**Main Traveled Roadway of a Freeway.** The portion of a freeway, including interchange roadways connecting one freeway with another, which is designed for the movement of large volumes of vehicular traffic, efficiently and safely at high speed, but not including service roadways, landscape areas, or ingress or egress ramps connecting the freeway with other streets.

**Motor vehicle use area.** Includes, but is not limited to, loading docks, service bays, repair yards, bus bays, trucking terminals, rail yards, transit platforms, and motorhome storage areas, not normally open to public vehicular use.

**Original Art Mural.** A one-of-a-kind, hand-painted, hand-tiled, or digitally printed image on the exterior wall of a building that does not contain any commercial message.

**Original Art Mural, Vintage.** An Original Art Mural that existed prior to the operative date of Los Angeles Ordinance No. 182706, which is October 12, 2013.

**Pathway Stub.** [INSERT]

**Perpendicular Line.** A straight line between the point on a sign face that is closest to the street and the point where the line intersects the street lot line at a 90 degree angle, as illustrated in *Sec. 4C.11.6.D.3. (Measurement, On-Site Signs).*

**Projection.** The distance by which a sign extends beyond the building face.

**Public Art Installation.** A facility, amenity or project that does not contain any commercial message and which is either an "approved public arts project" as defined in *Section 19.85.4 of the Los Angeles Administrative Code* or approved pursuant to *Section 91.107.4.6 of the Los Angeles Municipal Code*.

**Public Realm.** [INSERT]

**Queuing.** [INSERT]

**Queuing lane.** [INSERT]

**Queuing Space.** [INSERT]

**Ridgeline Protection Area.** Any lot designated as being within 50 feet of a ridgeline identified in the Department of City Planning Ridgeline Map ("Ridgeline Map"), dated _____ (Council File No. _____). The Ridgeline Map is created and maintained by the Department of City Planning, delineates the boundaries of the identified ridgelines and property which may be subject to Ridgeline Protection provisions of Section 12.21. C.11., and is published as part of the Geographic Information Systems database.

**Screening Structure.** A structure obstructing visibility from outside an enclosed area to another space, object or structure.

**Shrub.** A small to medium sized perennial woody plant. Unlike herbaceous plants, shrubs have persistent woody stems above the ground. They are distinguished from trees by their multiple stems and shorter height, for purposes of this Chapter, less than 15 feet.

**Shuttle Service.** [INSERT]

**Sign.** Any whole or part of a display board, wall, screen or object, used to announce, declare, demonstrate, display or otherwise present a message and attract the attention of the public.

**Sign Area.** See *Sec. 6.5.3*.

**Sign, Awning.** See *Sec. 4C.11.2.C.3.a*.

**Sign Face.** The surface upon which the sign message is placed.

**Sign, High Rise.** See *Sec. 4C.11.2.C.3.b*.

**Sign, Identification.** [INSERT]

**Sign, Illuminated Canopy.** See *Sec. 4C.11.2.C.3.c*.

**Sign, Information.** A sign that is limited to a message giving directions, instructions, menus, selections or address numerals.

**Sign, Legally Existing.** A sign authorized by all necessary permits.

**Sign, Marquee.** See *Sec. 4C.11.2.C.3.d*.

**Sign, Monument.** See *Sec. 4C.11.2.C.3.e*.

**Sign, Off-site.** A sign that displays any message directing attention to a business, product, service, profession, commodity, activity, event, person, institution or any other commercial message, which is generally conducted, sold, manufactured, produced, offered or occurs elsewhere than on the premises where the sign is located.

**Sign, On-site.** A sign that is other than an off-site sign.

**Sign, Pedestrian.** See *Sec. 4C.11.2.C.3.f*.

**Sign, Pole.** See *Sec. 4C.11.2.C.3.g*.

**Sign, Projecting.** See *Sec. 4C.11.2.C.3.h*.

**Sign, Roof.** See *Sec. 4C.11.2.C.3.i*.

**Sign, Supergraphic.** A sign, consisting of an image projected onto a wall or printed on vinyl, mesh or other material with or without written text, supported and attached to a wall by an adhesive and/or by using stranded cable and eye-bolts and/or other materials and methods, and which does not comply with the following provisions of this Code: *Sections 14.4.9 (Projecting Signs), 14.4.15 (Marquee Signs), 14.4.16 (Temporary Signs), 14.4.17 (Temporary Signs on Temporary Construction Walls) or 14.4.20 (Original Art Murals)*.

**Sign Support Structure.** A structure of any kind or character, erected, used or maintained for a sign upon which any poster, bill, printing, painting, projected image or other message may be placed.

**Sign, Temporary.** Any sign that is to be maintained for a limited duration, including paper signs and other signs that are not permanently affixed to the ground or building.

**Sign, Wall.** See *Sec. 4C.11.2.C.3.j*.

**Sign, Window.** See *Sec. 4C.11.2.C.3.k*.

**Sign, Yard.** See *Sec. 4C.11.2.C.3.l*.

**Street Frontage.** The length of a line separating a lot from one street.

**Surface parking lot.** A parking area that has no floor area below or above it.

**Temporary Construction Wall.** A wooden fence or wooden barrier that provides protection for pedestrians and is erected and maintained on the perimeter of a construction or demolition-site pursuant to *Sections 3303 and 3306 of the California Building Code (CBC)*.

**Transition Screen.** A planting area with a wall located along a common lot line, typically intended for buffering residential uses from surface parking lots, utilities, heavy commercial uses, and industrial uses.

**Vehicular Sales Areas.** Includes exterior areas used for the display and sale or rental of vehicles, boats, trailers, construction equipment, manufactured homes, or similar uses.

**Wall.** An artificially constructed vertical barrier of wood, masonry, wire, metal, or other manufactured material or combination of materials erected to enclose, screen, or separate areas.

**Waste Receptacle.** [INSERT]

# DIV. 5A.1. PURPOSE

The purpose of this Article is to establish the Use District, General Use Standards, Accessory Use regulations, and use definitions.

# DIV. 5A.2. RELATIONSHIP TO ZONE

## SEC. 5A.2.1. USE DISTRICTS

**A.** As established in *Sec. 1.4.2.* (Zoning Map), a zone is comprised of the following Districts:

[ FORM - FRONTAGE - STANDARDS ] [ **USE** - DENSITY ]

**B.** The Use District is a component of each zone and is located in the second bracket set preceding the Density District.

## SEC. 5A.2.2. RELATIONSHIP TO DENSITY DISTRICTS

**A.** Use Districts that contain provisions for Residential Uses do not include regulations regarding the number of Dwelling Units or Guest Rooms that are permitted, otherwise known as density. The Density District component of the zone, as described in *Article 6* (Density), is the mechanism that regulates the number of Dwelling Units or Guest Rooms permitted on any Lot.

**B.** In addition to use standards found in the Use District, generalized use standards for certain specified Use Groups are found in General Use Standards in *Part 5C*.

# DIV. 5A.3. ORGANIZATION OF USE REGULATIONS

## SEC. 5A.3.1. USE DISTRICTS

Use Districts indicate the permission levels for Use Groups as established in *Sec. 5A.3.2.D.* (Use Table Key) of this Article. Use Districts are referenced individually or as a group of Use Districts throughout this Chapter as shown below.

| USE DISTRICT ORGANIZATION | |
|---|---|
| **Open Space Use Districts** | |

| Industrial Restricted 1 | MR1 |
| Industrial Heavy 1 | MH1 |
| **Public Use Districts** | |
| Public Facilities | PF |

## SEC. 5A.3.2. USE TABLE COMPONENTS

### A. Use District Tables

1. This Article organizes each Use District as columns within Use Tables that provides the comprehensive list of regulated Use Groups. The Permission Levels are set for each Use Group within each Use District.

2. A descriptive explanation of each component of the Use Tables, and where the corresponding/relevant regulations can be found, are provided below.

### B. Use Groups

A Use Group is a set of uses similar in function or purpose. Each Use Group has a definition that includes a description of the types of activities that belong in that group, and includes examples of uses in that group. When types or intensity of uses within a Use Group are regulated differently than other uses in the group, they are listed below the Use Group and regulated independently. Any individual use will not be repeated in multiple Use Groups.

### C. Use Categories

Use Groups are organized into Use Categories. Use Categories do not have any associated Use District regulations, but may be referenced in other sections when they are regulated as a whole. Use Categories are organized as follows:

1. Residential Uses
2. Public and Institutional Uses
3. General Commercial Uses
4. Heavy Commercial Uses
5. Light Industrial Uses
6. Heavy Industrial Uses
7. Agricultural Uses

### D. Permission Levels

1. Each Use Group is assigned a Permission Level that varies by Use District based on whether a Use Group is permitted or prohibited, and the type of regulatory process or established set of standards, if any, that is required for a particular Use Group to be permitted. The permission level for each Use Group identified in the Use Tables established in each Division of *Part 5B* (Use Districts) is set using the symbols outlined below.

| USE TABLE KEY | | | |
|---|---|---|---|
| Symbol | Permission Level | Description | *Process* |
| P | Permitted Use | The use is permitted in the respective Use District. The use is also subject to the standards outlined in *Part 5C* (General Use Standards) of this Article and other applicable requirements in this Chapter. | *Ministerial* |
| LD | Limited by Use District | The use is permitted, subject to standards outline in the respective Use District. The use is may also be subject to the standards outlined in *Part 5C* (General Use Standards) of this Article and other applicable requirements in this Chapter. | *Ministerial (LADBS Review)* |
| LG | Limited by General Use Standard | The use is permitted, subject to standards outlined in *Part 5C* (General Use Standards) of this Article and other applicable requirements in this Chapter. | *Ministerial (LADBS Review)* |
| C1 | Conditional Use Permit, Class 1 | The use may be permitted in the respective Use District only after approval by the Zoning Administrator. The use is subject to conditions of approval, the standards outlined in *Part 5C* (General Use Standards) of this Article, except where the Use Standards are expressly modified as part of the approval process, and other applicable requirements. | *Sec. 13.4.1.* |
| C2 | Conditional Use Permit, Class 2 | The use may be permitted in the respective Use District only after approval by the Zoning Administrator. The use is subject to conditions of approval, the standards outlined in *Part 5C* (General Use Standards) of this Article, except where the Use Standards are expressly modified as part of the approval process, and other applicable requirements. | *Sec. 13.4.2.* |
| C3 | Conditional Use Permit, Class 3 | The use may be permitted in the respective Use District only after approval by the City Planning Commission. The use is subject to conditions of approval, the standards outlined in *Part 5C* (General Use Standards) of this Article, except where the Use Standards are expressly modified as part of the approval process, and other applicable requirements. | *Sec. 13.4.3.* |
| * | Adjacent District | The use may be permitted depending on the permission level of the most restrictive Use District of the adjacent properties. | *See Use District* |
| -- | Use Not Permitted | The use is not permitted in the respective Use District. | *n/a* |

## SEC. 5B.1.2. OPEN SPACE 1 (OS1)

### A. Intent

The OS 1 Use District allows for parks and park facilities. This District is intended to protect and preserve natural resources and provide outdoor recreation opportunities.

### B. Use District Standards

Any existing sanitary landfill sites must have received certificates of closure in compliance with federal and state regulations.

### C. Use Limitations

**1.** Parks & Open Space

**a.** Public recreation area may include bicycle trails, equestrian trails, walking trails, nature trails, park land/lawn areas, children's play areas, picnic facilities, and athletic fields (not to exceed 200 seats in park).

**b.** Public beaches, swimming pools, camping facilities, tennis courts and other game courts require approval by the City Planning Commission pursuant to *Sec. 13.4.3.* (Conditional Use Permit, Class 3).

### D. Conditional Uses

The following uses require a Conditional Use Permit, pursuant to *Sec. 13.4.1.* (Conditional Use Permit, Class 1), *Sec. 13.4.2.* (Conditional Use Permit, Class 2) and *Sec. 13.4.3.* (Conditional Use Permit, Class 3), as specified by the applicable Use Table.

**1.** Civic

**2.** Convention Center

**3.** Correctional or Penal Institution

**4.** School, K-12

**5.** School, Postsecondary

**6.** Shoreline Project

**7.** Solar Panel Energy Generating Facility

**8.** Eating and Drinking Establishment

**9.** Auditorium

**10.** Sports Arena and Stadium

**11.** Recreation, Outdoor

**12.** Golf Course.

**13.** Driving tees or ranges, miniature, and pitch and putt courses are not permitted.

**14.** Research and Development

# DIV. 5B.2. AGRICULTURAL DISTRICTS

Agricultural Use Districts emphasize agriculture-related uses while also allowing for residential uses.

## SEC. 5B.2.2. AGRICULTURAL 1 (A1)

### A. Intent

The A1 Use District allows for single-unit developments and agriculture-related uses. The Use District is intended to be primarily agricultural while allowing for residential uses. Certain public and institutional services and amenities are also allowed.

### B. Use District Standards

**1.** Any use or enterprise customarily carried on in the field of general agriculture that is not obnoxious or detrimental to the public welfare is permitted in this Use District.

**2.** The keeping of equines, bovines, goats or other domestic livestock shall be permitted only on lots having an area of 17,500 square feet or more.

**a.** A maximum of two currently licensed equines not owned by the resident of the involved property (for which monetary compensation may be paid) or kept on the property as an accessory use are permitted per lot.

**3.** Every animal keeping structure for the housing of equines, cattle, sheep, goats, swine, or other similar animals shall neither be located closer than 35 feet from the habitable rooms of the animal keeper's Dwelling Unit nor closer than 75 feet from the habitable rooms of a neighbor's Dwelling Unit.

**a.** Regardless of any provision to the contrary, the Zoning Administrator shall determine that the City may issue a building permit for any residential building which has a habitable room closer than 35 feet from a legally established equine use pursuant to *Sec. 13.4.1.* (Conditional Use Permit, Class 1), if the Zoning Administrator determines that the residential building cannot reasonably be constructed at a location 35 feet or greater from a legally established equine use. This determination may be made after giving consideration to:

**i.** Size and configurations of land parcel.

**ii.** Environmental conditions, including but not limited to topography, geology, drainage and soil.

**iii.** Public facilities and easements that restrict location of buildings.

**iv.** Feasibility of relocating the equine enclosure.

**4.** The commercial grazing, breeding, boarding, raising or training of domestic animals require approval by the Zoning Administrator pursuant to *Sec. 13.4.2.* (Conditional Use Permit, Class 2).

### C. Use Limitations

**1.** Community Center

**a.** Site must be owned and operated by a government agency.

**b.** The use shall also comply with the use standards in *Sec. 5C.3.1.* (Community Center).

**2.** Parks & Open Space

**a.** Site must be owned and operated by a government agency.

**b.** The use shall also comply with the use standards in *Sec. 5C.3.2.* (Park & Open Space).

**3.** Golf Course

**a.** Golf courses and limited accessory clubhouse are permitted.

**b.** Driving tees or ranges, miniature and pitch and putt courses having an average fairway length per hole of less than 125 yards, illuminated courses and similar commercial operations require approval by the Zoning Administrator pursuant to *Sec. 13.4.2.* (Conditional Use Permit, Class 2).

**4.** Animal Farming

**a.** Raising chicken, rabbits, and chinchillas for commercial purposes is permitted on lots of five acres or more.

**b.** Commercial activity for bovine, cattle, goats, and other similar domestic animals require approval by the Zoning Administrator pursuant to *Sec. 13.4.2.* (Conditional Use Permit, Class 2).

**i.** The minimum lot area for goat or cattle dairies shall not be less than 20 acres.

**5.** Equinekeeping, Non-commercial

**a.** The number of equine shall not exceed one for each 4,000 square feet of lot area.

**6.** Livestock Keeping

**a.** The number of bovine shall not exceed one for each 4,000 square feet of lot area.

**b.** Keeping five (5) or fewer swine is permitted, but six (6) or more requires approval by the Zoning Administrator pursuant to *Sec. 13.4.2.* (Conditional Use Permit, Class 2).

**7.** Farming (Plant Cultivation)

**a.** Farm stands are subject to the following limitations:

**i.** One stand is permitted, for the display and sale of only those products produced upon the same premises, provided that the plan for the construction of such stand is approved by the Department of Building and Safety.

**ii.** The stand must not exceed an area of two hundred (200) square feet and must be located not nearer than ten (10) feet to any street or highway.

## D. Conditional Uses

The following uses require a Conditional Use Permit, pursuant to *Sec. 13.4.1.* (Conditional Use Permit, Class 1), *Sec. 13.4.2.* (Conditional Use Permit, Class 2) and *Sec. 13.4.3.* (Conditional Use Permit, Class 3), as specified by the applicable Use Table.

**1.** Eldercare Facility

**2.** Fraternity/Sorority Housing

**3.** Correctional or Penal Institution

**4.** Parking.

- **a.** Parking areas must be public.

**5.** House of Worship

**6.** School, K-12

**7.** School, Postsecondary

**8.** Shoreline Project

**9.** Solar Panel Energy Generating Facility

**10.** Funeral and Related Services

**11.** Day Care Facility

**12.** Auditorium

**13.** Banquet Hall

**14.** Sports Arena and Stadium

**15.** Hospital

**16.** Private Club

**17.** Research and Development

**18.** Soundstages and Backlots

**19.** Green Waste and Wood Waste Facility

- **a.** The following types of uses are permitted with approval from the City Planning Commission pursuant to *Sec. 13.4.3.* (Conditional Use Permit, Class 3):
  - **i.** Chipping/grinding facility
  - **ii.** Composting facility

**iii.** Curing facility

**iv.** Mulching facility

**b.** In addition, the uses in Paragraph a. must be conducted in accordance with the following limitations:

**i.** The uses shall be conducted wholly within an enclosed building, or where deemed appropriate by the City Planning Commission, within an area which is completely enclosed by a solid wall or solid fence which is at least eight feet in height with necessary solid gates of like height. Open storage of material shall comply with the following standards:

**a)** The required wall or fence has been erected in an area which adjoins a street, no material shall be stored within the enclosed area to a height greater than that of the wall or fence for a distance of up to 50 feet from such wall or fence, unless the height of the wall or fence is ten feet or more in height;

**b)** When the height of the wall or fence is ten feet or more, no material shall be stored within the enclosed area to a height greater than that of the wall or fence for a distance of 37 feet from the wall or fence; or

**c)** After the minimum setback of either 50 feet or 37 feet has been observed, materials may be stored over the height of the wall or fence as determined by the City Planning Commission.

**ii.** The property upon which any use enumerated in this subdivision is conducted shall be landscaped to a minimum distance of five feet measured at a right angle from the adjacent street, except for those areas which are necessary for ingress and egress.

**iii.** Signs displaying the name of the company and/or operator, address and hours of operation shall be posted at or near the main entrance gate to the recycling facility at all times.

**iv.** Green Waste or Wood Waste recycling activities under this subdivision shall not exceed the noise level set forth in LAMC Section 111.03 (Minimum Ambient Noise Level) as measured from any point on adjacent property that is located in any Use District other than a Public Use District.

**v.** Green Waste or Wood Waste recycling uses shall comply with all necessary public safety requirements of LAMC Sec. 57.121. (Disclosure of Hazardous Substances). These uses must not emit any odor or smell that is offensive to adjacent uses and must further satisfy all necessary requirements as set forth by applicable state and county agencies.

**vi.** No standing water shall be allowed to accumulate anywhere on the site.

**vii.** All leachates shall be collected, controlled, disposed of and shall not be allowed to remain at the site at any time.

**viii.** Supplemental Findings. In addition to the findings otherwise required by *Sec. 13.4.3.* (Conditional Use Permit, Class 3), before granting an approval the City Planning Commission shall find that:

**a)** Adequate safeguards are provided to control impacts resulting from residual waste materials, airborne transmission of dust particles, or debris from stockpiles, storage areas or roadways located on the premises; and

**b)** Hours of operation shall be tailored to and be compatible with adjoining uses.

**20.** Animal Keeping, Wild

**21.** Equinekeeping, Commercial

# DIV. 5B.3. RESIDENTIAL DISTRICTS

Residential Use Districts emphasize residential uses and only allow a minimal amount of compatible services and amenities.

## SEC. 5B.3.2. RESIDENTIAL GENERAL 1 (RG1)

### A. Intent

The RG1 Use District allows for a wide variety of housing types to accommodate diverse housing needs. The Use District is intended to be primarily residential. Public and institutional services and amenities are also allowed.

### B. Use District Standards

Notwithstanding any provision to the contrary, the Zoning Administrator shall determine that the City may issue a building permit for any residential building which has a habitable room closer than 35 feet from a legally established equine use pursuant to *Sec. 13.4.1.* (Conditional Use Permit, Class 1), if the Zoning Administrator determines that the residential building cannot reasonably be constructed at a location 35 feet or greater from a legally established equine use. This determination may be made after giving consideration to:

**1.** Size and configurations of land parcel.

**2.** Environmental conditions, including but not limited to topography, geology, drainage and soil.

**3.** Public facilities and easements that restrict buildable area location.

**4.** Feasibility of relocating the equine enclosure.

### C. Use Limitations

**1.** Equinekeeping, Non-Commercial

**a.** The keeping of equines is permitted in conjunction with the residential use of the lot, provided that:

**i.** It is not for commercial purposes.

**ii.** There is a Minimum Lot Area of 20,000 square-feet, and the number of equines do not exceed one for each 5,000 square feet of Lot Area.

**b.** Every animal keeping structure for the housing of equines shall neither be located closer than 35 feet from the habitable rooms of the animal keeper's Dwelling Unit nor closer than 75 feet from the habitable rooms of a neighbor's Dwelling Unit.

### D. Conditional Uses

The following uses require a Conditional Use Permit, pursuant to *Sec. 13.4.1.* (Conditional Use Permit, Class 1), *Sec. 13.4.2.* (Conditional Use Permit, Class 2) and *Sec. 13.4.3.* (Conditional Use Permit, Class 3), as specified by the applicable Use Table.

**1.** Eldercare Facility

**2.** Correctional or Penal Institution

3. House of Worship
4. School, K-12
5. School, Postsecondary
6. Shoreline Project
7. Sports Arena and Stadium
8. Soundstages and Backlots

## SEC. 5B.3.3. RESIDENTIAL NEIGHBORHOOD AMENITY 1 (RN1)

### A. Intent

The RN1 Use District is primarily residential, but also allows for limited commercial uses that are generally restricted to 1,500 square feet in size per tenant space on the ground floor.

### B. Use District Standard

1. The Adjustment process, pursuant to *Sec. 13B.5.2.*(Adjustment), can be applied to any Commercial Tenant Size restriction in this Use District if the request represents an increase of 20% or less.
2. All commercial uses shall be on the ground floor only.

### C. Use Limitations

For the following Use Groups, the Commercial Tenant Size of any ground floor tenant space shall be limited to a maximum of 1,500 square feet and the daily hours of operation shall be limited to the hours between 6:00 am and 10:00 pm.

1. Eating and Drinking Establishment
2. Instructional Services
3. Office
4. Creative Media Office
5. Personal Services
6. Massage Therapy
7. Recreation, Indoor
8. Gym
9. Retail Sales
10. Food and Beverage Store

**11.** Day Care Facility

**a.** Up to 20 children or adults are permitted by-right.

**b.** Up to 50 children or adults may be permitted with approval by the Zoning Administrator pursuant to *Sec. 13.4.2.* (Conditional Use Permit, Class 2).

## D. Conditional Uses

The following uses require a Conditional Use Permit, pursuant to *Sec. 13.4.1.* (Conditional Use Permit, Class 1), *Sec. 13.4.2.* (Conditional Use Permit, Class 2) and *Sec. 13.4.3.* (Conditional Use Permit, Class 3), as specified by the applicable Use Table.

**1.** Correctional or Penal Institution

**2.** House of Worship

**3.** School, K-12

**4.** School, Postsecondary

**5.** Shoreline Project

**6.** Alcohol, Off-Site Consumption.

**a.** The use shall also comply with the use standards in *Part 5C* (General Use Standards).

**7.** Alcohol, On-Site Consumption

**a.** Permitted only in conjunction with an Eating and Drinking Establishment that is maintained as a bona fide eating place (restaurant) with an operational kitchen.

**b.** The use shall also comply with the use standards in *Part 5C* (General Use Standards).

**8.** Sports Arena and Stadium

**9.** Soundstages and Backlots

## E. Open Storage Limitations

Open storage of materials and equipment, including used materials and equipment, shall be permitted only when incidental to the use of an office, store or other commercial building of the same lot, provided that:

**1.** Such storage is in compliance with *Sec. 4C.3.5.C.2.a.* (Screening Type A);

**2.** No power-driven excavating or road building equipment is stored on the premises; and

**3.** There is no storage of a commercial vehicle which exceeds a Gross Vehicle Weight Rating (GVWR) greater than 19,500 lbs., or an unladen weight of 8,001 lbs.

# DIV. 5B.4. COMMERCIAL-MIXED DISTRICTS

Commercial-Mixed Use Districts promote neighborhoods with a mixture of uses including commercial and residential.

# SEC. 5B.4.2. COMMERCIAL-MIXED NEIGHBORHOOD 1 (XN1)

## A. Intent

The XN1 Use District allows for commercial uses generally within a 5,000 square foot establishment size on the ground floor, as well as a wide range of housing types. The Use District is intended to support the clustering of commercial, cultural, entertainment, and institutional uses that cater to immediately surrounding neighborhoods.

## B. Use District Standards

The Adjustment process, pursuant to *Sec. 13B.5.2.*(Adjustment), can be applied to any Commercial Tenant Size restriction in this Use District if the request represents an increase of 20% or less.

## C. Use Limitations

**1.** Commercial Tenant Size

For the following Use Groups, the Commercial Tenant Size of any ground floor tenant space shall be limited to a maximum of 5,000 square feet:

**a.** Animal Care, Sales, and Services

**b.** Eating and Drinking Establishment

**c.** Financial Services

**d.** Instructional Services

**e.** Office

**f.** Creative Media Office

**g.** Personal Services

**h.** Massage Therapy

**i.** Recreation, Indoor

**j.** Gym

**k.** Recreation, Outdoor

**l.** Retail Sales

**m.** Food and Beverage Store

**2.** Live/Work (for new construction)

**a.** The Minimum Average Unit Size of all Live/Work Units contained on a Lot shall be no less than 750 square feet.

**b.** Between 48 and 50 percent of each Unit shall be designated as workspace area. The workspace area shall be no smaller than 150 square feet and measure not less than 15 feet in at least one dimension and no less than 10 feet in any dimension. The required workspace area for each unit shall be clearly demarcated on approved building plans.

**c.** The workspace shall be assigned a non-residential use permitted in the Office Use Group, or Agriculture, Heavy Commercial, or Light Industrial Use Categories.

**d.** Excluding area used for bathrooms and storage, at least 70 percent of the floor area of each Live/Work unit shall be open with no fixed interior separation wall.

### 3. Joint Living and Work Quarters (for existing buildings)

**a.** The use shall comply with the use standards in *Sec. 5C.2.2.* (Joint Living and Work Quarters).

**b.** A Zoning Administrator may, upon application, permit Joint Living and Work Quarters with reduced parking pursuant to *Sec. 13.4.1.* (Conditional Use Permit, Class 1).

### 4. Alcohol Sales, On-Site Consumption

**a.** Permitted only in conjunction with an Eating and Drinking Establishment that is maintained as a bona fide eating place (restaurant) with an operational kitchen, and subject to the following limitations:

[ Reserved ]

**b.** If the limitations above cannot be met, this use must be approved by the Zoning Administrator pursuant to *Sec. 13.4.2.* (Conditional Use Permit, Class 2). The use shall also comply with the use standards in *Sec. 5C.4.3.* (Alcohol Sales, On-Site Consumption).

### 5. Hotel

Hotel uses are limited to 49 Guest Rooms. If the limitation above cannot be met, this use must be approved by the Zoning Administrator pursuant to *Sec. 13.4.2.* (Conditional Use Permit, Class 2).

### 6. Motel

Hotel uses are limited to 49 Guest Rooms. If the limitation above cannot be met, this use must be approved by the Zoning Administrator pursuant to *Sec. 13.4.2.* (Conditional Use Permit, Class 2).

## D. Conditional Uses

The following uses require a Conditional Use Permit, pursuant to *Sec. 13.4.1.* (Conditional Use Permit, Class 1), *Sec. 13.4.2.* (Conditional Use Permit, Class 2) and *Sec. 13.4.3.* (Conditional Use Permit, Class 3), as specified by the applicable Use Table.

**1.** Correctional or Penal Institution

2. School, K-12
3. School, Postsecondary
4. Shoreline Project
5. Alcohol Sales, Off-Site Consumption.
    a. The use shall also comply with the use standards in *Sec. 5C.4.2.* (Alcohol Sales, Off-Site Consumption).
6. Funeral and Related Services.
    a. Mortuaries and crematoriums are not permitted.
7. Auditorium
8. Dance Hall
9. Live Entertainment
10. Sports Arena and Stadium
11. Transient Occupancy Residential.
    a. Permitted only in new construction.
    b. New construction of this use is limited to 49 Guest Rooms or Dwelling Units.
    c. Conversion of existing Residential Units to this use is prohibited.
12. Private Club
13. Swap Meet
14. Research and Development
15. Soundstages and Backlots

## E. Open Storage Limitations

Open storage of materials and equipment, including used materials and equipment, shall be permitted only when incidental to the use of an office, store or other commercial building of the same lot, provided that:

1. Such storage is in compliance with *Sec. 4C.3.5.C.2.a.* (Screening Type A);
2. No power-driven excavating or road building equipment is stored on the premises; and
3. There is no storage of a commercial vehicle which exceeds a Gross Vehicle Weight Rating (GVWR) greater than 19,500 lbs., or an unladen weight of 8,001 lbs.

# SEC. 5B.4.3. COMMERCIAL-MIXED COMMUNITY 1 (XC1)

## A. Intent

The XC1 Use District allows for commercial uses generally within a 50,000 square foot establishment size on the ground floor, as well as a wide range of housing types. The Use District is intended to support a broad range of residential, commercial, and civic uses to serve surrounding neighborhoods as well as visitors to the area. Public and institutional services and amenities are also allowed.

## B. Use District Standards

The Adjustment process, pursuant to *Sec. 13B.5.2.*(Adjustment), can be applied to any Commercial Tenant Size restriction in this Use District if the request represents an increase of 20% or less.

## C. Use Limitations

**1.** Commercial Tenant Size

For the following Use Groups, the Commercial Tenant Size of any ground floor tenant space shall be limited to a maximum of 50,000 square feet:

**a.** Animal Care, Sales, and Services

**b.** Eating and Drinking Establishment

**c.** Financial Services

**d.** Instructional Services

**e.** Personal Services

**f.** Massage Therapy

**g.** Recreation, Indoor

**h.** Gym

**i.** Recreation, Outdoor

**j.** Retail Sales

**k.** Food and Beverage Store

**l.** Smoke and Vape Shop

**2.** Live/Work (for new construction)

**a.** The Minimum Average Unit Size of all Live/Work Units contained on a Lot shall be no less than 750 square feet.

**b.** Between 48 and 50 percent of each Unit shall be designated as workspace area. The workspace area shall be no smaller than 150 square feet and measure not less than 15 feet in at least one dimension and no less than 10 feet in any dimension. The required workspace area for each unit shall be clearly demarcated on approved building plans.

**c.** The workspace shall be assigned a non-residential use permitted in the Office Use Group, or Agriculture, Heavy Commercial, or Light Industrial Use Categories.

**d.** Excluding area used for bathrooms and storage, at least 70 percent of the floor area of each Live/Work unit shall be open with no fixed interior separation wall.

**3.** Joint Living and Work Quarters (for existing buildings)

**a.** The use shall comply with the use standards in *Sec. 5C.2.2.* (Joint Living and Work Quarters).

**b.** A Zoning Administrator may, upon application, permit Joint Living and Work Quarters with reduced parking pursuant to *Sec. 13.4.1.* (Conditional Use Permit, Class 1).

**4.** Adult Entertainment Business

**a.** A Sexual Encounter Establishment is not permitted.

**b.** The use shall comply with the use standards in *Sec. 5C.4.1.* (Adult Entertainment Business).

**5.** Veterinary Hospital

**a.** Must be within a fully enclosed building.

**b.** No outside keeping of animals permitted.

**6.** Hotel

Hotel uses are limited to 149 Guest Rooms.

**a.** If this limitation cannot be met, this use must be approved by the Zoning Administrator pursuant to *Sec. 13.4.2.* (Conditional Use Permit, Class 2).

**7.** Motel

Hotel uses are limited to 149 Guest Rooms.

**a.** If this limitation cannot be met, this use must be approved by the Zoning Administrator pursuant to *Sec. 13.4.2.* (Conditional Use Permit, Class 2).

**8.** Smoke and Vape Shop

In addition to the Commercial Tenant Size restrictions listed in Paragraph i. of this Subdivision, this use must be within a fully enclosed building.

**9.** Alcohol Beverage Manufacturing

**a.** The use must include an Eating and Drinking Establishment.

**b.** Alcohol Sales, Off-Site Consumption shall require a Conditional Use Permit in accordance with *Sec. 5C.4.2.* (Alcohol Sales, Off-Site Consumption).

**c.** Alcohol Sales, On-Site Consumption shall require a Conditional Use Permit in accordance with *Sec. 5C.4.3.* (Alcohol Sales, On-Site Consumption).

## D. Conditional Uses

The following uses require a Conditional Use Permit, pursuant to *Sec. 13.4.1.* (Conditional Use Permit, Class 1), *Sec. 13.4.2.* (Conditional Use Permit, Class 2) and *Sec. 13.4.3.* (Conditional Use Permit, Class 3), as specified by the applicable Use Table.

**1.** Correctional or Penal Institution

**2.** Shoreline Project

**3.** Alcohol Sales, Off-Site Consumption.

**a.** The use shall also comply with the use standards in *Sec. 5C.4.2.* (Alcohol Sales, Off-Site Consumption).

**4.** Alcohol Sales, On-Site Consumption.

**a.** The use shall also comply with the use standards in *Sec. 5C.4.3.* (Alcohol Sales, On-Site Consumption).

**5.** Funeral and Related Services

**6.** Dance Hall

**7.** Live Entertainment

**8.** Sports Arena and Stadium

**9.** Alternative Financial Services

**10.** Transient Occupancy Residential.

**a.** Permitted only in new construction.

**b.** New construction of this use is limited to 149 Guest Rooms or Dwelling Units.

**c.** Conversion of existing Residential Units to this use is prohibited.

**11.** Private Club

**12.** Swap Meet

**13.** Research and Development

**14.** Soundstages and Backlots

### E. Open Storage Limitations

Open storage of materials and equipment, including used materials and equipment, shall be permitted only when incidental to the use of an office, store or other commercial building of the same lot, provided that:

**1.** Such storage is in compliance with *Sec. 4C.3.5.C.2.a.* (Screening Type A);

**2.** No power-driven excavating or road building equipment is stored on the premises; and

**3.** There is no storage of a commercial vehicle which exceeds a Gross Vehicle Weight Rating (GVWR) greater than 19,500 lbs., or an unladen weight of 8,001 lbs.

## SEC. 5B.4.4. COMMERCIAL-MIXED GENERAL 1 (XG1)

### A. Intent

The XG1 District allows for primarily commercial uses. This District is intended to accommodate a variety of uses, mixing housing with small and large-scale commercial amenities and services.

### B. Use District Standards

There are no Use District Standards.

### C. Use Limitations

**1.** Live/Work (for new construction)

**a.** The Minimum Average Unit Size of all Live/Work Units contained on a lot shall be no less than 750 square feet.

**b.** Between 48 and 50 percent of each Unit shall be designated as workspace area. The workspace area shall be no smaller than 150 square feet and measure not less than 15 feet in at least one dimension and no less than 10 feet in any dimension. The required workspace area for each unit shall be clearly demarcated on approved building plans.

**c.** The workspace shall be assigned a non-residential use permitted in the Office Use Group, or Agriculture, Heavy Commercial, or Light Industrial Use Categories.

**d.** Excluding area used for bathrooms and storage, at least 70 percent of the floor area of each Live/Work unit shall be open with no fixed interior separation wall.

**e.** Inclusion of other uses. Live/work units shall not be permitted unless a minimum amount of non-residential uses are included within a lot such that:

**i.** The gross floor area of these uses equates to a minimum amount of at least 50% of the lot area and;

**ii.** Such space be assigned to a use permitted in the Office Use Group, or the Agricultural, Heavy Commercial, or Light Industrial Use Categories.

**2.** Joint Living and Work Quarters (for existing buildings)

**a.** The use shall comply with the use standards in *Sec. 5C.2.2.* (Joint Living and Work Quarters).

**b.** A Zoning Administrator may, upon application, permit Joint Living and Work Quarters with reduced parking pursuant to *Sec. 13.4.1.* (Conditional Use Permit, Class 1).

**3.** Adult Entertainment Business

**a.** A Sexual Encounter Establishment is not permitted.

**b.** The use shall comply with the use standards in *Sec. 5C.4.1.* (Adult Entertainment Business).

**4.** Veterinary Hospital

**a.** Must be within a fully enclosed building.

**b.** No outside keeping of animals permitted.

**5.** Smoke and Vape Shop

This use must be within a fully enclosed building.

**6.** Alcohol Beverage Manufacturing

**a.** The use must include an Eating and Drinking Establishment.

**b.** Alcohol Sales, Off-Site Consumption shall require a Conditional Use Permit in accordance with *Sec. 5C.4.2.* (Alcohol Sales, Off-Site Consumption).

**c.** Alcohol Sales, On-Site Consumption shall require a Conditional Use Permit in accordance with *Sec. 5C.4.3.* (Alcohol Sales, On-Site Consumption).

**7.** Self-Service Storage

**a.** If the use involves household rental trucks and utility rental trailers that exceed a Gross Vehicle Weight Rating (GVWR) greater than 19,500 lbs., or an unladen weight of 8,001 lbs, the use must be approved by the Zoning Administrator pursuant to *Sec. 13.4.2.* (Conditional Use Permit, Class 2).

**b.** Supplemental Findings. When acting on an application, a Zoning Administrator shall consider, among other criteria, the following:

**i.** That its operation will provide an essential service or retail convenience to the immediate residential neighborhood or a benefit to the community; and

**ii.** That its operation will be reasonably compatible with and not be detrimental to the public welfare or injurious to the improvements and use of adjacent properties.

## D. Conditional Uses

The following uses require a Conditional Use Permit, pursuant to *Sec. 13.4.1.* (Conditional Use Permit, Class 1), *Sec. 13.4.2.* (Conditional Use Permit, Class 2) and *Sec. 13.4.3.* (Conditional Use Permit, Class 3), as specified by the applicable Use Table.

**1.** Correctional or Penal Institution

**2.** Shoreline Project

**3.** Alcohol Sales, Off-Site Consumption

- **a.** The use shall also comply with the use standards in *Sec. 5C.4.2.* (Alcohol Sales, Off-Site Consumption).

**4.** Alcohol Sales, On-Site Consumption.

- **a.** The use shall also comply with the use standards in *Sec. 5C.4.3.* (Alcohol Sales, On-Site Consumption).

**5.** Funeral and Related Services

**6.** Dance Hall

**7.** Live Entertainment

**8.** Sports Arena and Stadium

**9.** Alternative Financial Services

**10.** Transient Occupancy Residential.

- **a.** Permitted only in new construction.
- **b.** Conversion of existing Residential Units to this use is prohibited.

**11.** Private Club

**12.** Gun Sales

- **a.** Supplemental Findings. In addition to the findings otherwise required, the Zoning Administrator shall also consider whether the proposed use will result in an over-concentration of this use in the area, and the number of firearms available for sale at the site.

**13.** Swap Meet

**14.** Research and Development

**15.** Soundstages and Backlots

**16.** Recycling Collection or Buyback Center

### E. Open Storage Limitations

Open storage of materials and equipment, including used materials and equipment, shall be permitted only when incidental to the use of an office, store or other commercial building of the same lot, provided that:

**1.** Such storage is in compliance with *Sec. 4C.3.5.C.2.a.* (Screening Type A);

**2.** No power-driven excavating or road building equipment is stored on the premises; and

**3.** There is no storage of a commercial vehicle which exceeds a Gross Vehicle Weight Rating (GVWR) greater than 19,500 lbs., or an unladen weight of 8,001 lbs.

## SEC. 5B.4.5. COMMERCIAL-MIXED ENTERTAINMENT 1 (XE1)

### A. Intent

The XE1 Use District allows a wide range of commercial and residential uses. This Use District is intended to support a lively atmosphere by allowing a variety of activities that cater to tourism and entertainment.

### B. Use District Standards

The ground floor of all buildings shall be limited to non-residential uses.

### C. Use Limitations

**1.** Live/Work (for new construction)

**a.** The Minimum Average Unit Size of all Live/Work Units contained on a Lot shall be no less than 750 square feet.

**b.** Between 48 and 50 percent of each Unit shall be designated as workspace area. The workspace area shall be no smaller than 150 square feet and measure not less than 15 feet in at least one dimension and no less than 10 feet in any dimension. The required workspace area for each unit shall be clearly demarcated on approved building plans.

**c.** The workspace shall be assigned a non-residential use permitted in the Office Use Group, or Agricultural, Heavy Commercial, or Light Industrial Use Categories.

**d.** Excluding area used for bathrooms and storage, at least 70 percent of the floor area of each Live/Work unit shall be open with no fixed interior separation wall.

**2.** Joint Living and Work Quarters (for existing buildings)

**a.** The use shall comply with the use standards in *Sec. 5C.2.2.* (Joint Living and Work Quarters).

**b.** The Zoning Administrator may, upon application, permit Joint Living and Work Quarters with reduced parking pursuant to *Sec. 13.4.1.* (Conditional Use Permit, Class 1).

**3.** Adult Entertainment Business

**a.** A Sexual Encounter Establishment is not permitted.

**b.** The use shall comply with the use standards in *Sec. 5C.4.1.* (Adult Entertainment Business).

**4.** Alcohol Sales, On-Site Consumption

**a.** Permitted by Administrative Review when compliant with the following limitations:

**i.** Establishment has no more than 150 seats

**ii.** The entire establishment is never closed to the public or used as a private club

**iii.** A telephone number and email address shall be provided for complaints or concerns regarding the operation of the establishment. The phone number and email address shall be posted on a sign at least 8.5" x 11" in size at the following locations: the entry, visible to pedestrians, and at the customer service desk, front desk, or near the reception area

**iv.** Complaints shall be responded to within 24 hours by the establishment. The establishment shall maintain a log of all calls and emails trailing a period of three years, detailing the date the complaint was received, the nature of the complaint, and the manner in which the complaint was resolved. This log shall be made available to the Department of City Planning upon request.

**v.** Within the establishment, the interior shall be adequately illuminated so as to make discernible all objects and persons, or have a minimum average surface illumination of 2.0 footcandles (21.5 lx).

**vi.** All exterior portions of the site shall be adequately illuminated in the evening so as to make discernible the faces and clothing of persons utilizing the space, or have a minimum average surface illumination of 0.2 footcandles (2.15 lx).

**vii.** A camera surveillance system shall be installed and in operation at all times to monitor the interior, entrance, exits and exterior areas, in front of and around the premises. Recordings shall be maintained for a minimum period of 30 days and are intended for use by the Los Angeles Police Department.

**viii.** The establishment shall be responsible for maintaining the premises and adjoining rights-of-way free of debris and litter.

**ix.** The establishment shall be responsible for monitoring both patron and employee conduct on the premises and within the parking areas under its control to prevent behavior that adversely affects or detracts from the quality of life for adjoining residents, property owners, and businesses.

**x.** Loitering is prohibited on all areas under the control of the restaurant establishment. A "No Loitering or Public Drinking" sign that is a minimum of 4 × 6 inches shall be posted outside next to every exit.

**xi.** Within 24 hours of its occurrence, all graffiti on the property under the establishment's control shall be removed or painted over to match the color of the surface to which it is applied.

**xii.** All trash and recycling bins under control of the restaurant establishment shall be kept closed and locked at all times when they are not in use, and shall be maintained such that they do not overflow.

**xiii.** An electronic age verification device shall be retained on the premises available for use during operational hours. This device shall be maintained in operational condition and all employees shall be instructed in its use.

**xiv.** A minimum of one on-duty manager with authority over the activities within the establishment shall be on the premises at all times that the establishment is open for business. The on-duty manager's responsibilities shall include the monitoring of the premises to ensure compliance with all applicable State laws, Municipal Code requirements and the conditions imposed by the Department of Alcoholic Beverage Control (ABC). The establishment shall be responsible for discouraging illegal and criminal activity on the subject premises and any exterior area under its control.

**xv.** Within the first six months of operation or the administrative clearance, all employees involved with the sale of alcohol shall enroll in the Los Angeles Police Department "Standardized Training for Alcohol Retailers" (STAR) or Department of Alcoholic Beverage Control "Licensee Education on Alcohol and Drugs" (LEAD) training program or the Responsible Beverage Service (RBS) Training Program. Upon completion of such training, the applicant shall request the Police Department or Department of Alcohol Beverage Control to issue a letter identifying which employees completed the training. STAR or LEAD or RBS training shall be conducted for all new hires within three months of their employment.

**xvi.** The applicant shall pay the fees required per *Article 15* (Fees) of this Chapter for Monitoring Restaurant Beverage Program Compliance and Inspection and Field Compliance Review of Operations. The applicant shall comply with the requirements of the City's Monitoring, Verification, and Inspection Program (MViP).

**xvii.** A copy of these limitations shall be retained on the premises at all times and produced upon request by the Police Department, the Department of Building and Safety, the Department of City Planning, or the California Department of Alcoholic Beverage Control.

**b.** If the limitations above cannot be met, this use must be approved by the Zoning Administrator pursuant to *Sec. 13.4.2.* (Conditional Use Permit, Class 2).

i. The use shall also comply with the use standards in *Sec. 5C.4.3.* (Alcohol Sales, On-Site Consumption).

5. Veterinary Hospital

   a. Must be within a fully enclosed building.

   b. No outside keeping of animals permitted.

6. Smoke and Vape Shop

   This use must be within a fully enclosed building.

7. Alcohol Beverage Manufacturing

   a. The use must include an Eating and Drinking Establishment.

   b. Alcohol Sales, Off-Site Consumption shall require a Conditional Use Permit in accordance with *Sec. 5C.4.2.* (Alcohol Sales, Off-Site Consumption).

   c. Alcohol Sales, On-Site Consumption shall require Administrative Review in accordance with *Sec. 5B.4.7.4.* (Alcohol Sales, On-Site Consumption in XE1).

8. Self-Service Storage

   a. If the use involves household rental trucks and utility rental trailers that exceed a Gross Vehicle Weight Rating (GVWR) greater than 19,500 lbs., or an unladen weight of 8,001 lbs, the use must be approved by the Zoning Administrator pursuant to *Sec. 13.4.2.* (Conditional Use Permit, Class 2).

   b. Supplemental Findings. When acting on an application, a Zoning Administrator shall consider, among other criteria, the following:

      i. That its operation will provide an essential service or retail convenience to the immediate residential neighborhood or a benefit to the community; and

      ii. That its operation will be reasonably compatible with and not be detrimental to the public welfare or injurious to the improvements and use of adjacent properties.

## D. Conditional Uses

The following uses require a Conditional Use Permit, pursuant to *Sec. 13.4.1.* (Conditional Use Permit, Class 1), *Sec. 13.4.2.* (Conditional Use Permit, Class 2) and *Sec. 13.4.3.* (Conditional Use Permit, Class 3), as specified by the applicable Use Table.

1. Correctional or Penal Institution

2. Shoreline Project

3. Alcohol Sales, Off-Site Consumption

**a.** The use shall also comply with the use standards in *Sec. 5C.4.2.* (Alcohol Sales, Off-Site Consumption).

**4.** Funeral and Related Services

**5.** Sports Arena and Stadium

**6.** Alternative Financial Services

**7.** Transient Occupancy Residential.

**a.** Permitted only in new construction.

**b.** Conversion of existing Residential Units to this use is prohibited.

**8.** Private Club

**9.** Gun Sales

**a.** Supplemental Findings. In addition to the findings otherwise required, the Zoning Administrator shall also consider whether the proposed use will result in an over-concentration of this use in the area, and the number of firearms available for sale at the site.

**10.** Research and Development

## E. Open Storage Limitations

Open storage of materials and equipment, including used materials and equipment, shall be permitted only when incidental to the use of an office, store or other commercial building of the same lot, provided that:

**1.** Such storage is in compliance with *Sec. 4C.3.5.C.2.a.* (Screening Type A);

**2.** No power-driven excavating or road building equipment is stored on the premises; and

**3.** There is no storage of a commercial vehicle which exceeds a Gross Vehicle Weight Rating (GVWR) greater than 19,500 lbs., or an unladen weight of 8,001 lbs.

# DIV. 5B.5. COMMERCIAL DISTRICTS

Commercial Use Districts cater to light industrial and commercial uses including ones that may be create more significant impacts, such as vehicle repair and fueling stations.

## SEC. 5B.5.1. TABLE OF USES

[Reserved]

# DIV. 5B.6. INDUSTRIAL-MIXED DISTRICTS

Industrial-Mixed Use Districts accommodate a mixture of light industrial, office, and research and development activity, with limited residential uses and other compatible uses.

## SEC. 5B.6.2. INDUSTRIAL-MIXED 1 (IX1)

### A. Intent

The IX1 District allows light industrial uses, office, research and development activity as well as residential uses that are restricted to Affordable Housing.

### B. Use District Standards

There are no Use District Standards.

### C. Use Limitations

**1.** Household Living

**a.** Any residential use must consist of solely Restricted Affordable Units, as defined in *Sec. 14.2.* (Glossary), except a manager's unit(s).

**i.** Records and Agreements. Projects are subject to the Records and Agreement requirements pursuant to *Sec. 9.2.1.*I. (Density Bonus; Procedures; Records and Agreements).

**ii.** Housing Replacement. Projects shall meet any applicable dwelling unit replacement requirements of California Government Code Section 65915c.(3), or as thereafter amended, as verified by HCIDLA, and all applicable covenant and monitoring fees in Section 19.14 shall be paid by the applicant prior to the issuance of any building permit.

**b.** Project Requirements

**i.** Affordable Housing Covenant. Projects shall record a covenant acceptable to HCIDLA that reserves and maintains the total combined number of Dwelling Units and Guest Rooms designated as restricted affordable for at least 55 years from the issuance of the Certificate of Occupancy

**ii.** Housing Replacement. Projects shall meet any applicable dwelling unit replacement requirements of California Government Code Section 65915c.(3), or as thereafter amended, as verified by HCIDLA, and all applicable covenant and monitoring fees in *Article 15* (Fees) shall be paid by the applicant prior to the issuance of any building permit.

**2.** Live/Work (for new construction)

**a.** The Minimum Average Unit Size of all Live/Work Units contained on a Lot shall be no less than 750 square feet.

**b.** Between 48 and 50 percent of each Unit shall be designated as workspace area. The workspace area shall be no smaller than 150 square feet and measure not less than 15 feet in at least one dimension and no less than 10 feet in any dimension. The required workspace area for each unit shall be clearly demarcated on approved building plans.

**c.** The workspace shall be assigned a non-residential use permitted in the Office Use Group, or Agriculture, Heavy Commercial, or Light Industrial Use Categories.

**d.** Excluding area used for bathrooms and storage, at least 70 percent of the floor area of each Live/Work unit shall be open with no fixed interior separation wall.

**e.** Any residential use must consist of solely Restricted Affordable Units, as defined in *Sec. 14.2.* (Glossary), except a manager's unit(s).

**i.** Records and Agreements. Projects are subject to the Records and Agreement requirements pursuant to *Sec. 9.2.1.*I. (Density Bonus; Procedures; Records and Agreements).

**ii.** Housing Replacement. Projects shall meet any applicable dwelling unit replacement requirements of California Government Code Section 65915c.(3), or as thereafter amended, as verified by HCIDLA, and all applicable covenant and monitoring fees in *Article 15* (Fees) shall be paid by the applicant prior to the issuance of any building permit.

**3.** Kennels

**a.** No outdoor animal keeping.

**b.** If the use is within 500 feet of a Residential Use District, the use must be approved by the Zoning Administrator pursuant to *Sec. 13B.2.2.* (Conditional Use Permit, Class 2).

**4.** Veterinary Hospital

**a.** Must be within a fully enclosed building.

**b.** No outside keeping of animals permitted.

**5.** Self-Service Storage

**a.** If the use involves household rental trucks and utility rental trailers that exceed a Gross Vehicle Weight Rating (GVWR) greater than 19,500 lbs., or an unladen weight of 8,001 lbs, the use must be approved by the Zoning Administrator pursuant to *Sec. 13B.2.2.* (Conditional Use Permit, Class 2).

**b.** When acting on an application, a Zoning Administrator shall consider, among other criteria, the following:

**i.** That its operation will provide an essential service or retail convenience to the immediate residential neighborhood or a benefit to the community; and

**ii.** That its operation will be reasonably compatible with and not be detrimental to the public welfare or injurious to the improvements and use of adjacent properties.

## D. Conditional Uses

The following uses require a Conditional Use Permit, pursuant to *Div. 13B.2.* (Quasi-Judicial Review), as specified by the applicable Use Table.

1. Correctional or Penal Institution
2. House of Worship
3. Schools, K-12
4. School, Postsecondary
5. Shoreline Project
6. Alcohol Sales, On-Site Consumption
    a. The use shall also comply with the use standards in *Sec. 5C.4.3.* (Alcohol Sales, On-Site Consumption).
7. Funeral and Related Services
8. Day Care Facility
9. Dance Hall
10. Live Entertainment
11. Sports Arena and Stadium
12. Hospital
13. Private Club
14. Gun Sales
    a. Supplemental Findings. In addition to the findings otherwise required, the Zoning Administrator shall also consider whether the proposed use will result in an over-concentration of this use in the area, and the number of firearms available for sale at the site.
15. Recycling Collection and Buyback Center

## E. Open Storage Limitations

Open storage of materials and equipment, including used materials and equipment, shall be in compliance with *Sec. 4C.8.3.*C.3.a (Open Storage Screen Type B).

# SEC. 5B.6.3. INDUSTRIAL-MIXED 2 (IX2)

## A. Intent

The IX2 District is intended to accommodate light industrial uses, office space, and research and development activity. The Use District also allows a wide range of commercial uses as well as Joint Living and Work Quarters.

## B. Use District Standards

There are no Use District Standards.

## C. Use Limitations

**1.** Kennels

**a.** No outdoor animal keeping.

**b.** If the use is within 500 feet of a Residential Use Class, a Class 2 Conditional Use Permit is required.

**2.** Veterinary Hospital

**a.** Must be within a fully enclosed building.

**b.** No outside keeping of animals permitted.

**3.** Smoke and Vape Shop

This use must be within a fully enclosed building.

**4.** Self-Service Storage

**a.** If the use involves household rental trucks and utility rental trailers that exceed a Gross Vehicle Weight Rating (GVWR) greater than 19,500 lbs., or an unladen weight of 8,001 lbs, the use must be approved by the Zoning Administrator pursuant to *Sec. 13B.2.2.* (Conditional Use Permit, Class 2).

**b.** When acting on an application, a Zoning Administrator shall consider, among other criteria, the following:

**i.** That its operation will provide an essential service or retail convenience to the immediate residential neighborhood or a benefit to the community; and

**ii.** That its operation will be reasonably compatible with and not be detrimental to the public welfare or injurious to the improvements and use of adjacent properties.

## D. Conditional Uses

The following uses require a Conditional Use Permit, pursuant to *Div. 13B.2.* (Quasi-Judicial Review), as specified by the applicable Use Table.

1. Correctional or Penal Institution
2. House of Worship
3. Schools, K-12
4. School, Postsecondary
5. Shoreline Project
6. Alcohol Sales, Off-Site Consumption
    a. The use shall also comply with the use standards in *Sec. 5C.4.2.* (Alcohol Sales, Off-Site Consumption).
7. Alcohol Sales, On-Site Consumption
    a. The use shall also comply with the use standards in *Sec. 5C.4.3.* (Alcohol Sales, On-Site Consumption).
8. Funeral and Related Services
9. Day Care Facility
10. Dance Hall
11. Live Entertainment
12. Sports Arena and Stadium
13. Hospital
14. Private Club
15. Gun Sales
    a. Supplemental Findings. In addition to the findings otherwise required, the Zoning Administrator shall also consider whether the proposed use will result in an over-concentration of this use in the area, and the number of firearms available for sale at the site.
16. Recycling Collection and Buyback Center

## E. Open Storage Limitations

Open storage of materials and equipment, including used materials and equipment, shall be in compliance with *Sec. 4C.8.3.*C.3.a (Open Storage Screen Type B).

# SEC. 5B.6.4. INDUSTRIAL-MIXED HYBRID 1 (IH1)

## A. Intent

The IH1 District supports a range of light industrial and commercial uses. The Use District allows for the combination of light manufacturing and residential uses as Live/Work units or through adaptive reuse. The District is intended to promote productive industries and entrepreneurial activities.

## B. Use District Standards

There are no Use District Standards.

## C. Use Limitations

**1.** Household Living

**a.** Residential Dwelling Units and Guest Rooms are permitted in existing buildings that qualify as Adaptive Reuse Projects pursuant to *Sec. 9.4.5.* (Downtown Adaptive Reuse Projects) and Section *Sec. 9.4.6.* (Citywide Adaptive Reuse Projects).

**b.** Residential Dwelling Units and Guest Rooms are permitted as part of a Qualified Permanent Supportive Housing Project which is eligible for the Qualified Permanent Supportive Housing Incentive Program, as defined in *Sec. 9.4.1.*

**c.** Inclusion of other uses. Residential Dwelling units shall not be permitted unless a minimum amount of non-residential uses are included within a lot such that:

**i.** The gross floor area of these uses equates to a minimum amount of at least 100% of the lot area and;

**ii.** Such space be assigned to a use permitted in the Office Use Group, or the Agricultural, Heavy Commercial, or Light Industrial Use Categories.

**2.** Live/Work (for new construction)

**a.** The Minimum Average Unit Size of all Live/Work Units contained on a Lot shall be no less than 750 square feet.

**b.** Between 48 and 50 percent of each Unit shall be designated as workspace area. The workspace area shall be no smaller than 150 square feet and measure not less than 15 feet in at least one dimension and no less than 10 feet in any dimension. The required workspace area for each unit shall be clearly demarcated on approved building plans.

**c.** The workspace shall be assigned a non-residential use permitted in the Office Use Group, or Agricultural, Heavy Commercial, or Light Industrial Use Categories.

**d.** Excluding area used for bathrooms and storage, at least 70 percent of the floor area of each Live/Work unit shall be open with no fixed interior separation wall.

**e.** Inclusion of other uses. Live/work units shall not be permitted unless a minimum amount of non-residential uses are included within a lot such that:

**i.** The gross floor area of these uses equates to a minimum amount of at least 100% of the lot area and;

**ii.** Such space be assigned to a use permitted in the Office Use Group, or the Agricultural, Heavy Commercial, or Light Industrial Use Categories.

**iii.** Workspace area within Live/Work units shall count toward the non-residential use requirement.

**3.** Adult Entertainment Business

**a.** A Sexual Encounter Establishment is not permitted.

**b.** The use shall comply with the use standards in *Sec. 5C.4.1.* (Adult Entertainment Business).

**4.** Veterinary Hospital

**a.** Must be within a fully enclosed building.

**b.** No outside keeping of animals permitted.

**5.** Smoke and Vape Shop

This use must be within a fully enclosed building.

## D. Conditional Uses

The following uses require a Conditional Use Permit, pursuant to *Div. 13B.2.* (Quasi-Judicial Review), as specified by the applicable Use Table.

**1.** Correctional or Penal Institution

**2.** House of Worship

**3.** Schools, K-12

**4.** School, Postsecondary

**5.** Shoreline Project

**6.** Alcohol Sales, Off-Site Consumption.

**a.** The use shall also comply with the use standards in *Sec. 5C.4.2.* (Alcohol Sales, Off-Site Consumption).

**7.** Alcohol Sales, On-Site Consumption

**a.** The use shall also comply with the use standards in *Sec. 5C.4.3.* (Alcohol Sales, On-Site Consumption).

**8.** Funeral and Related Services

**9.** Dance Hall

**10.** Live Entertainment

**11.** Sports Arena and Stadium

**12.** Hotel

**a.** This use shall be limited to 149 Guest Rooms.

**13.** Motel

**a.** This use shall be limited to 149 Guest Rooms.

**14.** Transient Occupancy Residential.

**a.** Permitted only in new construction.

**b.** New construction of this use is limited to 149 Guest Rooms or Dwelling Units.

**c.** Conversion of Residential Units to this use is prohibited.

**15.** Hospital

**16.** Private Club

**17.** Gun Sales

**a.** Supplemental Findings. In addition to the findings otherwise required, the Zoning Administrator shall also consider whether the proposed use will result in an over-concentration of this use in the area, and the number of firearms available for sale at the site.

## E. Open Storage Limitations

Open storage of materials and equipment, including used materials and equipment, shall be in compliance with *Sec. 4C.8.3.*C.3.a (Open Storage Screen Type B).

## SEC. 5B.6.5. INDUSTRIAL-MIXED HYBRID 2 (IH2)

### A. Intent

The IH2 District supports office and commercial uses, as well as research and development, wholesale, and light industrial uses. The Use District allows for a limited amount of Live/Work units. The District is intended to promote productive industries and entrepreneurial activities.

### B. Use District Standards

All new structures shall be built entirely with Type I, II, or IV construction, as defined in the Los Angeles Building Code and verified by the Los Angeles Department of Building and Safety.

### C. Use Limitations

**1.** Household Living

**a.** Residential Dwelling Units and Guest Rooms are permitted as part of a Qualified Permanent Supportive Housing Project which is eligible for the Qualified Permanent Supportive Housing Incentive Program, in accordance with *Sec. 9.4.1.*

**b.** New construction is not permitted, unless the use is part of a Qualified Permanent Supportive Housing Project which is eligible for the Qualified Permanent Supportive Housing Incentive Program, in accordance with *Sec. 9.4.1.* Live/Work (for new construction)

**2.** Live/Work (For New Construction)

**a.** The Minimum Average Unit Size of all Live/Work Units contained on a Lot shall be no less than 1,000 square feet.

**b.** Between 48 and 50 percent of each Unit shall be designated as workspace area. The workspace area shall be no smaller than 150 SF and measure not less than 15 feet in at least one dimension and no less than 10 feet in any dimension. The required workspace area for each unit shall be clearly demarcated on approved building plans.

**c.** The workspace area shall be assigned a non-residential use permitted in the Office Use Group, or the Agricultural, Heavy Commercial or Light Industrial Use Categories.

**d.** Excluding area used for bathrooms and storage, at least 70 percent of the floor area of each Live/Work unit shall be open with no fixed interior separation wall

**e.** Inclusion of other uses. Live/work units shall not be permitted unless a minimum amount of non-residential uses are included within a lot such that:

**i.** The gross floor area of these uses equates to a minimum amount of at least 150% of the lot area and;

**ii.** Such space shall be assigned to a use permitted in the Office Use Group, or the Agricultural, Heavy Commercial, or Light Industrial Use Categories.

iii. Workspace area within Live/Work units shall not count toward the non-residential use requirement.

**f.** The entire structure shall have a 50-foot minimum distance from any uses within the Heavy Industrial Use Category.

**3.** Adult Entertainment Business

**a.** A Sexual Encounter Establishment is not permitted.

**b.** The use shall comply with the use standards in *Sec. 5C.4.1.* (Adult Entertainment Business).

**4.** Veterinary Hospital

**a.** Must be within a fully enclosed building.

**b.** No outside keeping of animals permitted.

**5.** Smoke and Vape Shop

This use must be within a fully enclosed building.

## D. Conditional Uses

The following uses require a Conditional Use Permit, pursuant to *Div. 13B.2.* (Quasi-Judicial Review), as specified by the applicable Use Table.

**1.** Correctional or Penal Institution

**2.** House of Worship

**3.** Schools, K-12

**4.** School, Postsecondary

**5.** Shoreline Project

**6.** Alcohol Sales, Off-Site Consumption

**a.** The use shall also comply with the use standards in *Sec. 5C.4.2.* (Alcohol Sales, Off-Site Consumption).

**7.** Alcohol Sales, On-Site Consumption

**a.** The use shall also comply with the use standards in *Sec. 5C.4.3.* (Alcohol Sales, On-Site Consumption).

**8.** Funeral and Related Services

**9.** Dance Hall

**10.** Live Entertainment

**11.** Sports Arena and Stadium

**12.** Hotel

**a.** This use is limited to 75 Guest Rooms.

**13.** Motel

**a.** This use is limited to 75 Guest Rooms.

**14.** Transient Occupancy Residential.

**a.** Permitted only in new construction.

**b.** New construction of this use is limited to 75 Guest Rooms or Dwelling Units.

**c.** Conversion of Residential Units to this use is prohibited.

**15.** Hospital

**16.** Private Club

**17.** Gun Sales

**a.** Supplemental Findings. In addition to the findings otherwise required, the Zoning Administrator shall also consider whether the proposed use will result in an over-concentration of this use in the area, and the number of firearms available for sale at the site.

## E. Open Storage Limitations

Open storage of materials and equipment, including used materials and equipment, shall be in compliance with *Sec. 4C.8.3.*C.3.a (Open Storage Screen Type B).

## SEC. 5B.7.2. RESTRICTED LIGHT INDUSTRIAL 1 (MR1)

### A. Intent

The MR District allows heavy commercial and light industrial uses as well as a limited amount of commercial activity. This District intends to support employment, goods movement, and warehousing.

### B. Use District Standards

**1.** A dwelling shall be considered to be a permissible accessory building only when it is designed for and used solely by a watchman or caretaker (including their family) of an industrial development or of a permitted use which requires 24-hour supervision and is located on the same lot with such development or use.

**2.** No crushing, smashing, baling or reduction of metal is conducted on the premises unless such is conducted without producing substantial amounts of dust and is so conducted that the noise emanating therefrom, as measured from any point on adjacent property shall be no more audible than the noise emanating from ordinary street traffic and from other commercial or industrial uses measured at the same point on said adjacent property; provided, however, that such noise shall be permitted in the event it does not exceed the levels provided in Section 111.03 as measured from any point on adjacent property.

### C. Use Limitations

**1.** Kennels

**a.** No outdoor animal keeping.

**b.** If the use is within 500 feet of a Residential Use District, the use must be approved by the Zoning Administrator pursuant to *Sec. 13B.2.2.* (Conditional Use Permit, Class 2).

**2.** Veterinary Hospital

**a.** Must be within a fully enclosed building.

**b.** No outdoor keeping of animals permitted.

**3.** Eating and Drinking Establishment

All retail business must be conducted in connection with the main use and only as incidental to the main use.

**4.** Retail Sales

All retail business must be conducted in connection with the main use and only as incidental to the main use.

**5.** Animal Products Processing

**a.** Must be at least 500 feet from an Agricultural, Residential, Commercial-Mixed, or Commercial Use District.

**b.** No hides (raw) curing, tanning, or storage permitted.

**6.** Chemical Product Manufacturing

Must be at least 500 feet from an Agricultural, Residential, Commercial-Mixed, or Commercial Use District.

**7.** Cargo Container Storage Yard

The following standards shall apply to all Cargo Container Storage Yards, except those located in whole or in part within the boundaries of the Port of Los Angeles which are permitted by-right.

**a.** The following provisions apply to the stacking of cargo containers:

**i.** The stacking of cargo containers more than 20 feet high shall only be permitted if a structural analysis is done by a licensed engineer or architect in the State of California is submitted to and approved by the Los Angeles Department of Building and Safety. (LADBS)

**ii.** Cargo container stacking within 300 feet or less of a Residential Use District shall be limited to a maximum height of 30 feet. There is no maximum container height limit beyond 300 feet of a Residential Use District, except as limited by any applicable height limitation and Subparagraph h.i. below.

**b.** Cargo container storage yards shall obtain a "use of land" permit from LADBS for one or more contiguous lots maintained as one site.

**c.** The perimeter or each site with a separate "use of land" permit shall be enclosed by a minimum eight-foot fence or wall.

**i.** Fencing may be constructed of chain-link; however fencing adjacent to a Boulevard I or II, or Avenue I, II, or III shall also comply with Subparagraph h.iii. below.

**ii.** Fencing shall be maintained in good condition and appearance.

**iii.** Sheet metals shall be prohibited as fencing material.

**iv.** There shall be no requirement to fence each individual lot where multiple lots are maintained as one site under a valid "use of land" permit, including individual lots that may be separated by a public right-of-way, easement or other land occupied by a revocable permit.

**d.** The entire site shall be graded pursuant to Chapter IX .

**e.** All driveways, accessways and parking areas shall be covered with a decomposed granite, crushed gravel or similar material and be treated with dust control methods.

**f.** An annual site inspection shall be conducted by LADBS pursuant to *Sec. 13.1.8* (Department of Building and Safety).

**g.** All containers must be empty and cleaned of any residue which may pose any kind of physical or health risk.

**h.** In addition to the above specified requirements, the following conditions shall also apply to sites that are located adjacent to a Boulevard I, II, or Avenue I, II, or III. However, for those portions of the site that are separated from the roadway by a grade change of more than ten feet within five feet of the property line, Sub-subparagraphs (ii) and (iii) below shall not apply:

**i.** Cargo container stacking shall be limited to a maximum height of 20 feet within 20 feet of the property line adjoining a Boulevard I, II, or Avenue I, II, or III. There is no maximum cargo container height limit beyond 20 feet of a Boulevard I, II, or Avenue I, II, or III, except as limited by Subparagraph i. above.

**ii.** A minimum five-foot setback shall be provided along the street frontage adjacent to a Boulevard I, II, or Avenue I, II, or III. The setback shall be fully landscaped with drought resistant plants, ground cover and trees; with one minimum 15-gallon size tree planted for each 15 linear feet of street frontage and minimum three shrubs for each tree. The entire landscaped area shall be well maintained at all times.

**iii.** A solid wall or fence shall be required on the street frontage adjacent to a Boulevard I, II, or Avenue I, II, or III. The wall or fence shall be located within the required setback, and at the rear of the landscaped area between the landscaping and the use. A chain-link fence with slats and growing vines may be permitted in place of a solid wall or fence.

**8.** Junk Yard Facility

The use must comply with the standards listed in Subsection E. below.

**9.** Auto Dismantling

The use must comply with the standards listed in Subsection E. below.

**10.** Scrap Metal Yard

The use must comply with the standards listed in Subsection E. below.

**a.** A scrap metal processing yard that is entirely located at least 500 feet from a Agricultural, Residential, Commercial-Mixed, Commercial, or Industrial-Mixed Use District is exempt from these stacking limitations.

**11.** Green Waste and Wood Waste Facility

**a.** Chipping and Grinding Facilities when not fully enclosed require approval by the City Planning Commission, pursuant to *Sec. 13B.2.3.* (Conditional Use Permit, Class 3).

**b.** All other Green Waste and Wood Waste Facility uses are permitted.

**12.** Recycling Collection or Buyback Center

**a.** The depositing of glass, cans, papers, plastic, beverage containers, and similar Recyclable Materials, Recycling Collection or Buyback Centers, and Mobile Recycling Centers, shall be permitted without obtaining a Conditional Use Permit, pursuant to *Sec. 13B.2.3.* (Conditional Use Permit, Class 3), provided that all of the following conditions are met:

**i.** The lot upon which the Recycling Collection or Buyback Center is located is not within 1,000 feet of any Agricultural, Residential, Commercial-Mixed, Commercial, or Industrial-Mixed Use District.

**ii.** The area for depositing Recyclable Materials does not exceed a total of 1,000 square feet.

**iii.** The area for depositing Recyclable Materials shall be a minimum of 10 feet from all property lines, except for Reverse Vending Machines and Reverse Vending Machine Commodity Storage Bins located 24 inches or less from the exterior wall of a building.

**iv.** If the facility is located in any Commercial-Mixed or Commercial Use District, a five-foot landscaped buffer, or as otherwise required by the City Planning Department, shall be maintained along all street frontages.

**v.** All Recycling Receptacles shall be covered, durable, waterproof, rustproof, of incombustible construction, and of sufficient capacity to accommodate the materials collected.

**vi.** Except for Reverse Vending Machine Commodity Storage Bins, either the Recycling Receptacle or the enclosure is clearly identified with the operator's name, address, telephone number, hours of operation, and a notice that no material shall be left outside the enclosure, and each Recycling Receptacle must clearly indicate the type of material to be deposited.

**vii.** On a daily basis the site is kept free of litter, debris, spillage, bugs, rodents, odors, and other similar undesirable hazards.

**viii.** Recyclable Materials, other than Recyclable Materials contained in reverse vending machine commodity storage bins, are emptied from Recycling Receptacles when full or every week, whichever occurs first.

**ix.** All recycled goods shall be placed or stored in Recycling Receptacles and not be left out on the site by the end of the business day.

**x.** Paper products and other lightweight materials shall be immediately placed into covered Recycling Receptacles when they are dropped off.

**xi.** The hours of operation shall not exceed Monday through Friday from 7 a.m. to 8 p.m., Saturday from 8 a.m. to 6 p.m., and Sunday from 10 a.m. to 6 p.m., except for Reverse Vending Machines that are located within 24 inches of the exterior wall of a building, which may operate from 7 a.m. to 10 p.m., seven days a week.

**xii.** All Recycling Receptacles and containers shall be kept secure from unauthorized entry to prevent scavenging and theft of recyclable materials.

**xiii.** The area for depositing Recyclable Materials and/or enclosure shall not impair traffic flow nor diminish the required parking spaces except that up to 10 percent of the required parking spaces may be used as part of the area utilized for Recyclable Materials; provided, however, that if the area for depositing Recyclable Materials is abandoned, then the parking spaces shall be reestablished.

**xiv.** Any activity involving baling and hand sorting of Recyclable Materials, as well as automated can conveyor/magnetic or mechanical separators, and crushers for can, glass, or plastic bottles, is conducted in compliance with the following:

**xv.** No crushing, smashing, baling or reduction of metal is conducted on the premises unless such is conducted without producing substantial amounts of dust and is so conducted that the noise emanating therefrom, as measured from any point on adjacent property shall be no more audible than the noise emanating from ordinary street traffic and from other commercial or industrial uses measured at the same point on said adjacent property; provided, however, that such noise shall be permitted in the event it does not exceed the levels provided in Section 111.03 as measured from any point on adjacent property in an Agricultural, Residential, Commercial-Mixed, Commercial, Industrial-Mixed, or Industrial Use District.

**xvi.** At least one trash receptacle shall be provided within a recycling site.

**xvii.** The area for collection of Recyclable Materials, and all driveways, parking areas, storage areas, and loading zones shall be paved and maintained in good condition.

**xviii.** A source of running water shall be maintained on the site.

**xix.** No Recycling Center Operator shall permit loitering, camping, public begging, consumption of alcoholic beverages, use of illegal narcotics, or any other criminal activity on any premises over which he has control.

**b.** If the limitations in Paragraph a. cannot be met, this use must be approved by the City Planning Commission, pursuant to *Sec. 13B.2.3.* (Conditional Use Permit, Class 3).

**13.** Recycling Materials Sorting Facility

**a.** Recycling Materials Sorting Facilities shall be permitted without obtaining a Conditional Use Permit, pursuant to *Sec. 13B.2.3.* (Conditional Use Permit, Class 3), provided that all of the following conditions are met:

**i.** The facility is located at least 500 feet from any Agricultural, Residential, Commercial-Mixed, or Commercial Use District.

**ii.** The facility shall be operated by a Recycling Center Operator or Junk Dealer.

**iii.** Notwithstanding any other provisions of the Code, no processing of Recyclable Materials, shall be permitted at the facility.

**iv.** Recyclable Materials to be sorted shall be limited to paper, cardboard, glass, metal, plastic and other items that are deemed appropriate by the Department of Building and Safety, Bureau of Sanitation, and Fire Department.

**v.** The hours of operation shall be limited to 7 a.m. to 8 p.m., seven days a week, if the facility is located within 1,000 feet of an Agricultural or Residential Use District, or any residential use. Otherwise, operation may be 24 hours a day. The facility and all related activities shall be administered by on-site personnel during the hours the center is open.

**vi.** No depositing of Recyclable Materials shall be permitted during hours the center is not open.

**vii.** The facility shall be clearly identified with the operator's name, address, telephone number, hours of operation and a notice stating that no material shall be left outside the recycling center enclosure.

**viii.** Recycling Receptacles shall be provided that are durable, waterproof, rustproof, and of incombustible construction and of a capacity which are sufficient to accommodate the materials collected.

**ix.** Automated sorting and separating machinery shall be permitted, provided that the machinery is conducted in compliance with the following:

**a)** No crushing, smashing, baling or reduction of metal is conducted on the premises unless such is conducted without producing substantial amounts of dust and is so conducted that the noise emanating therefrom, as measured from any point on adjacent property shall be no more audible than the noise emanating from ordinary street traffic and from other commercial or industrial uses measured at the same point on said adjacent property; provided, however, that such noise shall be permitted in the event it does not exceed the levels provided in Section 111.03 as measured from any point on adjacent property in an Agricultural, Residential, Commercial-Mixed, Commercial, Industrial-Mixed, or Industrial Use District.

**x.** The facility shall be maintained in a clean, safe and sanitary condition on a daily basis.

**xi.** A source of running water shall be maintained on the site.

**xii.** The facility shall utilize some type of dust mitigation and/or wind mitigation measures to prevent blowing debris.

**xiii.** The facility shall be surrounded by a 6-foot high concrete block wall and a 5-foot landscaped buffer, or as otherwise required by the City Planning Department, adjoining all street frontages.

**xiv.** No Recycling Center Operator shall permit loitering, camping, public begging, consumption of alcoholic beverages, use of illegal narcotics, or any other criminal activity on any premises over which he has control.

**b.** If the limitations in Paragraph a. cannot be met, this use must be approved by the City Planning Commission, pursuant to *Sec. 13B.2.3.* (Conditional Use Permit, Class 3).

**14.** Recycling Materials Processing Facility

**a.** Recycling Materials Processing Facilities shall be permitted without obtaining a Conditional Use Permit, pursuant to *Sec. 13B.2.3.* (Conditional Use Permit, Class 3), provided that all of the following conditions are met:

**i.** The facility shall be located at least 1,000 feet from any Agricultural, Residential, Commercial-Mixed, Commercial, or Industrial-Mixed Use District.

**ii.** The facility shall be operated by a Recycling Center Operator or Junk Dealer.

**iii.** Notwithstanding any other provisions of the Code, Recyclable Materials collected and processed on the site shall be limited to paper, cardboard, glass, metal, plastic, and other items that are deemed appropriate by the Department of Building and Safety, Bureau of Sanitation, and Fire Department.

**iv.** Hours of operation shall be limited to 7am to 8pm, seven days a week, if the facility is located within 1,000 feet of an Agricultural Use Class, Residential Use Class, or any residential use. Otherwise, operation may be 24 hours a day. All operations must comply with Section 111.03 . The facility and all related activities shall be administered by on-site personnel during the hours the center is open.

**v.** No depositing of Recyclable Materials shall be permitted during hours the center is not open.

**vi.** The facility shall be clearly identified with the operator's name, address, telephone number, hours of operation and a notice stating that no material shall be left outside the recycling center enclosure.

**vii.** If Recycling Receptacles are used for storage of materials on site, they shall be durable, waterproof, rustproof, and of incombustible construction.

**viii.** Processing machinery, such as weighing scales and crushing and separating machines shall be permitted, provided that the machinery is conducted in compliance with the following:

**a)** No crushing, smashing, baling or reduction of metal is conducted on the premises unless such is conducted without producing substantial amounts of dust and is so conducted that the noise emanating therefrom, as measured from any point on adjacent property shall be no more audible than the noise emanating from ordinary street traffic and from other commercial or industrial uses measured at the same point on said adjacent property; provided, however, that such noise shall be permitted in the event it does not exceed the levels provided in Section 111.03 as measured from any point on adjacent property in an Agricultural, Residential, Commercial-Mixed, Commercial, Industrial-Mixed, or Industrial Use District.

**ix.** The facility shall be maintained in a clean, safe, and sanitary condition on a daily basis.

**x.** A source of running water shall be maintained on the site.

**xi.** The facility shall utilize some type of dust mitigation and/or wind mitigation measures to prevent blowing debris.

**xii.** The facility shall be surrounded by a 6-foot high concrete block wall and a 5-foot landscaped buffer, or as otherwise required by the City Planning Department, adjoining all street frontages.

**xiii.** No Recycling Center Operator shall permit loitering, camping, public begging, consumption of alcoholic beverages, use of illegal narcotics, or any other criminal activity on any premises over which he has control.

**b.** If the limitations in Paragraph a. cannot be met, this use must be approved by the City Planning Commission, pursuant to *Sec. 13B.2.3.* (Conditional Use Permit, Class 3).

## D. Conditional Uses

The following uses require a Conditional Use Permit, pursuant to *Div. 13B.2.* (Quasi-Judicial Review), as specified by the applicable Use Table.

**1.** Correctional or Penal Institution

**2.** House of Worship

**3.** School, Postsecondary

**4.** Shoreline Project

**5.** Alcohol Sales, Off-Site Consumption

**a.** The use shall also comply with the use standards in *Sec. 5C.4.2.* (Alcohol Sales, Off-Site Consumption)).

**6.** Sports Arena and Stadium

**7.** Hospital

**8.** Private Club

**9.** Gun Sales

**a.** Supplemental Findings. In addition to the findings otherwise required, the Zoning Administrator shall also consider whether the proposed use will result in an over-concentration of this use in the area, and the number of firearms available for sale at the site.

**10.** Solid Waste Alternative Technology Processing Facility.

**a.** Supplemental Findings. In addition to the other findings required by *Sec. 13B.2.3.* (Conditional Use Permit, Class 3), the City Planning Commission shall make all of the following findings:

**i.** That the proposed location of the facility will not result in an undue concentration of solid waste alternative technology processing facilities in the immediate area, will not create a cumulative impact with special consideration given to the location of solid waste facilities already permitted and will support the equitable distribution of these facilities citywide.

**ii.** That an effort was made to locate the facility in close proximity to existing solid waste facilities, transfer stations, solid waste resource collection vehicle yards, material recovery facilities and green waste processing facilities.

**iii.** That the facility will not detrimentally affect nearby residential uses and other sensitive land uses, taking into consideration the number and proximity of residential buildings, churches, schools, hospitals, public playgrounds, nursing homes, day care centers, and other similar uses within a 1,500 foot radius of the proposed site.

**iv.** That the facility operator will provide a language appropriate newsletter and other benefits to businesses and residents likely to be impacted by this facility, taking into consideration the location of the proposed site and nearby uses.

**v.** That access to the facility, on-site parking and vehicle storage will not constitute a traffic hazard or cause significant traffic congestion or disruption of vehicular circulation on adjacent streets.

**vi.** That hazardous waste and household hazardous waste as defined in the California Code of Regulations, Title 22, Section 66260.10, universal waste as defined in the California Code of Regulations, Title 22, Section 66260.10, radioactive waste as defined in Section 114985 of the California Health and Safety Code and medical waste as defined in Section 117690 of the California Health and Safety Code, will not be received at the facility.

**11.** Equinekeeping, Commercial

### E. Open Storage Limitations

1. Open storage of materials and equipment, including used materials and equipment, shall be conducted wholly within an enclosed building or within an area completely enclosed with a solid masonry wall not less than eight feet in height with necessary solid gates of like height; or within an area completely enclosed with a solid fence not less than eight feet in height with necessary solid gates of like height.

2. In the event the use is conducted in an area enclosed by a wall or fence as hereinabove provided, no material shall be stored to a height greater than the height of the enclosing wall or fence, except that the storage of empty second-hand wooden boxes, when located at least 300 feet from a Agricultural, Commercial-Mixed, Commercial, or Industrial-Mixed Use District, may be permitted an additional foot above the enclosing wall or fence for each two feet such boxes are set back from said enclosing wall or fence, provided that such stacking shall not exceed 18 feet in height. In no event shall such stacks violate the limitations imposed by Section 57.315.4.2 of the Los Angeles Municipal Code.

3. In the event the use is conducted in an area enclosed by a wall or fence as hereinabove provided, all property adjacent to any street shall be landscaped to a minimum depth of two feet measured at a right angle from the adjacent street and extending the full length of the property contiguous to such street except for areas necessary for ingress and egress.

4. The phrase "used materials and equipment" includes vehicles, boats, or airplanes which are inoperable, wrecked, damaged or unlicensed, i.e., not currently licensed by the Department of Motor Vehicles.

## SEC. 5B.7.3. HEAVY INDUSTRIAL 1 (MH1)

### A. Intent

The MH1 District allows heavy commercial, light industrial, and heavy industrial uses as well as a limited amount of commercial activity. This District is intended to support employment and accommodate the most intense industrial activities while minimizing potential disruptions to surrounding uses.

### B. Use District Standards

1. A dwelling shall be considered to be a permissible accessory building only when it is designed for and used solely by a watchman or caretaker (including their family) of an industrial development or of a permitted use which requires 24-hour supervision and is located on the same lot with such development or use.

2. No crushing, smashing, baling or reduction of metal is conducted on the premises unless such is conducted without producing substantial amounts of dust and is so conducted that the noise emanating therefrom, as measured from any point on adjacent property shall be no more audible than the noise emanating from ordinary street traffic and from other commercial

or industrial uses measured at the same point on said adjacent property; provided, however, that such noise shall be permitted in the event it does not exceed the levels provided in Section 111.03 as measured from any point on adjacent property.

3. Any use that includes an on-site loading area for commercial vehicles shall clearly post and maintain permanent "No Idling" signs. Signs shall be at least 18 inches by 24 inches in dimension and located every 50 feet along a wall facing each on-site loading area.

4. If a use listed in Subdivision C.1. below abuts a Residential or Commercial-Mixed Use District, or a property containing one of the following Sensitive Uses: all Residential Uses, School, Park or Open Space, Recreation (Indoor or Outdoor), Day Care Facility, Hospital, or Medical Facility the following development regulations apply:

   a. A *Type C1 screen (Sec. 4C.8.2.C.2.a.)* is required along the entire length of the common lot lines shared with a Residential or Commercial-Mixed Use District, or a Sensitive Use.

   b. A *Type B4 screen (Sec. 4C.8.1.C.3.d)* is required along the entire length of the frontage lot line for the entire property.

5. If a use listed in Subdivision C.2. below abuts a Residential or Commercial-Mixed Use District, or a property containing one of the following Sensitive Uses: all Residential Uses, School, Park or Open Space, Recreation (Indoor or Outdoor), Day Care Facility, Hospital, or Medical Facility the following development regulations apply:

   a. A *Type C2 screen (Sec. 4C.8.2.2.b)* is required along the entire length of the common lot lines shared with a Residential or Commercial-Mixed Use District, or a Sensitive Use.

   b. A *Type B5 screen (Sec. 4C.8.1.C.3.e)* is required along the entire length of the frontage lot line for the entire property.

6. All uses listed in Subdivision C.3. below shall be conducted wholly within an enclosed building equipped with mechanical ventilation to prevent fugitive emissions, unless another regulatory agency requires natural ventilation. If natural ventilation is required by another regulatory agency, an affidavit on agency letterhead to that effect must be provided. A stack, vent and flare is exempt from this enclosure requirement.

7. All uses listed in Subdivision C.4. below are prohibited within 200 feet of a Residential or Commercial-Mixed Use District, or a property containing one of the following Sensitive Uses: all Residential Uses, School, Park or Open Space, Recreation (Indoor or Outdoor), Day Care Facility, Hospital, or Medical Facility.

## C. Use Limitations

1. Uses are subject to screening requirements described in Subdivision B.4. above

   a. Ground Passenger Terminal

   b. Utilities, Major (General Use Standards found in *Part 5C* of this Article also apply)

**c.** Kennels (General Use Standards found in *Part 5C* of this Article also apply)

**d.** Funeral and Related Services

**e.** Fueling Station (General Standards found in *Part 5C* of this Article also apply)

**f.** Computer and Electronic Product Assembly

**g.** Food and Drink Manufacturing

**h.** Alcoholic Beverage Manufacturing

**i.** Furniture and Related Products Manufacturing

**j.** General Light Manufacturing

**k.** Maintenance and Repair Services

**l.** Textile and Apparel Manufacturing

**m.** Wholesale Trade and Warehousing

**2.** Uses are subject to screening requirements described in Subdivision B.5. above

**a.** Airport

**b.** Animal Products Processing

**c.** Chemical Product Manufacturing Animal Products Processing

**d.** Chemical Product Manufacturing (General Use Standards found in *Part 5C* of this Article also apply)

**e.** Cosmetic, Pharmaceutical Drug, and Soap Manufacturing

**f.** Freight Terminal

**g.** Junk Yard Facility (General Use Standards found in *Part 5C* of this Article also apply)

**h.** Auto Dismantling (General Use Standards found in *Part 5C* of this Article also apply)

**i.** Scrap Metal Yard (General Use Standards found in *Part 5C* of this Article also apply)

**j.** Machinery and Fabricated Metal Manufacturing

**k.** Nonmetallic Mineral Product Manufacturing

**l.** Petroleum and Coal Product Manufacturing

**m.** Plastic and Rubber Product Manufacturing

**n.** Primary Metal Manufacturing

**o.** Railway Facility

**p.** Resource Extraction (General Use Standards found in *Part 5C* of this Article also apply)

**q.** Oil and Gas Extraction (General Use Standards found in *Part 5C* of this Article also apply)

**r.** Green Waste and Wood Waste Facility (General Use Standards found in *Part 5C* of this Article also apply)

**s.** Hazardous Waste Facility

**t.** Solid Waste Alternative Technology Processing Facility

**u.** Recycling Collection or Buyback Center (General Use Standards found in *Part 5C* of this Article also apply)

**v.** Recycling Materials Sorting Facility (General Use Standards found in *Part 5C* of this Article also apply)

**w.** Recycling Materials Processing Facility (General Use Standards found in *Part 5C* of this Article also apply)

**x.** Wood and Paper Manufacturing

**3.** Uses subject to enclosure requirements described in Subdivision B.6. above

**a.** Funeral and Related Services

**b.** Computer and Electronic Product Assembly

**c.** Food and Drink Manufacturing

**d.** Alcoholic Beverage Manufacturing

**e.** Furniture and Related Products Manufacturing

**f.** General Light Manufacturing

**g.** Maintenance and Repair Services

**h.** Textile and Apparel Manufacturing

**i.** Wholesale Trade and Warehousing

**j.** Chemical Product Manufacturing

**k.** Cosmetic, Pharmaceutical Drug, and Soap Manufacturing

**l.** Junk Yard Facility (General Use Standards found in *Part 5C* of this Article also apply)

**m.** Auto Dismantling (General Use Standards found in *Part 5C* of this Article also apply)

**n.** Scrap Metal Yard (General Use Standards found in *Part 5C* of this Article also apply)

**o.** Machinery and Fabricated Metal Manufacturing

**p.** Nonmetallic Mineral Product Manufacturing

**q.** Petroleum and Coal Product Manufacturing

**r.** Plastic and Rubber Product Manufacturing

**s.** Primary Metal Manufacturing

**t.** Green Waste and Wood Waste Facility (General Use Standards found in *Part 5C* of this Article also apply)

**u.** Hazardous Waste Facility

**v.** Solid Waste Alternative Technology Processing Facility

**w.** Recycling Collection or Buyback Center (General Use Standards found in *Part 5C* of this Article also apply)

**x.** Recycling Materials Sorting Facility (General Use Standards found in *Part 5C* of this Article also apply)

**y.** Recycling Materials Processing Facility (General Use Standards found in *Part 5C* of this Article also apply)

**z.** Wood and Paper Manufacturing

**4.** Uses subject to distance prohibitions described in Subdivision B.7. above

**a.** Vehicle Repair, Light (General Use Standards found in *Part 5C* of this Article also apply)

**b.** Vehicle Repair, Heavy (General Use Standards found in *Part 5C* of this Article also apply)

**c.** Used Vehicle Sales, Light (General Use Standards found in *Part 5C* of this Article also apply)

**d.** Vehicle Sales and Rental, Light (General Use Standards found in *Part 5C* of this Article also apply)

**e.** Vehicle Sales and Rental, Heavy (General Use Standards found in *Part 5C* of this Article also apply)

**5.** Kennels

**a.** Outdoor keeping of animals is prohibited.

**b.** If the use is within 500 feet of a Residential Use District, the use must be approved by the Zoning Administrator pursuant to *Sec. 13B.2.2.* (Conditional Use Permit, Class 2).

**c.** General Use Standards found in *Part 5C* of this Article also apply.

**6.** Veterinary Hospital

**a.** Outdoor keeping of animals is prohibited.

**7.** Eating and Drinking Establishment

All retail business must be conducted in connection with the main use and only as incidental to the main use.

**8.** Retail Sales

All retail business must be conducted in connection with the main use and only as incidental to the main use.

**9.** Animal Products Processing

Must be at least 500 feet from an Agricultural, Residential, Commercial-Mixed, or Commercial Use District.

**10.** Chemical Product Manufacturing

Prohibited within 500 feet from an Agricultural, Residential or Commercial-Mixed Use District, or a property containing one of the following Sensitive Uses: all Residential Uses, School, Park or Open Space, Recreation (Indoor or Outdoor), Day Care Facility, Hospital, or Medical Facility.

**11.** Cargo Container Storage Yard

The following standards shall apply to all Cargo Container Storage Yards, except those located in whole or in part within the boundaries of the Port of Los Angeles which are permitted by-right.

**a.** The following provisions apply to the stacking of cargo containers:

**i.** The stacking of cargo containers more than 20 feet high shall only be permitted if a structural analysis is done by a licensed engineer or architect in the State of California is submitted to and approved by the Los Angeles Department of Building and Safety. (LADBS)

**ii.** Cargo container stacking within 300 feet or less of a Residential Use District shall be limited to a maximum height of 30 feet. There is no maximum container height limit beyond 300 feet of a Residential Use District, except as limited by any applicable height limitation and Subparagraph h.i. below.

**b.** Cargo container storage yards shall obtain a "use of land" permit from LADBS for one or more contiguous lots maintained as one site.

**c.** The perimeter or each site with a separate "use of land" permit shall be enclosed by a minimum eight-foot fence or wall.

**i.** Fencing may be constructed of chain-link; however fencing adjacent to a Boulevard I or II, or Avenue I, II, or III shall also comply with Subparagraph h.iii. below.

**ii.** Fencing shall be maintained in good condition and appearance.

iii. Sheet metals shall be prohibited as fencing material.

iv. There shall be no requirement to fence each individual lot where multiple lots are maintained as one site under a valid "use of land" permit, including individual lots that may be separated by a public right-of-way, easement or other land occupied by a revocable permit.

**d.** The entire site shall be graded pursuant to Chapter IX .

**e.** All driveways, accessways and parking areas shall be covered with a decomposed granite, crushed gravel or similar material and be treated with dust control methods.

**f.** An annual site inspection shall be conducted by LADBS pursuant to *Sec. 13.1.8* (Department of Building and Safety).

**g.** All containers must be empty and cleaned of any residue which may pose any kind of physical or health risk.

**h.** In addition to the above specified requirements, the following conditions shall also apply to sites that are located adjacent to a Boulevard I, II, or Avenue I, II, or III. However, for those portions of the site that are separated from the roadway by a grade change of more than ten feet within five feet of the property line, Sub-subparagraphs (ii) and (iii) below shall not apply:

i. Cargo container stacking shall be limited to a maximum height of 20 feet within 20 feet of the property line adjoining a Boulevard I, II, or Avenue I, II, or III. There is no maximum cargo container height limit beyond 20 feet of a Boulevard I, II, or Avenue I, II, or III, except as limited by Paragraph a. above.

ii. A minimum five-foot setback shall be provided along the street frontage adjacent to a Boulevard I, II, or Avenue I, II, or III. The setback shall be fully landscaped with drought resistant plants, ground cover and trees; with one minimum 15-gallon size tree planted for each 15 linear feet of street frontage and minimum three shrubs for each tree. The entire landscaped area shall be well maintained at all times.

iii. A solid wall or fence shall be required on the street frontage adjacent to a Boulevard I, II, or Avenue I, II, or III. The wall or fence shall be located within the required setback, and at the rear of the landscaped area between the landscaping and the use. A chain-link fence with slats and growing vines may be permitted in place of a solid wall or fence.

**12.** Junk Yard Facility

The use must comply with the standards listed in Subsection E. below.

**13.** Auto Dismantling

The use must comply with the standards listed in Subsection E. below.

**14.** Scrap Metal Yard

**a.** The use must comply with the standards listed in Subsection E. below.

**b.** A scrap metal processing yard that is entirely located at least 500 feet from a Agricultural, Residential, Commercial-Mixed, Commercial, or Industrial-Mixed Use District is exempt from these stacking limitations.

**15.** Green Waste and Wood Waste Facility

**a.** Chipping and Grinding Facilities when not fully enclosed require approval by the City Planning Commission, pursuant to *Sec. 13B.2.3.* (Conditional Use Permit, Class 3).

**b.** All other Green Waste and Wood Waste Facilities uses are permitted.

**16.** Recycling Collection or Buyback Center

**a.** The depositing of glass, cans, papers, plastic, beverage containers, and similar Recyclable Materials, Recycling Collection or Buyback Centers, and Mobile Recycling Centers, shall be permitted without obtaining a Conditional Use Permit, pursuant to *Sec. 13B.2.3.* (Conditional Use Permit, Class 3), provided that all of the following conditions are met:

**i.** The lot upon which the Recycling Collection or Buyback Center is located is not within 1,000 feet of any Agricultural, Residential, Commercial-Mixed, Commercial, or Industrial-Mixed Use District.

**ii.** The area for depositing Recyclable Materials does not exceed a total of 1,000 square feet.

**iii.** The area for depositing Recyclable Materials shall be a minimum of 10 feet from all property lines, except for Reverse Vending Machines and Reverse Vending Machine Commodity Storage Bins located 24 inches or less from the exterior wall of a building.

**iv.** If the facility is located in any Commercial-Mixed or Commercial Use District, a five-foot landscaped buffer, or as otherwise required by the City Planning Department, shall be maintained along all street frontages.

**v.** All Recycling Receptacles shall be covered, durable, waterproof, rustproof, of incombustible construction, and of sufficient capacity to accommodate the materials collected.

**vi.** Except for Reverse Vending Machine Commodity Storage Bins, either the Recycling Receptacle or the enclosure is clearly identified with the operator's name, address, telephone number, hours of operation, and a notice that no material shall be left outside the enclosure, and each Recycling Receptacle must clearly indicate the type of material to be deposited.

**vii.** On a daily basis the site is kept free of litter, debris, spillage, bugs, rodents, odors, and other similar undesirable hazards.

**viii.** Recyclable Materials, other than Recyclable Materials contained in reverse vending machine commodity storage bins, are emptied from Recycling Receptacles when full or every week, whichever occurs first.

**ix.** All recycled goods shall be placed or stored in Recycling Receptacles and not be left out on the site by the end of the business day.

**x.** Paper products and other lightweight materials shall be immediately placed into covered Recycling Receptacles when they are dropped off.

**xi.** The hours of operation shall not exceed Monday through Friday from 7 a.m. to 8 p.m., Saturday from 8 a.m. to 6 p.m., and Sunday from 10 a.m. to 6 p.m., except for Reverse Vending Machines that are located within 24 inches of the exterior wall of a building, which may operate from 7 a.m. to 10 p.m., seven days a week.

**xii.** All Recycling Receptacles and containers shall be kept secure from unauthorized entry to prevent scavenging and theft of recyclable materials.

**xiii.** The area for depositing Recyclable Materials and/or enclosure shall not impair traffic flow nor diminish the required parking spaces except that up to 10 percent of the required parking spaces may be used as part of the area utilized for Recyclable Materials; provided, however, that if the area for depositing Recyclable Materials is abandoned, then the parking spaces shall be reestablished.

**xiv.** Any activity involving baling and hand sorting of Recyclable Materials, as well as automated can conveyor/magnetic or mechanical separators, and crushers for can, glass, or plastic bottles, is conducted in compliance with the following:

**xv.** No crushing, smashing, baling or reduction of metal is conducted on the premises unless such is conducted without producing substantial amounts of dust and is so conducted that the noise emanating therefrom, as measured from any point on adjacent property shall be no more audible than the noise emanating from ordinary street traffic and from other commercial or industrial uses measured at the same point on said adjacent property; provided, however, that such noise shall be permitted in the event it does not exceed the levels provided in Section 111.03 as measured from any point on adjacent property in an Agricultural, Residential, Commercial-Mixed, Commercial, Industrial-Mixed, or Industrial Use District.

**xvi.** At least one trash receptacle shall be provided within a recycling site.

**xvii.** The area for collection of Recyclable Materials, and all driveways, parking areas, storage areas, and loading zones shall be paved and maintained in good condition.

**xviii.** A source of running water shall be maintained on the site.

**xix.** No Recycling Center Operator shall permit loitering, camping, public begging, consumption of alcoholic beverages, use of illegal narcotics, or any other criminal activity on any premises over which he has control.

**b.** If the limitations in Paragraph a. cannot be met, this use must be approved by the City Planning Commission, pursuant to *Sec. 13B.2.3.* (Conditional Use Permit, Class 3).

**17.** Recycling Materials Sorting Facility

**a.** Recycling Materials Sorting Facilities shall be permitted without obtaining a Conditional Use Permit, pursuant to *Sec. 13B.2.3.* (Conditional Use Permit, Class 3), provided that all of the following conditions are met:

**i.** The facility is located at least 500 feet from any Agricultural, Residential, Commercial-Mixed, or Commercial Use District.

**ii.** The facility shall be operated by a Recycling Center Operator or Junk Dealer.

**iii.** Notwithstanding any other provisions of the Code, no processing of Recyclable Materials, shall be permitted at the facility.

**iv.** Recyclable Materials to be sorted shall be limited to paper, cardboard, glass, metal, plastic and other items that are deemed appropriate by the Department of Building and Safety, Bureau of Sanitation, and Fire Department.

**v.** The hours of operation shall be limited to 7 a.m. to 8 p.m., seven days a week, if the facility is located within 1,000 feet of an Agricultural or Residential Use District, or any residential use. Otherwise, operation may be 24 hours a day. The facility and all related activities shall be administered by on-site personnel during the hours the center is open.

**vi.** No depositing of Recyclable Materials shall be permitted during hours the center is not open.

**vii.** The facility shall be clearly identified with the operator's name, address, telephone number, hours of operation and a notice stating that no material shall be left outside the recycling center enclosure.

**viii.** Recycling Receptacles shall be provided that are durable, waterproof, rustproof, and of incombustible construction and of a capacity which are sufficient to accommodate the materials collected.

**ix.** Automated sorting and separating machinery shall be permitted, provided that the machinery is conducted in compliance with the following:

**a)** No crushing, smashing, baling or reduction of metal is conducted on the premises unless such is conducted without producing substantial amounts of dust and is so conducted that the noise emanating therefrom, as measured from any point

on adjacent property shall be no more audible than the noise emanating from ordinary street traffic and from other commercial or industrial uses measured at the same point on said adjacent property; provided, however, that such noise shall be permitted in the event it does not exceed the levels provided in Section 111.03 as measured from any point on adjacent property in an Agricultural, Residential, Commercial-Mixed, Commercial, Industrial-Mixed, or Industrial Use District.

**x.** The facility shall be maintained in a clean, safe and sanitary condition on a daily basis.

**xi.** A source of running water shall be maintained on the site.

**xii.** The facility shall utilize some type of dust mitigation and/or wind mitigation measures to prevent blowing debris.

**xiii.** The facility shall be surrounded by a 6-foot high concrete block wall and a 5-foot landscaped buffer, or as otherwise required by the City Planning Department, adjoining all street frontages.

**xiv.** No Recycling Center Operator shall permit loitering, camping, public begging, consumption of alcoholic beverages, use of illegal narcotics, or any other criminal activity on any premises over which he has control.

**b.** If the limitations in Paragraph a. cannot be met, this use must be approved by the City Planning Commission, pursuant to *Sec. 13B.2.3.* (Conditional Use Permit, Class 3).

**18.** Recycling Materials Processing Facility

**a.** Recycling Materials Processing Facilities shall be permitted without obtaining a Conditional Use Permit, pursuant to *Sec. 13B.2.3.* (Conditional Use Permit, Class 3), provided that all of the following conditions are met:

**i.** The facility shall be located at least 1,000 feet from any Agricultural, Residential, Commercial-Mixed, Commercial, or Industrial-Mixed Use District.

**ii.** The facility shall be operated by a Recycling Center Operator or Junk Dealer.

**iii.** Notwithstanding any other provisions of the Code, Recyclable Materials collected and processed on the site shall be limited to paper, cardboard, glass, metal, plastic, and other items that are deemed appropriate by the Department of Building and Safety, Bureau of Sanitation, and Fire Department.

**iv.** Hours of operation shall be limited to 7am to 8pm, seven days a week, if the facility is located within 1,000 feet of an Agricultural Use Class, Residential Use Class, or any residential use. Otherwise, operation may be 24 hours a day. All operations must comply with Section 111.03 . The facility and all related activities shall be administered by on-site personnel during the hours the center is open.

**v.** No depositing of Recyclable Materials shall be permitted during hours the center is not open.

**vi.** The facility shall be clearly identified with the operator's name, address, telephone number, hours of operation and a notice stating that no material shall be left outside the recycling center enclosure.

**vii.** If Recycling Receptacles are used for storage of materials on site, they shall be durable, waterproof, rustproof, and of incombustible construction.

**viii.** Processing machinery, such as weighing scales and crushing and separating machines shall be permitted, provided that the machinery is conducted in compliance with the following:

**a)** No crushing, smashing, baling or reduction of metal is conducted on the premises unless such is conducted without producing substantial amounts of dust and is so conducted that the noise emanating therefrom, as measured from any point on adjacent property shall be no more audible than the noise emanating from ordinary street traffic and from other commercial or industrial uses measured at the same point on said adjacent property; provided, however, that such noise shall be permitted in the event it does not exceed the levels provided in Section 111.03 as measured from any point on adjacent property in an Agricultural, Residential, Commercial-Mixed, Commercial, Industrial-Mixed, or Industrial Use District.

**ix.** The facility shall be maintained in a clean, safe, and sanitary condition on a daily basis.

**x.** A source of running water shall be maintained on the site.

**xi.** The facility shall utilize some type of dust mitigation and/or wind mitigation measures to prevent blowing debris.

**xii.** The facility shall be surrounded by a 6-foot high concrete block wall and a 5-foot landscaped buffer, or as otherwise required by the City Planning Department, adjoining all street frontages.

**xiii.** No Recycling Center Operator shall permit loitering, camping, public begging, consumption of alcoholic beverages, use of illegal narcotics, or any other criminal activity on any premises over which he has control.

**b.** If the limitations in Paragraph a. cannot be met, this use must be approved by the City Planning Commission, pursuant to *Sec. 13B.2.3.* (Conditional Use Permit, Class 3).

## D. Conditional Uses

The following uses require a Conditional Use Permit, pursuant to *Div. 13B.2.* (Quasi-Judicial Review) as specified by the applicable Use Table.

**1.** Correctional or Penal Institution

**2.** House of Worship

**3.** School, Postsecondary

**4.** Shoreline Project

**5.** Alcohol Sales, Off-Site Consumption

**a.** The use shall also comply with the use standards in *Sec. 5C.4.2.* (Alcohol Sales, Off-Site Consumption).

**6.** Sports Arena and Stadium

**7.** Hospital

**8.** Private Club

**9.** Petroleum and Coal Product Manufacturing

**a.** In addition to a Conditional Use Permit with approval by the City Planning Commission, pursuant to *Sec. 13B.2.3.* (Conditional Use Permit, Class 3), new petroleum-based oil refineries and existing refineries expanding operations beyond the current property lines are required to:

**i.** Comply with all of the required Unified Programs (Unified Hazardous Waste and Hazardous Materials Management Regulatory Program). California Environmental Reporting System (CERS) database submittals may serve as proof of compliance.

**ii.** Submit a health assessment of the project for the surrounding vicinity identifying pollution and population indicators, such as, but not limited to, those analyzed in the California Communities Environmental Health Screening Tool; the number of people affected by the project; short term or permanent impacts caused by the project; likelihood that impacts will occur; and recommended mitigation measures.

**iii.** Submit a truck routing plan that minimizes the incidence of a commercial truck traveling past residences, churches, schools, hospitals, public playgrounds, nursing homes, day care centers, and other similar uses.

**10.** Solid Waste Alternative Technology Processing Facility

**a.** Supplemental Findings. In addition to the other findings required by *Sec. 13B.2.3.* (Conditional Use Permit, Class 3), the City Planning Commission shall make all of the following findings:

**i.** That the proposed location of the facility will not result in an undue concentration of solid waste alternative technology processing facilities in the immediate area, will not create a cumulative impact with special consideration given to the location of solid waste facilities already permitted and will support the equitable distribution of these facilities citywide.

ii. That an effort was made to locate the facility in close proximity to existing solid waste facilities, transfer stations, solid waste resource collection vehicle yards, material recovery facilities and green waste processing facilities.

iii. That the facility will not detrimentally affect nearby residential uses and other sensitive land uses, taking into consideration the number and proximity of residential buildings, churches, schools, hospitals, public playgrounds, nursing homes, day care centers, and other similar uses within a 1,500 foot radius of the proposed site.

iv. That the facility operator will provide a language appropriate newsletter and other benefits to businesses and residents likely to be impacted by this facility, taking into consideration the location of the proposed site and nearby uses.

v. That access to the facility, on-site parking and vehicle storage will not constitute a traffic hazard or cause significant traffic congestion or disruption of vehicular circulation on adjacent streets.

vi. That hazardous waste and household hazardous waste as defined in the California Code of Regulations, Title 22, Section 66260.10, universal waste as defined in the California Code of Regulations, Title 22, Section 66260.10, radioactive waste as defined in Section 114985 of the California Health and Safety Code and medical waste as defined in Section 117690 of the California Health and Safety Code, will not be received at the facility.

11. Resource Extraction

12. Oil and Gas Extraction

## E. Open Storage Limitations

1. Open storage of materials and equipment, including used materials and equipment, shall be conducted wholly within an enclosed building, or shall be completely enclosed with a solid wall or solid fence not less than eight feet in height with necessary solid gates of like height.

2. Where a required wall or fence has been erected between the area wherein the use is conducted and a street, no material is stored to a height greater than that of such wall or fence within 50 feet thereof unless the height of the wall or fence is 10 feet or more in which case the distance within which no material may be stored above the height of the wall or fence shall be 37 feet.

3. In the event the use is conducted in an area enclosed by a wall or fence as hereinabove provided, all property adjacent to any street shall be landscaped to a minimum depth of two feet measured at a right angle from the adjacent street and extending the full length of the property contiguous to such street except for areas necessary for ingress and egress.

4. The phrase "used materials and equipment" includes vehicles, boats, or airplanes which are inoperable, wrecked, damaged or unlicensed, i.e., not currently licensed by the Department of Motor Vehicles.

# DIV. 5B.8. PUBLIC DISTRICTS

Public Use Districts promote public and institutional uses and allow a limited amount of compatible uses.

## SEC. 5B.8.1. TABLE OF USES

| | PF1 *5B.8.2.* |
|---|---|
| **RESIDENTIAL USES** | |
| Household Living | -- |
| Apartment Hotel | * |
| Boarding or Apartment House | * |
| Community Care Facility, Licensed; As Listed Below: | |

## SEC. 5B.8.2. PUBLIC FACILITIES 1 (PF1)

### A. Intent

The PF Use District allows for government buildings, structures, offices, and services facilities. This District is intended to provide regulations for the use and development of land owned by a government agency.

### B. Use District Standards

**1.** An asterisk indicates that permission levels are dependent upon adjacent zoning and the type of development, including Joint Public and Private Developments. Uses containing an asterisk as regulated as follows:

**a.** Any Joint Public and Private Development use permitted in the most restrictive adjoining Use District, as outlined below is Subparagraph d., is permitted if approved by the Director utilizing the procedures described in *Sec. 13B.2.4.* (Project Review).

**b.** The phrase "adjoining zones" refers to the zones on properties abutting, across the street or alley from or having a common corner with the subject property. If there are two or more different adjoining zones, then only the uses permitted by the most restrictive Use District shall be permitted.

**c.** Fully private developments are not permitted.

**d.** Any Joint Public and Private Development use that is not permitted in the most restrictive adjoining Use District may be permitted if approved by the City Planning Commission pursuant to *Sec. 13B.2.3.* (Conditional Use Permit, Class 3).

**2.** Supplemental Findings. In addition to the findings otherwise required by this Chapter, the Commission shall find that benefits are provided to the public and that the benefit accruing from the project, whether as a result of additional taxes of the provision of public facilities, is sufficient to outweigh any impairment of the public interest that may be created by the public agencies' proposed use of the land.

**3.** Order of Restrictiveness. The order of restrictiveness of Use Districts, the first being the most restrictive and the last being the least restrictive, is as follows:

**a.** Open Space Use Districts

**b.** Agricultural Use Districts

**c.** Residential Use Districts

**d.** Commercial-Mixed Use Districts

**e.** Commercial Use Districts

**f.** Industrial-Mixed Use Districts

**g.** Industrial Use Districts

**h.** Public Use Districts

## C. Use Limitations

**1.** Civic

**a.** The use is permitted by-right if site is owned by a government agency.

**b.** All other Civic uses are subject to *Sec. 13B.2.3.* (Conditional Use Permit, Class 3).

**2.** Parking

**a.** Must be a public parking facility located under a freeway right-of-way.

**b.** Any other government-owned parking facility may be permitted with approval by the City Planning Commission pursuant to *Sec. 13B.2.3.* (Conditional Use Permit, Class 3)

**3.** School, K-12

**a.** Public elementary and secondary schools are permitted by-right.

**b.** All other types of educational institutions require approval by the City Planning Commission pursuant to *Sec. 13B.2.3.* (Conditional Use Permit, Class 3).

**4.** Medical Facility

Must be a public facility.

**5.** Hospital

Must be a public facility.

**6.** Office

**a.** Government buildings, structures, offices, and services facilities including maintenance yards only.

**b.** Government Enterprises are permitted subject to the following performance standards:

**i.** Security lighting is provided in parking areas;

**ii.** The property is improved with a ten foot landscaped buffer along the periphery of the property which is maintained and is equipped with an automatic irrigation system;

**iii.** Security night lighting is shielded so that the light source cannot be seen from adjacent residential properties;

**7.** Vehicle Repair, Light

Must be government-owned and in conjunction with a maintenance yard.

8. Vehicle Repair, Heavy

   Must be government-owned and in conjunction with a maintenance yard.

9. Vehicle Storage, Light

   Must be government-owned and in conjunction with a maintenance yard.

10. Vehicle Storage, Heavy

    Must be government-owned and in conjunction with a maintenance yard.

11. General Storage

    Must be government-owned and in conjunction with a maintenance yard.

12. Farming (Plant Cultivation)

    Permitted under power transmission rights-of-way.

## D. Conditional Uses

The following uses require a Conditional Use Permit, pursuant to *Div. 13B.2.* (Quasi-Judicial Review), as specified by the applicable Use Table.

1. Convention Center
2. Correctional or Penal Institution
3. School, Postsecondary
4. Shoreline Project
5. Auditorium
6. Sports Arena and Stadium
7. Research and Development
8. Solid Waste Facility
9. Solid Waste Alternative Technology Processing Facility.

   a. Supplemental Findings. In addition to the other findings required by *Sec. 13B.2.3.* (Conditional Use Permit, Class 3), the City Planning Commission shall make all of the following findings:

      i. That the proposed location of the facility will not result in an undue concentration of solid waste alternative technology processing facilities in the immediate area, will not create a cumulative impact with special consideration given to the location of solid waste facilities already permitted and will support the equitable distribution of these facilities citywide.

ii. That an effort was made to locate the facility in close proximity to existing solid waste facilities, transfer stations, solid waste resource collection vehicle yards, material recovery facilities and green waste processing facilities.

**b.** That the facility will not detrimentally affect nearby residential uses and other sensitive land uses, taking into consideration the number and proximity of residential buildings, churches, schools, hospitals, public playgrounds, nursing homes, day care centers, and other similar uses within a 1,500 foot radius of the proposed site.

**c.** That the facility operator will provide a language appropriate newsletter and other benefits to businesses and residents likely to be impacted by this facility, taking into consideration the location of the proposed site and nearby uses.

**d.** That access to the facility, on-site parking and vehicle storage will not constitute a traffic hazard or cause significant traffic congestion or disruption of vehicular circulation on adjacent streets.

**e.** That hazardous waste and household hazardous waste as defined in the California Code of Regulations, Title 22, Section 66260.10, universal waste as defined in the California Code of Regulations, Title 22, Section 66260.10, radioactive waste as defined in Section 114985 of the California Health and Safety Code and medical waste as defined in Section 117690 of the California Health and Safety Code, will not be received at the facility.

# DIV. 5C.1. GENERAL PROVISIONS

## SEC. 5C.1.1. PROJECT REVIEW THRESHOLDS

### A. Applicability

No grading permit, foundation permit, building permit, or use of land permit shall be issued for any of the following development projects unless a Project Review approval has first been obtained pursuant to *Sec. 13B.2.4.* (Project Review). This provision shall apply to individual projects for which permits are sought and also to the cumulative sum of related or successive permits which are part of a larger project, such as piecemeal additions to a building, or multiple buildings on a Lot, as determined by the Director.

1. Any Development Project, as defined in *Div. 14.2.* (Glossary), which creates, or results in an increase of, 50,000 gross square feet or more of nonresidential Floor Area.

2. Any Development Project, as defined in *Div. 14.2.* (Glossary), which creates, or results in an increase of, 50 or more dwelling units or guest rooms, or combination thereof.

3. Any change of use to a Drive-Through Eating and Drinking Establishment or any change of use to a Fast-food Establishment, either of which results in a net increase of 500 or more average daily trips as determined by, and using the trip generation factors determined by the Department of Transportation.

4. Any change of use other than to a Drive-Through Eating and Drinking Establishment or to a Fast-food Establishment which results in a net increase of 1,000 or more average daily trips as determined by, and using the trip generation factors determined by the Department of Transportation.

5. Any single-family residential development with a cumulative Floor Area of 17,500 square feet or larger located in the Hillside Standards Set.

## SEC. 5C.1.2. EXISTING USES

**A.** Any lot or portion of a lot which is being lawfully used for any of the purposes enumerated in this section at the time the property is first classified in a zone in which the use is permitted only by conditional use or at the time the use in that zone first becomes subject to the requirements of this section, shall be deemed to be approved for the conditional use and may be continued on the lot. Further, the conditions included in any special district ordinance, exception or variance which authorized the use shall also continue in effect.

**B.** Any lot or portion of a lot in the Commercial Mixed, Industrial Mixed, or Industrial Use Districts which was being used on June 1, 1951, for the temporary storage of abandoned, dismantled, partially dismantled, obsolete or wrecked automobiles, but not for the dismantling or wrecking of automobiles nor for the storage or sale of used parts, may continue to be so used.

**C.** Regulations governing yards, accessory buildings, parking, access, or any other internal features of mobilehome parks shall conform to the provisions of Title 25 of the California Administrative Code or any amendments. If yards, accessory buildings, parking, access, or any other internal features of mobilehome parks are not regulated by Title 25, they shall conform to all applicable provisions of this Code or any other conditions imposed by the City.

**D.** Any Light Industrial uses lawfully existing prior to March 22, 1981, in any portion of any building in a Commercial Mixed Use District shall not be extended beyond that portion of the building except as in accordance with *Sec. 13.4.1.* (Conditional Use Permit, Class 1).

# DIV. 5C.2. RESIDENTIAL USES

## SEC. 5C.2.1. HOMELESS SHELTER

**A.** If located on a Lot zoned with a Residential Use District, Commercial, Commercial-Mixed, or Industrial-Mixed Use District, the following limitations apply:

**1.** Must contain not more than 30 beds.

**2.** Must be located at least 300 feet from another such shelter.

**3.** If the limitations in Paragraph (1) and (2) cannot be met, the use must be approved by the Zoning Administrator pursuant to *Sec. 13.4.2* (Class 2 Conditional Use Permit).

**B.** If located on a Lot zoned with an Industrial Use District, the following limitations apply:

**1.** Must be located at least 300 feet from another such shelter.

**2.** If the limitations in Paragraph (1) cannot be met, the use must be approved by the Zoning Administrator pursuant to *Sec. 13.4.2* (Class 2 Conditional Use Permit).

## SEC. 5C.2.2. JOINT LIVING AND WORK QUARTERS

**A.** Joint Living and Work Quarters are limited to the following occupations: accountants; architects; artists and artisans; attorneys; computer software and multimedia related professionals; consultants; engineers; fashion, graphic, interior and other designers; insurance, real estate and travel agents; photographers and other similar occupations as determined by the Zoning Administrator, provided that the commercial uses are permitted by the underlying zone.

**B.** The yards required shall be the same as the yards observed by the existing structures on the site.

**C.** The number of existing parking spaces shall count as the number of parking spaces required for the site for up to eight Joint Living and Work Quarters units.

**D.** Work Space. The total floor area shall be arranged to comply with one of the following standards:

**1.** Tier 1 Standard – Low Percentage of Work Space. At least ten percent but no more than 25 percent of the total floor area in a Joint Living and Work Quarters shall be work space; or

**2.** Tier 2 Standard – Medium Percentage of Work Space. At least 25 percent but no more than 50 percent of the total floor area in a Joint Living and Work Quarters shall be work space.

**E.** Additional incentives may be granted for existing buildings that are eligible for Adaptive Reuse Projects pursuant to *Sec. 9.4.5.* (Downtown Adaptive Reuse Projects) and *Sec. 12.4.6.* (Citywide Adaptive Reuse Projects).

## SEC. 5C.2.3. MOBILEHOME PARK

**A.** There shall be a Type B4 Frontage Screen (*Sec. 4C.8.1.C.2.d*) and a Type C1 Transition Screen (*Sec. 4C.8.2.C.2.a*) on the site. No wall or fence shall be located in the Front Yard.

**B.** Only one 20 square-foot sign is allowed. If attached to a wall, the sign shall not extend more than 2 feet beyond the wall in any direction.

**C.** Conditional Use Permit.

**1.** Applicability. If the proposed project does not comply with the use standards listed in Subsections A and B of this Section (Mobilehome Park), the applicant may apply for a conditional use permit pursuant to *Sec. 13.4.2* (Conditional Use Permit, Class 2).

**2.** Supplemental Findings. In approving any project, the Zoning Administrator shall also find that the proposed project substantially meets the purposes of the use standards listed in Susbsections A and B of this Section (Mobilehome Park).

# DIV. 5C.3. PUBLIC & INSTITUTIONAL USES

## SEC. 5C.3.1. COMMUNITY CENTER

**A.** If located on a Lot zoned with an Agricultural or Residential Use District, the following limitations apply:

**1.** The outdoor play/recreational area is at least 100 feet away from any Residential Use.

**2.** There is no public address system or amplified sound outdoors on the site.

**3.** The Hours of Operation are limited to the time period between 7 a.m. and 10 p.m.

**B.** Conditional Use Permit.

**1.** Applicability. If the proposed project does not comply with the use standards listed in Subsection A of this Section, the applicant may apply for a conditional use permit pursuant to *Sec. 13.4.2* (Conditional Use Permit, Class 2).

**2.** Supplemental Findings. In approving any project, the Zoning Administrator shall also find that the proposed project substantially meets the purposes of the use standards listed in Subsection A of this Section.

## SEC. 5C.3.2. PARK & OPEN SPACE

**A.** If located on a Lot zoned with an Agricultural or Residential Use District, the following limitations apply:

**1.** The outdoor play/recreational area is at least 100 feet away from any Residential Use.

**2.** There is no public address system or amplified sound outdoors on the site.

**3.** The Hours of Operation are limited to the time period between 7 a.m. and 10 p.m.

**4.** Only one 20 square-foot sign is allowed. If attached to a wall, the sign shall not extend more than 2 feet beyond the wall in any direction.

**B.** Conditional Use Permit.

**1.** Applicability. If the proposed project does not comply with the use standards listed in Subsection A of this Section, the applicant may apply for a conditional use permit pursuant to *Sec. 13.4.2* (Conditional Use Permit, Class 2).

**2.** Supplemental Findings. In approving any project, the Zoning Administrator shall also find that the proposed project substantially meets the purposes of the use standards listed in Subsection A of this Section.

## SEC. 5C.3.3. UTILITIES

**A.** If located on a Lot zoned with an Agricultural, Residential, Commercial-Mixed, or Commercial Use District, The following limitations apply:

**1.** There shall be a Type B5 Frontage Screen (*Sec. 4C.8.1.C.2.e*) and a Type C2 Transition Screen (*Sec. 4C.8.2.C.2.b)* on the site.

**2.** Only one 20 square-foot sign is allowed. If attached to a wall, the sign shall not extend more than 2 feet beyond the wall in any direction.

**B.** Conditional Use Permit.

**1.** Applicability. If the proposed project does not comply with the use standards listed in Subsection A of this Section, the applicant may apply for a conditional use permit pursuant to *Sec. 13.4.2* (Conditional Use Permit, Class 2).

**2.** Supplemental Findings. In approving any project, the Zoning Administrator shall also find that the proposed project substantially meets the purposes of the use standards in Subsection A of this Section.

## SEC. 5C.3.4. SOLAR PANEL ENERGY GENERATING FACILITY

**A.** Solar Feed-in-Tariff (FiT) installations are permitted on the rooftop of a building with a valid certificate of occupancy or the rooftop of a parking structure, provided that project is not located on a Lot zoned with an Agricultural or Open Space Use District, or a 1L Density District.

**B.** Solar FiT installations are permitted on a carport or other structure that shelters automobiles in a parking area, provided that:

**1.** The project is not located on a Lot zoned with an Agricultural or Open Space Use District, or 1L Density District; and

**2.** A minimum of 10% of the site (which may include a lot or lots with common ownership) is covered by buildings with a valid certificate of occupancy, or the solar installation is located on top of a parking structure.

**C.** Definitions. For the purposes of these use standards:

**1.** A carport is a structure with a minimum clearance of 7 feet that shelters an automobile.

**2.** A ground mounted installation is a structure that supports a solar panel that is mounted below a height of seven feet and consists of a solar panel installation that does not cover a use.

**D.** Solar FiT installations must be maintained free of debris and graffiti and in working condition. Contact information for the operator and management company must be posted on site at all times, and also filed with Los Angeles Department of Water and Power.

**E.** Applicants of FiT solar projects, not the LADWP, shall be responsible for the respective permits, operations, maintenance, code compliance, and any other administrative aspect of proposed FiT solar projects.

**F.** If the proposed project does not comply with the use standards listed above, the applicant may apply for a conditional use permit pursuant to *Sec. 13B.2.3.* (Conditional Use Permit, Class 3).

# DIV. 5C.4. GENERAL COMMERCIAL USES

## SEC. 5C.4.1. ADULT ENTERTAINMENT BUSINESS

**A.** Purpose. It is the purpose and object of this Section to establish reasonable and uniform regulations to prevent the concentration of Adult Entertainment Businesses, as defined herein, within the City of Los Angeles.

**B.** Definitions. For the purpose of this Section, certain terms and words are defined as follows:

**1.** Adult Arcade. An establishment where, for any form of consideration, one or more motion picture projectors, slide projectors or similar machines, for viewing by five or fewer persons each, are used to show films, motion pictures, video cassettes, slides or other photographic reproductions which are characterized by an emphasis upon the depiction or description of Specified Sexual Activities or Specified Anatomical Areas.

**2.** Adult Bookstores. An establishment which has as a substantial portion of its stock-in-trade and offers for sale for any form of consideration any one or more of the following:

**a.** Books, magazines, periodicals or other printed matter, or photographs, films, motion pictures, video cassettes, slides or other visual representations which are characterized by an emphasis upon the depiction or description of Specified Sexual Activities or Specified Anatomical Areas, or

**b.** Instruments, devices or paraphernalia which are designed for use in connection with Specified Sexual Activities.

**3.** Adult Cabaret. A nightclub, bar, restaurant or similar establishment which regularly features live performances which are characterized by the exposure of Specified Anatomical Areas or by Specified Sexual Activities or films, motion pictures, video cassettes, slides or other photographic reproductions which are characterized by an emphasis upon the depiction or description of Specified Sexual Activities or Specified Anatomical Areas.

**4.** Adult Motel. A motel or similar establishment offering public accommodations for any form of consideration which provides patrons with closed circuit television transmissions, films, motion pictures, video cassettes, slides or other photographic reproductions which are characterized by an emphasis upon the depiction or description of Specified Sexual Activities or Specified Anatomical Areas.

**5.** Adult Motion Picture Theater. An establishment where, for any form of consideration, films, motion pictures, video cassettes, slides or similar reproductions are shown, and in which a substantial portion of the total presentation time is devoted to the showing of material which is characterized by an emphasis upon the depiction or description of Specified Sexual Activities or Specified Anatomical Areas.

6. Adult Theater. A theater concert hall, auditorium or similar establishment which, for any form of consideration, regularly features live performances which are characterized by the exposure of Specified Anatomical Areas or by Specified Sexual Activities.

7. Establishment. For the purposes of this Section, the "establishment" of an Adult Entertainment Business shall mean and include any of the following:

   a. The opening or commencement of any such business as a new business.

   b. The conversion of an existing business, whether or not an Adult Entertainment Business, to any of the adult entertainment businesses defined herein.

   c. The relocation of any such business.

8. Massage Parlor. An establishment where, for any form of consideration, massage, alcohol rub, fomentation, electric or magnetic treatment, or similar treatment or manipulation of the human body is administered, unless such treatment is administered by a Medical Service Professional, physician or similar professional person licensed by the State of California. This definition does not include Gyms, Personal Services, Schools, or similar uses where massage or similar manipulation of the human body is offered as an incidental or accessory service.

9. Public Park. A park, playground, swimming pool, beach, pier, reservoir, golf course or similar athletic field within the City of Los Angeles which is under the control, operation or management of the City Board of Recreation and Park Commissioners or the County Department of Beaches.

10. Religious Institution. A building which is used primarily for religious worship and related religious activities.

11. School. An institution of learning for minors, whether public or private which offers instruction in those courses of study required by the California Education Code or which is maintained pursuant to standards set by the State Board of Education. This definition includes a nursery school, kindergarten, elementary school, junior high school, senior high school or any special institution of learning under the jurisdiction of the State Department of Education, but it does not include a vocational or professional institution or an institution of higher education, including a community or junior college, college or university.

12. Sexual Encounter Establishment. An establishment, other than a hotel, motel or similar establishment offering public accommodations, which, for any form of consideration, provides a place where two or more persons may congregate, associate or consort in connection with Specified Sexual Activities or the exposure of Specified Anatomical Areas. This definition does not include an establishment where a medical practitioner, psychologist, psychiatrist or similar professional person licensed by the State of California engages in sexual therapy.

13. Specified Anatomical Areas. As used herein, Specified Anatomical Areas shall mean and include any of the following:

   a. Less than completely and opaquely covered human genitals, pubic region, buttocks, anus or female breasts below a point immediately above the top of the areolas.

**b.** Human male genitals in a discernibly turgid state, even if completely and opaquely covered.

**14.** Specified Sexual Activities. As used herein, Specified Sexual Activities shall mean and include any of the following:

**a.** The fondling or other erotic touching of human genitals, pubic region, buttocks, anus or female breasts.

**b.** Sex acts, normal or perverted, actual or simulated, including intercourse, oral copulation or sodomy.

**c.** Masturbation, actual or simulated.

**d.** Excretory functions as part of or in connection with any of the activities set forth in (a) through (c) above.

**15.** Substantial Enlargement. For the purposes of this Section, the "substantial enlargement" of an adult entertainment business shall mean the increase in floor area occupied by the business by more than fifty percent (50%), as such floor area exists on the effective date of this section.

**16.** Transfer of Ownership or Control. For the purposes of this Section, the "transfer of ownership or control" of an Adult Entertainment Business shall mean and include any of the following:

**a.** The sale, lease or sublease of such business.

**b.** The transfer of securities which constitute a controlling interest in such business, whether by sale, exchange or similar means.

**c.** The establishment of a trust, gift or other similar legal device which transfers the ownership or control of such business, except for transfer by bequest or other operation of law upon the death of the person possessing such ownership or control.

**17.** Adult Entertainment Business. Adult Arcade, Adult Bookstore, Adult Cabaret, Adult Motel, Adult Motion Picture Theatre, Adult Theatre, Massage Parlor, or Sexual Encounter Establishment, as defined herein, and each shall constitute a separate Adult Entertainment Business even if operated in conjunction with another Adult Entertainment Business at the same establishment.

**C.** Massage Parlors and Sexual Encounter Establishments may be allowed through a conditional use permit pursuant to *Sec. 13.4.2* (Conditional Use Permit, Class 2), unless otherwise specified in the Use District.

**D.** No person shall cause or permit the Establishment, Substantial Enlargement, or Transfer of Ownership or Control of an Adult Entertainment Business within 1,000 feet of another Adult Entertainment Business; within 500 feet of a Religious Institution, School, or Public Park within the City of Los Angeles; within 500 feet of any lot zoned with an Agricultural or Residential Use District within the City of Los Angeles.

**E.** No person shall cause or permit the Establishment or maintenance of more than one Adult Entertainment Business in the same building, structure or portion thereof, or the increase of floor area of any Adult Entertainment Business in any building, structure or portion thereof containing another Adult Entertainment Business.

**F.** Exception

**1.** A person may establish and maintain, or continue to operate, an Adult Entertainment Business on a Lot within 500 feet of a Lot zoned with an Agricultural Use District or Residential Use District, if a site consistent with *Sec. 5C.4.1.D.* and *Sec. 5C.4.1.E.* is not reasonably available elsewhere in the City for the establishment or relocation of the subject Adult Entertainment Business. This exception shall only apply to an Adult Entertainment Business which is otherwise in compliance with all other provisions including *Sec. 5C.4.1.D.* and *Sec. 5C.4.1.E.*

**a.** A site is "reasonably available" elsewhere in the City if it meets all of the following criteria:

**i.** Its use as the proposed Adult Entertainment Business is consistent with all applicable zoning regulations, including *Sec. 5C.4.1.D.* and *Sec. 5C.4.1.E.*.

**ii.** It is available for use, purchase, or rental as an Adult Entertainment Business.

**iii.** It has adequate street access, street lighting, and sidewalks.

**iv.** It is at least 500 feet away from any uses which are or may become obnoxious or offensive by reason or emission of odor, dust, smoke, noise, gas, fumes, cinders, refuse matter or water carried waste.

**b.** This exception shall not apply to Massage Parlors or Sexual Encounter Establishments.

**2.** To apply for an exception, an applicant shall file an application with the Department of City Planning, on a form provided by the Department, identifying the present or proposed location of the Adult Entertainment Business, and accompanied by data supporting the proposed exception and the fee provided for in *Article 15* (Fees). The procedures described in *Sec. 13.4.2* (Conditional Use Permit, Class 2) shall be followed to the extent applicable.

**3.** If the Zoning Administrator, Area Planning Commission or Council disapproves an exception, then it shall make findings of fact showing how a site consistent with *Sec. 5C.4.1.D.* and *Sec. 5C.4.1.E.* is reasonably available elsewhere in the City for the establishment or relocation of the subject Adult Entertainment Business.

**G.** A person possessing ownership or control of an Adult Entertainment Business shall be permitted to transfer such ownership or control if such business is not within 500 feet of any Place of Worship, K-12 School, Day Care Facility, or Public Park and the only other Adult Entertainment Business within 1,000 feet of such business has been established under a variance from the requirements of this Section, pursuant to the variance provisions set forth in *Sec. 13B.5.3.* This exception shall not, however, apply to an Adult Entertainment Business which has been established under such a variance.

**H.** Measurement of Distance. The distance between any two Adult Entertainment Businesses shall be measured in a straight line, without regard to intervening structures from the closest exterior structural wall of each business. The distance between any Adult Entertainment Business and any Place of Worship, K-12 School, Day Care Facility, or Public Park shall be measured in a straight line, without regard to intervening structures, from the closest exterior structural wall of the Adult Entertainment Business to the closest property line of the Place of Worship, K-12 School, Day Care Facility, or Public Park.

## SEC. 5C.4.2. ALCOHOL SALES, OFF-SITE CONSUMPTION

**A.** Findings. In addition to the findings otherwise required by *Sec. 13.4.2* (Conditional Use Permit, Class 2), the Zoning Administrator shall also find:

**1.** That the proposed use will not adversely affect the welfare of the pertinent community.

**2.** That the granting of the application will not result in an undue concentration of premises for the sale or dispensing for consideration of alcoholic beverages, including beer and wine, in the area of the City involved, giving consideration to applicable State laws and to the California Department of Alcoholic Beverage Control's guidelines for undue concentration; and also giving consideration to the number and proximity of these establishments within a one thousand foot radius of the site, the crime rate in the area (especially those crimes involving public drunkenness, the illegal sale or use of narcotics, drugs or alcohol, disturbing the peace and disorderly conduct), and whether revocation or nuisance proceedings have been initiated for any use in the area.

**3.** That the proposed use will not detrimentally affect nearby residentially zoned communities in the area of the City involved, after giving consideration to the distance of the proposed use from residential buildings, churches, schools, hospitals, public playgrounds and other similar uses, and other establishments dispensing, for sale or other consideration, alcoholic beverages, including beer and wine.

**B.** Notice to Councilmember. Whenever an application for a conditional use has been filed pursuant to this Section, the Zoning Administrator shall give notice of this fact promptly to the councilmembers whose districts include portions of the area of the City involved.

**C.** Limitations. The provisions of this Section shall not apply to the sale or dispensing for consideration of alcoholic beverages, including beer and wine, for consumption off-site of any premises located within the area of an operative specific plan which provides for conditional use approval for sale or dispensing. If that specific plan ceases to be operative, then a conditional use approval granted pursuant to the provisions of that specific plan for sale or dispensing may continue subject to the same rights and limitations as a conditional use granted pursuant to the provisions of this Section.

**D.** Existing Uses. The use of a Lot for an establishment dispensing, for sale or other consideration, alcoholic beverages, including beer and wine, for on-site or off-site consumption may not be continued or re-established without conditional use approval granted in accordance with the provisions of this Section if there is a substantial change in the mode or character of operation of the establishment, including any expansion by more than 20 percent of the floor area, seating or occupancy, whichever applies; except that construction for which a building permit is required in order to comply with an order issued by the Department of Building and Safety to repair or remedy an unsafe or substandard condition is exempt from this provision. Any expansion of less than 20 percent of the floor area, seating or occupancy, whichever applies, requires the approval of plans pursuant to Subsection H (Modification of Entitlement) of *Sec. 13.4.2* (Conditional Use Permit, Class 2).

## SEC. 5C.4.3. ALCOHOL SALES, ON-SITE CONSUMPTION

**A.** Findings. In addition to the findings otherwise required by *Sec. 13.4.2* (Conditional Use Permit, Class 2), the Zoning Administrator shall also find:

**1.** That the proposed use will not adversely affect the welfare of the pertinent community.

**2.** That the granting of the application will not result in an undue concentration of premises for the sale or dispensing for consideration of alcoholic beverages, including beer and wine, in the area of the City involved, giving consideration to applicable State laws and to the California Department of Alcoholic Beverage Control's guidelines for undue concentration; and also giving consideration to the number and proximity of these establishments within a one thousand foot radius of the site, the crime rate in the area (especially those crimes involving public drunkenness, the illegal sale or use of narcotics, drugs or alcohol, disturbing the peace and disorderly conduct), and whether revocation or nuisance proceedings have been initiated for any use in the area.

**3.** That the proposed use will not detrimentally affect nearby residentially zoned communities in the area of the City involved, after giving consideration to the distance of the proposed use from residential buildings, churches, schools, hospitals, public playgrounds and other similar uses, and other establishments dispensing, for sale or other consideration, alcoholic beverages, including beer and wine.

**B.** Notice to Councilmember. Whenever an application for a conditional use has been filed pursuant to this Section, the Zoning Administrator shall give notice of this fact promptly to the councilmembers whose districts include portions of the area of the City involved.

**C.** Limitations. The provisions of this Section shall not apply to the sale or dispensing for consideration of alcoholic beverages, including beer and wine, for consumption off-site of any premises located within the area of an operative specific plan which provides for conditional use approval for sale or dispensing. If that specific plan ceases to be operative, then a conditional use approval granted pursuant to the provisions of that specific plan for sale or dispensing may continue subject to the same rights and limitations as a conditional use granted pursuant to the provisions of this Section.

**D.** Existing Uses. The use of a Lot for an establishment dispensing, for sale or other consideration, alcoholic beverages, including beer and wine, for on-site or off-site consumption may not be continued or re-established without conditional use approval granted in accordance with the provisions of this Section if there is a substantial change in the mode or character of operation of the establishment, including any expansion by more than 20 percent of the floor area, seating or occupancy, whichever applies; except that construction for which a building permit is required in order to comply with an order issued by the Department of Building and Safety to repair or remedy an unsafe or substandard condition is exempt from this provision. Any expansion of less than 20 percent of the floor area, seating or occupancy, whichever applies, requires the approval of plans pursuant to Subsection H (Modification of Entitlement) of *Sec. 13.4.2* (Conditional Use Permit, Class 2).

## SEC. 5C.4.4. CERTIFIED FARMERS' MARKET

**A.** If located on a Lot zoned with a Residential Use District, the Zoning Administrator may, upon application, permit the operation of a Certified Farmers' Market, subject to the following:

**1.** Application. A copy of each application shall be provided to the Councilmember of the district in which the property is located. A Zoning Administrator shall approve an application only if all the following requirements are met:

**a.** The operation is conducted by one or more certified producers, by a nonprofit organization or by a local government agency;

**b.** If selling fruits, nuts or vegetables, the producer is authorized by the County Agricultural Commissioner to sell directly to consumers these products that are produced upon the land which the certified producer farms and owns, rents, leases or sharecrops; and

**c.** if selling eggs, honey, fish, and other seafood and freshwater products, live plants and other agricultural products, the market operator and producer secure all necessary licenses, certificates and health permits which are required to sell these products directly to consumers, provided these products are raised, grown or caught and processed, if necessary, in California.

**2.** Requirements

**a.** All market activities shall be conducted only between the hours of 7:00 a.m. and 7:00 p.m., except that necessary preparation of the site for sales activities and cleanup may be conducted for not more than one hour before and one hour after this period. No Certified Farmers' Market may operate more than twice in the same week;

**b.** The operator of a Certified Farmers' Market shall provide trash containers during the Hours of Operation;

**c.** Any portion of the Lot used for market activities shall be cleaned at the close of Hours of Operation. For purposes of this section only, "cleaned" shall include, but not be limited to, the removal of stalls, materials, debris, trash, etc., used in conjunction with market activities;

**d.** The operator of a Certified Farmers' Market shall maintain a list of vendors participating in the Certified Farmers' Market during the day of operation;

**e.** Certification of the Certified Farmers' Market and contact information for the operator shall be posted at the main entry and provided as part of the application. The contact person shall be available during the Hours of Operation and shall respond to any complaints. The operator shall keep a log of complaints with the date and time received, and their disposition; and

**f.** Electronic Benefit Transfer (EBT) Card payments shall be accepted at the Certified Farmers' Market. A Food and Nutrition Service (FNS) Number issued by the United States Department of Agricultural shall be provided on the application as proof of EBT card acceptance.

**3.** Violations. The Zoning Administrator may consider revoking the grant for failure to maintain the site in a satisfactory manner or failure to comply with the requirements above.

**B.** If not located on a Lot zoned with a Residential Use District, Certified Farmers' Markets are subject to the following:

**1.** All market activities shall be conducted only between the hours of 7:00 a.m. and 9:00 p.m., except that necessary preparation of the site for sales activities and cleanup may be conducted for not more than one hour before and one hour after this period. No Certified Farmers' Market may operate more than twice in the same week.

**2.** The operator of a Certified Farmers' Market shall provide trash containers during the Hours of Operation.

**3.** Any portion of the Lot used for market activities shall be cleaned at the close of Hours of Operation. For purposes of this Section only, "cleaned" shall include, but not be limited to, the removal of stalls, materials, debris and trash, etc., used in conjunction with market activities.

**4.** The operator of a Certified Farmers' Market shall maintain a list of vendors participating in the Certified Farmers' Market during the day of operation.

**5.** Certification of the Certified Farmers' Market and contact information for the operator shall be posted at the main entry, and otherwise available at the public's request. The contact person shall be available during the Hours of Operation and shall respond to any complaints. The operator shall keep a log of complaints received, the date and time received, and their disposition.

**6.** When located on a parking lot, the Certified Farmers' Market shall not use more than 80 percent of the provided parking spaces. Safety barricades that protect vendors and their customers from vehicles shall be used to separate the market and the remaining functional parking area.

**7.** Electronic Benefit Transfer (EBT) Card payments shall be accepted at the Certified Farmers' Market. A Food and Nutrition Service (FNS) Number issued by the United States Department of Agricultural shall be available at the public's request as proof of EBT card acceptance.

**8.** Conditional Use Permit

**a.** Applicability. If the proposed project does not comply with the use standards listed in *Sec. 5C.4.4.B.1.* through *Sec. 5C.4.4.B.7.* the applicant may apply for a conditional use permit pursuant to *Sec. 13.4.2* (Conditional Use Permit, Class 2).

**b.** Supplemental Findings. In approving any project, the Zoning Administrator shall also find that the proposed project substantially meets the purposes of the use standards listed in *Sec. 5C.4.4.B.1* through *Sec. 75C.4.4.B.7.*

## SEC. 5C.4.5. CEMETERY

**A.** The following limitations apply:

**1.** All buildings on the site are at least 300 feet from any adjoining street, any Lot containing a Residential Use, or any Lot zoned with an Agricultural or Residential Use District.

**2.** There shall be a Type B4 Frontage Screen (*Sec. 4C.8.1.C.2.d.*) and a Type C1 Transition Screen (*Sec. 4C.8.2.C.2.a.*) on the site. The wall or fence shall not extend into the required front yard setback.

**3.** The site is allowed to have only one double-faced monument sign, with a maximum of 20 square feet per side.

**B.** Conditional Use Permit

**1.** Applicability. If the proposed project does not comply with the use standards listed in *Sec. 5C.4.5.A.1.* through *Sec. 5C.4.5.A.3.,* the applicant may apply for a conditional use permit pursuant to *Sec. 13.4.2* (Conditional Use Permit, Class 2).

**2.** Supplemental Findings. In approving any project, the Zoning Administrator shall also find that the proposed project substantially meets the purposes of the use standards listed in *Sec. 5C.4.5.A.1.* through *Sec. 5C.4.5.A.3.*

# DIV. 5C.5. HEAVY COMMERCIAL USES

## SEC. 5C.5.1. CAR WASH

**A.** Every Car Wash shall be constructed or arranged so that entrances, exits, and openings shall not face any property with a Residential Use within 100 feet of the entrances, exits, or openings.

**B.** Commercial-Mixed or Commercial Use District. If located on a Lot zoned with a Commercial-Mixed or a Commercial Use District, every Car Wash use shall also comply with the following standards:

**1.** Development Standards.

**a.** Windows. The exterior walls and doors of any building, excluding bay doors or security grills, housing a Car Wash use, which are parallel to a street, shall consist of at least 50 percent transparent windows, unless prohibited by law.

**b.** Bay Doors. Bay doors or vehicle entrances, exits and openings shall not face any School, a Lot containing a Residential Use, or a Lot zoned with an Agricultural or Residential Use District that is within 100-feet from the face of the building containing the bay door, vehicle entrance, exit or opening.

**c.** Fences. Fences or walls erected along the Primary Street Lot Line shall not exceed 36-inches in height.

**d.** Automotive hoists. Automotive hoists of any type or size, shall be located and operated only inside a building enclosed on at least three sides.

**e.** Monument signs and information signs may only be located within the landscape-planted areas of the Lot or Lots.

**f.** Utilities. All new utility lines which directly service the Lot or Lots shall be installed underground. If underground service is not available at the time the application is submitted and fees paid for plan check, then provisions should be made for future underground service to the satisfaction of the Bureau of Engineering, if determined necessary by the Department of Water and Power.

**g.** Walls. A solid masonry wall at least six feet in height shall be erected along the Lot lines of the Lot or Lots where the Lot or Lots abuts or is across an alley from any School, a Lot containing a Residential Use, or a Lot zoned with a Residential Use District, except for that portion of the Lot where an access driveway is located.

**h.** Landscaping – Setback. A landscaped, planted area having a minimum width of five feet shall be required along all street frontages of the Lot or Lots and on the perimeters of all parking areas of the Lot or Lots that abut a Lot containing a Residential Use or a Lot zoned with a Residential Use District.

**2.** Operating Conditions.

**a.** Public address system shall not be permitted.

**b.** Site cleaning, sweeping, trash collection, and deliveries to the site shall be limited to the following hours:

**i.** Monday through Friday, 7:00 am to 7:00 pm; and

**ii.** Saturday and Sunday, 8:00 am to 5:00 pm.

**c.** Notwithstanding the above, trash collection shall not be allowed on Sundays or legal holidays.

**d.** Hours of Operation shall be limited to:

**i.** Monday through Friday, 7:00 am to 7:00 pm;

**ii.** Saturday, 9:00 am to 8:00 pm; and

**iii.** Sunday, 11:00 am to 8:00 pm

**e.** All loading, including those of vehicles, shall occur on-site.

**f.** Accessory sales activities shall not occur outside a fully enclosed building.

**g.** Temporary canopy tents shall not be permitted when the tents are visible from the street.

**h.** Trailers and/or temporary modular buildings shall not be permitted as a work area.

**i.** The site where the Car Wash Use is located shall be kept clear of weeds, rubbish, and all types of litter and combustible materials at all times. One trash receptacle shall be located for every 200 square-feet of open space and shall be uniformly distributed throughout the open area of the site.

**j.** Pennants, banners, ribbons, streamers, spinners, balloons, and supergraphic signs are prohibited.

**k.** All windows and glass doors shall be maintained free of any signs.

**3.** Covenant. Prior to the issuance of a building permit or land use permit, the owner of the Lot or Lots shall execute and record a covenant and agreement in a form satisfactory to the Director of Planning, acknowledging that the owner shall implement each of the conditions set forth in this Section. The covenant and agreement shall run with the land and be binding upon the owners, and any assignees, lessees, heirs, and successors of the owners. The City's right to enforce the covenant and agreement is in addition to any other remedy provided by law.

**4.** Specific Plan Compliance. Notwithstanding any other provision to the contrary, if the Director determines that the provisions of this Section conflict with those of an adopted Specific Plan, Overlay, or zone, then the provisions of that Specific Plan, Overlay, or zone shall prevail.

**C.** Conditional Use. A conditional use permit is required for Car Wash uses located on Lots zoned with a Commercial-Mixed or Commercial Use District that do not comply with the development standards and operating conditions listed in *Sec. 5C.5.1.A.* and *Sec. 5C.5.1.B.* and Car Wash uses located on Lots zoned with a Industrial-Mixed Use District that do not comply with *Sec. 5C.5.1.A.*

**1.** In making a determination on an application for a conditional use filed pursuant to this Section a Zoning Administrator may consider all of the applicable provisions of *Sec. 5C.5.1.A.* and *Sec. 5C.5.1.B.* as establishing minimum standards for the approval of Car Wash uses.

**2.** Findings. In addition to the findings set forth in *Sec. 13.4.2* (Conditional Use Permit, Class 2), the Zoning Administrator shall find:

**a.** That project approval will not create or add to a detrimental concentration of Car Wash uses in the vicinity of the proposed Car Wash use;

**b.** That based on data provided by the Department of Transportation or a licensed traffic engineer, ingress to, egress from and associated parking of the Car Wash use will not constitute a traffic hazard or cause significant traffic congestion or disruption of vehicular circulation on adjacent streets;

**c.** That any spray painting will be conducted within a fully-enclosed structure located at least 500-feet away from a School or Lot zoned with a Residential Use District, and that all spray painting will be conducted in full compliance with the provisions of Article 7, Chapter 5 of the LAMC, as well as South Coast Air Quality Management District Rules 1132 and 1151, regulating these installations; and

**d.** That the applicant has submitted an appropriate landscape plan setting forth all plant materials and irrigation systems; and a written maintenance schedule indicating how the landscaping will be maintained.

## SEC. 5C.5.2. FUELING STATION

**A.** All tire and tube repairing, battery servicing, automotive lubrication, mechanical adjustments, and other vehicle maintenance activities shall be conducted wholly within a building, except for:

**1.** Those servicing operations which are normally made in the area immediately adjacent to the pump island; and

**2.** The following services when conducted within the first 18 feet in depth measured perpendicular to the entire length of the building wall containing a garage bay door, provided said area shall not displace any required parking:

**a.** Electrical diagnostics;

**b.** Battery charging and changing; and

**c.** Tire removal and replacement, if the vehicle is elevated more than 12 inches off the ground measured to the bottom of the tire. A portable hoist may be used for this function.

Except as provided in Subparagraph A. above, automotive hoists of any type or size shall be located or operated only inside a building.

**B.** A six-foot high concrete or masonry wall, for the entire length of the property line, shall be constructed on any Lot line which abuts a Lot zoned with an Agricultural Use District, Residential Use District, or is separated therefrom only by an alley.

**1.** For a distance of 15 feet from the Primary Street Lot Line or Secondary Street Lot Line, said wall shall be only 3 feet 6 inches high.

**2.** Where a Lot line abuts an alley and the alley is used for vehicular ingress and egress the wall may be omitted for a distance not to exceed 25 feet.

**3.** Walls shall be without openings and shall be of solid masonry or concrete with a minimum nominal thickness of 6 inches.

**C.** No driveway approach, as defined the Bureau of Engineering Department of Public Works, shall be located within five feet of any property line abutting a Lot zoned with an Agricultural or Residential Use District, said distance to be measured from the intersection of the Lot line with the street to the far side of the nearest side slope of the driveway.

**D.** No part of any pump island shall be located within 12 feet of any street.

**E.** Display or storage of merchandise for sale, must be confined to the rear half of the Lot measured from all Primary Street Lot Line and Side Street Lot Line, except that display of automotive merchandise for sale shall be permitted in enclosed buildings, on the pump islands, in the open within three feet of the exterior walls of the main building, and is not more than two portable or semi-portable cabinets, provided each of said cabinets shall not exceed 6 feet in height, nor exceed 40 square feet in footprint, and provided further that said cabinets are located not less than 50 feet from any Primary Street Lot Line or Side Street Lot Line.

**1.** There shall be no rental, storage or storage for rental purposes of equipment commonly used by contractors or commercial vehicles which exceed a Gross Vehicle Weight Rating (GVWR) greater than 19,500 lbs., or an unladen weight of 8,001 lbs.

**F.** Except as permitted in *Sec. 5C.5.2.E.* (Display or storage of merchandise for sale), open-air storage of merchandise or materials, must be confined to a storage area completely enclosed by a solid, non-combustible wall or fence (with necessary self-closing gates) six feet in height. Said storage area must be at least 150 square-feet in area. No merchandise or material shall be stored higher than said wall or fence.

**G.** Commercial-Mixed, Commercial, Industrial-Mixed, Industrial, or Public Use Districts. If located on a Lot zoned with a Commercial-Mixed, Commercial, Industrial-Mixed, or Public Use Districts, the Fueling Station use shall also comply with all of the following use standards:

**1.** Development Standards.

**a.** Windows. The exterior walls and doors of any building, excluding bay doors and/or security grills, housing a Fueling Station use, which are parallel to a street, shall consist of at least 50 percent transparent windows, unless otherwise prohibited by law.

**b.** Bay Doors. Bay doors (including vehicle entrances, exits and openings) may not face any Lot containing a school or a Residential Use, or a Lot zoned with an Agricultural or Residential Use District when the face of the building(s) containing a bay door(s) is within 100 feet from said Lots.

**c.** Wash Racks. Wash rack shall be constructed or arranged so that vehicle entrances, exits and openings do not face any Lot containing a school or a Residential Use, or a Lot zoned with an Agricultural or Residential Use District when the face of the building(s) containing a wash rack(s) is within 100 feet from said Lots.

**d.** Fences. Fences or walls erected along the Front Lot Line shall not exceed 36-inches in height.

**e.** Automotive hoists. Automotive hoists of any type or size, shall be located and operated only inside a building enclosed on at least three sides.

**f.** Monument signs and information signs may only be located within the landscape-planted areas of the Lot or Lots.

**g.** Utilities. All new utility lines which directly service the Lot or site shall be installed underground. If underground service is not available at the time the application is submitted and fees paid for plan check, then provisions should be made for future underground service to the satisfaction of the Bureau of Engineering, if determined necessary by the Department of Water and Power.

**h.** Screening and Buffer. A Type C1 Transition Screen (*Sec. 4C.8.2.C.2.a.*), shall be built along the interior side and rear Lot lines.

**2.** Operating Conditions.

**a.** Public address system shall not be permitted.

**b.** Site cleaning, sweeping, trash collection, and deliveries to the site shall be limited to the following hours:

**i.** Monday through Friday, 7:00 am to 7:00 pm; and

**ii.** Saturday and Sunday, 8:00 am to 5:00 pm.

**iii.** Notwithstanding the above, trash collection shall not be allowed on Sundays or legal holidays.

**c.** Hours of Operation shall be limited to:

**i.** Monday through Friday, 7:00 am to 7:00 pm;

ii. Saturday, 9:00 am to 8:00 pm; and

iii. Sunday, 11:00 am to 8:00 pm.

**d.** All loading, including those of vehicles, shall occur on-site.

**e.** Accessory sales activities shall not occur outside a fully enclosed building.

**f.** Temporary canopy tents shall not be permitted when the tents are visible from the street.

**g.** Trailers or temporary modular buildings shall not be permitted as a work area.

**h.** The site shall include one trash receptacle for every 200 square-feet of open area, and shall be uniformly distributed throughout the open areas of the site.

**i.** Any automotive sound shop or automotive alarm shop shall be wholly conducted within a fully-enclosed building. No portion of the building or its associated parking area shall be within 50 feet of a Lot containing a school or a Residential Use, or a Lot zoned with an Agricultural or Residential Use District.

**j.** Pennants, banners, ribbons, streamers, spinners, balloons, and supergraphic signs are prohibited.

**k.** All windows and glass doors shall be maintained free of any signs.

**3.** Covenant. Prior to the issuance of a building permit or land use permit, the owner of the Lot or Lots shall execute and record a covenant and agreement in a form satisfactory to the Director of Planning acknowledging that the owner shall implement each of the conditions set forth in Subdivision 2 above. The covenant and agreement shall run with the land be binding upon the owners, and any assignees, lessees, heirs, and successors of the owners. The City's right to enforce the covenant and agreement is in addition to any other remedy provided by law.

**4.** Specific Plan Compliance. Notwithstanding any other provision to the contrary, if the Director determines that the provisions of this Section conflict with those of an adopted Specific Plan, Overlay, or zone, then the provisions of that Specific Plan, Overlay, or zone shall prevail.

**5.** Conditional Use. A conditional use permit is required for Fueling Station uses located on Lots zoned with a Commercial-Mixed, Commercial, Industrial-Mixed, Industrial, or Public Use District that do not comply with the development standards and operating conditions listed in Section and 7.5.2.G.1 and 7.5.2.G.2.

**a.** In making a determination on an application for a conditional use filed pursuant to this Section, a Zoning Administrator may consider all of the applicable provisions of *Sec. 5C.5.2.G.1.* and *Sec. 5C.5.2.G.2.* as establishing minimum standards for the approval of Fueling Station uses.

**b.** Findings. In addition to the findings set forth in *Sec. 13.4.2* (Conditional Use Permit, Class 2), the Zoning Administrator shall find:

i. That project approval will not create or add to a detrimental concentration of Fueling Station uses in the vicinity of the proposed Fueling Station use;

ii. That based on data provided by the Department of Transportation or a licensed traffic engineer, ingress to, egress from and associated parking of the Fueling Station use will not constitute a traffic hazard or cause significant traffic congestion or disruption of vehicular circulation on adjacent streets;

iii. That any spray painting will be conducted within a fully-enclosed structure located at least 500-feet away from a School or Lot zoned with a Residential Use District, and that all spray painting will be conducted in full compliance with the provisions of Article 7, Chapter 5 of the LAMC, as well as South Coast Air Quality Management District Rules 1132 and 1151, regulating these installations; and

iv. That the applicant has submitted an appropriate landscape plan setting forth all plant materials and irrigation systems, and a written maintenance schedule indicating how the landscaping will be maintained.

## SEC. 5C.5.3. USED VEHICLE SALES, LIGHT

**A.** All Light Used Vehicle Sales areas shall provide supplemental customer parking, on site, of at least one space for every 2,000 square feet of Light Used Vehicle Sales area. This parking is in addition to all other parking required for the Lot and shall be conspicuously posted and used for customer parking only. There shall be a minimum of two customer parking spaces provided for any Light Used Vehicle Sales area.

**B.** All repair work done on site must comply with the provisions of this subsection whether or not the repairs are done on customer or dealer owned vehicles.

**C.** Exception: Display of not more than three vehicles for purposes of sale or trade, at any one time, which is accessory to an approved use on the same Lot and not occupying any required parking spaces, does not require a separate certificate of occupancy, additional parking, or annual inspection.

**D.** Commercial-Mixed, Commercial, Industrial-Mixed Use Districts. If located on a Lot zoned with a Commercial-Mixed, Commercial, or Industrial-Mixed Use District, a new Light Used Vehicle Sales use or addition of floor area to an existing Light Used Vehicle Sales use may be established if the following development standards and operating conditions are also met:

**1.** Development Standards.

**a.** Windows. The exterior walls and doors of any building, excluding bay doors or security grills, housing a Light Used Vehicle Sales use, which are parallel to a street, shall consist of at least 50 percent transparent windows, unless otherwise prohibited by law.

**b.** Bay Doors. Bay doors or vehicle entrances, exits and openings shall not face any School, a Lot containing a Residential Use, or a Lot zoned with an Agricultural or Residential Use District that is within 100-feet from the face of the building containing the bay door, vehicle entrance, exit or opening.

**c.** Fences. Fences or walls erected along the Primary Street Lot Line shall not exceed 36-inches in height.

**d.** Automotive hoists. Automotive hoists of any type or size, shall be located and operated only inside a building enclosed on at least three sides.

**e.** Monument signs and information signs may only be located within the landscape-planted areas of the Lot or Lots.

**f.** Utilities. All new utility lines which directly service the Lot or Lots shall be installed underground. If underground service is not available at the time the application is submitted and fees paid for plan check, then provisions should be made for future underground service to the satisfaction of the Bureau of Engineering, if determined necessary by the Department of Water and Power.

**g.** Screening and Buffers.

**i.** A *Type C1 screen (Sec. 4C.8.2.C.2.a.)* is required along the interior side and rear Lot lines.

**ii.** A *Type B3 screen (Sec. 4C.8.1.C.3.c.)* is required along the entire length of the frontage lot line for the entire property.

**2.** Operating Conditions.

**a.** Spray painting shall not be conducted.

**b.** Junkyard or automobile dismantling activities shall not be conducted.

**c.** Public address system shall not be permitted.

**d.** Site cleaning, sweeping, trash collection, and deliveries to the site shall be limited to the following hours:

**i.** Monday through Friday, 7:00 am to 7:00 pm; and

**ii.** Saturday and Sunday, 8:00 am to 5:00 pm.

**iii.** Notwithstanding the above, trash collection shall not be allowed on Sundays or legal holidays.

**e.** Hours of Operation shall be limited to:

**i.** Monday through Friday, 7:00 am to 7:00 pm;

ii. Saturday, 9:00 am to 8:00 pm; and

iii. Sunday, 11:00 am to 8:00 pm

**f.** All loading, including those of vehicles, shall occur on-site.

**g.** Vehicles being repaired shall be stored on-site.

**h.** Accessory sales activities shall not occur outside a fully enclosed building.

**i.** Temporary canopy tents shall not be permitted when the tents are visible from the street.

**j.** Trailers or temporary modular buildings shall not be permitted as a work area.

**k.** The site where the Light Used Vehicle Sales use is located shall be kept clear of weeds, rubbish, and all types of litter and combustible materials at all times. One trash receptacle shall be located for every 200 square-feet of open space and shall be uniformly distributed throughout the open areas of the site.

**l.** Any automotive sound shop or automotive alarm shop shall be wholly conducted within a fully-enclosed building. No portion of the building or its associated parking area shall be within 50 feet of any School, Lot containing a Residential Use, or a Lot zoned with a Residential Use District.

**m.** Pennants, banners, ribbons, streamers, spinners, balloons, and supergraphic signs are prohibited.

**n.** All windows and glass doors shall be maintained free of any signs.

**o.** Covenant. Prior to the issuance of a building permit or land use permit, the owner of the Lot or Lots shall execute and record a covenant and agreement in a form satisfactory to the Director of Planning acknowledging that the owner shall implement each of the conditions set forth in this Section. The covenant and agreement shall run with the land and be binding upon the owners, and any assignees, lessees, heirs, and successors of the owners. The City's right to enforce the covenant and agreement is in addition to any other remedy provided by law.

**3.** Specific Plan Compliance. Notwithstanding any other provision to the contrary, if the Director determines that the provisions of this Section conflict with those of an adopted Specific Plan, Overlay, or zone, then the provisions of that Specific Plan, Overlay, or zone shall prevail.

**4.** Light Used Vehicle Sales located on Lots zoned with a Commercial-Mixed, Commercial, or Industrial-Mixed Use District that do not comply with the development standards and operating conditions listed in *Sec. 5C.5.3.D.*

**a.** In making a determination on an application for a conditional use filed pursuant to this Section, a Zoning Administrator may consider all of the applicable provisions of *Sec. 5C.5.3.D.* as establishing minimum standards for the approval of Automotive Uses.

**b.** Findings. In addition to the findings set forth in *Sec. 13.4.2* (Conditional Use Permit, Class 2), the Zoning Administrator shall find:

**i.** That project approval will not create or add to a detrimental concentration of Automotive Uses in the vicinity of the proposed Automotive Use;

**ii.** That based on data provided by the Department of Transportation or a licensed traffic engineer, ingress to, egress from and associated parking of the Automotive Use will not constitute a traffic hazard or cause significant traffic congestion or disruption of vehicular circulation on adjacent streets;

**iii.** That any spray painting will be conducted within a fully-enclosed structure located at least 500-feet away from a School or Lot zoned with a Residential Use District, and that all spray painting will be conducted in full compliance with the provisions of Article 7, Chapter 5 of the LAMC, as well as South Coast Air Quality Management District Rules 1132 and 1151, regulating these installations; and

**iv.** That the applicant has submitted an appropriate landscape plan setting forth all plant materials and irrigation systems, and a written maintenance schedule indicating how the landscaping will be maintained.

**E.** Industrial Use Districts. If located on a Lot zoned with an Industrial Use District, a new Light Used Vehicle Sales use or addition of floor area to an existing Used Vehicle Sales use may be established if the following development standards and operating conditions are met:

**1.** Screening and Buffers.

**i.** A *Type C1 screen (Sec. 4C.8.2.C.2.a.)* is required along the interior side and rear Lot lines.

**ii.** A *Type B3 screen (Sec. 4C.8.1.C.3.c.)* is required along the entire length of the frontage lot line for the entire property.

## SEC. 5C.5.4. VEHICLE REPAIR, LIGHT

**A.** Minimum Standards.

**1.** All Light Vehicle Repair uses shall comply with the following minimum standards:

**a.** All body and fender repairing when conducted within 300 feet of a Lot zoned with an Agricultural or Residential Use Districts shall be done within a completely enclosed building or room. The doors of such building or room may be open during the following Hours of Operation:

**i.** Mondays through Fridays, 7 am to 8 pm;

**ii.** Saturdays, 9 am to 8 pm; and

**iii.** Sundays, 11 am to 8 pm.

**b.** At all other times, the doors of such building or room shall be closed, except at intervals necessary for ingress and egress.

**c.** All body and fender repairing when conducted within 150 feet of a Lot zoned with an Agricultural or Residential Use Districts shall be done within a completely enclosed building or room with stationary windows. The doors of such building or room may be opened only at intervals necessary for ingress and egress, except that garage bay doors may be open during the Hours of Operation set forth in Paragraph a. above, provided:

**i.** A minimum 10-foot-high solid masonry fence or a minimum 10-foot-high intervening commercial or industrial building enclosed on at least three sides is maintained at the property line adjacent to a Lot zoned with an Agricultural or Residential Use Districts, or;

**ii.** Doors facing a public street shall be closer to the property line adjacent to the public street than the required yard setback of any adjacent a Lot zoned with an Agricultural or Residential Use Districts.

**d.** All automotive spray painting shall be done in full compliance with the provisions of Article 7 (Fire Code) of Chapter 5 (Public Safety and Protection) of the Code regulating these installations; provided further, that no spray painting may be done except in an approved spray booth or room approved for this use that is located within a wholly enclosed building. On Lots zoned with a Heavy Industrial Use District, a spray booth approved for use outside of a building may be utilized if allowed by all other jurisdictions having authority over spray painting.

**e.** Except for allowable outside uses when conducted on a Lot zoned with a Heavy Industrial Use District, all other operations shall be conducted within a building enclosed on at least three sides, except for the following, which may be conducted within the first 18 feet in depth measured perpendicular to the entire length of the building wall containing a garage bay door; said area shall not displace any required parking:

**i.** electrical diagnostics;

**ii.** battery charging and changing;

**iii.** tire removal and replacement, provided the vehicle is not elevated more than 12-inches off the ground measured to the bottom of the tire. A portable hoist only, may be used for this purpose.

**f.** If the building is located within 50 feet of a Lot zoned with an Agricultural or Residential Use District with no intervening street, the wall of the building nearest such Use District shall have no openings other than doors or stationary windows. Such doors shall be permitted only if the building is adjacent to an alley and may be opened only at intervals necessary for ingress or egress.

**g.** Automotive hoists, of any type or size, except as provided in Paragraph (4)(iii) above or allowed and operated on a Lot zoned with a Heavy Industrial Use District, shall be located or operated only inside a fully enclosed building.

**B.** Commercial-Mixed, Commercial, Industrial-Mixed Use Districts. If located on a Lot zoned with a Commercial-Mixed, Commercial, or Industrial-Mixed Use District, the Light Vehicle Repair use shall comply with all the following use standards.

**1.** Development Standards.

**a.** Windows. The exterior walls and doors of any building, excluding bay doors or security grills, housing an Automotive use, which are parallel to a street, shall consist of at least 50 percent transparent windows, unless prohibited by law.

**b.** Bay Doors. Bay doors (including vehicle entrances, exits and openings) may not face any Lot containing a school or a Residential Use, or a Lot zoned with an Agricultural or Residential Use Districts when the face of the building(s) containing a bay door(s) is within 100 feet from said Lots.

**c.** Wash Racks. Wash rack shall be constructed or arranged so that vehicle entrances, exits and openings) do not face any Lot containing a school or a Residential Use, or a Lot zoned with an Agricultural or Residential Use Districts when the face of the building(s) containing a wash rack(s) is within 100 feet from said Lots.

**d.** Fences. Fences or walls erected along the Front Lot Line shall not exceed 36-inches in height.

**e.** Automotive hoists. Automotive hoists of any type or size, shall be located and operated only inside a building enclosed on at least three sides.

**f.** Monument signs and information signs may only be located within the landscape-planted areas of the Lot or Lots.

**g.** Utilities. All new utility lines which directly service the Lot or site shall be installed underground. If underground service is not available at the time the application is submitted and fees paid for plan check, then provisions should be made for future underground service to the satisfaction of the Bureau of Engineering, if determined necessary by the Department of Water and Power.

**h.** Screening and Buffers. A *Type C1 screen (Sec. 4C.8.2.C.2.a.)*, shall be built along the interior side and rear Lot lines.

**2.** Operating Conditions.

**a.** All automotive spray painting shall be done in full compliance with the provisions of Article 7 of Chapter 5 of the Code regulating these installations; provided further, that no spray painting may be done except in an approved spray painting booth or room approved for this use that is located within a wholly enclosed building. In Lots zoned with a Light

Industrial or Heavy Industrial Use District, a spray booth approved for use outside of a building may be utilized if allowed by all other jurisdictions having authority over spray painting.

**b.** Junkyard or automobile dismantling activities shall not be conducted.

**c.** Public address system shall not be permitted.

**d.** Site cleaning, sweeping, trash collection, and deliveries to the site shall be limited to the following hours:

**i.** Monday through Friday, 7:00 am to 7:00 pm; and

**ii.** Saturday and Sunday, 8:00 am to 5:00 pm.

**iii.** Notwithstanding the above, trash collection shall not be allowed on Sundays or legal holidays.

**e.** Hours of Operation shall be limited to:

**i.** Monday through Friday, 7:00 am to 7:00 pm;

**ii.** Saturday, 9:00 am to 8:00 pm; and

**iii.** Sunday, 11:00 am to 8:00 pm.

**f.** At all other times, the doors of such building or room shall be closed, except at intervals necessary for ingress and egress.

