B. Applicability

All projects required by *Sec. 4C.4.1 (Required Automobile Parking stalls)* to provide automobile parking.

### C. Standards

#### 1. General

**a.** A reduction in required automobile parking stalls through the provision of one or more alternative parking strategies may be authorized in accordance with *Sec. 13B.2.5. (Director Determination)*. Applicants that wish to provide an alternative parking strategy as a means of reducing the total number of required spaces shall submit a report which provides the following:

**i.** Detailed description of all uses involved in the alternative parking strategy, including location, gross floor area, seating capacity if applicable, and hours of operations.

**ii.** Anticipated parking demand generated by employees, tenants and visitors on an hourly basis, 24 hours per day, for seven consecutive days

**iii.** Description of how an alternative parking strategy will alleviate the demand for a specified number of the total required parking stalls.

**iv.** Supplemental maps and plot plans deemed necessary for depicting all relevant components of an alternative parking strategy.

**b.** Additional documents, covenants, deed restrictions, or other agreements shall be executed and recorded as deemed necessary, in order to assure the continued maintenance, operation and viability of an approved alternative parking strategy, under the conditions set

forth in the Director's Determination. Revisions to the parking strategy shall submit a report documenting the revised manner in which the new parking strategy achieves the same intention and level of service as the originally approved parking strategy.

### 2. Shared Parking

In order to take advantage of different peak periods of parking demand among nearby uses the total number of required automobile parking stalls may be reduced when an applicant demonstrates that automobile parking stalls can be shared among multiple uses. The parking strategy shall meet all of the following criteria:

**a.** A shared parking facility shall be located within a 1,500 foot *walking distance* of each participating use.

**b.** Participating uses shall have mutually exclusive periods of peak parking demand.

**c.** The shared parking strategy will sufficiently alleviate the demand for the specified number of required parking stalls.

### 3. Proximity to Public Transportation

Uses within walking distance of a public transit facility may take advantage of increased transit ridership among employees, tenants and visitors and a decreased demand for automobile parking. The total number of required automobile parking stalls may be reduced provided the parking strategy meets all of the following criteria:

**a.** A use shall be located within a 1,500 foot *walking distance* of public transit. For this purpose, public transit means a location, including, but not limited to, a bus stop or train station, where the public may access buses, trains, subways, and other forms of transportation that charge set fares, run on fixed routes, and are available to the public. A public transit stop or station that is in development may also apply if the anticipated operating date is within three years.

**b.** The nearby public transit facility will sufficiently alleviate the demand for the specified number of required parking stalls.

### 4. Shuttle Service

Uses generating travel patterns whereby a majority of employees or visitors arrive and depart within the same time periods may operate a viable shuttle service that decreases the demand for automobile parking.

Criteria:

**a.** A shuttle shall provide scheduled service between the use and a location that can accommodate the arrival of shuttle users, such as a park and ride facility or public transit station or stop.

**b.** A majority of shuttle users arrive and depart roughly within the same three hour period.

**c.** The planned shuttle service will sufficiently alleviate the demand for the specified number of required parking stalls.

### 5. Designated Passenger Loading area

Uses that can accommodate a high share of arrivals and departures through dynamic ridesharing or taxi services when provided a safe and efficient passenger loading area may have a decreased demand for automobile parking.

Criteria:

**a.** A designated passenger loading area shall be located within a 300-foot *walking distance* of a street facing entrance to the use it serves. Travel between a designated passenger loading area and the use being served shall not require pedestrians to cross streets.

**b.** The passenger loading area shall not be placed within 75 feet of an intersection.

**c.** The passenger loading area shall provide sufficient space for a vehicle to pull out of roadway traffic and safely load and unload passengers without interfering with traffic flow.

**d.** The passenger loading area shall not decrease sidewalk space for pedestrians or impede pedestrian movement.

**e.** Passenger loading areas shall be clearly indicated with signage.

**f.** The designated passenger loading area will sufficiently alleviate the demand for the specified number of required parking stalls.

## D. Measurement

**1.** For measurement of walking distance see *Sec. 14.1.3 (Walking Distance)*.

**2.** For peak period demand [Reserved]

## E. Relief

A deviation from any alternative parking strategy *dimensional standard* of up to 10% may be requested in accordance with *Sec. 13B.5.2 (Adjustment)*.

# SEC. 4C.4.3. PARKING AREA DESIGN

## A. Intent

To ensure parking areas provide sufficient accommodation for automobile parking.

## B. Applicability

Parking area design standards are applicable to every parking area containing automobile parking stalls.

## C. Standards

### 1. Automobile Circulation

All portions of a parking area, including public parking structures, shall be accessible by automobile to all other portions of a parking area without requiring the use of any public street. LADOT may allow use of the public street for this purpose where they determine that it is not detrimental to the flow of traffic.

### 2. Location of Parking Stalls

**a.** The required automobile parking stalls shall be provided either on the same lot as the use they are intended to serve or on another lot not more than a 750-foot *walking distance* of a street facing entrance to the use intended to be served by the required parking. An *alternative parking strategy* may be approved to exceed this distance.

**b.** Automobile parking is not permitted within the *primary street parking setbacks*, *side street parking setbacks* and any *special lot line parking setbacks* established by the frontage district in accordance with *Sec. 3C.2.1. (Street Setback)*.

**c.** Automobile parking is not permitted within any portion of a site designated to be used as *lot amenity space* or *residential amenity space* in accordance with *Div. 2C.3. (Amenity)*.

### 3. Parking Stall Maneuvering

**a.** Each automobile parking stall shall be so located that no automobile is required to back onto any public street or sidewalk to leave the parking stall, parking bay or vehicular access lane, except where the automobile parking facility serves 4 parking stalls or less and where the vehicular access lane access is to a street other than a boulevard or avenue.

**b.** Each automobile parking stall shall be so located that parking maneuvers can be accomplished without driving onto a frontage parking setback area.

### 4. Parking Stall Striping

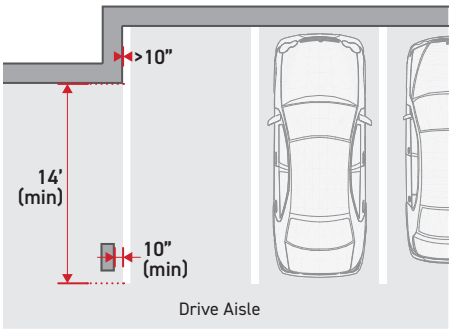
Each parking stall shall be clearly marked with striping for the entire required parking stall depth with the exception of parking areas on lots that contain less than 5 parking stalls.

### 5. Lighting

Parking areas shall be illuminated in accordance with *Sec. 4C.11.1 (Outdoor Lighting)*.

### 6. Parking Stall Obstructions

No fence, wall, partition, column, post or similar obstruction may be located within 10 inches of a parking stall along its longest dimension unless the obstruction is located a minimum of 14 feet from the access aisle measured parallel to the parking stall. Parking stalls provided in 1L or 2L Density Districts are exempt from this standard.



### 7. Parking Lots

For additional standards for *parking lots* see *Sec. 4C.4.4. (Parking Lot Design)*.

### 8. Structured Parking

For additional standards for *structured parking* see *Sec. 4C.4.5. (Parking Structure Design)*.

### 9. Parking Stall Dimensions

All automobile parking stalls shall meet the minimum dimension standards in the table below:

**PARKING STALL DIMENSIONS**

| Parking Stall Angle | Dimension | Parking Stall Type | | |
|---|---|---|---|---|
| | | STANDARD | COMPACT | TANDEM |
| Angled | Width (min) | 8'-4" | 7'-6" | 8'-4" |
| | Depth (min) | 18'-0" | 15'-0" | 33'-0" |
| Parallel (Typical) | Width (min) | 26'-0" | 23'-0" | n/a |
| | Depth (min) | 8'-0" | 7'-6" | n/a |
| Parallel (End Stall) | Width (min) | 30'-0" | 27'-0" | n/a |
| | Depth (min) | 8'-0" | 7'-6" | n/a |

### 10. Compact Parking

**a.** All parking stalls in excess of the required number of parking stalls in *Sec. 4C.4.1. (Required Automobile Parking Stalls)* may be compact parking stalls.

**b.** All parking stalls in excess of one parking stall per dwelling unit may be compact parking stalls.

**c.** In each parking area containing 10 or more parking stalls, a maximum of 40% of the required stalls may be compact parking stalls. Such restriction shall not apply to parking stalls in excess of the number of required stalls.

**d.** All compact stalls shall be clearly and visibly striped and labeled for compact car use only.

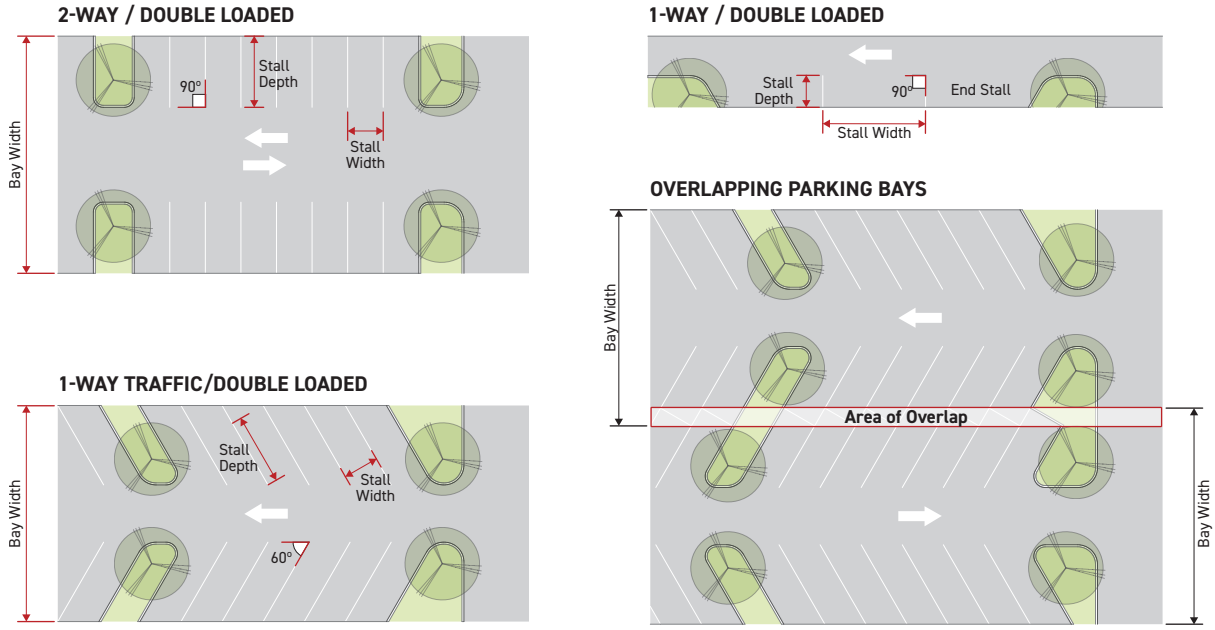
## 11. Tandem Parking

Automobiles may be parked in tandem in a private *parking area* serving a *residential use*, where the tandem parking is not more than two cars in depth. Tandem parking is not allowed for recreational vehicles or guest parking provided as part of a private *parking area* serving a *residential use*.

## 12. Parking Bay Dimensions

**a.** The minimum width of each parking bay is determined by the stall width and parking angle in accordance with the table below:

| PARKING BAY WIDTH | | | | | |
|---|---|---|---|---|---|
| Parking Stall | | One-Way Drive Aisle | | Two-Way Drive Aisle | |
| STALL ANGLE | STALL WIDTH | DOUBLE LOADED | SINGLE LOADED | DOUBLE LOADED | SINGLE LOADED |
| 0° (Parallel) | 8'-0" | 28'-0" | 18'-0" | 36'-0" | 28'-0" |
| 30° | 7'-6" | 40'-0" | 26'-0" | 48'-2" | 34'-0" |
| | 8'-4" | 43'-0" | 27'-6" | 51'-2" | 35'-6" |
| | 8'-6" | 43'-0" | 27'-6" | 51'-2" | 35'-6" |
| | 9'-0" | 43'-0" | 27'-6" | 51'-2" | 35'-6" |
| 45° | 7'-6" | 44'-4" | 28'-2" | 52'-1" | 36'-3" |
| | 8'-4" | 50'-3" | 31'-11" | 56'-4" | 38'-6" |
| | 8'-6" | 49'-10" | 31'-6" | 56'-4" | 38'-6" |
| | 9'-0" | 48'-7" | 30'-3" | 56'-4" | 38'-4" |
| 60° | 7'-6" | 49'-4" | 32'-8" | 54'-1" | 37'-11" |
| | 8'-4" | 56'-5" | 37'-3" | 59'-11" | 41'-1" |
| | 8'-6" | 55'-11" | 36'-9" | 59'-9" | 40'-11" |
| | 9'-0" | 54'-8" | 35'-3" | 59'-3" | 40'-7" |
| 90° | 7'-6" | 55'-4" | 40'-4" | 55'-4" | 40'-4" |
| | 8'-4" | 64'-0" | 46'-0" | 64'-0" | 46'-0" |
| | 8'-6" | 63'-4" | 45'-4" | 63'-4" | 45'-4" |
| | 9'-0" | 61'-4" | 43'-4" | 61'-4" | 43'-4" |



**b.** Where parking stalls of two bays interlock the parking bays may overlap.

**c.** Any tandem stalls provided shall increase the minimum parking bay width by 15' tandem stalls are provided on only one side of a drive aisle and 30' where tandem stalls are provided on two sides of a drive aisle.

**d.** Dimensions other than those specified may be approved by the Superintendent of Building in accordance with *LADBS Information Bulletin No. P/ZC 2002-001*.

## 13. Attended Mass Parking

A *parking area* providing *attendants* to park the vehicles at all times when the parking area is open for use does not have to meet the requirements of the following of *Sec. 4C.4.3.6. (Standard Parking Stalls)* and *Sec. 4C.4.3.7. (Parking Bay Dimensions)*.

## 14. Mechanical Automobile Lifts and Robotic Parking Structures

**a.** The *stacking* of 2 or more automobiles using a mechanical car lift or computerized parking structure is permitted.

**b.** All automobile parking stalls included in a mechanical lift or robotic parking structure shall meet the minimum dimension standards in the table below:

| PARKING STALL DIMENSIONS | | |
|---|---|---|
| Dimension | Parking Stall Type | |
| | STANDARD | COMPACT |
| Clear Width (min) | 8'-0" | 7'-0" |
| Clear Height (min) | 7'-0" | 6'-0" |

**d.** The platform of the mechanical lift on which the automobile is first placed shall be individually accessed and shall be placed so that the location of the platform and access to the platform meet all applicable requirements of this Division.

**e.** The lift equipment or computerized parking structure shall meet any applicable building, mechanical and electrical code requirements as approved by the Department of Building and Safety.

## D. Measurement

### 1. Parking Stall Width

The horizontal distance between opposite edges of a parking stall measured perpendicular to the parking stall angle.

### 2. Parking Stall Depth

The horizontal distance measured from the drive aisle to the farthest point of the parking stall that meets the minimum parking stall width standard, measured parallel to the parking stall angle.

### 3. Parking Bay Width

The horizontal distance between opposite edges of a parking stall measured perpendicular to the drive lane.

### 4. Parking Angle

The angle measured from the long edge of a *parking stall* to the *drive lane*.

### 5. Clear Height

Minimum clear height is measured as the vertical dimension of a parking stall at the lowest point, from finished floor surface or platform to the ceiling or other fixed obstruction for the full width and depth of the parking stall.

### 6. Clear Width

Minimum clear width is measured as the horizontal dimension of a parking stall at the narrowest point between walls or other fixed obstructions for the full depth of the parking stall.

## E. Exceptions

A *parking area* providing *attendants* to park the vehicles at all times when the parking area is open for use does not have to meet the requirements of the following of *Sec. 4C.4.3.6. (Standard Parking Stalls)* and *Sec. 4C.4.3.7. (Parking Bay Dimensions)*.

## F. Relief

1. A deviation from parking area design standards may be requested in accordance with Sec. 13B.5.1. (Alternative Compliance).

2. A reduction in required number of standard parking stalls by 10% in lieu of compact parking stalls may be requested in accordance with *Sec. 13.7.2 (Adjustments)*.

3. A deviation in required parking stall dimensions or parking bay dimensions may be allowed as a variance in accordance with *Sec. 13.7.3 (Variance)*.

# SEC. 4C.4.4. PARKING LOT DESIGN

## A. Intent

Ensure parking lots are designed to create safe, comfortable and attractive environments for users and pedestrians along the adjacent public right-of-way, while also mitigating heat island effects, absorbing noise pollution, managing stormwater runoff, sequestering carbon emissions and supporting urban biodiversity through landscaping and surface design.

## B. Applicability

**1.** Parking lot design standards apply to all (surface) automobile parking areas that are not contained within a *parking structure*. For parking structure design standards see Sec. 4C.4.5 (Parking Structure Design).

**2.** Interior landscaping standards apply to all (surface) automobile parking areas containing five or more parking stalls.

## C. Standards

### 1. Surfacing

All automobile parking areas shall be graded and drained to collect, retain and infiltrate surface water on-site by applying low impact development practices and standards in accordance with *LAMC Sec. 64.72. (Stormwater Pollution Control Measures for Development Planning and Construction Activities)*.

### 2. Interior Landscaping

#### a. General

**i.** Projects may comply with either Option 1 or Option 2 in order to meet the requirements of this section.

**ii.** Trees provided to meet interior landscaping standards may count toward the tree planting requirements in *Sec. 4C.6.2.*.

**iii.** The required stall length of parking stalls may overhang the planting areas required by the interior landscaping standards by 2 feet or less.

**iv.** All *planting areas* shall comply with *Sec. 4C.6.4. (Plant Design and Installation)* in addition to any planting area requirements of the chosen interior landscaping option.

**v.** All required *plants* shall comply with *Sec. 4C.6.4. (Plant Design and Installation)*.

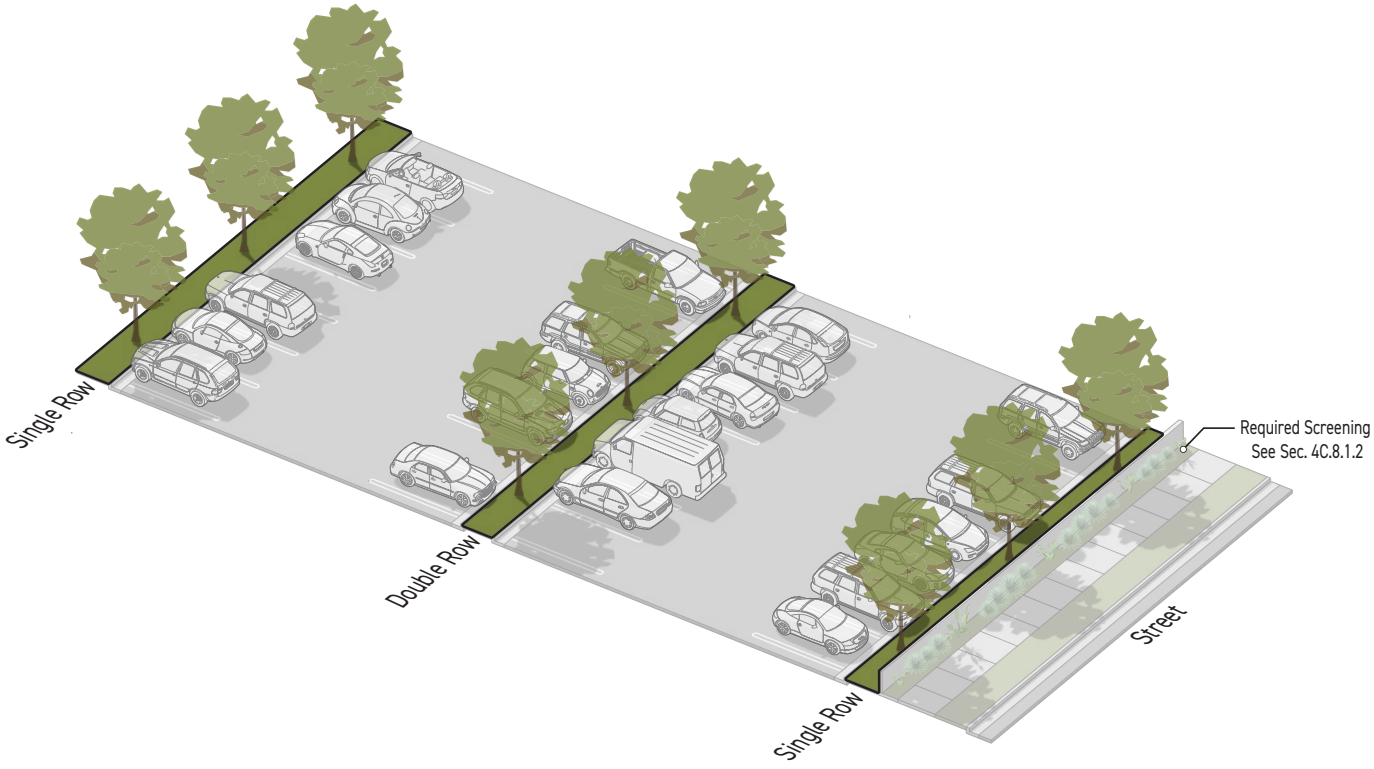
#### b. Option 1: Prescriptive Standard

**i.** The entire length of each *row of parking stalls* shall be accompanied by a continuous *planting area* with a minimum width of 5 feet.

**ii.** Trees planted within a *planting area* located along a single row of *parking stalls* shall be provided at a rate of one *large species tree (Sec. 4C.6.5.C.3.a.)* or two *small species trees (Sec. 4C.6.5.C.3.a.)* for every three *parking stalls*.

**iii.** Trees planted between a double row of *parking stalls* shall be provided at a rate of one *large species tree (Sec. 4C.6.5.C.3.a.)* or two *small species trees (Sec. 4C.6.5.C.3.a.)* for every six parking stalls.

**iv.** Required trees shall be spaced evenly along the entire length of the require *planting area*.



### C. Option 2: Performance-Based Standard

Trees shall be planted so that at least 50% of all parking lot stalls will be shaded by tree canopy after 10 years of planting.

## 3. Perimeter Screening

**a.** A *Type B2 or B3 frontage screen (Sec. 4C.8.1.C.3)* is required along frontage lot lines for the width of a parking lot facing a frontage lot line. If a Type B2 Frontage screen is used along the perimeter of a surface parking lot, appropriate bumper guards, wheel stops, steel posts, curbs, or other installations adequate to prevent vehicles from parking or driving into the planting area or into a public right-of-way are required.

**b.** A *Type C1 transition screen (Sec. 4C.8.2.C.3.a)* is required along common lot lines shared with lots having a 1L, 2L, 3L or 4L Density District for the width of any parking lot facing a common or alley lot line.

**c.** The required stall length of parking stalls may overhang the planting area of a required frontage screen or transition screen by 2 feet or less.

## D. Measurement

To measure planting area width see *Sec. 4C.6.4.D.1 (Planting Area Width)*.

## E. Relief

**1.** A deviation from any parking lot design *dimensional standard* of up to 10% may be requested in accordance with *Sec. 13B.5.2 (Adjustment)*.

**2.** A deviation from any parking lot design standard may be allowed as a variance in accordance with *Sec. 13B.5.3 (Variance)*.

# SEC. 4C.4.5. PARKING STRUCTURE DESIGN

## A. Intent

To limit the visual and environmental impact of motor vehicle use areas on the public realm to extent appropriate to the mobility context.

## B. Applicability

### 1. General

Parking structure design standards apply to all portions of parking structure facades along non-alley public rights-of way.

### 2. Parking Structure

For the purpose of parking structure design, parking structure includes parking garages and integrated parking.

### 3. Parking Garage

For the purpose of parking structure design, parking garage standards apply to structures with 50% or more of their floor area dedicated to parking uses.

### 4. Integrated Parking

For the purpose of parking structure design, integrated parking standards apply to structures with less than 50% of their floor area dedicated to parking uses.

### 5. Ground Story

When *Development Standards District (Part 4B)* requires ground story parking structures to be screened, concealed, adaptable or wrapped, the parking structure treatments apply to all above ground parking structure facades up to the first finished floor located above the ground story.

### 6. Upper Stories

When *Development Standards District (Part 4B)* requires upper stories of parking structures to be screened, concealed, adaptable or wrapped, the parking structure treatments apply to all portions of parking structure facades from the first finished floor located above the ground story to the topmost point of the parking structure facade.

## C. Standards

### 1. General

**a.** Parking structure design treatments are hierarchical according to the following order:

**i.** Screened Parking

**ii.** Concealed Parking

**iii.** Adaptable Parking

**iv.** Wrapped Parking

**b.** If a treatment listed higher in the order is required by *Development Standards District (Part 4B)*, the applicant may choose to meet the standards of a treatment lower in the order.

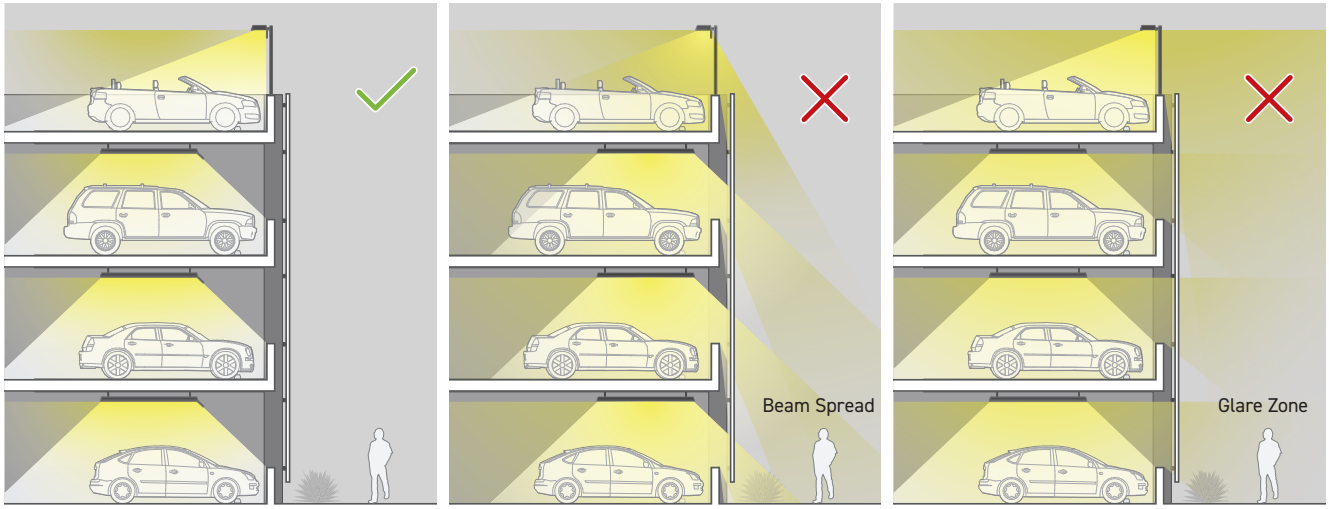
**c.** Ground story motor vehicle use areas located in a parking structure shall meet any parking setback standards in Frontage.

## 2. Lighting

All luminaires located in parking structures shall meet the following standards:

**a.** Luminaires shall meet the standards for outdoor lighting (*Div. 4C.11*).

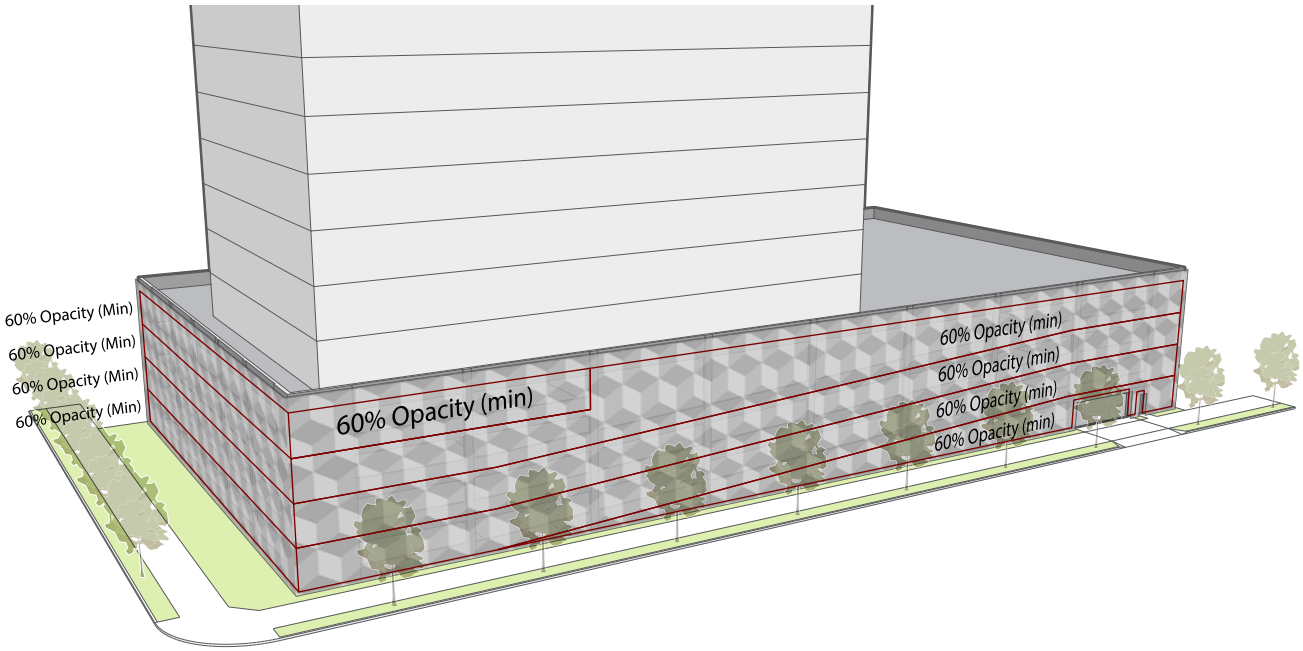
**b.** Beam spread and glare zone from luminaires shall be contained within the parking structure.



## 3. Parking Structure Design Treatments

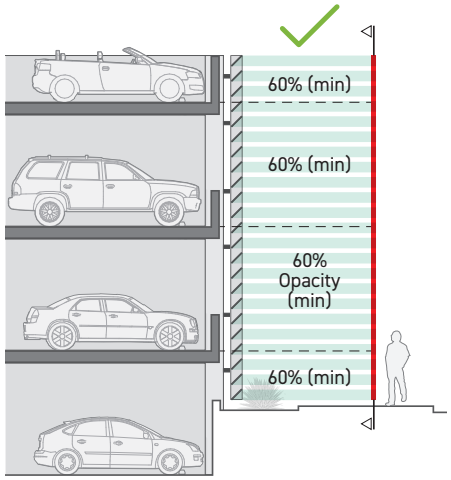
### a. Screened Parking

Intended to limit the visual and environmental impact of motor vehicle use areas on the public realm.

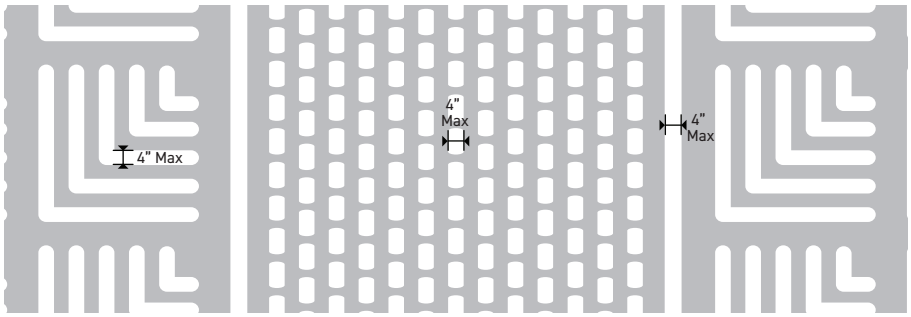


**i.** Underground, ground story, and upper story parking screening:

**a)** Shall be, on average, no less than 60% opaque for any individual tier of parking.

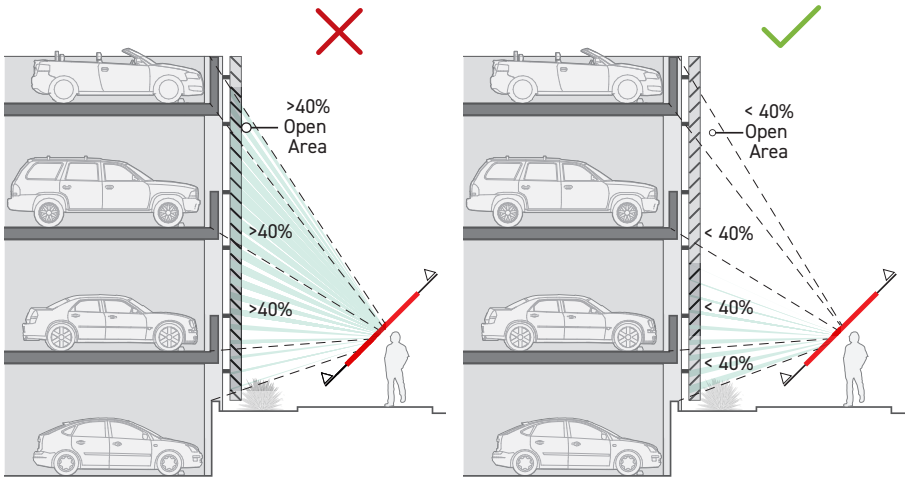


**b)** Openings in screens shall be 4 inches or less in at least one dimension.



**ii.** A type B1 or B2 *frontage screen (Sec. 4C.8.1.C.2.)* is required between ground story parking and all frontage lot lines.

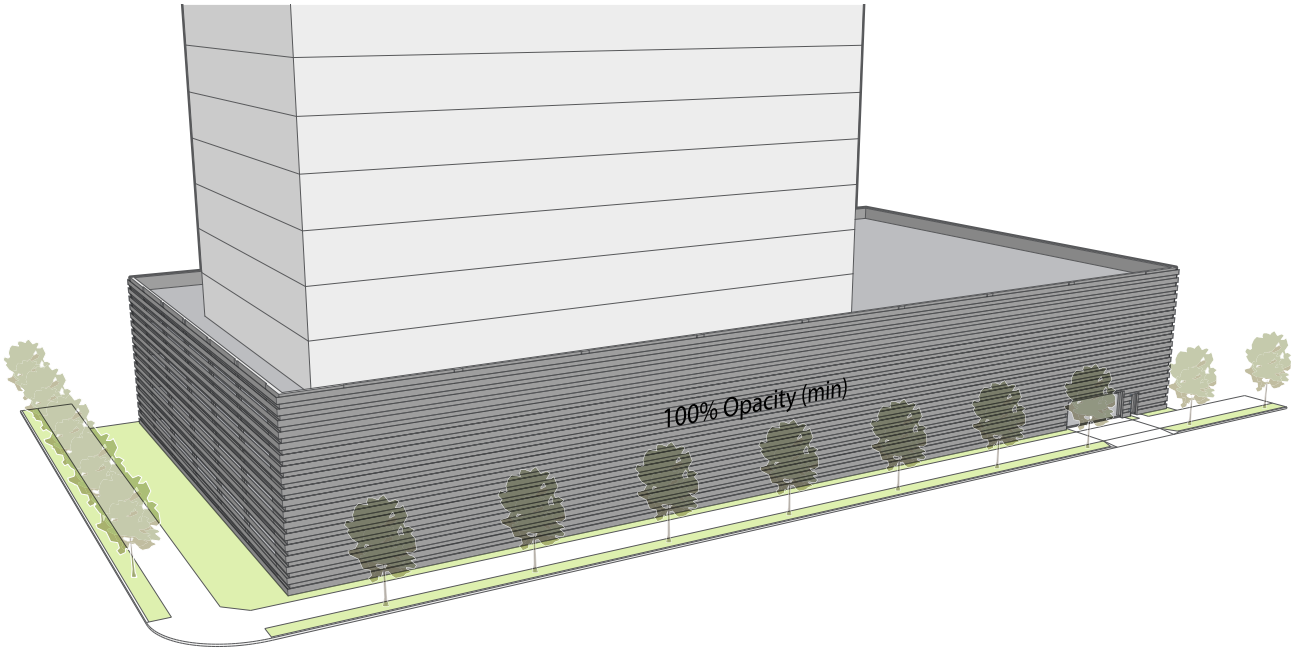
**iii.** Upper story parking screening, when viewed from the sidewalk below, shall not be less than 60% opaque.



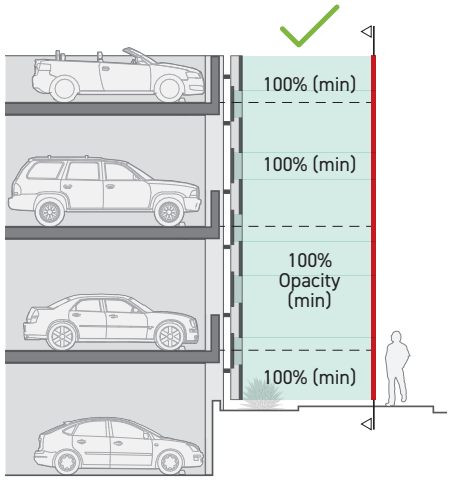
**iv.** Openings, providing vehicular or pedestrian access are allowed provided they are the minimum practical width.

### b. Concealed Parking

To entirely block views of cars, people and direct light from inside parking structures to the public realm.



**i.** All above grade parking structure facades shall be screened with an enclosure no less than 100% opaque.



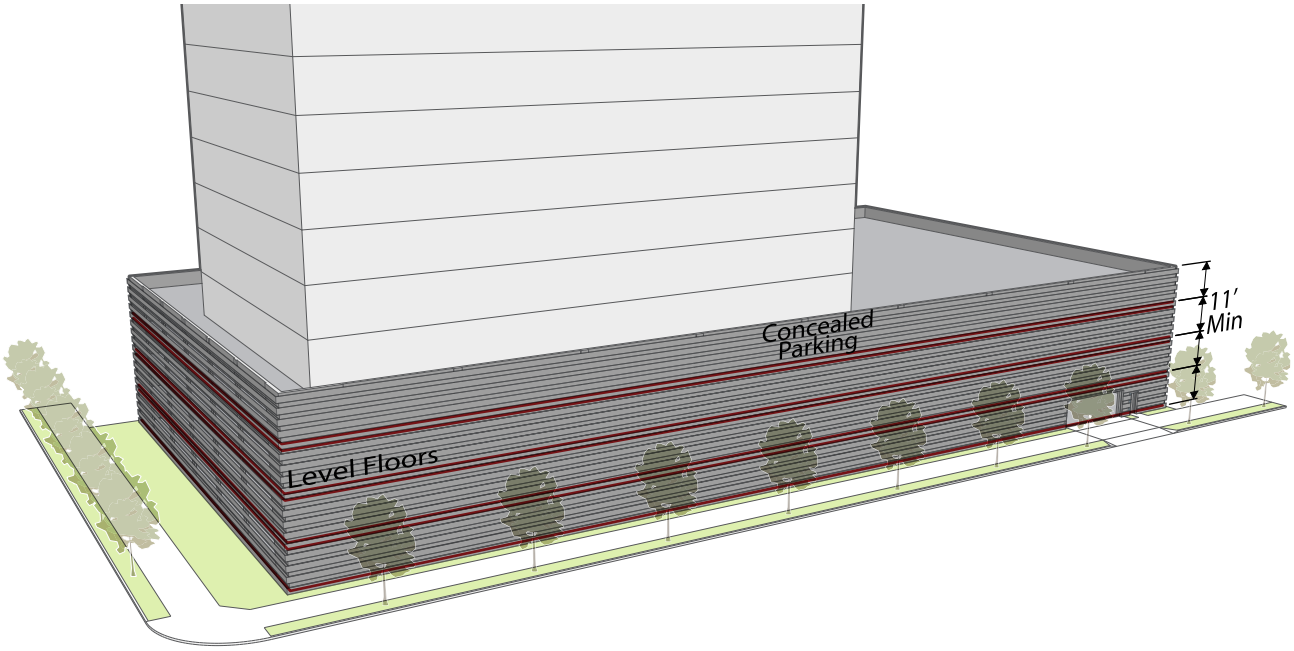
**ii.** Parking structure enclosures shall not include perforated metal screening products.

**iii.** A *type B2 or B3 frontage screen (Sec. 4C.8.1.C.3)* is required between ground story parking and all frontage lot lines.

**iv.** Openings, providing vehicular or pedestrian access are allowed provided they are the minimum practical width.

### C. Adaptable Parking

Intended to ensure floors used for parking are built in a way that allows vehicular use areas to change to active uses in the future without significant structural renovation.



**i.** Where required to be adaptable; parking structures shall meet the following standards for a minimum depth of 30 feet from the applicable street-facing building face:

**a)** Floor plates shall be level except to the minimum extent required for drainage.

**b)** Structure shall be constructed to accommodate loads associated with office building corridors above first floor as indicated by the International Building Code.

**c)** Floor to floor heights shall be a minimum of 11 feet.

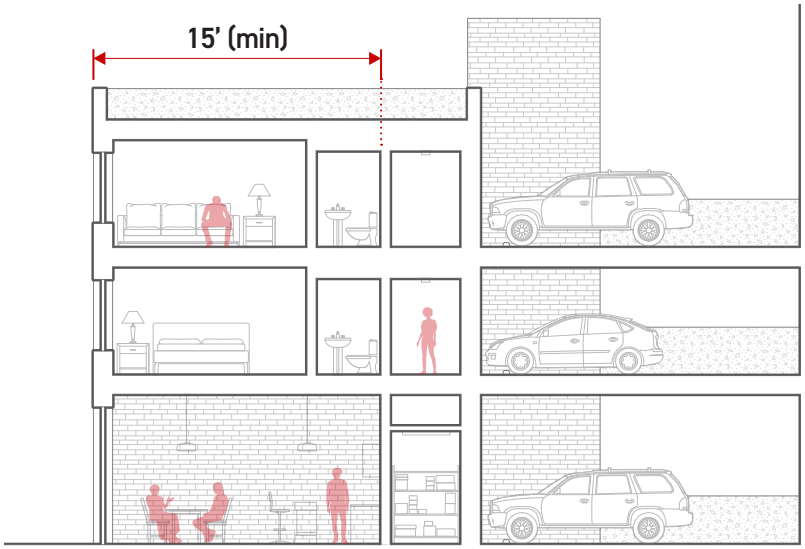
**ii.** All parking required to be adaptable shall also meet the standards for *concealed parking (Sec. 4C.4.5.C.3.b.)*.

### d. Wrapped Parking

Intended to ensure active uses along the public right-of-way in order to provide a human-scale and visual interest to buildings along streets and sidewalks, and passive surveillance of the public space, contributing to public safety, walkability and social engagement.

**i.** Where required to be wrapped; parking structures shall meet the following standards for the portion of the building width required to meet the minimum build-to width required in *Part 3B (Frontage District)*.

**a)** Parking and other motor vehicle use areas shall be separated from the street lot line by active uses for a minimum depth of 15 feet measured from the applicable street-facing building face.



**b)** For the purpose of wrapping parking, active uses include enclosed spaces designed and intended for tenants or residents. Areas for circulation, storage, mechanical equipment and utilities shall not account for more than 15% of an area designated an active use on any story.

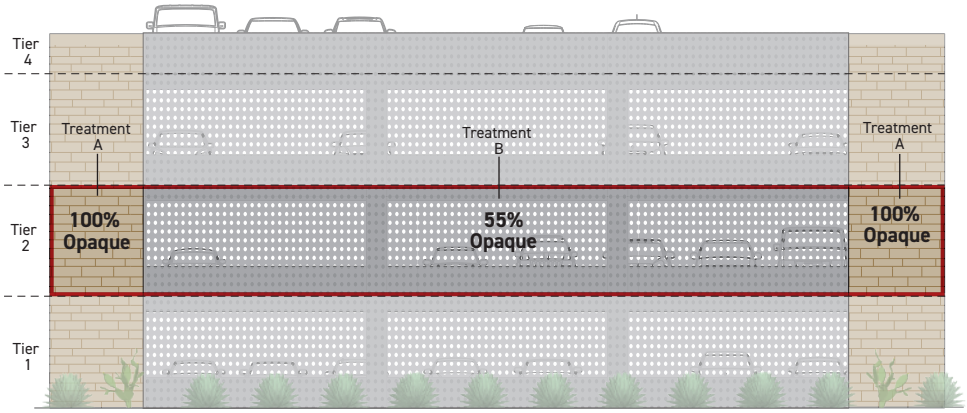
**ii.** The portion of the building width not required to meet the minimum build-to width required by *Frontage District (Part 3B)* may meet either the standards for wrapped parking or *concealed parking (Sec. 4C.4.5.C.3.b.)*.

## D. Measurement

**1.** Opacity of screening is calculated separately for each tier of parking on each building facade.

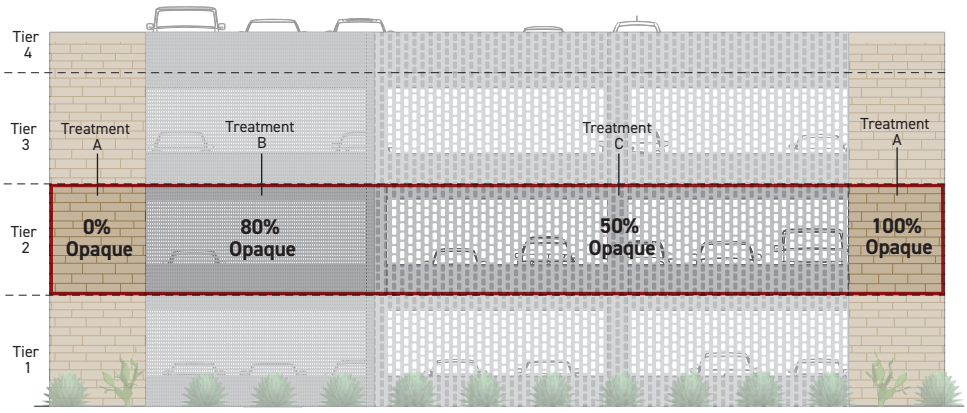
**2.** Minimum opacity is measured as a percentage calculated as the sum of all open areas on a parking screen facade area divided by the total parking screen facade area. Also see *Sec. 14.1.14. (Opacity %)*.

**3.** For the purpose of measuring opacity, above-grade portions of underground and ground floor parking screen facade area using a green wall meeting the standards of *Sec. 3C.4.2.E.1.j (Blank Foundation Wall Treatments)* is considered 60% opaque.



TIER 2 OPACITY CALCULATION

| | % OPAQUE | x PORTION OF TOTAL FACADE AREA | = WEIGHTED VALUE |
|---|---|---|---|
| TREATMENT A | 100% | 0.2 | 20% |
| TREATMENT B | 55% | 0.8 | 42% |
| TIER 2 TOTAL OPACITY | | | 62% |



TIER 2 OPACITY CALCULATION

| | % OPAQUE | x PORTION OF TOTAL FACADE AREA | = WEIGHTED VALUE |
|---|---|---|---|
| TREATMENT A | 100% | 0.2 | 20% |
| TREATMENT B | 80% | 0.3 | 24% |
| TREATMENT C | 50% | 0.5 | 25% |
| TIER 2 TOTAL OPACITY | | | 69% |

## E. Exceptions

As an alternative to meeting the wrapped parking standards, constrained sites, less than 30,000 square feet, may fully enclose upper story motor vehicle use areas with a facade meeting all applicable Frontage standards.

## F. Relief

1. An alternative to any parking structure design standards may be requested in accordance with *Sec. 13B.5.1 (Alternative Compliance)*.
2. A deviation from any parking structure design *dimensional standard* of up to 10% may be requested in accordance with *Sec. 13B.5.2 (Adjustment)*.
3. A deviation from any parking structure design standard may be allowed as a variance in accordance with *Sec. 13B.5.3 (Variance)*.

# DIV. 4C.5. TRANSPORTATION DEMAND MANAGEMENT

## SEC. 4C.5.1. SMALL PROJECTS

### A. Intent

[Reserved]

### B. Applicability

**1.** Development in Excess of 25,000 Square Feet of Gross Floor Area

**2.** Transportation demand management standards apply only to the construction of new non-residential gross floor area.

### C. Standards

Prior to the issuance of a building permit, the owner/applicant shall agree, by way of a covenant that runs with the land, to provide and maintain in a state of good repair the following applicable transportation demand management and trip reduction measures:

A bulletin board, display case, or kiosk (displaying transportation information) where the greatest number of employees are likely to see it. The transportation information displayed should include, but is not limited to, the following:

**a.** Current routes and schedules for public transit serving the site;

**b.** Telephone numbers for referrals on transportation information including numbers for the regional ridesharing agency and local transit operations;

**c.** Ridesharing promotion material supplied by commuter-oriented organizations;

**d.** Regional/local bicycle route and facility information;

**e.** A listing of on-site services or facilities which are available for carpoolers, vanpoolers, bicyclists, and transit riders.

**f.** Applicants shall execute and record a Covenant and Agreement that the trip reduction features required by this ordinance will be maintained, that required material specified in Subdivision 3 (a) (1)-(5) will be continually posted, and that additional carpool/vanpool spaces within the designated preferential area will be signed and striped for the use of ridesharing employees based on demand for such spaces. The Covenant and Agreement shall be acceptable to LADOT.