**g.** All loading, including those of vehicles, shall occur on-site.

**h.** Vehicles being repaired shall be stored on-site.

**i.** Accessory sales activities shall not occur outside a fully enclosed building.

**j.** Temporary canopy tents shall not be permitted when the tents are visible from the street.

**k.** Trailers or temporary modular buildings shall not be permitted as a work area.

**l.** The site shall include one trash receptacle for every 200 square-feet of open area, and shall be uniformly distributed throughout the open areas of the site.

**m.** Any automotive sound shop or automotive alarm shop shall be wholly conducted within a fully-enclosed building. No portion of the building or its associated parking area shall be within 50 feet of a Lot containing a school or a Residential Use, or a Lot zoned with an Agricultural or Residential Use Districts.

**n.** Pennants, banners, ribbons, streamers, spinners, balloons, and supergraphic signs are prohibited.

**o.** All windows and glass doors shall be maintained free of any signs.

3. Covenant. Prior to the issuance of a building permit or land use permit, the owner of the Lot or Lots shall execute and record a covenant and agreement in a form satisfactory to the Director of Planning acknowledging that the owner shall implement each of the conditions set forth in Subdivision 2. above. The covenant and agreement shall run with the land and be binding upon the owners, and any assignees, lessees, heirs, and successors of the owners. The City's right to enforce the covenant and agreement is in addition to any other remedy provided by law.

4. Specific Plan Compliance. Notwithstanding any other provision to the contrary, if the Director determines that the provisions of this Subsection conflict with those of an adopted Specific Plan, Overlay, or zone, then the provisions of that Specific Plan, Overlay, or zone shall prevail.

**C.** Industrial Use Districts. If located on a Lot zoned with an Industrial Use District, the Light Vehicle Repair use shall comply with all the following use standards.

1. The lot containing the automotive repair use is located more than 500 feet from a Lot containing a school or a Residential Use, or a Lot zoned with an Agricultural or Residential Use Districts.

2. All automotive spray painting shall be conducted within a building, and in full compliance with the provisions of Article 7 (Fire Code) of Chapter 5 (Public Safety and Protection) .

3. All other operations shall be conducted wholly within a building enclosed on at least three sides, except for the following activities, which may be conducted within the first 18 feet in depth in front of the garage bay door measured perpendicular to the entire length of the building wall containing a garage bay door, provided that this area does not displace any required parking:

   **a.** electrical diagnostics;

   **b.** battery charging and changing;

   **c.** tire removal and replacement, so long as the vehicle is elevated no more that 12 inches off the ground measured to the bottom of the tire. A portable hoist may be used for this function only.

4. Except as provided in Paragraph 3.c. above, automotive hoists, of any type or size, shall be located and operated only inside a building enclosed on at least three sides.

5. A minimum of 500 square feet of storage area shall be provided.

6. Any automotive sound shop or automotive alarm shop shall be wholly conducted within a fully-enclosed building. No portion of the building or its associated parking area shall be within 50 feet of a Lot containing a school or a Residential Use, or a Lot zoned with an Agricultural or Residential Use Districts.

**D.** Standards Relief. When a Light Vehicle Repair use cannot comply with the use standards outlined in this Section, a permit shall not be granted without first obtaining approval from the Zoning Administrator pursuant to *Sec. 13.4.2*. (Conditional Use Permit, Class 2), with the following supplemental findings:

**1.** That project approval will not create, or add to a detrimental concentration of automotive uses in the vicinity of the proposed automotive use;

**2.** That, based on data provided by the Department of Transportation or a licensed traffic engineer, ingress to, egress from, and associated parking of the automotive use will not constitute a traffic hazard or cause significant traffic congestion or disruption of vehicular circulation on adjacent streets;

**3.** That any spray painting will be conducted within a fully enclosed structure located at least 500 feet away from a Lot containing a school or a Lot zoned with an Agricultural or Residential Use Districts, and that all spray painting will be conducted in full compliance with the provisions of Article 7, Chapter 5, as well as South Coast Air Quality Management Air District Rules 1132 and 1151, regulating these installations; and

**4.** That the applicant has submitted an appropriate landscape plan setting forth all plan materials and irrigation systems, and a written maintenance schedule indicating how the landscaping will be maintained.

## SEC. 5C.5.5. VEHICLE REPAIR, HEAVY

**A.** Minimum Standards.

**1.** All body and fender repairing when conducted within 300 feet of a Lot zoned with an Agricultural or Residential Use District shall be done within a completely enclosed building or room. The doors of such building or room may be open during the following hours:

**a.** From 7 am until 8 pm on Mondays through Fridays;

**b.** From 9 am until 8 pm on Saturdays; and

**c.** From 11 am until 8 pm on Sundays.

**d.** At all other times, the doors of such building or room shall be closed, except at intervals necessary for ingress and egress.

**2.** All body and fender repairing when conducted within 150 feet of a Lot zoned with an Agricultural or Residential Use District shall be done within a completely enclosed building or room with stationary windows. The doors of such building or room may be opened only at intervals necessary for ingress and egress, except that garage bay doors may be open during the Hours of Operation set forth in Paragraph 1 of this Subsection, provided:

**a.** A minimum 10-foot high solid masonry fence or a minimum 10-foot high intervening commercial or industrial building enclosed on at least three sides is maintained at the property line adjacent to the an Agricultural or Residential Use District, or;

**b.** Doors facing a public street shall be closer to the property line adjacent to the public street than the required yard setback of any adjacent site zoned with an Agricultural or Residential Use District.

**3.** All automotive spray painting shall be done in full compliance with the provisions of Article 7 of Chapter 5 of the Code regulating these installations; provided further, that no spray painting may be done except in an approved spray booth or room approved for this use that is located within a wholly enclosed building. On a Lot zoned with a Heavy Industrial Use District, a spray booth approved for use outside of a building may be utilized if allowed by all other jurisdictions having authority over spray painting.

**4.** Except for allowable outside uses when conducted on Lots zoned with a Heavy Industrial Use District, all other operations shall be conducted within a building enclosed on at least three sides, except for the following, which may be conducted within the first 18 feet in depth measured perpendicular to the entire length of the building wall containing a garage bay door; said area shall not displace any required parking:

**a.** Electrical diagnostics;

**b.** Battery charging and changing;

**c.** Tire removal and replacement, provided the vehicle is not elevated more than 12-inches off the ground measured to the bottom of the tire. A portable hoist only, may be used for this purpose.

**5.** If the building is located within 50 feet of a Lot zoned with a Agricultural or Residential Use District with no intervening street, the wall of the building nearest such Use District shall have no openings other than doors or stationary windows. Such doors shall be permitted only if the building is adjacent to an alley at intervals necessary for ingress or egress.

**6.** Automotive hoists, of any type or size, except as provided in Paragraph 4(iii) above or allowed and operated on a Lot zoned with a Heavy Industrial Use District, shall be located or operated only inside a fully enclosed building.

## SEC. 5C.5.6. VEHICLE SALES AND RENTAL, LIGHT

**A.** A *Type C1 screen (Sec. 4C.8.2.C.2.a.)* is required along the interior side and rear Lot lines.

**B.** A *Type B3 screen (Sec. 4C.8.1.C.3.d)* is required along the entire length of the frontage lot line for the entire property.

## SEC. 5C.5.7. VEHICLE SALES AND RENTAL, HEAVY

**A.** A *Type C1 screen (Sec. 4C.8.2.C.2.a.)* is required along the interior side and rear Lot lines.

**B.** A *Type B2 screen (Sec.4C.8.1.C.2.b.) or B3 screen (Sec. 4C.8.1.C.3.c.)* is required along the entire length of the frontage lot line for the entire property.

## SEC. 5C.5.8. OFFICIAL POLICE GARAGE

**A.** Official Police Garages, as designated by the Los Angeles Police Commission, for the storage of impounded, abandoned or partially dismantled automobiles, subject to the following limitations:

**1.** The use is located 300 feet away or more from a Lot zoned with an Agricultural or Residential Use District.

**2.** The use is conducted wholly within an area completely enclosed with a solid masonry wall or solid fence no less than eight feet in height with necessary solid gates of the same height.

**3.** No dismantling of vehicles or crushing, smashing, baling or reduction of metal takes place on the premises.

**4.** All property adjacent to any street is landscaped to a minimum depth of two feet measured at a right angle from the adjacent street, and extending the full length of property contiguous to the street except for area necessary for ingress and egress; and

**5.** Paved off-street parking spaces are provided for buildings as required by *Sec. 4C.4.1. (Automobile Parking Stalls)* A, and in addition for all other portions of the Lot, other than public parking areas, as follows:

**a.** For one or fewer acres, a minimum of six spaces.

**b.** For more than one acre but not more than two acres, one space for each 12,000 square feet of Lot area; and

**c.** For each acre exceeding two acres, one space for each acre of Lot area; and

**6.** No material shall be stored to a height greater than the height of the enclosing wall or fence.

# DIV. 5C.6. LIGHT INDUSTRIAL USES

[Reserved]

# DIV. 5C.7. HEAVY INDUSTRIAL USES

## SEC. 5C.7.1. RESOURCE EXTRACTION

**A.** Notwithstanding any other provision of Article 6, 7, and 12 to the contrary, no temporary geological exploratory hole may be permitted on a Lot zoned with a Residential, Commercial-Mixed, or Commercial Use District within the area located between the mean high tide line of the City's shoreline and a line 1,000 yards landward from that line. This prohibition shall not be construed or interpreted as affecting:

**1.** Any shore line areas within the Los Angeles Harbor except for Cabrillo Beach;

**2.** Any oil well, controlled drill site or a facility for the production of oil gases or other hydrocarbon substances in existence on October 10, 2000;

**3.** Any connected subterranean gas holding areas and facilities that are operated as a public utility.

**4.** Subsurface drilling and producing operations more than 500 feet below the surface of the area described in Section 7.7.1.A;

**B.** This Section 7.7.8 shall apply to all Supplemental Use Districts within the area described in Section 7.7.1.A for which a vested right of oil has not accrued as of October 10, 2000.

**C.** If any provision or clause of this Section 7.7.8 or the application thereof to any person or circumstance is held to be unconstitutional or otherwise invalid by any court of competent jurisdiction, such invalidity shall not affect other Ordinance provisions thereof which can be implemented without the invalid provision, clause or application, and to this end the provisions and causes of this ordinance are declared to be severable.

# DIV. 5C.8. AGRICULTURAL USES

[Reserved]

# DIV. 5C.9. ACCESSORY USES

## SEC. 5C.9.1. ACCESSORY DWELLING UNITS

[Reserved]

## SEC. 5C.9.2. ADULT EDUCATION CLASSES IN PRIVATE HOMES

**A.** Notwithstanding any provision of this Article to the contrary, adult education classes are allowed in homes located on Lots zoned with a Residential Use District and no additional off-street parking shall be required in conjunction therewith, provided that:

**1.** Classes are held not more than one day a week for a period not to exceed three hours per day and each class does not meet for more than fifteen weeks in any one semester.

**2.** Classes are purely incidental to the use of the property as a home and no more than thirty persons are permitted to attend each class.

**3.** Classes primarily involve oral discussions and no laboratory equipment, heavy machinery, or large tools are used in connection therewith, except small audiovisual teaching aids.

**B.** No certificate of occupancy shall be required in connection with this use.

## SEC. 5C.9.3. ANIMAL KEEPING, DOMESTIC

Domestic Animal Keeping is allowed as an Accessory Use in any zone.

## SEC. 5C.9.4. BACKYARD BEEKEEPING

Backyard Beekeeping is allowed as an Accessory Use on Lots zoned with a Residential Limited Use District, provided that:

**A.** The person who is the owner of or in possession of an apiary is registered as a beekeeper with the County of Los Angeles Agricultural Commission.

**B.** The number of hives is limited to one for every 2,500 square feet of Lot area.

**C.** Hives are not located in the required Primary Street Lot Line setback or between the Primary Street Lot Line and the maximum setback of the required build-to range, including through Lots.

**D.** Hives are located a minimum of five feet from any Lot line and a minimum of 20 feet from public rights-of-way or private streets.

**E.** Hive entrances face away from, or parallel to, the nearest Lot line adjacent to another Lot.

**F.** A minimum six-foot high wall, fence, or hedge is located between hives and adjacent Lots, or hives are placed at a minimum of eight feet above ground level of the adjacent Lot. The purpose of this provision is to provide a solid barrier to help direct bees over six feet above ground level when departing the Lot to minimize interactions between bees and individuals in the vicinity.

**G.** A water source for bees shall be provided at all times on the property where the bees are kept to discourage bee visitation at swimming pools, hose bibs and other water sources on adjacent public or surrounding property.

## SEC. 5C.9.5. CHILDCARE FACILITY

Childcare facilities for 21 to 50 children on Lots zoned with a Residential Use District and a density indicator of "8" are permitted pursuant to *Sec. 13.4.1* (Conditional Use Permit, Class 1).

## SEC. 5C.9.6. DISPLAY, RENTAL, OR STORAGE OF HOUSEHOLD MOVING RENTAL TRUCKS OR UTILITY RENTAL TRUCKS, INCIDENTAL TO A FUELING STATION

The display, rental, or storage of Household Moving Rental Trucks or Utility Rental Trailers is allowed in connection with a Fueling Station, which is currently active in dispensing gasoline and oil to the general public, pursuant to the following use standards:

**A.** If the adjoining property, on any two sides of the involved Lot is zoned with a Mixed-Commercial Use District or a more restrictive Use District, then up to 10% of the Lot may be used for the display, rental, or storage of Household Moving Rental Trucks or Utility Rental Trailers.

**B.** If the adjoining property, on any two sides of the involved Lot is zoned with an Industrial-Mixed Use District or a less restrictive Use District, then up to 25% of the Lot may be used for the display, rental, or storage of Household Moving Rental Trucks or Utility Rental Trailers.

**C.** No storage, display, or rental of Household Moving Rental Trucks or Utility Rental Trailers shall take place within 25 feet of a Lot zoned with a Residential Use District.

## SEC. 5C.9.7. DRIVE-THROUGH SERVICE

A Drive-Through Service may be permitted in a building that complies with a Drive-Through Alternate Typology pursuant to Section XXXX (Drive-Through Alternate Typology).

## SEC. 5C.9.8. HELIPORT, INCIDENTAL TO AN OFFICE BUILDING, HOSPITAL, OR RESIDENTIAL USE

A heliport, which is incidental to an office building, hospital, or Residential Use, may be permitted in any zone pursuant to *Sec. 13.4.2* (Conditional Use Permit, Class 2).

## SEC. 5C.9.9. HELICOPTER LANDING, INFREQUENT

**A.** Notwithstanding any provision of Article 6, Article 7, or Article 15 to the contrary, helicopters may land and take off in any zone except on Lots zoned with a Residential Use District or the Office Mixed Use District, provided that a permit therefore has first been obtained from the Fire Department under the provisions of Division 5, Article 7 of Chapter 5 of the LAMC.

**B.** Such helicopter landings and takeoffs shall not exceed three per day in or upon any single location or premises except that the Fire Department may permit as many such landings and takeoffs in or upon any single location in a day as it determines are required by the individual nature of each such helicopter use, including occasions of civic interest, and are consistent with the public health, safety, general welfare and intent of Article 6, Article 7, and Article 15.

**C.** On Lots zoned with a Residential Use District or Office Mixed Use District, helicopters may land or take off in or upon any single location not more than two times per calendar year in a park, school ground or other similar type of public open space, for education programs sponsored by the Los Angeles Police Department or the Los Angeles City Unified School District, provided that the Fire Department permit referred to above has first been obtained.

**D.** Nothing herein shall prevent nor curtail the operation of emergency helicopter landing facilities as required in Section 57.4705 of the Los Angeles Municipal Code.

**E.** The provisions of this Section 7.9.6 shall not be construed or interpreted as permitting the establishment of a regularly operating airport, aircraft landing field, heliport or helistop.

## SEC. 5C.9.10. HISTORICAL VEHICLE COLLECTION

A Historic Vehicle Collection as an Accessory Use to any main use on a Lot may be permitted in any zone pursuant to *Sec. 13.4.1* (Conditional Use Permit, Class 1). In addition to the findings set forth in *Sec. 13.4.1* (Conditional Use Permit, Class 1), the Zoning Administrator shall find that:

**1.** All the historic vehicles and parts maintained in outdoor storage, whether currently licensed or unlicensed, or whether operable or inoperable constitute a Historic Vehicle Collection.

**2.** The Historic Vehicle Collection occupies less than 50 percent of the area of the Lot for Lots comprising 10,000 square feet or less, or 70 percent of the area of the Lot for Lots comprising more than 10,000 square feet.

**3.** The Historic Vehicle Collection is fully screened from ordinary public view by means of a suitable fence, trees, shrubbery, opaque covering or other appropriate means.

**4.** No portion of the Historic Vehicle Collection is located within five feet of any building or within any side yards required by this Code.

**5.** Plans for the maintenance of the Historic Vehicle Collection have been submitted to and approved by the Zoning Administrator in accordance with the procedures in *Sec. 13.4.1* (Conditional Use Permit, Class 1) and subject to the same fees as in Article 16 for relief from fence height limitation.

## SEC. 5C.9.11. HOME-SHARING

In all zones wherein residential uses are permitted by right, the following shall apply:

**A.** Purpose. The purpose of this Subsection is to allow for the efficient use and sharing of a residential structure which is a Host's Primary Residence, without detracting from the surrounding residential character or the City's available housing stock.

**B.** Definitions. The following definitions shall apply to this Subsection:

**1.** Administrative Guidelines. The Department of City Planning or Office of Finance may promulgate regulations, which may include, but are not limited to, application requirements, interpretations, conditions, reporting requirements, enforcement procedures, and disclosure requirements, to implement the provisions, and consistent with the intent, of this Subsection.

**2.** Booking Service. Any reservation and/or payment service provided by a Person that facilitates a Short-Term Rental transaction between a Person and a prospective guest or Transient user, and for which the Person collects or receives, directly or indirectly through an agent or intermediary, a fee in connection with the reservation and/or payment of services provided for the transaction.

**3.** Citation. Includes any enforcement citation, order, ticket or similar notice of violation, relating to the condition of or activities at a Person's Primary Residence or property, issued by the Los Angeles Department of Building and Safety, Los Angeles Housing and Community Investment Department, Los Angeles Police Department or Los Angeles Fire Department, including an Administrative Citation issued pursuant to Article 1.2 of the Los Angeles Municipal Code.

**4.** Extended Home-Sharing. Home-Sharing that is permitted for an unlimited number of days in a calendar year.

**5.** Hosting Platform. A Person that participates in Short-Term Rental business by collecting or receiving a fee, directly or indirectly through an agent or intermediary, for conducting a Booking Service transaction using any medium of facilitation.

**6.** Host. An individual who is registered for Home-Sharing as the term is defined in Section 12.03 .

**7.** Person. Shall have the same meaning as that term is defined in Section 21.7.2 .

**8.** Platform Agreement. A signed agreement between a Home-Sharing Hosting Platform (Platform) and the City, which, among other things, provides that the Platform will collect and submit the Transient Occupancy Tax to the City on behalf of Hosts and Persons listed for Short Term Rentals.

**9.** Primary Residence. The sole residence from which the Host conducts Home-Sharing and in which the Host resides for more than 6 months of the calendar year.

**10.** Rental Unit. A Dwelling Unit, Guest Room, Accessory Living Quarters, other residential structure, or portion thereof.

**11.** Short-Term Rental. A Rental Unit, rented in whole or in part, to any Person(s) for transient use of 30 consecutive days or less. Rental Units within City-approved Hotels, motels, Transient Occupancy Residential Structures and Bed and Breakfasts shall not be considered a Short-Term Rental.

**12.** Transient. Shall have the same meaning as that term is defined in Section 21.7.2 .

**C.** Home-Sharing Registration.

**1.** Department of City Planning in a manner provided by the Department, and shall include: information needed to verify the Host's identification and Primary Residence; identification of a local responsible contact person; a list of all Hosting Platforms to be used; whether Home-Sharing is for an entire Rental Unit or a portion thereof; and any other information required by the instructions on the application and/or by the guidelines promulgated by the Director of Planning. Payment of any filing fee required under Section 19.01 E. shall be included with the application. If the required information for registration, including any filing fee, is not received within 45 days of submittal of the application, the Home-Sharing registration will be considered withdrawn.

**2.** Eligibility Requirements. The following requirements must be met at the time of submitting an application for Home-Sharing registration:

**a.** The applicant has obtained a Transient Occupancy Registration Certificate from the Office of Finance pursuant to Section 21.7.6, unless the applicant exclusively lists his or her Primary Residence on Hosting Platforms that have a Platform Agreement with the City of Los Angeles.

**b.** The proposed Home-Sharing is consistent with the provisions of this subdivision and is limited to the Host's Primary Residence.

**i.** A renter or lessee shall not engage in Home-Sharing without prior written approval of the landlord. A renter or lessee shall provide copies of the landlord's written approval to the City at the time of filing the application for registration. A landlord may proactively prohibit Home-Sharing by tenants at any or all of the owner's properties by submitting a notification in writing to the Department of City Planning.

**ii.** A Primary Residence that is subject to affordable housing covenants, and/or Chapter 15 of the Los Angeles Municipal Code ("Rent Stabilization Ordinance"), and/or are income-restricted under City, state or federal law, is not eligible for Home-Sharing.

**iii.** No Primary Residence which is the subject of any pending Citation may be registered for Home-Sharing.

**iv.** No Person may apply for or obtain more than one Home-Sharing registration or otherwise operate more than one Home-Sharing Rental Unit at a time in the City of Los Angeles.

3. Expiration and Renewal. A Home-Sharing registration is valid for one year from the date of issuance. It may not be transferred or assigned and is valid only at the Host's Primary Residence. A Home-Sharing registration may be renewed annually if the Host: (1) pays the renewal fee; (2) has complied with the provisions of this subdivision for the past year; (3) provides information concerning any changes to the previous application for, or renewal of, the Home-Sharing registration; and 4) submits Home-Sharing records described in Subparagraph (e)(2) for the last year to demonstrate compliance with this subdivision, unless the Host lists exclusively on a Hosting Platform with a Platform Agreement that includes a provision for pass-through registration for applicants for a Home-Sharing registration. The records described in Subparagraph (e)(2) shall be made public to the extent required by law.

4. Suspensions and Revocations. Notwithstanding any other provision to the contrary, the Director may require the suspension, modification, discontinuance or revocation of any Home-Sharing registration if it is found that the Host has violated this subdivision or any other city, state, or federal regulation, ordinance or statute.

    a. Suspension. If a Host receives two Citations, the Host's Home-Sharing registration shall be suspended for 30 days or as long as at least one Citation is open, whichever is longer. The suspension shall become effective 15 days after the mailing of a Notice of Intent to Suspend the Host. If a Host initiates an appeal of either Citation, the suspension will take effect only if the appeal is not resolved entirely in the Host's favor.

        i. A Host may challenge a Citation by submitting an appeal to the City department that issued the Citation and providing notice to the Department of Planning as described in the Administrative Guidelines.

        ii. Where no process is described in the Citation, a Host may challenge a Citation by submitting an appeal to the Director of Planning in accordance with the process in Section 12.24 Z, with no further appeal to a Commission or City Council.

    b. Revocation. If three Citations have been issued to the Host and have been sustained (after exhaustion of any related remedies, including appeals) within a registration year, the Host's Home-Sharing registration shall be revoked. The revocation of a Host's Home-Sharing registration shall become effective 15 days after the mailing of a Notice of Intent to Revoke to the Host.

        i. A Host may challenge a Notice of Intent to Revoke by submitting an appeal to the Director of Planning in accordance with the process in Section 12.24 Z, with no further appeal to a Commission or City Council.

        ii. Pursuant to the revocation, the Host shall be prohibited from participating in Home-Sharing for one year from the effective date of the Notice of Intent to Revoke.

    c. Modification. The Director may modify, discontinue or revoke any Home-Sharing registration based upon an order to show cause, pursuant to Section 12.27.1 B, why any proposed modifications, discontinuances or revocations of any Home-Sharing registration

should not be issued. The Director shall provide notice to the Host and/or recorded owner and lessee(s) of the Host's Primary Residence to appear at a public hearing at a time and place fixed by the Director to respond to the Director's order to show cause.

**5.** Prohibitions.

**a.** No Person shall offer, advertise, book, facilitate or engage in Home Sharing or Short-Term Rental activity in a manner that does not comply with this subdivision.

**b.** A Host may not participate in Home-Sharing unless all advertisements clearly list the City-issued Home Sharing registration number or pending registration status number.

**c.** No Host shall engage in Home-Sharing for more than 120 days in any calendar year unless the City has issued the Host an Extended Home-Sharing registration pursuant to Paragraph (h) (Extended Home-Sharing).

**d.** Accessory Dwelling Units for which a complete building permit application was submitted on or after January 1, 2017, to the Department of Building and Safety pursuant to Section 12.26 A.3 may not be used for Home-Sharing, unless an applicant demonstrates the Accessory Dwelling Unit is the applicant's Primary Residence.

**e.** No Host shall offer, advertise, or engage in Home-Sharing in a non-Residential Building, including but not limited to, a vehicle parked on the property, a storage shed, trailer or any temporary structure, including, but not limited to, a tent.

**f.** If a Host lists a Primary Residence on multiple listings on multiple Hosting Platforms, only one listing may be booked at any given time.

**g.** A Host may not rent all or a portion of his Primary Residence for the purposes of Home-Sharing to more than one group of guests or under more than one booking, at any given time.

**h.** Home Sharing is not permitted in buildings that have been converted from units subject to Chapter 15 of the Los Angeles Municipal Code ("Rent Stabilization Ordinance") to single family homes until five years after the date of conversion.

**i.** Except for allowable Home Occupations, non-residential uses including, but not limited to, sales or exchange of products, events that charge a fee, or the promotion, display or servicing of any product shall not be permitted during Home-Sharing activity.

**j.** A Host shall only advertise on a Hosting Platform that was listed on the Host's Home-Sharing application form, unless the Host has submitted a written request and received written approval from the Department of City Planning to use another Hosting Platform.

**k.** No more than 2 overnight guests (not including children) are allowed per habitable room, not including kitchens, during Home-Sharing activities.

**l.** There shall be no use of sound amplifying equipment, as that term is defined in Section 111.01(j) after 10:00 pm and no evening outdoor congregations of more than 8 people (excluding children) during Home-Sharing activities. Home Sharing activities are subject to the noise regulations in the Los Angeles Municipal Code.

**m.** A Host whose Home-Sharing registration has been suspended is prohibited from participating in Home-Sharing for the duration of the suspension.

**n.** A Host whose Home-Sharing registration has been revoked may not participate in Home-Sharing unless and until a new registration is authorized.

**D.** Host Requirements.

**1.** A Host may be responsible for any nuisance violations, as described in Section 12.27.1.B, arising at the Host's Primary Residence during Home-Sharing activities. The Host, or owner of the Host's Primary Residence if the Host does not own it, may be assessed a minimum inspection fee, as specified in Section 98.0412 for each site inspection.

**2.** The Host shall keep and preserve, for a minimum period of three years, all records regarding each Home-Sharing stay, including the length of stay and the price paid for each stay, and any other records required by Administrative Guidelines promulgated by the Director.

**3.** On the Home-Sharing registration application, a Host shall acknowledge and consent to Office of Finance and other City agencies' inspection of records at all reasonable times and places for purposes of enforcement of this Subdivision.

**4.** The Host shall fully comply with all the requirements of Article 1.7 of the Los Angeles Municipal Code (establishing the Transient Occupancy Tax) and successor Sections.

**5.** The Host shall pay a per-night fee for each night of Home-Sharing, which will be deposited into the Short Term Rental Enforcement Fund per the requirements in Section 5.576 of the Los Angeles Administrative Code. The City Council shall adopt, by resolution, a per-night fee based on an analysis of the cost of implementing, maintaining, and enforcing this subdivision.

**6.** Every Host shall provide and maintain working fire extinguishers, smoke detectors, and carbon monoxide detectors, in compliance with fire, life and safety codes; information related to emergency exit routes on the property and contact information, including the contact information of the Host or a designated responsible agent of the Host.

**7.** Every Host that lists a Primary Residence located in a Very High Fire Hazard Severity Zone designated by the City of Los Angeles Fire Department pursuant to Government Code Section 51178 shall include in all Host listings and post written notices on any patio or deck that smoking is not permitted in any exterior of the property.

**8.** Every Host shall provide a code of conduct to guests that includes the relevant provisions of this Subdivision and other information to address behavioral, safety, security, and other matters, as required in the Department's Administrative Guidelines.

**9.** Every Host shall authorize any Hosting Platform on which his or her Primary Residence is listed to provide to the City the Host listing and other information described in Subsection (f)(4).

**10.** Every Host must consent to receive all City notices and citations regarding their Home-Sharing registration by U.S. mail.

**E.** Hosting Platform Responsibilities.

Hosting Platforms shons of this paragraph shall not apply to a Hosting Platform whenever it (a) complies with the Administrative Guidelines, issued by DCP and approved by resolution of the City Council, that describe how the Platform shall satisfy the Hosting Platform responsibilities in this paragraph, or (b) enters into a Platform Agreement, the terms of which shall be set forth in a master Platform Agreement approved by the City Council, that establishes the manner in which the Hosting Platform supports the City's enforcement of this subdivision and meets the purposes of the Platform responsibilities in this paragraph. Each individual Platform Agreement shall be approved by the City Council.

**F.** Enforcement of Violations.

**1.** The provisions in this Subsection shall be in addition to any criminal, civil or other legal remedy established by law that may be pursued to address violations of this Subdivision.

**2.** Any Person who has failed to comply with the provisions of this Subdivision may be subject to the provisions of Section 11.00 . The owner and/or operator of any property used for Short Term Rentals, including the Host or owner of any Host Primary Residence, may be assessed a minimum inspection fee, as specified in Section 98.0412 for each site inspection.

**3.** The Director may, at any time, require the modification, discontinuance, or revocation of any Home-Sharing registration in the manner prescribed in Subparagraph (c)(4).

**4.** The ACE program in Article 1.2 may be utilized to issue administrative citations and impose fines pursuant to this Subdivision. The citation shall be served by personal service or by depositing in the mail for delivery by the United States Postal Service, in a sealed envelope, postage prepaid, addressed to the operator of the Short Term Rental, the Host, and/or the property owner, if different than the operator or Host, shown on the County's last equalized property tax assessment roll. Fines for violations of this subdivision shall be as follows:

**a.** Hosting Platform: a $1,000 fine per day shall be imposed for any of the following violations:

**i.** Completing a Booking Service transaction for each listing without a valid City Home-Sharing registration number or pending registration status number.

**ii.** Completing a Booking Service transaction for each listing where more than one property is affiliated with a single Host, or each listing where the Host's home address does not match the listing location.

iii. Completing a Booking Service transaction for any listing for a Rental Unit where the Host's Home-Sharing or Extended Home-Sharing registration has been revoked or suspended by the City.

iv. Completing a Booking Service transaction for any Rental Unit lacking Extended Home-Sharing approval that has exceeded the authorized 120-day limit for hosting Short-Term Rentals in one calendar year.

b. Owner of Primary Residence and/or Host and/or Person:

i. A daily fine of $500, or two times the nightly rate charged, whichever is greater, for advertising a Rental Unit for the purposes of Short-Term Rental in violation of this Subdivision.

ii. A daily fine of $2,000, or two times the nightly Rent charged, whichever is greater, for each day of Home-Sharing activity beyond the 120 day limit in a calendar year, unless the Host has a valid Extended Home-Sharing Registration.

iii. For all other violations of this subdivision, the administrative fine shall be levied according to the amounts described in Section 11.2.04(a)(2) . The square footage for the use in calculating the fine shall be the amount of indoor space to which the Transient guest has access. If the square footage is unable to be ascertained, it shall be deemed to be between 500 and 2,499 square feet.

c. The fine amounts listed above shall be updated annually, from the date of effective date of this ordinance, according to the Consumer Price Index for All Urban Consumers (CPI-U).

G. Extended Home-Sharing. For Hosts who participate in Extended Home-Sharing, the following shall apply:

1. Application and Eligibility Requirements.

a. Ministerial Approval. Extended Home-Sharing may be approved by the Director if, in addition to the eligibility requirements for Home-Sharing, all of the following requirements are met:

i. The Host maintains a current Home-Sharing registration and has maintained a Home-Sharing registration for at least six months or has hosted for at least 60 days based on substantial evidence provided by the Host or Hosting Platform.

ii. No more than one Citation was issued within the prior three years.

iii. The Host provides proof of mailing of a notification concerning commencement of Extended Home-Sharing, which includes a Director-issued publication outlining the complaint process, to adjacent and abutting owners and occupants on a form provided by the Department.

**b.** Discretionary Approval. A discretionary review of an Extended Home-Sharing application is required if the Host complies with Subparagraph (h)(1)(i)(a), but two Citations have been issued within the prior three years.

**c.** If the Director finds that the matter may have a significant effect on neighboring properties, the Director may set the matter for public hearing. Written notice of the hearing shall be sent by First Class Mail at least 21 days prior to the hearing to the applicant, owners and tenants of the property involved, owners and tenants of all properties adjacent and abutting the proposed Extended Home-Sharing activity, the City Councilmember representing the area in which the property is located, and the applicable Neighborhood Council. If the Director determines that the matter will not have a significant effect on neighboring properties, no hearing shall be held.

**d.** The Extended Home-Sharing application may only be approved if, in addition to the eligibility requirements for Home-Sharing, all of the following requirements are met, to the satisfaction of the Director of Planning:

**i.** The Host provides proof of mailing of a notification, which includes a Director-issued publication outlining the complaint process, to adjacent and abutting owners and occupants on a form provided by the Department.

**ii.** In consideration of any comments received by the public on the application, the Director finds the use is in substantial conformance with the following findings:

**a)** That the Extended Home-Sharing will enhance the built environment in the surrounding neighborhood or will perform a function or provide a service that is essential or beneficial to the community, city or region;

**b)** That the Extended Home-Sharing operations and other significant features will be compatible with and will not adversely affect or further degrade adjacent properties, the surrounding neighborhood, the availability of housing, or the public health, welfare, and safety;

**c)** That the Extended Home-Sharing substantially conforms with the purpose, intent, and provisions of the General Plan, the applicable community plan, and any applicable specific plan; and

**d)** That there is no substantial evidence of continued nuisance behavior from the location.

**e.** If no appeal is filed within 15 days from the date of the Director's determination approving or denying an Extended Home-Sharing application, the Director's decision is final. An appeal to the Area Planning Commission may be filed by the applicant or any adjacent and abutting owner and occupant. An appeal shall be filed at the public counter of the Planning Department within 15 days of the date of the Director's decision. The appeal shall set forth specifically how the appellant believes the Director's findings and decision are in error. The Area Planning Commission may grant, conditionally grant or deny the appeal.

The failure of the Commission to act upon an appeal within 75 days after the expiration of the appeal period, or within an additional period as may be agreed upon by the applicant and the Director, shall be deemed a denial of the appeal and the original action on the matter shall become final.

**f.** ii. Ineligibility. If the Host's Home-Sharing registration has been suspended or revoked, the Host is not eligible to apply for Extended Home-Sharing for two years from the effective date of the revocation or suspension or as long as a Citation remains open or unresolved, whichever is later.

**g.** iii. Expiration and Renewal. An Extended Home-Sharing registration is valid for one year from the date of issuance. An Extended Home-Sharing registration is subject to the same expiration and renewal terms described in Subparagraph (c)(3) and may be renewed annually if the Host meets the same renewal requirements in that subparagraph.

**h.** iv. Revocations. An Extended Home Sharing approval shall be revoked if there are two Citations within a registration year in accordance with the process set forth in Paragraph (c)(4). Pursuant to the revocation, the Host shall be prohibited from participating in Home-Sharing for two years from the effective date of the Notice of Revocation or as long as a Citation remains open or unresolved, whichever is later.

**H.** Administration and Regulations. No Person shall fail to comply with the Administrative Guidelines.

**I.** Effective Date. This ordinance shall take effect on July 1, 2019.

**J.** Severability. If any provision of this Subdivision is found to be unconstitutional or otherwise invalid by any court of competent jurisdiction, that invalidity shall not affect the remaining provisions of this Subdivision which can be implemented without the invalidated provisions, and to this end, the invalid provisions of this Subdivision are declared to be severable. The City Council hereby declares that it would have adopted each and every provision and portion thereof not declared invalid or unconstitutional, without regard to whether any portion of the ordinance would subsequently be declared invalid or unconstitutional.

## SEC. 5C.9.12. HOME OCCUPATION

**A.** Home Occupation is allowed on any Lot zoned with a Residential Use District subject to the following limitations:

**1.** No changes which alter the residential character or appearance of the Dwelling Unit or property in any manner which precludes its Residential Use may be made. Activities associated with the home occupation may not be visible from the outside of the Dwelling Unit, except for Plant Cultivation.

**2.** Notwithstanding Section 12.21 A.7, signs and window or outside displays in connection with the home occupation are prohibited.

3. The use shall be conducted within the main Dwelling Unit, except for Plant Cultivation, and only by persons residing within the Dwelling Unit. However, no more than one person not residing on the premises may be employed to work on the premises as part of all of the home occupations.

4. Visitors' parked cars shall not displace or impede the use of required parking spaces.

5. The home occupation shall not generate greater vehicular or pedestrian traffic than is normal for the district in which the home occupation is located.

6. The use causes no public nuisance or disruption to the residential character of the neighborhood.

7. No more than one client visit or one client vehicle per hour shall be permitted, and only from 8:00am to 8:00pm for all of the home occupations.

8. The home occupation shall not involve the use of commercial vehicles for delivery of materials to and from the premises other than a vehicle not to exceed one ton capacity, owned by the operator of the home occupation. As used herein, commercial vehicles are as defined in the California Vehicle Code and, in addition, shall include construction equipment or any other mobile paraphernalia used in connection with such use. No person shall store equipment including, but not limited to, trailers or trucks in excess of one ton or wheeled construction equipment on property zoned for residential purposes.

9. Delivery and pickups are limited to two per day for all of the home occupations carried on in the dwelling, and only to services which normally make deliveries to or pickups from households in residential areas.

10. No material or mechanized equipment is utilized which is not associated with normal Residential Use.

11. Incidental storage related to the home occupations may be located in the Dwelling Unit, but shall not be located in any open areas, covered patios or carports. However, an attached or detached garage, provided the required covered parking spaces are maintained, or a detached, fully enclosed accessory building may be used for incidental storage area, but such storage shall not exceed 400 square feet.

12. Any advertising for the home occupation does not contain the address of the Dwelling Unit.

13. No "extremely hazardous substances," as listed in Section 355 (Appendix A) of Title 40 of the Code of Federal Regulations, are used, sold or stored on the site; and no "hazardous materials," as listed in Article 9, Title 22, of the California Health and Safety Code, are utilized except those associated with normal household use.

14. No spaces or equipment used in the home occupation is rented out to other parties not residing on the premises.

15. The home occupation does not include any uses requiring a conditional use permit.

16. No sales or exchange of products, processing, manufacturing, display or servicing of any product is conducted on the premises, except for handicrafts, or intellectual or artistic products, or direct sales, or sales where the orders have been previously made online, by telephone, at a prior meeting or a sales party, and in accordance with other standards of operation. Nothing in this Section 7.9.9 shall be construed as to permit other retail or wholesale sales on a lot zoned with a Residential Use District. Nor shall anything in this Section 7.9.9 be construed as allowing any type of on-site sales or distribution in connection with Plant Cultivation.

17. A person wishing to conduct a home occupation must obtain a City business license, if a license is required to perform the occupation, from the Office of Finance.

18. Monies collected from registration fees and from any fees imposed for violations of these provisions shall be deposited in the Home Occupations Trust Fund established pursuant to Section 5.486 of the Los Angeles Administrative Code. The money in this account shall be used to offset the costs by the Department of Building and Safety and the City Clerk's Office for administering the provisions of the home occupation ordinance.

19. Prohibited uses. Any use which disrupts, and is inconsistent with, the residential character of the neighborhood is prohibited. The following home occupations, including but not limited to other similar uses, and uses as determined by the Zoning Administrator are prohibited:

    **a.** Adult entertainment

    **b.** Ambulance service

    **c.** Animal training

    **d.** Automotive repair, painting, body/fender work, upholstering detailing, washing, including motorcycles, trucks, trailers and boats

    **e.** Beautician or barber

    **f.** Body piercing

    **g.** Dentist, except as secondary office which is not used for the general practice of dentistry, but may be used for consultation and emergency treatment as adjunct to a principal office located elsewhere

    **h.** Funeral chapel or home

    **i.** Garment manufacturing

    **j.** Gunsmith

    **k.** Massage therapist, unless the therapist has procured a massage technician's license and a massage business license, as needed, from the Los Angeles Police Department

**l.** Medical physician (non-psychiatric), except as a secondary office which is not used for the general practice of medicine, but may be used for consultation and emergency treatment as an adjunct to a principal office located elsewhere

**m.** Photography lab, other than for occupant's own use

**n.** Recording/motion picture/video production studios, except for editing of pre-recorded material

**o.** Restaurant

**p.** Retail sales

**q.** Tattoo studio

**r.** Tow truck service

**s.** Upholstery

**t.** Veterinary services and other uses which entail the harboring, training, care, breeding, raising or grooming of dogs, cats, birds, or other domestic animals on the premises, except those which are permitted by this Article (other than those owned by the resident)

**u.** Welding or machine shop

**v.** Yoga/spa retreat center

**B.** Authority of The Zoning Administrator. Notwithstanding any other provisions, the Zoning Administrator may require the discontinuance of a home occupation if he or she finds that as operated or maintained there has been a violation of any of the conditions or standards set forth in this Section 7.9.9 pursuant to Section 13.8.2 (Nuisance Abatement/Revocation).

**1.** Administrative Fines. An administrative fine of $250.00 may be collected by the Department of Building and Safety for any violation of the conditions and standards of Section 7.9.9.A.1 to Section 7.9.9.A.18 and administrative fines of $500.00 may be collected for repeated violations pursuant to the following provisions. These administrative fine provisions are in addition to any other fines and penalties authorized by law. It shall be unlawful to conduct any home occupation as set forth in Section 7.9.9.A.19.

**2.** Definitions. As used in this subparagraph the term "Superintendent" means the Superintendent of the Department of Building and Safety. The term "Department" means the Department of Building and Safety.

**3.** Order to Comply. For any home occupation found to be in violation of Section 7.9.9.A.1 to Section 7.9.9.A.18, the Superintendent shall send an Order to Comply to the operator of the home occupation use. The Order to Comply shall clearly state the following:

**a.** The violation must be corrected by a Compliance Date specified in the Order, which date shall be no more than 15 days from the date the Order is mailed.

**b.** Failure to correct the violation on or before the Compliance Date may result in the imposition of an administrative fine in the amount of $250.00.

**4.** Reinspection. The Superintendent shall reinspect a property for which an Order to Comply was issued pursuant to this paragraph subsequent to the Compliance Date.

**5.** Failure to Correct Violation. If any violation specified in the Order to Comply is not corrected prior to the Compliance Date as specified in the Order to Comply, an administrative fine of $250.00 may be collected by the Department.

**6.** If the Department determines that a fine is due, then it shall notify the person cited by United States mail in a sealed envelope, with postage paid. If the person cited is the owner of the property, the notice shall be addressed to the last known address of the owner as that address appears in the last equalized assessment roll. If the person to be cited is a tenant, the notice shall be addressed to the location where the home occupation is being conducted. Service of the notice shall be deemed to have been completed at the time of deposit with the United States Postal Service.

**7.** The person cited shall remit the fine to the Department within 30 days after the date of mailing of the notice. If the person cited fails to do so, then the Department, by sending a second notification by certified mail, may demand payment of the fine from the person cited and may prohibit the issuance of any building permit, license or approval to the cited persons until such fees are paid.

**C.** Repeated Violations. Notwithstanding any provision of this subsection to the contrary, if an Order to Comply is issued for a violation of Section 7.9.9, and after compliance with it a subsequent Order to Comply is issued for a violation of the same section occurring within one year of the date of the initial Order, an administrative fine of $500.00 may be collected by the Department.

**D.** Discontinuance of Use. Three violations of any condition set forth in of Section 7.9.9.A.1 to Section 7.9.9.A.18 which has resulted in an Order to Comply being issued under Section 7.9.9.A.21.b may result in the imposition of proceedings to discontinue the home occupation use. The Director shall have jurisdiction to discontinue a home occupation use by giving notice to the record owner of the home occupation by issuing A Notice of Intention to Discontinue the Home Occupation (Notice). The Notice shall provide an opportunity for the home occupation user to either:

**1.** Submit information to the Director by a date certain to show cause why the home occupation should not be discontinued; or

**2.** Appear at a time and place before the Director pursuant to the procedures prescribed in *Article 13* (Administration) to show cause why the use should not be discontinued.

**E.** Upon the expiration of the time periods set forth in the Notice, the Director may discontinue the home occupation use.

## SEC. 5C.9.13. FAMILY DAY CARE HOME

**A.** Small Family Day Care Home. Any dwelling unit, in any zone in which Residential Uses are allowed by-right, may be used as a Small Family Day Care Home.

**B.** Large Family Day Care Home. Any dwelling unit may be used as a Large Family Day Care Home pursuant to *Sec. 13.4.1* (Conditional Use Permit, Class 1) if located on a Lot zoned with a Residential Use District, and if it complies with the conditions listed below:

**1.** If the proposed use is within 300 feet from any existing Large Family Day Care Home, the use shall comply with the following:

**a.** The application shall include information to show that the proposed use will meet the following standards:

**i.** Drop-off and pick-up areas are provided, as necessary to avoid interference with traffic and promote the safety of the children.

**ii.** All play equipment and structures are located in the rear yard only.

**iii.** No loudspeaker or public address system shall be installed or operated on any open portion of the premises, and any recorded music used in connection with any activity shall be significantly modulated to ensure that the use does not disturb the neighboring residents.

**2.** If the proposed use is further than 300 feet from any existing Large Family Day Care Home, the use shall comply with the following:

**a.** Provide drop-off facilities, such as curb spaces or driveway area, which are necessary to avoid interference with traffic and promote the safety of the children.

**b.** Play equipment, swings, sandboxes, or structures shall be located in the rear yard only.

**c.** No loud speaker or public address system shall be installed or operated on any open portion of the premises, and any phonograph, radio or other recorded music used in connection with any activity shall be sufficiently modulated to ensure that the use does not disturb the adjoining and neighboring residents.

**d.** The existing residential character of the building and site shall be maintained, including the exterior façade, landscaping, fences, walls, lawn area, and driveways.

**e.** The floor space of any Dwelling Unit used for the operation of a Large Family Day Care Home shall not be increased for such use, and the floor space shall not be altered to reasonably preclude its continued use as a Dwelling Unit.

**f.** The Lot containing a proposed Large Family Day Care Home shall not be located within a 300-foot radius of a Lot containing an existing Large Family Day Care Home.

**g.** Notice of Intention to Operate Large Family Day Care Home. A Notice of Intention to Operate a Large Family Day Care Home shall be filed in the public office of the Department of City Planning, on forms provided by the Department. The forms shall be accompanied by all information deemed necessary by the Department. The notice shall include verification provided by the Department of Recreation and Parks that the Large Family Day Care Home is in compliance with the concentration and spacing set forth in Section 7.9.9.B.2.f No fee shall be charged and no public hearing shall be required in connection with the filing of the notice.

**h.** Violation of Conditions – Authority of Zoning Administrator to Require Modification of Conditions of Operation or Discontinuance of Large Family Day Care Homes

**i.** Notwithstanding any other provision, the Zoning Administrator may require a modification of the conditions of operation or the discontinuance of a Large Family Day Care Home if the Zoning Administrator finds that as operated or maintained there has been a violation of any of the conditions or standards set forth in Section 7.9.9.B.2.a through Section 7.9.9.B.2.f or that such use:

**i.** Jeopardizes or endangers the public health or safety of persons residing in, working on, or occupying the premises.

**ii.** Constitutes a public nuisance.

**iii.** Violates any provision or any other city, state or federal regulations, ordinance, or statute.

**3.** The procedure for the modification of the conditions of operation or discontinuance of a Large Family Day Care Home shall be as provided for in Section 13.8.2 (Nuisance Abatement/ Revocation).

## SEC. 5C.9.14. ONSHORE INSTALLATIONS SERVICING OIL DRILLING DISTRICTS ESTABLISHED IN AN OFFSHORE AREA

**A.** Onshore installations required in connection with the drilling for or production of oil, gas, or hydrocarbons in an offshore Oil Drilling District are allowed pursuant to *Sec. 13.4.3* (Conditional Use Permit, Class 3).

**B.** A conditional use permit for the onshore installations may only be granted if the drilling or production installations in the offshore Oil Drilling District which is to be served are permitted by the conditions of the Oil Drilling District (*Sec. 8.2.4.*).

## SEC. 5C.9.15. OUTDOOR DINING

Outdoor Dining shall be permitted in any Use District where "Eating and Drinking Establishments" are allowed.

## SEC. 5C.9.16. RECYCLING CENTERS, ACCESSORY

**A.** Any Postsecondary School, House of Worship, league or charitable institution, or any organization described in Section 501(c) (3) or (4) of the Internal Revenue Code shall be allowed to collect cans, bottles, papers, and plastic on its grounds as an accessory use or on City property, if approved by the City department with jurisdiction over that property, in all zones provided that:

**1.** The area for depositing Recyclable Materials does not exceed 200 square feet and shall be a minimum of 10 feet from all buildings, and 150 feet from the property line of any Lot zoned with a Residential Use District. Any area used exclusively for the collection of newspapers is exempted from the 150-foot distancing requirement.

**2.** Either the Recycling Receptacle or the enclosure is clearly identified with the business name, address, telephone number, Hours of Operation and notice that no material is to be left outside the enclosure.

**3.** Each Recycling Receptacle clearly indicates the type of material to be deposited.

**4.** On a daily basis the area for depositing Recyclable Materials is kept free of litter, debris, spillage, bugs, rodents, odors, and other similar undesirable hazards.

**5.** The Hours of Operation are Monday through Saturday from 8 a.m. to 4 p.m., and Sunday from 10 a.m. to 4 p.m., except when the collection site is further than 500 feet from any Lot zoned with a Residential Use District, then the permitted Hours of Operation are seven days a week from dawn until dusk.

**6.** The enclosure is kept secure from unauthorized entry by a locking gate or guard maintaining security for the main building.

**7.** The enclosure does not diminish the required number of parking spaces or impair traffic flow.

**8.** Newspapers are emptied from Recycling Receptacles when full or every week, whichever occurs first and all other materials are emptied from Recycling Receptacles when full or every 72 hours, whichever occurs first.

**9.** The baling of newspapers is permitted; however can or bottle crushing is not permitted.

**B.** Any Postsecondary School, House of Worship, league, or charitable institution, or any organization described in Section 501(c)(3) or (4) of the Internal Revenue Code shall be permitted the use of Mobile Recycling Centers, for organized drives for the collection of cans, bottles, papers, and plastic in all zones provided that:

**1.** Collections may be made on the grounds of the organization sponsoring the collection drive unless otherwise authorized by the Department of Building and Safety, or on a continuous basis at a recycling center certified by the California Department of Conservation, Recycling Division.

**2.** The collection of materials shall not be conducted on a site containing a Residential Use.

3. Not more than three drives shall be conducted on the same site within a 12- month period and the duration of any drive shall not exceed 30 days. No drive shall be conducted within a 90-day period following a prior drive on the same site or within 1,000 feet of the same site.

4. A permit for which no fee shall be charged must be obtained from the Board of Police Commissioners for the purpose of verifying proper time limitations prior to initiation of any drive conducted pursuant to this Section 7.9.12.B.

5. The Mobile Recycling Center shall be a minimum of 10 feet from all buildings.

6. The Mobile Recycling Center shall be maintained such that it is secured from unauthorized entry.

**C.** Recycling Collection or Buyback Centers, including reverse vending machines and Mobile Recycling Centers shall be permitted in conjunction with a grocery market on the same site zoned with a Commercial-Mixed Use District or a less restrictive Use District.

1. For the purposes of this Section 7.9.12.C, the term "grocery market" shall mean a retail business, of which greater than one half of the floor area is devoted to the sale of food items for consumption or use off the premises, excluding alcoholic beverages.

2. No portion of the recycling operation may be closer than 100 feet to any Lot zoned with a Residential Use District.

3. The area for depositing Recyclable Materials does not exceed a total of 600 square feet of the Lot area.

4. No reduction of any kind in required parking spaces is allowed. The area for depositing Recyclable Materials shall be a minimum of 10 feet from all property lines, except for Reverse Vending Machines and Reverse Vending Machine Commodity Storage Bins located 24 inches or less from the exterior wall of a building on the same site.

5. All Recycling Receptacles shall be covered, durable, waterproof, rustproof, of incombustible construction, and of sufficient capacity to accommodate the materials collected.

6. Except for Reverse Vending Machine Commodity Storage Bins, either the Recycling Receptacles or the enclosure is clearly identified with the operator's name, address, telephone number, Hours of Operation, and a notice that no material shall be left outside the enclosure, and each Recycling Receptacle must clearly indicate the type of material to be deposited.

7. On a daily basis the site is kept free of litter, debris, spillage, bugs, rodents, odors, and other similar undesirable hazards.

8. Recyclable Materials, other than Recyclable Materials contained in reverse vending machine commodity storage bins, are emptied from Recycling Receptacles when full or every week, whichever occurs first.

9. All recycled goods shall be placed or stored in Recycling Receptacles and not be left out on the site by the end of the business day.

10. Paper products and other lightweight materials shall be immediately placed into covered Recycling Receptacles when they are dropped off.

11. The Hours of Operation shall not exceed Monday through Friday from 7 a.m. to 8 p.m., Saturday from 8 a.m. to 6 p.m., except for Reverse Vending Machines that are located within 24 inches of the exterior wall of a building, which may operate from 7 a.m. to 10 p.m., seven days a week.

12. All Recycling Receptacles and containers shall be kept secure from unauthorized entry to prevent scavenging and theft of recyclable materials.

13. The area for depositing Recyclable Materials and/or enclosure shall not impair traffic flow.

14. Any activity involving baling and hand sorting of Recyclable Materials, as well as automated can conveyor/magnetic or mechanical separators, and crushers for can, glass, or plastic bottles, is conducted in compliance with Section 7.9.12.C.19.

15. At least one trash receptacle shall be provided within a recycling site.

16. The area for collection of Recyclable Materials, and all driveways, parking areas, storage areas, and loading zones shall be paved and maintained in good condition.

17. A source of running water shall be maintained on the site.

18. No Recycling Center Operator shall permit loitering, camping, public begging, consumption of alcoholic beverages, use of illegal narcotics, or any other criminal activity on any premises over which he or she has control.

19. No crushing, smashing, baling or reduction of metal is conducted on the premises unless such is conducted without producing substantial amounts of dust and is so conducted that the noise emanating therefrom, as measured from any point on adjacent property shall be no more audible than the noise emanating from ordinary street traffic and from other commercial or industrial uses measured at the same point on said adjacent property; provided, however, that such noise shall be permitted in the event it does not exceed the levels provided in Section 111.03 of the LAMC as measured from any point on adjacent property zoned with a Residential, Commercial-Mixed, Commercial, or Industrial Use District.

## SEC. 5C.9.17. STRUCTURES SOLELY SUPPORTING SOLAR ENERGY SYSTEMS

Structures that solely support solar energy systems may be permitted in any zone, and deviate from any regulation in the Zoning Code, such as height, Lot coverage, and location, pursuant to *Sec. 13.4.2* (Conditional Use Permit, Class 2).

## SEC. 5C.9.18. TENNIS OR PADDLE TENNIS COURT

A tennis or paddle tennis court, constructed as an Accessory Use to the primary Residential Use on the same Lot zoned with an Agricultural or Residential Use District shall comply with the following standards:

**A.** Tennis courts shall be lighted by a maximum of eight horizontally mounted, rectilinear-type, sharp cut-off fixtures shielded in such a manner that the light source will not be viewable from abutting residential properties. Lamps shall not be of more than 1,000 watts each and shall be mounted at a height of 20 feet or less above the court surface.

**B.** All portions of the enclosing fences around a tennis or paddle tennis court shall be open, mesh, chain link type fence for that portion of the fence which exceeds 6 feet above the finished surface of the court. The total height of such enclosing fence shall be limited to 10 feet above the court surface. However, where the entire tennis or paddle tennis court is located 25 feet or more from all property lines, the fence may have a total height of 12 feet above the surface of the court. This standard is not intended to prohibit retaining walls which form a portion of the required court enclosure.

**C.** Windscreens of plastic, canvas, or similar materials may be attached to the fence enclosing a tennis or paddle tennis court, provided such windscreens do not extend to a height greater than 6 feet above the court surface. However, where the entire tennis or paddle tennis court is located 25 feet or more from all property lines, the windscreens may extend to the height of the court fence.

**D.** Tennis or paddle tennis court lights subject the following Hours of Operation:

**1.** Monday through Thursday, 7:00 am to 9:00 pm;

**2.** Friday, 7:00 am to 10:00 pm;

**3.** Saturday, 8:00.am to 10:00 pm; and

**4.** Sunday, 8:00 am to 9:00 pm.

**E.** Residential accessory tennis or paddle tennis courts shall be used only by the occupants of the main Residential Use on the same Lot. This condition shall not prohibit the use of the courts by invited guests. However, such courts shall not be used as a private club or for commercial tennis instruction of players on a commercial basis other than occupants of the main Residential Use on the same Lot, or rented or used in any way for purely commercial purposes.

**F.** Any portion of a tennis or paddle tennis court which has a court surface 6 feet or more above the natural grade shall be located at least 50 feet from the property line of any property zoned wholly or partially with a Residential Use District or at least 50 feet from a property line of a property zoned with a Residential Use District on the opposite side of a street, private street, or alley.

**G.** Tennis or paddle tennis courts legally existing prior to the effective date of these standards may continue as a nonconforming development or in accordance with regulations existing at the time such use was established. However, any replacement of lighting, fencing, or windscreens for such

courts taking place after October 16, 1985, shall conform fully to these standards. These standards shall apply to any tennis or paddle tennis court which is accessory to a Residential Use and for which a permit is issued by the Department of Building and Safety subsequent to October 16, 1985, whether or not the subject of a variance.

**H.** Practice boards shall not be permitted unless expressly requested and authorized.

**I.** Tennis or paddle tennis courts, including fences and light may extend into a portion of the required rear yard of such Lot if such court and its appurtenances also meet the following conditions:

**1.** The court surface is not more than 2 feet above the natural adjacent grade at any point.

**2.** The court is located a distance from the rear Lot line at least equal to the width of the side yard required for a one–story main building in the zone but in no event less than 5 feet.

**J.** No tennis or paddle tennis court accessory to a primary residential use on the same lot in an Agricultural or Residential Use District shall be constructed until application for a building permit therefor has been filed with and issued by the Department of Building and Safety.

## SEC. 5C.9.19. WIRELESS TELECOMMUNICATION FACILITY

**A.** All Wireless Telecommunications Facilities shall employ camouflage design techniques to minimize visual impacts and provide appropriate screening. Such techniques shall be employed to make the installation, operation, and appearance of the facility as inconspicuous as possible, to prevent the facility from visually dominating the surrounding area, and to hide the installation from predominant views from surrounding properties. Depending on the proposed site and surroundings, certain camouflage design techniques may be deemed by the City as ineffective or inappropriate and alternative techniques may be required. Below is a menu of potential camouflage design techniques that should be considered based on different installation situations:

**B.** For Building and Structure Mounted Installations.

**1.** Facility components, including all antenna panels, may be mounted either inside the building or structure or behind the proposed screening elements, or on the exterior face of the building or structure. Suitable screening elements include, but are not limited to, the use of parapets or similar architectural elements (false windows, etc.).

**2.** All antenna panels and accessory wireless equipment mounted on the exterior of the building or structure shall be painted or otherwise coated to match the predominant color of the mounting building or structure.

**3.** Screening materials shall be matched in color, size, proportion, style, and quality with the exterior design and architectural character of the building or structure and the surrounding visual environment.

4. When required by the city, antenna panels shall be located and arranged on the building or structure so as to replicate the installation and appearance of the equipment already mounted to the building or structure.

**C.** For Monopole Installations.

1. Monopole installations shall be situated so as to utilize existing natural or man-made features including topography, vegetation, buildings, or other structures to provide the greatest amount of visual screening.

2. All antenna components and accessory wireless equipment shall be treated with exterior coatings of a color and texture to match the predominant visual background or existing architectural elements so as to visually blend in with the surrounding development. Subdued colors and non-reflective materials that blend with the surrounding materials and colors shall be used.

3. The approving authority may require additional measures designed to camouflage a Wireless Telecommunication Facility, including placing the facility entirely within a vertical screening structure. Suitable architectural features include, but are not limited to, clock towers, bell towers, church steeples, icon signs, lighthouses, flagpoles or utility poles. All facility components, including the antennas, shall be mounted inside said structure.

4. The camouflage design techniques employed shall result in an installation that either will blend in with the predominant visual background or will disguise the facility.

**D.** For Miscellaneous Installations.

1. A monorock or monoshrub installation will be considered properly screened provided that its location is compatible with the proposed screening method. For a monoshrub, other vegetation comparable to that replicated in the proposed screen shall be prevalent in the immediate vicinity of the Wireless Telecommunication Facility and the addition of new comparable living vegetation may be necessary to enhance the monoshrub screen. For a monorock, the proposed screen shall match in scale and color with other rock outcroppings in the general vicinity of the proposed site. A monorock screen may not be considered appropriate in areas that do not have natural rock outcroppings.

2. Co-location installations shall use screening methods similar to those used on the existing telecommunications facilities. Use of other appropriate screening methods may also be considered.

**E.** For Accessory Wireless Equipment. All accessory wireless equipment associated with the operation of any Wireless Telecommunications Facilities shall be placed and mounted in the least visually obtrusive feasible location. Suitable screening includes, but is not limited to, placement underground, internally within the building structure, on rooftop locations behind architectural elements, or when above ground, placement behind a landscaped wall or landscaped solid barrier.

**F.** Rooftop Wireless Telecommunications Facilities. Notwithstanding Section 7.9.15.A through Section 7.9.15.E, wireless antennas, including the associated equipment cabinets, are permitted by right, including those within any geographic specific plan areas, when located on the rooftops of buildings in Lots zoned with a Commercial-Mixed, Commercial, or Industrial Use District. However, these wireless antennas and associated equipment cabinets are not permitted by right pursuant to this Section 7.9.15.F on the rooftops of buildings located within a scenic parkway specific plan, scenic corridor specific plan, a roadway designated as a scenic highway within a specific plan area; or buildings that are designated on the National Register of Historic Places, including Contributing Buildings in National Register Historic Districts, the California Register of Historic Resources, the City of Los Angeles List of Historic-Cultural Monuments, or a Contributing Structure located in an Historic Preservation Overlay. The following standards shall apply to wireless antennas and the associated equipment cabinets permitted by this Section 7.9.15.F:

**1.** The antenna and any equipment cabinet are located on rooftops which are at least 40 feet in height above grade, provided the wireless antennas and associated equipment cabinets do not exceed any applicable height limit;

**2.** The antenna and any equipment cabinet are enclosed on all sides, including the roof, with a fiberglass or similar covering material for screening approved by the Department of Building and Safety. Notwithstanding *Article 14* (General Rules), the area under such enclosure shall not be considered floor area;

**3.** The structure covering the antenna and any equipment cabinet is painted and textured to match the exterior walls of the building;

**4.** The height of any wireless antenna structures and associated equipment cabinets is limited to ten feet above the highest point of the rooftop, as measured from immediately adjacent to the rooftop surface where the wireless antenna structures and associated equipment cabinets are located unless mounted on the walls of a penthouse, in which case the wireless antenna structures and associated equipment cabinets shall not exceed the height of the penthouse; and

**5.** Prior to issuance of any building permit authorizing the rooftop installation of a wireless antenna structure and associated equipment cabinets, the permit applicant shall provide the Department of Building and Safety with evidence that the council district office where the site of the proposed installation is located has been given a 20-day written notice prior to the issuance of such permit. This notification shall contain the name and address of the building permit applicant and the property address of the proposed installation and the approximate date of start of installation. This notification shall be by certified mail, return receipt requested.

**6.** Wireless antennas and rooftop equipment cabinets which do not meet these standards shall require a conditional use permit.

**G.** Exception. Any satellite dish antennae, radio, and television transmitters and antennae incidental to Residential Uses are exempt from the foregoing limitations.

# DIV. 5C.10. TEMPORARY USES

## SEC. 5C.10.1. EMERGENCY HOMELESS SHELTER

**A.** Notwithstanding any provisions to the contrary, during any period for which the Mayor and/or the City Council have declared a shelter crisis within the meaning of Government Code Sections 8698, et seq., a Homeless Shelter may be established and operated by any provider located on a Lot zoned with a Residential, Commercial-Mixed, Commercial, Industrial-Mixed, or Industrial Use District and in any zone on property owned or leased by the City of Los Angeles.

**B.** If the Lot on which any Homeless Shelter is located does not have sufficient area to provide the number of parking spaces required by Section 12.21 A.4.(w), then the number of spaces required shall be the number for which adequate area exists. If insufficient area for any parking spaces exists on the Lot, no spaces shall be required.

**C.** Unreinforced masonry and/or non-ductile concrete buildings shall not be used as a Homeless Shelter.

**D.** Any provider establishing and operating a Homeless Shelter on property not owned or leased by the City of Los Angeles shall also comply with the following requirements:

**1.** Providers shall register with the City of Los Angeles by submitting "Cold/Wet Weather Temporary Shelter Application" online via the City's website.

**2.** Providers shall comply with the "Cold/Wet Weather Temporary Shelter" requirements promulgated by the Los Angeles Fire Departments Fire Prevention and Public Safety Bureau.

**3.** Providers shall provide written notification to the owners of properties abutting the subject property, as well as to any school located within 500 feet of the subject property, prior to operating a Homeless Shelter on the subject property.

**4.** Providers shall comply with all local, state and federal requirements that apply to the permitted use of their property while operating a Homeless Shelter pursuant to this Section 7.10.1.

## SEC. 5C.10.2. INFREQUENT USE OF PROPERTY FOR COMMERCIAL FILMING

Notwithstanding any of the provisions of this Article to the contrary, property in all zones may be used for the purpose of infrequent filming of commercial motion pictures and still photographs, provided that a permit therefore has first been obtained from the City Council, or whomever the Council by order, resolution or ordinance may delegate such authority. The City Council, or whomever the Council by order, resolution or ordinance may delegate such authority shall adopt such rules and regulations concerning the issuance of said permits as may be necessary to assure that filming will be conducted at such times and in such a manner as to cause a minimum of interference with the enjoyment and use of adjacent property, and consistent with public health, safety and general welfare.

## SEC. 5C.10.3. INTERIM USE OF MOTELS FOR SUPPORTIVE HOUSING OR TRANSITIONAL HOUSING

**A.** Purpose. The purpose of this Section 7.10.3 is to facilitate the interim use of existing transient residential structures, such as Motels, Hotels, Apartment Hotels, and Transient Occupancy Residential Structures as Supportive Housing or Transitional Housing for persons experiencing homelessness or those at risk of homelessness. Under this Section 7.10.3, the structure may return to its previous use, or any use consistent with the underlying zoning, upon termination of the interim Supportive Housing or Transitional Housing use.

**B.** Interim Motel Housing Project. An Interim Motel Housing Project is the physical re-purposing or adaptation of an existing transient residential structure, such a Motel, Hotel, Apartment Hotel, or Transient Occupancy Residential Structure, for use as Supportive Housing or Transitional Housing for persons experiencing homelessness or those at risk of homelessness. The Local Public Agency determines who qualifies as experiencing homelessness or is at risk of homelessness. For purposes of this Section 7.10.3 only, Local Public Agency is defined as an agency, identified on a list maintained by the Department of City Planning, that funds Supportive Housing and Transitional Housing for persons experiencing homelessness or at risk of homelessness. All Dwelling Units and Guest Rooms in the structure must be used for Supportive Housing or Transitional Housing or a combination of both. The Interim Motel Housing Project must not increase or add Floor Area or expand the building footprint or height, nor shall it increase the total combined number of Dwelling Units or Guests Rooms. Any Floor Area used for onsite Supportive Services shall be considered accessory to the Residential Use.

**C.** Application and Approval.

**1.** The Department of Building and Safety shall review all Interim Motel Housing Projects for zoning compliance described in Section 7.10.3.E (Zoning Compliance) and adherence to the performance standards in Section 7.10.3.F (Performance Standards). The Interim Motel Housing Project shall be approved if the application requirements, zoning compliance and performance standards of this Section 7.10.3 are met through the approval process, including but not limited to payment of fees, set forth in Chapter IX of the LAMC. Interim Motel Housing Projects shall not be considered an increase in density or other change which requires any corresponding discretionary action.

**2.** Prior to issuance of a building permit, the applicant shall provide a copy of an executed contract agreement between the Local Public Agency, the provider of the Supportive or Transitional Housing, and the Interim Motel Housing Project applicant for the provision of onsite Supportive Housing or Transitional Housing, or a combination of both; proof that the applicant has received funding from a Local Public Agency; and proof that the Supportive Housing or Transitional Housing contract is in effect.

**3.** If structures or units are subject to the provisions of LAMC Section 47.70 et seq. (Residential Hotel Ordinance) on the date of the Interim Motel Housing Project application, they shall remain subject to all requirements and restrictions in Section 47.70 et seq. during

the Supportive Housing or Transitional Housing contract. Interim Motel Housing Project applicants seeking to convert structures subject to the Residential Hotel Ordinance shall also submit an Application for Clearance using the process described in LAMC Section 47.78. At the conclusion of the Supportive Housing or Transitional Housing contract, the number of Residential Units, as defined in LAMC Section 47.73 T., at each participating structure shall be identical to the number of units originally determined by the Housing and Community Investment Department to be Residential Units pursuant to LAMC Section 47.76 or any subsequent number approved as part of an Application for Clearance.

**D.** Termination of Supportive Housing or Transitional Housing Contract. Upon any termination of the Supportive Housing or Transitional Housing contract, the Interim Motel Housing Project applicant shall be required, within 90 days, to notify the Department of Building and Safety and to complete one of the following:

**1.** Submit an application to the Department of Building and Safety to return to the use, authorized by a Certificate of Occupancy, existing on the date of the Interim Motel Housing Project application, or to any use permitted by the current zoning regulations; or

**2.** Provide a copy of a new executed contract agreement to the Department of Building and Safety in accordance with the requirements in Section 7.10.3.C.2 to begin a new contract term for provision of Supportive Housing or Transitional Housing.

**E.** Zoning Compliance

**1.** Interim Motel Housing Projects shall not be subject to any otherwise applicable zoning ordinance, specific plan, or other overlay district regulations, including, but not limited to, the following:

**a.** Minimum Area per Dwelling Unit or Guest Room. A structure, regardless of any nonconforming status as to the area and density regulations of the underlying zone, may be used for an Interim Motel Housing Project, provided that the structure has a Certificate of Occupancy as, a Motel, Hotel, Apartment Hotel, or Transient Occupancy Residential Structure, and the conversion does not create any additional total combined number of Dwelling Units or Guest Rooms.

**b.** Off-Street Automobile Parking. Interim Motel Housing Projects shall be exempt from the provisions of LAMC Section 12.21 A.4.(m). During the Supportive Housing or Transitional Housing contract, however, the Interim Motel Housing Project shall maintain and not reduce the number of onsite parking spaces existing on the date of the Interim Motel Housing Project application.

**c.** Use. Notwithstanding the use provisions of the underlying zoning, an Interim Motel Housing Project shall be permitted.

**d.** Change of Use. Section 12.23 B.7. shall not apply to Interim Motel Housing Projects.

**e.** Nonconforming Use of Buildings located on Lots zoned with an Industrial Use District. Notwithstanding the regulations contained in Section 12.23 B.4, an Interim Motel Housing Project shall be permitted on Lots zoned with an Industrial Use District.

**2.** Minor Interior Alterations for Cooking Facilities. Approved Interim Motel Housing Project applicants may make minor interior alterations adding cooking facilities, including a sink, a refrigerator not exceeding 10 cubic feet, counter space not exceeding 10 square feet, and a hotplate or microwave, to Guest Rooms. In the event a structure is returned to the Motel or Hotel use in accordance with Section 7.10.3.D.1, the Motel or Hotel use may maintain any Guest Rooms with added cooking facilities.

**3.** Preservation of Nonconforming Rights. Upon termination of the Supportive Housing or Transitional Housing use, any structure that is nonconforming as to area or use regulations or any other zoning code requirements may return to the use and condition, authorized by a Certificate of Occupancy, existing on the date of the Interim Motel Housing Project application, notwithstanding any physical alterations to the subject property. Any Floor Area used for Supportive Services may be returned to use as Guest Rooms or Dwelling Units, or may be converted to accessory amenity spaces, so long as the total number of Dwelling Units or Guest Rooms do not exceed the number approved on the Certificate of Occupancy existing at the time of the application for Interim Motel Housing Project.

**F.** Performance Standards. The Interim Motel Housing Project shall meet the following performance standards:

**1.** Supportive Service Area. For every 20 Dwelling Units or Guest Rooms, a minimum of one dedicated office space shall be provided for the provision of on-site Supportive Services, including case management. A minimum of one dedicated office space shall be provided for Interim Motel Housing Projects with fewer than 20 total combined Dwelling Units or Guest Rooms. Any Floor Area dedicated to Supportive Services may be provided on-site within an existing building, but shall not exceed 10% of the total Floor Area of the building.

**2.** Security Lighting. Security lighting with illumination of not less than 0.2 footcandles (2.15 lx) shall be provided in parking areas, alleys and any unenclosed spaces under or within the first floor of the building(s).

**3.** Historic Building. An Interim Motel Housing Project shall not involve alteration of an historic character defining feature identified in a nomination or a survey for any project affecting a property listed in or formally determined eligible for a national, state or local historic register, individually or as a contributor to a historic district, unless the Director in consultation with the Office of Historic Resources determines the proposed alteration will not adversely impact the property's historic eligibility.

**G.** The requirements in Section 7.10.3.A (Purpose) and 7.10.3.B (Interim Motel Housing Project), must be met in order to qualify for a conditional use permit. In approving the conditional use permit application, the Director shall find that the Interim Motel Housing Project substantially meets

the purposes of the Performance Standards, including that it provides an appropriate level of Supportive Services that is accessible to the residents of the Supportive Housing or Transitional Housing.

**H.** Conditional Use Permit

**1.** Applicability. If compliance with the Performance Standards is not met, the applicant may apply for a conditional use permit pursuant to *Sec. 13.4.2* (Conditional Use Permit, Class 2). The requirements in Section 7.10.3.A (Purpose) and 7.10.3.B (Interim Motel Housing Project), must be met in order to qualify for a conditional use permit.

**2.** Supplemental Findings. In approving any project, the Zoning Administrator shall also find that the proposed project substantially meets the purposes of the Performance Standards, including that it provides an appropriate level of Supportive Services that is accessible to the residents of the Supportive Housing or Transitional Housing.

## SEC. 5C.10.4. MOBILE MEDICAL CLINIC

**A.** Notwithstanding any provision of this Article to the contrary, any bloodmobile may operate once a month for no more than 72 consecutive hours, in any single established parking area in any zone, provided the operation of the bloodmobile does not obstruct any driveway access aisle or required parking space.

**B.** Notwithstanding any provision of this Article to the contrary, any mobile medical facility may operate once a month for no more than 72 consecutive hours, in any single established parking area, or on any Lot zoned with a Commercial, Commercial-Mixed, or Industrial Use District provided the operation of the facility does not obstruct any driveway access aisle or required parking space.

**C.** Notwithstanding any provision of this Article to the contrary, any mobile medical facility may operate once a week for no more than 72 consecutive hours, in any single established hospital parking area, or on any Lot zoned with a Commercial, Commercial-Mixed, or Industrial Use District provided the operation of the facility does not obstruct any driveway access aisle or required parking space.

## SEC. 5C.10.5. STORAGE YARD FOR PUBLIC FACILITY CONSTRUCTION

Notwithstanding any other provision of in this Article, equipment and material storage yards used exclusively in connection with the construction of a public facility may be located on Lots zoned with a Residential, Commercial-Mixed, and Commercial Use District, provided the following conditions are complied with.

**A.** Such storage activities may not be commenced prior to the execution of the construction contract with the governmental entity authorizing such work, and such storage activity be terminated within 30 days of the expiration of the contract or 30 days after completion of the construction, whichever comes first.

**B.** No storage or related activities may be closer than 25 feet to any Residential Use unless a solid 8 foot high fence is constructed along the entire property line adjoining such improvement, except that parking of employees' personal vehicles shall be permitted within the 25 foot buffer area, and such parking area need not comply with the requirements of Section 12.21 A.6 of this article.

**C.** There may be no stockpiling of materials above 8 feet.

**D.** The Hours of Operation, including servicing and maintenance of all stored equipment, may be only between 7:00 a.m. and 6:00 p.m., and at no time on Saturdays, Sundays or holidays except in emergencies.

## SEC. 5C.10.6. SEASONAL RETAIL, OUTDOOR

**A.** The annual retail sale of pumpkins and Christmas trees shall be permitted on Lots zoned with a Commercial-Mixed or a Commercial Use District during the months of October and December.

**B.** Frosted light bulbs of 100 watts or less are exempt from the Outdoor Lighting and Glare Standards in *Sec. 4C.10.1.* (Outdoor Lighting).

**C.** There shall be no use of any sound equipment on Lots zoned with a Residential Use District.

**D.** The operator of such a sale of Christmas trees shall post a Two-Hundred Dollar ($200.00) cleanup deposit with the Office of the City Clerk prior to any Lot preparation or sales.

## SEC. 5C.10.7. TEMPORARY ENTERTAINMENT VENUE

**A.** Temporary Entertainment Venues may be operated on Lots zoned with a Commercial-Mixed or Commercial Use District.

**B.** All such operations are conducted at least 200 feet from any School or Lot zoned with a Residential Use District.

**C.** Such operations do not cause or produce any dust, gas, smoke, noise, fumes, odors, or vibrations detrimental to other property in the neighborhood or to the welfare of the occupants thereof.

**D.** No public address system in connection with the event is installed on the property unless it is modulated so as to not be disturbing to occupants of any nearby Dwelling Units.

**E.** All structures, apparatus and appurtenances shall be removed from the premises the next day following the closing of the temporary entertainment venue.

**F.** The hours of such operation to be limited between the hours of 10:00am and 10:00pm.

## SEC. 5C.10.8. TEMPORARY GEOLOGICAL EXPLORATORY CORE HOLE

A Temporary Geological Exploratory Core Hole may be permitted pursuant to *Sec. 13.4.2* (Conditional Use Permit, Class 2) and the following provisions:

**A.** The conditional use permit may be granted for a period of time deemed necessary to drill, test, and abandon temporary geological exploratory core hole(s) in all zones except the Heavy Industrial Use District provided that the time period may not exceed 200 days.

**B.** A conditional use permit may be granted for a period exceeding 200 days only if the Zoning Administrator finds that the drilling activities cannot be completed within 200 days due to depth, or deviation, or number of temporary geological exploratory core hole(s) to be drilled. However, in no event shall the Zoning Administrator increase the time period beyond 200 days by more than an additional 165 days.

**C.** In addition to the provisions listed in this Section, the standards listed in *Sec. 5C.7.1.* (Resource Extraction) shall also apply.

## SEC. 5C.10.9. TEMPORARY RESIDENCY IN MOBILEHOME PENDING RECONSTRUCTION OF DISASTER – DESTROYED DWELLING

**A.** Use of Land Permit. Notwithstanding any other provision to the contrary, the Department of Building and Safety may issue a use of land permit to any resident–owner of a single-family dwelling destroyed by disaster to temporarily place and reside in a Mobilehome upon the subject property. Such use of land permit shall be limited to a period of one year from the date of the subject disaster, during which period a building permit for the reconstruction of the subject dwelling unit must be obtained. When such a building permit is obtained the use of land permit shall be valid for an additional period to total no more than two years from the date of the subject disaster or until the dwelling unit is complete, whichever occurs first. No other extension of time shall be granted for such use of land permit.

**B.** Fence Requirement. Where a Mobilehome is placed within a required setback, such Mobilehome shall be screened from public view by a fence constructed to the specifications of Section 91.4401 (c) of the LAMC; on corner Lots, the restrictions of Section 62.200 of the LAMC shall also apply.

**C.** Yard Area Requirements. Such Mobilehome must observe five–foot setbacks from all property lines and adequate access shall be assured to permit the removal of such Mobilehome after reconstruction of the disaster-destroyed dwelling unit.

**D.** Site Restoration. Within thirty (30) days of the removal of the Mobilehome, all equipment and utilities accessory to such Mobilehome and any nonconforming fence constructed pursuant to this Section 7.10.9 shall be removed and the site restored to permitted use and condition.

# PART 5D. USE RULES

**Div. 5D.1. General Use Rules . . . . . 5-178**
Sec. 5D.1.1. Commercial Tenant Size . . . . . 5-178
**Div. 5D.2. Definitions . . . . . 5-179**

# DIV. 5D.1. GENERAL USE RULES

## SEC. 5D.1.1. COMMERCIAL TENANT SIZE

### A. Definition

The maximum Floor Area permitted per commercial tenant space.

### B. Measurement

**1.** This restriction applies to the General Commercial Use Category only.

**2.** A "commercial tenant" shall refer to any individual tenant contained within walls with a single entrance.

**a.** Direct connections between commercial tenant spaces are not permitted.

**b.** Commercial tenants may have connections to common areas and shared facilities.

**3.** Any limitations on tenant size restrictions shall apply to the cumulative sum of related or successive permits that are a part of a larger project, such as piecemeal additions to a building, or multiple buildings on a lot or adjacent lots, as determined by the Director of Planning.

### C. Exceptions

Common areas, including corridors and shared restrooms, are exempt from size restrictions.

# DIV. 5D.2. DEFINITIONS

**Abandoned Automobile.** Any motor vehicle, which when operated upon a highway is required to be registered by the California Vehicle Code, whose registration has been expired for a period of six months or more. Notwithstanding the foregoing definition, a motor vehicle stored within a permitted building or structure shall not be considered to be an abandoned automobile.

**Accessory Dwelling Unit.** Attached residential Dwelling Units or detached Accessory buildings, not considered to exceed the allowable density of the parcel, which provide complete independent living facilities for one or more persons with permanent provisions for living, sleeping, eating, cooking, and sanitation on the same parcel as a One-Unit dwelling. Accessory Dwelling Units include efficiency units, as defined in Section 17958.1 of the Health and Safety Code, and manufactured homes, as defined in Section 18007 of the Health and Safety Code.

**Accessory Living Quarters.** An accessory building used solely as the temporary dwelling of guests of the occupants of the premises; such dwelling having no kitchen facilities and not rented or otherwise used as a separate dwelling unit.

**Accessory Use.** A use, which is customarily incidental to that of the main building or the main use of the land and which is located on the same lot with a main building or main use.

**Adult Education Classes in Private Homes.** The occasional use of any Dwelling Unit for educational programs conducted by an accredited university.

**Adult Entertainment Business.** Defined to include Adult Arcade, Adult Bookstores, Adult Cabaret, Adult Motel, Adult Motion Picture Theater, Adult Theaters, Massage Parlor, or Sexual Encounter Establishment and each shall constitute a separate adult entertainment business even if operated in conjunction with another adult business at the same establishment.

**Agricultural Waste.** All plant materials generated from the growing and harvesting of agricultural crops, vegetables, and fruits.

**Airport.** Any runway landing area or other facility designed, used, or intended to be used either publicly or privately by any person for the landing and taking off of aircraft including all the necessary taxiways, aircraft storage and tie-down areas, hangars and other necessary buildings and open spaces. Infrequent Helicopter Landings are not included in this definition.

**Alcohol Sales, Off-Site Consumption.** The sale or dispensing of beer, wine, and other alcoholic beverages, associated with a business and its operations. Such establishments are licensed or seeking a license to sell or otherwise dispense alcoholic beverages for off-site or off-sale consumption as defined by the California State Alcoholic Beverage Control Act.

**Alcohol Sales, On-Site Consumption.** The sale or dispensing of beer, wine, or other alcoholic beverages, associated with a business and its operations. Such establishments are licensed or seeking a license to sell or otherwise dispense alcoholic beverages for on-site or on-sale consumption as defined by the California State Alcoholic Beverage Control Act.

**Alcoholic Beverage Manufacturing.** Any facility where beer, wine, or other alcoholic beverages are processed and prepared commercially for consumption.

**Alternative Financial Services.** Any for-profit lending facility offering small, unsecured, short-term loans, such as bail bonds, or a use that primarily consists of check cashing services for a fee. This definition also includes any business where articles of personal property may be left as security in exchange for a loan of money. Examples include pawnshops, precious metal buyback centers, short-term credit lenders, title loan centers, and similar establishments. Remittance services are not included in this use definition.

**Alzheimer's and Dementia Housing.** Residential housing that is licensed by the California Department of Social Services and provides 24-hour care for people suffering from Alzheimer's disease or other disorders resulting in dementia. The residential units shall be Guest Rooms only. The housing may be a component of an Eldercare Facility.

**Ambulance Service.** Any establishment primarily engaged in providing both emergency and non-emergency medical transport services. The vehicles are typically equipped with lifesaving equipment operated by medically trained personnel. The office component of any Ambulance Service use is included in the Office definition.

**Animal Care, Sales, and Services.** Any facility designed or arranged to provide services or retail products for the care of domestic animals. Examples include veterinary clinics and facilities engaged in the retail sale, grooming, daycare, or training of household pets.

**Animal Farming.** The raising of animals such as alpacas, cattle, donkeys, goats, mules, sheep, swine, domestic animals, or similar livestock typically for eggs, fiber, meat, milk, or other products. Activities may include day-to-day care, selective breeding, raising, and selling of animals. This definition includes, but is not limited to, aquaculture farms, ranches, and feedlots.

**Animal Keeping Enclosure.** Any structure or fence which establishes the perimeter of an animal keeping and maintenance area.

**Animal Keeping Structure.** Any Structure which has a roof and may have one or more sides and is used in whole or in part for the housing or shelter of animals.

**Animal Keeping, Domestic.** The keeping of common household domestic pets readily classifiable as being customarily incidental and accessory to a permitted residential use when no commercial activity is involved, including, but not limited to, cats, dogs, guinea pigs, hamsters, fish, fowl, lizards, rabbits, reptiles, small amphibians, and snakes.

**Animal Keeping, Wild.** The keeping of any wild, exotic, dangerous, or non-domestic animal or reptile. This use, in no event, shall include the following wild animals: bear, civet, coyote, eagle, eland, elephant, elk, giraffe, gnu, gorilla, hyena, hippopotamus, jaguar, leopard, lion, lynx, moose, orangutan, puma, rhinoceros, sea lion, tiger, venomous reptile, vulture, walrus, wart hog, wolf or yak.

**Animal Products Processing.** Any facility engaged in one or more of the following: dressing or dyeing furs; preparing processed meats and meat byproducts; preparing, tanning, and finishing hides and skins; refining or rendering animal fat, bones, and meat scraps; and slaughtering animals.

**Apartment.** Same as dwelling unit.

**Apartment House.** A residential building designed or used for three or more dwelling units or a combination of three or more dwelling units and not more than five guest rooms or suites of rooms.

**Apartment Hotel.** A residential building designed or used for both two or more dwelling units and six or more guest rooms or suites of rooms.

**Apiary.** The place where bees are kept and maintained, usually in a collection of hives or colonies.

**Assisted Living.** Residential housing that is licensed by the California Department of Social Services and provides assistance to people 62 years of age or older who require assistance with two or more non-medical activities of daily living as defined in the Department of Social Services licensing requirements. The residential units may consist either of Dwelling Units or Guest Rooms. Full time medical services shall not be provided on the premises. The housing may be a component of an Eldercare Facility.

**Auditorium.** Any facility for performing arts, motion pictures, other media arts or presentations before an audience, and with a total seating capacity equal to or greater than 1,200 on the site. Examples include multiplex theaters and concert halls. Facilities with a total seating capacity no greater than 1,200 are included in the Theater definition. This definition does not include Adult Entertainment Businesses.

**Auto Dismantling.** Any property or place where the business of an automobile dismantler, as defined by California Vehicle Code Section 220, is conducted.

**Automotive Use.** Any Vehicle Repair use or Vehicle Sales and Rental use as listed in the Use Table in *Part 5B* of this Article.

**Backyard Beekeeping.** The keeping or maintenance of an apiary in a hive as an accessory use.

**Banquet Hall.** Any facility leased or rented for private parties and other various social or business gatherings, typically for large numbers of people. Examples include, but are not limited to, formal dinners, receptions, reunions, business meetings, and club meetings.

**Bed and Breakfast Facility.** A building or portion thereof which is used as a temporary lodging place for fewer than thirty consecutive days and which does not contain more than five guest rooms and one kitchen.

**Bee.** Any stage of life of the common domestic honey bee (Apis Mellifera).

**Boarding or Rooming House.** A dwelling containing a single dwelling unit and not more than five guest rooms or suites of rooms, where lodging is provided with or without meals, for compensation.

**Building.** Any structure having a roof supported by columns or walls, for the housing, shelter or enclosure of persons, animals, chattels or property of any kind.

**Car Wash.** Any facility engaged in cleaning, washing, or waxing automotive vehicles, such as passenger cars, trucks, vans, and trailers.

**Caretaker Unit.** A Dwelling Unit designed for and used solely by a watchman or caretaker (including his or her family) on the same lot of an industrial development or use that requires a 24-hour supervision.

**Cargo Container.** Any container (refrigerated or non-refrigerated) that permits the storage and protection of cargo, and which may be transported by ship, rail or truck without intermediate loading and unloading of the contents of the container.

**Cargo Container Storage Yard.** An open-air site or facility, the primary use of which is the keeping of empty cargo containers, and equipment, and may have as accessory uses the storage of container chassis and truck cabs, repair facilities, warehouses, and offices associated with the movement or storage of cargo containers.

**Cemetery.** As defined by the California Health and Safety Code. Examples include burial parks, columbariums, and mausoleums.

**Certified Farmers' Markets.** A location where agricultural products are sold by producers or certified producers directly to consumers or to individuals, organizations, or entities that subsequently sell or distribute the products directly to end users, as defined in Section 1392.2, Title 3, of the California Code of Regulations.

**Chemical Product Manufacturing.** Any facility producing basic chemicals or manufacturing products by predominantly chemical processes. Examples include, but are not limited to, basic chemicals, such as acids, alkalies, organic chemicals, and salts; chemical products to be used in further manufacture, such as dry colors, pigments, and synthetic fibers; and finished chemical products to be used for ultimate consumption or as materials or supplies in other industries, such as fertilizers, explosives, and paints. The production of products such as asphalt coatings and petroleum lubricating oils are included in the Petroleum and Coal Product Manufacturing definition. The production of plastic and natural rubber products are included in the Plastic and Rubber Product Manufacturing definition

**Chipping and Grinding Facility.** Any facility which temporarily stores and/or processes source-separated green waste and/or wood waste by means of chipping, grinding, mixing and/or screening to produce a material of varying particle size. The material produced by the above described processes may be used as ground cover, biofuel, wood chips, animal bedding, worm food or other similar uses. This definition shall not include any chipping and/or grinding of green waste and/or wood waste conducted for noncommercial, nonprofit purpose.

**Civic.** Any facility that provides for display, preserving, or enjoyment of heritage, history, and the arts or any municipal building. Examples include, but are not limited to, city hall, cultural centers, libraries, museums, and observatories.

**Community Apartment Project.** The same as defined by Section 11004 of the California Business and Professions Code.

**Community Care Facility, Licensed, seven or more persons.** Any facility, place or building licensed by the State of California that is maintained and operated as a residential facility or as a social rehabilitation facility to provide non-medical residential care, day treatment, adult day care, or foster family agency services for persons in need of services, supervision or assistance essential for sustaining the activities of daily living, as defined in the Health and Safety Code. This definition applies when there are seven or more persons being served.

**Community Care Facility, Licensed, six or fewer persons.** Any facility, place or building licensed by the State of California that is maintained and operated as a residential facility or as a social rehabilitation facility to provide non-medical residential care, day treatment, adult day care, or foster family services for persons in need of services, supervision or assistance essential for sustaining the activities of daily living, as defined in the Health and Safety Code. This definition applies when there are six or fewer persons being served.

**Community Center.** Any building or group of buildings used to provide cultural, educational, recreational, or social services, which is not operated for profit.

**Compaction.** The densification of a Fill by mechanical means.

**Composting Facility.** Any facility which processes source- separated organic materials to a stabilized state through controlled biological decomposition where the resultant material is beneficial to plant growth or soil structure when used as a soil amendment. Materials may initially be chipped, shredded, and/or screened on site prior to being composted. Composting may be conducted in an in-vessel system or in the open, such as windrow composting or aerated static pile composting. This definition shall not include any composting of green waste and/or wood waste conducted for noncommercial, nonprofit purpose.

**Computer and Electronic Product Assembly.** Any facility involved in the assembly of computer and electronic products, electrical equipment, appliances, and electronic product components; these facilities may also test and repair such products and components. Examples include, but are not limited to, the assembly of appliances, communications equipment, computers, computer peripherals, lighting fixtures, and similar electronic products. Manufacturing of Computer and Electrical Equipment is included in the Machinery and Fabricated Metal Manufacturing definition.

**Convention Center.** Any publicly owned building or group of buildings used for conferences, exhibitions, and trade shows.

**Core Hole, Temporary Geological Exploratory.** A seismic test hole or exploratory core hole used or intended to be used exclusively for geological, geophysical, and other exploratory testing for natural gas, oil, or other hydrocarbon substances.

**Corner Lot.** A Lot adjoining the intersection of two or more streets.

**Correctional or Penal Institution.** Any facility generally designed for the confinement, correction, and rehabilitation of adult and/or juvenile offenders sentenced by a court.

**Cosmetic, Pharmaceutical Drug, and Soap Manufacturing.** Any facility where organic and inorganic raw materials are transformed by a chemical process for the formulation of cosmetics, pharmaceutical drugs, and soaps. Examples include, but are not limited to, eye and facial makeup preparations; fingernail polishes; and manufacturing of deodorants, cleaning shampoos, hair colors, lipsticks, medications, perfumes, and skin moisturizers.

**Counseling and Referral Facility.** A facility which provides counseling services and subsequently refers applicants to appropriate licensed social service agencies offering professional remedial assistance. Counseling and referral services may be offered in one or more of the following areas: welfare, housing, employment, health, education, legal matters, job development, consumer action, recreation, family problems, juvenile problems, probation, and neighborhood improvement. The facility may also administer the implementation of government funded programs established to provide low-income housing, job development classes and recreation.

**Creative Media Office.** Any administrative and technical support facility for motion picture, television, video, sound, computer, and other communications media production. Examples include, but are not limited to, administrative and production offices, post-production facilities, special effects and optical effects units, and film laboratories.

**Curing Facility.** Any composting facility, as defined by this Code, where additional and/or final biological stabilization is attained after most of the readily metabolized material has been decomposed, and where no chipping, grinding, or screening of material takes place. This definition shall not include any curing of green waste and/or wood waste conducted for noncommercial, nonprofit purpose.

**Dance Hall.** Any establishment open to the public which provides space dedicated to dancing.

**Day Care Facility.** Any facility that provides nonresidential care to children when licensed as a Day Care Facility by the State of California, or any facility that provides nonresidential care to adults, in a group setting on less than a 24-hour basis. Preschools are included in this definition.

**Destroyed.** Damaged so as to not be habitable as determined by the Department of Building and Safety.

**Disaster.** Fire, flood, wind, earthquake, or other calamity, act of God or the public enemy.

**Dormitory Room.** A guest room designed, intended or occupied as sleeping quarters by more than two persons. Every 100 square feet of superficial floor area in a dormitory room shall be considered as a separate guest room.

**Drive-Through Eating and Drinking Establishment.** Any establishment which dispenses food for consumption on or off the premises to an individual in a vehicle.

**Drive-Through Service.** Any establishment which provides a service or transaction in a vehicle that does not include food for consumption.

**Dwelling Unit.** A group of two or more rooms, one of which is a kitchen, designed for occupancy by one Household for living and sleeping purposes.

**Eating and Drinking Establishment.** Any establishment primarily engaged in the sale of prepared, ready-to-consume meals or drinks for consumption. Examples include, but are not limited to, bakeries, coffee shops, ice cream shops, fast-food establishments, restaurants, snack bars, and tea rooms.

**Efficiency Dwelling Unit.** A room located within any Residential Use used or intended to be used for residential purposes which has a kitchen and living and sleeping quarters combined therein, and which complies with the Health and Safety Code Section 17958.1.

**Eldercare Facility.** A facility which provides residential housing for persons 62 years of age and older, and which combines two or more of the following housing types: Senior Independent Housing, Assisted Living Care Housing, Skilled Nursing Care Housing, and/or Alzheimer's and Dementia Care Housing. A minimum of 75 percent of the floor area, exclusive of common areas, shall consist of Senior Independent Housing and/or Assisted Living Care Housing.

**Equine.** Any horse, pony, donkey, burro, or mule which is 12 months of age or older and is issued a current Equine License by the City Department of Animal Services. An animal which is under 12 months of age and is the offspring of or is unweaned and being nursed by a female equine lawfully kept on the property where said animal is kept shall not be considered an equine and shall be allowed by right on said property.

**Equine Enclosure.** Any structure or fence which establishes the perimeter of an equine keeping and maintenance area.

**Equinekeeping, Commercial.** Any commercial facility for the keeping, breeding, raising, training, or boarding of horses.

**Equinekeeping, Non-commercial.** A detached accessory building which has a roof and may have one or more sides and is used in whole or in part for the housing or shelter of an equine or equines owned by the occupants of the premises and not kept for renumeration, hire or sale.

**Factory-Built Housing.** As defined in Section 19971 of the State of California Health and Safety Code.

**Family Day Care Home.** A Dwelling Unit that regularly provides care, protection, and supervision for 14 or fewer children, in the provider's own home, for periods of less than 24 hours per day, while the parents or guardians are away, and is either a Large Family Day Care Home or Small Family Day Care Home.

**Family Day Care Home, Large.** A Family Day Care Home for 9 to 14 children, including children under the age of 10 years who reside at the home, as set forth in Health and Safety Code Section 1597.465.

**Family Day Care Home, Small.** A Family Day Care Home for 8 or fewer children, including children under the age of 10 years who reside at the home, as set forth in Health and Safety Code Section 1597.44.

**Farming (Plant Cultivation).** The cultivation of berries, flowers, fruits, grains, herbs, mushrooms, nuts, ornamental plants, seedlings, or vegetables for use on-site or for sale or distribution off-site or on-site.

**Fast-Food Establishment.** Any establishment which dispenses food for consumption on or off the premises, and which has the following characteristics: a limited menu, items prepared in advance or prepared or heated quickly, no table orders, and food served in disposable wrapping or containers.

**Fast-Food, Free Standing.** Any building designed for restaurant use by a single tenant or multiple tenants that share the same kitchen, which stands alone on its own lot or is free standing within a shopping center, and which dispenses prepared food over a counter or by way of drive-through service for consumption on or off the premises, and which has the following characteristics: a limited menu, items prepared in advance or prepared or heated quickly, no table orders, and food served in disposable wrapping or containers.

**Fill.** The depositing of soil, rock, or other earth materials by artificial means.

**Financial Services.** Financial institutions that provide retail banking services. This classification includes only those institutions engaged in the circulation of money, such as credit unions. Check-cashing businesses and payday lenders are included in the Alternative Financial Services definition.

**Food and Beverage Store.** Any establishment primarily involved in the retail sale of food and beverages for off-site consumption. Examples include, but are not limited to, meat markets, produce markets, and other grocery stores.

**Food and Drink Manufacturing.** Any facility in which processed livestock and agricultural products are transformed into food or drink products for eventual consumption. The food and beverage products manufactured in these facilities are typically sold to wholesalers or retailers for distribution to consumers. Tobacco product manufacturing is included in this definition. Examples include, but are not limited to, animal food manufacturing; beverage manufacturing; dairy product manufacturing, ice manufacturing; fruit and vegetable preserving, grain and oilseed milling; specialty food manufacturing, seafood product preparation and packaging, and sugar and confectionery product manufacturing. Animal slaughtering is included in the Animal Products Processing definition. Breweries, distilleries, and wineries are included in the Alcoholic Beverage Manufacturing definition.

**Fraternity/Sorority Housing.** A single structure or set of structures in which members of a fraternity, sorority, or similar social organization affiliated with a college or university take residence.

**Freight Terminal.** Any facility intended for freight pick-up, transfer, or distribution by ground or water, including any related facility used in connection with such activities. Examples include, but are not limited to, freight, railroad, and trucking yards.

**Fueling Stations.** Any facility that retails vehicular fuels, including diesel, gasoline, or alternative fuels.

**Funeral and Related Services.** Any facility engaged in the provision of services involving the care, preparation, or arrangement of human or animal remains, and conducting memorial services. Examples include crematoriums, funeral homes, mortuaries, and pet crematoriums. Cemeteries are not included in this definition.

**Furniture and Related Products Manufacturing.** Any facility that makes furniture and related articles, such as mattresses, window blinds, cabinets, and fixtures. The processes used in the manufacture of furniture include the cutting, bending, molding, laminating, and assembly of such materials as wood, metal, glass, plastics, and rattan. This definition does not include facilities that so lely bend metal, cut, and shape wood, or extrude and mold plastics.

**General Storage.** The use of any facility or an open area of land for the storage of goods, material, machinery or equipment, but not any storage that is ancillary to a principal use of the premises. Examples include, but are not limited to, building materials sales yards, contractor's equipment storage yards, and lumber yards.

**General Light Manufacturing.** Any facility that makes a wide range of products that cannot readily be classified into other specific Light Industrial definitions. Examples include, but are not limited to, billboard manufacturing, medical equipment and supplies manufacturing; and toy manufacturing.

**Golf Course.** An area of land laid out for the game of golf with a series of holes each including tee, fairway, and putting green and often one or more natural or artificial hazards.

**Green Waste and Wood Waste Facility.** Any facility which receives Green Waste and/or Wood Waste for chipping and grinding, composting, curing, or mulching. This definition does not include any chipping and grinding, composting, curing, or mulching conducted for noncommercial, nonprofit purposes.

**Green Waste.** All yard trimmings and/or leaves, grass clippings, agricultural wastes and vegetative landscaping materials generated from the maintenance of yards, parks or other similar facilities.

**Gross Vehicle Weight Rating.** The maximum weight a vehicle can carry, including driver, passengers, and cargo.

**Ground Passenger Terminal.** Any facility such as a bus or train station, where ground transport regularly load and unload passengers.

**Guest Room.** Any habitable room except a kitchen, designed or used for occupancy by one or more persons and not in a dwelling unit.

**Gun Sales.** Any establishment that sells firearms, ammunition, handguns, rifles, and related accessories.

**Gym.** Any commercial facility primarily intended for physical exercise. Amenities may include game courts, lap pools, exercise studios, saunas, steam rooms, and strength-training equipment. Examples include, but are not limited to, health clubs, self-defense gyms, rock climbing centers, and yoga studios.

**Hazardous Waste Facility.** Any facility utilized for the storage, treatment, and disposal of hazardous waste as defined in the California Health and Safety Code Section 25117.1.

**Heavy Industrial Uses.** Any use listed under the Heavy Industrial Use Category on the Use Table in *Part 5B* of this Article.

**Helicopter Landings, Infrequent.** Any single location or premises used for infrequent helicopter landings as regulated by Section 7.9.7.

**Historical Vehicle Collection.** One or more vehicles, as defined by Sections 5004(a)(1), (2) and (3) of the California Vehicle Code, special interest vehicles, as defined by Section 5051(b) of the California Vehicle Code, out-of-production vehicles of historical importance, as determined by the Zoning Administrator or parts cars, as defined in Section 5051(c) of the California Vehicle Code, which are collected, restored, or maintained for non-commercial hobby or historical purposes.

**Hive.** A structure that houses a bee colony.

**Home Occupation.** An occupation carried on by the occupant or occupants of a Dwelling Unit as an Accessory Use. For Dwelling Units where Home Occupation is conducted, the Home Occupation shall be considered a Residential Use for zoning purposes.

**Homeless Shelter.** A facility operated by a "provider," other than a "community care facility" as defined in the California Health and Safety Code Section 1502, which provides temporary accommodations to homeless persons or families and which meets the standards for shelters contained in Title 25, Division 1, Chapter 7 of the California Code of Regulations. The term "temporary accommodations" means that a homeless person or family will be allowed to reside at the shelter for a time period not to exceed six months. For the purpose of this definition, a "provider" shall mean a government agency or private non-profit organization which provides, or contracts with recognized community organizations to provide, emergency or temporary shelter for the homeless, and which has been certified by the Housing and Community Investment Department of the City of Los Angeles to meet all applicable requirements as such which are contained in the California Health and Safety Code and the California Code of Regulations.

**Hospice.** Any facility focused on providing medical care, pain management, and emotional and spiritual support for terminally ill individuals. Additional services provided may include, but are not limited to, short-term inpatient care, short-term respite care, speech-language pathology, and grief and loss counseling for patients, family, and friends.

**Hospital.** A health facility licensed by the State that provides 24-hour inpatient care, including the following basic services: medical, nursing, surgical, anesthesia, laboratory, radiology, pharmacy, dietary services.

**Hotel.** A building designated or used for or containing six or more guest rooms, or suites of rooms, which may also contain not more than one dwelling unit, but not including any institution in which human beings are housed or detained under legal restraint. Hotel uses include, but are not limited to, Short-Term Rentals.

**Hours of Operation.** The hours in which a business is open to the public.

**Household.** One or more persons living together in a Dwelling Unit, with common access to, and common use of all living, kitchen, and eating areas within the Dwelling Unit.

**Household Living.** Residential occupancy of at least one Dwelling Unit by a Household.

**Household Moving Rental Truck.** Any motor vehicle which is displayed, stored or offered for rental without a driver, used and maintained solely for the transportation of property, primarily used for the do-it-yourself movement of personal or household goods by private individuals on a short-term basis, having only two axles, and equipped with a body of no more than 22 feet in length measured at the vehicle chassis nor more than 12 feet in height measured from the surface upon which the involved truck rests. Such vehicle may exceed 5,600 pounds in registered net weight.

**House of Worship.** Any facility which is used primarily for religious activities and religious worship. Examples include, but are not limited to, chapels, meditation centers, mosques, religious meeting rooms, religious retreats, synagogues, or temples.

**Housing Development.** The construction pursuant to a building permit or the proposed conversion to condominium ownership pursuant to a final subdivision tract map submitted for approval of any Apartment House, Apartment Hotel, multiple dwelling or group dwelling, residential condominium development or cooperative apartment home having five or more Dwelling Units.

**Inoperable Vehicle.** Any motor vehicle or trailer which is incapable of immediate and sustained movement for which it was designed.

**Instructional Services.** Any establishment primarily engaged in offering avocational or recreational educational courses for the purposes of play, amusement, or relaxation, including education offered for the purpose of teaching the fundamentals, skills, or techniques of a hobby or activity. Examples include, but are not limited to, establishments offering programs in art, cooking, drama, driving, language training, music, sewing, tutoring, or other similar forms of self-improvement.

**In-Vessel Composting.** A process in which compostable material is enclosed in a drum, silo or similar structure where the environmental conditions are controlled and the compostable material is aerated and mechanically agitated. This process allows for accelerated decomposition.

**Joint Living and Work Quarters.** The conversion of an existing building to a residential occupancy of one or more rooms or floors used as a Dwelling Unit with adequate work space reserved for, and regularly used by, one or more persons residing there, as defined in the Health and Safety Code. For the purposes of this use, an existing building is a building for which a building permit was issued prior to April 1, 1994.

**Joint Public and Private Development.** A project on City-owned land that involves a cooperative arrangement between a private sector entity or a non-governmental organization and the City.

**Junk Yard Facility.** Any property where the business of a junk dealer, as defined by either Section 21601 of the California Business and Professions Code or Section 103.305 of the Los Angeles Municipal Code, is conducted - other than wholly within an enclosed building. In addition, a junk

yard shall include property used for the storage of impounded, abandoned, partially dismantled, obsolete or wrecked automobiles - other than wholly within an enclosed building. This definition does not include Historical Vehicle Collection. This definition does not include the acceptance or sale by bona fide automobile parts retail dealers of used parts (including tires or batteries) tendered in exchange for, or in part payment of new or previously rebuilt, reconstructed or remanufactured automobile parts.

**Kennels.** Any site on which four (4) or more dogs, at least four (4) months of age, are kept. This definition does not include Pet Shops.

**Kitchen.** Any room or any portion of a Dwelling Unit, whether an enclosing subdivision thereof or otherwise, used or intended or designed to be used for cooking and preparing food except a Light Housekeeping Room or that portion of a Recreation Room in a multiple residential use, or in an accessory building appurtenant thereto, containing the facilities for the cooking and preparation of food.

**Leachates.** Any liquid which has come into contact with or percolated through composting or curing materials and contains extracted or dissolved substances therefrom, or any other liquid which has been generated by the decomposition process.

**Light Housekeeping Room.** Any guest room which is designed and used as a bedroom and for the cooking and preparing of food, in a conformance with the provisions of Section 91.8116 of Article 1, Chapter 9 . For the purpose of applying the lot area and automobile parking space requirements of the various zones, each Light Housekeeping Room shall be considered as a separate Guest Room.

**Live Entertainment.** Any activity provided for the enjoyment, recreation, relaxation, diversion or other similar purpose performed by a person or persons who are physically present and where such performances is to patrons who are also physically present. Examples include dance performances, musical acts, sporting events, shows featuring comedians, magicians, or actors, and other similar productions.

**Live/Work.** A residential occupancy of one or more rooms or floors used as a Dwelling Unit with adequate work space reserved for, and regularly used by, one or more persons residing there and non-residential employees. A Live/Work unit combines both residential and non-residential uses within a single unit.

**Livestock Keeping.** The keeping of alpacas, cattle, donkeys, goats, llamas, mules, sheep, swine, or similar livestock

**Loading Space.** An off street space or berth on the same lot with a building, or contiguous to a group of buildings, for the temporary parking of a commercial vehicle while loading or unloading merchandise or materials, and which abuts upon a street, alley or other appropriate means of access.

**Machinery and Fabricated Metal Manufacturing.** Any facility in which fabricated metal is transformed into intermediate or end products. Important fabricated metal processes are forging, stamping,

bending, forming, and machining, used to shape individual pieces of metal; and other processes, such as welding and assembling, used to join separate parts together. Examples include, but are not limited to, machine shops; manufacturing of architectural and structural metals, batteries, electronic products, and vehicles and vehicle parts.

**Maintenance and Repair Services.** Any facility engaged in the maintenance or repair of industrial, business, or consumer machinery, equipment, or products. Examples include, but are not limited to, carpet cleaning and dry-cleaning plants; maintenance and repair of household appliances, furniture, office equipment, and similar items. Vehicle maintenance and repair is included in the Light Vehicle Repair and Heavy Vehicle Repair definition.

**Massage Therapy.** Any facility where massage, alcohol rub, fomentation, electric or magnetic treatment, or similar treatment or manipulation of the human body is administered by a medical practitioner, chiropractor, physical therapist, or similar professional person licensed by the State of California.

**Medical Facility.** An outpatient health facility that provides direct medical services to patients who remain less than 24 hours. Examples include, but are not limited to, dental, doctor, and optometry offices or clinics.

**Mobile Medical Clinic.** A vehicle, or portable structure transported by a vehicle, easily transportable in one or more sections, which is used to primarily provide diagnostic, preventive medical services, or blood collection services on a temporary basis in any one location.

**Mobile Recycling Center.** A receptacle, usually a trailer, for the collection of recyclable materials that is drawn by motor power and bears a valid state license.

**Mobilehome.** As defined by Section 18008 of the California Health and Safety Code.

**Mobilehome Park.** Any lot or portion of a lot used to provide rental or lease sites for two or more individual manufactured homes, mobilehomes, park trailers, or recreational vehicles.

**Mobilehome Site.** That portion of a Mobilehome Park set aside and designated for the occupancy of manufactured homes, mobilehomes, park trailers, or recreational vehicles and including the area set aside or used for parking and accessory buildings or structures such as awnings, cabanas or ramadas.

**Motel.** An auto-oriented Hotel that provides rooms with limited amenities and direct access to an open parking area. Also called a motor court or motor lodge.

**Mulch.** A woody vegetative material used as a nonnutritive ground cover to control erosion, improve water retention and retard weed growth.

**Mulching Facility.** Any facility which receives, temporarily stores and processes primarily source-separated carbonaceous wood waste and/or yard trimmings into a mulch. Examples of such materials include clean wood waste, tree and shrub trimming, leaves and other high carbon, low nitrogen material which decompose at a slow rate and have little leachate or odor-causing potential. Processing of such materials is achieved by chipping and screening to attain a uniform

particle size and may include limited aging of the material to achieve a desired appearance. This definition shall not include any mulching of green waste and/or wood waste conducted for noncommercial, nonprofit purpose.

**Nature Conservation Area.** An area designed for the conservation, protection, enhancement, and management of public land. Examples include, but are not limited to, ecological preserves, marine preserves, natural resource preserves, and water conservation areas.

**Nonmetallic Mineral Product Manufacturing.** Any facility with the purpose of transforming mined or quarried nonmetallic minerals, such as clay, gravel, sand, stone, and refractory materials using processes that include grinding, mixing, cutting, shaping, and honing. Examples include, but are not limited to, the manufacturing of clay products and refractory, cement and concrete products, glass and glass products, lime and gypsum products, and other nonmetallic mineral products.

**Office.** Any place where office activities such as administrative, professional, or clerical operations are performed. This definition does not include medical offices. Examples include, but are not limited to, dry labs, architectural, legal, accounting, engineering, therapists, and consulting offices.

**Official Police Garage.** City-approved vendors of vehicle towing and storage services that support the public safety mission of the Los Angeles Police Department (LAPD) and Department of Transportation (DOT).

**Oil and Gas Extraction.** Any facility which operates or develops oil and gas fields. Such activities may include exploration for crude petroleum and natural gas; drilling wells; and all other activities in the preparation of crude oil up to the point of shipment from the producing property. Examples include, but are not limited to, the production of crude petroleum and natural gas; sulfur recovery from natural gas; and recovery of hydrocarbon liquids.

**Outdoor Dining.** Any Covered or Uncovered portion of an Eating and Drinking Establishment which is unenclosed and which is used primarily for the consumption of food or drinks by the patrons of the Eating and Drinking Establishment. This definition includes Outdoor Dining areas that are on or above the ground floor, but does not include Rooftop Dining.

**Parking.** Any facility intended for the parking of vehicles as a principal use. Examples include parking structures and surface parking lots. Vehicle storage is not included in this definition.

**Parks & Open Space.** Publicly accessible uses focusing on natural areas, consisting mostly of vegetative landscapes and active or passive outdoor recreation areas. Examples include, but are not limited to, athletic fields, camping facilities, or lands owned and maintained by the Department of Recreation and Parks.

**Personal Services.** Any establishment providing a commercial service, such as hair styling, spa treatments, or cleaning, for the personal needs of customers.

**Petroleum and Coal Product Manufacturing.** Any facility which transforms crude petroleum and coal into usable products. Examples include, but are not limited to, grease and petroleum lubricating oils manufacturing, tar roofing and asphalt manufacturing, and refineries.

**Plastic and Rubber Product Manufacturing.** Any facility that manufactures goods by processing plastic materials and/or raw rubber.

**Primary Metal Manufacturing.** Any facility which smelts or refines ferrous and nonferrous metals. Examples include, but are not limited to, aluminum, iron, and steel foundries and mills.

**Principal Use.** The main permitted use of land or structures as distinguished from an accessory use.

**Private Club.** Any facility organized solely for the promotion of some common interest and which is accessible to club members and their guests only. Examples include, but are not limited to, business, fraternal, political, and social organizations.

**Public Safety Facility.** Any government facility that provides public safety services. Examples include, but are not limited to, fire stations and police stations.

**Railway Facility.** Any facility related to a freight railway; or a railway yard, maintenance, or fueling facility related to a passenger or freight railway.

**Recreation, Indoor.** Any commercial facility engaged in providing indoor sports and recreation services. Examples include, but are not limited to, bowling alleys, indoor skating rink facilities, and indoor skydiving.

**Recreation, Outdoor.** Any commercial facility engaged in providing outdoor sports and recreation services. Examples include, but are not limited to, outdoor batting cages, skateboard parks, and tennis courts.

**Recreation Room, Accessory.** A room contained in either a main building or an accessory building, designed to be utilized primarily for games, the pursuit of hobbies, social gatherings, and such activities. Such a room may contain such plumbing fixtures as are utilized in a bar or for hobby activities. Such a room in a single-family or two-family dwelling or in an accessory building appurtenant to a single-family or two-family dwelling, may not include facilities for the cooking and preparation of food. However, in a multiple residential use or in an accessory building appurtenant thereto, a recreation room which is for the common use of all the dwelling units therein may contain the facilities for the cooking and preparing of food.

**Recreational Vehicle.** As defined by Section 18010 of the California Health and Safety Code.

**Recyclable Materials.** Items or materials to be recycled or reused, including but not limited to yard waste, paper, plastic, glass, metal, newspaper, and cardboard.

**Recycling Area or Room.** An outdoor space or a room within a building which is designated for the collection of Recyclable Materials generated by the use(s) occupying only that site, is approved by the Fire Department and the Department of Building and Safety, and has the space to accommodate Recycling Receptacles.

**Recycling Center Operator or Junk Dealer.** A person having a fixed place of business in the City and engaging in, conducting, managing or carrying on the business of buying, selling or otherwise charging or re-selling for reuse, materials approved for collection at an approved Recycling Center

or Buyback Center, Recycling Materials Processing Facility, Recycling Materials Sorting Facility or Junk Yard as defined by this Code.

**Recycling Chute.** Any vertical smooth shaft used to convey recyclable materials from the upper floors of a building to a recyclable storage bin or room at the bottom end of the chute.

**Recycling Collection or Buyback Center.** Any facility, including Reverse Vending Machines, where Recyclable Materials are deposited or redeemed for monetary value, and which may include baling or crushing operations for the purposes of efficiency of storage and transfer (volume reduction), but shall not include sorting or processing activities for other than temporary storage purposes.

**Recycling Materials Processing Facility.** Any facility which accepts Recyclable Materials for sorting and processing on the site. For the purpose of this definition, processing shall mean the process of changing the physical characteristics of a Recyclable Material, including the shredding, smelting, grinding and crushing of cans, bottles, and other materials, for other than temporary storage purposes.

**Recycling Materials Sorting Facility.** Any facility which accepts commingled or source-separated Recyclable Materials of various types, which are separated on the site using a manual or automated system. For the purpose of this definition, source-separated Recyclable Materials are those which are separated from the waste stream at their point of generation for the purpose of recycling. This may include baling or crushing operations for the purposes of efficiency of storage and transfer (volume reduction), but shall not include processing activities for other than temporary storage purposes.

**Recycling Receptacle.** A container which is suitable for the collection of Recyclable Materials. Containers shall be covered, durable, waterproof, rustproof, and of incombustible construction, and shall provide protection against the environment or be in completely enclosed indoor recycling areas. Containers must be clearly labeled to indicate the type of material to be deposited.

**Research and Development.** Any laboratory where chemicals, drugs, or other material or biological matter are handled in liquid solutions or volatile phases, requiring direct ventilation, and specialized piped utilities.

**Residential Building.** A building or portion thereof designed or used for human habitation.

**Residential Production/Art Gallery Space.** An on-site building workshop or gallery amenity, not to be combined with an individual Live/Work unit, for use by residents and employees of Live/Work units for art production and/or display, materials and good fabrication, and other similar production activities.

**Residential Use.** Any use listed containing a Dwelling Unit or Guest Room.

**Resource Extraction.** Any facility engaged in mining, mine site development, or preparing metallic and nonmetallic minerals. Examples include, but are not limited to, metal ore mining, nonmetallic mineral mining, and quarrying.

**Retail Sales.** Any commercial establishment involved in the retail sale of new or used products, and the retail provision of consumer, repair services, or rental services to individuals and businesses. Retail Sales may be combined with other services such as computer, electronics, and similar small-item repairs. Examples include hardware stores, pharmacies, electronics stores, furniture stores, print shops, and clothing stores.

**Reverse Vending Machine.** An automated mechanical device which accepts one or more types of empty beverage containers including aluminum cans, glass and plastic bottles, and which issues a cash refund or a redeemable credit slip with a value not less than the container's redemption value as determined by the State of California. A Reverse Vending Machine may sort and process containers mechanically, provided that the entire process is enclosed within the machine.

**Reverse Vending Machine Commodity Storage Bin.** A non-automated container which is covered and made of durable, incombustible, rustproof and waterproof construction, which is used to store the processed aluminum cans, glass and plastic bottles that are removed from a Reverse Vending Machine.

**Rooftop Dining.** Any Covered or Uncovered portion of an Eating and Drinking Establishment which is unenclosed, located on a rooftop, and used primarily for the consumption of food or drinks by the patrons of the Eating and Drinking Establishment.

**Room, Habitable.** An enclosed subdivision in a residential building commonly used for living purposes, but not including any lobby, hall, closet, storage space, water closet, bath, toilet, slop sink, general utility room or service porch. A recess from a room or an alcove (other than a dining area) having 50 square feet or more of floor area and so located that it could be partitioned off to form a habitable room, shall be considered a habitable room. For the purpose of applying the automobile parking space requirements of this article, any kitchen as defined herein shall be considered a habitable room and, if it is a part of a room designed for other than food preparation or eating purposes, such remaining portion shall also be considered a habitable room. For the purpose of applying the lot area requirements of this article, a kitchen less than 100 square feet of room area from wall to wall shall not be considered a habitable room. For the purpose of applying the open space requirements of Section 12.21 G., a kitchen as defined herein shall not be considered a habitable room.

**School, K-12.** An institution of learning which offers instruction in grades K through 12.

**School, Postsecondary.** Any institution offering a formal educational program beyond K-12, including programs whose purpose is academic, vocational, or continuing professional education. Examples include, but are not limited to, colleges, technical schools, trade schools, and universities. Postsecondary Schools providing programs involving Heavy Industrial Uses or equipment are allowed only in Use Districts where corresponding industrial uses are also allowed.

**Scrap Metal Processing Yard.** Any facility which is maintained, used or operated solely for the processing and preparing of scrap metal for remelting by steel mills and foundries.

**Seasonal Retail, Outdoor.** Any outdoor holiday retail sales of trees, plants, fruits, or vegetables, or other similar products, not as an extension of a primary retail sales use on the same lot. Examples include seasonal sales of Christmas trees and pumpkins, and other customary holiday items.

**Self-Service Storage.** A building that offers secure self-storage for household goods in individual rooms, compartments, lockers or containers to which clients bring goods for storage and retrieve them any time during normal business hours.

**Senior Independent Living.** Residential housing that consists of Dwelling Units for persons 62 years of age and older and may include common dining areas or other community rooms. Full time medical services shall not be provided on the premises. It may be a component of an Eldercare Facility.

**Shoreline Project.** Any development in streams, wetlands, and other waters of the United States. Examples include, but are not limited to, depositing of fill and dredged material, jetties, marinas, and piers.

**Skilled Nursing Home.** Residential housing that is licensed by the California Department of Health and provides acute, intermediate, or long-term skilled nursing care and consists only of Guest Rooms for its residents. Full time medical services may be provided on the premises. It may be a component of an Eldercare Facility.

**Smoke and Vape Shop.** Any establishment, the main purpose of which is the sale of tobacco products, substances intended for smoking, or smoking accessories including but not limited to pipes, vaporizing devices or other smoking paraphernalia. If the establishment is solely dedicated to the retail or wholesale sales of tobacco products, substances intended for smoking, or smoking accessories, an attached public or private smokers' lounge that is solely dedicated to smoking shall be permitted. Any establishment with either an Alcoholic Beverages Control ("ABC") license or Public Health Permit is not solely dedicated to the retail or wholesale sale of tobacco products, substances intended for smoking, or smoking accessories; and therefore, an attached smokers' lounge is not allowed. Smoke and Vape Shops do not include medicinal or recreational marijuana establishments.

**Solar Panel Energy Generating Facility.** Any facility designed to generate electric power by solar energy primarily for off-site use or for sale.

**Solid Waste Alternative Technology Processing Facility.** Any facility that has one or more technological systems which extracts, recovers or generates usable materials and/or energy from solid waste, as defined in Section 40191 of California Public Resources Code.

**Solid Waste Facility.** Any facility utilized to: receive, temporarily store, separate, convert, combust, or process solid wastes; transfer solid wastes directly from small to larger vehicles for transport; or operate as a landfill. Examples include, but are not limited to, composting facilities, construction and demolition debris and inert material facilities, solid waste disposal sites, transfer and processing facilities, and transformation facilities.

**Soundstages and Backlots.** Any warehouse-type facility providing space for the construction and use of indoor sets, or any outdoor set, backlot, and other outdoor facility, including supporting indoor workshops and craft shops.

**Specific Plan.** A specific plan is a definite statement adopted by ordinance of policies, standards and regulations, together with a map or description defining the locations where such policies, standards and regulations are applicable.

**Sports Arena and Stadium.** A commercial facility used primarily for sports and consists of a field, court, race track, rink, or stage either partly or completely surrounded by tiered seating for spectators.

**Street, Collector.** Any street designated as a Collector Street on the adopted Mobility Plan of the General Plan.

**Structure.** Anything constructed or erected which is supported directly or indirectly on the Earth, but not including any vehicle which conforms to the California State Vehicle Act.

**Suite.** A group of habitable rooms designed as a unit, and occupied by only one family, but not including a kitchen or other facilities for the preparation of food, with entrances and exits which are common to all rooms comprising the suite.

**Supportive Housing.** Housing with no limit on length of stay for persons with low incomes who have one or more disabilities and may include, among other populations, adults, emancipated minors, families with children, elderly persons, young adults aging out of the foster care system, individuals exiting from institutional settings, veterans, and homeless people. The housing is linked to onsite or offsite Supportive Services, and any Floor Area used for the delivery of Supportive Services shall be considered accessory to the residential use.

**Transitional Housing.** A building where housing linked to Supportive Services is offered, usually for a period of up to 24 months, to facilitate movement to permanent housing for persons with low incomes who may have one or more disabilities, and may include adults, emancipated minors, families with children, elderly persons, young adults aging out of the foster care system, individuals exiting from institutional settings, veterans, and homeless people.

**Truck Gardening.** The cultivation of berries, flowers, fruits, grains, herbs, mushrooms, nuts, ornamental plants, seedlings, or vegetables for use on-site or for sale or distribution off-site.

**Substance Abuse Facility, Licensed, seven or more persons.** Any premises, place, or building licensed by the State of California that provides 24-hour residential nonmedical services to adults who are recovering from problems related to alcohol, drug, or alcohol and drug misuse or abuse, and who need alcohol and drug recovery treatment or detoxification services, as defined in the Health and Safety Code. This definition applies when there are seven or more persons being served.

**Substance Abuse Facility, Licensed, six or fewer persons.** Any premises, place, or building licensed by the State of California that provides 24-hour residential nonmedical services to adults who are recovering from problems related to alcohol, drug, or alcohol and drug misuse or abuse, and who

need alcohol and drug recovery treatment or detoxification services, as defined in the Health and Safety Code. This definition applies when there are six or fewer persons being served.

**Supportive Services.** Services that are provided on a voluntary basis to residents of Supportive Housing and Transitional Housing, including, but not limited to, a combination of subsidized, permanent housing, intensive case management, medical and mental health care, substance abuse treatment, employment services, benefits advocacy, and other services or service referrals necessary to obtain and maintain housing.

**Swap Meet.** Any outdoor event where goods are offered or displayed for sale or exchange by ten or more independent vendors. An independent swap meet vendor is any individual, partnership, corporation, business association or other person or entity who is not an employee of the owner or lessee of the subject building, and 1) a fee is charged by a swapmeet operator for the privilege of offering or displaying new or secondhand goods for sale or exchange; or 2) a fee is charged to prospective buyers for admission to the area where goods are offered or displayed for sale or exchange. Examples include, but are not limited to, flea markets, open-air markets, and other similar events.

**Temporary Entertainment Venue.** A temporary amusement, entertainment, or recreation use accessible to the general public. Examples include traveling circuses or periodic sports events.

**Tennis or Paddle Tennis Court.** A game court designed for the purpose of playing tennis, paddle tennis or similar game, utilizing a concrete slab or other conventionally accepted hard playing surface, an enclosing fence and frequently overhead lighting fixtures.

**Textile and Apparel Manufacturing.** Any facility that transforms fibers into a product, such as yarn or fabric, or manufactures textile and other apparel products. Examples include, but are not limited to, fabric mills, finishing and coating mills, jewelry manufacturing, and leather product manufacturing.

**Theater.** A facility for performing arts, motion pictures, or other media arts before an audience, and with a total seating capacity no greater than 1,200. Examples include comedy theaters, community theaters, and movie theaters. Facilities with a seating capacity equal to or greater than 1,200 are included in the Auditorium definition.

**Trailer or Automobile Trailer.** A vehicle without motive power, designed to be drawn by a motor vehicle and to be used for human habitation or for carrying persons and property, the terms "trailer" and "automobile trailer" shall not include a mobilehome.

**Transient Occupancy Residential.** A residential building designed or used for one or more dwelling units or a combination of three or more dwelling units and any number of guest rooms or suites of rooms wherein occupancy, by any person by reason of concession, permit, right of access, license, or other agreement is for a period of 30 consecutive calendar days or less, counting portions of calendar days as full days.

**Trash Chute.** Any vertical smooth shaft used to convey rubbish, trash, or garbage from the upper floors of a building to a trash storage bin or room at the bottom end of the chute.

**Use.** The purpose for which land or a building is arranged, designed or intended or for which either land or a building is or may be occupied or maintained.

**Used Vehicle Sales.** The sale of used vehicles at dealerships, where the primary function is the sale of used passenger vehicles and pickup trucks with a GVWR no greater than 19,500 lbs., or an unladen weight of less than 8,001 lbs., and other consumer vehicles such as motorcycles, boats, and recreational vehicles. The use may also include related ancillary uses such as a car wash.

**Utilities.** Any public or private infrastructure serving the general public. This infrastructure may facilitate development, generation, diversion, apportionment, measurement, storage, treatment, transfer, delivery, or conservation, for power, water, natural gas, sewage, or telephone, television, internet, and related communication. Wireless Telecommunication Facilities are not included in this definition.

**Utility Rental Trailer.** Any non-passenger carrying, box- type open or van designed to be towed by a passenger vehicle, not exceeding 3,500 pounds gross vehicle weight (GVW), and not exceeding 96 inches in total width, nor 72 inches in box width, nor 14 feet in box length.

**Vehicle Repair, Heavy.** Any facility involving the diagnosing of malfunctions, repairing or maintaining of heavy duty trucks with a Gross Vehicle Weight Rating (GVWR) greater than or equal to 19,500 lbs., and other commercial vehicles.

**Vehicle Repair, Light.** A use involving the diagnosing of malfunctions, repairing or maintaining of passenger vehicles, recreational vehicles, and pickup trucks with a Gross Vehicle Weight Rating (GVWR) no greater than 19,500 lbs., or an unladen weight of less than 8,001 lbs., and other consumer vehicles such as motorcycles, boats. Examples include, but are not limited to, smog testing shops,body shops, and other similar automotive related repair or installation businesses.

**Vehicle Sales and Rental, Light.** Any facility that sells, rents or leases passenger vehicles, recreational vehicles, and pickup trucks with a Gross Vehicle Weight Rating (GVWR) no greater than 19,500 lbs., or an unladen weight of less than 8,001 lbs., and other consumer vehicles such as motorcycles, boats.

**Vehicle Sales and Rental, Heavy.** Any facility that sells, rents or leases vehicles with a Gross Vehicle Weight Rating (GVWR) equal to or greater than 19,500 lbs., or an unladen weight of equal to or greater than 8,001 lbs.

**Vehicle Storage, Heavy.** Any facility for the storage of vehicles and heavy duty trucks with a Gross Vehicle Weight Rating (GVWR) greater than or equal to 19,500 lbs., and other commercial vehicles. Examples include storage of fleet vehicles, tractor trailers, dump trucks, and specialized trailers for oversized loads.

**Vehicle Storage, Light.** Any facility for the storage of passenger vehicles, light and medium duty trucks with a Gross Vehicle Weight Rating (GVWR) no greater than 19,500 lbs., and other consumer vehicles such as motorcycles, boats, and recreational vehicles. Examples include, but are not limited to, storage of buses, household moving rental trucks, motorcycles, recreational vehicles, and trailers.

**Vehicle, Commercial.** Any vehicle, excluding Household Moving Rental Trucks, and Utility Rental Trailers, which when operated upon a highway is required to be registered as a commercial vehicle by the Vehicle Code of the State of California or by any other jurisdiction and which is used or maintained for the transportation of persons for hire, compensation, or profit, or designed, used or maintained primarily for the transportation of property.

**Veterinary Hospital.** Any facility in which animals or pets are given medical or surgical treatment and care.

**Wholesale Trade and Warehousing.** Any facility engaged in operating wholesale, warehousing, or storage facilities for general merchandise, refrigerated goods, food and beverage products, and other warehouse products. They may also provide logistics services related to the distribution of goods.

**Windrow Composting.** The process in which compostable material is placed in elongated piles or windrows which are mechanically turned or aerated to encourage decomposition and to reduce odors.

**Wireless Telecommunication Facility.** Any structure built for the sole or primary purpose of supporting FCC-licensed antennas and their associated facilities. These structures may include radio transceivers, antennas, a regular and backup power supply, other associated electronics, and may be in any technological configuration. Wireless telecommunication embedded within or used exclusively for power devices, facilities, and infrastructure are exempt. Satellite dish antennae, radio and television transmitters, and antennae incidental to residential uses are not part of this definition.

**Wood and Paper Manufacturing.** Any facility engaged in processing and manufacturing of wood or paper products. Examples include, but are not limited to, lumber and pulp mills.

**Wood Wastes.** Any untreated and/or unpainted wood material such as pallets, plywood and other construction related scrap lumber, stumps and tree trimming.

# DIV. 6A.1. INTRODUCTION

## SEC. 6A.1.1. PURPOSE

The purpose of this Article is to establish the Density District, a mechanism that regulates the number of dwelling units and guest rooms permitted on any lot, otherwise known as density. Density Districts allow for a wide variety of zoning approaches to housing.

## SEC. 6A.1.2. DENSITY APPLICABILITY

### A. General Project Applicability

All projects filed after the effective date of this Zoning Code shall comply with the Density Standards in this Article, as further specified below.

#### 1. Project Activities

**a.** Density district standards apply to project activities as shown in the table below. More than one project activity may apply to a project (for example, an addition may also include the expansion of a use).

**b.** Where a rule is listed as generally applicable in the table below, the project activity shall meet the Density District rules within the Division. This general applicability may be further specified for each standard in the applicability provisions in Part 6C (Density Rules). Project applicability may also be modified by Article 12 (Nonconformities). Where a Division of the Density District rules is listed as not applicable in the table below, the standards within the Division do not apply to the project activity.

| | | PROJECT ACTIVITIES | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| | DENSITY DISTRICT RULES | Subdivision | New Construction | Addition | Facade Alteration | Site Alteration | Relocation | Major Renovation | Minor Renovation | Change/Expansion of Use | Ordinary Maintenance and Repair |
| Div. 6C.1 | **Maximum Density** | ● | ● | ● | ○ | ○ | ● | ● | ● | ● | ○ |

● = Rule generally applies to this project activity
○ = Rule is not applicable

#### 2. General Nonconformity

No project activity may decrease the conformance with any Density standards in Article 6 for a nonconforming use unless otherwise specified by *Div. 12.7.* (Nonconforming Density). For example, a major renovation shall meet the Density District maximum density, even where nonconforming density exists in the current building.

## SEC. 6A.1.3. RELATIONSHIP TO ZONE

A zone is comprised of the following districts, as established in *Sec. 1.4.2.* (Zoning Map):

The Density District is a separate and independent component of each zone.

## SEC. 6A.1.4. RELATIONSHIP TO USE DISTRICTS

**A.** When dwelling units and guest rooms are permitted by a zone's Use District in *Part 5B.* (Use Districts), the Density Districts in this Article establish limits on the number of dwelling units and guest rooms. While maximum density is set by the Density Districts, minimum density may be set by Use District.

**B.** Some use districts in *Part 5B.* (Use Districts) may establish additional requirements on dwelling units or guest rooms in addition to those in this Article.

## SEC. 6A.1.5. RELATIONSHIP TO PUBLIC BENEFIT SYSTEMS

Affordable housing incentive programs, outlined in *Article 9* (Public Benefit Systems), offer a variety of methods to obtain additional density (in excess of those limits established in this Article) in exchange for different affordability levels and types of affordable housing.

## SEC. 6A.1.6. RELATIONSHIP TO FORM DISTRICTS

Form Districts do not directly limit density, but do establish provision which may result in physical constraints that could potentially impact the number of dwelling units or guest rooms that can be accommodated on a lot.

## SEC. 6A.1.7. HOW TO USE THIS ARTICLE

### A. Identify the Density District

The fifth component in a zone string identifies the Density District for a property.

### B. Density District Standards

Density Districts standards are located in *Part 6B* (Density Districts). Each Density District identifies the standards specific to that Density District.

### C. Interpreting Density District Standards

Each standard in a Density District in *Part 6B* (Density Districts) provides a reference to *Part 6C* (Density Rules) where the standard is explained in detail.

# PART 6B. DENSITY DISTRICTS

**Div. 6B.1. Maximum Density . . . . . 6-8**
Sec. 6B.1.1. Lot-Based Districts . . . . . 6-8
Sec. 6B.1.2. Lot Area-Based Districts . . . . . 6-9

# DIV. 6B.1. MAXIMUM DENSITY

Every Density District has a corresponding maximum density. The maximum density either limits the number of dwelling units and guest rooms allowed based on lot area or indicates a flat limit on the number of dwelling units allowed per lot.

## SEC. 6B.1.1. LOT-BASED DISTRICTS

In 1L, 2L, 3L and 4L Density Districts, the maximum number of dwelling units permitted on a lot is limited to the ratios established in the table below.

| LOT-BASED DISTRICTS | |
|---|---|
| Density District | Dwelling Units Per Lot (max) *Sec. 6C.1.1.* |
| **1L** | 1 |
| **2L** | 2 |
| **3L** | 3 |
| **4L** | 4 |

## SEC. 6B.1.2. LOT AREA-BASED DISTRICTS

In FA, 2, 3, 4, 6, 8, 10, 12, 15, 20, 30, 40, 50, 60, and N Density Districts, the maximum density of dwelling units and guest rooms permitted on a lot is determined using the table below. A lot may contain any combination of dwelling units and guest rooms.

| LOT AREA-BASED DISTRICTS | | |
|---|---|---|
| Density District | Lot Area per Dwelling Unit (min sq-ft) *Sec. 6C.1.2.* | Lot Area per Guest Room (min sq-ft) *Sec. 6C.1.3.* |
| **FA** | Limited by Floor Area | Limited by Floor Area |
| **2** | 200 | Limited by Floor Area |
| **3** | 300 | 150 |
| **4** | 400 | 200 |
| **6** | 600 | 300 |
| **8** | 800 | 400 |
| **10** | 1000 | 500 |
| **12** | 1200 | 600 |
| **15** | 1500 | 750 |
| **20** | 2000 | 1000 |
| **30** | 3000 | 1500 |
| **40** | 4000 | 2000 |
| **50** | 5000 | 2500 |
| **60** | 6000 | 3000 |
| **N** | Not Permitted | Not Permitted |

Page Left Intentionally Blank

# PART 6C. DENSITY STANDARDS

**Div. 6C.1. Maximum Density . . . . . 6-11**
Sec. 6C.1.1. Dwelling Units Per Lot . . . . . 6-11
Sec. 6C.1.2. Lot Area Per Dwelling Unit . . . . . 6-12
Sec. 6C.1.3. Lot Area Per Guest Room . . . . . 6-13

# DIV. 6C.1. MAXIMUM DENSITY

## SEC. 6C.1.1. DWELLING UNITS PER LOT

The maximum number of dwelling units allowed on a lot.

### A. Intent

The intent of regulating the number of dwelling units based on a fixed number per lot is to provide a method to establish a specific maximum number of dwelling units regardless of lot area.

### B. Applicability

Dwelling Units per Lot applies to any project that includes dwelling units and is constructed in a Lot-Based District.

### C. Standards

**1.** Regardless of lot area, the number of dwelling units in the 1L, 2L, 3L and 4L Density Districts is limited to the maximums outlined in *Sec. 6B.1.1.* (Lot-Based Districts).

**2.** Where a lot is large enough to be subdivided following the applicable Form District lot area standards and the subdivision requirements in *Article 11* (Division of Land), each new lot is entitled to the maximum dwelling units per lot.

**3.** Guest rooms are not permitted on properties zoned with Lot-Based Districts.

### D. Measurement

**1.** Dwelling Units per Lot is measured as the cumulative number of dwelling units on a lot as defined in *Sec. 14.1.11.* (Lot).

### E. Exceptions

Accessory dwelling units, compliant with *Sec. 5C.9.1.* (Accessory Dwelling Units) and *Sec. 9.4.7.* (Accessory Dwelling Units), are exempt from the density limit for lots having one or more dwelling units.

### F. Relief

**1.** An increase in the maximum dwelling units per lot may be requested as a variance pursuant to *Sec. 13B.5.3.* (Variance).

## SEC. 6C.1.2. LOT AREA PER DWELLING UNIT

The maximum number of dwelling units allowed on a lot based on lot area.

### A. Intent

The intent of regulating the number of dwelling units based on a lot area is to provide a method that ensures there is a specified ratio of dwelling units in relation to the size of a lot.

### B. Applicability

Lot Area per Dwelling Units applies to any project that includes dwelling units in a Lot Area-Based Density District.

### C. Standards

The number of dwelling units on a lot shall not exceed the maximum established by the applicable Density District in *Sec. 6B.1.2.* (Lot Area-Based Districts).

### D. Measurement

1. The maximum number of dwelling units is calculated by dividing the lot area by the Dwelling Units per Lot Area (min sq-ft) value as outlined in *Sec. 6B.1.2.* (Lot Area-Based Districts), and can be provided in conjunction with any guest rooms if permitted on a lot as calculated in *Sec. 6C.1.3.* (Lot Area per Guest Room).
2. Lot area is counted only once - for either dwelling units or guest rooms.
3. Fractions of units do not count toward an additional dwelling unit or guest room, except as permitted in *Article 9* (Public Benefit Programs).
4. When density is designated as "Limited by Floor Area", there is no maximum density. Dwelling units are limited only by the physical constraints of the applicable Form District and are subject to the dimensional requirements in Chapter 9 (Building Regulations) of this Code.
5. When density is designated as "Not Permitted", dwelling units or guest rooms are not permitted.

### E. Exceptions

Accessory dwelling units, compliant with *Sec. 5C.9.1.* (Accessory Dwelling Units) and *Sec. 9.4.7.* (Accessory Dwelling Units), are exempt from the density limit for lots having one or more dwelling units.

### F. Relief

An decrease in the minimum lot area per dwelling unit may be requested as a variance pursuant to *Sec. 13B.5.3.* (Variance).

## SEC. 6C.1.3. LOT AREA PER GUEST ROOM

The maximum number of guest rooms allowed on a lot based on lot area.

### A. Intent

The intent of regulating the number of dwelling units based on lot area is to provide a method that ensures there is a specified ratio of guest rooms in relation to the size of a lot.

### B. Applicability

Lot Area per Guest Room applies to any project that includes guest rooms in a Lot Area-Based Density District.

### C. Standards

The number of guest rooms on a lot shall not exceed the maximum established by the applicable Density District in *Sec. 6B.1.2.* (Lot Area-Based Districts).

### D. Measurement

1. The maximum number of guest rooms is calculated by dividing the lot area by the Guest Rooms per Lot Area (min sq-ft) value as outlined in *Sec. 6B.1.2.* (Lot Area-Based Districts), and can be provided in conjunction with any dwelling units if permitted on a lot as calculated in *Sec. 6C.1.2.* (Lot Area per Dwelling Unit).
2. Lot area is counted only once - for either dwelling units or guest rooms.
3. Fractions of units do not count toward an additional dwelling unit or guest room, except as permitted in *Article 9* (Public Benefit Programs).
4. When density is designated as "Limited by Floor Area", there is no maximum density. Guest rooms are limited only by the physical constraints of the applicable Form District and are subject to the dimensional requirements in Chapter 9 (Building Regulations) of this Code.
5. When density is designated as "Not Permitted", dwelling units or guest rooms are not permitted.

### E. Exceptions

Accessory dwelling units, compliant with *Sec. 5C.9.1.* (Accessory Dwelling Units) and *Sec. 9.4.7.* (Accessory Dwelling Units), are exempt from the density limit for lots having one or more dwelling units.

### F. Relief

An decrease in the minimum lot area per guest room may be requested as a variance pursuant to *Sec. 13B.5.3.* (Variance).

ARTICLE 7.

# ALTERNATE TYPOLOGIES

Sec. 7.3.1. Form Standards . . . . . 7-9
Sec. 7.3.2. Frontage Standards . . . . . 7-9
Sec. 7.3.3. Development Standards . . . . . 7-9
Sec. 7.3.4. Use Standards . . . . . 7-9
Sec. 7.3.5. Density Standards . . . . . 7-9

# DIV. 7.1. INTRODUCTION

## SEC. 7.1.1. PURPOSE

There are certain cases where the desired physical form for a specific type of development is prohibited by the zoning applied to a lot. In those cases, Alternate Typologies provide a regulatory remedy by overriding specific standards included in underlying zoning districts that may otherwise prohibit the desired form. In exchange for providing greater flexibility for particular standards, Alternate Typologies require higher standards for other regulations to promote the desired form and ensure projects are contextually appropriate.

## SEC. 7.1.2. ALTERNATE TYPOLOGIES APPLICABILITY

Alternate Typologies are allowed only in eligible districts. Each Alternate Typology provides an eligibility table listing all zoning districts where the Alternate Typology is allowed. Zone strings composed of any combination of the districts listed under the eligible districts may use the Alternate Typology. When an eligible district is listed with "_", all variations of the district are eligible (for example, RN_ includes RN1, RN2 and any other RN variation).

## SEC. 7.1.3. RELATIONSHIP TO ZONE STRING

### A. Zoning Districts

1. Where a standard is listed in an Alternate Typology, the metric listed for the Alternate Typology supersedes the metric listed in the underlying zoning districts for the same standard.

2. Where an Alternate Typology references the underlying districts (for example, "Set by Form District"), provides no metric for a standard or does not list a standard in the underlying district, the underlying district standard applies.

### B. Specific Plans & Supplemental Districts

Alternate Typologies do not supersede the requirements of Specific Plans or Supplemental Districts.

### C. Special Districts

Special Districts are not eligible to use Alternate Typologies.

# DIV. 7.2. ALTERNATE TYPOLOGIES

## SEC. 7.2.1. CIVIC INSTITUTION 1

### A. Eligible Districts

| FORM | FRONTAGE | STANDARD | USE | DENSITY |
|---|---|---|---|---|
| All | All | 5 | All | All |

### B. Intent

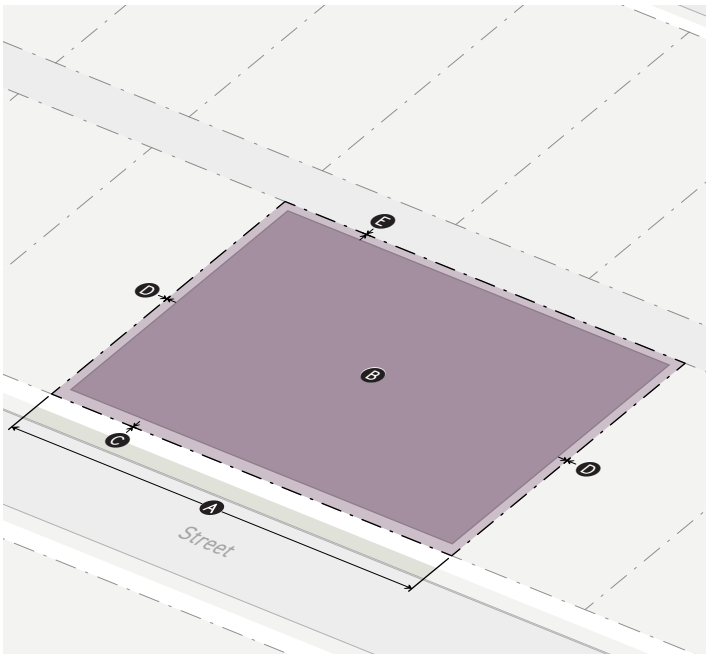
The Civic Institution 1 Alternate Typology is intended to promote placemaking through architectural monuments and publicly accessible spaces. This Alternate Typology allows greater design flexibility for civic institutions to differentiate civic assets from the surrounding urban fabric, while maintaining standards essential for ensuring all projects actively contribute to a highly walkable urban environment.

### C. Review

Administrative review is required. See *Sec. 14.5.1. (Administrative Review)*.

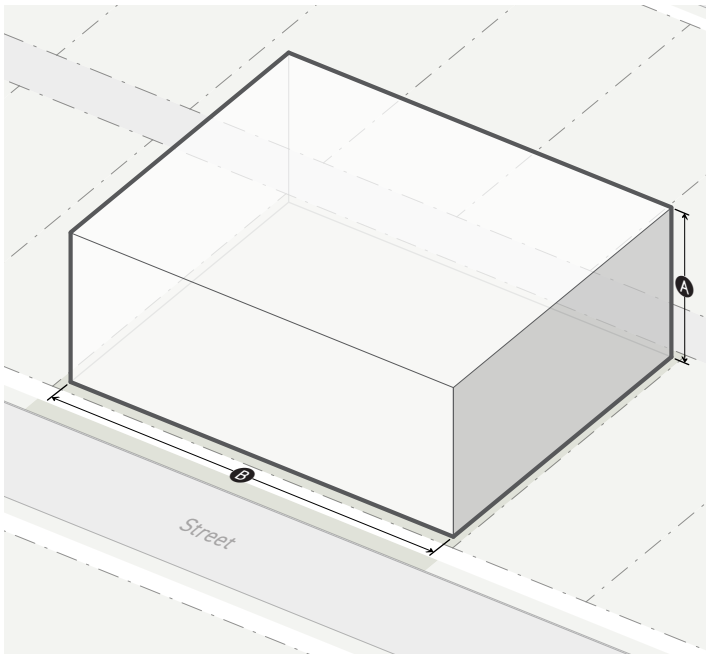
## D. Form Standards

### 1. Lot Parameters



| 1. LOT SIZE | Sec. 7.3.1 |
|---|---|
| Lot area (min) | n/a |
| Ⓐ Lot width (min) | 25' |
| **2. COVERAGE** | *Sec. 7.3.1* |
| Ⓑ Building coverage (max) | 95% |
| Building setbacks | |
| Ⓒ Primary street (min) | 0' |
| Side street (min) | 0' |
| Ⓓ Side (min) | 0' |
| Rear (min) | 0' |
| Ⓔ Alley (min) | 0' |
| Special lot line (min) | 0' |
| **3. AMENITY** | *Sec. 7.3.1* |
| Amenity space (min) | n/a |
| Residential amenity space (min) | n/a |

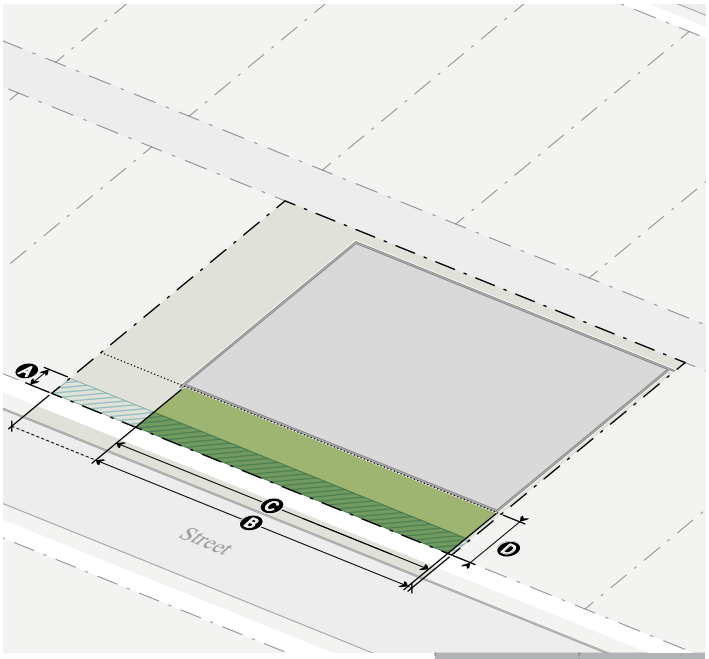
### 2. Bulk and Mass



| 1. HEIGHT & FAR | Sec. 7.3.1 |
|---|---|
| FAR (max) | Set by Form District |
| Ⓐ Height (max) | n/a |
| **2. UPPER STORY BULK** | *Sec. 7.3.1* |
| Set by Form District | |
| **3. BUILDING MASS** | *Sec. 7.3.1* |
| Set by Form District | |

## E. Frontage Standards

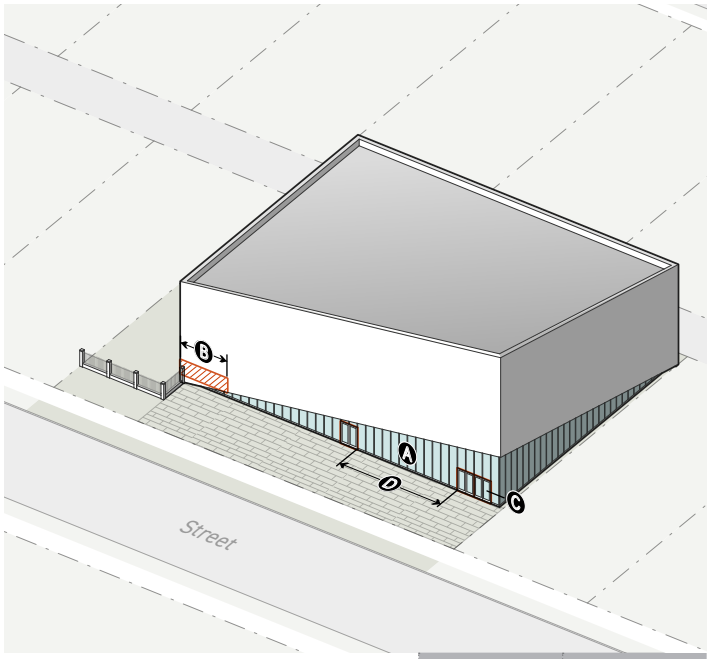
### 1. Site



| | Primary St. | Side St. |
|---|---|---|
| **BUILD-TO** | *Sec. 7.3.2* | |
| A **Build-to range** (min/max) | 0'/10' | 0'/10' |
| B **Build-to width** (min) | 80% | 60% |
| C **Pedestrian amenity modification** (max) | 100% | 100% |
| **PARKING** | *Sec. 7.3.2* | |
| D **Street lot line setback** (min) | 25' | 0' |
| **Parking between building & street** (allowed) | No | No |
| **LANDSCAPE** | *Sec. 7.3.2* | |
| **Impervious area** (max) | n/a | n/a |
| **Vegetation** (min) | n/a | n/a |
| **Privacy screen allowed** (max)* | A3 | A3 |

*Privacy screen may not be located between the building face meeting the required build-to width and the street.

### 2. Facade



| | Primary St. | Side St. |
|---|---|---|
| **TRANSPARENCY** | *Sec. 7.3.2* | |
| A **Ground story** (min)* | 10% | 10% |
| B Blank wall width (max) | 70' | 90' |
| **Upper stories** (min) | n/a | n/a |
| **ENTRANCES** | *Sec. 7.3.2* | |
| C **Street-facing entrance** | Required | n/a |
| D Entrance spacing (max) | 100' | 150' |
| **Entry feature** | No | No |
| **GROUND STORY** | *Sec. 7.3.2* | |
| **Ground story height** (min) | | |
| Residential (min) | n/a | n/a |
| Nonresidential (min) | 16' | 16' |
| **Ground floor elevation** (min/max) | n/a | n/a |

*Ground story window and door glazing may be screened for up to 50% of the glazed area.

## F. Development Standards

Set by *Development Standard District (Part 4B.)*.

## G. Use Standards

1. For a minimum of 20 years after the issuance of a certificate of occupancy applying Civic Institution 1 Alternate Typology, only public and institutional uses are permitted. The certificate of occupancy shall indicate a public or institutional use as the use of the property for that time period.
2. Once 20 years have elapsed, any use allowed in the applicable Use District is permitted.
3. For additional Use District Standards See *Part 5B. (Use District Standards)*.
4. For additional Use Specific Standards See *Part 5C. (Use Specific Standards)*.

## H. Density Standards

Set by *Density District (Part 6B.)*.

# DIV. 7.3. ALTERNATE TYPOLOGY RULES

## SEC. 7.3.1. FORM STANDARDS

**A.** For Form Standards set by Form District See *Part 2B. (Form Districts)*.

**B.** For Form Standards Rules See *Part 2C. (Form Rules)*.

## SEC. 7.3.2. FRONTAGE STANDARDS

**A.** For Frontage Standards set by Frontage District See *Part 3B. (Frontage Districts)*

**B.** For General Frontage Rules See *Part 3C. (General Frontage Rules)*

**C.** For Character Frontage Rules See *Part 3D. (Character Frontage Rules)*

## SEC. 7.3.3. DEVELOPMENT STANDARDS

**A.** For Development Standards set by Development Standards District See *Part 4B. (Development Standards Districts)*

**B.** For Development Standards Rules See *Part 4C. (Development Standards Rules)*

## SEC. 7.3.4. USE STANDARDS

**A.** For Use District Standards See *Part 5B. (Use District Standards).*

**B.** For Use Specific Standards See *Part 5C. (Use Standards).*

**C.** For Use Rules See *Part 5D. (Use Rules).*

## SEC. 7.3.5. DENSITY STANDARDS

**A.** For Density District Standards See *Part 6B. (Density District Standards).*

**B.** For Density Rules See *Part 6C. (Density Rules).*

# DIV. 8.1. SPECIFIC PLANS (SP)

## SEC. 8.1.1. GENERAL

### A. Purpose

The purpose of a specific plan is to provide additional regulatory controls or incentives beyond, or in-lieu of, those provided in this Chapter for the systematic execution of the General Plan.

### B. Applicability

#### 1. Definition of Project

The definition of a project and the applicability of specific plan regulations are established in each specific plan.

#### 2. Specific Plan Guidelines

A specific plan may establish guidelines in order to provide guidance for the implementation of a specific plan, or for the review of projects seeking relief from the standards outlined in each specific plan.

#### 3. Reconciling Provisions

In the event that the regulations of this Division or a specific plan conflict with any provisions of the zoning districts, supplemental districts, or any other regulation, the specific plan shall prevail. In the event that a specific plan is silent regarding any provisions of the zoning districts, supplemental districts, or any other regulations, those provisions shall apply. Except that:

**a.** If any process or procedure established in a specific plan conflicts with those set forth in *Article 13* (Administration), the provisions of the specific plan shall prevail.

**b.** In the event that any provision of a sign district conflicts with the provisions of a specific plan, the provisions of the sign district shall prevail.

#### 4. Issuance of Building Permits

For any project within a specific plan, the Department of Building and Safety may not issue a building permit(s) for a project unless approved by the Department of City Planning pursuant to the applicable procedures identified in *Sec. 8.1.3.* (Review Procedures).

#### 5. Violations

The violation of any provision of an adopted specific plan or condition imposed by a decision-making body in approving the site requirements, methods of operation, development plans or other actions taken pursuant to the authority contained in each specific plan and this Division shall constitute a violation of this Chapter.

## SEC. 8.1.2. SPECIFIC PLAN STANDARDS

### A. Specific Plan Regulations

Regulations are established in each specific plan as a regulatory document outside of this Chapter.

## SEC. 8.1.3. PROCEDURES

### A. Establishing & Amending Specific Plans

Specific plans are established and amended by the City Council pursuant to *Sec. 13B.1.2.* (Specific Plan Adoption/Amendment), and are represented as part of the zone of a lot as outlined in *Sec. 1.4.2.*A.3. (Zoning Map; Applicability; Specific Plans & Supplemental Districts).

### B. Administrative Review

As permitted by the applicable specific plan, a project that complies with the applicable regulations in a specific plan may be approved pursuant to *Sec. 13B.3.1.* (Administrative Review).

### C. Project Compliance

A project that is subject to review and consideration by the Director of Planning for compliance with the applicable regulations and guidelines in a specific plan may be approved pursuant to *Sec. 13B.4.2.* (Project Compliance).

### D. Project Compliance (Design Review Board)

A project that is subject to review and consideration by the Director of Planning, with recommendation from a Design Review Board, for compliance with the applicable regulations and guidelines in a specific plan may be approved pursuant to *Sec. 13B.4.3.* (Project Compliance - Design Review Board).

### E. Project Adjustment

An applicant of a project that cannot comply with the requirements of a specific plan may request relief, as applicable, pursuant to *Sec. 13B.4.4.* (Project Adjustment).

### F. Project Exception

An applicant of a project that cannot comply with the requirements of a specific plan may request relief, as applicable, pursuant to *Sec. 13B.4.5.* (Project Exception).

### G. Specific Plan Interpretation

The Director of Planning may interpret specific plans pursuant to *Sec. 13B.4.6.* (Specific Plan Interpretation).

# DIV. 8.2. SUPPLEMENTAL DISTRICTS

## SEC. 8.2.1. GENERAL

### A. Purpose

The zoning system established in this Chapter provides responsive zoning solutions to a wide variety of policy objectives. However, some policies are difficult to express through the underlying zoning districts alone and are better addressed through topic- or geographic-specific regulations. The supplemental districts established in this Division are intended to provide additional regulations that build upon and enhance the regulations applied through the base zoning.

### B. Applicability

#### 1. Establishing Supplemental Districts

New supplemental districts are established, and the enabling provisions are amended by the City Council pursuant to *Sec. 13B.1.3.* (Zoning Code Amendment). Supplemental districts are applied to lots as outlined in each district, and are represented as part of the third bracket set of the zone of a lot, as outlined in *Sec. 1B.2.3.*A.2. (Zoning Map; Applicability; Specific Plans & Supplemental Districts), with the acronym established for each district.

#### 2. Limitations on Supplemental Districts

The supplemental districts established in this Division shall not supercede any zoning district, as established in *Sec. 1.4.2.*A.1. (Zoning Districts). Except that sign districts may supercede the sign regulations established by Development Standards Districts, and oil drilling districts may supersede the use regulations regarding oil and gas extraction in Use Districts.

#### 3. Definition of Project

The definition of a project and the applicability of supplemental district regulations are established in each supplemental district.

#### 4. Supplemental District Guidelines

A supplemental district may establish guidelines in order to provide guidance for the implementation of a supplemental district, or for the review of projects seeking relief from the standards outlined in each supplemental district.

#### 5. Reconciling Provisions

The enabling language of each supplemental district established in this Article shall establish direction regarding potential conflicts with any provisions of the zoning districts of a lot, specific plan, or any other regulation.

#### 6. Issuance of Building Permits

Unless otherwise stated in this Division, for any project within a supplemental district, the Department of Building and Safety may not issue a building permit(s) for a Project unless approved by the Department of City Planning pursuant to the applicable procedures identified in each supplemental district.

#### 7. Violations

The violation of any provision of a supplemental district or condition imposed by a decision-making body in approving the site requirements, methods of operation, development plans or other actions taken pursuant to the authority contained in this Division shall constitute a violation of this Chapter.

## SEC. 8.2.2. COMMUNITY PLAN IMPLEMENTATION OVERLAY (CPIO)

### A. Purpose

The purpose of Community Plan Implementation Overlay (CPIO) Districts is to provide supplemental regulations tailored to each community plan area. A CPIO is intended to:

**1.** Ensure that development enhances the unique architectural, environmental, and cultural qualities of each community plan area.

**2.** Integrate improvements and enhancements to the public right-of-way.

**3.** Maintain compatible land uses, scale, intensity, and density.

### B. Applicability

#### 1. Definition of Project

A definition of the term project, which shall set forth the type of developments or uses subject to the overly regulations and/or processes. The CPIO district may define the term "project" differently for each subarea.

#### 2. CPIO Guidelines

CPIO guidelines may be established in order to provide guidance for the implementation of, or review of projects seeking relief from the regulations outlined in each CPIO district.

#### 3. Reconciling Provisions

##### a. Zoning Districts

In the event that the provisions of a CPIO district conflict with the any other provision of a zoning district, the other provisions of the zoning district will prevail.

#### b. Other Supplemental Districts

In the event that the provisions of a CPIO district conflict with the any provisions of another supplemental district(s) or any other regulation, the more restrictive provision shall prevail.

#### c. Specific Plans and Historic Preservation Districts

Regardless of Paragraph b. above, where the provisions of a CPIO district conflict with those of a specific plan or historic preservation district, then the provisions of the specific plan or historic preservation district shall prevail.

### 4. Issuance of Permits

For all projects within a CPIO district, the Department of Building and Safety shall not issue a grading, building or change of use permit unless approved by the Department of City Planning pursuant to the applicable procedures identified in Subsection D. (Review Procedures) below.

## C. District Standards

Each CPIO district shall contain the following:

### 1. Subarea Boundaries

A map showing all sites within the district's subarea(s).

### 2. District Regulations

District regulations and definitions that may apply to any lot and/or public right-of-way within a CPIO district's subarea(s).

## D. Procedures

### 1. Establishing a CPIO

CPIO district regulations and boundaries are established and amended pursuant to *Section 14.3.2.* (Specific Plan Adoption/Amendment), and are represented as part of the third bracket set of the zone of a lot with the acronym "CPIO".

#### a. Boundaries

CPIO districts shall remain within the boundaries of a single community plan. Subarea boundaries shall be defined at the time the CPIO district is established.

#### b. Community Plan Implementation Overlay (CPIO) District Subareas

A CPIO district includes one or more defined subareas within which community plan programs and/or policies are implemented through additional regulations. Subareas may be contiguous or non-contiguous parcels characterized by common community plan goals, themes, and policies and grouped by a common boundary.

#### c. Minimum Area

Each CPIO District shall have a minimum of one mapped subarea, as defined in Paragraph b. above, to enable the initiation and activation of a CPIO district for a community plan.

### 2. Administrative Review

A project that complies with the applicable provisions of an adopted CPIO district may be approved pursuant to *Sec. 13B.3.1.* (Administrative Review). Project applicants which do not comply with the applicable CPIO district regulations may request relief through the procedures set forth in Subdivision 2. (Project Adjustment) and 3. (Project Exception) below.

### 3. Project Adjustment

Project applicants may request relief of up to 20 percent from the quantitative district regulations or minor adjustments from the qualitative district regulations in an adopted CPIO district subarea, unless otherwise limited by a CPIO district or CPIO district subarea, pursuant to *Sec. 13B.4.4.* (Project Adjustment).

#### a. Limitations

**i.** Each adopted CPIO district shall indicate those district regulations which are not eligible for a project adjustment. If an application request includes more than one project adjustment, the Director may require that the applicant, prior to the application being deemed complete, file the requests as a project exception, pursuant to *Sec. 13B.4.5.* (Project Exception).

**ii.** To the extent that a CPIO district contains sign regulations, signs shall not qualify for relief through a project adjustment.

**iii.** All other projects seeking relief from any district regulation that contains prohibition language, or district regulations otherwise designated in the CPIO district as not eligible for a project adjustment, shall be processed through the project exception procedures identified in Subdivision 3. below.

#### b. Supplemental Finding

In addition to the findings set forth in *Sec. 13B.4.4.* (Project Adjustment), the Director must also find that the project is compatible with the neighborhood character of the CPIO district or CPIO district subarea.

### 4. Project Exception

If a project cannot comply with the requirements of a CPIO, the applicant may request relief, as applicable, pursuant to *Sec. 13B.4.5.* (Project Exception).

#### a. Limitations.

An exception from a district regulation shall not be used to grant a special privilege, nor to grant relief from self-imposed hardships.

#### b. Supplemental Findings

In addition to the findings set forth in *Sec. 13B.4.5.* (Project Exception), the Area Planning Commission may grant a project exception from a district regulation concerning signs if it also makes all the following findings:

**i.** Strict compliance would result in practical difficulty or unnecessary hardship inconsistent with the purposes of the zoning restrictions due to unique existing physical circumstances on the subject property;

**ii.** An exception from the district regulation is necessary for the preservation and enjoyment of a substantial property right or use generally possessed by other property within the same CPIO district and/or Subarea, the same zone, and vicinity but which, because of special circumstances and practical difficulties or unnecessary hardships, is denied to the property in question;

**iii.** The exception would not constitute a special grant of privilege.

## SEC. 8.2.3. SIGN DISTRICTS (SN)

### A. Purpose

The purpose of a sign district is to identify areas of the City with unique characteristics that can be enhanced by the imposition of special sign regulations designed to reinforce the theme or unique qualities of that district, or which eliminate blight through a sign reduction program.

### B. Applicability

#### 1. Definition of Project

A project involves the erection, construction, addition to, or exterior structural alteration of any sign located within a sign district, and is subject to the regulations outlined in the sign district in which it is located, pursuant to Subsection C. (District Standards) below.

#### 2. Reconciling Provisions

In the event that the provisions of a sign district conflict with the any provisions of the zoning districts of a lot, specific plan, other supplemental district, or any other regulation, the sign district shall prevail.

#### 3. Issuance of Building Permits

For any project within a sign district, the Department of Building and Safety may issue a permit(s) for a project pursuant to Subsection D. (Review Procedures) below.

## C. District Standards

The district standards for each sign district shall be determined at the time the district is established. The sign regulations shall enhance the character of the district by addressing the location, number, square footage, height, light illumination, hours of illumination, sign reduction program, duration of signs, design and types of signs permitted, as well as other characteristics, and can include murals, supergraphics, and other on-site and off-site signs.

### 1. Definitions

Definitions shall conform with those found in Section 91.6203 (Signs; Location) of Chapter 9 (Building Regulations) of this Code, if defined in that Section.

### 2. Limitations on Standards

However, the standards for a sign district cannot supersede the regulations of a specific plan or supplemental district, as established in this Article, or zoning regulation needed to implement the provisions of an approved Development Agreement.

## D. Procedures

### 1. Establishing a Sign District

Sign district regulations and boundaries are established and amended pursuant to *Sec.13B.1.2.* (Specific Plan Adoption/Amendment), and are represented as part of the third bracket set of the zone of a lot with the acronym "SN".

#### a. Applicable Zones

Each sign district shall include only properties in the Commercial-Mixed, Commercial, Industrial-Mixed, or Industrial Use Districts, except that properties in Residential Use Districts with a Density District of "2" or higher may be included in a sign district provided that lots are within a General Plan Land Use Designation of "Regional Center".

#### b. Minimum Area

No sign district shall contain less than one block or three acres in area, whichever is the smaller. The total acreage in the district shall include contiguous parcels of land which may only be separated by public streets, ways or alleys, or other physical features, or as set forth in the rules approved by the Director of Planning. Precise boundaries are required at the time of application for or initiation of an individual district.

### 2. Review of Projects

A project that conforms to the district standards in a sign district may be approved by the Department of Building and Safety.

# SEC. 8.2.4. OIL DRILLING DISTRICTS (O)

## A. Purpose

The purpose of this Section is to provide for a process to create supplemental districts for oil drilling activities.

## B. Applicability

### 1. General Applicability

The provisions of this Section shall apply to the Use Districts where the drilling of oil wells or the production from the wells of oil, gases or other hydrocarbon substances is permitted. The provisions of this Section shall not apply to:

**a.** Lots in the Heavy Industrial 1 (MH1) Use District, except as specifically provided in this Section to the contrary.

**b.** The location of subterranean gas holding areas which are operated as a public utility and which are regulated by the provisions of *Article 5* (Use).

### 2. Definition of Project

No person shall drill, deepen, or maintain an oil well or convert an oil well from one class to the other, and no permits shall be issued for that use, until a determination has been made by the Zoning Administrator or Area Planning Commission pursuant to the procedure prescribed in Subdivision C.3. (District Standards; Drilling Site Requirements) below.