### D. Measurement

[Reserved]

### E. Exceptions

The provisions of this subsection shall not apply to developments for which:

1. An application has been deemed complete by the City pursuant to Government Code Section 65943,
2. A Notice of Preparation for a Draft Environmental Impact Report has been circulated, or
3. Plans sufficient for a complete plan check were accepted by the Department of Building and Safety, on or before the effective date of this ordinance.

### F. Relief

1. An alternative to small project transportation demand management standards may be requested in accordance with Sec. 13B.5.1 (Alternative Compliance).
2. A deviation from any small project transportation demand management dimensional standard of up to 10% may be requested in accordance with Sec. 13B.5.2 (Adjustment).
3. A deviation from any small project transportation demand management standard may be allowed as a variance in accordance with Sec. 13B.5.3 (Variance).

## SEC. 4C.5.2. MEDIUM PROJECTS

### A. Intent

[Reserved]

### B. Applicability

1. Development in Excess of 50,000 Square Feet of Gross Floor Area
2. Transportation demand management standards apply only to the construction of new non-residential gross floor area. Prior to the issuance of a building permit, the owner/applicant shall agree, by way of a covenant that runs with the land, to provide and maintain in a state of good repair the following applicable transportation demand management and trip reduction measures.

### C. Standards

The owner shall comply with Paragraph B. above and in addition shall provide:

1. A designated parking area for employee carpools and vanpools as close as practical to the main pedestrian entrance(s) of the building(s). This area shall include at least ten percent of the parking stalls required for the site. The spaces shall be signed and striped sufficient to meet the employee demand for such spaces. The carpool/vanpool parking area shall be identified on the driveway and circulation plan upon application for a building permit;

2. One permanent, clearly identified (signed and striped) carpool/vanpool parking stall for the first 50,000 to 100,000 square feet of gross floor area and one additional permanent, clearly identified (signed and striped) carpool/vanpool parking stall for any development over 100,000 square feet of gross floor area;

3. Parking stalls clearly identified (signed and striped) shall be provided in the designated carpool/vanpool parking area at any time during the building's occupancy sufficient to meet employee demand for such spaces. Absent such demand, parking stalls within the designated carpool/vanpool parking area may be used by other vehicles;

4. No signed and striped parking stalls for carpool/vanpool parking shall displace any handicapped parking;

5. A statement that preferential carpool/vanpool spaces are available on-site and a description of the method for obtaining permission to use such spaces shall be included on the required transportation information board;

6. A minimum vertical clearance of 7 feet 2 inches shall be provided for all parking stalls and accessways used by vanpool vehicles when located within a parking structure;

7. Bicycle parking shall be provided in conformance with Division 4C.3 of this Code.

8. Applicants shall execute and record a Covenant and Agreement that the trip reduction features required by this ordinance will be maintained, that required material specified in Subdivision 3 (a) (1)-(5) will be continually posted, and that additional carpool/vanpool spaces within the designated preferential area will be signed and striped for the use of ridesharing employees based on demand for such spaces. The Covenant and Agreement shall be acceptable to LADOT.

## D. Measurement

[Reserved]

## E. Exceptions

The provisions of this subsection shall not apply to developments for which an application has been deemed complete by the City pursuant to Government Code Section 65943, or for which a Notice of Preparation for a Draft Environmental Impact Report has been circulated or for which plans sufficient for a complete plan check were accepted by the Department of Building and Safety, on or before the effective date of this ordinance.

## F. Relief

1. An alternative to medium project transportation demand management standards may be requested in accordance with Sec. 13B.5.1 (Alternative Compliance).

2. A deviation from any medium project transportation demand management dimensional standard of up to 10% may be requested in accordance with Sec. 13B.5.2 (Adjustment).

3. A deviation from any medium project transportation demand management standard may be allowed as a variance in accordance with Sec. 13B.5.3 (Variance).

# SEC. 4C.5.3. LARGE PROJECTS

## A. Intent

[Reserved]

## B. Applicability

1. Development in Excess of 50,000 Square Feet of Gross Floor Area

2. Transportation demand management standards apply only to the construction of new non-residential gross floor area. Prior to the issuance of a building permit, the owner/applicant shall agree, by way of a covenant that runs with the land, to provide and maintain in a state of good repair the following applicable transportation demand management and trip reduction measures.

## C. Standards

The owner shall comply with Paragraphs B. and C. above and shall provide:

1. A safe and convenient area in which carpool/vanpool vehicles may load and unload passengers other than in their assigned parking area;

2. Sidewalks or other designated pathways following direct and safe routes from the external pedestrian circulation system to each building in the development;

3. If determined necessary by the City to mitigate the project impact, bus stop improvements shall be provided. The City will consult with the local bus service providers in determining appropriate improvements. When locating bus stops and/or planning building entrances, entrances shall be designed to provide safe and efficient access to nearby transit stations/stops;

4. Safe and convenient access from the external circulation system to bicycle parking facilities on-site.

5. Applicants shall execute and record a Covenant and Agreement that the trip reduction features required by this ordinance will be maintained, that required material specified in Subdivision 3 (a) (1)-(5) will be continually posted, and that additional carpool/vanpool spaces within the designated preferential area will be signed and striped for the use of ridesharing employees based on demand for such spaces. The Covenant and Agreement shall be acceptable to LADOT.

## D. Measurement

[Reserved]

## E. Exceptions

The provisions of this subsection shall not apply to developments for which an application has been deemed complete by the City pursuant to Government Code Section 65943, or for which a Notice of Preparation for a Draft Environmental Impact Report has been circulated or for which plans sufficient for a complete plan check were accepted by the Department of Building and Safety, on or before the effective date of this ordinance.

## F. Relief

**1.** In cases of extreme hardship, duly established to its satisfaction, the City Council, acting in its legislative capacity, and by resolution, may grant an exemption from any/or all the provisions of this ordinance. In granting such an exemption, the City Council shall make the following findings:

**a.** Specific features of the development make it infeasible to satisfy all of the provisions of this subsection; and

**b.** The applicant has committed to provide equivalent alternative measures to reduce vehicle trips.

**2.** An alternative to large project transportation demand management standards may be requested in accordance with Sec. 13B.5.1 (Alternative Compliance).

**3.** A deviation from any large project transportation demand management dimensional standard of up to 10% may be requested in accordance with Sec. 13B.5.2 (Adjustment)..

## G. Monitoring

LADOT shall be responsible for monitoring the owner/applicant's continual implementation and maintenance of the project trip reduction features required by this ordinance.

# DIV. 4C.6. PLANTS

## SEC. 4C.6.1. PROTECTED TREES

See *LAMC Sec. 46.01 (Definition)*, *LAMC Sec. 46.02. (Requirements for Public Works Permits to Relocate of Remove Protected Trees and Shrubs)* and *Sec. 11.1.4.P. (Division of Land; Protected Tree Regulations)*.

## SEC. 4C.6.2. TREE PLANTING

### A. Intent

To maintain and increase the City's tree canopy, reduce consumption of electricity, improve air quality, promote infiltration of stormwater runoff, offset urban heat island effect, mitigate noise pollution, sequester carbon and support urban biodiversity.

### B. Applicability

All lots shall comply with tree requirement standards.

### C. Standards

1. One large species tree *(Sec. 4C.6.4.C.3.a.i)* or two small species trees (*Sec. 4C.6.4.C.3.a.ii*) shall be planted for every 4,000 square feet of floor area provided. For each additional 4,000 square feet of floor area, one additional one large species tree or two small species trees shall be required.

2. No less than one large species tree or two small species trees (*Sec. 4C.6.4.C.3.a.ii*) shall be planted on every lot.

3. All required trees shall have 1 inch minimum caliper and 15 gallon container size minimum at planting.

4. All required trees located in a surface parking lot, pedestrian amenity space, or public right-of-way shall have a minimum 1.5 inch minimum caliper and a 24 inch box container size minimum at planting.

5. Palms and bamboo do not count as required trees.

6. Required trees shall be planted either on-site or in the abutting parkway. Trees planted in the parkway require approval from the Board of Public Works or its designee per *LAMC Sec. 63.169 (Permit Required to Plant Streets).*

7. Existing trees on-site count toward the minimum tree requirement based on species in compliance with *Sec. 4C6.4.C.3.a.(Tree Types)*, provided each tree is healthy and has a minimum 1 inch caliper.

## D. Measurements

1. For measuring floor area see *Sec. 14.1.7 (Floor Area)*.
2. For large tree measurements see *Sec. 4C.6.4.C.3 (Tree Types)*.
3. For small tree measurements see *Sec. 4C.6.4.C.3 (Tree Types)*.
4. For measurement of caliper see *Sec. 4C.6.4.D.9. (Caliper)*.
5. For measurement of container size see *Sec. 4C.6.4.D.8. (Container Size)*.

## E. Exceptions

If required trees cannot feasibly be planted on-site or in the abutting parkway:

1. The tree may be planted off-site on private property or along public streets (with the prior approval of the Board of Public Works or its designee) within one mile of the lot of the Project, or
2. Payment of an in-lieu fee may be requested in accordance with *LAMC Sec. 62.177 (Establishment of Tree Replacement and Planting In-Lieu Fee)*.

## F. Relief

1. An alternative to tree planting standards may be requested in accordance with *Sec. 13B.5.1 (Alternative Compliance)*.
2. A deviation from any tree requirement standard may be allowed as a variance in accordance with *Sec. 13B.5.3 (Variance)*.

# SEC. 4C.6.3. STREETSCAPE

[RESERVED]

# SEC. 4C.6.4. PLANT DESIGN & INSTALLATION

## A. Intent

To provide the necessary elements to support a healthy urban ecological system.

## B. Applicability

All plants used to meet a requirement of this Zoning Code shall comply with plant design and installation standards unless otherwise specified.

## C. Standards

### 1. General

**a.** No invasive species may be planted in the city of Los Angeles. Any plant listed by the California Invasive Plant Inventory as an invasive or watch plant (including the ratings of "limited", "moderate", "high" or "watch") is considered an invasive species. (https://www.cal-ipc.org/plants/inventory/)

**b.** Plants shall not interfere with visibility at intersections and driveways per *LAMC Sec. 62.200 (Street Intersections - Obstructions to Visibility)*.

**c.** No plant identified by the Los Angeles Fire Department as a prohibited flammable plant species is allowed in a Very High Fire Severity Hazard Zone, as established in *LAMC Sec. 57.4908.1 (Very High Fire Severity Zone Established)*.

**d.** No artificial plants, trees, or other plants may be installed as required planting.

**e.** Projects with planting areas may be subject to *LAMC Sec. 99.04.304 (Outdoor Water Use)*.

**f.** Projects with planting areas may be subject to *LAMC Sec. 64.72 (Stormwater and Urban Runoff Pollution Control Measures for Development Planning and Construction Activities)*.

### 2. Planting Areas

#### a. General

**i.** Planting areas shall not include structures, foundation walls, footings or flatwork.

**ii.** Planting areas shall include an automatic irrigation system in compliance with *LAMC Sec. 99.04.304 (Outdoor Water Use)*.

**iii.** Planting areas shall have no horizontal dimension less than 3 feet.

**iv.** Planting areas shall have a minimum plant coverage of 75 percent.

**v.** All plants required to meet the minimum plant coverage standard shall meet the applicable plant type design and installation standards *(Sec.4C.6.4.C.3.)*.

**vi.** Planting areas shall include 1 large species tree or 2 small species trees for each 500 square feet of total required on-site planting area.

### b. Rooftop Planting Areas

Plants provided on or over a built structure, including but not limited to, a roof, a bridge, a balcony or a parking structure, shall comply with the following standards:

**i.** Where rooftop planting area standards conflict with plant type planting hole standards *(Sec. 4C.6.4.C.3.)*, rooftop planting area standards supersede.

**ii.** Minimum soil depth or soil volume for required plants, is as follows:

| TREES | | |
|---|---|---|
| Height at Maturity | Soil Volume (min) | Soil Depth (min) |
| 15' to 19' | 220 $ft^3$ | 36" |
| 20' to 24' | 400 $ft^3$ | 36" |
| 25' to 29' | 620 $ft^3$ | 42" |
| 30' to 34' | 900 $ft^3$ | 42" |
| 35' to 39' | 1,200 $ft^3$ | 42" |
| 40' or more | 1,600 $ft^3$ | 48" |

| OTHER PLANTS | |
|---|---|
| Height at Maturity | Soil Depth (min) |
| <5.9" | 12" |
| 6" to 11" | 18" |
| 1' to 7' | 24" |
| 8' to 14' | 30" |
| 15' to 24' | 36" |
| 25' or more | 42" |

**iii.** All trees shall be setback from the edge of the roof a minimum of two-thirds the mature height of the tree measured perpendicularly from the edge of the roof.

**iv.** All rooftop gardens and landscapes, occupied or unoccupied, shall comply with *LAMC Sec. 57.317 (Rooftop Gardens and Landscaped Roofs)*.

## 3. Plant Type

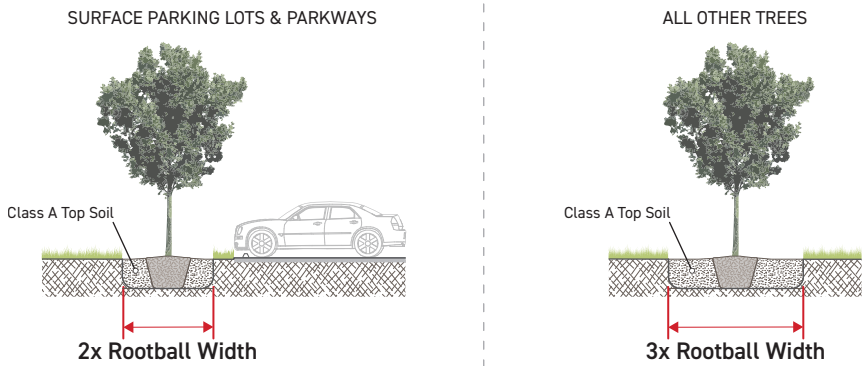
### a. Trees

#### i. Tree Types

**a)** Large species tree shall have a minimum 30 foot canopy spread at maturity.

**b)** Small species tree shall have a canopy spread at maturity of less than 30 feet and an no less than 15 feet.

#### ii. Planting Specifications



All trees and their planting hole, provided to meet a planting requirement shall meet the following standards:

**a)** Located within in a planting area meeting *Sec. 4C.6.4.C.2 (Planting Areas)*.

**b)** For trees located in surface parking lots and parkways, planting holes shall be a minimum width of 2 times the width of the rootball

**c)** For all other trees, planting holes shall be a minimum width of 3 times the width of the rootball.

**d)** Planting holes shall be no deeper than the height of the rootball.

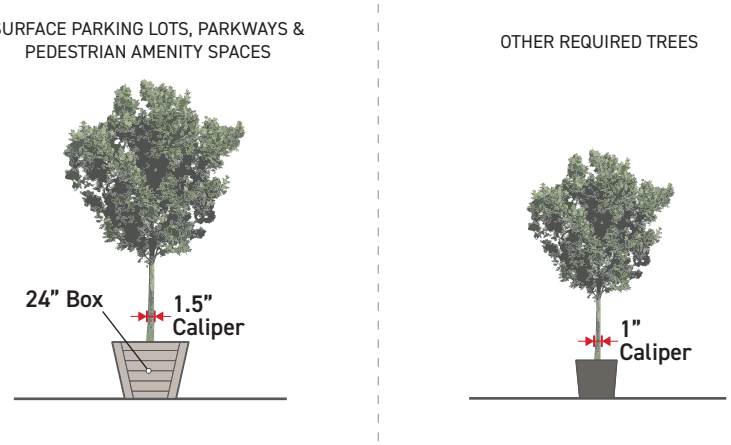
**e)** Planting hole shall be backfilled with class A top soil or native variety.

**f)** Backfill soil shall be compacted to no more than 70%.

**g)** Soil in beneath the rootball shall be compacted to at least 90%.

**h)** No other plants may be planted within 2 feet of a tree, measured from the center of the tree trunk.

**i)** All trees, planted in a surface parking lot, pedestrian amenity space, or parkway shall have a minimum 24 inch box container size and a minimum caliper of 1.5 inches or as specified by *ASNS (American Standard for Nursery Stock)*. All other required trees shall have 1 inch minimum caliper size.



## b. Screening Plants

### i. General

**a)** Required screening plants shall be perennial including, shrubs, vines, succulents, grasses and ferns.

**b)** Required screening plants shall have a minimum height at maturity of 3 feet.

### ii. Planting Specifications

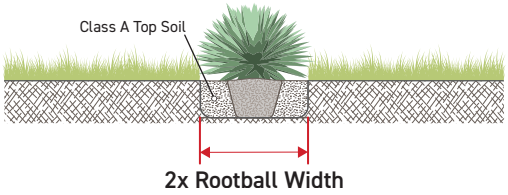
All screening plants and their planting holes provided to meet a screening requirement shall meet the following standards:

**a)** Located within in a planting area meeting *Sec. 4C.6.4.C.2 (Planting Areas)*.

**b)** Planting holes shall have a minimum width of 2 times the width of the rootball.

**c)** Planting holes shall be no deeper than the height of the rootball.

**d)** Planting holes shall be backfilled with Class A top soil or native variety.



**e)** Required screening plants shall have a minimum height of 18 inches at time of planting.

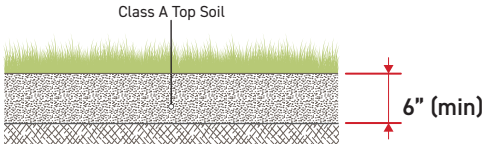
## c. Groundcover & Turf Plants

Turf plants such as sodded or seeded grass areas provided to meet a planting requirement shall meet the following standards:

**i.** Located within in a planting area meeting *Sec. 4C.6.4.C.2 (Planting Areas)*.

**ii.** Minimum top soil depth of 6 inches.

**iii.** Top soil shall be Class A top soil or native variety.



## d. Hedges

### i. General

**a)** Hedges include all shrubs planted closer than 1/2 of their *height at maturity* from another shrub or tree and all trees planted closer than 1/2 of their *canopy diameter at maturity* from another tree.

**b)** Trees planted at least 3 feet apart having no branches a minimum of six feet from surrounding grade are not considered a hedge and are not regulated by maximum hedge standards.

### ii. Planting Specifications

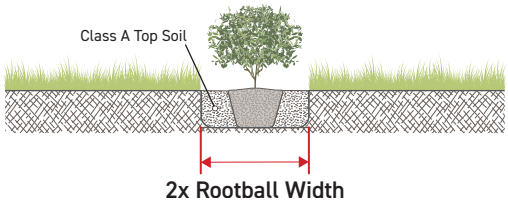
Shrubs and their planting holes provided as part of a hedge shall meet the following standards:

**a)** Located within in a planting area meeting *Sec. 4C.6.4.C.2 (Planting Areas)*.

**b)** Planting holes shall have a minimum width of 2 times the width of the rootball.

**c)** Planting holes shall be no deeper than the height of the rootball.

**d)** Planting holes shall be backfilled with Class A top soil or native variety.



## e. Living Walls

Living walls provided to meet a standard shall meet the following standards:

**i.** Permanently attached to the exterior of a building or structure.

**ii.** Automatic irrigation system permanently integrated into the assembly in compliance with *LAMC Sec 99.04.304 (Outdoor Water Use)*.

**iii.** Growing medium shall be permanently integrated into the assembly while retaining the ability to remove, replace and maintain the plants and growing medium.

**iv.** Minimum soil depth of 4 inches of Class A top soil or native variety

**v.** Minimum 75 percent plant coverage at maturity, measured vertically.

## f. All Other Plants

All plants, other than living walls, hedges, groundcover and turf plants, screening plants and trees provided to meet a planting requirement shall meet the following standards:

**i.** Located within in a planting area meeting *Sec. 4C.6.4.C.2 (Planting Areas)*.

**ii.** Planting holes shall have a minimum width of 2 times the width of the rootball.

**iii.** Planting holes shall be no deeper than the height of the rootball.

**iv.** Planting holes shall be backfilled with Class A top soil or native variety.

# 4. Native Plants

All plants required to be native plants shall meet the applicable plant type design and installations standards *(Sec. 4C.6.4.C.3.)* in addition to the following standards:

**a.** Shall be a tree, shrub or plant species specified by Water Use Classification of Landscape Species (WUCOLS) as native to the South Coastal region.

**b.** Soil amendments shall not be used.

#### 5. Maintenance

**a.** All required plants shall be maintained in good and healthy condition.

**b.** All required plants shall be allowed to reach and be maintained at no less than the spread at maturity specified in a landscape plan.

**c.** Landscape and screening areas shall be kept free of weeds and trash.

**d.** "Topping," defined as removal of more than 1/3 of the leaves and branches of a tree as measured from the lowest branch on the trunk of the tree to the top of the tree, is prohibited.

## D. Measurement

### 1. Planting Area Width

Planting area width is measured as the horizontal dimension from one edge of an area complying with *Sec. 4C.6.4.C.2 (Planting Areas)* to the opposite edge.

### 2. Plant Coverage

Plant coverage is measured as the cumulative area of a planting area covered by plants divided by the total planting area.

**a.** Trees count as plant coverage only for the portion of a planting area within 2 feet of a tree, measured as a circle, centered on the trunk of the tree, with a radius of 2 feet.

**b.** All other plants count as plant coverage for the anticipated spread of the plant at maturity.

### 3. Soil Depth

Soil depth is measured as the total vertical dimension of growing medium provided, measured from the lowest elevation to the highest elevation for all portions of a planting area.

### 4. Soil Volume

Soil volume is measured as the total volume of growing medium provided. Drainage layers and other elements located within a container or planter that are not growing medium are not included in the calculation of soil volume.

### 5. Rootball Depth

Depth of the rootball is measured from the root flare to the bottom of the root mass or bottom of the container.

### 6. Rootball Width

Width of the rootball is measured as the shortest horizontal dimension of the root mass or container from one end to the opposite end.

### 7. Canopy Diameter, Spread, Height at Maturity

Canopy diameter at maturity, spread at maturity and height at maturity shall be specified in Landscape Plants for California Gardens, or other locally calibrated and professionally recognized source.

### 8. Height at Planting

**a.** Height at planting is measured from the root flare.

**b.** For evergreens, height at planting is measured vertically to the midpoint of the leader between the uppermost whorl (branch) and the top of the leader.

**c.** For deciduous shrubs, height is measured vertically to the top of the shortest of all canes.

**d.** For all other plants, height is measured vertically to the highest point of the plant.

### 9. Container Size

**a.** Container Size is measured in accordance with the American Standard for Nursery Stock (ASNS).

**b.** When a minimum container size is indicated by a standard, all equivalent or greater container sizes are also requested in accordance with ASNS Container class volume ranges.

### 10. Caliper

**a.** For fruit trees, small fruits, understock and seedling trees and shrubs, caliper measurement shall be taken at the root collar or at the other points expressly described in the applicable sections of the American Standard for Nursery Stock.

**b.** Caliper for trees with multiple stems is measured as one-half the sum of the caliper of the three largest trunks.

**c.** For all other plants, caliper measurement shall be taken six inches above the root collar.

## E. Relief

**1.** An alternative to plant design and installation standards may be requested in accordance with *Sec. 13B.5.1 (Alternative Compliance)*.

**2.** A deviation from any plant design and installation *dimensional standard* of up to 10% may be requested in accordance with *Sec. 13B.5.2 (Adjustment)*.

**3.** A deviation from any plant design and installation standard may be allowed as a variance in accordance with *Sec. 13B.5.3 (Variance)*.

# DIV. 4C.7. FENCES & WALLS

## SEC. 4C.7.1. FRONTAGE YARD FENCES & WALLS

### A. Intent

To balance the needs for natural surveillance and visual interest along the public realm and security and privacy for private ground floor uses in a manner appropriate to context.

### B. Applicability

All fences, walls or hedges located in a frontage yard as specified by *Frontage District (Part 3B)*.

### C. Standards

#### 1. General

**a.** Where a required frontage screen (Sec. 4C.8.1.C.3) includes a wall or fence, the required fence or wall may only be located in the frontage yard if the wall or fence complies with the allowed frontage yard fence and wall standards specified by *Frontage District (Part 3B)*.

**b.** All fences and walls including their sub-grade elements, such as footings or foundation, shall be located on-site.

**c.** Allowed fence & wall types are hierarchical. Where a fence & wall type with a higher number designator is allowed in a Frontage District, all fence & wall types having a lower number designator are also allowed.

**d.** No fence & wall type with a greater number designator than the fence & wall allowed in Frontage may be located in the *frontage yard*.

**e.** All fences and wall provided shall provide necessary gates or openings to comply with the pedestrian access package standards specified by *Development Standards District (Part 4B)*.

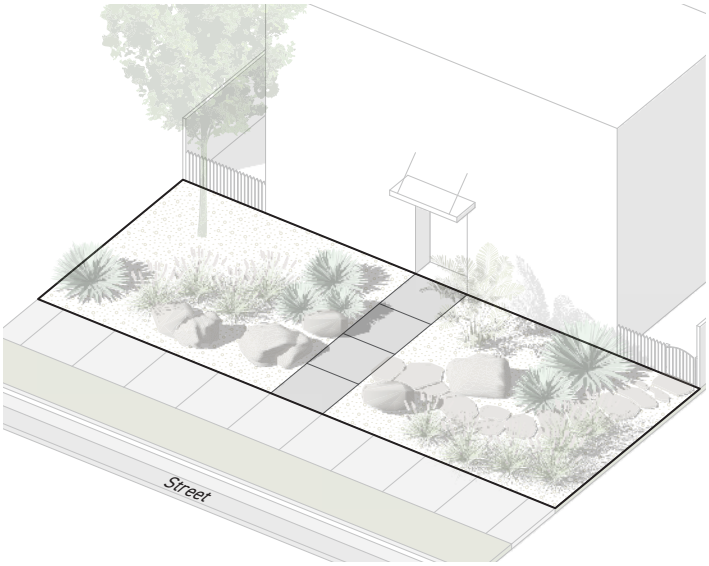
**f.** All fences and walls provided shall comply with *Sec. 4C.7.3. (Fence/Wall Design and Installation)*.

**g.** All hedges provided shall comply with *Sec. 4C.6.4 (Plant Design and Installation).*

## 2. Fence & Wall Types

### a. Type A1

Intended for frontage yards where building shall engage directly with the public realm to provide natural surveillance and visual interest along the public realm. Especially where ground floor uses are commercial or non-fenced frontage yards are the predominant character.

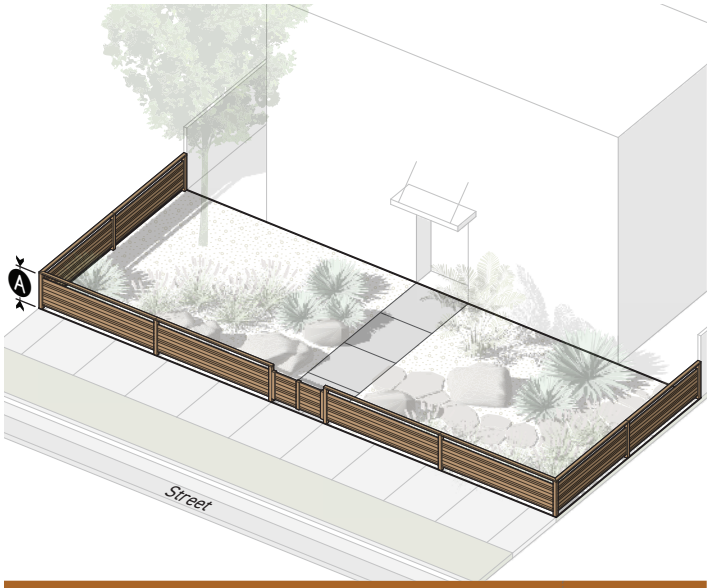


| DIMENSIONAL STANDARDS | |
|---|---|
| **Hedge Height** | Not allowed |
| **Fence/Wall Height*** | Not allowed |

* A fence or wall a maximum of 42" in height is allowed only where required by the California Department of Alcohol and Beverage Control.

### b. Type A2

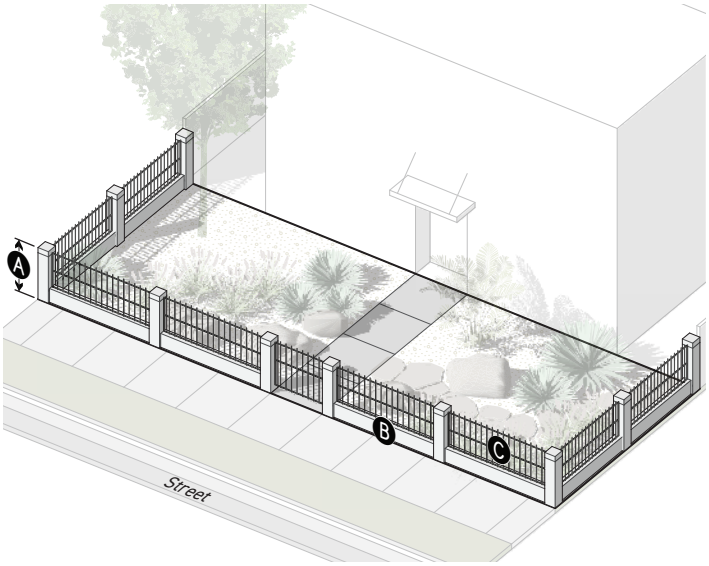
Intended for frontage yards where the need for natural surveillance, and visual interest along the public realm shall be balanced with the need for separation between private ground floor uses and the public realm.



| DIMENSIONAL STANDARDS | |
|---|---|
| Ⓐ **Hedge Height** (max) | 3.5' |
| **Fence/Wall Height** (max) | 3.5' |

## c. Type A3

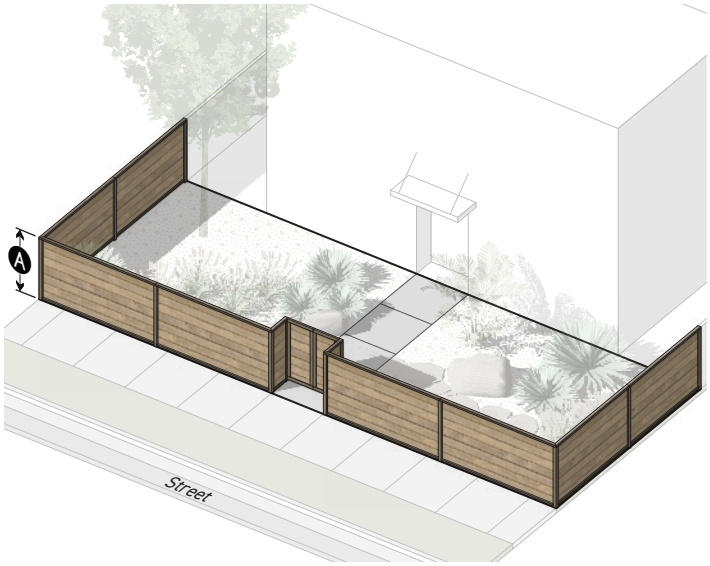
Intended for frontage yards where the need for natural surveillance and visual interest along the public realm shall be balanced with the need for security between private ground floor uses and the public realm.



| DIMENSIONAL STANDARDS | |
|---|---|
| **Hedge Height** (max) | 3.5' |
| A **Fence/Wall** | |
| Height (max) | 6' |
| Opacity below 3.5' in height (max) | 100% |
| Opacity 3.5' and above in height (max) | 50% |

## d. Type A4

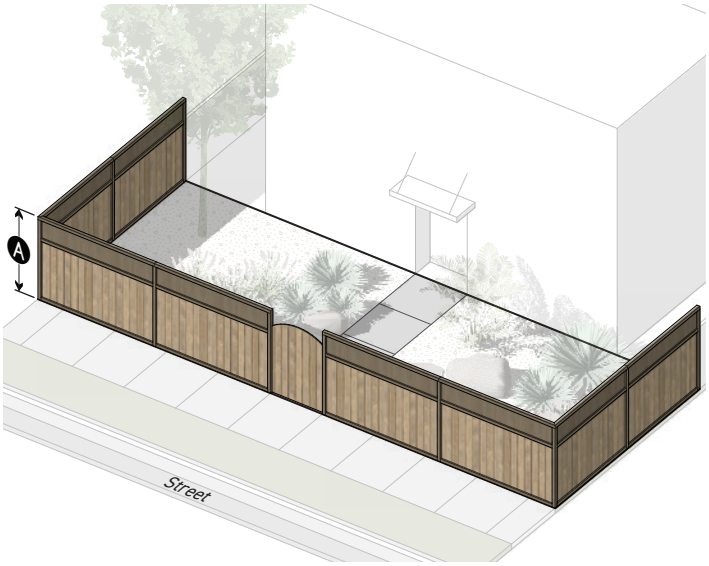
Intended for frontage yards in areas with high pedestrian and vehicular traffic, where natural surveillance and visual interest along the public realm is less critical than the need to mitigate impacts from the public realm on private ground floor uses.



| DIMENSIONAL STANDARDS | |
|---|---|
| A **Hedge Height** (max) | 6' |
| **Fence/Wall Height** (max) | 6' |

## e. Type A5

Intended for frontage yards in areas with high pedestrian and vehicular traffic, where natural surveillance and visual interest along the public realm is less critical than the need to mitigate intrusions from the public realm on private ground floor uses.



| DIMENSIONAL STANDARDS | |
|---|---|
| A **Hedge Height** (max) | 8' |
| **Fence/Wall Height** (max) | 8' |

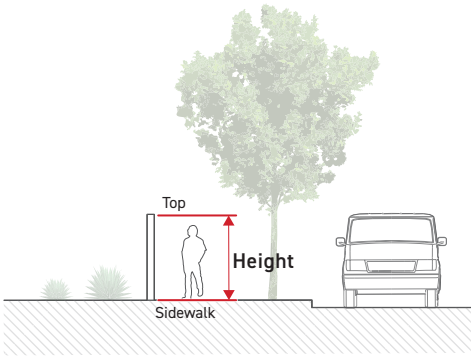
## D. Measurement

### 1. Frontage yard

For frontage yard designation see *Sec. 14.1.20 (Yard Designation)*.

### 2. Fence & Wall Height

**a.** Wall, fence and hedge height is measured from the adjacent sidewalk to the topmost point of the wall or fence.



**b.** Where no sidewalk exists within 20 feet of the wall, fence or hedge, height is measured from finished grade at the base of the wall or fence to the topmost point of the wall or fence.

### 3. Hedge Height

Hedge height is measured according to *Sec. 4C.6.4.D.7 (Height at Planting)*.

### 4. Opacity

For measurement of opacity, see *Sec. 14.1.14 (Opacity %)*.

## E. Relief

**1.** An alternative to frontage yard fences and walls standards may be requested in accordance with *Sec. 13B.5.1 (Alternative Compliance)*.

**2.** Up to a type A5 fence & wall type may be allowed in any Frontage district in accordance with *Sec. 13B.5.2 (Adjustment)*.

**3.** A deviation from any frontage yard fences and walls standard may be allowed as a variance in accordance with *Sec. 13B.5.3 (Variance)*.

## SEC. 4C.7.2. SIDE/REAR YARD FENCES & WALLS

### A. Intent

To provide security and privacy for private ground floor uses facing side and rear yards in a manner appropriate to context.

### B. Applicability

All walls and fences located in a rear or side yard. See *Sec. 14.1.22 (Yard Designation)*.

### C. Standards

1. Where a required *transition screen (Sec. 4C.8.2.C.3)* includes a wall or fence, the required screen standards supersede side/rear yard fences and walls standards.

2. Side and rear yard fences, walls and hedges shall be no taller than specified in the following table:

**SIDE/REAR YARD FENCE & WALL HEIGHT**

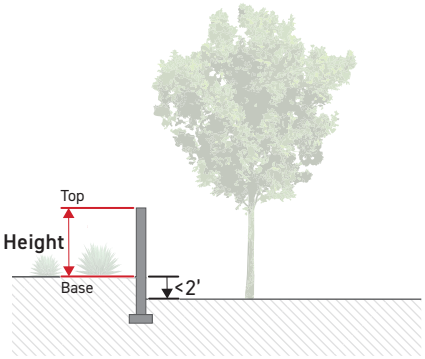
| Use Districts | Height (Max) |
|---|---|
| **Open Space** | 6' |
| **Residential** | 6' |
| **Commercial Mixed** | 6' |
| **Commercial** | 6' |
| **Industrial Mixed** | 6' |
| **Industrial** | 10' |
| **Public** | 6' |

3. All fences and walls provided shall comply with *Sec. 4C.7.3 (Fence/Wall Design and Installation).*

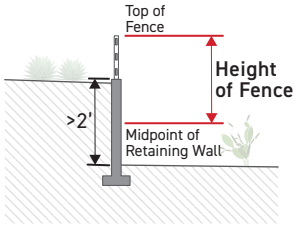
4. All hedges provided shall comply with *Sec. 4C.6.4 (Plant Design and Installation).*

### D. Measurement

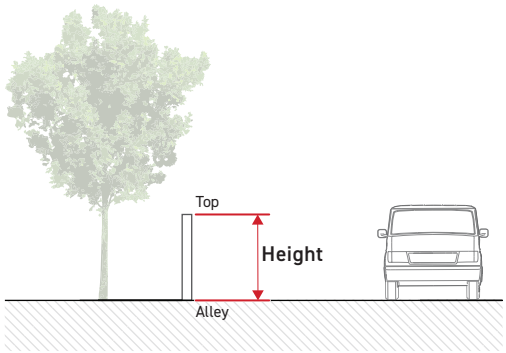
1. Where the difference in finished grade on either side of a fence or wall is less than 2 feet, height is measured from finished grade at the base of the wall or fence on the side with the highest finished grade.



2. When a wall or fence is located within 3 feet of the exterior face of a retaining wall and the retaining wall is 2 feet in height or greater, height is measured from the top of the wall or fence to the midpoint of the retaining wall.



3. Fences and walls located in a rear or side yard abutting an alley are measured from the surface of the adjacent alley, vertically to the topmost point of the wall or fence.



## E. Relief

1. An alternative to side/rear yard fences and walls standards may be requested in accordance with *Sec. 13B.5.1 (Alternative Compliance)*.

2. A deviation from any side/rear yard fences and walls *dimensional standard* of up to 10% may be requested in accordance with *Sec. 13B.5.2 (Adjustment)*.

3. A deviation from any side/rear yard fences and walls standard may be allowed as a variance in accordance with *Sec. 13B.5.3 (Variance)*.

# SEC. 4C.7.3. FENCE/WALL DESIGN & INSTALLATION

## A. Intent

To allow for needed security and privacy while preventing looming, and ensuring adequate access to light and air for abutting properties.

## B. Applicability

All fences, walls and hedges provided on a lot shall comply with fence/wall design and installation standards unless otherwise specified.

## C. Standards

### 1. General

**a.** Walls and fences shall be constructed of a durable, low maintenance material that has a long life expectancy.

**b.** No wall or fence may be constructed of tires, junk, leaves or other discarded materials.

**c.** Fences and walls shall not interfere with visibility at intersections and driveways see *LAMC Sec. 62.200 (Street Intersections - Obstructions to Visibility)*.

### 2. Maintenance

Walls and fences shall be maintained in good repair and shall be kept vertical, structurally sound and protected from deterioration.

## D. Measurement

[Reserved]

## E. Relief

**1.** An alternative to fence/wall design and installation standards may be requested in accordance with *Sec. 13B.5.1 (Alternative Compliance)*.

**2.** A deviation from any fence/wall design and installation *dimensional standard* of up to 10% may be requested in accordance with *Sec. 13B.5.2 (Adjustment)*.

**3.** A deviation from any fence/wall design and installation standard may be allowed as a variance in accordance with *Sec. 13B.5.3 (Variance)*.

# DIV. 4C.8. SCREENING

## SEC. 4C.8.1. FRONTAGE SCREENS

A device or combination of elements along a frontage lot line that conceals, obstructs or protects the public realm from adjacent uses.

### A. Intent

To mitigate negative impacts of uses with significant impacts from the public realm, promoting visual interest and increasing comfort for users of the public realm.

### B. Applicability

Frontage screen standards are applicable when required by *Part 5B (Use Districts)*, *Part 5C (General Use Standards)*, *Sec. 4C.2.2. (*Motor vehicle use area *Design)*, *Sec. 4C.2.3. (Queuing)*, *Sec. 4C.2.4. (Loading)*, *Sec. 4C.4.3. (Parking Lot Design)* or *Sec. 4C.4.4. (Parking Structure Design)*.

### C. Standards

#### 1. General

**a.** Required frontage screens shall be located along the frontage lot line for the length of the use subject to screening requirements.

**b.** Required frontage screens including their sub-grade elements, such as footings or foundation, shall be located entirely on-site.

**c.** Breaks for pedestrian, bicycle and vehicular access are allowed, provided the break in the screen is the minimum practical width.

**d.** When more than one frontage screen type is required, the screen with the highest minimum wall shall apply.

**e.** For portions of frontage lot lines where a building is located between the public realm and an the use requiring the frontage screen, no fence or wall is required as part of a frontage screen.

**f.** Where a required frontage screen includes a wall or fence, the fence or wall may only be located in the frontage yard if the wall or fence complies with the allowed frontage yard fence and wall standards specified by *Frontage District (Part 3B)*.

**g.** Where a required frontage screen includes a wall or fence, the required screen standards supersede *side/rear yard fences and walls standards (Sec. 4C.7.2.)*.

**h.** All fences and walls provided in a frontage screen shall comply with *Sec. 4C.7.3 (Fence/Wall Design and Installation)*

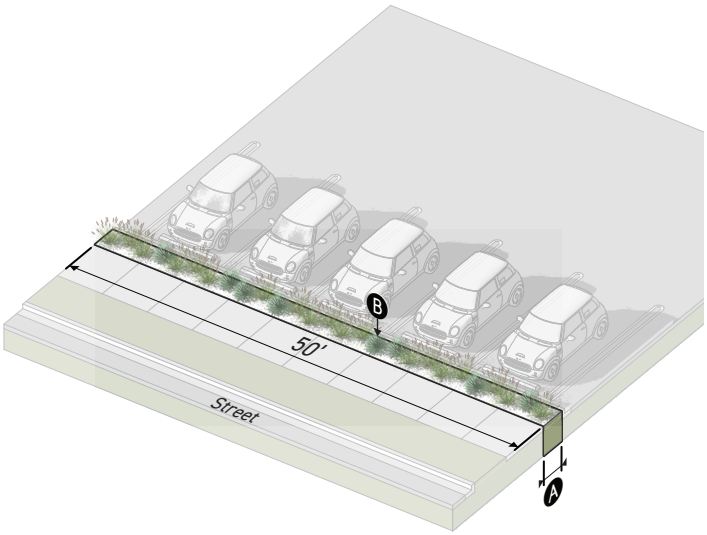
**i.** All plants provided in a frontage screen shall comply with *Sec. 4C.6.4 (Plant Design and Installation).*

**j.** *Maximum wall and fence height is regulated by Sec. 4C.7.2. and Sec. 4C.7.2.*

## 2. Frontage Screen Types

### a. Type B1

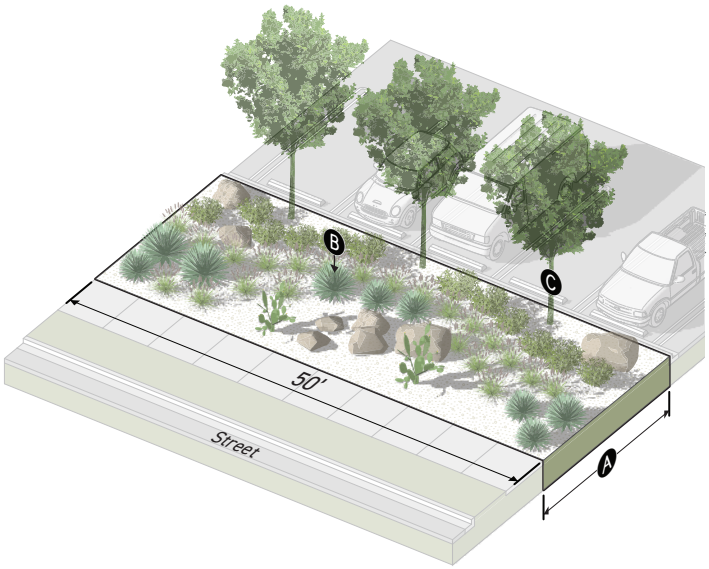
Intended for screening motor vehicle use areas that face a frontage lot line, including vehicle display areas.



| PLANTING AREA | |
|---|---|
| A **Width (min)** | 2.5' |
| B **Screening Plants** (min per 50') | 30 |
| **FENCES & WALLS** | |
| Height | n/a |
| Opacity | n/a |

### b. Type B2

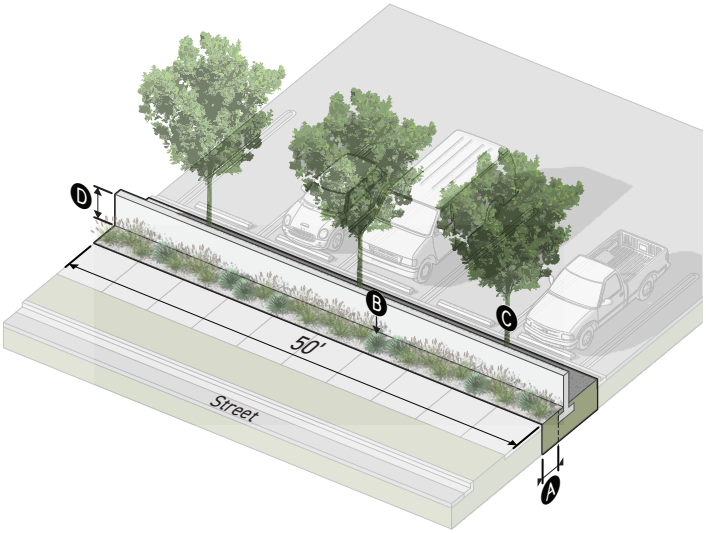
Intended for screening motor vehicle areas including drive-through lanes, drive aisles, maneuvering areas and fire lanes that face a frontage lot line.



| PLANTING AREA | |
|---|---|
| A **Width (min)** | 15' |
| B **Screening Plants** (min per 50') | 45 |
| C **Large Species Trees** (min per 50') | 3 |
| **FENCES & WALLS** | |
| Height | n/a |
| Opacity | n/a |

## c. Type B3

Intended for screening motor vehicle areas including drive-through lanes, drive aisles, maneuvering areas and fire lanes that face a frontage lot line.

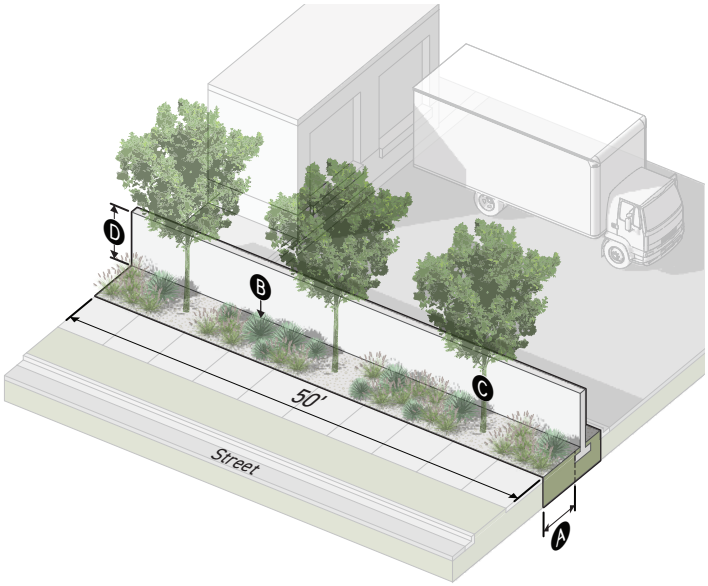


| PLANTING AREA | |
|---|---|
| A **Width** (min)* | 2.5' |
| B **Screening Plants** (min per 50') | 30 |
| C **Large Species Trees** (min per 50') | 3 |
| **FENCES & WALLS** | |
| D **Height** (min) | 3.5' |
| Opacity | |
| Below 3.5' (min) | 90% |
| 3.5' and above (max) | 50% |

* **Planting areas standards** *(Sec. 4C.6.4.C.2)* **shall be met for each required plant.**

## d. Type B4

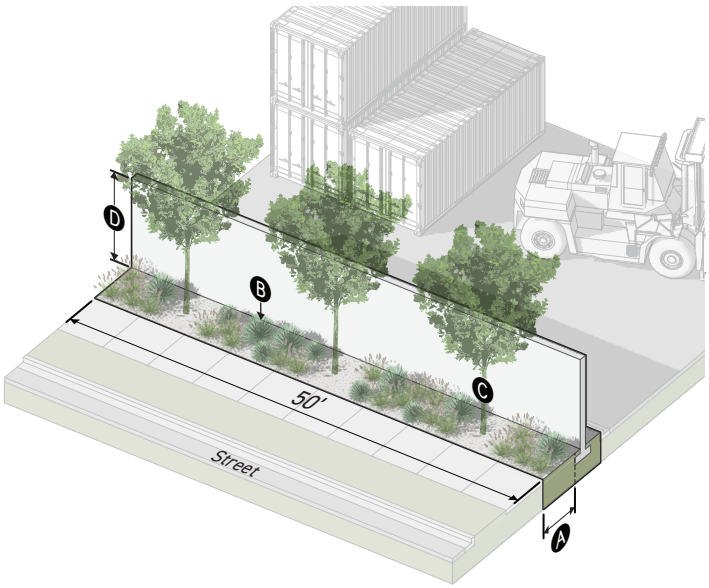
Intended for screening outdoor areas associated with moderate-impact uses that face a frontage lot line.



| PLANTING AREA | |
|---|---|
| A **Width** (min)* | 5' |
| B **Screening Plants** (min per 50') | 30 |
| C **Large Species Trees** (min per 50') | 3 |
| **FENCES & WALLS** | |
| D **Height** (min) | 6' |
| Opacity | |
| Below 6' (max) | 100% |
| 6' and above (max) | 50% |

## e. Type B5

Intended for screening outdoor areas associated with high-impact uses that face a frontage lot line.



| | |
|---|---|
| **PLANTING AREA** | |
| Ⓐ **Width** (min) | 5' |
| Ⓑ **Screening Plants** (min per 50') | 30 |
| Ⓒ **Large Species Trees** (min per 50') | 3 |
| **FENCES & WALLS** | |
| Ⓓ **Height** (min) | 10' |
| **Opacity** | |
| Below 10' (min) | 100% |
| 10' and above (max) | 100% |

## D. Measurement

### 1. Planting Area Width

For measuring planting area width see *Sec. 4C.6.4.D.1 (Planting Area Width)*.