### 3. Oil Drilling Area Types

Each district shall be determined to be in one of the following oil drilling area types using the corresponding criteria: The standards and requirements of each oil drilling district depend on the oil drilling area type in which the district is located.

#### a. Non-Urbanized Area

All those portions of the City which the City Planning Commission or Council has determined will not be detrimentally affected by the drilling, maintenance, or operation of oil wells. In making its determination, the City Planning Commission, or the Council on appeal, shall give due consideration to the amount of land subdivided, the physical improvements, the density of population and the zoning of the district.

#### b. Urbanized Area

All land in the City, except land in the Heavy Industrial (MH1) Use District, and land which has been determined to be "Non-Urbanized Area" by the City Planning Commission or Council or land located in the "Los Angeles City Oil Field Area" (as identified below).

#### c. Offshore Area

All property in the City which is between the mean high tide line and the outermost seaward City boundary.

#### d. Los Angeles City Oil Field Area

All land in the City within the areas identified on the maps in Ordinance No. 156,166 located in Council File No. 80-3951 and shall include all oil producing zones beneath those areas but no deeper than the third zone beneath the surface of the earth.

### 4. Status of Areas

Where uncertainty exists as to whether or not a particular area shall be continued as an urbanized area, any person contemplating filing a petition for the establishment of an oil drilling district, may prior to its filing, request the City Planning Commission to determine the status of the area in which the proposed district is to be located. The Commission shall refer the request to the Director of Planning for investigation and upon receipt of his or her report shall determine whether the area is "Urbanized" or "Non-Urbanized". The determination of the City Planning Commission may be appealed to the Council, which may, by resolution, approve or disapprove the determination.

### 5. Description of Districts

The districts within which the drilling for and production of oil, gas or other hydrocarbon substances is permitted, and the conditions applying thereto (subject to further conditions imposed by the Zoning Administrator in the drilling site requirements), are described as follows:

**a.** Districts in Non-Urbanized Areas. (For boundaries of districts and special conditions applicable thereto, refer to maps and records maintained by the Department of City Planning.)

**b.** Districts in Urbanized Areas. (For boundaries of districts and special conditions applicable thereto, refer to maps and records maintained by the Department of City Planning.)

**c.** Districts in Offshore Areas. (For boundaries of districts and special conditions applicable thereto, refer to maps and records maintained by the Department of City Planning.)

**d.** Districts in the Los Angeles City Oil Field Area. (For boundaries of such districts and any conditions applicable thereto, refer to maps and records maintained by the Department of City Planning.)

### 6. Requirements for Filing

#### a. Non–Urbanized Areas

Each application for the establishment of an Oil Drilling District in an Non–Urbanized Area shall include property having a net area or not less than one acre (excluding public streets,

alleys walks or ways, except that an application may be filed on property containing less than one acre which is surrounded on all sides by streets. Such property may consist of one or more parcels of land which shall be contiguous, except that said parcels may be separated by a public alley or walk.

### b. Urbanized Areas

**i.** Each application for the establishment of an Oil Drilling District in an Urbanized Area shall contain a statement that the applicant has the proprietary or contractual authority to drill for and produce oil, gas, or other hydrocarbon substances under the surface of at least 75 percent of the property to be included in said district.

Any municipal body or official required by law to consider and make a report or recommendation relative to or to approve or disapprove such application may request the applicant in writing to submit for inspection copies of leases and contracts held by the applicant in support of such asserted proprietary or contractual authority. The limitations of time for acting upon such application shall be suspended from the time of mailing such request until the documents requested have been submitted.

**ii.** Where said authority to drill for and produce oil, gas and other hydrocarbons is pursuant to contract, said application shall be accompanied by a copy thereof, and said contract shall have attached thereto and referred to therein by reference the following information for the contracting parties:

**a)** A summary of the provisions of this Code, as amended, which are applicable to the district, prepared or approved by the Board of Public Works or its designee;

**b)** Any additional information which the person in charge of Petroleum Administration finds from time to time is required to give all contracting parties a reasonably complete knowledge of oil and gas leasing requirements and procedures in urbanized areas within the City.

**iii.** The district described in said application shall be not less than 40 acres in area, including all streets, ways and alleys within the boundary thereof; shall be substantially compact in area; and the boundaries thereof shall follow public streets, ways or alleys as far as practicable.

**iv.** Each applicant for the establishment of an oil drilling district in an Urbanized Area shall be accompanied by a report from a petroleum geologist who:

**a)** Is an active member of the American Association of Petroleum Geologists or the American Institute of Professional Geologists; or

**b)** Meets the educational and experience requirements to become an active member of the American Association of Petroleum Geologists or the American Institute of Professional Geologists, that the production of oil from under the proposed district would not, in his or her opinion, result in any noticeable subsidence. If the City's

authorized person in charge of Petroleum Administration disagrees in any way with the report, he or she shall submit in writing his or her own views on the report as part of the report to the City Planning Commission.

### c. Offshore Areas

Each application for the establishment of an oil drilling district in an Offshore Area shall include property having a net area of not less than 1,000 acres.

### d. Los Angeles City Oil Field Area

Each application for the establishment of an oil drilling district in the Los Angeles City Oil Field Area shall:

**i.** Include property not less than one acre in size, bounded on each side by a public street, alley, walk or way and such district shall be wholly contained within the Los Angeles City Oil Field Area.

**ii.** Contain a statement that the applicant has the proprietary or contractual authority to drill for and produce oil, gas or other hydrocarbon substances under the surface of at least 75% of the total land area of the property to be included in said district. Any municipal body or official required by law to consider and make a report or recommendation relative to or to approve or disapprove such application may request the applicant in writing to submit for inspection copies of leases and contracts held by applicant in support of such asserted proprietary or contractual authority. The limitations of time for acting upon such application shall be suspended from the time of mailing such request until the documents requested have been submitted.

[**Editor's note:** Maps formerly referred to in this Paragraph were deleted by Ord. No. 177,103, Eff. 12/18/05.]

### e. General - All Areas

No application for the establishment of an Oil Drilling District shall be accepted for filing in the City Planning Department unless it has first been submitted to and reported on by the authorized person in charge of Petroleum Administration. The report shall consider the propriety of the proposed boundaries of the district, the desirability of the drill site location and whether or not the exploration for oil is geologically justified in the district. The report shall be made within 30 days of the receipt of the application. A copy of the report shall accompany the application when it is filed with the Department of City Planning.

## C. District Standards

### 1. Standard Conditions

#### a. Non-Urbanized Areas

Each oil drilling district established in a Non-Urbanized Area shall be subject to the following conditions:

**i.** Each district shall contain a net area of one acre or more which shall be composed of contiguous parcels of land that may be separated by an alley or walk, except that a district may contain an area of less than one acre where it is surrounded on all sides by streets.

**ii.** Each drilling site in any district shall contain a net area of one acre or more and shall be composed of contiguous parcels of land which may be separated only by an alley or walk. A drilling site may contain less than one acre of area where it is surrounded on all sides by public or approved private streets.

**iii.** Only one oil well Class A may be established or maintained on each acre of land, except that there may be one oil well Class A on any land surrounded on all sides by public or approved private streets. Provided, however, in determining conditions for drilling pursuant to Subdivision 3. (Drilling Site Requirements) below, the Zoning Administrator may permit surface operations for more than one oil well Class A in a semi-controlled drilling site where the additional wells are to be bottomed under adjacent land in a drilling district in lieu of surface operations. There shall be no less than one net acre of land in the combined drill site and production site for each well in a semi-controlled drilling site. The Zoning Administrator shall require a site of more than one acre for each oil well where a larger area is required in the particular oil drilling district. The Zoning Administrator may require larger minimum drilling sites or production areas when reasonably necessary in the public interest for a particular oil producing section.

**iv.** Where drilling sites greater than one acre are required and two or more lessees or oil drilling developers in a block or area have at least one net acre each, but all lessees or developers do not have the greater area required for drilling under these regulations, the Zoning Administrator shall equitably allocate permitted wells among the competing lessees or developers. Where necessary, the lessee or developer having control of the larger portion of the property shall be given preference. In those situations outlined above, in addition to the proration required by Subparagraph iv. below, the Zoning Administrator shall require that the lessee or developer who is authorized to drill the well shall offer an equitable consolidation agreement to the lessee or developer who has not been permitted to drill. This consolidation agreement shall contain an offer in writing, open for acceptance for 30 days, giving the other lessees or developers a choice of either:

**a)** A lease on terms and conditions agreed upon, or on substantially the same terms and conditions contained in leases owned by the applicant; or,

**b)** A consolidation agreement agreed upon providing that each lessee or developer shall contribute to the cost of drilling and operation of the well and share in the production from the well in the proportion that the area of his property bears to the total area in the drilling unit.

**v.** No public street, alley, walk or way shall be included in determining the net area within any district or drilling site.

**vi.** Where the drilling site is so located as to isolate any parcel of land in the oil drilling district in such a manner that it could not be joined with any other land so as to create another drilling site of the area required in the particular district in which it is located, the Zoning Administrator shall require, as a condition to the drilling and production on the drilling site that the owner, lessee or permittee or his or her successor shall pay to the owners of the oil and gas mineral rights in each isolated parcel, a pro-rata share of the landowners' royalty in all of the oil and gas produced from the drilling site, the share to be in that proportion as the net area of the isolated parcel is to the total net area of the drilling site plus the area of all the isolated parcels; provided that the landowners' royalty shall be determined in accordance with any existing contracts for payments to the landowners of the drilling site, but, in no event, as to the owner of the isolated parcel or parcels, shall it be less than a 1/6th part of the oil and gas produced and saved from the drilling site.

### b. Urbanized Areas

Each oil drilling district established in an Urbanized Area shall he subject to the following conditions:

**i.** Each district shall be not less than 40 acres in area, including all streets, ways, and alleys within the boundaries thereof.

**ii.** No more than one controlled drill site shall be permitted for each 40 acres in any district and that site shall not be larger than two acres when used to develop a district approximating the minimum size; provided, however, that where the site is to be used for the development of larger oil drilling districts or where the Zoning Administrator requires that more than one oil drilling district be developed from one controlled drilling site, the site may be increased, at the discretion of the Zoning Administrator when concurred in by the Board of Fire Commissioners, by no more than two acres for each 40 acres included in the district or districts.

**iii.** The number of oil wells Class A which may be drilled and operated from any controlled drilling site may not exceed one well to each five acres in the district or districts to be explored from said site.

Notwithstanding the above, should the City Council determine that an Urbanized Oil Drilling District contains more than one producing zone, the City Council may then authorize, by ordinance, the drilling of additional oil wells Class A, not to exceed one well per five acres for each identified producing zone, and specify the maximum number of wells to be drilled as the result of such authorization.

**iv.** Each applicant, requesting a determination by the Zoning Administrator prescribing the conditions controlling drilling and production operations, as provided in Subdivision 3. (Drilling Site Requirements) below, must have proprietary or contractual authority to drill for oil under the surface of at least 75 percent of the property in the district to be explored.

**v.** Each applicant or his or her successor in interest shall, within one year from the date the written determination is made by the Zoning Administrator prescribing the conditions controlling drilling and production operations as provided in Subdivision 3. (Drilling Site Requirements) below, execute an offer in writing giving to each record owner of property located in the oil drilling district who has not joined in the lease or other authorization to drill the right to share in the proceeds of production from wells bottomed in the district, upon the same basis as those property owners who have, by lease or other legal consent, agreed to the drilling for and production of oil, gas or other hydrocarbon substances from the subsurface of the district. The offer hereby required shall remain open for acceptance for a period of five years after the date the written determination is made by the Zoning Administrator. During the period the offer is in effect, the applicant, or his or her successor in interest, shall impound all royalties to which the owners or any of them may become entitled in a bank or trust company in the State of California, with proper provisions for payment to the record owners of property in the district who had not signed the lease at the time the written provisions were made by the Zoning Administrator, but who accepts the offer in writing within the five-year period. Any such royalties remaining in any bank or trust company at the time the offer expires which are not due or payable as provided above shall be paid pro-rata to those owners who, at the time of the expiration, are otherwise entitled to share in the proceeds of the production.

**vi.** The entire controlled drilling site shall be adequately landscaped, except for those portions occupied by any required structure, appurtenance or driveway, and all landscaping shall be maintained in good condition at all times. Plans showing the type and extent of the landscaping shall be first submitted to and approved by the Zoning Administrator.

**vii.** Each applicant, requesting a determination by the Zoning Administrator prescribing the conditions controlling drilling and production operations, as provided in Subdivision 3. (Drilling Site Requirements) below, shall post in the Office of Zoning Administration a satisfactory corporate surety bond (to be approved by the City Attorney and duplicates to be furnished to him or her) in the sum of $5,000 in favor of the City of Los Angeles, conditioned upon the performance by the applicant of all of the conditions,

provisions, restrictions and requirements of this Section, and all additional conditions, restrictions or requirements determined and prescribed by the Zoning Administrator. No extension of time that may be granted by the Zoning Administrator or any change or specifications or requirements that may be approved or required by him or her or by any other officer or department of the City or any other alteration, modification of waiver affecting any of the obligations of the grantee made by any City authority or by any other power or authority whatsoever shall be deemed to exonerate either the grantee or the surety on any bond posted pursuant to this Section.

**viii.** If the Zoning Administrator determines, after first receiving a report and recommendation from the Board of Public Works or its designee, that oil drilling and production activities within the district have caused or may cause subsidence in the elevation of the ground within the district or in the immediate vicinity, then after consulting with recognized experts in connection with that problem and with those producing hydrocarbons from the affected area, he or she shall have the authority to require the involved oil producer or producers to take corrective action, including re-pressurizing the oil producing structure or cessation of oil drilling and production.

**ix.** The Zoning Administrator may impose additional conditions or require corrective measures to be taken if he or she finds, after actual observation or experience with drilling one or more of the wells in the district, that additional conditions are necessary to afford greater protection to surrounding property.

### C. Offshore Areas

Each oil drilling district established in an Offshore Area shall be subject to the following conditions:

**i.** All activities conducted within each such district shall conform to the spirit and intent of the provisions of the Submerged Land Special District as established in *Sec. 1.4.2.* (Zoning Map).

**ii.** No surface or submarine drilling or producing operations shall be permitted between the mean high tide line and the outermost seaward City boundary. Surface drilling or producing operations may be conducted only from permitted or approved onshore drillsites. Oil and gas accumulations may be developed by directional or slant drilling beneath any portion of the submerged land within the district.

**iii.** Onshore drilling and producing operations utilizing directional or slant drilling may be approved by the Zoning Administrator only when a showing is made that production of oil and gas cannot be accomplished from already approved or permissible sites.

**iv.** The number of oil wells Class A which may be drilled into any offshore drilling district from a single installation or facility onshore shall not exceed one well to each five acres of district and the installation and operation of all wells shall meet the requirements of the Submerged Land Special District as established in *Sec. 1.4.2.* (Zoning Map).

**v.** Each applicant requesting a determination by the Zoning Administrator prescribing the conditions controlling drilling and production operations, as provided in Subdivision 3. (Drilling Site Requirements) below, shall post in the Office of Zoning Administration a satisfactory corporate surety bond (to be approved by the City Attorney and duplicates to be furnished to him or her) in the sum of $50,000 in favor of the City, conditioned upon the performance by the applicant of all of the conditions, provisions, restrictions and requirements of this section, and all additional conditions, restrictions, or requirements determined and prescribed by the Zoning Administrator. No extension of time that may be granted by the Zoning Administrator on any change of specifications on requirements that may be approved or required by him or her or by any other officer or department of the City or any other alteration, modification or waiver affecting any of the obligations of the applicant made by any City authority or by any other power or authority whatsoever shall be deemed to exonerate either the applicant or the surety on any bond posted pursuant to this section.

**vi.** All derricks and other drilling facilities shall be removed within 30 days after completion or abandonment of the well; and thereafter any work done on any existing well which requires redrilling or reconditioning shall be done by temporary or portable equipment which shall be removed within 30 days after completion of such work.

**vii.** Pollution of water and contamination or soiling of the urban coastline or beaches are prohibited.

### d. Los Angeles City Oil Field Area

Each oil drilling district established in the Los Angeles City Oil Field Area shall be subject to the following conditions:

**i.** The boundary of each district shall follow the center line of city streets as far as practicable;

**ii.** Each district shall include the streets, ways, and alleys within the boundaries thereof and shall be substantially compact in area;

**iii.** The drilling, pumping, redrilling, repairing, maintenance or other servicing of any new oil well Class A in said district shall be conducted only on a Drilling and Production Site in the Los Angeles City Oil Field Area upon which site at least one oil well Class A:

**a)** Was in existence on January 24, 1982; and

**b)** Had not been abandoned in accordance with State Division of Oil and Gas regulations prior to January 24, 1982; and

**c)** Has a Los Angeles Fire Department Serial Number, which number was in existence on January 24, 1982.

**iv.** The number of new oil wells Class A permitted on such a Drilling and Production Site in the Los Angeles City Oil Field Area shall not exceed one well to each acre in the District;

**v.** Each applicant, requesting a determination by the Zoning Administrator prescribing the conditions controlling new drilling and production operations as provided in Subdivision 3. (Drilling Site Requirements) below, must have proprietary or contractual authority to drill for oil under the surface of at least 75% of the total land area of the property in the district to be explored.

**vi.** Within one year from the date the written determination is made by the Zoning Administrator prescribing the conditions controlling drilling and production operations, as provided in Subdivision 3. (Drilling Site Requirements) below, each applicant or his or her successor in interest shall offer in writing to each record owner of property located in the oil drilling district who has not joined in the lease or other authorization to drill, the right to share in proceeds of production from new wells bottomed in the district upon the same basis as those property owners who have, by lease or other legal consent, agreed to the drilling for and production of oil, gas or other hydrocarbon substances from the sub-surface of the district. The offer hereby required shall remain open for acceptance for a period of five years after the date the written determination is made by the Zoning Administrator. During the period the offer is in effect, the applicant, or his or her successor in interest, shall impound all royalties to which the owners or any of them may become entitled in a bank or trust company in the State of California, with proper provisions for payment to the record owners of property in the district who had not signed the lease at the time the written determination was made by the Zoning Administrator, but who accepts the offer in writing within the five-year period. Any royalties remaining in any bank or trust company at the time the offer expires which are not due or payable as provided above shall be paid pro-rata to those owners who, at the time of the expiration, are otherwise entitled to share in the proceeds of the production.

**vii.** The entire site upon which new oil wells are to be drilled shall be adequately fenced and landscaped; plans showing the type and extent of the landscaping shall be first submitted to and approved by the Zoning Administrator.

**viii.** Each applicant requesting a determination by the Zoning Administrator prescribing the conditions controlling drilling and production operations, as provided in Subdivision 3. (Drilling Site Requirements) below, shall post in the Office of Zoning Administration a satisfactory corporate surety bond (to be approved by the City Attorney and duplicates to be furnished by him or her) in the sum of $5,000 in favor of the City of Los

Angeles, conditioned upon the performance by the applicant of all of the conditions, provisions, restrictions, and requirements of this section, and all additional conditions, restrictions, or requirements determined and prescribed by the Zoning Administrator. No extension of time that may be granted by the Zoning Administrator or any change of specifications or requirements that may be approved or required by him or her or by any other officer or department of the City or any other alteration, modification or waiver affecting any of the obligations of the grantee made by any city authority or by any other power or authority whatsoever shall be deemed to exonerate either the grantee or the surety of any bond posted pursuant to this section.

**ix.** If the Zoning Administrator determined after first receiving a report and recommendation from the Board of Public Works or its designee that oil drilling and production activities within the district have caused or may cause subsidence in the elevation of the ground within the district or in the immediate vicinity, he or she shall have the authority, after consulting with recognized experts in connection with the problem and with those persons producing hydrocarbons from the affected area, to require the involved oil producer or producers to take corrective action, including re-pressurizing the oil producing structure or cessation of oil drilling and production.

**x.** The Zoning Administrator may impose additional conditions or require corrective measures to be taken if the Zoning Administrator finds, after actual observation or experience with drilling one or more of the wells in the district, that additional conditions are necessary to afford greater protection to surrounding property.

**xi.** Any operator of any site within an oil drilling district, approved by the Zoning Administrator pursuant to *Sec. 12A.3.9.*C. (Nonconforming Oil Wells), may apply to the Department of City Planning for the establishment of fencing and landscaping requirements. Once the requirements have been satisfied, the operator shall be relieved of the restrictions specified in *Sec. 12A.3.9.*B. and C. (Nonconforming Oil Wells). Should an operator of such a site in a district desire to redrill or deepen a oil well Class A, if the oil well:

**a)** Was in existence on January 24, 1982; and

**b)** Had not been officially abandoned in accordance with State Division of Oil and Gas Regulations prior to January 24, 1982; and

**c)** Has a Los Angeles Fire Department serial number and the number was in existence on January 24, 1982, that operator shall comply with the provisions of Subdivision 3. (Drilling Site Requirements) below. Compliance with the Determination of Conditions issued shall relieve the operator of the restrictions specified in *Sec. 12A.3.9.*B. and C. (Nonconforming Oil Wells).

## 2. Additional Conditions

**a.** In addition to the standard conditions applying to oil drilling districts, the Council, by ordinance, or the Zoning Administrator may impose other conditions in each district as deemed necessary and proper. Where these conditions are imposed by ordinance, they may be subsequently modified or deleted in the following manner:

**i.** Where the condition relates to the location of a drill site within a district, by amending the ordinance, only after the submission of an application, the payment of fees, notice, hearing and procedure identical to that required by this article for the establishment of an oil drilling district; and

**ii.** Where the condition does not relate to the location of a drill site, by amending the ordinance, without the necessity of fees, notice or hearing.

**b.** In its report to the Council relative to the establishment of a district, the City Planning Commission may recommend conditions for consideration. Some of these additional conditions, which may be imposed in the ordinance establishing the districts or by the Zoning Administrator in determining the drilling site requirements, and which may be applied by reference, are as follows:

**i.** That all pumping units established in the subject district(s) shall be installed in pits so that no parts thereof will be above the surface of the ground.

[**Editor's note:** Formally 13.01.F.1. of Chapter 1 of this Code]

**ii.** That all oil produced in the subject district(s) shall be carried away by pipe lines or, if stored in said district, shall be stored in underground tanks so constructed that no portion thereof will be above the surface of the ground.

[**Editor's note:** Formally 13.01.F.2. of Chapter 1 of this Code]

**iii.** That the operator of any well or wells in the subject district(s) shall post in the Office of Zoning Administration a $5,000 corporate surety bond conditioned upon the faithful performance of all provisions of this article and any conditions prescribed by the Zoning Administrator. No extension of time that may be granted by the Zoning Administrator, or change of specifications or requirements that may be approved or required by the Zoning Administrator or by any other officer or department of the City, or other alteration, modification or waiver affecting any of the obligations of the grantee made by any City authority shall be deemed to exonerate either the grantee or the surety on any bond posted as required in this Code.

[**Editor's note:** Formally 13.01.F.3. of Chapter 1 of this Code]

**iv.** That the operators shall remove the derrick from each well within 30 days after the drilling of said well has been completed, and thereafter, when necessary, such completed wells shall be serviced by portable derricks.

[**Editor's note:** Formally 13.01.F.4. of Chapter 1 of this Code]

**v.** That the drilling site shall be fenced or landscaped as prescribed by the Zoning Administrator.

[**Editor's note:** Formally 13.01.F.5. of Chapter 1 of this Code]

**vi.** That, except in case of emergency, no materials, equipment, tools or pipe used for either drilling or production operations shall be delivered to or removed from the drilling site, except between the hours of 8:00 A.M. and 8:00 P.M. of any day.

[**Editor's note:** Formally 13.01.F.7. of Chapter 1 of this Code]

**vii.** That adequate fire fighting apparatus and supplies, approved by the Fire Department, shall be maintained on the drilling site at all times during drilling and production

[**Editor's note:** Formally 13.01.F.8. of Chapter 1 of this Code] operations.

**viii.** That no refining process or any process for the extraction of products from natural gas shall be carried on at a drilling site.

[**Editor's note:** Formally 13.01.F.9. of Chapter 1 of this Code]

**ix.** That no more than one well shall be bottomed in each five acres of the oil drilling district.

[**Editor's note:** Formally 13.01.F.13. of Chapter 1 of this Code]

**x.** That no new oil wells shall be spudded in after the President of the United States, or other proper authority, has declared that a state of war no longer exists.

[**Editor's note:** Formally 13.01.F.14. of Chapter 1 of this Code]

**xi.** That any person requesting a determination by the Zoning Administrator prescribing the conditions under which oil drilling and production operations shall be conducted as provided in Subdivision 3. (Drilling Site Requirements) below, shall agree in writing on their own behalf and their successors or assigns, to be bound by all of the terms and conditions of this article and any conditions prescribed by written determination by the Zoning Administrator; provided, however, that the agreement in writing shall not be construed to prevent the applicant or their successors or assigns from applying at any time for amendments pursuant to this Code or to the conditions prescribed by the Zoning Administrator, or from applying for the creation of a new district or an extension of time for drilling or production operations.

[**Editor's note:** Formally 13.01.F.17. of Chapter 1 of this Code]

**xii.** That all production equipment used shall be so constructed and operated that no noise, vibration, dust, odor, or other harmful or annoying substances or effect which can be eliminated or diminished by the use of greater care shall ever be permitted to result from production operations carried on at any drilling site or from anything incident thereto to the injury or annoyance of persons living in the vicinity; nor shall the site or structures thereon be permitted to become dilapidated, unsightly, or unsafe. Proven technological improvements in methods of production shall he adopted as they, from time to time, become available if capable of reducing factors of nuisance or annoyance.

[**Editor's note:** Formally 13.01.F.18. of Chapter 1 of this Code]

**xiii.** Wells which are placed upon the pump shall be pumped by electricity with the most modern and latest type of pumping units of a height of no more than 16 feet. All permanent equipment shall be painted and kept in neat condition. All production operations shall be as free from noise as possible with modern oil operations.

[**Editor's note:** Formally 13.01.F.19. of Chapter 1 of this Code]

**xiv.** All drilling equipment shall be removed from the premises immediately after drilling is completed, sump holes filled, and derricks removed within 60 days after the completion of the well.

[**Editor's note:** Formally 13.01.F.20. of Chapter 1 of this Code]

**xv.** That, subject to the approval of the Board of Fire Commissioners, the operators shall properly screen from view all equipment used in connection with the flowing or pumping of wells.

[**Editor's note:** Formally 13.01.F.21. of Chapter 1 of this Code]

**xvi.** Upon the completion of the drilling of a well the premises shall be placed in a clean condition and shall be landscaped with planting of shrubbery so as to screen from public view as far as possible, the tanks and other permanent equipment, such landscaping and shrubbery to be kept in good condition.

[**Editor's note:** Formally 13.01.F.22. of Chapter 1 of this Code

**xvii.** That no more than two wells may be drilled in each city block of the oil drilling district and bottomed under that block. However, at the discretion of the Zoning Administrator, surface operations for additional wells may be permitted in each of the blocks where each additional well is to be directionally drilled and bottomed under an adjacent block now or hereafter established in an oil drilling district in lieu of a well drilled on the adjacent block and under a spacing program which will result in not exceeding two wells bottomed under each block.

[**Editor's note:** Formally 13.01.F.23. of Chapter 1 of this Code]

**xviii.** That no more than one well shall be drilled in each city block of the oil drilling district; provided, however, that a second well may be drilled in that block bounded by "L", Gulf Avenue, Denni Street and Wilmington Boulevard, only in the event said second well be directionally drilled or whipstocked so that the bottom of the hole will be bottomed under the (Gulf Avenue School property located in the block bounded by "L" Street, Roman Avenue, Denni Street and Gulf Avenue, and in lieu of a well which might otherwise be permitted to be drilled in said last mentioned block.

[**Editor's note:** Formally 13.01.F.24. of Chapter 1 of this Code]

**xix.** That no more than one well may be drilled in each city block of the oil drilling district.

[**Editor's note:** Formally 13.01.F.25. of Chapter 1 of this Code]

**xx.** That all power operations other than drilling in said district shall at all times he carried on only by means of electrical power, which power shall not be generated on the drilling site.

[**Editor's note:** Formally 13.01.F.26. of Chapter 1 of this Code]

**xxi.** That no more than two wells may be drilled in each city block of the oil drilling district; provided, however, that two additional wells may be drilled in each of the following described blocks, (a) the block bounded by Q Street, Lakme Avenue, Sandison Street and Broad Avenue and (b) the block bounded by Sandison Street, Lakme Avenue, Broad Avenue and the southerly boundary of Tract No. 1934, but only if such additional wells are directionally drilled or whipstocked so that they will be bottomed under the Hancock–Banning High school property, located in the block bounded by Delores Street, Broad Avenue, Pacific Coast Highway and Avalon Boulevard, in lieu of the four wells which might otherwise be permitted to be drilled in the last mentioned block.

[**Editor's note:** Formally 13.01.F.29. of Chapter 1 of this Code]

**xxii.** No more than four controlled drilling sites shall be permitted in this subject district(s), and such sites shall not be larger than two acres.

[**Editor's note:** Formally 13.01.F.31. of Chapter 1 of this Code]

**xxiii.** The number of wells which may be drilled to any oil sand from the controlled drilling site shall not exceed one well to each five acres in the district, but in no event shall there be more than one well to each two and one-half acres.

[**Editor's note:** Formally 13.01.F.32 of Chapter 1 of this Code]

**xxiv.** That drilling operations shall be commenced within 90 days from the effective date the written determination is made by the Zoning Administrator or Area Planning Commission, or within any additional period as the Zoning Administrator may, for good cause, allow and thereafter shall be prosecuted diligently to completion or

else abandoned strictly as required by law and the premises restored to their original condition as nearly as practicable as can be done. If a producing well is not secured within eight months, the well shall be abandoned and the premises restored to its original condition, as nearly as practicable as can be done. The Zoning Administrator, for good cause, shall allow additional time for the completion of the well.

[**Editor's note:** Formally 13.01.F.33. of Chapter 1 of this Code]

**xxv.** That an internal combustion engine or electrical equipment may be used in the drilling or pumping operations of the well, and if an internal combustion engine is used, that mufflers be installed on the mud pumps and engine so as to reduce noise to a minimum, all of said installations to be done in a manner satisfactory to the Fire Department.

[**Editor's note:** Formally 13.01.F.34. of Chapter 1 of this Code]

**xxvi.** That no more than two production tanks shall be installed for each producing well, neither one of which shall have a rated capacity in excess of 1,000 barrels; provided, however, that if in the opinion of the Administrator it is necessary in order to provide for the maximum safety of operations or to decrease the number of individual production tank settings on any property, the Administrator may increase the number of such production tanks to no more than three, having a greater capacity not to exceed 2,000 barrels each. The Administrator shall permit such wash tanks or heating facilities as may appear necessary to ship or remove production from the premises. The plans for said tank or tanks, including the plot plan showing the location thereof on the property, shall be submitted to and approved in writing by the Administrator before said tank or tanks and appurtenances are located on the premises; and that said tank or tanks and appurtenances shall be kept painted and maintained in good condition.

[**Editor's note:** Formally 13.01.F.36. of Chapter 1 of this Code]

**xxvii.** All waste substances such as drilling muds, oil, brine or acids produced or used in connection with oil drilling operations or oil production shall be retained in water–tight receptors from which they may he piped or hauled for terminal disposal in a dumping area specifically approved for such disposal by the Los Angeles Regional Water Pollution Control Board No. 4.

[**Editor's note:** Formally 13.01.F.37. of Chapter 1 of this Code]

**xxviii.** Any wells drilled shall be cased tight to bedrock or effective means satisfactory to the Department of Water and Power used to prevent vertical movement of ground water.

[**Editor's note:** Formally 13.01.F.38. of Chapter 1 of this Code]

**xxix.** The applicant shall provide the Department of Water and Power with a precise plot plan of the drilling plant and roads leading thereto, and to make such safeguards as the Department deems necessary to assure the safety of the existing 50" water main which crosses the district involved.

[**Editor's note:** Formally 13.01.F.39. of Chapter 1 of this Code]

**xxx.** The Department of Water and Power of the City of Los Angeles shall be permitted to review and inspect methods used in the drilling and producing operations and in the disposal of waste, and shall have the right to require changes necessary for the full protection of the public water supply.

[**Editor's note:** Formally 13.01.F.40. of Chapter 1 of this Code]

**xxxi.** That the number of wells which may be drilled to any oil sand shall not exceed one well to each five acres in the district, but in no event shall there be more than one well to each two and one–half acres.

[**Editor's note:** Formally 13.01.F.42. of Chapter 1 of this Code]

**xxxii.** That drilling, pumping and other power operations shall at all times be carried on only by electrical power and that such power shall not be generated on the controlled drilling site or in the district.

[**Editor's note:** Formally 13.01.F.43. of Chapter 1 of this Code]

**xxxiii.** That an internal combustion engine or steam-driven equipment may be used in the drilling or pumping operations of the well , and, if an internal combustion engine or steam-driven equipment is used, that mufflers be installed on the mudpumps and engine; and that the exhaust from the steam-driven machinery be expelled into one of the production tanks, if such tanks are permitted, so as to reduce noise to a minimum, all of said installations to be found in a manner satisfactory to the Fire Department.

[**Editor's note:** Formally 13.01.F.44. of Chapter 1 of this Code]

**xxxiv.** That drilling operations shall be carried on or conducted in connection with only one well at a time in any one such district, and such well shall be brought in or abandoned before operations for the drilling of another well are commenced; provided, however, that the Administrator may permit the drilling of more than one well at a time after the discovery well has been brought in.

[**Editor's note:** Formally 13.01.F.45. of Chapter 1 of this Code]

**xxxv.** That all oil drilling and production operations shall be conducted in such a manner as to eliminate, as far as practicable, dust, noise, vibration or noxious odors, and shall be in accordance with the best accepted practices incident to drilling for and production of oil, gas and other hydrocarbon substances. Proven technological

improvements in drilling and production methods shall be adopted as they may become, from time to time, available, if capable of reducing factors of nuisance and annoyance.

[**Editor's note:** Formally 13.01.F.46. of Chapter 1 of this Code]

**xxxvi.** That all parts of the derrick above the derrick floor not reasonably necessary for ingress and egress including the elevated portion thereof used as a hoist, shall be enclosed with fire–resistive soundproofing material approved by the Fire Department, and the same shall be painted or stained so as to render the appearance of said derrick as unobtrusive as practicable.

[**Editor's note:** Formally 13.01.F.47. of Chapter 1 of this Code]

**xxxvii.** That all tools, pipe and other equipment used in connection with any drilling or production operations shall be screened from view, and all drilling operations shall be conducted or carried on behind a solid fence, which shall be maintained in good condition at all times and be painted or stained so as to render such fence as unobtrusive as practicable.

[**Editor's note:** Formally 13.01.F.48. of Chapter 1 of this Code]

**xxxviii.** That no materials, equipment, tools or pipe used for either drilling or production operations shall be delivered to or removed from the controlled drilling site except between the hours of 8:00 am and 6:00 pm, on any day, except in case of emergency incident to unforeseen drilling or production operations, and then only when permission in writing has been previously obtained from the Zoning Administrator.

[**Editor's note:** Formally 13.01.F.49. of Chapter 1 of this Code]

**xxxix.** That no earthen sumps shall be used.

[**Editor's note:** Formally 13.01.F.50. of Chapter 1 of this Code]

**xl.** That within 60 days after the drilling of each well has been completed, and said well placed on production, or abandoned, the derrick, all boilers and all other drilling equipment shall be entirely removed from the premises unless such derrick and appurtenant equipment is to be used within a reasonable time limit determined by the Administrator for the drilling of another well on the same controlled drilling site.

[**Editor's note:** Formally 13.01.F.51. of Chapter 1 of this Code]

**xli.** That no oil, gas or other hydrocarbon substances may be produced from any well hereby permitted unless all equipment necessarily incident to such production is completely enclosed within a building, the plans for said building to be approved by the Department of Building and Safety and the Fire Department. This building shall be of a permanent type, of attractive design and constructed in a manner that will

eliminate as far as practicable, dust, noise, noxious odors and vibrations or other conditions which are offensive to the senses, and shall be equipped with such devices as are necessary to eliminate the objectionable features mentioned above. The architectural treatment of the exterior of such building shall also be subject to the approval of the Zoning Administrator.

[**Editor's note:** Formally 13.01.F.52. of Chapter 1 of this Code]

**xlii.** That no oil, gas or other hydrocarbon substances may be produced from any well hereby permitted where same is located within or immediately adjoining subdivided areas where 10 percent of the lots or subdivided parcels of ground, within one-half mile radius thereof, are improved with residential structures, unless all equipment necessarily incidental to such production is countersunk below the natural surface of the ground and such installation and equipment shall be made in accordance with Fire Department requirements.

[**Editor's note:** Formally 13.01.F.53. of Chapter 1 of this Code]

**xliii.** That there shall be no tanks or other facilities for the storage of oil erected or maintained on the premises and that all oil products shall be transported from the drilling site by means of an underground pipe line connected directly with the production pump without venting products to the atmospheric pressure at the production site.

[**Editor's note:** Formally 13.01.F.54. of Chapter 1 of this Code]

**xliv.** That no more than two production tanks shall be installed on said drilling site, neither one of which shall have a rated capacity in excess of 1,000 barrels; that the plans for said tank or tanks, including the plot plans showing the location thereof on the property, shall be submitted to and approved in writing by the Administrator before said tank or tanks and appurtenances are located on the premises, and that said tank or tanks and appurtenances shall be kept painted and maintained in good condition at all times.

[**Editor's note:** Formally 13.01.F.55 of Chapter 1 of this Code.]

**xlv.** That any production tanks shall be countersunk below the natural surface of the ground and the installation thereof shall be made in accordance with safety requirements of the Fire Department.

[**Editor's note:** Formally 13.01.F.56. of Chapter 1 of this Code]

**xlvi.** That no refinery, dehydrating or absorption plant of any kind shall be constructed, established or maintained on the premises at any time.

[**Editor's note:** Formally 13.01.F.57. of Chapter 1 of this Code]

**xlvii.** That no sign shall be constructed, erected, maintained or placed on the premises or any part thereof, except those required by law or ordinance to be displayed in connection with the drilling or maintenance of the well.

[**Editor's note:** Formally 13.01.F.58. of Chapter 1 of this Code]

**a)** That suitable and adequate sanitary toilet and washing facilities shall be installed and maintained in a clean and sanitary condition at all times.

[**Editor's note:** Formally 13.01.F.59. of Chapter 1 of this Code]

**b)** That any owner, lessee or permittee and their successors and assigns, shall at all times be insured to the extent of $100,000 against liability in tort arising from drilling or production, or activities or operations incident thereto, conducted or carried on under or by virtue of the conditions prescribed by written determination by the Administrator as provided in Subdivision 3. (Drilling Site Requirements) below. The policy of insurance issued pursuant hereto shall be subject to the approval of the City Attorney, and duplicates shall be furnished to the Zoning Administrator. Each such policy shall be conditioned or endorsed to cover such agents, lessees or representatives of the owner, lessee or permittee as may actually conduct drilling, production or incidental operations permitted by such written determination by the Zoning Administrator.

[**Editor's note:** Formally 13.01.F.60. of Chapter 1 of this Code]

**c)** All onshore drilling and production installations or facilities shall be removed and the premises restored to their original conditions after all oil and gas wells have been abandoned, unless the City Planning Commission determines otherwise.

[**Editor's note:** Formally 13.01.F.62. of Chapter 1 of this Code]

### 3. Drilling Site Requirements

Any person desiring to drill, deepen or maintain an oil well in an oil drilling district that has been established by ordinance, or to drill or deepen and subsequently maintain an oil well in the Heavy Industrial 1 (MH1) Use District within 500 feet of a more restrictive zone shall file an application in the Department of City Planning on a form provided by the Department, requesting a determination of the conditions under which the operations may be conducted.

Where the district is in an Urbanized or Off-Shore Area, the Zoning Administrator, after investigation, may deny the application if he finds that there is available and reasonably obtainable in the same district or in an adjacent or nearby district within a reasonable distance one or more locations where drilling could be done with greater safety and security with appreciably less harm to other property, or with greater conformity to the Zoning Map, as established in *Sec. 1.4.2.* (Zoning Map). The Zoning Administrator shall deny an application for a drill site in an Urbanized or Off-Shore Area unless the applicant first files with the Zoning Administrator in a form and executed in a manner approved by the Zoning Administrator

**a.** either of the following continuing written offers

**i.** to make the drill site available to competing operators upon reasonable terms, or

**ii.** to enter into or conduct joint operations for a unit or cooperative plan of development of hydrocarbon reserves upon reasonable terms, if whichever course offered is determined to be feasible by the Zoning Administrator, and is subsequently required by him or her in order to effectuate the above set forth purposes, and

**b.** an agreement to abide by the determination of the Board of Public Works or its designee if any dispute arises as to the reasonableness of those terms after first having an opportunity to be heard. Where the district is in a Non-Urbanized Area, in the Los Angeles City Oil Field Area, or in those cases where the Zoning Administrator approves an application in an Urbanized or Off-Shore Area, the Zoning Administrator shall determine and prescribe additional conditions or limitations, not in conflict with those specified in the ordinance establishing the district, which he or she deems appropriate in order to give effect to the provisions of this Section and to other provisions of this Chapter relating to zoning. Where the proposed operation is in the Heavy Industrial (MH1) Use District and is within 500 feet of a more restrictive zone, the Zoning Administrator shall prescribe conditions and limitations, if any, as he or she deems appropriate to regulate activity which may be materially detrimental to property in the more restrictive zone. All conditions previously imposed by the Zoning Administrator in accordance with the provisions of this Chapter are continued in full force and effect.

The Zoning Administrator shall make a written determination within 60 days from the date of the filing of an application and shall forthwith transmit a copy to the applicant.

The determination shall become final after an elapsed period of 15 days from the mailing of the notification to the applicant, unless an appeal is filed within that period, in which case the provisions of *Sec. 13B.2.3.* (Class 2 Conditional Use Permit) concerning the filing and consideration of appeals shall apply.

### 4. Maintenance of Drilling and Production Sites

Effective August 1, 1962, the following regulations shall apply to existing and future oil wells within the City of Los Angeles, including oil wells operating pursuant to any zone variance, whether by ordinance or approval of the Zoning Administrator, and all oil wells in a Heavy Industrial (MH1) Use District which are within 500 feet of a more restrictive zone:

**a.** All stationary derricks, including their floors and foundations, shall be removed within 30 days after completion or abandonment of the well (notwithstanding any other provisions of this Code to the contrary) or by September 1, 1962, whichever occurs later; and thereafter any work done on any existing well which requires the use of a derrick shall be done by a temporary or portable derrick. Such temporary or portable derricks shall be removed within 30 days after the completion of such work.

**b.** The motors, engines, pumps and tanks of all such oil wells shall be sealed so that no offensive or obnoxious odor or fumes can be readily detected from any point on adjacent property.

**c.** The well pumping equipment for such wells shall be muffled or soundproofed so that the noise emanating therefrom, measured from any point on adjacent property, is no more audible than surrounding street traffic, commercial or industrial noises measured at the same point.

**d.** The maximum height of the pumping units for such wells shall not exceed 15 feet above existing grade level.

**e.** The site of such wells shall be so landscaped, fenced or concealed that the well and all of its appurtenant apparatus is reasonably protected against public entry, observation or attraction.

In addition to any other authority vested in the Zoning Administrator by Charter and this Code, the Zoning Administrator may waive or modify these regulations if the drilling site is physically inaccessible to a portable derrick, or is located in a mountainous and substantially uninhabited place, or is located in an Industrial Use District and is surrounded by vacant land or is adjacent to land used as permitted in the Industrial Use District and if the enforcement of such regulations would be discriminatory, unreasonable or would impose a undue hardship upon oil drilling in such locations. The Zoning Administrator may also waive or modify the 16–foot height limitation where, because of the amount of liquid to be raised or the depths at which such fluids are encountered, pumping unit in excess of 16 feet in height is shown by conclusive engineering evidence to be required.

All ordinances and parts of ordinances of the City in conflict herewith are hereby repealed to the extent of such conflict.

## D. Procedures

### 1. Establishing an Oil Drilling District

Oil drilling districts boundaries are established and amended pursuant to *Sec.13B.1.4.* (Zone Change), and are represented as part of the third bracket set of the zone of a lot with the acronym "O".

### 2. Review of Projects

Projects shall be reviewed in accorandance with any applicable procedural elements outlined in Subsection C. (District Standards) above.

### 3. Termination of District

**a.** Any ordinance establishing the districts described in this Section shall become null and void one year after the effective date thereof unless oil drilling operations are commenced and diligently prosecuted within such one-year period; provided, however, the Zoning

Administrator, upon recommendation of the Board of Public Works or its designee, may extend the termination date for four consecutive additional periods not to exceed one year each, prior to the termination date of each period, if written request is filed therefor with the office of the Zoning Administration setting forth the reasons for said request and the Zoning Administrator determines that good and reasonable cause exists therefor.

**b.** Similarly, the Zoning Administrator, upon recommendation of the Board of Public Works or its designee, may extend the termination date for three consecutive additional periods not to exceed one year each, prior to the termination date of each period, for those districts which are part of a group undergoing development from one or more common controlled drilling sites, provided that written request is filed, which sets forth the reasons for the request therefor and the Zoning Administrator determines that good and reasonable cause exists therefor, and providing further that drilling operations have been diligently prosecuted from the common controlled drilling site during the previous extension period. Additional one-year extensions may be made by the Zoning Administrator subject to the approval of the City Planning Commission.

**c.** Any ordinance establishing an Urbanized oil district shall become null and void one year after all wells drilled in the district after the effective date of said ordinance have been abandoned in accordance with legal requirements, unless the Zoning Administrator determines that the district is part of a group undergoing development from one or more common, controlled drilling sites, or on the basis of sufficient proof determines that production is allocated thereto from an adjacent, adjoining or nearby oil drilling district or districts under a unit or pooling agreement. In such cases the Zoning Administrator may if he finds that good and reasonable cause exists therefor, extend the termination date of the expiring district to coincide with the termination date of the other district or districts in which the one or more common controlled drilling sites are located or from which production is allocated under a unit or pooling agreement. The Zoning Administrator may terminate any such district when the reasons for such extension no longer apply.

**d.** Any ordinance establishing a Non-Urbanized district or district in the Los Angeles City Oil Field Area shall become null and void one year after all wells in the district have been abandoned in accordance with legal requirements, unless the Zoning Administrator, on the basis of sufficient proof, determines that the district is part of a group in which secondary hydrocarbon recovery operations are taking place, and that production from an adjoining or adjacent district is allocated thereto under a unit or pooling agreement. In such cases, the Zoning Administrator may, if he finds that good and reasonable cause exists therefor, extend the termination date to coincide with the termination date of the adjoining or adjacent district in which secondary recovery operations are being conducted. The Zoning Administrator may terminate any such district when the reasons for said extension no longer apply.

**e.** Zoning ordinance, prohibiting drilling of wells on tracts recently included in Residential Use Districts not an unreasonable exercise of police power and does not deprive lessee which acquired lease prior to zoning of property without due process.

# SEC. 8.2.5. COMMUNITY DESIGN OVERLAY (CDO)

## A. Purpose

This Section provides, as needed, a method of maintaining guidelines and standards in existing community design overlays (CDOs) that were established prior to January 1, 2020. The purpose of the CDO is to:

**1.** Ensure that development within communities is in accordance with community design policies adopted in the community plans, and with the community design guidelines and standards;

**2.** Promote the distinctive character, stability and visual quality of existing neighborhoods and communities by considering the unique architectural character and environmental setting of the district to ensure development visually provides a sense of place;

**3.** Assist in improving the visual attractiveness of multi-family housing available to meet the needs of all social and economic groups within the community;

**4.** Protect areas of natural scenic beauty, cultural or environmental interest;

**5.** Prevent the development of structures or uses which are not of acceptable exterior design or appearance; and

**6.** Protect the integrity of previously attained entitlements.

**7.** Provide for on-going community involvement in project design and evolution of guidelines.

## B. Applicability

### 1. Definition of Project

The erection, construction, addition to, or exterior structural alteration of any building or structure, including, but not limited to, pole signs and/or monument signs located in a community design overlay. A project does not include construction that consists solely of:

**a.** Interior remodeling, interior rehabilitation or repair work;

**b.** Alterations of, including structural repairs, or additions to any existing building or structure in which the aggregate value of the work, in any one 24-month period, is less than 50 percent of the building or structure's replacement value before the alterations or additions, as determined by the Department of Building and Safety, unless the alterations or additions are to any building facade facing a public street; or

**c.** A residential building on a parcel or lot which is developed entirely as a residential use and consists of four or fewer dwelling units, unless expressly provided for in a community design overlay established pursuant to this Section.

### 2. Reconciling Provisions

#### a. Zoning Districts

In the event that the provisions of a CDO conflict with any other provisions of the zoning districts of a lot, the provisions of the zoning districts shall prevail.

#### b. Supplemental Districts

In the event that the provisions of a CDO district conflict with the any provisions of another supplemental district, the more restrictive provision shall prevail.

#### c. Previously Granted Entitlements

Nothing in the guidelines and standards established in a CDO shall interfere with any previously granted entitlements, nor shall they restrict any right authorized in the zoning districts of a lot.

### 3. Issuance of Permits

Within a CDO, no building permit shall be issued for any project, and no person shall perform any construction work on a project, until the project has been submitted and approved pursuant to *Sec. 13B.2.5.* (Director Determination). No building permit shall be issued for any project, and no person shall do any construction work on a project except in conformance with the approved Director Determination.

## C. District Standards

Each CDO shall establish a design overlay plan which pictorially describes, by professionally accepted architectural graphic techniques, guidelines and standards regarding the location, appearance, configuration, and dimensions of any proposed buildings, structures and site improvements including but not limited to landscaping, walls and fences, roof equipment, pole signs, monument signs, and parking areas.

### 1. Preparation and Content

**a.** Upon initiation, the Director shall prepare, or cause to be prepared, proposed guidelines and standards based on the design policies contained in the applicable community plan. At the option of the Council District, the Director shall utilize a Citizen Advisory Committee, pursuant to Subdivision 2. below, in the development of design standards for individual communities and neighborhoods. The guidelines and standards shall be organized into those which are anticipated to be superseded by future citywide guidelines and standards, and those that are necessary to protect the unique architectural and environmental features of the CDO district.

**b.** The standards are in addition to, and do not replace, those set forth in zoning districts established in this Chapter, as amended, and any other relevant ordinances and do not convey any rights not otherwise granted under the provisions and procedures contained in this Chapter and other relevant ordinances, except as specifically provided herein.

### 2. Citizen Advisory Committee

At the option of the Councilmember(s) in whose district the CDO is established, a Citizen Advisory Committee shall be appointed to assist in development of guidelines and standards. The Citizen Advisory Committee shall be appointed by the Councilmember, and the committee shall consist of a minimum of five and a maximum of seven voting members, each serving a term of office of four years, the terms being staggered so that at least one term becomes vacated on each successive year. The chairperson and vice chairperson shall be elected annually by a majority of the committee. The suggested composition of membership is as follows: two architects and two professionals from the following or related fields: planning, urban design and landscape architecture, or construction. The remaining member or members need not be design professionals. All members shall reside, operate a business, or be employed within the community plan area(s) in which the CDO is located.

## D. Procedures

### 1. Maintaining an Existing CDO

The City Council may maintain an existing CDO pursuant to *Sec. 13B.1.2.* (Specific Plan Adoption/Amendment), and are represented as part of the third bracket set of the zone of a lot with the acronym "CDO". However, the CDO shall not change the existing boundaries or establish new guidelines and standards.

#### a. Boundaries

Precise boundaries are required at the time of application or initiation of an individual CDO. A CDO shall not encompass an area designated as an historic preservation district pursuant to *Sec. 8.2.5.* (Historic Preservation Districts).

### 2. Director Determination

The Director of Planning shall approve, with conditions if necessary, a project if the plans comply with the provisions of approved CDO guidelines and standards pursuant to *Sec. 13B.4.2.* (Project Compliance).

#### a. Supplemental Findings

In addition to the findings established in *Sec. 13B.4.2.* (Project Compliance), the Director of Planning, or the Area Planning Commission on appeal, shall approve a project as requested or in modified form if, based on the application and the evidence submitted, if the Director or Area Commission finds the following:

**i.** That the project substantially complies with the adopted CDO guidelines and standards.

**ii.** The structures, site plan and landscaping are harmonious in scale and design with existing development and any cultural, scenic or environmental resources adjacent to the site and in the vicinity.

### b. Notice of Director's Determination

Instead of the transmittal requirements in *Sec. 13B.4.2.* (Project Compliance), within five working days following the decision, a Notice of the Director's Determination, and copies of the approved plans, shall be mailed to the applicant, the Department of Building and Safety, the Councilmember in whose district the project is located, the Citizen Advisory Committee, and any persons or organizations commenting on the application or requesting a Notice.

# SEC. 8.2.6. HISTORIC PRESERVATION DISTRICTS (HPOZ)

## A. Purpose

**1.** As a matter of public policy, the recognition, preservation, enhancement, and use of buildings, structures, landscaping, natural features, and areas within the City having historic, architectural, cultural or aesthetic significance are required in the interest of the health, economic prosperity, cultural enrichment and general welfare of the people. This Division:

**a.** Protects and enhances the use of buildings, structures, natural features, and areas, which are reminders of the City's history, or which are unique and irreplaceable assets to the City and its neighborhoods, or which are worthy examples of past architectural styles;

**b.** Develops and maintains the appropriate settings and environment to preserve these buildings, structures, landscaping, natural features, and areas;

**c.** Enhances property values, stabilize neighborhoods and/or communities, render property eligible for financial benefits, and promote tourist trade and interest;

**d.** Fosters public appreciation of the beauty of the City, of the accomplishments of its past as reflected through its buildings, structures, landscaping, natural features, and areas;

**e.** Promotes education by preserving and encouraging interest in cultural, social, economic, political and architectural phases of its history;

**f.** Promotes the involvement of all aspects of the City's diverse neighborhoods in the historic preservation process; and

**g.** Ensures that all procedures comply with the California Environmental Quality Act (CEQA).

## B. Applicability

### 1. Definition of Project

A project is the addition, alteration, construction, demolition, reconstruction, rehabilitation, relocation, removal or restoration of the exterior of any building, structure, landscaping, natural feature, or lot, within a Historic Preservation District, except as provided under Subdivsion 3. (Exemptions) below. A Project may or may not require a building permit, and may include but not be limited to changing exterior paint color, removal of significant trees or landscaping, installation or removal of fencing, replacement of windows and/or doors which are character-defining features of architectural styles, removal of features that may or may not have a building permit, or changes to public spaces and similar activities.

### 2. Exemptions

This Section does not apply to the following:

### a. Emergency or Hazardous Conditions

The correction of emergency or hazardous conditions where the Department of Building and Safety, Housing and Community Investment Department, or other enforcement agency has determined that emergency or hazardous conditions currently exist and the emergency or hazardous conditions shall be corrected in the interest of the public health, safety, and welfare. When feasible, the Department of Building and Safety, Housing and Community Investment Department, or other enforcement agency should consult with the Director of Planning on how to correct the hazardous condition, consistent with the goals of the Historic Preservation District. However, any other work shall comply with the provisions of this Section.

### b. Department of Public Works Improvements

Department of Public Works improvements located, in whole or in part, within a Historic Preservation District:

**i.** Where the Director of Planning finds:

**a)** That the certified Historic Resources Survey for the Historic Preservation District does not identify any Contributing Elements located within the right-of-way and/or where the right-of-way is not specifically addressed in the approved Preservation Plan for the Historic Preservation District; and

**b)** Where the Department of Public Works has completed the CEQA review of the proposed improvement, and the review has determined that the improvement is exempt from CEQA, or will have no potentially significant environmental impacts.

**ii.** The relevant Board shall be notified of the Project, given a description of the Project, and an opportunity to comment.

### c. Historical Property Contracts

Work authorized by an approved Historical Property Contract by the City Council, or where a building, structure, landscaping, natural features, or lot has been designated as a City Historic-Cultural Monument by the City Council, unless proposed for demolition. However, those properties with Federal or State historic designation which are not designated as City Historic-Cultural Monuments or do not have a City Historical Property Contract are not exempt from review under this Section.

### d. Structural Repairs

Where work consists of repair to existing structural elements and foundations with no physical change to the exterior of a building.

#### e. Interior Alterations

Where work consists of interior alterations that do not result in a change to an exterior feature.

#### f. Preservation Plan Exemptions

Where the type of work has been specifically deemed exempt from review as set forth in the approved Preservation Plan for a specific Historic Preservation District.

### 3. Authority of Cultural Heritage Commission not Affected

Nothing in this Section supersedes or overrides the Cultural Heritage Commission's authority as provided in Sections 22.132. (Permits Required) and 22.133. (Time for Objection by the Commission) or Article 4 (Cultural Heritage Commission) of Chapter 7 ( Cultural Affairs Department) of Division 22 (Departments, Bureaus and Agencies Under the Control of the Mayor and Council) of the Los Angeles Administrative Code.

### 4. Publicly Owned Property

The provisions of this Section shall apply to any building, structure, landscaping, natural features, or lot within a Historic Preservation District which is owned or leased by a public entity to the extent permitted by law.

## C. District Standards

### 1. Preservation Plans

District Standards are established in each specific Historic Preservation Districts as a Preservation Plan adopted pursuant to *Sec. 13B.8.3.* (Preservation Plan Adoption / Amendment).

## D. Procedures

### 1. Establishing an HPOZ

Historic Preservation District regulations, or Preservation Plan, and boundaries are established and amended pursuant to *Div. 13B.8.* (Historic Preservation), and are represented as part of the third bracket set of the zoning districts of a lot with the acronym "HPOZ".

### 2. Review of Projects

Projects in Historic Preservation Districts shall be reviewed pursuant to *Div. 13B.8.* (Historic Preservation).

# DIV. 9.1. INTRODUCTORY PROVISIONS

## SEC. 9.1.1. PURPOSE

The purpose of this Article is to establish procedures for implementing State Density Bonus provisions, as set forth in California Government Code Sections 65915-65918, local incentives to increase the production of affordable housing, as well as other programs to facilitate the provision of public benefits to communities in the vicinity of new development in the City consistent with the General Plan and other housing-related City policies. Incentives include, but are not limited to, relief from a variety of regulations and/or requirements or the granting of additional allowances beyond what would normally be allowed. In addition, it is also the purpose of this Article to provide mechanisms to utilize the Maximum Bonus FAR, Bonus Height, and Bonus Stories as provided by a site's Form District.

## SEC. 9.1.2. GENERAL PROVISIONS

### A. Summary

This Article consists of Affordable Housing Incentive Programs of *Div. 9.2.* (Affordable Housing Programs), the Community Benefits Program contained in *Div. 9.3.* (Community Benefits Program), and a variety of other incentive programs contained in *Div. 9.4.* (General Incentive Programs). The Community Benefits Program, which enables projects to utilize one or more incentive programs; if a project involves residential uses it must first utilize the affordable housing incentive program outlined in *Sec. 9.3.2.* (Local Affordable Housing Incentive Program). *Div. 9.4.* (General Incentive Programs) contains programs designed to incentivize the production of dwelling units that are of benefit to the public, including eldercare facilities, permanent supportive housing, and other types of household living.

### B. Applicability

Any project containing 5 or more dwelling units, including projects with subdivisions of land, may utilize an affordable housing incentive program as outlined in *Div. 9.2.* (Affordable Housing Incentive Programs) or *Div. 9.3.* (Community Benefits Program), pursuant to the eligibility requirements for the specific program being utilized. The programs outlined in *Div. 9.4.* (General Incentive Programs) can be utilized as applicable and in conjunction with any other incentive program established in this Article.

### C. Maximum Bonus Floor Area

Projects using the Affordable Housing Incentive programs or Public Benefits programs may not exceed the FAR set by the Maximum Bonus FAR of the project site's Form District. However, residential projects utilizing the State Density Bonus program may exceed the Max Bonus FAR pursuant to *Sec. 9.2.1.* (Density Bonus).

### D. Project Sites with No Density Limit

If the project site's zoning has an "FA" Density District, no maximum density, then the maximum allowable units shall be determined by dividing the amount of Floor Area (in square feet) allowed

by the Base FAR by a "standardized unit size" of 950 square feet. The resulting number shall be considered the base amount of units allowed. However, a Community Plan Implementation Overlay (CPIO) can establish a different "standardized unit size", in which case the amount of Floor Area (in square feet) allowed by the Base FAR is dived by the CPIO's "standardized unit size".

# DIV. 9.2. AFFORDABLE HOUSING INCENTIVE PROGRAMS

## SEC. 9.2.1. DENSITY BONUS

### A. Purpose

The purpose of this Section is to establish procedures for implementing the State Density Bonus provisions in California Government Code Sections 65915-65918, as well as to increase the production of affordable housing in the City of Los Angeles, consistent with the General Plan and other City policies related to housing.

### B. Applicability

A housing development project will be granted a density bonus, including incentives, concessions, and waivers of development standards, in exchange for the required percentage of restricted affordable units, as established in Subsection D. (Base Incentives – Density and Parking), and if it has not utilized any other Affordable Housing Incentive Program.

### C. General Standards

#### 1. Fractional Units

For the purposes of this Section, regardless of *Sec. 6C.1.2.*D.3. (Calculating Maximum Density Base on Lot Area), in calculating base density and restricted affordable units, any number resulting in a fraction is rounded up to the next whole number.

#### 2. Other Discretionary Approvals

Approval of density bonus units does not, in and of itself, trigger other discretionary review actions required by this Chapter.

#### 3. Affordable Housing Subsidies

Approval of density bonus units does not, in and of itself, preclude a housing development project or residents of a housing development project from receipt of government subsidies for affordable housing.

### D. Base Incentives – Density and Parking

Any housing development project that meets the criteria established in Subsection B. (Applicability) above will receive the base incentives outlined below.

#### 1. Density

##### a. Very Low Income Restricted Affordable Units - For-Sale or Rental

A housing development project that includes 5% of the total units for Very Low Income households, either in rental units or for-sale units, will be granted a minimum density

bonus of 20% that may be applied to any part of the housing development project. The density bonus may be increased according to table below, up to a maximum of 35%. Projects seeking a Density Bonus of greater than 35% may do so pursuant to Subsection F. (Housing Development Project Exceeding 35% Density Bonus) or Subsection H. (Projects Exceeding 35% Density Bonus That Do Not Meet Subsection F.) below.

| VERY LOW INCOME UNITS | |
|---|---|
| % of Total Units | % Density Bonus |
| 5% | 20.0% |
| 6% | 22.5% |
| 7% | 25.0% |
| 8% | 27.5% |
| 9% | 30.0% |
| 10% | 32.5% |
| 11% | 35.0% |

### b. Low Income Restricted Affordable Units - For-Sale or Rental

A housing development project that includes 10% of the total units for Low Income households, either in rental units or for-sale units, will be granted a minimum density bonus of 20% that may be applied to any part of the housing development project. The density bonus may be increased according to table below, up to a maximum of 35%. Projects seeking a Density Bonus of greater than 35% may do so pursuant to Subsection F. (Housing Development Project Exceeding 35% Density Bonus) or Subsection H. (Projects Exceeding 35% Density Bonus That Do Not Meet Subsection F.) below.

| LOW INCOME UNITS | |
|---|---|
| % of Total Units | % Density Bonus |
| 10% | 20.0% |
| 11% | 21.5% |
| 12% | 23.0% |
| 13% | 24.5% |
| 14% | 26.0% |
| 15% | 27.5% |
| 16% | 29.0% |
| 17% | 30.5% |
| 18% | 32.0% |
| 19% | 33.5% |
| 20% | 35.0% |

### c. Common Interest Development with Low Income or Very Low Income Restricted Affordable Units

In a common interest development (such as a condominium), as defined in California Civil Code Section 4100, with Low Income or Very Low Income restricted affordable units, restricted affordable units may be for sale or for rent.

### d. Common Interest Development with Moderate Income Restricted Affordable Units

A common interest development (such as a condominium), as defined in California Civil Code Section 4100, that includes at least 10% of its units for Moderate Income households will be granted a minimum density bonus of 5%. The density bonus may be increased according to the table below, up to a maximum of 35%. Projects seeking a Density Bonus of greater than 35% may do so pursuant to Subsection F. (Housing Development Project Exceeding 35% Density Bonus) or Subsection H. (Projects Exceeding 35% Density Bonus That Do Not Meet Subsection F.) below.

| MODERATE INCOME UNITS | |
|---|---|
| % of Total Units | % Density Bonus |
| 10% | 5% |
| 11% | 6% |
| 12% | 7% |
| 13% | 8% |
| 14% | 9% |
| 15% | 10% |
| 16% | 11% |
| 17% | 12% |
| 18% | 13% |
| 19% | 14% |
| 20% | 15% |
| 21% | 16% |
| 22% | 17% |
| 23% | 18% |
| 24% | 19% |
| 25% | 20% |
| 26% | 21% |
| 27% | 22% |
| 28% | 23% |
| 29% | 24% |
| 30% | 25% |
| 31% | 26% |
| 32% | 27% |
| 33% | 28% |
| 34% | 29% |
| 35% | 30% |
| 36% | 31% |
| 37% | 32% |
| 38% | 33% |
| 39% | 34% |
| 40% | 35% |

### e. Senior Citizen Housing - For-Sale or Rental at Market-Rate

A senior citizen housing development or a mobilehome park that limits residency based on age requirements for housing for older persons pursuant to California Civil Code Sections 798.76 or 799.5 shall be granted a density bonus of 20%.

### f. Child Care

A housing development project that conforms to the requirements of any of Paragraphs (a) through (d) above, and includes a child care facility located on the premises of, as part of, or adjacent to the project, will be granted either of the following:

**i.** An additional density bonus that is, for purposes of calculating residential density, an increase in the Floor Area of the project equal to the Floor Area of the child care facility included in the project.

**ii.** One additional incentive, as provided in Subsection E. (Additional Incentives) below.

### g. Land Donation

An applicant for a subdivision, or other residential development approval that donates land for housing to the City of Los Angeles satisfying the criteria of California Government Code Section 65915(h)(2), as verified by the Department of City Planning, will be granted a density bonus of 15%.

### h. Restricted Affordable Units Located Near Transit Stop/Major Employment Center

In a housing development project located in or within 1,500 feet of a transit stop/major employment center, in lieu of providing the requisite number of restricted affordable units that would otherwise be required under this Section, an applicant may opt to provide a greater number of smaller restricted affordable units, provided that:

**i.** The smaller restricted affordable units meet the minimum unit size requirements established by the Low Income Housing Tax Credit Program as administered by the California Tax Credit Allocation Committee (TCAC);

**ii.** The total number of units in the housing development project, including density bonus units, does not exceed the maximum permitted by this Section;

**iii.** The area of the aggregate smaller restricted affordable units is equal to or greater than the square footage of the aggregate restricted affordable units that would otherwise be required under this Section; and

**iv.** The area of the aggregate smaller restricted affordable units is equal to or greater than the square footage of the aggregate restricted affordable units that would otherwise be required under this Section.

#### i. Condominium Conversion

A housing development project that involves the conversion of apartments into condominiums and that includes 33% of its units restricted to households of Low Income or Moderate Income or 15% of its units restricted to households of Very Low Income will be granted a density bonus of 25% or up to three additional incentives as provided in Subsection E. (Additional Incentives) below.

### 2. Automobile Parking

A housing development project that qualifies for a density bonus and complies with this Section may provide parking in compliance with the applicable parking provisions of *Article 4* (Development Standards), or with one of the applicable Parking Options below.

#### a. Parking Option 1

Required parking for all dwelling units in the housing development project (not just the restricted affordable units), inclusive of handicapped and guest parking, may be reduced by 33%.

#### b. Parking Option 2

Required parking for any restricted affordable units may be reduced as set forth below. Required parking for all other non-restricted units must comply with the applicable provisions of Article 4 (Development Standards).

**i.** One parking space per restricted affordable unit or guest room, except as follows:

**a)** Restricted affordable units or guest rooms for Low Income or Very Low Income senior citizens or disabled persons require 0.5 parking spaces for each unit; and

**b)** Restricted affordable units or guest rooms in a residential hotel require 0.25 parking spaces for each unit.

**ii.** Up to 40% of the required parking for restricted affordable units or guest rooms may be provided in compact parking stalls.

#### c. Parking Option 3

**i.** 100% affordable rental projects (exclusive of a manager's unit or units) located within ½ mile of a Major Transit Stop require 0.5 spaces per unit.

**ii.** 100% affordable rental senior projects (exclusive of a manager's unit or units) having either paratransit service or unobstructed access, within ½ mile, to fixed bus route service that operates at least eight times per day, require 0.5 spaces per unit.

**iii.** 100% affordable rental special needs projects (as defined in Section 51312 of the Health and Safety Code) and supportive housing projects (as defined in Section 50675.14 of the Health and Safety Code) having either paratransit service or unobstructed access, within ½ mile, to fixed bus route service that operates at least eight times per day, shall not require any parking spaces.

**iv.** Mixed-income projects consisting of the maximum number of Very Low Income or Low Income units provided for in density bonus law (which is 11 % and 20% respectively) within ½ mile of a major transit stop to which the project has unobstructed access require 0.5 parking spaces per bedroom.

**d.** If the parking requirements applicable to the project site pursuant to Article 4 (Development Standards) are less than the parking required by one of the applicable parking options in this Subdivision, an applicant may utilize the parking requirements of Article 4 (Development Standards).

## E. Additional Incentives

### 1. Eligibility for Additional Incentives

To be eligible for any Incentives in this Subsection, a housing development project (other than an Adaptive Reuse project) shall comply with the following:

**a.** The facade of any portion of a building that abuts a street shall be articulated with a change of material or with a break in plane, so that the facade is not a flat surface.

**b.** All buildings must be oriented to the street by providing entrances, windows, architectural features and/or balconies on the front and along any street-facing elevations.

**c.** The housing development project shall not be a contributing structure in a designated Historic Preservation Overlay Zone and shall not be on the City of Los Angeles list of Historical-Cultural Monuments.

**d.** The housing development project shall not be located on a Substandard Hillside Limited Street in a Hillside Area or in a Very High Fire Hazard Severity Zone as established in Article 7 (Fire Code) of Chapter 5 (Public Safety and Protection) of this Code.

### 2. Number of Additional Incentives Allowed

In addition to the Density Bonus and parking options identified in Subsection D. (Base Incentives – Density and Parking), a housing development project that qualifies for a Density Bonus, meets the criteria of Subsection B. (Applicability), and is in compliance with the eligibility criteria of this Subsection, shall be granted the number of Incentives set forth in the table below.

| NUMBER OF ADDITIONAL INCENTIVES | | | |
|---|---|---|---|
| Level of Affordability | Required Percentage of Restricted Units (excluding Density Bonus units) | | |
| | 1 Incentive | 2 Incentives | 3 Incentives |
| Very Low Income; or | 5% | 10% | 15% |
| Low Income; or | 10% | 20% | 30% |
| Moderate Income | 10% | 20% | 30% |

### 3. Yard Incentive

Up to 20% decrease in the required width or depth of any individual Yard, except along any property line that abuts a property zoned with a Residential Limited, Agriculture, or Open Space Use District. The landscaping for the housing development project must be in compliance with the landscape requirements in *Article 4* (Development Standards).

### 4. Building Coverage Incentive

Up to 20% increase in Building Coverage limits, provided that the landscaping for the housing development project is in compliance with the landscape requirements in *Article 4* (Development Standards).

### 5. Lot Width Incentive

Up to 20% decrease in the required Lot Width, provided that the landscaping for the housing development project is in compliance with the landscape requirements in *Article 4* (Development Standards).

### 6. Floor Area Ratio Incentive

**a.** An increase in the percentage of Base FAR equal to the percentage of density bonus for which the housing development project is eligible, not to exceed 35%; or

**b.** In lieu of the otherwise Base FAR, a floor area ratio not to exceed 3:1, provided:

**i.** The project site is zoned with a Commercial-Mixed or Commercial Use District; and,

**ii.** The project site fronts on a street designated as a Boulevard or Avenue in the General Plan Mobility Element; except that a housing development project in which at least 80% of the units in a rental project are restricted affordable units or in which 45% of units in a for-sale project are restricted affordable units shall be exempt from this requirement.

**c.** The housing development project contains the requisite number of restricted affordable units to qualify for a 35% Density Bonus; and,

**d.** 50% or more of the project site is located within 1,500 feet of a Transit Stop/Major Employment Center.

### 7. Height Incentive

A percentage increase in the height limit in feet equal to the percentage of density bonus for which the housing development project is eligible, except:

**a.** In any zone in which the height of buildings is limited in feet, this height increase only permits a maximum of 11 additional feet. In any zone in which the height of buildings is limited in stories but not feet, this incentive permits a maximum of one additional story. In any zone in which height is limited in both height and stories, this incentive permits a maximum of 11 additional feet and/or one additional story.

**b.** No additional height is permitted for that portion of a building in a housing development project that is located within 15 feet of a property with a 2L Density District. When a lot on which a housing development project is located is adjacent to a lot with a 2L Density District, but the building is beyond 15 feet from the property line, for each foot of additional height, the building must be set back one foot horizontally.

**c.** No additional height is permitted for any portion of a building in a housing development project located on a lot sharing a common lot line with or across an alley from a lot with a 1L Density District. This prohibition does not apply if the lot on which the housing development project is located is within 1,500 feet of a Transit Stop; however, no additional height is permitted for that portion of a building in the housing development project that is located within 50 feet of a property with a 1L Density District.

### 8. Lot Amenity Space Incentive

Up to 20% decrease from the lot amenity space requirement, provided that the landscaping for the housing development project is sufficient to comply with the landscape requirements in *Article 4* (Development Standards).

### 9. Density Calculation Incentive

The area of any land required to be dedicated for street or alley purposes may be included as lot area for purposes of calculating the maximum density permitted by the zone in which the housing development project is located.

### 10. Averaging of Floor Area Ratio, Density, Parking or Lot Amenity Space

A housing development project that is located on two or more contiguous parcels may average the Floor Area, density, lot amenity space, and parking over the project site, provided that:

**a.** The housing development project includes 11% or more of the units as restricted affordable units for Very Low Income households, or 20% or more of the units for Low Income households, or 30% or more of the units for Moderate Income households; and

**b.** The proposed use is permitted by the Use District of each parcel; and

**c.** No further lot line adjustment or any other action that may cause the housing development project site to be subdivided subsequent to this grant is permitted.

## F. Housing Development Project Exceeding 35% Density Bonus

A housing development project may be granted additional density increases beyond 35% by providing additional restricted affordable units in the following manner:

**1.** For every additional 1% of the total units set aside for Very Low Income units for sale or rental, the project is granted an additional 2.5% density increase;

**2.** For every additional 1% of the total units set aside for Low Income units for sale or rental, the project is granted an additional 1.5% density increase; and

**3.** For every additional 1% set aside of the total units for Moderate Income units in for-sale projects, the project is granted an additional 1% density increase.

**4.** A housing development project receiving additional density increases beyond 35% is eligible to request the density, parking, and additional Incentives in this Section.

## G. Procedures

### 1. Projects with No Additional Incentives

Housing development projects requesting only the incentives outlined in Subsection D. (Base Incentives – Density and Parking) above, without any incentives outlined in Subsection E. (Additional Incentives) above, are ministerial.

### 2. Projects Requesting Additional Incentives

**a.** Housing development projects that qualify for base incentives, request up to three additional incentives, and require no other discretionary actions, must file an application pursuant to Section 13.4.5. (Director Determination). Regardless of any other findings established in Section 13.4.5 (Director Determination), the Director of Planning must approve a density bonus and requested additional incentives unless the Director finds that:

**i.** The incentive is not required in order to provide for affordable housing costs as defined in California Health and Safety Code Section 50052.5, or affordable housing rents as defined in California Health and Safety Code Section 50053; or

**ii.** The incentive will have a specific adverse impact upon public health and safety or the physical environment or on any real property that is listed in the California Register of Historical Resources and for which there is no feasible method to satisfactorily mitigate or avoid the specific adverse impact without rendering the development unaffordable to Very Low Income, Low Income, and Moderate Income households. Inconsistency with the zoning or General Plan designation of a lot does not constitute a specific adverse impact upon the public health or safety.

**b.** Housing development projects that request up to three additional incentives and that require other discretionary actions, the applicable procedures set forth in *Sec. 13A.2.10.* (Multiple Approvals) apply.

**i.** The decision must include a separate section clearly labeled "Density Bonus/Affordable Housing Incentives Determination."

**ii.** Regardless of any other findings that may be applicable, the decision-maker must approve base incentives and requested additional incentives unless the decision-maker, based upon substantial evidence, makes either of the findings in Paragraph (a) above.

### 3. Projects with Requests for Waiver or Modification

#### a. Application

Housing development projects that qualify for incentives, as outlined in Subsection D. (Base Incentives – Density and Parking) above, and for which the applicant requests a waiver or modification of any Form District standard or development standard that is not included in the incentives outlined in Subsection E. (Additional Incentives) above must file an application pursuant to *Sec. 13B.2.3.* (Class 3 Conditional Use Permit).

#### b. Decision

**i.** The decision of the City Planning Commission on a Conditional Use Permit under this Section is final.

**ii.** Regardless of any other findings that may be applicable, the decision-maker must approve base incentives and requested waiver or modification of any Form District standard or development standard unless the decision-maker, based upon substantial evidence, makes either of the findings in Paragraph 2(a) above.

**iii.** For housing development projects requesting waiver or modification of any Form District standard or development standard not included in the incentives outlined in Subsection E. (Additional Incentives) above that include other discretionary applications, the procedures of *Sec. 13A.2.10.* (Multiple Approvals) apply. The decision must include a separate section clearly labeled "Density Bonus/ Affordable Housing Incentives Determination."

### 4. Projects Exceeding a 35% Density Bonus

#### a. Application

The City Planning Commission may grant additional density increases beyond 35%, pursuant to Subsection F. (Housing Development Project Exceeding 35% Density Bonus) above. Applicants must file an application pursuant to *Sec. 13B.2.3.* (Class 3 Conditional Use Permit).

#### b. Supplemental Findings

In addition to the findings of *Sec. 13B.2.3.* (Class 3 Conditional Use Permit), the Commission must also find that:

**i.** The project is consistent with and implements the affordable housing provisions of the General Plan;

**ii.** The project contains the requisite number of restricted affordable units to qualify for a full 35% density incentive based on the maximum allowable density of the project site.

**iii.** The housing development project meets any applicable dwelling unit replacement requirements of California Government Code Section 65915(c)(3);

**iv.** The project's restricted affordable units are subject to a recorded affordability restriction of 55 years from the issuance of the Certificate of Occupancy, recorded in a covenant acceptable to the Housing and Community Investment Department, and subject to fees as set forth in Sec. 19.14. (Fees for Enforcement of Housing Covenants) of Chapter 1 of this Code; and

**v.** The project addresses the policies and standards contained in the City Planning Commission's Affordable Housing Incentives Guidelines.

## H. Projects Exceeding 35% Density Bonus That Do Not Meet Subsection F

An Applicant may request additional density increases beyond 35% when the project does not meet the requirements of Subsection F. (Housing Development Project Exceeding 35% Density Bonus) pursuant to *Sec. 13B.3.1.* (Administrative Review).

### 1. Performance Standards

#### a. Purpose

The purpose of these performance standards is to provide for landscaping, lot amenity space, scale, bulk, height, and yards, particularly with regard to the main buildings, which are similar to those in the adjacent properties in the neighborhood, and to reduce the impacts to neighboring properties of projects utilizing this Section. In addition, it is the purpose of these performance standards to encourage the availability of affordable housing.

#### b. Standards

**i.** The project contains the requisite number of restricted affordable units to qualify for a full 35% density bonus based on the maximum allowable density of the project site;

**ii.** The housing development project complies with the standards contained in the Affordable Housing Incentives Guidelines approved by the City Planning Commission;

**iii.** No buildings are higher than any main building on adjoining property;

**iv.** The development meets the lot amenity space requirements of the zone;

**v.** Yards, at a minimum, shall meet the requirements for the zone or those which apply on adjoining or abutting properties, whichever is the most restrictive;

### 2. Housing Development Projects Not Meeting Performance Standards

#### a. Application

If a proposed housing development project does not comply with the performance standards delineated in Subsection A, the applicant may apply for approval pursuant to *Sec. 13B.2.3.* (Class 3 Conditional Use Permit).

#### b. Supplemental Finding

The proposed project substantially meets the purpose of the performance standards.

## I. Records and Agreements

Prior to the issuance of a building permit, the following requirements shall be met:

### 1. Housing Development Projects with Senior Citizen Households

For any housing development project qualifying for a density bonus and that contains housing for senior citizens, a covenant acceptable to the Housing and Community Investment Department, or its successor agency, shall be recorded with the Los Angeles County Recorder, guaranteeing that the occupancy restriction to senior citizens will be observed for at least 55 years from the issuance of the certificate of occupancy or a longer period of time if required by the construction or mortgage financing assistance program, mortgage assistance program or rental subsidy program.

### 2. Housing Development Projects with Low or Very Low, or Extremely Low Income Households

For any housing development project qualifying for a density bonus and that contains housing for Low Income, Very Low Income, or Extremely Low households, a covenant acceptable to the Housing and Community Investment Department must be recorded with the Los Angeles County Recorder, guaranteeing that the affordability criteria will be observed for at least 55 years from the issuance of the Certificate of Occupancy or a longer period of time if required by the construction or mortgage financing assistance program, mortgage assistance program or rental subsidy program.

### 3. Housing Development Projects with Moderate Income Households - For Sale

For any housing development project qualifying for a density bonus and that contains housing for Moderate Income households for sale, a covenant acceptable to the Housing and Community Investment Department and consistent with the for sale requirements of California Government Code Section 65915(c)(2) must be recorded with the Los Angeles County Recorder guaranteeing that the affordability criteria will be observed for at least 10 years from the issuance of the Certificate of Occupancy.

### 4. Conflicts of Duration of Affordability Covenants

If the duration of affordability covenants provided in this Section conflicts with the duration for any other government requirement, the longest duration controls.

### 5. Private Right of Enforcement

Any covenant described in this Section must provide for a private right of enforcement by the City, any tenant, or owner of any building to which a covenant and agreement applies.

# SEC. 9.2.2. TRANSIT ORIENTED COMMUNITIES AFFORDABLE HOUSING INCENTIVE PROGRAM

## A. Purpose

The purpose of this Section is to establish procedures for implementing the provisions established by Measure JJJ, as well as to increase the production of affordable housing in the City of Los Angeles, consistent with the General Plan and other City policies related to housing.

## B. Applicability

This Transit Oriented Communities Affordable Housing Incentive Program ("TOC Incentive Program"), and the provisions contained in the TOC Affordable Housing Incentive Program Guidelines, shall apply to all Eligible Housing Developments that are located within a one-half mile radius of a Major Transit Stop, as defined in Subdivision (b) of Section 21155 of the California Public Resources Code. Each one-half mile radius around a Major Transit Stop shall constitute a unique Transit Oriented Communities Affordable Housing Incentive Area ("TOC Area").

## C. Preparation and Content of TOC Incentive Guidelines

The Director of Planning shall establish and maintain TOC Affordable Housing Incentive Program Guidelines ("TOC Guidelines") that provide the eligibility standards, TOC Incentives, and other necessary components of this TOC Incentive Program outlined in this Section. Nothing in the TOC Guidelines shall restrict any right authorized by the zone of a property. The TOC Guidelines shall be consistent with the purposes of this Section and shall include the following:

### 1. Eligibility for TOC Incentives

An Eligible Housing Development located within a TOC Area shall be eligible for TOC Incentives if it:

**a.** Provides minimum required percentages of on-site restricted affordable units;

**b.** Meets any applicable replacement requirements of California Government Code Section 65915(c)(3); and

**c.** Is not utilizing a Density Bonus or Incentives pursuant to *Sec. 9.2.1.* (Density Bonus) or *Sec. 9.3.2.* (Local Affordable Housing Incentive Program), or other development bonuses pursuant to California Government Code Section 65915 or any other State or local program.

### 2. Minimum Required Percentages of On-Site Restricted Affordable Units.

Minimum required percentages of on-site restricted affordable units shall be determined by the Department of City Planning and set forth in the TOC Guidelines at rates that meet or exceed 11% of the total number of dwelling units affordable to Very Low Income Households; or 20% of the total number of dwelling units affordable to Lower Income Households. The Department of City Planning shall also establish an option for an Eligible Housing

Development to qualify for the TOC Incentives by providing a minimum percentage of units for Extremely Low Income households, which shall be set at no less than 7%. In calculating the required on-site restricted affordable units, the percentage shall be based on the total final project unit count, and any number resulting in a fraction shall be rounded up to the next whole number.

#### 3. Labor Standards

In creating the TOC Guidelines, the Department of City Planning shall identify incentives for projects that adhere to the labor standards required in Section 5 of Ordinance No. 184745, provided that no such incentives will be created that have the effect of undermining the affordable housing incentives contained this Section or in Government Code Section 65915.

#### 4. TOC Incentives

An Eligible Housing Development shall be granted TOC Incentives, as determined by the Department of City Planning consistent with the following:

##### a. Residential Density Increase

An Eligible Housing Development shall be granted increased residential density at rates that shall meet or exceed a 35% increase. In establishing the density allowances, the Department of City Planning may allow adjustments to minimum square feet per dwelling unit, floor area ratio, or both, and may allow different levels of density increase depending on the Project's Density District.

##### b. Parking

An Eligible Housing Development shall be granted parking reductions consistent with California Government Code Section 65915(p).

##### c. Incentives and Concessions

An Eligible Housing Development may be granted up to two or three incentives or concessions based upon the requirements set forth in California Government Code Section 65915(d)(2).

## D. Approval of TOC Guidelines and Incentives

The City Planning Commission shall review the TOC Guidelines and shall by vote make a recommendation to the Director of Planning to adopt or reject the TOC Guidelines.

## E. Process for Changing TOC Incentives and Eligibility

The TOC Incentives and the required percentages for on-site restricted affordable units may be adjusted for an individual TOC Area through a Community Plan update, Transit Neighborhood Plan, or Specific Plan, provided that the required percentages for on-site restricted affordable units may not be reduced below the percentages set forth in Subdivision B.2. above.

## F. Procedures

Application for the TOC Incentives shall be made on a form provided by the Department of City Planning, and shall follow the procedures outlined in *Sec. 9.2.1.*G. (Density Bonus; Procedures).

## G. Records and Agreements

Prior to issuance of a building permit for an Eligible Housing Development, the following shall apply:

### 1. Housing Development Containing Rental Housing

For any Eligible Housing Development qualifying for a TOC Incentive that contains rental housing for Extremely Low, Very Low, or Lower Income Households, a covenant acceptable to the Los Angeles Housing and Community Investment Department, or its successor agency, shall be recorded with the Los Angeles County Recorder, guaranteeing that the affordability criteria will be observed for 55 years or longer.

### 2. Housing Development Containing For-Sale Housing

For any Eligible Housing Development qualifying for a TOC Incentive that contains for-sale housing, a covenant acceptable to the Los Angeles Housing and Community Investment Department, or its successor agency, and consistent with the for-sale requirements of California Government Code Section 65915(c)(2) shall be recorded with the Los Angeles County Recorder.

### 3. Duration of Covenants

If the duration of affordability covenants provided for in this Subsection conflicts with the duration for any other government requirement, the longest duration shall control.

# DIV. 9.3. COMMUNITY BENEFITS PROGRAM

## SEC. 9.3.1. COMMUNITY BENEFITS PROGRAM STRUCTURE

### A. Purpose

The purpose of this Division is to promote the production of improvements, facilities, resources, and services beyond affordable housing for the benefit and enjoyment of the general public.

### B. Applicability

This Section shall apply to any project utilizing an incentive programs included as an available incentive program in a lot's applicable CPIO or specific plan, providing the required percentage of restricted affordable units as established in *Sec. 9.3.2.* (Local Affordable Housing Incentive Program) or public benefits as established in *Div. 9.2.* (Public Benefit Incentive Programs), and is on a lot which provides Bonus FAR, Bonus Height, or Bonus Stories.

### C. Eligibility

A project must meet the following criteria in order to obtain additional development incentives through the programs contained in this Division:

#### 1. Residential Projects

Residential projects must first utilize the Local Affordable Housing Incentive Program, established in *Sec. 9.3.2.*, to its fullest extent. If there is any unused floor area, height or stories based on the Bonus FAR, Bonus Height, or Bonus Stories available for the project site according to the site's applicable Form District, then a project may utilize the remaining development potential using one of the methods described in Subsection D. (Bonus Floor Area) below up to the maximum allowed by a lot's Form District. Utilizing the Local Affordable Housing Incentive Program to its fullest extent means to provide the adequate number of restricted affordable units to qualify for the maximum density increase allowed by the Local Affordable Housing Program Set applicable to the lot. Calculation of the maximum density increase allowed and number of restricted affordable units required shall be based on the maximum density allowed by the project site's Density District.

#### 2. Non-Residential Projects

Non-residential projects, including city-approved Hotels, Motels, and Transient Occupancy Residential Structures, may utilize the any of the programs established in *Div. 9.3.* (Community Benefits Program) without first utilizing the Local Affordable Housing Incentive Program. Bonus FAR, Bonus Height, or Bonus Stories may be awarded up to the maximum allowed by each sites Form District. In order to utilize any of the Public Benefits Incentive programs in *Division 9.3.* (Community Benefits Program), the incentive programs must be included as an available incentive program in a lot's applicable CPIO or specific plan.

### D. Bonus Floor Area, Height or Stories

A Residential Project that does not use all of the FAR, height, or stories granted by the Bonus FAR, Bonus Height, or Bonus Stories of the applicable Form District, after fully using the Local Affordable Housing Incentive Program, may access the remaining FAR, height, or stories using one or more of the following methods:

#### 1. Additional Restricted Affordable Units

Providing additional percentages of restricted affordable units above the minimum percentage required to qualify for the maximum density increase of the Local Affordable Housing Incentive Program. The amount of additional bonus density, FAR, height, or stories provided for additional percentages of restricted affordable units shall be contained in the lot's applicable CPIO or specific plan.

#### 2. Public Benefits Incentive Programs

Utilizing the one or more of the programs established in *Div. 9.3.* (Community Benefits Program) below, provided that the programs are included as available incentive programs in the lot's applicable CPIO or specific plan.

## SEC. 9.3.2. LOCAL AFFORDABLE HOUSING INCENTIVE PROGRAM

### A. Purpose

The purpose of the Local Affordable Housing Incentive Program is to incentivize the creation and development of restricted affordable units Citywide beyond the levels incentivized by the State Density Bonus program, and to increase the production of affordable housing units in specific areas identified in the applicable Community Plan.

### B. Eligibility

A housing development project that includes the minimum percentage of on-site restricted affordable units required by the Local Incentive Program Set in which it is located, is entitled to receive the Incentives in Subsection C. (Base Incentives) below. The Local Incentive Program Set applicable to a lot shall be identified in the lot's applicable CPIO or specific plan.

| LOCAL INCENTIVE PROGRAM SETS | | | | | |
|---|---|---|---|---|---|
| Set | Affordability Requirements | | | | |
| | Deeply Low Income | Extremely Low Income | Very Low Income | Lower Income | Moderate |
| A | n/a | 11% | 15% | 25% | n/a |
| B | n/a | 10% | 14% | 23% | n/a |
| C | n/a | 9% | 12% | 21% | n/a |
| D | n/a | 7% | 11% | 20% | n/a |
| E | 5% | 8% | 11% | 20% | 40% |

### 1. Housing Replacement

A housing development project must meet any applicable housing replacement requirements of California Government Code Section 65915(c)(3), as verified by the Department of Housing and Community Investment prior to the issuance of any building permit. Replacement housing units required per this Section may count towards on-site restricted affordable units requirements of Subdivision 1. above.

## C. Base Incentives

### 1. Residential Density

**a.** In Local Incentive Program Sets A-D, a housing development project that includes the minimum percentage of on-site restricted affordable units outlined in Subdivision B.1. above shall be granted an increase in the allowable residential density as follows:

| RESIDENTIAL DENSITY INCENTIVE | | | | | |
|---|---|---|---|---|---|
| Density District | Allowable Density Increase | | | | |
| | Set A | Set B | Set C | Set D | Set E |
| 2, 4 | 70% | 60% | 50% | 40% | 40% |
| 6 | 60% | 50% | 50% | 40% | 40% |
| 8, 12 | 50% | 40% | 40% | 35% | 35% |
| 15, 20 | 40% | 35% | 35% | n/a | n/a |
| 1L, 2L, 3L, 4L, FA | n/a | n/a | n/a | n/a | n/a |

**b.** 100% affordable housing development projects. housing development projects that consist of 100% on-site restricted affordable units, exclusive of a building manager's unit or units, shall be permitted an additional increase in density of 10 percentage points more than listed in Paragraph (a) above. For example, a 50% density increase will become a 60% density increase.

### 2. Floor Area Ratio

**a.** In Sets A-D, a housing development project that includes the minimum amount of on-site restricted affordable units as outlined in Subdivision B.1. shall be entitled to utilize the entire Bonus FAR as outlined in the lot's Form District.

**b.** In Set E, a housing development project that includes the minimum amount of on-site restricted affordable units shall be entitled to a 35% FAR increase.

**c.** 100% affordable housing development projects. housing development projects that consist of 100% on-site restricted affordable units, exclusive of a building manager's unit or units, shall be permitted an additional increase of 10% of floor area more than listed above or in the applicable Form District. However, in no instance shall the floor area ratio exceed 13:1.

### 3. Height

A housing development project that includes the minimum amount of on-site restricted affordable units shall be entitled to utilize the entire Bonus Height or Bonus Stories as outlined in the lot's Form District, when the Form District includes a Bonus Height or Bonus Stories metric.

### 4. Automobile Parking

**a.** Residential Parking. Eligible housing development projects shall qualify for a reduced residential parking requirement according to the Local Incentive Program Set in which the lot is located, based on the table below:

| AUTOMOBILE PARKING INCENTIVE | |
|---|---|
| Incentive Program Set | Parking Reduction |
| Set A, Set B | 75% Decrease in required minimum |
| Set C, Set D, Set E | 50% Decrease in required minimum |

**b.** For a housing development project that consists of 100% on-site restricted affordable units, exclusive of a manager's unit or units, there shall be no required parking for all residential units in the project.

**c.** For a housing development project located 750 feet or less from a Transit Stop, as measured from the closest point on any lot to the entrance(s) of the station or stop, there shall be no required parking for all residential units in the project.

**d.** Nonresidential Parking. A housing development project with nonresidential uses located in any Local Incentive Program Set may reduce the nonresidential automobile parking requirement for any ground-floor nonresidential use by 20% of the required minimum.

**e.** Consistency with State Code. Parking reductions offered for housing development projects shall always be consistent with or greater than those in California Government Code Section 65915(p).

## D. Additional Incentives

Additional incentives, and eligibility requirements for additional incentives, shall be outlined in the applicable CPIO or specific plan.

## E. Process

1. Housing development projects requesting only the Incentives outlined in Subsection C. (Base Incentives), without any additional Incentives, as outlined in applicable CPIO or specific plan, shall be considered ministerial. No application for these projects need to be filed with the Department of City Planning.

2. Housing development projects requesting additional Incentives, as outlined in applicable CPIO or specific plan, shall follow the procedures in *Sec. 9.2.1.*G.2. (Density Bonus; Procedures; Projects Requesting Additional Incentives).

3. Records and Agreements. housing development projects shall comply with the Records and Agreements requirements of *Sec. 9.2.1.*I. (Density Bonus; Procedures; Records and Agreements).

# SEC. 9.3.3. PUBLICLY ACCESSIBLE OUTDOOR AMENITY SPACE

## A. Purpose

The purpose of this Section is to incentivize the development of public outdoor plazas, parks, seating areas, and other amenity spaces, on private land.

## B. Applicability

If the Publicly Accessible Outdoor Amenity Space incentive program is listed as an available Incentive program in the applicable CPIO or specific plan, the project can obtain additional floor area as permitted by the Bonus FAR by providing Outdoor Amenity Space subject to the standards below.

## C. Standards

A project is considered to be providing Publicly Accessible Outdoor Amenity Space if:

1. The Publicly Accessible Outdoor Amenity Space is provided on the ground level of the project site;
2. The Publicly Accessible Outdoor Amenity Space shall be, at minimum, 100% of the size of the lot's minimum required lot amenity space area pursuant to the lot's Form District, including any Pedestrian Amenity exemption the project may qualify for. This provision may not be used in conjunction with the 25% reduction for making it publicly accessible pursuant to *Sec. 2C.3.1.*D. (Lot Amenity Space; Measurement);
3. All portions of the Publicly Accessible Outdoor Amenity Space shall be contiguous; and
4. The Outdoor Amenity Space complies with all minimum requirements contained in *Sec. 2C.3.3.*C. (Pedestrian Amenity Space) and D. (Privately-Owned Public Space).
5. The Outdoor Amenity Space complies with any additional requirements set forth in the applicable CPIO.

## D. Incentives

A project may obtain additional floor area, up to the project lot's Bonus FAR. The amount of floor area awarded shall be in accordance to the lot's applicable CPIO or specific plan.

## E. Process

To obtain additional floor area as outlines in the applicable CPIO or specific plan for providing Publicly Accessible Outdoor Amenity Space, an applicant must file an application pursuant to *Sec. 13B.2.5.* (Director Determination).

## F. Records and Agreements

A covenant acceptable to the Department of City Planning must be recorded with the Los Angeles County Recorder, guaranteeing that the Publicly Accessible Outdoor Amenity Space will be maintained and remain open to the public during all required hours.

# SEC. 9.3.4. COMMUNITY FACILITIES

## A. Purpose

The purpose of this Section is to incentivize the development of facilities and services that are necessary to the community or are of benefit to the public and the community in which the facility is located.

## B. Applicability

If the Community Facilities incentive program is listed as an available incentive program in the applicable CPIO or specific plan, the project can obtain additional floor area by providing one or more of the Community Facilities below. Each Community Facility must be listed as an allowable incentive option in the CPIO or specific plan applicable to the project site.

### 1. On-Site Provision of Child Care Services

A residential, commercial, industrial, or mixed-use project may obtain additional floor area as permitted by the Bonus FAR for the provision of on-site child care, subject to the following standards:

**a.** The child-care facility shall be in compliance with all requirements of Title 22, Division 12, Chapter 1 of the California Code of Regulations.

**b.** The child care facility shall be appropriately licensed by the California Department of Social Services.

**c.** Floor area utilized as a child care facility or facilities shall be used for such purpose for a minimum of 10 years after the Certificate of Occupancy is issued.

**d.** The floor area devoted to a child care facility shall be located on site.

**e.** No Certificate of Occupancy for a project which is obtaining additional floor area for the provision of a child care facility shall be issued prior to the issuance of the Certificate(s) of Occupancy for the child care facility required pursuant to this Subdivision.

### 2. Full-Service Grocery Store

A residential, commercial, industrial, or mixed-use project may obtain additional floor area as permitted by the Bonus FAR for the on-site provision of a Full-Service Grocery Store (Food and Beverage Store) subject to the following standards:

**a.** The grocery store shall have at least 10,000 square feet of floor area.

**b.** The grocery store shall dedicate at least 25% of its floor area to perishable food items.

**c.** Floor area utilized as a Full-Service Grocery Store shall be used for such purpose for a minimum of 10 years after the Certificate of Occupancy is issued.

**d.** The floor area devoted to a Full-Service Grocery Store shall be located on site.

**e.** No Certificate of Occupancy for a project which is obtaining additional floor area for the provision of a Full-Service Grocery Store shall be issued prior to the issuance of the Certificate(s) of Occupancy for the Full-Service Grocery Store required pursuant to this Subdivision.

**f.** The project site must be within a Grocery Store Incentive Area pursuant to the applicable CPIO or specific plan.

### 3. Health Centers

A residential, commercial, industrial, or mixed-use project may obtain additional floor area as permitted by the Bonus FAR for the on-site provision of a Health Center, which is a facility that provides health and medical care, subject to the following standards:

**a.** The Health Center shall be certified by the United States Department of Health and Human Services, Health resources and Services Administration (HRSA) as a Federally Qualified Health Center (FQHC), or FQHC Look-Alike as defined by the HRSA.

**b.** Floor area provided for a Health Center shall be used for such purpose for a minimum of 10 years after the Certificate of Occupancy is issued.

**c.** The floor area utilized as a Health Center shall be located on site.

**d.** No Certificate of Occupancy for a project which is obtaining additional floor area for the provision of a Health Center shall be issued prior to the issuance of the Certificate(s) of Occupancy for the Health Center required pursuant to this Subdivision.

**e.** The project site must be within a Health Center Incentive Area pursuant to the applicable CPIO or specific plan.

### 4. Employment Centers

A project in which a minimum of 50% of the floor area permitted by the Base FAR contains non-residential uses may obtain additional floor area as permitted by the Bonus FAR, subject to the following standards:

**a.** A minimum of 50% of the floor area permitted by the Base FAR must be utilized for non-residential uses for a minimum of 10 years after the issuance of the Certificate of Occupancy.

**b.** The project site must be within an Employment Centers Incentive Area pursuant to the applicable CPIO or specific plan.

### 5. Schools and Libraries

A residential, commercial, industrial, or mixed-use project may obtain additional floor area as permitted by the Bonus FAR for the on-site provision of a public school or public library, subject to the following standards:

**a.** Floor area utilized for a school shall be occupied by a Los Angeles Unified School District school (LAUSD), or a school approved for operation by LAUSD, and shall be properly accredited. Floor area utilized for a library shall be occupied by a library operated by the City of Los Angeles Library Department. The applicant must obtain a written agreement from either LAUSD or the City of Los Angeles Library Department confirming the space shall be utilized for a school or library

**b.** Floor area utilized as a school or library shall be used for such purpose for a minimum of 10 years after the Certificate of Occupancy is issued.

**c.** The floor area devoted to a school or library shall be located on site.

**d.** No Certificate of Occupancy for a project which is obtaining additional floor area as permitted by the Bonus FAR for the provision of a school or library shall be issued prior to the issuance of the Certificate(s) of Occupancy for the school or library required pursuant to this Subdivision.

**e.** The project site must be within a School and Libraries Incentive Area pursuant to the applicable CPIO or specific plan.

### 6. Social Services

A residential, commercial, industrial, or mixed-use project may obtain additional floor area as permitted by the Bonus FAR for the on-site provision of a Social Service Center, which is a facility that provides services for the benefit of the community, subject to the following standards:

**a.** The Social Services Center must be operated by a government agency or a 501(c)(3) non-profit organization;

**b.** Services are provided on a voluntary basis with an emphasis on employment services, job training, business incubation, youth development, educational services, medical and mental health care, substance abuse treatment, food aid, or other services deemed appropriate by the Director of Planning;

**c.** Floor area utilized as for a Social Service Center shall be used for such purpose for a minimum of 10 years after the Certificate of Occupancy is issued;

**d.** The floor area devoted to a Social Service Center shall be located on-site;

**e.** No Certificate of Occupancy for a Project which is obtaining additional floor area as permitted by the Bonus FAR for the provision of a Social Service Center shall be issued prior to the issuance of the Certificate(s) of Occupancy for the Social Service Center required pursuant to this Subdivision;

**f.** The project site must be within a Social Service Center Incentive Area pursuant to the applicable CPIO or specific plan.

### 7. Public Facilities

A residential, commercial, industrial, or mixed-use project may obtain additional floor area as permitted by the Bonus FAR for the on-site provision of a Government Facility, which is a facility operated by a government agency for public purposes, subject to the following standards:

**a.** Eligible facilities include: cultural centers, museums, police stations, fire stations, or other emergency response facilities deemed appropriate by the Director of Planning.

**b.** Floor area utilized for a Public Facility shall be used for such purpose for a minimum of 10 years after the Certificate of Occupancy is issued.

**c.** The floor area devoted to a Public Facility shall be located on-site.

**d.** No Certificate of Occupancy for a project which is obtaining additional floor area as permitted by the Bonus FAR for the provision of a Public Facility shall be issued prior to the issuance of the Certificate(s) of Occupancy for the Public Facility required pursuant to this Subdivision.

**e.** The project site must be within a Public Facility Incentive Area pursuant to the applicable CPIO or specific plan.

## C. Incentives

A project may additional floor area as permitted by the Bonus FAR. The amount of floor area awarded shall be in accordance to the lot's applicable CPIO or specific plan.

## D. Process

### 1. Application

To obtain additional development potential as allotted for in an applicable CPIO or specific plan for providing community facilities and improvements, an applicant must file for an application pursuant to *Sec. 13B.2.5.* (Director Determination).

### 2. Supplemental Findings

In addition to the findings required by *Sec. 13B.2.5.* (Director Determination), the Director must also find that the Community Facility will enhance the built environment or quality of life in the surrounding neighborhood and will perform a function or provide a service that is essential or beneficial to the community.

## E. Records and Agreements

A covenant acceptable to the Department of City Planning must be recorded with the Los Angeles County Recorder, guaranteeing that the applicant, tenant, or property owner will not change the use of the portion of the building dedicated to the Community Facility for the periods outlined in Subsection B. (Applicability) above from the issuance of the Certificate of Occupancy.

# DIV. 9.4. GENERAL INCENTIVE PROGRAMS

## SEC. 9.4.1. PERMANENT SUPPORTIVE HOUSING INCENTIVE PROGRAM

### A. Purpose

**1.** The purpose of this Section is to facilitate the expedient production of Supportive Housing units meeting the established definitions and regulations, or Qualified Permanent Supportive Housing Projects, in order to provide high-quality, well-serviced and affordable housing units which are responsive to the needs of the Target Population.

**2.** This Section is intended to facilitate construction or maintenance of Supportive Housing units pursuant to a ministerial approval process in conformance with the State density bonus provisions in California Government Code Section 65915. Qualified Permanent Supportive Housing Projects are those that meet the following objectives:

**a.** Projects should be located at sites that are accessible by public transit, including paratransit.

**b.** Individual dwelling units or guest rooms should be provided with basic amenities that are sufficient to support independent living.

**c.** Sufficient non-residential floor area, as determined in Subdivision B.2. (Supportive Services) below, should be made available on the subject property to provide the appropriate level of Supportive Services to the resident Target Population.

### B. Applicability

In order for a Qualified Permanent Supportive Housing Project to be eligible for this Qualified Permanent Supportive Housing Incentive Program it must comply with the following requirements:

#### 1. Use of Other Residential Incentive Programs

A Qualified Permanent Supportive Housing Project applying for another incentive program established in *Div. 9.2.* (Affordable Housing Incentive Programs), *Sec. 9.3.2.* (Local Affordable Housing Incentive Program), or affordable housing incentive provisions in any other specific plan or supplemental district at the same location shall not also be eligible for approval.

#### 2. Supportive Services

Applicants shall provide documentation describing the Supportive Services that will be provided onsite and offsite. Prior to any approval of a Qualified Permanent Supportive Housing Project, the applicant shall submit information demonstrating that Supportive Services will be provided to residents of the project. The applicant shall indicate the name of the entity or entities that will provide the Supportive Services, the Local Public Agency funding source(s) for those services, and proposed staffing levels. If a preliminary funding commitment is needed, the applicant shall also submit a signed letter of intent from the Local Public Agency

verifying that it is providing a preliminary funding commitment for the Supportive Services. If no funding commitment is needed, the applicant shall demonstrate that the entity or entities that will provide the Supportive Services are service providers prequalified by a Local Public Agency.

### 3. Housing Replacement

Projects shall meet any applicable dwelling unit replacement requirements of California Government Code Section 65915(c)(3), or as thereafter amended, as verified by the Los Angeles Housing and Community Investment Department, or its successor agency, and all applicable monitoring fees in Article 9 (Fees) of Chapter 1 of this Code shall be paid by the applicant prior to the issuance of any building permit.

### 4. On-Site Supportive Services Requirement

Non-residential floor area shall be provided for on-site Supportive Services in the following ratios:

**a.** For Qualified Permanent Supportive Housing Projects with 20 or fewer total combined dwelling units or guest rooms, no less than 90 square feet of dedicated office space shall be provided; or

**b.** For Qualified Permanent Supportive Housing Projects with greater than 20 dwelling units or guest rooms, a minimum of 3% of the total residential floor area shall be dedicated for on-site Supportive Services provided solely to on-site residents, including but not limited to community rooms, case management offices, computer rooms, or a community kitchen.

### 5. Location Requirement

The Qualified Permanent Supportive Housing Project shall be located within a High Quality Transit Area for the horizon year in the current Regional Transportation Plan/Sustainable Communities Strategy for the Southern California Association of Governments region.

### 6. Unit/Guest Room Requirements

Each dwelling unit or guest room shall have a private bathroom and cooking facilities containing, at minimum, a sink, refrigerator, counter space, and a hotplate or microwave. The Zoning Administrator can modify this requirement pursuant to *Sec. 13B.2.2.* (Class 2 Conditional Use Permit).

### 7. Historic Resources

The Qualified Permanent Supportive Housing Project shall not involve a historical resource, as defined by California Public Resources Code Section 21084.1 as determined by the Director, in consultation with the Office of Historic Resources.

## C. Incentives

The grant of any incentives under this Subsection shall not be considered an increase in density or other change which requires any corresponding Zone Change, General Plan Amendment, Project Exception or other discretionary action.

### 1. Base Incentives

A Qualified Permanent Supportive Housing Project meeting the requirements in Subsection B. (Applicability) above is eligible for the following base incentives:

#### a. Minimum Lot Area per Dwelling Unit or Guest Room

In all Density Districts except for 1L, the number of allowable dwelling units or guest rooms shall not be subject to the otherwise maximum density under any applicable zoning ordinance or specific plan. On any lot in Density District 15, the minimum lot area per dwelling unit or guest room shall be 500 square feet.

#### b. Parking

The following requirements shall apply to all Qualified Permanent Supportive Housing Projects:

**i.** Up to 40% of the total required parking spaces may be provided by compact stalls.

**ii.** No parking spaces shall be required for dwelling units or guest rooms restricted to the Target Population.

**iii.** For projects located within one-half (1/2) mile of a Transit Stop, or of a Major Transit Stop as defined in Section 21155(b) of the California Public Resources Code, no more than one-half (1/2) parking space shall be required for each income-restricted dwelling unit or guest room not occupied by the Target Population. Otherwise, no more than one (1) parking space shall be required for each restricted affordable unit or guest room not occupied by the Target Population.

**iv.** One parking space for every 20 dwelling units or guest rooms shall be required for the purpose of accommodating guests, Supportive Services, and case management.

**v.** For projects located in the Downtown Community Plan, no parking space shall be required for dwelling units or guest rooms dedicated or set aside for households that earn less than 50% of the Area Median Income as determined by the Los Angeles Housing and Community Investment Department, or its successor agency.

**vi.** Parking reductions offered for Qualified Permanent Supportive Housing Projects shall always be consistent or greater than those in California Government Code Section 65915(p).

**vii.** If the parking requirements applicable to the project site pursuant to Article 4 (Development Standards) are less than the parking required by one of the applicable parking options in this Subsection, an applicant may utilize the parking requirements of *Article 4* (Development Standards).

#### c. Floor Area

Areas designated exclusively for Supportive Services use or public areas accessible to all residents, including those for residential or Supportive Services uses, shall not be considered as floor area of the building for the purposes of calculating the total allowable floor area. The floor area shall be measured to the center line of wall partitions between public and non-public areas.

#### d. Conversion or Replacement of Existing Residential Hotel Use

Despite the provisions of the applicable Use District, a Qualified Permanent Supportive Housing Project developed pursuant to this Section shall be permitted when the project is converted from, or is a replacement of a Residential Hotel as defined in Section 47.73.S. (Residential Hotel Unit Conversion and Demolition; Definitions) of Chapter 4 (Public Welfare) of this Code, and is a continuation of an existing residential use. The replacement shall comply with the provisions of Article 7.1. (Residential Hotel Unit Conversion and Demolition) of Chapter 4 (Public Welfare) of this Code as approved by the Los Angeles Housing and Community Investment Department, or its successor agency. The total number of dwelling units or guest rooms may be increased as part of the conversion or replacement. This Subdivision shall not apply to a Residential Hotel located on a lot in Density District 20 or more restrictive.

#### e. Guest Rooms

For the purpose of this Section, a guest room may contain cooking facilities including a sink, refrigerator not exceeding 10 cubic feet, counter space not exceeding 10 square feet, and a hotplate or microwave.

### 2. Additional Incentives

A Qualified Permanent Supportive Housing Project meeting the requirements in Subsection B. (Applicability) above is eligible for any combination of up to five additional incentives described below, as applicable.

#### a. Yard

A Qualified Permanent Supportive Housing Project may obtain up to 20% decrease in the any required Yard, and all adjustments to individual Yards may be combined to count as one incentive, except that:

**i.** The project must still provide landscaping sufficient in compliance with the landscape requirements in *Article 4* (Development Standards).

**ii.** No reduction is permitted along a property line that abuts a property in Density District 1L, or any Open Space Use District.

**iii.** In Residential Use Districts, the resulting front yard may not be less than the average of the front yards, as measured to the main building, of adjoining lots along the same street face. If located on a corner lot or adjacent to a vacant lot, the front yard may align with the facade of the adjacent building along the same front lot line, and may result in more or less than a 20% decrease in the required yard. If there are no adjacent buildings, no reduction is permitted.

### b. Building Coverage

Up to 20% increase in Building Coverage limits, provided that the landscaping for the Qualified Permanent Supportive Housing Project is sufficient to provide 10% more than otherwise required by *Article 4* (Development Standards).

### c. Floor Area Ratio

**i.** Up to 35% increase in the Base FAR.

**ii.** On lots in Density District 15, up to a 20% increase in the Base FAR.

**iii.** In lieu of the otherwise applicable FAR, a FAR not to exceed 3:1, provided the lot is in a Commercial or Commercial-Mixed Use District.

### d. Height

Up to 35% increase in the maximum allowable height in feet, applicable over the entire lot regardless of any of the lower underlying height limits. In any Form District in which the height or number of stories is limited, this provision shall permit a maximum height increase of one additional story up to eleven feet. For the purposes of this Height incentive other transitional height requirements in this Chapter shall not apply. In their place, the following transitional height requirements shall be applied:

**i.** When adjacent to or across an alley from lots with in Density District 1L or 2L, the building's height shall be stepped-back within a 45 degree angle as measured from a point 25 feet above grade at the property line.

**ii.** On lots in Density District 15, when adjacent to or across an alley from lots in Density District 1L or 2L, the building's height shall be stepped-back within a 45 degree angle as measured from a point 20 feet above grade at the property line.

### e. Lot Amenity Space and Residential Amenity Space

Up to 20% decrease in the required lot amenity space and Residential Amenity Space, provided that the landscaping for the Qualified Permanent Supportive Housing Project is sufficient to provide 10% more than otherwise required by Article 4 (Development Standards).

### f. Averaging of Floor Area Ratio, Parking

Lot amenity space, or Residential Amenity Space. A Qualified Permanent Supportive Housing Project that is located on two or more contiguous parcels may average the floor area, lot amenity space, Residential Amenity Space, and parking over the project site, provided that:

**i.** The proposed use is permitted by the underlying zone(s) of each parcel; and

**ii.** No further lot line adjustment or any other action that may cause the Qualified Permanent Supportive Housing Project site to be subdivided subsequent to this grant shall be permitted.

### g. Ground Floor Use

Where non-residential floor area is required by a zoning ordinance, Specific Plan, Community Plan, or other set of standards, that requirement may be satisfied by any active ground floor use such as community rooms, resident amenities, Supportive Service areas, or lot amenity space.

### h. Other Development Standard

Up to a 20% relief may be provided from one other development standard not described in this Subsection, as that term is defined in California Government Code Section 65915(o)(1), or as may be amended from time to time.

## D. Process

### 1. Qualified Permanent Supportive Housing Projects Meeting All Applicability Requirements

To utilize an incentive, as outlined is Subsection C. (Incentives) above, an applicant must file pursuant to *Sec. 13B.3.1.* (Administrative Review).

#### a. Application Material

All applications shall be reviewed for compliance with the definitions in this Section, applicability requirements in Subsection B. (Applicability) above, and compliance with the applicable incentive standards in Subsection C. (Incentives) above. The application shall be approved by the Department of City Planning if the applicable standards of this Section are met.

#### b. Notification of Application

Despite the provisions of *Sec. 13B.3.1.* (Administrative Review), the following requirements shall be completed at least 30 days prior to the Department of City Planning's approval of the Qualified Permanent Supportive Housing Project:

**i.** The Department shall send written notices of the Qualified Permanent Supportive Housing Project application by U.S. mail to the abutting property owners, applicable Neighborhood Council and the Council District Office of the site; and

**ii.** The applicant shall post, in a conspicuous place near the entrance of the property, a public notice of the Qualified Permanent Supportive Housing Project application. The applicant shall submit proof of posting to the Department, which includes submission of a completed public notice form provided by the Department and photographs of the posted notice.

#### c. Additional Waivers

The City may not apply a development standard that will physically preclude the construction of the Qualified Permanent Supportive Housing Project. Applicants may request additional waivers pursuant to the procedures described in Subdivision *Sec. 9.2.1.*G.3. (Density Bonus; Procedures; Projects with Requests for Waiver or Modification). The Zoning Administrator may modify or exempt the applicability requirements for Qualified Permanent Support Housing Projects in Subdivisions B.4. (On-Site Supportive Services Requirement), B.5. (Location Requirement), B.6. (Unit/Guest Room Requirements), and B.7. (Historic Resources), pursuant to *Sec. 13B.2.2.* (Class 2 Conditional Use Permit), when the applicant can demonstrate that the project remains consistent with the purpose of those standards.

### E. Records and Agreements

Prior to the issuance of any building permit for a Qualified Permanent Supportive Housing Project, the applicant shall record a covenant acceptable to the Los Angeles Housing and Community Investment Department, or its successor agency, that reserves and maintains the total combined number of dwelling units and guest rooms designated as restricted affordable for at least 55 years from the issuance of the Certificate of Occupancy.

## SEC. 9.4.2. INTERIM USE OF MOTELS FOR SUPPORTIVE HOUSING OR TRANSITIONAL HOUSING

### A. Purpose

The purpose of this Section is to facilitate the interim use of existing Transient Residential structures, such as Motels, Lodging, Apartment Hotels, and Transient Occupancy Residential structures, as Supportive Housing or Transitional Housing for persons experiencing homelessness or those at risk of homelessness. Under this Section, the structure may return to its previous use, or any use consistent with the underlying zoning, upon termination of the interim Supportive Housing or Transitional Housing use.

### B. Applicability

An Interim Motel Housing Project is eligible for conversion to Supportive Housing or Transitional Housing for persons experiencing homelessness or those at risk of homelessness if they meet the following requirements:

#### 1. Certificate of Occupancy

The structure has a Certificate of Occupancy as a Motel, Lodging, Apartment Hotel, or Transient Occupancy Residential Structure;

#### 2. Use of Units

All dwelling units and guest rooms in the structure must be used for Supportive Housing or Transitional Housing or a combination of both;

#### 3. No Additions

The Interim Motel Housing Project does not increase or add floor area or expand the building footprint or height;

#### 4. No Expansion of Use

The Interim Motel Housing Project does not increase the total combined number of dwelling units or Guests Rooms;

### 5. Permitted Use

Any floor area used for on-site Supportive Services shall be considered accessory to the residential use;

### 6. Supportive Service Area

For every 20 dwelling units or guest rooms, a minimum of one dedicated office space shall be provided for the provision of on-site Supportive Services, including case management. A minimum of one dedicated office space shall be provided for Interim Motel Housing Projects with fewer than 20 total combined dwelling units or guest rooms. Any floor area dedicated to Supportive Services may be provided on-site within an existing building, but shall not exceed 10% of the total floor area of the building;

### 7. Supportive Services Contract

The applicant provides a copy of an executed contract agreement between the Local Public Agency, the provider of the Supportive Housing or Transitional Housing, and the Interim Motel Housing Project applicant for the provision of on-site Supportive Housing or Transitional Housing, or a combination of both; proof that the applicant has received funding from a Local Public Agency; and proof that the Supportive Housing or Transitional Housing contract is in effect;

### 8. Residential Hotel Ordinance

If structures or units are subject to the provisions of Article 7.1. (Residential Hotel Unit Conversion and Demolition) of Chapter 4 (Public Welfare) of this Code on the date of the Interim Motel Housing Project application, they shall remain subject to all requirements and restrictions in Article 7.1. (Residential Hotel Unit Conversion and Demolition) of Chapter 4 (Public Welfare) of this Code during the Supportive Housing or Transitional Housing contract; and

### 9. Historic Building

An Interim Motel Housing Project shall not involve alteration of an historic character defining feature identified in a nomination or a survey for any project affecting a property listed in or formally determined eligible for a National, State or local historic register, individually or as a contributor to a historic district, unless the Director in consultation with the Office of Historic Resources determines the proposed alteration will not adversely impact the property's historic eligibility.

## C. Incentives

Interim Motel Housing Projects shall not be subject to any otherwise applicable zoning ordinance, specific plan, or other overlay district regulations, including, but not limited to, the following:

### 1. Minimum Area per Dwelling Unit or Guest Room

Interim Motel Housing Projects shall not be considered an increase in density or other change which requires any corresponding discretionary action. A structure, regardless of any nonconforming status as to the area and density regulations of the underlying zone, may be used for an Interim Motel Housing Project.

### 2. Off-Street Automobile Parking

Interim Motel Housing Projects shall be exempt from the provisions of Article 4 (Development Standards) during the Supportive Housing or Transitional Housing contract, however, the Interim Motel Housing Project shall maintain and not reduce the number of on-site parking spaces existing on the date of the Interim Motel Housing Project application.

### 3. Use

Despite the provisions of the underlying Use District or any nonconforming use provision to the contrary, an Interim Motel Housing Project shall be permitted.

### 4. Minor Interior Alterations for Cooking Facilities

Approved Interim Motel Housing Project applicants may make minor interior alterations adding cooking facilities, including a sink, a refrigerator not exceeding 10 cubic feet, counter space not exceeding 10 square feet, and a hotplate or microwave, to guest rooms. In the event a structure is returned to the Motel or Hotel use in accordance with Subdivision D.3. (Termination of Supportive Housing or Transitional Housing Contract) below, the Motel or Hotel may maintain any guest rooms with added cooking facilities.

### 5. Preservation of Nonconforming Rights

Upon termination of the Supportive Housing or Transitional Housing use, in accordance with Subdivision D.3. (Termination of Supportive Housing or Transitional Housing Contract) below, any structure that is nonconforming as to area or use regulations or any other zoning code requirements may return to the use and condition, authorized by a Certificate of Occupancy, existing on the date of the Interim Motel Housing Project application, despite any physical alterations to the subject property. Any floor area used for Supportive Services may be returned to use as guest rooms or dwelling units, or may be converted to accessory amenity spaces, so long as the total number of dwelling units or guest rooms do not exceed the number approved on the Certificate of Occupancy existing at the time of the application for Interim Motel Housing Project.

## D. Process

### 1. Department of Building and Safety Review

Interim Motel Housing Projects shall be approved by the Department of Building and Safety if the applicability requirements of Subsection B. (Applicability) above, and the standards

described in Subsection C. (Incentives) above are met, and the incentives described in Subsection C. (Incentives) above shall be granted.

### 2. Residential Hotel Ordinance

Interim Motel Housing Project applicants seeking to convert structures subject to the Residential Hotel Ordinance pursuant to Article 7.1. (Residential Hotel Unit Conversion and Demolition) of Chapter 4 (Public Welfare) of this Code must also submit an application using the process described in Section 47.78. (Application for Clearance) of Chapter 4 (Public Welfare) of this Code.

### 3. Termination of Supportive Housing or Transitional Housing Contract

Upon any termination of the Supportive Housing or Transitional Housing contract, the following shall apply:

**a.** The Interim Motel Housing Project applicant shall be required, within 90 days, to notify the Department of Building and Safety and to complete one of the following:

**i.** Submit an application to the Department of Building and Safety to return to the use, authorized by a Certificate of Occupancy, existing on the date of the Interim Motel Housing Project application, or to any use permitted by the current zoning regulations; or

**ii.** Provide a copy of a new executed contract agreement to the Department of Building and Safety in accordance with the requirements in Subdivision B.7. (Supportive Services Contract) above to begin a new contract term for provision of Supportive Housing or Transitional Housing.

**b.** Residential Hotel Ordinance. The number of Residential Units, as defined in Section 47.73.T. (Residential Hotel Unit Conversion and Demolition; Definitions) of Chapter 4 (Public Welfare) of this Code, at each participating structure of an Interim Motel Housing Project which has been converted to structures subject to Article 7.1. (Residential Hotel Unit Conversion and Demolition) of Chapter 4 (Public Welfare) of this Code shall be identical to the number of units originally determined by the Housing and Community Investment Department to be Residential Units pursuant to Section 47.76. (Residential Unit Status Determination) of Chapter 4 (Public Welfare) of this Code or any subsequent number approved as part of an application using the process described in Section 47.78. (Application for Clearance) of Chapter 4 (Public Welfare) of this Code.

### 4. Modifications to Interim Motel Housing Project Applicability Requirements

The Zoning Administrator may modify or exempt the applicability requirements for Interim Motel Housing Projects in Subdivisions B.6 (Supportive Service Area) and B.9 (Historic Building) above, pursuant to *Sec. 13B.2.2.* (Class 2 Conditional Use Permit), when the applicant can demonstrate that the project remains consistent with the purpose of those standards.

# SEC. 9.4.3. ELDERCARE FACILITIES INCENTIVE PROGRAM

## A. Purpose

The purpose of this Section is to provide development standards for Alzheimer's and Dementia Housing, Assisted Living, Senior Independent Living and Skilled Nursing Home, and create a single process for approvals and facilitate the processing of applications of Eldercare Facilities. These facilities provide much needed services and housing for the growing senior population of the City of Los Angeles.

## B. Applicability

An Eldercare Facility project located on a lot or lots in any Agricultural, Residential, Commercial, Or Commercial-Mixed Use District.

## C. Incentives

### 1. Zoning District Requirements

The Zoning Administrator may permit an Eldercare Facility project that does not meet the Use District, Density District, or height provisions of the Form District contained in this Chapter, or the requirements of any specific plan, Supplemental District, or Citywide regulation adopted or imposed by City action.

### 2. Development of Site

New buildings or structures may be erected, enlargements may be made to existing buildings, and the existing housing types within the Eldercare Facility project may be extended on the approved site, provided that development plans are submitted to and approved by the Zoning Administrator. The Zoning Administrator may disapprove the plans if he/she finds that the use does not conform to the purpose and intent of the findings required for an Eldercare Facility under this Section, and may specify the conditions under which the plans may be approved.

### 3. Change of Use

No housing type within an Eldercare Facility project may be changed to a different housing type unless the new housing type is subsequently approved. The Zoning Administrator may approve changes to the number of dwelling units, guest beds, guest rooms, or floor area provided that a minimum of 75% of the floor area, exclusive of common areas, shall consist of Senior Independent Housing and/or Assisted Living Care Housing.

## D. Procedures

### 1. Permit

The Zoning Administrator may permit an Eldercare Facility project utilizing the Incentives outlined in Subsection C. (Incentives) above pursuant to *Sec. 13B.2.2.* (Class 2 Conditional Use Permit).

### 2. Supplemental Findings

In addition to the findings set forth in *Sec. 13B.2.2.* (Class 2 Conditional Use Permit), the Zoning Administrator shall not grant the approval unless he or she also finds that:

**a.** The strict application of the land use regulations on the subject property would result in practical difficulties or unnecessary hardships inconsistent with the general purpose and intent of the zoning regulations;

**b.** The Eldercare Facility project shall provide services to the elderly such as housing, medical services, social services, or long-term care to meet citywide demand; and

**c.** The Eldercare Facility project shall not create an adverse impact on street access or circulation in the surrounding neighborhood.

## SEC. 9.4.4. NON-PERMITTED DWELLING UNITS WHERE AFFORDABLE HOUSING IS PROVIDED

### A. Purpose

The purpose of this Section is to further health and safety standards in multifamily buildings and preserve and create affordable housing units by establishing procedures to legalize certain pre-existing non-permitted dwelling units in conformance with the State Density Bonus provisions in California Government Code Section 65915.

### B. Process

The applicant shall submit an application on a form developed by the Department of City Planning that contains basic information about the project, the owner and/or applicant and conformance with this section. The Director of Planning shall review all applications for compliance with the eligibility criteria in Subsection C. (Applicability). The application shall be approved by the Director of Planning if the eligibility criteria and performance standards of this subsection are met.

### C. Applicability

A structure with a non-permitted dwelling unit or guest room located in all Density Districts except for Density District 1L is eligible for the provisions of this section when the following criteria are met:

#### 1. Pre-Existing Unit

The unit(s) to be legalized have been occupied as a residential unit at any time between December 11, 2010, and December 10, 2015. Examples of the types of evidence to establish occupancy include, but are not limited to: an apartment lease; utility bill; Rent Stabilization Ordinance (RSO) Rent Registration Certificate; code enforcement case documentation (e.g., Orders to Comply); or other evidence identified on the application form and made available for public inspection in the case file.

### 2. Restricted Affordable Units

At least one additional restricted affordable unit is being provided on the project site. A restricted affordable unit is defined for this section as a residential unit for which rental or mortgage amounts are restricted so as to be affordable to and occupied by Very Low Income, Low Income or Moderate Income households, as those income ranges are defined by the California Department of Housing and Community Development (HCD) or any successor agency. Affordable means that rents or housing expenses cannot exceed 30% of the maximum gross income of each respective household income group. Moderate Income units may be utilized, provided the project is not located in a Low-Moderate Census Tract pursuant to the Community Reinvestment Act.

### 3. Performance Standards

The property shall meet the following performance standards:

#### a. Front Yard Landscaping

All portions of the required front Yard not used for necessary driveways and walkways, including decorative walkways, are landscaped and maintained, and not otherwise paved;

#### b. Lighting

Security night lighting is shielded so that the light source cannot be seen from adjacent residential properties;

#### c. Parking Area

Any surface parking areas are landscaped pursuant to the requirements of Article 4 (Development Standards);

#### d. Signs

Any illegal signs shall have been removed.

#### e. Code Violations

The project site must not have any outstanding code violations other than those being addressed by the application under this section; and

#### f. Unpermitted Building Area Expansion

The units to be legalized shall not result or have resulted in an unpermitted expansion of the building footprint or height, except that additions of less than 250 square feet, not resulting in any additional height, may be permitted, provided it is not located on the building frontage adjoining the front yard. The purpose of this standard is to limit exterior alterations to those that are minor and do not have a significant impact on the visual character of the building or neighborhood.

### g. Alternative Compliance

If compliance with the performance standards outlined in this Subdivision is not met, the applicant may request approval from the Zoning Administrator pursuant to *Sec. 13B.2.2.* (Class 2 Conditional Use Permit).

## D. Incentives

A property meeting the eligibility criteria above must comply with all applicable zoning codes, except:

**1.** The grant of permitted status to pre-existing non-permitted units under this Section shall not be considered an increase in density or other change which requires any corresponding zone change, general plan amendment, specific plan exception pursuant to *Sec. 13B.4.5.* (Project Exception), or discretionary action.

**2.** The number of allowable dwelling units or guest rooms can be increased up to 35% over the otherwise maximum allowable residential density under any applicable zoning ordinance and/or specific plan, depending on the percentage of restricted affordable units provided in the building, pursuant to the density bonus charts in California Government Code Section 65915(f). These charts can be extended proportionally to permit both a density increase and an affordable set-aside less than what is shown on the charts.

**3.** For properties which have more permitted units than are allowed under current maximum allowable density, an increase in current maximum allowable density beyond 35% may be authorized as long as the project offers sufficient restricted affordable units to achieve at least a 35% density bonus pursuant to the density bonus charts in California Government Code Section 65915(f) and the increase in number of units does not exceed 35% of the number of permitted units on the property. Notwithstanding the actual number of permitted units on the property, the base number of units for calculating the percentage of restricted affordable units shall be the units allowed by the current maximum residential density.

**4.** A property containing one structure with two permitted dwelling units in all Density District except for Density District 1L may legalize a third unit as long as one of the units is a restricted affordable unit, even if the third unit increases the density by more than 35%.

**5.** An applicant may choose any one of the following methods of calculating required parking, if applicable, in conjunction with the bicycle parking provisions in *Article 4* (Development Standards):

**a.** Parking may be recalculated for all units in the project (not just the restricted units) using Parking Option 1 in *Sec. 9.2.1.* (Density Bonus);

**b.** Parking may be calculated by maintaining all existing parking and providing additional parking just for the newly legalized unit(s) in accordance with Parking Option 2 in *Sec. 9.2.1.* (Density Bonus) as long as one restricted affordable unit or dwelling unit for Low

Income individuals who are 62 years of age or more, or who has a physical or mental impairment that limits one or more major life activities is provided for each legalized unit; or

**c.** Parking may be calculated by maintaining all existing parking and providing additional parking at a ratio of 0.5 parking spaces per bedroom for the newly legalized units for a project located within one half mile of a Major Transit Stop, which is a site containing an existing rail transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute period or a major transit stop included in the applicable Regional Transportation Plan/ Sustainable Community Strategy (RTP/STS).

**d.** If the net new number of required parking spaces is other than a whole number, it shall be rounded up to the next whole number.

**6.** The applicant shall be eligible for up to three concessions or incentives in accordance with Government Code Section 65915(d)(2), depending on the percentage of restricted affordable units provided. For the purposes of this subdivision, a concession or incentive means a reduction in a site development standard or a modification of zoning code requirements or architectural design requirements that exceed the minimum building standards approved by the California Building Standards Commission, including, but not limited to, a reduction in lot amenity space requirements and in the ratio of vehicular parking spaces that would otherwise be required.

**7.** Additional Incentives. The City may not apply a development standard that will physically preclude the legalization of a project which meets the eligibility criteria of Paragraph C.3.c. above at the densities or with the concessions or incentives permitted by this Section. Development standards, include, but are not limited to: a site condition; a height limitation; a setback requirement; a floor area ratio; an lot amenity space requirement; or a parking ratio that applies to a residential development pursuant to any ordinance, general plan element, specific plan, charter, or other local condition, law, policy, resolution, or regulation. Development standards do not include conditions imposed through discretionary approvals. Incentives shall not be used to exempt compliance with performance standards.

**8.** The street dedication provisions of *Article 10* (Streets and Parks) shall not apply when units are legalized under this Section.

**9.** Relationship to the Affordable Housing Incentive Guidelines. The City's Affordable Housing Incentive Guidelines shall not apply to projects under this Subsection.

## E. Records and Agreements

Prior to the issuance of any building permit, a covenant acceptable to the Los Angeles Housing and Community Investment Department, or its successor agency, shall be recorded with the

Los Angeles County Recorder, guaranteeing that each required restricted affordable unit shall be reserved and maintained for at least 55 years from the issuance of the Certificate of Occupancy.

## SEC. 9.4.5. DOWNTOWN ADAPTIVE REUSE PROJECTS.

### A. Purpose

The purpose of this Section is to revitalize the Downtown Community Plan Area, and implement the General Plan by facilitating the conversion of older, economically distressed, or historically significant buildings to apartments, live/work units, offices, or visitor-serving facilities. This will help to reduce vacant space as well as preserve Downtown's architectural and cultural past and encourage the development of a live/work and residential community Downtown, thus creating a more balanced ratio between housing and jobs in the region's primary employment center. This revitalization will also facilitate the development of a "24-hour city" and encourage mixed commercial and residential uses in order to improve air quality and reduce vehicle trips and vehicle miles traveled by locating residents, jobs, hotels and transit services near each other.

### B. Applicability

The provisions of this Section shall apply to adaptive reuse projects in all or any portion of the following buildings in the Downtown Community Plan Area:

#### 1. Prior to July 1, 1974

Buildings constructed in accordance with building and zoning codes in effect prior to July 1, 1974. A Certificate of Occupancy, building permit, or other suitable documentation may be submitted as evidence to verify the date of construction.

#### 2. On or After July 1, 1974

Buildings constructed in accordance with building and zoning codes in effect on or after July 1, 1974, if five years have elapsed since the date of issuance of final Certificates of Occupancy.

#### 3. Historic Buildings

Buildings designated on the National Register of Historic Places, the California Register of Historical Resources, or the City of Los Angeles List of Historic-Cultural Monuments. Contributing Buildings in National Register Historic Districts or Contributing Structures in Historic Preservation Overlay Zones (HPOZ) established pursuant to Division 13.11. (Historic Preservation) are also eligible buildings.

#### 4. Parking Structures

Any parking garage or structure, or parking area of any existing building, with a Certificate of Occupancy which was issued at least 10 years prior to the date of application.

## C. Incentives

Despite any other provisions of this Chapter to the contrary, Downtown adaptive reuse projects shall be entitled to the incentives set forth below. These incentives shall not apply to any new floor area that is added to an Adaptive Reuse Project unless otherwise stated.

### 1. Project Review

Adaptive reuse projects shall be exempt from the requirements set forth in Section 13.4.4. (Project Review).

### 2. Loading Space

If no loading space is provided, then a loading space shall not be required pursuant to Article 4 (Development Standards).

### 3. Floor Area

#### a. Existing Floor Area

Existing floor area which exceeds that permitted by the zone, specific plan, supplemental use district, or any other land use regulation shall be permitted.

#### b. Floor Area Exemptions

The following actions shall not be considered as adding new floor area that enlarges an eligible building, but shall be considered part of an Adaptive Reuse Project entitled to benefit from the incentives:

**i.** Changing the use of any existing area of an eligible building that is not included in the definition of floor area in *Article 14* (Rules and Definitions), to any use permitted in the underlying Use District. Demolishing and removing any interior existing portion of an eligible building for the construction of any new use permitted in the underlying Use District shall not exceed the area of the existing portion demolished, and must be located within the same building's existing exterior walls and below the existing roof.

**ii.** The conversion of existing parking areas of garages or structures as long as the conversion remains within the existing exterior walls of the garage or structure.

#### c. New Rooftop Structures

The construction of new structures on the existing roof, as long as the new rooftop structures:

**i.** Do not exceed one story;

**ii.** Comply with the height requirements of the zone;

#### d. Lot Amenity Space Areas Created by Reusing Existing Portions of a Building

Balconies, patios, terraces, recreation and fitness rooms, pools, gardens, and other lot amenity space areas that are created by reusing existing portions of an eligible building. Such existing portions may include interior space, lobbies, fire escapes, rooftops, mechanical rooms, elevator shafts, stair shafts, elevator penthouses, or other existing portions of an eligible building, either above or below the existing roof, shall not be considered new floor area.

#### e. Mezzanines

Mezzanines, or loft spaces in dwelling units, guest rooms, or joint living and work quarters which do not exceed more than 33% of the floor area of the space below shall not be considered new floor area.

#### f. Basements

Reusing or changing the use of existing portions of an Eligible Building that are below grade shall not be considered new floor area.

#### g. Floor Area Averaging

Floor area may be averaged as part of a unified Adaptive Reuse Project.

#### h. Historic Buildings

Any existing or new floor area within an existing structure identified by SurveyLA, or any qualified historic resource survey, as a contributing structure, or designated as historic in a local, state or Federal Register of Historic Places, that is maintained on site and incorporated into a Unified Adaptive Reuse Project shall be excluded from the calculation of total floor area up to a maximum of 1.5 FAR.

### 4. Height

Existing height in excess of that permitted by the zone, specific plan, supplemental use district, or any other land use regulation shall be permitted.

### 5. Loading Space

Where a loading space is provided, it shall be maintained. If no loading spaces exist, then a loading space shall not be required in conjunction with the development of an Adaptive Reuse Project.

### 6. Density

Dwelling units, guest rooms, and joint living and work quarters shall not be subject to the lot area requirements of the lot's Density District.

## D. Standards

No additional standards apply to adaptive reuse projects subject to this Section.

## E. Process

### 1. Buildings Built Prior to July 1, 1974

Adaptive reuse projects involving buildings constructed in accordance with building and zoning codes in effect prior to July 1, 1974 shall be approved by the Department of Building and Safety if the requirements of Subsection B. (Applicability) above, and the standards described in Subsections C. (Incentives) and D. (Standards) above are met, and the incentives described in Subsection C. (Incentives) above shall be granted.

### 2. Building Built On or After July 1, 1974

#### a. Approval

Adaptive reuse projects involving buildings constructed in accordance with building and zoning codes in effect on or after July 1, 1974, may be approved by the Zoning Administrator, pursuant to *Sec. 13B.2.1.* (Class 1 Conditional Use Permit), if the applicability requirements of Subsection B. (Applicability), and the standards described in Subsections C. (Incentives) and D. (Standards) above are met, and the incentives described in Subsection C. (Incentives) above shall be granted.

#### b. Supplemental Finding

In addition to the findings in *Sec. 13B.2.1.* (Class 1 Conditional Use Permit), the Zoning Administrator must also find that the building is no longer economically viable in its current use or uses.

# SEC. 9.4.6. CITYWIDE ADAPTIVE REUSE PROJECTS

## A. Purpose

The purpose of this Section is to encourage and facilitate the conversion and retention of existing, or historically significant buildings, and conversion between uses permitted or conditionally permitted by the designated Use District of the property. The goal is to reduce vacant space, as well as preserve the City's architectural and cultural past, and encourage the sustainable practice of retaining the inherent energy that goes into the construction of existing buildings. This practice has demonstrated its effectiveness as a revitalization tool that encourages the use of underutilized buildings and the creation of new dwelling units.

## B. Applicability

The provisions of this Section shall apply to adaptive reuse projects outside the Downtown Community Plan Area and the Adaptive Reuse Incentive Areas Specific Plan, in any Commercial or Commercial-Mixed Use District, or on any lot, regardless of Use District, in Density District 2 or FA, in the following buildings:

### 1. Prior to July 1, 1974

Buildings constructed in accordance with building and zoning codes in effect prior to July 1, 1974. A Certificate of Occupancy, building permit, or other suitable documentation may be submitted as evidence to verify the date of construction.

### 2. On or After July 1, 1974

Buildings constructed in accordance with building and zoning codes in effect on or after July 1, 1974, if five years have elapsed since the date of issuance of final Certificates of Occupancy.

### 3. Historic Buildings

Buildings designated on the National Register of Historic Places, the California Register of Historical Resources, or the City of Los Angeles List of Historic-Cultural Monuments. Contributing Buildings in National Register Historic Districts or Contributing Structures in Historic Preservation Overlay Zones (HPOZ) established pursuant to Division 13.11. (Historic Preservation) are also eligible buildings.

### 4. Parking Structures

Any parking garage or structure, or parking area of any existing building built at least 10 years prior to the date of application in excess of the minimum parking required by this Chapter.

## C. Incentives

The Zoning Administrator may grant, modify or deny some or all of the incentives established below to adaptive reuse projects proposed pursuant to this Section. Furthermore, the Zoning Administrator shall have the authority to grant any other incentives or exceptions from the requirements of this Chapter required to permit adaptive reuse projects proposed pursuant to

this Section, including but not limited to the authority to permit dwelling units, guest rooms and joint living and work quarters in adaptive reuse projects, despite the nonconforming provisions of *Article 12* (Nonconformities). Despite any other provisions of this Chapter to the contrary, adaptive reuse projects shall be entitled to the incentives set forth below. These incentives shall not apply to any new Floor Area that is added to an adaptive reuse project unless otherwise stated.

### 1. Project Review

Adaptive reuse projects shall be exempt from the requirements set forth in *Section 13B.2.4.* (Project Review).

### 2. Loading Space

If no loading space is provided, then a loading space shall not be required pursuant to *Article 4* (Development Standards).

### 3. Floor Area

#### a. Existing Floor Area

Existing Floor Area which exceeds that permitted by the zone, specific plan, supplemental use district, or any other land use regulation shall be permitted.

#### b. Floor Area Exemptions

The following actions shall not be considered as adding new Floor Area that enlarges an eligible building, but shall be considered part of an adaptive reuse project entitled to benefit from the incentives:

**i.** Changing the use of any existing area of an eligible building that is not included in the definition of Floor Area in Article 14 (Rules and Definitions), to any use permitted in the underlying Use District. Demolishing and removing any interior existing portion of an eligible building for the construction of any new use permitted in the underlying Use District shall not exceed the area of the existing portion demolished, and must be located within the same building's existing exterior walls and below the existing roof.

**ii.** The conversion of existing parking areas of garages or structures as long as the conversion remains within the existing exterior walls of the garage or structure.

#### c. New Rooftop Structures

The construction of new structures on the existing roof, as long as the new rooftop structures:

**i.** Do not exceed one story;

**ii.** Comply with the height requirements of the zone;

**iii.** Are not used for dwelling units, guest rooms, or joint living and work quarters, but must be used solely for Accessory Uses or Residential Amenity Space. However, the existing roof of an eligible building may be used as the top level of a multiple-level dwelling units, guest rooms, or joint living and work quarters. However, no complete and separate dwelling units, guest rooms, or joint living and work quarters may be constructed on the existing roof of an eligible building.

#### d. Lot Amenity Space Areas Created by Reusing Existing Portions of a Building

Balconies, patios, terraces, recreation and fitness rooms, pools, gardens, and other Lot Amenity Space areas that are created by reusing existing portions of an eligible building. Such existing portions may include interior space, lobbies, fire escapes, rooftops, mechanical rooms, elevator shafts, stair shafts, elevator penthouses, or other existing portions of an eligible building, either above or below the existing roof, shall not be considered new Floor Area.

#### e. Mezzanines

Mezzanines, or loft spaces in dwelling units, guest rooms, or joint living and work quarters which do not exceed more than 33% of the Floor Area of the space below shall not be considered new Floor Area.

#### f. Basements

Reusing or changing the use of existing portions of an Eligible Building that are below grade shall not be considered new Floor Area.

#### g. Floor Area Averaging

Floor Area may be averaged as part of a unified adaptive reuse project.

#### h. Historic Buildings

Any existing or new Floor Area within an existing structure identified by SurveyLA, or any qualified historic resource survey, as a contributing structure, or designated as historic in a local, state or Federal Register of Historic Places, that is maintained on site and incorporated into a Unified adaptive reuse project shall be excluded from the calculation of total Floor Area up to a maximum of 1.5 FAR.

### 4. Height

Existing height in excess of that permitted by the zone, specific plan, supplemental use district, or any other land use regulation shall be permitted.

### 5. Yards

Existing observed yards which do not meet the yards required by the zone, specific plan, Supplemental District, or any other land use regulation shall be permitted.

### 6. Off-Street Automobile Parking

The required number of parking spaces shall be the same as the number of spaces that existed on the site on June 3, 1999, and shall be maintained and not reduced. However, if the total parking required by this Chapter for the new use is less than the number of parking spaces that existed as of June 3, 1999, then the number of parking spaces may be reduced to the number of required parking spaces.

### 7. Loading Space

Where a loading space is provided, it shall be maintained. If no loading spaces exist, then a loading space shall not be required in conjunction with the development of an adaptive reuse project.

### 8. Density

Dwelling units, guest rooms, and joint living and work quarters shall not be subject to the lot area requirements of the lot's Density District.

## D. Standards

Adaptive reuse projects permitted pursuant to this Section shall include a toilet and bathing facilities.

## E. Process

The Zoning Administrator may permit adaptive reuse projects in eligible buildings pursuant to *Sec. 13B.2.1.* (Class 1 Conditional Use Permit).

### 1. Supplemental Findings.

In addition to the findings in *Sec. 13B.2.1.* (Class 1 Conditional Use Permit), the Zoning Administrator shall also find that:

**a.** The eligible building, constructed on or after July 1, 1974, is no longer economically viable in its current use or uses. In making this finding, the Zoning Administrator shall consider the building's past and current vacancy rate, existing and previous uses, and real estate market information. The Zoning Administrator may require the applicant to submit independently verified documentation.

**b.** In approving a reduced parking incentive pursuant to Subdivision C.6. (Off-Street Automobile Parking) above, the Zoning Administrator find that the surrounding area will not be adversely affected by overflow parking or traffic congestion originating or terminating at the site of the adaptive reuse project.

# DIV. 10.1. STREET DEDICATION AND IMPROVEMENT

## SEC. 10.1.1. STREET STANDARDS

### A. Street Standards Committee.

This provision creates a Street Standards Committee (Committee) comprised of the Director of Planning (as Chair), the City Engineer and the General Manager of the Department of Transportation, or their designees.

This Committee shall:

1. Recommend to the City Planning Commission minimum width and improvement standards for all classes of public and private streets and alleys. The City Planning Commission shall adopt such minimum width and improvement standards as it determines necessary for the safe and adequate movement of pedestrians, bicyclists, equestrians, transit service and vehicular traffic, the increased retention and detention of stormwater, the installation of necessary utilities and for reasonable and proper access to abutting properties. Such standards shall not be applicable to any street or alley for which the City Council, by ordinance, adopts specific standards.

2. Modify the Complete Street Design Guide (CSDG) on an as-needed basis to align the CSDG with current and innovative street design practice.

3. Develop guidelines to be consistent with the goals and purpose of the Mobility Element of the General Plan, as determined by the City Planning Commission. These guidelines shall also establish a procedure for providing notice to interested persons, including the Councilmember of the district where the property is located.

### B. Adoption of Standards.

A public hearing shall be conducted by the City Planning Commission, pursuant to *Sec. 13B.1.5.* (Policy Action), prior to the approval of any change in the standards.

## SEC. 10.1.2. REQUIREMENT

No building or structure shall be erected or enlarged, and no building permit shall be issued, on a lot in a Residential Use District with a Density District of "8" or less (as such order of restrictiveness is set forth in *Sec. 6A.2.3.* (Maximum Density Based on Lot Area)), or a lot in a Commercial-Mixed, Commercial, Industrial-Mixed, Industrial, or Public Use District; if such lot abuts a boulevard, avenue, or collector street unless the one-half of the boulevard, avenue, or collector street which is located on the same side of the center of the boulevard, avenue, or collector street as such lot has been dedicated and improved for the full width of the lot, so as to meet the standards for such boulevard, avenue, or collector street provided in *Sec. 10.1.9.* (Improvement Standards); and further provided that in the case of either a corner lot or an L-shaped interior lot abutting a boulevard, avenue, or collector street and a local standard street or local limited street which intersect, that one-half of the local standard street or local limited street, on the same side of the center of the local standard

street or local limited street as such lot, has been dedicated and improved for that portion of said lot or lots within 300 feet of the ultimate property line of said boulevard, avenue, or collector street so as to meet the standards for local standard street or local limited street provided in *Sec. 10.1.9.* (Improvement Standards) and provide adequate right-turn ingress to and egress from the boulevard, avenue, or collector street; or such dedication and improvement has been assured to the satisfaction of the City Engineer respectively. As used in this Division, the center/control line of the boulevard, avenue, or collector street shall mean the center of those boulevard, avenue, or collector street as shown on the Citywide Circulation System Map of the Mobility Element of the General Plan or, with respect to collector streets, on the adopted Community Plans of the Land Use Element of the General Plan on file in the offices of the Department of City Planning.

**A.** The maximum area of land required to be so dedicated shall not exceed 25% of the area of any such lot which was of record on March 1, 1962 in the Los Angeles County Recorder's Office. In no event shall such dedication reduce the lot below a width of 50 feet or an area of 5,000 square feet.

**B.** No such dedication for any boulevard, avenue, or collector street; or any other street shall be required with respect to those portions of such a lot occupied by a legally existing main building, which is to remain.

**C.** No additional improvement shall be required on a lot where complete roadway, curb, gutter and sidewalk improvements exist within the present dedication contiguous to the lot.

**D.** No building or structure shall be erected on any such lot within the dedication required by *Sec. 10.1.9.* (Improvement Standards).

**E.** No dedication shall be required where the existing right-of-way is equal to or greater than the street standard, even where the improved sidewalk does not meet the standard dimension.

**F.** Where the existing improved roadway meets or exceeds the street standard, no dedication shall be required, except as necessary to bring the abutting sidewalk dimension into compliance with the street standard as depicted in the most recent version of the Bureau of Engineering's standard plan number S470.

**G.** Nothing herein shall preclude the decision maker on a discretionary entitlement from requiring a dedication or improvement greater than what is set forth in this Division, where the decision maker determines that a greater dedication or improvement bears an essential nexus and rough proportionality to the project's impact.

**H.** For streets accompanied by a parallel frontage or service road and for streets designated as divided streets, existing roadway dimensions are deemed to be in compliance with the street standards, and no additional dedication or improvement is required. A dedication for sidewalk improvement shall be required, however, as necessary to bring the abutting sidewalk dimension into compliance with the street standard.

**I.** Additional dedication and improvement requirements may be imposed in order to ensure compliance with the Americans with Disabilities Act.

**J.** Notwithstanding the above, in order to achieve consistent right-of-way dimensions, the Bureau of Engineering on a by-right project, or the decision maker on a discretionary entitlement, may modify this Division's dedication and improvement requirements for meandering streets or portions of streets that lack uniform roadway widths, including for divided streets, and streets accompanied by a parallel frontage or service road. The guidelines developed by Streets Standards Committees shall be consistent with the goals and purpose of the Transportation Element of the General Plan as determined by the City Planning Commission. These guidelines shall also establish a procedure for notice to interested persons, including the Council Member of the district where the property is located.

## SEC. 10.1.3. EXCEPTIONS

The provisions of *Sec. 10.1.2.* (Requirement) shall not apply to the following construction projects:

**A.** A single-unit dwelling with customary accessory buildings when erected on a vacant lot.

**B.** Additions and accessory buildings incidental to a legally existing residential building, provided no additional dwelling units or guest rooms are created.

**C.** Additions and accessory buildings incidental to a legally existing non-residential building, provided that the total cumulative floor area of all such additions and accessory buildings shall not exceed 500 square feet.

## SEC. 10.1.4. DEDICATION PROCEDURE

Any person required to dedicate land by the provisions of this Division shall make an offer to dedicate, properly executed by all parties of interest including beneficiaries in deeds of trust as shown by a current preliminary title report prepared by a Title Company approved by the City Engineer for that purpose. The trustee under a deed of trust shall not be required to execute the dedicatory instrument, unless, in the view of the City Engineer, such execution is necessary to satisfactorily dedicate the land. Such report shall be furnished by the applicant. Such offer shall be on a form approved by the City Attorney and the City Engineer; be in such terms as to be binding on the owner, heirs, assignees or successors in interest, and shall continue until the City Council accepts or rejects such offer or until one year from the date such offer is filed with the City Engineer for processing, whichever occurs first. The offer shall provide that the dedication will be complete upon acceptance by the City Council. The offer shall be recorded by the City Engineer in the Office of the County Recorder of Los Angeles County upon its acceptance by the City Engineer. The City Engineer shall accept or reject the offer for recordation within 10 days after it is filed with the City Engineer. The offer shall be promptly processed by the City Departments concerned and submitted to the City Council, in order to complete the dedication within one year. If the offer is rejected by the City Council or not processed within one year, the City Engineer shall issue a release from such offer which shall be recorded in the Office of the County Recorder unless the parties making the offer wish to have the time extended.

## SEC. 10.1.5. IMPROVEMENT PROCEDURE

**A.** Any person required to make improvements by the provisions of this Division shall either make and complete the improvements to the satisfaction of the City Engineer or shall file with the City Engineer a bond in an amount as the City Engineer shall estimate and determine to be necessary to complete all of the improvements required.

**B.** Such bond may be either a cash bond or a bond executed by a company authorized to act as a surety in the State of California. The bond shall be payable to the City and be conditioned upon the faithful performance of any and all work required to be done, and that should the work not be done or completed within the time specified, the City may, at its option, cause the work to be done or completed, and the parties executing the bond shall be firmly bound under a continuing obligation for the payment of all necessary costs and expenses incurred in the construction. The bond shall be executed by the owner of the lot as principal, and if a surety bond, shall also be executed by a corporation authorized to act as a surety under the laws of the State of California.

**C.** Whenever the owner elects to deposit a cash bond, the City is authorized, in the event of any default on the owner's part, to use any or all of the deposit money to cause all of the required work to be done or completed, and for payment of all costs and expenses. Any money remaining shall be refunded to the owner.

**D.** When a substantial portion of the required improvement has been completed to the satisfaction of the City Engineer and the completion of the remaining improvements is delayed due to conditions beyond the owner's control, the City Engineer may accept the completed portion and consent to a proportionate reduction of the surety bond in an amount estimated and determined by the City Engineer to be adequate to assure the completion of the required improvements remaining to be made.

**E.** Whenever a surety bond has been filed in compliance with this Division, the City is authorized, in the event of any default on the part of the principal, to enforce collection under such bond, for any and all damages sustained by the City by reason of any failure on the part of the principal faithfully and properly to do or complete the required improvements, and in addition may cause all of the required work to be done or completed, and the surety upon the bond shall be firmly bound for the payment of all necessary costs thereof.

**F.** The term of the bond shall begin on the date of the deposit of cash or the filing of the surety bond, and shall end upon the date of the completion to the satisfaction of the City Engineer of all improvements required to be made. The fact of such completion shall be endorsed by a statement thereof signed by the City Engineer, and the deposit shall be returned to the owner, or the surety bond may be exonerated at any time thereafter.

**G.** For purposes of this Division, improvement shall be considered satisfactorily assured when the City Engineer accepts the cash or surety bond provided for in this Division, or the improvements required to be made have been completed to the City Engineer's satisfaction. When the City Engineer accepts the bond or the work has been completed to the City Engineer's satisfaction, the City Engineer shall notify the Department of Building and Safety of the completion.

## SEC. 10.1.6. ISSUANCE OF BUILDING PERMITS

When all dedication and improvements required by this Division have been completed or satisfactorily assured, a building permit may be issued.

## SEC. 10.1.7. BUREAU OF ENGINEERING FEES

In addition to all other required fees, the following fees shall be charged for services provided for processing applications pursuant to the provisions of this Division:

**A.** A nonrefundable fee as set forth in Sec. 11.12. (Summary of Fees for Bureau of Engineering Services Pursuant to the Provisions of this Chapter) of Chapter 1 (General Provisions and Zoning) of this Code for every property requiring the City Engineer to investigate and determine whether the provisions of this Division require a dedication of land or improvement to land.

**B.** A fee as set forth in Sec. 11.12. (Summary of Fees for Bureau of Engineering Services Pursuant to the Provisions of this Chapter) of Chapter 1 (General Provisions and Zoning) of this Code for Bureau of Engineering services for processing real estate transfer documents for every property for which the provisions of this Division require a dedication of land.

## SEC. 10.1.8. LOTS AFFECTED BY STREET WIDENING

**A.** On a lot which is affected by street widening required by the provisions of this Division, all required yards, parking areas, loading space and building locations for new buildings or structures or additions to buildings or structures shall be measured and calculated from the new lot lines being created by any widening; provided, however, that for the purpose of establishing the required front yard depth on a frontage where the ultimate street line has been determined under the provisions of this Division, the depths of all existing front Yards may be measured from such ultimate street line instead of the front lot line.

**B.** In applying all other provisions of this Article, the area of such lot shall be considered as that which existed immediately prior to such required street widening.

## SEC. 10.1.9. IMPROVEMENT STANDARDS

**A.** All boulevard, avenue, and collector street shall be constructed and improved in accordance with the standards adopted by the City Planning Commission pursuant to *Sec. 10.1.1.* (Street Standards).

**B.** All streets not designated boulevard, avenue, or collector street, but that intersect a boulevard, avenue, or collector street, shall be dedicated to a maximum width of 60 feet. Roadway and parkway widths shall conform to those standards adopted by the City Planning Commission in accordance with *Sec. 10.1.1.* (Street Standards), depending upon street classification type. Whenever uncertainty exists as to the application of the provisions of this Division, or in instances of streets so classified as requiring less than 60 feet of dedication in order to conform to the minimum width standards as adopted in accordance with *Sec. 10.1.1.* (Street Standards), the City Engineer shall make any necessary determinations.

**C.** All improvements required to be made by the provisions of this Division shall be made in accordance with the current applicable provisions of the Standard Specifications for Public Works Construction adopted by the City Council.

**D.** The City Engineer may approve and allow variations from the Standard Specifications for Public Works Construction as determined necessary based on conditions of terrain and the existing improvements contiguous to the property involved.

## SEC. 10.1.10. WAIVER AND APPEALS

This Section shall constitute the exclusive mechanism for waivers and appeals of dedication and improvement requirements under this Division. Waivers of dedication or improvement requirements may not be granted by City Council motion.

### A. Waivers for By-Right Projects

Any person seeking a waiver of this Division's dedication or improvement requirements for a project that does not require a discretionary entitlement shall file an application for a waiver with the Director of Planning.

#### 1. Notice

Within 10 calendar days of the receipt of an application for a waiver, the Director of Planning shall mail notice of the requested waiver to the following individuals and entities with a notice that all comments shall be submitted to the Director no later than 14 calendar days following mailing of the notice:

**a.** Owners of property across the street or alley from the subject property;

**b.** Owners of property with frontage along the same street that has a common corner with or that abuts the subject property;

**c.** Owners of property with frontage along the same street that has a common corner with or that abuts any properties listed in paragraphs a. or b. above;

**d.** The Councilmember of the district where the subject property is located; and

**e.** The Department of Transportation and Bureau of Engineering.

**f.** Notification pursuant to this Division shall also be provided to Advisory Agency members for waivers that require the modification of a Map.

**i.** Any person seeking a waiver that requires a modification of a Map shall submit a map modification request and payment of map modification fees to the Bureau of Engineering as required by *Div. 13B.7.* (Division of Land).

### 2. Findings

The Director of Planning may waive, reduce or modify the required dedication or improvement as appropriate after making any of the following findings, in writing, based on substantial evidence in the record:

**a.** The dedication or improvement requirement does not bear a reasonable relationship to any project impact.

**b.** The dedication or improvement is not necessary to meet the City's mobility needs for the next 20 years based on guidelines established by the Streets Standards Committee.

**c.** The dedication or improvement requirement is physically impractical.

### 3. Written Determination

The Director of Planning shall issue a determination regarding the request no sooner than 15 calendar days following mailing of the notice described above, and no later than 75 days from receipt of the waiver application, or within any additional period mutually agreed upon by the applicant and the Director of Planning. The Director of Planning shall mail the determination letter to all individuals to whom notice of the application was provided.

### 4. Appeal

Any person required to dedicate land or make improvements pursuant to this Division may appeal the Director of Planning's decision to the Area Planning Commission. The appeal shall be filed within 15 calendar days of the date of mailing of the Director of Planning's determination letter. Such appeal shall be made in writing, shall be filed at the Department of City Planning's public counter, shall state in clear and concise language the grounds for the appeal, and shall be accompanied by a filing fee in the amount specified above.

**a.** Before acting on any appeal, the Area Planning Commission shall set the matter for a hearing, giving at least 15 calendar days' notice to the individuals identified in Subdivision A.1. (Notice) above.

**b.** On appeal, the Area Planning Commission shall consider the waiver request *de novo* based on the findings set forth in Subdivision A.2. (Findings) above. The Area Planning Commission shall act to approve or deny the appeal within 75 calendar days after the expiration of the appeal period or within any additional period mutually agreed upon by the applicant and the Area Planning Commission.

## B. Waivers for Discretionary Projects

**1.** For projects that require a discretionary entitlement, an applicant shall file a waiver request as part of the master land use application or subdivider's statement for the project. In such case, the decision maker for the discretionary entitlement shall process the waiver request pursuant to the procedures established for the discretionary entitlement, but may only grant a waiver after making one of the required findings set forth in Subdivision A.2. (Findings) above. The

waiver request shall be set forth in the application filed with the Department of City Planning, and may not be raised for the first time at the hearing on the entitlement or at any entitlement appeal hearing. The applicant may appeal the waiver determination pursuant to the same procedures that govern the entitlement. Except in the case of Projects that include a tentative map, the waiver determination is subject to only one level of appeal. On appeal, the decision maker shall consider the waiver request *de novo* based on the findings set forth in Subdivision A.2. (Findings) above.

**2.** If the discretionary entitlement for a Project has already been approved prior to March 4, 2017, an applicant may apply for a waiver following the procedures in Subsection A. (Waivers for By-Right Projects) above.

### C. Waivers for a Map Modification

Notwithstanding the Parcel, Tentative or Final Tract Map modification procedures set forth in Article 13 of Chapter 1A, projects that have an approved or recorded Map and where the street standards for which the original dedication or improvements were revised after the Map was either approved or recorded may apply for a waiver from a street dedication or improvement using the procedures in Subsection A. (Waivers for By-Right Projects) above, with the Director acting for the Advisory Agency.

### D. Exceptions

Projects located in a Hillside Area that seek to obtain a waiver from a required street dedication or improvement shall use the procedures described in *Sec. 13B.1.1.* (Class 1 Conditional Use Permit), as applicable.

### E. Authority of the City Engineer

Notwithstanding any other requirement of this Code, the City Engineer may waive or modify any condition of approval or other obligation related to right-of-way improvement or dedication consistent with the Mobility Element of the City's General Plan without requiring any discretionary entitlement, including, but not limited to, a modification under Subsection C. (Waivers for a Map Modification) above and *Article 13* (Administration). Nothing in this Division is intended to relieve applicants and the City of compliance with the Subdivision Map Act and State law.

## SEC. 10.1.11. COST-SHARING FOR UNUSUAL IMPROVEMENTS

Upon proper application to the City Council and upon recommendation of the City Engineer, the City may accept and provide for contribution toward the cost of making any improvement required by the provisions of this Division which the City Engineer determines will cost an amount greatly in excess of the cost to other property owners who are required to make improvements under the provisions of this Division in the immediate vicinity of the improvement.

## SEC. 10.1.12. CITY ENGINEER TO DETERMINE STREET ALIGNMENT

Whenever uncertainty exists as to the proper application of the provisions of this Division in the matter of street alignment, the City Engineer shall determine their application in conformity with the spirit and intent of this Division.

## SEC. 10.1.13. WRITTEN NOTIFICATION REQUIRED

When the City Engineer determines that the provisions of this Division are applicable to any building permit application, the City Engineer shall inform the applicant of that determination, of the specific requirements of this Division determined to be applicable, and of the availability and procedure for appeal of this determination to the City Council.

# DIV. 10.2. DEDICATION BY LEASE

## SEC. 10.2.1. ELIGIBILITY

A lessee holding a parcel of real property under a long-term lease may offer to dedicate or convey a street easement for the term of the lease only in satisfaction of the requirements of *Div. 10.1.* (Street Dedication and Improvement), providing the following conditions are met.

**A.** Such lease is of record in the Office of the County Recorder, and the lessee certifies under penalty of perjury that, except for the rental provided for by such lease, the owners will receive no financial benefit or other income from the proposed development during the term of the lease.

**B.** The area of real property to be dedicated will be used for sidewalk only, and not for vehicular traffic or the installation of any subsurface or above surface lines, pipes or other public or private utility facilities, except for facilities that connect from the fully dedicated streets into the buildings to be constructed.

**C.** That notwithstanding that the adjacent public street is fully improved with all improvements as specified in *Sec. 10.1.2.*C. (Requirement), the sidewalk will be fully constructed and all other necessary or desirable public improvements in the adjacent street will be fully constructed by the lessee as a part of its development on the leasehold estate, and the lessee shall post the requisite bonds to guarantee such construction.

**D.** The total value of the improvements to be constructed for which the dedication is required is $3,000,000.00 or more, as determined by the Department of Building and Safety.

## SEC. 10.2.2. DEDICATION DOCUMENT

The dedication of the leasehold estate for street purposes pursuant to this Division shall be a form of deed making specific reference to the document creating the leasehold estate and the deed shall convey only the leasehold rights. The City Engineer is authorized to accept such deeds and place same of record with the County Recorder of Los Angeles County without further authority of the City Council, upon the approval of such deed as to form by the City Attorney. Dedication of a leasehold estate for street purposes shall not be approved and no building permit shall be issued if the City Attorney determines that the granting of such public right will cause a forfeiture or termination of the leasehold rights in the area to be dedicated.

# DIV. 10.3. PRIVATE STREET REGULATIONS

## SEC. 10.3.1. PURPOSE

The purpose of this Division is to prescribe rules and regulations governing the platting and division of land as lots or building sites which are contiguous or adjacent to private road easements; to provide for the filing and approval of private street maps; to provide for the approval of private road easements as private streets, to provide for the naming of private streets, and to require that lots or building sites which are contiguous or adjacent to private streets conform to the minimum requirements of this Code before permits may be issued.

## SEC. 10.3.2. APPLICABILITY

**A.** No person shall plat or divide land as lots or building sites which are contiguous or adjacent to a private road easement and no person shall be granted a building permit for such a lot or building site unless a private street map has been first filed with and approved by the Director in accordance with the provisions of this Division.

**B.** When private streets have been laid out and designated as such to a recorded subdivision map or on a filed record of survey map, the provisions of this Division shall not apply thereto.

**C.** When a developed residential lot or building site has its access driveway located within a private road easement that existed and was recorded prior to September 6, 1961, the private road easement is deemed to have been approved in accordance with the provisions of this Division and may be continued. Further, on such lot or building site, additions and alterations may be made to such dwelling, and accessory buildings may be erected on said lot if no additional dwelling units or guest rooms are created.

## SEC. 10.3.3. SUBDIVISIONS

The provisions of this Division shall not be construed as authorizing the subdivision of land without fully complying with the provisions contained and set forth in *Article 11* (Division of Land). However, the provisions of this Division may be met by complying with the provisions of *Article 11* (Division of Land) relating to subdivisions, without the necessity for filing a private street map in addition to the subdivision maps required by *Article 11* (Division of Land).

## SEC. 10.3.4. PROCEDURE

See *Sec. 13B.7.7* (Private Street Map).

## SEC. 10.3.5. PRIVATE STREETS, LOT OR BUILDING SITE STANDARDS

All private streets, lots, or building sites shall conform to the following regulations:

## A. Boulevards, Avenues and Collector Streets

The location, widths and alignment of all private streets shall conform to the location, widths and alignment of all boulevard, avenue, and collector street designated on the Citywide General Plan Circulation System maps of the Mobility Plan Element; and to any proceedings for any public improvement; and to any subdivision map that has been tentatively approved.

## B. Local Street Alignment

All private streets, as far as practical, shall be in alignment with existing public or private streets and their proper projections or prolongations, provided that where the property being divided into lots or building sites is large enough, a modified curve street layout may be permitted.

## C. Private Street Width

All private streets shall be designed to conform with private street standards adopted by the City Planning Commission as provided in *Sec. 10.1.1.* (Street Standards).

## D. Street Grades

On hillside or mountain streets comprising a through route, a grade in excess of 6% shall not be permitted unless a grade not to exceed 8% will obviate an excessive curvature or eliminate excessive cuts. Grades of all streets shall be as low as possible, consistent with the advantageous development of the proposed platting and division of land. The grade of any street of more than local traffic needs shall not exceed 10%. No local street grade shall exceed 15%.

## E. Curves and Tangents

A minimum centerline radius of at least 75 feet shall be used on winding mountain streets, a minimum centerline radius of at least 500 feet shall be used on all through traffic streets. In flat areas, curves on local streets shall have radii as long as possible, consistent with local conditions. The tangent distance between reversed curves shall not be less than 50 feet.

## F. Intersections

Private street intersections shall be as nearly at right angles as practicable.

## G. Effect on Adjoining Property

Private street layout shall be designed to provide access to and not impose undue hardship upon property adjoining the proposed division of lands.

## H. Cul-De-Sacs (Dead-End Streets)

Cul-de-sacs shall be permitted only where through streets are not practical, or where good neighborhood design suggests their use. Adequate provisions for turning shall be made at the end of each cul-de-sac by providing a circle or other area with a minimum overall radius of 42 feet. In the case of unusual topographic conditions, a "T" or "Y" turn may be permitted. The legs of

the "T" or "Y" turn shall have a minimum paved surface 12 feet in width and 20 feet in length, the minimum radius between each leg and the street shall be 20 feet.

## I. Rounding Block Corners

At all block corners, the property line shall be rounded or cut back. Intersection corners on the private street prolongation of boulevard, avenue, and collector street shall be rounded with 20' radius curves and all other corners shall be rounded with 15' radius curves, provided that where business development is indicated, a diagonal cut-off substantially equivalent to rounding may be used in order to aid building construction, in which case at right-angle intersections a substantial equivalent shall be a 10-foot by 10-foot cutoff.

## J. Improvements, Drainage and Sewage

1. All private streets and all lots and building sites laid out contiguous or adjacent to private streets shall have approved drainage facilities and the method for sewage disposal shall be approved by the Department of Health.

2. All such private streets shall be graded and improved to an approved width and grade. The street grading and improvement shall include surface improvements, fire hydrants and water mains, catch basins, pipe culverts, sanitary sewers, where reasonably available, and storm drains, where required. Drainage easements shall be improved to an approved manner.

3. Boulevard, avenue, and collector street shall be graded to an approved width and improved to an approved width and grade necessary for the general use of lot owners adjoining said private street and local neighborhood traffic and drainage needs.