### 2. Screening Plants

For screening plant standards see *Sec. 4C.6.4.C.4 (Screening Plants)*.

### 3. Large Species Trees

For large tree standards see *Sec. 4C.6.4.C.3.a.i (Tree Type- Large Tree)*.

### 4. Fences & Wall Height

For measuring fence and wall height see *Sec. 4C.7.1.D.1 (Fence and Wall Height)*.

### 5. Fences & Wall Opacity

For measuring opacity see *Sec. 14.1.14. (Opacity %)*.

## E. Relief

**1.** An alternative to frontage screen standards may be requested in accordance with *Sec. 13B.5.1 (Alternative Compliance)*.

**2.** A deviation from any frontage screen *dimensional standard* of up to 10% may be requested in accordance with *Sec. 13B.5.2 (Adjustment)*.

**3.** A deviation from any frontage screen standard may be allowed as a variance in accordance with *Sec. 13B.5.3 (Variance)*.

## SEC. 4C.8.2. TRANSITION SCREENS

A device or combination of elements along a common lot line that conceals, obstructs or protects abutting lots from impactful uses.

### A. Intent

To mitigate negative impacts from subject uses to adjacent uses, promoting visual interest and increasing comfort for users of the subject lot, the public realm and adjacent lots.

### B. Applicability

Transition screen standards are applicable when required by *Part 5B (Use Districts)*, *Part 5C (General Use Standards)*, *Sec. 4C.2.2. (*Motor vehicle use area *Design)*, *Sec. 4C.2.3. (Queuing)*, *Sec. 4C.2.4. (Loading)*, *Sec. 4C.4.3. (Parking Lot Design)* or *Sec. 4C.4.4. (Parking Structure Design)*.

### C. Standards

#### 1. General

**a.** Required transition screens shall be located along the common lot line for the length of the use subject to screening requirements.

**b.** Required transition screens including their sub-grade elements, such as footings or foundation, shall be located entirely on-site.

**c.** Breaks for pedestrian, bicycle and vehicular access are allowed, provided the break in the screen is the minimum practical width.

**d.** When more than one transition screen type is required, the screen with the highest minimum wall shall apply.

**e.** For portions of common lot lines where a building is located between the common lot line and an impact use, no fence or wall is required as part of a frontage screen.

**f.** Where a required transition screen includes a wall or fence, the fence or wall may only be located in the frontage yard if the wall or fence complies with the allowed frontage yard fence and wall standards specified by *Frontage District (Part 3B)*.

**g.** Where a required transition screen includes a wall or fence, the required screen standards supersede *side/rear yard fences and walls standards (Sec. 4C.7.2.)*.

**h.** All fences and walls provided in a transition screen shall comply with *Sec. 4C.7.3 (Fence/ Wall Design and Installation)*

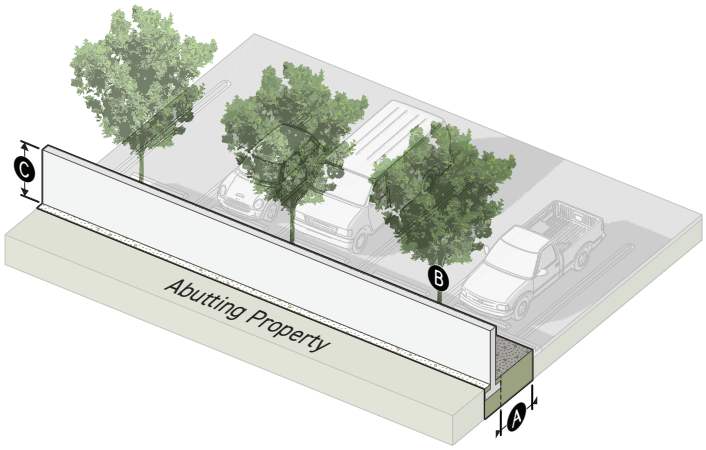
**i.** All plants provided in a transition screen shall comply with *Sec. 4C.6.4 (Plant Design and Installation).*

**j.** Maximum wall and fence height is regulated by *Sec. 4C.7.2. and Sec. 4C.7.2.*

## 2. Transition Screen Types

### a. Type C1

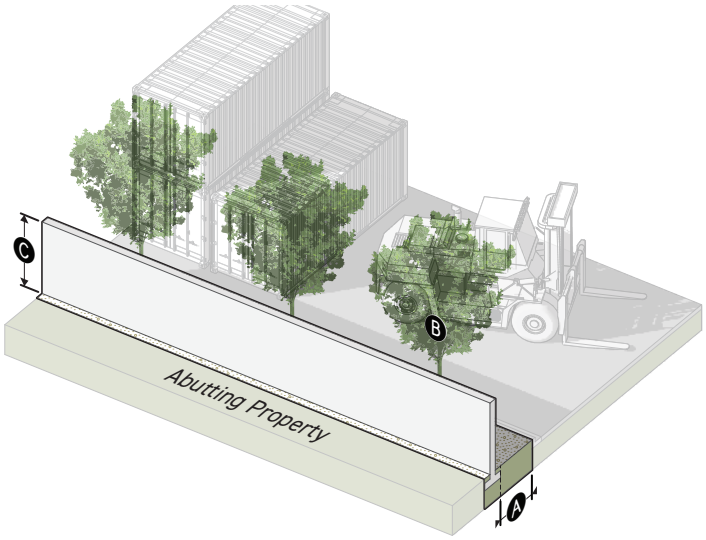
Intended for screening moderate-impact uses from abutting lower-intensity uses.



| PLANTING AREA | |
|---|---|
| A **Width (min)** | 5' |
| **Large Species Trees** (min per 50') | 3 |
| **FENCES & WALLS** | |
| B Height (min) | 6' |
| **Opacity** | |
| Below 6' (min) | 100% |
| 6' and above (max) | 50% |

### b. Type C2

Intended for screening high-impact uses from lower-intensity abutting uses.



| PLANTING AREA | |
|---|---|
| A **Width (min)** | 5' |
| **Large Species Trees** (min per 50') | 3 |
| **FENCES & WALLS** | |
| D Height (min) | 10' |
| **Opacity** | |
| Below 10' (min) | 100% |
| 10' and above (max) | 100% |

## D. Measurement

### 1. Planting Area Width

For measuring planting area width see *Sec. 4C.6.4.D.1 (Planting Area Width)*.

### 2. Large Species Trees

For large tree standards see *Sec. 4C.6.4.C.3.a.i (Tree Type- Large Species Tree)*.

### 3. Fences & Wall Height

For measuring fence and wall height see *Sec. 4C.7.1.D.1 (Fence and Wall Height)*.

### 4. Fences & Wall Opacity

For measuring opacity see *Sec. 14.1.14 (Opacity %)*.

## E. Relief

**1.** An alternative to transition screen standards may be requested in accordance with *Sec. 13B.5.1 (Alternative Compliance)*.

**2.** A deviation from any transition screen *dimensional standard* of up to 10% may be requested in accordance with *Sec. 13B.5.2 (Adjustment)*.

**3.** A deviation from any transition screen standard may be allowed as a variance in accordance with *Sec. 13B.5.3 (Variance)*.

# SEC. 4C.8.3. OUTDOOR STORAGE

Material and equipment, new or used, held outside of a building for future use. Outdoor storage includes the storage of vehicles, boats, or airplanes which are inoperable, wrecked, damaged or unlicensed, i.e. not currently licensed by the Department of Motor Vehicles.

## A. Intent

To ensure outdoor storage areas are designed in a manner that conceals, obstructs or protects abutting lots from impactful activities associated with outdoor storage.

## B. Applicability

Outdoor storage screening standards are applicable where required by a *Use District (Part 5B)* or *General Use Standard (Part 5C)*.

## C. Standards

### 1. Location

Outdoor storage and its screening enclosure shall not be located in any of the following locations:

**a.** In a frontage yard.

**b.** Closer to any frontage lot line than the frontage lot line setback listed in outdoor storage screen types.

### 2. Screening Enclosure

**a.** Outdoor storage areas shall be screened with the *outdoor storage screening type (Sec. 4C.8.3)* specified by *Use District (Part 5B)* or *General Use Standard (Part 5C)*.

**b.** Necessary gates provided in the screening structure shall meet the applicable *outdoor storage screening type (Sec. 4C.8.3)* requirements in addition to the following standards:

**i.** Shall have a height of no less than the minimum required fence or wall height.

**ii.** Where a screening structure is taller than the minimum height, gates may differ no more than 1 foot from the height of the wall or fence provided.

**iii.** In no case shall gates exceed the height of the screening structure by more than 1 foot.

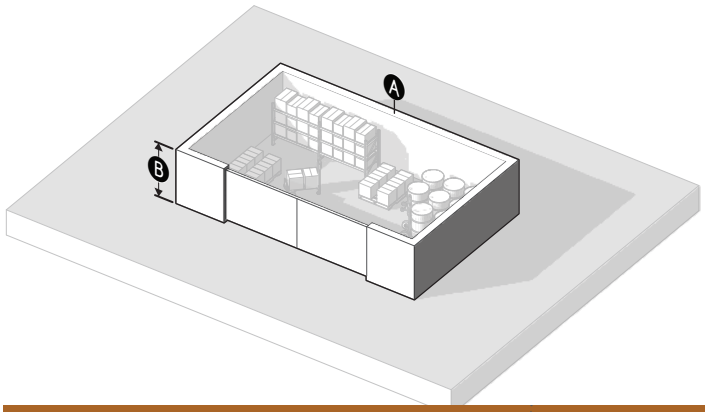
**c.** No material or equipment shall be stored to a height greater than the height of the enclosing wall or fence.

**d.** All provided fences and walls shall comply with *Sec 4C.7.3 (Fence/Wall Design and Installation)*.

### 3. Outdoor Storage Screening Types

## a. Screen A

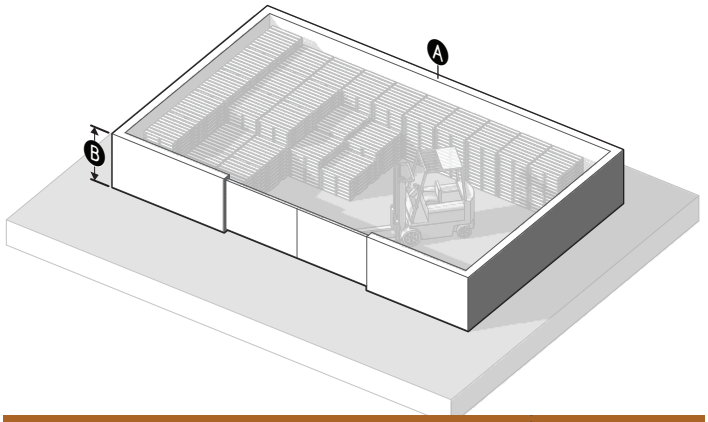
Applicable as required by *Article 5 (Use)*.



| | |
|---|---|
| **SITING** | |
| **Frontage lot line setback** (min) | 60' |
| **Area** (max) | 3000 SF |
| **FENCES & WALLS** | |
| **Enclosure** (min) | 100% |
| **Height (min)** | 6' |
| **Opacity (min)** | 90% |

## b. Screen B

Applicable as required by *Article 5 (Use)*.



| | |
|---|---|
| **SITING** | |
| **Frontage lot line setback** (min) | n/a |
| **Area** (max) | n/a |
| **FENCES & WALLS** | |
| **Enclosure** (min) | 100% |
| **Height (min)** | 6' |
| **Opacity (min)** | 90% |

## D. Measurement

### 1. General

**a.** For frontage yard designation see *Sec. 14.1.20.G. (Frontage yard)*.

**b.** Frontage lot line setbacks are measured perpendicular from all frontage lot lines toward the interior of the lot

**c.** For lot line designation see *Sec. 14.1.20.G. (Frontage yard)*.

**d.** For measurement of area, the area of an outdoor storage space is measured as all portions of a lot enclosed by a screening structure. The area does not include the screening structure.

**e.** For measurement of enclosure see *Sec. 14.1.4. (Enclosure)*.

**f.** For measurement of height see *Sec. 4C.7.1.D.1 (Fence and Wall Height)*.

**g.** For measurement of opacity see *Sec. 14.1.14 (Opacity %)*.

## E. Relief

**1.** An alternative to outdoor storage screening standards may be requested in accordance with *Sec. 13B.5.1 (Alternative Compliance)*.

**2.** A deviation from any outdoor storage screen type dimensional standard of up to 15% may be requested in accordance with *Sec. 13B.5.2 (Adjustment)*.

**3.** Deviation from any outdoor storage standard may be allowed as a variance in accordance with *Sec. 13B.5.3 (Variance)*.

# SEC. 4C.8.4. WASTE RECEPTACLES

## A. Intent

To ensure waste receptacle service areas are designed in a manner that does not detract from the safety, comfort, or enjoyment of users of the lot, neighboring lots or the public realm.

## B. Applicability

All waste receptacles provided on a lot with the exception of lots zoned with a 1L, 2L, 3L, or 4L Density District.

## C. Standards

### 1. Location

**a.** Waste receptacles and their screening enclosures shall not be located in a frontage yard.

**b.** Waste receptacles may be located within a building or structure provided they are 100% enclosed.

### 2. Screening Enclosure

The outdoor waste receptacle shall be screened with an enclosure that meets the following requirements:

**a.** 100% enclosed for a minimum height of 6 feet.

**b.** Minimum of 90% opaque.

**c.** Access gates provided in the screening enclosure shall meet the following standards:

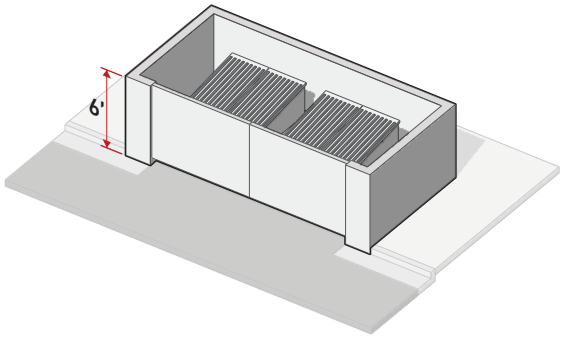
**i.** Shall have a height of no less than 6 feet.

**ii.** Where a screening structure is taller than the minimum height, gates may differ no more than 1 foot from the height of the wall or fence provided.

**iii.** In no case shall gates exceed the height of the screening structure by more than 1 foot.

**iv.** No less than 90% opaque.

**d.** Meet *Sec. 4C.7.3 (Fence/Wall Design & Installation)*.



## D. Measurement

**1.** For frontage yard designation see *Sec. 14.1.20.G. (Frontage yard)*.

**2.** For measurement of height see *Sec. 4C.7.1.D.1 (Fence and Wall Height)*.

**3.** For measurement of enclosure see *Sec. 14.1.4. (Enclosure)*.

**4.** For measurement of opacity see *Sec. 14.1.14 (Opacity %)*.

## E. Relief

**1.** An alternative to waste receptacle screening standards may be requested in accordance with *Sec. 13B.5.1 (Alternative Compliance)*.

2. A deviation from any waste receptacle screening dimensional standard of up to 15% may be requested in accordance with *Sec. 13B.5.2 (Adjustment)*.

3. Deviation from any outdoor storage standard may be allowed as a variance in accordance with *Sec. 13B.5.3 (Variance)*.

## SEC. 4C.8.5. ROOF-MOUNTED EQUIPMENT

### A. Intent

To ensure roof mounted equipment is designed to minimize effects on surrounding properties and the *public realm* and to ensure roof-mounted equipment is obscured from view on the city skyline.

### B. Applicability

All *mechanical* or *utility equipment* located on a roof shall meet the following screening standards.

### C. Standards

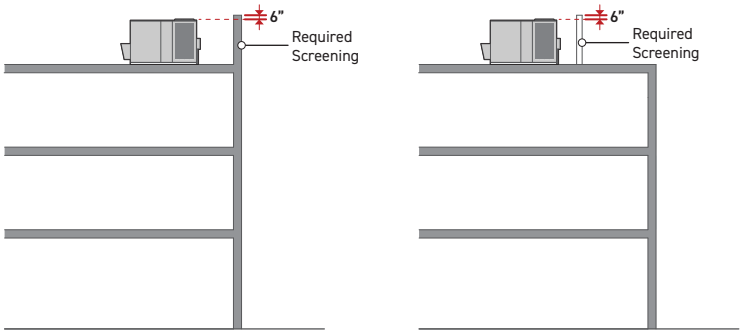
1. Roof-mounted mechanical or utility equipment (including but not limited to, compressors, condensers, conduits, pipes, vents, and ducts) shall be screened on all sides by a parapet or *screening enclosure* that:

   a. Is no less than 75% opaque;

   b. Has a minimum height 6 inches greater in height than the topmost point of the equipment; and

   c. Encloses the equipment 100% up to the minimum height of the structure.

2. The screening structure shall meet *Sec. 4C.7.3 (Fence/Wall Design & Installation)*.



### D. Measurement

1. For measurement of opacity see *Sec. 14.1.14 (Opacity %)*.

2. For measurement of Enclosure see *Sec. 14.1.4 (Enclosure)*.

3. Height from topmost point of the equipment is measured to the top of the screen at its lowest height.

### E. Exceptions

The following are exempt:

1. *Sustainable energy systems*;
2. *Los Angeles Fire Department equipment*;
3. *Helipads*; and
4. *Window cleaning systems*.

### F. Relief

1. An alternative to roof-mounted equipment screening standards may be requested in accordance with *Sec. 13B.5.1 (Alternative Compliance)*.
2. A deviation from any roof-mounted equipment screening dimensional standard of up to 15% may be requested in accordance with *Sec. 13B.5.2 (Adjustment)*.
3. Deviation from any roof-mounted equipment screening standard may be allowed as a variance in accordance with *Sec. 13B.5.3 (Variance)*.

## SEC. 4C.8.6. GROUND-MOUNTED EQUIPMENT

### A. Intent

To ensure ground-mounted equipment is concealed to minimize effects on the public realm.

### B. Applicability

All outdoor mechanical or utility equipment supported by an approximately horizontal surface located between finished grade and the top of the ground story shall meet the following screening standards.

### C. Standards

#### 1. Location

a. Equipment located entirely below finished grade may be located anywhere on a lot.

b. Electrical transformers, utility boxes and other utility equipment, located in a frontage yard shall be installed below grade to the satisfaction of the Los Angeles Department of Water and Power.

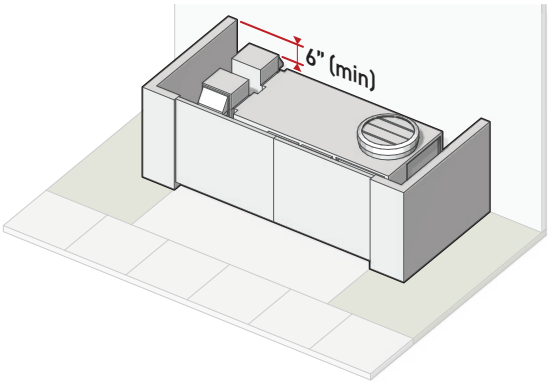
c. Ground mounted equipment may be located within a building or structure provided no portion faces a frontage yard.

**d.** Ground mounted equipment and their screening enclosures shall not be located in a frontage yard unless it is fully screened with a screening enclosure meeting the standards below and that screening enclosure complies with the frontage yard fences and walls type standards allowed by *Frontage District (Part 3B)*.

### 2. Screening Enclosure

The ground-mounted equipment located in a frontage yard shall be screened with an enclosure that meets the following requirements:

**a.** 100% enclosed for a height no less that 6 inches taller than the topmost point of the equipment.



**b.** Minimum of 90% opaque.

**c.** Access gates provided in the screening enclosure shall meet the following standards:

**i.** Shall have a height no less that 6 inches taller than the topmost point of the equipment.

**ii.** Where a screening structure is taller than the minimum height, gates may differ no more than 1 foot from the height of the wall or fence provided.

**iii.** In no case shall gates exceed the height of the screening structure by more than 1 foot.

**iv.** No less than 90% opaque.

**d.** Meet *Sec. 4C.7.3 (Fence/Wall Design & Installation)*.

## D. Measurement

**1.** For measurement of opacity see Sec. 14.1.14 (Opacity %).

**2.** For measurement of Enclosure see Sec. 14.1.4 (Enclosure).

**3.** Height from topmost point of the equipment is measured to the top of the screen and gate at their lowest height.

### E. Exceptions

Where Los Angeles Department of Water and Power deems below grade vaults for electrical transformers, utility boxes and other utility equipment infeasible, this equipment may be located at grade and in a frontage yard provided the equipment is screened in conformance with *Sec 4C.8.6. (Ground-Mounted Equipment- Screening Enclosure)* and the frontage yard fences and walls allowed standards in *Frontage District (Part 3B)*.

### F. Relief

1. An alternative to ground mounted equipment screening standards may be requested in accordance with Sec. 13B.5.1 (Alternative Compliance).
2. A deviation from any ground-mounted equipment screening dimensional standard of up to 15% may be requested in accordance with Sec. 13B.5.2 (Adjustment).
3. Deviation from any ground-mounted equipment screening standard may be allowed as a variance in accordance with Sec. 13B.5.3 (Variance).

## SEC. 4C.8.7. WALL-MOUNTED EQUIPMENT

### A. Intent

To ensure wall-mounted equipment is concealed to minimize effects on the public realm.

### B. Applicability

All outdoor mechanical or utility equipment attached to the wall of a building or structure shall meet the following screening standards.

### C. Standards

#### 1. Location

**a.** Equipment located entirely below finished grade may be located anywhere on a lot.

**b.** Wall-mounted equipment may be located within a building or structure provided no portion faces a frontage yard.

**c.** Wall-mounted electrical meters, gas meters, cable boxes and other utility equipment shall not be attached to a building facade facing a frontage yard, and shall not be located in a frontage yard unless it is fully screened with a screening enclosure meeting the standards below and that screening enclosure complies with the frontage yard fences and walls type standards allowed by *Frontage District (Part 3B)*.

#### 2. Screening Enclosure

Wall-mounted equipment located on a building or structure facade abutting a frontage yard shall be screened with an enclosure that meets the following requirements:

**a.** Minimum 75% enclosed for a height of at least 6 inches taller than the topmost point of the equipment.

**b.** Minimum of 75% opaque.

**c.** Access gates provided in the screening enclosure shall meet the following standards:

**i.** Shall have a height no less that 6 inches taller than the topmost point of the equipment.

**ii.** Where a screening structure is taller than the minimum height, gates may differ no more than 1 foot from the height of the wall or fence provided.

**iii.** In no case shall gates exceed the height of the screening structure by more than 1 foot.

**iv.** No less than 90% opaque.

**d.** Meet *Sec. 4C.7.3 (Fence/Wall Design & Installation)*.

## D. Measurement

**1.** For measurement of opacity see Sec. 14.1.14 (Opacity %).

**2.** For measurement of Enclosure see Sec. 14.1.4 (Enclosure).

**3.** Height from topmost point of the equipment is measured to the top of the screen and gate at their lowest height.

## E. Exceptions

[Reserved]

## F. Relief

**1.** An alternative to wall-mounted equipment screening standards may be requested in accordance with Sec. 13B.5.1 (Alternative Compliance).

**2.** A deviation from any wall-mounted equipment screening dimensional standard of up to 10% may be requested in accordance with Sec. 13B.5.2 (Adjustment).

**3.** Deviation from any wall-mounted equipment screening standard may be allowed as a variance in accordance with Sec. 13B.5.3 (Variance).

# DIV. 4C.9. GRADING & RETAINING WALLS

## SEC. 4C.9.1. GRADING & HAULING

[Reserved]

# SEC. 4C.9.2. RETAINING WALLS

A freestanding continuous structure, as viewed from the top, intended to support earth, which is not attached to a building.

## A. Intent

To prevent retaining walls which loom over neighboring properties and public right-of-ways in our *hillside areas* and improve the aesthetic quality of large retaining walls.

## B. Applicability

This Section applies to retaining walls that meet all of the following criteria:

**1.** Located in an Agricultural or Residential Use District;

**2.** Located on land designated as a *hillside area*; and

**3.** Located on a lot developed or to be developed with dwelling units.

## C. Standards

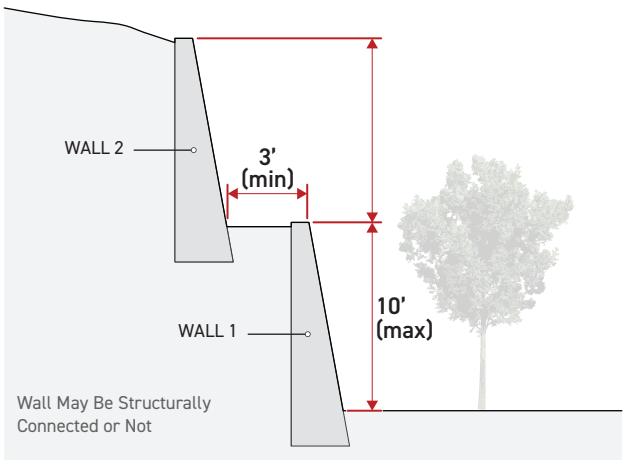
### 1. General

A maximum of one free standing vertical or approximately vertical retaining wall may be built on any lot with a maximum height of 12 feet. However, as shown in the diagram below, a maximum of two vertical or approximately vertical walls or portions of a wall can be built if they comply with the following:

**a.** The minimum horizontal distance between the two walls is three feet,

**b.** Neither of the two walls exceed a height of 10 feet, and

**c.** In no case shall the height of a wall located in a yard exceed the maximum height specified by the *frontage yard fence and wall type (Sec. 4C.7.1.C.2.)* allowed by *Frontage District (Part 3B)*.



### 2. Landscaping

For retaining walls of eight feet or greater in height, the applicant shall submit a landscape plan designed to completely hide the retaining wall from view within a reasonable amount of time. The landscape plan shall be subject to the approval of the Director of Planning in accordance with Sections 12.40 through 12.43 of this Code and any plant standards in *Div 4C.6 (Plants)* and fences and wall standards in *Div. 4C.7. (Fences and Walls)*.

## D. Measurement

The height of retaining walls is measured from the top of the wall to the lower side of the adjacent ground elevation.

## E. Exceptions

### 1. Exception for Public Agency Projects

This Section does not apply to projects undertaken by a public agency.

### 2. Exception for Retaining Walls Required by Building and Safety

The provisions of this subdivision do not apply to any retaining wall built to comply with an order issued by the Department of Building and Safety to repair an unsafe or substandard condition.

## F. Relief

The Zoning Administrator may approve retaining walls that exceed the heights or the maximum number allowed in Subsection C. above pursuant to Sec. 13B.2.1. (Class 1 Conditional Use Permit).

# DIV. 4C.10. OUTDOOR LIGHTING & GLARE

## SEC. 4C.10.1. OUTDOOR LIGHTING

### A. Intent

Minimize light trespass and provide lighting standards to support a variety of environments.

### B. Applicability

Any new outdoor lighting shall meet the requirements of this Section.

### C. Standards

#### 1. Light Trespass

All outdoor lighting shall be directed toward the lot upon which the luminaire is located in order to prevent light trespass onto adjacent properties.

#### 2. Lighting Quantity

**a.** Projects must comply with the applicable outdoor lighting requirements from Chapter 9, Article 3 of this Code (Electrical Code), and non-residential lighting and glare requirements from Chapter 9, Article 9 of this Code (Green Building Code).

**b.** All parking areas and garages provided for three or more dwelling units or guest rooms shall have an average surface illumination of not less than 0.2 footcandles (2.15 lx).

**c.** River Form Districts or Frontages. Any property zoned with a River Form District or River Frontage must meet the additional standards below:

**i.** All site and building mounted lighting shall be designed such that it produces a maximum initial luminance value no greater than 0.20 horizontal and vertical foot candles (2.15 lux) at the site boundary and no greater than 0.01 horizontal foot candles (0.11 lux) 15 feet beyond the site.

**ii.** All low pressure sodium, high pressure sodium, metal halide, fluorescent, quartz, incandescent greater than 60 watts, mercury vapor, and halogen fixtures shall be fully shielded in such a manner as to not exceed the limitations in Sec. 4C.10.1.C.2.a, above.

### D. Measurement

[Reserved]

### E. Exceptions

[Reserved]

### F. Relief

A deviation from any lighting standard may be requested as a variance in accordance with *Sec. 13B.5.3 (Variance)*.

## SEC. 4C.10.2. GLARE

### A. Intent

To prevent the use of materials that generate high levels of glare and reflected heat resulting in detrimental effects on surrounding properties and the public realm.

### B. Applicability

1. All glass installed on a building facade shall comply with glare standards.
2. Properties zoned with a House-Scale or Estate-Scale Form District do not need to comply with glare standards.

### C. Standards

Buildings may not use materials with an exterior reflectance rating of 30 percent or greater.

### D. Measurement

[Reserved]

### E. Exceptions

[Reserved]

### F. Relief

1. An alternative to any glare standards may be requested in accordance with *Sec. 13B.5.1 (Alternative Compliance)*.
2. A deviation from any glare standard may be requested as a variance in accordance with *Sec. 13B.5.3 (Variance)*.

# DIV. 4C.11. SIGNS

## SEC. 4C.11.1. RULES FOR ALL SIGNS

### A. Intent

The intent of this Division is to promote public safety and welfare by regulating signs in keeping with the following objectives:

1. The design, construction, installation, repair and maintenance of signs will not interfere with traffic safety or otherwise endanger public safety.
2. This Division will provide reasonable protection to the visual environment by controlling the size, height, spacing and location of signs.
3. Both the public and sign users will benefit from signs having improved legibility, readability and visibility.
4. Consideration will be given to equalizing the opportunity for messages to be displayed.
5. Adequacy of message opportunity will be available to sign users without dominating the visual appearance of the area.
6. This Division will conform to judicial decisions, limiting further costly litigation and facilitating enforcement.

### B. Applicability

1. All *exterior signs*, *window signs* and *sign support structures* not located primarily in a public right-of-way shall conform to the requirements of this Division and all other applicable provisions of this Chapter.
2. There may be additional sign regulations in Sign Districts, Specific Plans, Overlays and Use Standards. See *Article 8 (Specific Plans and Supplemental Districts)* for their relationship with the standard regulations.
3. A sign, having no sign face visible from any public or private right-of-way, that is enclosed by permanent, opaque architectural features on the project site, including building walls, freestanding walls, roofs, or overhangs, is not subject to the requirements of this Division except for the general brightness limitation set forth in *Sec. 4C.11.1.C.2. (Sign Illumination Limitations)*.

### C. Standards

#### 1. Ideological, Political and Non-Commercial Messages

No provision of this Division prohibits an *ideological*, *political* or other *noncommercial message* on a sign otherwise permitted by this Division.

### 2. Sign Illumination Limitations

No sign shall be arranged and illuminated in a manner that will produce a light intensity of greater than 3 *footcandles* above ambient lighting, as measured at the property line of the nearest residentially-zoned property.

### 3. Maintenance

#### a. Appearance

Every sign shall be maintained in a clean, safe and good working condition, including the replacement of defective parts, defaced or broken faces, lighting and other acts required for the maintenance of the sign. *Display surfaces* shall be kept neatly painted or posted at all times.

#### b. Debris Removal

The base of any sign erected on the ground shall be kept clear of weeds, rubbish or other combustible material at all times.

#### c. Abandoned Signs

90 days after the cessation of a business activity, service or product, the related signs shall be removed, or the face of the signs removed and replaced with blank panels, or be painted out.

### 4. Hazard To Traffic

#### a. Prohibition

No sign or sign support structure shall be erected, constructed, painted or maintained, and no permit can be issued, if the sign or sign support structure, because of its location, size, nature or type, constitutes a hazard to the safe and efficient operation of vehicles upon a street or a freeway, or creates a condition that endangers the safety of persons or property.

#### b. Hazard Referral

The Department of Building and Safety will refer the following to LADOT for hazard evaluation and determination prior to the issuance of a building permit:

**i.** All permit applications for signs that will be visible from and are located within 500 feet of the main traveled roadway of a freeway; and

**ii.** All other permit applications and any signs that are determined by the Department of Building and Safety to have a potential for hazard.

#### c. Hazard Determination

LADOT will return to the Department of Building and Safety each application given to it together with a statement of its determination. If LADOT determines that the sign or sign

support structure will constitute a hazard, the Department of Building and Safety shall deny the application for permit.

### 5. Freeway Exposure

**a.** No person shall erect, construct, install, paint or maintain, and no building or electrical permit can be issued for, any sign or sign support structure within 2,000 feet of a freeway unless the Department of Building and Safety has determined that the sign will not be viewed primarily from a main traveled roadway of a freeway or an on-ramp/off-ramp.

**b.** The phrase "viewed primarily from" means that the message may be seen with reasonable clarity for a greater distance by a person traveling on the main traveled roadway of a freeway or on-ramp/off-ramp than by a person traveling on the street adjacent to the sign.

### 6. Sign Permit Priority Status

**a.** To maintain location, area, frontage or spacing status, signs shall be installed within 6 months of issuance of a building permit for such sign or prior to expiration of any permit extension granted by the Department of Building and Safety.

**b.** Where more than one permit is issued for a sign or signs on a lot and the more recently issued permit or permits cause such sign or signs to violate this Division, the more recently issued permit or permits are invalid and are subject to revocation. Any previously issued permits remain valid provided that such permits were issued in compliance with this Division. This provision does not apply to legally existing nonconforming signs.

### 7. Prohibited Signs

Signs are prohibited if they:

**a.** Contain obscene matters, as defined in Section 311 of the Penal Code of the State of California.

**b.** Contain or consist of posters, pennants, banners, ribbons, streamers or spinners, except as permitted in *Sec. 4C.11.2 (Temporary Signs)*.

**c.** Contain flashing, mechanical and strobe lights in conflict with the provisions of *Sections 80.08.4 and 93.0107 of this Code*.

**d.** Are revolving and where all or any portion rotate at greater than 6 revolutions per minute.

**e.** Are tacked, pasted or otherwise temporarily affixed on the walls of buildings, barns, sheds, trees, poles, posts or fences, except as permitted in *Sec. 4C.11.2 (Temporary Signs)*.

**f.** Are affixed to any vehicle or trailer on private property if the vehicle or trailer is not intended to be otherwise used in the business and the sole purpose of attaching the sign to the vehicle or trailer is to attract people to a place of business.

**g.** Emit audible sounds, odor or visible matter.

**h.** Use human beings, live animals, animated figures, motion pictures or projectors or any other means that causes continuous motion in connection with any sign.

**i.** Are supergraphic signs, except where supergraphic signs are specifically permitted pursuant to a legally-adopted specific plan, a supplemental use district, an approved development agreement or a sign district. In addition, despite the provisions of *Sec. 13B.10.1.B. (Vesting of Development Plan)*, this prohibition does not apply to any building permit issued prior to August 14, 2009 if the Department of Building and Safety determines that both substantial liabilities have been incurred, and substantial work has been performed on-site, in accordance with the terms of that permit pursuant to Section 91.106.4.3.1.

**j.** Are off-site signs, including off-site digital displays, except when off-site signs are specifically permitted by pursuant to a relocation agreement entered into pursuant to California Business and Professions Code Section 5412. This prohibition also applies to alterations, enlargements or conversions to digital displays of legally existing off-site signs, except for alterations that conform to the provisions of Section 91.6216 and all other requirements of this Code. This prohibition does not apply to off-site signs, including off-site digital displays, that are specifically permitted pursuant to a legally-adopted specific plan, a supplemental use district, an approved development agreement or a sign district. In addition, despite the provisions of *Sec. 13B.10.1.B. (Vesting of Development Plan)*, this prohibition does not apply to any building permit issued prior to August 14, 2009 if the Department of Building and Safety determines that both substantial liabilities have been incurred, and substantial work has been performed on-site, in accordance with the terms of that permit pursuant to Section 91.106.4.3.1.

**k.** Are inflatable devices, except where inflatable devices are specifically permitted pursuant to a legally-adopted specific plan, a supplemental use district, an approved development agreement or a sign district.

### 8. Prohibited Locations

**a.** No sign or sign support structure shall project into any public alley, except that a sign or sign support structure above a height of 14 feet may project no more than 6 inches into a public alley.

**b.** No sign or sign support structure shall be located less than 6 feet horizontally or 12 feet vertically from overhead electrical conductors energized in excess of 750 volts. As used here, the term overhead electrical conductors means any electrical conductor, either bare or insulated, installed above-ground, except electrical conductors that are enclosed in iron pipe or other material covering of equal strength. Arcs of 6-foot radius may be used to define corners of the prohibition area.

**c.** No sign or sign support structure shall be erected in a visibility triangle as defined by Section 62.200.

**d.** No sign or sign support structure shall be located within 2 feet of the curb or edge of any roadway.

#### 9. Temporary Signs

For additional standards applicable to temporary signs, see *Sec. 4C.11.2 (Temporary Signs)*.

#### 10. Off-site Signs

For additional standards applicable to off-site signs, see *Sec. 4C.11.3 (Off-Site Signs)*.

#### 11. On-Site Signs

For additional standards applicable to on-site signs, see *Sec. 4C.11.4 (On-Site Signs)*.

#### 12. Additional Sign Regulations

There may be additional sign regulations in Sign Districts, Specific Plans, Overlays and Use Standards. *See Article 8 (Specific Plans and Supplemental Districts)* for their relationship with the standard regulations.

## D. Measurement

[Reserved]

## E. Exceptions

### 1. Wall Signs

**a.** Wall signs in compliance with the standards below are exempt from the limitations in *Sec. 4C.11.1.C.5. (Freeway Exposure)*.

**i.** The total area of all wall signs on a building shall not exceed 100 square feet.

**ii.** An individual wall sign shall not exceed 50 square feet in area.

**iii.** Wall signs shall be viewed primarily from an off ramp but not the main traveled roadway of a freeway.

**iv.** Wall signs shall not have moving parts or any arrangement of lights that create the illusion of movement.

**b.** Wall signs in compliance with the standards below are exempt from the limitation *in Sec. 4C.11.1.C.5. (Freeway Exposure)*. These signs can have moving parts or any arrangement of lights that create the illusion of movement.

**i.** Identification signs identifying the building where the sign is located, providing the area of the sign is not more than 50 square feet or is not larger than 5% of the area of the side of the building, which faces primarily to the freeway, whichever is greater; and

**ii.** Wall signs on which the advertising is limited to the name of any person, firm or corporation occupying the building, or the type of business, services rendered, or the name of any product manufactured or sold on the premises. The total area of all wall signs on a building permitted in this subdivision cannot exceed 100 square feet. Any one sign cannot exceed 50 square feet in area.

### 2. Original Art Murals, Vintage Original Art Murals and Public Art Installations

**a.** An Original Art Mural that conforms to the requirements of *Section 22.119 of the Los Angeles Administrative Code* is not considered a sign and is not subject to the provisions of this Division or any other ordinance that regulates signs.

**b.** Any supposed "mural" that does not conform to the requirements of *Section 22.119 of the Los Angeles Administrative Code* is considered a sign and is subject to the provisions of this Divisions or any other ordinance that regulates signs and digital displays.

**c.** A Public Art Installation registered pursuant to the requirements of *Section 19.85.4 of the Los Angeles Administrative Code* or the requirements of *Section 91.107.4.6 of the Los Angeles Municipal Code* is not a sign, but is subject to *Sec. 4C.11.1.C.2 (Sign Illumination Limitations)* and any other applicable zoning and land use regulations set forth in the Los Angeles Municipal Code.

**d.** A building permit from the Department of Building and Safety is required for the necessary physical alterations to a building or other structures due to a new hand-tiled or digitally printed Original Art Mural or any Public Art Installation that may require a building permit.

**e.** If any part, sentence, phrase, clause, term or word in *Section 14.4.2 (Definitions)* or *Sec. 4C.11.1.E.2.* relating to Original Art Murals is declared invalid or unconstitutional by a valid court judgment or decree of any court of competent jurisdiction, the declaration of such unconstitutionality does not affect the constitutionality or lawfulness of the remainder of this Code, the Los Angeles Administrative Code or any other City regulation regulating signage, billboards or Original Art Murals.

## F. Relief

**1.** A deviation from any rules for all signs dimensional standard of up to 15% may be requested in accordance with *Sec. 13B.5.2 (Adjustment)*.

**2.** Deviation from any rules for all signs standard may be allowed as a variance in accordance with *Sec. 13B.5.3 (Variance)*.

# SEC. 4C.11.2. TEMPORARY SIGNS

## A. Intent

[Reserved]

## B. Applicability

**1.** All temporary signs shall conform to the requirements of this Division and all other applicable provisions of this Chapter.

**2.** A building permit is required for a temporary sign, pennant, banner, ribbon, streamer or spinner. The permit application shall specify the dates being requested for authorized installation and the proposed location.

**3.** A building permit is required for a temporary sign on a temporary construction wall.

## C. Standards

### 1. General

Temporary signs may display only on-site or noncommercial messages, except that temporary signs on temporary construction walls may display off-site messages.

### 2. Temporary Signs

#### a. Location

Temporary signs, including those that do not require a building permit, may be tacked, pasted or otherwise temporarily affixed to windows or on the walls of buildings, barns, sheds or fences.

#### b. Area

**i.** The combined sign area of temporary signs cannot exceed 10 square feet in an Agricultural or Residential Use District or 2 square feet for each foot of street frontage in all other Use Districts.

**ii.** The combined sign area of temporary signs, when placed upon a window and any other window signs shall not exceed a maximum of 10% of the window area.

#### c. Construction

Temporary signs may contain or consist of posters, pennants, ribbons, streamers or spinners. Temporary signs may be made of paper or any other material. If the temporary sign is made of cloth, it shall be flame-proofed when the aggregate area exceeds 100 square feet. Every temporary cloth sign shall be supported and attached with stranded cable of 1/16-inch minimum diameter or by other methods as approved by the Department of Building and Safety.

#### d. Time Limit

**i.** Temporary signs that require a permit shall be removed within 30 days of installation and shall not be reinstalled for a period of 30 days of the date of removal of the previous sign. The installation of temporary signs shall not exceed a total of 90 days in any calendar year.

**ii.** Temporary signs that do not require a permit shall be removed within 30 days of the date of installation of the sign.

### 3. Temporary Signs on Temporary Construction Walls

#### a. Location

Temporary signs placed on the exterior surfaces of any temporary construction walls, and/or solid wood fences surrounding vacant lots not allowed in Open Space, Agricultural and Residential Use Districts.

#### b. Height

Signs may only be placed to a maximum height of 8 feet.

#### c. Area

Despite the provisions of *Sec. 4C.11.2.C.2.a. (Location)*, signs placed on temporary construction walls or solid wood fences surrounding vacant lots pursuant to the terms of this Section shall not extend above the top of the wall or fence and shall comply with the following:

**i.** The combined sign area of temporary signs shall not exceed 8 square feet for each foot of street frontage.

**ii.** Individual signs shall not exceed a sign area of 250 square feet.

**iii.** Signs may be grouped to form a maximum sign area of 250 square feet.

**iv.** Signs or groups of signs having an area of 250 square feet shall be separated from any other sign on the temporary construction walls or solid wood fences surrounding vacant lots by at least 10 feet measured horizontally.

#### d. Time Limit

**i.** Despite the provisions of *Sec. 4C.11.2.C.2.d. (Time Limit)*, signs placed on temporary construction walls or solid wood fences surrounding vacant lots pursuant to the terms of this section can remain for as long as the building permits associated with the construction-site remain in effect or for a period of 2 years, whichever is less.

**ii.** Building permits for signs on solid wood fences surrounding vacant lots, which are not construction-sites, will be issued for a time period not to exceed one year.

**iii.** The Department of Building and Safety shall grant a new building permit for a period equal to the original building permit term upon the receipt of:

**a)** An application for a new building permit;

**b)** The payment of the building permit fee; and

**c)** A written statement from the Director of the Office of Community Beautification consenting to the new building permit.

### e. Special Requirements Surrounding Vacant Lots

#### i. Review by the Office of Community Beautification

**a)** At any time after the issuance of a building permit under this Section and upon request of the Council district office of the Council district in which the site or lot is located, the Office of Community Beautification shall investigate an area consisting of a 500-foot radius around the permitted site or lot to determine whether there exists a public nuisance due to the presence of graffiti or posters/handbills on light poles, utility poles, bus stops, and any other illegal postings on public property.

**b)** If the Office of Community Beautification cannot establish that the area constitutes a public nuisance because of the presence of graffiti, posters/handbills and any other illegal postings on public property within a 500-foot radius around the permitted site or lot, then the Office of Community Beautification shall expand the radius around the site or lot in 250-foot increments, up to a maximum radius of 1,500 feet. If the Office of Community Beautification finds the existence of a public nuisance on public property within the expanded radius area beyond the original 500-foot radius, then it shall require the applicant to abate the public nuisance in the expanded radius area in accordance with *Subdivision iii.*, below.

#### ii. Notification of Locations for Placement of Signs

**a)** Within 10 days after the issuance of the building permit, the applicant shall provide written notification to the Office of Community Beautification and the Council district office of the Council district in which the construction-site or vacant lot is located.

**b)** The notification shall contain the name and address of the applicant and the property address where the signs will be placed. The notification to the Office of Community Beautification shall include a copy of the applicant's contract with the property owner to post signs at the specified location.

### iii. Nuisance Abatement

**a)** It is the applicant's responsibility to clean and maintain free from graffiti public property and rights-of-way within an area consisting of a 500-foot radius or any expanded radius required by the Office of Community Beautification around the permitted site or lot.

**b)** The applicant shall patrol the abatement area every 24 hours to search for graffiti and remove any graffiti within 24 hours of its discovery. The removal of graffiti includes, but is limited to, spray paint on walls, poles, and fences on public property. In addition, the applicant shall also be responsible for removing any posters/handbills on light poles, utility poles, bus stops, and any other illegal postings on public property. At the time of graffiti removal, the applicant shall also remove any trash, debris or rubbish from the public sidewalks within the abatement area around the permitted site. The Office of Community Beautification will enforce the provisions of this subsection.

### iv. Permit Revocation

Any building permit issued pursuant to this section may be revoked by the Department of Building and Safety for any of the following reasons, provided a written and signed notification of the applicant's failure to comply with *Paragraphs (a), (d), (e) or (f) of this subsection* is sent to the Department of Building and Safety by the Director of the Office of Community Beautification:

**a)** Failure by the applicant to maintain the temporary construction wall or solid wood fence surrounding a vacant lot free from graffiti.

**b)** Failure by the applicant to comply with the terms of the permit.

**c)** Failure by the applicant to maintain the bond required in Section 91.6201.2.2.

**d)** Failure by the applicant to eradicate graffiti within a 500-foot radius or any expanded radius required by the Office of Community Beautification of the temporary construction wall, and/or solid wood fence surrounding a vacant lot within 24 hours of receiving notification of the presence of graffiti from the Office of Community Beautification or the Council staff in the Council district in which the construction-site or vacant lot is located.

**e)** Failure by the applicant to remove posters/handbills placed on light poles, utility poles, bus stops and any other illegal postings on public property within a 500-foot radius or any expanded radius required by the Office of Community Beautification of the temporary construction wall, and/or solid wood fence surrounding a vacant lot, within 24 hours of receiving notification of the presence of posters/handbills or other illegal postings from the Office of Community Beautification or the Council staff in the Council district in which the construction-site or vacant lot is located.

**f)** Failure by the applicant, at the time of graffiti removal, to remove trash, debris or rubbish from the public sidewalks within the abatement area around the permitted site.

#### v. Removal of Signs

If the Department of Building and Safety revokes the building permit allowing signs on temporary construction walls, and/or solid wood fences surrounding vacant lots, then any signs placed on the temporary construction walls and/or solid wood fences surrounding vacant lots shall be removed by the applicant within 72 hours after receipt of written notification.

#### vi. Public Nuisance

Any signs remaining on temporary construction walls, and/or solid wood fences surrounding vacant lots after the building permit is revoked are deemed to be a public nuisance that can be abated by utilizing the procedure contained in Section 91.8904, et seq..