4. Where street improvements, drainage or sewers are required to be constructed on a private street, plans and profiles showing the grades and the nature and extent of the required improvements shall be filed with the City Engineer for approval, the checking of plans, inspections, supervision and other services rendered in connection with the construction of required improvements shall be accomplished under permits in accordance with the provisions of Sec. 62.105(b) (Streets, Sidewalks and Other Improvements - Permits Required) of Article 2 (Streets and Sidewalks) of Chapter 6 (Public Works and Property) of this Code.

5. Where improvements have been previously constructed in a private street, plans and profiles showing the grades and the nature and extent of the existing improvements shall be filed with the City Engineer for the approval and said plans shall be checked and where additional construction is required, the additional construction shall be inspected and supervised, and all services rendered in connection with the existing or required improvements shall be accomplished under permit in accordance with the provisions of Sec. 62.105(b) (Streets, Sidewalks and Other Improvements - Permits Required) of Article 2 (Streets and Sidewalks) of Chapter 6 (Public Works and Property) of this Code.

6. Whenever a private street map or a portion of a map includes land that is within a local drainage district, the provisions and requirements of the ordinance establishing such district shall be complied with.

### K. Conformance To General Plan

1. Each private street map shall be designed in compliance with the zoning applying to the property or approved by the City Council for change.

2. Each private street map shall substantially conform to all other elements of the General Plan as adopted by the City Council.

## SEC. 10.3.6. POSTING OF PRIVATE STREETS

At or near the entrance of each intersection of a private street with a dedicated public street or with another private street, there shall be erected and maintained by applicant a sign post to which is attached a sign having an area of at least 15 inches by 21 inches upon which is printed and clearly legible in at least 2–inch letters the name of the private street and the words "PRIVATE STREET," in at least one-inch letters the words "NOT DEDICATED FOR PUBLIC USE OR MAINTAINED BY THE CITY OF L.A. (LAMC Sec. 10.3.6.)." The words, letters and figures of the sign shall be arranged in substantially the following manner:

"(NAME OF STREET),
PRIVATE STREET
NOT DEDICATED FOR PUBLIC USE
OR MAINTAINED BY CITY OF L.A.
(LAMC Sec. 10.3.6.)"

## SEC. 10.3.7. DIRECTOR APPROVAL AND APPEALS

See *Sec. 13B.7.7.* (Private Street Map).

## SEC. 10.3.8. PRIVATE STREET NAMES

**A.** Private street names shall be established or changed pursuant to procedures set forth in this Division in the event no private street map is required under *Sec. 10.3.2.* (Applicability) or *Sec. 13B.7.7.* (Private Street Map).

**B.** Applications to establish or change the name of a private street shall be filed with the City Engineer. Applications shall be signed by a majority of the owners of properties abutting the private street or that portion of the street to be named or renamed, and be accompanied by:

1. Payment of the required application processing fees;

2. A map, drawn to scale, delineating the location, extent, width, and alignment of the private street, the approximate location and frontage dimensions of said parcels on said street, and the location of existing public streets which it may ingress or egress; and

3. Identity of the maker of the map and the names and addresses of owners of record of property abutting the private street or that portion of the street to be named or renamed.

**C.** The Council may initiate proceedings to name or rename a private street. In such event, the Council action shall be referred to the City Engineer. That office shall process the action in the manner set forth in Subsection E. below, and, if necessary or appropriate under the circumstances, shall prepare a map in the manner which satisfies the requirements set forth in Subdivision B.2. above.

**D.** Where there is an application filed to name or rename a private street and no new private street map is required pursuant to *Sec. 13B.7.7* (Private Street Map), or there is a Council-initiated request, a private street may be named or renamed to a requested new name and the necessary documents recorded by the City Engineer with respect to the new name, pursuant to the following procedure:

**1.** The City Engineer shall determine whether the proposed new name or change of name of a street is in the public interest and will not create confusion, be misleading, or be unduly long or carry connotations offensive to good taste and decency.

**2.** The City Engineer shall give notice of the proposed new street name or name change to the record owners and occupants of all real property abutting such private street. The notice shall designate the location of the private street or portion of the street to which the proposed new name is to apply. The street, or the affected portion of the street, shall be described in the notice with reference to other streets, and by the name or names, if any, which it bears or by which it, or any portion of it, may be or may have been known, and the notice shall also state the proposed new street name. The notice shall further set forth whether or not the City Engineer's determination recommends disapproval of the proposed name for reasons provided in Subdivision 1. above, and shall state that any written objections with respect to the proposed new name or name change or the City Engineer's recommendation, shall be filed with the City Engineer within 30 days after a date designated on the notice as applicable for said purpose, and that the objections shall be signed by each person so objecting.

**3.** In the event any objections are filed within the 30-day time limit, or any objections are filed with respect to a City Engineer's recommendation of disapproval within the 30-day time limit, the City Engineer shall forward these, together with the City Engineer's determination and recommendations and the applicable file to the City Council. The City Council shall set the matter for hearing and the City Clerk shall thereupon notify by mail each person objecting to the proposed street name or to the City Engineer's recommendation of disapproval and inform that person of the time and place for hearing. At the time specified, the City Council shall hear all objections and shall thereafter approve or disapprove the proposed street name. The City Council's decision shall be final and conclusive.

**4.** In the event no objections are filed with the City Engineer within 30 days of the date prescribed on the notice and the City Engineer has not recommended disapproval of the proposed new name, the application for that name shall be deemed approved. In the event the City Engineer has recommended disapproval of the proposed name, and no objections to that recommendation have been filed, the application shall be deemed denied.

5. If the new name is either approved by the City Council, or in the event no City Council hearing was required and the application is deemed approved, the new private street name shall be effective and, the City Engineer shall cause any necessary indexing and/or recordation of documents to be accomplished and shall provide a copy of the determination to all City Departments rendering emergency service to the affected properties and to the United States Postal Service.

**E.** The approval or deemed approval of a private street name as provided for in this Division is not, and shall not be construed to be, an acceptance of a private street as a public street, nor shall it create any public warranty or liability or legal status as a public street, nor should it be so construed.

# DIV. 10.4. PARKS FEES & DEDICATIONS

## SEC. 10.4.1. PURPOSE

New dwelling units increase demand on existing park and recreational facilities and create the need for additional facilities. The purpose of this Division is to enable the acquisition of land and the collection of fees to be used for the purpose of developing new or rehabilitating existing recreational facilities in order to create a healthy and sustainable city.

## SEC. 10.4.2. TYPES OF FEES

The type and amount of park and recreation impact fees associated with a project depends on the type of project being developed. Subdivision projects consisting of more than 50 residential Dwelling Units are subject to a Quimby in-lieu fee. All other residential projects are subject to a park mitigation fee. Collectively, these fees are referred to in this Chapter as park fees.

## SEC. 10.4.3. SUBJECT PROPERTIES

All new dwelling units and joint living and work quarters shall be required to dedicate land, pay a fee or provide a combination of land dedication and fee payment for the purpose of acquiring, expanding and improving park and recreational facilities for new residents. For the purposes of this Division, dwelling units, accessory dwelling units, junior accessory dwelling units, and joint live and work quarters shall be referred to as dwelling units.

### A. Residential Subdivision Projects That Contain More Than 50 Dwelling Units

A subdivision containing more than 50 dwelling units shall be required to participate in an early consultation with the Department of Recreation and Parks and Department of City Planning pursuant to *Sec. 10.4.4.* (Residential Subdivision Projects that Contain More than 50 Dwelling Units) and may be required to dedicate land, make park improvements, pay a park fees or provide a combination of land dedication and park fee payment.

### B. All Other Residential Projects

For residential subdivision projects containing 50 or fewer dwelling units or for non-subdivision residential projects that are seeking a building permit for a project application that contains any number of net new dwelling units, the project shall pay a park fee pursuant to *Sec. 10.4.5.* (Park Fees for Non-Subdivision Projects, Residential Subdivisions with 50 Dwelling Units or Fewer, or Residential Subdivisions with more than 50 Dwelling Units that are not Dedicating Land). Applicants may choose to dedicate land or new park and recreational facilities, and/or improve existing park and recreational facilities in lieu of payment of a park fee.

### C. Exemptions

The following types of development shall not be required to pay a park fee:

1. Alterations, renovations or expansion of an existing residential building or structure where no additional dwelling units are created.
2. Replacement of existing dwelling units on the same lot resulting in no net increase of dwelling units.
3. The replacement of a destroyed or partially destroyed or damaged building or structure where no additional dwelling units are created.
4. Affordable housing pursuant to *Sec. 10.4.7.* (Affordable Housing Exemption)
5. Accessory dwelling units and junior accessory dwelling units.
6. Non-residential development.

## SEC. 10.4.4. RESIDENTIAL SUBDIVISION PROJECTS THAT CONTAIN MORE THAN 50 DWELLING UNITS

### A. Early Consultation

Applicants shall meet with the Department of Recreation and Parks and Department of City Planning staff in advance of submitting a Subdivision application for a project of more than 50 dwelling units. The purpose of this early consultation is to discuss the potential land dedication requirements of the project and to discuss credits available to the applicant, if any. The Department of Recreation and Parks shall provide written verification of the consultation to the project applicant within 10 business days of the meeting. Written verification of this consultation shall be required before the Department of City Planning accepts an application for a tentative subdivision.

### B. Formula for Park Land Dedication

1. The Department of Recreation and Parks shall calculate the amount of land to be dedicated by determining the number of net new, non-exempt, pursuant to *Sec. 10.4.3.*C. (Subject Properties; Exempt), dwelling units in the proposed project and multiply that number by the average number of people per occupied dwelling unit and multiplying that by the park service factor:

   LD = (DU x P) x F

   LD: Land to be dedicated in acres.

   DU: Total number of new market-rate Dwelling Units.

   P: Average number of people per occupied Dwelling Unit as determined by the most recent version of the U.S. Census for the City of Los Angeles.

   F: Park service factor, as indicated by the Department of Recreation and Parks rate and fee schedule.

2. Any land dedication for park and recreation purposes shall not be deducted from a site's lot area for the purposes of calculating project density.

3. If after recording the final map there is an increase in the number of dwelling units to be built or a change in the number and/or type of dwelling units designated which increases the number of persons served by the subdivision, the project applicant shall be required to dedicate additional land and/or pay additional fees, as determined by the Department of Recreation and Parks and the City Planning Department.

## C. Park Land Dedication Radius

Any land dedication for park and recreation purposes shall be located within a certain radius from the project site, as specified below:

1. Neighborhood Park: within a 2-mile distance

2. Community Park: within a 5-mile distance

3. Regional Park: within a 10-mile distance

## D. Review of Land Dedication

1. Upon receiving the project application for a subdivision, the Department of City Planning shall transmit the project application that involves a proposed land dedication to the Department of Recreation and Parks.

2. After receipt of the project application, the Department of Recreation and Parks shall determine whether the land dedication proposal complies with the Department of Recreation and Park's existing park and recreation standards and requirements.

3. If the Department of Recreation and Parks determines that the land dedication proposal meets the standards and requirements of the department, the General Manager of the Department of Recreation and Parks shall prepare a report to the Board of Recreation and Parks Commissioners regarding the proposed dedication. The Board of Recreation and Parks Commissioners may accept or decline the land dedication.

## E. Payment of Park Fee

If the project is not required to dedicate land park and recreational purposes, the project applicant shall pay a park fee pursuant to *Sec. 10.4.5.* (Park Fees for Non-Subdivision Residential Projects, Residential Subdivisions with 50 Dwelling Units or Fewer, or Residential Subdivisions with more than 50 Dwelling Units that are Not Dedicating Land).

# SEC. 10.4.5. PARK FEES FOR NON-SUBDIVISION RESIDENTIAL PROJECTS, RESIDENTIAL SUBDIVISIONS WITH 50 DWELLING UNITS OR FEWER, OR RESIDENTIAL SUBDIVISIONS WITH MORE THAN 50 DWELLING UNITS THAT ARE NOT DEDICATING LAND

## A. Fees and Fee Schedule

The park fee amount depends on the type of project. The Department of Recreation and Parks shall collect these fees pursuant to Sec. 19.17. (Park Fee) of Chapter 1 (General Provisions and Zoning) of this Code and the Department of Recreation and Parks rate and fee schedule.

## B. Fee Calculation

The Department of Recreation and Parks shall calculate the amount of the park fee due for each residential development project by determining the number of new non-exempt, pursuant to *Sec. 10.4.3.*C. (Subject Properties; Exempt), dwelling units in the proposed project and multiplying the number of dwelling units by the park fee amount per dwelling unit according to the following formula:

Project Park Fee = DU x PRF

DU: Total number of new, non-exempt, pursuant to *Sec. 10.4.3.*C. (Subject Properties; Exempt), Dwelling Units.

PRF: Park Fee per Dwelling Unit.

## C. Fee Expenditure Radius

Recreational sites and facilities shall be located within a certain radius from the project site, as specified below:

**1.** Neighborhood park: within a 2-mile distance.

**2.** Community park: within a 5-mile distance.

**3.** Regional park: within a 10-mile distance.

## D. Indexing

Any fee imposed by this Division shall be adjusted on July 1st of each year by a percentage equal to a weighted average of the annual percentage change in: (1) the Construction Cost Index for Los Angeles, as published by Engineering News Record, or its successor publication, for the 12 month period between March in the year in which the adjustment is made and the month of March in the immediately preceding year; and (2) the annual percentage change in the Median Home Sales Price for the City of Los Angeles, as published by CoreLogic, or its successor publication, for the 12-month period between March in the year in which the adjustment is made and the month of March in the immediately preceding year.

### E. Fee Payment Timing

#### 1. Residential Subdivision Projects

The park fee for residential subdivisions shall be calculated and collected prior to final subdivision map approval.

#### 2. Residential Non-Subdivision Projects

For other residential development projects, the park fee shall be calculated and collected prior to the issuance of the Certificate of Occupancy.

## SEC. 10.4.6. PARK FEE AS ADDITIONAL REQUIREMENT

The park fee enacted by this Division is a fee imposed on residential development projects reflecting each project's proportionate share of the cost of providing park land and improvements necessary to meet the needs created by each respective development. As such, the park fee is additional and supplemental to, and not in substitution of, lot amenity space or residential amenity space required by this Chapter, specific plan(s), or any other planning document.

## SEC. 10.4.7. AFFORDABLE HOUSING EXEMPTION

**A.** Notwithstanding any other provision contained in this Division, new dwelling units which are rented or sold to persons or households of very-low, low or moderate income shall receive an affordable housing exemption from the park fee and land dedication requirement.

**1.** An affordable housing dwelling unit shall receive an exemption from the requirement for dedication of land for park and recreational purposes and/or payment of the park fee if the affordable housing dwelling unit is affordable to a household at or below 120% of AMI.

**2.** In projects with a mix of market-rate and affordable housing dwelling units, only the affordable housing dwelling units shall receive this exemption.

**B.** For any affordable housing dwelling unit qualifying for an exemption, a covenant acceptable to the Los Angeles Housing and Community Investment Department shall be recorded with the Los Angeles County Recorder, guaranteeing that the affordability criteria will be observed for at least 55 years from the issuance of the Certificate of Occupancy or a longer period of time if required by the construction or mortgage financing assistance program, mortgage assistance program, or rental subsidy program. For any affordable housing dwelling unit qualifying for an exemption that has a recorded covenant with the Los Angeles Housing and Community Investment Department (HCID), the project will record a covenant with the Department of Recreation and Parks in order to be exempt from the required Park Fee.

**C.** The Los Angeles Housing and Community Investment Department shall evaluate the project to ensure it meets the above requirements and shall advise the Department of Recreation and Parks and the Department of City Planning about whether the project meets those requirements.

**D.** Should any qualifying affordable housing dwelling unit cease to operate as a qualifying affordable housing dwelling unit before the 55-year period has expired, HCID shall notify the Department of Recreation and Parks, and the parks fee for each said dwelling unit shall be paid to the City at the then-current rate.

## SEC. 10.4.8. CREDITS

### A. Public Land Dedication or Improvement to Dedicated Land

#### 1. Public Land Dedication

In lieu of paying the park fee or any portion of the park fee, land may be dedicated to the City of Los Angeles for public park and recreational purposes, at the City's option. This may be with or without recreational facility improvements. The amount of land to be dedicated shall be determined pursuant to one of the following formulas, and credit shall be granted, square foot for square foot, for any land dedicated to the City:

##### a. Subdivision Projects:

LD = (DU x P) x F1

LD: Land to be dedicated in acres.

DU: Total number of net new, non-exempt, pursuant to *Sec. 10.4.3.*C. (Subject Properties; Exempt), dwelling units.

P: Average number of people per occupied dwelling unit as determined by the most recent version of the U.S. Census for the City of Los Angeles.

F1: Park service factor for subdivision projects, as indicated by the Department of Recreation and Parks rate and fee schedule.

##### b. Non-Subdivision Projects:

LD = (DU x P) x F2

LD: Land to be dedicated in acres.

DU: Total number of net new, non-exempt, pursuant to *Sec. 10.4.3.*C. (Subject Properties; Exempt), dwelling units.

P: Average number of people per occupied dwelling unit as determined by the most recent version of the U.S. Census for the City of Los Angeles.

F2: Park service factor for non-subdivision projects, as indicated by the Department of Recreation and Parks rate and fee schedule.

### 2. Improvement to Dedicated Land

In lieu of paying the park fee or dedicating land, or any portion thereof, the City may permit improvements to be made to dedicated City parkland, or land being dedicated as a City park or recreational facility.

### 3. General

**a.** The total amount of credits shall not exceed 100 percent of the calculated requirement for the park fee or land dedication.

**b.** Credit shall be granted for the property dedicated pursuant to this Division, dollar for dollar, in satisfaction of any park fee required to be paid. The cost and subsequent credit should bear a reasonable relationship to an independent assessment of the construction cost for the facility, such as the estimates provided by RSMeans Building Construction Cost Data or similar measure. Credits may be awarded for on-site or off-site land dedication and/or park improvements.

**c.** The Department of Recreation and Parks shall determine whether the proposal complies with the department's park and recreational standards and requirements. If the Department determines the proposal meets the department's standards and requirements, the General Manager of the Department of Recreation and Parks shall prepare a report to the Board of Recreation and Parks Commissioners regarding the proposed dedication or improvement. The Board of Recreation and Parks Commissioners may accept or decline the land dedication, new park and recreational facility, or improvement to existing park and facilities.

**d.** If the dedication and/or improvement is accepted by the Board of Recreation and Parks Commissioners in lieu of the park fee or land dedication, or any portion thereof, the City shall reduce or waive the fee, or land dedication, or any portion thereof, upon dedication of the property and/or guarantee of the improvement. The guarantee of the improvement shall be to the satisfaction of the Department of Recreation and Parks and shall be by a deposit with the Department of Recreation and Parks of an irrevocable deposit instrument issued by a bank, savings and loan association or other depository whose deposits are insured by an instrumentality of the federal government. The deposit shall be fully insured by such instrumentality. The deposit instrument shall be in a form that permits collection by the City of Los Angeles at maturity without further consent of any other party.

## B. Privately Owned Park and Recreational Facilities

Where facilities for park and recreational purposes are provided in a proposed residential development and such facilities will be privately owned and maintained by the future owners of the development, the areas occupied by such facilities shall be partially credited against the requirement of dedication of land for park and recreational purposes or the payment of a park fee thereof, provided that the following standards are met to the satisfaction of the Department of Recreation and Parks: (1) that each facility is available for use by all the residents of the residential

development; and (2) that the area and the facilities satisfy the recreation and park needs of the residential development so as to reduce the need for public recreation and park facilities to serve the project residents.

1. The amount of credits for non-publicly accessible park and recreational facilities shall not exceed 35 percent of the calculated requirement for the park and recreation impact fee or land dedication. Credits may be awarded for on-site or off-site private facilities.

2. The amount of credits for publicly accessible, privately maintained park and recreational facilities shall not exceed 100% of the calculated requirement for the park and recreation impact fee or land dedication. Credits may be awarded for on-site or off-site private facilities.

3. Private park and recreational facilities shall include a variety of active and passive amenities, as determined by the Department of Recreation and Parks.

4. Credit shall be granted, dollar for dollar, for any recreational and park impact fees required to be paid for the property pursuant to this Division, as determined by the Department of Recreation and Parks. The cost and subsequent credit should bear a reasonable relationship to an independent assessment of the construction cost for the facility, such as the estimates provided by RSMeans Building Construction Cost Data or similar.

5. Credits shall not be given for any lot amenity space or residential amenity space required to be maintained by this Chapter, specific plan, or any other planning document.

6. The granting of credits shall also be subject to the following:

    a. The private ownership and maintenance of the facilities shall be adequately provided for by written agreements; and

    b. The use of the private facilities, whether publicly or non-publicly accessible, is restricted for park and recreational purposes by recorded covenants acceptable to the Department of Recreation and Parks which run with the land and which cannot be defeated or eliminated without the consent of the City Council; and

    c. The proposed facilities are reasonably adaptable for use for park and recreational purposes, taking into consideration such factors as size, shape, topography, geology, access and location of the private open space land; and

    d. The proposed non-public facilities are available for use by all the residents of the proposed residential development; and

    e. Any proposed publicly accessible, privately-maintained park and recreational facilities are accessible for use by the general public with no discrimination between residents and non-residents, are open at hours comparable to those of City parks and facilities, and have appropriate signage indicating that the space is public; and

    f. The facilities are in substantial accordance with, and meet the policies and standards for, the development of park and recreational facilities.

### C. Dwelling Unit Construction Tax Credit

A credit shall be allowed whenever a dwelling unit construction tax previously has been paid pursuant to Sec. 21.10.3. (Dwelling Unit Construction Tax) of Article 1.10 (Dwelling Unit Construction Tax) of Chapter 2 (Licenses, Permits, Business Regulations) of this Code for dwelling units constructed on land for which a fee is required to be paid in accordance with the provisions of this Division. Said credit shall be equal to the amount of the tax previously paid, but shall not exceed the amount of any fee required to be paid under the provisions of this Division.

### D. Credit Request Timing

The project applicant shall submit any requests for credit, and the Department of Recreation and Parks may only approve such requests, prior to the approval of the Final Map or prior to the date of final inspection, or the date of the Certificate of Occupancy, whichever is earliest and applicable, and prior to the dedication of any land or payment of any park fee.

## SEC. 10.4.9. PARK FEE ACCOUNT AND ACCOUNTING

### A. Park Fee Account

The City of Los Angeles establishes a separate park and recreation fee trust fund account ("account") to which any park fee collected by the City shall be posted. The funds of the account shall not be commingled with any other funds or revenues of the City. Any interest accrued by the account shall be used solely for the purposes of park and recreational facility acquisition, expansion and improvement.

### B. Park Fee Accounting

Within 180 days after the last day of each fiscal year, the Department of Recreation and Parks shall report to the Board of Commissioners of Recreation and Parks on the amount of the fee income (including interest income), expenditures, status of the trust fund account, and interfund transfers. The Department of Recreation and Parks shall also report on each of the park and recreational facilities on which fees were committed in the last fiscal year and the approximate date by which the construction of the park and recreational facilities will commence. The City shall maintain accounts and prepare reports in accordance with California Government Code Section 66001 or successor section.

### C. Refund of Fees Under the Government Code

1. Park fees collected pursuant to this Division shall be committed by the City within five years of receipt of payment for a residential development project to serve or benefit residents of the project for which the fees were collected.

2. If the fees are not committed as specified in this Division, Quimby fees shall be refunded in accordance with California Government Code Section 66477 or successor section. All other park fees shall be refunded in accordance with California Government Code Section 66001 or successor section.

### D. Other Refunds

In the event that an applicant requests a refund for reasons not set forth in Government Code Sections 66001 or 66477, or their successor sections, if any, the applicant shall submit a claim for a refund with the Department of Recreation and Parks. Upon the Department's determination, the fee payer may receive a refund, without interest, of the fees paid pursuant to this Division; however, the portion of any fee revenue received by the City as reimbursement of its costs in administering the provisions of this Division shall not be refunded. The fee payer shall submit an application for a refund to the City within one year of payment. Failure to timely submit the required application for refund shall constitute an absolute waiver of any right to the refund.

## SEC. 10.4.10. USE OF PARK FEES OR LANDS DEDICATED PURSUANT TO THIS SECTION

**A.** The dedicated lands or park fees collected pursuant to this Division shall be used for the acquisition, improvement and expansion of public parks and recreational facilities. The fees shall be committed and expended in accordance with the provisions and procedures established in this Division. The park fee may be used to pay the principal sum and interest and other finance costs on bonds, notes or other obligations issued by, or on behalf of, the City to finance such park and recreational facility improvements; and any administrative costs incurred by the City in accordance with this Division.

**B.** Interest accrued on Quimby in-lieu fees collected pursuant to this Division may be applied outside the project development for which the original fees were collected, provided that the Department of Recreation and Parks holds a public hearing prior to committing the interest, and uses the interest to develop new or rehabilitate existing neighborhood or community parks or recreational facilities within the City. All such public parks and recreational facilities shall comply with the principles and standards set forth in the General Plan.

**C.** The park or recreational facilities acquired, improved or expanded shall be publicly accessible and serve or benefit the project that dedicated the land or paid the fees.

# DIV. 11.1. GENERAL PROVISIONS

## SEC. 11.1.1. GENERAL

### A. Scope

1. No person may subdivide land in the City of Los Angeles unless a final tract map (for subdivisions of 5 or more parcels) or parcel map (for subdivisions of 4 or less parcels), pursuant to Section 66426 of Article 1 (General Provisions) of Chapter 2 (Maps) of the Subdivision Map Act, has been recorded as provided in this Article and pursuant to *Div. 13B.7.* (Division of Land).

2. No building or structure shall be constructed or enlarged on any land which has been subdivided in violation of the provisions of this Article and *Div. 13B.7.* (Division of Land), nor shall any permit be issued therefor.

3. The provisions of this Article shall not be construed as preventing the recording of a final tract map containing less than five lots or creating fewer than five condominium units in accordance with the procedures outlined in *Div. 13B.7.* (Division of Land) and in the Subdivision Map Act.

### B. Applicability

The provisions of this Article are applicable to a commercial/industrial conversion project, commercial/industrial to residential conversion project, residential conversion project, or residential to commercial/industrial conversion project as defined in *Article 14* (General Rules & Definitions), except as follows.

#### 1. Stock Cooperative Conversions

The provisions of this Article do not apply to any conversion for stock cooperative purposes which satisfies either of the following criteria: (a) the application for stock cooperative (DRE Form 658 or its equivalent) was filed with the California Department of Real Estate prior to July 1, 1979, or (b) a subdivision public report for stock cooperative was issued pursuant to Business and Professions Code Section 11018 prior to November 10, 1979.

#### 2. New Stock Cooperatives

The provisions of this Article do not apply to any stock cooperative project, other than a commercial/industrial conversion project, commercial/industrial to residential conversion project, residential conversion project, or residential to commercial/industrial conversion project, where the application for stock cooperative (DRE Form 658 or its equivalent) was filed with the California Department of Real Estate prior to March 21, 1980.

#### 3. Subdivision of Air Space

The provisions of this Article apply to any division of the space above or below a lot with a definite width, length, and upper and lower elevation occupied or to be occupied by a use,

group of buildings or portions of buildings, and accessory buildings or portions of accessory buildings, or accessory uses.

### C. Purpose

**1.** The purpose of this Article is to regulate and control the division of land within the City of Los Angeles, to provide for the dedication of land, the payment of fees in lieu of dedication of land, or a combination of both, for the acquisition and development of park and recreation sites and facilities to serve the future inhabitants of the subdivision, to supplement the provisions of the Subdivision Map Act concerning the subdivision design, subdivision improvement and survey data of subdivisions, the form and content of preliminary parcel maps, tentative tract maps, final tract map, and parcel maps. The procedure to be followed in securing the official approval of the City of Los Angeles on such maps shall be completed pursuant to *Div. 13B.7.* (Division of Land), in a manner that is consistent with the applicable general and specific plans as well as the public health, safety and welfare.

**2.** It is also the intention of this Article that the subdividing of land in the City of Los Angeles be done in accordance with the grading regulations of the City contained and set forth in Article 1 (Building Code) of Chapter 9 (Building Regulations) of this Code and to establish when possible beauty and attractiveness in the hills consistent with watershed drainage, erosion and fire control requirements, and good engineering practices.

### D. Interpretation

#### 1. Private Streets

This Article and *Div. 13B.8.* (Division of Land) is not to be interpreted or construed to invalidate any previous act on the part of the City approving or authorizing private streets, or authorizing the issuance of building permits for structures on lots served by private streets.

#### 2. Planning Commission

Unless otherwise specified, further references in this Article to "Planning Commission" mean either the Area Planning Commission or the City Planning Commission, whichever has authority.

## SEC. 11.1.2. ADVISORY AGENCY

### A. Additional Authority

**1.** The Advisory Agency has the authority to grant deviations of no more than 20% from the applicable floor area, yard, and height requirements. The subdivider shall ask for adjustments at the time of filing.

**2.** In permitting adjustments, the Advisory Agency shall make the findings contained in *Sec. 13B.5.2.* (Adjustment). The reductions/deviations shall be included in the written decision of the Advisory Agency.

3. Notification and appeal rights to such reductions/deviations shall conform to *Sec. 13B.7.2.* (Parcel Map Exemption/Lot Line Adjustment).

## SEC. 11.1.3. SUBDIVISION DESIGN STANDARDS

### A. Conformance to the General Plan

1. Each preliminary parcel map or tentative tract map shall be designed in compliance with the zoning applicable to the property or approved by the City Council for change or will be subject to a condition requiring compliance with such zoning prior to the recordation of the final tract map or parcel map.

2. Where a preliminary parcel map or tentative tract map involves land for which a General Plan including dwelling unit densities has been adopted by the Council, and the land is also in a Hillside Area the number of lots on the map shall be limited so that the number of dwelling units permitted by the applicable zoning regulations does not substantially exceed the dwelling unit densities shown on the Plan.

3. Each preliminary parcel map or tentative tract map shall substantially conform to all other elements of the General Plan. In computing the number of dwelling units, only the area being designated for residential use and land that is being dedicated for public uses shall be considered, excepting, however, land set aside for street purposes, or land required to be dedicated for park and recreation purposes pursuant to *Article 10* (Streets & Parks).

4. In Hillside Area, which are designated in the "Minimum Residential" General Plan land use designation, the dwelling unit density shall not exceed that allowed by the following formula:

$$D = \frac{50 - S}{35}$$

Where :

D = the maximum number of dwelling units per gross acre allowable, and

S = the average natural slope of the land in%.

Where the total allowable number of dwelling units per preliminary parcel map or tentative tract map calculated under the above formula results in a number other than a whole number, it shall be rounded to the nearest whole number as follows:

**a.** Where the fractional portion of the total allowable number of dwelling units equals 0.5 or more, the total number of allowable dwelling units shall be rounded to the next larger whole number;

**b.** Where the fractional portion of the total allowable number of dwelling units equals less than .5, the total number of allowable dwelling units shall be rounded to the next smaller whole number.

In no case may the permitted density be less than 0.05 dwelling units per gross acre. Where the total allowable number of dwelling units per tentative tract map calculated under the above formula results in a number less than one, it shall be rounded up to allow one dwelling unit per tentative tract map. Where previous grading on a site makes it difficult to determine average natural slope using the above formula, the Director of Planning shall determine the average natural slope in a manner to carry out the purpose and intent of this Subsection.

## B. Streets

### 1. Right-of-Way and Roadway Widths

All streets and alleys shall be designed to conform with the Planning Commission's adopted standards. The requirements and exceptions set forth in *Article 10* (Streets & Parks), however, do apply.

### 2. Street Grades

**a.** Grades of all streets shall be as flat as consistent with adequate surface drainage requirements and the approved development of the proposed subdivision. The minimum grade permitted is 0.4%, except in extremely flat areas where a grade of 0.2% may be used. The maximum grade permitted for streets designated as Boulevard or Avenue is 6%, except where a grade not to exceed 10% will eliminate excessive curvature, fill or excavation. The maximum grade permitted for Collector Streets is 10% and for Local Streets is 15%. Variations from these requirements may be granted by the Advisory Agency upon recommendation by the City Engineer in individual cases in accordance with the provisions of *Sec. 13B.7.7.* (Private Street Map).

**b.** Changes in grade greater than 0.4% shall be connected by vertical curves. The length of vertical curves shall conform to standards for sight distance and riding qualities established by the City Engineer.

### 3. Future Streets

In the event certain streets or alleys in a subdivision are to be reserved for future public use and they have been approved as to location and width, they shall be indicated on the final tract map or parcel map and offered for dedication as future streets or future alleys. Certificates providing that the City may accept the offer to dedicate such easement at any time shall be shown on the final tract map or parcel map.

### 4. Corner Cut-Off

At all block corners, the property line shall be rounded. On all major and secondary highways, the corner shall have a 20-foot radius curve and on all other streets, a 15-foot radius curve; provided, however, that where commercial development is permitted, a diagonal cutoff of 15 feet × 15 feet in lieu of a 20-foot radius curve and a ten foot × ten foot cutoff in lieu of a 15-foot radius curve may be used. In industrial zones the curves shall have a minimum radius of at least 40 feet.

### 5. Horizontal Curves

The centerline radii of curves shall be as large as possible, consistent with conditions. All curves shall have sufficient length to avoid the appearance of an angle point. Reversing curves shall be connected by tangents of length approved by the City Engineer as sufficient to safely reverse the unbalanced centrifugal force. In any case, horizontal curves shall have the following minimum centerline radii:

**a.** Boulevards and Avenues: 1,000 feet

**b.** Collector Streets: 500 feet

**c.** Local Streets: 300 feet

**d.** Local Streets in a Hillside Area: 125 feet

### 6. Intersections

Street intersections shall be as near to a right angle as possible. No jogs are allowed in the continuity of an arterial street. Jogs in a non-arterial street where crossing an arterial street shall be held to a minimum. Multiple intersections of more than four approaches should be avoided. In Hillside Areas, special conditions may be required.

### 7. Cul-de-Sac Streets

Cul-de-sac streets should be avoided except in locations where physical constraints prohibit the continuation of the street (such as where a river or railroad infrastructure is present) or where made necessary by historical development patterns. Where cul-de-sac streets are approved, they shall be terminated by a turning area conforming to the latest standards approved by the Planning Commission. Where feasible, existing cul-de-sacs should be modified and new cul-de-sacs should be designed to include a passageway for bicycles and pedestrians to access the surrounding area.

### 8. General

**a.** All streets within or immediately adjacent to the subdivision shall be improved with curbs and gutters, unless not required by the Advisory Agency upon recommendation of the City Engineer.

**b.** Streets within or immediately adjacent to the subdivision shall be improved with sidewalks, except that in mountainous, hillside or rural areas, sidewalks may be omitted or may be provided on only one side of the street with the approval of the Advisory Agency.

## C. Alleys

**1.** Alleys shall be not less than 20 feet in width. Alleys serving industrial zones shall be not less than 30 feet wide, unless otherwise approved by the Advisory Agency.

**2.** All dead-end alleys shall be constructed with adequate turning areas.

3. Whenever practicable, alleys are required at the rear of all lots that are in Residential Use Districts and that front an arterial street. Alleys may also be required at the rear of lots in commercial and industrial zones.

4. Where two alleys intersect, a triangular corner cut-off of not less than 10 feet along each alley line shall be provided.

## D. Pedestrian Walks

If the Advisory Agency determines that inner-block pedestrian walks are necessary for the public health, safety or welfare, they shall be dedicated to a width of not less than 12 feet. The Advisory Agency, however, shall only impose such a dedication requirement after finding that the dedication bears an essential nexus and rough proportionality to a project's impact.

## E. Blocks

Blocks in Residential and Industrial Use Districts areas shall not exceed 1,700 feet in length, except in a Hillside Area. Blocks in Commercial Use Districts shall not exceed 800 feet in length except in locations where the prevailing block length (within 1/2 mile) is less than 800 feet. In such instance, the new block shall not exceed the average prevailing block length.

## F. Lot Size

1. Every lot shall have a minimum width and area to comply with the requirements as specified for the Form District in which the lot is located.

2. When the Advisory Agency determines that traffic access, topography and drainage conditions will safely allow lot averaging, and when the subdivider has demonstrated to the satisfaction of the Advisory Agency in a written report that such averaging is consistent with proper subdivision design, and in addition will produce, one or more of the following benefits: require less grading than a conventional subdivision design not utilizing lot averaging; result in improved lot design; or produce other environmental benefits; the Advisory Agency may permit the width and area of not more than 20% of the lots in a subdivision located in a Hillside Area, to be reduced as specified below, provided that the average area of all lots in the subdivision is not less than the following requirements the required minimum for the zone of the lot.

| LOT AREA IN SQUARE FEET | | | |
|---|---|---|---|
| Form District | Lot Width (min) | Lot Area (min) | Lot Average (min) |
| **Rural-Limited** | 63 feet | 14,000 | 17,500 |
| **Residential Estate-Limited 5** | No Reduction | 32,00 | 40,000 |
| **Residential Estate-Limited 4** | 72 feet | 16,000 | 20,000 |
| **Residential Estate-Limited 3** | 72 feet | 12,000 | 15,000 |
| **Residential Estate-Limited 2** | 63 feet | 8,800 | 11,000 |
| **Residential Estate-Limited 1** | 60 feet | 7,200 | 9,000 |

3. In computing such average, that portion of any lot exceeding 150% of the average requirement shall not be included, provided however, that in the Rural-Limited Form Districts the maximum area of any lot that may be used in computing the average shall be 24,500 square feet.

4. In a tract where one or more lots have less than the average requirement for the Form District, no lot can be rearranged or divided unless: (1) the average requirement for the original final tract map or parcel map is maintained, and (2) such rearrangement or division is accomplished by recording a new final tract map or parcel map, or by securing determination that the proposed rearrangement or division is exempt from the parcel map procedure in *Sec. 11A.4.1.*B.3.c. (Parcel Maps; General; Scope).

5. Where it finds it necessary in order to promote the general welfare, the Advisory Agency may require that lots that are contiguous or nearby to existing lots on the same street be increased in size to be compatible with the size of the existing lots. However, in no case may the Advisory Agency require such lots to contain an area of over 50% more than that required by the applicable Form District or Alternate Typology.

6. Property in commercial or industrial zones need not be divided into more than one lot where such property is to be operated as a unit.

7. Each portion of a lot which is platted to be divided by a City or County boundary line shall be given a separate letter or number on the recorded tract map.

8. Side lines of lots shall be approximately at right angles to the streets, or radial to the street on curved streets, except where topography or other conditions make this impracticable.

9. Where it finds that there will be no material increase in the dwelling unit density permitted by the zone, and that the public health, safety or welfare and good subdivision design would be promoted by the dedication of public streets to a width in excess of the approved standards provided for in this Article, or the dedication of service roads, or the dedication or reservation of land for public parks, public uses or other open areas, the Advisory Agency may permit the required area of one or more of the lots in a subdivision in an Rural-Limited or Estate Limited Form Districts to be reduced to the extent of such dedication or reservation. Provided, however, that in no event may such a reduction exceed 15%, and no lot in the Rural-Limited or Estate Limited Form Districts in a Hillside Area, is permitted to be reduced below the minimum area specified in Subdivision 1. above.

10. Where the Advisory Agency finds the project is consistent with the dwelling unit density permitted by the General Plan, and that the public health, safety or welfare and good subdivision design will be promoted by the preservation of protected trees, the Advisory Agency may permit the required area of one or more of the lots in a subdivision in Rural-Limited, Estate Limited, or House-Limited Form Districts to be reduced by an amount sufficient to provide for protected tree preservation in accordance with Subsection P. (Protected Tree Regulations) below. Provided, however, that in no event may the reduction exceed 50% of the required lot area; lots zoned with Rural-Limited or Estate Limited, Form Districts may not

be reduced below 50 feet in width; lots zoned with House-Limited Form Districts may not be reduced below 40 feet in width; and no lot in a designated "K" Horsekeeping District may be reduced below 17,500 square feet.

## G. Easements

1. Easements for public utilities, water system, sewers, street lights, storm drains or flood control channels, and slope rights shall be provided wherever determined necessary by the Advisory Agency upon recommendation of the City Engineer.

2. Wherever it is determined that future easements are necessary, a certificate shall be placed on the final tract map or parcel map indicating that the City will accept such easements at any time.

## H. Grading in Hillside Areas

Subdivision design requirements in a Hillside Area shall meet the grading standards established by the Board of Public Work and the grading regulations established by Article 1 (Building Code) of Chapter 9 (Building Regulations) of this Code. Such requirements may also include providing soil reports prepared by a registered civil engineer specializing in soil mechanics or reports on geological investigations.

## I. Problem Areas

Areas designated by resolution of the Board of Public Works as problem areas shall not be subdivided except when approved by the Advisory Agency upon recommendation of the Superintendent of Building and the City Engineer.

## J. Grading Plans

1. The Advisory Agency may require a proposed grading plan with the preliminary parcel map or tentative tract map of any subdivision. Upon recommendation of the Superintendent of Building or the City Engineer, or where it appears that cuts and fills will occur in the grading of the property that may be contrary to the objectives of this Article, the Advisory Agency may require the subdivider to submit grading plans for all or part of the tract before action on the preliminary parcel map or tentative tract map will be taken. Any grading plan submitted shall contain a statement of the quantities (in cubic yards) of cut and fill and quantities of export or import material involved. If the amount of earth material to be imported to or exported from a subdivision site is 1,000 cubic yards or more, statements of the following shall also be included:

    a. The proposed borrow or disposal site;

    b. The proposed haul route;

    c. The total gross weight with load of the proposed haul vehicles; and

    d. Any other pertinent data which the Advisory Agency may require.

2. Failure to furnish a grading plan (where necessary to complete the investigation of the preliminary parcel map or tentative tract map within the time specified in the written notice requesting its submission) will be cause for the disapproval of the preliminary parcel map or tentative tract map, unless an extension of the time for acting on the Map is mutually agreed upon between the subdivider and the Advisory Agency.

3. If changes in the design of the lots or street system can be made to correct the conditions set forth in Subsection H. (Hillside Grading Areas) above, either by increased lot sizes or changes in grades, such modifications shall be made.

## K. Storm Drains

Storm drains shall be designed in conformance with standards approved by the City Engineer. Storm drain facilities to intercept and convey all runoff to a suitable point of disposal are required when runoff from the entire area tributary to and including the subdivision exceeds the limiting depth of street flow as determined by the City Engineer. These storm drain requirements shall also include the following:

1. In areas without sumps, storm drains shall be designed to remove all runoff from a storm of 10-year frequency.

2. In sump areas, storm drains shall be designed to remove all runoff from a storm of 50-year frequency.

3. Storm drains shall be of sufficient capacity in all cases to prevent flooding of building sites from a storm of 50-year frequency.

4. On Hillside Limited Streets, the maximum depth of water as determined by the City Engineer shall be based on a storm of 50-year frequency.

## L. Installation of Utilities

1. Utility lines, including but not limited to those required for electricity, communication, street lighting, and cable services necessary for the general use of the lot owners in the subdivision, shall be installed or guaranteed to be installed in the same manner as other required subdivision improvements.

2. Except in Industrial-Mixed, Industrial, Public, and Open Space Use Districts, in all portions of a tract map area, all such utility lines shall be installed underground, provided, however, that incidental, appurtenant equipment such as transformers, terminal boxes and meter cabinets may be placed above ground, but shall conform with regard to placement and height with those standards adopted by the Planning Commission as it determines are necessary to safeguard the public against hazards created by the equipment and to further the purposes of this Article. The Subdivision Committee, as established in *Sec. 13A.1.10.* (Subdivision Committee), shall make its report and recommendation of the Planning Commission prior to the adoption of the standards.

3. The subdivider shall make the necessary cost and other arrangements for such underground installation and for relocation of existing facilities with each of the persons, firms or corporations furnishing utility services involved.

## M. Model

Regardless of any other provision of this Chapter, a model or models may be erected and maintained on any lot or site designated by the Advisory Agency as a site for a model or models on an approved or conditionally approved preliminary parcel map or tentative tract map, in lots zoned with Agricultural or Residential Use Districts and the "1L" Density District with respect to one-unit dwellings, and in lots zoned with Residential Use Districts allowing multiple-unit structures, i.e., buildings containing more than one dwelling unit, for a period of time as determined by the Advisory Agency, provided that:

1. Not more than 15% of the lots and in no case more than 20 lots at any one time in a subdivision may be designated as sites for the construction of models, and, with respect to multiple unit structures, not more than 15% of the units and in no case more than 20 units at any one time in a proposed building designated as a model site, may be designated as models. Each of the sites shall be located in a manner as to not adversely affect existing developed residential properties. Further, each of the sites shall be easily accessible and provision for the accessibility shall be assured at the time that the preliminary parcel map or tentative tract map is conditionally approved.

2. In a Hillside Area, a grading plan for the entire approved or conditionally approved subdivision or any final tract map or parcel map unit thereof has been approved by the Grading Division of the Department of Building and Safety and a Grading Certificate has been issued for the property involved or that the grading is being carried on under the authorization of a valid grading permit.

3. Necessary easements for the installation of water system facilities and underground utilities have been dedicated and the developer has guaranteed the cost of relocation or future adjustment of these facilities to the satisfaction of the Department of Water and Power.

4. The owner assumes liability for any damage caused to water system facilities and underground utilities prior to final street improvements in a manner satisfactory to the Department of Water and Power.

5. Adequate fire protection facilities are provided to the satisfaction of the Fire Department.

6. Adequate sewer facilities are provided to the satisfaction of the Bureau of Engineering and the Los Angeles County Health Department.

7. A paved access roadway at least 20 feet in width is provided which is satisfactory to the Department of Building and Safety.

8. Off-street parking be provided as follows:

**a.** For multiple-unit structures, the numbers and location of the off-street parking facilities will be determined by the Advisory Agency;

**b.** For one-unit detached structures, one lot for each six model dwellings shall be located contiguous to the model dwelling sites. All off-street parking facilities and driveways shall be dust-proofed with asphaltic surfacing or with decomposed granite which is sprinkled at sufficient intervals to prevent dust, or by an alternate method of dust control satisfactory to the Department of Building and Safety.

**9.** The model dwelling sites are attractively maintained and, with respect to one-unit detached structures, attractively landscaped.

**10.** Any furnishings placed in the model dwelling are maintained solely for purposes accessory to the display of the model dwelling and in no way are used to sell or promote the sale of such furnishings.

**11.** Prior to the issuance of any building permit for a model dwelling, the property owner shall first execute and file with the Superintendent of Building a notarized agreement assuming all risks and agreeing to all of the conditions set forth in this Article. With respect to one-unit detached structures, the agreement shall further provide that in the event that a final tract map or parcel map that includes the property where the model dwelling is located is not recorded, all buildings or structures authorized by the permit will be removed, within 90 days from the expiration of the tentative tract map, and that if all buildings and structures are not completely removed as required above, they may be confiscated and removed or demolished by the City without further notice. Prior to the erection of any model dwelling that is a one-unit detached structure, authorized pursuant to the approval of any subdivision and contingent on the approval of the subdivision, the property owner shall post in the Department of Building and Safety a bond in favor of the City of Los Angeles (to be approved by the City Attorney and duplicates to be furnished) in an amount satisfactory to the Department of Building and Safety sufficient to defray any expense incurred by the City in the removal or demolition of the model dwelling or dwellings. The bond will be released to the property owner or person legally entitled to it either upon recordation of the subdivision tract map or upon removal of the concerned structures or buildings, as the case may be, to the satisfaction of the Superintendent of Building.

**12.** This Section applies to approved or conditionally approved tentative tract maps that include model dwelling units and that have not been recorded as of the effective date of this ordinance.

**13.** A real estate tract sales office may be established and maintained in one model dwelling approved in accordance with the provisions of this Section or in a dwelling constructed on a recorded lot previously designated as a model dwelling site by the Advisory Agency and temporarily serving as an example of houses or units built or to be built in the same subdivision, provided that:

**a.** No general real estate brokerage business is conducted on the premises, and any business transacted there is limited to the original sale of vacant or improved land shown on the preliminary parcel map or tentative tract map or units of airspace shown on the condominium plan.

**b.** All signs conform to the applicable provisions of *Div. 4C.6.* (Signs).

**c.** The tract sales office is attractively maintained and, where located in a one-unit detached structure, is attractively landscaped.

**d.** The property owner has first executed and filed with the Superintendent of Building a notarized agreement agreeing to comply with all other provisions of this Subdivision and, further, agreeing that after all dwelling units in the development are initially sold or rented, all tract sales being conducted within the structure will cease; all signs will be entirely removed from the premises; any residential type of sliding glass door in a private garage doorway will be replaced with a conventional private garage door, and any sales office activity located in a private garage will be discontinued and this area reconverted for the storage of private vehicles.

## N. Park and Recreation Sites

Park and recreation sites to serve the future inhabitants of each new subdivision shall be provided and located in conformance with the standards contained in the Open Space Element of the General Plan.

## O. Where Subdivision Includes Land Within Drainage District

Whenever a subdivision or a portion of a subdivision includes land which is within a local drainage district, the provisions and requirements of the ordinance establishing such district shall be met.

## P. Protected Tree Regulations

No protected tree may be relocated or removed except as provided in this Article or Article 6 (Preservation of Protected Trees) of Chapter 4 (Public Welfare) of this Code. The term "removed" or "removal" includes any act that will cause a protected tree to die, including but not limited to acts that inflict damage upon the root system or other parts of the tree by fire, application of toxic substances, operation of equipment or machinery, or by changing the natural grade of land by excavation or filling the drip line area around the trunk.

### 1. Required Determinations

Subject to historical preservation requirements set forth in Subdivision 3. (Historical Monuments) below, when a protected tree exists within a proposed subdivision, the tree may be relocated or removed if the Advisory Agency, in consultation with the City's Chief Forester, determines the existence of either a. or b. below:

**a.** There has been prior applicable government action in which:

i. The removal of the tree had been approved by the Advisory Agency; or

ii. The property on which the protected tree is located has been the subject of a determination by the City Planning Commission, the City Council, a Zoning Administrator, or an Area Planning Commission, the appeal period established by *Div. 13B.7.* (Division of Land) with respect to the determination has expired, the determination is still in effect, and pursuant to the determination, the protected tree's removal would be permissible; or

iii. A building permit has been issued for the property on which the protected tree is located, the permit is still in effect, and the removal or relocation is not prohibited by the permit.

**b.** The removal of the protected tree would not result in undesirable, irreversible soil erosion through diversion or increased flow of surface waters that cannot be mitigated to the satisfaction of the City's Chief Forester, and the physical condition or location of the tree is such that:

i. Its continued presence in its existing location prevents the reasonable development of the property; or

ii. According to a report required pursuant to *Sec. 11A.2.1.*C. (Protected Tree Reports for Tentative Tract Maps), acceptable to the Advisory Agency and prepared by a tree expert, there is a substantial decline from a condition of normal health and vigor of the tree, and its restoration through appropriate and economically reasonable preservation procedures and practices is not advisable; or

iii. It is in danger of falling due to an existing and irreversible condition.

iv. Its continued presence at its existing location interferes with proposed utility services or roadways within or without the subject property, and the only reasonable alternative to the interference is the removal of the tree; or

v. It has no apparent aesthetic value, which will contribute to the appearance and subdivision design of the proposed subdivision; or it is not located with reference to other trees or monuments in such a way as to acquire a distinctive significance at the location.

### 2. Supplemental Authority

In the event the Advisory Agency, in consultation with the City's Chief Forester, determines pursuant to Paragraph 1.b. above, that a protected tree may be removed or relocated, the Advisory Agency may:

**a.** Require relocation elsewhere on the same property where a protected tree has been approved for removal, and where the relocation is economically reasonable and favorable to the survival of the tree. Relocation to a site other than upon the same property may be permitted where there is no available or appropriate location on the property and the

owner of the proposed off-site relocation site consents to the placement of a tree. In the event of relocation, the Advisory Agency may designate measures to be taken to mitigate adverse effects on the tree.

**b.** Permit protected trees of a lesser size, or trees of a different species, to be planted as replacement trees for protected trees permitted by this Code to be removed or relocated, if replacement trees required pursuant to this Code are not available. In that event, the Advisory Agency may require a greater number of replacement trees.

### 3. Historical Monuments

The Advisory Agency, except as to Subparagraph 1.b.iii. above, shall require retention of a protected tree at its existing location, if the tree is officially designated as an Historical Monument or as part of an Historic Preservation Overlay Zone.

### 4. Requirements

In the event the Advisory Agency, in consultation with the City's Chief Forester, determines pursuant to Paragraph 1.b. above that a protected tree may be removed or relocated, the Advisory Agency shall require that:

**a.** The protected tree is replaced within the property by at least two trees of a protected variety included within the definition set forth in *Div. 11B.1.* (Definitions), except where the protected tree is relocated pursuant to Paragraph 2.a. above. The size of each replacement tree shall be a 15-gallon, or larger, specimen, measuring one inch or more in diameter at a point one foot above the base, and not less than 7 feet in height, measured from the base. The size and number of replacement trees shall approximate the value of the tree to be replaced.

**b.** The subdivider record those covenants and agreements approved by the Advisory Agency necessary to assure compliance with conditions imposed by the Advisory Agency and to assure protected tree preservation.

**c.** The subdivider provide protected tree maintenance information to purchasers of lots within the proposed subdivision.

**d.** The subdivider post a bond or other assurance acceptable to the City Engineer to guarantee the survival of trees required to be replaced or permitted or required to be relocated, in a manner to assure the existence of continuously living trees at the approved replacement or relocation site for three years from the date that the trees are replaced or relocated. The City Engineer shall use the provisions of *Sec. 11A.3.3.*E. (Subdivision Improvements; Guarantees) of this Article as its procedural guide in satisfaction of the bond requirements and processing. Any bond required shall be in a sum estimated by the City Engineer to be equal to the dollar value of the replacement tree or of the tree that is to be relocated. In determining value for these purposes, the City Engineer shall consult with the Advisory Agency, the City's Chief Forester, the evaluation of trees guidelines approved and adopted for professional plantsmen by the International Society

of Arboriculture, the American Society of Consulting Arborists, the National Arborists Association and the American Association of Nurserymen, and other available, local information or guidelines.

### 5. Grading

The Advisory Agency is authorized to prohibit grading or other construction activity within the drip line of a protected tree.

## Q. Preliminary Soils Report

**1.** A preliminary soils report, prepared by a civil engineer registered in California, and based upon adequate test borings is required with the preliminary parcel map or tentative tract map of any subdivision. The Advisory Agency may waive the preliminary soils report upon its determination that no preliminary analysis is necessary due to its knowledge of the qualities of the soils of the subdivision.

**2.** If the preliminary soils report indicates the presence of critically expansive soils or other soil problems which, if not corrected, would lead to structural defects, a soils investigation of each lot in the subdivision may be required. Such soils investigation shall be done by a civil engineer registered in California, who shall recommend the corrective action which is likely to prevent structural damage to each structure proposed to be constructed in the area where such soils problem exists. The Advisory Agency may approve the subdivision or a portion of the subdivision where such soils problems exist if it determines that the recommended corrective action is likely to prevent structural damage to each structure to be constructed, and as a condition to the issuance of any building permit may require that the approved recommended action be incorporated in the construction of each structure.

## R. Mulholland Scenic Parkway

**1.** Notwithstanding the street standards adopted by the City Planning Commission pursuant to *Sec. 10.1.1.* (Street Standards), the width and improvement standards for the Mulholland Scenic Parkway shall be substantially as follows:

**a.** Two travel lanes, one in each direction, each 15 feet wide;

**b.** Passing lane segments and turn pockets where necessary to facilitate movement of traffic;

**c.** Substantial conformance to existing roadway alignment;

**d.** No median strip except to facilitate turning movements;

**e.** Hard surfaced shoulders but with a natural look, separated from the roadway by a painted line where the shoulder is utilized for bikeway purposes;

**f.** Minimum street and driveway access to the Parkway;

**g.** Reasonable protection of a scenic corridor 500 feet more or less, depending on topography, from each side of the existing right-of-way, to preserve the scenic quality and for the development of parks, vista points, parking facilities, and continuous bicycle, equestrian and hiking trails;

**h.** All utilities to be underground;

**i.** All necessary signs and road related fixtures to be of a special design to blend with the scenic character of the Parkway;

**j.** Grading to be kept to an absolute minimum;

**k.** All necessary grading to be gently contoured and fully landscaped with fire-resistant plants to present a natural appearance.

**2.** It is the duty of the Advisory Agency to interpret and apply these standards in conformance with the spirit and intent of the Report of the Citizens' Advisory Committee on the Mulholland Scenic Parkway as adopted as City policy by the City Council on March 26, 1973, under Council File No. 70-5000, or with such Parkway plans as may subsequently be adopted.

**3.** These standards are applicable to any subdivision map within 500 feet of the right-of-way of Mulholland Drive between the Hollywood Freeway on the west and Mulholland Highway on the west and along Mulholland Highway to the southerly City boundary, as shown on the City Engineer's official cadastral or district maps.

## S. Valley Circle Boulevard, Plummer Street Scenic Corridor

**1.** Notwithstanding the street standards adopted by the City Planning Commission pursuant to *Sec. 10.1.1.* (Street Standards), the width and improvement standards for Valley Circle Boulevard from Roscoe Boulevard to Plummer Street and for Plummer Street from Valley Circle Boulevard to Topanga Canyon Boulevard shall be substantially as follows:

**a.** Two travel lanes, one in each direction;

**b.** Left turn pockets as needed;

**c.** 48 feet of paved roadway, including 2-foot wide concrete gutters and curbs;

**d.** No continuous raised median strip;

**e.** Wide shoulders to accommodate recreation trails;

**f.** Minimum street and driveway access to the roadway;

**g.** All utilities to be underground;

**h.** Lighting only at intersections and parking areas, and kept to a minimum useful Intensity;

**i.** Fire Hydrants and light standards located away from the roadway for increased safety;

**j.** Picnic areas, drinking fountains, restrooms facilities, watering troughs, hitching rails and simple shade structures provided at suitable locations;

**k.** The general design and development of the roadway, trails, turnouts, and all appurtenant fixtures, facilities and amenities to be rustic, natural and in keeping with the scenic character of the corridor;

**l.** Reasonable protection of a scenic corridor, 1,500 feet more or less depending on topography, from each side of the existing rights-of-way, to preserve the scenic quality, protect long-distance views, and for the development of parks, vista points, parking facilities, and continuous trails;

**m.** Specific dimension standards for a 100-foot-wide right-of-way, the preferred width, shall be a 14-foot-wide two-way bicycle path, a hiking trail meandering in a 10-foot-wide landscaped parkway, a 16-foot-wide equestrian trail bordered by bolted wood fences and a 12-foot-wide parkway on the opposite side of the roadway;

**n.** The dimension standards for an 86-foot-wide right-of-way shall be a 12- foot-wide two-way bicycle path, hiking trail meandering in an 8-foot-wide landscaped parkway, a 12-foot-wide equestrian trail bordered by bolted wood fences and a 6-foot-wide parkway on the opposite side of the roadway;

**o.** Trails to be built prior to or concurrently with the roadway, and to have suitable crossings and access to areas of interest;

**p.** Attractively designed masonry walls or screening landscaping along the edges of private developments adjacent to the scenic corridor;

**q.** Maximum preservation of natural terrain and vegetation;

**r.** Grading to be kept to an absolute minimum; all necessary grading to be gently contoured and fully landscaped with native, low-water-need, fire-resistant plants to present a natural appearance;

**s.** All buildings in the corridor to be placed so as to preserve a clear line of sight from the roadway to the visible mountain crest;

**t.** Off-site advertising signs to be prohibited within the corridor;

**u.** On-site advertising, traffic, informational and regulatory signs to be kept to a minimum number and size, and to be of special rustic design.

**2.** It is the duty of the Advisory Agency to interpret and apply these standards in conformance with the spirit and intent of the Valley Circle Boulevard Plummer Street Scenic Corridor Study adopted as City policy by the City Council on March 28, 1977, under Council File No. 77-82, or with such parkway plans as may subsequently be adopted.

3. The standards stated here are applicable to any subdivision map within 1,500 feet of the right-of-way of Valley Circle Boulevard from Roscoe Boulevard to Plummer Street and of Plummer Street from Valley Circle Boulevard to Topanga Canyon Boulevard as shown on the City Engineer's official cadastral or district maps.

# DIV. 11.2. TENTATIVE TRACT MAPS

## SEC. 11.2.1. TENTATIVE TRACT MAP STANDARDS

### A. Tentative Tract Map Requirements

#### 1. Filing and Reports

The subdivider shall pay the necessary fees for and file with the City Planning Department at least 25 copies of the tentative tract map, two copies of an area map showing the location of ownerships which are located within the area covered by the tentative tract map and within a 500-foot radius of the proposed subdivision; and two copies of a certified list showing the names and addresses of owners of all property and the addresses of all residential, commercial, and industrial occupants of all property located within 500 feet of the proposed subdivision. The Department shall furnish a copy of the certified list of names and addresses and a copy of the area map to the Bureau of Engineering, and copies of the tentative tract map to each member of the Subdivision Committee and to any other departments or public agencies which the Advisory Agency had determined may have an interest in the proposed subdivision. The Subdivision Committee shall make such examination of the Map and property, and make such reports and recommendations to the Advisory Agency as they find are necessary. All such reports shall be submitted in writing. Such reports shall be made within 39 calendar days after the filing of the Map or within such additional time as the Advisory Agency may approve.

#### 2. Action of Advisory Agency

The Advisory Agency shall approve, conditionally approve or disapprove the tentative tract map pursuant to *Sec. 13B.7.2.* (Parcel Map Exemption/Lot Line Adjustment).

**a.** Whenever two or more lots are to be created on a common slope and the City Engineer or Superintendent of Building determines that conditions so dictate, the Advisory Agency may require as a condition of approval of the tentative tract map that appropriate deed covenants, on a form approved by the City Attorney, be recorded which provide to each owner of the common slope a joint right of entry for necessary access of men and equipment, and a joint easement over the slope area to maintain and repair any portions of the common slope.

**b.** All streets on the tentative tract map shall be identified by their proposed names. All proposed street names shall be approved by the City Engineer. The Advisory Agency may withhold approval of the Map if the City Engineer has determined that a proposed street name would create confusion, be misleading, be unduly long or carry connotations offensive to good taste and decency.

### B. Map Requirement

Tentative tract maps filed with the City Planning Department shall be prepared by or under the direction of a licensed surveyor or registered civil engineer. Such maps shall clearly show all

information required by this Article, and shall be drawn to an engineer's scale of not less than one inch equals 200 feet. The tentative tract map shall contain all the following:

1. The tract number.
2. Sufficient legal description of the property to define its boundaries.
3. Names, addresses and telephone numbers of the record owner, subdivider, and person preparing the map.
4. North point, engineering scale, date and area.
5. The widths and approximate locations of all existing and proposed public easements or rights of way, or private street easements, within and adjacent to the property involved.
6. Locations, widths and approximate grades of existing and proposed highways, streets, alleys or ways, whether public or private within and adjacent to the property involved.
7. Existing street names, and names or designations for all proposed streets and highways.
8. Approximate radii of all centerline curves for streets, highways, alleys or ways.
9. Lot layout, approximate dimensions of each lot and number of each lot.
10. The locations of potentially dangerous areas, including geologically hazardous areas and areas subject to inundation or flood hazard; the location, width and direction of flow of all watercourses, flood control channels, and mud or debris paths where ravines or swales will exist within and adjacent to the property involved; building setbacks from such hazards, the proposed method of providing flood, erosion and mud or debris control; and areas where access and emergency paths will be located in the event flood design capacity is exceeded. Lot lines shall be located so that the flow of watercourses and mud and debris paths, access and emergency paths, and setbacks shall be adjacent to lot lines or in areas or restrictions against construction.
11. The existing contour of the land at intervals of not more than 5 feet, and of not more than 2-foot intervals if the slope of the land is less than 5%.
12. The approximate location of all buildings or structures on the property involved which are to be retained, notations concerning all buildings which are to be removed, and approximate locations of all existing wells.
13. The approximate location and general description of any large or historically significant trees and of any protected trees and an indication as to the proposed retention or destruction of the trees.
14. If any streets shown on the tentative tract map are proposed to be private streets, they shall be clearly indicated. Such streets shall conform to the requirements of *Div. 10A.3.* (Private Street Regulations) or shall have been previously approved in accordance with the then applicable private street provisions.

**15.** The proposed method of providing sewage disposal and drainage for the property.

**16.** A statement regarding existing and proposed zoning.

### C. Protected Tree Reports for Tentative Tract Maps

**1.** No application for a tentative tract map approval for a subdivision where a protected tree is located is considered complete unless it includes a report, in a form acceptable to the Advisory Agency and the City's Chief Forester, which pertains to preserving the tree and evaluates the subdivider's proposals for the preservation, removal, replacement or relocation of the tree. The report shall be prepared by a tree expert and shall include all protected trees identified pursuant to Subdivision B.13. above.

**2.** In the event the subdivider proposes any grading, land movement, or other activity within the drip line of a protected tree referred to in the report, or proposes to relocate or remove any protected tree, the report shall also evaluate any mitigation measures proposed by the subdivider and their anticipated effectiveness in preserving the tree.

## SEC. 11.2.2. VESTING TENTATIVE TRACT MAPS

See *Sec. 13B.7.3.* (Tentative Tract Map).

# DIV. 11.3. FINAL TRACT MAPS

## SEC. 11.3.1. FINAL TRACT MAP STANDARDS

### A. Process.

See *Sec. 13B.7.4.* (Final Tract Map).

### B. Final Tract Map Requirements

The following information shall be submitted with the final tract map: names, addresses and telephone numbers of the record owners, subdivider and person preparing the final tract map. The general form and layout of the map, including size and type of lettering, drafting and location of acknowledgments, etc. shall be determined by the City Engineer. The map shall be prepared on high-quality tracing cloth or other material approved by the City Engineer.

**1.** Each sheet of the final tract map shall be 18 × 26 inches. A marginal line shall be drawn completely around each sheet, leaving a blank margin of one inch. The scale of the map shall be such as to show all details clearly. Each sheet shall be numbered, and its relation to other sheets clearly shown. The tract number, scale and north point shall be shown on each sheet. If more than three sheets are necessary to show the entire subdivision, an index map shall be included on one of the sheets. The boundary line of a subdivision shall be indicated by distinctive symbols and clearly so designated.

**2.** Where any land to be subdivided is separated or divided into two or more parcels or portions by any parcel of land other than a street, highway, or other public way, or a railroad, public utility or flood control right-of-way, each separate parcel or portion of a parcel shall be subdivided as a separate parcel and shown on a separate subdivision map.

### C. Boundary Evidence

Such stakes, monuments or other evidence determining the boundaries of the subdivision as are found on the ground, together with sufficient designations of adjoining subdivisions by lot and tract number and page of record, or by section, township and range, or other proper legal description as may be necessary to locate precisely the limits of the subdivision, shall be clearly and fully shown on the final tract map.

### D. Monuments

#### 1. Boundary

**a.** Each final tract map shall show durable monuments of not less than two-inch steel pipe at least 24 inches long found or set at or near each boundary corner and at intermediate points approximately 1,000 feet apart or at such lesser distance as may be necessary by topography or culture to assure accuracy in reestablishment of any point or line without unreasonable difficulty. The precise position and character of each monument shall be

shown on the final tract map. Where the elevation of the top of each such monument is not approximately level with the surface of the ground, its relative position shall be indicated.

**b.** The establishment of boundary monuments may be required by the Advisory Agency, the Appeal Board or the City Council upon appeal, prior to the recordation of the final tract map, however, such requirement may be modified to accept the submission of complete field notes as evidence of a thorough survey, or the setting of only a portion of the boundary monuments, or the referencing of monuments to adjacent reference points. The City Engineer shall submit a recommendation concerning this matter. The reference points shall be indicated in a set of field notes showing clearly the ties between such monuments and sufficient number to set accurately each boundary monument after recordation of the final tract map. The boundary monuments shall be properly located by coordinates in the California Coordinate System or in such manner as determined by the City Engineer to be suitable and sufficient.

### 2. Centerline

Complete centerline data, including lengths of tangents and semi-tangents, shall be shown on the map for all streets within or adjoining the tract where no official centerline has been previously established. In locations where the point of intersection falls on private property, chords shall be shown instead of semi-tangents. The subdivider shall have approved monuments placed with permanent references to the monuments and furnish a set of field notes to the City Engineer.

### 3. Deferment

**a.** In the event any or all of the monuments required to be set are subsequent to the recordation of the final tract map, the map shall clearly show and describe such monuments. All such monuments or the furnishing of notes for deferred monuments shall be agreed to be set and furnished by the subdivider.

**b.** When the placement of monuments is to be deferred, the Bureau of Engineering shall charge and collect a fee of $443 for the service of receiving and processing a bond to guarantee placement of the monuments.

### 4. Geodetic Controls

Ties to the Geodetic Triangulation System shall be provided where stations have been established within reasonable distance from the subdivision boundary, and such ties are deemed necessary by the City Engineer.

## E. Surveys

### 1. Requirements

**a.** The procedure and practice of all survey work, done on any subdivision, shall conform to the accepted standards of engineering and surveying professions. The final tract map shall close in all its parts.

**b.** In the event the City Engineer has established the centerline of any street or alley in or adjoining a subdivision, the final tract map shall show such centerline together with the reference to a field book or map showing such centerline and the monuments that determine its position. If determined by ties, that fact shall be stated on the final tract map.

### 2. Notes to be Furnished

**a.** For such centerline monument set, the civil engineer or surveyor under whose supervision the survey has been made shall furnish to the City Engineer a set of notes showing clearly the ties such monument and a sufficient number (normally 4) of durable distinctive reference points or monuments. Such reference points may be lead and tacks in sidewalks, or curbs, or 2-inch × 2-inch stakes set back of the curb line and below the surface of the ground or such substitute as appears to be not more likely to be disturbed.

**b.** The set of notes shall be of such quality, form and completeness, and shall be on paper of such quality and size as may be necessary to conform to the standardized office records of the City Engineer. All such notes shall be indexed by the City Engineer as part of the permanent public records.

### 3. Identification Marks

All monuments set as required in this Article shall be permanently and visibly marked or tagged with the registration or license number of the civil engineer or surveyor under whose supervision the survey was made.

## F. Bearings

### 1. Basis

**a.** The final tract map shall indicate the basis of bearings, making reference to some recorded subdivision map, or other record acceptable to the City Engineer.

**b.** The final tract map shall have as the basis of bearings a line based on the Geodetic Triangulation System where ties to the system are deemed feasible by the City Engineer.

### 2. Distances

The bearing and length of each lot line, block line and boundary line shall be shown on the final tract map, and each required bearing and distance shall be indicated.

## G. Lot Numbers

The lots shall be numbered consecutively commencing with the number 1, except as otherwise provided in this Article, with no omissions or duplications. Each numbered lot shall be shown entirely on one sheet.

## H. Curve Data

The length, radius and total central angle and bearings of terminal radii of each curve and the bearing of each radial line to each lot corner on each curve, and the central angle of each segment within each lot shall be shown on the final tract map.

## I. Easement

### 1. Lines

The final tract map shall show all the necessary data including width and side lines of all public easements to which the lots in the subdivision are subject. If the easement is not definitely located on record, a statement as to the easement shall appear on the title sheet.

### 2. Designation

Easements shall be denoted by broken lines.

### 3. Identification

Each easement shall be clearly labeled and identified and, if already of record, proper reference to the records given. Easements being dedicated shall be so indicated in the Certificate of Dedication.

## J. City Boundary Lines

City boundary lines crossing or abutting the subdivision shall be clearly designated and tied in.

## K. Natural Water Course Designation

In the event that a dedication of right-of-way for flood control or storm drainage is not required, the location of any natural water course shall be shown on the final tract map, unless such natural water course, channel, stream or creek is shown on the grading plans to be filled or otherwise eliminated by the grading of the tract.

## L. Title Sheet

The title sheet for each final tract map of a subdivision shall contain all the certificates and acknowledgment required by the Subdivision Map Act. The wording of such certificates and acknowledgments shall be approved by the City Attorney. Forms of certificates and acknowledgment may be obtained from the City Engineer.

## SEC. 11.3.2. NOTIFICATIONS

### A. Notification Regarding Street Lighting Maintenance Assessments

The City Engineer shall cause to be filed, at the time of filing of any subdivision map with the County Recorder, a notice or notices which shall provide information with respect to each parcel in the subdivision regarding the obligation of any purchaser of such property to pay street lighting maintenance assessments pursuant to the provisions of Article 1 (Lighting District Procedures) of Chapter 3 (Street Lighting Improvements) of Division 6 (Special Assessment District Procedures) of the Los Angeles Administrative Code.

### B. Notification Regarding Sewer Pumping or Drainage Facilities and Maintenance Districts

The subdivider shall execute and record with the County Recorder a notice identifying all sewer pumping or drainage facilities within the subdivision, either in existence or to be constructed, which could be maintained under maintenance district procedures authorized by Division 6 (Special Assessment District Procedures) of the Los Angeles Administrative Code. Such notice shall provide information regarding the possible obligation of each lot owner for assessments and shall be recorded at the time the final subdivision map is filed with the County Recorder.

## SEC. 11.3.3. SUBDIVISION IMPROVEMENTS

### A. Requirements

The streets, alleys, lots and easements in all subdivisions subject to the provisions of this Article shall be laid out to provide for sewer and drainage facilities. All streets and alleys and other public ways and easements within and immediately adjoining the subdivision, together with any drainage and sanitary sewer easements, shall be graded and improved to a width and grade in accordance with plans approved by the City Engineer. Other subdivision improvements as authorized by the Subdivision Map Act may be required.

1. In addition to permanent subdivision improvements, temporary subdivision improvements may be required to be made prior to or concurrent with permanent subdivision improvements. In a Hillside Area, temporary erosion control devices shall be designed and installed in a manner approved by the Board of Public Works and the Department of Building and Safety.

2. If the subdivision has been submitted only for the purpose of clarifying records by consolidating existing lots or metes and bounds parcels, or for the purpose of absorbing vacated streets or alleys or for the purpose of reversion to acreage, the Advisory Agency upon the recommendation of the City Engineer may waive all or a portion of the subdivision improvements which otherwise would be required.

## B. Improvement Plans

1. Final plans, profiles and specifications for subdivision improvements shall be furnished to the City Engineer for approval and processing concurrently with the checking of the final tract map or parcel map. Such plans, profiles and specifications shall show full details for such subdivision improvements, and shall be in accordance with the standards adopted by the City of Los Angeles.

2. In lieu of final plans, profiles and specifications, the subdivider may furnish preliminary plans for subdivision improvements in a form satisfactory to the City Engineer, provided the subdivider agrees to furnish final plans, profiles and specifications to the City Engineer not later than 6 months from the date the final tract map or parcel map is filed for recording with the County Recorder. Preliminary plans shall be of sufficient detail and extent so as to permit the City Engineer to determine the type, extent, quantity and estimated cost of the required subdivision improvements.

## C. Street Lighting

Plans for a street lighting system shall be submitted to and be approved by the Bureau of Street Lighting. The time requirement for submittal shall be as prescribed in Subsection B. above.

## D. Street Trees

1. Arrangements between the subdivider and the City to ensure the subdivider either places street trees in subdivisions to the satisfaction of the Bureau of Street Maintenance of the Department of Public Works, or makes a cash payment to the City. The amount of cash payment shall be in accordance with rates established by the Board of Public Works. When planted by the City, street trees may be planted under contract or by City forces.

2. Any street tree planted by a subdivider, or for which a payment is made to the City of Los Angeles to provide such tree, is subject to the street tree maintenance fee set forth in Section 62.176 (Street Maintenance Fee) of Article 2 (Streets and Sidewalks) of Chapter 6 (Public Works and Property) of this Code.

## E. Guarantees

1. No final tract map or parcel map may be presented to the Council for approval until the subdivider/owner has completed the subdivision improvements, or has guaranteed that all subdivision improvements will be constructed and installed within a specified time. The requirement of guaranteeing the construction and installation of subdivision improvements will not be waived under any condition except as provided in this Section. Parcel maps, the preliminary maps for which have been approved by the Advisory Agency specifying that subdivision improvements are not required until such time as a building permit or other grant of approval for development is issued, are exempt from this provision. California non-profit corporations are exempt from these requirements to the extent provided in the Subdivision Map Act.

**2.** The guarantee shall be furnished in accordance with the provisions of this subsection:

**a.** The subdivider/owner shall execute an Improvement Agreement. Under the terms of this agreement, the subdivider/owner shall, among other things, agree to construct and install the subdivision improvements at the subdivider/owner's expense; shall warrant all work performed against any defective work or labor done, or defective materials furnished for a period of one year following acceptance by the City Engineer of all subdivision improvements; and shall agree to reimburse the City for all costs and reasonable expenses and fees incurred by the City in enforcing the terms of the agreement including reasonable attorney's fees.

**b.** Performance of the Improvement Agreement shall be guaranteed by one of the following, at the option of and subject to the approval of the City:

**i.** A surety bond or bonds payable to the City, executed by the subdivider/owner as principal and one or more corporate sureties authorized to act as surety under the laws of the State of California and having a certificate of authority as acceptable surety on Federal bonds; or

**ii.** A deposit of cash; or

**iii.** A deposit of negotiable United States Treasury bonds or notes, for which the faith and credit of the United States are pledged for the payment of principal and interest, payable to the bearer; or

**iv.** A deposit of fully-insured certificates of deposit issued by a financial institution whose deposits are insured by an instrumentality of the Federal Government, together with a non-revocable assignment to the City that pledges that the funds are on deposit and guaranteed for the performance of the Improvement Agreement. Such certificates of deposit may provide that interest shall be paid to the depositor. The assignment shall allow the City to withdraw the principal amount, or any portion of the principal amount, on declaration of default by the Board of Public Works without the necessity of any further consent by the depositor. The Improvement Security shall be on a form prepared by the City Engineer, shall be a joint and several obligation, and shall be in an amount estimated by the City Engineer to be reasonably necessary to complete the construction and installation of all of the subdivision improvements required to be done pursuant to the Improvement Agreement and to warrant the work against defective work or labor done, or defective materials furnished in the performance of the work.

**c.** The term of the Improvement Security shall begin on the day it is approved by the City Council and shall continue until the work is accepted by the City Engineer.

**d.** The Improvement Security shall contain the further conditions that in addition to the face amount, all parties executing the security shall be firmly bound under a continuing obligation for payment of all reasonable costs, expenses and fees, including reasonable

attorney's fees incurred by the City in enforcing the obligation secured; that all parties agree to any extensions of time within which to construct and install the subdivision improvements; and that all parties further agree to such alterations of or additions to the work as may be deemed necessary by the City Engineer provided the cost increase does not exceed 10% of the value of the Improvement Security.

### 3. Improvement Warranty Guarantee

As a part of the Improvement Security there shall be included an amount to be determined by the City Engineer sufficient for the guarantee and warranty of the work for a period of one year following the date of acceptance of the work by the City Engineer against any defective work or labor done, or defective materials furnished in the performance of the work.

### 4. Labor and Material Payment Security

Security shall be furnished for payment of labor and materials furnished in the construction and installation of the subdivision improvements. The security shall be furnished in one of the forms described in Paragraph 2. above, and shall be in an amount equal to not less than 50% of the Improvement Security as estimated by the City Engineer. The security shall inure to the benefit of all persons, and entities furnishing services, supplies or equipment for the subdivision improvements as referenced in Sections 8400, 8402 and 8404 of the California Civil Code. All claims under this labor and materials payment security shall be filed with the City Clerk on or before the expiration of 90 days after the completion of the subdivision improvements.

### 5. Existing Security

If the subdivider/owner already has on file with the City Engineer an Improvement Security in one of the forms described in paragraph 2. above, posted pursuant to Section 62.111 (Class "B" Permits-Plans-Bonds-Insurance) of Article 2 (Streets and Sidewalks) of Chapter 6 (Public Works and Property) of this Code which guarantees completion of all of the subdivision improvements designated in the Improvement Agreement and in an amount at least equal to the amount determined by the City Engineer to be necessary to complete all of the subdivision improvements, no additional Improvement Security is required; however, improvement warranty guarantee and labor and material security may be required.

## F. Extension of Time

If it appears that the subdivision improvements cannot be completed by the date specified in the Improvement Agreement, written application may be made to the City Engineer for an extension of the completion date. One extension of time shall be granted to a time at which the City Engineer determines the work of subdivision improvement should reasonably be completed. Further extensions of time may be granted at the discretion of the City Engineer. If the subdivider disagrees with the determination of the City Engineer such decision may be appealed to the Board of Public Works. Any extension may be considered upon agreement by the surety and principal to:

1. Begin or resume construction of the subdivision improvements on a schedule to be specified by the City Engineer; or

2. Update the estimated cost of construction and installation of the subdivision improvements with an adjustment in the Improvement Security commensurate with the updated estimates; or

3. To the extent possible, construct and install the required subdivision improvements in accordance with the standards and specifications of the Board of Public Works in effect at the time such extension of time is granted; or

4. Comply with other conditions as may be deemed necessary by the City Engineer to ensure diligent prosecution of the work.

## G. Reduction of Improvement Security

When a portion of the subdivision improvements have been completed to the satisfaction of the City Engineer, the City Engineer may consent to a reduction in the amount of the Improvement Security upon written request from the subdivider/owner. The City Engineer may consent to 2 reductions provided the original security for the subdivision improvements exceeds $200,000 and the work completed is identifiable, capable of being maintained by the City, and accepted by the City Engineer. In extreme hardship circumstances, the City Engineer may consent to one reduction without regard to the preceding provisions. The remaining security shall be adequate to cover the estimated cost of completing the remaining subdivision improvements, the improvement warranty guarantee, and reasonable expenses and fees for enforcement of the terms of the Improvement Agreement. If a cash deposit or negotiable security is on deposit, that portion of the cash or negotiable security not required as a guarantee for the remaining subdivision improvements, improvement warranty guarantee and reasonable expenses and fees for enforcement of the terms of the Improvement Agreement, shall be returned to the depositor. If a certificate of deposit is on file, reduction in the Improvement Security will be accomplished by the City Engineer issuing a notice of reduction to the depositor and financial institution. If a surety bond is on file, reduction in the Improvement Security will be accomplished by the execution of a rider to the improvement surety bond by the principal and surety and is effective upon approval by the City Engineer and the City Attorney.

## H. Release of Improvement Security

When all of the requirements of the Improvement Agreement and the Improvement Security have been completed to the satisfaction of the City Engineer and the improvement warranty guarantee has expired, the City Engineer shall issue a Certificate of Acceptance and Termination of Improvement Warranty Bond to the subdivider/owner and a copy thereof shall be sent to the surety company if a surety bond is on file. However, if the improvement warranty guarantee has not expired, the City Engineer may issue a Certificate of Acceptance, which exonerates the portion of the Improvement Security guaranteeing completion of the construction and installation of the subdivision improvements, but not the improvement warranty guarantee. The warranty guarantee shall thereafter be released in total by the City Engineer on or after one year from the date of the

completion notice from the Bureau of Engineering, provided no claims against the guarantee have been made by the City.

### I. Release of Labor and Material Payment Security

On or after 90 days from the date of completion notices from both the Bureau of Contract Administration and the Bureau of Engineering, security posted under Subdivision E.4. (Labor and Material Payment Security) above to secure payment for labor and materials may be released by the City Engineer in whole if no claims are filed or reduced to an amount equal to 150% of those claims filed with the City Clerk. If a cash, negotiable security, or certificate of deposit payment security is on file, the City Engineer shall:

**1.** Release the cash, negotiable security or certificate of deposit payment bond in total, if no claims have been filed; or

**2.** Reduce the cash or negotiable security or certificate of deposit payment bond to an amount equal to 150% total amount of the claims filed with the City Clerk.

### J. Enforcement

If the subdivider/owner neglects, refuses or fails to construct the subdivision improvements with such diligence as to insure completion within the time specified, or within such extensions of the time as may have been granted by the City Engineer or the Board of Public Works or if the subdivider/owner neglects, refuses or fails to perform satisfactorily any act required under the Improvement Agreement, the Board of Public Works may declare the Improvement Agreement in default, and shall take whatever actions are necessary to enforce the terms and conditions of the Improvement Security. The Board is hereby empowered to order all or any part of the work to be done either by City forces or by separate contract, and the City is entitled to reimbursement for all costs and expenses as a result of such construction. If the Improvement Security is a cash deposit, negotiable security or certificate of deposit the Board is empowered to deduct therefrom, on behalf of the City, an amount sufficient to reimburse and to indemnify the City for any and all damages, costs and expenses sustained or incurred by the City in enforcing the terms and conditions of the Improvement Agreement.

## SEC. 11.3.4. PRIVATE STREETS

**A.** Whenever a private street is proposed to be used or included in a subdivision, the private street shall conform in all respects with all the requirements contained and set forth in *Div. 10A.3.* (Private Street Regulations). A private street map need not be filed with the Advisory Agency in addition to the maps required by the provisions of this Article, provided that the maps filed in conformance with the provisions of this Article show the private street and contain the information pertaining to the street that is required to be provided in a private street map.

**B.** If a private street located within the proposed subdivision has been approved in accordance with the then applicable regulations prior to filing the tentative tract map of the subdivision, the street is deemed to comply with the requirements of this Section and *Div. 10A.3.* (Private Street Regulations) and no further approval is required.

## SEC. 11.3.5. REVERSION TO ACREAGE

**A.** Proceedings for reversion to acreage of subdivided real property may be initiated by the City Council on its own motion or by petition of all of the owners of record of the real property within the subdivision pursuant to *Sec. 13B.7.3.* (Tentative Tract Map).

**B.** Upon the title sheet of each map filed for the purpose of reverting subdivided land to acreage, the subtitle shall consist of the words "A reversion to acreage of....". Any map so submitted shall be accompanied by evidence of title and non-use or lack of necessity of any streets or easements which are to be vacated or abandoned. Any streets or easements to be left in effect after the reversion shall be adequately delineated on the map.

**C.** When a reversion is effective, all fees and deposits shall be returned and all improvement security released, except those retained pursuant to *Sec. 13B.7.3.* (Tentative Tract Map).

**D.** After approval of the reversion by the City Council, the final tract map or parcel map shall be delivered to the County Recorder. The filing of the final tract map or parcel map constitutes legal reversion to acreage of the land affected and also constitutes abandonment of all streets and easements not shown on the Map.

## SEC. 11.3.6. MERGER AND RESUBDIVISION

Subdivided lands may be merged and resubdivided without reverting to acreage by complying with all the applicable requirements for the subdivision of land as provided in this Article. The filing of the final tract map or parcel map, pursuant to *Div. 13B.7.* (Division of Land), constitutes legal merging of the separate parcels into one parcel and the resubdivision of the parcel. Any unused fees or deposits previously made pursuant to this Article pertaining to the property shall be credited *pro rata* towards any requirements that are applicable at the time of resubdivision. Any streets or easements to be left in effect after the resubdivision shall be adequately delineated on the map. After approval of the merger and resubdivision by the City Council, the map shall be delivered to the County Recorder. The filing of the map constitutes legal merger and resubdivision of the land affected and also constitutes abandonment of all streets and easements not shown on the map.

## SEC. 11.3.7. MAPS, LOCAL DRAINAGE DISTRICTS, EXEMPTION FROM FEES

**A.** Payment of fees is required in the sums fixed by ordinance for local drainage districts involved and as a condition to approval of final subdivision maps and private street maps, except as provided in Subsection B. below, whenever the City Council determined such need pursuant to former Section 11543.5 of the California Business and Professions Code or finds and determines such

need pursuant to Section 66483 of Article 5 (Fees) of Chapter 4 (Requirements) of Division 2 (Subdivisions) of Title 7 (Planning and Land Use) of the California Government Code, effective March 1, 1975 for a local drainage district, and finds:

1. That subdivision and development of property requires or will require construction of facilities described in the local drainage plan; and

2. That the fees are fairly apportioned within the area on the basis of benefits conferred on the property proposed for subdivision or on the need for facilities created by the proposed subdivision and development of other property within such area.

**B.** In the event the owner filing the map petitions the City Council for an exemption from payment of fees required by ordinances to be paid to defray actual or estimated costs of constructing planned drainage facilities for removal of surface and storm waters from local or neighborhood drainage areas, and the City Council finds and determines that the final subdivision map or the private street map filed for approval is not filed for subdivision or development purposes, the City Council may thereupon exempt that map from payment of the fees or other consideration notwithstanding provisions of *Sec. 11A.1.3.*O. (Subdivision Design Standards; Where Subdivision Includes Land Within Drainage District), *Sec. 11A.4.3.*B.9. (Preliminary Parcel Map Standards of Review; Conditional Approval; Where Parcel Map Includes Land Within Drainage District), or *Sec. 10A.3.5.*J.4. (Private Street, Lot or Building Site Standards; Improvements, Drainage And Sewage) or requirements of Subsection A. above or of the ordinance for such payment.

**C.** For purposes of this Subsection the term "subdivision" and the term "development" neither includes nor applies to final subdivision maps or private street maps that are filed within the City:

1. In connection with a sale of land which is to be further divided by the filing of either a subdivision map or private street map prior to development occurring.

2. Solely for the purposes of reversion to acreage, or to combine portions of vacated streets with adjoining lots or parcels, or to make boundary line adjustments without creating any new lots or parcels, or to effect technical corrections on existing recorded maps in order to cause those maps to conform to actual fact, clarify the record, and cause them to read correctly, provided however that approval or recordation of such new maps does not or will not otherwise change or amend any existing recorded map or any legend.

## SEC. 11.3.8. MODIFICATIONS

See *Sec. 13B.7.3.H.* (Tentative Tract Map; Modification of Entitlement).

## SEC. 11.3.9. SUBDIVISION REQUIRING IMPORT OR EXPORT OF EARTH

**A.** Upon the filing of a tentative tract map that, for its implementation, requires the import or export of more than 1,000 cubic yards of earth materials, the Advisory Agency shall request that the Superintendent of Building and the General Manager of the Department of Transportation investigate the circumstances of the proposed import or export of earth materials and the effect

upon the public health, safety, and welfare. The Advisory Agency shall request the City Engineer to determine the effect of any import and export on the structural integrity of the public streets and to determine the effect on public safety relative to street alignment, width and grade.

**B.** In taking action on the tentative tract map, the Advisory Agency shall impose conditions of approval to mitigate any detrimental effects of the hauling operations necessary to import or export earth, including but not limited to:

**1.** Designating routes to be followed by trucks hauling earth materials;

**2.** Limiting truck weight, length or speed; and

**3.** Any other conditions of approval necessary to ensure repair of damages to public streets along the hauling route that may reasonably be expected to be caused by hauling operations. Such additional conditions may include a condition that the developer shall file a bond for the benefit of the City. Any such bond shall be in a form approved by the City Attorney, executed by the developer and a corporate surety authorized to do business in the State in an amount sufficient to cover the repair of any damage to the public streets reasonably expected to be caused by the hauling operations. The conditions of the bond shall guarantee to indemnify the City for all costs and expense in repairing the damaged streets or other public facilities. In lieu of a surety bond, the developer may file a cash bond with the Department upon the same terms and conditions and in an amount equal to that which would be required in the surety bond. The deposit submitted may be in the form of cash or negotiable United States securities. The term of such bond shall begin on the date of filing and shall remain in effect until the completion of the hauling operations and subsequent inspection of the affected public streets by the Department of Public Works.

**C.** The Advisory Agency may disapprove the tentative tract map as provided in *Sec. 13B.7.3.*E.1. (Tentative Tract Map; Standards for Review and Required Findings; Tentative Map/Subdivision of Air Space).

## SEC. 11.3.10. MODIFICATION OF RECORDED FINAL TRACT MAPS

In addition to amendments to final tract maps authorized by Section 66469 of Article 7 (Correction and Amendment of Maps) of Chapter 3 (Procedure) of the Subdivision Map Act, after a final tract map is filed with the Office of the County Recorder, the recorded map, including the conditions of approval, may be modified pursuant to the provisions of *Sec. 13B.7.4.*H. (Final Tract Map; Modification of Final Tract Map). Modifications and amending maps shall be governed by the following limitations.

**A.** No modifications involving increases in density are allowed if the increase would change the density of a subdivision as approved on appeal by the City Planning Commission or the City Council, where such density was the subject of the appeal to the City Planning Commission or the City Council.

**B.** No condition may be modified if it was imposed as a mitigating measure identified in a mitigated or conditional negative declaration or in an Environmental Impact Report.

**C.** Modifications involving increases in density over that originally approved by the Advisory Agency in approving the tentative tract map shall be limited as follows:

**1.** For subdivision of fewer than 10 lots or dwelling units, any density increase shall be limited to one lot or dwelling unit; and

**2.** For subdivisions containing 10 or more lot or dwelling units, any increase shall be limited to not more than 10% of that originally approved.

**D.** Modifications involving either an increase in the height of structures, or in the elevation of building pads where the elevation of such pads has been specified by the Advisory Agency, shall be limited as follows:

**1.** An increase in the height of structures of not more than 10% above the approved height of such structures; or

**2.** An increase in the elevation of building pads of not more than 5 feet above the approved elevation of such pads.

**3.** Any such increase in height or elevation shall not obstruct the view from surrounding properties.

**4.** A greater increase in the elevation of building pads may be approved if such increase has been determined to be necessary for health and safety reasons by the Department of Building and Safety.

**E.** No modifications are permitted that violate the intent of any of the original conditions of the tract map approval as that intent is expressed in the findings or otherwise by the decision-maker.

# DIV. 11.4. PARCEL MAPS

## SEC. 11.4.1. GENERAL

### A. Purpose

The following parcel map regulations are intended to ensure compliance with the Subdivision Map Act, this Chapter, and the City's General Plan, to assure lots of acceptable subdivision design and of a size compatible with the size of existing lots in the immediate neighborhood; to preserve property values; to assure compliance with the Design Standards for Streets and Alleys in this Article where street or alley dedication or subdivision improvement are required; and to prevent interference with the opening or extension of streets necessary for emergency vehicle access, proper traffic circulation and the future development of adjacent properties; and to provide that the dividing of land in the Hillside Areas be done in a manner that ensures that the separate parcels can be safely graded and developed as building sites.

### B. Scope

**1.** No land shall be separated in ownership or otherwise divided into 2, 3, or 4 parcels or condominiums, and no such divided parcel or condominium shall be separately maintained unless the division conforms to that shown on a parcel map that has been approved by the Advisory Agency and recorded in the Office of the County Recorder.

**2.** No building permit shall be issued, and no building or structure shall be constructed, altered or maintained on any land which has been separated in ownership or otherwise divided into 2, 3 or 4 parcels in violation of the provisions of this Article, and until and unless a parcel map has been recorded in the Office of the County Recorder. All conditions of approval shall be completed prior to filing the parcel map.

**3.** These regulations do not apply to the leasing of apartments, offices, stores or similar space within an apartment building, industrial building, commercial building or mobilehome park, nor to mineral, oil or gas leases, nor do they apply to the following divisions of land, except as may be required by Paragraph C. below.

**a.** Those divisions of land made in compliance with the Subdivision Map Act and the subdivision regulations contained in this Article.

**b.** Those divisions of land made solely because of the sale, acquisition, lease or combining of lands by governmental agencies, including the City of Los Angeles and any of its departments, or any further division of such lands by a lessee of such governmental agency.

**c.** Those where the Advisory Agency or the Appeal Board determines that all the following conditions exist:

**i.** A lot line adjustment is made between 4 or fewer existing adjoining lots or parcels and the land taken from one lot or parcel is added to an adjoining lot or parcel;

ii. The resulting number of lots or parcels remains the same or is decreased;

iii. The parcels or lots resulting from the lot line adjustment conform to the General Plan, any applicable Coastal Plan, this Chapter, and the City's building ordinances.

4. Those involving land dedicated for cemetery purposes under the applicable provisions contained in the Health and Safety Code of the State of California.

## C. Parcel Maps - Divisions of Land of Five or More Parcels Not Subdivisions

1. No parcel of land may be separated in ownership or otherwise divided into 5 or more parcels, where such a division is not a subdivision by reason of the exceptions contained in Subdivisions (a), (b), (c) and (d) of Section 66426 of Article 1 (General Provisions) of Chapter 2 (Maps) of the Subdivision Map Act, and no such divided parcel shall be separately maintained unless a tentative tract map of such division has been approved by the Advisory Agency and a parcel map prepared in conformity has been recorded in the Office of the County Recorder.

2. Where the Advisory Agency determines that a tentative tract map filed for the division of land described in Subdivision (b) and (c) of Section 66426 of Article 1 (General Provisions) of Chapter 2 (Maps) of the Subdivision Map Act complies with all the requirements of this Article, but that dedication for street opening or widening or easements is necessary, it shall require that an offer to dedicate such additional land as is necessary to be made in a manner provided by *Sec. 11A.4.3.*B.1. (Preliminary Parcel Map Standards of Review; Conditional Approval).

3. Where the Advisory Agency determines that a tentative tract map filed for the division of land described in Subdivision (c) of Section 66426 of Article 1 (General Provisions) of Chapter 2 (Maps) of the Subdivision Map Act complies with all of the requirements of this Article, but that improvement of public or private streets, highways, ways or easements is necessary for local traffic, drainage or sanitary needs, such improvements shall be constructed, or their construction and completion guaranteed in the manner provided by *Sec. 11.A.3.3.* (Subdivision Improvements), as a condition of approval of the tentative tract map.

4. No building permit may be issued, and no building or structure may be constructed, altered or maintained on any land which has been separated in ownership or otherwise divided into five or more parcels, where a parcel map is not required for such a division by reason of the exceptions contained in Subdivisions (a), (b), (c) and (d) of Section 66426 of Article 1 (General Provisions) of Chapter 2 (Maps) of the Subdivision Map Act, in violation of the provisions of this Article. All conditions of approval shall be completed prior to submitting the parcel map to the City Engineer.

## D. Slope Density

1. In Hillside Area, which are designated in the "Minimum Residential" General Plan land use designation, the dwelling unit density shall not exceed that allowed by the following formula:

$$D = \frac{50 - S}{35}$$

Where:

D = the maximum number of dwelling units per gross acre allowable, and

S = the average natural slope of the land in %.

2. Where the total allowable number of dwelling units per parcel map or tentative tract map calculated under the above formulas results in a number other than a whole number, it shall be rounded to the nearest whole number as follows:

   a. Where the fractional portion of the total allowable number of dwelling units equals .5 or more, the total number of allowable dwelling units shall be rounded to the next larger whole number;

   b. Where the fractional portion of the total allowable number of dwelling units equals less than .5, the total number of allowable dwelling units shall be rounded to the next smaller whole number.

3. In no case may the permitted density be less than 0.05 dwelling units per gross acre. Where the total allowable number of dwelling units per parcel map calculated under the above formula results in a number less than one, it shall be rounded up to allow one dwelling unit per parcel map.

4. Where previous grading on a site makes it difficult to determine average natural slope using the above formula, the Director of Planning shall determine the average natural slope in a manner to carry out the purpose and intent of this subsection.

## E. Forms and Map Requirements

Each person applying for approval of a parcel map required by Paragraph B. above shall submit a reproducible preliminary parcel map to the City Planning Department showing the land to be divided and its proposed division. The map may be prepared by the applicant, except that the Advisory Agency may require the map to be prepared by a licensed land surveyor or registered civil engineer and that it be based upon a field survey when it determines that such is necessary to provide the information required by this Subsection or Subsections F. (Incomplete Map), G. (Additional Reports), or H. (Protected Tree Reports for Parcel Maps) below. The map shall be made on one or more sheets of tracing paper or polyester based film at least 8 1/2 inches x 11 inches but shall not exceed 18 x 26 inches. It shall be legibly drawn using a decimal or an engineer's scale and shall clearly show the following information:

1. The dimensions and record boundaries of the total parcel together with a legal description of the total parcel attached to the map.

2. The dimensions and boundaries of each proposed parcel.

3. The names, addresses and telephone number of the property owners, the person filing the map, and the registered civil engineer or licensed land surveyor, if any, who prepared the map.

4. The abutting streets and alleys and existing surface improvements and proposed dedications and subdivision improvements.

5. The location of other existing public easements or private street easements.

6. In Hillside Areas, the existing contours of the land at intervals of not more than five feet.

7. The accurate location of any structures on the property.

8. Names or designations for all proposed streets.

9. Such other information as the Advisory Agency determines is necessary to properly consider the proposed division.

## F. Incomplete Map

If at any time during the processing of the Map it is discovered that the Map has been improperly prepared or required pertinent information has not been submitted, the applicant shall be promptly notified in writing by mail of the defect and of further information or correction required The time limits specified shall not begin until the omitted or inaccurate information is furnished in a proper manner.

## G. Additional Reports

In addition to the preliminary parcel map, and when determined by the Superintendent of Building or the City Engineer to be necessary, the following reports shall be submitted to the City Planning Department by the applicant when the property is located in a Hillside Areas.

1. A geologic report prepared by an engineering geologist, as defined in Chapter 9, Article 1of the LAMC, setting forth all relevant geologic data pertaining to the proposed separate parcels and including separately stated conclusions listing any potential hazards to public health, safety or welfare which may exist on the proposed parcels or which could result from grading or building upon the proposed separate parcels

2. A report prepared by a soils engineer, as defined in Division 70 (Grading, Excavations, and Fills) of Article 1 (Building Code) of Chapter 9 (Building Regulations) of this Code, setting forth sufficient engineering data to explain the proposed solutions to:

    a. Any potential geologic hazards disclosed by the geologic report; and

    b. Any potential geologic hazards that could be created by the proposed grading.

## H. Protected Tree Reports for Parcel Maps

No application for a preliminary parcel map approval for a parcel where a protected tree is located will be considered complete unless it includes a report pertaining to preserving the tree. The report shall be prepared by a tree expert and shall evaluate the subdivider's proposals for protected tree preservation, removal, replacement or relocation. In the event the subdivider proposes any grading, land movement, or other activity within the drip line of any protected tree referred to in the report, or proposes to relocate or remove any tree, the report shall also evaluate any mitigation measures proposed by the subdivider and the anticipated effectiveness in preserving the tree.

# SEC. 11.4.2. PRELIMINARY PARCEL MAP STANDARDS

## A. Disapproval of Maps

1. Where a parcel map involves land for which a General Plan, including dwelling unit densities, has been adopted by the Council, and the land is also in a Hillside Areas, the number of lots or parcels on the map shall be limited so that the number of dwelling units permitted by the applicable zoning regulations does not substantially exceed the dwelling unit densities shown on the plan.

2. Where a parcel map includes land upon which either a combination of parking and commercial zones or a combination of parking and industrial zones has been established, the parcel map will not be approved unless each parcel being created substantially conforms to the established ratio of space for parking to space for commercial use or space for parking to space for industrial use as such ratio existed immediately prior to the land division.

3. The Advisory Agency shall disapprove a preliminary parcel map when the property is situated in a Hillside Areas and the Department of Building and Safety or the Bureau of Engineering has submitted a report in writing to the Advisory Agency recommending disapproval of the preliminary parcel map because of any existing or potential geologic hazards lacking satisfactory engineering solutions.

4. The Advisory Agency may disapprove a preliminary parcel map unless the proposed name of each street has been approved by the City Engineer. Advisory Agency approval shall be withheld if the City Engineer has determined that a proposed street name would create confusion, be misleading, be unduly long or carry connotations offensive to good taste and decency.

## B. Lots May Be Increased In Size

1. Where the Advisory Agency finds it necessary in order to promote the general welfare, to provide for a more consistent development for the area, and to preserve property values, it may require that lots or parcels described in a parcel map and located in a Residential Use District be increased in size from that proposed so as to more closely conform to the size of existing contiguous lots or nearby parcels on the same street. However, in no case may the Advisory Agency require such parcels in the aforementioned Use District, other than when a zone includes a Rural-Limited, Estate-Limited 4 or Estate-Limited 5 Form District, to contain an area of more than 20,000 square feet.

2. Where the Advisory Agency finds that a future public easement will be needed on a portion of the lots or parcels for street or other public uses, it may require that the lots or parcels be increased in size from the proposed to provide space for such easement; and in addition, it may impose conditions prohibiting or restricting the erection for buildings or structures on that portion needed for the easement.

## C. Maps Involving Private Road Easements

Whenever a proposed division of land involves one or more parcels that are contiguous or adjacent to a private road easement with the remaining parcel contiguous or adjacent to a dedicated street, only the parcel map need be filed, without requiring the payment of additional fees or the filing of a private street map. The Advisory Agency may approve, conditionally approve, or disapprove the map subject to the applicable provisions of this Article or *Div. 10A.3.* (Private Street Regulations).

## D. Lots In The Very High Fire Hazard Severity Zone

**1.** The Advisory Agency may disapprove a preliminary parcel map for land located in the Very High Fire Hazard Severity Zone because of inadequate fire protection facilities unless:

**a.** The designated area in which buildings are to be erected on each proposed parcel or lot, as shown on the map, is located not more than 1,000 feet from a fire hydrant, the distance to be measured along a route providing reasonable access, as determined by the Fire Chief, for the laying of fire hoses in an emergency; or

**b.** The Fire Chief reports that adequate fire protection exists, or is in the process of being provided, for the parcels or lots.

**2.** Upon proper application to the City Council, and upon recommendation of the Chief Engineer of Waterworks of the Department of Water and Power, the City may provide for contribution toward the cost of installation of water mains and hydrants necessary to comply with this Subsection where the Chief Engineer determines that the cost of such installation is greatly in excess of normal charges for providing like facilities.

## E. Maps Involving Future Streets

In the event that the Advisory Agency determines that certain streets or alleys in a proposed division of land shall be reserved for future public use, they shall be indicated on the preliminary parcel map and offered for dedication as future streets or future alleys prior to recording the parcel map. The applicant shall furnish the Bureau of Right-of-Way and Land an offer of dedication therefor in accordance with the provisions of Subdivision B.1. below.

## F. Maintenance of Accessory Structures

Where the Advisory Agency determines that a proposed parcel map complies with all provisions of these Parcel Map Regulations, but finds that the proposed division of land will result in an accessory building or structure being on a parcel separated from the main building or a residential building being on a parcel without the required off-street parking spaces and, in order to afford the applicant time to properly provide a main building on the same parcel with the accessory structure or building, or to remove same, or to provide the required off-street parking spaces with the residential building, the Advisory Agency may approve the proposed parcel map and the continued use and maintenance of the accessory structures or buildings separated from the main building for

a period of time not to exceed one year and the residential building without the off-street parking spaces for a period of time not to exceed 90 days subject to the following conditions:

1. That as a prerequisite to the filing of the final parcel map with the City Engineer, the owner or owners of record of the subject property shall record in the office of the County Recorder of Los Angeles County, California, a covenant running with the and in which such owner or owners agree to comply with an the conditions imposed by the Advisory Agency in approving the parcel map.

2. That upon approval of the proposed parcel map, in addition to the permanent copy placed on file in the City Planning Department, the Advisory Agency shall furnish a copy of the action to the applicant and to the Department of Building and Safety.

### G. Lots Involving a Common Slope

Whenever two or more lots are to be created on a common slope and the City Engineer or Superintendent of Building determines that condition so dictate, the Advisory Agency may require as a condition of approval of the preliminary parcel map that appropriate deed covenants on a form approved by the City Attorney be recorded which provide to each owner of the common slope a joint right on entry for access of men and equipment, and a joint easement over the slope area to maintain and repair the common slope.

### H. Protected Trees

When a protected tree exists on a proposed parcel, the preservation of the tree at its existing location, its relocation for preservation purposes, or the removal of the tree shall be regulated in the same manner as that provided under subdivision regulations set forth in this Article.

## SEC. 11.4.3. PRELIMINARY PARCEL MAP REVIEW CONSIDERATIONS

### A. Approval

When the Advisory Agency determines that the proposed parcel map complies with all the provisions of these parcel map regulations, and no dedication or subdivision improvement is required, it shall approve the Map.

### B. Conditional Approval

When the Advisory Agency determines that the preliminary parcel map complies with all of the provisions of these parcel map regulations, but that street or alley dedications or subdivision improvements, storm drain easements, sanitary sewer easements or slope easements are necessary, or that grading or construction of an engineered retaining structure as specified in this Section is necessary. It may approve the proposed preliminary parcel map subject to the following conditions being complied with to the satisfaction of the City Engineer:

1. That an offer be made to dedicate such land as is necessary for street or alley purposes in compliance with the applicable street and alley design standards established in *Sec. 11A.1.3.* (Subdivision Design Standards) and such storm drain easements, sanitary sewer easements

and slope easements as are deemed necessary. The offer shall be properly executed by all parties having a record interest, including beneficiaries under deeds of trust as shown by a current preliminary title report prepared by a title company approved by the City Engineer for that purpose. The trustee under the deed of trust shall not be required to execute the dedicatory instrument, unless, in the view of the City Engineer, such execution is necessary to satisfactorily dedicate the land. This report shall be on a form approved by the City Attorney and the City Engineer; be in such terms as to be binding on the owner, heirs, assigns or successors in interest; and shall continue until the City Council accepts or rejects it. The offer shall provide that the dedication will be complete upon acceptance by the City Council. The City Engineer shall approve or disapprove the offer for recordation within ten days after it is filed. The offer shall be recorded by the City Engineer in the Office of the County Recorder upon its approval. If the streets, alleys and easements being offered for dedication are required for immediate public use as streets, alleys and easements, a resolution of acceptance shall thereafter be submitted to the City Council concurrently with the final parcel map in order to complete the dedication. Offers to dedicate that are not required for immediate public use will be retained by the City until such time as acceptance for public use occurs. If an offer is rejected by the City Council, the City Engineer shall issue a release from such offer, which shall be recorded in the Office of the County Recorder.

**2.** When it is determined that additional street dedication for widening will be required from property adjoining that depicted in the preliminary parcel map in order to comply with the applicable street standards provided for in *Sec. 11A.1.3*. (Subdivision Design Standards), the offer of dedication provided for above shall include an agreement as a covenant running with the land that upon completion of the dedication, a one-foot wide portion of the property included within the dedication and abutting such adjoining property shall not be used for access. This agreement shall be in the form of a covenant running with the land and shall be recorded, but shall by its own terms become null and void upon the completion of the dedication of the additional land needed for street purposes from the adjoining property. The City Engineer shall show that portion of the dedication which is subject to the recorded covenant on the District Maps of the City of Los Angeles. As long as the agreement remains in effect, the one-foot strip shall not be used as a means of access to the adjoining property, nor shall any permits be issued by any City Department permitting its use for access purposes.

**3.** That such subdivision improvements as are required be constructed and installed to the satisfaction of the City Engineer or that construction and installation of such subdivision improvements be guaranteed in accordance with the provisions of *Sec. 11A.3.3.*G. (Subdivision Improvements; Guarantees). The subdivision improvements shall be limited to grading and the installation of local drainage and sewer facilities, curbs, gutters, sidewalks, street lights, street trees and roadway surfacing. In addition, the City Engineer may also require such other incidental subdivision improvements as are essential to the proper installation of the required public street or alley improvements. All such subdivision improvements shall be graded and improved in accordance with plans approved by the City Engineer. When the conditions of approval of the preliminary parcel map specify that subdivision improvements are required

to be constructed prior to the grant of any development right, no building permit shall be issued until the subdivision improvements have been constructed or suitably guaranteed in accordance with *Sec. 11A.3.3.*G. (Subdivision Improvements; Guarantees).

4. That if grading or construction of an engineered retaining structure is required by the Advisory Agency to remove potential geologic hazards, such grading or construction shall be completed or guaranteed to the satisfaction of the City Engineer or the Superintendent of Building.

5. When recommended by the Fire Department, the Advisory Agency may as a condition of approval of the preliminary parcel map, require the installation of fire hydrants to the satisfaction of the Fire Department.

6. Upon proper application to the City Council, and upon recommendation of the City Engineer of Waterworks of the Department of Water and Power, the City may provide for contribution toward the costs of installation of water mains and hydrants necessary to comply with this subsection where the Chief Engineer determines that the cost of such installation is greatly in excess of normal charges for providing like facilities.

7. Failure to fulfill all conditions of a conditional approval within one year after the date of such approval will automatically terminate and void the proceedings. Upon application, prior to the expiration of the original one-year period, an extension of time for a period not exceeding one year may be granted by the Advisory Agency. The Advisory Agency's determination on an application for a time extension shall be subject to the appeal provision of *Sec. 13B.7.8.* (Subdivision Appeal).

### 8. Modification of Requirements

The Advisory Agency may modify or waive any dedication or subdivision improvement requirements pursuant to *Sec. 13B.7.5.*F.2. (Preliminary Parcel Map; Scope of Decision; Modification of Requirements).

### 9. Where Parcel Map Includes Land Within Drainage District

Whenever a parcel map, or a portion thereof includes land which is within a Local Drainage District, the provisions and requirements of the ordinance establishing such District shall be complied with.

### 10. Modifications of Approved Preliminary Parcel Maps

The Advisory Agency may grant slight modifications to a preliminary parcel map upon its own initiative or upon a request from a subdivider pursuant to *Sec. 13B.7.5.*H. (Preliminary Parcel Map; Modification of Entitlement).

### 11. Map Identification and Reproduction

Each preliminary parcel map shall be identified with a number assigned by the City Planning Department and the date of filing. The number shall be shown on the recorded parcel map.

## SEC. 11.4.4. PARCEL MAP

### A. Preliminary Parcel Map Requirements

A final parcel map shall be prepared and filed with the City Engineer in compliance with the provisions of this Article. The map shall conform substantially to the approved preliminary parcel map, or the approved tentative tract map which was filed pursuant to the requirements contained in *Sec. 11A.4.1.*C. (General; Parcel Maps - Divisions of Land of Five or More Parcels Not Subdivisions) . The final parcel map shall be accepted by the City Council provided that:

**1.** The necessary subdivision improvements and grading or retaining structure construction, as set forth in the approval of the preliminary parcel map, have been installed and approved by the City, or provided the subdivider executes an Improvement Agreement and submits or agrees to submit:

**a.** Improvement plans; and

**b.** Satisfactory grading or construction plans, where grading or construction of an engineered retaining structure is required in Hillside Areas; and

**c.** Improvement Securities, warranty guarantees, and labor and material payment securities in accordance with provisions of *Sec. 11A.3.3.*G. (Subdivision Improvements; Guarantees).

**2.** All approvals have been obtained from City departments and other public agencies; and

**3.** Any special assessment or bond required to be paid or guaranteed pursuant to Paragraph (c) of Section 66493 of Article 8 (Taxes and Assessments) of Chapter 4 (Requirements) of the Subdivision Map Act has been paid in full, or such payment has been guaranteed.

### B. Final Parcel Map Requirements

**1.** The following information shall be submitted with the parcel map: names, address and telephone number of the record owners, and person preparing the parcel map. The general form and layout of the map, including size and type of lettering, drafting and location of acknowledgment, and other required information shall be determined by the City Engineer. The map shall be prepared on high quality tracing cloth, polyester based film, or other material approved by the City Engineer.

**2.** The map shall show the location of each parcel and its relation to surrounding surveys. The location of any remainder of the original parcel shall be shown, but need not be shown as a matter of survey but only by reference to the existing record boundaries of such remainder if such remainder has a gross area of 5 acres or more.

**3.** Each sheet of the parcel map shall be 18 x 26 inches. A marginal line shall be drawn around each sheet, leaving a blank margin of one inch. The scale of the map shall be such as to show all details clearly. Each sheet shall be numbered, and its relation to other sheets clearly shown.

The parcel map number, scale and north point shall be shown on each sheet. If more than 3 sheets are necessary to show the entire division of land, an index map shall be included on one of the sheets.

4. The exterior boundary of the land included within the subdivision shall be indicated by distinctive symbols and clearly so designated. Each parcel shall be identified by a letter.

5. Where the division of land creates 4 or less parcels, the parcel map may be compiled from recorded or filed data when sufficient survey information exists on filed maps to locate and retrace the exterior boundary lines of the parcel map if the location of at least one of these boundary lines can be established from an existing monumented line.

6. All other parcel maps shall be based upon a field survey made in conformance with the Land Surveyor's Act.

7. The parcel map shall be prepared by a registered civil engineer or licensed land surveyor. A signed Surveyor's Certificate as required by the Subdivision Map Act shall appear on the parcel map.

8. Where there are no dedications being made by the parcel map, a certificate signed and acknowledged by the fee owners only, of the real property being subdivided, consenting to the preparation and recordation of the parcel map, is required.

## SEC. 11.4.5. APPROVAL OF MAP DOES NOT AUTHORIZE VIOLATION OF OTHER LAWS

Neither the approval or conditional approval of any parcel map constitutes or waives compliance with any other applicable provision of this Code, nor does any such approval authorize, nor should it be deemed to authorize, a violation or failure to comply with other applicable provisions of this Code.

## SEC. 11.4.6. MODIFICATION OF RECORDED PARCEL MAPS, REVIEW CONSIDERATIONS

Modifications and amending maps shall be governed by the following limitations.

1. No modifications involving increases in density are allowed that would change the density of a parcel map as approved on appeal by the Appeal Board or the City Council, where such density was the subject of the appeal to the Appeal Board or the City Council.

2. No condition may be modified if it was imposed as a mitigating measure identified in a mitigated or conditional negative declaration or in an Environmental Impact Report.

3. Modifications involving increases in density shall not exceed an increase of one lot or dwelling unit.

    a. For subdivision of fewer than 10 lots or dwelling units, any density increase shall be limited to one lot or dwelling unit; and

**b.** For subdivisions containing 10 or more lots or dwelling units, any increase shall be limited to not more than 10% of that originally approved.

**4.** Modifications involving either increase in the height of structures, or in the elevation of building pads where the elevation of such pads has been specified by the Advisory Agency, shall be limited as follows:

**a.** An increase in the height of structures of not more than 10% above the approved height of such structures; or

**b.** An increase in the elevation of building pads of not more than 5 feet above the approved elevation of such pads.

**c.** Any such increase in height or elevation shall not obstruct the view from surrounding properties.

**d.** A greater increase in the elevation of building pads may be approved if such increase has been determined to be necessary for health and safety reasons by the Department of Building and Safety.

**5.** No modifications are permitted that violate the intent of any of the original conditions of the parcel map approval as that intent is expressed in the findings or otherwise by the decision-maker.

## SEC. 11.4.7. SALES CONTRARY TO PARCEL MAP REGULATIONS ARE VOIDABLE

Any deed of conveyance, sale or contract to sell made contrary to the provisions of these parcel map regulations is voidable to the extent and in the same manner as is provided for violation of Section 66499.32 of Article 2 (Remedies) of Chapter 7 (Enforcement and Judicial Review) of the Subdivision Map Act.

# DIV. 12.1. GENERAL PROVISIONS

## SEC. 12.1.1. PURPOSE

It is the intent of the City that no modification should be made to any nonconforming lot, building, structure, site or use that increases the degree of nonconformity with this Zoning Code.

## SEC. 12.1.2. RELATIONSHIP TO ZONING DISTRICT ARTICLE APPLICABILITY STANDARDS

**A.** The provisions of this Article shall be in addition to the Applicability provisions of the following Articles: Article 2 (Form), Article 3 (Frontage), Article 4 (Development Standards), Article 5 (Use) and Article 6 (Density). In the event that there is a conflict or discrepancy between the provisions of this Article and the Applicability provisions of Articles 2 through 6, the provisions of the applicable Article shall supersede.

**B.** *Sec. 12.1.5 (Restoration of Damaged Nonconforming Buildings)* and *Sec. 12.16 (Replacement of Earthquake Hazardous Buildings)* below supersede any other provisions of this Zoning Code.

## SEC. 12.1.3. AREA OF WORK

Where a permit application does not involve an entire site, building or structure, the standards of this Article apply only to the area of work that is the subject of the permit application.

## SEC. 12.1.4. MAINTENANCE AND EXPANSION OF NONCONFORMING BUILDINGS

### A. Maintenance

A nonconforming building or structure may be maintained, repaired, or structurally altered, provided the building conformed to the zoning regulations, if any, at the time it was established.

### B. Additions to Nonconforming Buildings

An addition to a nonconforming building or structure is generally allowed, provided that the project activity does not increase the extent to which the building or structure is nonconforming to any standard in this zoning code and additions conform to the current zoning regulations.

### C. Relocating Nonconforming Buildings

A nonconforming building or structure may not be relocated, in whole or in part, to any other location on the lot unless every portion of the building or structure that is moved is made to conform to all the current regulations of the zone and other applicable current land use regulations, except as otherwise permitted by *Sec. 12.1.7. (Lots Affected by Acquisitions for Public Use)* below.

## SEC. 12.1.5. RESTORATION OF DAMAGED NONCONFORMING BUILDINGS

**A.** A nonconforming building or structure, which is damaged or partially destroyed by any fire, flood, wind, earthquake or other calamity or the public enemy, may be restored and the occupancy or use of the building, structure or part of the building or structure, which existed at the time of the damage or destruction, may be continued or resumed, provided that the total cost of restoration does not exceed 75% of the replacement value of the building or structure at the time of the damage or destruction. A permit for restoration shall be obtained within a period of two years from the date of the damage or destruction. Except as set forth in *Sec. 12.1.5.B.* below, if the damage or destruction exceeds 75% of the replacement value of the nonconforming building or structure at the time of the damage or destruction, no repairs or restoration shall be made unless every portion of the building or structure is made to conform to all regulations for new buildings in the zone in which it is located, and other applicable current use regulations.

**B.** If the damage or destruction of a nonconforming building exclusively for residential use in any zone exceeds 75% of its replacement value at the time of the damage or destruction, the building or structure may be reconstructed provided the following requirements are met.

**1.** The restored or reconstructed building may encroach into any side setback no more than half the width of the required setback in the zone in which it is located, or in other applicable current regulations of this Zoning Code, but in no event more than 3 feet.

**2.** The restored or reconstructed building may encroach in the front and rear setbacks no more than half the width of the required setback in the zone in which it is located, or in other applicable current regulations of this Zoning Code.

**3.** Neither the footing, nor the building or structure projects into any area planned for widening or extension of existing or future streets as determined by the Advisory Agency upon the recommendation of the City Engineer.

**4.** The height shall not exceed the allowable height for new buildings or structures in the zone in which it is located, or in other applicable current regulations of this Chapter.

**5.** A building permit for the reconstruction be obtained within 2 years of the damage or destruction from fire, flood, wind, earthquake, or other calamity, or the public enemy.

# SEC. 12.1.6. REPLACEMENT OF EARTHQUAKE HAZARDOUS BUILDINGS

## A. General

**1.** Except as otherwise provided in this Chapter, a building nonconforming as to height, number of stories, lot area, loading space or parking, which is demolished as a result of enforcement of the Earthquake Hazard Reduction Ordinance provisions in Article 1 (Building Code) of Chapter 9 (Building Regulations) of this Code, may be reconstructed with the same nonconforming height, number of stories, lot area, loading space or parking as the original building, provided, however, that reconstruction shall be commenced within two years of obtaining a permit for demolition and completed within two years of obtaining a permit for reconstruction. Provided further, that neither the footing, nor any portion of the replacement building may encroach into any area planned for widening or extension of existing or future streets as determined by the Advisory Agency upon the recommendation of the City Engineer.

**2.** Additionally, a building nonconforming as to use or yards, which is demolished as a result of enforcement of the Earthquake Hazard Reduction Ordinance, may be reconstructed with the same nonconforming use or yards provided that the approval of a Zoning Administrator is obtained as outlined below.

## B. Nonconforming Rights Related to Earthquake Safety Ordinance

A Zoning Administrator may, pursuant to *Sec. 13B.2.1 (Class 1 Conditional Use Permit)*, permit a building, nonconforming as to use or yards, which is demolished as a result of enforcement of the Earthquake Safety Ordinance (Division 68 of Article 1 of Chapter 9 this Code), to be reconstructed with the same nonconforming use or yards as the original building.

### 1. Procedures

#### a. Notification

**i.** Despite the provisions of *Sec. 13B.2.1. (Class 1 Conditional Use Permit)*, an application pursuant to this Subsection involving a nonconforming use shall instead notify the owners and occupants of all property within and outside the City within 500 feet of the exterior boundaries of the area subject to the application.

**ii.** An application pursuant to this Subsection involving only a nonconforming yard, when a public hearing is held, the notice shall be given in the same manner as required in *Sec. 13B.2.1. (Class 1 Conditional Use Permit)*.

#### b. Waiver of Public Hearing

**i.** Despite the provisions of *Sec. 13B.2.1. (Class 1 Conditional Use Permit)*, the Zoning Administrator may waive the public hearing if the applicant has secured the approval for the reconstruction from the owners of all properties abutting, across the street or

alley from, or having a common corner with the subject property. If that approval is obtained from the surrounding property owners, the Zoning Administrator may waive the public hearing if the Administrator makes the following written findings:

**a)** That the nonconforming use will not have a significant adverse effect on adjoining property or on the immediate neighborhood; and

**b)** That the nonconforming use is not likely to evoke public controversy.

**ii.** An application pursuant to this Subsection involving only a nonconforming yard may be set for a public hearing in accordance with the same procedures as above, if the Zoning Administrator determines that the public interest requires a hearing.

### 2. Supplemental Findings

In addition to the findings otherwise required by *Sec. 13B.2.1. (Class 1 Conditional Use Permit)*, a Zoning Administrator shall also require and find the following:

**a.** That reconstruction be commenced within two years of obtaining a permit for demolition and completed within two years of obtaining a permit for reconstruction; and

**b.** That neither the footing nor any portion of the replacement building encroaches into any area planned for widening or extension of existing or future streets; and

**c.** That the continued nonconforming use of the property or the continued maintenance of nonconforming yards will not be materially detrimental to the public welfare and will not have a substantial adverse impact on or be injurious to the properties or improvements in the vicinity.

## SEC. 12.1.7. LOTS AFFECTED BY ACQUISITIONS FOR PUBLIC USE

### A. Maintenance and Repair of Existing Buildings

**1.** Where a building or structure is located upon a lot portion of which is acquired for any public use, (by condemnation, purchase, dedication, or otherwise) by any governmental entity, or if all or a part of a separate off-street automobile parking area serving such building or structure is acquired for public use, such building or structure may be maintained, and may thereafter be used, maintained or repaired without relocating or altering the same to comply with the area regulations or off-street automobile parking requirements of this Chapter. Further, if such building or structure is partially located upon the area being acquired for public use, it may be relocated upon the same lot or premises or remodeled or reconstructed without observing the required yard adjacent to the new lot line created by such acquisition, and without reducing the number of dwelling units to conform to the area regulations of the zone in which it is located and without observing the off-street automobile parking requirements of this Chapter. The exemptions provided in this Section permit compliance only to the extent that such non–compliance is caused by an acquisition for public use.

2. If only a portion of an existing building or structure is acquired for public use, any new construction, addition, facade alteration, site alteration or renovation of the remainder of said building or structure which was made necessary by said acquisition, shall conform to the provisions of Chapter 9 (Building Regulations). Any portion of the building or structure which does not require any new construction, addition, facade alteration, site alteration or renovation by reason of said acquisition shall not be required to be made to conform to the provisions of Chapter 9 (Building Regulations) unless it would otherwise be required to conform thereto independently of and in the absence of said acquisition of only a portion of the building or structure.

### B. Lot Area

If a lot resulting from the acquisition of all or a portion of a parcel for public use does not comply with the area requirements of the zone in which it is located, or if a legally existing nonconforming lot is further reduced in size because of such acquisition, said lot may be utilized and a building permit shall be issued for any purpose permitted in the zone, so long as the lot is not smaller in size or width than one-half of the minimum lot area or lot width required for the zone.

## SEC. 12.1.8. CALCULATION OF TIME

Whenever a building, structure, use, or site element becomes nonconforming due to a change in the Zoning Map or the text of this Chapter, and a period of time is specified in this Article for the removal of the nonconforming building, structure, use or site element, the period of time is computed from the effective date of such change.

## SEC. 12.1.9. COMPLIANCE WITH OTHER LAWS

Nothing in this Article relieves any person from the obligation to comply with the requirements of any Federal, State or County law.

# DIV. 12.2. NONCONFORMING FORM

## SEC. 12.2.1. LOT SIZE

### A. Lot Area

#### 1. Standards

**a.** Where a lot is nonconforming as to lot area, any building or structure allowed on a conforming lot is allowed on the nonconforming lot, provided that it meets all of the dimensional requirements of the zone except the lot area requirement.

**b.** Where a lot is nonconforming as to lot area, any setback encroachments allowed on a conforming lot are also allowed on the nonconforming lot.

**c.** Where a lot is nonconforming as to lot area, any use permitted in the applicable Use District on a conforming lot is allowed on the nonconforming lot, except that where the applicable Use District requires a lot area,the Use District lot area shall be met.

#### 2. Exceptions

[Reserved]

### B. Lot Width

#### 1. Standards

**a.** Where a lot is nonconforming as to lot width, any building or structure allowed on a conforming lot is allowed on a nonconforming lot, provided that it meets all of the dimensional requirements of the zone except the lot width requirement.

**b.** Where a lot is nonconforming as to lot width, any setback encroachments allowed on a conforming lot are also allowed on the nonconforming lot.

**c.** Where a lot is nonconforming as to lot width, any use permitted in the applicable Use District on a conforming lot is allowed on a nonconforming lot, except that where the applicable Use District requires a lot width,the Use District lot width shall be met.

#### 2. Exceptions

[Reserved]

## SEC. 12.2.2. COVERAGE

### A. Building Coverage

#### 1. Standards

Where a lot is nonconforming as to building coverage, additional building coverage is not allowed. This standard does not prohibit a site alteration that reduces existing building

coverage, or new vertical construction (addition) of a building that does not exceed applicable height or FAR limits.

### 2. Exceptions

#### a. Rural, Estate and House Form Districts

Where a lot is nonconforming as to building coverage on properties in the Rural, Estate and House Form Districts, the building shall not be added to in any manner unless the addition conforms to all the current regulations of the zone and other applicable current land use regulations, except as may be approved or permitted pursuant to a discretionary approval. However, alterations, other than additions to existing buildings, may be made, provided that the changes do not meet the definition of demolition.

## B. Building Setbacks

### 1. Standards

**a.** Where a lot has a building that is nonconforming as to side, rear or alley setbacks, any new building on the lot shall meet the side, rear or alley setbacks and any other applicable standards of the zone.

**b.** Where a building is nonconforming as to side, rear or alley setbacks, it may be expanded, provided that:

**i.** Any addition located in the nonconforming setback shall not encroach into any portion of that setback to a greater extent than the existing nonconforming building encroaches.

**ii.** In no event shall any addition reduce the width of a side setback or the depth of a rear or alley setback to less than 50% of that required by the current setback regulations of the applicable zone and other applicable current land use regulations.

**iii.** The total of all additions made since the building became nonconforming as to side, rear or alley setbacks shall not exceed, in height or length, the height or length of that portion of the adjoining nonconforming building that extends into the same setback.

**c.** Buildings nonconforming as to side, rear or alley setback regulations may conduct ordinary repair and maintenance, be structurally altered, or undergo minor or major renovation, provided the activity does not meet the definition of demolition.

### 2. Exceptions

[Reserved]

#### a. Rural, Estate and House Form Districts

A building nonconforming as to side, rear or alley setbacks on properties in the Rural, Estate and House Form Districts, not including properties in the Coastal Zone which are

not located in a Hillside Area, shall not be added to or enlarged in any manner unless the addition or enlargement conforms to all the current regulations of the zone and other applicable current land use regulations, except as may be approved or permitted pursuant to a discretionary approval.

## SEC. 12.2.3. AMENITY

### A. Lot Amenity Space

#### 1. Standards

Where a lot is nonconforming as to lot amenity space requirements, any area of work associated with new construction, addition or site alteration shall meet the lot amenity space requirements.

#### 2. Exceptions

[Reserved]

### B. Residential Amenity Space

#### 1. Standards

Where a lot is nonconforming as to residential amenity space requirements, any new construction, addition or site alteration shall meet the residential amenity space requirements.

#### 2. Exceptions

[Reserved]

### C. Amenity Design Standards

#### 1. Standards

Where a lot is nonconforming as to amenity design standards requirements, any new construction, addition or site alteration shall meet the amenity design standards requirements.

#### 2. Exceptions

[Reserved]

## SEC. 12.2.4. FLOOR AREA RATIO & HEIGHT

### A. Floor Area Ratio (FAR)

#### 1. Standards

Where a building or structure, or combination of multiple buildings and structures, is nonconforming as to floor area ratio, no additional floor area is allowed. This does not prohibit a site alteration, minor or major renovation that does not increase the amount of floor area.

#### 2. Exceptions

**a.** Where a building or structure, or combination of multiple buildings and structures, is nonconforming as to floor area ratio in the Rural, Estate and House Form Districts, not including properties in the Coastal Zone which are not located in a Hillside Area the building or structure shall not be added to in any manner unless the addition conforms to all the current regulations of the zone and other applicable current land use regulations, except as may be approved or permitted pursuant to a discretionary approval. However, alterations, other than additions to existing buildings, may be made provided that the changes do not meet the definition of demolition.

**b.** In Development Standards Districts 5 and 6, existing covered, above-grade parking areas do not count as floor area for the purpose of calculating maximum FAR.

### B. Height in Feet or Stories

#### 1. Standards

**a.** Where an existing building or structure is nonconforming as to the maximum height in either feet or stories, any new construction or addition shall not exceed the maximum height or any other applicable standards of the zone.

**b.** Where an existing building or structure is nonconforming as to the minimum height limit requirement, any new construction or addition shall meet the minimum height limit.

#### 2. Exceptions

Where an existing building or structure is nonconforming only as to maximum height, it may not be added to in any manner, unless the addition conforms to all the current regulations of the applicable zone and other applicable current regulations of this Chapter, provided that the total aggregate floor area included in all the separate additions shall not exceed 50% of the floor area of the ground floor of the building or structure.

## SEC. 12.2.5. UPPER-STORY BULK

### A. Bulk Plane

#### 1. Standards

Where an existing building or structure is nonconforming as to the bulk plane, any new construction, addition or facade alteration shall not exceed the bulk plane.

#### 2. Exceptions

A building that is nonconforming only as to bulk plane regulations may not be added to in any manner, unless the addition conforms to all the current regulations of the applicable zone and other applicable current regulations of this Chapter, provided that the total aggregate floor area included in all the separate additions shall not exceed 50% of the floor area of the ground floor of the building or structure.

### B. Street Step-Back

#### 1. Standards

**a.** Where an existing building or structure is nonconforming as to the maximum stories without street step-back requirement, any new construction, addition or facade alteration shall meet the maximum stories without street step-back requirement.

**b.** Where an existing building or structure is nonconforming as to the minimum street step-back depth requirement, any new construction, addition or facade alteration shall meet the minimum street step-back requirement.

#### 2. Exceptions

[Reserved]

### C. Height Transition

#### 1. Standards

**a.** Where an existing building or structure is nonconforming as to the maximum stories without height transition requirement, any new construction, addition or facade alteration shall not exceed the stories without height transition.

**b.** Where an existing building or structure is nonconforming as to the minimum height transition depth requirement, any new construction, addition or facade alteration shall meet the minimum height transition depth requirement.

#### 2. Exceptions

[Reserved]

## SEC. 12.2.6. BUILDING MASS

### A. Building Width

#### 1. Standards

Where an existing building or structure is nonconforming as to the building width requirement, any new construction, addition or facade alteration shall not exceed the building width requirement.

#### 2. Exceptions

[Reserved]

## B. Facade Width

### 1. Standards

Where an existing building or structure is nonconforming as to the facade width requirement, any new construction, addition or facade alteration shall not exceed the facade width requirement.

### 2. Exceptions

[Reserved]

# DIV. 12.3. NONCONFORMING FRONTAGE

## SEC. 12.3.1. BUILD-TO

### A. Applicable Stories

#### 1. Standards

Where an existing building or structure is nonconforming as to the build-to applicable stories requirement, any new construction or addition shall meet the minimum build-to applicable stories.

#### 2. Exceptions

[Reserved]

### B. Build-to Range and Build-To Width

#### 1. Standards

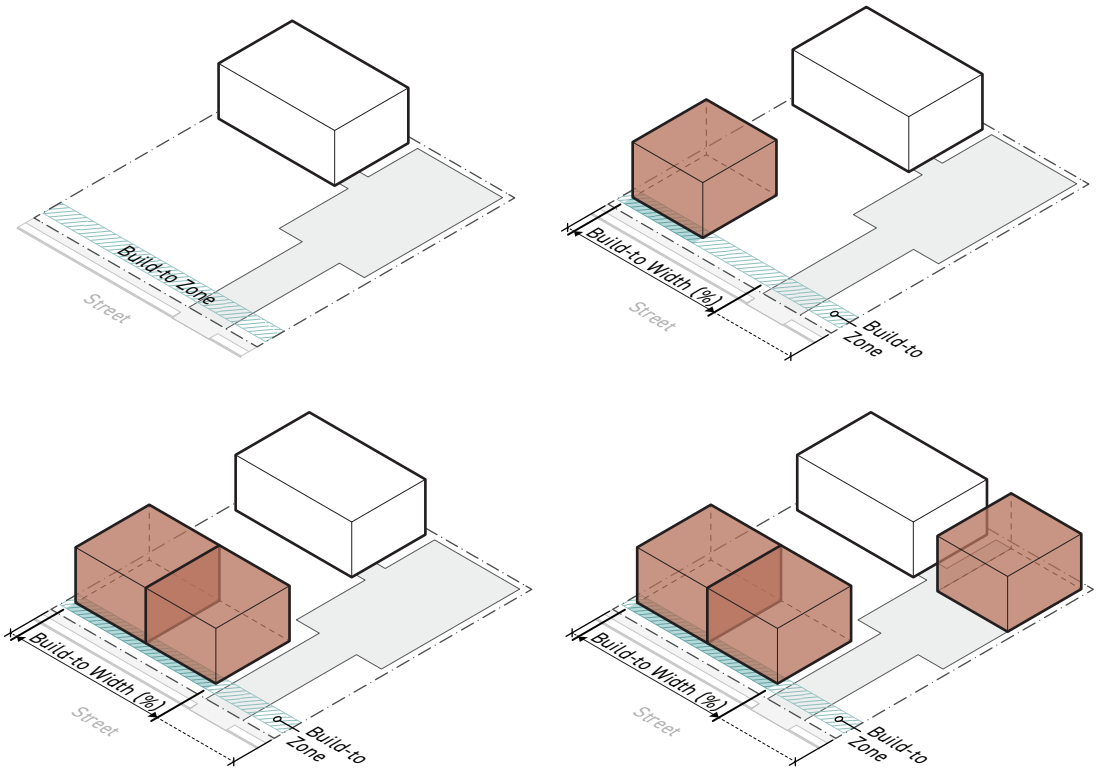
##### a. General

Where an existing building or structure is nonconforming as to the build-to range or build-to width requirements, any new construction or addition shall meet the minimum build-to width between the minimum and maximum build-to range in one of the ways outlined in this Section.

### b. New Construction on an Interior Lot

**i.** All new construction shall occupy the build-to range until the build-to width standard has been met. Each new building does not have to meet the required build-to width for the entire lot.

**ii.** Once the build-to width standard has been met, new buildings may be placed outside of the build-to zone.



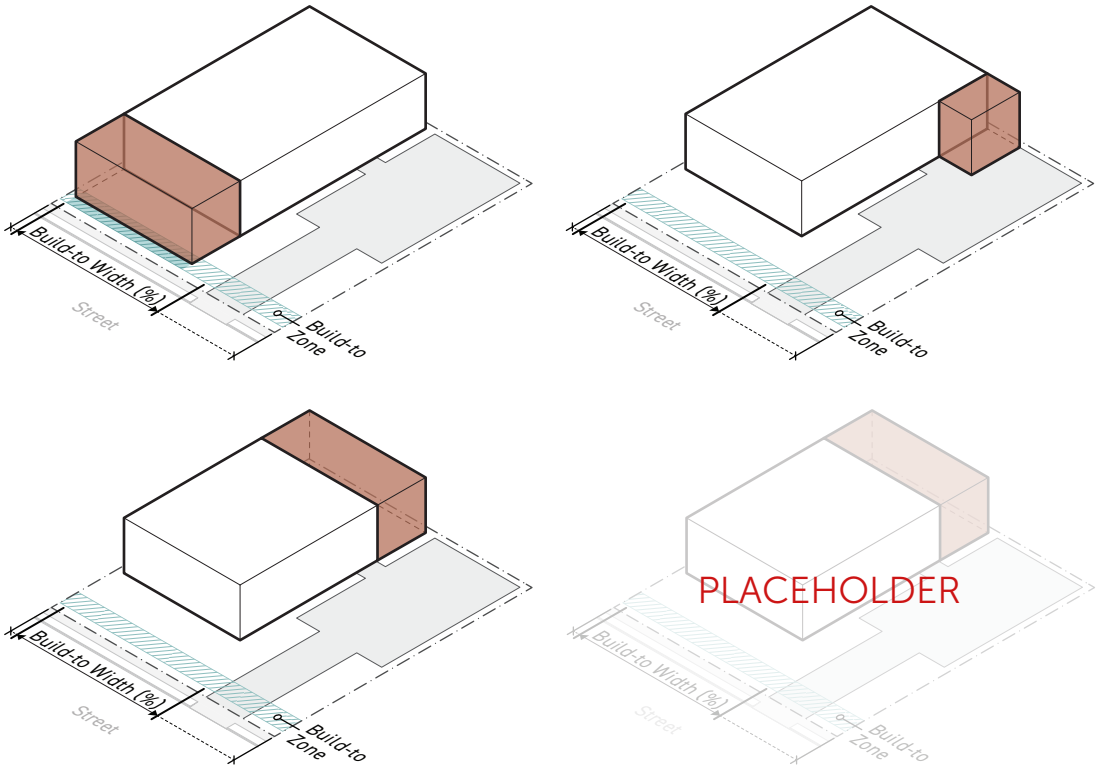
### C. Additions on an Interior Lot

**i.** Any addition to the street-facing facade of a building that is nonconforming as to build-to range or build-to width shall occupy the build-to range. The addition does not have to meet the required build-to width for the entire lot. Additions to the street-facing facade with a maximum floor area of 10% of the existing building footprint are allowed behind the build-to range.

**ii.** Additions that extend a building that is nonconforming as to build-to range or build-to width toward the side lot line are allowed, provided they have a floor area less than 20% of the existing building footprint. Once the build-to width standard has been met, additions of any size that extend the building toward the side lot line are allowed.

**iii.** Additions of any size that extend a building that is nonconforming as to build-to range or build-to width toward the rear lot line are allowed.

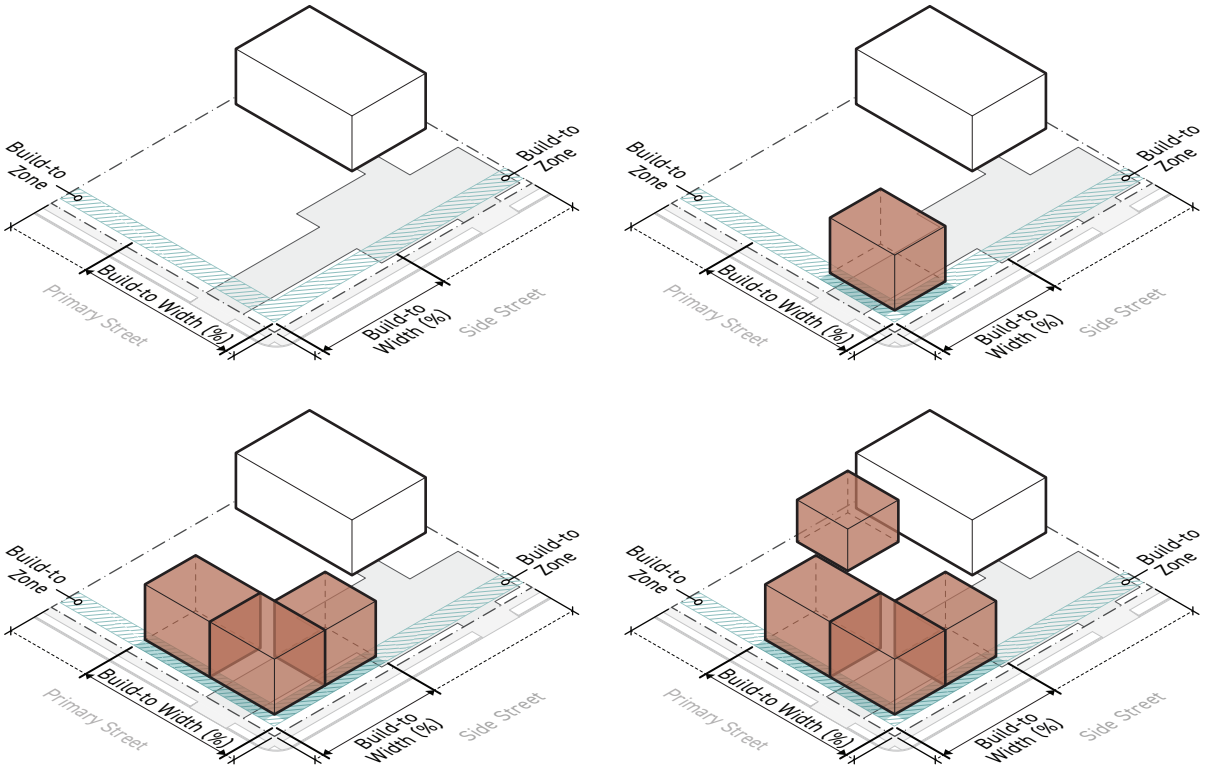
**iv.** Additions on top of a building that is nonconforming as to build-to range or build-to width are allowed, provided they do not increase the existing building footprint by more than 50 square feet.



### d. New Construction on a Corner Lot

**i.** All new construction shall occupy the build-to range until the build-to width standard for both streets has been met.

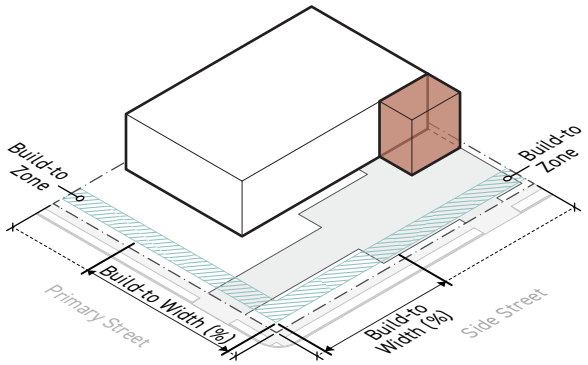
**ii.** Once the build-to width requirement has been met for both streets, new construction may be placed behind the build-to range.



### e. Additions on a Corner Lot

**i.** Any addition to the primary street-facing facade of a building that is nonconforming as to build-to range or build-to width shall be located within the build-to range on the primary street. The addition does not have to meet the minimum build-to width for the entire lot. Street-facing facade additions with floor area no greater than 10% of the existing building footprint are allowed behind the build-to range.

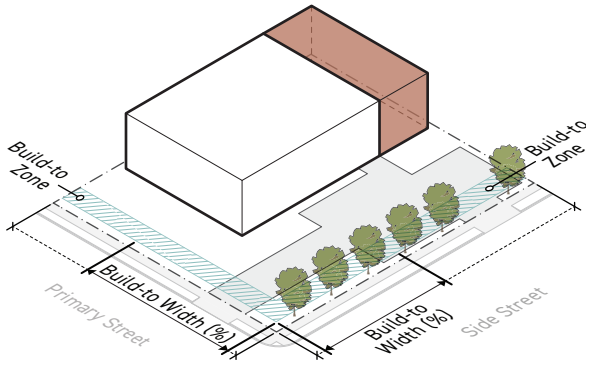
**ii.** Additions that extend a building that is nonconforming as to build-to range or build-to width toward the side lot line are allowed, provided the floor area is no greater than 20% of the existing building footprint. Once the build-to width standard has been met for both streets, side additions of any size that extend the building toward the side lot line are allowed.



**iii.** Additions of any size that extend a building that is nonconforming as to build-to range or build-to width toward the rear lot line and are located behind the build-to range are allowed provided:

**a)** A *planting area (Sec4C.6.4.C.2.)*, at least 6 feet wide, abutting to the side street lot line, is installed across the entire length of the side street frontage where no building occupies the build-to zone. Breaks for pedestrian, bicycle and vehicular access are allowed.

**b)** The planting area shall include *large species trees (Sec.4C.6.4.C.3.a.)* planted at a rate of 1 per 30 feet along the entire length of the planting area.



**c)** Trees should be planted offset from street trees to maximize space for canopy growth.

**iv.** Additions on top of a building that is nonconforming as to build-to range or build-to width are allowed, provided they do not increase the existing building footprint by more than 50 square feet.

#### 2. Exceptions

On lots with existing an existing residential building that is nonconforming as to build-to range or build-to width, new construction of additional dwelling units located in a rear yard that are detached from the existing building are exempt from build-to range and build-to width requirements.

### C. Pedestrian Amenity Modification

#### 1. Standards

Where a building or structure does not meet the build-to width requirement and an existing plaza or similar open space located in the build-to zone does not meet the standards for pedestrian amenity modification, the existing open space may be maintained but not expanded and any additions, new construction, site modifications and facade modifications shall increase conformity with the pedestrian amenity modification standards to the greatest extent feasible.

#### 2. Exceptions

[Reserved]

## SEC. 12.3.2. PARKING

### A. Street Setback

#### 1. Standards

Where an existing building or structure is nonconforming as to the street setback for parking requirement, any new construction, addition, site alteration or major renovation shall meet the minimum required street setback for parking.

#### 2. Exceptions

[Reserved]

## SEC. 12.3.3. LANDSCAPING

### A. Planted Area

#### 1. Standards

Where an existing lot is nonconforming as to the planted area requirement within the frontage yard, any new construction, addition, site alteration or major alteration shall meet the minimum required planted area within the frontage yard.

#### 2. Exceptions

[Reserved]

### B. Allowed Privacy Screen

#### 1. Standards

Where an existing lot is nonconforming as to the allowed privacy screen requirement, any new construction, addition, site alteration or major renovation shall meet the allowed privacy screen requirement.

#### 2. Exceptions

[Reserved]

## SEC. 12.3.4. TRANSPARENCY

### A. General

#### 1. Standards

Where an existing building or structure is nonconforming as to the general transparency requirement for all ground stories or all upper stories, any new construction, addition, facade alteration or major renovation shall meet the general transparency requirement for all ground stories and all upper stories.

#### 2. Exceptions

A blank wall width alternative may be used in lieu of transparency, as provided in *Sec. 3C.4.2*.

### B. Blank Wall Width

#### 1. Standards

Where an existing building or structure is nonconforming as to the blank wall width requirement for blank ground story or foundation walls, any new construction, addition, facade alteration or major renovation shall meet the blank wall width requirement for blank ground story or foundation walls.

#### 2. Exceptions

A blank wall width alternative may be used in lieu of meeting the blank wall standard, as provided in *Sec. 3C.4.2*.

## SEC. 12.3.5. ENTRANCES

### A. Street-Facing Entrance

#### 1. Standards

Where an existing building or structure is nonconforming as to the street-facing entrance requirement, including the entrance space requirement, any new construction, addition, facade alteration or major renovation shall meet the minimum street-facing entrance requirement.

#### 2. Exceptions

[Reserved]

### B. Entry Feature

#### 1. Standards

Where an existing building or structure is nonconforming as to the entry feature requirement, including the entry feature option requirements, any new construction, addition, facade alteration or major renovation shall meet the minimum entry feature requirement.

#### 2. Exceptions

[Reserved]

## SEC. 12.3.6. GROUND STORY

### A. Ground Story Height

#### 1. Standards

Where an existing building or structure is nonconforming as to the ground story height requirement, any new construction, addition or major renovation shall meet the minimum ground story height requirement.

#### 2. Exceptions

[Reserved]

### B. Ground Floor Elevation

#### 1. Standards

Where an existing building or structure is nonconforming as to the ground floor elevation requirement, any new construction, addition or major renovation shall meet the minimum ground floor elevation requirement.

## 2. Exceptions

[Reserved]

# DIV. 12.4. NONCONFORMING CHARACTER FRONTAGE

## SEC. 12.4.1. BUILD-TO

See Sec. 12.3.1. Build-To.

## SEC. 12.4.2. PARKING

See Sec. 12.3.2. Parking.

## SEC. 12.4.3. LANDSCAPING

See Sec. 12.3.3. Landscaping.

## SEC. 12.4.4. GROUND FLOOR ELEVATION

See Sec. 12.3.6.B. Ground Floor Elevation.

## SEC. 12.4.5. STORY HEIGHT

### A. Ground Story Height

See Sec. 12.3.6.A. Ground Story Height.

### B. Upper Story Height

#### 1. Standards

Where an existing building or structure is nonconforming as to the upper story height requirement, any new construction or addition shall meet the minimum upper story height requirement.

#### 2. Exceptions

[Reserved]

## SEC. 12.4.6. ARTICULATION

### A. Base, Middle & Top

#### 1. Standards

Where an existing building or structure is nonconforming as to the base, middle and top requirement, any new construction or addition shall meet all of the minimum base, middle and top requirements.

#### 2. Exceptions

[Reserved]

## B. Base-Top

### 1. Standards

Where an existing building or structure does not meet the base-top requirement, any new construction or addition shall meet the minimum base-top requirement.

### 2. Exceptions

[Reserved]

## C. Horizontal Bands

### 1. Standards

Where an existing building or structure does not meet the horizontal bands requirement, any new construction or addition shall meet the minimum horizontal bands requirement.

### 2. Exceptions

[Reserved]

## D. Vertical Bands

### 1. Standards

Where an existing building or structure does not meet the vertical bands requirement, any new construction, addition or facade alteration shall meet the minimum vertical bands requirement.

### 2. Exceptions

[Reserved]

## E. Articulating Elements

### 1. Standards

Where an existing building or structure does not meet the articulating elements requirement, any new construction, addition or facade alteration shall meet the minimum articulating elements requirement.

### 2. Exceptions

[Reserved]

## SEC. 12.4.7. FEATURES

### A. Prohibited Features

#### 1. Standards

Where an existing building or structure does not meet the prohibited features requirements, any new construction, addition or facade alteration shall meet the prohibited features requirements.

#### 2. Exceptions

[Reserved]

## SEC. 12.4.8. ENTRANCES

### A. Street-Facing Entrance

See Sec. 12.3.5.A. Street-Facing Entrance

### B. Entry Feature

See Sec. 12.3.5.B. Entry Feature

### C. Focal Entry Feature

#### 1. Standards

Where an existing building or structure is nonconforming as to the focal entry feature requirements, any new construction, addition or facade alteration shall meet the minimum focal entry feature requirements.

#### 2. Exceptions

[Reserved]

## SEC. 12.4.9. TRANSPARENCY

### A. Ground Story

#### 1. Standards

**a.** Where an existing building or structure does not meet the general transparency or blank wall width requirements, see Sec. 12.3.4. Transparency.

**b.** Where an existing building or structure does not meet the window recession, bulkhead, symmetrical lite pattern, horizontal sliding windows or vinyl windows requirements, any new construction, addition or facade alteration shall meet all of the minimum window recession, bulkhead, symmetrical lite pattern, horizontal sliding windows and vinyl windows requirements.

#### 2. Exceptions

[Reserved]

### B. Upper Stories

#### 1. Standards

Where an existing building or structure is nonconforming as to the window recession, symmetrical lite pattern, sill, horizontal sliding windows or vinyl windows requirements, any new construction, addition or facade alteration shall meet all of the minimum window recession, symmetrical lite pattern, sill, horizontal sliding windows and vinyl windows requirements.

#### 2. Exceptions

[Reserved]

## SEC. 12.4.10. EXTERIOR MATERIALS

### A. Principal or Accessory Materials

#### 1. Standards

Where an existing building or structure is nonconforming as to the principal materials or accessory materials requirements, any new construction, addition or facade alteration shall meet all of the minimum principal materials and accessory materials requirements.

#### 2. Exceptions

[Reserved]

## SEC. 12.4.11. ROOF DESIGN

### A. Roof Form or Roof Materials

#### 1. Standards

Where an existing building or structure is nonconforming as to the roof form or roof materials requirements, any new construction, addition or facade alteration shall meet all of the minimum roof form and roof materials requirements.

#### 2. Exceptions

[Reserved]

# DIV. 12.5. NONCONFORMING DEVELOPMENT STANDARDS

## SEC. 12.5.1. PEDESTRIAN ACCESS

### A. Pedestrian Access Packages

#### 1. Standards

Where an existing lot is nonconforming as to the pedestrian access package requirements, any new construction, addition, site alteration or major renovation shall meet the minimum pedestrian access package requirements.

#### 2. Exceptions

[Reserved]

### B. Pedestrian Accessway

#### 1. Standards

Where an existing lot is nonconforming as to the pedestrian accessway requirements, any new construction, addition, site alteration or major renovation shall meet the minimum pedestrian accessway requirements.

#### 2. Exceptions

[Reserved]

### C. Pedestrian Bridges and Tunnels

#### 1. Standards

Where an existing lot is nonconforming as to the pedestrian bridge and tunnel requirements, any new construction, addition, site alteration or major renovation shall meet the minimum pedestrian bridge and tunnel requirements.

#### 2. Exceptions

[Reserved]

## SEC. 12.5.2. MOTOR VEHICLE ACCESS

### A. Motor Vehicle Access Packages

#### 1. Standards

Where an existing lot is nonconforming as to the automobile access package requirements, any new construction, addition, site alteration or major renovation shall meet the minimum automobile access package requirements.

#### 2. Exceptions

[Reserved]

### B. Motor Vehicle Use Area Design

#### 1. Standards

Where an existing lot is nonconforming as to the motor vehicle use area design requirements, any new construction, addition or site alteration shall meet the minimum motor vehicle use area design requirements.

#### 2. Exceptions

[Reserved]

## SEC. 12.5.3. BICYCLE PARKING

### A. Bicycle Parking Spaces

#### 1. Standards

Where an existing lot is nonconforming as to the bicycle parking spaces, any new construction, addition, site alteration or major renovation shall meet the minimum bicycle parking requirements.

#### 2. Exceptions

[Reserved]

### B. Short-Term Bicycle Parking Design

#### 1. Standards

Where an existing lot is nonconforming as to the short-term bicycle parking design requirements, any new construction, addition, site alteration or major renovation shall meet the minimum short-term bicycle parking design requirements.

#### 2. Exceptions

[Reserved]

### C. Long-Term Bicycle Parking Design

#### 1. Standards

Where an existing lot is nonconforming as to the long-term bicycle parking design requirements, any new construction, addition, site alteration or major renovation shall meet the minimum long-term bicycle parking design requirements.

## 2. Exceptions

[Reserved]

## SEC. 12.5.4. AUTOMOBILE PARKING

### A. Automobile Parking Stalls

#### 1. Standards

**a.** Where an existing lot is nonconforming as to the automobile parking space requirements, any new construction, addition or major renovation shall meet the minimum automobile parking requirements.

**b.** All currently provided parking spaces shall be considered as the required parking for an existing nonconforming use if the parking spaces are less than or equal to the parking required by the applicable Development Standards District.

#### 2. Exceptions

[Reserved]

### B. Alternative Parking Strategies

#### 1. Standards

Where an existing lot is nonconforming as to the alternative parking strategies requirements, any new construction, addition or major renovation shall meet the minimum alternative parking strategies.

#### 2. Exceptions

[Reserved]

### C. Parking Area Design

#### 1. Standards

Where an existing lot is nonconforming as to the parking area design requirements, any new construction, addition or major renovation shall meet the minimum parking area design requirements.

#### 2. Exceptions

[Reserved]

### D. Parking Lot Design

#### 1. Standards

Where an existing lot is nonconforming as to the parking lot design requirements, any new construction, addition or major renovation shall meet the minimum parking lot design requirements.

### 2. Exceptions

[Reserved]

## E. Parking Structure Design

### 1. Standards

Where an existing lot is nonconforming as to the parking structure design requirements, any new construction or addition shall meet the minimum parking structure design requirements.

### 2. Exceptions

[Reserved]

## F. Motor Vehicle Use Area Design

### 1. Standards

Where an existing lot is nonconforming as to the motor vehicle use area design requirements, any new construction, addition, site alteration or major renovation shall meet the minimum motor vehicle use area design requirements.

### 2. Exceptions

The required width and depth of a parking stall may be reduced to accommodate a structure solely supporting a solar energy system if it meets all of the following conditions:

**a.** The structural elements are within 10 inches of a corner of the stall farthest from the access aisle or vehicular access lane.

**b.** For tandem stalls, dimensions are reduced only for the stall farthest from the vehicular access lane.

**c.** The reductions are not applied to an accessible parking stall.

**d.** The parking lot already exists and is not new construction or site alteration."

# SEC. 12.5.5. TRANSPORTATION DEMAND MANAGEMENT

## A. Small, Medium or Large Projects

### 1. Standards

Where an existing building is nonconforming as to the transportation demand management requirements for the applicable floor area, any new construction, addition or major renovation shall meet the minimum transportation demand management requirements for the applicable floor area.

### 2. Exceptions

[Reserved]

## SEC. 12.5.6. PLANTS

### A. Protected Trees

#### 1. Standards

Where an existing lot is nonconforming as to the protected trees requirements, any new construction, addition or site alteration shall meet the minimum protected trees requirements.

#### 2. Exceptions

[Reserved]

### B. Tree Planting

#### 1. Standards

Where an existing lot is nonconforming as to the tree planting requirement, any new construction, addition or site alteration shall meet the minimum tree planting requirement.

#### 2. Exceptions

[Reserved]

### C. Streetscape Requirements

#### 1. Standards

Where an existing lot is nonconforming as to the streetscape requirements, any new construction, addition or major renovation shall meet the minimum streetscape requirements.

#### 2. Exceptions

[Reserved]

### D. Plant Design & Installation Requirements

#### 1. Standards

Where an existing lot is nonconforming as to the plant design and installation requirements, any new construction, addition or site alteration shall meet the minimum plant design and installation requirements.

#### 2. Exceptions

[Reserved]

## SEC. 12.5.7. FENCES AND WALLS

### A. Front Yard Fences and Walls

#### 1. Standards

Where an existing lot is nonconforming as to the front yard fences and walls requirements, any new construction, addition or major renovation shall meet the minimum front yard fences and walls requirements.

#### 2. Exceptions

[Reserved]

### B. Side/Rear Yard Fences and Walls

#### 1. Standards

Where an existing lot is nonconforming as to the side/rear yard fences and walls requirements, any new construction, addition or major renovation shall meet the minimum side/rear yard fences and walls requirements.

#### 2. Exceptions

[Reserved]

### C. Fence/Wall Design & Installation

#### 1. Standards

Where an existing lot is nonconforming as to the fence/wall design and installation requirements, any new construction, addition or major renovation shall meet the minimum fence/wall design and installation requirements.

#### 2. Exceptions

[Reserved]

## SEC. 12.5.8. SCREENING

### A. Frontage Screens

#### 1. Standards

Where an existing lot is nonconforming as to the frontage screen requirements, any new construction, addition, site alteration or major renovation shall meet the minimum frontage screen requirements.

#### 2. Exceptions

[Reserved]

### B. Transition Screens

#### 1. Standards

Where an existing lot is nonconforming as to the transition screen requirements, any new construction, addition, site alteration or major renovation shall meet the minimum transition screen requirements.

#### 2. Exceptions

[Reserved]

## SEC. 12.5.9. SCREENING

### A. Outdoor Storage, Waste Receptacles, Ground-Mounted and Roof-Mounted Equipment

#### 1. Standards

Where an existing lot is nonconforming as to the outdoor storage, waste receptacle or ground-mounted or roof-mounted equipment requirements, any new construction, addition, site alteration or major renovation shall meet the minimum open storage, waste receptacle and ground-mounted and roof-mounted equipment requirements.

#### 2. Exceptions

[Reserved]

## SEC. 12.5.10. GRADING

### A. Grading & Hauling Standards

#### 1. Standards

[Reserved]

#### 2. Exceptions

[Reserved]

### B. Retaining Walls

#### 1. Standards

Where an existing lot is nonconforming as to the retaining wall requirements, any new construction, addition or site alteration shall meet the minimum retaining wall requirements.

#### 2. Exceptions

*Retaining wall standards (Sec. 4C.9.2.C.)* does not apply to a retaining wall that received a final discretionary approval, as determined by the Director of Planning, from the City under another provision of this Zoning Code prior to the effective date of Ord. No. 176,445 (effective 3/9/05).

## SEC. 12.5.11. OUTDOOR LIGHTING AND GLARE

### A. Outdoor Lighting

#### 1. Standards

Where an existing lot is nonconforming as to the outdoor lighting requirements, any new construction, addition, site alteration or major renovation shall meet the minimum outdoor lighting requirements.

#### 2. Exceptions

[Reserved]

### B. Glare

#### 1. Standards

Where an existing lot is nonconforming as to the glare requirements, any new construction, addition, site alteration or major renovation shall meet the minimum glare requirements.

#### 2. Exceptions

[Reserved]

## SEC. 12.5.12. SIGNS

### A. Rules for All Signs

#### 1. Standards

[Reserved]

#### 2. Exceptions

Any existing nonconforming sign, as defined in *LAMC Section 91.6203 (Signs; Location)*, may be continued, provided that no structural, electrical or mechanical alterations are made to the sign except as permitted in *LAMC Section 91.6206 (Signs; Electrical)*.

### B. Temporary Signs

#### 1. Standards

## SEC. 12.5.13. RIDGELINE PROTECTION

### A. Ridgeline Protection Levels

#### 1. Standards

[Reserved]

#### 2. Exceptions

[Reserved]

## SEC. 12.5.14. ENVIRONMENTAL PROTECTION

### A. Environmental Protection Measures

#### 1. Standards

Where an existing lot is nonconforming as to the environmental protection measures requirements, any new construction, addition, site alteration or major modification shall meet the minimum environmental protection measures requirements.

#### 2. Exceptions

[Reserved]

# DIV. 12.6. NONCONFORMING USE

## SEC. 12.6.1. USE IN A DISTRICT

### A. General

1. Where an existing use is not allowed in the applicable Use District, the use may be continued, provided the use conformed to the zoning regulations, if any, at the time it was established.

2. Where an existing use is not allowed in the applicable Use District, it shall not be expanded into any other portion of the building in which it is located.

3. Where an existing use is not allowed in the applicable Use District, it may be relocated within the existing building, provided the move does not cause a net increase in the amount of floor area of the nonconforming use.

4. Any change of use shall conform to the current use regulations of the zone.

5. A building or structure or portion or a building or structure, or piece of land, which contained a nonconforming use that has been discontinued for a continuous period of one year or more, shall only be occupied by a use that conforms to the current use regulations of the zone.

### B. General Exceptions

Where a building in any Open Space, Agricultural, Residential, Commercial, Commercial-Mixed, or Public Use District includes an existing nonconforming use, any residential portion of the building may be enlarged, provided that the enlargement does not create an additional dwelling unit or guest room and the addition or expansion meets all other requirements for the applicable zone.

### C. Mandatory Discontinuance of Uses

#### 1. Commercial Uses

In Agricultural and Residential Use Districts, any nonconforming use of a building first permitted in a Commercial Use District shall be discontinued within 5 years from the date the use becomes nonconforming. However, the Zoning Administrator may permit its continuation pursuant to *Sec. 13.4.1. (Conditional Use Permit, Class 1)*.

#### 2. Manufacturing Uses

In Agricultural and Residential Use Districts, any nonconforming use of a building first permitted in an Industrial Use District shall be discontinued within 5 years from the date the use becomes nonconforming.

### D. Commercial Animal Keeping

Nonconforming Animal Farming and Livestock Keeping, or other similar uses, for commercial purposes in any Residential Use District, shall be completely abandoned within 15 years from the date such use became nonconforming.

### E. Use of Land

1. In Agricultural, Residential, and Commercial or Commercial-Mixed Use Districts, a nonconforming use of land where no buildings are utilized in connection with the use or where the only buildings utilized are accessory or incidental to the use, shall be discontinued within 5 years from the date the use becomes nonconforming.

2. A nonconforming use of land which is accessory or incidental to the nonconforming use of a building shall be discontinued on the same date the nonconforming use of the building is discontinued.

## SEC. 12.6.2. USE DISTRICT STANDARDS

Where an existing use does not meet the use district standards requirements, any new construction, addition or major modification shall meet the minimum use district standards requirements.

## SEC. 12.6.3. CITYWIDE USE STANDARDS

Where an existing use does not meet the citywide use standards requirements, any new construction, addition or major modification shall meet the minimum citywide use standards requirements.

## SEC. 12.6.4. USE LIMITATIONS

Where an existing use does not meet the use limitations requirements, any new construction, addition or major modification shall meet the minimum use limitations requirements.

## SEC. 12.6.5. CONDITIONAL USE

## SEC. 12.6.6. SPECIFIC NONCONFORMING USE PROVISIONS

### A. Nonconforming Uses in Industrial Use Districts

The nonconforming use of land in an Industrial Use District, where no buildings are utilized in connection with the use or where the only buildings utilized are accessory or incidental to the use, may be continued, subject to the following limitations.

1. The nonconforming use shall not be added to in any way either on the same or adjoining land beyond the limits of what was originally permitted.

2. The nonconforming use shall be completely enclosed within a building or within an area enclosed on all sides with a solid wall or solid fence of a height sufficient to screen the use from public view, but in no event less than 6 feet in height, within one year from the date the use becomes nonconforming.

3. A building in an Industrial Use District that is nonconforming as to use with no dwelling units or guest rooms shall not be redesigned or rearranged to contain dwelling units or guest rooms.

4. A building in an Industrial Use District that is nonconforming as to use with dwelling units or guest rooms shall not be redesigned or rearranged so as to increase the number of dwelling units or guest rooms in the building.

5. Nonconforming residential uses in Heavy Industrial Use Districts, except for caretakers quarters, shall not permitted to remain beyond 5 years from the date the use became nonconforming.

## B. Nonconforming Oil Wells

1. No well for the production of oil, gas or other hydrocarbon substances, which is a nonconforming use, shall be re-drilled or deepened.

2. Wells for the production of oil, gas or other hydrocarbon substances, which is a nonconforming use, including any incidental storage tanks and drilling or production equipment, shall be completely removed within 20 years from date such use became nonconforming. If said date was subsequent to June 1, 1946; provided, however, a Zoning Administrator may, pursuant to *Section 13.4.1. (Conditional Use Permit, Class 1)*, allow such wells to continue to operate after said removal date, if the Zoning Administrator determines that such continued operation would be reasonably compatible with the surrounding area and in connection therewith may impose such conditions, including time limitations, as they deem necessary to achieve such compatibility.

3. Regardless of *Subsection B*. above, in the Los Angeles City Oil Field, wells for the production of oil, gas or other hydrocarbon substances, which is a nonconforming use, may continue operation provided an application for a Conditional Use Permit, Class 1, was filed with the Office of Zoning Administration on or before November 1, 1986 and was subsequently approved. Any well operator may reapply for Zoning Administrator approval, pursuant to *Sec. 13.4.1. (Conditional Use Permit, Class 1)*, after November 1, 1986 provided the prior approval has not expired.

## C. Equine Keeping

### 1. Nonconforming Lots

Equines may be kept and a stable may be erected or maintained on any lot, as permitted, in a Residential Use District, provided said lot had the area required for the keeping of equines at the time the lot was established.

### 2. Equinekeeping

Equine uses shall be allowed to be continued if, after the legal establishment of the equine use, an adjacent property is granted a building permit to construct a dwelling unit within the 75-foot required distance between an equine use and the adjacent property's dwelling unit. The nonconforming equine use shall be subject to the following limitations.

**a.** The subject lot has been designated by an Equine License to stable at least one licensed equine during the 12 months prior to the issuance of the building permit for the adjacent property's dwelling unit.

**b.** The nonconforming equine use shall be discontinued if, during a successive 3-year period, no equine is licensed by the Department of Animal Services to be stabled on the subject lot.

**c.** The equine enclosure shall not be closer than 35 feet to the habitable rooms of any dwelling unit.

**d.** The equine enclosure shall not be expanded, extended or relocated in such a manner as to reduce the nonconforming distance between the enclosure and the habitable rooms of the neighbor's dwelling unit.

### 3. Construction of Dwelling Units on Adjacent Property

If, pursuant to *Sec. 13.4.1. (Conditional Use Permit, Class 1)*, the Zoning Administrator grants permission for a dwelling unit on an adjacent property to be constructed closer than 35 feet from a legally existing equine enclosure, the equine enclosure may be considered to be nonconforming if it is relocated not closer than 35 feet from the habitable rooms attached to any dwelling. The nonconforming equine enclosure shall be subject to the requirements of *Subsection B*. above.

### 4. Equinekeeping within 35 feet of a Residential Building

**a.** If an equine use was legally established prior to November 22, 1982, that use shall be allowed to continue, even though the City issued a building permit between November 22, 1982 and July 1, 1986, to construct a residential building on an adjacent lot within the 35-foot required distance between an equine use and the habitable rooms of a residential building on the adjacent lot.

**b.** This provision shall not apply to building permits authorized by the Zoning Administrator, pursuant to *Sec. 13.4.1. (Conditional Use Permit, Class 1)*. This nonconforming equine use shall be subject to the following limitations.

**i.** The subject lot has been designated by an Equine License to stable at least one licensed equine during the 12 months prior to the issuance of the building permit for the residential building on an adjacent lot.

**ii.** The nonconforming equine use shall be discontinued if, during a successive 3-year period, no equine is licensed by the Department of Animal Services to be stabled on the subject lot.

**iii.** The equine enclosure shall not be expanded, extended, or relocated in such a manner as to reduce the nonconforming distance between the enclosure and the habitable rooms of the residential building on an adjacent lot.

## SEC. 12.6.7. ORDERS TO COMPLY

The Department of Building and Safety shall have the authority to issue an order to comply to an owner of any building or structure who is in violation of this Division and advise the owner of the required discontinuance of the nonconforming use of the building or structure. Included in any order shall be a provision advising the owner of the right to apply to the Department of City Planning within 90 days for permission to continue the nonconforming use of the building or structure as provided in this Division, but the failure to include that provision shall not nullify the order or provide a basis for the continued use of the building or structure. The Department of Building and Safety shall record a notice of any order issued pursuant to this Division with the Office of the Los Angeles County Recorder, but the failure to so record shall not nullify the order or provide a basis for the continued use of the building or structure by any owner, purchaser or lessee who was not aware of the order.

# DIV. 12.7. NONCONFORMING DENSITY

## SEC. 12.7.1. STANDARDS

**A.** Nonconforming density may be continued, provided the density conformed to the zoning regulations, if any, at the time it was established.

**B.** A building that is nonconforming as to density may be repaired, structurally altered, or undergo major or minor renovation, provided the changes do not meet the definition of demolition.

**C.** A residential building that is nonconforming as to the area regulations (density) in the Open Space, Agricultural, Residential, Commercial Mixed, or Public Facility Use Districts, may be added on to, provided that the addition does not create any additional dwelling units or guest rooms.

**D.** No additional subdivision is permitted in any district that regulates density on a per lot basis or a per lot area basis.

## SEC. 12.7.2. EXCEPTIONS

A residential use with nonconforming density may be expanded or undergo major or minor renovation, provided that no additional units are added and the addition or renovation meets all other requirements for the applicable zone.

# DIV. 14.1. GENERAL STANDARDS & MEASUREMENT

## SEC. 14.1.1. COVERED AREA (%)

The measurement of how open an occupiable space is to the sky.

### A. Standards

#### 1. Covered

A space or structure is considered covered if it is covered with a horizontal projection having an area that is less than 75% open to the sky.

#### 2. Uncovered

A space or structure is considered uncovered if it has no horizontal projection covering it or if it is covered with a horizontal projection having an area that is less than 75% open to the sky.

### B. Measurement

**1.** Covered area is a percentage, measured as the total area that is open to the sky divided by the total area of the occupiable space.

**2.** Non-solid roof structures, such as lattice and pergolas, may be measured as open to the sky provided they meet the standard in *Sec. 14.1.1.A.2. (Uncovered)*.

## SEC. 14.1.2. DISTANCE, STRAIGHT LINE

The shortest distance between two points, measured horizontally.

## SEC. 14.1.3. DISTANCE, WALKING

Distance measured as the most direct path of travel for a pedestrian.

### A. Measurement

Walking distance is measured horizontally along the most direct route of travel on the ground in the following manner:

1. Starting at the nearest street-facing entrance accessible to the majority of tenants or residents on the subject lot;
2. In a straight line to the nearest public sidewalk, walkway, street or road;
3. Along a public sidewalk, walkway, street, or road; and
4. In a straight line ending at the nearest pedestrian access point to the destination use.

## SEC. 14.1.4. ENCLOSURE

The measurement of how closed off an occupiable space is to its surroundings.

### A. Standards

#### 1. Enclosed

A space or structure is considered enclosed when it has an enclosure of 66.7% or greater.

#### 2. Enclosed Within Structure

[Reserved]

#### 3. Unenclosed

A space or structure is considered unenclosed when it has an enclosure of less than 66.7%.

#### 4. Open Area

The portion of the perimeter of space or the portion of the projected plane along the perimeter of a space having no obstructing structure within 5' measured outward from the subject space.

#### 5. Solid Area

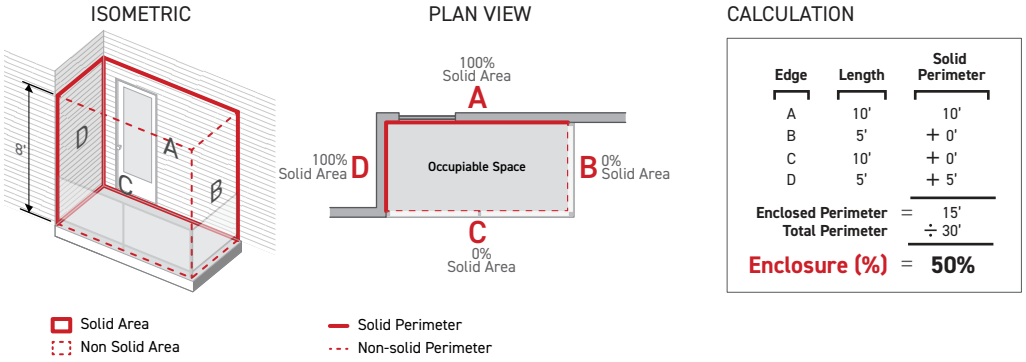
The portion of the perimeter of space or the portion of the projected plane along the perimeter of a space that does not meet the standards for *open area (Sec. 14.1.14.)*.

## B. Measurement

Enclosure is measured as a percentage of open area on an 8-foot tall vertical plane projected along the perimeter of the occupiable space.

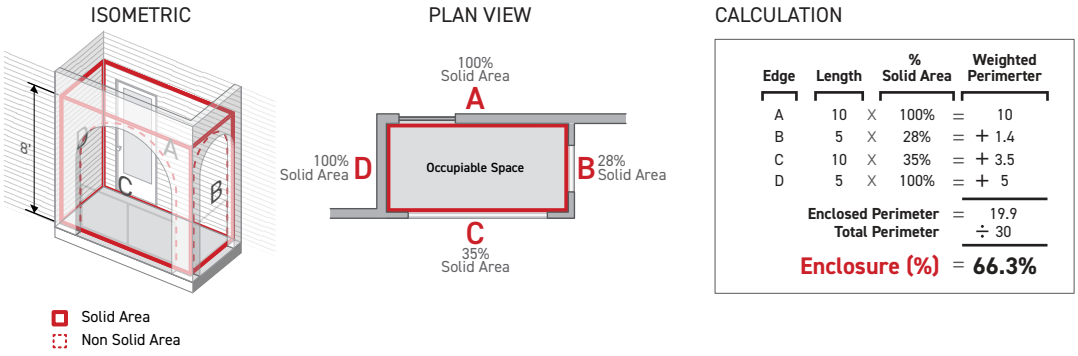
### 1. Solid Perimeter

For structures or spaces that do not mix solid and open area within the height of the projected plane, enclosure shall be calculated as the solid perimeter divided by the total perimeter.



### 2. Weighted Perimeter

For structures or spaces that mix solid and non-solid area within the height of the projected plane, enclosure shall be measured as the sum of all weighted open area for each plane, calculated as the percentage of the open area of each plane multiplied by its portion of the total perimeter.



## C. Exceptions

1. Protective barriers 45 inches in height or less, measured from finished floor elevation, having an opacity *(Sec. 14.1.14.)* of no more than 40% do not count toward enclosed perimeter.

2. Protective barriers 45 inches in height or less, measured from finished floor elevation, that are transparent with a minimum visual light transmittance of 60% and maximum external reflectance of 20% do not count toward enclosed perimeter.

## SEC. 14.1.5. ENCROACHMENT, HORIZONTAL

A structure or assembly that extends horizontally into a space where structures are typically prohibited.

### A. Standards

#### 1. Architectural Details

Building elements attached to or integrated into the structure of a building, not intended for human occupation.

(Examples include: cornices, belt courses, sills, lintels, pilasters, pediments and chimneys)

#### 2. Roof Projections

Roof elements that overhang or cantilever beyond the footprint of a building and do not include posts or columns.

(Examples include: Eaves, roof overhangs, gutters, awnings and canopies)

#### 3. Unenclosed Structures (Ground Story)

Structures having all finished floors and ground surfaces at or below the maximum ground floor elevation listed in Frontage and having a total structure height less than 15 feet, measured from grade.

(Examples include: porch, deck, stoop, landing platforms, gazebo, trellis, arbor, pergola, basketball hoop, volleyball nets)

#### 4. Unenclosed Structures (Above Ground Story)

Structures having finished floors or ground surfaces above the maximum ground floor elevation specified by *Frontage District (Part 3B)* or having a total structure height of 15 feet of greater, measured from surrounding finished grade, and meets the standards for *unenclosed (Sec. 14.4.A.2.)*.

(Examples include: balcony, upper-story light shelves, exterior stairways)

#### 5. Enclosed Projecting Structures

Structures that overhang or cantilever beyond the footprint of the building that meet the definition of enclosed.

Enclosed projecting structures shall have a cumulative length less than 25% of the width of the building. Each story is measured separately.

(Examples include: bay window, oriel window, sleeping porch, overhanging volume, enclosed balcony)

### 6. Mechanical Equipment (Ground Mounted)

Equipment supported by the ground related to privately operated systems, including related wires, conduits, and pipes.

(Examples include: gas meters, water softeners, pool equipment, HVAC equipment, gas tanks, cisterns, wind turbines and solar panels.)

### 7. Mechanical Equipment (Wall Mounted)

Equipment attached to a wall related to privately operated systems, including related wires, conduits, and pipes.

(Examples include: gas meters, electric meters, electrical panels, water heaters, HVAC equipment, and gas tanks.)

### 8. Waste Enclosure

Waste areas and their required screening structures.

(Examples include: trash compactors, garbage, recycling and food waste.)

### 9. Utility Equipment

Equipment related to public or utility operated systems, including related wires, conduits and pipes.

(Examples include: hydrants, transformers, utility cabinets, water utility devices, cable television or phone boxes.)

### 10. Underground Structures

Covered structures located entirely below finished grade.

(Examples include: cellars, basements, parking structures, storm water storage and cisterns.)

### 11. Flatwork

Structures 2.5 feet in height or less, measured from finished grade.

(Examples include: pavement, sidewalks, multi-use paths, patios, low decks, and stairs and ramps that are 2.5 feet in height or less.)

### 12. Fences, Walls, Hedges and Screening

Fences, walls and hedges including allowed frontage yard walls and fences, allowed rear and side yard fences and walls, and required screening may encroach into any required setback up to the lot line, provided that fences and walls in any frontage yard are allowed by the frontage yard fence and wall standards specified by *Frontage District (Part 3B)*.

(diagram needed)

#### 13. Vegetation

Living organisms, absorbing water and organic substances through its roots and synthesizing nutrients.

#### 14. Outdoor Furniture

Permanent or movable furniture including benches, tables, and bike and scooter parking racks may encroach into any required setback up to the lot line.

#### 15. Signs

See *Sec. 4C.12 (Signs)*

### B. Measurement

#### 1. Encroachment

Encroachment is measured as the horizontal distance from the edge of the area where structures are restricted.

#### 2. Distance from Lot Line

Distance from lot line is measured as the horizontal distance from a lot line. Distance from lot line is measured toward the interior of the lot along the full perimeter of the lot line.

### C. Exception

Alterations to existing structures may encroach beyond the limitations of this Code only where such limitations prohibit compliance with California State Accessibility Standards or Fire Code. When greater encroachments are necessary, the encroachment shall extend the minimum amount necessary to achieve compliance.

## SEC. 14.1.6. ENCROACHMENT, VERTICAL

A structure or assembly that extends vertically into a space where structures are typically prohibited.

### A. Standards

#### 1. General

**a.** No vertical encroachments are allowed that contribute to floor area.

**b.** Alterations to existing structures may encroach beyond the limitations of this Code only where such limitations prohibit compliance with California State Accessibility Standards or Fire Code. When greater encroachments are necessary, the encroachment shall extend the minimum amount necessary to achieve compliance.

#### 2. Mechanical Equipment (Roof Mounted)

Equipment supported by a roof related to public or privately-operated systems, including related wires, conduits, pipes and visual screens.

(Examples include: HVAC equipment, cisterns, water tanks, wind turbines, solar panels, solar water heaters, exhaust ducts, smokestacks, wireless masts, communication equipment, satellite dishes, ventilation fans, chimney, flues, vent stacks, generators)

#### 3. Architectural Elements

Building elements attached to or integrated onto the roof of a building, not intended for human occupation.

(Examples include: skylights, steeples, spires, belfries, cupolas, domes, flagpoles, lighting)

#### 4. Vertical Circulation

Enclosed and covered structures used for building circulation and rooftop access.

(Examples include: elevator room, and associated equipment, stairway access to roof)

#### 5. Safety Guards

Vertical barriers required for safety and protection.

(Examples include: fencing, walls, parapets and railing)

#### 6. Unenclosed Structures

Unenclosed areas attached to or integrated onto the roof of a building, intended for human shelter or activity.

(Examples include: shade structures, cabanas, pergolas, rooftop bar, outdoor dinning, permanent seating, beehives, sports courts, and cooking facilities)

#### 7. Flatwork

Constructed objects 2.5 feet in height or less.

(Examples include: decking, walkways, patios and planters, provided they are 2.5 feet in height or less.)

#### 8. Vegetation

Living organisms, absorbing water and organic substances through its roots and synthesizing nutrients.

(Examples include: trees, shrubs, flowers, herbs, vegetables, grasses, ferns, mosses)

#### 9. Signs

See *Sec. 4C.12 (Signs)*

## B. Measurement

### 1. Encroachment

#### a. Height in Feet

For any Form District with a maximum height in feet standard, encroachment is measured as the vertical distance from the maximum allowed height in feet to the topmost point of the encroaching object.

#### b. Height in Stories Only

For Form Districts where height is only regulated in stories, encroachment is measured as the vertical distance from the top of the roof deck to the topmost point of the encroaching object.

### 2. Setback from Roof Edge

Setback from roof edge is measured as the horizontal distance from the outermost edge of the roof structure. Setback from roof edge is measured inward along the full perimeter of the roof structure.

## SEC. 14.1.7. FLOOR AREA

The cumulative amount of interior floor space on a lot.

### A. Measurement

#### 1. General

**a.** Floor area is calculated as the sum of all interior floor space for each story of a building.

**b.** The following areas are included in the calculation of floor area:

**i.** All interior areas within the exterior walls of a building;

**ii.** Any structure that is both enclosed *Sec. 14A.1.4.C.1. (Enclosed)* and covered *Sec. 14A.1.1.B.1. (Covered)*.

**c.** The following are not included in the calculation of floor area:

**i.** Exterior walls.

**ii.** Bicycle parking areas.

**iii.** All automobile parking areas, except for RL Use Districts as specified in *Sec. 14.1.7.A.2.* and Development Standard Districts 5 and 6 as specified in *Sec. 14.1.7.A.3.*.

**iv.** Spaces with ceiling heights less than 7 feet measured from finished floor (examples: floored attic space and space under stairs).

**v.** *Basements (Sec. 14.1.18.B.)* or underground structures (examples: underground parking and cellars)

**vi.** Stairways and elevator shafts.

**vii.** Mechanical equipment that is integral or incidental to the operation of on-site buildings, provided that the equipment does not serve off-site buildings.

#### 2. RL Use Districts

**a.** Any floor or portion of a floor with a ceiling height greater than 14 feet counts as twice the square footage of that area.

**b.** Up to 400 square feet of a detached garage is exempt from the calculation of floor area provided the structure is:

**i.** Separated from the primary structure a minimum of 10 feet; and

**ii.** Located a minimum of 40 feet from a primary street lot line.

**c.** Up to 200 square feet of an attached garage is exempt from the calculation of floor area.

**d.** No more than 400 square feet of garage floor area may be exempt per lot.

**e.** Accessory buildings not exceeding 200 square feet are exempt from the calculation of floor area; provided, the total combined area exempted of all the detached accessory buildings on a lot does not exceed 400 square feet.

### 3. Development Standard Districts 5 and 6

**a.** All covered, above-grade parking areas are included in the calculation of floor area.

**b.** Occupiable space located on the ground story is not included in the calculation of floor area. For the purpose of calculating floor area, occupiable space includes lobbies, meeting rooms, gyms, and occupiable ground floor tenant space. Areas for circulation, restrooms, and storage are not considered occupiable spaces and therefore count toward floor area.

## SEC. 14.1.8. FREQUENCY

### A. Measurement

**1.** Frequency is a ratio measured as the number of required occurrences of an object over a specified distance (displayed as "occurrences : distance" or "occurrences per distance").

**a.** Occurrences of an object is measured as the total quantity of a required object located within the specified distance.

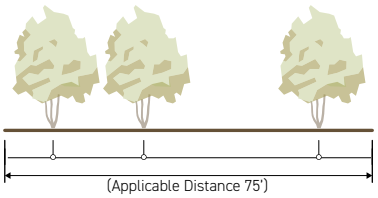
**b.** Specified distance is measured horizontally.

**2.** When calculating the number of required objects over a provided distance that is shorter or longer than that specified in a frequency ratio, divide the required occurrence of an object by the specified distance, then multiply this quotient by the provided distance. Fractional required occurrences may be rounded down to the nearest whole occurrence so long as a minimum of one occurrence is provided.

**3.** Frequency standards do not preclude irregular spacing.

EXAMPLE

(Occurrences)
**Frequency: 1 per 30'**
(Distance)



FORMULA

$$\frac{\text{Applicable Distance (75')}}{\text{Standard Distance (30')}} \times \text{Standard Occurrences (1)} = \textbf{Required Occurrences (3)}$$

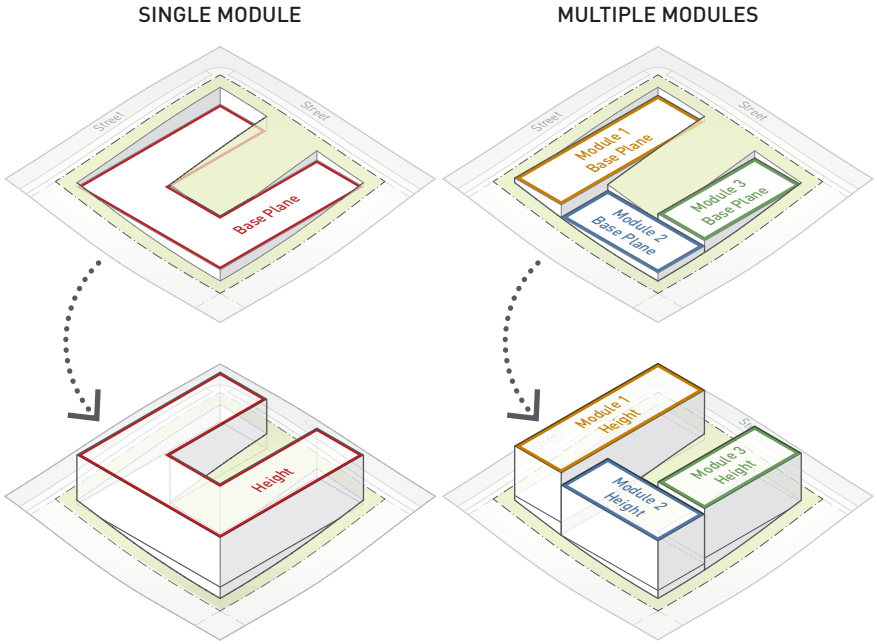
## SEC. 14.1.9. GRADE PLANE

The elevation from which building and structure height is measured.

### A. Measurement

#### 1. General

Grade plane elevation is determined at the footprint of each building. Grade plane elevation for each individual building is established using one or multiple grade plane modules, as determined by the applicant.



## 2. Grade Plane Module

Grade plane elevation for each individual grade plane module is determined by the calculation below:

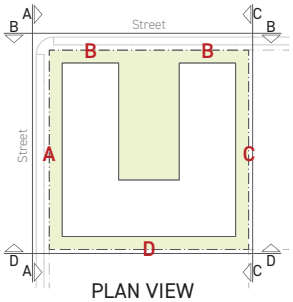
**a.** Measuring each building elevation average grade (see Sec. 14.1.9.A.3.);

**b.** Calculating each building elevation weighted average grade by multiplying each building elevation average grade by the total length of the elevation;

**c.** Summing the total of all weighted average grades calculated in paragraph b) above; then

**d.** Dividing the result by the total length of applicable elevations in the Module.

### SINGLE MODULE

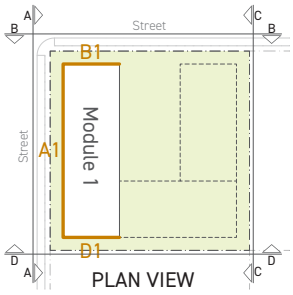


PLAN VIEW

[Avg. Grade Elevation A X Elevation A Length] + [Avg. Grade Elevation B X Elevation B Length] + [Avg. Grade Elevation C X Elevation C Length] + [Avg. Grade Elevation D X Elevation D Length] ÷ [Total Length of Module Elevations] = [Base Plane Elevation]

FORMULA

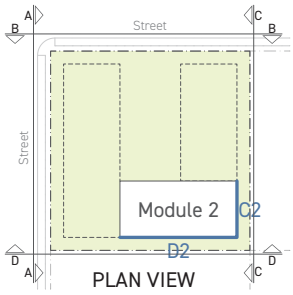
### MULTIPLE MODULE



PLAN VIEW

[Avg. Grade Elevation A1 X Elevation A1 Length] + [Avg. Grade Elevation B1 X Elevation B1 Length] + [Avg. Grade Elevation D1 X Elevation D1 Length] ÷ [Total Length of Module 1 Elevations] = [Module 1 Base Plane Elevation]

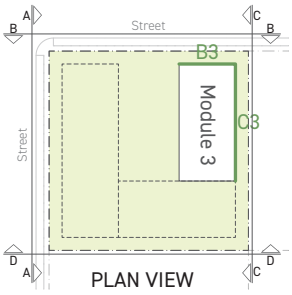
FORMULA



PLAN VIEW

[Avg. Grade Elevation C2 X Elevation C2 Length] + [Avg. Grade Elevation D2 X Elevation D2 Length] ÷ [Total Length of Module 2 Elevations] = [Module 2 Base Plane Elevation]

FORMULA



PLAN VIEW

[Avg. Grade Elevation B3 X Elevation B3 Length] + [Avg. Grade Elevation C3 X Elevation C3 Length] ÷ [Total Length of Module 3 Elevations] = [Module 3 Base Plane Elevation]

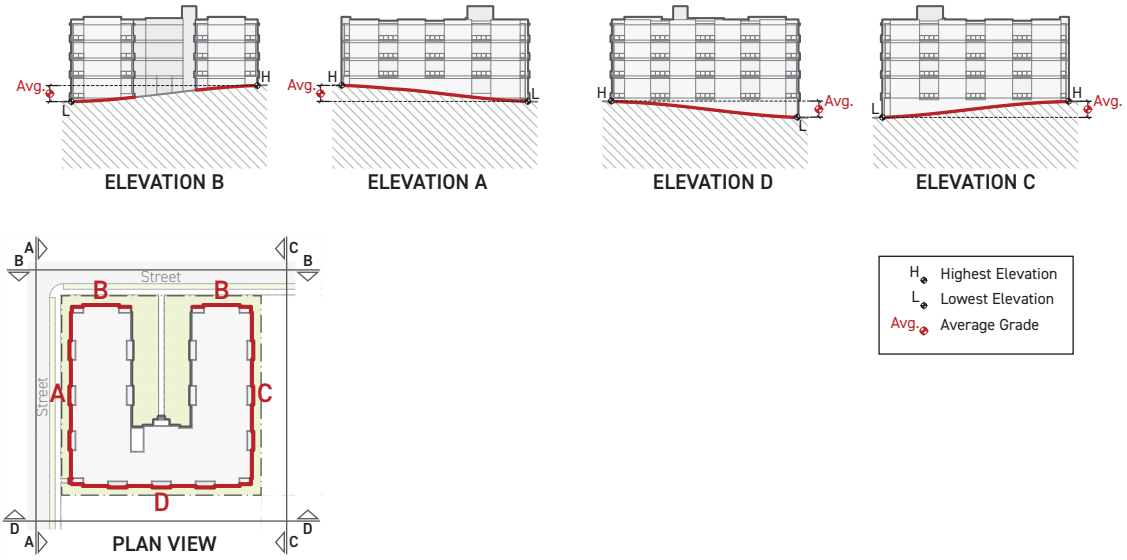
FORMULA

## 3. Building Elevation Average Grade

Building elevation average grade for each individual applicable building elevation (see *Sec. 14.1.9.A.4.*) is determined by:

**a.** Averaging the highest and lowest elevation along original grade or finished grade (whichever is more restrictive) along the base of each applicable facade (see Sec.14.1.9.A.5.).

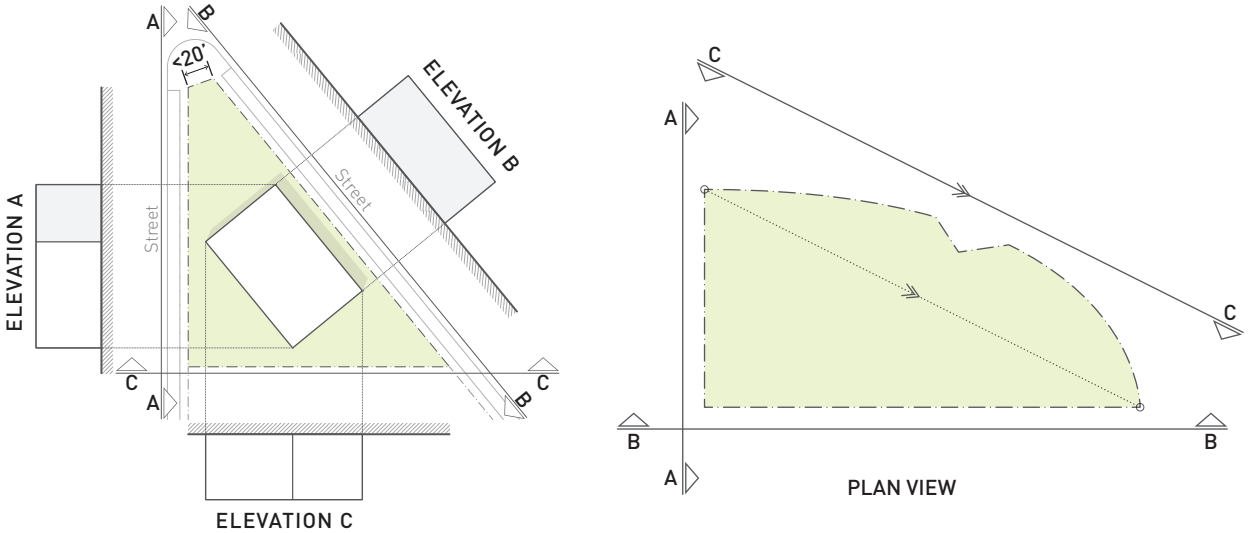
**b.** For the purpose of this section, where a grading plan has been approved by the City, average grade is calculated from the finished grade.



## 4. Applicable Building Elevations

**a.** Building elevations are projected parallel to each lot line greater than 20 feet long.

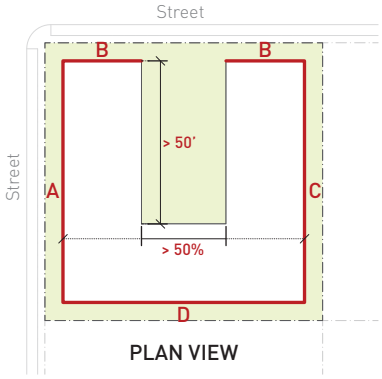
**b.** Building elevations along curved or complex property lines are projected parallel to a line connecting the end points of the curved or complex property line.



### 5. Applicable Facades

**a.** All facades visible from the applicable building elevations (see Sec.14.1.9.A.4.) shall be included in calculating building elevation average grade (see Sec.14.1.9.A.3.).

**b.** Building facades more than 50 feet behind the lot-line facing facade nearest to an associated property line are not included in the calculation of building elevation average grade (see Sec.14.1.9.A.3.), provided they are less than 50% of the total building width.



PLAN VIEW

## B. Standards

Retaining walls and fill cannot be used to raise grade and increase the allowable height of a structure unless established in conformance with a grading plan.

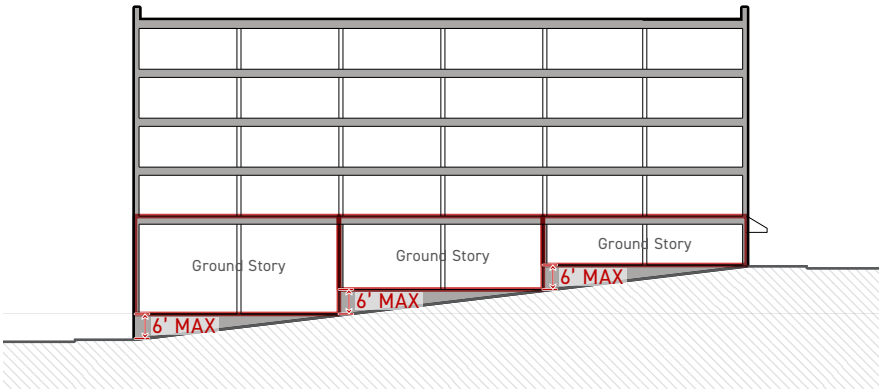
## SEC. 14.1.10. GROUND STORY DETERMINATION

The lowest story of a building or structure having a minimum of 6 feet exposed above finished grade for all portions of its perimeter.

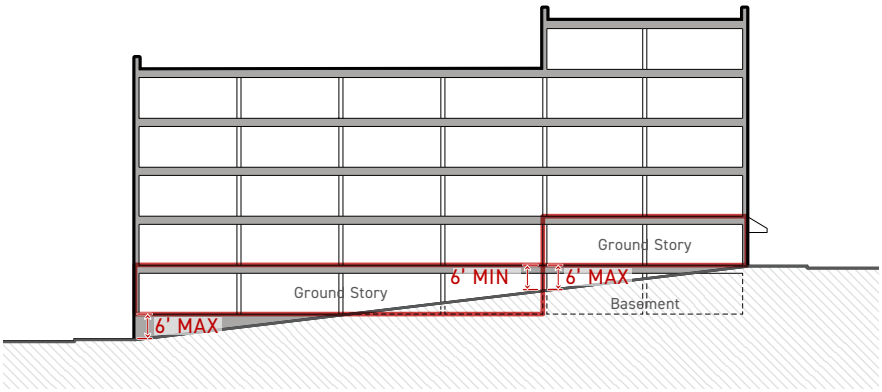
### A. Measurement

Ground story is the first story above grade plane that meets the following standards:

**1.** The finished ground floor elevation shall not be greater than 6 feet above finished grade for any portion of the building perimeter.



**2.** A higher or lower floor may be designated as the ground story for different portions of a building. A ground story shall be exposed above surrounding grade at least 6 feet for all portions of the building perimeter.



## SEC. 14.1.11. LOT

One or more parcels of land identified for the purpose of development.

**A.** A lot may be composed of one or more contiguous parcels.

**B.** All parcels composing a lot shall be owned by the same person or entity.

**C.** For the purpose of a meeting standards associated with an applicable zone, a lot composed of multiple parcels may meet all applicable standards independently for each parcel or the lot may meet the standards treating the collection of contiguous parcels as a single parcel.

**D.** A lot does not include portions of a lot required for land dedication (eg. proposed rights-of-way) with the exception of required street corner dedications. Required street corner dedications are included in all measurements of a lot.

**E.** A lot includes all portions of a lot allocated to city or utility easements

## SEC. 14.1.12. LOT LINE DETERMINATION

### A. General

**1.** A lot line shall have only one designation.

**2.** Each lot line shall have one of the following designations:

**a.** Primary street lot line;

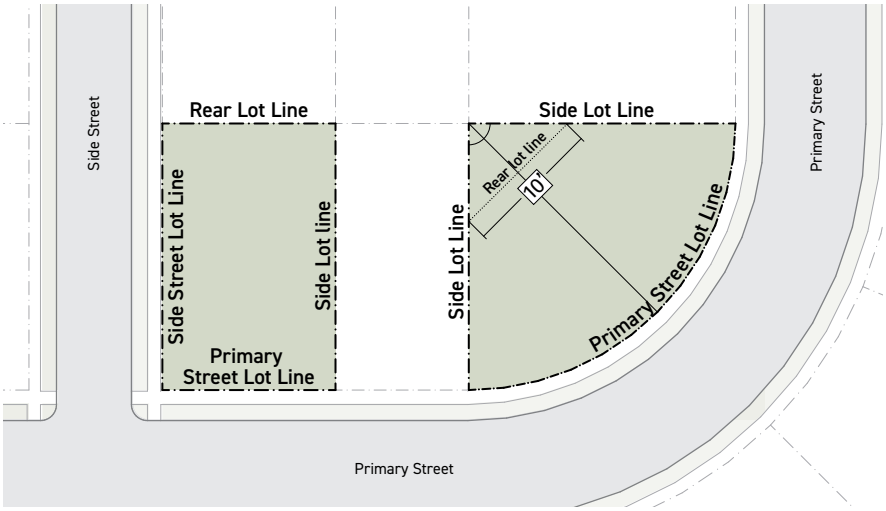
**b.** Side street lot line;

**c.** Side lot line;

**d.** Rear lot line;

**e.** Alley lot line; or

**f.** Special lot line.



## B. Frontage Lot Line

1. A frontage lot line is any lot line required to meet frontage standards.
2. Frontage lot lines include all lot lines with the following designations:
   a. Primary street lot lines,
   b. Side street lot lines, and
   c. Special lot lines.

## C. Primary Street Lot Line

A lot line separating a lot from a primary street right-of-way.

1. Each lot shall have at least one primary street lot line. A lot may have more than one primary street lot line.
2. A primary street may be mapped as outlined in Sec. 1.4.3. (Primary Street Map). When mapped as outlined in Sec. 1.4.3., the lot line abutting the mapped primary street shall always be designated a primary street lot line.
3. For lots that abut multiple streets that have not been mapped as a primary street, a primary street lot line is determined using the following:
   a. The street or streets with the highest classification (Mobility Plan Street Designation);
   b. The established orientation of the block;
   c. The street abutting the longest face of the block;
   d. The street parallel to an alley within the block;
   e. The street that the lot takes its address from;
   f. The primary street lot line designation of adjacent development, either existing or approved; and
   g. Whether the street faces a publicly accessible open space.
4. Where determining the primary street using the above criteria is unclear, primary street lot line may be determined by the Director of Planning according to *Sec. 13B.3.1. (Administrative Review)*.
5. Once designated for a site, a primary street lot line cannot be changed (e.g., a primary street lot line cannot, for purposes of subsequent development, be re-designated a side street lot line) unless all standards of the applicable Zone are met based on the proposed change in street lot line designation.

## D. Side Street Lot Line

A lot line separating a lot from a side street right-of-way. Any street lot line not determined to be a primary street lot line (see Sec.16.2.3.) is considered a side street lot line.

## E. Special Lot Line

1. Any lot line that is not a primary street or side street lot line that has frontage standards identified in a *Dual Frontage District (Div. 3B.8.)* or in the *Daylight Factory/River Character Frontage (Sec. 3B.9.4.)*. Even when a lot line qualifies as a rear lot line, side lot line, all lot lines that qualify as a Special lot line shall be designated as such.

2. Special lot lines include but are not limited to, river lot lines, special alley lot lines and park lot lines.

## F. Side Lot Line

Any lot line not determined to be a primary street, side street, rear, alley or special lot line. When uncertainty exists, a lot line is a side lot line when it is also a side lot line on an abutting lot.

## G. Rear Lot Line

A lot line that is opposite and most distant from a primary street lot line and is approximately parallel to it.

1. A lot may have only one lot line designated as a rear lot line.

2. In the case of a through-lot, a lot may have no rear lot line.

3. When uncertainty exists or where there are multiple primary street lot lines, a lot line is a rear lot line when it is also a rear lot line on an abutting lot.

## H. Alley Lot Line

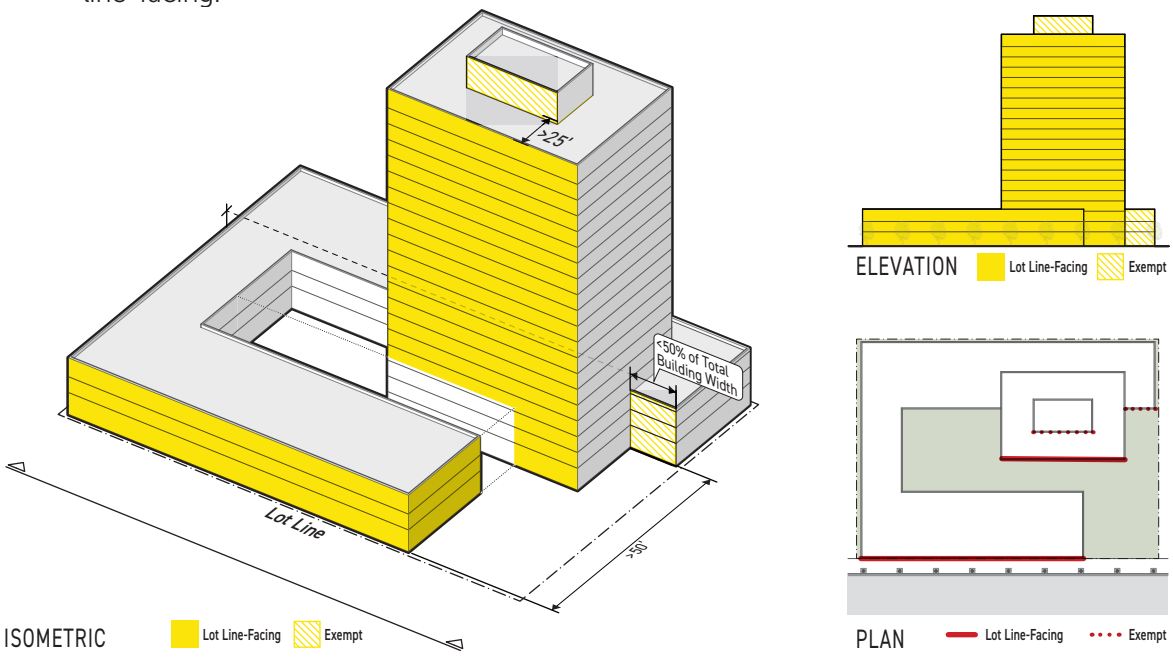
Any lot line separating a lot from an alley right-of-way. Even when a lot line qualifies as a rear lot line, or side lot line, all lot lines that abut an alley right-of-way shall be designated an alley lot line.

## SEC. 14.1.13. LOT LINE-FACING FACADE

The portions of a building facade with no permanent structure located between the building facade and a street lot line.

### A. Measurement

1. All facades visible from a building elevation projected parallel to the lot line are considered lot line-facing.



2. For elevations along curved or complex lot lines, see *Sec. 14-1.1.15. (Parallel or Perpendicular to Street)*.

### B. Exceptions

1. Building facades more than 50 feet from the building facade nearest to the lot line, are not included, provided they are less than 50% of the total building width. The distance from the nearest building face is measured perpendicular to the lot line.

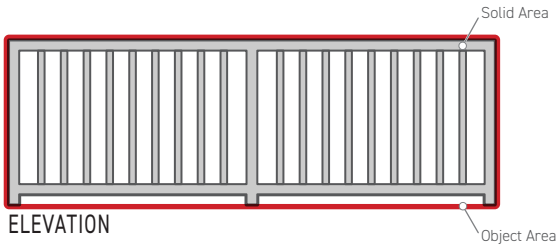
2. Building facades that are located entirely above the 6th story and are stepped-back more than 25 feet from the outer edge of the story below are not included provided the stepped-back facade is less than 10% the total building height.

## SEC. 14.1.14. OPACITY (%)

### A. Measurement

1. Opacity is measured as a percentage, calculated by dividing the solid portion of the object area by the total area of the object.

2. The total area of the object is measured as the smallest regular shape containing all elements of the object or assembly.



FORMULA

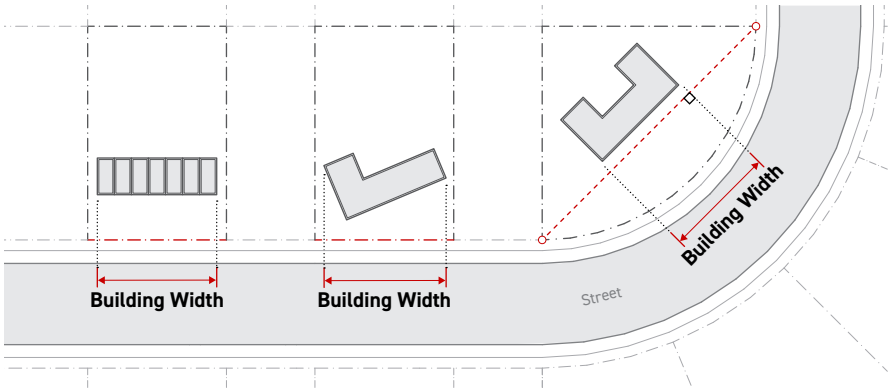
$$\frac{\text{Solid Area}}{\text{Object Area}} = \textbf{Opacity (\%)}$$

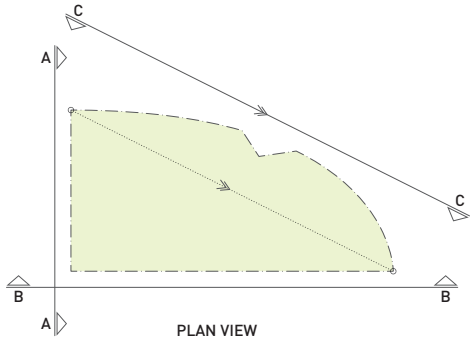
### B. Exception

Any solid permanent structure within a distance of 5 feet from the subject object, measured perpendicular from the object area, renders otherwise non-solid areas solid for the purpose of measuring opacity.

## SEC. 14.1.15. PARALLEL OR PERPENDICULAR TO STREET

Where a street lot line is curved and only abutting one street, standards measured parallel or perpendicular to that street lot line assume the angle of the lot line to be the same as a straight line connecting the endpoints of the curved lot line segment.



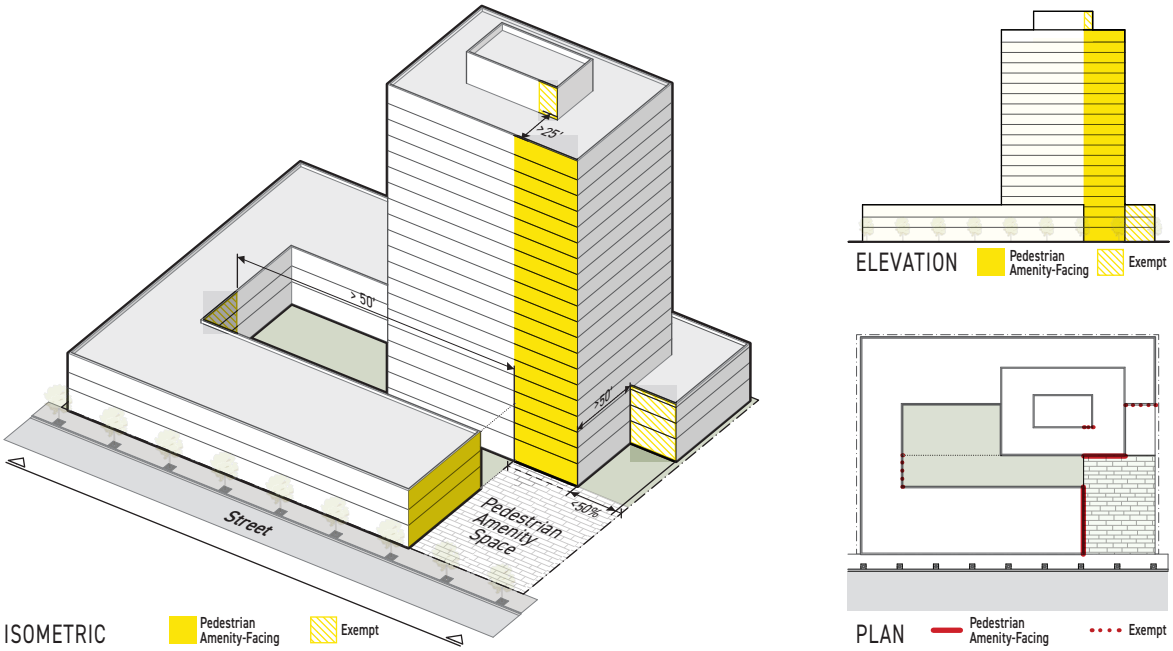


## SEC. 14.1.16. PEDESTRIAN AMENITY-FACING FACADE

The portions of a building facade with no permanent structure located between the building facade and a pedestrian amenity space.

### A. Measurement

All portions of a facade visible from the 3 required building elevations below (Sec. 14.1.16.A.1., 2. and 3.) are considered pedestrian amenity-facing.



1. An elevation from the pedestrian amenity space projected parallel to the frontage lot line,
2. An elevation from the pedestrian amenity space projected perpendicular to the frontage lot line facing to the right of the frontage lot line, and
3. An elevation from the pedestrian amenity space projected perpendicular to the frontage lot line facing to the left of the frontage lot line.
4. For elevations along curved or complex frontage lot lines, see *Sec. 14-1.1.15. (Parallel or Perpendicular to Street).*

### B. Exceptions

1. Building facades more than 50 feet from the pedestrian amenity space are not included, provided they are less than 50% of the total width of the pedestrian amenity space.
2. Building facades that are located entirely above the 6th story and are stepped-back more than 25 feet from the outer edge of the story below are not included provided the stepped-back facade is less than 10% the total building height.

# SEC. 14.1.17. PROJECT ACTIVITIES

## A. Area of Work

That portion or portions of a building or lot consisting of all reconfigured spaces as indicated on the construction documents. Area of Work includes portions of the building or lot where work not initially intended by the owner is specifically required by this Chapter or the Building Code. Area of Work excludes other portions of the building or lot where incidental work entailed by the intended work shall be performed.

## B. Project

The new construction, addition, structural alteration, demolition, reconstruction, rehabilitation, relocation, removal or restoration of the exterior of any building, structure or landscaping and the installation of any sign, fence or wall. Project also includes any use of land or change in use. A project may or may not require a building permit.

## C. Project Activities

### 1. Subdivision

The division of land as defined in *Section 66424 of the Subdivision Map Act*.

### 2. Demolition

The removal of any of the following:

**a.** More than 50% of the perimeter wall framing.

**b.** More than 50% of the roof framing.

**c.** More than 50% of the structural members.

### 3. New Construction

Any work including the construction of a building or structure that is structurally detached from existing buildings and structures on a lot.

### 4. Addition

Any work that increases the floor area or the volume of enclosed space of an existing building, and is structurally attached to the existing building.

### 5. Facade Alteration

Any modification to one of the following:

**a.** The facade of a building,

**b.** The roof or a building,

**c.** A structure attached to the facade, or

**d.** A structure located between the frontage lot line and the facade of a building.

### 6. Site Alteration

Any exterior modification of site landscaping or the lot, including grading, flatwork, and parking lot resurfacing and restriping.

### 7. Relocation

The movement of a building or structure from its existing location to another location.

### 8. Major Renovation

The alteration of the interior of any building or structure that does not expand the building or structure, and for which the aggregate value of the alterations within any 24-month period exceeds 50% percent of the replacement cost of the building or structure, as determined by the Department of Building and Safety.

### 9. Minor Renovation

The alteration to the interior of any building or structure that does not expand the building or structure, provided that the alteration does not qualify as a major renovation. Minor renovation includes interior alterations for fire, life safety and handicapped requirements regardless of scope of work and aggregate valuation.

### 10. Change of use

See "Use, Change of" in *Division 14.2 (Glossary)*.

### 11. Ordinary Maintenance and Repair

Ordinary maintenance and repair is any work done to correct the deterioration, decay of, or damage to a any part of a building, structure or lot, including in-kind replacement, which does not involve a change in the existing design.

## SEC. 14.1.18. STORY

The portion of a building included between the upper surface of a floor and the upper surface of the floor next above, except that the topmost story is that portion of a building included between the upper surface of a floor and the upper surface of the ceiling structure above.

### A. Attic

An attic is not considered a story when less than 50% of the floor area is occupiable space.

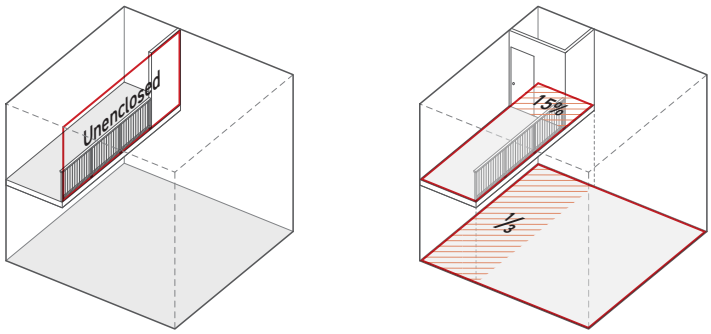
### B. Basement

A basement is not considered a story when it is not exposed more than 6 feet above finished grade at any portion of its perimeter. Any story exposed more than 6 feet above finished grade is considered the ground story for that portion of the building.

### C. Mezzanine

A mezzanine is not considered a story when it meets the following standards:

1. The mezzanine floor area shall not be greater than 1/3 of the floor area of the room or space it is included within,
2. The mezzanine perimeter shall be unenclosed with the exception of the surrounding walls enclosing the room or space it is included within.
3. Within the mezzanine floor area, a maximum of 15% of the mezzanine floor area may be enclosed.

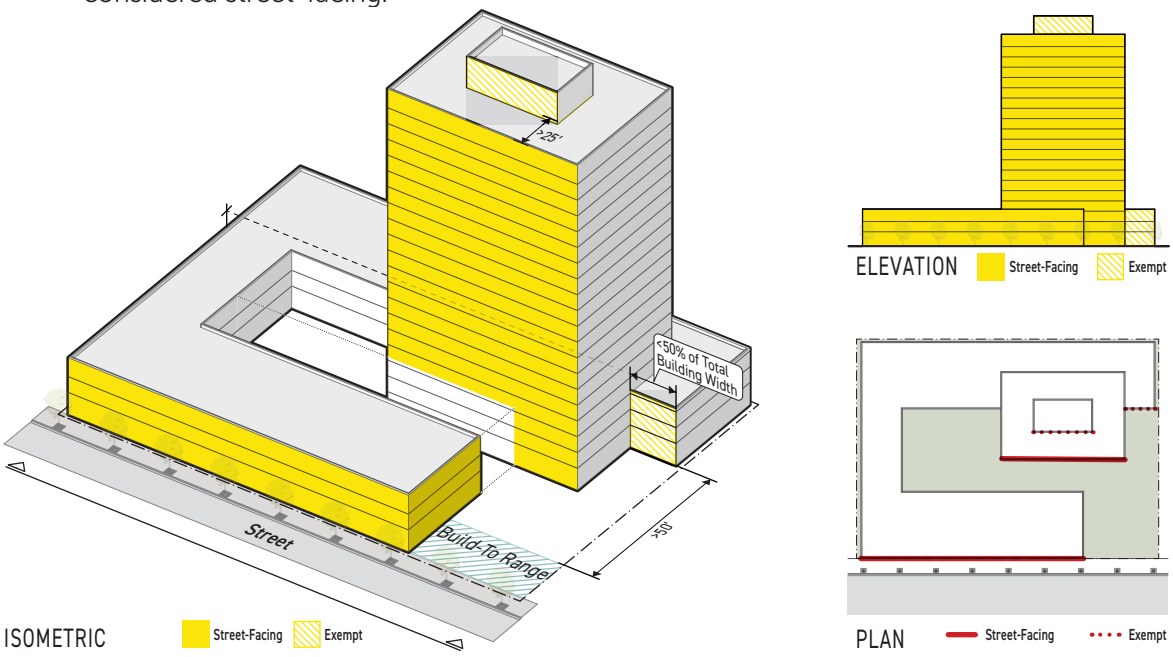


## SEC. 14.1.19. STREET-FACING FACADE

The portions of a building facade with no permanent structure located between the building facade and a street lot line.

### A. Measurement

1. All facades visible from a building elevation projected parallel to the street lot line are considered street-facing.



2. For elevations along curved or complex frontage lot lines, see *Sec. 14-1.1.15. (Parallel or Perpendicular to Street).*

### B. Exceptions

1. Building facades more than 50 feet from the maximum setback in the build-to range are not included, provided they are less than 50% of the total building width.

2. Building facades that are located entirely above the 6th story and are stepped-back more than 25 feet from the outer edge of the story below are not included provided the stepped-back facade is less than 10% the total building height.

## SEC. 14.1.20. YARD DESIGNATION

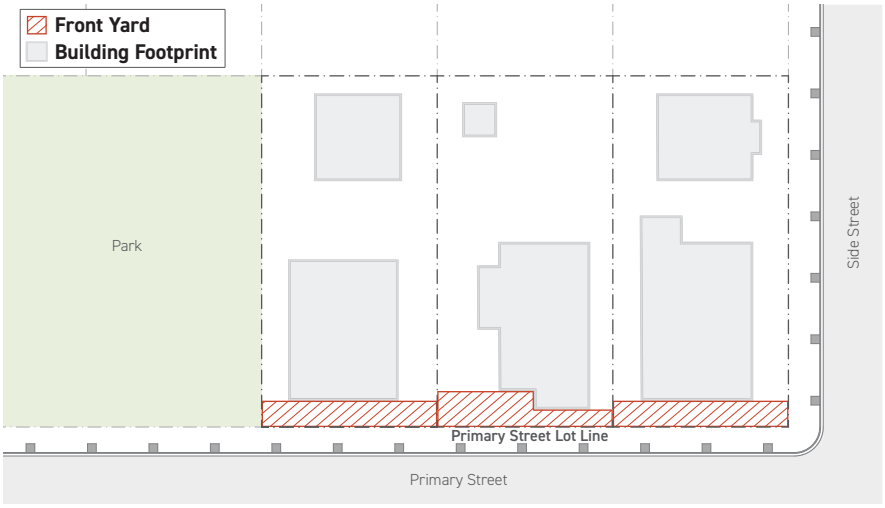
### A. General

1. All portions of a lot between exterior walls of a building and a property line shall be designated as either a front yard, special yard, side street yard, side yard, or rear yard.

2. No portions of a lot may have more than one yard designation.

### B. Front Yard

All portions of a lot between a primary street lot line and a principal structure facing a primary street lot line extending the full width of the lot.



1. No less than 80% of the width of each primary street-facing principal structure shall abut the front yard. Only portions of a building width set at least 15 feet behind the front building facade, measured perpendicular to the primary street lot line, may be excluded.

2. Portions of a lot that meet the criteria for front yard designation shall not be designated as any other yard.

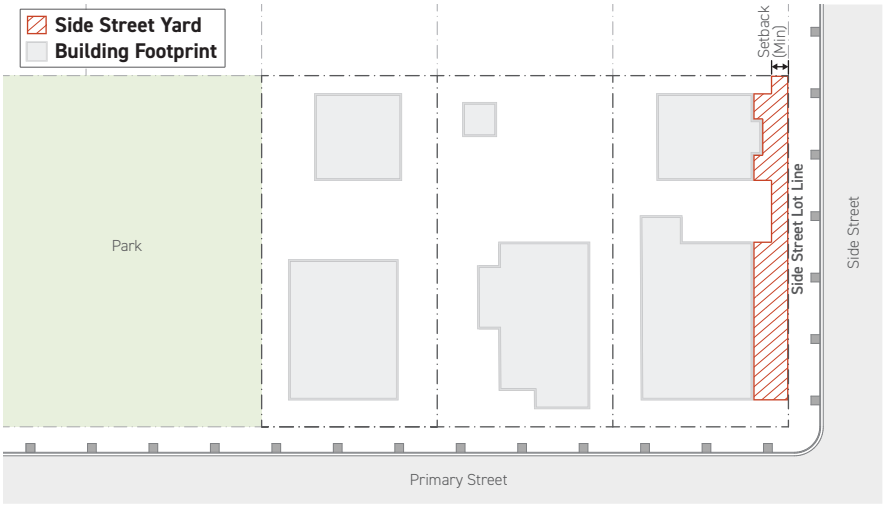
## C. Special Yard

All portions of a lot between a special lot line and a principal structure facing a special lot line extending the full width of the lot.

1. Special yards include but are not limited to river, special alley, and park yards.
2. No less than 80% of the width of principal structures facing the special lot line shall abut the special yard. Only portions of a building set at least 15 feet behind the front building facade, measured perpendicular to the special lot line, may be excluded.
3. For portions of the lot width where no primary structure faces the special lot line, the special yard includes only portions of the lot included in the minimum special lot line setback as specified by *Frontage District (Part 3B)*.
4. Portions of a lot that meet the criteria for special yard designation shall not be designated as a side street yard, rear yard or side yard.

## D. Side Street Yard

The portions of a lot between a side street lot line and a principal structure facing a side street lot line.



1. No less than 80% of the width of each side street-facing principal structure shall abut the side street yard. Only portions of a building width set at least 15 feet behind the front building facade, measured perpendicular to the side street lot line, may be excluded.

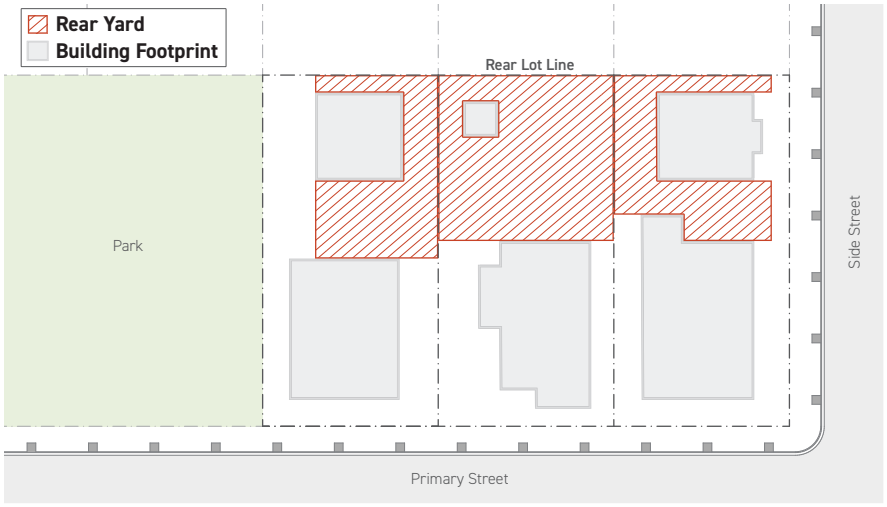
2. For portions of the lot width where no primary structure faces the side street lot line, the side street yard includes only portions of the lot included in the side street setback.

3. Portions of a lot that meet the criteria for side street yard designation shall not be designated as a rear yard or side yard.

[graphic needed]

## E. Rear Yard

The portions of a lot between a rear lot line and a principal structure. Portions of a lot that meet the criteria for rear yard designation shall not be designated as a side yard.



## F. Side Yard

The portions of a lot between a side lot line and a principal structure. All portions of a lot that do not meet the yard designation criteria for any other yard shall be designated as a side yard.

## G. Frontage Yard

Frontage yard is a category of yards referring to all yards that abut a frontage lot line including:

1. Front yards,
2. Side street yards, and
3. Special yards.

# DIV. 14.2. GLOSSARY

## A

**Abandoned Automobile.** Any motor vehicle, which when operated upon a highway is required to be registered by the California Vehicle Code, whose registration has been expired for a period of six months or more. Notwithstanding the foregoing definition, a motor vehicle stored within a permitted building or structure shall not be considered to be an abandoned automobile.

**Abutting.** To touch or have a common boundary with.

**Abut or abutting.** To touch or have a common boundary with.

**Above-Grade.** [Reserved]

**Above-Grade.** Located at or higher than the surrounding finished grade.

**Access.** A means of approaching or entering a place.

**Access, Motor Vehicle.** [Reserved]

**Access, Pedestrian.** [Reserved]

**Accessory Building.** A detached subordinate building, the use of which is customarily incidental to that of the primary building or the primary use on the lot.

**Accessory Dwelling Unit (ADU).** An attached or detached residential dwelling unit that provides complete independent living facilities for one or more persons and is located on a lot with a proposed or existing primary residence. It shall include permanent provisions for living, sleeping, eating, cooking, and sanitation on the same lot as the single-unit or multi-unit dwelling is or will be situated. ADUs include efficiency units as defined in Section 17958.1 of the Health and Safety Code, manufactured homes as defined in Section 18007 of the Health and Safety Code, and Movable Tiny Houses.

**Accessory Living Quarters.** An accessory building used solely as the temporary dwelling of guests of the occupants of the premises; such dwelling having no kitchen facilities and not rented or otherwise used as a separate dwelling unit.

**Accessory Material.** Building products used as an exterior wall finish material to accent or support the primary material.

**Accessory Use.** A use, which is customarily incidental to that of the main building or the main use of the land and which is located on the same lot with a main building or main use.

**Active space.** [Reserved]

**Acts.** The Federal Fair Housing Amendments Act of 1988 and California's Fair Employment and Housing Act.

**Adaptable Parking.** [Reserved]

**Adaptive Reuse Incentive Areas Specific Plan.** Building located in the Adaptive Reuse Incentive Areas Specific Plan, Ordinance No. 175,038.

**Adaptive Reuse Project.** Any change of use to dwelling units, guest rooms, or joint living and work quarters, or any change in commercial use to another commercial use, in all or any portion of any eligible building according to *Sec. 9.4.5.B. (Applicability, Downtown Adaptive Reuse Projects)* and *Sec. 9.4.6.B. (Applicability, Citywide Adaptive Reuse Projects)*, as long as the commercial use is allowed in the zone. An adaptive reuse project includes a change of an existing use to new uses that are accessory to dwelling units, guest rooms, or joint living and working quarters so long as the accessory uses are consistent with the definition of "accessory use" set forth in Article 14 of this Chapter, and are permitted in the zone.

**Addition.** An extension or increase in floor area or height of a building or structure.

**Addition.** Addition is the expansion of an existing building or structure, with or without other alterations to the building or structure.

**Addition, Major.** One or more additions or expansions to an existing building or site within any consecutive 3-year period that increases the floor or site area of an existing building or site by 50% or more, but not including additions to an existing building in a 1L or 2L Density District where the floor area of the existing building and any additions total no more than 1,500 square feet.

**Addition, Minor.** One or more additions or expansions to an existing building or site that does not exceed the thresholds for a major addition.

**Adjacent.** Located abutting or beside with no similar structure type located between.

**Adult Education Classes in Private Home.** The occasional use of any dwelling unit for educational programs conducted by an accredited university.

**Adult Entertainment Business.** Defined to include Adult Arcade, Adult Bookstores, Adult Cabaret, Adult Motel, Adult Motion Picture Theater, Adult Theaters, Massage Parlor, or Sexual Encounter Establishment and each shall constitute a separate adult entertainment business even if operated in conjunction with another adult business at the same establishment.

**Advisory Agency.** See *Sec. 13A.1.9.* (Advisory Agency).

**Advisory Agency.** The Director of Planning, which is designated as the Advisory Agency for the City pursuant to the Subdivision Map Act (see Sec. 13B.8.1.).

**Affordable Housing Incentives Guidelines.** The guidelines approved by the City Planning Commission, pursuant to Section 13.3.5 (Policy Action) of this Chapter, under which Housing Development Projects for which a Density Bonus above 35% has been requested are evaluated for compliance with the requirements of this Division.

**Affordable Housing Incentive Program.** An Incentive Program established in Division 9.2 of this Chapter to increase the production of affordable housing, consistent with City policies.

**Aggrieved Person.** Any person or entity with standing to appeal an action on an application filed under this Code under California law, or as provided in the provisions of this Code relating to a particular appeal.

**Aggrieved Person.** Any person who, in person or through a representative, appeared at a hearing on the application for a Coastal Development Permit, or appeal hearing in connection with the decision or action appealed, or who, by other appropriate means prior to a hearing, informed the permit issuing authority, or appeal body of the nature of his or her concerns or who for good cause was unable to do either. "Aggrieved person" includes the applicant for a Coastal Development Permit.

**Agricultural Waste.** All plant materials generated from the growing and harvesting of agricultural crops, vegetables, and fruits.

**Airport.** Any runway landing area or other facility designed, used, or intended to be used either publicly or privately by any person for the landing and taking off of aircraft including all the necessary taxiways, aircraft storage and tie-down areas, hangars and other necessary buildings and open spaces. Infrequent Helicopter Landings are not included in this definition.

**Alcohol Sales, Off-Site Consumption.** The sale or dispensing of beer, wine, and other alcoholic beverages, associated with a business and its operations. Such establishments are licensed or seeking a license to sell or otherwise dispense alcoholic beverages for off-site or off-sale consumption as defined by the California State Alcoholic Beverage Control Act.

**Alcohol Sales, On-Site Consumption.** The sale or dispensing of beer, wine, or other alcoholic beverages, associated with a business and its operations. Such establishments are licensed or seeking a license to sell or otherwise dispense alcoholic beverages for on-site or on-sale consumption as defined by the California State Alcoholic Beverage Control Act.

**Alcoholic Beverage Manufacturing.** Any facility where beer, wine, or other alcoholic beverages are processed and prepared commercially for consumption.

**Alley.** A public way, other than a street or highway, providing a means of vehicular access to abutting property.

**Alley Lot Line.** [Reserved]

**Alley Lot Line-Facing Facade.** [Reserved]

**Allowed Privacy Screen.** Fences, walls and hedges allowed in a frontage yard.

**Allowed Setback Encroachment.** [Reserved]

**Alteration.** Any exterior change or modification of a building, structure, Landscaping, Natural Feature or lot within a Historic Preservation Overlay Zone including but not limited to changing exterior

paint color, February 28, 2020 REVISED RECOMMENDATION DRAFT 208 removal of significant trees or Landscaping, installation or removal of fencing, and similar Projects, and including street features, furniture or fixtures.

**Alternative Financial Service.** Any for-profit lending facility offering small, unsecured, short-term loans, or a use that primarily consists of check cashing services for a fee. This definition also includes any business where articles of personal property may be left as security in exchange for a loan of money. Examples include pawnshops, precious metal buyback centers, short-term credit lenders, title loan centers, and similar establishments.

**Alzheimer's and Dementia Housing.** Residential housing that is licensed by the California Department of Social Services and provides 24-hour care for people suffering from Alzheimer's disease or other disorders resulting in dementia. The residential units shall be Guest Rooms only. The housing may be a component of an Eldercare Facility.

**Ambulance Service.** Any establishment primarily engaged in providing both emergency and non-emergency medical transport services. The vehicles are typically equipped with lifesaving equipment operated by medically trained personnel. The office component of any Ambulance Service use is included in the Office definition.

**Amenity Design Standard.** [Reserved]

**Amenity Space, Residential.** An area which is designed and intended to be used by occupants of residential units for recreational, domestic, or vocational purpose.

**Amenity Space, Lot.** An area on a lot that is open-air and designated to be used for active or passive recreation, including common open space, private open space, pedestrian amenity space and privately owned public space. See *Sec. 2.2.3.3. (Lot Amenity Space)*.

**American Standard for Nursery Stock.** [Reserved]

**Animal Care, Sales and Services.** Any facility designed or arranged to provide services or retail products for the care of domestic animals. Examples include veterinary clinics and facilities engaged in the retail sale, grooming, daycare, or training of household pets.

**Animal Farming.** The raising of animals such as alpacas, cattle, donkeys, goats, mules, sheep, swine, domestic animals, or similar livestock typically for eggs, fiber, meat, milk, or other products. Activities may include day-to-day care, selective breeding, raising, and selling of animals. This definition includes, but is not limited to, aquaculture farms, ranches, and feedlots.

**Animal Keeping Enclosure.** Any structure or fence which establishes the perimeter of an animal keeping and maintenance area.

**Animal Keeping Structure.** Any structure which has a roof and may have one or more sides and is used in whole or in part for the housing or shelter of animals.

**Animal Keeping, Domestic.** The keeping of common household domestic pets readily classifiable as being customarily incidental and accessory to a permitted residential use when no commercial

activity is involved, including, but not limited to, cats, dogs, guinea pigs, hamsters, fish, fowl, lizards, rabbits, reptiles, small amphibians, and snakes.

**Animal Keeping, Wild.** The keeping of any wild, exotic, dangerous, or non-domestic animal or reptile. This use, in no event, shall include the following wild animals: bear, civet, coyote, eagle, eland, elephant, elk, giraffe, gnu, gorilla, hyena, hippopotamus, jaguar, leopard, lion, lynx, moose, orangutan, puma, rhinoceros, sea lion, tiger, venomous reptile, vulture, walrus, wart hog, wolf or yak.

**Animal Products Processing.** Any facility engaged in one or more of the following: dressing or dyeing furs; preparing processed meats and meat byproducts; preparing, tanning, and finishing hides and skins; refining or rendering animal fat, bones, and meat scraps; and slaughtering animals.

**Apartment.** Same as dwelling unit.

**Apartment Hotel.** A residential building designed or used for both two or more dwelling units and six or more guest rooms or suites of rooms.

**Apartment House.** A residential building designed or used for three or more dwelling units or a combination of three or more dwelling units and not more than five guest rooms or suites of rooms.

**Apiary.** The place where bees are kept and maintained, usually in a collection of hives or colonies.

**Appeal Board (Subdivision Approval).** "For purposes of Subdivision Appeals, the Appeal Board is: The Area Planning Commission where the map is located for any parcel map or tentative map that: (a) creates or results in less than 50,000 gross square feet of nonresidential floor area; or (b) creates or results in fewer than 50 dwelling units, guest rooms, or combination of dwelling units and guest rooms; or (c) involves a lot with fewer than 65,000 square feet of lot area; or (d) where specifically provided by this Chapter or Chapter 1. Otherwise, the City Planning Commission" [Is this already in Art. 13?]

**Appealable Area.** The area identified in Sec. 30603 of the Public Resources Code. The area that meets this criteria includes, but is not limited to, the area shown on the "Post-LCP Certification Permit and Appeals Jurisdiction Map" certified by the Coastal Commission in accordance with the provisions of Sec. 13576 of Title 14 of the California Code of Regulations and attached as an exhibit in each certified coastal specific plan.

**Appealable Development.** In accordance with Sec. 30603(a) of the Public Resources Code, any development that constitutes a major public works project or a major energy facility, or any development located in the Appealable Area.

**Applicant.** The person or entity who files an application. If the application is approved, the "applicant" includes any successor or assignee of the original applicant.

**Applicable Stories.** The number of stories that are required to meet build-to standards.

**Application.** An application for any process described in Article 13 of this Chapter.

**Approving Authority.** The initial decision maker and appeal body, including the Director of Planning, City Engineer, Zoning Administrator, City Planning Commission, Area Planning Commission, Board of Public Works, City Council or other applicable decision-making person or body within the City, which has the authority to approve a Coastal Development Permit pursuant to this Section or by reason of jurisdiction over other permits and approvals sought in conjunction with an application for a Coastal Development Permit.

**Architectural Element.** [Reserved]

**Architectural Feature.** [Reserved]

**Area Median Income (AMI).** The median income in Los Angeles County as determined annually by the California Department of Housing and Community Development (HCD) or any successor agency, adjusted for household size.

**Area Planning Commission.** [Reserved]

**Articulating Element.** [Reserved]

**Assembly.** [Reserved]

**Assisted Living.** Residential housing that is licensed by the California Department of Social Services and provides assistance to people 62 years of age or older who require assistance with two or more non-medical activities of daily living as defined in the Department of Social Services licensing requirements. The residential units may consist either of Dwelling Units or Guest Rooms. Full time medical services shall not be provided on the premises. The housing may be a component of an Eldercare Facility.

**At-Grade.** [Reserved]

**At-Risk Affordable Unit.** Any residential dwelling unit that receives government assistance under prescribed federal, State, and/or local programs, or any combination of rental assistance and is eligible to convert to market rate due to termination (opt-out) of a rent subsidy contract, prepayment of a subsidized mortgage, or expiration of rental restrictions. these assistance programs include, but are not limited to, Housing Choice Vouchers [formerly Section 8], project-based rental assistance, subsidized mortgage programs (e.g., FHA), or expiring rent/deed restrictions with the use of State or local funding programs, including Community Redevelopment Agency Covenants.

**Attic.** The space between the ceiling framing of the top story and the underside of the roof structure.

**Auditorium.** Any facility for performing arts, motion pictures, other media arts or presentations before an audience, and with a total seating capacity equal to or greater than 1,200 on the site. Examples include multiplex theaters and concert halls. Facilities with a total seating capacity no greater than 1,200 are included in the Theater definition. This definition does not include Adult Entertainment Businesses.

**Auto Dismantling.** Any property or place where the business of an automobile dismantler, as defined by California Vehicle Code Section 220, is conducted.

**Automobile Access.** [Reserved]

**Automobile Parking Space.** [Reserved]

**Automotive Repair Garage.** All retail or wholesale uses which are enumerated in the definition for "Automotive repair" in Section 12.03 (Definitions) of Chapter 1 (General Provisions and Zoning) of this Code, and, in addition, includes all testing, installation of vehicle equipment or accessories, and the application of paint, sprayed coloring, or other types of covering or the recovering of any part of a vehicle interior or exterior. Included in this definition are smog testing shops whether for test only or for repairs, window tinting or replacement shops, application of vinyl or similar covering materials, installation of parts or accessories on the site of a parts store, and all other similar uses.

**Automotive Use.** Any Vehicle Repair use or Vehicle Sales and Rental use as listed in the Use Table in Article 6.

**Avenue.** Any street designated as an Avenue I, II, or III on the Citywide General Plan Circulation System maps of the Mobility Plan Element.

**Average Natural Slope.** The average of the ungraded slopes at selected contours within a given parcel of land divided by its area as computed from either the City's Engineer's topographic maps or a topographic map prepared by a California registered civil engineer or California licensed land surveyor. Regardless of which map is used, calculations cannot be derived or interpolated from a map that originally had contour intervals of greater than 25 feet for subdivisions or greater than five feet for parcel maps. Average natural slope shall be computed by the following formula:

$$S = \frac{C \times L}{A} \times 100$$

Where:

S = average natural slope in%.

C = contour interval in feet, at no greater than 25-foot intervals for subdivisions or 5-foot intervals for parcel maps, resulting in at least 5 contour lines.

L = total accumulated length of all contours of interval "C" in feet.

A = the area being considered in square feet.

Slopes may be computed only by the entire subdivision or parcel map area. The calculation "L" (contour lengths) and "A" (area in square feet) can be computed by 500-foot grid increments, as shown on the City Engineer's topographic maps. The "L" for each grid increment shall be added to the "L" for every other grid increment and the "A" for each grid increment shall be added to the "A" for every other grid increment to determine the "L" and the "A" for the entire subdivision or parcel map, prior to calculating the average natural slope for that subdivision or parcel map. In

any matter where the average natural slope is used to calculate density pursuant to *Sec. 11A.1.3.* (Design Standards) or *Sec. 11A.4.1.* (General), the subdivision file shall contain copies of all maps and all calculations so that the figures can be verified. All maps and all calculations are required to be submitted at the time of the filing of a subdivision application or the application is deemed incomplete.

**Awning Sign.** A sign painted, sewn, or otherwise adhered to the material of an awning as an integrated part of the awning itself.

## B

**Backyard Beekeeping.** The keeping or maintenance of an apiary in a hive as an accessory use.

**Banned Features.** [Placeholder - replaced with "Prohibited Features"]

**Banquet Hall.** Any facility leased or rented for private parties and other various social or business gatherings, typically for large numbers of people. Examples include, but are not limited to, formal dinners, receptions, reunions, business meetings, and club meetings.

**Base-Top.** The base-top articulation requirement is composed of two separate and coordinated articulating elements designed to visually break a building facade up into two separately legible layers.

**Base, Middle & Top.** The base, middle top articulation requirement is composed of three separate and coordinated articulating elements designed to visually break a building facade up into three separately legible layers.

**Basement.** An occupiable portion of a building located below a ground story.

**Bed and Breakfast Facility.** A building or portion thereof which is used as a temporary lodging place for fewer than thirty consecutive days and which does not contain more than five guest rooms and one kitchen.

**Bee.** Any stage of life of the common domestic honey bee (Apis Mellifera).

**Bicycle Corral.** [Reserved]

**Bicycle Parking.** [Reserved]

**Bicycle Share Station.** [Reserved]

**Bisecting Line.** A line that equally divides the angle created by the projection of intersecting lot lines of a lot adjoining the street of a corner lot as illustrated in Diagram C of this article.

**Blank Wall Width.** The portions of ground story building facades that do not include any transparent area meeting the standards in Sec. 3C.5.1. (General).

**Board.** The respective Historic Preservation Board as established by this Division.

**Board.** The Board of Building and Safety Commissioners.

**Boarding or Rooming House.** A dwelling containing a single dwelling unit and not more than five guest rooms or suites of rooms, where lodging is provided with or without meals, for compensation.

**Boulevard.** Any street designated as a Boulevard I or II on the Citywide General Plan Circulation System maps of the Mobility Plan Element of the General Plan.

**Buffer.** A planting area with a wall, fence, or hedge, intended to provide a space between one use and another use, one Use Class and another Use Class, or one use and the public right-of-way.

**Build-to Range.** The area on a lot between the minimum setback and the maximum setback specified for a district.

**Build-to Width.** The cumulative building width required to occupy the build-to range, based on the width of the lot at the street, alley or special lot line.

**Building.** A covered and enclosed structure that is intended for human occupation.

**Building Break.** The minimum distance structures shall be separated to in order to establish them as separate buildings for the purpose of measuring building width. *(see Sec.2.2.6.2)*

**Building Coverage.** The area of a lot covered by buildings or structures.

**Building Coverage.** The area of a site covered by structures.

**Building Entrance.** [Reserved]

**Building, Existing.** [Reserved]

**Building Facade.** See Facade.

**Building Face.** The general outer surface, not including cornices, bay windows or architectural projections, of any exterior wall of a building.

**Building Frontage.** The projection of the exterior building walls upon the street used for street frontage, as measured perpendicular to the edge of the street. For walls that are not parallel to the street, the building frontage shall be measured along the wall that, other than open parking spaces, has direct and unimpeded access to the street.

**Building Setback.** The area on a lot not intended for buildings and structures, includes primary street setbacks, side street setbacks, side setbacks, rear setbacks, alley setbacks, and special lot line setbacks. [File under Setback?]

**Building Setback.** The area on a site not intended for buildings and structures except where expressly allowed as an exception, including primary street setbacks, side street setbacks, side setbacks, rear setbacks, alley setbacks, and special lot line setbacks.

**Building Site.** Any parcel of land which conforms to the definition of lot.

**Building or Structure Area.** The area of a site occupied by a building or structure, measured horizontally.

**Building Width.** The width of any structure or collection of structures on a site.

**Bulk Plane.** A imaginary sloping plane that rises inward over the lot that limits building height based on its proximity to site lot lines.

**Bulk Plane.** A series of planes that limit the allowable volume of space a building or structure can occupy.

## C

**California State Accessibility Standards.** [Reserved]

**California State Fire Code.** [Reserved]

**Caliper.** [Reserved]

**Canopy.** [Reserved]

**Canopy Sign.** A sign attached to a canopy.

**Car Wash.** Any facility engaged in cleaning, washing, or waxing automotive vehicles, such as passenger cars, trucks, vans, and trailers.

**Carpool.** A vehicle carrying two to five persons to and from work on a regular schedule.

**Caretaker Unit.** A Dwelling Unit designed for and used solely by a watchman or caretaker (including his or her family) on the same lot of an industrial development or use that requires a 24-hour supervision.

**Cargo Container.** Any container (refrigerated or non-refrigerated) that permits the storage and protection of cargo, and which may be transported by ship, rail or truck without intermediate loading and unloading of the contents of the container.

**Cargo Container Storage Yard.** An open-air site or facility, the primary use of which is the keeping of empty cargo containers, and equipment, and may have as accessory uses the storage of container chassis and truck cabs, repair facilities, warehouses, and offices associated with the movement or storage of cargo containers.

**Categorically Excluded Development.** A development, which is excluded from the Coastal Development Permit requirements pursuant to a categorical exclusion order adopted by the Coastal Commission that February 28, 2020 REVISED RECOMMENDATION DRAFT 259 sets forth the specific categories of development that qualify for the exclusion within a specific geographic area, and which establishes that those categories of development in the specified geographic areas will have no potential for significant adverse effects, either individually or cumulatively on coastal resources or on public access to or along the coastline.

**Ceiling.** [Reserved]

**Ceiling Height.** [Reserved]

**Cemetery.** As defined by the California Health and Safety Code. Examples include burial parks, columbariums, and mausoleums.

**CEQA.** The California Environmental Quality Act, California Public Resources Code, Div. 13, Sec. 21000 et seq., including as it may be amended from time to time.

**CEQA Clearance.** Any determination, finding or certification authorized or required under CEQA to approve a Project in compliance with CEQA. CEQA Clearances include, but are not limited to, (i) a determination that an approval does not require CEQA review, in whole or in part, either due to the applicability of an exemption or because the City action is not a Project, (ii) a finding that the City may adopt a Negative Declaration or a Mitigated Negative Declaration, (iii) the certification of an Environmental Impact Report, or (iv) a finding that a Project was adequately assessed in a prior adopted Negative Declaration or certified Environmental Impact Report, including through the use of an addendum.

**CEQA Guideline.** The California Code of Regulations, Title 14, Chapter 3, Sec. 15000, et seq., including as they may be amended from time to time.

**Certificate of Appropriateness.** An approved certificate issued for the construction, Additions over established thresholds, Demolition, reconstruction, Alteration, removal, or relocation of any publicly or privately owned building, structure, Landscaping, Natural Feature, or lot within a Historic Preservation Overlay Zone that is identified as a Contributing Element in the Historic Resources Survey for the zone, including street features, furniture or fixtures.

**Certificate of Compatibility.** An approved certificate issued for the construction of a new building or structure on a lot, Demolition, or building replacement of an element, identified as Non-Contributing, or not listed, in the Historic Resources Survey for the zone.

**Certified Farmers' Markets.** A location where agricultural products are sold by producers or certified producers directly to consumers or to individuals, organizations, or entities that subsequently sell or distribute the products directly to end users, as defined in Section 1392.2, Title 3, of the California Code of Regulations.

**Chamfered Corner.** An architectural feature at corner of a building adjacent to a street intersection where a tertiary building face transitions between two otherwise intersecting primary building faces at an angle between 30 and 60 degrees measured from both primary building faces.

**Channel Letters.** Individually cut letters, numbers or figures, illuminated or non-illuminated, affixed to a building or structure.

**Change of Use.** See "Use, Change of" in this Division.

**Character Frontage.** [Reserved]

**Chemical Product Manufacturing.** Any facility producing basic chemicals or manufacturing products by predominantly chemical processes. Examples include, but are not limited to, basic chemicals, such as acids, alkalies, organic chemicals, and salts; chemical products to be used in further manufacture, such as dry colors, pigments, and synthetic fibers; and finished chemical products to be used for ultimate consumption or as materials or supplies in other industries, such as fertilizers, explosives, and paints. The production of products such as asphalt coatings and petroleum lubricating oils are included in the Petroleum and Coal Product Manufacturing definition. The production of plastic and natural rubber products are included in the Plastic and Rubber Product Manufacturing definition

**Childcare Facility.** [Reserved]

**Chipping and Grinding Facility.** Any facility which temporarily stores and/or processes source-separated green waste and/or wood waste by means of chipping, grinding, mixing and/or screening to produce a material of varying particle size. The material produced by the above described processes may be used as ground cover, biofuel, wood chips, animal bedding, worm food or other similar uses. This definition shall not include any chipping and/or grinding of green waste and/or wood waste conducted for noncommercial, nonprofit purpose.

**City.** The City of Los Angeles, California

**City Council.** [Reserved]

**City Engineer.** [Reserved]

**City Planning Commission.** [Reserved]

**Circulation Areas.** [Reserved]

**Civil Engineer.** The Registered Civil Engineer employed by the owner or by the subdivider to prepare the Subdivision Maps and improvement plans.

**Clear Height.** Clear height is measured as the vertical dimension of the occupiable portion of an architectural feature at the narrowest point.

**Circulation.** [Reserved]

**Circulation, Building.** [Placeholder - move to rest of Building definitions?]

**Circulation, Motor Vehicle.** [Placeholder - move to rest of Motor Vehicle definitions?]

**Civic.** Any facility that provides for display, preserving, or enjoyment of heritage, history, and the arts or any municipal building. Examples include, but are not limited to, city hall, cultural centers, libraries, museums, and observatories.

**Clear Depth or Clear Width.** Clear depth is the horizontal dimension of the occupiable portion of an architectural feature at the narrowest point. Depth is typically measured perpendicular to the street lot line while width is typically measured parallel to the street lot line.

**Clear Height.** Clear height is the vertical dimension of the occupiable portion of an architectural feature at the shortest point.

**Coastal Bluff.** The upper termination of a bluff, cliff, or seacliff. In cases where the top edge of the cliff is rounded away from the face of the cliff as a result of erosional processes related to the presence of the steep cliff face, the bluff line or edge shall be defined as that point nearest the cliff beyond which the downward gradient of the surface increases more or less continuously until it reaches the general gradient of the cliff. In a case where there is a steplike feature at the top of the cliff face, the landward edge of the topmost riser shall be taken to be the cliff edge. The termini of the bluff line, or edge along the seaward face of the bluff, shall be defined as a point reached by bisecting the angle formed by a line coinciding with the general trend of the bluff line along the inland facing portion of the bluff. The minimum length of bluff line or edge used in making these determinations is 500 feet.

**Coastal Development.** Any of the following on land, in or under water: the placement or erection of any solid material or structure; the discharge or disposal of any dredged material or of any gaseous, liquid, solid or thermal waste; the grading, removing, dredging, mining or extraction of any materials; any change in the density or intensity of use of land, including, but not limited to, subdivisions pursuant to the Subdivision Map Act (commencing with California Government Code Sec. 66410), and any other division of land, including lot splits, except where the land division is brought about in connection with the purchase of the land by a public agency for public recreational use; any change in the intensity of use of water or of access to the water; construction, reconstruction, demolition or alteration of the size of any structure, including any facility of any private, public or municipal utility; and the removal or harvesting of major vegetation other than for agricultural purposes, kelp harvesting, and timber operations, which are in accordance with a timber harvesting plan submitted pursuant to the provisions of the Z'berg-Nejedly Forest Practice Act of 1973 (commencing with Sec. 4511 of the Public Resources Code).

**Coastal Zone.** That land and water area within the City as specified on maps prepared by the California Coastal Commission, copies of which are on file with the Department of City Planning and the Office of City Engineer. Such "coastal zone" extends seaward to the City's outer limit of jurisdiction, and generally extends inland 1000 yards from the mean high tide line of the sea. In significant coastal estuarine, habitat and recreational areas it extends inland to the first major ridgeline paralleling the sea or five miles from the mean high tide line of the sea, whichever is less, and in developed urban areas the zone extends inland 1000 yards.

**Coastal Zone.** That land and water area specified on the maps cited in Sec. 30103 of the Public Resources Code, extending seaward to the State's outer limit of jurisdiction, including all offshore islands, but with some additional criteria for special areas as specified in Sec. 30103.5 and 30166 of the Public Resources Code.

**Collector Street.** Any street designated as a Collector Street on the Citywide General Plan Circulation System maps of the Mobility Element of the General Plan.

**Commercial Filming.** [Reserved]

**Commercial/Industrial Conversion Project.** An existing building used exclusively for commercial or industrial purposes, or both, proposed for conversion to a condominium or stock cooperative to be used exclusively for such purposes through approval of a tract or parcel map. For purposes of this definition, the term "existing" means that the building was constructed prior to 1945, or if it was built after 1945, a certificate of occupancy was issued for the building prior to the time of map application.

**Commercial/Industrial to Residential Conversion Project.** An existing building used exclusively for commercial or industrial purposes, or both, proposed for conversion to a condominium, stock cooperative or community apartment to be used exclusively for residential purposes through approval of a tract or parcel map. For purposes of this definition, the term "existing" means that the building was constructed prior to 1945 or, if it was built after 1945, a certificate of occupancy was issued for the building prior to the time of map application.

**Commercial Tenant Size.** The maximum floor area permitted per commercial tenant space.

**Community Apartment Project.** The same as defined by Section 11004 of the California Business and Professions Code.

**Community Care Facility, Licensed, 6 or fewer persons.** Any facility, place or building licensed by the State of California that is maintained and operated as a residential facility or as a social rehabilitation facility to provide non-medical residential care, day treatment, adult day care, or foster family services for persons in need of services, supervision or assistance essential for sustaining the activities of daily living, as defined in the Health and Safety Code. This definition applies when there are six or fewer persons being served.

**Community Care Facility, Licensed, 7 or more persons.** Any facility, place or building licensed by the State of California that is maintained and operated as a residential facility or as a social rehabilitation facility to provide non-medical residential care, day treatment, adult day care, or foster family agency services for persons in need of services, supervision or assistance essential for sustaining the activities of daily living, as defined in the Health and Safety Code. This definition applies when there are seven or more persons being served.

**Community Center.** Any building or group of buildings used to provide cultural, educational, recreational, or social services, which is not operated for profit.

**Community Land Trust.** A California nonprofit corporation that: (1) has no part of its net earnings inuring to the benefit of any member, founder, contributor, or individual; (2) is neither sponsored by, controlled by, nor under the direction of a for-profit organization; (3) has a corporate membership of adult residents of a particular geographic area as described in the bylaws of the corporation; (4) has a board of directors that: (A) includes a majority of members who are elected by the corporate membership; (B) includes representation by persons occupying and/or leasing any structural improvements on the land; and (C) includes representation by persons residing within the geographic area specified in the bylaws of the corporation who neither lease land from the corporation nor occupy structural improvements controlled by the corporation; (5) acquires and retains parcels of land, primarily for conveyance under long-term ground leases; (6) transfers

ownership of many or all of the structural improvements located on such leased parcels to the lessees; and (7) retains a preemptive option to purchase such structural improvements at a price determined by formula that is designed to ensure that the improvements remain affordable to low and moderate income households in perpetuity.

**Community Plan Implementation Overlay (CPIO).** A document established by Community Plan Area, or other Plan Area, defining applicable Public Benefits Incentives Programs available, amount of Floor Area awarded for Public Benefits Incentives programs, applicable Local Affordable Housing Incentive Program sets, and other items relating to the administration of this Article.

**Compaction.** The densification of a fill by mechanical means.

**Composting Facility.** Any facility which processes source-separated organic materials to a stabilized state through controlled biological decomposition where the resultant material is beneficial to plant growth or soil structure when used as a soil amendment. Materials may initially be chipped, shredded, and/or screened on site prior to being composted. Composting may be conducted in an in-vessel system or in the open, such as windrow composting or aerated static pile composting. This definition shall not include any composting of green waste and/or wood waste conducted for noncommercial, nonprofit purpose.

**Computer and Electronic Product Assembly.** Any facility involved in the assembly of computer and electronic products, electrical equipment, appliances, and electronic product components; these facilities may also test and repair such products and components. Examples include, but are not limited to, the assembly of appliances, communications equipment, computers, computer peripherals, lighting fixtures, and similar electronic products. Manufacturing of Computer and Electrical Equipment is included in the Machinery and Fabricated Metal Manufacturing definition.

**Common Indoor Amenity Space.** [Placeholder - move to Amenity Space?]

**Common Lot Line.** A lot line shared by two lots.

**Common Outdoor Amenity Space.** [Placeholder - move to Amenity Space?]

**Concealed Parking.** [Reserved]

**Condominium.** The same as defined by Section 783 of Chapter 1 (Estates in General) of Title 2 (Estates in Real Property) Part 2 (Real or Immovable Property) of Division 2 (Property) of the California Civil Code.

**Construction, New.** The construction of a new building, structure or site element, such as a parking lot.

**Contributing Building.** [Reserved]

**Contributing Element.** Any building, structure, Landscaping, Natural Feature identified on the Historic Resources Survey as contributing to the Historic significance of the Historic Preservation Overlay Zone, including a building or structure which has been altered, where the nature and extent of the Alterations are determined reversible by the Historic Resources Survey.

**Controlled Drilling Site.** That particular location within an oil drilling district in an "Urbanized Area" upon which surface operations for the drilling, deepening or operation of an oil well or any incidental operation are permitted under the terms of this section, subject to the conditions prescribed by written determination by the Zoning Administrator.

**Convention Center.** Any publicly owned building or group of buildings used for conferences, exhibitions, and trade shows.

**Core Hole, Temporary Geological Exploratory.** A seismic test hole or exploratory core hole used or intended to be used exclusively for geological, geophysical, and other exploratory testing for natural gas, oil, or other hydrocarbon substances.

**Corner Lot.** A Lot adjoining the intersection of two or more streets.

**Correctional or Penal Institution.** Any facility generally designed for the confinement, correction, and rehabilitation of adult and/or juvenile offenders sentenced by a court.

**Cosmetic, Pharmaceutical Drug and Soap Manufacturing.** Any facility where organic and inorganic raw materials are transformed by a chemical process for the formulation of cosmetics, pharmaceutical drugs, and soaps. Examples include, but are not limited to, eye and facial makeup preparations; fingernail polishes; and manufacturing of deodorants, cleaning shampoos, hair colors, lipsticks, medications, perfumes, and skin moisturizers.

**Counseling and Referral Facility.** A facility which provides counseling services and subsequently refers applicants to appropriate licensed social service agencies offering professional remedial assistance. Counseling and referral services may be offered in one or more of the following areas: welfare, housing, employment, health, education, legal matters, job development, consumer action, recreation, family problems, juvenile problems, probation, and neighborhood improvement. The facility may also administer the implementation of government funded programs established to provide low-income housing, job development classes and recreation.

**Covered Area.** An area on a lot that is not open to the sky. See *Sec 14.1.1. (Covered Area)*.

**Creative Media Office.** Any administrative and technical support facility for motion picture, television, video, sound, computer, and other communications media production. Examples include, but are not limited to, administrative and production offices, post-production facilities, special effects and optical effects units, and film laboratories.

**Crown Sign.** A type of sign located on the facade of the uppermost portion of buildings over 150 ft.

**Curbcut.** [Reserved]

**Cultural.** Anything pertaining to the concepts, skills, habits, arts, instruments or institutions of a given people at any given point in time.

**Cultural Heritage Commission.** [Reserved]

**Curing Facility.** Any composting facility, where additional and/or final biological stabilization is attained after most of the readily metabolized material has been decomposed, and where no chipping, grinding, or screening of material takes place. This definition shall not include any curing of green waste and/or wood waste conducted for noncommercial, nonprofit purpose.

## D

**Dance Hall.** Any establishment open to the public which provides space dedicated to dancing.

**Day Care Facility.** Any facility that provides nonresidential care to children when licensed as a Day Care Facility by the State of California, or any facility that provides nonresidential care to adults, in a group setting on less than a 24-hour basis. Preschools are included in this definition.

**Decision Maker.** The agency or official charged with rendering a formal recommendation or decision on an application subject to Article 13 of this Chapter. For purposes of Sec. 13B.11.1 (Environmental Review Procedures), the "decision maker" is the decision-making body, as defined by the CEQA Guidelines.

**Deeply Low Income Households.** Persons and families whose incomes do not exceed 15 percent of area median income, adjusted for family size.

**Demolition.** Demolition is the removal of more than 50% of the perimeter wall framing or the removal of more than 50% of the roof framing.

**Demolition.** The removal of more than 50% of the perimeter wall framing, the removal of more than 50% of the roof framing, or the substantial removal of the exterior of a facade in the Street-Visible Area.

**Density Bonus.** A density increase over the otherwise maximum allowable residential density under the applicable zoning ordinance and/or specific plan granted pursuant to *Article 9 (Public Benefit Systems)*.

**Density Bonus Procedures.** Procedures to implement the City's Density Bonus program developed by the Departments of Building and Safety, City Planning and Housing.

**Department.** The Department of City Planning, unless otherwise indicated. Reference: City Charter, Sec. 550.

**Department.** The Department of Building and Safety.

**Department of Building and Safety.** [Reserved]

**Design Review Board.** [Reserved]

**Destroyed.** Damaged so as to not be habitable as determined by the Department of Building and Safety.

**Developer.** The owner of the Project and, if different from the owner, any person, firm, partnership, association, joint venture, corporation, or any entity or combination of entities which develops or causes to be developed the residential housing project and, if applicable, provides off-site affordable units, together with their successors and assigns, but does not include a lender, any governmental entity or the general contractor working for any developer.

**Development.** A development is any construction project requiring a building permit.

**Development.** The construction of new non-residential floor area.

**Development.** On land, in or under water, the placement or erection of any solid material or structure; discharge or disposal of any dredged material or of any gaseous, liquid, solid, or thermal waste; grading, removing, dredging, mining, or extraction of any materials; change in the density or intensity of the use of land, including, but not limited to, subdivisions pursuant to the Subdivision Map Act (commencing with Sec. 66410 of the California Government Code), and any other division of land, including parcel maps and private street divisions, except where any land division is brought about in connection with the purchase of such land by a public agency for public recreational use; change in the intensity of use of water, or of access thereto; construction, reconstruction, demolition, or alteration of the size of any structure, including any facility of any private, public, or municipal utility; and the removal or harvesting February 28, 2020 REVISED RECOMMENDATION DRAFT 249 of major vegetation other than for agricultural purposes, kelp harvesting, and timber operations which are in accordance with a timber harvesting plan submitted pursuant to the provisions of the Z'berg- Nejedly Forest Practice Act of 1973 (commencing with Sec. 4511 of the California Public Resources Code). As used in this definition, "structure" includes, but is not limited to, any building, road, pipe, flume, conduit, siphon, aqueduct, telephone line, and electrical power transmission and distribution line.

**Development Project.** The construction of, addition to, or alteration of, any building or structure, or a change of use of an existing building or structure that requires a building permit and that results in an increase in floor area, or a net increase in average daily vehicle trips as determined by using trip generation factors promulgated by the Department of Transportation for the purpose of effectuating *Sec. 5C.1.1. (Project Review Thresholds)*.

**Digital Display.** A sign face, building face, or any building or structural component that displays still images, scrolling images, moving images, or flashing images, including video and animation, through the use of grid lights, cathode ray projections, light emitting diode displays, plasma screens, liquid crystal displays, fiber optics, or other electronic media or technology that is either independent of, attached to, integrated into, or projected onto a building or structural component, and that may be changed remotely through electronic means.

**Dimensional Standard.** [Reserved]

**Directly Accessed.** [Reserved]

**Director.** The Director of the Department of City Planning, or the Director's designee.

**Director of Planning.** [Placeholder - see Director above]

**Disabled Person.** A person who has a physical or mental impairment that limits one or more major life activities, anyone who is regarded as having that type of an impairment or, anyone who has a record of having that type of an impairment.

**Disaster.** Fire, flood, wind, earthquake, or other calamity, act of God or the public enemy.

**Disaster.** Fire, flood, wind, earthquake, or other natural or man-made disaster.

**Distance, Straight Line.** [Reserved] See *Sec. 114.1.2. (Distance, Straight Line)*.

**Distance, Walking.** [Reserved] See *Sec. 114.1.3. (Distance, Walking)*

**Display.** [Reserved]

**Divided-lite.** [Reserved]

**Door Frame.** [Reserved]

**Door Opening.** [Reserved]

**Dormitory Room.** A guest room designed, intended or occupied as sleeping quarters by more than two persons. Every 100 square feet of superficial floor area in a dormitory room shall be considered as a separate guest room.

**DOT.** Los Angeles Department of Transportation [Abbreviations?]

**Drilling and Production Site in the Los Angeles City Oil Field Area.** Locations within an oil drilling district in the "Los Angeles City Oil Field Area" upon which surface operations for the drilling, deepening or operation of an oil well or any operation incident thereto, are permitted under the terms of Sec. 8.2.4. (Oil Drilling Districts), subject to the conditions prescribed by written determination by the Zoning Administrator.

**Drip Line.** A line which may be drawn on the ground around a tree directly under its outermost branch tips and which identifies that location where rainwater tends to drip from the tree.

**Drive Lanes.** [Reserved]

**Drive-Through Eating and Drinking Establishment.** Any establishment which dispenses food for consumption on or off the premises to an individual in a vehicle.

**Drive-Through Service.** Any establishment which provides a service or transaction in a vehicle that does not include food for consumption.

**Drive-Thru Facility.** [Reserved]

**Driveway.** [Reserved]

**Dual Frontage.** [Reserved]

**Dwelling or Dwelling Unit.** A group of two or more rooms, one of which is a kitchen, designed for occupancy by one household for living and sleeping purposes.

## E

**Eating and Drinking Establishment.** Any establishment primarily engaged in the sale of prepared, ready-to-consume meals or drinks for consumption. Examples include, but are not limited to, bakeries, coffee shops, ice cream shops, fast-food establishments, restaurants, snack bars, and tea rooms.

**Easement.** A right given to a person or entity to trespass upon or use land owned by another.

**Economically Disadvantaged Area.** A zip code that includes a census tract or portion thereof in which the median annual household income is less than $40,000 per year, as measured and reported by the U.S. Census Bureau in the 2010 U.S. Census and as updated by the parties upon the U.S. Census Bureau issuing updated Median Annual Household income data by census tract in the American Community Survey.

**Efficiency Dwelling Unit.** A room located within any Residential Use used or intended to be used for residential purposes which has a kitchen and living and sleeping quarters combined therein, and which complies with the Health and Safety Code Section 17958.1.

**Egress.** [Reserved]

**Eldercare Facility.** A facility which provides residential housing for persons 62 years of age and older, and which combines two or more of the following housing types: Senior Independent Housing, Assisted Living Care Housing, Skilled Nursing Care Housing, and/or Alzheimer's and Dementia Care Housing. A minimum of 75 percent of the floor area, exclusive of common areas, shall consist of Senior Independent Housing and/or Assisted Living Care Housing.

**Elevation.** [Reserved]

**Eligible Housing Development.** A Housing Development, as defined in this Subsection, that includes on-site Restricted Affordable Units, as defined in this Subsection, at a rate that meets or exceeds the minimum requirements to satisfy the TOC Incentives, as determined by the Department of City Planning and as set forth in Section 9.2.02 of this Chapter.

**Emergency.** A sudden, unexpected occurrence demanding immediate action to prevent or mitigate loss or damage to life, health, property or essential public services.

**Emergency Homeless Shelter.** [Reserved]

**Employment Centers Incentive Area.** An area of a Community Plan identified in the applicable Community Plan Implementation Overlay as eligible to utilize the Employment Centers Incentive of Section 9.4.03.

**Enclosed.** Having a perimeter with an enclosure of 66.7% or greater. See *Sec. 14.1.4 (Enclosure)*.

**Enclosure.** See *Sec.14.1.4 (Enclosure)*.

**Encroachment.** [Reserved]

**Encroachment, Horizontal.** [Reserved] See *Sec.14.1.5 (Encroachment, Horizontal)*.

**Encroachment, Vertical.** [Reserved] See *Sec.14.1.6 (Encroachment, Vertical)*.

**Entry Feature.** Improved design standards applied to an entrance along the public way.

**Environmental Protection Standards.** [Reserved]

**Environmentally Sensitive Habitat Area.** Any officially mapped area in which plant or animal life or their habitats are either rare or especially valuable because of their special nature or role in an Ecosystem and which could easily be disturbed or degraded by human activities and developments, and any area identified as a wetland, an environmentally sensitive habitat or as a Sensitive Coastal Resource Area, in a certified Local Coastal Program, a certified land use plan or a certified specific plan.

**Eligible Housing Developments.** [Reserved]

**Enclosed.** A structure or space having 25% or less open area along its perimeter. (*see Sec.16.1.4 for Enclosure measurement*).

**Enlargement.** [Reserved] See expansion.

**Equine.** Any horse, pony, donkey, burro, or mule which is 12 months of age or older and is issued a current Equine License by the City Department of Animal Services. An animal which is under 12 months of age and is the offspring of or is unweaned and being nursed by a female equine lawfully kept on the property where said animal is kept shall not be considered an equine and shall be allowed by right on said property.

**Equine Enclosure.** Any structure or fence which establishes the perimeter of an equine keeping and maintenance area.

**Equinekeeping, Commercial.** Any commercial facility for the keeping, breeding, raising, training, or boarding of horses.

**Equinekeeping, Non-Commercial.** A detached accessory building which has a roof and may have one or more sides and is used in whole or in part for the housing or shelter of an equine or equines owned by the occupants of the premises and not kept for renumeration, hire or sale.

**Existing Uses.** [Reserved]

**Expansion.** [Reserved]

**Exterior Face.** [Reserved]

**External Reflectance.** [Reserved]

**Extremely Economically Disadvantaged Area.** A zip code that includes a census tract or portion thereof in which the median annual household income is less than $32,000 per year, as measured and reported by the U.S. Census Bureau in the 2010 U.S. Census and as updated by the parties

upon the U.S. Census Bureau issuing updated Median Annual Household income data by census tract in the American Community Survey.

**Extremely Low-Income Households.** Annual income of a household that does not exceed the amount designated for that category as defined in Section 50106 of the Health and Safety Code.

## F

**Facade.** The above-grade, non-roof portions of exterior building envelope.

**Facade, Primary.** [Reserved]

**Facade Alteration.** Facade alteration is any exterior modification of the facade of a building or structure. See. *Sec. 14.1.17.C.5. (Facade Alteration, Project Activities)*.

**Facade Area.** [Reserved]

**Facade Area, Ground Story.** [Reserved]

**Facade Area, Upper Story.** [Reserved]

**Facade Break.** The minimum recess in a street facing facade that is required to establish a single street-facing building length as separate facades for the purpose of measuring facade width. *(see Sec.2.2.6.3)*

**Facade Width.** The horizontal dimension of street facing facade not including a facade break. (see Sec.2.2.6.3)

**Facade Width.** The width of a street-facing building facade that is uninterrupted by a facade break.

**Family Day Care Home.** A Dwelling Unit that regularly provides care, protection, and supervision for 14 or fewer children, in the provider's own home, for periods of less than 24 hours per day, while the parents or guardians are away, and is either a Large Family Day Care Home or Small Family Day Care Home.

**Family Day Care Home, Large.** A Family Day Care Home for 9 to 14 children, including children under the age of 10 years who reside at the home, as set forth in Health and Safety Code Section 1597.465.

**Family Day Care Home, Small.** A Family Day Care Home for 8 or fewer children, including children under the age of 10 years who reside at the home, as set forth in Health and Safety Code Section 1597.44.

**Farming (Plant Cultivation).** The cultivation of berries, flowers, fruits, grains, herbs, mushrooms, nuts, ornamental plants, seedlings, or vegetables for use on-site or for sale or distribution off-site or on-site.

**Fast-Food, Free Standing.** Any building designed for restaurant use by a single tenant or multiple tenants that share the same kitchen, which stands alone on its own lot or is free standing within a

shopping center, and which dispenses prepared food over a counter or by way of drive-through service for consumption on or off the premises, and which has the following characteristics: a limited menu, items prepared in advance or prepared or heated quickly, no table orders, and food served in disposable wrapping or containers.

**Fast-Food Establishment.** Any establishment which dispenses food for consumption on or off the premises, and which has the following characteristics: a limited menu, items prepared in advance or prepared or heated quickly, no table orders, and food served in disposable wrapping or containers.

**Feasible.** Capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, social and technological factors.

**Fence.** A constructed vertical barrier of wood, masonry, wire, metal, or other manufactured material or combination of materials erected to enclose, screen, or separate areas. A fence differs from a wall in not having a solid foundation along its whole length.

**Fill.** The depositing of soil, rock, or other earth materials by artificial means.

**Final Map.** A map prepared in accordance with the provisions of Div. 13.10 of this Chapter and with any applicable provisions of the Subdivision Map Act, designed to be recorded in the Office of the County Recorder of Los Angeles.

**Financial Services.** Financial institutions that provide retail banking services. This classification includes only those institutions engaged in the on-site circulation of money, including credit unions and bail bond brokers. Check-cashing businesses and payday lenders are included in the Alternative Financial Services definition.

**Finished Floor.** [Reserved]

**Finished Grade.** [Reserved]

**Finished Ground Floor Elevation.** [Reserved]

**Finished Ground Surface.** [Reserved]

**Fire Protection.** Such fire hydrants and other protective devices as required by the Chief Engineer of the Fire Department.

**Fire Stairs.** [Reserved]

**First Public Road Paralleling the Sea.** That road nearest to the sea, as defined in Sec. 30115 of the Public Resources Code, which: (a) is lawfully open to uninterrupted public use and is suitable for that use; (b) is February 28, 2020 REVISED RECOMMENDATION DRAFT 260 publicly maintained; (c) is an improved, all-weather road open to motor vehicle traffic in at least one direction; (d) is not subject to any restrictions on use by the public except when closed due to an emergency or when closed temporarily for military purposes; and (e) does, in fact, connect with other public roads, providing a continuous access system, and generally parallels and follows the shoreline of the sea

to include all portions of the sea where the physical features, such as bays, lagoons, estuaries and wetlands cause the waters of the sea to extend landward from the generally continuous coastline.

**Flatwork.** Any constructed object 2.5 feet in height or less measured from surrounding grade, including pavement.

**Flood Hazard.** A hazard to land or improvements due to overflow water having sufficient velocity to transport or deposit debris, scour the surface soil, dislodge or damage buildings, or erode the banks of water courses.

**Floor Area.** Floor area is the total area of floor space within a building or structure meeting the definitions of covered and enclosed. See *Sec. 14.1.7 (Floor Area)*.

**Floor Area, Gross.** That area in square feet confined within the outside surface of the exterior walls of a building, as calculated by adding the total square footage of each of the floors in the building, except for that square footage devoted to vehicle parking and necessary interior driveways and ramps.

**Floor Area Ratio (FAR).** Floor area ratio (FAR) is the measurement of a building's floor area in relation to the size of the lot that the building is located on. See *Sec.2C.4.1. Floor Area Ratio (FAR))*.

**Focal Entry Feature.** Improved design standards applied to the primary entrance along the public way.

**Food and Beverage Store.** Any establishment primarily involved in the retail sale of food and beverages for off-site consumption. Examples include, but are not limited to, meat markets, produce markets, and other grocery stores.

**Food and Drink Manufacturing.** Any facility in which processed livestock and agricultural products are transformed into food or drink products for eventual consumption. The food and beverage products manufactured in these facilities are typically sold to wholesalers or retailers for distribution to consumers. Tobacco product manufacturing is included in this definition. Examples include, but are not limited to, animal food manufacturing; beverage manufacturing; dairy product manufacturing, ice manufacturing; fruit and vegetable preserving, grain and oilseed milling; specialty food manufacturing, seafood product preparation and packaging, and sugar and confectionery product manufacturing. Animal slaughtering is included in the Animal Products Processing definition. Breweries, distilleries, and wineries are included in the Alcoholic Beverage Manufacturing definition.

**Foundation Wall.** The above-grade portion of a facade that is located below the finished ground floor.

**Fraternity/Sorority Housing.** A single structure or set of structures in which members of a fraternity, sorority, or similar social organization affiliated with a college or university take residence.

**Freight Terminal.** Any facility intended for freight pick-up, transfer, or distribution by ground or water, including any related facility used in connection with such activities. Examples include, but are not limited to, freight, railroad, and trucking yards.

**Freeway.** A highway that the owners or those in possession of abutting lands have no right or easement of access to or from their abutting lands or that owners have only limited or restricted right or easement of access, and that is declared to be a freeway, in compliance with the Streets and Highways Code of the State of California.

**Frequency.** See *Sec.14.1.8 (Frequency)*.

**Frontage District.** See *Part 3B. (Frontage Districts)*.

**Frontage Lot Line.** [Reserved]

**Frontage Road.** A street lying adjacent and approximately parallel to and separated from a freeway, and which affords access to abutting property.

**Front Yard.** See *Sec. 14.1.20. (Yard Designation)*.

**Frontage Yard Fences and Walls.** A wall, fence, or hedge intended for front yards where a sense of privacy and enclosure is desired. See *Sec. 4C.7.1. (Frontage Yard Fences and Walls)*.

**Fueling Stations.** Any facility that retails vehicular fuels, including diesel, gasoline, or alternative fuels.

**Funeral and Related Services.** Any facility engaged in the provision of services involving the care, preparation, or arrangement of human or animal remains, and conducting memorial services. Examples include crematoriums, funeral homes, mortuaries, and pet crematoriums. Cemeteries are not included in this definition.

**Furniture and Related Products Manufacturing.** Any facility that makes furniture and related articles, such as mattresses, window blinds, cabinets, and fixtures. The processes used in the manufacture of furniture include the cutting, bending, molding, laminating, and assembly of such materials as wood, metal, glass, plastics, and rattan. This definition does not include facilities that so lely bend metal, cut, and shape wood, or extrude and mold plastics.

**Future Street or Alley.** Any real property which the owner has offered for dedication to the City for street or alley purposes, but which has been rejected by the City Council of the City of Los Angeles, subject to the right of the Council to rescind its action and accept by resolution at any later date and without further action by the owner, all or part of the property as a public street or alley. [Move to Street?]

## G

**General Light Manufacturing.** Any facility that makes a wide range of products that cannot readily be classified into other specific Light Industrial definitions. Examples include, but are not limited to, billboard manufacturing, medical equipment and supplies manufacturing; and toy manufacturing.

**General Plan.** A General Plan is a comprehensive declaration of purposes, policies and programs for the development of the city, which includes, where applicable, diagrams, maps and text setting forth objections, principles, standards and other features, and which has been adopted by the City Council. See *Div. 13C.1.* (Administrative Definitions).

**General Storage.** The use of any facility or an open area of land for the storage of goods, material, machinery or equipment, but not any storage that is ancillary to a principal use of the premises. Examples include, but are not limited to, building materials sales yards, contractor's equipment storage yards, and lumber yards.

**Geological Exploratory Core Hole.** [Reserved]

**Glare.** [Reserved]

**Glazing.** [Reserved]

**Golf Course.** An area of land laid out for the game of golf with a series of holes each including tee, fairway, and putting green and often one or more natural or artificial hazards.

**Grade.** The elevation or contour of the ground surface of a site.

**Grade, Finished.** Grade as established after a grading permit or where no grading permit is required, the original grade.

**Grade, Original.** Grade as established before a grading permit. Original grade does not include fill material or retained soil established without a grading permit.

**Grade Plane.** The elevation from which building and structure height is measured. See *Sec. 14.1.9. (Grade Plane)*.

**Grade, Surrounding.** The elevation of grade measured along the outside perimeter or an object, assembly, or structure.

**Grading.** Grading is any cut or fill, combination of cut and fill, or recompaction of soil, rock or other earth materials.

**Green Waste.** All yard trimmings and/or leaves, grass clippings, agricultural wastes and vegetative landscaping materials generated from the maintenance of yards, parks or other similar facilities.

**Green Waste and Wood Waste Facility.** Any facility which receives Green Waste and/or Wood Waste for chipping and grinding, composting, curing, or mulching. This definition does not include any chipping and grinding, composting, curing, or mulching conducted for noncommercial, nonprofit purposes.

**Grocery Story Incentive Area.** An area of a Community Plan identified in the applicable Community Plan Implementation Overlay as eligible to utilize the Full-Service Grocery Store Incentive of Section 9.4.03.

**Gross Vehicle Weight Rating.** The maximum weight a vehicle can carry, including driver, passengers, and cargo

**Ground Floor.** The floor surface associated with the ground story.

**Ground Floor Elevation.** The finished floor height associated with the story of a building having its finished floor elevation nearest to the finished ground surface.

**Ground Passenger Terminal.** Any facility such as a bus or train station, where ground transport regularly load and unload passengers.

**Ground Story.** See *Sec. 14.1.10. (Ground Story Determination)*.

**Ground Story Facade Area.** The portion of an above-grade building facade located on the ground story.

**Ground Story Height.** The floor-to-floor height of the story of a building having its finished floor elevation nearest to the finished ground surface.

**Ground Surface.** [Reserved]

**Groundcover.** [Reserved]

**Guest Room.** Any habitable room except a kitchen, designed or used for occupancy by one or more persons and not in a dwelling unit.

**Gun Sales.** Any establishment that sells firearms, ammunition, handguns, rifles, and related accessories.

**Gym.** Any commercial facility primarily intended for physical exercise. Amenities may include game courts, lap pools, exercise studios, saunas, steam rooms, and strength-training equipment. Examples include, but are not limited to, health clubs, self-defense gyms, rock climbing centers, and yoga studios.

## H

**Habitable Space.** Any occupiable space designed and intended for living, sleeping, eating or cooking. Bathrooms, toilet rooms, closets, halls, storage or utility spaces, and similar areas are not considered habitable spaces.

**Hauling.** [Reserved]

**Hazardous Waste Facility.** Any facility utilized for the storage, treatment, and disposal of hazardous waste as defined in the California Health and Safety Code Section 25117.1.

**Health Center Incentive Area.** An area of a Community Plan identified in the applicable Community Plan Implementation Overlay as eligible to utilize the Health Center Incentive of Section 9.4.03.

**Hearing Officer.** Any Department of City Planning planner conducting a public hearing on behalf of the Director or the City Planning Commission.

**Heavy Industrial Uses.** See *Div. 5D.2. (Definitions, Use)*.

**Hedge.** [Reserved]

**Height in Feet.** The vertical dimension of a building or structure, measured in feet. (see Sec.2.2.4.2)

**Height in Feet.** The maximum height in feet of a building or structure.

**Height in Stories.** The height of a building measured in stories. See *Sec. 2C.4.3. (Height in Stories)*.

**Height Transition.** A reduction in the maximum height allowance of buildings and structures for a limited depth along non-street lot lines. *(see Sec.2.2.5.3)*

**Height Transition Depth.** [Reserved]

**Helicopter Landings, Infrequent.** Any single location or premises used for infrequent helicopter landings as regulated by Section 7.9.7.

**Heliport.** [Reserved]

**High-Rise Sign.** A sign located at least 100 feet above grade and attached to the wall of a building.

**Hillside Area.** Lots identified as being in a Hillside Area, as established in *Sec.1B.2.6.* (Hillside Area Map).

**Historic.** Any building, structure, Landscaping, Natural Feature, or lot, including street features, furniture or fixtures, which depicts, represents or is associated with persons or phenomena which significantly affect or which have significantly affected the functional activities, heritage, growth or development of the City, State, or Nation.

**Historic-Cultural Monument.** Any building, structure, Landscaping, Natural Feature, or lot designated as a City Historic- Cultural Monument.

**Historic Preservation Overlay Zone (HPOZ).** Any area of the City containing buildings, structures, Landscaping, Natural Features or lots having Historic, architectural, Cultural or aesthetic significance and designated as a Historic Preservation Overlay Zone under the provisions of this Division.

**Historic Resources Survey.** A document, which identifies all contributing and non-contributing buildings, structures and all contributing Landscaping, Natural Features and lots, individually or collectively, including street features, furniture or fixtures, and which is certified as to its accuracy and completeness by the Cultural Heritage Commission.

**Historical Property Contract.** A contract between an Owner or Owners of a Historical-Cultural Monument or a Contributing Element and the City, which meets all requirements of Sec. 50281 and 50282 of the California Government Code and Sec. 19.140 et seq. of the Los Angeles Administrative Code.

**Historical Vehicle Collection.** One or more vehicles, as defined by Sections 5004(a)(1), (2) and (3) of the California Vehicle Code, special interest vehicles, as defined by Section 5051(b) of the California Vehicle Code, out-of-production vehicles of historical importance, as determined by the Zoning Administrator or parts cars, as defined in Section 5051(c) of the California Vehicle Code, which are collected, restored, or maintained for non-commercial hobby or historical purposes.

**Hive.** A structure that houses a bee colony.

**Home Occupation.** An occupation carried on by the occupant or occupants of a Dwelling Unit as an Accessory Use. For Dwelling Units where Home Occupation is conducted, the Home Occupation shall be considered a Residential Use for zoning purposes.

**Home-Sharing.** [Reserved]

**Homeless Shelter.** A facility operated by a "provider," other than a "community care facility" as defined in the California Health and Safety Code Section 1502, which provides temporary accommodations to homeless persons or families and which meets the standards for shelters contained in Title 25, Division 1, Chapter 7 of the California Code of Regulations. The term "temporary accommodations" means that a homeless person or family will be allowed to reside at the shelter for a time period not to exceed six months. For the purpose of this definition, a "provider" shall mean a government agency or private non-profit organization which provides, or contracts with recognized community organizations to provide, emergency or temporary shelter for the homeless, and which has been certified by the Housing and Community Investment Department of the City of Los Angeles to meet all applicable requirements as such which are contained in the California Health and Safety Code and the California Code of Regulations.

**Horizontal Bands.** A continuous band of material running horizontally across a facade.

**Horizontal Storage.** A device that holds the bicycle upright by wheel contact shall hold at least 180 degrees of wheel arc. [standard, not definition]

**Hospice.** Any facility focused on providing medical care, pain management, and emotional and spiritual support for terminally ill individuals. Additional services provided may include, but are not limited to, short-term inpatient care, short-term respite care, speech-language pathology, and grief and loss counseling for patients, family, and friends.

**Hospital.** A health facility licensed by the State that provides 24-hour inpatient care, including the following basic services: medical, nursing, surgical, anesthesia, laboratory, radiology, pharmacy, dietary services.

**Hotel.** A building designated or used for or containing six or more guest rooms, or suites of rooms, which may also contain not more than one dwelling unit, but not including any institution in which human beings are housed or detained under legal restraint. Hotel uses include, but are not limited to, Short-Term Rentals.

**Hours of Operation.** The hours in which a business is open to the public.

**House of Worship.** Any facility which is used primarily for religious activities and religious worship. Examples include, but are not limited to, chapels, meditation centers, mosques, religious meeting rooms, religious retreats, synagogues, or temples.

**Household.** One or more persons living together in a dwelling unit, with common access to, and common use of all living, kitchen, and eating areas within the dwelling unit.

**Household Living.** Residential occupancy of at least one dwelling unit by a household.

**Household Moving Rental Truck.** Any motor vehicle which is displayed, stored or offered for rental without a driver, used and maintained solely for the transportation of property, primarily used for the do-it-yourself movement of personal or household goods by private individuals on a short-term basis, having only two axles, and equipped with a body of no more than 22 feet in length measured at the vehicle chassis nor more than 12 feet in height measured from the surface upon which the involved truck rests. Such vehicle may exceed 5,600 pounds in registered net weight.

**Housing Development.** The construction pursuant to a building permit or the proposed conversion to condominium ownership pursuant to a final subdivision tract map submitted for approval of any Apartment House, Apartment Hotel, multiple dwelling or group dwelling, residential condominium development or cooperative apartment home having five or more Dwelling Units.

**Housing Development Project.** The construction of five or more new dwellings units, the addition of five or more residential dwelling units to an existing building or buildings, the remodeling of a building or buildings containing five or more residential dwelling units, or a mixed use development containing residential dwelling units. For the purpose of establishing the minimum number of five dwelling units, Restricted Affordable Units shall be included and density bonus units shall be excluded.

## I

**Illuminated Architectural Canopy Sign.** An enclosed illuminated canopy that is attached to the wall of a building with the face of the sign approximately parallel to the wall and with the message integrated into its surface. [Move to Sign?]

**Illuminated Canopy Sign.** A sign integrated into an enclosed internally illuminated canopy that is attached to the wall of a building. [Move to Sign?]

**In-Vessel Composting.** A process in which compostable material is enclosed in a drum, silo or similar structure where the environmental conditions are controlled and the compostable material is aerated and mechanically agitated. This process allows for accelerated decomposition.

**Incentive.** The granting of additional development potential through a Local Incentive Maximum or a modification to a development standard or requirement of this Chapter.

**Incidental.** [Reserved]

**Individual with a Disability.** As defined under the Acts, a person who has a physical or mental impairment that limits one or more major life activities, anyone who is regarded as having that type of impairment or, anyone who has a record of that type of impairment.

**Inflatable Device.** A sign that is a cold air inflated object, which may be of various shapes, made of flexible fabric, resting on the ground. Inflatable devices are restrained, attached, or held in place by a cord, rope, cable or similar method. The term inflatable device shall not include any object that contains helium, hot air or a lighter-than-air substance.

**Infrequent Use.** [Reserved]

**Ingress.** [Reserved]

**Inoperable Vehicle.** Any motor vehicle or trailer which is incapable of immediate and sustained movement for which it was designed.

**Instructional Services.** See *Div. 5D.2. (Definitions, Use)*.

**Integrated Parking.** Structures with 50% or less of the gross floor area devoted to vehicular use area.

**Interim Motel Housing Project.** An Interim Motel Housing Project is the physical re-purposing or adaptation of an existing transient residential structure, such as a motel, Hotel, Apartment Hotel, Transient Occupancy Residential Structure, or Hostel, for use as Supportive Housing or Transitional Housing for persons experiencing homelessness or those at risk of homelessness. The Local Public Agency determines who qualifies as experiencing homelessness or is at risk of homelessness.

**Interim Use.** [Reserved]

**Interior.** All enclosed and covered areas included within surrounding exterior walls of a building.

**Interior Walls.** [Reserved]

**Inundation.** Ponded water or water in motion of sufficient depth to damage property due to the presence of the water or to deposit of silt.

## J

**Joint Living and Work Quarters.** The conversion of an existing building to a residential occupancy of one or more rooms or floors used as a Dwelling Unit with adequate work space reserved for, and regularly used by, one or more persons residing there, as defined in the Health and Safety Code. For the purposes of this use, an existing building is a building for which a building permit was issued prior to April 1, 1994.

**Joint Public and Private Development.** A project on City-owned land that involves a cooperative arrangement between a private sector entity or a non-governmental organization and the City.

**Junior Accessory Dwelling Unit (JADU).** A unit that is no more than 500 square feet in size and contained entirely within a single-family residence. A Junior Accessory Dwelling unit may include separate sanitation facilities, or may share sanitation facilities with the existing structure.

**Junk Yard Facility.** Any property where the business of a junk dealer, as defined by either Section 21601 of the California Business and Professions Code or Section 103.305 of the Los Angeles Municipal Code, is conducted - other than wholly within an enclosed building. In addition, a junk yard shall include property used for the storage of impounded, abandoned, partially dismantled, obsolete or wrecked automobiles - other than wholly within an enclosed building. This definition does not include Historical Vehicle Collection. This definition does not include the acceptance or sale by bona fide automobile parts retail dealers of used parts (including tires or batteries) tendered

in exchange for, or in part payment of new or previously rebuilt, reconstructed or remanufactured automobile parts.

## K

**Kennels.** Any site on which four (4) or more dogs, at least four (4) months of age, are kept. This definition does not include Pet Shops.

**Kitchen.** Any room or any portion of a Dwelling Unit, whether an enclosing subdivision thereof or otherwise, used or intended or designed to be used for cooking and preparing food except a Light Housekeeping Room or that portion of a Recreation Room in a multiple residential use, or in an accessory building appurtenant thereto, containing the facilities for the cooking and preparation of food.

## L

**LAMC.** Los Angeles Municipal Code. [Abbreviations?]

**Landing Platforms.** The portion of a floor adjacent to an elevator, ramp, stair or door, designed to provide a stable space to stand.

**Landscape.** Any modification to the visible features of a site including; non-building structures, standalone fences and walls, site furniture, flatwork, ground treatments, vegetation, changes to terrain, stormwater management feature, outdoor lighting, water feature, and outdoor access and circulation.

**Landscape Plan.** [Reserved]

**Landscaping.** The design and organization of landforms, hardscape, and softscape, including individual groupings of trees, shrubs, groundcovers, vines, pathways, arbors, etc.

**Large Species Tree.** A tree with a minimum 30 foot canopy spread at maturity.

**Leachates.** Any liquid which has come into contact with or percolated through composting or curing materials and contains extracted or dissolved substances therefrom, or any other liquid which has been generated by the decomposition process.

**Legislative Approval.** Any action that formulates a rule of general applicability that applies to all future cases. These typically require an action by the City Council, such as those as set forth in Div. 13B.1 (Legislative Action) of this Article.

**Legislative Decision.** See Sec. 13A.2.1.B. (Applicability; Procedural Categories).

**Light Housekeeping [Guest] Room.** Any guest room which is designed and used as a bedroom and for the cooking and preparing of food, in conformance with the provisions of Section 91.8116 of the Building Code, Chapter 9 For the purpose of applying the lot area and automobile parking

space requirements of the various zones, each Light Housekeeping Room shall be considered as a separate Guest Room. [Move to Guest Room?]

**Live Entertainment.** Any activity provided for the enjoyment, recreation, relaxation, diversion or other similar purpose performed by a person or persons who are physically present and where such performances is to patrons who are also physically present. Examples include dance performances, musical acts, sporting events, shows featuring comedians, magicians, or actors, and other similar productions.

**Live/Work.** A residential occupancy of one or more rooms or floors used as a Dwelling Unit with adequate work space reserved for, and regularly used by, one or more persons residing there and non-residential employees. A Live/Work unit combines both residential and non-residential uses within a single unit.

**Livestock Keeping.** See *Div. 5D.2. (Definitions, Use)*.

**Living Wall.** A system permanently attached to the exterior building facade supporting vegetation with its growing medium and integrated irrigation system.

**Loading.** [Reserved]

**Loading Area.** Areas designed and intended for the loading and unloading of goods to and from *commercial vehicles*.

**Loading Space.** An off-street space or berth on the same lot with a building, or contiguous to a group of buildings, for the temporary parking of a commercial vehicle while loading or unloading merchandise or materials, and which abuts upon a street, alley or other appropriate means of access.

**Local Coastal Program (LCP).** The City's land use plans and other applicable general plan elements, zoning ordinances, zoning district maps, and proposed implementing actions, which when taken together, meet the requirements of, and implement the provisions and policies of, the California Coastal Act of 1976.

**Local Public Agency.** An agency, identified on a list maintained by the Department of City Planning, that funds Supportive Housing and Transitional Housing for persons experiencing homelessness or at risk of homelessness.

**Local Street.** A street providing access to abutting property and serving local traffic, as distinguished from through traffic.

**Local Street.** Any street other than a Collector Street, Avenue or Boulevard, or freeway providing access to abutting property and serving local as distinguished from through traffic.

**Lodging.** Any visitor-serving facility that provides accommodations in guest rooms or units for compensation, including, but not limited to, Short-Term Rentals.

**Long-Term Bicycle Parking.** [Reserved]

**Lot.** A parcel of land conforming to the standards for identifying a lot contained in *Section 14.1.11 (Lot)*, and which is identified on a *final tract map (Div. 11.3.)* or a parcel map recorded in the Office of the County Recorder with a separate and distinct letter or number.

**Lot - Air Space.** A division of the space above or below a lot as defined in *Article 14* (General Definitions & Measurements) with a finite width, length, and upper and lower elevation occupied or to be occupied by a use, building or portion thereof, unit group of buildings or portions thereof, and accessory buildings or portions thereof or accessory uses. An air space lot shall be identified on a final map or a parcel map recorded in the office of the County Recorder with a separate and distinct number or letter.

An air space lot shall have such access to a street or private street by means of one or more easements or other entitlements to use in a form satisfactory to the Advisory Agency and the City Engineer.

**Lot Area.** The amount of land area within the boundaries of a lot.

**Lot Line.** The boundaries of a lot. See *Sec. 14.1.12. (Lot Line Determination)*.

**Lot Line-Facing Facade.** [Reserved]

**Lot line, Alley.** See *Sec. 14.1.12.H. (Alley Lot Line, Lot Line Determination)*.

**Lot line, Frontage.** See *Sec. 14.1.12.B. (Frontage Lot Line, Lot Line Determination)*.

**Lot line, Primary Street.** See *Sec. 14.1.12.C. (Primary Street Lot Line, Lot Line Determination)*.

**Lot line, Rear.** See *Sec. 14.1.12.G. (Rear Lot Line, Lot Line Determination)*.

**Lot line, Side.** See *Sec. 14.1.12.F. (Side Lot Line, Lot Line Determination)*.

**Lot line, Side Street.** See *Sec. 14.1.12.D. (Side Street Lot Line, Lot Line Determination)*.

**Lot line, Special.** See *Sec. 14.1.12.E. (Special Lot Line, Lot Line Determination)*.

**Lot Tie.** Multiple parcels can be grouped together as a lot for the purpose of development. See also *Sec. 14.1.11. (Lot)*.

**Lot Width.** The length of primary street lot lines bounding a lot.

**Lower Income Households.** As defined in Sec. 50079.5 (Definitions) of the California Health and Safety Code.

**Lower Income Households.** Annual income of a household that does not exceed the amount designated for that category as defined in Section 50079.5 of the Health and Safety Code.

## M

**Machinery and Fabricated Metal Manufacturing.** Any facility in which fabricated metal is transformed into intermediate or end products. Important fabricated metal processes are forging, stamping, bending, forming, and machining, used to shape individual pieces of metal; and other processes, such as welding and assembling, used to join separate parts together. Examples include, but are not limited to, machine shops; manufacturing of architectural and structural metals, batteries, electronic products, and vehicles and vehicle parts.

**Main Traveled Roadway of a Freeway.** The portion of a freeway, including interchange roadways connecting one freeway with another, which is designed for the movement of large volumes of vehicular traffic, efficiently and safely at high speed, but not including service roadways, landscape areas, or ingress or egress ramps connecting the freeway with other streets.[Measurement?]

**Maintenance.** [Reserved]

**Maintenance and Repair.** See "Maintenance and Repair, Ordinary" below.

**Maintenance and Repair, Ordinary.** Any work done to correct the deterioration, decay of, or damage to any part of a building, structure or lot, including in-kind replacement, which does not involve a change in the existing design, materials, or exterior paint color.

**Maintenance and Repair Services.** Any facility engaged in the maintenance or repair of industrial, business, or consumer machinery, equipment, or products. Examples include, but are not limited to, carpet cleaning and dry-cleaning plants; maintenance and repair of household appliances, furniture, office equipment, and similar items. Vehicle maintenance and repair is included in the Light Vehicle Repair and Heavy Vehicle Repair definition.

**Major Transit Stop.** [Reserved]

**Majority.** A majority number of the members of the respective body, not the majority of members present.

**Marquee Sign.** A sign displayed on the periphery of a marquee.

**Massage Therapy.** Any facility where massage, alcohol rub, fomentation, electric or magnetic treatment, or similar treatment or manipulation of the human body is administered by a medical practitioner, chiropractor, physical therapist, or similar professional person licensed by the State of California.

**Maturity.** [Reserved]

**Mechanical and utility equipment.** [Reserved]

**Mechanical Exhaust Outlets.** [Reserved]

**Medical Facility.** An outpatient health facility that provides direct medical services to patients who remain less than 24 hours. Examples include, but are not limited to, dental, doctor, and optometry offices or clinics.

**Mezzanine.** An intermediate level within a story of a building. *(For Mezzanine Standards see Sec. 14.1.19.C. (Mezzanine, Story)*.

**Ministerial Action.** Any action involving only the nondiscretionary application of objective standards, including the processes described in *Sec. 13A.2.1.B. (Applicability, Procedural Categories)*.

**Ministerial Decision.** See Sec. 13A.2.1.B. (Applicability; Procedural Categories).

**Mobile Medical Clinic.** A vehicle, or portable structure transported by a vehicle, easily transportable in one or more sections, which is used to primarily provide diagnostic, preventive medical services, or blood collection services on a temporary basis in any one location.

**Mobile Recycling Center.** A receptacle, usually a trailer, for the collection of recyclable materials that is drawn by motor power and bears a valid state license.

**Mobilehome.** As defined by Section 18008 of the California Health and Safety Code.

**Mobilehome Park.** Any lot or portion of a lot used to provide rental or lease sites for two or more individual manufactured homes, mobilehomes, park trailers, or recreational vehicles.

**Mobilehome Site.** That portion of a Mobilehome Park set aside and designated for the occupancy of manufactured homes, mobilehomes, park trailers, or recreational vehicles and including the area set aside or used for parking and accessory buildings or structures such as awnings, cabanas or ramadas.

**Model Dwelling.** A one-family residential unit having all the following characteristics:

1. The unit is constructed on a proposed lot or in a proposed building previously designated as a model dwelling site by the Advisory Agency in a subdivision or a multiple unit development for which the Advisory Agency has approved or conditionally approved a tentative map, but for which a final map has not yet been recorded.
2. The proposed lot upon which the unit is constructed is recognized as a legal building site for the duration of the model dwelling permit.
3. No Certificate of Occupancy for such unit has been issued by the Superintendent of Building.
4. Where applicable, temporary access to the lot is permitted over future streets previously restricted to public access.
5. The unit is intended to be temporarily used as an example of the dwellings which have been built or are proposed to be built in the same subdivision or multiple dwelling development.

**Moderate Income Households.** Annual income of a household that does not exceed the amount designated for that category as defined in Section 50052.5 of the Health and Safety Code.

**Module.** [Reserved]

**Monument Sign.** A freestanding sign that is erected directly upon the original grade or finished grade, or that is raised no more than 12 inches from the existing or artificially created grade to the bottom

of the sign, and that has a horizontal dimension equal to or greater than its vertical dimension. See *Sec. 4C.11.6.C.e. (Monument Sign)*.

**Motel.** An auto-oriented Hotel that provides rooms with limited amenities and direct access to an open parking area. Also called a motor court or motor lodge.

**Motor Vehicle.** A self-propelled devise designed for transporting persons or property with the ability to reach speeds over 20 miles per hour.

**Motor Vehicle Access.** [Reserved]

**Motor Vehicle Use Area.** An area designed and intended for use by motor vehicles. See *Sec. 4C.14. (Definitions, Development Standards)*.

**Mulch.** A woody vegetative material used as a nonnutritive ground cover to control erosion, improve water retention and retard weed growth.

**Mulching Facility.** Any facility which receives, temporarily stores and processes primarily source-separated carbonaceous wood waste and/or yard trimmings into a mulch. Examples of such materials include clean wood waste, tree and shrub trimming, leaves and other high carbon, low nitrogen material which decompose at a slow rate and have little leachate or odor-causing potential. Processing of such materials is achieved by chipping and screening to attain a uniform particle size and may include limited aging of the material to achieve a desired appearance. This definition shall not include any mulching of green waste and/or wood waste conducted for noncommercial, nonprofit purpose.

**Mullion.** [Reserved]

**Muntins.** [Reserved]

## N

**Native Plants.** [Reserved]

**Natural Feature.** Any significant tree, plant life, geographical or geological feature identified individually or collectively on the Historic Resources Survey as contributing to the Cultural or Historical significance of the Historic Preservation Overlay Zone.

**Nature Conservation Area.** An area designed for the conservation, protection, enhancement, and management of public land. Examples include, but are not limited to, ecological preserves, marine preserves, natural resource preserves, and water conservation areas.

**New Construction.** New construction is the construction of a new building or structure.

**Non-Contributing Element.** Any building, structure, Natural Feature, lot, or Landscaping, that is identified in the Historic Resources Survey as a Non-Contributing element, or not listed in the Historic Resources Survey.

**Non-Residential Project.** A development project that does not contain any dwelling units, guest rooms, joint living and work quarters, Live/Work units, or any other type of Lodging.

**Nonconforming Building or Structure.** A nonconforming building or structure is a structure, or portion of a building or structure that does not conform to the regulations of this Chapter and that lawfully existed at the time the regulations with which it does not conform became effective.

**Nonconforming Site or Lot.**

**Nonconforming Use.** A nonconforming use is the use of a building, structure, or land that does not conform to the regulations of this Chapter and which lawfully existed at the time the regulations with which it does not conform became effective.

**Nonmetallic Mineral Product Manufacturing.** Any facility with the purpose of transforming mined or quarried nonmetallic minerals, such as clay, gravel, sand, stone, and refractory materials using processes that include grinding, mixing, cutting, shaping, and honing. Examples include, but are not limited to, the manufacturing of clay products and refractory, cement and concrete products, glass and glass products, lime and gypsum products, and other nonmetallic mineral products.

## O

**Occupiable Space.** Any area designed and intended for human occupancy with a minimum clear height of 7.5 feet.

**Office.** Any place where office activities such as administrative, professional, or clerical operations are performed. This definition does not include medical offices. Examples include, but are not limited to, dry labs, architectural, legal, accounting, engineering, therapists, and consulting offices.

**Official Police Garage.** City-approved vendors of vehicle towing and storage services that support the public safety mission of the Los Angeles Police Department (LAPD) and Department of Transportation (DOT).

**Off-Site Sign.** A sign that displays any message directing attention to a business, product, service, profession, commodity, activity, event, person, institution or any other commercial message, which is generally conducted, sold, manufactured, produced, offered or occurs elsewhere than on the premises where the sign is located.[Move to Sign?]

**Oil and Gas Extraction.** Any facility which operates or develops oil and gas fields. Such activities may include exploration for crude petroleum and natural gas; drilling wells; and all other activities in the preparation of crude oil up to the point of shipment from the producing property. Examples include, but are not limited to, the production of crude petroleum and natural gas; sulfur recovery from natural gas; and recovery of hydrocarbon liquids.

**Oil Well.** Any well or hole already drilled, being drilled or to be drilled into the surface of the earth which is used or intended to be used in connection with coring, or the drilling for prospecting for or producing petroleum, natural gas or other hydrocarbon substances, or is used or intended to be used for the subsurface injection into the earth of oil field waste, gases, water or liquid substances,

including any such existing hole, well or casing which has not been abandoned in accordance with the requirements of Article 7 of Chapter 5 of this Code except that "Oil Well" shall not include "Temporary Geological Exploratory Core Hole" as defined in Article 14 (Rules & Definitions).

**Oil Well Class A.** Any oil well drilled, conditioned arranged, used or intended to be used for the production of petroleum.

**Oil Well Class B.** Any oil well drilled, conditioned, arranged, used or intended to be used only for the subsurface injection into the earth of oil field waste, gases, water or liquid substances.

**On-Site Sign.** A sign that is other than an off-site sign.

**Opacity (%).** See *Sec. 14.1.14 (Opacity %)*.

**Open Area.** The measurement of the permeability of an object or assembly. *(For Measurement see Sec.XX)*

**Open Space.** [Reserved]

**Open Space Depth.** [Reserved]

**Open Storage.** [Reserved]

**Open to the Sky.** Having no intervening structure between the finished floor or ground surface and the sky.

**Original Art Mural.** A one-of-a-kind, hand-painted, hand-tiled, or digitally printed image on the exterior wall of a building that does not contain any commercial message. For definition purposes, a commercial message is any message that advertises a business conducted, services rendered, or goods produced or sold.

**Outdoor Amenity Space.** [Reserved]

**Outdoor Dining.** Any Covered or Uncovered portion of an Eating and Drinking Establishment which is unenclosed and which is used primarily for the consumption of food or drinks by the patrons of the Eating and Drinking Establishment. This definition includes Outdoor Dining areas that are on or above the ground floor, but does not include Rooftop Dining.

**Outdoor Equipment.** [Reserved]

**Outdoor Lighting.** [Reserved]

**Outdoor Room.** [Reserved]

**Owner.** Any person, association, partnership, firm, corporation or public entity identified as the holder of title on any property as shown on the records of the City Engineer or on the last assessment roll of the County of Los Angeles, as applicable. For purposes of this Chapter, "Owner" also refers to an appointed representative of an association, partnership, firm, corporation, or public entity which is a recorded owner.

## P

**Parcel.** A piece of land with defined boundaries intended for the purpose of ownership

**Parcel Map.** A map showing a division of land other than those divisions which require a Final Tract Map as defined by the Subdivision Map Act.

**Parcel Map.** A map showing a division of land other than those divisions, which require a Final Map as defined by the Subdivision Map Act.

**Parking.** Any facility intended for the parking of vehicles as a principal use. Examples include parking structures and surface parking lots. Vehicle storage is not included in this definition.

**Parking Area.** [Reserved]

**Parking Garage.** Structures with 50% or more of their floor area dedicated to parking uses. See *Sec. 4C.4.5. (Parking Structure Design)*.

**Parking Space.** [Reserved]

**Parking Stall.** [Reserved]

**Parking Structure.** For the purpose of parking structure design, parking structure includes parking garages and integrated parking structures. See *Sec. 4C.4.5. (Parking Structure Design)*.

**Parking Structure, Integrated.** Structures with less than 50% of their floor area dedicated to parking uses. See *Sec. 4C.4.5. (Parking Structure Design)*.

**Parking Structure Facade.** [Reserved] See *Sec. 4C.4.5. (Parking Structure Design)*.

**Parks & Open Space.** See *Div. 5D.2. (Definitions, Use)*.

**Parkway.** [Reserved]

**Paseo.** [Reserved]

**Pedestrian Access.** [Reserved]

**Pedestrian Accessway.** [Reserved]

**Pedestrian Amenity Modification.** The width of pedestrian amenity space in the build-to range that is allowed to count toward the build-to width requirement.

**Pedestrian Amenity Space.** [Reserved]

**Pedestrian Amenity Space-Facing Facade.** See *Sec. 14.1.16. (Pedestrian Amenity-Facing Facade)*.

**Pedestrian Connection.** [Reserved]

**Pedestrian Facilities.** Site improvements designed and intended for pedestrian foot traffic including but not limited to sidewalks, walkways and crosswalks. See *Sec. 4.1.2. (Pedestrian Facilities)*.

**Pedestrian Passageway.** [Reserved]

**Pedestrian Sign.** A small sign attached perpendicular to the building facade that hangs from a bracket or support extending more than 1 foot from the outside wall of the building. [Move to Sign?]

**Permanent Structure.** [Reserved]

**Permit.** Any license, certificate, approval, or other entitl-ement for use granted, conditionally granted, or denied by any public agency, which is subject to the provisions of this Section.

**Perpendicular Line.** A straight line between the point on a sign face that is closest to the street and the point where the line intersects the street lot line at a 90 degree angle, as illustrated in Diagram C of this article.

**Perennial.** A plant that lives more than two years, including woody species and other plants that do not die back annually.

**Person.** An individual, joint venture, joint stock company, partnership, association, club, company, corporation, business trust, organization or the manager, lessee, agent, servant, officer or employee of any of them.

**Personal Services.** Any establishment providing a commercial service, such as hair styling, spa treatments, or cleaning, for the personal needs of customers.

**Petroleum and Coal Product Manufacturing.** Any facility which transforms crude petroleum and coal into usable products. Examples include, but are not limited to, grease and petroleum lubricating oils manufacturing, tar roofing and asphalt manufacturing, and refineries.

**Plant.** [Reserved]

**Plant Type.** [Reserved]

**Planting Area.** The area on a lot designated and designed for plants.

**Planting Hole.** [Reserved]

**Plastic and Rubber Product Manufacturing.** Any facility that manufactures goods by processing plastic materials and/or raw rubber.

**Pole Sign.** A freestanding sign that is erected or affixed to one or more poles or posts and that does not meet the requirements of a monument sign or a pillar sign.

**Preferential Parking.** Parking spaces, designated or assigned through use of a sign or painted space markings for Carpools or Vanpools, that are provided in a location more convenient to the entrance for the place of employment than parking spaces provided for single-occupant vehicles.

**Preliminary Parcel Map.** Refers to a map made for the purpose of showing the design of a proposed subdivision creating 4 or fewer parcels, 4 or fewer condominiums, or 4 or fewer units in a community apartment project or stock cooperative, and showing the existing conditions in and around it and need not be based upon an accurate or detailed final survey of the property.

**Prepare.** Whenever this Chapter directs an agency or official to prepare a document, this means that the agency or official may actually prepare the document or cause the document to be prepared by its staff, consultants, or other authorized third parties.

**Primary Metal Manufacturing.** Any facility which smelts or refines ferrous and nonferrous metals. Examples include, but are not limited to, aluminum, iron, and steel foundries and mills.

**Primary or Side Street.** [Placeholder - move to Street?]

**Primary Street Lot Line.** [Placeholder - move to Lot Line?]

**Principal Material.** The building product used as the exterior wall finish material for the great majority of the exterior building facade.

**Principal Use.** The main permitted use of land or structures as distinguished from an accessory use.

**Privacy Screens.** [Reserved]

**Private.** [Reserved]

**Private Club.** Any facility organized solely for the promotion of some common interest and which is accessible to club members and their guests only. Examples include, but are not limited to, business, fraternal, political, and social organizations.

**Private Road Easement.** A parcel of land not dedicated as a public street, over which a private easement for road purposes is proposed to be or has been granted to the owners of property contiguous or adjacent to the road that intersects or connects with a public street, or a private street; in each instance the instrument creating such easement shall be or shall have been duly recorded or filed in the Office of the County Recorder of Los Angeles.

**Private Street.** An ingress/egress easement, roadway, walkway, or other right-of-way open to travel by pedestrians, non-motorized vehicles, or motor vehicles that is not a public street or way, whether or not the instrument creating it has been recorded or filed in the Office of the Recorder of Los Angeles County.

**Private Street.** A private road easement as defined herein which has been determined by the Advisory Agency or the Director of Planning to be adequate for access and for the purposes set forth in this Article, or in Div. 10A.3. (Private Street Regulations).

**Private Street.** A private road easement as defined herein which has been determined by the Advisory Agency or the Director of Planning to be adequate for access and for the purposes set forth in this Chapter, Article 7 (Division of Land Regulations), or Article 8 (Private Street Regulations) of Chapter 1 (General Provisions and Zoning) of this Code.

**Problem Areas.** Those portions of the City of Los Angeles determined by resolution of the Board of Public Works to be actually or potentially dangerous by reason of geological conditions, being subject to inundation or overflow by stormwater, or because of any other potentially dangerous condition, including but not limited to areas subject to rapid spread of fire.

**Producing Zone.** A reservoir or series of reservoirs of sufficient thickness and productivity of hydrocarbons as to form an economic source of supply and which is segregated from other reservoirs or series of reservoirs by natural boundaries or barriers to such an extent as to make its separate development either economically or mechanically desirable in accordance with good oil field practice.

**Project.** New construction, addition, structural alteration, demolition, reconstruction, rehabilitation, relocation, removal or restoration of the exterior of any building, structure or landscaping and the installation of any sign, fence or wall. Project also includes any use of land or change in use. A project may or may not require a building permit. See *Sec. 14.1.17.B. (Project Activities)*.

**Project Activities.** See *Sec. 14.1.17. (Project Activities)*.

**Project Adjustment.** See *Div. 13C.1. (Definitions, Administration)*.

**Project Compliance.** See *Div. 13C.1. (Definitions, Administration)*.

**Project Review Thresholds.** [Reserved]

**Project Site.** The physical site on which a development project is located.

**Protected Tree.** See LAMC Sec. 46.01 (Defnition), LAMC Sec. 46.02. (Requirements for Public Works Permits to Relocate of Remove Protected Trees and Shrubs) and Sec. 11.1.4.P. (Division of Land; Protected Tree Regulations).

**Protected Tree.** "Protected Trees" as defined in Section 46.01 (Definition) of Article 6 (Preservation of Protected Trees) of Chapter 4 (Public Welfare) of this Code.

**Protection Levels.** [Reserved]

**Protective Barrier.** A building component or assembly located at or near the open sides of elevated occupiable space floor surfaces that are designed to reduce the risk of fall from the occupiable space. (Examples include: guardrails, railings and parapets)

**Public Art Installation.** A facility, amenity or project that does not contain any commercial message and which is either an "approved public arts project" as defined by Section 19.85.4 of the Los Angeles Administrative Code or approved pursuant to Section 91.107.4.6 of the Los Angeles Municipal Code. For definition purposes, a commercial message is any message that advertises a business conducted, services rendered, or goods produced or sold.

**Public Benefits Incentive Program.** An Incentive Program established in Division 9.4 of this Chapter to promote the production of improvements, facilities, resources, and services beyond affordable housing for the benefit and enjoyment of the general public.

**Public Facilities Incentive Area.** An area of a Community Plan identified in the applicable Community Plan Implementation Overlay as eligible to utilize the Public Facilities Incentive of Section 9.4.03.

**Public Facility.** [Reserved]

**Public Project.** Any development initiated by the Department of Public Works or any of its bureaus, any development initiated by any other department or agency of the City, and any development initiated or to be carried out by any other governmental agency which is required to obtain a local government permit. Public Project shall not include any development by any department or agency of the City or any other governmental entity which otherwise requires action by or approval of the City Planning Commission, Area Planning Commission or the Office of Zoning Administration, or any development by any department or agency of the City or any other government entity for which a permit from the Department of Building and Safety is required. Public Project shall also not include any development on tidelands, submerged lands, or on public trust lands, whether filled or unfilled. (Definition Amended by Ord. No. 173,268, eff. 7/1/00, Oper. 7/1/00.)

**Public Project.** Any development initiated by the Department of Public Works or any of its bureaus, any development initiated by any other department or agency of the City, and any development initiated or to be carried out by any other governmental agency that is required to obtain a local government permit. Public Project shall not include any development by any department or agency of the City or any other governmental entity that otherwise requires action by or approval of the City Planning Commission, Area Planning Commission, or the Office of Zoning Administration, or any development by any department or agency of the City or any other government entity for which a permit from the Department of Building and Safety is required. Public Project shall also not include any development on tidelands, submerged lands, or on public trust lands, whether filled or unfilled. Wetland. Lands within the Coastal Zone, which may be covered periodically or permanently with shallow, water and include saltwater marshes, freshwater marshes, open or closed brackish water marshes, swamps, mudflats and fens.

**Public Realm.** [Reserved]

**Public Right-of-Way.** See "Right-of-Way" in this Division.

**Public Right-of-Way Buffer.** A planting area with a wall, fence, or hedge, located along a public right-of-way, and typically intended for screening of surface parking lots, utilities, heavy commercial uses, and industrial uses.

**Public Safety Facility.** Any government facility that provides public safety services. Examples include, but are not limited to, fire stations and police stations.

**Public Way.** A street, alley or other parcel of land leading to a street or public right-of-way, that has been deeded, dedicated, or otherwise permanently appropriated to the public for public use that has a clear width and height of not less than 10 feet.

**Public Way.** Any street, channel, viaduct, subway, tunnel, bridge, easement, right-of-way or other way in which a public agency has a right of use.

## Q

**Qualified Permanent Supportive Housing Project.** The construction of, addition to, or remodeling of a building or buildings offering Supportive Housing; located in a zone in the 15 Density District, or a Density District allowing greater density, and where all of the total combined dwelling units or guest rooms, exclusive of any manager's units, are affordable. For the purposes of this subdivision, affordable means that rents or housing costs to the occupying residents do not exceed 30 percent of the maximum gross income of Extremely Low, Very Low or Low Income households, as those income ranges are defined by the United States Department of Housing and Urban Development (HUD) or any successor agency, as verified by the Housing & Community Investment Department (HCIDLA). A minimum of 50 percent of the total combined dwelling units or guest rooms is occupied by the Target Population.

**Quasi-Judicial Approval.** These actions apply rules to specific facts and are subject to procedural due process principles. These include the processes described in Div. 13B.2. (Quasi-Judicial Review), 13B.4. (Specific Plan Implementation), and 13B.5. (Quasi-Judicial Relief) of this Article.

**Quasi-Judicial Decision.** See Sec. 13A.2.1.B. (Applicability; Procedural Categories).

**Queueing.** [Reserved]

## R

**Railway Facility.** Any facility related to a freight railway; or a railway yard, maintenance, or fueling facility related to a passenger or freight railway.

**Rear Lot Line.** [Placeholder - move to Lot Line?]

**Reasonable Accommodation.** Providing an Individual with a Disability or developers of housing for an Individual with a Disability, flexibility in the application of land use and zoning regulations or policies (including the modification or waiver of certain requirements), when it is necessary to eliminate barriers to housing opportunities.

**Reconstruction.** [Reserved]

**Reconstruction.** The act or process of reproducing by new construction the exact form, features and details of a vanished building, portion of a building, structure, landscape, Natural Feature, or object as it appeared at a specific period of time, on its original or a substitute lot.

**Recreation Room, Accessory.** See *Div. 5D.2. (Definitions, Use)*.

**Recreation, Indoor.** Any commercial facility engaged in providing indoor sports and recreation services. Examples include, but are not limited to, bowling alleys, indoor skating rink facilities, and indoor skydiving.

**Recreation, Outdoor.** Any commercial facility engaged in providing outdoor sports and recreation services. Examples include, but are not limited to, outdoor batting cages, skateboard parks, and tennis courts.

**Recreational Vehicle.** As defined by Section 18010 of the California Health and Safety Code.

**Recyclable Materials.** Items or materials to be recycled or reused, including but not limited to yard waste, paper, plastic, glass, metal, newspaper, and cardboard.

**Recycling Area or Room.** See *Div. 5D.2. (Definitions, Use)*.

**Recycling Center.** Any recycling collection or buyback site, recycling sorting facility, or other recycling oriented site which does not do any processing other than mechanical compaction to reduce the volume of recyclable containers for economy of storage.

**Recycling Center Operator or Junk Dealer.** See *Div. 5D.2. (Definitions, Use)*.

**Recycling Chute.** Any vertical smooth shaft used to convey recyclable materials from the upper floors of a building to a recyclable storage bin or room at the bottom end of the chute.

**Recycling Collection or Buyback Center.** Any facility, including Reverse Vending Machines, where Recyclable Materials are deposited or redeemed for monetary value, and which may include baling or crushing operations for the purposes of efficiency of storage and transfer (volume reduction), but shall not include sorting or processing activities for other than temporary storage purposes.

**Recycling Materials Processing Facility.** Any facility which accepts Recyclable Materials for sorting and processing on the site. For the purpose of this definition, processing shall mean the process of changing the physical characteristics of a Recyclable Material, including the shredding, smelting, grinding and crushing of cans, bottles, and other materials, for other than temporary storage purposes.

**Recycling Materials Sorting Facility.** Any facility which accepts commingled or source-separated Recyclable Materials of various types, which are separated on the site using a manual or automated system. For the purpose of this definition, source-separated Recyclable Materials are those which are separated from the waste stream at their point of generation for the purpose of recycling. This may include baling or crushing operations for the purposes of efficiency of storage and transfer (volume reduction), but shall not include processing activities for other than temporary storage purposes.

**Reflective Symmetry.** [Reserved]

**Rehabilitation.** The act or process of returning a property to a state of utility, through repair or Alteration, which makes possible an efficient contemporary use while preserving those portions or features of the property which are significant to its Historical, architectural and Cultural values.

**Relocation.** Relocation is the movement of a building or structure from its existing location to another location.

**Renovation, Major.** Major renovation is the alteration of the interior of any building or structure that does not expand the building or structure, and for which the aggregate value of the alterations within any 24-month period exceeds 50% percent of the replacement cost of the building or structure, as determined by the Department of Building and Safety. Any structural alteration (a change that would prolong the life of the supporting members of a building or structure, such as bearing walls, columns, beams or girders) is included in this definition.

**Renovation, Minor.** Minor renovation- is any alteration that does not impact the exterior of the building, including interior alterations for fire, life safety and handicapped requirements. A structural alteration (a change that would prolong the life of the supporting members of a building or structure, such as bearing walls, columns, beams or girders) is not included in this definition.

**Renter.** Any person, association, partnership, firm, corporation, or public entity which has rented or leased a dwelling unit or other structure within an HPOZ for a continuous time period of at least three years. For purposes of this Chapter, the "renter" also refers to an appointed representative of an association, partnership, firm, corporation, or public entity which is a renter.

**Replacement Unit.** Any unit that would need to be replaced pursuant to Sec. 65915(c)(3) (Density Bonuses and Other Incentives) of the California Government Code if the Project was seeking a density bonus.

**Research and Development.** Any laboratory where chemicals, drugs, or other material or biological matter are handled in liquid solutions or volatile phases, requiring direct ventilation, and specialized piped utilities.

**Resident.** [Reserved]

**Residential Amenity Space.** An area which is designed and intended to be used by occupants of dwelling units for recreational, domestic, or vocational purposes.

**Residential Building.** A building or portion thereof designed or used for human habitation.

**Residential Conversion Project.** An existing apartment house, apartment hotel, hotel, multiple dwelling or group dwelling used exclusively for residential purposes proposed for conversion to a condominium, stock cooperative, or community apartment project to be used exclusively for residential purposes through approval of a tract or parcel map. For purposes of this definition, the term "existing" means that the building was constructed prior to 1945 or, if it was built after 1945, a certificate of occupancy has been issued for the building prior to the time of map application.

**Residential Dwelling Unit.** See dwelling unit.

**Residential Hotel.** Any building containing six or more guest rooms or Efficiency dwelling units, which are intended or designed to be used, or are used, rented, or hired out to be occupied, or are occupied for sleeping purposes by guests, so long as the guest rooms or Efficiency dwelling units are also the primary residence of those guests, but not including any building containing six or more guest rooms or Efficiency dwelling units, which is primarily used by transient guests who do not occupy that building as their primary residence.

**Residential Production/Art Gallery Space.** An on-site building workshop or gallery amenity, not to be combined with an individual Live/Work unit, for use by residents and employees of Live/Work units for art production and/or display, materials and good fabrication, and other similar production activities.

**Residential Project.** A development project containing any number of dwelling units, guest rooms, joint living and work quarters, Live/Work units, or any other type of Lodging, not intended for transient occupancy.

**Residential to Commercial/Industrial Conversion Project.** An existing apartment house, apartment hotel, hotel, multiple dwelling or group dwelling used exclusively for residential purposes proposed for conversion to a condominium or stock cooperative which is to be used exclusively for commercial or industrial purposes through approval of a tract or parcel map. For purposes of this definition, the term "existing" means that the building was constructed prior to 1945 or, if it was built after 1945, a certificate of occupancy was issued for the building prior to the time of map application.

**Residential Unit.** A Dwelling Unit or joint living and work quarters; a mobile-home, as defined in California Health and Safety Code Section 18008; a mobile-home lot in a mobile-home park, as defined in California Health and Safety Code Section 18214; or a Guest Room or Efficiency Dwelling Unit in a Residential Hotel.

**Residential Use.** See *Div. 5D.2. (Definitions, Use)*.

**Resource Extraction.** Any facility engaged in mining, mine site development, or preparing metallic and nonmetallic minerals. Examples include, but are not limited to, metal ore mining, nonmetallic mineral mining, and quarrying.

**Restoration.** The act or process of accurately recovering the form, features and details of a property as it appeared at a particular period of time by means of the removal of later work or by the replacement of missing earlier work.

**Retail Sales.** Any commercial establishment involved in the retail sale of new or used products, and the retail provision of consumer, repair services, or rental services to individuals and businesses. Retail Sales may be combined with other services such as computer, electronics, and similar small-item repairs. Examples include hardware stores, pharmacies, electronics stores, furniture stores, print shops, and clothing stores.

**Retaining Wall.** [Reserved]

**Restricted Affordable Unit.** A Dwelling Unit for which rental or mortgage amounts are restricted so as to be affordable to and occupied by Extremely Low, Very Low, Low or Moderate Income households, as determined by the Los Angeles Housing and Community Investment Department or its successor agency.

**Reverse Vending Machine.** An automated mechanical device which accepts one or more types of empty beverage containers including aluminum cans, glass and plastic bottles, and which issues

a cash refund or a redeemable credit slip with a value not less than the container's redemption value as determined by the State of California. A Reverse Vending Machine may sort and process containers mechanically, provided that the entire process is enclosed within the machine.

**Reverse Vending Machine Commodity Storage Bin.** A non-automated container which is covered and made of durable, incombustible, rustproof and waterproof construction, which is used to store the processed aluminum cans, glass and plastic bottles that are removed from a Reverse Vending Machine.

**Reviewing Agency.** The agency or official charged with reviewing an application for completeness or preparing a staff report. This is typically the Zoning Administrator, Director, or Department of City Planning.

**Revised Tentative Map.** A map involving a revised arrangement of the streets, alleys, easements or lots within property for which a tentative map has been previously approved or a modification of the boundary of the property.

**Revised Tentative Tract Map.** A map involving a revised arrangement of the streets, alleys, easements or lots within property for which a tentative map has been previously approved or a modification of the boundary of the property.

**Right-of-Way.** [Reserved]

**Right-Of-Way.** The dedicated area that includes roadways, medians, and/or sidewalks.

**Roadway.** That portion of a right-of-way for a street or alley used or intended to accommodate the movement of vehicles.

**Roof Form.** The shape of the external upper covering of a building, including the frame for supporting the roofing.

**Roof Form, Accessory.** A portion of a roof structure that deviates from the principal roof form in either shape or color or shape and color.

**Roof Materials.** [Reserved]

**Roof-Mounted Equipment.** [Reserved]

**Rooftop Dining.** Any Covered or Uncovered portion of an Eating and Drinking Establishment which is unenclosed, located on a rooftop, and used primarily for the consumption of food or drinks by the patrons of the Eating and Drinking Establishment.

**Rooftop Planting Areas.** Plants provided on or over a built structure, including but not limited to, a roof, a bridge, a parking structure.

**Roof Sign.** A sign erected upon a roof of a building.

**Roof Structure.** [Reserved]

**Roof Terrace.** [Reserved]

**Root Ball Depth.** [Reserved]

**Root Ball Width.** [Reserved]

**Room, Habitable.** See *Div. 5D.2. (Definitions, Use)*.

**Rounding.** [Reserved]

**ROW.** Right-of-way [Abbreviation?]

## S

**Safety Barriers.** [Reserved]

**Sea.** The Pacific Ocean and all harbors, bays, channels, canals, estuaries, salt marshes, sloughs and other areas subject to tidal action through any connection with the Pacific Ocean, excluding non-estuarine rivers, streams, tributaries, creeks, and flood control and drainage channels.

**Screened Parking.** [Placeholder - move to Parking?]

**Screening.** [Reserved]

**Screening Plants.** [Reserved]

**Security Grate.** [Reserved]

**Security Grate, Exterior.** [Reserved]

**Security Grate, Interior.** [Reserved]

**Service Areas.** [Reserved]

**Setback.** [Reserved]

**School, K-12.** An institution of learning which offers instruction in grades K through 12.

**Schools and Libraries Incentive Area.** An area of a Community Plan identified in the applicable Community Plan Implementation Overlay as eligible to utilize the Schools and Libraries Incentive of Section 9.4.03.

**School, Postsecondary.** Any institution offering a formal educational program beyond K-12, including programs whose purpose is academic, vocational, or continuing professional education. Examples include, but are not limited to, colleges, technical schools, trade schools, and universities. Postsecondary Schools providing programs involving Heavy Industrial Uses or equipment are allowed only in Use Districts where corresponding industrial uses are also allowed.

**Scrap Metal Processing Yard.** Any facility which is maintained, used or operated solely for the processing and preparing of scrap metal for remelting by steel mills and foundries.

**Seasonal Retail, Outdoor.** Any outdoor holiday retail sales of trees, plants, fruits, or vegetables, or other similar products, not as an extension of a primary retail sales use on the same lot. Examples include seasonal sales of Christmas trees and pumpkins, and other customary holiday items.

**Self-Service Storage.** A building that offers secure self-storage for household goods in individual rooms, compartments, lockers or containers to which clients bring goods for storage and retrieve them any time during normal business hours.

**Senior Citizens.** Individuals who are at least 62 years of age, except that for projects of at least 35 units that are subject to this subdivision, a threshold of 55 years of age may be used, provided all applicable City, State and Federal regulations are met.

**Senior Citizen Housing Development.** See *Div. 5D.2. (Definitions, Use)*.

**Senior Independent Living.** Residential housing that consists of Dwelling Units for persons 62 years of age and older and may include common dining areas or other community rooms. Full time medical services shall not be provided on the premises. It may be a component of an Eldercare Facility.

**Service Road.** That part of a major or secondary highway, containing a roadway that affords access to abutting property and is adjacent and approximately parallel to and separated from the principal roadway.

**Sheltering Structure.** [Reserved]

**Shoreline Project.** Any development in streams, wetlands, and other waters of the United States. Examples include, but are not limited to, depositing of fill and dredged material, jetties, marinas, and piers.

**Short-Term Bicycle Parking.** [Reserved]

**Shrub.** A small to medium sized perennial woody plant. Unlike herbaceous plants, shrubs have persistent woody stems above the ground. They are distinguished from trees by their multiple stems and shorter height, for purposes of this Chapter, less than 15 feet.

**Sidewalk Grade.** [Reserved]

**Sidewalk, Public.** [Reserved]

**Sign.** Any whole or part of a display board, wall, screen or object, used to announce, declare, demonstrate, display or otherwise present a message and attract the attention of the public.

**Sign Area.** An area circumscribed by the smallest geometric shape created with a maximum of eight straight lines that will enclose all words, letters, figures, symbols, designs and pictures, together with all framing, background material, colored or illuminated areas and attention-attracting devices, forming an integral part of an individual message except that:

**a.** For wall signs having no discernible boundary, each of the following shall be included in any computation of surface area: (a) the areas between letters; (b) words intended to be read together; and (c) any device intended to draw attention to the sign message.

**b.** For spherical, cylindrical or other three-dimensional signs, the area of the sign shall be computed from the smallest two-dimensional geometrical shape or shapes, which will best approximate the greatest actual surface area visible from any one direction.

**c.** Sign support structures are excluded if neutral in color.

"Time and Temperature" sign copy is excluded from computation of sign area if the copy is less than 56 square feet in area.

**Sill.** The bottommost horizontal exterior surface of a window opening, including a ledge or other architectural detail, that projects from the surrounding building facade.

**Sign Face.** The surface upon which the sign message is placed.

**Sign Support Structure.** A structure of any kind or character, erected, used or maintained for a sign upon which any poster, bill, printing, painting, projected image or other message may be placed.

**Sign, Legally Existing.** A sign authorized by all necessary permits.

**Simulated Divided-Lite.** [Reserved]

**Site Alteration.** Site alteration is any exterior modification of site landscaping or the lot, including grading.

**Site Design.** [Reserved]

**Site Plan.** [Reserved]

**Skilled Nursing Home.** Residential housing that is licensed by the California Department of Health and provides acute, intermediate, or long-term skilled nursing care and consists only of Guest Rooms for its residents. Full time medical services may be provided on the premises. It may be a component of an Eldercare Facility.

**Slope.** The plane or incline of land usually expressed as a percentage where:

$$\% \text{ slope} = \frac{\text{vertical distance}}{\text{horizontal distance}} \times 100$$

**Small Species Tree.** A tree with a minimum 15 foot canopy spread at maturity.

**Smoke and Vape Shop.** Any establishment, the main purpose of which is the sale of tobacco products, substances intended for smoking, or smoking accessories including but not limited to pipes, vaporizing devices or other smoking paraphernalia. If the establishment is solely dedicated to the retail or wholesale sales of tobacco products, substances intended for smoking, or smoking accessories, an attached public or private smokers' lounge that is solely dedicated to smoking

shall be permitted. Any establishment with either an Alcoholic Beverages Control ("ABC") license or Public Health Permit is not solely dedicated to the retail or wholesale sale of tobacco products, substances intended for smoking, or smoking accessories; and therefore, an attached smokers' lounge is not allowed. Smoke and Vape Shops do not include medicinal or recreational marijuana establishments.

**Social Service Incentive Area.** An area of a Community Plan identified in the applicable Community Plan Implementation Overlay as eligible to utilize the Social Service Incentive of Section 9.4.03.

**Soil Depth.** [Reserved]

**Soil Volume.** [Reserved]

**Solar Energy Systems.** [Reserved]

**Solar Panel Energy Generating Facility.** Any facility designed to generate electric power by solar energy primarily for off-site use or for sale.

**Solid Waste Alternative Technology Processing Facility.** Any facility that has one or more technological systems which extracts, recovers or generates usable materials and/or energy from solid waste, as defined in Section 40191 of California Public Resources Code.

**Solid Waste Facility.** Any facility utilized to: receive, temporarily store, separate, convert, combust, or process solid wastes; transfer solid wastes directly from small to larger vehicles for transport; or operate as a landfill. Examples include, but are not limited to, composting facilities, construction and demolition debris and inert material facilities, solid waste disposal sites, transfer and processing facilities, and transformation facilities.

**Soundstages and Backlots.** Any warehouse-type facility providing space for the construction and use of indoor sets, or any outdoor set, backlot, and other outdoor facility, including supporting indoor workshops and craft shops.

**Specific Adverse Impact.** A significant, quantifiable, direct, and unavoidable impact, based on objective, identified written public health or safety standards, policies, or conditions as they existed on the date the application was deemed complete.

**Specific Plan.** A specific plan is a definite statement adopted by ordinance of policies, standards and regulations, together with a map or description defining the locations where such policies, standards and regulations are applicable.