#### vii. Office of Community Beautification

The Office of Community Beautification is the designated authorized representative of the City for the purpose of enforcing and implementing the provisions of Sections 91.8904.1.2 and 91.8307 to remove the nuisances described in this section.

## D. Measurement

[Reserved]

## E. Exceptions

Pursuant to Section 91.6201.2(1)(c), no building permit is required for a temporary sign, pennant, banner, ribbon streamer or spinner of less than 20 square feet of sign area that contains a political, ideological or other noncommercial message.

## F. Relief

1. A deviation from any temporary sign dimensional standard of up to 15% may be requested in accordance with *Sec. 13B.5.2 (Adjustment).*
2. Deviation from any temporary sign standard may be allowed as a variance in accordance with *Sec. 13B.5.3 (Variance)*.

# SEC. 4C.11.3. OFF-SITE SIGNS

## A. Intent

[Reserved]

## B. Applicability

All off-site signs and sign support structures shall conform to the requirements of this Division and all other applicable provisions of this Chapter.

## C. Standards

### 1. Location

**a.** No portion of an off-site sign with a sign area greater than 80 square feet can be placed within 200 feet of a lot or a property zoned with a Residential Use District, which is located on the same side of the same street as the lot on which the sign is placed. However, where a lot has 2 or more street frontages, a sign may be located on that street frontage, which is not on the same street as the lot or property zoned with a Residential Use District; provided the sign and sign support structure are placed in that half of the lot that is the farthest from the street frontage on which the lot is located.

**b.** No portion of an off-site sign or sign support structure can be located in that half of a lot located farthest from the street frontage when a lot or a property zoned with a Residential Use District is located to the rear of that street frontage.

**c.** Off-site signs are not permitted along that portion of a lot having a street frontage of less than 50 feet.

**d.** No more than 4 off-site signs can be located at the intersection of 2 or more streets when the off-site signs are located within 150 feet of the intersection of 2 street frontages.

**e.** An off-site sign face cannot be located within one foot of an interior lot line.

### 2. Area

The sign area of a single face cannot exceed 800 square feet.

### 3. Height

**a.** The height to the top of the off-site sign is limited to a maximum of 42 feet above the sidewalk grade or edge of roadway grade nearest the sign, except that a sign that is more than 80% above a roof of a building may extend to the top of the sign a maximum of 30 feet above the surface of the roof under the sign.

**b.** In no event can the height to the top of the off-site sign exceed a height greater than that height specified in the Form District in which the sign is located, or a height of 60 feet above the sidewalk grade or edge of roadway grade nearest the sign, whichever is more restrictive.

**c.** The bottom of the off-site sign shall be at least 8 feet above the sidewalk grade or edge of roadway grade nearest the sign.

### 4. Spacing

An off-site sign, which is either single-faced or parallel double-faced, shall be spaced as specified below from any other existing or previously permitted off-site sign, which is single-faced or parallel double-faced.

**SPACING REQUIREMENTS BETWEEN OFF-SITE SIGNS**

| Existing or Permitted Sign | Proposed Sign | | |
|---|---|---|---|
| | <80 SF | 80 - 300 SF | >300 SF |
| <80 SF | 100' | 100' | 200' |
| 80 - 300 SF | 100' | 300' | 300' |
| >300SF | 200' | 300' | 600' |

### 5. Double-Faced Off-site Signs

**a.** Off-site signs may be either single or double-faced.

**b.** For double-faced off-site signs whose faces are parallel, the distance between sign faces cannot exceed 6 feet.

**c.** For double-faced off-site signs whose faces are not parallel, the distance between sign faces at their widest point cannot exceed 35 feet. The separation of sign faces at their closest point cannot exceed 6 feet. In no event can the angle between sign faces exceed 37 degrees.

### 6. Projection

Off-site signs shall not project over the street right-of-way.

### 7. Covering

The backs of off-site signs exposed to public view shall be covered with a finished surface or material and shall be properly maintained.

### 8. Other Requirements

**a.** A maximum of two poles are permitted for any off-site sign. The maximum cross-sectional dimension of a pole cannot exceed 10% of the overall height of the sign.

**b.** Off-site sign supports shall be structurally independent of a building.

**c.** Sign support structures shall be located directly under the sign face as viewed from the front of the sign. The maximum horizontal distance between the center of the sign support structure and the sign face can not exceed 10 feet.

## D. Measurement

### 1. Frontage Determination on Lots with Lot Lines Adjoining More Than One Street

**a.** An off-site sign is considered to be on a single street for purposes of measuring off site signs, if the sign and its support structure are located entirely on the side of the bisecting line closest to that street and the sign face is placed at the same angle as the perpendicular line or at an angle not to exceed 20 degrees from either side of the perpendicular line as shown on Diagram C.

**b.** An off-site sign located on a through lot shall be located on a single street if the sign and its support structure are located entirely on that half of the lot closest to the lot line adjoining that street.

**c.** Any off-site sign not in conformance with either *Subdivision a. or b.* above is considered to be located on more than one street frontage.

### 2. Spacing

**a.** For any double-faced off-site sign, the spacing requirements are based on the area of the largest sign face.

**b.** For double-faced off-site signs whose faces are not parallel, the spacing between any proposed, permitted or existing off-site sign is determined by the following formula:

$$D = S \left[ 1 + \frac{(B - 5)}{90} \right]$$

Where:

D = required spacing between signs, in feet.

S = sign spacing determined from Table No. B in feet.

B = widest edge separation of sign faces in feet.

**c.** Spacing is measured between off-site signs that are located on the same side of the same street. Spacing is measured from a line that is perpendicular to the street line and that passes through a point on the street line that is closest to the nearest sign face edge. Spacing is measured along the center line of the street.

## E. Exceptions

Legally existing nonconforming off-site signs, off-site signs permitted in a Sign District, or permitted by a relocation agreement or other City contract, may display off-site or noncommercial messages.

### F. Relief

1. A deviation from any off-site sign dimensional standard of up to 15% may be requested in accordance with *Sec. 13B.5.2 (Adjustment)*.

2. Deviation from any off-site sign standard may be allowed as a variance in accordance with *Sec. 13B.5.3 (Variance)*.

## SEC. 4C.11.4. ON-SITE SIGNS

### A. Intent

[Reserved]

### B. Applicability

All *exterior signs*, window signs and sign support structures shall conform to the requirements of this Division and all other applicable provisions of this Chapter.

### C. Standards

#### 1. Sign Packages

On-site signs shall comply with all the applicable sign package.

#### 2. Sign Types

On-site signs shall comply with all applicable sign type standards.

#### 3. Street Address Requirement

No sign shall be maintained on any property unless a street address for the property has been obtained, and is maintained in accordance with the provisions of Section 63.113.

### D. Measurement

See *Sec. 4C.11.6.D. (Measurement, Sign Types)*.

### E. Relief

1. A deviation from any on-site sign dimensional standard of up to 15% may be requested in accordance with *Sec. 13B.5.2 (Adjustment)*.

2. Deviation from any on-site sign standard may be allowed as a variance in accordance with *Sec. 13B.5.3 (Variance)*.

# SEC. 4C.11.5. SIGN PACKAGES

## A. Intent

The intent of the sign packages is to provide variety in the sign allocation based on the extent of reliance on specific modes of travel.

1. Sign Package 1 is intended for areas with a variety of transportation modes.
2. Sign Package 2 is intended for areas with a focus on pedestrian experience and alternative transportation modes besides motor vehicles.

## B. Applicability

Sign package standards apply to all on-site signs determined by the sign package assigned by Development Standards District.

## C. Standards

### 1. General

A required sign package is specified in *Article 4, Development Standards Districts*.

## 2. Sign Package 1

| AGRICULTURAL & RESIDENTIAL USE DISTRICTS | |
|---|---|
| **Total Sign Area Allocation** | 30 SF |
| **Sign Area Per Individual Sign** (max): | |
| Awning Sign | 20 SF |
| High Rise sign | Not allowed |
| Illuminated Canopy Sign | Not allowed |
| Marquee Sign | Not allowed |
| Monument Sign/Pole Sign | 9 SF (only 1 sign allowed) |
| Pedestrian Sign | Not allowed |
| Projecting Sign | Not allowed |
| Roof Sign | Not allowed |
| Wall Sign | 20 SF |
| Window Sign | Not allowed |
| Yard Sign | 20 SF |
| **ALL OTHER USE DISTRICTS** | |
| **Total Sign Area Allocation**[1] | 4 SF per foot of street frontage |
| **Combined area of Illuminated Canopy Signs, Roof Signs and Wall Signs** (max) | 2 SF per foot of street frontage, plus 1 SF for each foot of building frontage |
| **Sign Area Per Individual Sign Type** (max): | |
| Awning Sign | 2 SF per foot of street frontage |
| High Rise Sign | 5% of the area of the wall where the signs are attached |
| Illuminated Canopy Sign | 2 SF per foot of street frontage |
| Marquee Sign | Limited by marquee size |
| Monument Sign | 1.5 SF per foot of street frontage, no individual monument sign can exceed 75 SF per sign face |
| Pedestrian Sign | 9 SF per sign face |
| Pole Sign | 2 SF per foot of street frontage plus 1 SF for each foot of building frontage, no individual pole sign can exceed 400 SF per sign face |
| Projecting Sign | 25 SF plus 1.5 SF per foot of street frontage, no individual projecting sign can exceed 300 SF per sign face |
| Roof Sign | 2 SF per foot of street frontage, plus 1 SF for each foot of building frontage, no individual roof sign can exceed 300 SF |
| Wall Sign | 2 SF per foot of street frontage, plus 1 SF for each foot of building frontage |
| Window Sign | Total area of all window signs cannot exceed 10% of window area |
| Yard Sign | Not allowed |

[1] High Rise Signs and Marquee Signs are not counted towards the Total Sign Area Allocation

### 3. Sign Package 2

| AGRICULTURAL & RESIDENTIAL USE DISTRICTS | |
|---|---|
| **Total Sign Area Allocation** | 30 SF |
| **Sign Area Per Individual Sign** (max): | |
| Awning Sign | 20 SF |
| High Rise sign | Not allowed |
| Illuminated Canopy Sign | Not allowed |
| Marquee Sign | Not allowed |
| Monument Sign | 9 SF (only 1 sign allowed) |
| Pedestrian Sign | Not allowed, except for RN Use Districts |
| Pole Sign | Not allowed |
| Projecting Sign | Not allowed |
| Roof Sign | Not allowed |
| Wall Sign | 20 SF |
| Window Sign | Not allowed |
| Yard Sign | 20 SF |
| **ALL OTHER USE DISTRICTS** | |
| **Total Sign Area Allocation**[(1)] | 4 SF per foot of street frontage |
| **Sign Area Per Individual Sign Type** (max): | |
| Awning Sign | 2 SF per foot of street frontage, no individual awning sign can exceed 12 SF |
| High Rise Sign | 5% of the area of the wall where the signs are attached |
| Illuminated Canopy Sign | Not allowed |
| Marquee Sign | Limited by marquee size |
| Monument Sign | 1.5 SF per foot of street frontage, no individual monument sign can exceed 32 SF per sign face |
| Pedestrian Sign | 9 SF per sign face |
| Pole Sign | Not allowed |
| Projecting Sign | 25 SF plus 1.5 SF per foot of street frontage, no individual projecting sign can exceed 48 SF per sign face |
| Roof Sign | Not allowed |
| Wall Sign | 2 SF per foot of street frontage, plus 1 SF for each foot of building frontage, no individual wall sign can exceed 80 SF |
| Window Sign | Total area of all window signs cannot exceed 10% of window area; no individual window sign can exceed 50 SF |
| Yard Sign | Not allowed |

[(1)] High Rise Signs and Marquee Signs are not counted towards the Total Sign Area Allocation

## D. Measurement

### 1. Sign Area

An area circumscribed by the smallest geometric shape created with a maximum of eight straight lines that will enclose all words, letters, figures, symbols, designs and pictures, together with all framing, background material, colored or illuminated areas and attention-attracting devices, forming an integral part of an individual message except that:

**a.** For wall signs having no discernible boundary, each of the following shall be included in any computation of surface area:

**i.** The areas between letters;

**ii.** Words intended to be read together; and

**iii.** Any device intended to draw attention to the sign message.

**b.** For spherical, cylindrical or other three-dimensional signs, the area of the sign shall be computed from the smallest two-dimensional geometrical shape or shapes, which will best approximate the greatest actual surface area visible from any one direction. Sign support structures are excluded if *neutral in color*.

### 2. Total Sign Area Allocation

**a.** The sign area for all signs, including required signs and signs displaying addresses, is counted toward the total sign area allocation as specified in *Sec.4C.11.5.C. (Sign Packages)*.

**b.** The following signs are not counted towards the Total Sign Area Allocation:

**i.** High Rise Signs,

**ii.** Marquee Signs,

**iii.** Temporary Signs; and

**iv.** Temporary Signs on temporary construction walls and on fences surrounding vacant lots.

## E. Exceptions

Flag lots containing less than 50 feet of street frontage are allotted 50 feet of street frontage for the purpose of determining the type of sign permitted and for the allowable sign area.

## F. Relief

**1.** A deviation from any sign package dimensional standard of up to 10% may be requested in accordance with *Sec. 13B.5.2 (Adjustment)*.

**2.** Deviation from any sign package standard may be allowed as a variance in accordance with *Sec. 13B.5.3 (Variance)*.

## SEC. 4C.11.6. SIGN TYPES

### A. Intent

[Reserved]

### B. Applicability

#### 1. General

[Reserved]

#### 2. Combination Signs

A sign subject to more than one type of classification, shall meet the requirements for the type to which each portion is subject.

### C. Standards

## 1. Awning Sign

### DEFINITION

A sign painted, sewn, or otherwise adhered to the material of an awning as an integrated part of the awning itself.

### GENERAL PROVISIONS

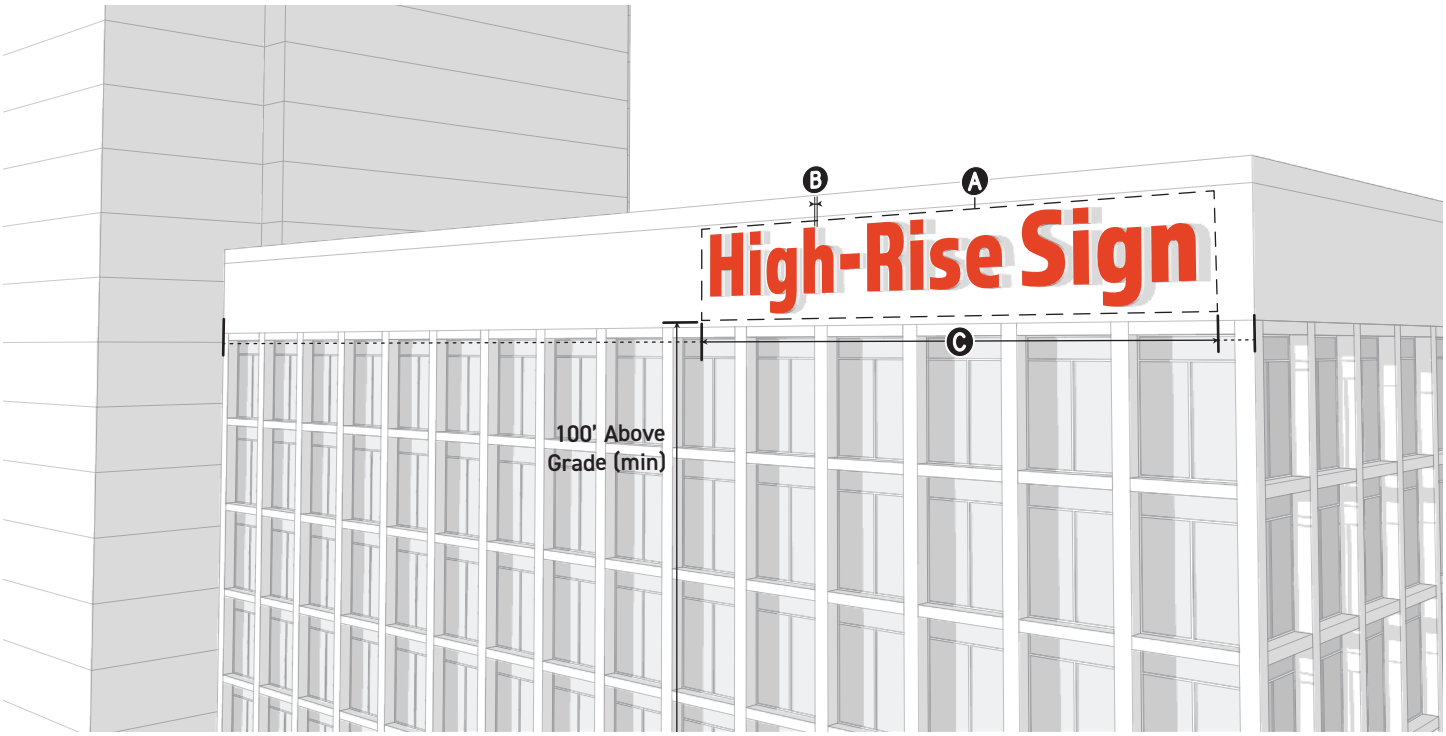
i. Signs are only allowed on awnings that comply with all applicable provisions of LAMC Sec. 91.3202, LAMC Sec. 91.3202.3.1 and *Sec. 4C.11.1.C.8 (Prohibited Locations)*.

ii. No sign can be placed on any portion of an awning except the valance that is parallel to the building face. No sign can extend outside the awning.

iii. Signs are not allowed on awnings with a valance above 14 feet in height measured from the nearest sidewalk or edge of roadway grade to the top of the valance.

| TOTAL SIGN AREA ALLOCATION | |
|---|---|
| **Sign Package 1** | *Sec. 4C.11.5.C.2* |
| **Sign Package 2** | *Sec. 4C.11.5.C.3* |
| **DIMENSIONS** | |
| Ⓐ **Area of individual sign** (max) | |
| Sign Package 1 | *Sec. 4C.11.5.C.2* |
| Sign Package 2 | *Sec. 4C.11.5.C.3* |
| Ⓑ Vertical dimension (max) | 1' |

## 2. High-Rise Sign



### DEFINITION

A sign located at least 100 feet above grade and attached to the wall of a building.

### GENERAL PROVISIONS

i. The plane of the sign face of a high rise sign shall be approximately parallel to the face of the building.

ii. A high rise sign shall not extend above the top of the wall of the building, except where there is less than 3 feet between the top of the wall and the top of a window, the high rise sign may extend above the top of the wall by a maximum of 3 feet.

### DIMENSIONS

| | |
|---|---|
| Ⓐ **Area of individual sign** (max) | |
| Sign Package 1 | *Sec. 4C.11.5.C.2* |
| Sign Package 2 | *Sec. 4C.11.5.C.3* |
| Ⓑ **Projection** (max) | 2' |
| Ⓒ **Width** (max % of facade length) | 80% |

## 3. Illuminated Canopy Sign

### DEFINITION

A sign integrated into an enclosed internally illuminated canopy that is attached to the wall of a building.

### GENERAL PROVISIONS

i. An illuminated canopy sign shall not extend above the top of the wall of a building.

ii. For emergency personnel access, illuminated canopy signs shall not occupy a 4-foot distance along the exterior wall at one corner of the building's street frontage and an additional 4-foot distance along every 50 feet of the building frontage.

iii. Illuminated canopy sign shall bear the electric sign label of an approved testing agency with a re-inspection service.

iv. Only canopies at grade level may contain illuminated canopy signs over a door or window.

v. Illuminated canopy signs may project over a street right-of-way, but shall comply with LAMC Sec. 91.3202 and *Sec. 4C.11.1.C.8. (Prohibited Locations)*.

| TOTAL SIGN AREA ALLOCATION* | |
|---|---|
| Sign Package 1 | *Sec. 4C.11.5.C.2* |
| Sign Package 2 | Not allowed |
| **DIMENSIONS** | |
| Ⓐ **Area of individual sign (max)*** | |
| Sign Package 1 | *Sec. 4C.11.5.C.2* |
| Sign Package 2 | Not allowed |
| Ⓑ **Vertical dimension** (max) | 3' |
| **Depth** (max) | 8" |
| Ⓒ **Clear height above grade** (min) | 8'2" |
| Ⓓ **Projection from building face** (max) | 3' |

## 4. Marquee Sign

| DEFINITION |
| --- |
| A sign attached to the periphery of a marquee. |

| GENERAL PROVISIONS |
| --- |
| i. Signs shall not extend above or below the marquee. |
| ii. Signs shall not be attached to any portion of the marquee except on the periphery. |
| iii. Cloth or banner signs or drop-roll curtains may be suspended below the exterior periphery and extend within 7 feet of the grade. |
| iv. Signs shall comply with LAMC Sec. 91.3202 and *Sec. 4C.11.1.C.8. (Prohibited Locations)*. |

| DIMENSIONS | |
| --- | --- |
| Limited by marquee size | |

## 5. Monument Sign

### DEFINITION

A freestanding sign which is wholly independent of a building for support, erected directly upon the existing or artificially created grade, or that is raised no more than 12 inches from the grade to the bottom of the sign.

### GENERAL PROVISIONS

i. A monument sign shall be set back at least 7.5 feet from an interior lot line.

ii. A monument sign shall be located at least 15 feet from any other monument sign, projecting sign or pole sign in any direction.

iii. The location of a monument sign cannot interfere or present a hazard to pedestrian or vehicular traffic.

iv. A monument sign shall not project over a street right-of-way.

| TOTAL SIGN AREA ALLOCATION | |
|---|---|
| **Sign Package 1** | *Sec. 4C.11.5.C.2* |
| **Sign Package 2** | *Sec. 4C.11.5.C.3* |
| **DIMENSIONS** | |
| Ⓐ **Area of individual sign** (max) | |
| Sign Package 1 | *Sec. 4C.11.5.C.2* |
| Sign Package 2 | *Sec. 4C.11.5.C.3* |
| Ⓑ **Height** (max) | |
| Agricultural, Residential District | 6' |
| All other districts | 8' |
| Ⓒ **Depth** (max) | 2' |

## 6. Pedestrian Sign

### DEFINITION

A small sign attached perpendicular to the building facade that hangs from a bracket or support.

### GENERAL PROVISIONS

i. A hanging bracket shall be an integral part of the sign design.

ii. Pedestrian signs shall be located below the window sills of the 2nd story on a multi-story building or below the top of the exterior wall on a single-story building.

iii. Pedestrian signs shall be located within 5 feet horizontally of a ground story tenant entrance.

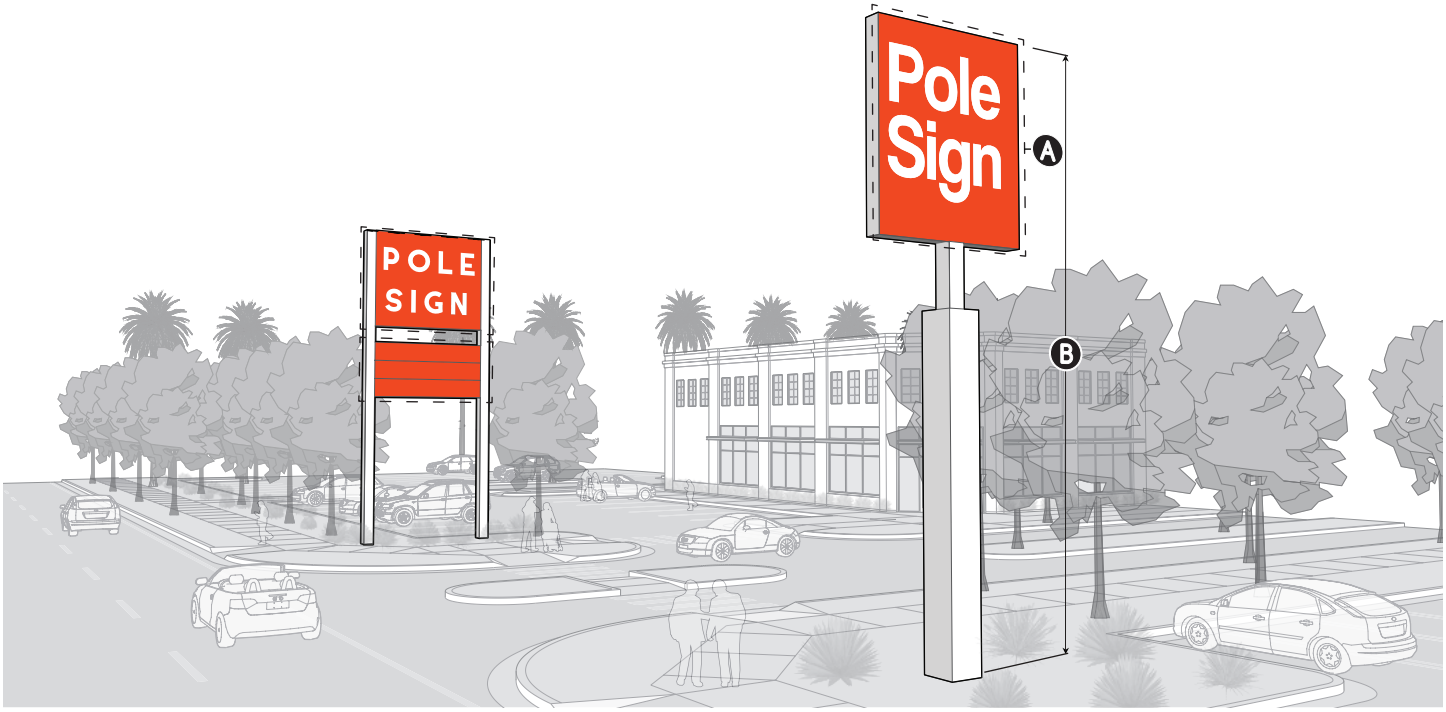
iv. Pedestrian signs shall be located at least 15 feet from any other pedestrian sign or projecting sign.

v. Pedestrian signs shall be attached to a building to withstand the loads as required by Sec. 91.6212.

vi. Pedestrian signs shall comply with *Sec. 4C.11.1.C.8. (Prohibited Locations)*.

| TOTAL SIGN AREA ALLOCATION | |
|---|---|
| Sign Package 1 | *Sec. 4C.11.5.C.2* |
| Sign Package 2 | *Sec. 4C.11.5.C.3* |
| **DIMENSIONS** | |
| Ⓐ **Area of individual sign** (max) | 9 SF |
| Ⓑ **Vertical dimension** (max) | 3' |
| Ⓒ **Projection** (min/max) | 1'/3' |
| Ⓓ **Depth** (max) | 6" |
| Ⓔ **Clear height above adjacent grade** (min) | 8'2" |

## 7. Pole Sign



### DEFINITION

A freestanding sign that is wholly independent of a building for support, permanently affixed to the ground using one or two poles or posts.

### GENERAL PROVISIONS

i. Lots having a street frontage of at least 50 feet may have a pole sign for each 200 feet of street frontage. Existing pole signs and existing projecting signs are included in the count of the total number of pole signs allowed

| Street Frontage | Total Number of Signs Allowed |
|---|---|
| 50' to ≤ 200' | 1 |
| >200' to ≤ 400' | 2 |
| >400' to ≤ 600' | 3 |
| One additional pole sign allowed for each additional increment of 200' of street frontage | |

ii. A pole sign shall not be located at least 10 feet from an interior lot line; however, on a corner lot, a pole signs may be 5 feet from an interior lot line.

iii. A pole sign shall be located at least 15 feet from any other pole sign, projecting sign or monument sign at any direction.

iv. The maximum width of a pole or post shall not exceed 10% of the overall sign height.

v. A pole sign shall be located so as not to interfere or present a hazard to pedestrian or vehicular traffic.

### GENERAL PROVISIONS (CONTINUED)

vi. Where the lower part of a pole sign is less than 8 feet above sidewalk grade or the edge of roadway grade nearest the sign, the sign shall extend to 18 inches from grade or be installed in a planter that extends beyond the edges of the sign and any support structure that is 18 inches min in height.

vii. A pole sign may project over a street right-of-way, but shall comply with *Sec. 4C.11.6.D.2. (Projection Over Property Line)* and *Sec. 4C.11.1.C.8. (Prohibited Locations)*. Sign projections shall fall within an area that is perpendicular to the street right-of-way and has a width of 3 feet as measured parallel to the street right-of-way.

| TOTAL SIGN AREA ALLOCATION | |
|---|---|
| Sign Package 1 | *Sec. 4C.11.5.C.2* |
| Sign Package 2 | Not allowed |
| **DIMENSIONS** | |
| Ⓐ **Area of individual sign (max)** | |
| Sign Package 1 | *Sec. 4C.11.5.C.2* |
| Sign Package 2 | Not allowed |
| Ⓑ **Height[1] including pole (max)** | |
| Agricultural or Residential District | 6' |
| All other districts | |
| ≤50' of street frontage | 25' |
| >50 to ≤ 100 feet of street frontage | 35' |
| >100 feet of street frontage | 42' |

[1] Any pole sign located at the street corner of a corner lot may use the greater street frontage for determining height limitations. In no event can a sign exceed the height in which the sign is located.

## 8. Projecting Sign

### DEFINITION

A sign attached approximately perpendicular to the building facade.

### GENERAL PROVISIONS

i. The plane of the sign face shall be within 15 degrees of a line perpendicular to the face of the building, except at the corner of the building.

ii. Lots having a street frontage of at least 50 feet may have a projecting sign for each 200 feet of street frontage. Existing projecting signs or existing pole signs are included in the count of the total number of projecting signs allowed.

| Street Frontage | Total Number of Signs Allowed |
|---|---|
| 50' to ≤ 200' | 1 |
| >200' to ≤ 400' | 2 |
| >400' to ≤ 600' | 3 |
| One additional pole sign allowed for each additional increment of 200' of street frontage | |

iii. A projecting sign cannot extend above the top of the wall.

iv. A projecting sign shall be located at least 7.5 feet from any interior lot line and be located at least 15 feet from any other projecting sign, monument sign or pole sign in any direction

### GENERAL PROVISIONS (CONTINUED)

v. Projecting signs shall be attached to a building to withstand the loads as required by Section 91.6212.

vi. A projecting sign may project over the street right-of-way, but shall comply with *Sec. 4C.11.6.D.2. (Projection Over Property Line)* and *Sec. 4C.11.1.C.8.* (Prohibited Locations). Sign projections shall fall within an area that is perpendicular to the street right-of-way and has a maximum width of 3 feet as measured parallel with the street right-of-way.

vii. For projecting signs located above 16 feet and on a lot having a street frontage greater than 50 feet, projections over the street right-of-way may vary linearly from 5 feet at 50 feet to 8 feet at 100 feet of street frontage.

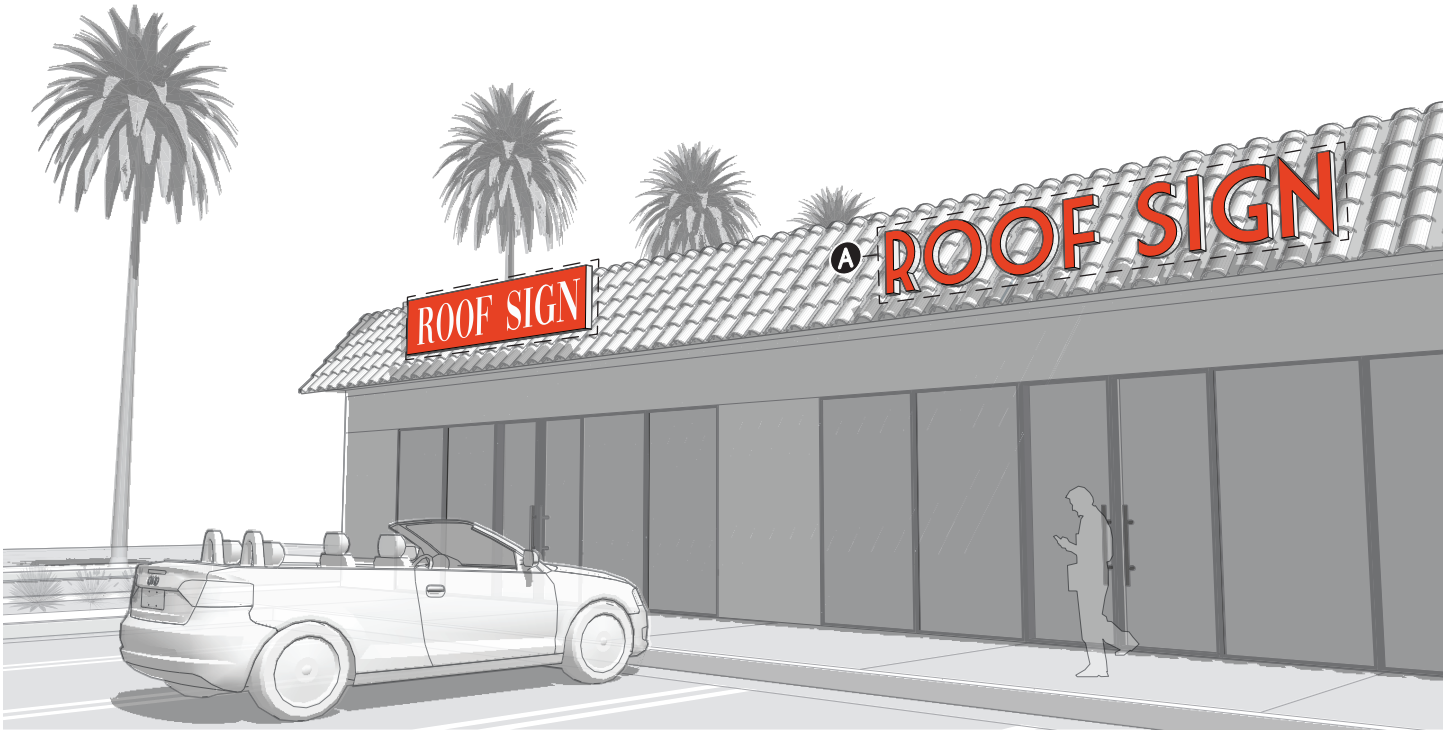
### TOTAL SIGN AREA ALLOCATION

| | |
|---|---|
| **Sign Package 1** | *Sec. 4C.11.5.C.2* |
| **Sign Package 2** | *Sec. 4C.11.5.C.3* |

### DIMENSIONS

| | |
|---|---|
| Ⓐ **Area of individual sign** (max) | |
| Sign Package 1 | *Sec. 4C.11.5.C.2* |
| Sign Package 2 | *Sec. 4C.11.5.C.3* |
| Ⓑ **Projection** (min/max) | *Sec. 4C.11.6.D.2.* |
| Ⓒ **Clear height above adjacent grade** (min) | 8'2" |

## 9. Roof Sign



| DEFINITION |
|---|
| A sign erected on a roof of a building. |

| GENERAL PROVISIONS |
|---|
| i. Roof signs are allowed only when placed directly upon a roof that slopes downward toward and extends to or over the top of an exterior wall. |
| ii. The top of the roof sign shall be located at least 2 feet below the highest point of the roof where the sign is located. |
| iii. Roof signs shall be located at least 2 feet from the edge of the roof. |
| iv. Roof signs shall be located at least 10 feet from interior lot lines. |
| v. The plane of the sign face of a roof sign shall be approximately parallel to the face of the building. |

| TOTAL SIGN AREA ALLOCATION | |
|---|---|
| Sign Package 1 | *Sec. 4C.11.5.C.2* |
| Sign Package 2 | Not allowed |
| **DIMENSIONS** | |
| Ⓐ **Area of individual sign** (max) | *Sec. 4C.11.5.C.2* |

## 10. Wall Sign

### DEFINITION

A sign attached to, painted on, projected onto or erected on the wall of a building.

### GENERAL PROVISIONS

i. For wall signs made up of individual letters that use the wall of the building as background, sign area allocated in *Sec. 4C.11.5.C.2.* and *Sec. 4C.11.*5.C.3. may be increased by 20%, provided there is no change in color between the background and the surrounding wall area.

ii. For buildings more than one story in height, the combined wall sign area shall not exceed that permitted for a single story by more than 10% for each additional story. In no event, shall the combined wall sign area exceed by 50% that area permitted for a single-story building.

iii. If any message is placed on the edge of a wall sign, then that portion of the wall sign is regulated as a pedestrian sign or a projecting sign.

iv. A wall sign cannot extend above the top of the wall of the building, except where there is less than 3 feet between the top of the wall and the top of a window, the wall sign may extend above the top of the wall by a maximum of 3 feet.

v. The plane of the sign face of a wall sign shall be approximately parallel to the face of the building.

### GENERAL PROVISIONS (CONTINUED)

vi. Wall signs cannot be illuminated when installed on a wall that faces the rear or side lot line that is located within 30 feet of properties zoned with an Agricultural or Residential Use Class and a density indicator of 8 to 60 or 1L to 4L .

vii. No wall sign shall project over any public property or any street right-of-way greater than that permitted in *Sec. 4C.11.6.D.2. (Projection Over Property Line)* and shall comply with *Sec. 4C.11.1.C.8.* (Prohibited Locations).

viii. Where a parking lot exists between a wall sign and the street, and there is a freestanding wall or fence between the parking lot and the street, a sign may be placed on the wall or fence provided the sign does not project beyond the lot line. The sign is limited to that portion of the wall or fence between 2.5' and 3.5' in height above the finished grade at the base of the wall generally facing the street.

| TOTAL SIGN AREA ALLOCATION | |
|---|---|
| **Sign Package 1** | *Sec. 4C.11.5.C.2* |
| **Sign Package 2** | *Sec. 4C.11.5.C.3* |
| **DIMENSIONS** | |
| Ⓐ **Area of individual sign** (max) | |
| Sign Package 1 | *Sec. 4C.11.5.C.2* |
| Sign Package 2 | *Sec. 4C.11.5.C.3* |
| Ⓑ **Projection** (max) | |
| Sign Package 1 | 2' |
| Sign Package 2 | 1' |

## 11. Window Sign

### DEFINITION

A sign, except for a supergraphic sign, that is attached to, affixed to, leaning against, or otherwise placed within 6 feet of a window or door in a manner so that the sign is visible from outside the building.

### GENERAL PROVISIONS

Window area is the area of continuous glass (or other transparent material) panels separated by not more than 6 inches.

| TOTAL SIGN AREA ALLOCATION | |
|---|---|
| Sign Package 1 | *Sec. 4C.11.5.C.2* |
| Sign Package 2 | *Sec. 4C.11.5.C.3* |
| **DIMENSIONS** | |
| Ⓐ Area of individual sign (max) | |
| Sign Package 1 | 10% |
| Sign Package 2 | 10% |

## 12. Yard Sign

| DEFINITION |
|---|
| A small sign placed in a yard or other open space. |

| GENERAL PROVISIONS |
|---|
| Yard signs shall not have mechanical or moving parts and no electricity or other source of illumination or power may be attached or made a part of the sign. |

| TOTAL SIGN AREA ALLOCATION | |
|---|---|
| Sign Package 1 | *Sec. 4C.11.5.C.2* |
| Sign Package 2 | *Sec. 4C.11.5.C.3* |
| **DIMENSIONS** | |
| Ⓐ **Area of individual sign** (max) | 20 SF |
| Ⓑ **Height** (max) | 6' |

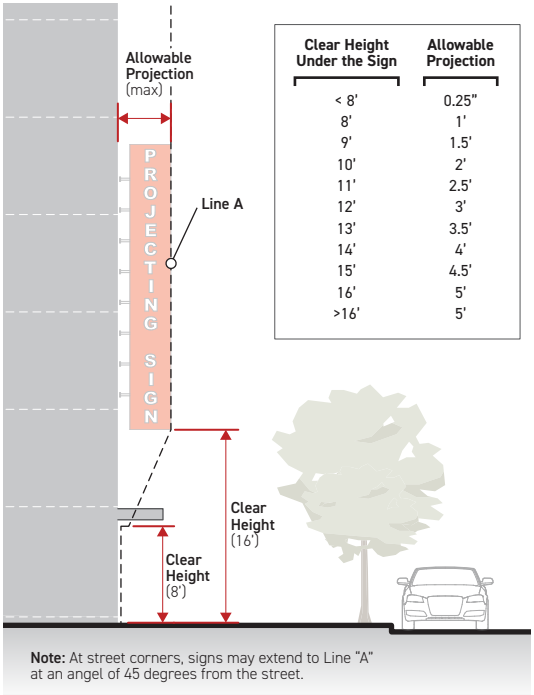
## D. Measurement

### 1. Sign Height

The height of all signs permitted by this Division shall be measured as the distance in a straight vertical line from the top of the sign to the sidewalk grade or to the edge of roadway grade nearest the sign if there is no sidewalk. No sign may be located at a height that exceeds the height limit above grade established by any *land use ordinance*, including the height limit established for the *underlying zone*.

### 2. Projection Over Property Line

[Reserved]

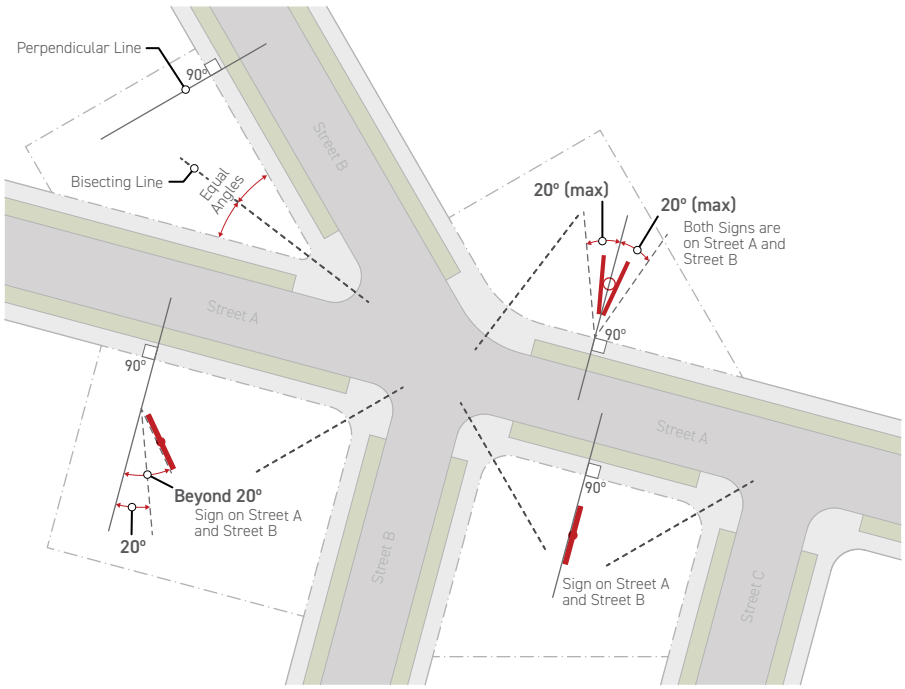


| Clear Height Under the Sign | Allowable Projection |
|---|---|
| < 8' | 0.25" |
| 8' | 1' |
| 9' | 1.5' |
| 10' | 2' |
| 11' | 2.5' |
| 12' | 3' |
| 13' | 3.5' |
| 14' | 4' |
| 15' | 4.5' |
| 16' | 5' |
| >16' | 5' |

### 3. Lots with Multiple Street Frontages

If a lot is a corner lot or other lot with two or more street frontages, then the following regulations shall apply:

**a.** A *freestanding sign* shall be considered to be located along a particular street if the sign and its support structure are located entirely on the side of the bisecting line closest to that street, and the sign face is placed at the same angle as the perpendicular line or at an angle not to exceed 20 degrees from either side of the perpendicular line as shown below.



**b.** On a *through lot*, a freestanding sign shall be considered to be located along a particular street if the sign and its support structure are located entirely on that half of the lot closest to the lot line adjoining that street.

## E. Relief

**1.** A deviation from any sign type dimensional standard of up to 10% may be requested in accordance with *Sec. 13B.5.2 (Adjustment)*.

**2.** Deviation from any sign type standard may be allowed as a variance in accordance with *Sec. 13B.5.3 (Variance)*.

# DIV. 4C.12. RIDGELINE PROTECTION

[Reserved]

# DIV. 4C.13. ENVIRONMENTAL PROTECTION

## SEC. 4C.13.1. ENVIRONMENTAL PROTECTION MEASURES

### A. Intent

1. Ensure that development in the City does not result in detrimental impacts to those residing or working in and around construction activities, and to abutting properties, and the public right of way, including the habitat, cultural resources, and historic or fragile buildings.

2. Provide a mechanism for mitigation measures adopted to certify environmental impact reports for City plans, policies, or regulations to be made enforceable on future development projects consistent with CEQA Guidelines Section 15162.4.

3. Provide a flexible mechanism to adopt and amend uniformly applicable development standards to allow streamlined environmental review, including pursuant to CEQA Guidelines Section 15183.3.

### B. Applicability

No permit shall be issued by the Los Angeles Department of Building and Safety (LADBS) without the applicant demonstrating compliance with applicable Environmental Protection Measures (EPM).

### C. Adoption and Maintenance of the Environmental Protection Measures

The Director of Planning shall prepare, maintain, and update the EPM, as deemed necessary and appropriate. The EPM, and any amendments, shall be adopted by the Director, according to *Sec. 13B.2.5. (Director Determination)*.

### D. Noncompliance

Failure to comply with the EPM or any condition or commitments made in compliance with the EPM is a violation of the Code, subject to all available administrative, criminal and civil remedies. Additionally, upon confirmation of non-compliance, the Director may require as deemed necessary and appropriate the applicant and/or property owner to retain at its own expense an independent consultant, subject to Director approval, to ensure compliance with the EPM and any conditions or commitments made in compliance with the EPM.

# DIV. 4C.14. DEFINITIONS

**Bicycle Cage.** [INSERT]

**Bicycle Corral.** [INSERT]

**Bicycle Locker.** [INSERT]

**Bicycle Rack.** [INSERT]

**Bicycle Room.** [INSERT]

**Bicycle Share Service Provider.** [INSERT]

**Bicycle Share Station.** [INSERT]

**Bicycle Share Station Dock.** [INSERT]

**Bisecting Line.** A line that equally divides the angle created by the projection of intersecting lot lines of a lot adjoining the street of a corner lot as illustrated in *Diagram C of this article*. Building Face. The general outer surface, not including cornices, bay windows or architectural projections, of any exterior wall of a building.

**Building Frontage.** The projection of the exterior building walls upon the street used for street frontage, as measured perpendicular to the edge of the street. For walls that are not parallel to the street, the building frontage shall be measured along the wall that, other than open parking stalls, has direct and unimpeded access to the street.

**Commercial Message.** Any message that advertises a business conducted, services rendered, or goods produced or sold.

**Common lot line.** A lot line shared by two lots.

**Control Gate.** [INSERT]

**Digital Display.** A sign face, building face, or any building or structural component that displays still images, scrolling images, moving images, or flashing images, including video and animation, through the use of grid lights, cathode ray projections, light emitting diode displays, plasma screens, liquid crystal displays, fiber optics, or other electronic media or technology that is either independent of, attached to, integrated into, or projected onto a building or structural component, and that may be changed remotely through electronic means.

**Discarded Material.** [INSERT]

**Drive Aisle.** [INSERT]

**Drive-Through Lane.** [INSERT]

**Drive-Through Lane Queuing Lane.** [INSERT]

**Fence.** An artificially constructed vertical barrier of wood, masonry, wire, metal, or other manufactured material or combination of materials erected to enclose, screen, or separate areas. A fence differs from a wall in not having a solid foundation along its whole length.

**Fire Severity Hazard Zone, Very High.** Geographical area identified by the State to be at a significant risk from wildfires based on fuel loading, slope, fire weather and other relevant factors.

**Footcandle.** The unit of measure expressing the quantity of light received on a surface. One footcandle is the illuminance produced by a candle on a surface one foot square from a distance of one foot.

**Freeway.** A highway that the owners or those in possession of abutting lands have no right or easement of access to or from their abutting lands or that owners have only limited or restricted right or easement of access, and that is declared to be a freeway, in compliance with the Streets and Highways Code of the State of California.

**Frontage Screen.** A planting area with a wall, fence, or hedge, located along a public right-of-way, and typically intended for screening of surface parking lots, utilities, heavy commercial uses, and industrial uses.

**Inflatable Device.** A sign that is a cold air inflated object, which may be of various shapes, made of flexible fabric, resting on the ground. Inflatable devices are restrained, attached, or held in place by a cord, rope, cable or similar method. The term inflatable device shall not include any object that contains helium, hot air or a lighter-than-air substance.

**Junk.** [INSERT]

**Light trespass.** Light that falls beyond the property it is intended to illuminate.

**Low Voltage Landscape Lighting.** Landscape lighting powered at less than 15 volts and limited to luminaires having a rated initial luminaire lumen output of 525 lumens or less.

**Lumen.** The unit of measure used to quantify the amount of light produced by a lamp or emitted from a luminaire (as distinct from "watt," a measure of power consumption).

**Luminaire.** The complete lighting unit (fixture), consisting of a lamp, or lamps and ballast(s) (when applicable), together with the parts designed to distribute the light (reflector, lens, diffuser), to position and protect the lamps, and to connect the lamps to the power supply.

**Luminaire, Fully Shielded.** A luminaire constructed and installed in such a manner that all light emitted by the luminaire, either directly from the lamp or a diffusing element, or indirectly by reflection or refraction from any part of the luminaire, is projected below the horizontal plane through the luminaire's lowest light-emitting part.

**Luminaire, Partially Shielded.** A luminaire with opaque top and translucent or perforated sides, designed to emit most light downward.