**Sports Arena and Stadium.** A commercial facility used primarily for sports and consists of a field, court, race track, rink, or stage either partly or completely surrounded by tiered seating for spectators.

**Spread.** [Reserved]

**Stacked Storage.** [Placeholder - move to Storage?]

**Standalone Parking Structure.** Structures with more than 50% of the gross floor area devoted to vehicular use area. Standalone parking structures may be physically connected to another building or structure, but shall be structurally independent.

**Stock Cooperative.** The same as defined by Section 11003.2 of Article 1 (General Provisions) of Chapter 1 (Subdivided Lands) of Part 2 (Regulation of Transactions) of Division 4 (Real Estate) of the California Business and Professions Code.

**Storage.** [Reserved]

**Storage Yard.** [Reserved]

**Story.** The portion of a building included between the upper surface of a floor and the upper surface of the floor next above, except that the topmost story is that portion of a building included between the upper surface of a floor and the upper surface of the ceiling structure above. See *Sec. 14.1.18. (Story)*.

**Story, Ground.** See "Ground Story".

**Story, Upper.** Any story of a building located above a ground story.

**Street, Collector.** Any street designated as a Collector Street on the adopted Mobility Plan of the General Plan.

**Street Frontage.** The length of a line separating a lot from one street.

**Street Setback.** An area on a lot where motor vehicle use areas are prohibited, including primary street parking setbacks, side street parking setbacks and special lot line parking setbacks.

**Street Step-back.** A step-like recess in the massing of a building that requires that upper stories are pushed back from the lower stories along a street lot line or street lot lines. *(see Sec. 2.2.5.2)*

**Street Setback Encroachment.** [Reserved]

**Street Step-back Depth.** [Reserved]

**Street Wall.** [Reserved]

**Street-Facing.** The portions of a building facade with no permanent structure located between the building facade and a street lot line. See also *Sec. 14.1.19. (Street-Facing)*.

**Street-Facing Entrance.** A door providing access and from the public way to the interior of a building.

**Street-Facing Facade.** [Reserved]

**Street Visible Area.** Any portion of the front, side, and rear facades that can be seen from any adjacent street, alley, or sidewalk, or that would be visible but are currently obstructed by landscaping, fencing, or freestanding walls. It also includes undeveloped portions of the lot where new construction would be visible from the adjacent street or sidewalk; facades that are generally

visible from non-adjacent streets due to steep topography; or second stories visible over adjacent one story structures.

**Streetscape.** See *Sec. 4C.6.3. (Streetscape)*.

**Structural Alteration.** [Reserved] (Art 12)

**Structure.** Any constructed object more than 30 inches in height. Including unenclosed structures that are structurally integrated with a building.

**Structure, Parking.** See "Parking Structure".

**Structure, Permanent.** A structure designed, intended, and constructed so as to remain at one location.

**Structure, Sheltering.** A structure designed, intended and constructed to protect users from precipitation and inclement weather.

**Structure, Underground.** A structure located entirely below the ground floor elevation.

**Subdivider.** A person, firm, corporation, partnership or association who proposes to divide, divides or causes to be divided, real property into a subdivision for themselves or for others.

**Subdivider.** A person, firm, corporation, Partnership or association who proposes to divide, divides or causes to be divided real property into a subdivision for himself or for others. The term "subdivider" includes any assignee or designee of the subdivider.

**Subdivision.** The same as defined in Sec. 66424 of the California Government Code. Subdivision includes a stock cooperative project as defined in Sec. 12.03 of Chapter 1 (General Provisions and Zoning) of this Code and in Div. 11B.1. (Division of Land Definitions) of this Chapter, as applicable.

**Subdivision.** The same as defined in Section 66424 of the Subdivision Map Act. Subdivision includes a Stock Cooperative project.

**Subdivision Approval.** Any approval under the Division of Land regulations set forth in Div. 13B.8. (Division of Land) of this Article.

**Subdivision Committee.** [Reserved]

**Subdivision Design.** Design of a subdivision shall include:

1. Street alignments, grades and widths;
2. Drainage and sanitary facilities and utilities, including alignments and grades thereof;
3. Location and size of all required easements and rights-of-way;
4. Fire roads and firebreaks:
5. Lot and size configuration;

6. Traffic access;

7. Grading;

8. Land to be dedicated for park and recreation purposes, and

9. Such other specific requirements in the General Plan and configuration of the entire subdivision as may be necessary or convenient to insure conformity to or implementation of the General Plan or any adopted Specific Plan.

**Subdivision Improvement.** Such street work and utilities to be installed, or agreed to be installed by the subdivider on the land to be used for public or private streets, highways, ways, and easements as are necessary for the general use of the lot owners in the subdivision and local neighborhood traffic and drainage needs and required as a condition precedent to the approval and acceptance of the Final Map or Parcel Map. Such street work and utilities include necessary monuments, street name signs, guardrails, barricades, safety devices, fire hydrants, grading, retaining walls, storm drains and flood control channels and facilities, erosion control structures, sanitary sewers, street lights, street trees, traffic warning devices other than traffic signals and relocation of existing traffic signal systems directly affected by other subdivision improvements and other facilities as are required by the Bureau of Street Lighting or Bureau of Street Maintenance in conformance with other applicable provisions of this Code, or as are determined necessary by the Advisory Agency for the necessary and proper development of the proposed subdivision and to insure conformity to or the implementation of the general plan or any adopted specific plan.

**Subdivision Map Act.** The Subdivision Map Act of the State of California, Chapters 1 through 7 of Div. 2 (Subdivisions) of Title 7 (Planning and Land Use) of the California Government Code, commencing with Sec. 66410.

**Substance Abuse Facility, Licensed, seven or more persons.** Any premises, place, or building licensed by the State of California that provides 24-hour residential nonmedical services to adults who are recovering from problems related to alcohol, drug, or alcohol and drug misuse or abuse, and who need alcohol and drug recovery treatment or detoxification services, as defined in the Health and Safety Code. This definition applies when there are seven or more persons being served.

**Substance Abuse Facility, Licensed, six or fewer persons.** Any premises, place, or building licensed by the State of California that provides 24-hour residential nonmedical services to adults who are recovering from problems related to alcohol, drug, or alcohol and drug misuse or abuse, and who need alcohol and drug recovery treatment or detoxification services, as defined in the Health and Safety Code. This definition applies when there are six or fewer persons being served.

**Suite.** A group of habitable rooms designed as a unit, and occupied by only one family, but not including a kitchen or other facilities for the preparation of food, with entrances and exits which are common to all rooms comprising the suite.

**Supergraphic Sign.** A sign, consisting of an image projected onto a wall or printed on vinyl, mesh or other material with or without written text, supported and attached to a wall by an adhesive and/or by using stranded cable and eye-bolts and/or other materials and methods, and which does not

comply with the following provisions of this Code: Sections 14.4.9, 14.4.15, 14.4.16, 14.4.17 and/or 14.4.20.

**Superintendent.** The Superintendent of Building or his or her authorized representative.

**Supportive Housing.** Housing with no limit on length of stay for persons with low incomes who have one or more disabilities and may include, among other populations, adults, emancipated minors, families with children, elderly persons, young adults aging out of the foster care system, individuals exiting from institutional settings, veterans, and homeless people. The housing is linked to onsite or offsite Supportive Services, and any Floor Area used for the delivery of Supportive Services shall be considered accessory to the residential use.

**Supportive Services.** Services that are provided on a voluntary basis to residents of Supportive Housing and Transitional Housing, including, but not limited to, a combination of subsidized, permanent housing, intensive case management, medical and mental health care, substance abuse treatment, employment services, benefits advocacy, and other services or service referrals necessary to obtain and maintain housing.

**Surface Parking Area.** [Reserved]

**Surface Parking Lot.** A parking area that has no floor area below or above it.

**Surveyor.** A licensed land surveyor authorized to practice in California.

**Swap Meet.** Any outdoor event where goods are offered or displayed for sale or exchange by ten or more independent vendors. An independent swap meet vendor is any individual, partnership, corporation, business association or other person or entity who is not an employee of the owner or lessee of the subject building, and 1) a fee is charged by a swapmeet operator for the privilege of offering or displaying new or secondhand goods for sale or exchange; or 2) a fee is charged to prospective buyers for admission to the area where goods are offered or displayed for sale or exchange. Examples include, but are not limited to, flea markets, open-air markets, and other similar events.

## T

**Target Population.** Persons with qualifying lower incomes who:

1. Have one or more disabilities, including mental illness, HIV or AIDS, substance abuse, or other chronic health condition, and are homeless as defined by any Los Angeles City, Los Angeles County, State of California, or Federal guidelines; or

2. Are chronically homeless, as defined by any Los Angeles City, Los Angeles County, State of California, or Federal guidelines.

**Temporary Construction Wall.** A wooden fence or wooden barrier that provides protection for pedestrians and is erected and maintained on the perimeter of a construction or demolition site pursuant to Sections 3303 and 3306 of the California Building Code (CBC).

**Temporary Entertainment Venue.** A temporary amusement, entertainment, or recreation use accessible to the general public. Examples include traveling circuses or periodic sports events.

**Temporary Residency.** [Reserved]

**Temporary Sign.** Any sign that is to be maintained for a limited duration, including paper signs and other signs that are not permanently affixed to the ground or building.

**Tenant.** [Reserved]

**Tentative Map.** Refers to a map made for the purpose of showing the design of a proposed subdivision creating five or more parcels, five or more condominiums, or five or more units in a community apartment project or stock cooperative, and showing the existing conditions in and around it and need not be based upon an accurate or detailed final survey of the property.

**Tentative Tract Map.** A map made for the purpose of showing the design of a proposed subdivision creating 5 or more parcels, 5 or more condominiums, or 5 or more units in a community apartment project or stock cooperative, and showing the existing conditions in and around it and need not be based upon an accurate or detailed final survey of the property.

**Tennis or Paddle Tennis Court.** A game court designed for the purpose of playing tennis, paddle tennis or similar game, utilizing a concrete slab or other conventionally accepted hard playing surface, an enclosing fence and frequently overhead lighting fixtures.

**Textile and Apparel Manufacturing.** Any facility that transforms fibers into a product, such as yarn or fabric, or manufactures textile and other apparel products. Examples include, but are not limited to, fabric mills, finishing and coating mills, jewelry manufacturing, and leather product manufacturing.

**Theater.** A facility for performing arts, motion pictures, or other media arts before an audience, and with a total seating capacity no greater than 1,200. Examples include comedy theaters, community theaters, and movie theaters. Facilities with a seating capacity equal to or greater than 1,200 are included in the Auditorium definition.

**Tiny House, Movable.** An enclosed space intended for separate, independent living quarters and that meets all of the following:

1. Is licensed and registered with the California Department of Motor Vehicles;
2. Meets the American National Standards Institute (ANSI) 119.5 requirements or the National Fire Protection Association (NFPA) 1192 standards, and is certified for ANSI or NFPA compliance;
3. Cannot move under its own power;
4. Is no larger than allowed by California State Law for movement on public highways; and
5. Is no smaller than 150 and no larger than 430 square feet as measured within the exterior faces of the exterior walls.

**Tract Map.** Tract map refers to either a tentative map or final map.

**Tract Map, Final.** A map prepared in accordance with the provisions of *Division 13B.7.* (Division of Land) and with any applicable provisions of the Subdivision Map Act, designed to be recorded in the Office of the County Recorder of Los Angeles.

**Trailer or Automobile Trailer.** A vehicle without motive power, designed to be drawn by a motor vehicle and to be used for human habitation or for carrying persons and property, the terms "trailer" and "automobile trailer" shall not include a mobilehome.

**Transparent Area.** X-ref Frontage.

**Transient Occupancy Residential.** See *Div. 5D.2. (Definitions, Use)*.

**Transit Stop/Major Employment Center.** Any one of the following:

1. A station stop for a fixed transit guideway or a fixed rail system that is currently in use or whose location is proposed and for which a full funding contract has been signed by all funding partners, or one for which a resolution to fund a preferred alignment has been adopted by the Los Angeles County Metropolitan Transportation Authority or its successor agency; or
2. A Metro Rapid Bus stop located along a Metro Rapid Bus route; or, for a Housing Development Project consisting entirely of Restricted Affordable Units, any bus stop located along a Metro Rapid Bus route; or
3. The boundaries of the following three major economic activity areas, identified in the General Plan Framework Element: Downtown, LAX and the Port of Los Angeles; or
4. The boundaries of a college or university campus with an enrollment exceeding 10,000 students.

**Transitional Buffer.** A planting area with a wall located along a common lot line, typically intended for buffering residential uses from surface parking lots, utilities, heavy commercial uses, and industrial uses.

**Transitional Housing.** A building where housing linked to Supportive Services is offered, usually for a period of up to 24 months, to facilitate movement to permanent housing for persons with low incomes who may have one or more disabilities, and may include adults, emancipated minors, families with children, elderly persons, young adults aging out of the foster care system, individuals exiting from institutional settings, veterans, and homeless people.

**Transitional Worker.** An individual who, at the time of commencing work on the project, resides in an Economically Disadvantaged Area or Extremely Economically Disadvantaged Area and faces at least two of the following barriers to employment: (1) being homeless; (2) being a custodial single parent; (3) receiving public assistance; (4) lacking a GED or high school diploma; (5) having a criminal record or other involvement with the criminal justice system; (6) suffering from chronic unemployment; (7) emancipated from the foster care system; (8) being a veteran; or (9) being an

apprentice with less than 15% of the apprenticeship hours required to graduate to journey level in a program.

**Transmit or Transmitted.** Notification of a decision in writing, by mail, or electronically. The date of transmittal is the date the decision is mailed (as shown by the date stamp), unless otherwise provided.

**Transparency.** The amount of transparent area on a building facade.

**Transparent Area.** See *Sec. 3C.4.1.C.3. (Transparent Area)*.

**Transportation Demand Management (TDM).** The alteration of travel behavior through programs of incentives, services, and policies, including encouraging the use of alternatives to single-occupant vehicles such as public transit, cycling, walking, carpooling/vanpooling and changes in work schedule that move trips out of the peak period or eliminate them altogether (as in the case in telecommuting or compressed work weeks).

**Trash Chute.** Any vertical smooth shaft used to convey rubbish, trash, or garbage from the upper floors of a building to a trash storage bin or room at the bottom end of the chute.

**Tree Expert.** A person with at least 4 years of experience in the business of transplanting, moving, caring for and maintaining trees and who is (1) a certified arborist with the International Society of Arboriculture and who holds a valid California license as an agricultural pest control advisor or (2) a landscape architect or (3) a registered consulting arborist with the American Society of Consulting Arborists.

**Trip Reduction.** Reduction in the number of work-related trips made by single-occupant vehicles.

**Truck Gardening.** The cultivation of berries, flowers, fruits, grains, herbs, mushrooms, nuts, ornamental plants, seedlings, or vegetables for use on-site or for sale or distribution off-site.

**Turf Plants.** [Reserved]

## U

**Underground Parking.** Vehicular use areas located below the ground floor elevation.

**Unenclosed.** A structure or space having more than 25% open area along its perimeter. (*see Sec.16.1.4 for Enclosure measurement*).

**Unified Adaptive Reuse Project.** An Adaptive Reuse Project composed of two or more buildings, so long as the Project has all of the following characteristics: (a) functional linkages, such as pedestrian or vehicular connections; (b) common architectural and landscape features, which constitute distinctive design elements of the Project; and (c) a unified appearance when viewed from adjoining streets. Unified Adaptive Reuse Projects may include lots that abut or are separated only by an alley or are located across the street from any portion of each other.

**Uniformity Ratio.** [Reserved]

**Upper Stories.** [Reserved]

**Upper Story Height.** The floor-to-floor height of any story of a building located above the ground story.

**Use.** The purpose for which land or a building is arranged, designed or intended or for which either land or a building is or may be occupied or maintained.

**Use, Change of.** [Reserved]

**Used Vehicle Sales Area.** An area or lot where any type of used motor vehicle or trailer is displayed for sale.

**Used Vehicle Sales, Light.** The sale of used vehicles at dealerships, where the primary function is the sale of used passenger vehicles and pickup trucks with a GVWR no greater than 19,500 lbs., or an unladen weight of less than 8,001 lbs., and other consumer vehicles such as motorcycles, boats, and recreational vehicles. The use may also include related ancillary uses such as a car wash.

**Utility.** Any public or private infrastructure serving the general public. This infrastructure may facilitate development, generation, diversion, apportionment, measurement, storage, treatment, transfer, delivery, or conservation, for power, water, natural gas, sewage, or telephone, television, internet, and related communication. Wireless Telecommunication Facilities are not included in this definition.

**Utility Area.** [Reserved]

**Utility Rental Trailer.** Any non-passenger carrying, box- type open or van designed to be towed by a passenger vehicle, not exceeding 3,500 pounds gross vehicle weight (GVW), and not exceeding 96 inches in total width, nor 72 inches in box width, nor 14 feet in box length.

## V

**Vanpool.** A vehicle carrying six or more persons to and from work on a regular schedule, and on a prepaid basis.

**Vehicular Access Lane.** A lane located on a lot that provides motor vehicle access from a driveway in the public right-of-way to a parking lot or other motor vehicle use area on-site.

**Vehicle.** Any motorized form of transportation, including but not limited to automobiles, vans, buses and motorcycles.

**Vehicle, Commercial.** Any vehicle, excluding Household Moving Rental Trucks, and Utility Rental Trailers, which when operated upon a highway is required to be registered as a commercial vehicle by the Vehicle Code of the State of California or by any other jurisdiction and which is used or maintained for the transportation of persons for hire, compensation, or profit, or designed, used or maintained primarily for the transportation of property.

**Vehicle Repair, Heavy.** Any facility involving the diagnosing of malfunctions, repairing or maintaining of heavy duty trucks with a Gross Vehicle Weight Rating (GVWR) greater than or equal to 19,500 lbs., and other commercial vehicles.

**Vehicle Repair, Light.** A use involving the diagnosing of malfunctions, repairing or maintaining of passenger vehicles, recreational vehicles, and pickup trucks with a Gross Vehicle Weight Rating (GVWR) no greater than 19,500 lbs., or an unladen weight of less than 8,001 lbs., and other consumer vehicles such as motorcycles, boats. Examples include, but are not limited to, smog testing shops,body shops, and other similar automotive related repair or installation businesses.

**Vehicle Sales and Rental, Heavy.** Any facility that sells, rents or leases vehicles with a Gross Vehicle Weight Rating (GVWR) equal to or greater than 19,500 lbs., or an unladen weight of equal to or greater than 8,001 lbs.

**Vehicle Sales and Rental, Light.** Any facility that sells, rents or leases passenger vehicles, recreational vehicles, and pickup trucks with a Gross Vehicle Weight Rating (GVWR) no greater than 19,500 lbs., or an unladen weight of less than 8,001 lbs., and other consumer vehicles such as motorcycles, boats.

**Vehicle Storage, Heavy.** Any facility for the storage of vehicles and heavy duty trucks with a Gross Vehicle Weight Rating (GVWR) greater than or equal to 19,500 lbs., and other commercial vehicles. Examples include storage of fleet vehicles, tractor trailers, dump trucks, and specialized trailers for oversized loads.

**Vehicle Storage, Light.** Any facility for the storage of passenger vehicles, light and medium duty trucks with a Gross Vehicle Weight Rating (GVWR) no greater than 19,500 lbs., and other consumer vehicles such as motorcycles, boats, and recreational vehicles. Examples include, but are not limited to, storage of buses, household moving rental trucks, motorcycles, recreational vehicles, and trailers.

**Vehicular Access Rights.** The right or easement for access of owners or occupants of abutting lands to a public way other than as pedestrians.

**Vehicular Sales Areas.** Includes exterior areas used for the display and sale or rental of vehicles, boats, trailers, construction equipment, manufactured homes, or similar uses.

**Vehicular Use Area.** Includes, but is not limited to, loading docks, service bays, repair yards, bus bays, trucking terminals, rail yards, transit platforms, and motorhome storage areas, not normally open to public vehicular use.

**Vertical Bands.** A continuous band of material running vertically up a facade.

**Vertical Circulation.** [Reserved]

**Vertical Storage.** [Reserved]

**Very High Fire Severity Hazard Zone.** A geographical area identified to be at a significant risk from wildfires based on fuel loading, slope, fire weather and other relevant factors, as established in

LAMC Section 57.4908 (Very High Fire Hazard Severity Zone-Requirements Specific to Los Angeles) of Article 7 (Fire Code) of Chapter 5 (Public Safety and Protection).

**Very Low-Income Households.** Households with an annual income that does not exceed the amount designated for that category as defined in Sec. 50105 (Definitions) California of the Health and Safety Code.

**Vesting Tentative Map.** A tentative map for any land division that has printed conspicuously on its face the words "Vesting Tentative Map" and is characterized by certain rights to proceed with development when filed and processed in accordance with *Sec. 13B.7.3.* (Tentative Tract Map).

**Veterinary Hospital.** Any facility in which animals or pets are given medical or surgical treatment and care.

**Vintage Original Art Mural.** An Original Art Mural that existed prior to the operative date of Los Angeles Ordinance No. 182706, which is October 12, 2013.

**Visual Obstruction.** [Reserved]

**Visual Light Transmittance.** [Reserved]

## W

**Wall.** A constructed vertical barrier erected to enclose, screen, or separate areas. A wall differs from a fence in having a solid foundation along its whole length.

**Wall, Exterior.** [Reserved]

**Wall, Interior.** [Reserved]

**Wall Plate.** [Reserved]

**Wall Sign.** A sign on the wall of a building or structure, with the exposed face of the sign in a plane approximately parallel to the plane of the wall, that has been attached to, painted on, or erected against the wall, projected onto the wall, or printed on any material which is supported and attached to the wall by an adhesive or other materials or methods.

**Waste Receptacles.** [Reserved]

**Water Supply.** Such water system supply and distribution facilities as are necessary to provide a reliable and adequate water supply for private use and public fire protection purposes.

**Wholesale Trade and Warehousing.** Any facility engaged in operating wholesale, warehousing, or storage facilities for general merchandise, refrigerated goods, food and beverage products, and other warehouse products. They may also provide logistics services related to the distribution of goods.

**Window.** An operable or inoperable opening constructed in a wall that admits light or air into an enclosure and is often framed and spanned with glass or other translucent material.

**Window Assembly.** [Reserved]

**Window Display.** [Reserved]

**Window Frame.** [Reserved]

**Window Grill.** [Reserved]

**Window Opening.** [Reserved]

**Window Rail.** [Reserved]

**Window Sash.** [Reserved]

**Window Sign.** A sign that is attached to, affixed to, leaning against, or otherwise placed within 6 feet of a window or door in a manner so that the sign is visible from outside the building. The term window sign shall not include the display of merchandise in a store window.

**Windrow Composting.** The process in which compostable material is placed in elongated piles or windrows which are mechanically turned or aerated to encourage decomposition and to reduce odors.

**Wireless Telecommunication Facility.** Any structure built for the sole or primary purpose of supporting FCC-licensed antennas and their associated facilities. These structures may include radio transceivers, antennas, a regular and backup power supply, other associated electronics, and may be in any technological configuration. Wireless telecommunication embedded within or used exclusively for power devices, facilities, and infrastructure are exempt. Satellite dish antennae, radio and television transmitters, and antennae incidental to residential uses are not part of this definition.

**Wood and Paper Manufacturing.** Any facility engaged in processing and manufacturing of wood or paper products. Examples include, but are not limited to, lumber and pulp mills.

**Wood Wastes.** Any untreated and/or unpainted wood material such as pallets, plywood and other construction related scrap lumber, stumps and tree trimming.

**Wrapped Parking.** [Reserved]

## X

## Y

**Yard.** See *Sec. 14.1.20. (Yard Designation)*.

**Yard Sign.** See *Sec. 4C. 11.6.C.12. (Yard Sign)*.

## Z

**Zoning Administrator.** The Zoning Administrator shall mean the Chief Zoning Administrator or an Associate Zoning Administrator. The Director may appoint the Zoning Administrator to act as the Director's designee or as a Hearing Officer for the Director. Reference: Sec. 561 of the City Charter

# Appendix H

## Inventory of CRA Mitigation Measures

Prepared by the Department of City Planning

| Impact Area | Community Redevelopment Plan Area | | Mitigation Measures | | Response to Mitigation Measure | Impact of Removing Mitigation Measure |
|---|---|---|---|---|---|---|
| **Land Use & Planning** | **Central Industrial** | **1** | LU1 | The Agency's approval of developments within commercial or industrial corridors shall explicitly consider the effects of commercial activities on adjacent residential properties. Site plan and project design reviews shall be conducted to ensure that projects in these areas will be appropriately screened to mitigate light, glare, and noise impacts. As a condition of project approval, mitigation measures to avoid light, glare, and noise impacts shall be established, which would include, but are not limited to, screening or physical design. | Not necessary and infeasible. The mitigation is inconsistent with current City policy, as well as the policies and programs proposed under the Downtown Plan. The mitigation measure is derived from an older zoning system, and does not comport with the various new and more detailed Use Districts and Development Standards that are proposed as part of the Project, that better manage the compatibility between residential and commercial uses, and that are proposed to be applied to by-right projects. Further, the mitigation measure is inconsistent with the City, and the Downtown Plan's, goal to reduce Vehicle Miles Traveled by facilitating a more robust mix of uses within proximity to transit resources located throughout the Community Plan Area. Lastly, the City can continue to identify and mitigate project-specific light, glare, and noise effects consistent with project review (same as the current Site Plan Review) and other similar discretionary approval processes. | See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Downtown Plan, and see specifically, Section 4.10 (Land Use) - less than significant impact realted to inconsistency with land use plans and policies; Section 4.1 (Aesthetics) less than significant impacts on light, glare and shade; Section 4.11 (Noise)- less than significant impact to permanent noise increases due to stationary and mobile operational activities; significant and unavoidable impacts generated by temporary construction noise. |
| | | **2** | LU2 | Proposed industrial uses shall be buffered from adjacent residential neighborhoods through a variety of land use planning and site design techniques which would include, but are not limited to, the following: screening walls, landscaped setbacks, perimeter or intervening streets, etc. | Not necessary. The mitigation is inconsistent with the policies and programs proposed under the Downtown Plan. The Plan confines traditional industrial uses that have historically necessitated buffering to a smaller geography than applied under the Redevelopment Plan. The Downtown Plan also proposes more contemporary Development Standards for both more traditional industrial uses, as well as newer industrial (hybrid industrial, production uses, etc.) that address buffering between residential and industrial uses. | See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Downtown Plan, and see specifically, Section 4.10 (Land Use) - less than significant impact realted to inconsistency with existing land use plans and policies. |
| | | **3** | LU3 | Proximity and nuisance impacts such as light, glare, odor, and noise shall be minimized through project design features. | Lighting and Glare.<br>Infeasible. This mitigation measure requires a project-specific lighting plan for projects adjacent to existing residences or other sensitive uses. Projects of a certain size that could potentially cause lighting spillover impacts are subject to LAMC Section 16.05 (Site Plan Review) which would allow for site-specific analysis of potential light and glare effects as appropriate under State law. Future development in the the Downtown Plan would be required to comply with LAMC Chapter 9, Article 3, Section 93.0117 and Chapter 9, Article 1, Section 91.6205M, for light and glare affecting residential uses. These standards prohibit the use of highly reflective or deeply tinted glass. In addition, new standards contained in the New Zoning Code would further reduce glare potential by preventing new development from using materials that typically create high levels of glare. Existing applicable regulatory frameworks include LAMC Signs Article 4.4 Sign Regulations; 14.4.3 Application; 14.4.4 General Provisions; 14.4.5 Hazard to Traffic; 14.4.6 Freeway Exposure. As a matter of policy the City finds adopting and implementing additional processes and design standards and imposing additional study and review requirements, including to address lighting and glare, and other than those already existing, such as project review (same as the current Site Plan Review), and those proposed with the Downtown Plan are unnecessary and undesirable, and would not result in an efficient use of City resources or desirable land use outcomes.<br>Additionally, per SB 743--a bill that is intended to reduce GHG through encouragement of development around transit--aesthetic impacts are not considered CEQA impacts for infill projects within a transit priority area (TPA). Most of the Downtown Plan area is in a TPA. These aesthetic impacts include impacts to visual resources, aesthetic character, shade and shadow, light and glare, and scenic vistas. Infill projects are residential, mixed-use residential, or employment center project, consistent with the development that is anticipated under the Downtown Plan. | See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Downtown Plan, and see specifically, Section 4.1 (Aesthetics)- less than significant impacts on light, glare and shade; Section 4.11 (Noise)- less than significant impact to permanent noise increases due to stationary and mobile operational activities; significant and unavoidable impacts generated by temporary construction noise. |
| | | | | | Odor<br>Not necessary. The Downtown Plan concentrates heavy and, light industrial uses in the eastern and southern portions of the Downtown Plan Area, away from residential uses. In addition, the Downtown Plan includes standards for new buildings that would insulate against odor issues. | See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Downtown Plan, and specifically, Section 4.3 (Air Quality) - less than significant impacts related to odor. |
| | | | | | Noise.<br>Not necessary. The California Building Code Title 24 has noise insulation standards for new buildings, and the City has a noise ordinance to regulate excessive noise, including around residential areas. Additionally, discretionary projects can be reviewed for noise under environmental review project review, if applicable. As a policy matter, the City finds adopting any additional regulations, requirements or review to address noise, including for ministerial and discretionary projects, is not desirable or necessary and would not be an efficient use of City resources or result in good land use outcomes. | See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Downtown Plan, and specifically, Section 4.11 (Noise)- less than significant impacts to permanent noise increases due to stationary and mobile operational activities; significant and unavoidable impacts generated by temporary construction noise. |
| | | | LU4 | The Agency's review and approval of residential projects shall consider the predominately industrial nature of the area. Site plan and project design reviews shall be conducted to assure that projects in these areas will incorporate design features (screening, double or triple glazing, etc.) to minimize adverse impacts resulting from the presence of residential uses in an industrial area. | Infeasible. The Downtown Plan establishes Hybrid Industrial Zones, which directly address compatibility between residential, live/work, and non-residential uses, through use limitations, as well as Development Standards. This mitigation measure is inconsistent with a ministerial review process and adds an additional layer of review to discretionary approvals that is undesirable. project review (same as the current Site Plan Review)in the LAMC requires that projects of a certain size would be subject to design review conditions of approval by way of a Director's determination and environmental clearance. As a matter of policy the City finds adopting and implementing additional processes and design standards for discretionary and ministerial projects, other than those already existing, including project review (same as the current Site Plan Review), and those proposed in the Downtown Plan are unnecessary and undesirable, and would not result in an efficient use of City resources or desirable land use outcomes. Additionally, impacts to new residential occupants from existing uses is not a CEQA impact. | See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably antidpated development under the Downtown Plan, and see specifically, Section 4.10 (Land Use) - less than significant impact related to inconsistency with current land use plans and policy. |
| | | **4** | LU5 | During project-specific development and design, the Agency shall coordinate with the City of Los Angeles Department of Planning regarding planning goals and objectives. | Not necessary and infeasible. The Agency no longer implements the Redevelopment Plans, the Redevelopment plans are now implemented directly by City of Los Angeles Department of City Planning, thus the mitigation requiring inter-agency coordination is functionally irrelevant. Furthermore, the proposed Downtown Plan is an update to the existing Central City and Central City North Community Plans. The goals, policies, zoning and implementation of the Downtown Plan are aligned to reflect and further the larger goals and objectives of the City of Los Angeles Department of Planning, including it's goal to reduce green house gas emissions, direct growth to transit hubs, and to plan for increases to the housing supply. Therfore, the City finds adopting any additional regulations, requirements or review to address the departments planning goals and objectives, is not necessary. | See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Downtown Plan, and see specifically, Chapter 3 (Project Description) for a discussion of the goals and objectives of the Downtown Plan. |
| | **City Center** | **1** | LU1 | See Central Industrial LU1 above | See response to Central Industrial LU1 above. | |
| | | | LU2 | See Central Industrial LU2 above | See response to Central Industrial LU2 above. | |
| | | | LU3 | See Central Industrial LU3 above | See response to Central Industrial LU3 above. | |
| | | | LU4 | See Central Industrial LU4 above | See response to Central Industrial LU4 above. | |
| | **Chinatown** | | | N/A | N/A | |
| **Aesthetic** | **Central Industrial** | **1** | A1 | For all new development greater than 30 feet in height considered within and/or adjacent to areas of existing concentrations of artist loft housing, a specific determination shall be made as to whether sunlight access would be substantially impaired. In those instances where adverse impacts are anticipated, changes in building orientation, setback or massing shall be required to reduce or eliminate the impact. | Infeasible. This mitigation measure is inconsistent with State and Local policy, per SB 743--a bill that is intended to reduce GHG through encouragement of development around transit--aesthetic impacts are not considered CEQA impacts for infill projects within a transit priority area (TPA). Most of the Downtown Plan area is in a TPA. These aesthetic impacts include impacts to visual resources, aesthetic character, shade and shadow, light and glare, and scenic vistas. Infill projects are residential, mixed-use residential, or employment center projects, consistent with anticipated development under the Downtown Plan.The City regulates height and massing through zoning standards and its decisions to designate properties with contextual and tailored development standards compatible with existing visual character. Moreover, this mitigation measure requires project-specific studies. Per LAMC, project review (same as the current Site Plan Review) requires that projects of a certain size would be subject to design review conditions of approval by way of a Director's determination and environmental clearance. As a matter of policy the City finds adopting and implementing additional processes and design standards and imposing additional study and review requirements, including to address shade and shadow, other than those already existing, including Site Plan Review, and those proposed with the Downtown Plan are unnecessary and undesirable, and would not result in an efficient use of City resources or desirable land use outcomes. | See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Downtown Plan, and see specifically, Section 4.10 (Land Use) of the DEIR for the less than significant land use impacts; Section 4.1 (Aesthetics)- for less than significant impacts on light and shade. |
| | | **2** | A2 | Lighting plans for public and private projects located adjacent to existing residences (apartments, condominiums, etc.) shall be reviewed by the Agency to determine that there will be no adverse spillover lighting affects. Where lighting is adjacent to existing residential units, cutoffs, shrouds, shields or similar techniques shall be used to eliminate potential impacts. | Infeasible. This mitigation measure is inconsistent with State and Local policy, per SB 743--a bill that is intended to reduce GHG through encouragement of development around transit--aesthetic impacts are not considered CEQA impacts for infill projects within a transit priority area (TPA). Most of the Downtown Plan area is in a TPA. These aesthetic impacts include impacts to visual resources, aesthetic character, shade and shadow, light and glare, and scenic vistas. Infill projects are residential, mixed-use residential, or employment center projects, consistent with anticipated development under the Downtown Plan. Furthermore, this mitigation measure requires a project-specific lighting plan for projects adjacent to existing residences or other sensitive uses. Projects of a certain size that could potentially cause lighting spillover impacts would likely be subject to project review (same as the current Site Plan Review) including design review conditions of approval by way of a Director's determination and environmental clearance. As a matter of policy the City finds adopting and implementing additional processes and design standards and imposing additional study and review requirements, including to address lighting issues, other than those proposed with the Downtown Plan and those already existing, including Site Plan Review, are unnecessary and undesirable, and would not result in an efficient use of City resources or desirable land use outcomes. | See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Downtown Plan, and see specifically, Section 4.1 (Aesthetics)- for less than significant impacts related to lighting and glare. |
| | **City Center** | **1** | A1 | To ensure that new development is visually compatible in scale and character with adjacent existing development, the Agency shall adopt design guidelines for residential areas and commercial corridors within the Project Area. These guidelines shall supplement existing zoning requirements and provide additional guidance regarding landscaping, open space, height, setbacks and similar factors that influence visual compatibility of land uses. | Infeasible. New development would be subject to neighborhood-specific Form, Frontage, and Development Standard provisions, under the proposed new zoning system, and thus the more subjective design guidelines envisioned by the mitigation measure are unnecessary (and furthermore the adoption of Design Guidelines is not permissible under SB330). Form Standards regulate lot size, lot coverage, outdoor amenity space, floor area ratio and building height, and upper-story bulk and building mass. Frontage Standards regulate facade treatment requirements, design and spacing of building entrances, front yard landscaping, blank wall width, and ground story height. Development Standards which vary by neighborhood also enhance design. As a matter of policy, the City finds adopting and implementing additional processes and design standards for visual compatibility, other than those already existing, and those proposed in the Downtown Plan are unnecessary and undesirable, and would not result in an efficient use of City resources or desirable land use outcomes. | See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Downtown Plan, and see specifically, Section 4.10 (Land Use) - no, or less than significant, land use impacts; Section 4.01 (Aesthetics)- less than significant impacts on visual compatibility. |
| | | **2** | A2 | See Central Industrial A2 above | See response to Central Industrial A2 above. | |
| | **Chinatown** | | | N/A | N/A | |
| **Cultural & Historical Resources** | **Central Industrial** | **1** | CR1 | To the extent feasible, existing architectural and historic resources shall not be demolished and shall be incorporated into future development. | Infeasible. The City's Cultural Heritage Ordinance requires that all projects that include a designated Historic Cultural Monument, are required to be reviewed by Office of Historic Resources and the Cultural Heritage Commission. Any discretionary project, including those that require project review (same as the current Site Plan Review), are required to undergo CEQA review to determine if they will impact a historic resource and to mitigate significant impacts or the City will need to prepare an Environmental Impact Report and adopt a statement of overriding considerations before causing a significant impact. The City finds as a matter of policy, including any additional processes, including additional delay to additional properties, to the review and approval of projects for the purposes of historical resource protections, than those in the Downtown Plan or in existing City regulations, including those for Historical Cultural Monuments, HPOZs, and the Building and Safety code requirements, is unnecessary and undesirable and would not result in an efficient use of City resources or desirable land use outcomes. | See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Downtown Plan, and see specifically, Section 4.4 (Cultural Resources) of the DEIR for potentially signifcant and unavoidable impacts related to historical resources. |
| | | **2** | CR2 | Rehabilitation of architecturally or historically significant buildings shall meet the U.S. Secretary of the Interior's Standards for Rehabilitation. | Not Necessary. The City's Cultural Heritage Ordinance requires all projects that include a designated Historic Cultural Monument or discretionary projects that include eligible historical resources be subject to Office of Historic Resources review. Historic Cultural Monuments require Cultural Heritage Commission review for proposed exterior and interior alterations in accordance with the Secretary of the Interior's Standards for Rehabilitation. As a matter of policy, the City finds including any additional processes, including additional delay to properties, or the review and approval of projects for the purposes of historical resource protections, other than those already existing, including processes for Historical Cultural Monuments, HPOZs, and the Building and Safety code requirements, and those proposed in the Downtown Plan are unnecessary and undesirable, and would not result in an efficient use of City resources or desirable land use outcomes. | See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Downtown Plan, and see specifically, Section 4.4 (Cultural Resources) of the DEIR for the potentially significant and unavoidable impacts related to historical resources. |

| | | | | | | |
|---|---|---|---|---|---|---|
| | | 3 | CR3 | New developments adjacent to significant historic or architectural resources shall be compatible in size, scale, materials, fenestration and massing to such historic or architectural resources. | Infeasible. The Downtown Plan proposes zoning standards that include height limitations and contextual infill facade standards in certain historic districts within the Plan area. As a matter of policy, the City finds adopting further design standards, other than those already existing are unnecessary and undesirable (and furthermore the adoption of Design Guidelines is not permissible under SB330) and would not result in an efficient use of City resources or result in desirable land use outcomes. | See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Downtown Plan, and see specifically, Section 4.4 (Cultural Resources) of the DEIR for the potentially signficant and unavoidable impacts related to historical resources. |
| | | 4 | CR4 | Historic street lamps shall be repaired and reused rather than replaced by contemporary fixtures for streetscape improvements. | Infeasible. This mitgation addresses an individual project-level concern. Any discretionary project, such as City streetwork improvements or larger private development projects that would be required to do streetwork improvements that could impact eligible historic resource, including street improvements, such as street lamps, would require CEQA review and mitigation measures to avoid impacts to historical resources as defined by CEQA. Any additional policy intervention to protect "historic" street lamps in ministerial projects including the adoption of design standards is not desirable. Moreover, the measure is not needed to avoid impacts to aesthetics because the City does not find as a policy matter that the loss of such street lights will result in a signfiant aesthetic impact. Additionally, most of the Plan Area would be in a Transit Priority Area which would not have an aesthetic impact for reasonably foreseeable development. | See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Downtown Plan, and see specifically, Section 4.1 (Aesthetics) less than signficant impacts to visual character and light and glare; Section 4.4 (Cultural Resources) of the DEIR for potentially signficant and unavoidable impacts related to historical resources. |
| | | 5 | CR5 | If human remains are exposed during construction, State Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the County Coroner has made the necessary findings as to origin and disposition pursuant to Public Resources Code Section 5097.98. Construction must halt in the area of the discovery of human remains, the area must be protected, and consultation and treatment should occur as prescribed by law. | Not Necessary. Protocol for the discovery of human remains is already part of the regulatory framework. See California Health and Safety Code Section 7050.5(b) | See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Downtown Plan, and see specifically, Section 4.4 (Cultural Resources) and Section 4.16 (Tribal Resources) of the DEIR- for less than significant impacts with mitigation related to discoverey of human remains during construction. |
| | | 6 | CR6 | To locate cultural resources, archaeological monitoring is recommended for initial ground disturbance, unless other treatment methods have indicated that monitoring is not required. If cultural materials are exposed during construction, construction shall be diverted from that area. The area of discovery should be protected from disturbance while qualified archaeologists and appropriate officials, in consultation with the State Historic Preservation Office (SHPO), determine an appropriate treatment plan. | Not Necessary. The Downtown Plan DEIR addresses impacts for projects on archaeological resources in Section 4.4, Cultural Resources through mitigation measures 4.4-2(a) through 4.4-2(d), which are equal or more effective than this mitigation measure. | See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticpated development under the Downtown Plan, and see specifically, Section 4.4 (Cultural Resources) of the DEIR - for less than significant impacts with mitigation related to archeological resources; Section 4.16 (Tribal Resources)- for less than significant impacts with mitigation related to discovery of tribal cultural resources. |
| | **City Center** | 1 | CR1 | See Central Industrial CR1 above | See response to Central Industrial CR1 above. | |
| | | 2 | CR2 | See Central Industrial CR2 above | See response to Central Industrial CR2 above. | |
| | | 3 | CR3 | See Central Industrial CR3 above | See response to Central Industrial CR3 above. | |
| | | 4 | CR4 | See Central Industrial CR4 above | See response to Central Industrial CR4 above. | |
| | | 5 | CR5 | To locate prehistoric cultural resources, archaeological monitoring is recommended for initial ground disturbance, unless other treatment methods have indicated that monitoring is not required. If cultural materials are exposed during construction, construction should be diverted from that area. The area of the discovery should be protected from disturbance while qualified archaeologists and appropriate officials, in consultation with the State Historic Preservation Office (SHPO), determine an appropriate treatment plan. If human remains re exposed during construction, State Health and Safety Code Section 7050.5 states that nofurther disturbance shall occur until the County Coroner has made the necessary findings as to origin and disposition pursuant to Public Resources Code Section 5097. 98. Construction must halt in the area of discovery of human remains, the area must be protected, and treatment should occur as prescribed by law. | Not Necessary. The DEIR Section 4.4 Cultural Resources addresses impacts for projects on cultural resources, through 4.4-2(a) through 4.4-2(d), which are equal or more effective than this mitigation measure. Protocol for the discovery of human remains is already part of the regulatory framework. See California Health and Safety Code Section 7050.5(b). | See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticpated development under the Downtown Plan, and see specifically, Section 4.4 (Cultural Resources) of the DEIR- for less than significant impacts with mitigation related to archeological resources and less than significant impacts related to human remains; Section 4.16 (Tribal Resources)- for less than significant impacts with mitigation related to discovery of tribal cultural resources. |
| | | 6 | CR6 | See Central Industrial CR6 above | See response to Central Industrial CR6 above. | |
| | **Chinatown** | | | N/A | N/A | |
| **Population, Housing & Employment** | **Central Industrial** | 1 | PHE1 | For private projects within the proposed Project Area, relocation assistance shall be provided to displaced low to moderate income households to the fullest extent provided by law. For public projects, relocation assistance shall be provided to residents in accordance with applicable federal and state requirements. | Infeasible and Unnecessary. The impact being addressed by this mitigation measure is a social economic impact and not a CEQA impact. As shown in Section 4.12 of the Draft EIR, there is no substantial evidence to support significant environmental impacts related to housing displacement.<br><br>However, as a matter of policy, the City has established multiple programs to support housing opportunities for a range of incomes:<br>Just Cause Eviction Ordinance - Just cause eviction statutes are laws that stipulate specific reasons and conditions for which tenants can legally be evicted for. These are called "just causes" which can include failure to pay rent or violations of lease term.<br><br>City of Los Angeles' Rent Stabilization Ordinance (RSO) - Rent stabilization control ordinances protect tenants from excessive rent increases, while allowing landlords a reasonable return on their investments. These ordinances limit rent increases to certain percentages, but California state law allows landlords to raise rents to the market rate once the unit becomes vacant.<br><br>City of Los Angeles' Condominium Conversion Regulation – The converting of rental units to condominiums impacts the City's vital rental housing supply and has removed vital housing stock from the rental market. Tenant relocation assistance regulations prohibit landlords from removing tenants from units until they are adequately relocated. Regulations also prohibit conversions unless the city or regional vacancy rate is five percent or less. This regulation is to preserve the supply of housing and protect tenants affected by conversions.<br><br>SB 330 - Establishes the Housing Crisis Act of 2019, which accelerates housing production in California by streamlining the permitting and approval processes. It also provides protections for occupants by requiring that existing units be replaced by equivalent new units and occupants can live in the existing units up to six months prior to demolition. Occupants also must receive relocation assistance, have first right-of-return, and can move back in at an affordable rate.<br><br>AB 2222 - Expands affordability covenants from 30 to 55 years of all very low and low-income units that qualified an applicant for a density bonus. Requires that developers identify and replace one for one, all of the property's pre-existing affordable units to be eligible for a density bonus.<br><br>The Downtown Community Benefits Program (CBP) – This program provides incentives that prioritize mixed-income and 100 percent affordable housing and seeks to ensure replacement of affordable units on project sites. Incentives offer greater height, and floor area ratio, particularly around fixed rail transit stations and bus corridors. Additionally, the CBP provides opportunities for small business support through the provision of onsite community facilities. | See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Downtown Plan, and see specifically, Section 4.12 (Population and Housing)- less than significant impacts related unplanned growth and net loss or displacment of housing. |
| | | 1 | PHE2 | Any affordable housing units for all income levels displaced in the proposed Project Area shall be replaced on a one-for-one basis at a minimum. | Infeasible and Unnecessary. As shown in the Draft EIR in Section 4.12, the Proposed Plan is not expected to result in signficant environmental impacts from reasonably anticipated development as a result of a loss of housing. This measure addresses socio-economic impacts without evidence of it resulting indirectly in a significant impact to the physical environment. As such, it is not a CEQA impact. Moreover, as a policy matter providing replacement housing is infeasible. Per the City's Rent Stabilization Ordinance, removal of rent-controlled units under the state's Ellis Act must either have a one-for-one replacement with affordable units or ensure that 20% of new units are affordable - whichever number is higher. The City also recently adopted a linkage fee and implemented the Transit Oriented Communities (TOC) Guidelines as additional means of providing affordable housing in the City. As a matter of policy the City finds using City funds to provide replacement housing that can no longer be funded by CRA tax increment is undesirable and will not result in the best use of City funds or the most efficient use of resource to provide affordable housing | |
| | | 2 | PHE 3 | The Redevelopment Plan shall contain provisions to provide relocation assistance to displaced businesses or non-profit organizations such as community and social service providers (in the unlikely event that the latter is displaced) at comparable locations, as well as to retain businesses and jobs within the proposed Project Area or non-profit organizations within their service area. | Infeasible. The impact being addressed by this mitigation measure is a social economic impact and not a CEQA impact. There is no substantial evidence to support significant environmental impacts related to commercial displacement. This mitigation measure relates to relocation assistance and is only applicable to the Redevelopment Agencies. The city has established programs to support small businesses.<br><br>The Downtown Community Benefits Program (CBP) – This program provides incentives that offer greater height, and floor area ratio, particularly around fixed rail transit stations and bus corridors in exchange for community facilities such as social services, business incubators, and public facilities. As a matter of policy the City finds using City funds to provide relocation assistance to business property owners and tenants is not the best use of City funds or a desirable public policy. | |
| | | 3 | PHE 4 | The Agency shall phase and permit development in the proposed Project Area in a manner that will ensure that, when existing | See response to Central Industrial PHE 3 above. | |
| | **City Center** | 1 | PHE1 | See Central Industrial PHE 1 above | See response to Central Industrial PHE 1 above. | |
| | | 2 | PHE2 | See Central Industrial PHE 2 above | See response to Central Industrial PHE 2 above. | |
| | | 3 | PHE3 | The Redevelopment Plan shall contain explicit provisions to provide relocation assistance to displaced businesses at comparable | See response to Central Industrial PHE 3 above. | |
| | | 4 | PHE4 | See Central Industrial PHE 4 above | See response to Central Industrial PHE 4 above. | |
| | **Chinatown** | 1 | IX.6. | Some of the expected inconveniences and expenses of relocation due to Agency activities will be mitigated. The Redevelopment Plan and California Community Redevelopment Law requires the Agency to assist in finding relocation facilities and to make relocation payments. Any large scale displacement of individuals, families and businesses at any one time will be avoided. No residents will be displaced unless and until there Is suitable housing available and ready for occupancy at rents comparable to those paid at the time of displacement | See responses to Central Industrial PHE2 and PHE3 above. Additionally, the tax increment funding source used by the Redevelopment Agencies to provide this mitigation is not available to the City and was no longer available to the CRA/LA after the Dissolution Law dissolved the former CRA. | |
| **Transportation & Traffic** | **Central Industrial** | 1 | T1 | The "Los Angeles Downtown Strategic Plan" contains transportation strategies intended to provide system wide mitigation of vehicular traffic in the downtown area.<br>The key elements of this strategy are to:<br>• continue the development and implementation of the regional rail system components serving downtown;<br>• continue the development and implementation of transit way and high-occupancy-vehicle (HOV) facilities to both serve downtown and provide a regional HOV network;<br>• expand convenient, accessible and coordinated transit service with the downtown area, to encourage use of transit for commute trips and to enhance internal circulation within the Central Business District (CBD);<br>• add buses as necessary on overcrowded lines. | Infeasible. Since the adoption of this CRA plan, the City's policies related to mobility and circulation have substantially changed with the adoption of Mobility Plan 2035 in 2015, SB 743, and the Complete Streets Act and the movement away from vehicular travel towards a multi-modal travel. Since the adoption of the CRA plan, the Downtown Plan area has seen significant transportation investments and has many rail improvements underway such as the LinkUS project, Metro L(Gold) line expansion, and the Metro Regional Connector project. The improvements will transform LA Union Station into a world-class transit and mobility hub, create three additional transit stations within the Plan Area and expand multimodal connection for Angelenos across the City and County of Los Angeles. The City is also currently working on a Mobility Investment Plan (MIP) to identify and prioritize capital improvement projects that support a multimodal environment. As a policy matter, the City finds adopting any additional programs or requirements to encourage multimodal uses other than those improvements underway and proposed in the MIP, those proposed in the Mobility 2035 plan, the Downtown Plan and the MIP, is unnecessary and undesirable, would not be a good use of limited City resources, and would not result in good public policy related to addressing transportation issues in the City | See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Downtown Plan, and see specifically, Section 4.15- significant and unavoidable safety impacts related to off-ramp queuing. |
| | | 2 | T2 | Santa Fe: 3rd to 4th - Restripe to create two lanes northbound, which will, increase capacity by one lane northbound. | Infeasible. The Downtown Plan envisions mobility improvements consistent with contemporary City policy, such as Mobility Plan 2035. This segment of Santa Fe is included in an active transportation improvement grant area. The ATP Grant promotes expanded bike facilities, consistent with policy direction found in the Project and Mobility Plan 2035. As a policy matter, the City finds that making the additional changes called for in this mitigation measure, including adding additional lanes at intersections, is inconsistent, and not a desirable street configuration and would not be a good use of limited City resources for street improvements or interventions. | |
| | | 3 | | Seventh: Alameda to Mill - Imposition of no parking/no stopping provisions on both sides of the street during both AM and PM Peak traffic hours, which will increase capacity by three lanes in each direction. | Infeasible. The Downtown Plan envisions mobility improvements consistent with contemporary City policy, such as Mobility Plan 2035. The segment of 7th street from Alameda to Hill is included in the 6th Street Viaduct infrastructure improvement plan, superseding the plans proposed in the mitigation measure. As a policy matter, the City finds that increasing capacity by three lanes on this right of way, is inconsistent with contemporary policy direction, would not be a good use of limited City resources for street improvements or interventions, and is not a desirable street configuration. | |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| | | 4 | | Olympic: Alameda to Lawrence - Imposition of no parking/no stopping provisions on both sides of the street during both AM and PM peak traffic hours, which will increase capacity by three lanes in each direction. | Infeasible. The Downtown Plan envisions mobility improvements consistent with contemporary City policy, such as Mobility Plan 2035. This segment of Olympic has been improved based on more recent policy direction. The west bound segment of Olympic currently has three lanes, and a fourth lane to accommodate and a bus zone on the corner turning onto Northbound Alameda. The eastbound segment of Olympic between Alameda and Lawrence currently has two lanes, with red curb sections, and ingress for driveways for local businesses along the segment. Additionally, as a policy matter, the City finds that increasing capacity by three lanes on this right of way, would not be a good use of limited City resources for street improvements or interventions, and is not a desirable street configuration. | |
| | **City Center** | 1 | T1 | See Central Industrial T1 above | See response to Central Industrial T1 above | | |
| | | 2 | T2 | Third Street between San Pedro Street and Central Avenue - install peak hour no parking/no stopping restrictions and stripe a fifth westbound lane on the north side of the street during AM peak hours. | Infeasible. The Downtown Plan envisions mobility improvements consistent with contemporary City policy, such as Mobility Plan 2035. Street widenings are not consistent with the city's Mobility Plan 2035 or contemporary policy direction to reduce VMT. As a matter of policy, the City finds that making the additional changes called for in this mitigation measure, including restricting parking and imposing no stopping provisions, is unnecessary and undesirable, would not be a good use of limited City resources for street improvements or interventions, and would not result in desirable parking services, street configuration or street operations. | | |
| | | 3 | | Eleventh Street between Santee Street and Los Angeles Street - install peak hour no parking/no stopping restrictions and stripe a second lane on the south side of the street. | | | |
| | **Chinatown** | 1 | IX.2.a | Traffic impacts would be reduced by encouragement of employers to form car and van pools and to provide preferred parking | Infeasible. The Downtown Plan includes policies supporting TDM strategies, which could include carpool and vanpool incentives, for new non-residential projects. The | | |
| | | 2 | IX.2.b. | Traffic impacts would be reduced by encouragement of the use of buses and any future mass transit modes, including the People | Infeasible. Since the adoption of the CRA plan, the People Mover project evolved into the Regional Connector project, currently under construction. The Downtown | | |
| | | 3 | IX.2.c. | Traffic impacts would be reduced by encouragement of utilizing the opportunities afforded by the City's Parking Management Plan. | Infeasible. This mitigation measure is no longer consistent with contemporary City policy. The Downtown Plan follows contemporary City policy direction, and has eliminated parking minimums to encourage non-vehicular travel, increase affordability, and improve design outcomes in the Plan Area. | | |
| | | 4 | IX.2.d. | Traffic impacts would be reduced by the potential implementation of traffic flow improvements, Including traffic management parking controls, street widenings, creation of cul de sacs and resolving of intersection problems Such actions would mitigate present congestion, visual, noise and air pollution concentrations, and those which may occur due to Project activities. | Infeasible. As written, the action set forth in this mitigation measure is unclear and therefore infeasible. | | |
| | | 5 | IX.2.e. | Traffic impacts would be reduced by the strengthening through Redevelopment activities of Chinatown's role as an employment and residential center, thereby requiring fewer work trips. The new developments are also consistent with the State's urban development strategy of developing inner-city areas to reduce travel requirements. | See response to IX.2.d. above. | | |
| **Air Quality** | **Central Industrial** | 1 | AQ1 | The Agency shall ensure that the best practices are employed to reduce the creation of inhalable dust particles during the construction process for Agency-sponsored or funded projects. Abatement shall use measures consistent with SCAQMD Rule 403, such as:<br>• Watering and sweeping construction areas and their vicinities (within a 500-foot radius) such that a 12 percent surface soil moisture content throughout any site grading or excavation activity is maintained; | Not necessary. Rule 403 (fugitive dust) is already part of the regulatory framework. | See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Downtown Plan, and see specifically, Section 4.2 (Air Quality) of the DEIR for less than significant impacts to conflicting or obstructing implementation of applicable Air Quality plans. | |
| | | 2 | AQ2 | Construction sites shall implement control measures that at a minimum satisfy the requirements of SCAQMD Rule 403. | See response to AQ1 above. | | |
| | | 3 | AQ3 | The Agency shall require a Phase I assessment for the demolition of existing buildings and/or the excavation/grading of existing industrial sites. These assessments shall specifically specify the potential for airborne contaminant, recommended abatement measures to be implemented. | Not necessary. The DT EIR addresses potential ACM and LBP exposure during renovation or demolition of discretionary projects in Section 4.2 Air Quality and hazardous contamination in Section 4.8 Hazards. As a policy matter, the City finds adopting additional processes, review and requirements to address hazardous materials for the approval of development projects or construction is unnecessary and undesirable and would not result in good public policy or desirable land use outcomes. | See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Downtown Plan, and specifically, see Section 4.8 (Hazards & Hazardous Materials)- less than significant level with migation; Section 4.2 (Air Quality) significant and unavoidable impact related to emissions during construction. | |
| | | 4 | AQ4 | Construction sites that would result in particulate emissions greater than the SCAQMD 150 lbs. Per day shall be specifically reviewed to determine whether there are residences, SRO's transitional housing, health service providers, or major sidewalk homeless encampments within 500 feet of the site. If any of these condition are met, additional abatement will be achieved through a combination of temporary screens installation or retrofit of air conditioners or the temporary relocation of sidewalk homeless encampments. | Infeasible. Given the scope of the Downtown Plan, the City finds the project level locational aspects of this mitigation measure infeasible to enforce at the Community Plan Level. Larger projets that would foreseeably result in these emissions would be required to do environmental assessments and would be required to mitigate any significant air impacts to sensitive receptors. | See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticpated development under the Downtown Plan, and see specifically, Section 4.2 (Air Quality) - less than significant impacts to conflicting or obstructing implementation of applicable Air Quality plans; less than significant impacts related to operational pollutants and odor generation, and significant and unavoidable impact to related to emissions during construction; and significant and unavoidable impacts related to operational emissions of toxic air contaminants associated with distribution centers. | |
| | | 5 | AQ5 | All proposed new industrial uses shall be queried as to whether an SCAQMD permit is required for any equipment or process. If any permanent residential use is located within 500 feet, then the Agency shall require a health risk assessment with additional abatement measures should unacceptable levels of risk (as defined by the US EPA and the California EPS and California Department of Toxic Substances) be identified. | Not necessary. This mitigation measure is already part of the regulatory framework, see DEIR Section 4.2 Air Quality. | | |
| | | 6 | AQ6 | The Agency shall require the preparation of an assessment of diesel related inhalable contaminants for any new or significantly expanded truck terminal within the redevelopment project that is located within 500 feet of a permanent residential use. The Agency shall require a health risk assessment with additional abatement measures should unacceptable levels of risk (as defined by the US EPA and the California EPS and California Department of Toxic Substances) be identified. | Not necessary. The DEIR addresses diesel emissions and CARB regulation for any approval of a project located in the Downtown Plan Area in Section 4.2 Air Quality. In addition, per mitigation measure in the DEIR, 4.2 Air Quality, distribution centers in the Downtown Plan Area within 1,000 feet of sensitive land uses that require discretionary permits and would accommodate more than 100 truck trips or 40 transport refrigeration units (TRUs) per day are required to prepare health risk assessments (HRAs) per SCAQMD and OEHHA guidance to identify the potential for cancer and non-cancer health risks. If cancer risks exceeding SCAQMD standards are identified, the applicant shall identify ways to reduce risks. 4.2 Air Quality. CONCERNED WE DON'T DISCUSS | | |
| | | 7 | AQ7 | ROG reductions during architectural coating. All Agency-sponsored projects that require the use of architectural coatings shall use coating transfers or spray equipment with a transfer efficiency rate of no less than 65 percent. | Not necessary. The DEIR addresses the requirement to utilize architectural coatings compliant with the current SCAQMD standards in Section 4.2 Air Quality which satisfies this requirement. | | |
| | | 8 | AQ8 | The Agency shall coordinate with the Los Angeles Department of Transportation to ensure that designated truck routes are not located adjacent to existing or planned residential areas. | Not necessary. Section 4.2 Air Quality of thie DEIR includes a mitigation measure that requires discretionary projects that involve construction-related activity to comply with best management practices, including re-routing construction trucks away from sensitive receptor areas to address any possible air and noise impacts. | | |
| | | 9 | AQ9 | Within 500 feet of a proposed residential unit the Agency shall require an analysis, which evaluates the potential for the proposed industrial use to result in objectionable odors. | Not necessary. The Downtown Plan concentrates production, light industrial, and heavy industrial uses in the eastern and southern portions of the Downtown Plan Area, away from residential uses. The Downtown Plan includes standards for new buildings that would insulate against odor issues. | | |
| | | 10 | AQ10 | Reduction in Mobile Emissions of Carbon Monoxide, Nitrogen Dioxide and Reactive Organic Gas (Ozone precursor). To reduce | Infeasible. This applies to CRA funded and sponsored projects. | | |
| | **City Center** | 1 | AQ1 | PM10 Abatement. The Agency shall ensure that best practices are employed to reduce the creation of inhalable dust particles | See response to Central Industrial AQ2 above. | | |
| | | 2 | AQ2 | See Central Industrial AQ10 above | See response to Central Industrial AQ10 above. | | |
| | **Chinatown** | 1 | IX. 3 | Non-residential development utilizing Agency financial assistance will be required to meet Federal, State and local standards to | See response to Central Industrial AQ10 above. | | |
| **Noise** | **Central Industrial** | 1 | N1 | Consistent with the City of Los Angeles Noise Ordinance, construction shall be limited to the hours between 7:00 a.m. and 9:00 p.m. on weekdays, and between the hours of 8:00 a.m. and 6:00 p.m. on Saturdays. Construction shall be prohibited on Sundays. | Not necessary and infeasible. This is part of the regulatory framework. The LAMC limits construction between 7:00 a.m. and 9:00 p.m. on weekdays, and between 8:00 a.m. and 6:00 p.m. when activities would be located within 500 feet of residences on any Saturdays or anytime on Sundays or federal holidays. As a policy matter, the City finds imposing additional limitations on construction hours of operation other than those in the Noise Ordinance and Section 41.40 is unnecessary and undesirable and would not result in good public policy related to construction in the City. | See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Downtown Plan, and see specifically, Section 4.11 (Noise)- less than significant impacts to permanent noise increases due to stationary and mobile operational activities; significant and unavoidable impacts generated by temporary construction noise. | |
| | | 2 | N2 | Prior to the issuance of a Building Permit for projects within the proposed Project Area, the Agency shall verify that truck haul routes have been designated, and that these routes to the greatest extent feasible avoid residential areas and schools. | See response to Central Industrial AQ8 above. | | |
| | | 3 | N3 | Major construction sites within 500 feet of a school shall be reviewed with the LAUSD to determine whether a construction noise mitigation program shall be implemented to mitigate noise-related disruptions. The mitigation program shall consider such measures as limited hours of construction in certain site areas to hours when the school would not be affected, providing prior notification to the school of particularly noisy activities, substitution of electric powered versus combustion engine powered equipment, and the use of temporary shrouds or barriers. | Not necessary and infeasible. Construction activities, including those near schools are subject to the Regulatory Compliance Measures adopted pursuant to the City's noise ordinances. These include LAMC Ch. IV, Article 1 Sec. 41.40 Construction Noise; LAMC CH. XI Sec. 112.05 Power tools; LAMC Sec. 111.03 Ambient Noise; LAMC Sec. 112.02 HVAC system noise. As a policy matter, the City finds adopting additional noise requirements other than those in the Noise Ordinance and Section 41.40 and/or imposing additional review and standard requirements on approval of development projects and development of land is unnecessary and undesirable and would not result in good public policy related to construction in the City or be an efficient use of City resources. | | |
| | | 4 | N4 | For new residential developments, the agency shall require an acoustical analysis and that the development shall adopt the resulting insulation and attenuation measures to minimize operational noise levels. | Not necessary and infeasible. Addresses impacts from existing evironment on the Project which are not CEQA impacts.<br>The California Noise Insulation Standards in Title 24 of the California Code of Regulations establish uniform minimum noise insulation performance standards to protect persons in new hotels, motels, apartment houses, and dwellings other than detached single-family dwellings from the effects of excessive noise. | | |
| | | 5 | N5 | For proposed industrial/commercial development adjacent to existing residential uses, new developments shall be constructed at such distances from sensitive noise receptors and/or be designed such that anticipated noise levels are reduced to acceptable levels. | Not necessary and infeasible. The Plan generally confines traditional industrial uses to a smaller geography than applied under the Redevelopment Plan. The Downtown Plan also proposes more contemporary Development Standards for both more traditional industrial uses, as well as newer industrial (hybrid industrial, production uses, etc.) that address buffering between residential and non-residential uses. Heavy commercial and industrial use projects would be required to comply with buffering requirements when cited adjacent to more sensitive uses, and Conditional use permits (CUPs) maybe required for certain uses to allow the decision makers to assess potential inconsistencies and impose conditions to control noise for uses that may need special conditions to ensure compatibility with surrounding land uses. As a policy matter, the City finds adopting additional processes, review and requirements to address noise for the approval of development projects or construction is unnecessary and undesirable and would not result in good public policy or desirable land use outcomes. | | |
| | **City Center** | 1 | N1 | See Central Industrial N1 above | See response to Central Industrial N1 above. | | |
| | | 2 | N2 | See Central Industrial N2 above | See response to Central Industrial N2 above. | | |
| | | | N3 | See Central Industrial N3 above | See response to Central Industrial N3 above. | | |
| | **Chinatown** | 3 | IX. 1. | The temporary intermittent increases in noise and dust during demolition and construction activities will be minimized by limiting operations to normal weekday working hours (e.g., 7 a.m. to 5 p.m.) and using normal wetting procedures during grading and demolition. | See response to Central Industrial N1 and N3 above. | | |
| | | 1 | IX.5. | New development utilizing Agency financial assistance will conform to applicable state and local noise standards. Specific noise | Infeasible. This applies to CRA funded and sponsored projects. | | |
| **Public Services** | **Central Industrial** | 1 | PS1 | The Agency shall ensure that developers of private projects to prepare security plans in consultation with the LAPD crime prevention unit prior to approval of site-specific developments within the proposed Project Area. The security plans shall include consideration of issues such as on-site private security officers for new development security lighting and surveillance equipment for interior and exterior building areas. | Not necessary and infeasible. The Downtown Plan includes a policy to continue interagency coordination with LAPD. Discretionary projects that include CEQA review would be subject to CPTED (Crime Prevention Through Environmental Design). As a policy matter, the City finds adopting additional review requirements and standards for ministerial projects to address security features is unnecessary and undesirable and would not be an efficient use of City resources. | See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Downtown Plan, and specifically Section 4.13 (Public Services)- less than significant impact related to police protection services. | |
| | | 2 | PS2 | Additional police personnel and equipment shall be provided as needed by the City in order to maintain an adequate level of police protection to the proposed Project Area. Sources of funding for additional personnel and equipment could include fees generated by the new development as a result implementation of the proposed Project. | Not necessary and infeasible. Development projects within the City pay administrative fees which contribute to a general fund. A portion of the general fund is included in the LAPD budget allocation for each fiscal year. As a policy matter, the City finds creating or adopting new development fees for the purposes of funding police equipment and personnel is unnecessary and undesirable and would not be an efficient use of City resources. | | |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| | | **School** | **3** | PS3 | Payment of school facility fees according to Government Code Section 65995, as amended by Senate Bill 50, is considered "full and complete school facilities mitigation" for purposes of CEQA (Gov. Code Section 65996, subdivision). The proposed project includes all public and private activities done in furtherance of the proposed project, including development projects undertaken for purposes of development in furtherance of the proposed project. | Not Necessary. This is part of the regulatory framework. California Government Code Section 65995 found in Title 7, Chapter 4.9 of the California Government Code authorizes school districts to collect impact fees from developers of new residential and commercial/industrial building space. | See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Downtown Plan, and specifically Section 4.13 (Public Services)- less than significant impacts related to schools. |
| | | **Park & Recreation** | | PS4 | The proposed Redevelopment Plan shall identify the provision of additional parkland and active recreational facilities as specific needs within the proposed Project Area. The Plan shall also include funding or other in-kind contributions to provide for parkland acquisition consistent with Department of Recreation and Parks facility programming, the identification of specific acquisition opportunities, and the availability of tax increment or other Agency resources. | Infeasible. The Downtown Plan includes zoning standards with requirements for amenity and open space provisions for residential and nonresidential buildings within the plan area. Additionally, the Downtown Plan includes policies for ongoing interagency coordination with other departments and agencies on park acquisition and maintenance, as well as park access. Quimby fees, which fund parks, are required for development projects that include new residential dwelling units and the City has park fees. As a policy matter, the City finds adopting additional programs, requirements or incentive systems to obtain open space and recreational space and amenities is unnecessary and undesirable and would not result in good public policy or desirable land use outcomes. | See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Downtown Plan, and specifically Section 4.14 (Recreation) - potentially significant impacts related to the deterioration of existing parks. |
| | | | | PS5 | Businesses shall be encouraged to invest more in on-site facilities to provide recreation to employees during breaks and lunch hours. | Not Necessary. The Downtown Plan includes zoning standards with required amenity and open space provisions for residential and non-residential buildings within the Plan Area. These provisions would serve all building occupants, i.e. residents and employees. | |
| | | | **4–5** | PS6 | In addition to Quimby fees collected from developers of residential projects, developers of commercial/industrial projects shall be encouraged to provide their buildings' occupants with some basic park features in certain portions of their landscaped areas. | See response to PS4 above. | |
| | | | **6** | PS7 | The proposed Central Industrial Redevelopment Project is primarily an industrial area with a large industrial workforce and a few areas of residential uses. Per the 30-Year Work Program, up to five pocket parks of 15,000 square feet each (total 1. 7 acres) shall be added to serve as a place of respite for the industrial workforce and for the area residents. | Not necessary and infeasible. The Downtown Plan includes incentives for the provision of open space. The City also has a Quimby Fee paid by developers that is utilized by the Recreation and Parks department and the Park fee is used to develop new parks. | |
| | | | **7** | PS8 | The Agency shall provide up to an additional 5 acres of park space within the Project Area over the life of the Program commensurate with the increase in housing that results in the Proposed Project Area. | See response to PS7 above. Additionally, to the extent this created a funding obligation, the City did not receive funds from CRA/LA to fulfill this obligation. | |
| | | **Utilities & Solid Waste** | **9** | U1 | The Agency shall require, through its project design and Site Plan Review process, that all feasible and reasonable measures have been taken to reduce water consumption, including, but not limited to, systems to use reclaimed water for landscaping (should reclaimed water become available to the City), drip irrigation, recirculating hot water systems, water-conserving landscape techniques (such as mulching, installation of drip irrigation systems, landscape design to group plants of similar water demand, | Not necessary. The City has programs supporting water conservation, consistent with State law. Projects would be required to comply with the City's water conservation ordinances, such as the Model Water Efficient Landscape Ordinance, and Supply Ordinance No. 165004 to reduce water consumption, in order to obtain building permits in the City of Los Angeles. As a policy matter, the City finds adopting additional processes, review and requirements to address utilities for the approval of development projects or construction is unnecessary and undesirable and would not result in good public policy or desirable land use outcomes. | See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Downtown Plan, and specifically Section 4.17 (Utilities & Service Systems)- less than significant impacts related to solid waste. |
| | | | | U2 | The Agency shall require that adequate areas on-site be set aside for solid waste source separation and collection. | Not necessary. AB 341 requires Mandatory Commercial Recycling in California as of July 1, 2012. Businesses, public entities that subscribe to waste collection services, and multi-family residential properties with five or more units are required to have a recycling program. | |
| | | | | U3 | For major developments within the proposed Project Area, the Agency shall require the incorporation of an on-site recycling and conservation program, including waste management techniques, aggressive use of recycled materials and furnishings or other recycling/conservation measures. | See response to U2 above. | |
| | **City Center** | **Police Services** | **1** | PS1 | The Agency shall require developers of private projects to prepare security plans in consultation with the LAPD crime prevention unit prior to approval of site-specific developments within the proposed Project Area. The security plans shall include consideration of issues such as on-site private security officers, video surveillance equipment for interior and exterior building areas, and secured entryways as recommended by the Police Department during their review. | See response to Central Industrial PS1 above. | |
| | | | **2** | PS2 | Additional police personnel and equipment shall be provided as needed by the City in order to maintain an adequate level of police protection to the proposed Project Area. Sources of funding for additional personnel and equipment could include fees generated by the new development as a result if implementation of the proposed Redevelopment Project. | See response to Central Industrial PS2 above. | |
| | | **School** | **3** | PS3 | Payment of school facility fees according to Government Code Section 65995, as amended by Senate Bill 50, is considered "full and complete school facilities mitigation" for purposes of CEQA. (Government Code Section 65996, subdivision). | See response to Central Industrial PS3 above. | |
| | | **Parks & Recreation** | **4** | PS4 | The proposed Redevelopment Plan shall identify the provision of additional parkland and active recreational facilities as specific needs within the proposed Project Area. The Plan shall also include funding or other in-kind contributions to provide for parkland acquisition consistent with Department of Recreation and Parks facility programming, the identification of specific acquisition opportunities, and the availability of tax increment or other Agency resources. | See response to Central Industrial PS4 above. | |
| | | | **5** | PS5 | See Central Industrial PS5 above | See response to Central Industrial PS5 above. | |
| | | | **6** | PS6 | See Central Industrial PS6 above | See response to Central Industrial PS6 above. | |
| | | | **7** | PS7 | Per the proposed City Center Redevelopment Project's 5-Year Implementation Plan, the Agency shall conduct identification of sites and pre-assembly work for a large park and start construction of one pocket park (15,000 square feet or 0.34 acres). Per the 30- Year Work Program, an additional six pocket parks of 15,000 square feet each (total 2.06 acres) and two large parks of 200,000 square feet each (total 9.18 acres) shall be added. | See response to Central Industrial PS6 above. | |
| | | **Utilities & Solid Waste** | **8** | U1 | The Agency shall require, through its project design and Site Plan Review process, that all feasible and reasonable measures have been taken to reduce water consumption, including, but not limited to, systems to use reclaimed water for landscaping (should reclaimed water become available to the City) , recirculating hot water systems, water-conserving landscape techniques (such as mulching, installation of drip irrigation systems, landscape design to group plants of similar water demand, soil moisture sensors, automatic irrigation systems, clustered landscaped areas to maximize the efficiency of the irrigation system), water conserving kitchen and bathroom fixtures and appliances, thermostatically controlled mixing valves for baths and showers, and insulated hot water lines, as per City adopted code requirements. | See response to Central Industrial U1 above. | |
| | | | **9** | U2 | The Agency shall require that adequate areas on-site be set aside for solid waste source separation and collection. For commercial projects and housing projects with more than 20 residential units, commercial size trash compactors shall be installed in all portions of each component of the project. | See response to Central Industrial U2 above. | |
| | | | **10** | U3 | For major developments within the proposed Project Area, the Agency shall require the incorporation of an on-site recycling and conservation program, including waste management techniques, aggressive use of recycled materials and furnishings or other recycling/conservation measures. | See response to Central Industrial U3 above. | |
| | **Chinatown** | **Police Services** | **1** | IX.8. | The impact of Agency-sponsored new development on police services will be reduced by the installation of adequate security lighting, City-approved security hardware on all doors and windows, and viewing holes in the entrance doors of individual dwelling units. Residents will be encouraged to develop neighborhood watch programs. Private developers should consult with the police department regarding security measures appropriate for the particular projects | See response to Central Industrial PS1 above. | |
| **Hazards & Risk Upsets** | **Central Industrial** | | | HR1 | If alluvial deposits underlying a specific project site are determined susceptible to seismically induced settlement, site-specific recommendations shall be made to mitigate this hazard. Mitigation alternatives include foundations on piles or caissons driven into deeper subsurface materials that are not settlement-prone, or compaction of the near-surface soil materials to decrease their susceptibility to settlement. | Not necessary. The City of Los Angeles relies on Municipal Code Chapter IX, Article 1, Building Code, (the LABC), which incorporates the CBC, to provide geotechnical hazard prevention regulations. In general, the LAMC includes requirements for construction and ground disturbance that could affect geologic risks, as well as standards for building foundations, earthquake/seismic structural designs, and development within landslide susceptible areas. Division 18 of Article 1, in adopting the CBC, provides guidance for development located on expansive soils; Division 70 provides general construction, grading and site excavation requirements and restricts issuance of grading permits for development in landslide areas, unless a soil investigation is prepared by an engineer registered by the State of California and is approved by the City. | See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Downtown Plan, and specifically, see Section 4.6 (Geology & Soils)- less than significant impacts related to geology and seismic hazards. |
| | | | | HR2 | A state-certified geologist shall review all excavations for future projects within the proposed Project Area for evidence indicative of faulting, or seismically induced ground deformation. If during grading, an active fault is determined to extend through the site, appropriate building setbacks from the fault line shall be established. | Not necessary. LADBS requires surface fault rupture hazard investigations for projects located within an official or preliminary Alquist-Priolo Earthquake Fault Zone (APEFZ); and/or within a City of Los Angeles Preliminary Fault Rupture Study Areas (PFRSA). As a policy matter, the City finds adopting additional regulations or restrictions to address geological hazards is undesirable and unnecessary, would be an inefficient use of City resources and result in undesirable land use and building design outcomes. | |
| | | | | HR3 | For site-specific developments within the proposed Project Area, a qualified geologist shall perform a geological investigation. The scope of the investigation shall be developed in coordination with the City of Los Angeles Department of Building and Safety. The geological investigation shall reasonably address settlement, corrosive oils, ground shaking, liquefaction, and subsidence. As appropriate, mitigation measures shall be identified and implemented with the approval of the Department of Building and Safety. | Infeasible and not necessary. The California Building Code has requirements (CBC Appendix J) for all grading, excavation, and earthwork construction, and prohibits grading from occurring without first having obtained a permit from the building official. Appendix J of the CBC requires the preparation of a geotechnical report that notes the distribution of existing soils, conclusions and recommendations for grading procedures, soil design criteria for any structures or embankments required to accomplish the proposed grading, and where necessary, slope stability studies, and recommendations and conclusions regarding site geology. This applies to projects that include grading, excavation, and earthwork and not just for construction of a new building. To the extent that this mitigation is to address impacts from existing conditions to future residents of the project, those are not CEQA impacts pursuant to CBIA v. BAAQMD. | |
| | | | | HR4 | If inactive, abandoned or unidentified oil wells are encountered during the planning or implementation of development within the proposed project area, the State of California, Department of Conservation, Division of Oil, Gas, and Geothermal Resources (DOG) shall be contacted to identify the well and to evaluate whether or not the well has been properly abandoned. The DOG will require proper abandonment or re-abandonment of an oil well if the well is to be located under any proposed structure. If the wells found to have been properly abandoned; and will not be located under a proposed structure, the DOG may not require re-abandonment. | Not necessary. LAMC Section 91.6105 prohibits the development of specific uses and buildings in proximity to an oil well casing. These include schools, sanitariums, an assembly occupancy (i.e., gathering place for 50 or more people), fuel manufacturing plant, or public utility generating, receiving, or distributing electricity, and buildings more than 400 square feet in area and taller than 36 feet in height. In addition, in accordance with LAMC Section 91.7109.2, any abandoned oil well encountered during construction is required to be evaluated by the Fire Department and may be required to be re-abandoned in accordance with applicable rules and regulations of the California Division of Oil, Gas, and Geothermal Resources (CALGEM). | See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Downtown Plan, and specifically, see Section 4.8 (Hazards & Hazardous Materials)- less than significant impacts related to oil wells. |
| | | | **4** | HR5 | Soils shall be evaluated on a project-by-project (basis, and appropriate mitigation recommended. If found, all compressible materials shall be removed and replaced as compacted fill (with the exception of peat, which shall be removed from the fills). The criteria for leaving surficial soils in place should be consistent with the grading specifications of the City of Los Angeles. Other recommendations may include deep pile, or caissons to support the structures, and/or in-place mechanical densification of compressible layers. | Not necessary. Future development would be required to comply with Division 18, Soils and Foundations, of the LABC, which adopted Chapter 18 of the CBC by reference. Therefore, future development would be required to comply with the CBC regarding the minimum standards for structural design and site development. An acceptable degree of soil stability can be achieved for soil materials by the CBC-required incorporation of soil treatment programs (replacement, grouting, compaction, drainage control, etc.) in the excavation and construction plans to address site-specific soil conditions. Adherence to these requirements would achieve accepted safety standards relative to unstable geologic units or soils. | See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Downtown Plan, and specifically, see Section 4.6 (Geology & Soils) less than significant impacts related to geology and seismic hazards. |
| | | | **5** | HR6 | If soils underlying the site-specific project are determined susceptible to ground lurching, special foundation recommendations | See response to Central Industrial HR5 above. | |
| | | | **6** | HR7 | If soils underlying the site specific proposed project are determined to be highly expansive, they shall be mitigated by special | See response to Central Industrial HR5 above. | |
| | | | **7** | HR8 | Property specific Phase One and Phase Two environmental testing shall be performed prior to new development in the Project Area. If soil and/or groundwater contamination or the presence of underground storage tanks are identified prior to the implementation of new development, proper remediation of the soil and/or groundwater and removal of the tank shall be performed in conformance with all federal, state and local regulations. | Not necessary and Infeasible. The DEIR discusses issues concerning soil disturbance in Section 4.8, Hazards and Hazardous Materials. The section includes a mitigation measure that requires full database research for discretionary projects that involve construction-related soil disturbance located on land that is currently or was historically zoned as industrial or, previously had a gas station or dry-cleaning facility on-site. This initial database search could result in the need to complete a Phase I and Phase II Assessment. As a policy matter, the City finds adopting additional processes, review and requirements to address hazardous materials for the approval of development projects or construction is unnecessary and undesirable and would not result in good public policy or desirable land use outcomes. | See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Downtown Plan, and specifically, see Section 4.8 (Hazards & Hazardous Materials) less than significant impacts related to oil wells; less than significant impacts related to lead and asbetos exposure. |

| | | | | | | |
|---|---|---|---|---|---|---|
| | | 8 | HR9 | On a project-by-project basis, a survey to test for asbestos-containing building materials, lead-based paints, and PCBs, shall be performed, as necessary. This survey shall be subject of the approval of the Agency. PCB and lead-based paint analysis and removal shall be performed in conformance with federal, state, and local regulations. | Not necessary. It is already part of the regulatory framework because it is a requirement of SCAQMD's Rule 1403, which was enacted in 1989. In addition, per mitigation measure in the Section 4.2 Air Quality of theis DEIR, construction contractors for all discretionary projects that involve construction-related activity are required to implement best available dust control measures during active construction operations capable of generating dust, consistent with SCAQMD Rule 403. | |
| | | 9 | HR10 | All activities associated with asbestos shall be conducted under the direct supervision of a certified asbestos consultant. | Not necessary. The DEIR discusses the issues concerning demolition in Section 4.8, Hazards and Hazardous Materials. Section 4.8 includes a mitigation measure | |
| | | 10 | HR11 | Individual project sponsors shall obtain all necessary regulatory agency permits prior to implementation of subsequent | Not necessary. The regulatory framework includes thresholds for project review and permitting. | |
| | | 11 | HR12 | Any project involving hazardous waste generation shall, utilize only the services of properly trained and qualified hazardous waste | Not necessary and infeasible. To ensure that workers and others at individual development sites in the Downtown Plan Area are not exposed to unacceptable levels of | |
| | **City Center** | 1 | HR1 | See Central Industrial HR1 above | See response to Central Industrial HR1 above. | |
| | | 2 | HR3 | See Central Industrial HR2 above | See response to Central Industrial HR2 above. | |
| | | 3 | HR3 | See Central Industrial HR3 above | See response to Central Industrial HR3 above. | |
| | | 4 | HR4 | Studies shall also be conducted prior to development approval on a project-by-project basis "where saturated conditions exist near the ground surface." These studies would evaluate water depths and soil conditions and identify any areas that have the potential for liquefaction. | Not necessary. Reasonably expected development from the Downtown Plan would be subject to existing requirements, regulations and policies provided in the LABC, which would ensure that reasonably expected development from the Downtown Plan would not increase or otherwise alter the potential for impacts related to on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse compared to existing conditions. The DEIR also discusses requirements to ensure that soil and/or groundwater contamination that may be present on Downtown Plan Area properties are identified and, as necessary, remediated in Section 4.8, Hazards and Hazardous Materials. | See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Downtown Plan, and specifically, see Section 4.6 (Geology & Soils) and Section 4.8 (Hazards and hazardous Materials)for no or less than significant impacts related to geology and seismic hazards. |
| | | 5 | HR5 | In those areas determined susceptible to liquefaction, special foundations shall be provided to mitigate this hazard. Possible mitigation recommendations may include deep piles or caissons to support the planned structures and/or mechanical densification of subsurface soils prone to liquefaction. | | |
| | | 6 | HR6 | Any loose liquefaction-prone sediments occurring on a specific development site shall be compacted to appropriate City standards to reduce liquefaction potential. Additionally, foundations and footings for all developments within susceptible areas shall be designed in accordance with City of Los Angeles Code standards to reduce the potential for structural failure associated with liquefaction. | | |
| | | 7 | HR7 | See Central Industrial HR4 above. | See response to Central Industrial HR4 above. | |
| | | 8 | HR8 | See Central Industrial HR5 above | See response to Central Industrial HR5 above. | |
| | | 9 | HR9 | See Central Industrial HR6 above | See response to Central Industrial HR6 above. | |
| | | 10 | HR10 | See Central Industrial HR7 above | See response to Central Industrial HR7 above. | |
| | | | HR11 | See Central Industrial HR9 above | See response to Central Industrial HR9 above. | |
| | | 11 | HR12 | A Phase One type environmental assessment shall be required for all Agency-sponsored or funded projects that involve | See response to Central Industrial HR8 above. | |
| | | 12 | HR13 | All new businesses that involve the handling, manufacturing, or generation of known hazardous materials shall be reviewed by the | See response to Central Industrial HR12 above. | |
| | | 13 | HR14 | Individual project sponsors shall obtain all necessary regulatory agency permits prior to implementation of subsequent | See response to Central Industrial HR11 above. | |
| | | 15 | HR15 | Prior to new construction, a qualified environmental professional shall evaluate any identified soil and/or groundwater contamination. Lateral and vertical extent of soil contamination, lateral extent of groundwater contamination, and remedial options shall be determined in conformance with applicable City, State and Federal standards. Remediation measures shall be implemented, as determined necessary by local oversight agencies, such as the City of Los Angeles Fire Department, California Environmental Protection Agency, Los Angeles Department of Public Works, and the California Regional Water Quality Board. | Infeasible and not necessary. The Proposed Project DEIR, Section 4.8, Hazards and Hazardous Materials proposed mitigation measure requires full database research for discretionary projects that involve construction-related soil disturbance located on land within ¼-mile of an identified active hazardous material site. This initial database search could result in the need to complete a Phase I and Phase II Assessment. In addition, LAMC Article 4.4 requires that a project include construction Best management Practices (BMPs) to prevent contamination of stormwater and runoff in its project plans. These BMPs are subject to City review and are required to be implemented during construction. As a policy matter, the City finds adopting additional processes, review and requirements to address hazardous materials for the approval of development projects or construction is unnecessary and undesirable and would not result in good public policy or desirable land use outcomes. | See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Downtown Plan, and specifically, see Section 4.8 (Hazards & Hazardous Materials)- less than significant impacts related to soill and ground water contamination |
| | **Chinatown** | 1 | IX.7. | Some of the proposed circulation improvements (e.g., street widening, provision of adequate turnaround areas, improved alley access) will be beneficial from a fire safety standpoint. | Infeasible. As written, the action set forth in this mitigation measure is unclear and therefore infeasible. | |
| | | 2 | IX.7. | The rehabilitation program will include activities to reduce fire hazards, including repair or installation of electrical wiring in conformance with existing building codes, and elimination of accumulated litter. | See response to IX.7. above. Additionally, unnecessary because the Fire Code provides requirements to address fire hazards from new construction or remodels. | |
| **Hydrology & Water Quality** | **Central Industrial** | 1 | H1 | All projects, where applicable, shall use permeable surfaces to minimize the transport of pollutants. All projects where applicable, shall be required to establish an erosion control plan prior to construction. | Not necessary. All future developments in the Downtown Plan Area would be required to comply with the LID Ordinance and Stormwater and Urban Runoff Pollution Control Ordinance, which require the inclusion of BMPs in a project's design to prevent, control, and reduce stormwater pollutants. The City's Stormwater and Urban Runoff Pollution Control Ordinance requires future development to comply with the SUSMP requirements, if applicable abd integrate LID practices and standards for stormwater pollution mitigation, and maximize open, green, and pervious space on all development consistent with the City's landscape ordinance and other related requirements. As a policy matter, the City finds adopting additional processes, review and requirements to address hazardous materials for the approval of development projects or construction is unnecessary and undesirable and would not result in good public policy or desirable land use outcomes. | See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Downtown Plan, and see specifically, Section 4.19 (Hydrology)- less than significant impacts related to erosion and transport of pollutants |
| | | | H2 | The Agency shall require all applicants for development to include drainage plans to be reviewed by Bureau of Engineering prior to project approval. | See response to H1 above. | |
| | | 2~3 | H3 | All subsequent site specific projects which are determined to have a significant effect on storm water runoff shall investigate measures to capture local rainfall on the project site, eliminate incremental increase in flows to the storm drain system and provide filtering of flows to capture contaminants originating from the project site. | Not necessary. Discussion of impacts in DEIR Section 4.9 Hydrology and Water Quality, states Downtown Plan Area development would generally involve redevelopment of already developed sites so would not substantially increase impervious surface area or runoff. New development would also be subject to the existing regulatory framework, which in many cases would reduce peak runoff rates. | See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Downtown Plan, and see specifically, Section 4.19 (Hydrology)- less than significant impacts related to storm water run-off |
| | | 4 | H4 | All projects, where applicable, shall use permeable surfaces to minimize the transport of pollutants. | See response to Central Industrial H1 above. | |
| | **City Center** | 1 | H1 | The Agency shall require projects to obtain proper discharge permits, as required by the Regional Water Quality Control Board. | See response to Central Industrial H1 above. | |
| | | 2 | H2 | See Central Industrial H2 above | See response to Central Industrial H2 above. | |
| | | | H3 | See Central Industrial H3 above | See response to Central Industrial H3 above. | |
| | **Chinatown** | 1 | IX.4. | All new development utilizing Agency financial assistance will comply with applicable building codes in regard to water and energy conservation measures. Occupants will be encouraged to implement voluntary conservation measures. | Infeasible. This applies to CRA funded and sponsored projects. | See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Downtown Plan, and see specifically, Section 4.17 (Utilities)- less than significant impacts related to water supply; Section 4.15 (Energy)-less than significant impact with respect to energy consumption. |

# Downtown Plan Operational - Existing

**Los Angeles-South Coast County, Summer**

## 1.0 Project Characteristics

### 1.1 Land Usage

| Land Uses | Size | Metric | Lot Acreage | Floor Surface Area | Population |
|---|---|---|---|---|---|
| Government (Civic Center) | 3,865.92 | 1000sqft | 88.75 | 3,865,922.00 | 0 |
| General Light Industry | 40,101.58 | 1000sqft | 920.61 | 40,101,581.00 | 0 |
| Condo/Townhouse High Rise | 36,000.00 | Dwelling Unit | 562.50 | 36,000,000.00 | 102960 |
| Convenience Market (24 Hour) | 105,376.58 | 1000sqft | 2,419.11 | 105,376,578.00 | 0 |

### 1.2 Other Project Characteristics

| | | | | | |
|---|---|---|---|---|---|
| **Urbanization** | Urban | **Wind Speed (m/s)** | 2.2 | **Precipitation Freq (Days)** | 33 |
| **Climate Zone** | 11 | | | **Operational Year** | 2018 |
| **Utility Company** | Los Angeles Department of Water & Power | | | | |
| **CO2 Intensity (lb/MWhr)** | 1227.89 | **CH4 Intensity (lb/MWhr)** | 0.029 | **N2O Intensity (lb/MWhr)** | 0.006 |

### 1.3 User Entered Comments & Non-Default Data

Downtown Plan Operational - Existing - Los Angeles-South Coast County, Summer

Project Characteristics -

Land Use - existing sf

Construction Phase - No construction

Grading - no construction

Vehicle Emission Factors -

Vehicle Emission Factors -

Vehicle Emission Factors -

Woodstoves - None included

Consumer Products -

Water And Wastewater - Assumed outdoor water minimal for Downtown Plan Area.

Solid Waste - Solid waste for public facilities reflects the CalEEMod default for Government Office Buildings per Utility Calculations Memo 4.2019

Vehicle Trips - mobile not calculated in caleemod

| **CO2 Intensity (lb/MWhr)** | 1227.89 | **CH4 Intensity (lb/MWhr)** | 0.029 | **N2O Intensity (lb/MWhr)** | 0.006 |

### 1.3 User Entered Comments & Non-Default Data

Downtown Plan Operational - 2040 No Project - Los Angeles-South Coast County, Annual

Project Characteristics -

Land Use - sf

Construction Phase - No construction

Grading - no const

Woodstoves - None included

Consumer Products -

Water And Wastewater - Assumed outdoor water minimal for Downtown Plan Area; adjusted to be consistent with UWMP

Vehicle Trips - Mobile emissions not calculated in CalEEMod

Solid Waste - Solid waste for public facilities reflects the CalEEMod default for Government Office Buildings per Utility Calculations Memo 4.2019

# Downtown Plan Operational - 2040 No Project

**Los Angeles-South Coast County, Summer**

## 1.0 Project Characteristics

### 1.1 Land Usage

| Land Uses | Size | Metric | Lot Acreage | Floor Surface Area | Population |
|---|---|---|---|---|---|
| Government (Civic Center) | 36,561.90 | 1000sqft | 839.35 | 36,561,904.00 | 0 |
| General Light Industry | 125,352.08 | 1000sqft | 2,877.69 | 125,352,077.00 | 0 |
| Condo/Townhouse High Rise | 59,000.00 | Dwelling Unit | 921.88 | 59,000,000.00 | 168740 |
| Convenience Market (24 Hour) | 107,372.77 | 1000sqft | 2,464.94 | 107,372,768.00 | 0 |

### 1.2 Other Project Characteristics

| | | | | | |
|---|---|---|---|---|---|
| **Urbanization** | Urban | **Wind Speed (m/s)** | 2.2 | **Precipitation Freq (Days)** | 33 |
| **Climate Zone** | 11 | | | **Operational Year** | 2040 |
| **Utility Company** | Los Angeles Department of Water & Power | | | | |
| **CO2 Intensity (lb/MWhr)** | 1227.89 | **CH4 Intensity (lb/MWhr)** | 0.029 | **N2O Intensity (lb/MWhr)** | 0.006 |

### 1.3 User Entered Comments & Non-Default Data

Downtown Plan Operational - 2040 No Project - Los Angeles-South Coast County, Summer

Project Characteristics -

Land Use - sf

Construction Phase - No construction

Grading - no const

Woodstoves - None included

Consumer Products -

Water And Wastewater - Assumed outdoor water minimal for Downtown Plan Area; adjusted to be consistent with UWMP

Vehicle Trips - Mobile emissions not calculated in CalEEMod

Solid Waste - Solid waste for public facilities reflects the CalEEMod default for Government Office Buildings per Utility Calculations Memo 4.2019

### 1.3 User Entered Comments & Non-Default Data

Downtown Plan Operational - 2040 No Project - Los Angeles-South Coast County, Winter

Project Characteristics -

Land Use - sf

Construction Phase - No construction

Grading - no const

Woodstoves - None included

Consumer Products -

Water And Wastewater - Assumed outdoor water minimal for Downtown Plan Area; adjusted to be consistent with UWMP

Vehicle Trips - Mobile emissions not calculated in CalEEMod

Solid Waste - Solid waste for public facilities reflects the CalEEMod default for Government Office Buildings per Utility Calculations Memo 4.2019

### 1.3 User Entered Comments & Non-Default Data

Downtown Plan Operational - 2040 with DP - Los Angeles-South Coast County, Annual

Project Characteristics -

Land Use - sf

Construction Phase - No construction

Grading - no const

Woodstoves - None included

Consumer Products -

Area Coating -

Water And Wastewater - Assumed outdoor water minimal for Downtown Plan Area; water use from UWMP

Solid Waste - Solid waste for public facilities reflects the CalEEMod default for Government Office Buildings per Utility Calculations Memo 4.2019

Vehicle Trips - Mobile emissions not calculated in CalEEMod

## 11.0 Vegetation

# Downtown Plan Operational - 2040 with DP

**Los Angeles-South Coast County, Summer**

## 1.0 Project Characteristics

### 1.1 Land Usage

| Land Uses | Size | Metric | Lot Acreage | Floor Surface Area | Population |
|---|---|---|---|---|---|
| Government (Civic Center) | 45,730.21 | 1000sqft | 1,049.82 | 45,730,208.00 | 0 |
| General Light Industry | 76,758.42 | 1000sqft | 1,762.13 | 76,758,424.00 | 0 |
| Condo/Townhouse High Rise | 133,000.00 | Dwelling Unit | 2,078.13 | 133,000,000.00 | 380380 |
| Convenience Market (24 Hour) | 199,504.74 | 1000sqft | 4,580.00 | 199,504,737.00 | 0 |

### 1.2 Other Project Characteristics

| | | | | | |
|---|---|---|---|---|---|
| **Urbanization** | Urban | **Wind Speed (m/s)** | 2.2 | **Precipitation Freq (Days)** | 33 |
| **Climate Zone** | 11 | | | **Operational Year** | 2040 |
| **Utility Company** | Los Angeles Department of Water & Power | | | | |
| **CO2 Intensity (lb/MWhr)** | 1227.89 | **CH4 Intensity (lb/MWhr)** | 0.029 | **N2O Intensity (lb/MWhr)** | 0.006 |

### 1.3 User Entered Comments & Non-Default Data

Downtown Plan Operational - 2040 with DP - Los Angeles-South Coast County, Summer

Project Characteristics -

Land Use - sf

Construction Phase - No construction

Grading - no const

Woodstoves - None included

Consumer Products -

Area Coating -

Water And Wastewater - Assumed outdoor water minimal for Downtown Plan Area; water use from UWMP

Solid Waste - Solid waste for public facilities reflects the CalEEMod default for Government Office Buildings per Utility Calculations Memo 4.2019

Vehicle Trips - Mobile emissions not calculated in CalEEMod

### 1.3 User Entered Comments & Non-Default Data

Downtown Plan Operational - 2040 with DP - Los Angeles-South Coast County, Winter

Project Characteristics -

Land Use - sf

Construction Phase - No construction

Grading - no const

Woodstoves - None included

Consumer Products -

Area Coating -

Water And Wastewater - Assumed outdoor water minimal for Downtown Plan Area; water use from UWMP

Solid Waste - Solid waste for public facilities reflects the CalEEMod default for Government Office Buildings per Utility Calculations Memo 4.2019

Vehicle Trips - Mobile emissions not calculated in CalEEMod

4 SMAQMD Friant Ranch Interim Recommendation

# INTRODUCTION

In response to the California Supreme Court decision on December 24, 2018, Sierra Club v. County of Fresno (Friant Ranch), this paper provides a supplemental discussion on the potential for identifiable health impacts to result from air pollutants analyzed in City of Los Angeles (City) environmental documents prepared pursuant to the California Environmental Quality Act (CEQA). The discussion focuses on significant impacts identified in City Environmental Impact Reports (EIRs) and the feasibility of directly relating any identified significant adverse air quality impact to likely health consequences. The Supreme Court opinion in Friant Ranch requires projects with significant air quality impacts to "relate the expected adverse air quality impacts to likely health consequences or explain why it is not feasible at the time of drafting to provide such an analysis, so that the public may make informed decisions regarding the costs and benefits of the project" (Friant Ranch, page 6). The Friant Ranch decision also states that providing "only a general description of symptoms that are associated with exposure"… "fail[s] to indicate the concentrations at which such pollutants would trigger the identified symptoms…." and "the public would have no idea of the health consequences that result when more pollutants are added to a nonattainment basin". This paper provides information to the public regarding health consequences associated with exposure to air pollutants and explains why direct correlation of a project's pollutant emissions and anticipated health effects is currently infeasible, as no expert agency has approved a quantitative method to reliably and meaningfully translate mass emission estimates of criteria air pollutants to specific health effects for the scale of projects typically analyzed in City EIRs.

# BACKGROUND AND METHODOLOGY

The purpose of CEQA is to inform the public as to the potential for a proposed project to result in one or more significant adverse effects on the environment (including health effects). This includes the potential for a project to result in a considerable contribution towards one or more significant cumulative impacts. CEQA does not require detailed analysis of impacts that are found to be less than significant or less than a considerable contribution to a significant cumulative impact.

In accordance with CEQA requirements and the CEQA review process, the City assesses air quality impacts of proposed local plans and development projects, requires mitigation of potentially significant air quality impacts by conditioning discretionary permits, and monitors and enforces implementation of such mitigation. The State CEQA Guidelines Section 15064.7 states that the significance criteria established by the applicable air quality management district or air pollution control district, when available, may be relied upon to make determinations of significance. The City is located within the South Coast Air Basin (Air Basin), under the jurisdiction of the South Coast Air Quality Management District (SCAQMD). The City defers to threshold guidance established by the SCAQMD and utilizes the SCAQMD's *CEQA Air Quality Handbook* (approved by the AQMD Governing Board in 1993) and subsequent guidance provided on the SCAQMD website[1]. The SCAQMD is currently in the process of developing *an Air Quality Analysis Guidance Handbook* to replace the 1993 Handbook.

In addition, when considering potential air quality impacts under CEQA, consideration is given to the location of sensitive receptors within close proximity to land uses that emit toxic air contaminants (TACs). The California Air Resources Board (CARB) has published and adopted the *Air Quality and Land Use Handbook: A Community Health Perspective* (2005), which considers impacts to sensitive receptors from facilities that emit TAC emissions. CARB has also published Strategies to Reduce Air Pollution Exposure Near High-Volume Roadways: Technical Advisory, a supplement to the handbook that is intended to provide scientifically based strategies to reduce exposure to traffic emissions near high-volume roadways in order to protect public health and promote equity and environmental justice. The SCAQMD has also adopted land use planning guidelines in

[1] SCAQMD, *Air Quality Analysis Guidance,* http://www.aqmd.gov/home/rules-compliance/ceqa/air-quality-analysis-handbook#. Accessed August 2019.

the *Guidance Document for Addressing Air Quality Issues in General Plans and Local Planning* (2005). Together, the documents introduce land use-related policies and strategies that rely on design and distance parameters to minimize emissions and lower potential health risks.

It should also be noted that a host of other regional and local plans also generally address issues of air quality and public health. These include the Southern California Association of Governments (SCAG's) Regional Transportation Plan/Sustainable Communities Strategy (2016 RTP/SCS), SCAQMD's Air Quality Management Plan (AQMP), City of Los Angeles' General Plan (including the Framework, Air Quality, Mobility 2035, and Health and Wellness Elements), and City of Los Angeles' Green New Deal (Sustainable pLAn 2019). These contain policies and programs for the protection of the environment and health through improved air quality and serve to provide additional critical guidance for the betterment of public health for the region and City.

# CEQA THRESHOLDS OF SIGNIFICANCE

Certain air pollutants have been recognized to cause notable health problems and consequential damage to the environment either directly or in reaction with other pollutants, due to their presence in elevated concentrations in the atmosphere. Such pollutants have been identified and regulated as part of an overall endeavor to prevent further deterioration and facilitate improvement in air quality. The National Ambient Air Quality Standards (NAAQS) and California Ambient Air Quality Standards (CAAQS) have been set at levels considered safe to protect public health, including the health of sensitive populations such as asthmatics, children, and the elderly with a margin of safety, and to protect public welfare, including protection against decreased visibility and damage to animals, crops, vegetation, and buildings[2]. As the scientific methods for the study of air pollution health effects have progressed over the past decades, adverse effects have been shown to occur at lower levels of exposure. For some pollutants, no clear thresholds for effects have been demonstrated. New findings over time have, in turn, led to the revision and lowering of NAAQS which, in the judgment of the U.S. Environmental Protection Agency (EPA), are necessary to protect public health. Ongoing assessments of the scientific evidence from health studies continue to be an important part of setting and informing revisions to federal and state air quality standards[3].

The six principal pollutants for which national and state criteria and standards have been promulgated, known as "criteria pollutants", and which are most relevant to current air quality planning and regulation in the

[2] U.S. EPA, *NAAQS Table*, https://www.epa.gov/criteria-air-pollutants/naaqs-table. Accessed July 2019.
[3] SCAQMD, *Final 2016 AQMP,* 2017. Appendix I-69. https://www.aqmd.gov/docs/default-source/clean-air-plans/air-quality-management-plans/2016-air-quality-management-plan/final-2016-aqmp/appendix-i.pdf?sfvrsn=14. Included as Attachment 1 of this memorandum.

Air Basin include: ozone ($O_3$), respirable and fine particulate matter ($PM_{10}$ and $PM_{2.5}$), carbon monoxide (CO), nitrogen dioxide ($NO_2$), sulfur dioxide ($SO_2$), and lead (Pb). The State of California has also set standards for sulfates ($SO_4$), which are a component of particulate matter, and a nuisance odor standard for hydrogen sulfide ($H_2S$). The Air Basin is currently in non-attainment and exceeds air quality standards for two criteria pollutants: ozone and particulate matter. The Los Angeles County portion of the Air Basin is also designated non-attainment for lead.

Although the SCAQMD's primary mandate is attaining the State and National Ambient Air Quality Standards for criteria pollutants within the district, SCAQMD also has a general responsibility pursuant to the Health and Safety Code §41700 to control emissions of air contaminants and prevent endangerment to public health. Additionally, state law requires the SCAQMD to implement airborne toxic control measures (ATCM) adopted by the California Air Resources Board (CARB), and to implement the Air Toxics "Hot Spots" Act. As a result, the SCAQMD has regulated pollutants other than criteria pollutants such as volatile organic compounds (VOCs), TACs, greenhouse gases, and stratospheric ozone depleting compounds. The SCAQMD has developed a number of rules to control non-criteria pollutants from both new and existing sources. These rules originated through state directives, Clean Air Act (CAA) requirements, or the SCAQMD rulemaking process.

As such, in addition to criteria pollutants, VOCs and TACs are also of concern in the Air Basin. Some VOCs are also classified by the state as TACs. While there are no specific VOC ambient air quality standards, VOCs are a prime component (along with $NO_x$) of the photochemical processes by which such criteria pollutants as ozone, nitrogen dioxide, and certain fine particles are formed. They are therefore regulated as "precursors" to formation of these criteria pollutants.

TACs is a term used to describe airborne pollutants that may be expected to result in an increase in mortality or serious illness or which may pose a present or potential hazard to human health, and include both carcinogens and non-carcinogens. CARB and the California Office of Environmental Health Hazard Assessment (OEHHA) determine if a substance should be formally identified, or "listed," as a TAC in California. CARB has listed approximately 200 toxic substances, including those identified by the EPA, which are identified on the California Air Toxics Program's TAC List. TACs are also not classified as "criteria" air pollutants. The effects of TACs can be diverse and their health impacts tend to be local rather than regional; consequently ambient air quality standards for these pollutants have not been established, and analysis of health effects is instead based on cancer risk and exposure levels.

To achieve and maintain air quality standards, the SCAQMD has established numerical emission indicators of significance for regional and localized air quality impacts for both construction and operational phases of a local plan or project. The SCAQMD has established the thresholds based on "scientific and factual data that is contained in the federal and state Clean Air Acts" and recommends "that these thresholds be used by

lead agencies in making a determination of significance."[4] The numerical emission indicators are based on the recognition that the Air Basin is a distinct geographic area with a critical air pollution problem for which ambient air quality standards have been promulgated to protect public health[5]. SCAQMD's thresholds identified below represent the maximum emissions from a plan or project that are not expected to cause or contribute to an exceedance of the most stringent applicable national or state ambient air quality standard. By analyzing a plan or project's emissions against the thresholds, EIRs assess whether these emissions directly contribute to any regional or local exceedances of the applicable ambient air quality standards and exposure levels.

*Note: In the thresholds referenced below, "emissions" refer to the actual quantity of pollutant measured in pounds per day (ppd). "Concentrations" refer to the amount of pollutant material per volumetric unit of air and are measured in parts per million (ppm), parts per billion (ppb), or micrograms per cubic meter (µg/m3).*

## Construction (Regional and Localized)

Given that construction impacts are temporary and limited to the construction phase, the SCAQMD has established numeric indicators of significance specific to construction activity. Based on the indicators in the SCAQMD *CEQA Air Quality Handbook*, a project would potentially cause or contribute to an exceedance of an ambient air quality standard if the following would occur:

- Regional construction emissions from both direct and indirect sources would exceed any of the following SCAQMD prescribed daily emissions thresholds:[6]
    - 75 pounds per day for VOC
    - 100 pounds per day for $NO_x$
    - 550 pounds per day for CO
    - 150 pounds per day for $SO_2$
    - 150 pounds per day for $PM_{10}$
    - 55 pounds per day for $PM_{2.}5$

In addition, the SCAQMD has developed a methodology to assess the potential for localized emissions to cause an exceedance of applicable ambient air quality standards or ambient concentration limits. The localized significance thresholds are only applicable to $NO_x$, CO, $PM_{10}$ and $PM_{2.5}$. The SCAQMD has established conservative screening criteria that can be used to determine the maximum allowable daily emissions that would satisfy the localized significance thresholds and therefore not cause or contribute to an exceedance of the applicable

[4] SCAQMD, *CEQA Air Quality Handbook 1993,* Page 6-2.

[6] SCAQMD, *Air Quality Significance Thresholds,* March 2015. http://www.aqmd.gov/docs/default-source/ceqa/handbook/scaqmd-air-quality-significance-thresholds.pdf?sfvrsn=2. Accessed August 2019.

ambient air quality standards without project-specific dispersion modeling. The screening criteria depend on: (1) the area in which the Project is located, (2) the size of the Project Site, and (3) the distance between the Project Site and the nearest sensitive receptor. Otherwise, impacts would be considered significant if the following would occur:

- Maximum daily localized emissions of $NO_x$ and/or CO during construction are greater than the applicable localized significance thresholds, resulting in predicted ambient concentrations in the vicinity of the Project Site greater than the most stringent ambient air quality standards for $NO_2$ and/or CO.[7]
- Maximum daily localized emissions of $PM_{10}$ and/or $PM_{2.5}$ during construction are greater than the applicable localized significance thresholds, resulting in predicted ambient concentrations in the vicinity of the Project Site to exceed 10.4 µg/m3 over 24 hours (SCAQMD Rule 403 control requirement).

## Operation (Regional and Localized)

Based on the numeric indicators of significant in the SCAQMD *CEQA Air Quality Handbook*, a project would potentially cause or contribute to an exceedance of an ambient air quality standard if the following would occur:

- Operational emissions exceed any of the following SCAQMD daily regional numeric indicators:[8]
  - 55 pounds a day for VOC
  - 55 pounds per day for $NO_x$
  - 550 pounds per day for CO
  - 150 pounds per day for $SO_2$
  - 150 pounds per day for $PM_{10}$
  - 55 pounds per day for $PM_{2.5}$

In addition, the SCAQMD has developed a methodology to assess the potential for localized emissions to cause an exceedance of applicable ambient air quality standards. The localized significance thresholds are only applicable to $NO_x$, CO, $PM_{10}$ and $PM_{2.5}$. The SCAQMD has established conservative screening criteria that can be used to determine the maximum allowable daily emissions that would satisfy the localized significance thresholds and therefore not cause or contribute to an exceedance of the applicable ambient air quality

[7] SCAQMD, *Final Localized Significance Threshold Methodology,* 2008, http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/localized-significance-thresholds. Accessed August 2019.
[8] SCAQMD, *Air Quality Significance Thresholds,* March 2015. http://www.aqmd.gov/docs/default-source/ceqa/handbook/scaqmd-air-quality-significance-thresholds.pdf?sfvrsn=2. Accessed August 2019.

standards without project-specific dispersion modeling. The screening criteria depend on: (1) the area in which the Project is located, (2) the size of the Project Site, and (3) the distance between the Project Site and the nearest sensitive receptor. Otherwise, impacts would be considered significant if the following would occur:

- Maximum daily localized emissions of $NO_x$ and/or CO during operation are greater than the applicable localized significance thresholds, resulting in predicted ambient concentrations in the vicinity of the Project Site greater than the most stringent ambient air quality standards for $NO_2$ and/or CO[9].
- Maximum daily localized emissions of $PM_{10}$ and/or $PM_{2.5}$ during operation are greater than the applicable localized significance thresholds, resulting in predicted ambient concentrations in the vicinity of the Project Site to exceed 2.5 µg/m3 over 24 hours (SCAQMD Rule 1303 allowable change in concentration).

### Toxic Air Contaminants

Based on the criteria set forth by the SCAQMD, the Project would expose sensitive receptors to substantial concentrations of TACs if any of the following would occur[10]:

- The Project emits carcinogenic materials or TACs that exceed the maximum incremental cancer risk of 10 in 1 million or a cancer burden greater than 0.5 excess cancer cases (in areas greater than or equal to 1 in 1 million) or an acute or chronic hazard index of 1.0.

## AVAILABLE MODELS

Current models used in CEQA in air quality analyses are designed to calculate and disclose the mass emissions expected from the construction and operation of a proposed project. The estimated emissions are then compared to significance thresholds, which are in turn, keyed to reducing emissions to levels that will not interfere with the region's ability to attain the health-based standards. While this serves to protect public health in the overall region, there is currently no methodology to determine the impact of emissions (e.g., pounds per

[9] SCAQMD, *Final Localized Significance Threshold Methodology,* 2008, http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/localized-significance-thresholds. Accessed August 2019.

Accessed August 2019.

day) on concentration levels (e.g., parts per million or micrograms per cubic meter) in specific geographic areas.[11]

Based on SCAQMD guidance, the City utilizes the California Emissions Estimator Model (CalEEMod) to quantify construction and operational air quality impacts from land use projects. Potential TAC impacts are evaluated by conducting a qualitative analysis consistent with CARB and SCAQMD guidance, and may be followed by a more detailed analysis utilizing CARB's Hotspots Analysis and Reporting Program (HARP model) where the project results in a substantial source of TACs or if a project would site sensitive land uses in proximity to TAC sources. However, although CARB and SCAQMD provide guidance for TAC analysis, most land use projects analyzed in City EIRs do not contain substantial on-site sources of TACs, and siting new sensitive uses near existing TAC sources is generally not considered a CEQA impact.

The following table provides a summary of other common available air quality models and identifies their general purposes as well as limitations in quantifying emissions and health effects. Although there are a number of other models available (e.g. models to quantify emissions, dispersion models to determine pollutant concentrations, and regional-scale models which estimate health impacts), this suite of tools is currently not designed to meet the City's need to accurately analyze project-level health effects:

| MODEL | SOURCE | PURPOSE | LIMITATIONS |
|---|---|---|---|
| **CalEEMod**<br>California Emissions Estimator Model | SCAQMD | CalEEMod is a statewide land use **emissions computer model** designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify potential criteria pollutant and greenhouse gas (GHG) emissions associated with both construction and operational from a variety of land use projects. | The model can quantify emissions, but is not able to model concentrations or dispersion of pollutants or related health effects. |
| **AERMOD** | USEPA / American Meteorological Society | AERMOD models the **dispersion** of criteria air pollutant emissions over a period of time from discrete emission sources across a defined spatial boundary and can help inform exceedance of pollutant concentration standards. AERMOD provides more refined modeling than AERSCREEN, since it uses actual meteorological data (rather than simulated data) for the vicinity of the project site. *NOTE:* The U.S. EPA has adopted the | AERMOD can estimate pollutant concentrations of $NO_x$, $NO_2$, CO, $SO_2$, $PM_{10}$, $PM_{2.5}$, total suspended particulates, lead, and other pollutants. However, AERMOD cannot estimate concentrations of VOCs, $O_3$ or secondary PM. While AERMOD can estimate concentrations for certain pollutants, no methods have been demonstrated to reliably and meaningfully connect pollutant concentrations to specific health effects. |

[11] SMAQMD, *Friant Ranch Interim Recommendation*, 2019. http://www.airquality.org/LandUseTransportation/Documents/FriantInterimRecommendation.pdf. Accessed August 2019. Included as Attachment 4 of this memorandum.

| MODEL | SOURCE | PURPOSE | LIMITATIONS |
|---|---|---|---|
| | | AERMOD air dispersion model into its list of regulatory approved models in place of the previously used ISCST3 (Industrial Source Complex Short Term) model and CARB recommends AERMOD, instead of ISCST3, for Hot Spots risk assessments. | |
| **AERSCREEN** | USEPA | AERSCREEN is a screening version of the AERMOD **dispersion model,** intended to produce concentration estimates that are equal to or greater than the estimates produced by AERMOD with a fully developed set of meteorological and terrain data, but the degree of conservatism will vary depending on the application. This program is useful as a screening Health Risk Assessment (HRA) for minor or temporary sources such as construction-only projects. | As with AERMOD, AERSCREEN can estimate concentrations for certain pollutants; however, AERSCREEN does not connect pollutant concentrations to specific health effects. |
| **BenMAP-CE** Environmental Benefits Mapping and Analysis Program - Community Edition | USEPA | BenMAP-CE is a **regional-scale model** that can be used to estimate the resulting **health impacts** from change in ambient $PM_{2.5}$ concentrations for related health endpoints such as premature mortality, hospital admissions, and emergency room visits. The USEPA CMAQ model can be used to predict changes in the ambient air concentration of ozone, the results of which can be used in BenMAP-CE to estimate the resulting health impacts. | The model is used for assessing impacts over large areas and populations and is not intended to be used for individual projects, as it would not provide meaningful or reliable results at the smaller scale. |
| **CalEnviroScreen** California Communities Environmental Health Screening Tool | OEHHA & CalEPA | CalEnviroScreen is a **mapping tool** that helps identify California communities that are most affected by many sources of pollution, identified by a data-driven scoring system. | While the tool is useful to identify communities disproportionately burdened by certain pollutants, the tool is not used to track or model dispersal of project emissions. |
| **CALINE-4** | Caltrans | CALINE-4 is a **line-source dispersion model** for predicting air pollutant concentrations at receptors near highways and arterial streets, specifically for CO, $NO_2$, and PM. Caltrans guidance recommends only utilizing the tool for CO hot-spot analysis, and does not recommend using CALINE-4 to analyze any other pollutant. | CALINE-4 is limited to estimating concentrations of CO, $NO_2$, and PM from line sources such as roadways. CALINE-4 does not have the capability to evaluate concentrations of $O_3$ or secondary PM, or concentrations from other types of emissions sources (e.g., point, volume, or area sources). CALINE-4 is also not able to connect pollutant concentrations to specific health effects. |

| MODEL | SOURCE | PURPOSE | LIMITATIONS |
|---|---|---|---|
| **CAMx**<br>Compressive Air Quality Model | Ramboll & Environ | CAMx is a **grid-based dispersion model** that simulates the chemical interactions and three-dimensional dispersion patterns on a regional, statewide, and national scale. | Since CAMx is designed to model emissions on a regional, statewide, and national scale, it is unsuitable for project-level analysis. |
| **CMAQ**<br>Community Multiscale Air Quality Modeling System | USEPA | CMAQ is an atmospheric **dispersion model** consisting of a suite of programs for conducting air quality model simulations. CMAQ combines current knowledge in atmospheric science and air quality modeling, multi-processor computing techniques, and an open-source framework to deliver estimates of ozone, particulates, toxics and acid deposition. The program can be used to predict the concentration and deposition of both criteria pollutants and TACs. | There are limitations on the minimum modeling domain at which the model is still reasonably accurate. (e.g. the EPA recommends nesting a local regional model within a larger regional domain. However, the EPA recognized that expanding to a larger regional domain needs more data, which currently may not be available to the public. In addition, the minimum resolution of the CMAQ model is 1 sq. km., meaning that it would have difficulty in modeling impact areas that are less than 247 acres with meaningful or reliable results.) |
| **EMFAC**<br>EMissions FACtor | CARB | EMFAC2017 is used to estimate **emissions** from on-road vehicles in California. | The model can quantify emissions, but is not able to model concentrations or dispersion of pollutants or related health effects. |
| **HARP**<br>Hotspots Analysis and Reporting Program | CARB | HARP is a software suite that addresses the programmatic requirements of the Air Toxics "Hot Spots" Program (Assembly Bill 2588) and can perform air **dispersion** runs and **health risk assessments**, as well as can create and manage facility and emissions data. HARP is useful for determining how increases in specific TAC concentrations could affect receptors in terms of the increased cancer risks, chronic hazards, and acute hazards. | The tool is not used for evaluation of criteria air pollutants and related health effects. |
| **OFFROAD** | CARB | OFFROAD calculates **emissions** from off-road sources. The OFFROAD model is now being replaced by category specific methods and inventory models that are being developed for specific regulatory support projects. | The model can quantify emissions, but is not able to model concentrations or dispersion of pollutants or related health effects. In addition, the model is not comprehensive and lacks emissions forecasts for certain types of equipment. |
| **Roadway Construction Emissions Model** | SMAQMD | The model can be used to assist roadway project proponents with determining the **emission** impacts of their projects. | The Roadway Construction Emissions Model can quantify emissions, but is not able to model concentrations or dispersion of pollutants or related health effects. |

As demonstrated above, while a number of models and tools are available to quantify emissions and pollutant concentrations, these models are limited by a number of factors in determining health impacts of individual development and infrastructure projects as well as local plan-level projects. The USEPA currently performs health impact assessments (HIAs) using the CMAQ model for pollutant transport modeling and BENMAP for health impact calculations. However, as described in further detail below, these models are designed to estimate health impacts over a large scale (e.g. city-wide, state-wide). In addition, the CMAQ model requires inputs such as regional sources of pollutants and global meteorological data, which are generally not accessible. In addition to the unsuitability of regional models in providing reliable results for local-level plans or individual projects, other general limitations of the current suite of models include limitations on the ability of certain tools to model concentrations or the dispersion of pollutants for all types of sources, other models only addressing a partial and incomplete range of pollutants and secondary pollutants, and limitations on being able to correlate identified concentrations to related health effects.

As such, neither the SCAQMD, CARB, "nor any air district currently have methodologies that would provide Lead Agencies and CEQA practitioners with a consistent, reliable, and meaningful analysis to correlate specific health impacts that may result from a proposed project's mass emissions".[12]

# AIR QUALITY AND HEALTH EFFECTS

The following information and analysis of health effects is relevant where a City EIR concludes that regional or localized air pollutant emissions would exceed the SCAQMD's thresholds of significance identified above and such impacts are deemed significant and unavoidable.

Ambient air pollution is a general public health concern, and in particular, Southern California has a long and well-documented history in battling poor air quality. Since the mid-20th century, the greater Los Angeles region has been at the forefront of air pollution science, low-emissions technology development, and innovative air quality regulation. These efforts have led to substantial and noticeable improvements in air quality and public health within the South Coast Air Basin, all during a period of dramatic increases in economic activity, population, and vehicle miles traveled. Despite these successes, the health of the region's residents continues to be seriously affected by the poor air quality that confronts the region.[13] Ambient air pollution continues to be linked to increases in respiratory illness (morbidity) and increases in death rates (mortality).[14]

Air pollution has many effects on the health of both adults and children. Adverse health outcomes linked to air pollution include asthma, cardiovascular effects, premature mortality, respiratory effects, cancer, reproductive effects, neurological effects, and other health outcomes.

The evidence linking these effects to air pollutants is derived from population based (i.e., large-scale) observational and field studies (epidemiological) as well as controlled laboratory studies involving human subjects and animals. There have been an increasing number of studies focusing on the mechanisms (that is, on learning how specific organs, cell types, and biochemicals are involved in the human body's response to air pollution) and specific pollutants responsible for individual effects. Yet the underlying biological pathways for these effects are not always clearly understood.

[13] SCAQMD, *Final 2016 AQMP*, 2017, Page Preface. http://www.aqmd.gov/home/air-quality/clean-air-plans/air-quality-mgt-plan/final-2016-aqmp. Accessed August 2019.
[14] SCAQMD, *Final 2016 AQMP*, 2017, Page Appendix I-1. http://www.aqmd.gov/home/air-quality/clean-air-plans/air-quality-mgt-plan/final-2016-aqmp. Accessed August 2019. Included as Attachment 1 of this memorandum.

Although individuals inhale pollutants as a mixture under ambient conditions, the regulatory framework and the control measures developed are mostly pollutant-specific. Individual pollutants usually differ in their sources, their times and places of occurrence, the kinds of health effects they may cause, and their overall levels of health risk. To meet the air quality standards, comprehensive plans are developed, including the Air Quality Management Plan (AQMP) and Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS). These plans examine multiple pollutants, cumulative effects, and transport issues related to attaining healthful air quality in the region. In addition, a host of regulatory standards function to identify and limit exposure of air pollutants and toxic air contaminants.

# HEALTH EFFECTS ADDRESSED IN PLANS AND REGULATORY STANDARDS

As previously stated, the NAAQS and CAAQS have been set at levels considered safe to protect public health. These standards are informed by and revised based on evolving scientific evidence of air pollution health effects. The SCAQMD (together with SCAG) has the responsibility for ensuring that national and state ambient air quality standards are achieved and maintained throughout the Air Basin. Failure to comply with these standards puts state and local agencies at risk for penalties such as: lawsuits, fines, a federal takeover of state implementation plans, and a loss of funds from federal agencies such as the Federal Highway Administration and Federal Transit Administration.

## Criteria Pollutants

To meet the standards, the SCAQMD has adopted a series of AQMPs, which serve as a regional blueprint to develop and implement an emission reduction strategy that will bring the area into attainment with the standards in a timely manner. The 2016 AQMP includes strategies to ensure that rapidly approaching attainment deadlines for ozone and $PM_{2.5}$ are met and that public health is protected to the maximum extent feasible. The most significant air quality challenge in the Air Basin is to reduce $NO_X$ emissions[15] sufficiently to meet the upcoming ozone standard deadlines, as $NO_X$ plays a critical role in the creation of ozone. The AQMP's strategy to meet the 8-hour ozone standard in 2023 should lead to sufficient $NO_X$ emission reductions to attain the 1-hour

[15] NOx emissions are a precursor to the formation of both ozone and secondary $PM_{2.5}$.

ozone standard by 2022. Since $NO_X$ emissions also lead to the formation of $PM_{2.5}$, the $NO_X$ reductions needed to meet the ozone standards will likewise lead to improvement of $PM_{2.5}$ levels and attainment of $PM_{2.5}$ standards.[16][17]

The SCAQMD's strategy to meet national and state standards distributes the responsibility for emission reductions across federal, state and local levels and industries. The 2016 AQMP is composed of stationary and mobile source emission reductions from traditional regulatory control measures, incentive-based programs, co-benefits from climate programs, mobile source strategies, and reductions from federal sources, which include aircraft, locomotives and ocean-going vessels. These strategies are to be implemented in partnership with the CARB and U.S. EPA. In addition, SCAG recently approved their 2016-2040 Regional Transportation Plan/Sustainable Communities Strategies (2016-2040 RTP/SCS) Plan[18] which includes transportation programs, measures, and strategies generally designed to reduce vehicle miles traveled (VMT), which are contained in the AQMP.

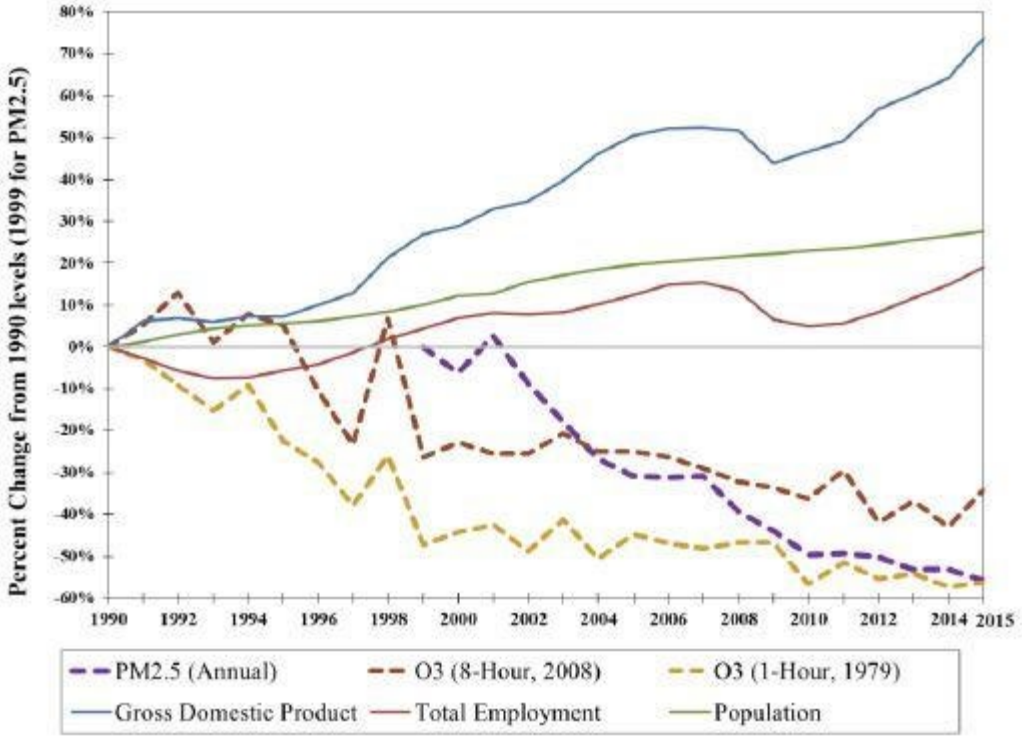
Pursuant to California Health and Safety Code Section 40460, SCAG has the responsibility of preparing and approving the portions of the AQMP relating to the regional demographic projections and integrated regional land use, housing, employment, and transportation programs, measures, and strategies. The SCAQMD combines its portion of the Plan with those prepared by SCAG.[19] The RTP/SCS and Transportation Control Measures, included as Appendix IV-C of the 2016 AQMP for the Air Basin, are based on SCAG's 2016-2040 RTP/SCS.

The 2016 AQMP forecasts the 2031 emissions inventories "with growth" based on SCAG's 2016-2040 RTP/SCS. The region is projected to see a 12 percent growth in population, 16 percent growth in housing units, 23 percent growth in employment, and 8 percent growth in vehicle miles traveled between 2012 and 2031. Despite this regional growth, air quality has improved substantially over the years, primarily due to the effects of air quality control programs at the local, state and federal levels. Figure 1, provided below, shows the trends since 1990 of the 8-hour ozone levels, the 1-hour ozone levels, and annual average $PM_{2.5}$ concentrations (since 1999), compared to the regional gross domestic product, total employment and population. Human activity in the region has an impact on achieving reductions in emissions. However, the ozone and particulate matter levels continue

[16] Estimates are based on the inventory and modeling results and are relative to the baseline emission levels for each attainment year (see Final 2016 AQMP for detailed discussion).
[17] SCAQMD, *Final 2016 AQMP*, 2017. Page ES-2. http://www.aqmd.gov/home/air-quality/clean-air-plans/air-quality-mgt-plan/final-2016-aqmp. Accessed August 2019.
[18] SCAG, *Final 2016 RTP/SCP*, 2016 http://scagrtpscs.net/Pages/FINAL2016RTPSCS.aspx. Accessed August 2019.
[19] SCAQMD, *Final 2016 AQMP*, 2017. Page ES-2. http://www.aqmd.gov/home/air-quality/clean-air-plans/air-quality-mgt-plan/final-2016-aqmp. Accessed August 2019.

to trend downward as the economy and population increase, demonstrating that it is possible to maintain a healthy economy while improving public health through air quality improvements.[20]

Figure 1:
Percent Change in Air Quality Along with
Demographic Data for the 4-County Region (1990-2015)



*Source: SCAQMD, Figure 1-4 of the Final 2016 AQMP.*

## Consistency with AQMP and 2016-2040 RTP/SCS Growth Assumptions

As discussed above, the 2016 AQMP incorporates the SCAG 2016–2040 RTP/SCS and updated emission inventory methodologies for various source categories to demonstrate attainment with applicable state and federal standards. With regard to land use, the 2016-2040 RTP/SCS land use control measures (i.e., goals and policies) focus on the reduction of vehicle trips and VMT.

The City's EIRs provide an analysis of a project's consistency with both the AQMP and the 2016-2040 RTP/SCS. The 2016-2040 RTP/SCS is expected to help SCAG reduce VMT, with reductions in per capita transportation emissions of 18 percent by 2035 and 21-percent by 2040. In addition, the 2016-2040 RTP/SCS provides a 2012 Base Year projected daily Total VMT per capita of 21.5 and 18.4 daily Total VMT per capita for the

[20] SCAQMD, *Final 2016 AQMP*, 2017. Page 1-6. http://www.aqmd.gov/home/air-quality/clean-air-plans/air-quality-mgt-plan/final-2016-aqmp. Accessed August 2019.

2040 Plan Year. As the AQMP control strategy is based on projections from local General Plans, projects which are consistent with local General Plans are considered consistent with the growth assumptions of the air quality related regional plans and their emissions are assumed to be accounted for in the AQMP emissions inventory. Projects which include amendments to General or Specific Plans, or are considered significant projects, undergo further scrutiny for AQMP consistency.

## Toxic Air Contaminants

In addition, the state's California Air Toxics Program is an established two-step process of risk identification and risk management to address potential health effects from exposure to toxic substances in the air. In the risk identification step, CARB and OEHHA determine if a substance should be formally identified, or "listed," as a TAC in California. In the risk management step, CARB reviews emission sources of an identified TAC to determine whether regulatory action is needed to reduce risk. Based on results of that review, CARB has promulgated a number of ATCMs, both for mobile and stationary sources. These ATCMs include measures such as limits on heavy-duty diesel motor vehicle idling and emission standards for off-road diesel construction equipment in order to reduce public exposure to diesel PM and other TACs. These actions are also supplemented by the AB 2588 Air Toxics "Hot Spots" program and SB 1731, which require facilities to report their air toxics emissions, assess health risks, notify nearby residents and workers of significant risks if present, and reduce their risk through implementation of a risk management plan. SCAQMD has further adopted two rules to limit cancer and non-cancer health risks from facilities located within its jurisdiction. Rule 1401 (New Source Review of Toxic Air Contaminants) regulates new or modified facilities, and Rule 1402 (Control of Toxic Air Contaminants from Existing Sources) regulates facilities that are already operating. Rule 1402 incorporates requirements of the AB 2588 program, including implementation of risk reduction plans for significant risk facilities.

City EIRs acknowledge that these plans and regulatory standards have been set at levels considered safe to protect public health and are part of the regulatory environment when considering local plan and project-level impacts.

# HEALTH EFFECTS OF CRITERIA POLLUTANTS AND TOXIC AIR CONTAMINANTS

A summary discussion of the health effects due to exposure of pollutants exceeding SCAQMD's significance thresholds is provided in City EIRs and an expanded discussion is provided below (substantially drawn from reviews presented in the SCAQMD's Final 2016 Air Quality Management Plan, Chapter 2 (Air Quality and Health Effects), March 2017). A more detailed discussion of the health effects of these pollutants is provided in Attachment 1 to this memorandum (SCAQMD Final 2016 Air Quality Management Plan, Appendix I: Health Effects)

## Ozone ($O_3$)

Ozone is a gas that is formed when volatile organic compounds (VOCs) and $NO_X$—both byproducts of internal combustion engine exhaust—undergo slow photochemical reactions in the presence of sunlight. Ozone concentrations are generally highest during the summer months when direct sunlight, light wind, and warm temperature conditions are favorable. Ozone is one of the most important air pollutants affecting human health in regions like Southern California. Ozone is a molecule built of three atoms of oxygen linked together in a very energetic combination. When ozone comes into contact with a surface it rapidly releases this extra force in the form of chemical energy. When this happens in biological systems, such as the respiratory tract, this energy can cause damage to sensitive tissues in the upper and lower airways.

The major subgroups of the population considered to be at increased risk from ozone exposure are outdoor exercising individuals including children and people with preexisting respiratory disease(s) such as asthma. The database identifying the former group as being at increased risk to ozone exposure is much stronger and more quantitative than that for the latter group, probably because of a larger number of studies conducted were with healthy individuals. The adverse effects reported with short-term ozone exposure are greater with increased activity because activity increases the breathing rate and the volume of air reaching the lungs, resulting in an increased amount of ozone reaching the lungs. Children may be a particularly vulnerable population to air pollution effects because they spend more time outdoors, are generally more active, and have a higher ventilation rate than adults. A number of adverse health effects associated with ambient ozone levels have been identified from laboratory and epidemiological studies. These include increased respiratory symptoms, damage to cells of the respiratory tract, decreases in lung function, increased susceptibility to respiratory infection, and increased risk of hospitalization.

The Children's Health Study, conducted by researchers at the University of Southern California, followed a cohort of children that live in 12 communities in southern California with differing levels of air pollution for several years. A publication from this study found that school absences in fourth graders for respiratory illnesses were associated with ambient ozone levels. An increase of 20 ppb ozone was associated with an 83 percent increase in illness related absence rates.[21] However, it is not recommended to base assumptions of health impacts off of a single example or study. It should also be noted that the study is based on one specific subgroup and may not apply to the general population. Furthermore, the study analyzed changes in regional air quality, and these region-wide changes could not be reasonably attributable to a single project or local plan based on existing science and models.

The number of hospital admissions and emergency room visits for all respiratory causes (infections, respiratory failure, chronic bronchitis, etc.) including asthma show a consistent increase as ambient ozone levels increase in a community. These excess hospital admissions and emergency room visits are observed when hourly ozone concentrations are as low as 0.08 to 0.10 ppm.

Numerous recent studies have found positive associations between increases in ozone levels and excess risk of mortality. These associations persist even when other variables including season and levels of particulate matter are accounted for. This indicates that ozone mortality effects are independent of other pollutants.[22]

Several population-based studies suggest that asthmatics are more adversely affected by ambient ozone levels, as evidenced by increased hospitalizations and emergency room visits. Laboratory studies have attempted to compare the degree of lung function change seen in age and gender-matched healthy individuals versus asthmatics and those with chronic obstructive pulmonary disease. While the degree of change evidenced did not differ significantly, that finding may not accurately reflect the true impact of exposure on these respiration-compromised individuals. Since the respiration-compromised group may have lower lung function to begin with, the same degree of change may represent a substantially greater adverse effect overall.

A publication from the Children's Health Study focused on children and outdoor exercise. In communities with high ozone concentrations, the relative risk of developing asthma in children playing three or more sports was found to be over three times higher than in children playing no sports.[23] These findings indicate that new cases of asthma in children are associated with heavy exercise in communities with high levels of ozone. While

[22] Bell ML, McDermott A, Zeger SL, Samet, JM, Dominici, F. *Ozone and Short-Term Mortality in 95 US Urban Communities, 1987-2000.* 2004. JAMA 292:2372-2378.

[23] McConnell R, Berhane K, Gilliland F, London SJ, Islam T, Gauderman WJ, Avol E, Margolis HG, Peters JM. *Asthma in exercising children exposed to ozone: a cohort study.* 2002. Lancet, 359:386-91.

it has long been known that air pollution can exacerbate symptoms in individuals with respiratory disease, this is among the first studies that indicate ozone exposure may be causally linked to asthma.

Some lung function responses (volume and airway resistance changes) observed after a single exposure to ozone exhibit attenuation or a reduction in magnitude with repeated exposures. Although it has been argued that the observed shift in response is evidence of a probable adaptation phenomenon, it appears that while functional changes may exhibit adaptation, biochemical and cellular changes which may be associated with episodic and chronic exposure effects may not exhibit similar adaptation. That is, internal damage to the respiratory system may continue with repeated ozone exposures, even if externally observable effects (chest symptoms and reduced lung function) disappear.

In a laboratory, exposure of human subjects to low levels of ozone causes reversible decrease in lung function as assessed by various measures such as respiratory volumes, airway resistance and reactivity, irritative cough and chest discomfort. Lung function changes have been observed with ozone exposure as low as 0.08 to 0.12 ppm for 6-8 hours under moderate exercising conditions. Similar lung volume changes have also been observed in adults and children under ambient exposure conditions (0.10 - 0.15 ppm). The responses reported are indicative of decreased breathing capacity and are reversible.

In laboratory studies, cellular and biochemical changes associated with respiratory tract inflammation have also been consistently reported in the airway lining after low level exposure to ozone. These changes include an increase in specific cell types and in the concentration of biochemical mediators of inflammation and injury such as cytokines and fibronectin. These inflammatory changes can be observed in healthy adults exposed to ozone in the range of 0.08 to 0.10 ppm.

The susceptibility to ozone observed under ambient conditions could be due to the combination of pollutants that coexist in the atmosphere or ozone may actually sensitize these subgroups to the effects of other pollutants. Some animal studies show results that indicate possible chronic effects including functional and structural changes of the lung. These changes indicate that repeated inflammation associated with ozone exposure over a lifetime may result in sufficient damage to respiratory tissue such that individuals later in life may experience a reduced quality of life in terms of respiratory function and activity level achievable. An autopsy study involving Los Angeles County residents provided supportive evidence of lung tissue damage (structural changes) attributable to air pollution. A study of birth outcomes in southern California found an increased risk for birth defects in the aortic and pulmonary arteries associated with ozone exposure in the second month of pregnancy.[24] This is the first study linking ambient air pollutants to birth defects in humans. Confirmation by further studies is needed. In summary, acute adverse effects associated with ozone exposures have been well

[24] Ritz B, Yu F, Chapa G, Fruin S. *Effect of Air Pollution on Preterm Birth Among Children Born in Southern California between 1989 and 1993.* 2002. Epidemiology, 11(5)502-11.

documented, although the specific causal mechanism is still somewhat unclear. Additional research efforts are required to evaluate the long-term effects of air pollution and to determine the role of ozone in influencing chronic effects.

## Particulate Matter ($PM_{10}$ and $PM_{2.5}$)

The human body naturally prevents the entry of larger particles into the body. However, small particles, with an aerodynamic diameter equal to or less than ten microns ($PM_{10}$) and even smaller particles with an aerodynamic diameter equal to or less than 2.5 microns ($PM_{2.5}$), can enter the body and are trapped in the nose, throat, and upper respiratory tract. These small particulates could potentially aggravate existing heart and lung diseases, change the body's defenses against inhaled materials, and damage lung tissue. The elderly, children, and those with chronic lung or heart disease are most sensitive to $PM_{10}$ and $PM_{2.5}$. Lung impairment can persist for two to three weeks after exposure to high levels of particulate matter. Some types of particulates could become toxic after inhalation due to the presence of certain chemicals and their reaction with internal body fluids. The U.S. Environmental Protection Agency and the California Air Resources Board have recognized adverse health effects that may be associated with exposure to $PM_{10}$ and $PM_{2.5}$, including:[25] (1) Increased respiratory symptoms, such as the irritation of the airways; (2) Coughing, or difficulty breathing; (3) Decreased lung function, particularly in children; (4) Aggravated asthma; (5) Development of chronic bronchitis; (6) Irregular heartbeat; (7) Increased respiratory and cardiovascular hospitalizations; and (8) Premature death in people with heart or lung disease.

Epidemiological studies have provided continued and consistent evidence for most of the effects listed above. An association between increased daily or several-day-average concentrations of $PM_{10}$ and excess mortality and morbidity is consistently reported from studies involving communities across the U.S. as well as in Europe, Asia, and South America.

A number of studies have evaluated the association between particulate matter exposure and indices of morbidity such as hospital admissions, emergency room visits or physician office visits for respiratory and cardiovascular diseases. The effects estimates are generally higher than the effects for mortality. The effects are associated with measures of $PM_{10}$ and $PM_{2.5}$. Thus, it appears that when a relatively small number of people experience severe effects, larger numbers experience milder effects, which may relate either to the coarse or to the fine fraction of airborne particulate matter.

[25] See, e.g., U.S. Environmental Protection Agency, *Health and the Environment*, www.epa.gov/air/particlepollution/health.html. Accessed July 30, 2008; U.S. Environmental Protection Agency, *Particle Pollution and Your Health*, www.epa.gov/airnow/particles-bw.pdf. Accessed July 30, 2008.; California Air Resources Board, *Health Effects of Particulate Matter and Ozone Air Pollution*, January 2004.

In the National Morbidity, Mortality, and Air Pollution Study (NMMAPS), hospital admissions for those 65 years or older were assessed in 14 cities. Hospital admissions for these individuals showed an increase of 6 percent for cardiovascular diseases and a 10 percent increase for respiratory disease admissions, per 50 $\mu g/m^3$ increase in $PM_{10}$. The excess risk for cardiovascular disease ranges from 3-10 percent per 50 $\mu g/m^3$ $PM_{10}$. However, as noted below, this study analyzed indirect indicators of health impacts rather than direct health impacts, and other studies have demonstrated greater variability of the effects of PM increases in terms of number of medical visits.

Similarly, school absences, lost workdays and restricted activity days have also been used in some studies as indirect indicators of acute respiratory conditions. The results are suggestive of both immediate and delayed impact on these parameters following elevated particulate matter exposures. These observations are consistent with the hypothesis that increased susceptibility to infection follows particulate matter exposures.

Some studies have reported that short-term particulate matter exposure is associated with changes in lung function (lung capacity and breathing volume); upper respiratory symptoms (hoarseness and sore throat); and lower respiratory symptoms (increased sputum, chest pain and wheeze). The severity of these effects is widely varied and is dependent on the population studied, such as adults or children with and without asthma. Sensitive individuals, such as those with asthma or pre-existing respiratory disease, may have increased or aggravated symptoms associated with short-term particulate matter exposures. Several studies have followed the number of medical visits associated with pollutant exposures. A range of increases from 3 to 42 percent for medical visits for respiratory illnesses was found corresponding to a 50 $\mu g/m^3$ change in $PM_{10}$. A limited number of studies also looked at levels of $PM_{2.5}$. The findings suggest that both the fine and coarse fractions may have associations with some respiratory symptoms.

While most studies have evaluated the acute effects, some studies specifically focused on evaluating the effects of chronic exposure to $PM_{10}$ and $PM_{2.5}$. Studies have analyzed the mortality of adults living in different U.S. cities. After adjusting for important risk factors, these studies found a consistent positive association of deaths and exposure to particulate matter. A similar association was observable in both total number of deaths and deaths due to cardiorespiratory causes. A shortening of lifespan was also reported in these studies.

Significant associations for $PM_{2.5}$ for both total mortality and cardiorespiratory mortality were reported in a study using data from the American Cancer Society. A re-analysis of the data from this study confirmed the finding.[26] The Harvard Six Cities Study evaluated several size ranges of particulate matter and reported significant associations with $PM_{15}$, $PM_{2.5}$, sulfates, and non-sulfate particles, but not with coarse particles ($PM_{15}$–

[26] Krewski D, Burnett RT, Goldberg MS, Hoover K, Siemiatycki J, Abrahamowicz M, White WH, et al. *Reanalysis of the Harvard Six Cities Study and the American Cancer Society Study of Particulate Air Pollution and Mortality. A Special Report of the Institute's Particle Epidemiology Reanalysis Project.* 2000. Health Effects Institute.

$PM_{2.5}$). An extension of the Harvard Six Cities Cohort confirmed the association of mortality with $PM_{2.5}$ levels.[27] These studies provide evidence that the fine particles, as measured by $PM_{2.5}$, may be more strongly associated with mortality effects from long-term particulate matter exposures than are coarse compounds.

A follow-up study of the American Cancer Society cohort confirmed and extended the findings in the initial study. The researchers estimated that, on average, a 10 $\mu g/m^3$ increase in fine particulates was associated with an approximately 4 percent increase in total mortality, a 6 percent increase in cardiopulmonary mortality, and an 8 percent increase risk of lung cancer mortality.[28] The magnitude of effects is larger in the long-term studies than in the short-term investigations, and therefore demonstrates variability and unreliability of a specific numeric indicator (as indicated above) for the general population. Furthermore, an analysis of the American Cancer Society Cohort from the Los Angeles area used a more detailed estimate of long-term $PM_{2.5}$ exposures and found that the risk of mortality was up to three times higher than estimated with the national cohort.[29] These findings indicate that long-term exposures may be more important in terms of overall health effects.

Despite data gaps, the extensive body of epidemiological studies has both qualitative and quantitative consistency suggestive of causality. A considerable body of evidence from these studies suggests that ambient particulate matter, alone or in combination with other coexisting pollutants, is associated with significant increases in mortality and morbidity in a community.

In summary, the scientific literature indicates that an increased risk of mortality and morbidity is associated with particulate matter at ambient levels. The evidence for particulate matter effects is mostly derived from population studies with supportive evidence from clinical and animal studies. Although most of the effects are attributable to particulate matter, co-pollutant effects cannot be ruled out on the basis of existing studies. The difficulty of separating the effects may be due to the fact that particulate levels co-vary with other combustion source pollutants. That is, the particle measurements serve as an index of overall exposure to combustion-related pollution, and some component(s) of combustion pollution other than particles might be at least partly responsible for the observed health effects. In addition, limitations of applying the results of a singular study to determine a specific project's health effects are described above, as well as subsequent discussion (see "Relating Adverse Air Quality Impacts and Health Effects" on page 27). Therefore, at this time, there is no specific numeric indicator that can reliably indicate specific health effects from particulate matter.

## Carbon Monoxide (CO)

Carbon monoxide is primarily emitted from combustion processes and motor vehicles due to incomplete combustion of fuel. Elevated concentrations of CO weaken the heart's contractions and lower the amount of oxygen carried by the blood. It is especially dangerous for people with chronic heart disease. Inhalation of CO can cause nausea, dizziness, and headaches at moderate concentrations and can be fatal at high concentrations.

Individuals with a deficient blood supply to the heart are the most susceptible to the adverse effects of CO exposure. The effects observed include earlier onset of chest pain with exercise, and electrocardiograph changes indicative of worsening oxygen supply delivery to the heart. Inhaled CO has no known direct toxic effect on the lungs, but exerts its effect on tissues by interfering with oxygen transport, by competing with oxygen to combine with hemoglobin present in the blood to form carboxyhemoglobin (COHb). Hence, people with conditions requiring an increased oxygen supply can be adversely affected by exposure to CO. Individuals most at risk include patients with diseases involving heart and blood vessels, fetuses, and patients with chronic hypoxemia (oxygen deficiency), such as is seen at high altitudes. Reductions in birth weight and impaired neurobehavioral development have been observed in animals chronically exposed to CO resulting in COHb levels similar to those observed in smokers. Recent studies have found increased risks for adverse birth outcomes with exposure to elevated CO levels, including preterm births and heart abnormalities. The U.S. EPA concluded in their most recent review that the evidence linking long-term CO exposures with reproductive health outcomes was suggestive of a causal relationship[30].

## Nitrogen Dioxide ($NO_2$)

$NO_2$ is a byproduct of fuel combustion and major sources include power plants, large industrial facilities, and motor vehicles. $NO_2$ is a gaseous air pollutant that serves as an indicator of gaseous oxides of nitrogen, such as nitric oxide (NO) and other related compounds ($NO_X$). $NO_2$ absorbs blue light and results in a brownish-red cast to the atmosphere and reduced visibility. $NO_2$ also contributes to the formation of $PM_{10}$. Nitrogen oxides irritate the nose and throat, and increase one's susceptibility to respiratory infections, especially in people with asthma. $NO_X$ is also a precursor to the formation of ozone.

The adverse effects of ambient nitrogen dioxide air pollution exposure on health were reviewed in the 2008 U.S. EPA Integrated Science Assessment for Oxides of Nitrogen—Health Criteria[31], and more recently in the

[30] U.S. EPA. *Integrated Science Assessment for Carbon Monoxide (Final Report*). 2010. https://cfpub.epa.gov/ncea/risk/recordisplay.cfm?deid=218686. Accessed August 2019.
[31] U.S. EPA. *Integrated Science Assessment for Oxides of Nitrogen—Health Criteria (Final Report).* 2008. http://cfpub.epa.gov/ncea/isa/recordisplay.cfm?deid=194645. Accessed August 2019.

2016 U.S. EPA Integrated Science Assessment for Oxides of Nitrogen—Health Criteria.[32] The 2016 U.S. EPA review noted the respiratory effects of $NO_2$, and evidence suggestive of effects on cardiovascular health, mortality and cancer.

Experimental studies have found that $NO_2$ exposures increase responsiveness of airways, pulmonary inflammation, and oxidative stress, and can lead to the development of allergic responses. These biological responses provide evidence of a plausible mechanism for $NO_2$ to cause asthma. Additionally, results from controlled exposure studies of asthmatics demonstrate an increase in the tendency of airways to contract in response to a chemical stimulus (airway responsiveness) or after inhaled allergens. Animal studies also provide evidence that $NO_2$ exposures have negative effects on the immune system, and therefore increase the host's susceptibility to respiratory infections. Epidemiological studies showing associations between $NO_2$ levels and hospital admissions for respiratory infections support such a link, although the studies examining respiratory infections in children are less consistent.

The Children's Health Study in Southern California found associations of $NO_2$ with respiratory symptoms in asthmatics.[33] Particles and $NO_2$ were correlated, and it was determined that $NO_2$ plays a stronger role. Ambient levels of $NO_2$ were also associated with a decrease in lung function growth in a group of children followed for eight years. In addition to $NO_2$, the decreased growth was also associated with particulate matter and airborne acids. The study authors postulated that these may be a measure of a package of pollutants from traffic sources.

Results from controlled exposure studies of asthmatics demonstrated an increase in the tendency of airways to contract in response to a chemical stimulus (bronchial reactivity). Effects were observed with an exposure to 0.3 parts per million (ppm) $NO_2$ for a period ranging from 30 minutes to 3 hours. A similar response is reported in some studies with healthy subjects at higher levels of exposure (1.5 - 2.0 ppm). Mixed results have been reported when people with chronic obstructive lung disease are exposed to low levels of $NO_2$.

## Toxic Air Contaminants

In addition to criteria pollutants, a number of TACs have the potential to impact human health, including diesel particulate matter (DPM), a pollutant associated with heavy equipment and truck traffic. TACs refer to a diverse group of "non-criteria" air pollutants that can affect human health, but have not had ambient air quality standards established for them. This is not because they are fundamentally different from the pollutants

[32] U.S. EPA. *Integrated Science Assessment for Oxides of Nitrogen—Health Criteria (Final Report).* 2016. https://cfpub.epa.gov/ncea/isa/recordisplay.cfm?deid=310879. Accessed August 2019.
[33] McConnell R, Berhane K, Gilliland F, London SJ, Islam T, Gauderman WJ, Avol E, Margolis HG, Peters JM. *Asthma in exercising children exposed to ozone: a cohort study.* 2002. Lancet, 359:386-91.

discussed above, but because their effects tend to be local rather than regional. TACs are classified as carcinogenic and non-carcinogenic, where carcinogenic TACs can cause cancer and non-carcinogenic TAC can cause acute and chronic impacts to different target organ systems (e.g., eyes, respiratory, reproductive, developmental, nervous, and cardiovascular).

DPM, which is emitted in the exhaust from diesel engines, was listed by the state as a TAC in 1998. DPM has historically been used as a surrogate measure of exposure for all diesel exhaust emissions. DPM consists of fine particles (fine particles have a diameter less than 2.5 micrometer (μm)), including a subgroup of ultrafine particles (ultrafine particles have a diameter less than 0.1 μm). Collectively, these particles have a large surface area which makes them an excellent medium for absorbing organics. The visible emissions in diesel exhaust include carbon particles or "soot." Diesel exhaust also contains a variety of harmful gases and cancer-causing substances.

Exposure to DPM may be a health hazard, particularly to children whose lungs are still developing and the elderly who may have other serious health problems. DPM levels and resultant potential health effects may be higher in close proximity to heavily traveled roadways with substantial truck traffic or near industrial facilities. According to CARB, DPM exposure may lead to the following adverse health effects: (1) aggravated asthma; (2) chronic bronchitis; (3) increased respiratory and cardiovascular hospitalizations; (4) decreased lung function in children; (5) lung cancer; and (6) premature deaths for people with heart or lung disease.[34] [35] OEHHA's HARP model and Air Toxics Hot Spots Program Guidance Manual (Guidance Manual) for the Preparation of Health Risk Assessments includes an ability to link certain TACs with metrics for cancer-rates or non-cancer effects on certain organ groups.

# RELATING ADVERSE AIR QUALITY IMPACTS AND HEALTH EFFECTS

The feasibility of determining a connection between air pollutant emissions and human health is different for a site-specific project, such as for a development project or local area plan, than it is for a larger regional scale analysis of an area-wide project, such as an analysis for a regulation change for the entire Air Coast Basin. As discussed below, directly correlating a single project's emissions in a typical City EIR to quantifiable human

[34] CARB, *Diesel Exhaust and Health*, www.arb.ca.gov/research/diesel/diesel-health.htm, Accessed August 2019.
[35] CARB, *Fact Sheet: Diesel Particulate Matter Health Risk Assessment Study for the West Oakland Community: Preliminary Summary of Results,* March 2008.

health consequences is currently not scientifically feasible, as it is not possible to conduct such an analysis that would provide reliable or meaningful results. As further discussed below, it is also infeasible to correlate regional emissions from local area-wide projects or plans identified in City EIRs to quantified human health consequences in any reliable or meaningful way, for many of the same reasons, and with additional challenges associated with separating and anticipating reasonably foreseeable emissions from other sources.

It should also be noted that in April 2019, the Sacramento Metropolitan Air Quality Management District (SMAQMD) published an Interim Recommendation on implementing the Friant Ranch decision in the review and analysis of proposed projects under CEQA in Sacramento County (Attachment 4). The SMAQMD is to date the only California air district to formally release, as guidance, an Interim Recommendation (April 2019) for lead agencies and practitioners preparing CEQA documents for projects within Sacramento County to comply with the Friant Ranch decision. Consistent with the expert opinions submitted to the Court in Friant Ranch by the San Joaquin Valley Air Pollution Control District (SJVAPCD) (Attachment 3) and SCAQMD (Attachment 2), the SMAQMD guidance confirms the absence of an acceptable or reliable quantitative methodology that would correlate the expected criteria air pollutant emissions of projects to the likely health consequences to people of project-generated criteria air pollutant emissions. The SMAQMD guidance explains that while it is in the process of developing a methodology to assess these impacts, lead agencies should follow the Friant Court's advice to explain in meaningful detail why this analysis is not yet feasible.

The following information is therefore provided to explain that for most projects and local level plans analyzed in City EIRs, it is currently not scientifically feasible to provide a reliable quantitative analysis directly correlating a project's significant pollutant emissions and human health.

## Existing Models and Tools

As previously described, a number of existing models and tools exist for quantifying both project emissions and pollutant concentrations. Certain federal and state public health standards for air quality are set in terms of acceptable regional concentration levels of pollutants. The SCAQMD demonstrates attainment of these concentration standards, in part, by setting CEQA thresholds for amounts of construction and operational emissions produced by individual projects or plans. In compliance with CEQA and the identified thresholds, City EIRs for individual development projects and local-level plans disclose and analyze project *emissions* for criteria pollutants and pollutant concentrations for TACs. For CEQA purposes, *concentrations* of criteria pollutants are typically not calculated. While it may be possible to utilize a project's emission data to determine concentration amounts, this would hinge the analysis on an additive range of assumptions and uncertainties, thus contributing to a higher margin of error. In addition, an accurate model of the data would also require a complex set of input data which may not be readily available or would otherwise contribute further to the

unreliability of the results. Furthermore, additional limitations exist for utilizing both regional and local models for this purpose. As such, modeling these concentrations of criteria pollutants utilizing existing tools would result in unreliable data, as discussed in further detail below.

### *Modeling Concentrations v. Emissions*

In order to relate a project's emissions to human health effects, it would first be necessary to model the air pollutant concentrations resulting from a project. As discussed above, studies which link health effects with exposure to pollutants are primarily based on the ultimate ambient or regional concentrations of pollutants. This is especially true for secondary pollutants such as ozone and PM. The lack of correlation between the direct *quantity* of precursor pollutants and the *concentration* of ozone or secondary PM formed is important because it is not necessarily the *quantity* of precursor pollutants (such as $NO_X$, $SO_2$, VOCs, etc.) that causes human health effects; rather, it is the *concentration* of resulting ozone and secondary PM that causes these effects. Indeed, the ambient air quality standards for ozone, which are statutorily required to be set by USEPA (at levels that are requisite to protect the public health with a margin of safety) and by CARB (at levels that are requisite to protect the health of the most sensitive groups) are established as concentrations of ozone and not as quantity (i.e., tonnages) of ozone precursor pollutants.[36] [37] Furthermore, since the ambient air quality standards are focused on achieving a particular concentration region-wide, the regional models and health impact analysis tools (i.e., BenMAP-CE, CAMx, CMAQ) and plans for attaining the ambient air quality standards are also regional in nature. However, as further described below (pages 31-32), these regional models are not useful for analysis of the health impacts of specific projects on any given geographic location.

### *Complexities of Modeling Concentrations*

In requiring a health risk type analysis for criteria air pollutants, it is important to understand how criteria pollutants are formed, dispersed, and regulated. As an example, ground level ozone (smog) is not directly emitted into the air, but is instead formed when precursor pollutants such as $NO_X$ and VOC are emitted into the atmosphere and undergo complex chemical reactions in the process of sunlight.[38] Once formed, ozone can be transported long distances by wind.[39] Due to the complexity of ozone formation, a specific tonnage amount of $NO_X$

[36] U.S. EPA, *Table of Ozone National Ambient Air Quality Standards,* https://www.epa.gov/ground-level-ozone-pollution/table-historical-ozone-national-ambient-air-quality-standards-naaqs. Accessed August 2019.
[37] CARB, *California Ambient Air Quality Standards*, https://ww2.arb.ca.gov/resources/california-ambient-air-quality-standards. Accessed August 2019.
[38] SJVAPCD, *Application for Leave to File Amicus Curiae Brief of SJVAPCD in Support of Defendant and Respondent, County of Fresno and Real Party in Interest and Respondent, Friant Ranch, L.P,* April 13, 2015. Page 4. Included as Attachment 2 of this memorandum.
[39] U.S. EPA, *Ground-level Ozone: Basic Information*, www.epa.gov/airquality/ozonepollution/basic.html. Accessed August 2019.

or VOCs emitted in a particular area does not equate to a particular concentration of ozone in that area.[40] In fact, even rural areas that have relatively low emissions of $NO_X$ or VOCs can have high ozone concentrations simply due to wind transport and other meteorological conditions such as temperature inversion and high pressure systems. Conversely, areas that have substantially more $NO_X$ and VOC emissions could experience lower concentrations of ozone simply because sea breezes disperse the emissions.[41]

For those projects where regional construction and operational emissions exceed the SCAQMD's recommended daily significance thresholds, this does not mean that one can determine with accuracy the concentration of ozone that will be created at or near the Project Site on a particular day or month of the year, or the specific human health effects that may occur. Meteorology, the presence of sunlight, geographical distribution of emissions, and other complex photochemical factors all combine to determine the ultimate concentrations and locations of ozone. This is especially true for the typical development project where most of the criteria pollutant emissions derive not from a single "point source," but from area wide sources (consumer products, paint, etc.) or mobile sources (cars and trucks) driving to, from and around the Project Site.

As another example, particulate matter can be divided into two categories: directly emitted PM and secondary PM. While directly emitted PM can have a localized impact, the tonnage emitted does not always equate to a specific local PM concentration because it can be transported long distances by wind.[42] Secondary PM, like ozone, is formed via complex chemical reactions in the atmosphere between precursor chemicals such as sulfur dioxide and $NO_X$. Due to the complexity of secondary PM formation, the tonnage of PM-forming precursor emissions in an area does not necessarily result in an equivalent concentration of secondary PM in that area.

Furthermore, for modeling to produce reliable results, it is necessary to have data regarding the sources and types of toxic air contaminants, location of emission points, velocity of emissions, the meteorology and topography of the area, and the location of receptors (worker and residence).[43] Not all of these specific details or factors may be known at the time that a project or plan is undergoing CEQA review. For example, it may not be

[40] SJVAPCD, *Application for Leave to File Amicus Curiae Brief of SJVAPCD in Support of Defendant and Respondent, County of Fresno and Real Party in Interest and Respondent, Friant Ranch, L.P.*, April 13, 2015. Page 4. Included as Attachment 2 of this memorandum.

feasible to perform a health risk assessment for airborne toxics that will be emitted by a generic industrial building that was built on "speculation" (i.e., without knowing the future tenant(s)).[44]

### *Purposes and Limitations of Regional Models*

As described above, local, state, and federal standards are set with the purpose of attaining ambient air quality standards within the region for the protection of public health. In part to meet these ambient standards, the SCAQMD has set numeric thresholds for land-use projects to determine significant air quality impacts. These thresholds are based on regional project emissions, which refer to the actual *quantity* of pollutants generated by the project, and are measured in pounds per day. These pollutant sources (e.g., onsite natural gas usage and offsite vehicular exhaust across the regional roadway network) can be estimated, measured, and quantified. However, once a project's emissions enter the environment, these emissions are subject to a number of complex factors and variables, including chemical changes, dispersal, and weather variation, and ultimately combine with other existing conditions to result in the regional ambient air quality and concentrations of pollutants.

The SCAQMD (and other regional air quality management and air pollution control districts) conducts regional-scale modeling in order to evaluate regional-scale air pollution, including modeling for the AQMP, modeling attainment demonstrations, and the Multiple Air Toxics Exposure Study (MATES) studies. This involves a regional scale photochemical model such as CAMx and CMAQ, which have a modeling domain on the order of hundreds of kilometers. Mobile source emissions are estimated using EMFAC and SCAG RTP/SCS VMT data and traffic data obtained from Caltrans for the entire basin. The effort, resources, and availability of necessary input data required to perform this type of analysis is complex and extensive, and is infeasible for smaller projects.

### *Unreliability of Using Regional Models at Smaller Scale*

As noted in the Brief of Amicus Curiae by the South Coast Air Quality Management District in the Friant Ranch case (Attachment 2), SCAQMD has among the most sophisticated air quality modeling and health impact evaluation capability of any of the air districts in the State, and thus it is uniquely situated to express an opinion on how lead agencies should correlate air quality impacts with specific health outcomes.[45] The computer models (e.g., CMAQ modeling platform)[46] used to simulate and predict an attainment date for ozone are based on regional inventories of precursor pollutants and meteorology within an air basin. At a very basic level, based on

---

[44] SCAQMD, *Application of the SCAQMD for Leave to File Brief of Amicus Curiae in Support of Neither Party and Brief of Amicus Curiae,* April 6, 2015. Page 10. Included as Attachment 2 of this memorandum.

[45] SCAQMD, *Application of the SCAQMD for Leave to File Brief of Amicus Curiae in Support of Neither Party and Brief of Amicus Curiae,* April 6, 2015. Pages 9, 10. Included as Attachment 2 of this memorandum.

[46] The SCAQMD 2016 AQMP ozone attainment demonstration was developed using the U.S. EPA recommended CMAQ (version 5.0.2) modeling platform with SAPRC07 chemistry, and the Weather Research and Forecasting Model (WRF) (version 3.6) meteorological fields.

gross assumptions appropriate for regional-scale analyses, the models simulate future ozone levels based on predicted changes in precursor emissions basin wide. It should be noted that it takes a large amount of additional precursor emissions to cause a modeled increase in ambient ozone levels over an entire region.[47] The computer models are not designed to determine whether the emissions generated by an individual development project, or even emissions from most relatively small-scale areas such as specific plan areas or community plan areas, will affect the date that the air basin attains the ambient air quality standards. Instead, the models help inform regional planning strategies based on the extent all of the emission-generating sources within the air basin must be controlled in order to reach attainment.[48]

In addition, this modeling is inappropriate for project-level or local plan-level analysis, as small changes in modeling results could be well within the normal gross margin of error of the CMAQ model performance. For example, SCAQMD states the expected margin of error for comparing CMAQ modeled daily maximum air pollutant concentrations to monitored concentrations is 20 percent.[49] However, even the expected 20 percent margin of error is exceeded in regional scale analyses. SCAQMD found that when maximum values equal or exceed 60 ppb, the normalized gross maximum error ranges from 15.7 to 19.8 percent for the coastal region, 11.5 to 22.3 percent for the San Fernando region, 12.1 to 25.2 for the foothills region, 14.7 to 18.2 for the urban source region, 12.5 to 20.9 percent for the urban receptor region, and 9.6 to 16.8 for the Coachella Valley.[50] The quarterly error statistic for $PM_{2.5}$ ranges from 54 percent to 95.7 percent for the coastal region, 30.1 to 60.6 percent for the San Fernando region, 30.7 to 81.6 percent for the foothills region, 41.1 to 81.6 percent for the urban source region, 23.5 to 53 percent for the urban receptor region, and 38 to 59.6 percent for the Coachella Valley region.[51]

Therefore, using these regional models at the project-level or local plan-level scale would not yield reliable results, as the emissions from a localized project would be small in comparison, falling within margins of error of the regional models. Therefore, results regarding project or local plan-level emissions would not be meaningful or statistically significant.

### *Purposes and Limitations of Localized Models*

Certain models (such as AERMOD and HARP) may be able to direct certain pollutant concentrations locally with reliable accuracy. However, these are used to prepare project-level health risk assessments (HRAs) for pollutants like DPM and other TACs, and do not address secondary pollutants such as ozone. Regarding the use of other potential localized models such as CALINE-4, the City's CEQA documents currently provide CO hotspot analyses where appropriate. However, per guidance from the SCAQMD and Caltrans, further modeling of other pollutants would be inappropriate using CALINE-4.[52] In addition, while these models are able to estimate concentrations for certain pollutants, no methods have been demonstrated to reliably and meaningfully connect these pollutant concentrations to specific health effects.

If an attempt were made to potentially utilize a localized model to determine a project's resulting pollutant concentrations, most likely an analysis would follow a methodology similar to how localized air quality analyses are currently performed for CEQA (e.g., freeway HRAs). For example, a project's vehicle emissions could be determined using CalEEMod or EMFAC. The project-related traffic emissions within a ¼ mile of the project site could then be combined with project-related emissions from on-site sources and analyzed for receptors in the vicinity using AERMOD on a microscale basis. The analysis could load traffic emissions along the roadway network consistent with the traffic study. This approach could be used for CO, $NO_2$, $PM_{10}$, and $PM_{2.5}$; however, this would not address other pollutants, these models include additional limitations, and a number of uncertainties would be included in the modeling assumptions. Some of the limitations and uncertainties of this approach would include:

*Pollutant Emissions.* CalEEMod generates total daily regional-wide emissions from a project. These emissions account for different trip lengths based on the trip generation (residential vs. commercial, commute vs. delivery, etc.) and trip type (primary, diverted, pass-by). It would be speculative to assume on a regional basis where these emissions were to occur. It would also be speculative to assume which types of vehicles would use specific roadways (e.g., diesel delivery trips associated with a Project would likely use different routes than commuter trips).

*Spatial and temporal data.* It would be speculative to assume when and where vehicles would be travelling. AERMOD assumes steady state conditions and may not be able to account for variations in meteorology as well as seasonal variations.

[52] Caltrans, *Project-Level Air Quality Analysis*. https://dot.ca.gov/programs/environmental-analysis/air-quality/project-level-air-quality-analysis. Accessed August 2019.

*Ambient data.* Health impacts are highly dependent on ambient air quality levels. While data at ambient monitoring stations may be available, nearby localized sources (e.g.; stationary emissions and major roadways) are not known and are not accounted for.

*Chemistry.* AERMOD is unable to process chemical reactions related to secondary PM and ozone formation.

The combination and compounding of the uncertainties from each component and step of the modeling analysis, particularly in the context of the very small increment of change in regional ambient air pollutant concentrations that a single project would be predicted to cause, would likely result in large margins of error for the overall modeled outcomes. That is, even if a model reports a certain outcome, the actual outcome may be in a relatively broad range surrounding the reported outcome. When these uncertainties are factored into the modeling analysis, the results would not be able to provide a meaningful estimate of health impacts. Furthermore, as described in further detail below, even if reliable pollutant concentration data were available, the concentration information could not be reliably and directly related to a health impact at this time.

## Metrics for Determining Health Effects

### *CEQA Thresholds and Relationship to Specific Health Effects*

As one of the many paths that the SCAQMD has established to lead the district towards achieving acceptable levels of pollutant concentrations region-wide, the agency has set CEQA thresholds of significance for project emission quantities. These SCAQMD thresholds are related to basin-wide emissions, are cumulative in nature, and do not indicate thresholds for project-specific concentrations related to particular health effects. Therefore, it should be noted that the SCAQMD regional significance thresholds are not direct indicators of specific health effects.

For example, with respect to ozone precursor emissions, the SCAQMD has set its operational CEQA significance threshold for $NO_X$ and VOC at 10 tons per year (expressed as 55 pounds per day). This is based on the federal Clean Air Act, which defines a major stationary source for extreme ozone nonattainment areas such as the SCAQMD as one emitting 10 tons per year. Under the federal Clean Air Act, such sources are subject to enhanced control requirements, thus SCAQMD determined that 55 pounds (less than .03 tons) per day was an appropriate threshold for making a CEQA significance finding and requiring feasible mitigation. For context, according to the most recent EPA-approved SCAQMD basin-wide emissions inventory, the VOC inventory for emissions is 500 tons per day and for $NO_X$ emissions is 522 tons per day for the baseline year of 2012.[53] The

[53] SCAQMD, *Final 2016 AQMP*, 2017. Figure 3-3. http://www.aqmd.gov/home/air-quality/clean-air-plans/air-quality-mgt-plan/final-2016-aqmp. Accessed August 2019.

threshold quantity of 55 pounds per day therefore represents a very small percentage (approximately .005 percent) of total daily basin-wide emissions. It should also be noted that from a scientific standpoint, it takes a large amount of additional precursor emissions to cause a statistically significant increase in ambient ozone levels over an entire region. In the case of ozone, the SCAQMD's 2012 AQMP showed that reducing baseline year 2008 $NO_X$ by 432 tons per day and reducing VOC by 187 tons per day would only reduce ozone levels at the SCAQMD's monitor site with the highest levels by 9 parts per billion.[54] Therefore, the SCAQMD has stated that "…a project source that emits 10 tons/year of $NO_X$ or VOC is small enough that its regional impact on ambient ozone levels may not be detected in the regional air quality models that are currently used to determine ozone levels. Thus, in this case it would not be feasible to directly correlate project emissions of VOC or $NO_X$ with specific health impacts from ozone."[55] Therefore, the SCAQMD has stated that the agency does not currently know of a way to accurately quantify ozone-related health impacts caused by VOC or $NO_X$ emissions from relatively small projects[56], although this type of analysis may potentially be feasible for regional-scaled projects with very high emissions of ozone precursors.

### *Lack of Established Metrics by Expert Agencies*

Furthermore, both the SCAQMD and SJVAPCD have indicated that it is not feasible to quantify project-level health effects from ozone and secondary-formed pollutants based on available modeling techniques.[57] [58] The SCAQMD Brief also cites the author of the CARB methodology, which reported that a $PM_{2.5}$ methodology is not suited for small projects and may yield unreliable results.[59] In addition, it would be infeasible to determine, with any degree of reliability, the impact on attainment of the ambient air quality standards and the number of nonattainment days that may result when a Project exceeds regional thresholds, and any findings would be speculative. As discussed above, the currently available regional models and health impact analysis tools (i.e., BenMAP-CE, CAMx, CMAQ) are equipped to model the impact of all emission sources in an air basin to demonstrate attainment.

Even if a metric could be calculated, it would not be reliable because the models attempt to evaluate the impact of all emission sources in an air basin on attainment and would likely not yield information with sufficient statistical certainty or a measurable increase in ozone concentrations sufficient to quantify health effects for an individual project. The SCAQMD Brief concludes, with respect to the Friant Ranch EIR, that although it may have been technically possible to plug the data into a methodology, the results would not have been reliable or meaningful.[60] No expert agency, including the SCAQMD and CARB, have approved a quantitative method to reliably and meaningfully translate mass emission estimates of criteria pollutants to specific health effects.

### *Limitations of Extrapolating Metrics from Health Impact Assessments*

Current HRA tools are able to provide some insight into potential health effects from project TACs and these tools have been specifically designed to evaluate how toxic emissions are released, how they disperse throughout an area, and the potential for those toxic pollutants to impact human health. However, these tools for TAC analysis do not address criteria pollutants and their related specific health effects, and also present their own limitations. HRAs typically include three separate components: an emissions inventory, dispersion modeling, and health risk calculations. OEHHA's HARP model and Air Toxics Hot Spots Program Guidance Manual (Guidance Manual) for the Preparation of Health Risk Assessments includes an ability to link certain air quality compounds with metrics for cancer-rates or non-cancer effects on certain organ groups.

The Guidance Manual identifies Response Exposure Levels (RELs) for various pollutants, which are concentration levels at (or below) which no adverse non-cancer health effects are anticipated for a specific exposure duration, usually specific to certain target organs. Exceeding the REL does not automatically indicate an adverse health impact, as the REL is not the threshold where population health effects would first be seen. However, increasing concentrations above the REL value increases, with an undefined probability, the likelihood that the health effect will occur.[61] These RELs are developed by OEHHA based on a highly technical and robust research process, including data gathering, modeling, determining appropriate parameters, making extrapolation adjustments, addressing variables and factors of uncertainty, consulting with expert agencies and the public, and undergoing scientific review. As such, the HARP model has become an accepted industry standard in evaluating health impacts from TACs and providing reliable and meaningful analysis, although the limitations of this analysis is also disclosed in HRA documents.

It should also be noted that the process of assessing health risks and impacts itself includes a degree of uncertainty, dependent on the availability of data and the extent to which assumptions are relied upon in cases

[60] SCAQMD, *Application of the SCAQMD for Leave to File Brief of Amicus Curiae in Support of Neither Party and Brief of Amicus Curiae,* April 6, 2015. Page 15. Included as Attachment 2 of this memorandum.
[61] OEHHA. *Air Toxics Hot Spots Program Guidance Manual.* February 2015. page 6-2. https://oehha.ca.gov/media/downloads/crnr/2015guidancemanual.pdf. Accessed August 2019.

where the data are incomplete or unknown. In general, sources of uncertainty that may lead to an overestimation or an underestimation of the risk include: extrapolation of toxicity data in animals to humans, uncertainty in the estimation of the emissions, uncertainty in the air dispersion models, and uncertainty in the exposure estimates.[62] In addition to uncertainty, there is a natural range or variability in measured parameters defining the exposure scenario, including variation among the human population. Risk estimates generated by an HRA should therefore not be interpreted as the *expected* rates of disease in the exposed population but rather as *estimates* of potential for disease, based on current knowledge and a number of assumptions.[63]

For criteria pollutants, OEHHA guidance for health risk has only been identified for short-term one-hour peak exposures (acute inhalation) for CO, $H_2S$, $NO_2$. Ozone, $SO_x$, and $SO_2$, and otherwise the guidance lacks cancer potency factors or RELs for any longer-term exposure of any criteria pollutant. Even so, the HARP model which utilizes these factors or RELs is utilized for stationary sources and does analyze health impacts from mobile source emissions. As emissions from projects analyzed in City local-plan or project EIRs are usually heavily comprised of mobile source emissions, utilization of the HARP model for this analysis would not be useful to provide meaningful information regarding health impacts. Therefore, existing models utilizing these RELs for acute inhalation are not able to provide sufficient information about direct health impacts or probability of specific adverse health effects from criteria pollutants for City EIR projects.

In general, health impact assessments also use Concentration-Response (C-R) functions. C-R functions determine the relationship between the change in pollutant concentration and change in health impacts (baseline vs. project). It should be noted that not all C-R functions are linear. Using AERMOD or Cal3QHC/CALINE4, there is no reliable method to estimate baseline conditions at a project's buildout. While ambient monitoring data is available throughout the air basin, this does not account for nearby related projects or other stationary sources.

There are also many C-R functions based on pollutants, specific health impacts, age, race, pollutant uptake rates, sensitivity to specific pollutants, and other criteria. When calculating health impacts, the appropriate C-R functions would need to be selected. Due to the level of speculation required to make these assumptions, this could expose a project to potential challenges, as experts may debate about the correct C-R function used for analyses. As discussed above, while a microscale model could be used for some aspects of projects to address localized roadway impacts, linking specific health effect to concentrations would be speculative under CEQA due to the uncertainties in such an analysis, as discussed above.

[62] Ibid. page I-5.
[63] Ibid. page I-6.

### *Limitations on Extrapolating Metrics from Existing Health Studies*

In the absence of an adopted metric by an expert agency identifying emission or concentration levels with a particular health effect, there is information on this topic available within a body of health research and series of independent studies, as generally described in previous sections and in Attachment 1 (SCAQMD Final 2016 AQMP, Appendix I: Health Effects). However, utilizing this body of work can also be problematic if attempting to make reliable or meaningful conclusions relating project emissions to specific health impacts, For example, many of the health studies rely on specific population subgroups or provide limited sample sizes, and therefore have conclusions which would not apply to health effects on the general public. In addition, within the universe of these studies, there exists a broad range of findings and at times, inconsistent conclusions between studies. Research in this field is also subject to other limitations, including the scientific infeasibility of parsing out specific pollutants from other variables with an acceptable degree of certainty, which results in weak causal relationships between particular pollutants and specific health effects. Therefore, it would be speculative to use a limited study to relate concentrations of any specific pollutant to specific health impacts for a number of reasons. While pollutant increments could be compared to relevant data identified from a specific study, it is not recommended to base findings of a specific health-related impact on any single limited study. Therefore, even if a project's pollutant concentrations could be determined with an acceptable degree of accuracy, existing available information could still only provide a range or general idea of health impacts to the population at large.

## Health Effects from Regional Emissions Generated by Local Plans or Projects are Likely Nominal

The SCAQMD also conducted pollutant modeling for proposed Rule 1315 in which the CEQA analysis accounted for essentially all of the increases in emissions due to new or modified sources in the District between 2010 and 2030, or an approximate increase of 6,620 pounds per day of $NO_X$ and 89,947 pounds per day of VOC. At this regional scale, the SCAQMD was able to correlate this very large emissions increase to expected health outcomes from ozone and particulate matter. The results of the analysis showed that this increase of regional pollutant emissions would contribute to only a small increase in the air basin wide ozone concentrations in 2030 of 2.6 ppb and less than 1 ppb of $NO_2$.[64]

Comparatively, a typical City project emits much lower amounts of pollutant emissions. For City projects that generate emissions exceeding SCAQMD's operational significance thresholds, (e.g., peak daily regional

[64] SCAQMD, *Final Program Environmental Assessment for Re-Adoption of Proposed Rule 1315,* 2011. Page 1-11. https://www.aqmd.gov/home/research/documents-reports/lead-agency-scaqmd-projects/aqmd-projects---year-2011/re-adoption-of-proposed-rule-1315.

emissions of 150 pounds per day of $PM_{10}$ and 55 pounds per day of $NO_X$, VOC or $PM_{2.5}$), these projects also typically represent relatively small amounts of pollutant emissions, with regional impacts which may not even be detected by current regional air quality models. For example, when comparing the Rule 1315 analysis to a large City project, such as the Olympia Project (a mixed-use development with 1.8 million square feet of floor area on a 3.3-acre site), Olympia's regional operational emissions would result in approximately 2 pounds of VOC and 12 pounds of $NO_X$ over the SCAQMD's significance thresholds, or approximately 0.06 and 1.0 percent of the emissions analyzed by SCAQMD related to Rule 1315, respectively.

As a further comparison to a local plan or community plan-level City project, such as the Hollywood Community Plan Update (which anticipates an approximate 27 percent increase for both housing/population and employment within a 22 square mile regional center within the City), the plan's regional operational emissions would result in an increase of 472 lbs. per day in VOCs and a decrease of 2,763 lbs. per day of $NO_X$, or approximately 0.5 percent of the VOC emissions analyzed by SCAQMD related to Rule 1315. $NO_X$ emissions would decrease under the Community Plan and would therefore not exceed any significant thresholds. This demonstrates that most City projects studied in project and plan-level EIRs would result in emissions at much lower rates than those necessary to be able to correlate project emissions with specific health effects. Furthermore, construction and operational emissions are typically more regional (e.g., emitted by mobile sources distributed across region's roadway network) and different than the identified stationary sources as modeled in SCAQMD's analysis of Rule 1315, which would add to the difficulties of modeling project-related emissions.

Running the regional-scale photochemical grid model used for predicting ozone attainment with the emissions from any individual project or even a relatively small-scale area project would not yield reliable information regarding a measurable increase in ozone concentrations sufficient to accurately quantify ozone-related health effects. Any modeled increase in ozone concentrations would not be useful for a meaningful analysis, as the increase would be so comparatively small that it would be well within the margin of error of such models. Similarly, it would also not be feasible to identify a Project's impact on the days of nonattainment per year. Based on this information, a general description of the adverse health effects resulting from the pollutants at issue is all that can be feasibly provided at this time.

# CONCLUSION

Federal and state ambient air quality standards are designed to prevent the harmful effects of air pollution. These standards are continually updated based on evolving research, including research which relates air quality impacts with health effects. At the regional level, plans such as the SCAQMD's AQMP and SCAG's RTP/SCS work to ensure that the South Coast Air Basin reaches and maintains attainment with these federal and state standards. Locally, the City's EIRs evaluate a plan or project's consistency with applicable policies identified in the SCAQMD's AQMP and SCAG's RTP/SCS. City EIRs also identify regulatory compliance measures which work to limit risk and exposure to TACs. In addition, in evaluating air quality impacts on a plan- or project-level, the City's EIRs utilize thresholds guidance and air quality models established by the SCAQMD, which have been developed to implement these regional plans for attainment and protection of public health. Improvements to air quality in the region attest to the efficacy of these plans and local implementation practices.

For local plans or projects that exceed any identified SCAQMD air quality threshold, City EIR documents typically identify and disclose generalized health effects of certain air pollutants but are currently unable to establish a reliable connection between any local plan or project and a particular health effect. In addition, no expert agency has yet to approve a quantitative method to reliably and meaningfully do so. A number of factors contribute to this uncertainty, including the regional scope of air quality monitoring and planning, technological limitations for modeling at a local plan- or project-level, and the intrinsically complex nature between air pollutants and health effects in conjunction with local environmental variables. Therefore, at the time, it is infeasible for City EIRs to directly link a plan's or project's significant air quality impacts with a specific health effect. However, as air quality modeling and research on health effects advances over time, the City will continue to seek the latest guidance from local air quality agencies and experts and refine its approach based on future information as it becomes available.

# INTRODUCTION

This document presents a summary of scientific findings on the health effects of ambient air pollutants. The California Health and Safety Code Section 40471(b) requires that the South Coast Air Quality Management District (SCAQMD) prepare a report on the health impacts of particulate matter in the South Coast Air Basin (SCAB) in conjunction with the preparation of the Air Quality Management Plan (AQMP) revisions. This document, which was prepared to satisfy that requirement, also includes sections discussing the health effects of the other major pollutants. The intention of this document is to provide a brief summary of the conclusions of scientific reviews conducted by U.S. EPA and other scientific agencies, with some additional information from more recently published studies.

In addition to the air pollutant health effects summaries, there is an Attachment to this Appendix, which is a list of publications that have resulted from health-related research projects sponsored by SCAQMD over the past several years. Some of these studies are discussed in this Appendix, as appropriate, although there are many other studies referenced here. The studies funded by SCAQMD also help inform the SCAQMD's work in characterizing the air pollution and its effects in our local region and the influences of sources of air pollution in the Basin.

While information on ambient air quality statistics, attainment status, spatial distribution of air pollutants, environmental justice, socioeconomic impacts, control strategies, and cost-effectiveness are important issues that may relate to health effects, these issues are not the focus of this Appendix, and are instead discussed in detail in other chapters and appendices of the AQMP, or in the AQMP Socioeconomic Report.

# HEALTH EFFECTS OF AIR POLLUTION

Ambient air pollution is a major public health concern. Excess deaths and increases in illnesses associated with high air pollution levels have been documented in several episodes as early as 1930 in Meuse Valley, Belgium; 1948 in Donora, Pennsylvania; and 1952 in London. Although levels of pollutants that occurred during these acute episodes are now unlikely in the United States, ambient air pollution continues to be linked to increases in illness and other health effects (morbidity) and increases in death rates (mortality).

Adverse health outcomes linked to air pollution include cardiovascular effects, premature mortality, respiratory effects, cancer, reproductive effects, neurological effects, and other health outcomes. The evidence linking these effects to air pollutants is derived from population-based observational and field studies (epidemiological), toxicological studies, as well as controlled laboratory studies involving human subjects and animals. There have been an increasing number of studies focusing on the mechanisms (that is, on learning how specific organs, cell types, and biomarkers are involved in

the human body's response to air pollution). Yet the underlying biological pathways for these effects are not always clearly understood.

Although individuals inhale pollutants as a mixture under ambient conditions, the regulatory framework and the control measures developed are pollutant-specific for six major outdoor pollutants covered under Sections 108 and 109 of the Clean Air Act. This is appropriate, in that different pollutants can differ in their sources, their times and places of occurrence, the kinds of health effects they may cause, and their overall levels of health risk. Different pollutants, from the same or different sources, oftentimes occur together. While the combined effects of multiple air pollutants that occur simultaneously may be important, the air quality standards address each criteria pollutant separately, and thus, this Appendix is divided into sections by pollutant. To meet the air quality standards, comprehensive plans are developed such as the Air Quality Management Plan (AQMP); and to minimize exposure to toxic air contaminants in the South Coast AQMD, a local air toxics control plan is also prepared. These plans examine multiple pollutants, cumulative impacts, and transport issues related to attaining healthful air quality. A brief overview of the effects observed and attributed to various air pollutants is presented in this Appendix. Because the SCAB exceeds the federal standards for ozone and PM2.5, this Appendix focuses more attention in the discussion of these two pollutants, since the health impacts within the SCAB are potentially greater for these two pollutants compared to the health impacts of the other criteria pollutants. For the other pollutants, a brief summary of the associated health effects is provided.

This summary is drawn substantially from reviews presented previously (South Coast Air Quality Management District 1996; South Coast Air Quality Management District 2003; South Coast Air Quality Management District 2007; South Coast Air Quality Management District 2013b), and from the most recent U.S. EPA Integrated Science Assessment (ISA) reviews for Ozone (U.S. EPA 2013b), Carbon Monoxide (U.S. EPA 2010), Particulate Matter (U.S. EPA 2009), Nitrogen Oxides (U.S. EPA 2016), Sulfur Dioxide (U.S. EPA 2008), and Lead (U.S. EPA 2013a). Additional reviews prepared by the California Air Resources Board and the California EPA Office of Environmental Health Hazard Assessment for Particulate Matter (California Air Resources Board and Office of Environmental Health Hazard Assessment 2002), for Ozone (California Air Resources Board and Office of Environmental Health Hazard Assessment 2005) and for Nitrogen Dioxide (California Air Resources Board and Office of Environmental Health Hazard Assessment 2007) were included in the summary. In addition, several large review articles on the health effects of air pollution also helped inform this Appendix (American Thoracic Society 1996a; Brunekreef et al. 2002). More detailed citations and discussions on air pollution health effects can be found in these references.[1] Additionally, a supplemental literature review of mortality and morbidity impacts of PM2.5, ozone, $NO_2$, and $SO_2$ was conducted for the AQMP Socioeconomic Evaluation to identify more recent studies (Industrial Economics Inc. 2016b; Industrial Economics Inc. 2016a); this health effects summary also draws upon this literature review to discuss these more recent studies, particularly those published since the

[1] Most of the studies referred to in this Appendix are cited in the above sources. Only specific selected references to provide examples of the types of health effects are cited in this summary.

most recent ISA's. This summary highlights studies that were conducted in the South Coast Air Basin or in Southern California, or alternatively, in California, if few studies from our local region are available on the specific topic. Studies conducted in Southern California give an important "local perspective" in understanding and evaluating the health effects of air pollution. However, studies conducted in other locations also provide critical information that is pertinent to advancing the scientific understanding of the health effects of air pollution, including effects on our local population. As such, this summary also discusses key studies that were conducted in other locations.

Over the decades of national reviews of outdoor air pollution and their health impacts, the U.S. EPA has developed a list of five criteria by which the strength and credibility of data can be judged. This five-tier weight-of-evidence approach provides an objective basis for assessing the breadth, specificity, and consistency of evidence concerning a particular health outcome. Table I-1 shows the five descriptors used by the U.S. EPA for assessing causality, using a weight-of-evidence approach. Within each section discussing a specific pollutant are tables showing summaries of the U.S. EPA conclusions regarding the causality of air pollution health effects, which are the conclusions of their scientific evaluation of the research studies they have reviewed. For the criteria pollutants, the discussion in this Appendix will focus only on those categories of health effects for which the U.S. EPA has determined there is a causal or likely causal relationship with the pollutant, while other health effects may be discussed briefly. In particular, because of the relatively long time gap since the latest U.S. EPA ISA for PM (in 2009), and because the SCAB currently exceeds the federal standards for PM2.5, some additional health endpoints that are emerging as areas of interest with regard to PM exposure are discussed briefly in this Appendix.

It is important to note that the U.S. EPA is tasked with assessing new and emerging air quality science, including health studies, as part of the process of setting the federal air quality standards. In other words, the U.S. EPA's role is to assess the causal relationships between the pollutants and the different types of health endpoints. It is SCAQMD's role to describe the public health impacts of poor air quality in our region, as well as to develop and implement an emission reduction strategy to attain the federal and state ambient air quality standards. Therefore, it is not the intention of this Appendix to assess whether there is or is not an effect of a specific air pollutant on any particular health endpoint, but rather to summarize the health effects and causal determinations as assessed by U.S. EPA and other scientific agencies, to discuss some recent studies published since the latest U.S. EPA reviews, to give some quantitative estimates of the health impacts of particulate matter air pollution in the South Coast Air Basin, and to present a "local perspective" by highlighting studies conducted in the South Coast Air Basin, Southern California, or California.

## TABLE I-1

U.S. EPA's Weight of Evidence Descriptions for Causal Determination of Health Effects

| DETERMINATION | WEIGHT OF EVIDENCE |
|---|---|
| Causal Relationship | Evidence is sufficient to conclude that there is a causal relationship with relevant pollutant exposures. That is, the pollutant has been shown to result in health effects in studies in which chance, bias, and confounding could be ruled out with reasonable confidence. For example: (a) controlled human exposure studies that demonstrate consistent effects; or (b) observational studies that cannot be explained by plausible alternatives or are supported by other lines of evidence (e.g., animal studies or mode of action information). Evidence includes replicated and consistent high-quality studies by multiple investigators. |
| Likely To Be A Causal Relationship | Evidence is sufficient to conclude that a causal relationship is likely to exist with relevant pollutant exposures, but important uncertainties remain. That is, the pollutant has been shown to result in health effects in studies in which chance and bias can be ruled out with reasonable confidence but potential issues remain. For example: (a) observational studies show an association, but co-pollutant exposures are difficult to address and/or other lines of evidence (controlled human exposure, animal, or mode of action information) are limited or inconsistent; or (b) animal toxicological evidence from multiple studies from different laboratories that demonstrate effects, but limited or no human data are available. Evidence generally includes replicated and high-quality studies by multiple investigators. |
| Suggestive Of A Causal Relationship | Evidence is suggestive of a causal relationship with relevant pollutant exposures, but is limited because chance, bias, and confounding cannot be ruled out. For example, at least one high-quality epidemiologic study shows an association with a given health outcome but the results of other studies are inconsistent. |
| Inadequate To Infer A Causal Relationship | Evidence is inadequate to determine that a causal relationship exists with relevant pollutant exposures. The available studies are of insufficient quantity, quality, consistency or statistical power to permit a conclusion regarding the presence or absence of an effect. |
| Not Likely To Be A Causal Relationship | Evidence is suggestive of no causal relationship with relevant pollutant exposures. Several adequate studies, covering the full range of levels of exposure that human beings are known to encounter and considering susceptible populations, are mutually consistent in not showing an effect at any level of exposure. |

(Adapted from U.S. EPA, 2009)

# OZONE

Ozone is a gaseous air pollutant that is a highly reactive compound and a strong oxidizing agent. When ozone comes into contact with the respiratory tract, it can react with tissues and cause damage in the airways. Ozone, or its reaction products, can penetrate into the gas exchange region of the deep lung. Both short-term and long-term exposures to ozone have been linked to respiratory effects. Ozone from man-made sources is formed by photochemical reactions when pollutants such as volatile organic compounds, nitrogen oxides, and carbon monoxide react with sunlight. The main sources of such ozone precursors are discussed in detail in the draft 2016 AQMP Chapter 3. Additionally, a discussion of the spatial distribution of ozone is provided in the draft 2016 AQMP Chapter 2.

In 1997, the U.S. EPA established the first federal standard for ozone averaged over 8 hours, at 0.08 ppm. In 2005, the California Air Resources Board (CARB) established standards of 0.09 ppm averaged over one hour and at 0.070 ppm averaged over eight hours. In 2008, the U.S. EPA lowered the federal standard for ozone to 0.075 ppm averaged over eight hours. On the basis of recent evaluations of ozone health effects, U.S. EPA's Clean Air Scientific Advisory Committee recommended in 2015 that the National Ambient Air Quality Standard (NAAQS) for ozone be reduced and recommended a range in which 0.070 ppm would be the upper limit. In 2015, the U.S. EPA concluded that the current national standard was not adequate to protect public health and lowered the 8-hour ozone standard to 0.070 ppm (U.S. EPA 2015b). While the federal standards must be attained within a specified time frame, the California standards do not have specific defined deadlines, but must be attained by the earliest practicable date.

The table below provides the overall U.S. EPA staff conclusions on the causality of short-term (i.e. hours, days, weeks) and long-term (i.e. months, years) ozone health effects for the health outcomes evaluated (U.S. EPA 2013b).

**TABLE I-2**

Summary of U.S. EPA's Causal Determinations for Health Effects of Ozone

| **SHORT-TERM EXPOSURES** | |
|---|---|
| **Health Outcome** | **Causality Determination** |
| Respiratory Effects | Causal relationship |
| Cardiovascular Effects | Likely to be a causal relationship |
| Central Nervous System Effects | Suggestive of a causal relationship |
| Effects on Liver and Xenobiotic Metabolism | Inadequate to infer a causal relationship |
| Effects on Cutaneous and Ocular Tissues | Inadequate to infer a causal relationship |
| Mortality | Likely to be a causal relationship |
| **LONG-TERM EXPOSURES** | |
| **Health Outcome** | **Causality Determination** |
| Respiratory Effects | Likely to be a causal relationship |
| Cardiovascular Effects | Suggestive of a causal relationship |
| Reproductive and Developmental Effects | Suggestive of a causal relationship |
| Central Nervous System Effects | Suggestive of a causal relationship |
| Cancer | Inadequate to infer a causal relationship |
| Mortality | Suggestive of a causal relationship |

(From U.S. EPA, 2013a Table 1-1)

## Short-Term Exposure Effects of Ozone

The adverse effects reported with short-term ozone exposure are greater with increased activity because activity increases the breathing rate, the depth of the breaths, and the volume of air reaching the lungs, resulting in an increased amount of ozone reaching deeper into the lungs. Children are considered to be a particularly vulnerable population to air pollution effects because their lungs are still growing, they typically spend more time outdoors, are generally more physically active, and have a higher ventilation rate relative to their body weight, compared to adults (U.S. EPA 2013b).

A number of adverse health effects associated with ambient ozone levels have been identified from laboratory and epidemiological studies (American Thoracic Society 1996b; U.S. EPA 2006; U.S. EPA 2013b). These include increased respiratory symptoms, damage to cells of the respiratory tract,

decrease in lung function, increased susceptibility to respiratory infection, an increased risk of hospitalization, and increased risk of mortality. For short-term ozone exposures, the U.S. EPA determined in the most recent ISA that the evidence supports a causal relationship for respiratory effects, and a likely causal relationship for cardiovascular effects and mortality.

In the laboratory, exposure of human subjects to low levels of ozone causes reversible decreases in lung function as assessed by various measures such as respiratory volumes, airway resistance and reactivity, irritative cough and chest discomfort. The results of several studies where human volunteers were exposed to ozone for 6.6 hours at levels between 0.04 and 0.12 ppm were summarized by Brown (Brown et al. 2008). As shown in Figure I-1, there is an increasing response on lung function with increasing exposure levels in moderately exercising subjects. A study published after the analysis by Brown et al. exposed healthy young adults for 6.6 hours under intermittent moderate exercise to each of the following: filtered air, and ozone at 0.06, 0.07, 0.08, and 0.087 ppm (Schelegle et al. 2009). The study found decreases in lung function (forced expiratory volume in 1 second, or FEV1) with each of the different levels of ozone exposure, although the decrease in lung function at 0.06 ppm was not statistically different from exposure to filtered air. Lung function (FEV1) decreases were approximately 5 percent, 7 percent, and 11 percent at ozone exposure levels of 0.07, 0.08, and 0.087 ppm. A more recent study (Kim et al. 2011) exposed young healthy adults to ozone in the range of 0.06 to 0.10 ppm for 6.6 hours while engaging in intermittent moderate exercise, and found that the study participants exhibited an approximately 2 percent reduction in lung function (FEV1) and an increase in pulmonary inflammation after exposure to ozone at the 0.06 ppm concentration.

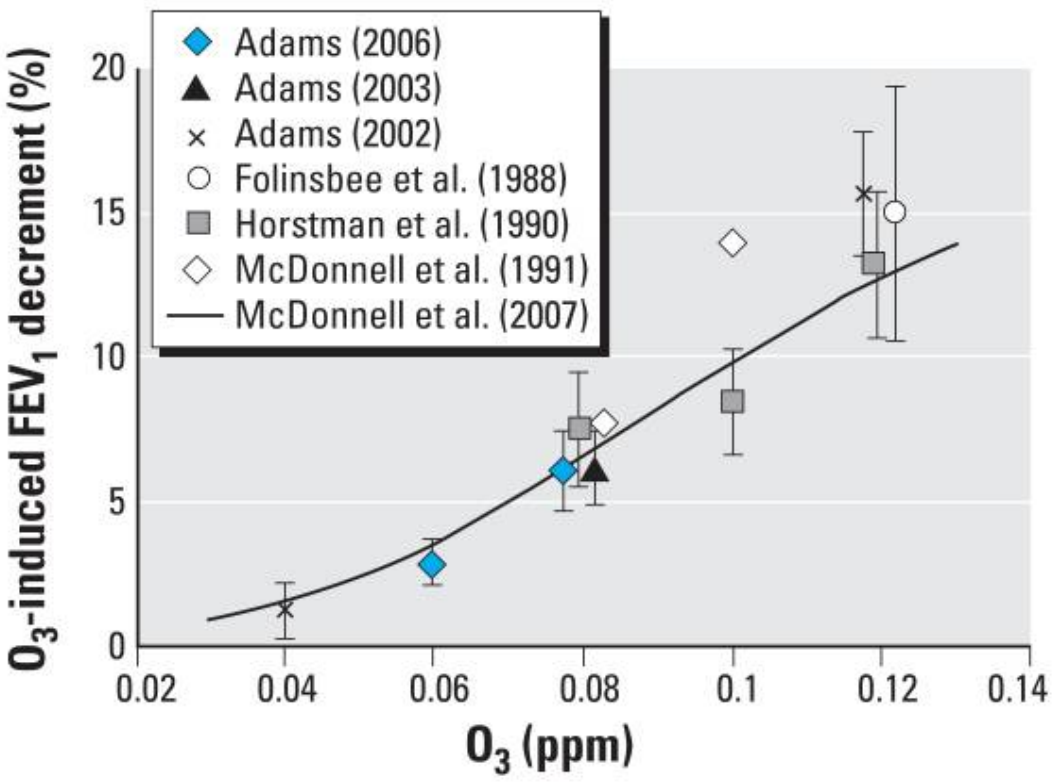

**FIGURE I-1**

Comparison of mean ozone-induced decrements in lung function following 6.6 hours of ozone exposure. Error bars represent the standard error. McDonnell et al. (2007) was a summary of results from several studies, and is represented by the line in the graph. (From: (Brown et al. 2008))

Some changes in lung function (volume and airway resistance changes) observed after study participants were exposed to ozone only once exhibit attenuated responses or a reduction in magnitude of responses when exposures are repeated, although there were a range of individual human responses observed, including some non-responders (Linn et al. 1988). Although it has been argued that the observed shift in response is evidence of a probable development of tolerance, it appears that while functional changes may exhibit attenuation, biochemical and cellular changes which may be associated with episodic and chronic exposure effects may not exhibit an attenuation. That is, internal damage to the respiratory system may continue with repeated ozone exposures, even if externally observable effects (chest symptoms and reduced lung function) disappear. An additional argument against toleration is that after several days or weeks without ozone exposures, the responsiveness (in terms of lung function as well as symptoms) returns, which is evidence that any tolerance developed is relatively short-lived (U.S. EPA 2013b).

Laboratory studies have also compared the degree of lung function change seen in healthy individuals versus asthmatics and those with chronic obstructive pulmonary disease (COPD). In several

laboratory studies of individuals with COPD, the percent decreases in lung function from short-term ozone exposures ≤0.30ppm among patients with COPD generally did not differ from the lung function decrements experienced by healthy patients (Linn et al. 1982; Solic et al. 1982; Linn et al. 1983; Kehrl et al. 1985). That finding, however, may not accurately reflect the true impact of exposure on these respiration-compromised individuals. Since the respiration-compromised group may have lower lung function to begin with, the same total percent change in lung function may represent a substantially greater relative adverse effect overall. Other studies have found that subjects with asthma are more sensitive to the short-term effects of ozone in terms of lung function and inflammatory response, as evidenced by measuring changes in lung function, increased hospitalizations, and emergency room visits for respiratory conditions (U.S. EPA 2013b). This evidence supports the hypothesis that asthmatics are a particularly sensitive population to the health effects of ozone.

In laboratory studies of animals, cellular and biochemical changes associated with respiratory tract inflammation have also been consistently found in the airway lining after low- level exposure to ozone. These changes include an increase in specific cell types and in the concentration of biochemical mediators of inflammation and injury such as Interleukin-1, Interleukin-6, Interleukin-8, Tumor Necrosis Factor α (TNF-α), and fibronectin (Van Bree et al. 2002; Johnston et al. 2007; U.S. EPA 2013b).

In addition to controlled laboratory conditions, epidemiological studies of individuals exercising outdoors, including children attending summer camp, have shown associations of reduced lung function with ozone exposure. There were wide ranges in responses among individuals. U.S. EPA's 2013 ISA indicated that most studies found reductions in lung function ($FEV_1$) in the range of approximately <1 to 2 percent when standardized to an increase of 0.04 ppm for a 1-hour maximum, an increase of 0.03 ppm for an 8-hour maximum, and an increase of 0.02 ppm for a 24-hour average (U.S. EPA 2013b). Somewhat greater decrements in lung function (4.9 to 7.3 percent) were found in children with asthma who had respiratory infections or were using corticosteroid medication.

Epidemiologic studies have found that increases in short-term ozone levels are associated with impacts on children's respiratory health, including increases in respiratory symptoms in children with asthma, and increased numbers of absences from school. Studies conducted in various cities in the U.S. and in other countries have reported increased respiratory symptoms among children with asthma, including wheeze, cough, difficulty breathing, and chest symptoms/tightness (U.S. EPA 2013b). The Children's Health Study, conducted by researchers at the University of Southern California, followed for several years a cohort of children that live in 12 communities in Southern California with differing levels of air pollution. A publication from this study reported that school absences in fourth graders for respiratory illnesses were positively associated with short-term increases in ambient ozone levels. An increase of 20 ppb (0.02 ppm) ozone was associated with a 63 percent increase in illness-related absence rates and an 83 percent increase in respiratory illnesses (Gilliland et al. 2001). A small panel study of Hispanic children with asthma living in the Huntington Park neighborhood of Los Angeles, California reported that a 10.8 ppb increase in ozone averaged

over 8 hours nearly doubled the odds of having asthma symptoms that interfered with daily activities (Delfino et al. 2003). Despite these studies, and some others linking ozone exposures with school absences, the U.S. EPA concluded that only limited evidence is currently available linking these ozone exposures to respiratory-related school absences (U.S. EPA 2013b).

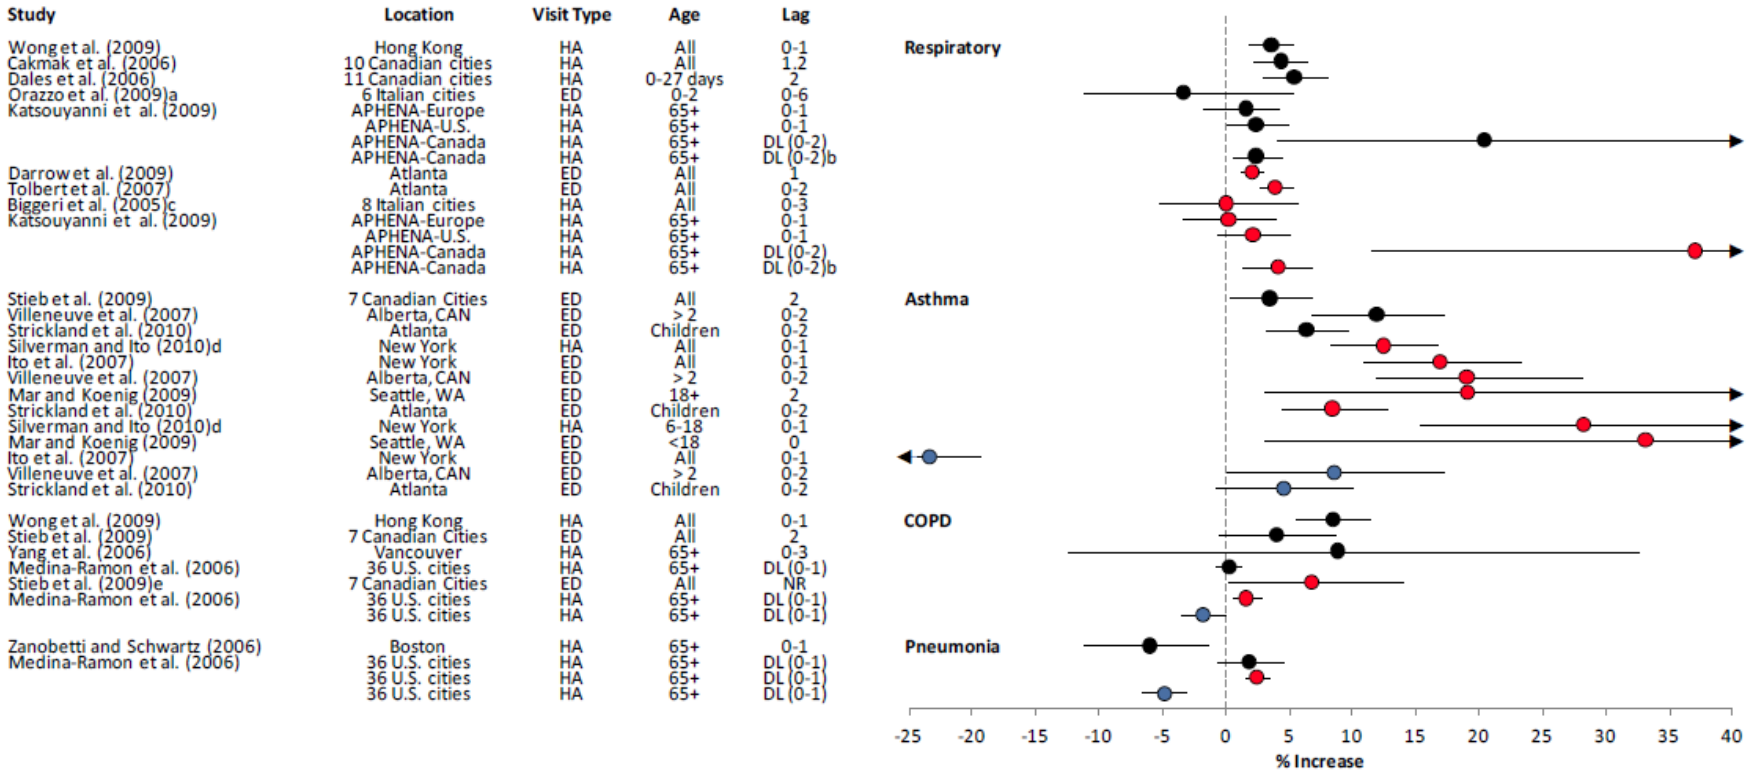
Numerous studies have found associations of short-term ozone levels and hospital admissions and emergency department admissions for respiratory conditions, and the U.S. EPA concluded in the latest ISA that the most recent epidemiological studies conducted in both single cities and multiple cities continue to provide evidence supporting a causal relationship between short-term ozone exposures and respiratory effects (U.S. EPA 2013b). The studies generally found stronger associations for asthma and COPD in the warm season or in the summer months, compared to the cold season, and also provided evidence that children are at greatest risk of ozone-related respiratory health effects. Several of these studies reviewed in the ISA had average ozone concentrations well below 60 ppb averaged over 8 hours and still reported associations with respiratory outcomes. One study of asthma emergency department visits reported ozone effects at concentrations as low as 30 ppb (Strickland et al. 2010). Figure I-2 presents examples of studies regarding all-year and seasonal analysis of ozone exposure and hospital admissions or emergency department visits. This figure illustrates the associations found between ambient ozone exposure and key respiratory outcomes (asthma, COPD and pneumonia), and shows the stronger effects with summertime ozone exposures. Recently, a study in California reported that short-term ozone exposures were associated with emergency department visits for asthma, acute respiratory infections, pneumonia, COPD, and upper respiratory tract infections, with more consistent associations during the warm season (Malig et al. 2016). This California study provides additional supporting evidence for ozone-related respiratory effects.

The potential cardiovascular effects of short-term ozone exposure have been studied in toxicological, human exposure, and epidemiological studies. Controlled human exposure studies have found that ozone exposures produce changes in heart function (as measured by heart rate variability) and increases in biomarkers in the blood for systemic inflammation and oxidative stress. The limited number of toxicological studies on this topic provide evidence of cardiovascular effects. The effects observed include increased heart rate variability, arrhythmias, vascular disease, and inflammation and oxidative stress leading to atherosclerosis, which can lead to tissue damage due to ischemia and reperfusion (i.e. having the blood supply cut off and then restored to the tissues) (U.S. EPA 2013b). The controlled human exposure and toxicological studies provide evidence of cardiovascular effects of ozone, and some plausible mechanisms for these effects. Epidemiological studies, including some recent multi-city studies show relatively consistent associations between short-term ozone exposures and cardiovascular mortality (these studies are discussed further below). However, epidemiological studies do not provide consistent evidence of cardiovascular morbidity with short-term ozone exposures. Studies conducted in the Los Angeles area or in California also do not provide consistent evidence of short-term ozone effects on cardiovascular morbidity. A study of elderly non-smokers in the Los Angeles area with a history of heart disease found no associations between ozone exposure and blood pressure nor ST-segment depression, a measure of cardiac ischemia (Delfino et

al. 2010; Delfino et al. 2011). A Los Angeles-based study of cardiovascular hospital admissions did not find increased risk with ozone exposures (Linn et al. 2000). However, a biomarker study of students at UC Berkeley who spent their summer vacation in either the Los Angeles or San Francisco Bay Area found that ozone exposures over a period of 2 weeks or 1 month were associated with increases in a biomarker of lipid peroxidation, but no association was found for a biomarker of antioxidant capacity (Chen et al. 2007). Lipid peroxidation is an indicator of oxidative stress, which may be triggered by pulmonary inflammation caused by ozone exposure. Given the strong evidence of cardiovascular morbidity from experimental studies and the consistent positive associations reported in epidemiological studies of cardiovascular mortality, but the lack of consistent evidence from epidemiological studies of cardiovascular morbidity, the U.S. EPA determined that there is a likely causal relationship between short-term ozone exposures and cardiovascular effects (U.S. EPA 2013b).

For mortality effects, the U.S. EPA 2013 ISA concluded that there was a likely causal relationship for short-term ozone exposures. This determination is supported by numerous studies have found positive associations between short-term increases in ozone levels and excess risk of mortality from all non-accidental causes, cardiovascular causes, and respiratory causes (Bell et al. 2004; Bell et al. 2005; Huang et al. 2005; Ito et al. 2005; Levy et al. 2005; Bell et al. 2008; Zanobetti et al. 2008). Studies conducted across multiple cities in the U.S. Canada, Europe and Asia reported increased cardiovascular and respiratory mortality risks with increased short-term ozone exposures, and several studies additionally reported increased mortality risk for summer season ozone exposures (Katsouyanni et al. 2009; Samoli et al. 2009; Stafoggia et al. 2010; Wong et al. 2010). Some studies have also demonstrated that these associations persist even when other variables including season and levels of particulate matter are accounted for, indicating that ozone mortality effects may be independent of other pollutants, although there is some variability across studies with regard to the sensitivity of the ozone associations to adjustment for PM (Bell et al. 2004; Huang et al. 2005; Katsouyanni et al. 2009; Stafoggia et al. 2010). With regard to respiratory effects, the substantial evidence supporting a causal relationship between short-term ozone exposures and respiratory morbidity provides strong support for the recent evidence from epidemiological studies linking such exposures to respiratory mortality. For cardiovascular effects, while there is strong evidence linking cardiovascular mortality with short-term ozone exposures, the epidemiological studies of non-fatal outcomes do not provide consistent evidence for a coherent mechanism linking ozone exposures to cardiovascular mortality (U.S. EPA 2013b).

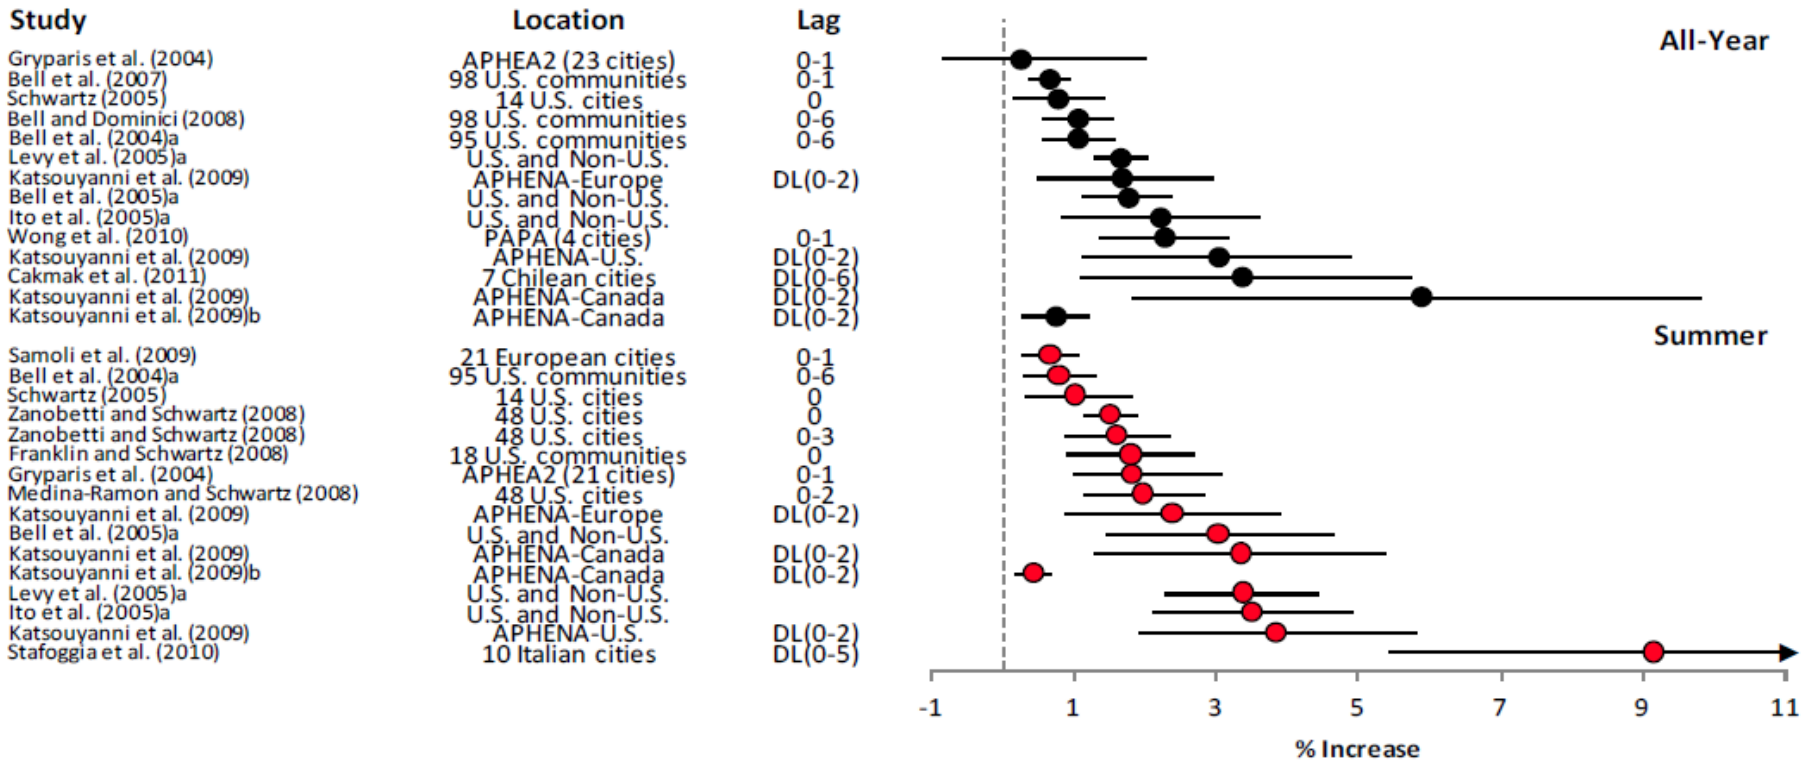
Examples of studies showing the relative change in mortality risks for all-year and summer-only analyses are shown in Figure I-3.



Note: Effect estimates are for a 20 ppb increase in 24-hour; 30 ppb increase in 8-hour max; and 40 ppb increase in 1-hour max $O_3$ concentrations. HA=hospital admission; ED=emergency department. Black=All-year analysis; Red=Summer only analysis; Blue=Winter only analysis. (From (U.S. EPA 2013b) Figure 6-19)

**FIGURE I-2**

Change in respiratory-related hospital admission and emergency department visits in studies that presented all-year and/or seasonal results.



Note: Effect estimates are for a 40 ppb increase in 1-hr max, 30 ppb increase in 8-hr max, and 20 ppb increase in 24-hr average $O_3$ concentrations. (From (U.S. EPA 2013b) Figure 6-27)

**FIGURE I-3**

Summary of mortality risk estimates for short-term $O_3$ exposure and all-cause (nonaccidental) mortality.

## Long-Term Exposure Effects of Ozone

The U.S. EPA 2013 ISA for Ozone concluded that there was a likely causal relationship between long-term ozone exposure and respiratory effects (U.S. EPA 2013b). Evidence supporting this determination comes from epidemiological and toxicological studies, particularly studies of asthma and related symptoms, asthma-related hospital admissions, lung function, lung inflammation and oxidative stress. Other health effects of long-term ozone exposure were determined to have "suggestive" or "inadequate" evidence of causality, although the few studies of respiratory mortality provide support to the respiratory health effects of ozone.

The Adventist Health and Smog Study (AHSMOG) and Children's Health Study cohorts are two large long-term studies conducted in California that examined several aspects of long-term ozone effects in adults and children, respectively. Several of these studies focused on asthma development and exacerbation. The AHSMOG study included adult, non-smoking, non-Hispanic white Seventh Day Adventists living in California. The 10-year follow-up AHSMOG study reported that a 10 ppb increase in annual mean ozone exposures increased the risk of asthma development in males by three-fold (relative risk 3.12, 95 percent confidence interval: 1.16, 5.85), but no effect was seen among females (relative risk 0.94, 95 percent confidence interval: 0.65, 1.34) (Greer et al. 1993). The 15-year follow-up AHSMOG study used an ozone metric focusing on 8-hour average exposures, and reported that a 10 ppb increase was associated with a 30 percent increased risk of developing asthma in males (relative risk 1.31, 95 percent confidence interval: 1.01, 1.71), and these effects persisted even after accounting for other pollutants (McDonnell et al. 1999). The latter study also found no effect in females, although this may reflect a greater potential for misclassification of air pollution exposure in females compared to males, due to different time-activity patterns resulting in greater time spent outdoors among males (U.S. EPA 2013b). In the Children's Health Study, among children living in 12 Southern California communities with high ozone concentrations, the relative risk of developing asthma in children playing three or more sports was found to be over three times higher than in children playing no sports (McConnell et al. 2002). The high ozone communities had a 4-year mean daytime ozone concentration of 59.6 ppb, compared to 40.0 ppb for the low-ozone communities. These findings indicate that new cases of asthma in children may be associated with performance of heavy exercise in communities with high levels of ozone. While it has long been known that air pollution can exacerbate symptoms in individuals with preexisting respiratory disease, this is among the first studies that indicate ozone exposure may contribute to asthma onset. However, three more recent Southern California studies did not find an association between ozone exposures and childhood asthma incidence, but did report increased risks of asthma onset with higher exposures to particulate matter or $NO_2$ (Islam et al. 2007; McConnell et al. 2010; Nishimura et al. 2013). These studies did not examine whether genetic factors may have played a role in making some people more susceptible than others to the respiratory effects of ozone exposure. Some analyses from the Children's Health Study identified specific genetic variants that, when combined with ambient ozone exposure, either increase or decrease the risk of developing asthma (Islam et al. 2008; Islam et al. 2009; Salam et al. 2009). These genetic variants are involved with antioxidant and/or anti-

inflammatory pathways, and are likely involved in key elements of asthma development (U.S. EPA 2013b).

Other studies examined the impact of long-term ozone exposures and respiratory symptoms, particularly among asthmatics. Studies have linked long-term ozone exposures to increased risk of having poorly-controlled asthma, increased asthma symptoms, and respiratory-related school absences (Gilliland et al. 2001; Akinbami et al. 2010; Jacquemin et al. 2012). An analysis from the CHS found no association between long-term ozone exposures and chronic lower respiratory tract symptoms, and another found an increased risk of bronchitic symptoms within a community, although the association was reduced when accounting for other pollutants (McConnell et al. 1999; McConnell et al. 2003). However, two studies from the CHS demonstrated gene-environment interactions for genes that are involved in inflammation or antioxidant pathways. One study found that asthmatic children with a particular genetic variant that reduces expression of the cytokine TNF-α (as part of an inflammatory response) had reduced risk of bronchitic symptoms for children in low-ozone communities, but not for children in high-ozone communities (Lee et al. 2009). A second study found that a particular genetic variant reduced the risk of respiratory-related school absences among children living in communities with high levels of ozone (defined in this study as being above the median value of 46.9 ppb) (Wenten et al. 2009).

Results of epidemiologic studies of hospital admissions and emergency department visits support the relationship between ozone exposure and respiratory effects. In a 2007 study conducted in Southern California, an increased risk of having poorly-controlled asthma was associated with living in areas above the 90$^{th}$ percentile ozone level (28.7 ppb, annual average) among men and elderly individuals (Meng et al. 2007). A study in the South Coast Air Basin found that ozone was associated with increased hospital discharges for asthma among children (Moore et al. 2008). Another study in the South Coast Air Basin looked at infants hospitalized for bronchiolitis. This study found a reduced risk of infant bronchiolitis hospitalization with increased ozone exposure, although there was no association for ozone when accounting for the effect of PM2.5, which was positively associated with this respiratory outcome (Karr et al. 2007). A study of people with asthma was conducted in the San Joaquin Valley of California, and found that a 10 ppb increase in ozone exposures averaged over one year increased the odds of asthma-related hospital admissions and emergency department visits by approximately 50 percent, and the odds of asthma symptoms among adults by about 40 percent (Meng et al. 2010). Studies conducted in other locations have also reported increases in asthma hospitalizations (U.S. EPA 2013b).

Some animal studies show results that indicate possible chronic effects including functional and structural changes of the lung. However, morphological, developmental, and immunological differences make it difficult to apply these results to humans experiencing ambient exposures. These changes observed in airway responsiveness provide support for the long-term effects of ozone in asthma development or exacerbation (U.S. EPA 2013b). However, epidemiologic studies examining long-term ozone exposures and lung function deficits have reported mixed results. For example, an analysis of the first CHS cohort found that PM2.5 and $NO_2$ exposures were associated with decreased

lung function, but did not find an association for ozone (Gauderman et al. 2004). An autopsy study involving Los Angeles County residents who died between ages 14 and 25 years due to violent death, although conducted many years ago when pollutant levels were higher than currently measured, provided supportive evidence of lung tissue damage (structural changes), which the authors suggested were attributable to air pollution (Sherwin 1991), although many uncertainties remain about the extent to which air pollution explains the findings.

Unlike short-term ozone exposures, there is limited evidence linking long-term ozone exposures with mortality. A large study based on the American Cancer Society Cancer Prevention Study II (CPS-II) cohort included 96 metropolitan statistical areas in the U.S., and reported that a 10 ppb increase in daily maximum 1-hour ozone concentrations averaged between April and September (warm season) was associated with a relative risk of 1.040 (95 percent confidence interval: 1.010, 1.067) for respiratory deaths, but no association with cardiovascular deaths (Jerrett et al. 2009). A U.S. study of Medicare enrollees reported increased risk of mortality with higher ozone exposures averaged over the warm season, among patients who had previously been hospitalized for congestive heart failure, myocardial infarction, COPD and diabetes (Zanobetti et al. 2011). A recent large-scale study found increased risk of all-cause, cardiovascular, and respiratory mortality with long-term ozone exposures, even after accounting for the effects of PM2.5 and $NO_2$, as well as other behavioral and demographic factors, including smoking (Turner et al. 2016). Other studies have found temperature to be an important potential risk factor for mortality, and may confound or modify the associations between air pollution exposure and mortality (Basu et al. 2002; Cheng et al. 2008). The Turner 2016 study examined the role of temperature, and found that the associations between ozone and mortality differed based on average daily maximum temperatures (Turner et al. 2016). While the U.S. EPA determination in the latest ISA was that the evidence was suggestive of long-term ozone exposure causing mortality, the studies of respiratory mortality support the evidence for the respiratory effects of ozone exposure, for which U.S. EPA has concluded there is a causal relationship.

For non-respiratory health endpoints, the U.S. EPA causal determinations were “suggestive of a causal relationship” (for cardiovascular, reproductive and developmental, central nervous system and mortality effects) or “inadequate to infer a causal relationship” (for cancer). Some studies conducted in California have examined reproductive or developmental effects, including birth defects, low birth weight or birth weight reductions, stillbirth and autism (Ritz et al. 2002; Ritz et al. 2007; Morello-Frosch et al. 2010; Becerra et al. 2013; Mobasher et al. 2013; Trasande et al. 2013; Laurent et al. 2014; Green et al. 2015; Symanski et al. 2016). Other recent studies have examined cardiovascular effects (Koken et al. 2003; Ensor et al. 2013; Rodopoulou et al. 2014). While many of these studies have reported associations with ambient ozone levels, the most recent U.S. EPA determination in 2013 was that the evidence was suggestive of a causal determination, but did not yet rise to a higher level.

## Sensitive Populations for Ozone-Related Health Effects

A number of population groups are potentially at increased risk for ozone exposure effects. In the most recent ISA for ozone in 2013, the U.S. EPA has identified several populations as having adequate evidence for increased risk from ozone exposures. These include children, older adults, outdoor workers, and individuals with asthma, certain variations in genes related to oxidative metabolism or inflammation, or reduced intake of certain nutrients such as Vitamins C and E (Kreit et al. 1989; Horstman et al. 1995; Sienra-Monge et al. 2004; Romieu et al. 2012; U.S. EPA 2013b; Bell et al. 2014). There is suggestive evidence for other potential factors, such as a person's sex, socioeconomic status, and obesity (U.S. EPA 2013b). Some other factors that could affect sensitivity to ozone have also been studied; however, there was inadequate evidence to conclude whether these were risk factors for ozone sensitivity. The table below summarizes the evidence for factors affecting sensitivity to ozone from the 2013 ISA for ozone.

**TABLE I-3**

Summary of Evidence for Potential Increased Susceptibility to Ozone-Related Health Effects

| Evidence Classification | Potential At Risk Factor |
|---|---|
| Adequate evidence | Genetic factors<br>Asthma<br>Children<br>Older adults<br>Diet<br>Outdoor worker |
| Suggestive evidence | Sex<br>SES<br>Obesity |
| Inadequate evidence | Influenza/infection<br>COPD<br>Cardiovascular disease<br>Diabetes<br>Hyperthyroidism<br>Race/ethnicity<br>Smoking<br>Air conditioning use |
| Evidence of no effect | -- |

From (U.S. EPA 2013b) Table 8-6

As previously mentioned, one group that has been recognized as being particularly sensitive to the effects of ozone is young children with asthma, because their lungs are still developing, their potential for increased exposure due to time spent exercising outdoors, and their high ventilation rates relative to body weight (U.S. EPA 2013b). Some factors that may contribute to the increased sensitivity among people with asthma include having an altered innate immune function and factors that decrease their antioxidant defenses (Alexis et al. 2014). Ozone creates secondary oxidation products that are electrophilic, and certain genetic factors influence a person's ability to metabolize

these electrophiles, which can affect respiratory function (U.S. EPA 2013b). Asthma exacerbations are more prevalent and severe in young boys than in girls, but the evidence on whether boys are more susceptible than girls to the effects of air pollution on asthma symptoms is not consistent (Guarnieri et al. 2014).

## Summary – Ozone Health Effects

In summary, outdoor ozone exposures have been associated with a range of negative human health effects. The strongest evidence for negative health impacts are on the respiratory system, and are measured by decreased lung function performance and increased cell injury. In addition, the 2013 ISA also concluded that there was a likely causal relationship between short-term ozone exposures and cardiovascular effects (such as changes in heart function, and increased systemic inflammation and oxidative stress) as well as respiratory mortality. Although the specific mechanisms of action for ozone effects on the various health endpoints have not been fully identified, there is evidence of the important roles of oxidation of key enzymes and proteins, inflammatory responses, changes in immune response, and modification and activation of neural reflex pathways (U.S. EPA 2013b).

The previous U.S. EPA review of ozone in the 2006 Air Quality Criteria Document (AQCD) had already concluded that there was clear, consistent evidence that acute ozone exposure is causally associated with respiratory effects (U.S. EPA 2006). Additionally, the 2006 AQCD for ozone concluded that the evidence was highly suggestive of ozone causing mortality, but that there was limited evidence for ozone causing cardiovascular effects. In the 2013 ISA, the U.S. EPA cited that several lines of evidence provide support for the respiratory effects of ozone, including human exposure studies, epidemiology and toxicology, which led to the conclusion that there was a causal relationship with short-term ozone exposures, and a likely causal relationship with long-term ozone exposures. In humans, respiratory effects were detected in laboratory studies at 0.06 ppm ozone concentrations, and in epidemiological studies with average ozone concentrations as low as 0.03 ppm (Strickland et al. 2010; Kim et al. 2011). Some populations are more sensitive to the health effects of ozone than others, including elderly persons, children, outdoor workers and persons with asthma.

# PARTICULATE MATTER

Airborne particulates are a complex group of pollutants that vary in physical, chemical, and biological dimensions. Physically, particles can vary by size, surface area and roughness, shape, and mass. Chemically, they vary by chemical composition. Biologically, they can vary by toxicity. In addition, particles vary by source, and can come from anthropogenic (man-made, such as from combustion of fuels, or frictional abrasion) or “natural” (plants – for example, pollens and spores) origins. The composition of particulate matter can vary across sub-regions, and a description of the spatial differences in PM composition can be found in the draft 2016 AQMP Chapter 2 and Appendix II.

The National Ambient Air Quality Standard for particulate matter was established in 1971, and set limits on the ambient level of Total Suspended Particulates (TSP). In 1987, the national particulate matter standards were revised to focus on particles sized 10 µm (micrometers) aerodynamic diameter and smaller. These can be inhaled and deposited throughout the upper and lower

respiratory system, depositing in both airways and gas-exchange areas of the lung. These particles are referred to as PM10. U.S. EPA initially promulgated ambient air quality standards for PM10 of 150 μg/m$^3$ averaged over a 24-hour period, and 50 μg/m$^3$ for an annual average. U.S. EPA has since rescinded the annual PM10 standard, but kept the 24-hour standard.

As more health research data has become available, concerns have centered on smaller and smaller particles. Additional focus has been placed on particles having an aerodynamic diameter of 2.5 μm or less (PM2.5). A greater fraction of particles in this size range can penetrate and deposit deep in the lungs. The U.S. EPA established standards for PM2.5 in 1997 and in 2006 lowered the air quality standards for PM2.5 to 35 μg/m$^3$ for a 24-hour average and reaffirmed 15 μg/m$^3$ for an annual average standard. There was considerable controversy and debate surrounding the review of particulate matter health effects and the consideration of ambient air quality standards (Kaiser 1997; Vedal 1997) when the U.S. EPA promulgated the initial PM2.5 standards in 1997. In 2002, the California Air Resources Board adopted an air quality standard for PM2.5 at a level of 12 μg/m$^3$, in the form of an annual average.

Since that time, additional studies have been published and some of the key studies were closely scrutinized and the data reanalyzed by additional investigators. The reanalyses confirmed the original findings, and there are now additional data confirming and extending the range of the adverse health effects of PM2.5 exposures. In 2012, the U.S. EPA revised the PM2.5 annual average standard to 12.0 μg/m$^3$ (U.S. EPA 2013c). This federal standard is set at same level as the current California PM2.5 annual standard, although the California standard does not have a specified attainment date. In 2014, the U.S. EPA announced it is preparing an ISA as part of the review of the federal PM standards (the process is described briefly in the draft AQMP Chapter 8). The draft AQMP Chapter 2 and Appendix II provide additional information about how PM levels in the South Coast Air Basin compare to the federal and state standards.

There have been several reviews of the health effects of ambient particulate matter (American Thoracic Society 1996a; Brunekreef et al. 2002; U.S. EPA 2004; U.S. EPA 2009; Brook et al. 2010). In addition, the California Air Resources Board (CARB) and the Office of Environmental Health and Hazard Assessment (OEHHA) have reviewed the adequacy of the California Air Quality Standards for Particulate Matter (California Air Resources Board and Office of Environmental Health Hazard Assessment 2002).

The major types of health effects associated with particulate matter include:

- Increased mortality
- Exacerbation of respiratory disease and of cardiovascular disease as evidenced by increases in:
    - Respiratory symptoms, exacerbation of asthma
    - Cardiovascular symptoms, non-fatal myocardial infarction
    - Hospital admissions and emergency room visits

- Physician office visits
- School absences

- Adverse birth outcomes
- Effects on lung function
- Changes in lung morphology

In the 2009 Integrated Science Assessment for Particulate Matter, the U.S. EPA presented conclusions on the particulate matter causal determination of several health effects based on an updated review of scientific studies (U.S. EPA 2009). The conclusions are presented separately for particulates in the size range of 2.5 to 10 micrometers (µm) in aerodynamic diameter (PM10-2.5, often referred to as the coarse fraction) and those ≤2.5 µm (PM2.5, or fine particles). Of note, there is currently no federal or California standard for PM10-2.5, although a PM10 standard remains in effect. These conclusions are depicted in the following tables.

**TABLE I-4**

Summary of U.S. EPA's Causal Determinations for Health Effects of PM10-2.5

| **SHORT-TERM EXPOSURES** | |
|---|---|
| **Health Outcome** | **Causality Determination** |
| Cardiovascular effects | Suggestive of a causal relationship |
| Respiratory effects | Suggestive of a causal relationship |
| Mortality | Suggestive of a causal relationship |
| **LONG-TERM EXPOSURES** | |
| **Health Outcome** | **Causality Determination** |
| Cardiovascular effects | Inadequate to infer a causal relationship |
| Respiratory effects | Inadequate to infer a causal relationship |
| Mortality | Inadequate to infer a causal relationship |
| Reproductive and developmental | Inadequate to infer a causal relationship |

(From (U.S. EPA 2009) Table 2-3 and Section 2.3.4)

There are also differences in the composition and sources of particles in the different size ranges that may have implications for health effects. The particles in the coarse fraction (PM10-2.5) are mostly produced by mechanical processes. These include automobile tire wear, industrial processes such as cutting and grinding, and resuspension of particles from the ground or road surfaces by wind and human activities, such as agricultural, mining, and construction operations, which may be particularly important in rural areas.

**TABLE I-5**

Summary of U.S. EPA's Causal Determinations for Health Effects of PM2.5

| **SHORT-TERM EXPOSURES** | |
|---|---|
| **Health Outcome** | **Causality Determination** |
| Cardiovascular effects | Causal relationship |
| Respiratory effects | Likely to be a causal relationship |
| Central nervous system | Inadequate to infer a causal relationship |
| Mortality | Causal relationship |
| **LONG-TERM EXPOSURES** | |
| **Health Outcome** | **Causality Determination** |
| Cardiovascular effects | Causal relationship |
| Respiratory effects | Likely to be a causal relationship |
| Mortality | Causal relationship |
| Reproductive and developmental | Suggestive of a causal relationship |
| Cancer, Mutagenicity, Genotoxicity | Suggestive of a causal relationship |

(From (U.S. EPA 2009) Tables 2-1 and 2-2)

In contrast, particles smaller than 2.5 μm are mostly derived from combustion sources, such as automobiles, trucks, and other vehicle exhaust, as well as from stationary combustion sources. The particles are either directly emitted or are formed in the atmosphere from gases that are emitted. Components from material in the earth's crust, such as dust, are also present, with the amount varying in different locations.

Attention to another range of very small particles has been increasing over the last several years. These are generally referred to as "ultrafine" particles, with diameters of 0.1 μm or less. Ultrafine particles are mainly composed of particles from fresh emissions of combustion sources, but are also formed in the atmosphere by condensation of vapors that are emitted or by chemical or photochemical reactions with other contaminants in the air.

Ultrafine particles have relatively short half-lives (minutes to hours) and the particle size rapidly grows through condensation and coagulation processes into particles within the PM2.5 size range. Ultrafine particles are garnering interest since a limited number of epidemiological and some laboratory studies, though not all, indicate that their toxicity may be higher on a mass basis than larger particles. There is also evidence that these small particles, or toxic components carried on their surface, can translocate from the lung to the blood and to other organs of the body, or through the olfactory bulb into the brain (U.S. EPA 2009). Currently, there are no federal or California

standards for ultrafine particles. As such, the health effects of ultrafine particles is discussed in a separate section following the discussion of PM10 and PM2.5.

The current federal and California standards for particulate matter are listed in Table I-6.

**TABLE I-6**

Ambient Air Quality Standards for Particulate Matter

| STANDARD | FEDERAL | CALIFORNIA |
|---|---|---|
| PM10 24-Hour average | 150 μg/m$^3$ | 50 μg/m$^3$ |
| PM10 Annual Average | -- | 20 μg/m$^3$ |
| PM2.5 24-Hour Average | 35 μg/m$^3$ | -- |
| PM2.5 Annual Average | 12 μg/m$^3$ | 12 μg/m$^3$ |

## Short-Term Exposure Effects of PM

Epidemiological studies have provided evidence for most of the effects listed above. In an extensive report focusing on the history of particulate matter research, the U.S. EPA reviewed several well-conducted studies that reported an association between mortality and increased daily or several-day-average concentrations of PM10 (U.S. EPA 2004). In addition, excess mortality and morbidity are reported in many studies involving communities across the U.S. as well as in Europe, Asia, and South America (U.S. EPA 2009; Lu et al. 2015; Shah et al. 2015; Cai et al. 2016), although there are some studies that show no effect for the specific exposures and outcomes evaluated (Milojevic et al. 2014; Wang et al. 2015; Zu et al. 2016). While there were some studies conducted in California, the importance of assessing results from studies from many different locations around the world should not be understated. The repeatability and consistency of results across many locations strengthens the weight of evidence in the determination of causality.

A review and analysis of epidemiological literature for acute adverse effects of particulate matter was published by the American Thoracic Society in 1996, where several adverse effects were listed as associated with daily PM10 exposures (Table I-7). The review also reported that individuals who are elderly or have preexisting lung or heart disease are more susceptible than others to the adverse effects of PM10 (American Thoracic Society 1996a).

**TABLE I-7**

Combined Effect Estimates of Daily Mean Particulate Pollution (PM10)

| | **% CHANGE IN HEALTH INDICATOR PER EACH 10 µg/m$^3$ INCREASE IN PM10** |
|---|---|
| Increase in Daily Mortality | |
| Total deaths | 1.0 |
| Respiratory deaths | 3.4 |
| Cardiovascular deaths | 1.4 |
| Increase in Hospital Usage (all respiratory diagnoses) | |
| Admissions | 1.4 |
| Emergency department visits | 0.9 |
| Exacerbation of Asthma | |
| Asthmatic attacks | 3.0 |
| Bronchodilator use | 12.2 |
| Emergency department visits* | 3.4 |
| Hospital admissions | 1.9 |
| Increase in Respiratory Symptom Reports | |
| Lower respiratory | 3.0 |
| Upper respiratory | 0.7 |
| Cough | 2.5 |
| Decrease in Lung Function | |
| Forced expiratory volume | 0.15 |
| Peak expiratory flow | 0.08 |

* One study only
(From: (American Thoracic Society 1996a))

Since then, many more recent studies have provided additional evidence that excess mortality and morbidity are associated with short-term exposure to PM10 and PM2.5 (Pope et al. 2006).

Estimates of mortality effects from studies of PM10 exposures range from 0.3 to 1.7 percent increase for a 10 µg/m$^3$ increase in PM10 levels. The National Morbidity, Mortality, and Air Pollution Study (NMMAPS), a study of 20 of the largest U.S. cities, determined a combined risk estimate of about a 0.5 percent increase in total mortality for a 10 µg/m$^3$ increase in PM10 (Samet et al. 2000a). This

study also analyzed the effects of gaseous co-pollutants. When the gaseous pollutants were included in the analyses, the estimated associations between PM10 and mortality remained, though they were somewhat reduced. These results suggest that the effects reported in the study are likely due to the particulate exposures; they cannot readily be explained by coexisting weather stresses or other pollutants.

An expansion of the NMMAPS study to 90 U.S. cities also reported association with PM10 levels and mortality (Samet et al. 2000b; Health Effects Institute 2003). After the study was published, it was discovered that some of the study analyses had been performed with incorrect default values. The strong positive association between acute PM10 exposure and mortality remained, both upon reanalysis using revised software and using alternative modeling approaches (Dominici et al. 2002; Health Effects Institute 2003).

Studies of short-term exposures to PM2.5 have also found associations with increases in mortality. The NMMAPS study conducted a national analysis of PM2.5 mortality association for 1999-2000. The risk estimates were 0.29 percent for all-cause mortality and 0.38 percent for cardio-respiratory mortality (Dominici et al. 2007). In its 2009 review, U.S. EPA determined that estimates for PM2.5 generally are in the range of 0.29 to 1.21 percent increase in total deaths per 10 $\mu g/m^3$ increase in 24-hour PM2.5 levels. The estimates for cardiovascular related mortality range from 0.03 to 1.03 percent per 10 $\mu g/m^3$, and for respiratory mortality estimates range from 1.01 to 2.2 percent per 10 $\mu g/m^3$ 24-hour PM2.5 (U.S. EPA 2009). Figure I-4 shows a summary of U.S. and Canadian studies of mortality and short-term PM2.5 exposures, which shows that the most consistent positive associations were seen with cardiovascular and all-cause deaths. Positive associations for respiratory deaths were also seen in several of these studies, although the precision of the estimates for respiratory deaths was lower relative to that of all-cause or cardiovascular deaths.

Several studies have attempted to assess the relative importance of particles smaller than 2.5 µm and those between 2.5 µm and 10 µm (PM10-2.5). While some studies report that PM2.5 levels are better predictors of mortality effects, others suggest that PM10-2.5 is also important. Most of the studies found higher mortality associated with PM2.5 levels than with PM10-2.5. For example, a study of six cities in the U.S. found that particulate matter less than 2.5 µm was associated with increased mortality, but that the larger particles were not. In the U.S. EPA review (U.S. EPA 2009), several studies were presented that found associations of PM10-2.5 and mortality. Some of the studies showed differences by region of the U.S. In one study of 47 U.S. cities that had both PM2.5 and PM10 data available to calculate PM10-2.5 as a difference, overall, the study found a significant association between the computed PM10-2.5 and all-cause, cardiovascular, and respiratory mortality. The study also reported differences by season and climate area (Zanobetti et al. 2009).

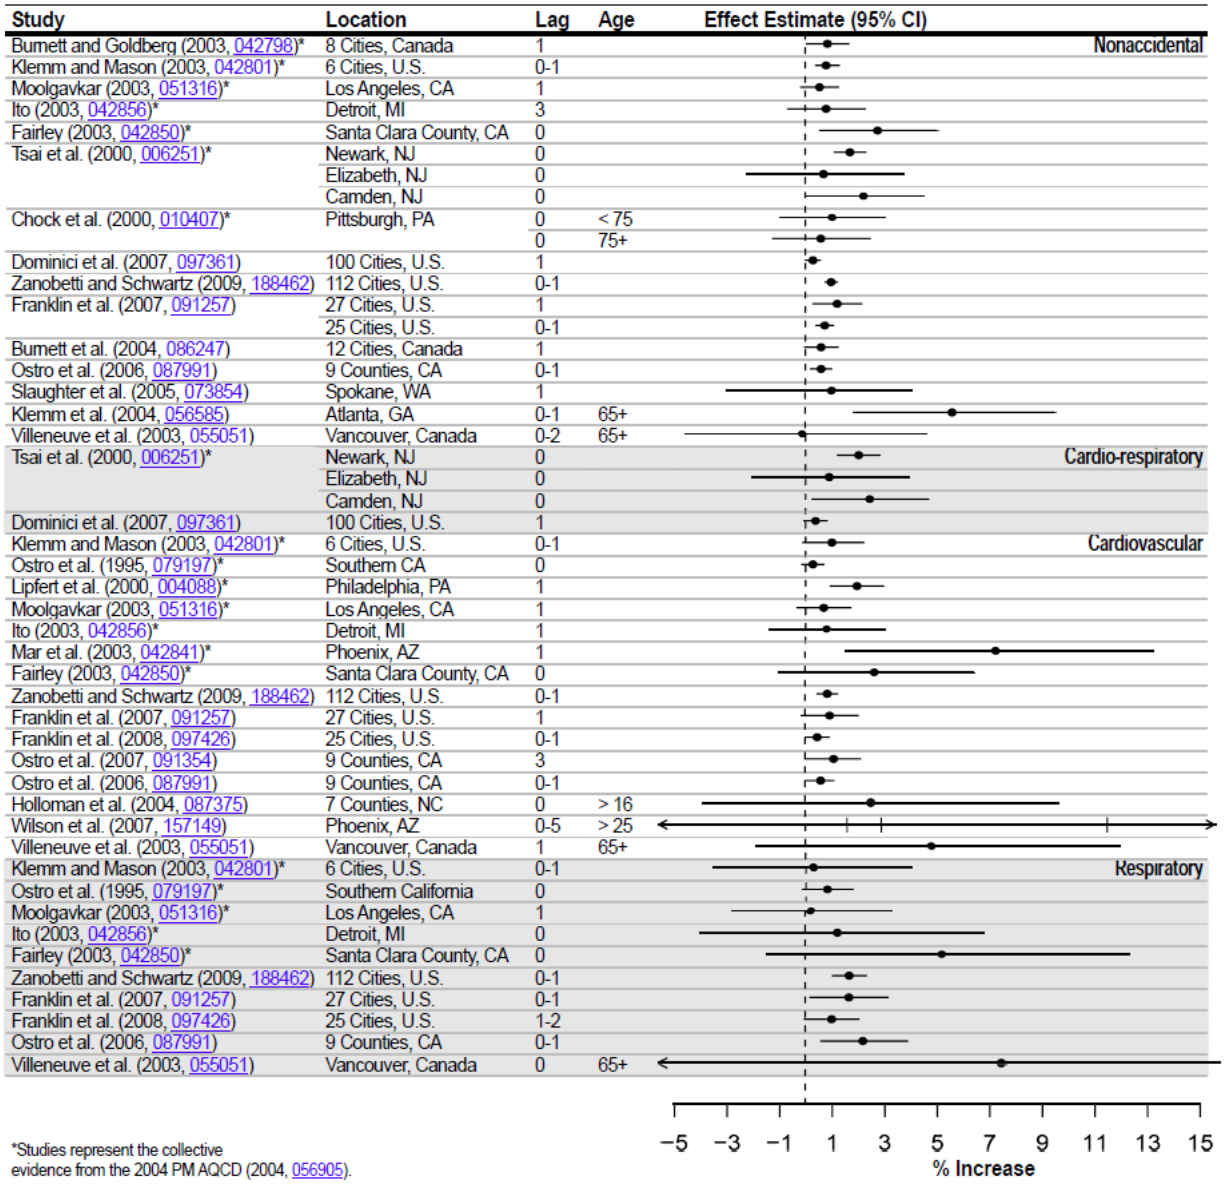


**FIGURE I-4**

Summary of Non-accidental All-Cause and Cause-Specific Mortality per 10 µg/m3 Increase in PM2.5 Short-term Exposures, for U.S.- and Canadian-based studies (from (U.S. EPA 2009), Figure 6-27). "Lag" indicates the number of days between the exposure and the outcome assessed.

A major knowledge gap in understanding the relative importance of "fine" PM (PM2.5) and "coarse" PM (PM10-2.5) is the relative lack of direct measurements of PM10-2.5. Most estimates are made by subtracting PM2.5 from PM10 measured at co-located samplers, a process that is subject to errors that are inherent in the subtracting of one relatively large number from another. More research is needed to better assess the relative effects of coarse (PM10-2.5) fractions of particulate matter on mortality. A graph from the U.S. EPA review is included in the figure below to demonstrate ranges

of mortality findings associated with coarse particulates. Consistent positive associations are seen, particularly for cardiovascular and nonaccidental all-cause mortality, with varying degrees of precision across the different studies.

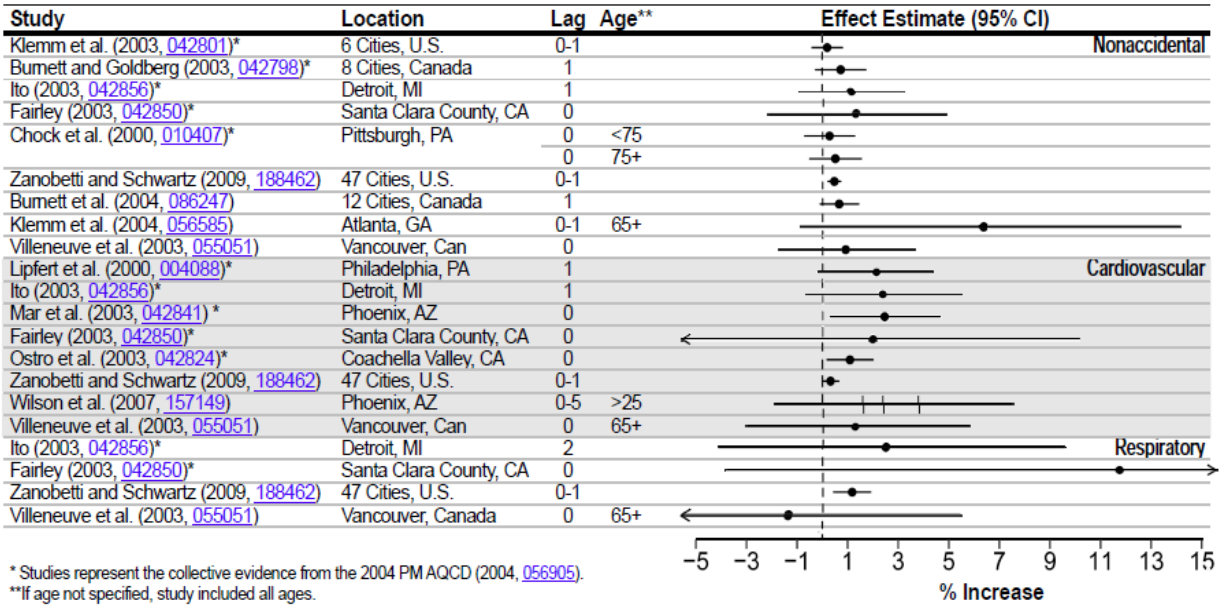

**FIGURE I-5**

Summary of Percent Increase in Total (Nonaccidental) and Cause-Specific Mortality Per 10 µg/m3 Increase in PM10-2.5 Short-term Exposure (from (U.S. EPA 2009), Figure 6-30). "Lag" indicates the number of days between the exposure and the outcome assessed.

A number of studies have evaluated the association between particulate matter exposure and indices of morbidity such as hospital admissions, emergency room visits or physician office visits for respiratory and cardiovascular diseases. The effect estimates for these various morbidities are generally higher than the estimates for mortality. Observed effects have been associated with PM10, PM2.5 and PM10-2.5.

In the NMMAPS study, hospital admissions for those 65 years or older were assessed in 14 U.S. cities. Several models were compared to estimate associations of hospital admissions for specific disease categories and short-term PM10 levels. Hospital admissions showed an increase ranging from 0.68 – 1.47 percent for cardiovascular diseases, a range of 1.46 – 2.88 percent increase for COPD, and a range of 1.31 – 2.86 percent increase for pneumonia per 10 µg/$m^3$ increase in $PM_{10}$ (Samet et al. 2000b). In the reanalysis of the study (Health Effects Institute 2003), it was found that when using different models, the pollution coefficients were generally lower. However, the authors note that most of the conclusions of associations with PM10 exposures and hospital admissions held. Two recent Southern California studies evaluated associations between short-term PM2.5 levels and asthma-related hospital or emergency admissions. One study, based in Orange County, reported

increased risk of asthma-related hospital encounters with increased ozone and PM2.5 in the warm seasons, and with CO, $NO_x$, and PM2.5 in the cool seasons (Delfino et al. 2014). The second study, conducted in Los Angeles County, reported monthly average PM2.5, CO, and $NO_2$ levels were positively associated with asthma hospitalization rates (Delamater et al. 2012).

Similarly, school absences, lost workdays, and restricted activity days have also been used in some studies as indirect indicators of acute respiratory conditions (Ostro 1987; Ostro 1990; Ransom et al. 1992; Gilliland et al. 2001; Park et al. 2002; Hales et al. 2016). These observations help support the hypotheses that particulate matter exposures increase inflammation in the respiratory tissues and may also increase susceptibility to infection (U.S. EPA 2009).

Some studies have reported that short-term particulate matter exposure is associated with changes in lung function (lung capacity and breathing volume); upper respiratory symptoms (hoarseness and sore throat); and lower respiratory symptoms (increased sputum, chest pain and wheeze). The severity of these effects is widely varied and is dependent on the population studied, such as adults or children with and without asthma. Sensitive individuals, such as those with asthma or pre-existing respiratory disease, may have increased or aggravated symptoms associated with short-term particulate matter exposures. Several studies have followed the number of medical visits associated with pollutant exposures. A range of increases from 1 to 4 percent for medical visits for respiratory illnesses was found corresponding to a 10 $\mu g/m^3$ change in PM10. A number of studies also looked at levels of PM2.5 or PM10-2.5. The findings suggest that both the fine and coarse fractions may have associations with some respiratory symptoms (U.S. EPA 2009). Among the newer health endpoints evaluated in recent studies of short-term effects of PM2.5 is stroke. One recent meta-analysis evaluated 16 studies of short-term PM2.5 exposures and estimated a 5 percent increased risk of stroke for each 10 $\mu g/m^3$ increase in PM2.5 (Shin et al. 2014).

The biological mechanisms by which particulate matter can produce health effects have been investigated in laboratory studies. Brook et al. (Brook et al. 2010) summarized three likely pathways by which PM exerts it effects on cardiovascular health outcomes: (1) PM can activate inflammatory pathways and cause systemic oxidative stress, leading to the production of pro-inflammatory cytokines; (2) PM can disrupt the autonomic nervous system leading to increased blood pressure, increased arrhythmic potential, and decreased heart rate variability; and (3) PM, particularly UFPs or particle constituents such as organic compounds and metals, can enter the bloodstream and cause increased constriction of the blood vessels and increased blood pressure. Each of these pathways may also lead to the formation of reactive oxygenated species (ROS, or free radicals) that can cause DNA oxidation and systemic inflammation. Inflammatory responses in the respiratory system in humans and animals can lead to inflammation in fat tissues and in the liver, which can lead to vascular dysfunction (e.g. atherosclerosis), changes in metabolic function (e.g. insulin resistance), and increased thrombotic potential (Brook et al. 2010). Several reviews discuss mechanistic studies in detail (Brunekreef et al. 2002; Brook et al. 2004; Brook et al. 2010). A study in cells using ambient air samples in communities near railyards in the South Coast Air Basin found that the PM2.5 phase of ambient air pollution contains prooxidant components, primarily metals, which can trigger an

inflammatory response in the cells (Eiguren-Fernandez et al. 2015; Cho 2016). The same study noted that vapor phase pollutants, which contain most of the electrophiles, may trigger a different biological response in the cells, suppressing inflammatory responses and could result in a reduced ability to fight off infections.

Some studies have examined the health effects of short-term exposures to specific PM constituents and sources (Lippmann 2014; Basagana et al. 2015; Atkinson et al. 2016). While there is some evidence suggesting possible links with specific constituents or sources, such as diesel exhaust, sulfates (related to coal combustion), and certain metals, the U.S. EPA determined that there were not enough studies evaluating short-term constituent- or source-specific exposures at the time of the previous Integrated Science Assessment to be able to make a causal determination (U.S. EPA 2009).

## Long-Term Exposure Effects of PM

Numerous studies have evaluated the health effects of long-term (months to years) or chronic exposure to particulate matter, with the largest number of studies examining cardiovascular and respiratory health endpoints, as well as mortality. Other health outcomes that have been linked to long-term PM exposures include reproductive effects, cancer outcomes, and, more recently, metabolic syndromes and neurological effects. The U.S. EPA 2009 Integrated Science Assessment for Particulate Matter (ISA for PM) concluded that sufficient evidence is available to support a causal determination for long-term PM2.5 exposures and cardiovascular and mortality effects, and a likely causal relationship for respiratory effects. A summary of the evidence is presented below, focusing on the long-term effects of PM2.5 exposures.

Many research studies, including some recent studies, have evaluated the health effects of exposures to air pollutants from traffic emissions using a variety of exposure modeling techniques (Hart et al. 2014; Harris et al. 2015; Kingsley et al. 2015; Rice et al. 2015; Danysh et al. 2016). In general, these articles are not discussed in detail here, because of the difficulty in attributing the observed effects to a specific pollutant or combination of pollutants. However, these studies do provide supporting evidence that air pollutants from traffic exhaust are linked to health effects in humans.

**Long-Term Particulate Matter Exposures and Mortality**

Since the initial promulgation by U.S. EPA of the National Ambient Air Quality Standards for PM2.5, controversy has remained over the association of mortality and exposures to PM2.5. Several large, prospective cohort studies conducted in the U.S. and Canada were used to evaluate long-term PM exposures and mortality, including total number of deaths and deaths due to specific causes. The strongest and most consistent evidence of long-term PM2.5 effects are for cardiovascular mortality, particularly ischemic heart disease, and there is evidence that ambient PM2.5 exposure is associated with and lung cancer mortality (Dominici et al. 2006; Krewski et al. 2009; Jerrett et al. 2013; International Agency for Research on Cancer 2015). Below is a brief discussion of the evidence linking

PM and mortality reviewed in the U.S. EPA 2009 ISA along with more recently published studies, with a focus on large prospective studies and studies conducted in California or Southern California.

In the assessment of evidence for mortality outcomes linked to long-term PM exposures, the 2009 U.S. EPA ISA for PM reviewed 15 studies evaluating PM2.5 exposures, 2 studies evaluating PM10-2.5 exposures, and 5 studies evaluating PM10 exposure. The majority of these studies were conducted in the United States, and 3 of the studies of PM2.5 exposures were conducted in California or Southern California. Previous reviews conducted in 1996 and 2004 by U.S. EPA assessed evidence primarily from large prospective cohort studies, such as the Harvard Six Cities Study (Dockery et al. 1993), the American Cancer Society (ACS) Study (Pope et al. 1995; Pope et al. 2002), and the Seventh-Day Adventist Health Air Pollution (AHSMOG) Study (Abbey et al. 1999; McDonnell et al. 2000). The U.S. EPA 2004 PM Air Quality Criteria Document concluded that there was strong evidence linking long-term PM2.5 exposures to all-cause and cardiopulmonary mortality, but not enough evidence for a link with PM10-2.5. The 2009 U.S. EPA ISA for PM similarly concluded that the newer studies provide additional evidence to support a causal determination for long-term PM2.5 exposures and increased mortality risk, but there continues to be insufficient evidence supporting such a link with particles in the coarse fraction. This most recent U.S. EPA review evaluated the additional updated analyses of the previously-established large cohort studies (Harvard Six Cities, ACS, AHSMOG, and Veterans studies), and noted two new major cohorts that provide further evidence linking PM2.5 and mortality: the Women's Health Initiative (WHI) study (Miller et al. 2007) and the Medicare Cohort Studies (Eftim et al. 2008).

The American Cancer Society Cancer Prevention Study II (ACS) is a large, prospective national cohort study of over one million participants in the U.S. recruited from all 50 states, the District of Columbia and Puerto Rico, and followed over many years. Over the past two decades, studies using data from this cohort have reported associations for PM2.5 for both total mortality and cardiorespiratory mortality (Pope et al. 1995; Krewski 2000; Pope et al. 2002; Jerrett et al. 2005; Krewski et al. 2009; Jerrett et al. 2013; Pope et al. 2015). The survey included several measures of smoking and exposure to second-hand smoke, which were included in the statistical models to account for the potential confounding effects of smoking. The original study reported that long-term exposures to fine particulate air pollution were associated with cardiopulmonary and lung cancer mortality (Pope et al. 1995). In a reanalysis of the data (Krewski 2000), mortality rates and PM2.5 levels were analyzed for 50 metropolitan areas of the U.S. Average (median) levels from monitors in each metropolitan area were used to estimate PM2.5 exposures. At these levels of aggregation, regional differences in the association of PM2.5 and mortality were noted, with higher mortality risks in the Northeast and Midwest, and more moderate mortality risks in the West.

Another follow-up study of the American Cancer Society cohort confirmed and extended the findings in the initial study. The researchers estimated that, on average, a 10 $\mu g/m^3$ increase in fine particulates was associated with approximately a 4 percent increase in total mortality, a 6 percent increase in cardiopulmonary mortality, and an 8 percent increase in risk of lung cancer mortality (Pope et al. 2002). In an additional reanalysis and extension of the American Cancer Society cohort

from 1982 to 2000 (Krewski et al. 2009), and including additional metropolitan areas for the most recent years, effects estimates on mortality were similar, though somewhat higher than those reported previously. The extended analyses included an additional 11 years of cohort follow-up compared to the original study. The authors reported positive and significant association between a 10 $\mu g/m^3$ change in PM2.5 level and all-cause, cardiopulmonary disease, and ischemic heart disease deaths. Mortality from ischemic heart disease was associated with the largest risk estimates.

Subsets of the ACS study data have also been evaluated to estimate effects in California and the metropolitan Los Angeles area (Jerrett et al. 2005; Jerrett et al. 2013). These results are discussed further below, along with results of other California or Southern California-based studies.

The Harvard Six Cities Study is a large prospective cohort study of adults in six U.S. cities, and began in the year 1974. The original analysis and a subsequent reanalysis found positive associations between particulate matter and sulfate in relation to mortality, after controlling for potential confounding factors such as smoking status, sex, age, and other factors (Dockery et al. 1993)(Krewski 2000). An extension of the Harvard Six Cities Cohort confirmed the association of mortality with PM2.5 levels, and reported that improvements in PM2.5 levels over the study time period were associated with decreased mortality risk (Laden et al. 2006). An update to this study covering the years 1974 to 2009 found a linear relationship of PM2.5 levels and mortality from all causes, cardiovascular causes, and from lung cancer (Lepeule et al. 2012). According to the authors, the PM2.5 levels decreased over time, but no evidence of a threshold for these effects was found.

AHSMOG is a cohort study of non-Hispanic white Seventh-day Adventists in California, with participants followed starting from the late 1970's. Confounding due to smoking in this study is unlikely due to very low smoking rates in this population; however, the study is limited in its the ability to apply the findings to other population groups. The study has linked long-term PM10 exposures and other air pollutants to deaths from all natural causes and deaths due to lung cancer among males (Abbey et al. 1999), although the authors concluded that these associations were likely due to exposures to fine particles rather than the coarse fraction of PM10 (McDonnell et al. 2000). In a re-analysis of the data, the study found PM2.5 was associated with an increased risk of coronary heart disease mortality among females but not among males (Chen et al. 2005). Similar associations among females only were found for coarse particles and PM10.

Other cohort studies include an analysis of mortality and PM2.5 exposures in a Medicare enrollee population. Zeger et al. (Zeger et al. 2008) assembled a Medicare enrollee cohort by including all Medicare enrollees residing in over 4,500 zip codes with centroids within six miles of a PM2.5 monitor. PM2.5 data was obtained from the monitoring stations, and mean annual levels were calculated for the zip codes within six miles of each monitor. The authors found that long-term exposures to PM2.5 was associated with all-cause mortality for the eastern and central portions of the U.S., and these mortality risk estimates were similar to those previously published in the Six Cities Study and the American Cancer Society cohorts. The authors reported that there were no statistically significant associations between zip code levels of PM2.5 and all-cause mortality rates in the western

region of the U.S. This finding was attributed largely to the higher PM2.5 levels in Los Angeles area counties compared to other western urban areas, but there were not higher mortality rates in the Los Angeles area counties. Several factors could explain this finding. The authors note that the toxicity of the PM mixture may differ by location, e.g. with higher PM2.5 sulfate levels in the eastern region. In addition, the use of ecological data rather than individual-level data for exposure assessment and some confounding factors, and the assessment of all-cause mortality rather than cause-specific mortality may have impacted the results of this study. For example, the authors used county-level COPD risk as an estimate of smoking prevalence, because individual-level measures of smoking were not available. The authors further reported that they found no associations of PM2.5 with all-cause mortality in persons aged 85 years or higher, which may reflect other competing causes of death in this age group not related to air pollution exposures.

The Women's Health Initiative (WHI) Study is a nationwide cohort of post-menopausal women in 36 metropolitan areas of the U.S. who had no history of cardiovascular disease (Miller et al. 2007). The study found that long-term exposure to PM2.5 was associated with a 24 percent increased risk of cardiovascular disease and a 76 percent increased risk of death from cardiovascular causes for each additional 10 $\mu g/m^3$ of PM2.5; these relative risk estimates are larger than those reported in the ACS and Six Cities Studies, but differences in health status, PM composition, and overall mortality risk in these distinct populations may account for such differences in the effect estimates. The WHI study results accounted for the potential confounding effects of several factors, including medical risk factors for cardiovascular disease, measures of socioeconomic status, and cigarette smoking. Another large cohort study focusing on women is the Nurses' Health Study, which found that PM10 exposures were associated with all-cause mortality and fatal coronary heart disease, with exposures 24 months prior to death having the strongest effects (Puett et al. 2008). These results accounted for several potential confounders, including smoking status and history, medical risk factors for cardiovascular disease, and area-level measures of socioeconomic status. This study did not evaluate PM2.5 exposures.

A recent pooled analysis of 22 European cohorts and including over 350,000 participants evaluated long-term air pollution exposures and exposure to PM2.5, PM10, and nitrogen oxides, using land use regression models to estimate exposures (Beelen et al. 2014). The authors reported that a 5 $\mu g/m^3$ increase in PM2.5 was associated with approximately a 7 percent increase in mortality from natural causes.

Estimates of mortality risks associated with long-term PM2.5 levels from recent studies are shown in the figure below. The recent evidence is consistent with past studies, showing increased risk of premature death with increased PM2.5 exposures. For cause-specific mortality, consistent positive associations are seen with cardiovascular mortality endpoints and with lung cancer deaths, but weak associations are seen with overall respiratory mortality.

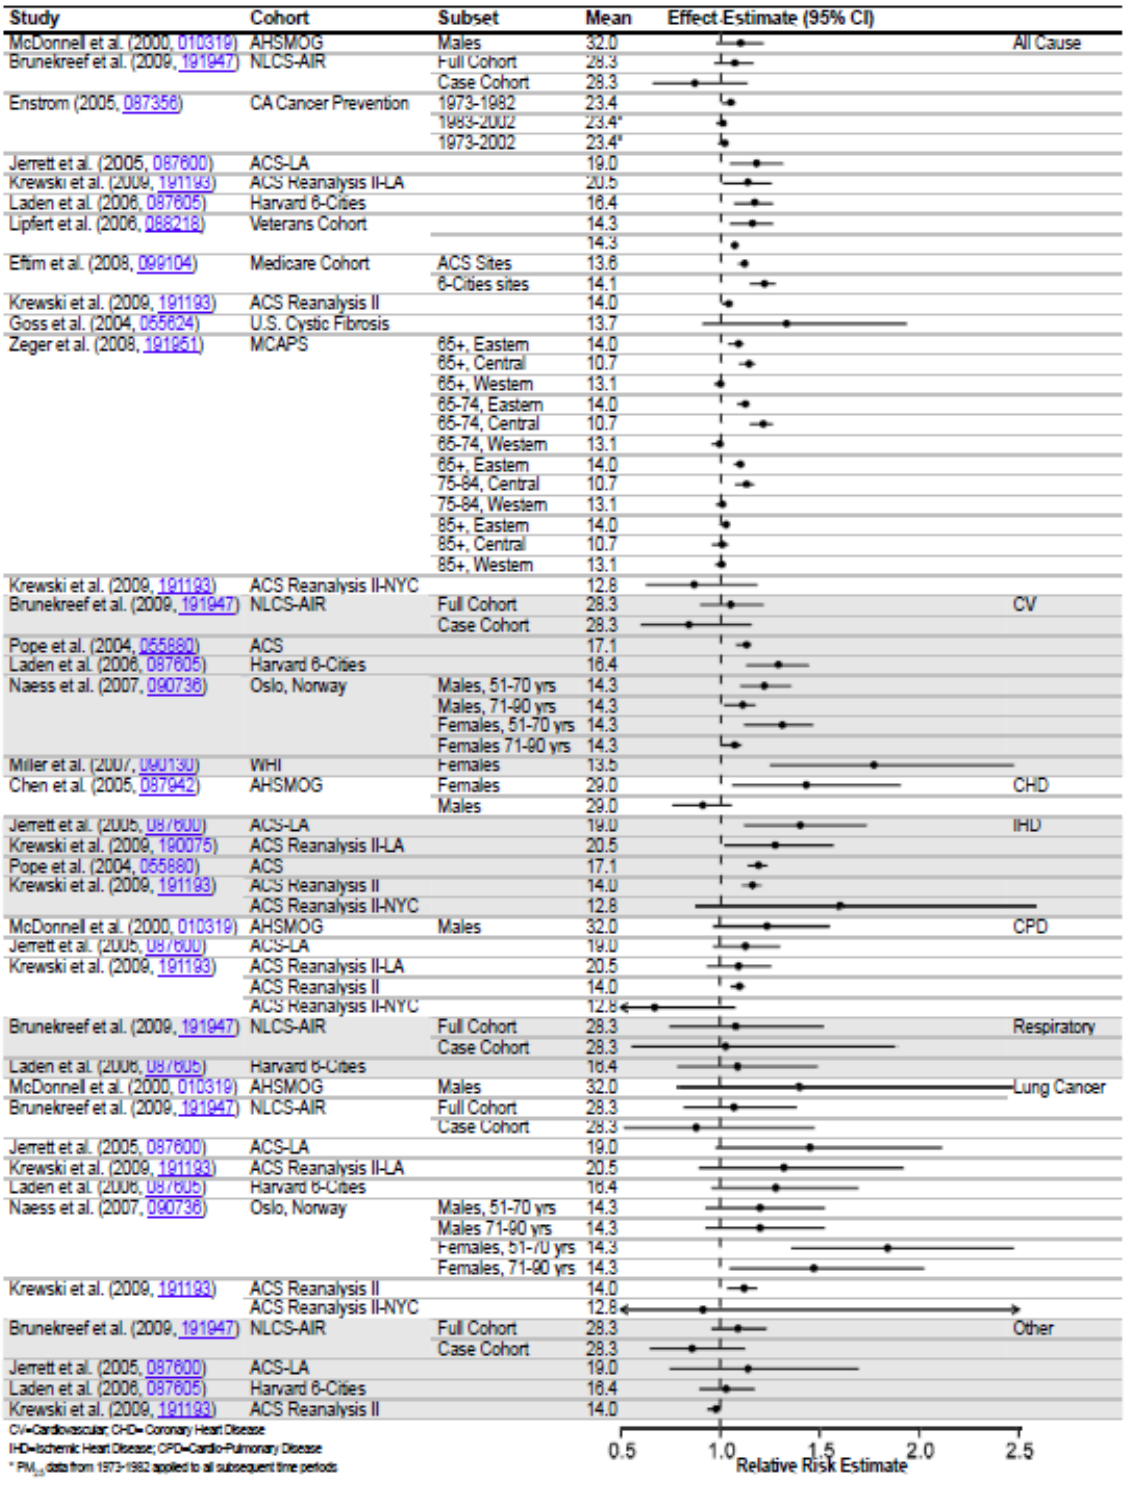

**FIGURE I-6**

Mortality Risk Estimates, Long-Term Exposure to PM2.5 in Cohort Studies (From (U.S. EPA 2009), Figure 7-7). "Mean"=mean PM2.5 exposure estimates in the study. CV=cardiovascular, CHD=coronary heart disease, IHD=ischemic heart disease, CPD=cardiopulmonary disease.

In addition to the AHSMOG study, other analyses of mortality and PM2.5 levels specific to California have also been reported, including an analysis of a subset of the ACS II data. An analysis of the ACS II study (Jerrett et al. 2013) followed individuals in California from that cohort recruited starting in 1982, with follow-up to 2000. PM2.5 levels at subject residences were estimated using land use regression models. Over 40 potential confounders were included in the statistical models, and included individual-level variables (e.g. smoking, diet, demographic, and other factors) and neighborhood-level variables (e.g. unemployment, poverty, income inequality, racial composition). The authors noted that mortality rates differ in urban areas compared to non-urban areas, and adjusted for urban/rural status in the model to estimate pollution effects on mortality. All-cause mortality, mortality from cardiovascular disease, and mortality from ischemic heart disease were positively associated with PM2.5 levels in single-pollutant models. These associations with PM2.5 remained after additional adjustment for ozone levels. Because of moderate correlations across pollutants, it may not be possible to draw conclusions about which pollutant(s) in this mixture cause the observed effects. Positive associations of all-cause and certain cause-specific mortality rates with estimated $NO_2$ and ozone levels were also found. The authors concluded that these results indicate that several components of combustion-related pollutant mixture are associated with mortality.

A study analyzed data from the California Teachers Study cohort of over 100,000 active and retired school teachers recruited in 1995, and followed through 2005 (Lipsett et al. 2011). Pollutant exposures at the subject residences were estimated using data from ambient monitors, and extrapolated using a distance-weighted method. The authors reported that a 10 $\mu g/m^3$ increase in PM2.5 was associated with a 20 percent risk increase in mortality from ischemic heart disease, but no associations were found with all-cause, cardiovascular, or lung cancer mortality. A 10 $\mu g/m^3$ increase in PM10 was associated with increased risk of ischemic heart disease and incident stroke. These results accounted for several individual- and neighborhood-level factors, including smoking, second-hand smoke, medical risk factors for cardiovascular disease, and indicators of socioeconomic status.

A more recent analysis of the California Teachers Study cohort from 2001 through 2007 estimated the association between particulate pollutants and all-cause, cardiovascular, ischemic heart disease, and respiratory mortality (Ostro et al. 2015). Exposure data at the residential level were estimated by a chemical transport model that computed pollutant concentrations from over 900 sources in California. Besides particle mass, monthly concentrations of 11 species and 8 sources or primary particles were generated at 4-km grids. The results were reported as finding statistically significant associations of ischemic heart disease mortality with PM2.5 mass and several of its components (Figure I-7). The study also found significant positive associations between ischemic heart disease mortality and ultrafine particle mass as well as several ultrafine particulate components including elemental carbon, organic carbon, copper, metals, meat cooking, and mobile source derived components. An earlier study using data from the same cohort had used monitoring data to estimate mortality risk, and similarly reported increased risk of all-cause, cardiopulmonary, and ischemic heart disease mortality with higher exposures to PM2.5 mass. This study also reported increased ischemic heart disease risk with higher exposures to PM2.5 constituents such as organic carbon, sulfates, and

nitrates (Ostro et al. 2010). Both studies adjusted for several individual- and neighborhood-level covariates, including smoking status and indicators of socioeconomic status.

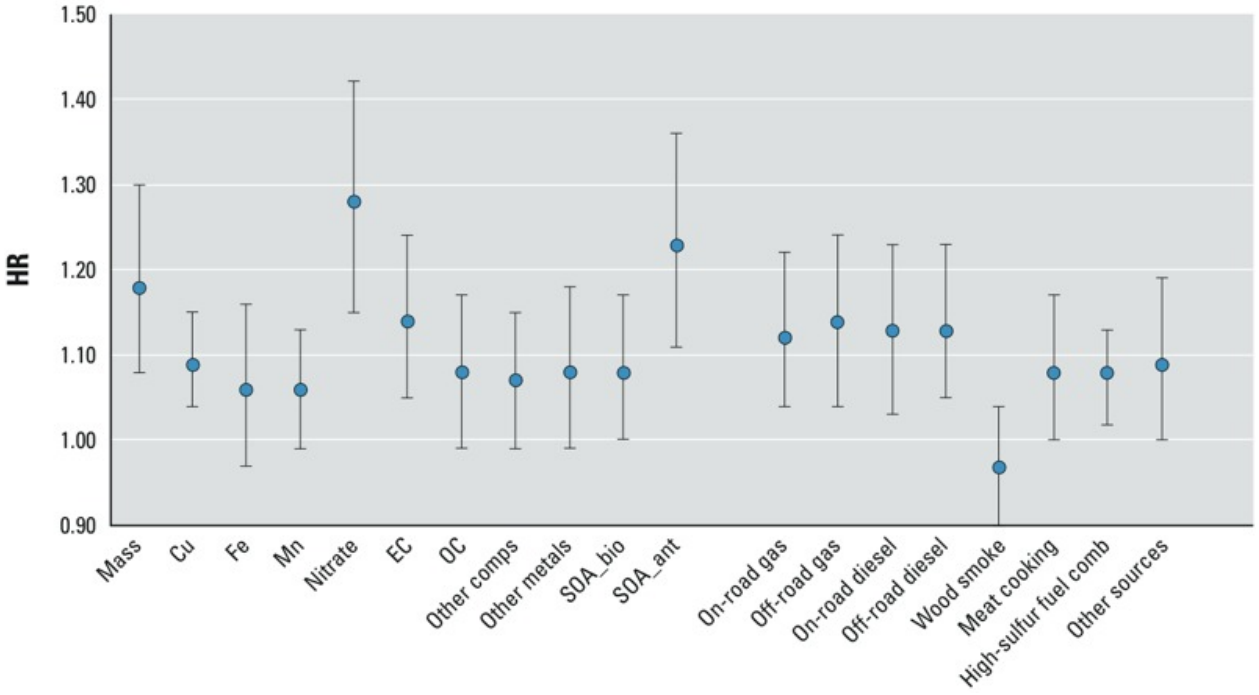

**FIGURE I-7**

Association of PM2.5 constituents and sources with Ischemic Heart Disease mortality (Hazard Ratios and 95 percent Confidence Intervals) using interquartile range. Abbreviations: comb = combustion; comps = components; SOA_bio= secondary organic aerosols from biogenic sources (derived from long-chain alkanes, xylenes, toluenes, and benzene and their oligomers); SOA_ant=secondary organic aerosols from biogenic sources (derived from isoprenes, monoterpenes, and sesiquiterpenes and their oligomers). (From (Ostro et al. 2015))

A cohort of elderly individuals (average age of 65 years in 1973) recruited from 11 California counties was followed over several years (Enstrom 2005). A positive association for long-term PM2.5 exposure with all-cause deaths was reported from 1973–1982. However, no significant association was found in the later time period of 1983–2002. PM2.5 levels were obtained from measurements made during 1979- 1983 by the EPA as part of the Inhalable Particle Monitoring Network and the cohort was confined to those participants in the American Cancer Society Cancer Prevention Study I who were living in the 11 counties that had one of the monitors. Pollutant levels were estimated using data from these monitors and averaged over each county, which may lead to exposure misclassification and bias toward finding no effect. The study adjusted for several potential confounding factors, including demographic factors, smoking, body mass index, and other factors.

The California Air Resources Board recently conducted a cross-sectional study of long-term PM2.5 exposures in rural and urban areas within California, using ambient monitoring data from 116

stations in the monitoring network, and calculating zip code-level exposure estimates (Garcia et al. 2016). The study observed larger effect sizes for increased PM2.5-related mortality risk in rural compared to urban areas from all causes, cardiovascular disease and cardiopulmonary disease. In urban areas, the study found PM2.5 exposures to be associated with increased risk of cardiovascular disease, ischemic heart disease, and cardiopulmonary disease; however, for all-cause non-accidental mortality risk, only an exposure model restricted to people living within 10 km of a monitoring station in urban areas showed an association with PM2.5. This study did not control for the potential confounding effects of smoking.

A recent study analyzed data from the National Institutes of Health AARP Diet and Health cohort, including about 160,000 participants in California (Thurston et al. 2016). Census tract-level PM2.5 exposures were estimated based on land use regression models. For the California cohort, PM2.5 levels were associated with an approximately 10 percent increase in cardiovascular disease mortality risk for each additional 10 $\mu g/m^3$ of PM2.5. A small but positive effect estimate was found for all-cause mortality in California, and no association was found for respiratory mortality in the California cohort, although the estimates indicated uncertainty in the magnitude and direction of these effects. This study adjusted for several potential confounders, including demographic factors, smoking, and indicators of socioeconomic status.

A few studies have focused on particulate matter exposure and health effects in residents of Southern California. Two analyses of the American Cancer Society II cohort, for example, focused specifically on the Los Angeles Metropolitan area using methods to estimate exposures on a finer geographical scale than previous studies that used geographic scales at the county or metropolitan area. Improved exposure estimation methods reduce potential bias from exposure misclassification. Using data from monitoring stations in the Los Angeles area, one study applied interpolation methods (Jerrett et al. 2005) and another applied land use regression techniques (Krewski et al. 2009) to estimate PM2.5 exposures to the study participants. Significant associations of PM2.5 with mortality from all causes and cardiopulmonary disease were reported, with the magnitude of risks being higher than those from the national studies of the American Cancer Society II cohort. Such improved exposure estimation techniques can reduce misclassification bias in epidemiological studies. It should be noted that various analyses were presented in these as well as other studies to estimate the influence of various individual-level and ecologic variables that might also be related to health effects risks. Including such variables helps control for potential confounding, but generally reduces the estimated association between PM2.5 and all-cause mortality. It may be illustrative to describe some of the estimates from the various calculations as presented by the authors of the Los Angeles area cohort (Krewski et al. 2009). In the descriptions in Table I-9, HR refers to the "hazard ratio" expressed for a 10 $\mu g/m^3$ change in PM2.5 exposure, followed by the 95 percent Confidence Interval. For example, if the hazard ratio is 2, the risk would be twice as high; and, conversely if the hazard ratio is 0.5, the risk would be one-half of that of the reference group. Several of the analyses results follow as excerpted from Krewski, 2009. Table I-8 includes PM2.5, plus various additional individual and ecological variables. Similar effects of covariate adjustment were seen for hazard ratios for

mortality from ischemic heart disease, although effect estimates were stronger for ischemic heart disease mortality compared to those for all-cause mortality.

**TABLE I-8**

Influence of Adding Confounding Variables on All-Cause Mortality

| VARIABLE INCLUDED | HAZARD RATIO per 10 µg/m$^3$ change in PM2.5 exposure |
|---|---|
| PM2.5 alone (stratified for age, sex, and race) | 1.197 (95% CI, 1.082–1.325); |
| PM2.5 with 44 individual-level covariates* | 1.143 (95% CI, 1.033–1.266) |
| PM2.5 with 44 individual-level covariates and the ecologic covariate of unemployment | 1.127 (95% CI, 1.015–1.252) |
| PM2.5 with 44 individual-level covariates and social factors extracted from the principal component analysis (which account for 81% of the total variance in the social variables) | 1.142 (95% CI, 1.026–1.272). |
| PM2.5 with 44 individual-level covariates and all ecologic covariates that were individually associated with mortality in bivariate models with PM2.5 exposure | 1.115 (95% CI, 1.003–1.239) |
| PM2.5 parsimonious model that included 44 individual-level covariates and ecologic confounder variables that both reduced the pollution coefficient and had associations with mortality | 1.126 (95% CI, 1.014–1.251) |

*These covariates included several measures of smoking.
(From Krewski, 2009)

U.S. EPA also released a Regulatory Impact Analysis (U.S. EPA 2012) which looked at the costs and benefits of alternate PM2.5 standard levels. As part of the analysis, U.S. EPA looked at California-specific studies regarding PM2.5 and mortality published in the scientific literature. The U.S. EPA analysis concluded "most of the cohort studies conducted in California report central effect estimates similar to the (nation-wide) all-cause mortality risk estimate we applied from Krewski et al. (2009) and Laden et al. (2006) albeit with wider confidence intervals. A couple of cohort studies conducted in California indicate higher risks than the risk estimates we applied." Thus, in U.S. EPA's judgment, the California-related studies provided estimates of mortality consistent with or higher than those from the national studies.

At the time of the 2009 ISA, few studies had examined long-term exposures to chemical-specific PM constituents or compared source-specific PM effects on mortality (U.S. EPA 2009). The 2009 ISA discussed only two studies that used direct measurements of PM constituents other than sulfates: the Veteran's Cohort (Lipfert et al. 2006) and the Netherlands Cohort Study (Beelen et al. 2008). These studies found mortality associations with long-term exposures to traffic pollutants, nitrates and sulfates.

With measures adopted to control emissions of air pollutants, ambient levels of PM2.5 have been decreasing. These reductions in particulate matter have been associated with reductions in mortality. For example, studies have found that increases in life expectancy are associated with reductions in air pollution levels, and that a portion of this increase can be attributed to reductions in PM2.5 exposures (Correia et al. 2013; Pope et al. 2013).

**Long-Term Particulate Matter Exposures and Cardiovascular Effects**

Studies of cardiovascular mortality provide the strongest evidence of an association between PM2.5 exposures and cardiovascular effects. The U.S. EPA 2009 ISA review determined that the evidence is sufficient to infer a causal relationship between long-term PM2.5 exposures and cardiovascular effects. In addition to the studies of mortality, other epidemiological studies provide additional evidence of sub-clinical and clinical cardiovascular effects, while toxicological studies suggest a plausible biological mechanism for such effects (Fanning et al. 2009; U.S. EPA 2009).

Epidemiological studies of subclinical effects typically have used subclinical measures of atherosclerosis, which is an underlying disease contributing to many clinical cardiovascular outcomes such as myocardial infarction, sudden cardiac death, stroke, and vascular aneurysms (U.S. EPA 2009). A study in Southern California residents used the carotid intima-media thickness (CIMT) as a measure of subclinical atherosclerosis (Kunzli et al. 2005). The subjects' residential areas were geocoded and a geospatial extrapolation of ambient monitoring data was used to assign annual mean concentrations of ambient PM2.5. The authors report results of an association between atherosclerosis and ambient air pollution as measured by PM2.5. The associations of PM2.5 and CIMT were strongest in women ≥ 60 years of age. The Multi-Ethnic Study of Atherosclerosis (MESA) is a population-based study of people living in 6 U.S. cities or counties, including Los Angeles, CA (Diez Roux et al. 2008). The MESA study reported that 20-year average PM2.5 exposures corresponded to a small increase in CIMT, although the magnitude of the increase was much smaller than the Kunzli 2005 study. The study accounted for the potential influence of sociodemographic factors, lipid status, smoking, diabetes, body mass index, and geographical location. Such differences may be attributable to differences in the study populations. Other sub-clinical outcome measures for atherosclerosis in the MESA study were weakly associated or not associated with PM exposures.

Clinical cardiovascular outcomes have also been examined in several epidemiological studies, including two that were based on prospective cohort studies: the Women's Health Initiative (WHI) Observational Study (Miller et al. 2007) and the Nurses' Health Study (Puett et al. 2008). Both these studies also examined cardiovascular mortality, and found links with long-term particulate matter

exposures. The WHI study included only women who were free of cardiovascular disease at enrollment, and estimated PM2.5 exposures using a nearest monitor approach. The study found PM2.5 exposures to be associated with cardiovascular disease outcomes, including myocardial infarction, revascularization, stroke, coronary heart disease death, and cerebrovascular disease, and accounted for the several potential confounding factors, such as sociodemographic factors, medical risk factors for cardiovascular disease, and cigarette smoking (Miller et al. 2007). An analysis of the Nurses' Health Study included women without a history of myocardial infarction and who lived in certain metropolitan areas in the northeastern U.S. (Puett et al. 2008). Long-term PM10 exposures were estimated using land use regression models as well as air pollution monitoring data, and the results accounted for potential confounding by smoking status and history, medical risk factors for cardiovascular disease, and area-level measures of socioeconomic status. This study found positive associations with the risk of all-cause and coronary heart disease mortality, and the results were suggestive of a link to coronary heart disease events although there was a great deal of uncertainty in this result. Other studies conducted in the U.S. and Europe have examined clinical cardiovascular outcomes with varying results (U.S. EPA 2009).

The U.S. EPA 2009 ISA concluded that epidemiologic studies, along with toxicological evidence linking PM exposures to atherosclerosis and other cardiovascular outcomes, provides evidence linking PM to cardiovascular effects and mortality. While the associations between PM and subclinical and clinical measures have inconsistent results, the consistency of the studies linking PM exposures to cardiovascular mortality and the coherence of the toxicological studies provide support for U.S. EPA's causal determination.

**Long-Term Particulate Matter Exposures and Respiratory Effects**

The U.S. EPA 2009 ISA review determined that the evidence for long-term particulate matter exposures on respiratory effects is likely to be causal. Several studies, including prospective cohort studies, have assessed the effects of long-term particulate matter exposure on respiratory symptoms and lung function changes. Consistent, positive associations have been found with respiratory symptoms, such as bronchitis, poorly controlled asthma, and decreased lung function in children (U.S. EPA 2009; Guarnieri et al. 2014). Since many of the studies of children included survey measures, these studies typically controlled for the potential confounding effect of tobacco smoking by the child and exposure to second-hand smoke at home, and some studies were also able to account for exposure to maternal smoking *in utero*.

The Southern California Children's Health Study established cohorts of school children from 12 Southern California communities, and followed these participants over time. One of the early studies from this cohort reported positive associations of particulate matter with prevalent bronchitis or phlegm among children with asthma. These effects were also associated with $NO_2$ and acid vapor levels (McConnell et al. 1999). Another study based on this cohort reported a lower rate of growth in lung function in children living in areas with higher levels of particulate pollution (Gauderman et al. 2000). Decreases in lung function growth were associated with PM10, PM2.5, PM10-2.5, acid

vapor, and $NO_2$. There was no association with ozone levels. The investigators were not able to identify independent effects of the pollutants but noted that motor vehicle emissions are a major source of the pollutants.

A follow-up study on a second cohort of children confirmed the findings that decreased lung function growth was associated with particulates, nitric oxides, and elemental carbon levels (Gauderman et al. 2002). Elemental carbon is often used as a measure for diesel particulate. Additionally, children who moved to areas with less air pollution were found to show improvement in lung function growth rate, while those who moved to areas with higher PM10 and $NO_2$ showed declines in lung function growth rates (Avol et al. 2001). By the time the fourth graders graduated from high school, a significant number showed lower lung function. The risk of lower lung function was about four times higher in children with the highest PM2.5 exposure when compared to the lowest exposure communities (Gauderman et al. 2004).

A follow-up report from the Children's Health Study assessed whether improving air quality in Southern California over the past decade has led to beneficial changes in health (Gauderman et al. 2015). It was reported that as the levels of nitrogen oxide and fine particulates were reduced as the result of reductions in air pollution emissions, the deficits in lung function growth were also of a smaller magnitude. Recently, the Children's Health Study cohort data were also used to evaluate associations with bronchitic symptoms in children (Berhane et al. 2016). The study found that reductions in NOx, ozone, and PM10 and PM2.5 were associated with decreases in bronchitic symptoms, with stronger effects observed in children with asthma. These results indicate that improvements in air quality, as measured by fine particulate and nitrogen oxides, are associated with improvements in children's health in Southern California.

A limited number of studies have linked PM exposures to asthma incidence. In an analysis of the Children's Health Study in Southern California, Islam et al. found that while children with better lung function are generally at lower risk of developing asthma, living in an area with long-term average PM2.5 levels ≥13.7 $\mu g/m^3$ offset this protective characteristic; in other words, this study related high PM2.5 levels with new-onset asthma in children (Islam et al. 2007). The U.S. EPA 2009 ISA report also reviewed two European studies that linked PM2.5 with asthma onset in children (Brauer et al. 2007) and adults (Kunzli et al. 2009). Two recent studies were identified in our literature search: the first study used the Sister Study national cohort and found that a 3.6 $\mu g/m^3$ increase in PM2.5 was associated with a 20 percent increased risk of incident asthma and a 14 percent increase in incident wheeze among adult females (Young et al. 2014); the second study was a study of Medicaid-enrolled children in Harris County, Texas, and found PM2.5 was associated with new-onset asthma in single-pollutant models (Wendt et al. 2014). However, accounting for the potential effects of other pollutants added substantial uncertainty in the overall effect estimates for PM2.5, meaning that it is difficult to distinguish in this study whether the effects are due to PM2.5 or other pollutant exposures.

The U.S. EPA 2009 ISA also noted that studies from many different locations, including Mexico City, Sweden, and a national cohort in the U.S. provide additional coherent and consistent evidence of respiratory effects associated with PM exposures.

**Long-Term Particulate Matter Exposures and Emerging Areas of Interest**

Beyond cardiovascular, respiratory and mortality effects, the U.S. EPA 2009 ISA review concluded that the evidence available at the time was suggestive of a causal relationship between long-term exposures to PM and reproductive/developmental effects, as well as cancer. Since the 2009 ISA, there have been several studies conducted that evaluated these health endpoints in relation to PM exposures, as well as studies of metabolic syndrome and neurological health outcomes. Because of the relatively long time gap since the latest ISA for PM, and because the SCAB exceeds the federal standards for PM2.5, these health endpoints are discussed briefly here, with a focus on studies conducted since the 2009 ISA, and studies conducted in California or in the SCAB.

Cancer

The U.S. EPA 2009 ISA review concluded that existing evidence is suggestive of a link between PM2.5 and cancer, with studies of lung cancer providing the strongest evidence. More recently, the International Agency for Research on Cancer (IARC) recently designated outdoor air pollution and particulate matter as carcinogenic to humans (Group 1 carcinogens), and a meta-analysis provided quantitative evidence for the associations between particulate matter and lung cancer risk (Hamra et al. 2014; International Agency for Research on Cancer 2015). The IARC review included studies evaluating associations between outdoor air pollution and lung cancer, urinary bladder cancer, breast cancer, leukemia and lymphoma, childhood cancers, and total cancers. Among these cancers, the IARC Working Group concluded that outdoor air pollution and particulate matter cause lung cancer, and that positive associations were observed between outdoor air pollution and urinary bladder cancer. The IARC Working Group also noted that associations with childhood leukemia were suggestive of an association, and, while there were some inconsistencies across studies, an association could not be ruled out. To estimate overall lung cancer risk, the meta-analysis included 14 studies reporting on PM2.5 and 9 studies reporting on PM10; the vast majority of these were cohort studies from North America and Europe. The meta-analysis found positive associations for both PM10 and PM2.5 and lung cancer risk, with the PM2.5 results being more consistent. Additionally, the study analyzed whether the association between PM2.5 and lung cancer differed by smoking status, and found positive associations for each smoking status group (current smokers, former smokers, and never-smokers).

A recent study from the Adventist Health and Smog Study-2 (AHSMOG-2) cohort in the U.S. and Canada reported that a 10 ug/$m^3$ increase in ambient PM2.5 increased the risk of lung cancer incidence by about 40 percent, after accounting for ozone exposures (Gharibvand et al. 2016). Because all participants are non-smokers, with over 80 percent never having smoked, and with the former smokers having an average of 24 years between quitting smoking and being diagnosed with lung cancer, the likelihood of confounding by smoking in this cohort is much lower than in most other

populations. Another recent study conducted in California evaluated air pollution in relation to survival after being diagnosed with lung cancer, and found that patients living in areas with higher $NO_2$, PM2.5 and PM10 had shorter survival times, particularly for those patients who were diagnosed at earlier stages of lung cancer (Eckel et al. 2016). Few other studies have evaluated air pollution effects on lung cancer survival, so this study represents a relatively newer area of research.

Reproductive Health Outcomes

The U.S. EPA 2009 ISA review concluded that existing evidence is suggestive of a link between PM2.5 and reproductive health effects. Numerous studies report evidence indicating that particulate matter exposure during pregnancy may be associated with adverse birth outcomes, with relatively consistent evidence linking PM2.5 and PM10 exposures to low birth weight or decreases in birth weight (Bobak et al. 1999; Sram et al. 2005; Stieb et al. 2012). Among the studies reviewed in the 2009 U.S. EPA ISA for particulate matter or in the literature search for more recent and/or local studies, several studies of low birth weight (defined as <2,500g or approximately 5.5 pounds at birth) or reductions in birth weight were conducted in California or in the Southern California region (Basu et al. 2004; Parker et al. 2005; Salam et al. 2005; Wilhelm et al. 2005; Morello-Frosch et al. 2010; Wilhelm et al. 2012; Basu et al. 2014; Laurent et al. 2014). Two of these studies were conducted in Los Angeles County and were published since the last AQMP in 2012, and both examined low birth weight among full-term babies ("term low birth weight"). Laurent et al. reported that a 5.82 $\mu g/m^3$ increase in PM2.5 exposures during pregnancy was linked to a 2.5 percent increased risk of term low birth weight (Laurent et al. 2014). The second study evaluated PM2.5 exposures by source, and found increased odds of term low birth weight with increased exposure to PM2.5 from diesel sources, gasoline, geological sources, as well as elemental carbon (Wilhelm et al. 2012). Studies from the U.S., Brazil, Mexico, the Czech Republic, South Korea, Japan, and Taiwan have reported that neonatal and early postnatal exposure to particulate matter may lead to increased infant mortality (U.S. EPA 2009). Among these studies, one was conducted in Southern California, and found increased risks for deaths among infants between one and 12 months old associated with exposures to particulates and other pollutants; however, no effect was seen for neonatal mortality (defined as mortality in the first month after birth) (Ritz et al. 2006). Some newer research has also linked particulate matter exposures to risk of certain birth defects and stillbirth. A California-based study used monitoring station data and traffic density measures to evaluate potential associations with a variety of birth defects in the San Joaquin Valley (Padula et al. 2013a; Padula et al. 2013b; Padula et al. 2013c; Padula et al. 2015). One of these studies reported evidence suggesting that PM10 and PM2.5 may increase the risk of certain congenital heart defects (Padula et al. 2013b). For neural tube defects, increased risks were linked to higher exposures to carbon monoxide and nitrogen oxide (Padula et al. 2013a), but higher risks for spina bifida with PM10 exposures were found only among mothers living in lower socioeconomic status neighborhoods (Padula et al. 2015). An earlier study conducted in Los Angeles County used ambient monitoring data to estimate exposures, and reported increased risk of certain congenital heart defects with higher exposures to carbon monoxide, but not for PM10; PM2.5 was not evaluated in this study (Ritz et al. 2002). A couple of recent studies evaluated PM2.5 exposures during gestation and risk of stillbirth. A recent study conducted in Ohio used monitoring station data

to evaluate stillbirth risk, and found that higher levels of PM2.5 exposure in the third trimester was linked to a 42 percent increased risk of stillbirth (DeFranco et al. 2015). A California-based study similarly found an increased risk of stillbirth with higher PM2.5 exposures averaged over the entire pregnancy, but the association may have been confounded by co-occurring nitrogen dioxide exposures (Green et al. 2015). A third study, conducted in Taiwan, found that higher PM10 and sulfur dioxide exposures in the first trimester were associated with increased risk of stillbirth among babies who were born preterm; PM2.5 was not assessed in this study (Hwang et al. 2011).

In the U.S. EPA review, it was noted that stronger associations with birth weight reductions are observed with PM2.5 compared to PM10, and animal toxicological studies provide supportive evidence, although a specific mechanism is not known (U.S. EPA 2009). These results and many other studies provide evidence that fetuses and infants are subgroups affected by particulate matter exposures.

Neurological Health Outcomes

A 2012 review conducted by a panel of research scientists convened by the National Institute of Environmental Health Sciences identified several studies that reported links between outdoor air pollution and central nervous system effects, such as decreased cognitive function, Alzheimer's disease, Parkinson's disease, and impacts on behavioral testing and development in childhood (Block et al. 2012). Toxicological studies suggest that the damage may be caused through an oxidative stress pathway, and demonstrate that PM can be inhaled into the lungs and translocated to the brain, and that ultrafine particles to reach the brain through the olfactory nerve (Peters et al. 2006). Some more recent studies have evaluated neurological impacts of PM, ranging from studies of older adults to prenatal exposures. The Normative Aging Study evaluated older men in Boston, MA, and reported an association between black carbon (a marker of traffic exhaust) and cognitive function, as measured through cognitive tests (Power et al. 2011). A study conducted in the Los Angeles Basin used monitoring data to evaluate long-term exposures in a middle-aged and older adult population, and reported PM2.5 exposure was associated with decreased verbal learning (Gatto et al. 2014). A study of school children in Spain reported that children attending schools with higher levels of air pollution, as measured by elemental carbon (a marker of diesel exhaust), $NO_2$, and ultrafine particles, experienced smaller growth in several cognitive measures (Sunyer et al. 2015). Three recent studies reported that PM2.5 exposures during the prenatal period were associated with autism in childhood. One study was conducted in Los Angeles County, and reported that 7 percent increased odds of autism with a 4.68 $\mu g/m^3$ increase in PM2.5; the effect estimate increased to 15 percent when accounting for ozone in the statistical models (Becerra et al. 2013). A California-based study found that an 8.7 $\mu g/m^3$ increase in PM2.5 during the prenatal period or in the first year of life doubled the odds of autism (Volk et al. 2013). The third study was based on the Nurses' Health Study II cohort, and reported an increased risk of autism with prenatal PM2.5 exposures, but not with exposures before pregnancy or after delivery (Raz et al. 2015). These studies provide emerging evidence of health effects of air pollution on neurological health outcomes.

Metabolic Syndrome

Metabolic syndrome, which is the clustering of several known risk factors for cardiovascular disease (Huang 2009), is a relatively new health outcome to be studied in relation to air pollution exposure. The U.S. EPA 2009 ISA reviewed only one epidemiological study and one toxicological study. These studies provided some evidence that particulate matter exposures may be linked to markers of metabolic syndrome, such as insulin resistance, hypertension, high cholesterol, or obesity, or that having a metabolic syndrome may increase susceptibility to the effects of PM10 exposures on cardiovascular outcomes (U.S. EPA 2009). More recently, a Swiss epidemiological study reported that long-term PM10 exposures were associated with increased risk of metabolic syndrome (Eze et al. 2015). Two other human studies found that people with metabolic syndrome exposed to particulate matter air pollution experienced cardiovascular effects and worsening insulin resistance (Devlin et al. 2014; Brook et al. 2016). Some recent animal studies have also reported impacts of PM on the development of obesity and metabolic syndrome, and that animals with pre-existing metabolic syndrome may be more sensitive to the cardiovascular effects of PM exposure (Brocato et al. 2014; Wagner et al. 2014; Wei et al. 2016).

## Ultrafine Particles

As noted above, numerous studies have found associations between particulate matter levels and adverse health effects, including mortality, hospital admissions, and respiratory disease symptoms. The vast majority of these studies used particle mass of PM10, PM2.5, or PM10-2.5 as the measure of exposure. Some researchers have postulated, however, that ultrafine particles may be responsible for some of the observed associations of particulate matter and health outcomes (Oberdorster et al. 1995; Seaton et al. 1995). Ultrafine particles are typically defined as particles with aerodynamic diameters of less than 0.1 µm or 100 nm. Ultrafine particles are formed as a result of combustion processes as well as secondary atmospheric transformations. Vehicle emissions, especially diesel exhaust, are major sources of ultrafine particles; therefore, proximity to a major roadway is an important factor that affects an individual's exposure to ultrafine particles (Zhu et al. 2002; HEI Review Panel on Ultrafine Particles 2013). There is currently no federal or California standard for ultrafine particles.

U.S. EPA staff has presented conclusions on causal determination of several health effects of ultrafine PM based on a recent review of the available scientific studies (U.S. EPA 2009). These causal determinations are depicted in Table I-9.

**TABLE I-9**

Summary of U.S. EPA's Causal Determination of Ultrafine PM by Exposure Duration and Health Outcome

| **SHORT-TERM EXPOSURES** | |
|---|---|
| **Health Outcome** | **Causality Determination** |
| Cardiovascular effects | Suggestive of a causal relationship |
| Respiratory effects | Suggestive of a causal relationship |
| Central nervous system | Inadequate to infer a causal relationship |
| Mortality | Inadequate to infer a causal relationship |
| **LONG-TERM EXPOSURES** | |
| **Health Outcome** | **Causality Determination** |
| Cardiovascular effects | Inadequate to infer a causal relationship |
| Respiratory effects | Inadequate to infer a causal relationship |
| Mortality | Inadequate to infer a causal relationship |
| Reproductive and developmental | Inadequate to infer a causal relationship |
| Cancer, Mutagenicity, Genotoxicity | Inadequate to infer a causal relationship |

(From (U.S. EPA 2009) Table 2-4 and Chapters 6 and 7)

In 2013, a review of the health effects of ultrafine particles concluded that current available evidence does not support that exposures to ultrafine particles alone account for the adverse health effects that have been associated with other ambient pollutants such as PM2.5, although the report noted several limitations in the exposure data relating to ultrafine particles (HEI Review Panel on Ultrafine Particles 2013). However, a more recent assessment of the studies published since that time suggest that UFP's may be more harmful compared to health compared to PM10 and PM2.5 (Li et al. 2016). Several potential mechanisms have been brought forward to suggest that the ultrafine portion may be important in determining the toxicity of ambient particulates, some of which are discussed below.

Smaller particles can also be inhaled deeper into the lungs, although the relationship between deposition fraction and particle size is complex. The ultrafine particles between 20-30 nm generally have higher fractional deposition in the alveolar region of the lung, where air exchange takes place. Because ultrafine particles are cleared from the lung more slowly compared to larger particles, the ultrafine particles can accumulate in the lung tissue where they can also translocate into the blood and to other organs (HEI Review Panel on Ultrafine Particles 2013). Ultrafine particles can also enter the brain tissues through the olfactory nerve (Peters et al. 2006). For a given mass concentration, ultrafine particles have much higher numbers of particles and surface area compared to larger particles. Particles can act as carriers for other adsorbed agents, such as trace metals and organic

compounds; and the larger surface area may transport more of such toxic agents than larger particles. Combined with the slower clearance of UFP's from the alveolar region of the lung, these small particles can deliver a greater amount of toxics to this part of the lung, causing increased inflammation (Li et al. 2016).

Exposures of laboratory animals to ultrafine particles have found cardiovascular and respiratory effects. Using an animal model of atherosclerotic disease, mice exposed to concentrated ultrafine particles (defined as less than 0.18 µm) near a roadway in Southern California showed larger early atherosclerotic lesions than mice exposed to concentrated PM2.5 or to filtered air (Araujo et al. 2008). In a mouse allergy model, exposures to concentrated ultrafine particles (less than 0.18 µm) resulted in a greater response to antigen challenge to ovalbumin (Li et al. 2010), indicating that vehicular traffic exposure could exacerbate allergic inflammation in already-sensitized animals. More specifically, ambient UFP's with a higher polycyclic aromatic hydrocarbon (PAH) content and higher oxidant potential triggered greater allergic inflammation in mice compared to a mixture of fine and ultrafine particles (Li et al. 2009). A related study identified specific proteins that are up-regulated among the exposed mice, which were proteins involved in allergic airway inflammation and immune system response (Kang et al. 2010). These results suggest that UFP's may play a role in the development or exacerbation of asthma, and point to an oxidative stress pathway. Additionally, some experiments using engineered nanoparticles found that the particle exposure led to a suppressed immune response to infections (Li et al. 2016).

Controlled exposures of human volunteers to ultrafine particles either laboratory-generated or as products of combustion, such as diesel exhaust containing particles, have found physiological changes related to vascular effects. Mills et al., for example found exposure to diesel exhaust particulate at 300 $\mu g/m^3$ attenuated both acetylcholine and sodium-nitroprusside-induced vasorelaxation (Mills et al. 2011). These exposures were higher than typical ambient concentrations, although the authors state that such concentrations can be found regularly in heavy traffic, occupational settings, and in some of the most polluted cities in the world. This study showed that diesel exhaust particulates had impacts on vascular function while carbon nanoparticles did not change vascular function, providing evidence that is complementary to the epidemiological studies linking particulate matter exposure to cardiovascular outcomes. Several other human exposures studies have reported effects of UFP's on inflammatory markers, lung function, heart rate and heart rate variability, including effects on people with asthma, diabetes, or metabolic syndrome (Li et al. 2016).

There is a lack of long-term studies of human population exposure to ultrafine particles, as there is currently no ultrafine monitoring network in the U.S. As noted above, however, a recent study from California estimated exposures to PM2.5 and ultrafine particles among members of the California Teachers Study cohort. Positive, statistically significant associations of ischemic heart disease mortality were observed with modeled PM2.5 and with ultrafine particle mass concentrations derived from chemical transport models using California emissions inventories (Ostro et al. 2015). Other epidemiological studies have reported links between UFP exposures both indoors and

outdoors with decreased microvascular function and increased systemic inflammation in adults (Karottki et al. 2014; Olsen et al. 2014), and with oxidative DNA damage in children (Song et al. 2013).

There have been several cross-sectional epidemiological studies of ultrafine particles, mainly from Europe. Some of these studies found effects on hospital admissions and emergency department visits for respiratory and cardiovascular effects, whereas other studies did not find such effects (U.S. EPA 2009). A recent study conducted in Rochester, NY reported that ambient UFP exposures in the prior week were associated with increased risk of asthma-related medical visits indicative of asthma exacerbation; the study did not find associations with accumulation mode PM, PM2.5, black carbon, or sulfur dioxide (Evans et al. 2014). Concentrations of ultrafine particles can vary geographically, and it is not clear how well the central-site monitors used in these studies reflect actual exposures.

Additional discussion on the sources and health effects of ultrafine particles can be found in Chapter 9 of the 2012 AQMP.

## Sensitive Populations for PM-Related Health Effects

Certain populations may be more sensitive to the health effects of particulate air pollution, and evidence to assess susceptibility comes from epidemiological, controlled human exposure, and toxicological studies of PM2.5 and PM10 exposures. The U.S. EPA 2009 ISA for PM concluded that there is evidence supporting increased susceptibility to the effects of PM among children (for respiratory effects) and older adults (for cardiovascular effects), individuals with pre-existing cardiovascular or respiratory conditions, individuals with lower socioeconomic status (sometimes assessed using proxy measures such as educational attainment or residential location), and individuals with certain genetic polymorphisms that control antioxidant response, regulate enzyme activity, or regulate procoagulants (U.S. EPA 2009). In addition, there is some limited evidence that additional factors may increase a person's susceptibility to PM health effects, including chronic inflammatory conditions (e.g. diabetes, obesity) and life stage, with pregnant women and fetuses *in utero* being potentially more susceptible. Table I-10 summarizes the U.S. EPA's 2009 ISA assessment of susceptibility factors for particulate matter.

**TABLE I-10**

Summary of Evidence for Potential Increased Susceptibility to PM-Related Health Effects

| Assessment of Evidence | Potential At Risk Factor |
|---|---|
| Increased susceptibility to PM | Older Adults (≥65 years)<br>Children (<18 years)<br>Genetic factors<br>Cardiovascular diseases<br>Respiratory illnesses<br>Socioeconomic status (SES)<br>Educational attainment (surrogate of SES)<br>Residential location (surrogate of SES) |
| Increased susceptibility to PM, but limited studies available | Pregnancy and developmental effects<br>Diabetes<br>Obesity<br>Health status, e.g. nutrition (surrogate of SES) |
| Did not increase susceptibility to PM | Gender<br>Race/ethnicity |
| Did not increase susceptibility to PM, but limited studies available | Respiratory contributions to cardiovascular effects |

Adapted From (U.S. EPA 2009) Table 8-2

## Summary - Particulate Matter Health Effects

A considerable body of scientific evidence from epidemiologic, controlled human exposure and toxicological studies support the causal determinations for particulate matter and several categories of health endpoints, with the strongest evidence supporting a causal relationship for PM2.5 exposures with cardiovascular effects and mortality. Specific cardiovascular effects include cardiovascular deaths, hospital admissions for ischemic heart disease and congestive heart failure, changes in heart rate variability and markers of oxidative stress, and markers of atherosclerosis. The scientific evidence also supported a likely causal relationship for PM2.5 exposure with respiratory effects, such as hospital admissions for COPD or respiratory infections, asthma development, asthma or allergy exacerbation, lung cancer, impacts on lung function, lung inflammation, oxidative stress, and airway hyperresponsiveness. Both short-term and long-term particulate matter exposures are linked to health effects in humans. Young children, older adults, and people with pre-existing respiratory or cardiovascular health conditions are among those who may be more susceptible to the adverse effects of PM.

## Estimates of the Health Burden of Particulate Matter in the South Coast Air Basin

In terms of estimating health burdens of air pollution exposure, CARB has conducted analyses in the past estimating exposures and quantitative health effects from exposures to particulate matter as well as other pollutants. A recent assessment focused on premature mortality and PM2.5, and

estimated the deaths associated with exposures above 5.8 µg/$m^3$, which is an estimate of background PM2.5 (California Air Resources Board 2010a). The analysis used the U.S. EPA's risk assessment methodology for calculating premature mortality and used ambient air quality measurements averaged over a three-year period of 2006-2008. An update to this analysis using ambient air quality data from 2009-2011 indicated that PM2.5-related premature deaths in California due to cardiopulmonary causes as 7,200 deaths per year with an uncertainty range of 5,600 – 8,700. Estimates were also made for the California Air Basins. For the South Coast Air Basin, the estimate was 4,000 cardiopulmonary deaths per year with an uncertainty range of 3,200–4,900. These estimates were calculated using the associations of cardiopulmonary mortality and PM2.5 from the second exposure period from Krewski (Krewski et al. 2009).

Another analysis of health impacts in the South Coast was conducted as part of the Socioeconomic Report for the 2012 AQMP. The analysis estimated the anticipated costs and benefits of adopting the measures in the Final 2012 AQMP, which included the projected public health benefits associated with lower PM2.5 concentrations as a result of the 2012 plan (South Coast Air Quality Management District 2012). Based on that analysis, the projected annual number of averted deaths due to PM2.5 reductions from the 2012 AQMP was 668 deaths in year 2014, and 275 deaths in year 2023. In addition, estimated numbers of health conditions prevented per year due to the 2012 AQMP were shown for several other health endpoints, including respiratory and cardiovascular outcomes. The estimates of cases averted in year 2014 were 597 cases of acute bronchitis, 29 to 261 non-fatal heart attacks, 18,384 person-days for lower and upper respiratory symptoms, 153 respiratory emergency room visits, 151 hospital admissions, 287,447 person-days of minor restricted activity, 48,805 work loss days, and 26,910 person-days of asthma attacks. Importantly, these estimates of prevented mortality and morbidity should not be compared to the estimates of deaths attributable to PM2.5 conducted by CARB, because these analyses are intended to answer different questions. The SCAQMD estimates address the question of "how many cases are averted due to the adoption of the 2012 AQMP?" while the CARB estimates address the question of "how many deaths are attributable to PM2.5 exposures above 5.8 µg/m3?". Both analyses provide important information regarding the health impacts of PM2.5.

## NITROGEN DIOXIDE

Nitrogen dioxide ($NO_2$) is a gaseous air pollutant that serves as an indicator of gaseous oxides of nitrogen, such as nitric oxide (NO) and other related compounds ($NO_x$). These gases can undergo photochemical reactions to form ground-level ozone, and are important contributors to ozone pollution levels in the SCAB. Evidence of the health effects of $NO_2$ is derived from human and animal studies, which link $NO_2$ with respiratory effects such as decreased lung function and increases in airway responsiveness and pulmonary inflammation (U.S. EPA 2016). The U.S. EPA in 2010 retained the existing standards of 53 ppb for $NO_2$ averaged over one year, and adopted a new short-term standard of 100 ppb (0.1 ppm) averaged over one hour. The standard was designed to protect against increases in airway reactivity in individuals with asthma based on controlled exposure studies, as well as respiratory symptoms observed in epidemiological studies. The revised standard also requires additional monitoring for $NO_2$ near roadways.

In the current U.S. EPA Integrated Science Assessment for Nitrogen Oxides (U.S. EPA 2016), the staff conclusion for causal relationships between exposures and health effects are shown in the following table.

**TABLE I-11**

Summary of U.S. EPA's Causal Determination for Health Effects of Nitrogen Dioxide

| **SHORT-TERM EXPOSURES** | |
|---|---|
| **Health Outcome** | **Causality Determination** |
| Respiratory effects | Causal relationship |
| Cardiovascular and related metabolic effects | Suggestive of a causal relationship |
| Total mortality | Suggestive of a causal relationship |
| **LONG-TERM EXPOSURES** | |
| **Health Outcome** | **Causality Determination** |
| Respiratory effects | Likely to be a causal relationship |
| Cardiovascular and related metabolic effects | Suggestive of a causal relationship |
| Reproductive and developmental effects | Fertility, Reproduction, and Pregnancy: Inadequate to infer a causal relationship<br>Birth Outcomes: Suggestive of a causal relationship<br>Postnatal Development: Inadequate to infer a causal relationship |
| Total Mortality | Suggestive of a causal relationship |
| Cancer | Suggestive of a causal relationship |

(From (U.S. EPA 2016), Table ES-1)

Since the previous U.S. EPA Integrated Science Assessment (ISA) for Nitrogen Oxides from 2008, the causal determination for short-term and long-term respiratory effects have been updated in the 2016 ISA to reflect the stronger evidence now available pointing to a causal or likely causal relationship. For non-respiratory outcomes, the U.S. EPA also updated their assessment of the weight of evidence to show that the evidence for several short- and long-term outcomes is suggestive, but not sufficient to infer a causal relationship. Evidence for low-level nitrogen dioxide ($NO_2$) exposure effects is derived from laboratory studies of asthmatics and from epidemiological studies. Additional evidence is derived from animal studies. In the 2016 ISA, the U.S. EPA cited the coherence of the results from a variety of studies, and a plausible biological mechanism (whereby $NO_2$ reacts with the respiratory lining and forms secondary oxidation products that increase airway responsiveness and allergic

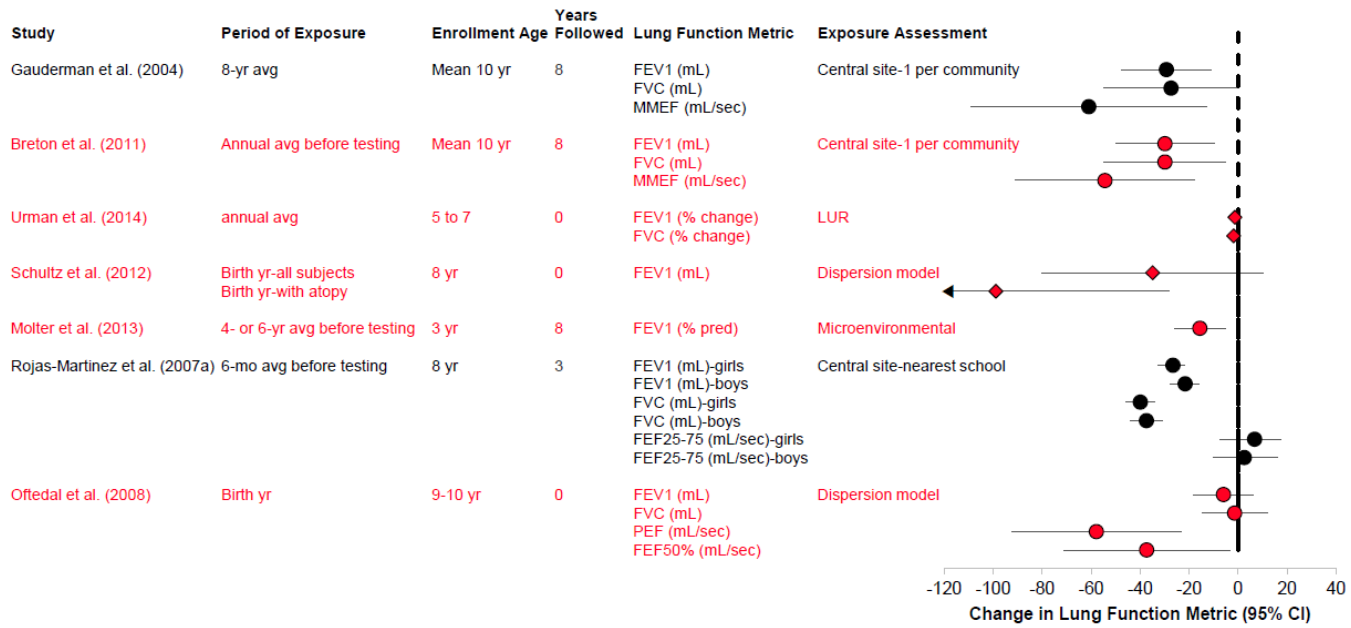
inflammation) to support the determination of a causal relationship between short-term $NO_2$ exposures and asthma exacerbations ("asthma attacks"). The long-term link with respiratory outcomes was strengthened by recent experimental and epidemiological studies, and the strongest evidence available is from studies of asthma development.

Several studies related to outdoor exposure have found health effects associated with ambient $NO_2$ levels, including respiratory symptoms, respiratory illness, decreased lung function, pulmonary inflammation, increased emergency room visits for asthma, and cardiopulmonary mortality. However, since traffic exhaust is an important source of $NO_2$ and several other pollutants, such as particulate matter, exposure generally occurs in the presence of other pollutants, making it more difficult for these studies to distinguish the specific role of $NO_2$ in causing effects independent of other pollutants. However, studies linking $NO_2$ to asthma exacerbations and human experimental studies provided support for the U.S. EPA determination that this causal relationship exists for short-term $NO_2$ exposures independent of other traffic-related pollutants (U.S. EPA 2016). The report also concludes that epidemiological studies do not rule out the possible influence of other traffic-related pollutants on the observed health effects.

The Children's Health Study in Southern California has evaluated a variety of health endpoints in relation to air pollution exposures, including lung function, lung development, school absences, and asthma. The study found associations between long-term exposure to air pollution, including $NO_2$, PM10, and PM2.5, and respiratory symptoms in asthmatic children (McConnell et al. 1999). Particles and $NO_2$ levels were correlated, and independent effects of individual pollutants could not be discerned. A subsequent analysis using more refined exposure estimation methods indicated consistent associations between long-term $NO_2$ exposures and respiratory symptoms in children with asthma (McConnell et al. 2003).

Ambient levels of $NO_2$ were also associated with a decrease in lung function growth in a group of children followed for eight years, including children with no history of asthma. In addition to $NO_2$, the decreased growth was also associated with particulate matter and airborne acids. The study authors postulated this may be a result of a package of pollutants from traffic sources (Gauderman et al. 2004).

A number of studies have since reported deficits in lung function associated with nitrogen oxides exposures. Examples are shown in Figure I-8.



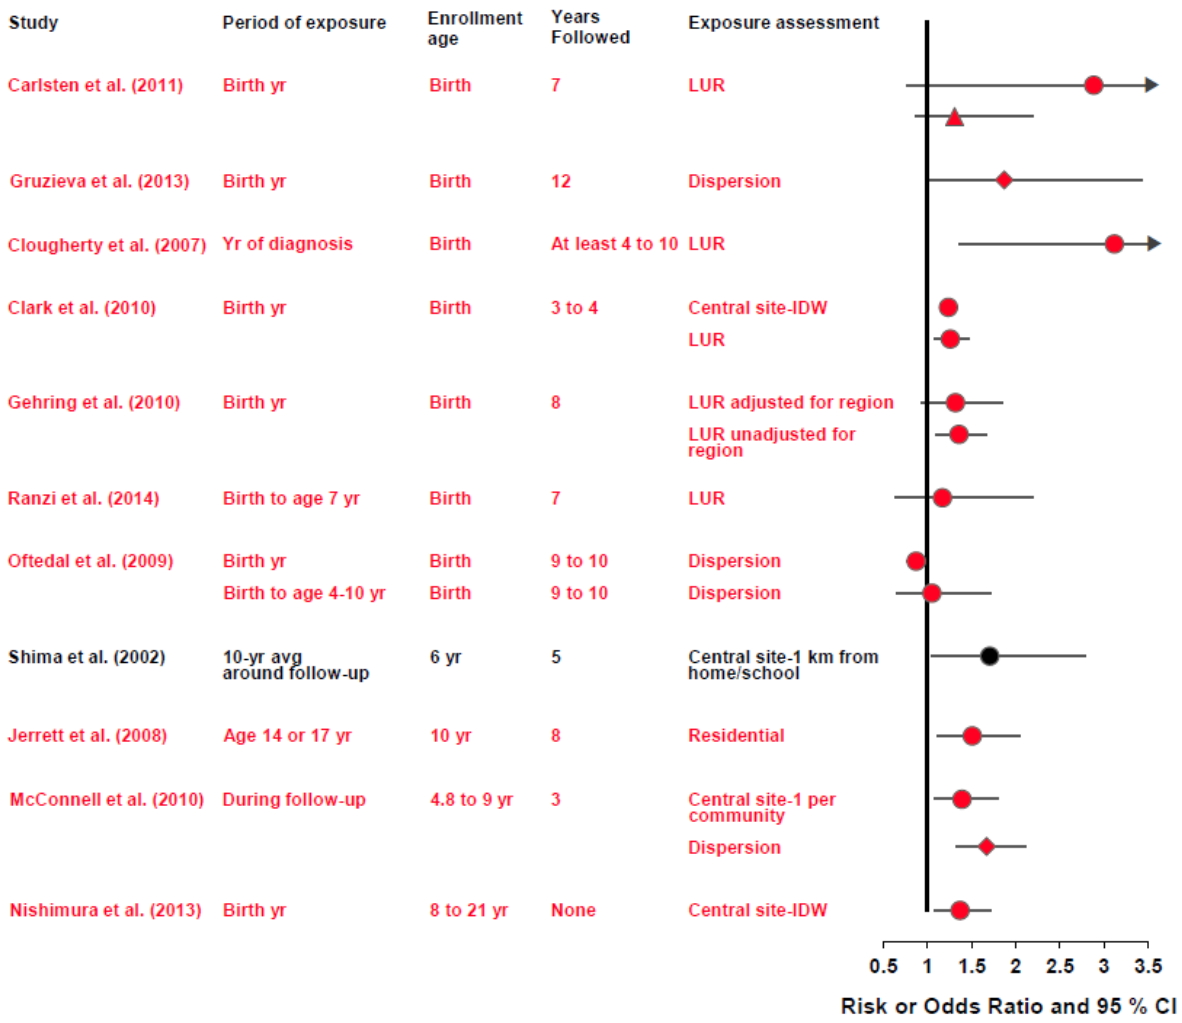
Note: Studies in red are recent studies. Studies in black were included in the 2008 ISA for Oxides of Nitrogen. Circles = $NO_2$; Diamonds = $NO_x$. All mean changes in this plot are standardized to a 10-ppb increase in $NO_2$ and a 20-ppb increase in $NO_x$ concentration. Effect estimates from studies measuring $NO_x$ in $\mu g/m_3$ (Schultz et al., 2012) have not been standardized.

**FIGURE I-8**

Associations of nitrogen dioxide ($NO_2$) or the sum of nitric oxide and $NO_2$ ($NO_x$) with lung function indices from prospective studies of children (From (U.S. EPA 2016), Figure 6-5).

A follow-up report from the Children's Health Study has assessed whether improving air quality in Southern California over the past several decades has led to beneficial changes in health among children (Gauderman et al. 2015). It was reported that as the levels of nitrogen oxide and fine particulates came down as the result of air pollution emissions reductions, the deficits in lung function growth were also of a smaller magnitude. Such improvements were observed in children with asthma as well as in those without asthma. These results indicate that improvements in air quality are associated with improvements in children's health.

In recent years, the most compelling evidence of long-term effects of $NO_2$ has been from prospective cohort studies that link $NO_2$ exposures to the development of asthma, primarily in children. The U.S. EPA included several recent studies in their review, as shown in the Figure I-9. The vast majority of these studies found that higher $NO_2$ exposures were linked to an increased risk or odds of developing asthma among children.



Effect estimates are standardized to a 10-ppb increase in $NO_2$, with the exception of Gruzieva et al. (2013) who examined NOx in µg/m3 and Oftedal et al (2009) who did not report increments for the effect estimates for the birth to age 4 years or birth to age 10 years exposure periods. Note: Black symbols = studies evaluated in the 2008 Integrated Science Assessment for Oxides of Nitrogen; Red symbols = recent studies. Circles=$NO_2$; triangles=NO; diamonds=NOx.

**FIGURE I-9**

Associations of ambient nitrogen dioxide ($NO_2$) concentrations with asthma incidence in longitudinal cohort studies of children (From (U.S. EPA 2016), Figure 6-1).

Among the studies of childhood asthma incidence reviewed in the 2016 U.S. EPA ISA for Oxides of Nitrogen, two studies were conducted in Southern California. Both studies were based on the Children's Health Study cohort, but one study used a smaller subset of the cohort and estimated $NO_2$ exposures using monitors at the children's homes (Jerrett et al. 2008). The second study examined over 2000 children and used data from air monitoring stations as well as modeled $NO_2$ levels to estimate exposures (McConnell et al. 2010). Both studies found a positive association between $NO_2$ exposures and the onset of asthma in these children, however, because $NO_2$ is often strongly

correlated with PM2.5 and other components of traffic-related air pollution, it is possible that the effects observed are due to some other component of traffic exhaust for which $NO_2$ serves as a proxy measure. The consistency of the effects found linking $NO_2$ exposure and asthma development in children, the use of prospective longitudinal study designs following children for several years, and the use of several different methods to estimate exposures are noted strengths of such studies. Experimental studies have found that $NO_2$ exposures increase responsiveness of airways, pulmonary inflammation, and oxidative stress, and can lead to the development of allergic responses. These biological responses provide evidence of a plausible mechanism for $NO_2$ to cause asthma.

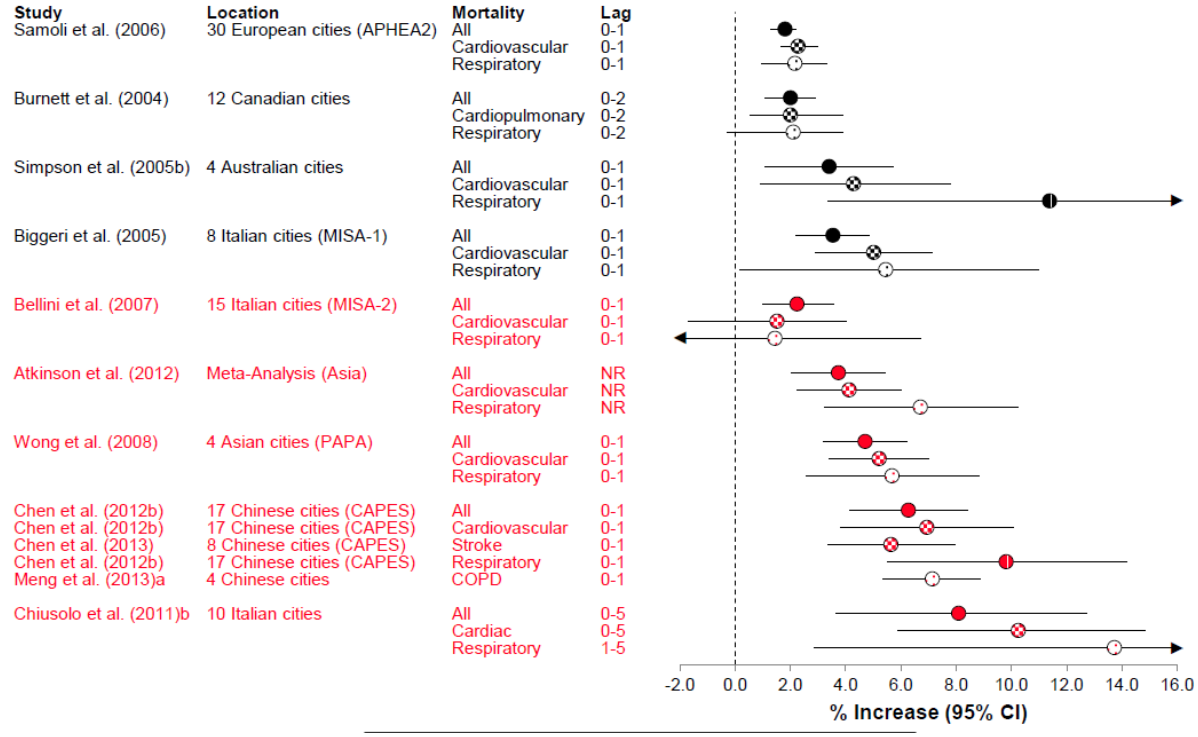
Results from controlled exposure studies of asthmatics demonstrate an increase in the tendency of airways to contract in response to a chemical stimulus (airway responsiveness) or after inhaled allergens (U.S. EPA 2016). Effects were observed among adult volunteers with asthma when exposed to 100 ppb $NO_2$ for 60 minutes and to 200-300 ppb for 30 minutes, with approximately 70 percent of study participants experiencing an increase in airway responsiveness. A similar response was reported in some studies with healthy subjects at higher levels of exposure (1.5 - 2.0 ppm), although these changes in healthy adults are likely of little or no clinical significance. Increased airway responsiveness among people with asthma can lead to worse symptoms and reduced lung function. Mixed results have been reported from controlled human exposure studies of people with chronic obstructive lung disease, with some studies reporting no change in symptom score while other studies reporting increased symptom scores when participants were exposed to $NO_2$ while exercising (U.S. EPA 2016).

Short-term controlled studies of rats exposed to $NO_2$ over a period of several hours indicate cellular changes associated with allergic and inflammatory responses that can lead to liver damage and reduced hepatic function. Rodent models exposed to $NO_2$ repeatedly for 4 to 14 days demonstrated increased airway responsiveness with high levels of exposure (4000 ppb). Animal studies also provide evidence that $NO_2$ exposures have negative effects on the immune system, and therefore increase the host's susceptibility to respiratory infections. Epidemiological studies showing associations between $NO_2$ levels and hospital admissions for respiratory infections also support such a link (U.S. EPA 2016).

Several epidemiological studies conducted in California have examined associations between $NO_2$ exposures and other health effects, including some recent studies evaluating cardiovascular effects (Coogan et al. 2012; Bartell et al. 2013; Wittkopp et al. 2013), mortality (Lipsett et al. 2011; Bartell et al. 2013; Jerrett et al. 2013), birth outcomes (Ghosh et al. 2012; Laurent et al. 2014; Padula et al. 2014; Ritz et al. 2014; Green et al. 2015), and cancer (Ghosh et al. 2013). Many studies conducted in other geographic areas have also found links with these health outcomes, and the latest assessment by U.S. EPA is that the existing studies are suggestive of a causal relationship for some of these endpoints or inadequate to infer a causal relationship for other endpoints (U.S. EPA 2016). In addition, some of the newer outcomes evaluated in relation to $NO_2$ exposures include neurological outcomes such as Parkinson's disease (Ritz et al. 2016), Alzheimer's disease (Oudin et al. 2016), and autism (Becerra et al. 2013; Volk et al. 2013), as well as metabolic diseases such as diabetes and obesity (Coogan et al. 2012; Robledo et al. 2015; White et al. 2016). However, many of these studies

use $NO_2$ exposures as a proxy measure for traffic-related air pollutants, and do not aim to identify a specific pollutant within the mix of pollutants from this source. Thus, there is uncertainty on whether $NO_2$ exposure has independent relationships with non-respiratory related health effects, or whether $NO_2$ is simply a marker of near-road air pollution exposure, which includes a mixture of air pollutants, including some air toxics.

Examples of studies reporting an association of mortality with short-term $NO_2$ exposures are shown in the figure below.



Note: Black symbols = multicity studies evaluated in the 2008 Integrated Science Assessment for Oxides of Nitrogen; Red symbols = recent studies. Filled circle = total mortality; Crosshatch = cardiovascular mortality; Vertical lines = respiratory mortality.

**FIGURE I-10**

Percentage increase in total, cardiovascular, and respiratory mortality from multi-city studies for a 20-ppb increase in 24-hour average or 30-ppb increase in one-hour maximum nitrogen dioxide concentrations (From (U.S. EPA 2016), Figure 5-23).

## SULFUR DIOXIDE

Sulfur dioxide ($SO_2$) is a gaseous air pollutant that has been linked to a variety of respiratory effects, such as decreased lung function and increased airway resistance. Controlled laboratory studies involving human volunteers have clearly identified asthmatics as a very sensitive group to the effects of ambient sulfur dioxide ($SO_2$) exposures. Healthy subjects have failed to demonstrate any short-term respiratory functional changes at exposure levels up to 1.0 ppm over 1-3 hours. In exercising asthmatics, brief exposure (5-10 minutes) to $SO_2$ at levels between 0.2-0.6 ppm can result in increases in airway resistance and decreases in breathing capacity. The response to $SO_2$ inhalation is

observable within two minutes of exposure, increases further with continuing exposure up to five minutes, then remains relatively steady as exposure continues. $SO_2$ exposure is generally not associated with any delayed reactions or repetitive asthmatic attacks (U.S. EPA 2008). In 2010, the U.S. EPA $SO_2$ air quality standard was set at 75 ppb (0.075 ppm) averaged over one hour to protect against acute asthma attacks in sensitive individuals.

The EPA assessment based on the 2008 Integrated Science Assessment for Sulfur Oxides is shown in the table below (U.S. EPA 2008). The U.S. EPA recently released a draft of the revised ISA for SO2 (U.S. EPA 2015a) which evaluates recent evidence assessing links to mortality and cardiovascular, respiratory, carcinogenic, and reproductive effects (Brunekreef et al. 2009; Hart et al. 2011; Pascal et al. 2013; Chen et al. 2014; Gianicolo et al. 2014; Milojevic et al. 2014; Moridi et al. 2014; Stingone et al. 2014; Straney et al. 2014; Wang et al. 2014; Winquist et al. 2014; Yang et al. 2014; Ancona et al. 2015; Green et al. 2015; Rich et al. 2015; Shah et al. 2015; Yorifuji et al. 2015).

**TABLE I-12**

Summary of U.S. EPA's Causal Determinations for Health Effects of Sulfur Oxides

| **SHORT-TERM EXPOSURES** | |
|---|---|
| **Health Outcome** | **Causality Determination** |
| Respiratory morbidity | Causal relationship |
| Cardiovascular morbidity | Inadequate to infer a causal relationship |
| Mortality | Suggestive of a causal relationship |
| **LONG-TERM EXPOSURES** | |
| **Health Outcome** | **Causality Determination** |
| Respiratory morbidity | Inadequate to infer a causal relationship |
| Carcinogenic effects | Inadequate to infer a causal relationship |
| Prenatal and neonatal outcomes | Inadequate to infer a causal relationship |
| Mortality | Inadequate to infer a causal relationship |

(From (U.S. EPA 2008) Chapter 3)

In epidemiologic studies of children and adults, associations of short-term variations in $SO_2$ levels with increases in respiratory symptoms, emergency department visits, and hospital admissions for respiratory-related causes have been reported. There is uncertainty as to whether $SO_2$ is associated with the effects or whether other co-occurring pollutants may explain the observed effects, although some studies indicated that the $SO_2$ effects remained even after accounting for the effects of other pollutants, including PM2.5. Coupled with the human clinical studies, these data suggest that $SO_2$ can trigger asthmatic episodes in individuals with pre-existing asthma (U.S. EPA 2008).

Animal studies have shown $SO_2$ effects on pulmonary inflammation with acute exposure at concentrations consistent with ambient $SO_2$ levels. Toxicological studies using animals found that repeated exposures to concentrations of $SO_2$ as low as 0.1 ppm promoted allergic sensitization and airway inflammation. Such evidence, combined with human clinical studies and epidemiological studies in people with asthma support the U.S. EPA determination of a causal relationship between short-term $SO_2$ exposure and respiratory morbidity. One of these studies was conducted in the Los Angeles area, and found that higher ambient $SO_2$ levels were associated with increased odds of asthma symptoms among Hispanic children with asthma (Delfino et al. 2003).

Some epidemiological studies indicate that the cardiovascular mortality effects associated with short-term exposures to ambient $SO_2$ were generally reduced when accounting for other pollutants, although the evidence is still suggestive of a causal relationship. Few epidemiological studies are available to assess the potential confounding effects of other co-occurring pollutants in studies of long-term effects. For example, there is some evidence that sulfates, which are formed when $SO_2$ oxidizes rapidly in the atmosphere, may be associated with lung function changes, although the evidence is not consistent (Reiss et al. 2007). Sulfates are positively correlated with $SO_2$ levels, so it is difficult to distinguish the effect of one individual pollutant. Based on a level determined necessary to protect the most sensitive individuals, the California Air Resources Board (CARB) in 1976 adopted a standard of 25 $\mu g/m^3$ (24-hour average) for sulfates. There is no federal air quality standard for sulfates.

## CARBON MONOXIDE

Carbon monoxide (CO) is a gaseous air pollutant that has a high affinity to bond with oxygen-carrying proteins (hemoglobin and myoglobin). The resulting reduction in oxygen supply in the bloodstream is responsible for the toxic effects of CO, which are typically manifested in the oxygen-sensitive organ systems. The effects have been studied in controlled laboratory environments involving exposure of humans and animals to CO, as well as in population-based studies of ambient CO exposure effects. People with deficient blood supply to the heart (ischemic heart disease) are known to be susceptible to the effects of CO. Protection of this group is the basis of the existing National Ambient Air Quality Standards for CO at 35 ppm for one hour and 9 ppm averaged over eight hours. The health effects of ambient CO have been recently reviewed by U.S. EPA, with the strongest evidence supporting a likely causal link between short-term CO exposures and cardiovascular outcomes, although studies have linked both short-term and long-term CO exposures to several other health outcomes (Table I-13) (U.S. EPA 2010).

**TABLE I-13**

Summary of U.S. EPA's Causal Determinations for Health Effects of Carbon Monoxide

| **SHORT-TERM EXPOSURES** | |
|---|---|
| **Health Outcome** | **Causality Determination** |
| Cardiovascular morbidity | Likely to be a causal relationship |
| Central nervous system | Suggestive of a causal relationship |
| Respiratory morbidity | Suggestive of a causal relationship |
| Mortality | Suggestive of a causal relationship |
| **LONG-TERM EXPOSURES** | |
| **Health Outcome** | **Causality Determination** |
| Cardiovascular morbidity | Inadequate to infer a causal relationship |
| Central nervous system | Suggestive of a causal relationship |
| Birth outcomes and developmental effects | Suggestive of a causal relationship |
| Respiratory morbidity | Inadequate to infer a causal relationship |
| Mortality | Not likely to be a causal relationship |

(From (U.S. EPA 2010) Table 2-1)

Inhaled CO has no known direct toxic effect on lungs but rather exerts its effects by interfering with oxygen transport—through the formation of carboxyhemoglobin (COHb, a chemical complex of CO and hemoglobin) ), which reduces the amount of oxygen the blood can carry to the tissues. Exposure to CO is often evaluated in terms of COHb levels in blood, measured as percentage of total hemoglobin bound to CO. Endogenous COHb is estimated to be <1 percent in healthy individuals, but COHb levels are sensitive to health status and metabolic state, with higher levels among smokers and persons with inflammatory diseases. Estimates based on a large prospective study of adults conducted in the 1970s showed a dose-response relationship between the average number of cigarettes smoked per day and the COHb concentrations (never smokers: 1.59±1.72 percent, former smokers: 1.96±1.87 percent, 1-5 cigarettes/day: 2.31±1.94 percent, 6–14 cigarettes/day: 4.39±2.48 percent, 15–24 cigarettes/day: 5.68±2.64 percent, >=25 cigarettes/day: 6.02±2.86 percent) (Hart et al. 2006).

Under controlled laboratory conditions, healthy subjects exposed to CO sufficient to result in 5 percent COHb levels exhibited reduced duration of maximal exercise performance due to the inability to deliver sufficient oxygen to the heart and other muscles. Studies involving subjects with coronary artery disease who engaged in exercise during CO exposures have shown that COHb levels as low as

2.4 percent can lead to earlier onset of electrocardiograph changes indicative of deficiency of oxygen supply to the heart. Other effects of inadequate oxygen delivery to the body tissues include earlier onset of chest pain, increase in the duration of chest pain, headache, confusion and drowsiness (U.S. EPA 2000).

A number of epidemiological studies have found associations between short-term ambient CO levels and increased hospital admissions and emergency department visits for ischemic heart disease, including myocardial infarction (U.S. EPA 2010). In studies reporting results stratified by age and sex, larger effects were generally observed among older adults and among males. Examples of such studies, including information on number of days of lag time between exposure and hospital admissions for key cardiovascular outcomes, are shown in the figure below.

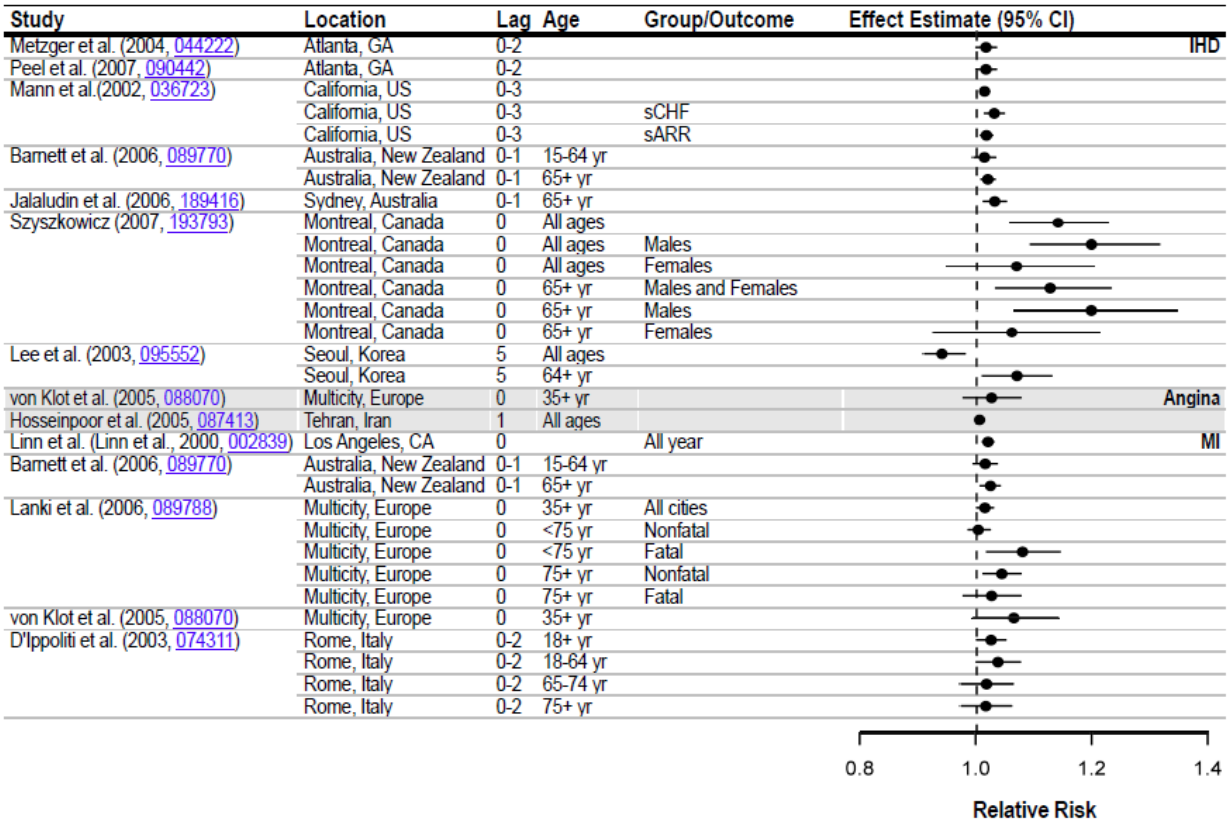


**FIGURE I-11**

Effect estimates (95 percent confidence intervals) associated with hospital admissions for various forms of heart disease. Effect estimates have been standardized to a 1 ppm increase in ambient CO for 1-h max CO concentrations, 0.75 ppm for 8-h max CO concentrations, and 0.5 ppm for 24-h average CO concentrations (From (U.S. EPA 2010), Figure 5-2). Lag time is the time between the exposure and the outcome measured. The closed circle on the diagram indicates the effect estimate, while the bar indicates the 95 percent confidence interval.

Research studies have also evaluated ambient CO exposures in relation to reproductive health outcomes. Epidemiological studies conducted in Southern California have reported an association

between with CO exposure during pregnancy and increases in pre-term births (Ritz et al. 2000; Wilhelm et al. 2005; Ritz et al. 2007). The increases in the pre-term births were also associated with PM10 or PM2.5 levels. There are very few studies examining CO exposure and birth defects, but one Southern California study found increased risks for cardiac-related birth defects with carbon monoxide exposure in the second month of pregnancy (Ritz et al. 2002). Toxicological studies in laboratory animals with higher than ambient levels of CO have also reported decrements in birth weight and prenatal growth, as well as impaired neurobehavior in the offspring of exposed animals (U.S. EPA 2010). The U.S. EPA concluded in their most recent review that the evidence linking long-term CO exposures with reproductive health outcomes was suggestive of a causal relationship.

## LEAD

Lead (Pb) is a toxic air contaminant that is recognized to exert an array of deleterious effects on multiple organ systems. There are a number of potential public health effects at low level exposures, and there is no recognized lower threshold for health effects (U.S. EPA 2013a). The health implications are generally indexed by blood lead levels which are related to lead exposures both from inhalation as well as from ingestion. Effects include impacts on population IQ as well as heart disease and kidney disease. The initial air quality standard for lead was established by U.S. EPA in 1978 at a level of 1.5 µg /$m^3$ averaged over a calendar quarter. U.S. EPA revised the NAAQS for lead in 2008 to a level of 0.15 µg/$m^3$ averaged over a rolling three-month period to protect against lead toxicity. The SCAB's attainment status for lead is described in the draft 2016 AQMP Chapter 2.

The U.S. EPA has recently reviewed the health effects of ambient lead exposures in conjunction with an Integrated Science Assessment and a review of the NAAQS for lead (U.S. EPA 2013a; U.S. EPA 2015c). Lead can accumulate and be stored in the bone, and this lead in bone can be released into the blood when the bone is metabolized, which happens naturally and continuously. Blood lead is the most common measure of lead exposure, and it represents recent exposure and may be an indicator of total body burden of lead (U.S. EPA 2013a). The following table gives the summary of causality conclusions from the U.S. EPA review, which illustrates the wide range of health effects associated with lead exposure.

**TABLE I-14**

Summary of U.S. EPA's Causal Determinations for Health Effects of Lead

| HEALTH OUTCOME | CAUSALITY DETERMINATION |
|---|---|
| **Children - Nervous System Effects** | |
| Cognitive Function Decrements | Causal relationship |
| Externalizing Behaviors: Attention, Impulsivity and Hyperactivity | Causal relationship |
| Externalizing Behaviors: Conduct Disorders in Children and Young Adults | Likely to be a causal relationship |
| Internalizing Behaviors | Likely to be a causal relationship |
| Auditory Function Decrements | Likely to be a causal relationship |
| Visual Function Decrements | Inadequate to infer a causal relationship |
| Motor Function Deficits | Likely to be a causal relationship |
| **Adults – Nervous System Effects** | |
| Cognitive Function Decrements | Likely to be a causal relationship |
| Psychopathological Effects | Likely to be a causal relationship |
| **Cardiovascular effects** | |
| Hypertension | Causal relationship |
| Subclinical Atherosclerosis | Suggestive of a causal relationship |
| Coronary Heart Disease | Causal relationship |
| Cerebrovascular Disease | Inadequate to infer a causal relationship |
| **Renal Effects** | |
| Reduced Kidney Function | Suggestive of a causal relationship |
| **Immune System Effects** | |
| Atopic and Inflammatory Response | Likely to be a causal relationship |
| Decreased Host Resistance | Likely to be a causal relationship |
| Autoimmunity | Inadequate to infer a causal relationship |
| **Hemotologic Effects** | |
| Decreased Red Blood Cell Survival and Function | Causal relationship |
| Altered Heme Synthesis | Causal relationship |
| **Reproductive and Developmental Effects** | |
| Development | Causal relationship |
| Birth Outcomes (low birth weight, spontaneous abortion) | Suggestive of a causal relationship |
| Male Reproductive Function | Causal relationship |
| Female Reproductive Function | Suggestive of a causal relationship |
| **Cancer** | |
| Cancer | Likely to be a causal relationship |

(From (U.S. EPA 2013a) Table ES-1)

Children appear to be sensitive to the neurological toxicity of lead, with effects observed at blood lead concentration ranges of 2–8 µg/dL. No clear threshold has been established for such effects. According to the U.S. EPA review, the most important effects observed are neurotoxic effects in children and cardiovascular effects in adults. The effects in children include impacts on intellectual

attainment and school performance. Figure I-12 provides a summary of the lowest levels of blood lead that have been associated with certain neurological, hematological and immune effects in children.

| Lowest Observed Effect Blood Lead Level | Neurological Effects | Hematological Effects | Immune Effects |
|---|---|---|---|
| 30 µg/dL | | Increased urinary δ-aminolevulinic acid | |
| 15 µg/dL | Behavioral disturbances (e.g., inattention, delinquency)<br>Altered electrophysiological responses | Erythrocyte protoporphyrin (EP) elevation | |
| 10 µg/dL | Effects on neuromotor function<br>CNS cognitive effects (e.g., IQ deficits) | Inhibition of δ-aminolevulinic acid dehydratase (ALAD)<br>Pyrimidine-5′-nuclotidase (Py5N) activity inhibition | Effects on humoral (↑ serum IgE) and cell-mediated (↓ T-cell abundance) immunity |
| 5 µg/dL | (???) | (???) | |
| 0 µg/dL | | | |

Note: Arrows depict cases where weight of overall evidence strongly substantiates likely occurrence of type of effect in association with blood-Pb concentrations in range of 5-10 µg/dL, or possibly lower, as implied by (???). Although no evident threshold has yet been clearly established for those effects, the existence of such effects at still lower blood-Pb levels cannot be ruled out based on available data.

Source: Adapted/updated from Table 1-17 of U.S. Environmental Protection Agency (1986a).

**FIGURE I-12**

Summary of Lowest Observed Effect Levels for Key Lead-Induced Health Effects in Children (From (U.S. EPA 2007), Table 3-1)

Figures I-12 and I-13, taken from the U.S. EPA review (U.S. EPA 2007), depict the health effects of lead in relation to blood levels. In the figure, the question marks indicate that there are no demonstrated threshold blood lead levels for health effects. The Centers for Disease Control (CDC) has recently revised their lead hazard information and replaced their level of concern for adverse effects of 10 µg/dL blood lead level with a childhood blood lead level reference value of 5 µg/dL to identify children and environments associated with lead-exposure hazards (Centers for Disease Control and Prevention 2016).

Figure I-13 provides a summary of the lowest levels of blood lead that have been associated with key health effects in adults. For adults, evidence supports a causal relationship between lead and increased blood pressure and hypertension, as well as coronary heart disease (myocardial infarction, ischemic heart disease, and heart rate variability). Other health effects among adults are also relatively high on the causal scale, including neurological, hematological, and renal effects.

| Lowest Observed Effect Blood Lead Level | Neurological Effects | Hematological Effects | Cardiovascular Effects | Renal Effects |
|---|---|---|---|---|
| 30 µg/dL | Peripheral sensory nerve impairment | Erythrocyte protoporphyrin (EP) elevation in males | | Impaired Renal Tubular Function |
| 20 µg/dL | Cognitive impairment | | | |
| 15 µg/dL | Postural sway | Erythrocyte protoporphyrin (EP) elevation in females | | |
| | | Increased urinary δ-aminolevulinic acid | | |
| 10 µg/dL | | Inhibition of δ-aminolevulinic acid dehydratase (ALAD) | Elevated blood pressure ↓ | |
| 5 µg/dL | | | (???) | Elevated serum creatine (↓ creatine clearance) |
| 0 µg/dL | | | | |

Note: Arrows depict cases where weight of overall evidence strongly substantiates likely occurrence of type of effect in association with blood-Pb concentrations in range of 5-10 µg/dL, or possibly lower, as implied by (???). Although no evident threshold has yet been clearly established for those effects, the existence of such effects at still lower blood-Pb levels cannot be ruled out based on available data.

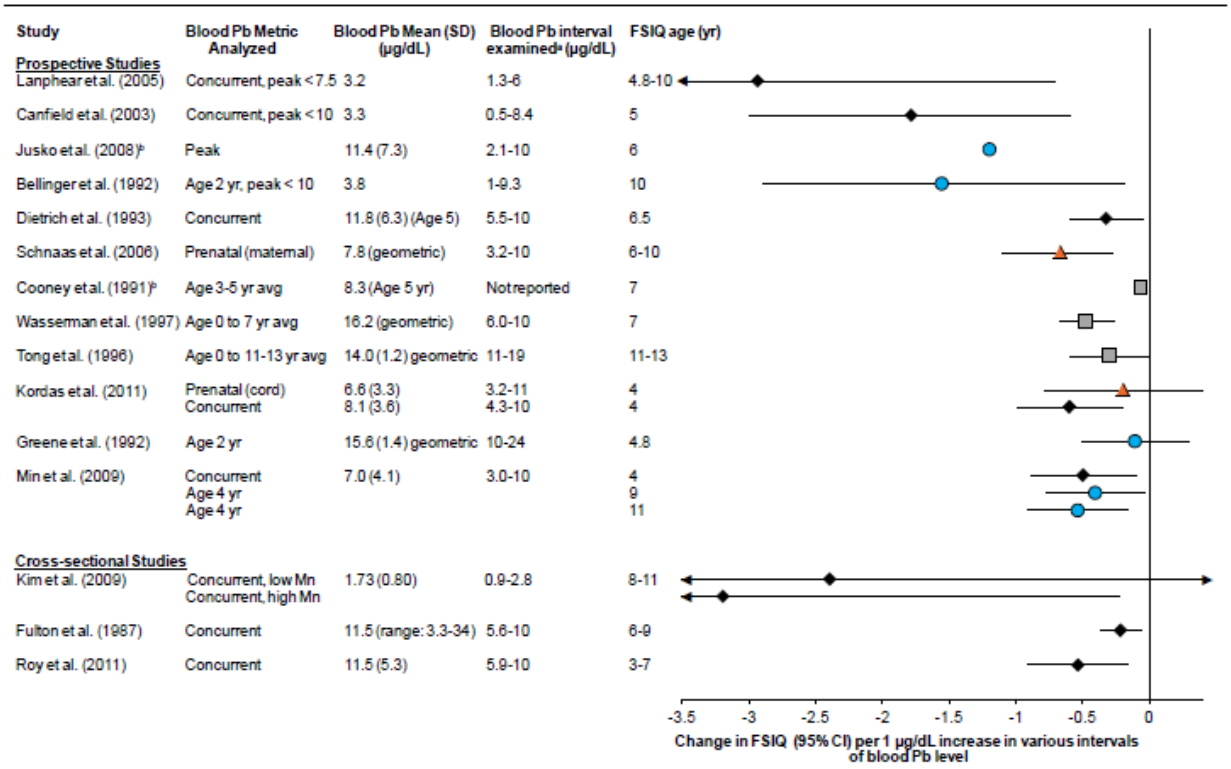
**FIGURE I-13**

Summary of Lowest Observed Effect Levels for Key Lead-Induced Health Effects in Adults (From (U.S. EPA 2007), Table 3-2)

In its most recent review of lead health effects, the U.S. EPA confirmed its previous conclusion regarding the cognitive decline in children as the most sensitive adverse effect associated with lead exposures. The effects as measured by a reduction in IQ from a number of studies are shown in the following figure. According to the review, the currently available evidence supports a median estimate of -1.75 IQ points for a change of 1 µg/dL blood lead to describe the neurocognitive impacts on young children (U.S. EPA 2015c).



[a]See Table 4-3 for explanation of the blood Pb level interval examined. Effect estimates were calculated for the lowest range examined in the study or the 10th percentile of blood Pb level to a blood Pb level of 10 µg/dL.
[b]Sufficient data were not available to calculate 95% CI.

Note: Mn = manganese. Results are presented for most of the cohorts examined in the literature and generally are grouped according to strength of study design, representativeness of the study population characteristics and blood Pb levels examined, and extent of consideration for potential confounding. There is not necessarily a continuum of decreasing strength across studies. Results usually are presented for the oldest age examined in cohorts. Multiple results from a cohort are grouped together. To facilitate comparisons among effect estimates across studies with different distributions of blood Pb levels and model structures (e.g., linear, log-linear), effect estimates are standardized to a 1 µg/dL increase for the lowest range of blood Pb levels examined in the study or the interval from the 10th percentile of blood Pb level to 10 µg/dL. For populations with 10th percentiles near or above 10 µg/dL, the effect estimate was calculated for the 10th to 90th percentile of blood Pb level. The percentiles are estimated using various methods and are only approximate values. Effect estimates are assumed to be linear within the blood Pb level interval evaluated. The various tests used to measure FSIQ are scored on a similar scale (approximately 40-160 FSIQ points). Black diamonds, blue circles, orange triangles, and gray squares represent effect estimates for concurrent, earlier childhood, prenatal, and lifetime average blood Pb levels, respectively. The horizontal lines associated with point estimates represent 95% confidence intervals (CI).

**FIGURE I-14**

Associations of Blood Pb Levels with Full-Scale IQ (FSIQ) in Children (From (U.S. EPA 2013a), Figure 4-2)

# TOXIC AIR CONTAMINANTS

Toxic air contaminants are pollutants for which there generally are no ambient air quality standards. The Toxic Air Contaminant Identification and Control Act (AB 1807, Tanner, 1983) created California's first program to reduce exposures to air toxics by requiring CARB to adopt Air Toxics Control measures. Air Districts must either enforce these measures or adopt their own equally or more stringent measures. The Air Toxics "Hot Spots" Information and Assessment Act (AB 2588, Connelly,

1987) supplements the earlier program by requiring air toxics inventories for certain facilities, notification of people's exposure to significant health risks, and facility plans to reduce these risks. Under California's Air Toxics Program, the Office of Environmental Health Hazard Assessment (OEHHA) assesses the health effects of substances that may pose a risk of adverse health effects, and CARB assesses the potential for humans to be exposed to these substances. These effects are usually an increased risk for cancer, adverse birth outcomes, or respiratory effects. After review by the state Scientific Review Panel, CARB holds a public hearing on whether to formally list substances that may pose a significant risk to public health as a Toxic Air Contaminant. Chapter 9 of the draft 2016 AQMP describes the Air Toxics Control Plan for the SCAQMD.

Air toxics include many different types of chemicals, and the discussion here will not address all air toxics in a comprehensive manner. However, this section will discuss very briefly diesel particulate matter and volatile organic compounds (VOC's), because diesel particulate matter is the most significant contributor to cancer risk in the South Coast Air Basin, and because some VOC's are air toxics, and are part of the control measures proposed in the current Air Quality Management Plan.

## Diesel Particulate Matter

The California Air Resources Board listed diesel particulate matter as a Toxic Air Contaminant in 1998, based on the determination that it was a human carcinogen (California Air Resources Board 2010b). The International Agency for Research on Cancer, an arm of the World Health Organization, classified diesel exhaust as probably carcinogenic to humans in 1989 (International Agency for Research on Cancer 1989). More recently, IARC convened an international panel of scientists to review the published literature since the initial classification regarding the carcinogenicity of diesel combustion emissions. The panel concluded that diesel exhaust is a substance that causes lung cancer in humans (International Agency for Research on Cancer 2012b).

OEHHA also establishes potency factors for air toxics that are carcinogenic. The potency factors can be used to estimate the additional cancer risk from ambient levels of toxics. This estimate represents the chance of contracting cancer in an individual over a lifetime exposure to a given level of an air toxic and is usually expressed in terms of additional cancer cases per million people exposed.

SCAQMD conducted studies on the ambient concentrations and estimated the potential health risks from air toxics (South Coast Air Quality Management District 2000; South Coast Air Quality Management District 2008; South Coast Air Quality Management District 2015). In the latest SCAQMD Multiple Air Toxics Exposure Study, MATES IV, a one-year monitoring program was undertaken at 10 sites throughout the SCAB over the time period July 2012 – June 2013 (South Coast Air Quality Management District 2015). Over 30 substances were measured, which included the toxics that contributed the most to health risks in the Basin. The results showed that the overall lifetime risk for excess cancer from a 70-year lifetime exposure to the levels of air toxics calculated from the regional model was 367 in a million. This reflects a greater than 50 percent reduction in exposures and risks compared to the MATES III Study that was conducted from 2004 -2006. The largest contributor to this risk was diesel particulate matter, accounting for 68 percent of the air

toxics risk. The average measured levels were also compared to the non-cancer chronic Reference Exposure Levels (RELs), and found to be below the established RELs for the over 30 substances measured.

In 2015, OEHHA updated the calculation procedure to estimate cancer risks from air toxics exposures (Dodge et al. 2015). The revisions to the calculation methodology included accounting for higher risks attributable to early life exposures (up to age 16 years), updates to the population distribution of breathing rates by age, and a reduction in the time of household residence. In combination, these changes resulted in risk estimates in the MATES IV study to be about 2.5 times higher than the previous methodology employed in the MATES studies. The average lifetime risk for excess cancer cases is estimated to be 897 per million using the updated procedure (South Coast Air Quality Management District 2015). However, it is important to note that results from the MATES IV study still represent approximately a 50 percent reduction in air toxics levels and cancer risk compared to MATES III. In addition to the maps in the MATES IV final report (South Coast Air Quality Management District 2015), an interactive map of the MATES IV cancer risks from air toxics calculated using the 2015 OEHHA guidelines is available through this website: http://www.aqmd.gov/home/tools/public.

In 2009, the Advanced Collaborative Emissions Study (ACES) reported that newer diesel engine technologies are very effective in reducing the amount of emissions from diesel trucks, as required by recent regulations (Khalek et al. 2009). In a long-term exposure study published in 2015, rats breathing the lower emissions did not develop cancer, while the rats breathing the higher emissions from older diesel engines (in previous studies) did develop cancer (McDonald et al. 2015). However, the 2015 study did not evaluate whether the PM from the newer engines was any more or less toxic compared to the older engines on a gram per gram basis; the study was not designed to determine such differences. Therefore, without any additional data on the toxicity of PM from the newer diesel engines, the analysis done in the MATES IV study used the same risk factor for both, applied to the mass of PM. For example, whether a person is exposed to 10 ug/$m^3$ of particulate matter from a single old diesel engine or several new diesel engines, the cancer risk would be the same because it is calculated based on 10 ug/$m^3$ of exposure.

In the Particulate Matter section of this Appendix, the vast majority of the studies described evaluated the health effects of total PM2.5 exposures by mass, regardless of whether they were from newer diesel engines, older diesel engines, or other sources. While this new diesel technology is very effective in terms of reducing the amount of emissions from diesel trucks, what people are being exposed to is a total concentration of PM from many sources. Health studies generally use this total concentration to analyze whether or not there is an effect on the specific health outcomes evaluated. In addition, it is important to note that direct PM2.5 emissions from diesel engines represent a small portion of overall PM2.5 exposure. $NO_x$ emissions from diesel engines that eventually lead to PM2.5 formation in the atmosphere, however, represent a larger component of PM2.5 exposure (South Coast Air Quality Management District 2013a; Harley 2014).

## Volatile Organic Compounds

VOC's are a class of air pollutants that undergo photochemical reactions in the air to form ozone. It should be noted that there are no state or national ambient air quality standards for VOCs because they are not classified as criteria pollutants. VOCs are regulated, however, because limiting VOC emissions reduces the rate of photochemical reactions that contribute to the formation of ozone.

VOCs are also transformed into organic aerosols in the atmosphere, contributing to higher PM and lower visibility levels. In addition, VOC's that have toxic properties are also regulated as air toxics. Chapter 3 of the draft 2016 AQMP presents data on VOC sources and emissions in the South Coast Air Basin.

Some examples of VOC's that are known to cause health effects include benzene, toluene, ethylbenzene and xylenes (abbreviated BTEX), 1,3-butadiene, formaldehyde, and perchloroethylene. Several of these VOC's are carcinogenic. Based on the MATES IV analysis, benzene, 1,3-butadiene, and carbonyls (formaldehyde and acetaldehyde) together account for approximately 21 percent of the total cancer risk from air toxics in the SCAB. Not all carcinogenic VOC's are known to cause the same types of cancers, although several are associated with blood cancers. For example, the cancers most closely associated with long-term benzene exposure are leukemias. Formaldehyde is linked to nasopharyngeal cancer and leukemias, while 1,3-butadiene causes cancers in both the blood and lymphatic systems (International Agency for Research on Cancer 2012a).

Many VOC's can also cause non-cancer health effects. For these types of health outcomes, OEHHA has developed acute and chronic Reference Exposure Levels (RELs). RELs are concentrations in the air below which adverse health effects are not likely to occur. Acute RELs refer to short-term exposures, generally of one-hour duration. Chronic RELs refer to long-term exposures of several years. OEHHA has also established eight-hour RELs for several substances. The ratio of ambient concentration to the appropriate REL can be used to calculate a Hazard Index. A Hazard Index of less than one would not be expected to result in adverse effects (Dodge et al. 2015).

In the MATES IV assessment of chronic non-cancer health risks, the monitored air toxics levels were found to be below the chronic RELs. In other words, the general levels of air toxics in the SCAB are not expected to cause adverse non-cancer health effects. Importantly, the MATES IV monitoring network was designed to characterize the air toxics exposures in the basin overall. Given that ambient monitoring is necessarily conducted at a limited number of locations, and modeling is limited to a spatial resolution of 2km, there may be higher exposures not captured by the fixed-site monitoring. To address this limitation, particularly in some communities with environmental justice concerns, the MATES IV study also included local-scale studies in 3 communities very close to known industrial sources or large mobile source facilities, with a focus on ultrafine particles and diesel PM emissions. Details of these study results can be found in the MATES IV final report (South Coast Air Quality Management District 2015).

# ODORS

Environmental odors are recognized as having the potential to cause health effects and/or quality of life impacts. The theory of "miasma" dates back to Hippocrates in ancient Greek times, and related bad odors to disease. The health effects of environmental odors can vary widely, and depend on the compound causing the odor, the level of the compound, as well as the sensitivity and physiological responses of the person detecting the odor.

Different levels of odor exposure can cause a range of responses and health effects, and the science of odor as a potential health issue was summarized previously by Schiffman and Williams (Schiffman et al. 2005b). There are two key nerves in the nasal cavity involved in odor effects: the olfactory nerve provides the sense of smell, while the trigeminal nerve provides the sense of irritation. At very low levels, an odor can be detected (i.e. odor threshold), and at slightly higher levels, an odor can be recognized and identified. At levels higher than detection or recognition levels, an odor can cause annoyance or intolerance, and at even higher levels, an odor can cause irritation or possible toxicity, if the odor is caused by a compound that is also an air toxic (Schiffman et al. 2005b).

Schiffman and Williams proposed three mechanisms of action for odor symptoms (Schiffman et al. 2005b). In the first mechanism, an odor substance can be at the level that can produce irritation, which triggers the trigeminal nerve. This mechanism is considered a toxic effect because symptoms appear when the chemical concentration is at or above the irritation level; here, the odor serves only as the marker of the toxic effect. In the second mechanism, the odor compound is below the irritation level but above odor detection thresholds, which can result in odor annoyance. This mechanism is relatively common among environmental odors, and has been studied in communities exposed to odors from landfills, hazardous waste sites or concentrated animal feeding operations (CAFO's) (Shusterman et al. 1991; Schiffman et al. 2005a; Heaney et al. 2011; Schinasi et al. 2011; Blanes-Vidal et al. 2012; Hooiveld et al. 2015). In this mechanism, the health effect is not a toxicological effect, and the dose does not necessarily correlate well with the effect in these instances. Genetic factors, previous exposure ("learning"), and beliefs about the safety of the odor may play important roles in these odors causing health symptoms (Shusterman 2001). The third proposed mechanism is when an odor substance is present along with a co-pollutant or endotoxin that is capable of producing health effects. In this mechanism, the effect is also a toxic effect, but the odor serves as a marker of the presence of a mixture that includes a toxic compound; if the co-pollutant were not present, no health effect would be expected in this scenario.

Individual characteristics can play important roles in altering an individual's response to an odor. Factors that can influence odor perception include age, genetics, gender, medical history (including mental health, neurological conditions, and other health conditions), health-related behaviors (tobacco, alcohol), and occupational and environmental factors (Greenberg et al. 2013; Wilson et al. 2014; Agency for Toxic Substances and Disease Registry 2016). Additionally, an individual's cognitive associations with the odor prior to an exposure can result in increased reporting of health-related symptoms after exposure (Shusterman et al. 1991; Shusterman 2001; Greenberg et al. 2013). Common symptoms associated with environmental odor exposures include headache, nasal

congestion, eye, nose and throat irritation, hoarseness or sore throat, cough, chest tightness, shortness of breath, wheezing heart palpitations, nausea, drowsiness, and mental depression (Agency for Toxic Substances and Disease Registry 2016). If the concentrations of the odor compound are below irritation levels, then the symptoms are not expected to persist once the person is no longer exposed; however, being exposed to odor levels at or above irritation levels for longer periods of time may cause symptoms that persist after moving out of the exposure area (Agency for Toxic Substances and Disease Registry 2016).

## CONCLUSIONS

A large body of scientific evidence shows that the adverse impacts of air pollution on human and animal health are clear. A considerable number of population-based and laboratory studies have established a link between air pollution and increased morbidity and, in some instances, premature mortality. Importantly, the health effects of air pollution extend beyond respiratory effects, and there is substantial evidence that air pollution (including particulate matter and ozone) exposures cause cardiovascular morbidity and mortality. Some air pollutants, such as diesel PM, lead, and several other air toxics, have been linked to increased cancer risk. Health studies have also identified populations who may be more susceptible to the adverse effects of air pollution, such as children, older adults, low SES communities, people with certain pre-existing health conditions, and people with certain genetic factors. Understanding the impacts of air pollution on these more susceptible populations can help inform policies that better protect public health, for example, in setting standards for criteria air pollutants, and in the development of methods to evaluate air toxics health risks. Continued research on the effects of specific PM constituents and ultrafine particles will be important in furthering the understanding of how these pollutants affect human health.

As the scientific methods for the study of air pollution health effects have progressed over the past decades, adverse effects have been shown to occur at lower levels of exposure. For some pollutants, no clear thresholds for effects have been demonstrated. The new findings have, in turn, led to the revision and lowering of National Ambient Air Quality Standards (NAAQS) which, in the judgment of the Administrator of the U.S. EPA, are necessary to protect public health. Chapter 8 of the draft 2016 AQMP provides an overview of the extensive, multi-year, public process involved in setting federal air quality standards. Assessments of the scientific evidence from health studies is an important part of the process, and has helped inform revisions to the federal air pollution standards. Figures I-15 and I-16 are meant to convey some of the historical context to recent revisions to the NAAQS for ozone and for particulate matter, with regard to key developments in the understanding of the health effects of these pollutants.

**TO THE HONORABLE CHIEF JUSTICE AND JUSTICES OF THE SUPREME COURT:**

## APPLICATION FOR LEAVE TO FILE *AMICUS CURIAE* BRIEF

Pursuant to Rule 8.520(f) of the California Rules of Court, the South Coast Air Quality Management District (SCAQMD) respectfully requests leave to file the attached *amicus curiae* brief. Because SCAQMD's position differs from that of either party, we request leave to submit this amicus brief in support of neither party.

## HOW THIS BRIEF WILL ASSIST THE COURT

SCAQMD's proposed amicus brief takes a position on two of the issues in this case. In both instances, its position differs from that of either party. The issues are:

1) Does the California Environmental Quality Act (CEQA) require an environmental impact report (EIR) to correlate a project's air pollution emissions with specific levels of health impacts?
2) What is the proper standard of review for determining whether an EIR provides sufficient information on the health impacts caused by a project's emission of air pollutants?

This brief will assist the Court by discussing the practical realities of correlating identified air quality impacts with specific health outcomes. In short, CEQA requires agencies to provide detailed information about a project's air quality impacts that is sufficient for the public and decisionmakers to adequately evaluate the project and meaningfully understand its impacts. However, the level of analysis is governed by a rule of reason; CEQA only requires agencies to conduct analysis if it is reasonably feasible to do so.

With regard to health-related air quality impacts, an analysis that correlates a project's air pollution emissions with specific levels of health impacts will be feasible in some cases but not others. Whether it is feasible depends on a variety of factors, including the nature of the project and the nature of the analysis under consideration. The feasibility of analysis may also change over time as air districts and others develop new tools for measuring projects' air quality related health impacts. Because SCAQMD has among the most sophisticated air quality modeling and health impact evaluation capability of any of the air districts in the State, it is uniquely situated to express an opinion on the extent to which the Court should hold that CEQA requires lead agencies to correlate air quality impacts with specific health outcomes.

SCAQMD can also offer a unique perspective on the question of the appropriate standard of review. SCAQMD submits that the proper standard of review for determining whether an EIR is sufficient as an informational document is more nuanced than argued by either party. In our view, this is a mixed question of fact and law. It includes determining whether additional analysis is feasible, which is primarily a factual question that should be reviewed under the substantial evidence standard. However, it also involves determining whether the omission of a particular analysis renders an EIR insufficient to serve CEQA's purpose as a meaningful, informational document. If a lead agency has not determined that a requested analysis is infeasible, it is the court's role to determine whether the EIR nevertheless meets CEQA's purposes, and courts should not defer to the lead agency's conclusions regarding the legal sufficiency of an EIR's analysis. The ultimate question of whether an EIR's analysis is "sufficient" to serve CEQA's informational purposes is predominately a question of law that courts should review de novo.

This brief will explain the rationale for these arguments and may assist the Court in reaching a conclusion that accords proper respect to a lead agency's factual conclusions while maintaining judicial authority over the ultimate question of what level of analysis CEQA requires.

## STATEMENT OF INTEREST OF *AMICUS CURIAE*

The SCAQMD is the regional agency primarily responsible for air pollution control in the South Coast Air Basin, which consists of all of Orange County and the non-desert portions of the Los Angeles, Riverside, and San Bernardino Counties. (Health & Saf. Code § 40410; Cal. Code Regs., tit. 17, § 60104.) The SCAQMD participates in the CEQA process in several ways. Sometimes it acts as a lead agency that prepares CEQA documents for projects. Other times it acts as a responsible agency when it has permit authority over some part of a project that is undergoing CEQA review by a different lead agency. Finally, SCAQMD also acts as a commenting agency for CEQA documents that it receives because it is a public agency with jurisdiction by law over natural resources affected by the project.

In all of these capacities, SCAQMD will be affected by the decision in this case. SCAQMD sometimes submits comments requesting that a lead agency perform an additional type of air quality or health impacts analysis. On the other hand, SCAQMD sometimes determines that a particular type of health impact analysis is not feasible or would not produce reliable and informative results. Thus, SCAQMD will be affected by the Court's resolution of the extent to which CEQA requires EIRs to correlate emissions and health impacts, and its resolution of the proper standard of review.

## CERTIFICATION REGARDING AUTHORSHIP AND FUNDING

No party or counsel in the pending case authored the proposed amicus curiae brief in whole or in part, or made any monetary contribution intended to fund the preparation or submission of the brief. No person or entity other than the proposed *Amicus Curiae* made any monetary contribution intended to fund the preparation or submission of the brief.

Respectfully submitted,

DATED: April 3, 2015

SOUTH COAST AIR QUALITY
MANAGEMENT DISTRICT
KURT R. WIESE, GENERAL COUNSEL
BARBARA BAIRD, CHIEF DEPUTY COUNSEL

By: Barbara Baird
Barbara Baird
*Attorneys for [proposed] Amicus Curiae*
*SOUTH COAST AIR QUALITY*
*MANAGEMENT DISTICT*

## BRIEF OF AMICUS CURIAE

## SUMMARY OF ARGUMENT

The South Coast Air Quality Management District (SCAQMD) submits that this Court should not try to establish a hard-and-fast rule concerning whether lead agencies are required to correlate emissions of air pollutants with specific health consequences in their environmental impact reports (EIR). The level of detail required in EIRs is governed by a few, core CEQA (California Environmental Quality Act) principles. As this Court has stated, "[a]n EIR must include detail sufficient to enable those who did not participate in its preparation to understand and to consider meaningfully the issues raised by the proposed project." (*Laurel Heights Improvement Assn. v. Regents of the Univ of Cal.* (1988) 47 Cal.3d 376, 405 ["*Laurel Heights I*"]) Accordingly, "an agency must use its best efforts to find out and disclose all that it reasonably can." (*Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova* (2007) 40 Cal.4th 412, 428 (quoting CEQA Guidelines § 15144)[1].). However, "[a]nalysis of environmental effects need not be exhaustive, but will be judged in light of what is reasonably feasible." (*Association of Irritated Residents v. County of Madera* (2003) 107 Cal.App.4th 1383, 1390; CEQA Guidelines §§ 15151, 15204(a).)

With regard to analysis of air quality related health impacts, EIRs must generally quantify a project's pollutant emissions, but in some cases it is not feasible to correlate these emissions to specific, quantifiable health impacts (e.g., premature mortality; hospital admissions). In such cases, a general description of the adverse health impacts resulting from the pollutants at issue may be sufficient. In other cases, due to the magnitude

[1] The CEQA Guidelines are found at Cal. Code Regs., tit. 14 §§ 15000, *et seq.*

or nature of the pollution emissions, as well as the specificity of the project involved, it may be feasible to quantify health impacts. Or there may be a less exacting, but still meaningful analysis of health impacts that can feasibly be performed. In these instances, agencies should disclose those impacts.

SCAQMD also submits that whether or not an EIR complies with CEQA's informational mandates by providing sufficient, feasible analysis is a mixed question of fact and law. Pertinent here, the question of whether an EIR's discussion of health impacts from air pollution is sufficient to allow the public to understand and consider meaningfully the issues involves two inquiries: (1) Is it feasible to provide the information or analysis that a commenter is requesting or a petitioner is arguing should be required?; and (2) Even if it is feasible, is the agency relying on other policy or legal considerations to justify not preparing the requested analysis? The first question of whether an analysis is feasible is primarily a question of fact that should be judged by the substantial evidence standard. The second inquiry involves evaluating CEQA's information disclosure purposes against the asserted reasons to not perform the requested analysis. For example, an agency might believe that its EIR meets CEQA's informational disclosure standards even without a particular analysis, and therefore choose not to conduct that analysis. SCAQMD submits that this is more of a legal question, which should be reviewed de novo as a question of law.

## ARGUMENT

## I. RELEVANT FACTUAL AND LEGAL FRAMEWORK.

### A. Air Quality Regulatory Background

The South Coast Air Quality Management District (SCAQMD) is one of the local and regional air pollution control districts and air quality

management districts in California. The SCAQMD is the regional air pollution agency for the South Coast Air Basin, which consists of all of Orange County and the non-desert portions of Los Angeles, Riverside, and San Bernardino Counties. (Health & Saf. Code § 40410, 17 Cal. Code Reg. § 60104.) The SCAQMD also includes the Coachella Valley in Riverside County (Palm Springs area to the Salton Sea). (SCAQMD, *Final 2012 AQMP (Feb. 2013)*, http://www.aqmd.gov/home/library/clean-air-plans/air-quality-mgt-plan/final-2012-air-quality-management-plan; then follow "chapter 7" hyperlink; pp 7-1, 7-3 (last visited Apr. 1, 2015).) The SCAQMD's jurisdiction includes over 16 million residents and has the worst or nearly the worst air pollution levels in the country for ozone and fine particulate matter. (SCAQMD, *Final 2012 AQMP (Feb. 2013)*, http://www.aqmd.gov/home/library/clean-air-plans/air-quality-mgt-plan/final-2012-air-quality-management-plan; then follow "Executive Summary" hyperlink p. ES-1 (last visited Apr. 1, 2015).)

Under California law, the local and regional districts are primarily responsible for controlling air pollution from all sources except motor vehicles. (Health & Saf. Code § 40000.) The California Air Resources Board (CARB), part of the California Environmental Protection Agency, is primarily responsible for controlling pollution from motor vehicles. (*Id.*) The air districts must adopt rules to achieve and maintain the state and federal ambient air quality standards within their jurisdictions. (Health & Saf. Code § 40001.)

The federal Clean Air Act (CAA) requires the United States Environmental Protection Agency (EPA) to identify pollutants that are widely distributed and pose a threat to human health, developing a so-called "criteria" document. (42 U.S.C. § 7408; CAA § 108.) These pollutants are frequently called "criteria pollutants." EPA must then establish "national ambient air quality standards" at levels "requisite to protect public health",

allowing "an adequate margin of safety." (42 U.S.C. § 7409; CAA § 109.) EPA has set standards for six identified pollutants: ozone, nitrogen dioxide, sulfur dioxide, carbon monoxide, particulate matter (PM), and lead. (U.S. EPA, National Ambient Air Quality Standards (NAAQS), http://www.epa.gov/air/criteria.html (last updated Oct. 21, 2014).)[2]

Under the Clean Air Act, EPA sets emission standards for motor vehicles and "nonroad engines" (mobile farm and construction equipment, marine vessels, locomotives, aircraft, etc.). (42 U.S.C. §§ 7521, 7547; CAA §§ 202, 213.) California is the only state allowed to establish emission standards for motor vehicles and most nonroad sources; however, it may only do so with EPA's approval. (42 U.S.C. §§ 7543(b), 7543(e); CAA §§ 209(b), 209(c).) Sources such as manufacturing facilities, power plants and refineries that are not mobile are often referred to as "stationary sources." The Clean Air Act charges state and local agencies with the primary responsibility to attain the national ambient air quality standards. (42 U.S.C. § 7401(a)(3); CAA § 101(a)(3).) Each state must adopt and implement a plan including enforceable measures to achieve and maintain the national ambient air quality standards. (42 U.S.C. § 7410; CAA § 110.) The SCAQMD and CARB jointly prepare portion of the plan for the South Coast Air Basin and submit it for approval by EPA. (Health & Saf. Code §§ 40460, et seq.)

The Clean Air Act also requires state and local agencies to adopt a permit program requiring, among other things, that new or modified "major" stationary sources use technology to achieve the "lowest achievable emission rate," and to control minor stationary sources as

---

[2] Particulate matter (PM) is further divided into two categories: fine particulate or $PM_{2.5}$ (particles with a diameter of less than or equal to 2.5 microns) and coarse particulate ($PM_{10}$) (particles with a diameter of 10 microns or less). (U.S. EPA, Particulate Matter (PM), http://www.epa.gov/airquality/particlepollution/ (last visited Apr. 1, 2015).)

needed to help attain the standards. (42 U.S.C. §§ 7502(c)(5), 7503(a)(2), 7410(a)(2)(C); CAA §§ 172(c)(5), 173(a)(2), 110(a)(2)(C).) The air districts implement these permit programs in California. (Health & Saf. Code §§ 42300, et seq.)

The Clean Air Act also sets out a regulatory structure for over 100 so-called "hazardous air pollutants" calling for EPA to establish "maximum achievable control technology" (MACT) for sources of these pollutants. (42 U.S.C. § 7412(d)(2); CAA § 112(d)(2).) California refers to these pollutants as "toxic air contaminants" (TACs) which are subject to two state-required programs. The first program requires "air toxics control measures" for specific categories of sources. (Health & Saf. Code § 39666.) The other program requires larger stationary sources and sources identified by air districts to prepare "health risk assessments" for impacts of toxic air contaminants. (Health & Saf. Code §§ 44320(b), 44322, 44360.) If the health risk exceeds levels identified by the district as "significant," the facility must implement a "risk reduction plan" to bring its risk levels below "significant" levels. Air districts may adopt additional more stringent requirements than those required by state law, including requirements for toxic air contaminants. (Health & Saf. Code § 41508; *Western Oil & Gas Assn. v. Monterey Bay Unified APCD* (1989) 49 Cal.3d 408, 414.) For example, SCAQMD has adopted a rule requiring new or modified sources to keep their risks below specified levels and use best available control technology (BACT) for toxics. (SCAQMD, *Rule 1401-New Source Review of Toxic Air Contaminants*, http://www.aqmd.gov/home/regulations/rules/scaqmd-rule-book/regulation-xiv; then follow "Rule 1401" hyperlink (last visited Apr. 1, 2015).)

## B. The SCAQMD's Role Under CEQA

The California Environmental Quality Act (CEQA) requires public agencies to perform an environmental review and appropriate analysis for projects that they implement or approve. (Pub. Resources Code § 21080(a).) The agency with primary approval authority for a particular project is generally the "lead agency" that prepares the appropriate CEQA document. (CEQA Guidelines §§ 15050, 15051.) Other agencies having a subsequent approval authority over all or part of a project are called "responsible" agencies that must determine whether the CEQA document is adequate for their use. (CEQA Guidelines §§ 15096(c), 15381.) Lead agencies must also consult with and circulate their environmental impact reports to "trustee agencies" and agencies "with jurisdiction by law" including "authority over resources which may be affected by the project." (Pub. Resources Code §§ 21104(a), 21153; CEQA Guidelines §§ 15086(a)(3), 15073(c).) The SCAQMD has a role in all these aspects of CEQA.

Fulfilling its responsibilities to implement its air quality plan and adopt rules to attain the national ambient air quality standards, SCAQMD adopts a dozen or more rules each year to require pollution reductions from a wide variety of sources. The SCAQMD staff evaluates each rule for any adverse environmental impact and prepares the appropriate CEQA document. Although most rules reduce air emissions, they may have secondary environmental impacts such as use of water or energy or disposal of waste—e.g., spent catalyst from control equipment.[3]

---

[3] The SCAQMD's CEQA program for its rules is a "Certified Regulatory Program" under which it prepares a "functionally equivalent" document in lieu of a negative declaration or EIR. (Pub. Resources Code § 21080.5, CEQA Guidelines § 15251(l).)

The SCAQMD also approves a large number of permits every year to construct new, modified, or replacement facilities that emit regulated air pollutants. The majority of these air pollutant sources have already been included in an earlier CEQA evaluation for a larger project, are currently being evaluated by a local government as lead agency, or qualify for an exemption. However, the SCAQMD sometimes acts as lead agency for major projects where the local government does not have a discretionary approval. In such cases, SCAQMD prepares and certifies a negative declaration or environmental impact report (EIR) as appropriate.[4] SCAQMD evaluates perhaps a dozen such permit projects under CEQA each year. SCAQMD is often also a "responsible agency" for many projects since it must issue a permit for part of the projects (e.g., a boiler used to provide heat in a commercial building). For permit projects evaluated by another lead agency under CEQA, SCAQMD has the right to determine that the CEQA document is inadequate for its purposes as a responsible agency, but it may not do so because its permit program already requires all permitted sources to use the best available air pollution control technology. (SCAQMD, *Rule 1303(a)(1) – Requirements*, http://www.aqmd.gov/home/regulations/rules/scaqmd-rule-book/regulation-xiii; then follow "Rule 1303" hyperlink (last visited Apr. 1, 2015).)

Finally, SCAQMD receives as many as 60 or more CEQA documents each month (around 500 per year) in its role as commenting agency or an agency with "jurisdiction by law" over air quality—a natural resource affected by the project. (Pub. Resources Code §§ 21104(a), 21153; CEQA Guidelines § 15366(a)(3).) The SCAQMD staff provides comments on as many as 25 or 30 such documents each month.

---

[4] The SCAQMD's permit projects are not included in its Certified Regulatory Program, and are evaluated under the traditional local government CEQA analysis. (Pub. Resources Code §§ 21150-21154.)

(SCAQMD Governing Board Agenda, Apr. 3, 2015, Agenda Item 16, Attachment A, http://www.aqmd.gov/home/library/meeting-agendas-minutes/agenda?title=governing-board-meeting-agenda-april-3-2015; then follow "16. Lead Agency Projects and Environmental Documents Received by SCAQMD" hyperlink (last visited Apr. 1, 2015).) Of course, SCAQMD focuses its commenting efforts on the more significant projects.

Typically, SCAQMD comments on the adequacy of air quality analysis, appropriateness of assumptions and methodology, and completeness of the recommended air quality mitigation measures. Staff may comment on the need to prepare a health risk assessment detailing the projected cancer and noncancer risks from toxic air contaminants resulting from the project, particularly the impacts of diesel particulate matter, which CARB has identified as a toxic air contaminant based on its carcinogenic effects. (California Air Resources Board, Resolution 98-35, Aug. 27, 1998, http://www.arb.ca.gov/regact/diesltac/diesltac.htm; then follow Resolution 98-35 hyperlink (last visited Apr. 1, 2015).) Because SCAQMD already requires new or modified stationary sources of toxic air contaminants to use the best available control technology for toxics and to keep their risks below specified levels, (SCAQMD Rule 1401, supra, note 15), the greatest opportunity to further mitigate toxic impacts through the CEQA process is by reducing emissions—particularly diesel emissions—from vehicles.

## II. THIS COURT SHOULD NOT SET A HARD-AND-FAST RULE CONCERNING THE EXTENT TO WHICH AN EIR MUST CORRELATE A PROJECT'S EMISSION OF POLLUTANTS WITH RESULTING HEALTH IMPACTS.

Numerous cases hold that courts do not review the correctness of an EIR's conclusions but rather its sufficiency as an informative document. (*Laurel Heights 1, supra*, 47 Cal.3d at p. 392; *Citizens of Goleta Valley v.*

*Bd. of Supervisors* (1990) 52 Cal.3d 553, 569; *Bakersfield Citizens for Local Control v. City of Bakersfield* (2004) 124 Cal.App.4th 1184, 1197.)

As stated by the Court of Appeal in this case, where an EIR has addressed a topic, but the petitioner claims that the information provided about that topic is insufficient, courts must "draw[] a line that divides *sufficient* discussions from those that are *insufficient*." (*Sierra Club v. County of Fresno* (2014) 226 Cal.App.4th 704 (superseded by grant of review) 172 Cal.Rptr.3d 271, 290.) The Court of Appeal readily admitted that "[t]he terms themselves – sufficient and insufficient – provide little, if any, guidance as to where the line should be drawn. They are simply labels applied once the court has completed its analysis." (*Id.*)

The CEQA Guidelines, however, provide guidance regarding what constitutes a sufficient discussion of impacts. Section 15151 states that "the sufficiency of an EIR is to be reviewed in light of what is reasonably feasible." Case law reflects this: "Analysis of environmental effects need not be exhaustive, but will be judged in light of what was reasonably feasible." (*Association of Irritated Residents v. County of Madera, supra,* 107 Cal.App.4th at p. 1390; see also CEQA Guidelines § 15204(a).)

Applying this test, this Court cannot realistically establish a hard-and-fast rule that an analysis correlating air pollution impacts of a project to quantified resulting health impacts is always required, or indeed that it is never required. Simply put, in some cases such an analysis will be "feasible"; in some cases it will not.

For example, air pollution control districts often require a proposed new source of toxic air contaminants to prepare a "health risk assessment" before issuing a permit to construct. District rules often limit the allowable cancer risk the new source may cause to the "maximally exposed individual" (worker and residence exposures). (*See, e.g.*, SCAQMD Rule 1401(c)(8); 1401(d)(1), *supra* note 15.) In order to perform this analysis, it

is necessary to have data regarding the sources and types of air toxic contaminants, location of emission points, velocity of emissions, the meteorology and topography of the area, and the location of receptors (worker and residence). (SCAQMD, *Supplemental Guidelines for Preparing Risk Assessments for the Air Toxics "Hot Spots" Information and Assessment Act (AB2588), pp. 11-16*; (last visited Apr. 1, 2015) http://www.aqmd.gov/home/library/documents-support-material; "Guidelines" hyperlink; AB2588; then follow AB2588 Risk Assessment Guidelines hyperlink.)

Thus, it is feasible to determine the health risk posed by a new gas station locating at an intersection in a mixed use area, where receptor locations are known. On the other hand, it may not be feasible to perform a health risk assessment for airborne toxics that will be emitted by a generic industrial building that was built on "speculation" (i.e., without knowing the future tenant(s)). Even where a health risk assessment can be prepared, however, the resulting maximum health risk value is only a calculation of risk—it does not necessarily mean anyone will contract cancer as a result of the project.

In order to find the "cancer burden" or expected additional cases of cancer resulting from the project, it is also necessary to know the numbers and location of individuals living within the "zone of impact" of the project: i.e., those living in areas where the projected cancer risk from the project exceeds one in a million. (SCAQMD, Health Risk Assessment Summary form, http://www.aqmd.gov/home/forms ; filter by "AB2588" category; then "Health Risk Assessment" hyperlink (last visited Apr. 1, 2015).) The affected population is divided into bands of those exposed to at least 1 in a million risk, those exposed to at least 10 in a million risk, etc. up to those exposed at the highest levels. (*Id.*) This data allows agencies to calculate an approximate number of additional cancer cases expected from

the project. However, it is not possible to predict which particular individuals will be affected.

For the so-called criteria pollutants[5], such as ozone, it may be more difficult to quantify health impacts. Ozone is formed in the atmosphere from the chemical reaction of the nitrogen oxides ($NO_x$) and volatile organic compounds (VOC) in the presence of sunlight. (U.S. EPA, Ground Level Ozone, http://www.epa.gov/airquality/ozonepollution/ (last updated Mar. 25, 2015).) It takes time and the influence of meteorological conditions for these reactions to occur, so ozone may be formed at a distance downwind from the sources. (U.S. EPA, *Guideline on Ozone Monitoring Site Selection* (Aug. 1998) EPA-454/R-98-002 § 5.1.2, http://www.epa.gov/ttnamti1/archive/cpreldoc.html (last visited Apr. 1, 2015).) $NO_x$ and VOC are known as "precursors" of ozone.

Scientifically, health effects from ozone are correlated with increases in the ambient level of ozone in the air a person breathes. (U.S. EPA, *Health Effects of Ozone in the General Population,* Figure 9, http://www.epa.gov/apti/ozonehealth/population.html#levels (last visited Apr. 1, 2015).) However, it takes a large amount of additional precursor emissions to cause a modeled increase in ambient ozone levels over an entire region. For example, the SCAQMD's 2012 AQMP showed that reducing $NO_x$ by 432 tons per day (157,680 tons/year) and reducing VOC by 187 tons per day (68,255 tons/year) would reduce ozone levels at the SCAQMD's monitor site with the highest levels by only 9 parts per billion. (South Coast Air Quality Management District, *Final 2012 AQMP (February 2013)*, http://www.aqmd.gov/home/library/clean-air-plans/air-quality-mgt-plan/final-2012-air-quality-management-plan; then follow "Appendix V: Modeling & Attainment Demonstrations" hyperlink,

[5] See discussion of types of pollutants, supra, Part I.A.

pp. v-4-2, v-7-4, v-7-24.) SCAQMD staff does not currently know of a way to accurately quantify ozone-related health impacts caused by $NO_x$ or VOC emissions from relatively small projects.

On the other hand, this type of analysis may be feasible for projects on a regional scale with very high emissions of $NO_x$ and VOCs, where impacts are regional. For example, in 2011 the SCAQMD performed a health impact analysis in its CEQA document for proposed Rule 1315, which authorized various newly-permitted sources to use offsets from the districts "internal bank" of emission reductions. This CEQA analysis accounted for essentially *all* the increases in emissions due to new or modified sources in the District between 2010 and 2030.[6] The SCAQMD was able to correlate this very large emissions increase (e.g., 6,620 pounds per day $NO_x$ (1,208 tons per year), 89,180 pounds per day VOC (16,275 tons per year)) to expected health outcomes from ozone and particulate matter (e.g., 20 premature deaths per year and 89,947 school absences in the year 2030 due to ozone).[7] (SCAQMD Governing Board Agenda, February 4, 2011, Agenda Item 26, *Assessment for: Re-adoption of Proposed Rule 1315 – Federal New Source Review Tracking System* (see hyperlink in fn 6*)* at p. 4.1-35, Table 4.1-29.)

---

[6] (SCAQMD Governing Board Agenda, February 4, 2011, Agenda Item 26, Attachment G, *Assessment for: Re-adoption of Proposed Rule 1315 – Federal New Source Review Tracking System, Vol. 1, p.4.0-6,* http://www.aqmd.gov/home/library/meeting-agendas-minutes/agenda?title=governing-board-meeting-agenda-february-4-2011; the follow "26. Adopt Proposed Rule 1315 – Federal New Source Review Tracking System" (last visited April 1, 2015).)

[7] The SCAQMD was able to establish the location of future $NO_x$ and VOC emissions by assuming that new projects would be built in the same locations and proportions as existing stationary sources. This CEQA document was upheld by the Los Angeles County Superior Court in *Natural Res. Def. Council v SCAQMD*, Los Angeles Superior Court No. BS110792).

However, a project emitting only 10 tons per year of $NO_x$ or VOC is small enough that its regional impact on ambient ozone levels may not be detected in the regional air quality models that are currently used to determine ozone levels. Thus, in this case it would not be feasible to directly correlate project emissions of VOC or $NO_x$ with specific health impacts from ozone. This is in part because ozone formation is not linearly related to emissions. Ozone impacts vary depending on the location of the emissions, the location of other precursor emissions, meteorology and seasonal impacts, and because ozone is formed some time later and downwind from the actual emission. (EPA Guideline on Ozone Monitoring Site Selection (Aug. 1998) EPA-454/R-98-002, § 5.1.2; https://www.epa.gov/ttnamti1/archive/cpreldoc.html; then search "Guideline on Ozone Monitoring Site Selection" click on pdf) (last viewed Apr. 1, 2015).)

SCAQMD has set its CEQA "significance" threshold for $NO_x$ and VOC at 10 tons per year (expressed as 55 lb/day). (SCAQMD, *Air Quality Analysis Handbook*, http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook; then follow "SCAQMD Air Quality Significance Thresholds" hyperlink (last visited Apr. 1, 2015).) This is because the federal Clean Air Act defines a "major" stationary source for "extreme" ozone nonattainment areas such as SCAQMD as one emitting 10 tons/year. (42 U.S.C. §§ 7511a(e), 7511a(f); CAA §§ 182(e), 182(f).) Under the Clean Air Act, such sources are subject to enhanced control requirements (42 U.S.C. §§ 7502(c)(5), 7503; CAA §§ 172(c)(5), 173), so SCAQMD decided this was an appropriate threshold for making a CEQA "significance" finding and requiring feasible mitigation. Essentially, SCAQMD takes the position that a source that emits 10 tons/year of $NO_x$ or VOC would contribute cumulatively to ozone formation. Therefore, lead agencies that use SCAQMD's thresholds of significance may determine

that many projects have "significant" air quality impacts and must apply all feasible mitigation measures, yet will not be able to precisely correlate the project to quantifiable health impacts, unless the emissions are sufficiently high to use a regional modeling program.

In the case of particulate matter ($PM_{2.5}$)[8], another "criteria" pollutant, SCAQMD staff is aware of two possible methods of analysis. SCAQMD used regional modeling to predict expected health impacts from its proposed Rule 1315, as mentioned above. Also, the California Air Resources Board (CARB) has developed a methodology that can predict expected mortality (premature deaths) from large amounts of $PM_{2.5}$. (California Air Resources Board, *Health Impacts Analysis: PM Premature Death Relationship*, http://www.arb.ca.gov/research/health/pm-mort/pm-mort_arch.htm (last reviewed Jan. 19, 2012).) SCAQMD used the CARB methodology to predict impacts from three very large power plants (e.g., 731-1837 lbs/day). (Final Environmental Assessment for Rule 1315, *supra*, pp 4.0-12, 4.1-13, 4.1-37 (e.g., 125 premature deaths in the entire SCAQMD in 2030), 4.1-39 (0.05 to 1.77 annual premature deaths from power plants.) Again, this project involved large amounts of additional $PM_{2.5}$ in the District, up to 2.82 tons/day (5,650 lbs/day of $PM_{2.5}$, or, or 1029 tons/year. (*Id.* at table 4.1-4, p. 4.1-10.)

However, the primary author of the CARB methodology has reported that this $PM_{2.5}$ health impact methodology is not suited for small projects and may yield unreliable results due to various uncertainties. [9] (SCAQMD, *Final Subsequent Mitigated Negative Declaration for: Warren*

---

[8] SCAQMD has not attained the latest annual or 24-hour national ambient air quality standards for "$PM_{2.5}$" or particulate matter less than 2.5 microns in diameter.

[9] Among these uncertainties are the representativeness of the population used in the methodology, and the specific source of PM and the corresponding health impacts. (*Id.* at p. 2-24.)

*E&P, Inc. WTU Central Facility, New Equipment Project (certified July 19, 2011)*, http://www.aqmd.gov/home/library/documents-support-material/lead-agency-permit-projects/permit-project-documents---year-2011; then follow "Final Subsequent Mitigated Negative Declaration for Warren E&P Inc. WTU Central Facility, New Equipment Project" hyperlink, pp. 2-22, 2-23 (last visited Apr. 1, 2015).) Therefore, when SCAQMD prepared a CEQA document for the expansion of an existing oil production facility, with very small $PM_{2.5}$ increases (3.8 lb/day) and a very small affected population, staff elected not to use the CARB methodology for using estimated $PM_{2.5}$ emissions to derive a projected premature mortality number and explained why it would be inappropriate to do so. (*Id.* at pp 2-22 to 2-24.) SCAQMD staff concluded that use of this methodology for such a small source could result in unreliable findings and would not provide meaningful information. (*Id.* at pp. 2-23, 2-25.) This CEQA document was not challenged in court.

In the above case, while it may have been technically possible to plug the data into the methodology, the results would not have been reliable or meaningful. SCAQMD believes that an agency should not be required to perform analyses that do not produce reliable or meaningful results. This Court has already held that an agency may decline to use even the "normal" "existing conditions" CEQA baseline where to do so would be misleading or without informational value. (*Neighbors for Smart Rail v. Exposition Metro Line* (2013) 57 Cal.4th 439, 448, 457.) The same should be true for a decision that a particular study or analysis would not provide reliable or meaningful results.[10]

---

[10] Whether a particular study would result in "informational value" is a part of deciding whether it is "feasible." CEQA defines "feasible" as "capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, social, and

Therefore, it is not possible to set a hard-and-fast rule on whether a correlation of air quality impacts with specific quantifiable health impacts is required in all cases. Instead, the result turns on whether such an analysis is reasonably feasible in the particular case.[11] Moreover, what is reasonably feasible may change over time as scientists and regulatory agencies continually seek to improve their ability to predict health impacts. For example, CARB staff has been directed by its Governing Board to reassess and improve the methodology for estimating premature deaths. (California Air Resources Board, *Health Impacts Analysis: PM Mortality Relationship*, http://www.arb.ca.gov/research/health/pm-mort/pm-mort.htm (last reviewed Dec. 29, 2010).) This factor also counsels against setting any hard-and-fast rule in this case.

## III. THE QUESTION OF WHETHER AN EIR CONTAINS SUFFICIENT ANALYSIS TO MEET CEQA'S REQUIREMENTS IS A MIXED QUESTION OF FACT AND LAW GOVERNED BY TWO DIFFERENT STANDARDS OF REVIEW.

### A. Standard of Review for Feasibility Determination and Sufficiency as an Informative Document

A second issue in this case is whether courts should review an EIR's informational sufficiency under the "substantial evidence" test as argued by Friant Ranch or the "independent judgment" test as argued by Sierra Club.

---

technological factors." (Pub. Resources Code § 21061.1.) A study cannot be "accomplished in a *successful* manner" if it produces unreliable or misleading results.

[11] In this case, the lead agency did not have an opportunity to determine whether the requested analysis was feasible because the comment was non-specific. Therefore, SCAQMD suggests that this Court, after resolving the legal issues in the case, direct the Court of Appeal to remand the case to the lead agency for a determination of whether the requested analysis is feasible. Because Fresno County, the lead agency, did not seek review in this Court, it seems likely that the County has concluded that at least some level of correlation of air pollution with health impacts is feasible.

As this Court has explained, "a reviewing court must adjust its scrutiny to the nature of the alleged defect, depending on whether the claim is predominantly one of improper procedure or a dispute over the facts." (*Vineyard Area Citizens v. City of Rancho Cordova, supra,* 40 Cal.4th at 435.) For questions regarding compliance with proper procedure or other legal questions, courts review an agency's action de novo under the "independent judgment" test. (*Id.*) On the other hand, courts review factual disputes only for substantial evidence, thereby "accord[ing] greater deference to the agency's substantive factual conclusions." (*Id.*)

Here, Friant Ranch and Sierra Club agree that the case involves the question of whether an EIR includes sufficient information regarding a project's impacts. However, they disagree on the proper standard of review for answering this question: Sierra Club contends that courts use the independent judgment standard to determine whether an EIR's analysis is sufficient to meet CEQA's informational purposes,[12] while Friant Ranch contends that the substantial evidence standard applies to this question.

///

///

///

///

///

///

///

///

///

---

[12] Sierra Club acknowledges that courts use the substantial evidence standard when reviewing predicate factual issues, but argues that courts ultimately decide as a matter of law what CEQA requires. (Answering Brief, pp. 14, 23.)

SCAQMD submits that the issue is more nuanced than either party contends. We submit that, whether a CEQA document includes sufficient analysis to satisfy CEQA's informational mandates is a mixed question of fact and law,[13] containing two levels of inquiry that should be judged by different standards.[14]

The state CEQA Guidelines set forth standards for the adequacy of environmental analysis. Guidelines Section 15151 states:

> An EIR should be prepared with a sufficient degree of analysis to provide decision makers with information which enables them to make a decision which intelligently takes account of environmental consequences. An evaluation of the environmental effects of a proposed project need not be exhaustive, but the sufficiency of an EIR is to be reviewed in light of what is reasonably feasible. Disagreement among experts does not make an EIR inadequate, but the EIR should summarize the main points of disagreement among the experts. The courts have looked not for perfection, but for adequacy, completeness, and a good-faith effort at full disclosure.

In this case, the basic question is whether the underlying analysis of air quality impacts made the EIR "sufficient" as an informative document. However, whether the EIR's analysis was sufficient is judged in light of what was reasonably feasible. This represents a mixed question of fact and law that is governed by two different standards of review.

---

[13] Friant Ranch actually states that the claim that an EIR lacks sufficient relevant information is, "most properly thought of as raising mixed questions of fact and law." (Opening Brief, p. 27.) However, the remainder of its argument claims that the court should apply the substantial evidence standard of review to all aspects of the issue.

[14] Mixed questions of fact and law issues may implicate predominantly factual subordinate questions that are reviewed under the substantial evidence test even though the ultimate question may be reviewed by the independent judgment test. *Crocker National Bank v. City and County of San Francisco* (1989) 49 Cal.3d 881, 888-889.

SCAQMD submits that an EIR's sufficiency as an informational document is ultimately a legal question that courts should determine using their independent judgment. This Court's language in *Laurel Heights I* supports this position. As this Court explained: "The court does not pass upon the correctness of the EIR's environmental conclusions, but only upon its *sufficiency as an informative document.*" (*Laurel Heights I, supra,* 47 Cal.3d at 392-393) (emphasis added.) As described above, the Court in *Vineyard Area Citizens v. City of Rancho Cordova, supra,* 40 Cal.4th at 431, also used its independent judgment to determine what level of analysis CEQA requires for water supply impacts. The Court did not defer to the lead agency's opinion regarding the law's requirements; rather, it determined for itself what level of analysis was necessary to meet "[t]he law's informational demands." (*Id.* at p. 432.) Further, existing case law also holds that where an agency fails to comply with CEQA's information disclosure requirements, the agency has "failed to proceed in the manner required by law." (*Save Our Peninsula Comm. v. Monterey County Bd. of Supervisors* (2001) 87 Cal.App.4th 99, 118.)

However, whether an EIR satisfies CEQA's requirements depends in part on whether it was reasonably feasible for an agency to conduct additional or more thorough analysis. EIRs must contain "a detailed statement" of a project's impacts (Pub. Res. Code § 21061), and an agency must "use its best efforts to find out and disclose all that it reasonably can." (CEQA Guidelines § 15144.) Nevertheless, "the sufficiency of an EIR is to be reviewed in light of what is reasonably feasible." (CEQA Guidelines § 15151.)

SCAQMD submits that the question of whether additional analysis or a particular study suggested by a commenter is "feasible" is generally a question of fact. Courts have already held that whether a particular alternative is "feasible" is reviewed by the substantial evidence test.

(*Uphold Our Heritage v. Town of Woodside* (2007) 147 Cal.App.4th 587, 598-99; *Center for Biological Diversity v. County of San Bernardino* (2010) 185 Cal.App.4th 866, 883.) Thus, if a lead agency determines that a particular study or analysis is infeasible, that decision should generally be judged by the substantial evidence standard. However, SCAQMD urges this Court to hold that lead agencies must explain the basis of any determination that a particular analysis is infeasible in the EIR itself. An EIR must discuss information, including issues related to the feasibility of particular analyses "in sufficient detail to enable meaningful participation and criticism by the public. '[W]hatever is required to be considered in an EIR must be in that formal report; what any official might have known from other writings or oral presentations cannot supply what is lacking in the report.'" (*Laurel Heights I, supra*, 47 Cal.3d at p. 405 (quoting *Santiago County Water District v. County of Orange* (1981) 118 Cal.App.3d 818, 831) (discussing analysis of alternatives).) The evidence on which the determination is based should also be summarized in the EIR itself, with appropriate citations to reference materials if necessary. Otherwise commenting agencies such as SCAQMD would be forced to guess where the lead agency's evidence might be located, thus thwarting effective public participation.

Moreover, if a lead agency determines that a particular study or analysis would not result in reliable or useful information and for that reason is not feasible, that determination should be judged by the substantial evidence test. (See *Neighbors for Smart Rail v. Exposition Metro Line Construction Authority*, *supra*, 57 Cal.4th 439, 448, 457:

whether "existing conditions" baseline would be misleading or uninformative judged by substantial evidence standard.[15])

If the lead agency's determination that a particular analysis or study is not feasible is supported by substantial evidence, then the agency has not violated CEQA's information disclosure provisions, since it would be infeasible to provide additional information. This Court's decisions provide precedent for such a result. For example, this Court determined that the issue of whether the EIR should have included a more detailed discussion of future herbicide use was resolved because substantial evidence supported the agency's finding that "the precise parameters of future herbicide use could not be predicted." *Ebbetts Pass Forest Watch v. California Dept. of Forestry & Fire Protection* (2008) 43 Cal.4th 936, 955.

Of course, SCAQMD expects that courts will continue to hold lead agencies to their obligations to consult with, and not to ignore or misrepresent, the views of sister agencies having special expertise in the area of air quality. (*Berkeley Keep Jets Over the Bay v. Board of Port Commissioners* (2007) 91 Cal.App.4th 1344, 1364 n.11.) In some cases, information provided by such expert agencies may establish that the purported evidence relied on by the lead agency is not in fact "substantial". (*Id.* at pp. 1369-1371.)

In sum, courts retain ultimate responsibility to determine what CEQA requires. However, the law does not require exhaustive analysis, but only what is reasonably feasible. Agencies deserve deference for their factual determinations regarding what type of analysis is reasonably feasible. On the other hand, if a commenter requests more information, and the lead agency declines to provide it but does *not* determine that the

---

[15] The substantial evidence standard recognizes that the courts "have neither the resources nor the scientific expertise" to weigh conflicting evidence on technical issues. (*Laurel Heights I, supra,* 47 Cal.3d 376, 393.)

requested study or analysis would be infeasible, misleading or uninformative, the question becomes whether the omission of that analysis renders the EIR inadequate to satisfy CEQA's informational purposes. (*Id.* at pp. 1370-71.) Again, this is predominantly a question of law and should be judged by the de novo or independent judgment standard of review. Of course, this Court has recognized that a "project opponent or reviewing court can always imagine some additional study or analysis that might provide helpful information. It is not for them to design the EIR. That further study...might be helpful does not make it necessary." (*Laurel Heights I, supra,* 47 Cal.3d 376, 415 – see also CEQA Guidelines § 15204(a) [CEQA "does not require a lead agency to conduct every test. . . recommended or demanded by commenters."].) Courts, then, must adjudicate whether an omission of particular information renders an EIR inadequate to serve CEQA's informational purposes.[16]

---

[16] We recognize that there is case law stating that the substantial evidence standard applies to "challenges to the scope of an EIR's analysis of a topic" as well as the methodology used and the accuracy of the data relied on in the document "because these types of challenges involve factual questions." (*Bakersfield Citizens for Local Control v. City of Bakersfield, supra,* 124 Cal.App.4th 1184, 1198, and cases relied on therein.) However, we interpret this language to refer to situations where the question of the scope of the analysis really is factual—that is, where it involves whether further analysis is feasible, as discussed above. This interpretation is supported by the fact that the *Bakersfield* court expressly rejected an argument that a claimed "omission of information from the EIR should be treated as inquiries whether there is substantial evidence supporting the decision approving the project. " *Bakersfield, supra,* 124 Cal.App.4th at p. 1208. And the *Bakersfield* court ultimately decided that the lead agency must analyze the connection between the identified air pollution impacts and resulting health impacts, even though the EIR already included some discussion of air-pollution-related respiratory illnesses. *Bakersfield, supra,* 124 Cal.App.4th at p. 1220. Therefore, the court must not have interpreted this question as one of the "scope of the analysis" to be judged by the substantial evidence standard.

### B. Friant Ranch's Rationale for Rejecting the Independent Judgment Standard of Review is Unsupported by Case Law.

In its brief, Friant Ranch makes a distinction between cases where a required CEQA topic is not discussed at all (to be reviewed by independent judgment as a failure to proceed in the manner required by law) and cases where a topic is discussed, but the commenter claims the information provided is insufficient (to be judged by the substantial evidence test). (Opening Brief, pp. 13-17.) The Court of Appeal recognized these two types of cases, but concluded that both raised questions of law. (*Sierra Club v. County of Fresno* (2014) 226 Cal.App.4th 704 (superseded by grant of review) 172 Cal.Rptr.3d 271, 290.) We believe the distinction drawn by Friant Ranch is unduly narrow, and inconsistent with cases which have concluded that CEQA documents are insufficient. In many instances, CEQA's requirements are stated broadly, and the courts must interpret the law to determine what level of analysis satisfies CEQA's mandate for providing meaningful information, even though the EIR discusses the issue to some extent.

For example, the CEQA Guidelines require discussion of the existing environmental baseline. In *County of Amador v. El Dorado County Water Agency* (1999) 76 Cal.App.4th 931, 954-955, the lead agency had discussed the environmental baseline by describing historic month-end water levels in the affected lakes. However, the court held that this was not an adequate baseline discussion because it failed to discuss the timing and amounts of past actual water releases, to allow comparison with the proposed project. The court evidently applied the independent judgment test to its decision, even though the agency discussed the issue to some extent.

Likewise, in *Vineyard Area Citizens* (2007) 40 Cal.4th 412, this Court addressed the question of whether an EIR's analysis of water supply impacts complied with CEQA. The parties agreed that the EIR was required to analyze the effects of providing water to the development project, "and that in order to do so the EIR had, in some manner, to identify the planned sources of that water." (*Vineyard Area Citizens, supra,* at p. 428.) However, the parties disagreed as to the level of detail required for this analysis and "what level of uncertainty regarding the availability of water supplies can be tolerated in an EIR . . . ." (*Id.*) In other words, the EIR had analyzed water supply impacts for the project, but the petitioner claimed that the analysis was insufficient.

This Court noted that neither CEQA's statutory language or the CEQA Guidelines specifically addressed the question of how precisely an EIR must discuss water supply impacts. (*Id.*) However, it explained that CEQA "states that '[w]hile foreseeing the unforeseeable is not possible, an agency must use its best efforts to find out and disclose all that it reasonably can.'" (*Id.*, [Guidelines § 15144].) The Court used this general principle, along with prior precedent, to elucidate four "principles for analytical adequacy" that are necessary in order to satisfy "CEQA's informational purposes." (*Vineyard Area Citizens, supra,* at p. 430.) The Court did not defer to the agency's determination that the EIR's analysis of water supply impacts was sufficient. Rather, this Court used its independent judgment to determine for itself the level of analysis required to satisfy CEQA's fundamental purposes. (*Vineyard Area Citizens, supra*, at p. 441: an EIR does not serve its purposes where it neglects to explain likely sources of water and "... leaves long term water supply considerations to later stages of the project.")

Similarly, the CEQA Guidelines require an analysis of noise impacts of the project. (Appendix G, "Environmental Checklist Form."[17]) In *Gray v. County of Madera* (2008) 167 Cal.App.4th 1099, 1123, the court held that the lead agency's noise impact analysis was inadequate even though it had addressed the issue and concluded that the increase would not be noticeable. If the court had been using the substantial evidence standard, it likely would have upheld this discussion.

Therefore, we do not agree that the issue can be resolved on the basis suggested by Friant Ranch, which would apply the substantial evidence standard to *every* challenge to an analysis that addresses a required CEQA topic. This interpretation would subvert the courts' proper role in interpreting CEQA and determining what the law requires.

Nor do we agree that the Court of Appeal in this case violated CEQA's prohibition on courts interpreting its provisions "in a manner which imposes procedural or substantive requirements beyond those explicitly stated in this division or in the state guidelines." (Pub. Resources Code § 21083.1.) CEQA requires an EIR to describe *all* significant impacts of the project on the environment. (Pub. Resources Code § 21100(b)(2); *Vineyard Area Citizens, supra,* at p. 428.) Human beings are part of the environment, so CEQA requires EIRs to discuss a project's significant impacts on human health. However, except in certain particular circumstances,[18] neither the CEQA statute nor Guidelines specify the precise level of analysis that agencies must undertake to satisfy the law's requirements. (see, e.g., CEQA Guidelines § 15126.2(a) [EIRs must describe "health and safety problems caused by {a project's} physical changes"].) Accordingly, courts must interpret CEQA as a whole to

---

[17] Association of Environmental Professionals, 2015 CEQA Statute and Guidelines (2015) p.287.

[18] E.g., Pub. Resources Code § 21151.8(C)(3)(B)(iii) (requiring specific type of health risk analysis for siting schools).

determine whether a particular EIR is sufficient as an informational document. A court determining whether an EIR's discussion of human health impacts is legally sufficient does not constitute imposing a new substantive requirement.[19] Under Friant Ranch's theory, the above-referenced cases holding a CEQA analysis inadequate would have violated the law. This is not a reasonable interpretation.

## IV. COURTS MUST SCRUPULOUSLY ENFORCE THE REQUIREMENTS THAT LEAD AGENCIES CONSULT WITH AND OBTAIN COMMENTS FROM AIR DISTRICTS

Courts must "scrupulously enforce" CEQA's legislatively mandated requirements. (*Vineyard Area Citizens, supra*, 40 Cal.4th 412, 435.) Case law has firmly established that lead agencies must consult with the relevant air pollution control district before conducting an initial study, and must provide the districts with notice of the intention to adopt a negative declaration (or EIR). (*Schenck v. County of Sonoma* (2011) 198 Cal.App.4th 949, 958.) As *Schenck* held, neither publishing the notice nor providing it to the State Clearinghouse was a sufficient substitute for sending notice directly to the air district. (*Id.*) Rather, courts "must be satisfied that [administrative] agencies have fully complied with the procedural requirements of CEQA, since only in this way can the important public purposes of CEQA be protected from subversion." *Schenck,* 198 Cal.App.4th at p. 959 (citations omitted).[20]

---

[19] We submit that Public Resources Code Section 21083.1 was intended to prevent courts from, for example, holding that an agency must analyze economic impacts of a project where there are no resulting environmental impacts (see CEQA Guidelines § 15131) , or imposing new procedural requirements, such as imposing additional public notice requirements not set forth in CEQA or the Guidelines.

[20] Lead agencies must consult air districts, as public agencies with jurisdiction by law over resources affected by the project, *before* releasing an EIR. (Pub. Resources Code §§ 21104(a); 21153.) Moreover, air

Lead agencies should be aware, therefore, that failure to properly seek and consider input from the relevant air district constitutes legal error which may jeopardize their project approvals. For example, the court in *Fall River Wild Trout Foundation v. County of Shasta,* (1999) 70 Cal.App.4th 482, 492 held that the failure to give notice to a trustee agency (Department of Fish and Game) was prejudicial error requiring reversal. The court explained that the lack of notice prevented the Department from providing any response to the CEQA document. (*Id.* at p. 492.) It therefore prevented relevant information from being presented to the lead agency, which was prejudicial error because it precluded informed decision-making. (*Id.*)[21]

---

districts should be considered "state agencies" for purposes of the requirement to consult with "trustee agencies" as set forth in Public Resources Code § 20180.3(a). This Court has long ago held that the districts are not mere "local agencies" whose regulations are superseded by those of a state agency regarding matters of statewide concern, but rather have concurrent jurisdiction over such issues. (*Orange County Air Pollution Control District v. Public Util. Com.* (1971) 4 Cal.3d 945, 951, 954.) Since air pollution is a matter of statewide concern, *Id* at 952, air districts should be entitled to trustee agency status in order to ensure that this vital concern is adequately protected during the CEQA process.

[21] In *Schenck,* the court concluded that failure to give notice to the air district was not prejudicial, but this was partly because the trial court had already corrected the error before the case arrived at the Court of Appeal. The trial court issued a writ of mandate requiring the lead agency to give notice to the air district. The air district responded by concurring with the lead agency that air impacts were not significant. (*Schenck,* 198 Cal.App.4th 949, 960.) We disagree with the *Schenck* court that the failure to give notice to the air district would not have been prejudicial (even in the absence of the trial court writ) merely because the lead agency purported to follow the air district's published CEQA guidelines for significance. (*Id.*, 198 Cal.App.4th at p. 960.) In the first place, absent notice to the air district, it is uncertain whether the lead agency properly followed those guidelines. Moreover, it is not realistic to expect that an air district's published guidelines would necessarily fully address all possible air-quality related issues that can arise with a CEQA project, or that those

Similarly, lead agencies must obtain additional information requested by expert agencies, including those with jurisdiction by law, if that information is necessary to determine a project's impacts. (*Sierra Club v. State Bd. Of Forestry* (1994) 7 Cal.4th 1215, 1236-37.) Approving a project without obtaining that information constitutes a failure to proceed in the manner prescribed by CEQA. (*Id.* at p. 1236.)

Moreover, a lead agency can save significant time and money by consulting with the air district early in the process. For example, the lead agency can learn what the air district recommends as an appropriate analysis on the facts of its case, including what kinds of health impacts analysis may be available, and what models are appropriate for use. This saves the lead agency from the need to do its analysis all over again and possibly needing to recirculate the document after errors are corrected, if new significant impacts are identified. (CEQA Guidelines § 15088.5(a).) At the same time, the air district's expert input can help the lead agency properly determine whether another commenter's request for additional analysis or studies is reasonable or feasible. Finally, the air district can provide input on what mitigation measures would be feasible and effective.

Therefore, we suggest that this Court provide guidance to lead agencies reminding them of the importance of consulting with the relevant air districts regarding these issues. Otherwise, their feasibility decisions may be vulnerable to air district evidence that establishes that there is no substantial evidence to support the lead agency decision not to provide specific analysis. (*See Berkeley Keep Jets Over the Bay, supra,* 91 Cal.App.4th 1344, 1369-1371.)

---

guidelines would necessarily be continually modified to reflect new developments. Therefore we believe that, had the trial court not already ordered the lead agency to obtain the air district's views, the failure to give notice would have been prejudicial, as in *Fall River, supra,* 70 Cal.App.4th 482, 492.

## CONCLUSION

The SCAQMD respectfully requests this Court *not* to establish a hard-and-fast rule concerning whether CEQA requires a lead agency to correlate identified air quality impacts of a project with resulting health outcomes. Moreover, the question of whether an EIR is "sufficient as an informational document" is a mixed question of fact and law containing two levels of inquiry. Whether a particular proposed analysis is feasible is predominantly a question of fact to be judged by the substantial evidence standard of review. Where the requested analysis is feasible, but the lead agency relies on legal or policy reasons not to provide it, the question of whether the EIR is nevertheless sufficient as an informational document is predominantly a question of law to be judged by the independent judgment standard of review.

Respectfully submitted,

## PROOF OF SERVICE

I am employed in the County of Los Angeles, California. I am over the age of 18 years and not a party to the within action. My business address is 21865 Copley Drive, Diamond Bar, California 91765.

On April 3, 2015 I served true copies of the following document(s) described as **APPLICATION OF THE SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT FOR LEAVE TO FILE BRIEF OF *AMICUS CURIAE* IN SUPPORT OF NEITHER PARTY AND *[PROPOSED]* BRIEF OF *AMICUS CURIAE*** by placing a true copy of the foregoing document(s) in a sealed envelope addressed as set forth on the attached service list as follows:

**BY MAIL:** I enclosed the document(s) in a sealed envelope or package addressed to the persons at the addresses listed in the Service List and placed the envelope for collection and mailing following our ordinary business practices. I am readily familiar with this District's practice for collection and processing of correspondence for mailing. Under that practice, the correspondence would be deposited with the United States Postal Service, with postage thereon fully prepaid at Diamond Bar, California, in the ordinary course of business. I am aware that on motion of the party served, service is presumed invalid if postal cancellation date or postage meter date is more than one day after date of deposit for mailing in affidavit.

I declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct.

Executed on April 3, 2015 at Diamond Bar, California.

Patricia Anderson

## APPLICATION

Pursuant to California Rules of Court 8.520(f)(1), proposed Amicus Curiae San Joaquin Valley Unified Air Pollution Control District hereby requests permission from the Chief Justice to file an amicus brief in support of Defendant and Respondent, County of Fresno, and Defendant and Real Parties in Interest Friant Ranch, L.P. Pursuant to Rule 8.520(f)(5) of the California Rules of Court, the proposed amicus curiae brief is combined with this Application. The brief addresses the following issue certified by this Court for review:

> Is an EIR adequate when it identifies the health impacts of air pollution and quantifies a project's expected emissions, or does CEQA further require the EIR to *correlate* a project's air quality emissions to specific health impacts?

As of the date of this filing, the deadline for the final reply brief on the merits was March 5, 2015. Accordingly, under Rule 8.520(f)(2), this application and brief are timely.

### 1. Background and Interest of San Joaquin Valley Unified Air Pollution Control District

The San Joaquin Valley Unified Air Pollution Control District ("Air District") regulates air quality in the eight counties comprising the San Joaquin Valley ("Central Valley"): Kern, Tulare, Madera, Fresno, Merced, San Joaquin, Stanislaus, and Kings, and is primarily responsible for attaining air quality standards within its jurisdiction. After billions of dollars of investment by Central Valley businesses, pioneering air quality regulations, and consistent efforts by residents, the Central Valley air basin has made historic improvements in air quality.

The Central Valley's geographical, topographical and meteorological features create exceptionally challenging air quality

conditions. For example, it receives air pollution transported from the San Francisco Bay Area and northern Central Valley communities, and the southern portion of the Central Valley includes three mountain ranges (Sierra, Tehachapi, and Coastal) that, under some meteorological conditions, effectively trap air pollution. Central Valley air pollution is only a fraction of what the Bay Area and Los Angeles produce, but these natural conditions result in air quality conditions that are only marginally better than Los Angeles, even though about ten times more pollution is emitted in the Los Angeles region. Bay Area air quality is much better than the Central Valley's, even though the Bay Area produces about six times more pollution. The Central Valley also receives air pollution transported from the Bay Area and northern counties in the Central Valley, including Sacramento, and transboundary anthropogenic ozone from as far away as China.

Notwithstanding these challenges, the Central Valley has reduced emissions at the same or better rate than other areas in California and has achieved unparalleled milestones in protecting public health and the environment:

- In the last decade, the Central Valley became the first air basin classified by the federal government under the Clean Air Act as a "serious nonattainment" area to come into attainment of health-based National Ambient Air Quality Standard ("NAAQS") for coarse particulate matter (PM10), an achievement made even more notable given the Valley's extensive agricultural sector. Unhealthy levels of particulate matter can cause and exacerbate a range of chronic and acute illnesses.
- In 2013, the Central Valley became the first air basin in the country to improve from a federal designation of "extreme" nonattainment to

actually attain (and quality for an attainment designation) of the 1-hour ozone NAAQS; ozone creates "smog" and, like PM10, causes adverse health impacts.

- The Central Valley also is in full attainment of federal standards for lead, nitrogen dioxide, sulfur dioxide, and carbon monoxide.
- The Central Valley continues to make progress toward compliance with its last two attainment standards, with the number of exceedences for the 8-hour ozone NAAQS reduced by 74% (for the 1997 standard) and 38% (for the 2008 standard) since 1991, and for the small particulate matter (PM2.5) NAAQS reduced by 85% (for the 1997 standard) and 61% (for the 2006 standard).

Sustained improvement in Central Valley air quality requires a rigorous and comprehensive regulatory framework that includes prohibitions (e.g., on wood-burning fireplaces in new residences), mandates (e.g., requiring the installation of best available pollution reduction technologies on new and modified equipment and industrial operations), innovations (e.g., fees assessed against residential development to fund pollution reduction actions to "offset" vehicular emissions associated with new residences), incentive programs (e.g., funding replacements of older, more polluting heavy duty trucks and school buses)[1], ongoing planning for continued air quality improvements, and enforcement of Air District permits and regulations.

The Air District is also an expert air quality agency for the eight counties and cities in the San Joaquin Valley. In that capacity, the Air District has developed air quality emission guidelines for use by the Central

---

[1] San Joaquin's incentive program has been so successful that through 2012, it has awarded over $ 432 million in incentive funds and has achieved 93,349 tons of lifetime emissions reductions. *See* SAN JOAQUIN VALLEY AIR POLLUTION CONTROL DISTRICT, 2012 PM2.5 PLAN, 6-6 (2012) *available at* http://www.valleyair.org/Workshops/postings/2012/12-20-12PM25/FinalVersion/06%20Chapter%206%20Incentives.pdf.

Valley counties and cities that implement the California Environment Quality Act (CEQA).[2] In its guidance, the Air District has distinguished between toxic air contaminants and criteria air pollutants.[3] Recognizing this distinction, the Air District's CEQA Guidance has adopted distinct thresholds of significance for *criteria* pollutants (i.e., ozone, PM2.5 and their respective precursor pollutants) based upon scientific and factual data which demonstrates the level that can be accommodated on a cumulative basis in the San Joaquin Valley without affecting the attainment of the applicable NAAQS.[4] For *toxic air* pollutants, the District has adopted different thresholds of significance which scientific and factual data demonstrates has the potential to expose sensitive receptors (i.e., children, the elderly) to levels which may result in localized health impacts.[5]

The Air District's CEQA Guidance was followed by the County of Fresno in its environment review of the Friant Ranch project, for which the Air District also served as a commenting agency. The Court of Appeal's holding, however, requiring correlation between the project's criteria

---

[2] *See, e.g.*, SAN JOAQUIN VALLEY AIR POLLUTION CONTROL DISTRICT, PLANNING DIVISION, GUIDE FOR ASSESSING AND MITIGATING AIR QUALITY IMPACTS (2015), *available at* http://www.valleyair.org/transportation/GAMAQI_3-19-15.pdf ("CEQA Guidance").

[3] Toxic air contaminants, also known as hazardous air pollutants, are those pollutants that are known or suspected to cause cancer or other serious health effects, such as birth defects. There are currently 189 toxic air contaminants regulated by the United States Environmental Protection Agency ("EPA") and the states pursuant to the Clean Air Act. 42 U.S.C. § 7412. Common TACs include benzene, perchloroethylene and asbestos. *Id.* at 7412(b).

In contrast, there are only six (6) criteria air pollutants: ozone, particulate matter, carbon monoxide, nitrogen oxides, sulfur dioxide and lead. Although criteria air pollutants can also be harmful to human health, they are distinguishable from toxic air contaminants and are regulated separately. For instance, while criteria pollutants are regulated by numerous sections throughout Title I of the Clean Air Act, the regulation of toxic air contaminants occurs solely under section 112 of the Act. Compare 42 U.S.C. §§ 7407 – 7411 & 7501 – 7515 with 42 U.S.C. § 7411.

[4] See, e.g., CEQA Guidance at http://www.valleyair.org/transportation/GAMAQI_3-19-15.pdf, pp. 64-66, 80.

[5] See, e.g., CEQA Guidance at http://www.valleyair.org/transportation/GAMAQI_3-19-15.pdf, pp. 66, 99-101.

pollutants and local health impacts, departs from the Air District's Guidance and approved methodology for assessing criteria pollutants. A close reading of the administrative record that gave rise to this issue demonstrates that the Court's holding is based on a misunderstanding of the distinction between toxic air contaminants (for which a local health risk assessment is feasible and routinely performed) and criteria air pollutants (for which a local health risk assessment is not feasible and would result in speculative results).[6] The Air District has a direct interest in ensuring the lawfulness and consistent application of its CEQA Guidance, and will explain how the Court of Appeal departed from the Air District's long-standing CEQA Guidance in addressing criteria pollutants and toxic air contaminants in this amicus brief.

### 2. How the Proposed Amicus Curiae Brief Will Assist the Court

As counsel for the proposed amicus curiae, we have reviewed the briefs filed in this action. In addition to serving as a "commentary agency" for CEQA purposes over the Friant Ranch project, the Air District has a strong interest in assuring that CEQA is used for its intended purpose, and believes that this Court would benefit from additional briefing explaining the distinction between criteria pollutants and toxic air contaminants and the different methodologies employed by local air pollution control agencies such as the Air District to analyze these two categories of air pollutants under CEQA. The Air District will also explain how the Court of Appeal's opinion is based upon a fundamental misunderstanding of these two different approaches by requiring the County of Fresno to correlate the project's *criteria* pollution emissions with *local* health impacts. In doing

---

[6] CEQA does not require speculation. *See, e.g., Laurel Heights Improvement Ass'n v. Regents of Univ. of Cal.*, 6 Cal. 4th 1112, 1137 (1993) (upholding EIR that failed to evaluate cumulative toxic air emission increases given absence of any acceptable means for doing so).

so, the Air District will provide helpful analysis to support its position that at least insofar as criteria pollutants are concerned, CEQA does not require an EIR to correlate a project's air quality emissions to specific health impacts, because such an analysis is not reasonably feasible.

**Rule 8.520 Disclosure**

Pursuant to Cal. R. 8.520(f)(4), neither the Plaintiffs nor the Defendant or Real Party In Interest or their respective counsel authored this brief in whole or in part. Neither the Plaintiffs nor the Defendant or Real Party in Interest or their respective counsel made any monetary contribution towards or in support of the preparation of this brief.

**CONCLUSION**

On behalf of the San Joaquin Valley Unified Air Pollution Control District, we respectfully request that this Court accept the filing of the attached brief.

## I. INTRODUCTION.

The San Joaquin Valley Unified Air Pollution Control District ("Air District") respectfully submits that the Court of Appeal erred when it held that the air quality analysis contained in the Environmental Impact Report ("EIR") for the Friant Ranch development project was inadequate under the California Environmental Quality Act ("CEQA") because it did not include an analysis of the correlation between the project's criteria air pollutants and the potential adverse human health impacts. A close reading of the portion of the administrative record that gave rise to this issue demonstrates that the Court's holding is based on a misunderstanding of the distinction between toxic air contaminants and criteria air pollutants.

Toxic air contaminants, also known as hazardous air pollutants, are those pollutants that are known or suspected to cause cancer or other serious health effects, such as birth defects. There are currently 189 toxic air contaminants (hereinafter referred to as "TACs") regulated by the United States Environmental Protection Agency ("EPA") and the states pursuant to the Clean Air Act. 42 U.S.C. § 7412. Common TACs include benzene, perchloroethylene and asbestos. *Id.* at 7412(b).

In contrast, there are only six (6) criteria air pollutants: ozone, particulate matter, carbon monoxide, nitrogen oxides, sulfur dioxide and lead. Although criteria air pollutants can also be harmful to human health,

they are distinguishable from TACs and are regulated separately. For instance, while criteria pollutants are regulated by numerous sections throughout Title I of the Clean Air Act, the regulation of TACs occurs solely under section 112 of the Act. *Compare* 42 U.S.C. §§ 7407 – 7411 & 7501 – 7515 *with* 42 U.S.C. § 7411.

The most relevant difference between criteria pollutants and TACs for purposes of this case is the manner in which human health impacts are accounted for. While it is common practice to analyze the correlation between an individual facility's TAC emissions and the expected localized human health impacts, such is not the case for criteria pollutants. Instead, the human health impacts associated with criteria air pollutants are analyzed and taken into consideration when EPA sets the national ambient air quality standard ("NAAQS") for each criteria pollutant. 42 U.S.C. § 7409(b)(1). The health impact of a particular criteria pollutant is analyzed on a regional and not a facility level based on how close the area is to complying with (attaining) the NAAQS. Accordingly, while the type of individual facility / health impact analysis that the Court of Appeal has required is a customary practice for TACs, it is not feasible to conduct a similar analysis for criteria air pollutants because currently available computer modeling tools are not equipped for this task.

It is clear from a reading of both the administrative record and the Court of Appeal's decision that the Court did not have the expertise to fully

appreciate the difference between TACs and criteria air pollutants. As a result, the Court has ordered the County of Fresno to conduct an analysis that is not practicable and not likely yield valid information. The Air District respectfully requests that this portion of the Court of Appeal's decision be reversed.

## II. THE COURT OF APPEAL ERRED IN FINDING THE FRIANT RANCH EIR INADEQUATE FOR FAILING TO ANALYZE THE SPECIFIC HUMAN HEALTH IMPACTS ASSOCIATED CRITERIA AIR POLLUTANTS.

Although the Air District does not take lightly the amount of air emissions at issue in this case, it submits that the Court of Appeal got it wrong when it required Fresno County to revise the Friant Ranch EIR to include an analysis correlating the criteria air pollutant emissions associated with the project with specific, localized health-impacts. The type of analysis the Court of Appeal has required will not yield reliable information because currently available modeling tools are not well suited for this task. Further, in reviewing this issue de novo, the Court of Appeal failed to appreciate that it lacked the scientific expertise to appreciate the significant differences between a health risk assessment commonly performed for toxic air contaminants and a similar type of analysis it felt should have been conducted for criteria air pollutants.

///

///

### A. Currently Available Modeling Tools are not Equipped to Provide a Meaningful Analysis of the Correlation between an Individual Development Project's Air Emissions and Specific Human Health Impacts.

In order to appreciate the problematic nature of the Court of Appeals' decision requiring a health risk type analysis for criteria air pollutants, it is important to understand how the relevant criteria pollutants (ozone and particulate matter) are formed, dispersed and regulated.

Ground level ozone (smog) is not directly emitted into the air, but is formed when precursor pollutants such as oxides of nitrogen (NOx) and volatile organic compounds (VOCs) are emitted into the atmosphere and undergo complex chemical reactions in the process of sunlight.[1] Once formed, ozone can be transported long distances by wind.[2] Because of the complexity of ozone formation, a specific tonnage amount of NOx or VOCs emitted in a particular area does not equate to a particular concentration of ozone in that area. In fact, even rural areas that have relatively low tonnages of emissions of NOx or VOCs can have high levels of ozone concentration simply due to wind transport.[3] Conversely, the San Francisco Bay Area has six times more NOx and VOC emissions per square mile than the San Joaquin Valley, but experiences lower

[2] *Id.*
[3] *Id.*

concentrations of ozone (and better air quality) simply because sea breezes disperse the emissions.[4]

Particulate matter ("PM") can be divided into two categories: directly emitted PM and secondary PM.[5] While directly emitted PM can have a localized impact, the tonnage emitted does not always equate to the local PM concentration because it can be transported long distances by wind.[6] Secondary PM, like ozone, is formed via complex chemical reactions in the atmosphere between precursor chemicals such as sulfur dioxides (SOx) and NOx.[7] Because of the complexity of secondary PM formation, the tonnage of PM-forming precursor emissions in an area does not necessarily result in an equivalent concentration of secondary PM in that area.

The disconnect between the *tonnage* of precursor pollutants (NOx, SOx and VOCs) and the *concentration* of ozone or PM formed is important because it is not necessarily the tonnage of precursor pollutants that causes human health effects, but the concentration of resulting ozone or PM. Indeed, the national ambient air quality standards ("NAAQS"), which are statutorily required to be set by the United States Environmental Protection

[7] *Id.*

Agency ("EPA") at levels that are "requisite to protect the public health," 42 U.S.C. § 7409(b)(1), are established as concentrations of ozone or particulate matter and not as tonnages of their precursor pollutants.[8]

Attainment of a particular NAAQS occurs when the concentration of the relevant pollutant remains below a set threshold on a consistent basis throughout a particular region. For example, the San Joaquin Valley attained the 1-hour ozone NAAQS when ozone concentrations remained at or below 0.124 parts per million Valley-wide on 3 or fewer days over a 3-year period.[9] Because the NAAQS are focused on achieving a particular concentration of pollution region-wide, the Air District's tools and plans for attaining the NAAQS are regional in nature.

For instance, the computer models used to simulate and predict an attainment date for the ozone or particulate matter NAAQS in the San Joaquin Valley are based on regional inputs, such as regional inventories of precursor pollutants (NOx, SOx and VOCs) and the atmospheric chemistry and meteorology of the Valley.[10] At a very basic level, the models simulate future ozone or PM levels based on predicted changes in precursor

---

[10] *Id.* at Ch. 2 p. 2-19 (visited March 12, 2015); *San Joaquin Valley Unified Air Pollution Control District 2008 PM2.5 Plan*, Appendix F, pp. F-2 – F-5, available at: http://www.valleyair.org/Air_Quality_Plans/docs/AQ_Final_Adopted_PM2.5/20%20Appendix%20F.pdf (visited March 19, 2015).

emissions Valley wide.[11] Because the NAAQS are set levels necessary to protect human health, the closer a region is to attaining a particular NAAQS, the lower the human health impact is from that pollutant.

The goal of these modeling exercises is not to determine whether the emissions generated by a particular factory or development project will affect the date that the Valley attains the NAAQS. Rather, the Air District's modeling and planning strategy is regional in nature and based on the extent to which *all* of the emission-generating sources in the Valley (current and future) must be controlled in order to reach attainment.[12]

Accordingly, the Air District has based its thresholds of significance for CEQA purposes on the levels that scientific and factual data demonstrate that the Valley can accommodate without affecting the attainment date for the NAAQS.[13] The Air District has tied its CEQA significance thresholds to the level at which stationary pollution sources permitted by the Air District must "offset" their emissions.[14] This "offset"

---

[11] *Id.*

[12] Although the Air District does have a dispersion modeling tool used during its air permitting process that is used to predict whether a particular project's directly emitted PM will either cause an exceedance of the PM NAAQS or contribute to an existing exceedance, this model bases the prediction on a worst case scenario of emissions and meteorology and has no provision for predicting any associated human health impacts. Further, this analysis is only performed for stationary sources (factories, oil refineries, etc.) that are required to obtain a New Source Review permit from the Air District and not for development projects such as Friant Ranch over which the Air District has no preconstruction permitting authority. *See* San Joaquin Valley Unified Air Pollution Control District Rule 2201 §§ 2.0; 3.3.9; 4.14.1, available at: http://www.valleyair.org/rules/currntrules/Rule2201041l.pdf (visited March 19, 2015).

[13] *San Joaquin Valley Unified Air Pollution Control District Guide to Assessing and Mitigating Air Quality Impacts*, (March 19, 2015) p. 22, available at: http://www.valleyair.org/transportation/CEQA%20Rules/GAMAQI%20Jan%202002%20Rev.pdf (visited March 30, 2015).

[14] *Id.* at pp. 22, 25.

level allows for growth while keeping the cumulative effects of all new sources at a level that will not impede attainment of the NAAQS.[15] In the Valley, these thresholds are 15 tons per year of PM, and 10 tons of NOx or VOC per year. *Sierra Club*, *supra*, 172 Cal.Rptr.3d at 303; AR 4554. Thus, the CEQA air quality analysis for criteria pollutants is not really a localized, project-level impact analysis but one of regional, "cumulative impacts."

Accordingly, the significance thresholds applied in the Friant Ranch EIR (15 tons per year of PM and 10 tons of NOx or VOCs) are not intended to be indicative of any localized human health impact that the project may have. While the health effects of air pollution are of primary concern to the Air District (indeed, the NAAQS are established to protect human health), the Air District is simply not equipped to analyze whether and to what extent the criteria pollutant emissions of an individual CEQA project directly impact human health in a particular area. This is true even for projects with relatively high levels of emissions of criteria pollutant precursor emissions.

For instance, according to the EIR, the Friant Ranch project is estimated to emit 109.52 tons per year of ROG (VOC), 102.19 tons per year of NOx, and 117.38 tons per year of PM. Although these levels well

---

[15] [15] *San Joaquin Valley Unified Air Pollution Control District Environmental Review Guidelines* (Aug. 2000) p. 4-11, available at: http://www.valleyair.org/transportation/CEQA%20Rules/ERG%20Adopted%20_August%202000_.pdf (visited March 12, 2015).

exceed the Air District's CEQA significance thresholds, this does not mean that one can easily determine the concentration of ozone or PM that will be created at or near the Friant Ranch site on a particular day or month of the year, or what specific health impacts will occur. Meteorology, the presence of sunlight, and other complex chemical factors all combine to determine the ultimate concentration and location of ozone or PM. This is especially true for a project like Friant Ranch where most of the criteria pollutant emissions derive not from a single "point source," but from area wide sources (consumer products, paint, etc.) or mobile sources (cars and trucks) driving to, from and around the site.

In addition, it would be extremely difficult to model the impact on NAAQS attainment that the emissions from the Friant Ranch project may have. As discussed above, the currently available modeling tools are equipped to model the impact of *all* emission sources in the Valley on attainment. According to the most recent EPA-approved emission inventory, the NOx inventory for the Valley is for the year 2014 is 458.2 tons per day, or 167,243 tons per year and the VOC (or ROG) inventory is 361.7 tons per day, or 132,020.5 tons per year.[16] Running the photochemical grid model used for predicting ozone attainment with the

---

[16] *San Joaquin Valley Unified Air Pollution Control District 2007 Ozone Plan*, Appendix B pp. B-6, B-9,
available at:
http://www.valleyair.org/Air_Quality_Plans/docs/AQ_Ozone_2007_Adopted/19%20Appendix%20B%20April%202007.pdf (visited March 12, 2015).

emissions solely from the Friant Ranch project (which equate to less than one-tenth of one percent of the total NOx and VOC in the Valley) is not likely to yield valid information given the relative scale involved.

Finally, even once a model is developed to accurately ascertain local increases in concentrations of photochemical pollutants like ozone and some particulates, it remains impossible, using today's models, to correlate that increase in concentration to a specific health impact. The reason is the same: such models are designed to determine regional, population-wide health impacts, and simply are not accurate when applied at the local level.

For these reasons, it is not the norm for CEQA practitioners, including the Air District, to conduct an analysis of the localized health impacts associated with a project's criteria air pollutant emissions as part of the EIR process. When the accepted scientific method precludes a certain type of analysis, "the court cannot impose a legal standard to the contrary." *Kings County Farm Bureau v. City of Hanford* (1990) 221 Cal.App.3d 692, 717 n. 8. However, that is exactly what the Court of Appeal has done in this case. Its decision upends the way CEQA air quality analysis of criteria pollutants occurs and should be reversed.

///

///

///

### B. The Court of Appeal Improperly Extrapolated a Request for a Health Risk Assessment for Toxic Air Contaminants into a Requirement that the EIR contain an Analysis of Localized Health Impacts Associated with Criteria Air Pollutants.

The Court of Appeal's error in requiring the new health impact analysis for criteria air pollutants clearly stems from a misunderstanding of terms of art commonly used in the air pollution field. More specifically, the Court of Appeal (and Appellants Sierra Club et al.) appear to have confused the health risk analysis ("HRA") performed to determine the health impacts associated with a project's toxic air contaminants ("TACs"), with an analysis correlating a project's criteria air pollutants (ozone, PM and the like) with specific localized health impacts.

The first type of analysis, the HRA, is commonly performed during the Air District's stationary source permitting process for projects that emit TACs and is, thus, incorporated into the CEQA review process. An HRA is a comprehensive analysis to evaluate and predict the dispersion of TACs emitted by a project and the potential for exposure of human populations. It also assesses and quantifies both the individual and population-wide health risks associated with those levels of exposure. There is no similar analysis conducted for criteria air pollutants. Thus, the second type of analysis (required by the Court of Appeal), is not currently part of the Air District's process because, as outlined above, the health risks associated

with exposure to criteria pollutants are evaluated on a regional level based on the region's attainment of the NAAQS.

The root of this confusion between the types of analyses conducted for TACs versus criteria air pollutants appears to stem from a comment that was presented to Fresno County by the City of Fresno during the administrative process.

In its comments on the draft EIR, the City of Fresno (the only party to raise this issue) stated:

> [t]he EIR must disclose the human health related effects of the Project's air pollution impacts. (CEQA Guidelines section 15126.2(a).) The EIR fails completely in this area. The EIR should be revised to disclose and determine the significance of TAC impacts, and of human health risks due to exposure to Project-related air emissions.

(AR 4602.)

In determining that the issue regarding the correlation between the Friant Ranch project's criteria air pollutants and adverse health impacts was adequately exhausted at the administrative level, the Court of Appeal improperly read the first two sentences of the City of Fresno's comment in isolation rather than in the context of the entire comment. *See Sierra Club v. County of Fresno* (2014) 172 Cal.Rptr.3d 271, 306. Although the comment first speaks generally in terms of "human health related effects" and "air pollution," it requests only that the EIR be revised to disclose "the significance of TACs" and the "human health risks due to exposure."

The language of this request in the third sentence of the comment is significant because, to an air pollution practitioner, the language would only have indicated only that a HRA for TACs was requested, and not a separate analysis of the health impacts associated with the project's criteria air pollutants. Fresno County clearly read the comment as a request to perform an HRA for TACs and limited its response accordingly. (AR 4602.)[17] The Air District submits that it would have read the City's comment in the same manner as the County because the City's use of the terms "human health risks" and "TACs" signal that an HRA for TACs is being requested. Indeed, the Air District was also concerned that an HRA be conducted, but understood that it was not possible to conduct such an analysis until the project entered the phase where detailed site specific information, such as the types of emission sources and the proximity of the sources to sensitive receptors became available. (AR 4553.)[18] The City of Fresno was apparently satisfied with the County's discussion of human health risks, as it did not raise the issue again when it commented on the final EIR. (AR 8944 – 8960.)

---

[17] Appellants do not challenge the manner in which the County addressed TACs in the EIR. (Appellants' Answer Brief p. 28 fn. 7.)

[18] Appellants rely on the testimony of Air District employee, Dan Barber, as support for their position that the County should have conducted an analysis correlating the project's criteria air pollutant emissions with localized health impacts. (Appellants Answer Brief pp. 10-11; 28.) However, Mr. Barber's testimony simply reinforces the Air District's concern that a risk assessment (HRA) be conducted once the actual details of the project become available. (AR 8863.) As to criteria air pollutants, Mr. Barber's comments are aimed at the Air District's concern about the amount of emissions and the fact that the emissions will make it "more difficult for Fresno County and the Valley to reach attainment which means that the health of Valley residents maybe [sic] adversely impacted." Mr. Barber says nothing about conducting a separate analysis of the localized health impacts the project's emissions may have.

The Court of Appeal's holding, which incorrectly extrapolates a request for an HRA for TACs into a new analysis of the localized health impacts of the project's criteria air pollutants, highlights two additional errors in the Court's decision.

First, the Court of Appeal's holding illustrates why the Court should have applied the deferential substantial evidence standard of review to the issue of whether the EIR's air quality analysis was sufficient. The regulation of air pollution is a technical and complex field and the Court of Appeal lacked the expertise to fully appreciate the difference between TACs and criteria air pollutants and tools available for analyzing each type of pollutant.

Second, it illustrates that the Court likely got it wrong when it held that the issue regarding the criteria pollutant / localized health impact analysis was properly exhausted during the administrative process. In order to preserve an issue for the court, '[t]he "exact issue" must have been presented to the administrative agency....' [Citation.] *Citizens for Responsible Equitable Environmental Development v. City of San Diego*, (2011) 196 Cal.App.4th 515, 527 129 Cal.Rptr.3d 512, 521; *Sierra Club v. City of Orange* (2008) 163 Cal.App.4th 523, 535, 78 Cal.Rptr.3d 1, 13. "'[T]he objections must be sufficiently specific so that the agency has the

opportunity to evaluate and respond to them.' [Citation.]" *Sierra Club v. City of Orange*,163 Cal.App.4th at 536.[19]

As discussed above, the City's comment, while specific enough to request a commonly performed HRA for TACs, provided the County with no notice that it should perform a new type of analysis correlating criteria pollutant tonnages to specific human health effects. Although the parties have not directly addressed the issue of failure to exhaust administrative remedies in their briefs, the Air District submits that the Court should consider how it affects the issues briefed by the parties since "[e]xhaustion of administrative remedies is a jurisdictional prerequisite to maintenance of a CEQA action." *Bakersfield Citizens for Local Control v. City of Bakersfield* (2004) 124 Cal.App.4th 1184, 1199, 22 Cal.Rptr.3d 203.

## III. CONCLUSION

For all of the foregoing reasons, the Air District respectfully requests that the portion of the Court of Appeal's decision requiring an analysis correlating the localized human health impacts associated with an individual project's criteria air pollutant emissions be reversed.

---

[19] *Sierra Club v. City of Orange*, is illustrative here. In that case, the plaintiffs challenged an EIR approved for a large planned community on the basis that the EIR improperly broke up the various environmental impacts by separate project components or "piecemealed" the analysis in violation of CEQA. In evaluating the defense that the plaintiffs had failed to adequately raise the issue at the administrative level, the Court held that comments such as *"the use of a single document for both a project-level and a program-level EIR [is] 'confusing',"* and *"[t]he lead agency should identify any potential adverse air quality impacts that could occur from all phases of the project and all air pollutant sources related to the project,"* were too vague to fairly raise the argument of piecemealing before the agency. *Sierra Club v. City of Orange*, 163 Cal.App.4th at 537.

correlating the localized human health impacts associated with an individual project's criteria air pollutant emissions be reversed.

Respectfully submitted,

# SMAQMD

# FRIANT RANCH

# INTERIM RECOMMENDATION

SACRAMENTO METROPOLITAN AIR QUALITY MANAGEMENT DISTRICT

# Friant Ranch
# Interim Recommendation

## Background

The California Supreme Court in the case of *Sierra Club v. County of Fresno* (2018) 6 Cal. 5th 502 regarding the proposed Friant Ranch project determined the air quality analysis in the environmental impact report (EIR) was inadequate because it did not make "a reasonable effort to substantively connect the project's air quality impacts to likely health consequences." The Court determined that "the EIR should be revised to relate the expected adverse air quality impacts to likely health consequences or explain in meaningful detail why it is not feasible at the time of drafting to provide such an analysis."

## Need

Lead agencies and practitioners preparing documents to comply with the California Environmental Quality Act (CEQA) have requested guidance from the Sacramento Metropolitan Air Quality Management District (Sac Metro Air District) on implementing the Friant Ranch decision in the review and analysis of proposed projects in Sacramento County.

## Interim Recommendation

The Sac Metro Air District does not currently have a methodology that would correlate the expected air quality emissions of projects to the likely health consequences of the increased emissions. The Sac Metro Air District is in the process of developing a methodology to assess these impacts, and anticipates releasing it in the fall of 2019. In the interim, agencies should follow the Friant Court's advice to explain in meaningful detail why this analysis is not yet feasible.

This explanation should describe the background underlying air regulations, the regional nature of the regulatory approach, and why the approach is not amenable to project level assessments. This should include a discussion of the public health impact analyses that form the basis for the state and federal health-based pollutant concentration standards, and the application of the standards to regions that were established based upon a commonality of factors impacting air quality. Air districts, in turn, have focused on reducing regional emissions from all sectors to meet the health-based concentration standards, thereby reducing the pollutant specific health impacts for the entire population. For example, the Sac Metro Air District prepared plans to attain and maintain the ozone and particulate matter ambient air quality standards. These attainment plans include emissions inventories, air monitoring data, control measures, modeling, future pollutant-level estimates, and general health information. Attainment planning models rely on regional inputs to determine ozone and particulate matter formation and concentrations in a regional context, not a project specific context. Because of the complexity of ozone formation, the pounds or tons of emissions from a proposed project in a specific geographical location does not equate to a specific concentration of ozone formation in a given area, because in addition to emission levels, ozone formation is affected by atmospheric chemistry, geography, and weather. Secondary formation of particulate matter is very similar to the complexity of ozone formation, and localized impacts of directly emitted particulate matter do not always equate to local particulate matter concentrations due to transport of emissions. The analysis should explain that because air district attainment plans and supporting air model tools are regional in nature, they do not allow for analysis of the health impacts of specific projects on any given geographic location. More information is included in the threshold justification documents developed by the Sac Metro Air District, and available at our website at www.airquality.org.

The analysis should also discuss the current models[i] used in CEQA in air quality analyses, which, in contrast to attainment models, are designed to calculate and disclose the mass emissions expected from the construction and operation of a proposed project (pounds/day and tons/year). The estimated emissions are then compared to significance thresholds, which are in turn keyed to reducing emissions to levels that will not interfere with the region's ability to attain the health-based standards. The Sac Metro Air District adopted operational emission thresholds for ozone precursors, nitrogen oxides (NOx) and reactive organic gasses (ROG), with the goal of obtaining 0.45 tons/year of NOx and 0.49 tons/year of ROG reductions from new

development projects exceeding the thresholds by including emission reducing design features as mitigation.[ii] More recently, the Sac Metro Air District adopted particulate matter thresholds, PM10 and PM2.5, to align with the new source review permit offset levels, which are designed to prevent new emission sources from affecting attainment progress.[iii] Sac Metro Air District thresholds are set at 65 pounds/day NOx (11.8 tons/year), 65 pounds/day ROG (11.8 tons/year), 80 pounds/day PM10 (14.6 tons/year), and 82 pounds/day PM2.5 (15 tons/year).[iv] CEQA thresholds are a tool Sac Metro Air District uses to obtain emission reductions from development projects to support attainment of the Federal and State ambient air quality standards. This protects public health in the overall region, but there is currently no methodology to determine the impact of emissions on concentration levels in specific geographic areas.

The CEQA analysis should consider the degree to which various other tools, such as CalEEMod, EMFAC, OFFROAD, AERMOD, and HARP and CAMx, could assist in assessing specific health impacts of a project, and, where those tools would not be useful, explain why. For example, while CalEEMod may be useful in comparing emissions to significance thresholds, it is not able to assess transport of pollutants or the impacts of external factors (weather, terrain, etc.) on pollutant concentrations at particular locations.

In Sacramento, concentration modeling of ozone has not been an analytical tool used for project level emissions due to the complex nature of pollution concentration formation and numerous regional influences (multiple emission sources, meteorology, atmospheric chemistry and geography). Although some particulate matter concentration modeling has been conducted for project specific emissions for stationary source permitting purposes, concentration modeling has mainly been used to support ozone attainment demonstration.

Outside of these tools, neither the Sac Metro Air District nor any other air district currently have methodologies that would provide Lead Agencies and CEQA practitioners with a consistent, reliable, and meaningful analysis to correlate specific health impacts that may result from a proposed project's mass emissions.

An expanded discussion of health impacts resulting from specific air pollutants may also be warranted for projects with emissions exceeding the Sac Metro Air District's thresholds of significance. There is an array of information on health impacts related to exposure to ozone[v] and particulate matter[vi] emissions published by the US EPA and the California Air Resources Board. Health studies are used by these agencies to set the Federal and State ambient air quality standards. A more general discussion of health impacts related to air pollution is also available on www.spareheair.com and in the Sac Metro Air District's *Guide to Air Quality Assessment in Sacramento County.*[vii] None of the health-related information can be directly correlated to the pounds/day or tons/year of emissions estimated from a single, proposed project.

## Developing Guidance

The interim recommendation is in place to assist lead agencies and practitioners with CEQA document preparation until Sac Metro Air District develops a methodology that provides a consistent, reliable and meaningful analysis to address the Court's direction on correlating health impacts to a project's emissions.

Sac Metro Air District staff have initiated discussions with the other air district's in the Sacramento Federal Ozone Nonattainment area regarding developing guidance in response to Friant Ranch since we share air quality issues and use the same growth assumptions, mobile source emissions, and modeling efforts to support our ozone and particulate matter attainment plans.

One potentially useful tool in developing a methodology is the US EPA's BenMap tool[viii]. According to US EPA's website, BenMap is an "open-source computer program that calculates the number and economic value of air pollution-related deaths and illnesses. The software incorporates a database that includes many of the concentration-response relationships, population files, and health and economic data needed to quantify these impacts." BenMap may be able to provide the detailed health information needed for the guidance under development.

Sac Metro Air District is working with its engineering and environmental technical support consultant, Ramboll USA Corporation, to develop a methodology that will provide a consistent, reliable, efficient, and meaningful analysis that correlates health impacts from proposed projects' emissions for the Sacramento region. The current strategy will analyze how various levels of emissions (the CEQA tonnage estimates) impact attainment pollutant concentration levels, and use BenMap to correlate increases in concentration levels to health impacts. Once a methodology is available, Sac Metro Air District staff will inform interested stakeholders and provide updated guidance in this document and in its *Guide to Air Quality Assessment in Sacramento County*.

## Contact Information

Lead agencies and CEQA practitioners may contact Mr. Paul Philley, CEQA and Land Use Section Program Supervisor at 916-874-4882 or pphilley@airquality.org regarding Sac Metro Air District's recommendations.

# INTRODUCTION

In 2016 the City of Los Angeles updated their new Travel Demand Forecasting Model (Los Angeles Model) as part of the *Infill and Complete Streets – Capturing VMT Impacts and Benefits to CEQA Project*. The citywide model focused on consistency with the latest version of the SCAG regional travel demand model, improving key components of the model process, and meeting or exceeding industry standards for calibration and validation. The details of the updated Los Angeles Model are available as part of the *2016 City of Los Angeles Travel Demand Model, Model Development Report*.[1] The City of Los Angeles Model was used to analyze the 2040 Future (No Project) scenario for the Downtown Community Plan. The following were the major focus areas during the model update process:

- Maintain consistency with the 2016 SCAG RTP/SCS model
- Increase zonal detail across the City of Los Angeles
- Incorporate Big Data (such as cell phone and GPS data) into the trip distribution validation to improve VMT estimation at smaller geographic analysis zones
- Rebuild a majority of the transit route system using General Transit Feed Specification (GTFS) data from major transit operators
- Update the highway network to reflect major arterial and freeway construction projects
- Use Automated Traffic Surveillance and Control (ATSAC) loop volume data to collect traffic counts from several months for validation
- Include transit performance validation statistics including system ridership by mode and carrier

The Downtown Subregion Travel Demand Forecasting Model (referred to as the Downtown Model in the remainder of this report) builds upon the citywide model update and refines the level of detail within the Downtown Community Plan Area for improved sensitivity in measuring the effect of land use development and transportation network changes. The Downtown Model was developed using TransCAD Version 7.0 Build 12410. The model utilizes a conventional 4-step process consisting of trip generation, trip distribution, mode split, and assignment. This report focuses on the SED and network inputs included in the 2040 City of Los Angeles Model scenario, as well as the model enhancements made for the Downtown Community Plan Model, created for the purposes of analyzing both 2017 Existing Conditions and the 2040 Proposed Plan scenario.

# MODEL INPUTS

## SOCIOECONOMIC DATA

The Southern California Association of Governments (SCAG) 2016 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) provided the initial baseline socioeconomic data estimates for the Downtown Community Plan Area. From this baseline set of data, the City of Los Angeles derived 2017 estimates for population, households, and employment.

**Table 1** summarizes the socioeconomic variables for the Downtown Community Plan and the City of Los Angeles. The Downtown Community Plan Area contain approximately 12% of the employment within the City of Los Angeles, and less than 3% of the households.

**TABLE 1 EXISTING 2017 SOCIOECONOMIC DATA**

| Category | Downtown Model Area | City of Los Angeles |
|---|---|---|
| Population | 75,740 | 3,950,476 |
| Households | 33,676 | 1,397,216 |
| K12 Students | 8,133 | 609,735 |
| College Students | 6,507 | 275,632 |
| Employees | 218,883 | 1,824,052 |

## TRAFFIC ANALYSIS ZONE SYSTEM

Socioeconomic data and other information used in the model are contained in geographically defined areas known as Transportation Analysis Zones (TAZs). These zones provide the spatial unit within which travel behavior and trip generation are estimated. The City of Los Angeles model has TAZ system based on the Tier 1 TAZ system used in the 2016 SCAG RTP/SCS model. The custom zone system was created to add more detail within the City of Los Angeles, so that the zonal boundaries are predominantly defined by roadways or other geographic features. This method of subdividing the SCAG Tier 1 zones improves vehicles accesses the local street network. The 37 Tier 1 zones in the Downtown Community Plan area were disaggregated into 233 TAZs in the Los Angeles Model. The subdivided TAZs better reflect how and where traffic enters and exits the street network and are divided along logical transportation boundaries like major streets and topography.

**Figure 1** shows the TAZ system within the Downtown Community Plan Areas used by City staff to develop land use estimates for existing conditions and land use forecasts for the future year scenarios.

As part of the process to subdivide the SCAG Tier 1 zones for the citywide model update, Fehr & Peers reapportioned the socioeconomic data proportionally using geographic area calculations and aerial imagery within GIS software. Residential, school, and employment disaggregation factors were individually developed for each Tier 1 zone.

For the development of the Downtown Model, City staff reviewed the socioeconomic data assumptions for the TAZs within the Plan Area and adjusted the distribution of households and employment. These distribution adjustments were based on data from the Los Angeles County Assessor, but maintained the total number of households, population, and jobs within the Plan Area based on SCAG's estimates for Year 2016. **Table 2** summarizes the Existing 2017 socioeconomic data within the Plan Area by Downtown planning subregion.

**TABLE 2 EXISTING 2017 DOWNTOWN COMMUNITY PLAN SOCIOECONOMIC DATA**

| Subregion | Population | Households | Employment |
|---|---|---|---|
| Central City | 49,458 | 26,293 | 191,802 |
| Central City North | 26,282 | 7,383 | 27,081 |
| *Total* | 75,740 | 33,676 | 218,883 |

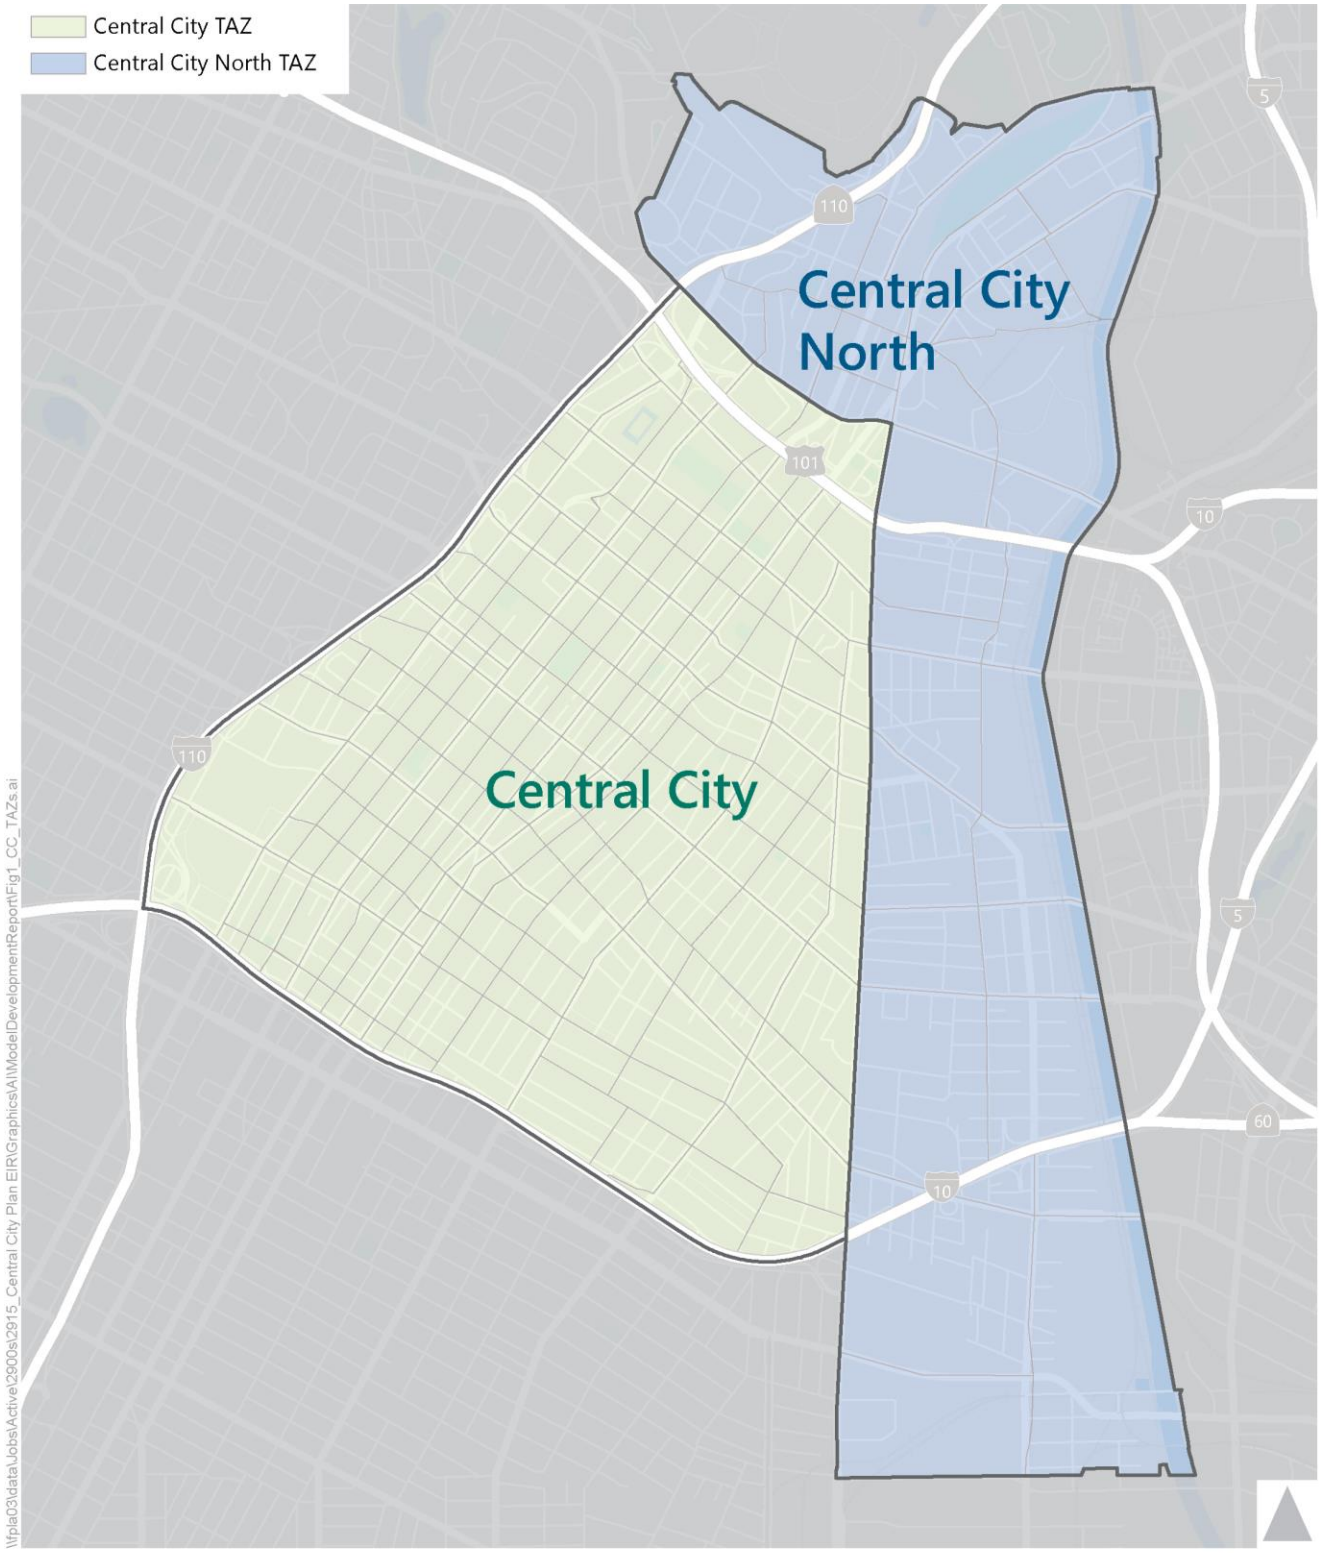

Figure 1

Central City and Central City North Community Plan Areas

# HIGHWAY NETWORK

The highway network within the Downtown Model is shown in **Figure 2**. The primary attributes of the network links include: directionality (1-way versus 2-way), posted speed limit, and number of lanes (by time of day, including parking restrictions). Fehr & Peers conducted fieldwork visits in February 2017 to verify these attributes for roadways within the Plan Area. The network inputs also include turning movement restrictions for each model time period at signalized intersections and freeway ramps where appropriate.

The highway network was also reviewed for consistency with the classifications established in the Los Angeles Mobility Plan 2035 to ensure that facilities classified as Boulevards or Avenues within the Plan Area were included in the model. Key local collector roads were also added to the model, including:

- Santee Street
- Wall Street
- Crocker Street
- Towne Avenue
- Traction Avenue
- Palmetto Street
- Mill Street
- Industrial Street
- Bay Street
- Lemon Street
- Wilson Street
- Violet Street
- Mesquit Street
- Willow Street
- Yale Street
- Ord Street
- High Street
- Chavez Ravine Place
- College Street
- LA Live Way
- Georgia Street
- Francisco Street
- 17th Street
- Jesse Street
- 23rd Street
- 15th Street
- 2nd Street east of Alameda Street
- 3rd Street east of Alameda Street

A full list of additional roadway characteristic detail added to the Downtown Community Plan Area networks can be found in Appendix A.

# TRANSIT NETWORK

The transit network for the citywide model was updated to include the most recently available route and schedule information from the largest transit providers in Los Angeles County. As part of the 2017 Downtown Travel Demand Model, the Metro Expo Phase 2 and Gold Line Foothill light rail extensions were included in the transit network.

The following agencies and routes provide the majority of the transit service within the Plan Area:

- Los Angeles County Metropolitan Transportation Authority (Metro)
    - Red Line Subway
    - Purple Line Subway
    - Expo Line Light Rail
    - Blue Line Light Rail
    - Gold Line Light Rail
    - Silver Line Bus
    - Local Bus (105 routes)
    - Rapid Bus (8 routes)
    - Express Bus (2 routes)

- Los Angeles Department of Transportation (LADOT)
    - DASH local routes (6 routes)
    - Commuter Express (10 routes)

- Additional providers
    - Metrolink
    - Amtrak
    - Foothill Transit
    - Santa Clarita Transit
    - Orange County Transit Authority
    - Antelope Valley Transit Authority
    - Santa Monica Big Blue Bus
    - GTrans (Gardena)
    - Montebello Bus Lines
    - Torrance Transit

Figure 2

Downtown Model Network

# AREAS OUTSIDE OF THE DOWNTOWN COMMUNITY PLAN

Although the Downtown Community Plan Area is the main focus of the model development process, the model itself is a refinement of the 2016 City of Los Angeles travel demand model. Therefore, the entirety of the City-wide model is included in the Downtown Model, including the other Cities in Los Angeles County (e.g., West Hollywood, Burbank and Glendale). No additional refinements or changes were made to the roadway network outside of the Downtown Community Plan Area. However, to account for the 2017 base year of the Downtown Model, the 2016 City of Los Angeles model transit network was updated to include the Expo Line extension to Santa Monica (opened May 2016) and the Gold Line extension to Azusa (opened March 2016).

# FUTURE YEAR CONDITIONS

The following future year scenarios were analyzed utilizing the City of Los Angeles and Downtown Models:

- 2040 Future (No Project) Conditions (City of Los Angeles Model)
- 2040 Proposed Plan (Project) Conditions (Downtown Model)

The socioeconomic data and transportation networks under these analysis scenarios are presented below.

## FUTURE 2040 SOCIOECONOMIC DATA

Future year socioeconomic household, population, and employment data for the 2040 Future (No Project) Plan and 2040 Proposed Plan scenarios were developed by the Los Angeles Department of City Planning and are described below.

### 2040 FUTURE (NO PROJECT) CONDITIONS

The 2040 Future (No Project) Plan scenario was analyzed using the 2040 City of Los Angeles Model. The SED and network within the Community Plan Area match exactly the conditions in the 2040 City of Los Angeles Model. SED is shown by the areas within the Downtown Community Plan in **Table 3**.

**TABLE 3 2040 EXISTING PLAN (NO PROJECT) CONDITIONS SED**

| Subregion | Households | Household Growth* | Population | Population Growth* | Employment | Employment Growth* |
|---|---|---|---|---|---|---|
| Central City | 80,891 | 54,598 | 143,673 | 94,215 | 221,679 | 29,877 |
| Central City North | 15,433 | 8,050 | 45,422 | 19,140 | 35,181 | 8,100 |
| *Total* | 96,324 | 62,648 | 189,095 | 113,355 | 256,860 | 37,977 |

Source: Southern California Association of Governments (SCAG), 2016. City of Los Angeles, 2017.

*Growth is calculated as the difference between 2040 Future (No Project) Conditions and Existing 2017 Conditions.

## 2040 PROPOSED PLAN (PROJECT) CONDITIONS

Socioeconomic data for the Proposed Plan reflect reasonably anticipated future development through the Year 2040 including the proposed land use and zoning changes and housing incentive units. The distribution of household and employment growth with the Proposed Plan were determined at the TAZ level based on planned land use and zoning changes (See *Methodology*, in the Appendix of this EIR). **Table 4** shows the 2040 Proposed Plan socioeconomic data by planning area, as prepared by the Los Angeles Department of City Planning. This SED is based on known approved and pipeline development projects within the Plan Area in addition to growth associated with the Proposed Plan. The K-12 and college student data from the 2040 City of Los Angeles model were used for this scenario. **Figures 3** and **4** illustrate the growth distribution for Households and Employment, respectively, comparing the 2040 Proposed Plan scenario with the 2040 City of Los Angeles Model Future (No Project) scenario. As shown, household growth is primarily concentrated in the southern and eastern portions of the plan area, in the communities of South Park, Fashion District, and Arts District, while employment growth is concentrated in similar areas but is more dispersed. Outside of the Community Plan Area boundary, 2040 City of Los Angeles model SED data were used, which are consistent with the SCAG RTP/SCS.

Detailed SED data, including household categorization by income level and employment categorization by industry, for TAZs within the Community Plan Area was developed using the total population, household, and employment data described above. Given the anticipated change in housing type and employment sectors under the 2040 Proposed Plan Conditions when compared to Existing Conditions, detailed categorization for many areas with primarily industrial employment or few households was based on more densely developed areas of the Community Plan at the direction of the Los Angeles Department of City Planning. For example, it was assumed that detailed SED income and employment categories in parts of the Arts District would more closely resemble the more mixed-use areas of the Downtown Community Plan Area than Existing Arts District conditions.

**TABLE 4 2040 PROPOSED PLAN (PROJECT) SED**

| Subregion | Household | Household Growth* | Population | Population Growth* | Employment | Employment Growth* |
|---|---|---|---|---|---|---|
| Central City | 108,462 | 27,571 | 204,807 | 61,134 | 236,871 | 15,192 |
| Central City North | 24,786 | 9,353 | 47,100 | 1,678 | 67,827 | 32,646 |
| *Total* | 133,248 | 36,924 | 251,907 | 62,812 | 304,698 | 47,838 |

*Growth is calculated as the difference between 2040 Proposed Plan and 2040 Future (No Project) Conditions.

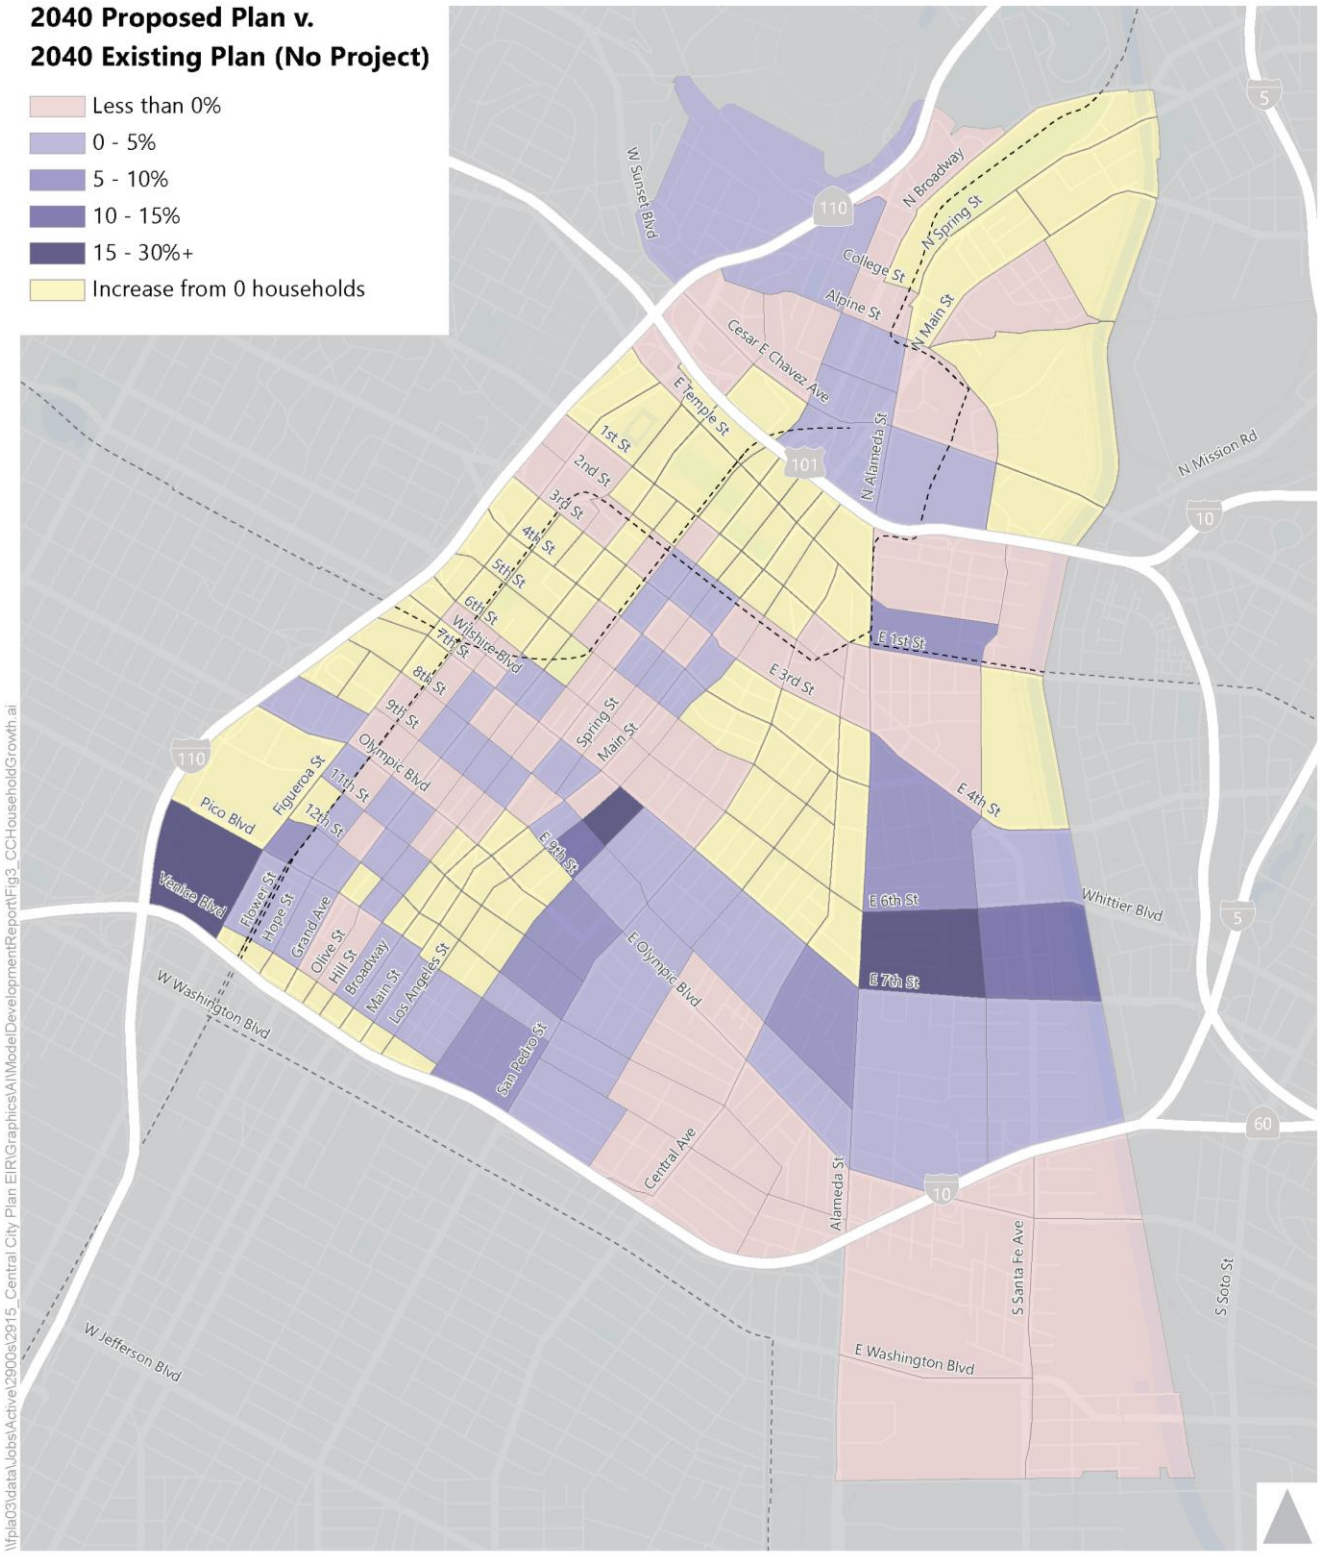

Figure 3

2040 Proposed Plan Household Growth

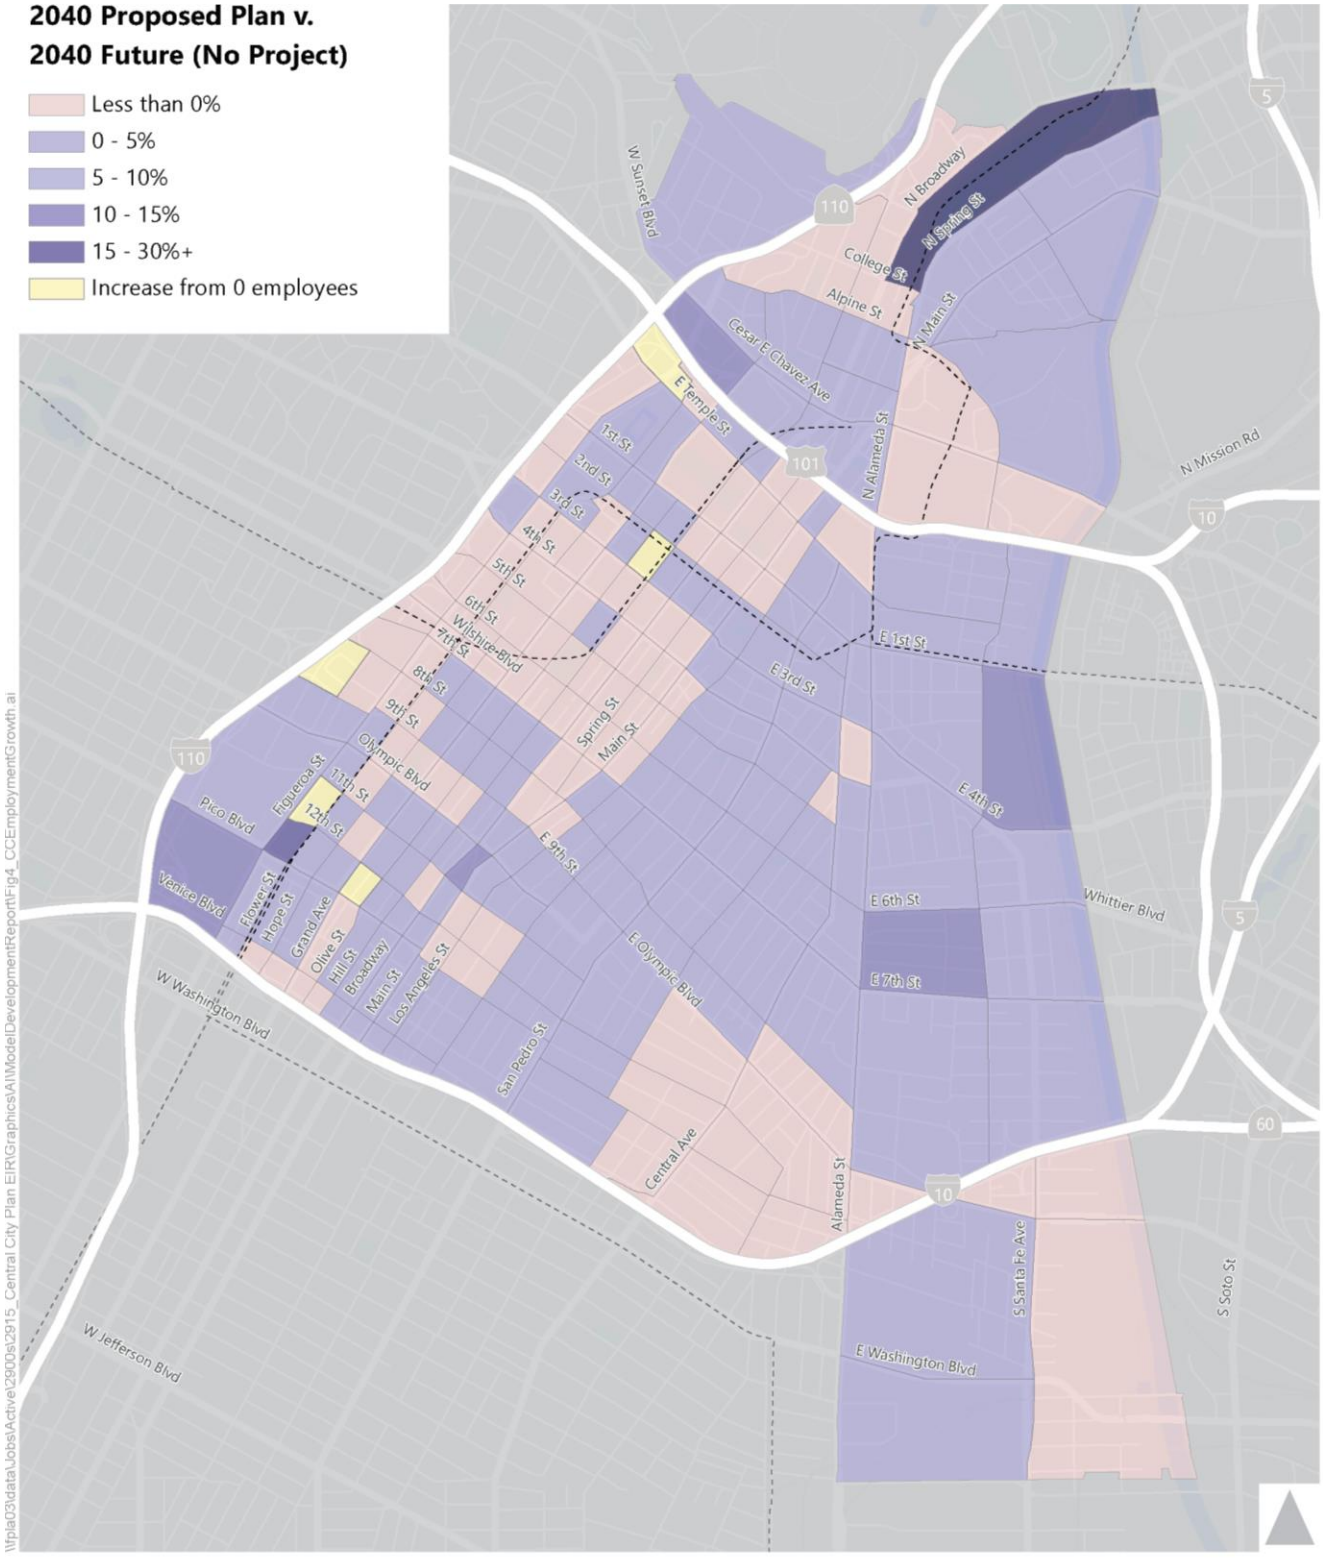

Figure 4

2040 Proposed Plan Employment Growth

# FUTURE 2040 TRANSPORTATION NETWORK

## 2040 FUTURE (NO PROJECT) CONDITIONS

The highway and transit network improvements included in the 2040 Future (No Project) Conditions scenario reflect the 2040 Plan scenario of the 2016 SCAG RTP/SCS and Mobility Plan 2035. Related to the 2016 SCAG RTP/SCS, the improvements selected for the City of Los Angeles model 2040 scenario include those projects that have committed funding on the Federal Transportation Improvement Program (FTIP) in the near-term or are included in the fiscally-constrained Regional Transportation Plan (RTP). For a complete description of projects selected in the 2040 Existing Plan model, refer to the *2016 City of Los Angeles Travel Demand Model, Model Development Report*. No RTP or FTIP highway projects included in the 2040 City of Los Angeles model are located within or adjacent to the Downtown Community Plan area. The projects within or near-to the Downtown Community Plan area are:

- Transit Improvements:
    - Metro Regional Connector (ID #LA0G010, FTIP)
    - West Santa Ana Light Rail (ID #1TR1011, RTP_F)

In addition to the City of Los Angeles Travel Demand Model 2040 projects, the 2040 Future (No Project) scenario of the Downtown Model also includes projects from Mobility Plan 2035 latest version, September 2016. Mobility Plan 2035 provides the framework for future community plan updates, which take a closer look at the transportation system in specific areas of the City and recommend more detailed implementation strategies to realize Mobility Plan 2035. The Mobility Plan 2035 reflects policies and programs that lay the foundation for safe, accessible, and enjoyable streets for pedestrians, bicyclists, transit users, and vehicles throughout the City of Los Angeles, including the Downtown Community Plan. Mobility Plan 2035 was adopted by the City in August 2015 and is compliant with the 2008 Complete Streets Act (AB 1358), which mandates that the circulation element of a city's General Plan be modified to plan for a balanced, multimodal transportation network that meets the needs of all users of streets, roads, and highways, defined to include motorists, pedestrians, bicyclists, children, persons with disabilities, seniors, movers of commercial goods, and users of public transportation, in a manner that is suitable to the rural, suburban, or urban context of the general plan.

The Mobility Plan 2035 contains a variety of enhanced network treatments within the Downtown Community Plan Area that are incorporated into the 2040 Future (No Project) scenario of the model. **Figure 5** shows the following enhanced network treatments for roadways in the Plan Area:

- Bicycle Enhanced Network (BEN)

- Transit Enhanced Network (TEN)
- Vehicle Enhanced Network (VEN)

## 2040 PROPOSED PLAN (PROJECT) CONDITIONS

The highway and transit network improvements included in the 2040 Proposed Plan (Project) Conditions scenario reflect the 2040 Plan scenario of the 2016 SCAG RTP/SCS as outlined in detail above. Additionally, the 2040 Proposed Plan reflects a more refined version of the Mobility Plan 2035 than that originally imagined city-wide several years ago. The enhanced network treatments envisioned through Mobility Plan 2035 were reviewed and refined to complement the anticipated growth areas as well as the Downtown Plan's specific goals and policies. Since Mobility Plan 2035 does not prescribe or mandate how the enhanced network treatments are implemented within each community plan, the refinements to the enhanced network treatments primarily consisted of developing potential implementation options within the Downtown Plan Area. These are shown in **Figure 6**.

The full 2040 Proposed Plan Transportation Project List is presented in **Appendix A**. The Project List is not exhaustive but is representative of the types of improvements proposed for inclusion in the Community Plan. In addition, the Proposed Plan would not, itself, entitle or otherwise approve any transportation projects. Nevertheless, potential impacts of implementing the transportation improvements contained in the Project Lists were analyzed at a programmatic level as part of the Proposed Plan Conditions.

## ADDITIONAL MOBILITY PLAN 2035 CONSIDERATIONS

Mobility Plan 2035 represents the best indication of long-term capital planning for transportation infrastructure in Los Angeles, and at the time of Mobility Plan 2035 adoption it was envisioned that the identified networks would be realized by the year 2035. As the officially adopted mobility element of the General Plan, the Plan establishes priority for future investments along the various enhanced networks on a citywide scale.

While the City typically accounts for and assumes projects that are built, underway, or have secured funding as part of the horizon year future, there is evidence of a rapid pace of improvements and funding of the enhanced networks in the Plan Area outlined in Mobility Plan 2035. Recent and ongoing investments and prioritization of first-last mile connectivity demonstrate the commitment to improve this infrastructure regardless of whether the Downtown Community Plan itself is adopted. For this reason, it is reasonable to analyze all future scenarios in this area with the inclusion of Mobility Plan 2035.

Given the closer level of attention and detail given in the community planning process, it is also reasonable to analyze the Proposed Plan with a refined version of Mobility Plan 2035 that better suits the

more nuanced and timely approach to the Downtown community specifically, as has been done for other community plans underway since the Mobility Plan 2035 adoption.

For all Future 2040 scenarios of the Downtown Plan, transportation network assumptions to be applied to the roadways designated for enhanced network treatments are summarized below in Error! Reference source not found..

**TABLE 5 DOWNTOWN COMMUNITY PLAN ENHANCED NETWORKS MODEL ASSUMPTIONS**

| **Enhanced Network** | **Treatment Level** | **Model Assumptions** |
|---|---|---|
| Vehicle-Enhanced Network (VEN) | Moderate | • Reduce vehicle travel times by 10 percent<br>• Add one vehicular travel lane per direction if all-day parking is available, or convert one off-peak parking lane per direction to a full-time vehicular travel lane |
| | Comprehensive | • Reduce vehicle travel times by 10 percent<br>• Add one vehicular travel lane per direction if all-day parking is available, or convert one off-peak parking lane per direction to a full-time vehicular travel lane<br>• Increase effective vehicular capacity by 10 percent |
| Transit-Enhanced Network (TEN) | Moderate | • No change to lane configurations<br>• Double frequency of bus service |
| | Moderate Plus | • Convert one vehicular travel lane per direction to a bus only lane during peak periods<br>• Double frequency of bus service |
| | Comprehensive | • Convert one vehicular travel lane per direction to a bus only lane for the full day<br>• Double frequency of bus service |
| Bicycle-Enhanced Network (BEN)/Bicycle Lane Network | Bike Lane (Tier 3) | • No change in lane configuration |
| | Bike Lane (Tier 2) | • Remove one vehicular travel lane per direction to accommodate a bicycle lane or buffered bicycle lane |
| | Protected Bike Lanes (Tier 1) | • Remove one vehicular travel lane per direction to accommodate a Protected Bike Lane |

**SOURCE**: Mobility Plan 2035 Model Assumptions, Fehr & Peers, City of Los Angeles.

***Table 5 Notes and Assumptions:***

- Tier 1 and Tier 2 bicycle facilities were included as these are facilities planned by the sunset of this plan. Tier 3 was not included as those facilities were not assumed to be implemented by that time.
- In cases where Tier 1 or Tier 2 bicycle facilities, and Moderate Plus or Comprehensive transit enhancements are planned for the same roadway facility, only one vehicle travel lane was removed in each direction of travel as part of the Enhanced Network.
- On roadway facilities with only one general purpose vehicle lane in each direction under existing conditions, no travel lanes were removed from the Enhanced Network.
- For purposes of developing the network in a travel demand model, the Neighborhood Enhanced Networks (NEN) identified in Mobility Plan 2035, while increasing pedestrian safety, will not reduce vehicle capacity and therefore are not included in the transportation analysis.
- On the TEN, Comprehensive and Moderate Plus networks included the conversion of a travel lane, as these enhancements include bus-only lanes at least some of the day. Moderate networks were not modeled, as these are designated for stop enhancements and increases service, with buses operating in mixed flow with vehicles.
- Table 5 and these assumptions were determined with the project team.

## BOYLE HEIGHTS COMMUNITY PLAN AREA

The 2040 Future (No Project) and Proposed Plan (Project) scenarios assume full buildout of the Boyle Heights 2040 Community Plan network improvements. The Boyle Heights Community Plan Area is directly adjacent to the Downtown Plan Area, and both areas began and intended to complete their planning and EIR documentation process in a relatively similar timeframe. Given the simultaneous nature of these plans, it was determined by the Department of City Planning that both should assume the other would be adopted in the future, and therefore should include inputs from the other plan's proposed SED and network assumptions in both the Future No Project and Project scenarios. This is reasonable and important to assume, as the proximity and street network connections could have significant effects on one another, and it is more conservative to run calculations with the possible increase of density and network usage both areas anticipate with future growth.

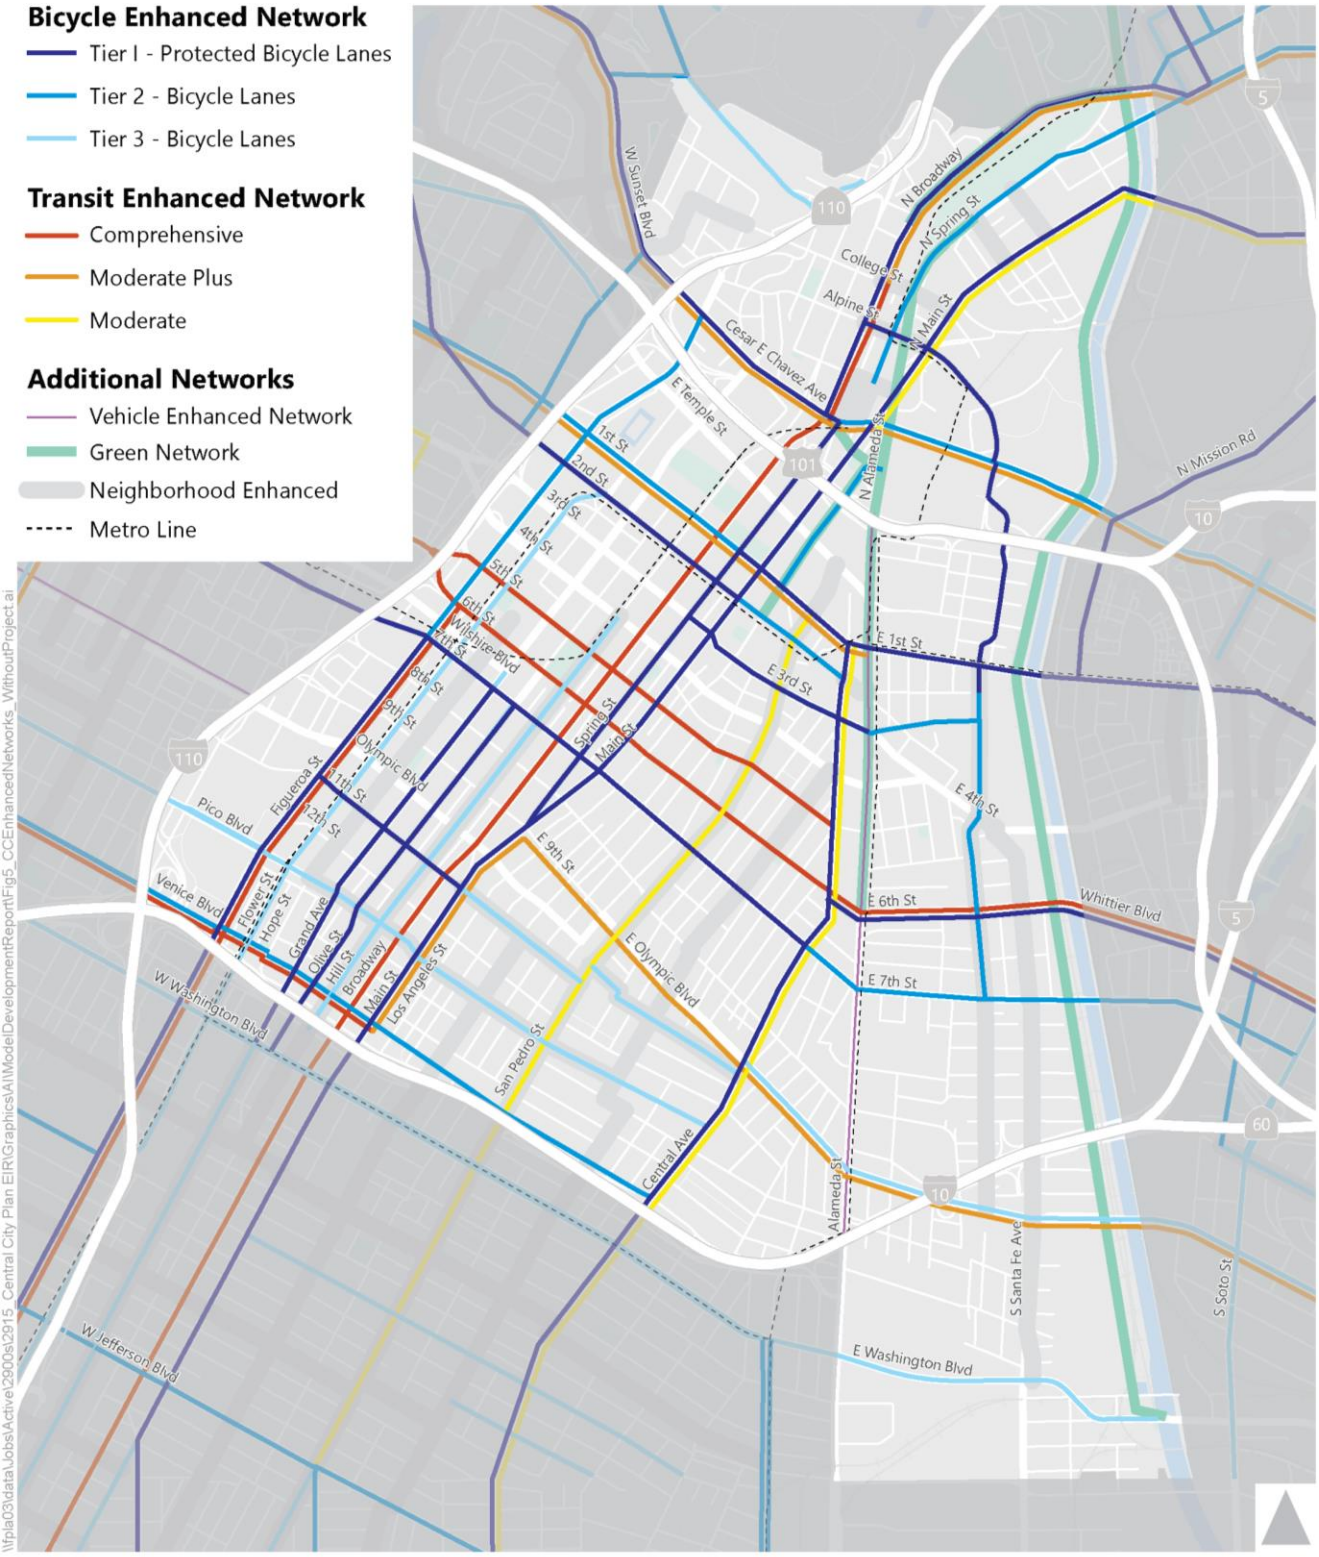

Figure 5

2040 Network Changes (No Project)

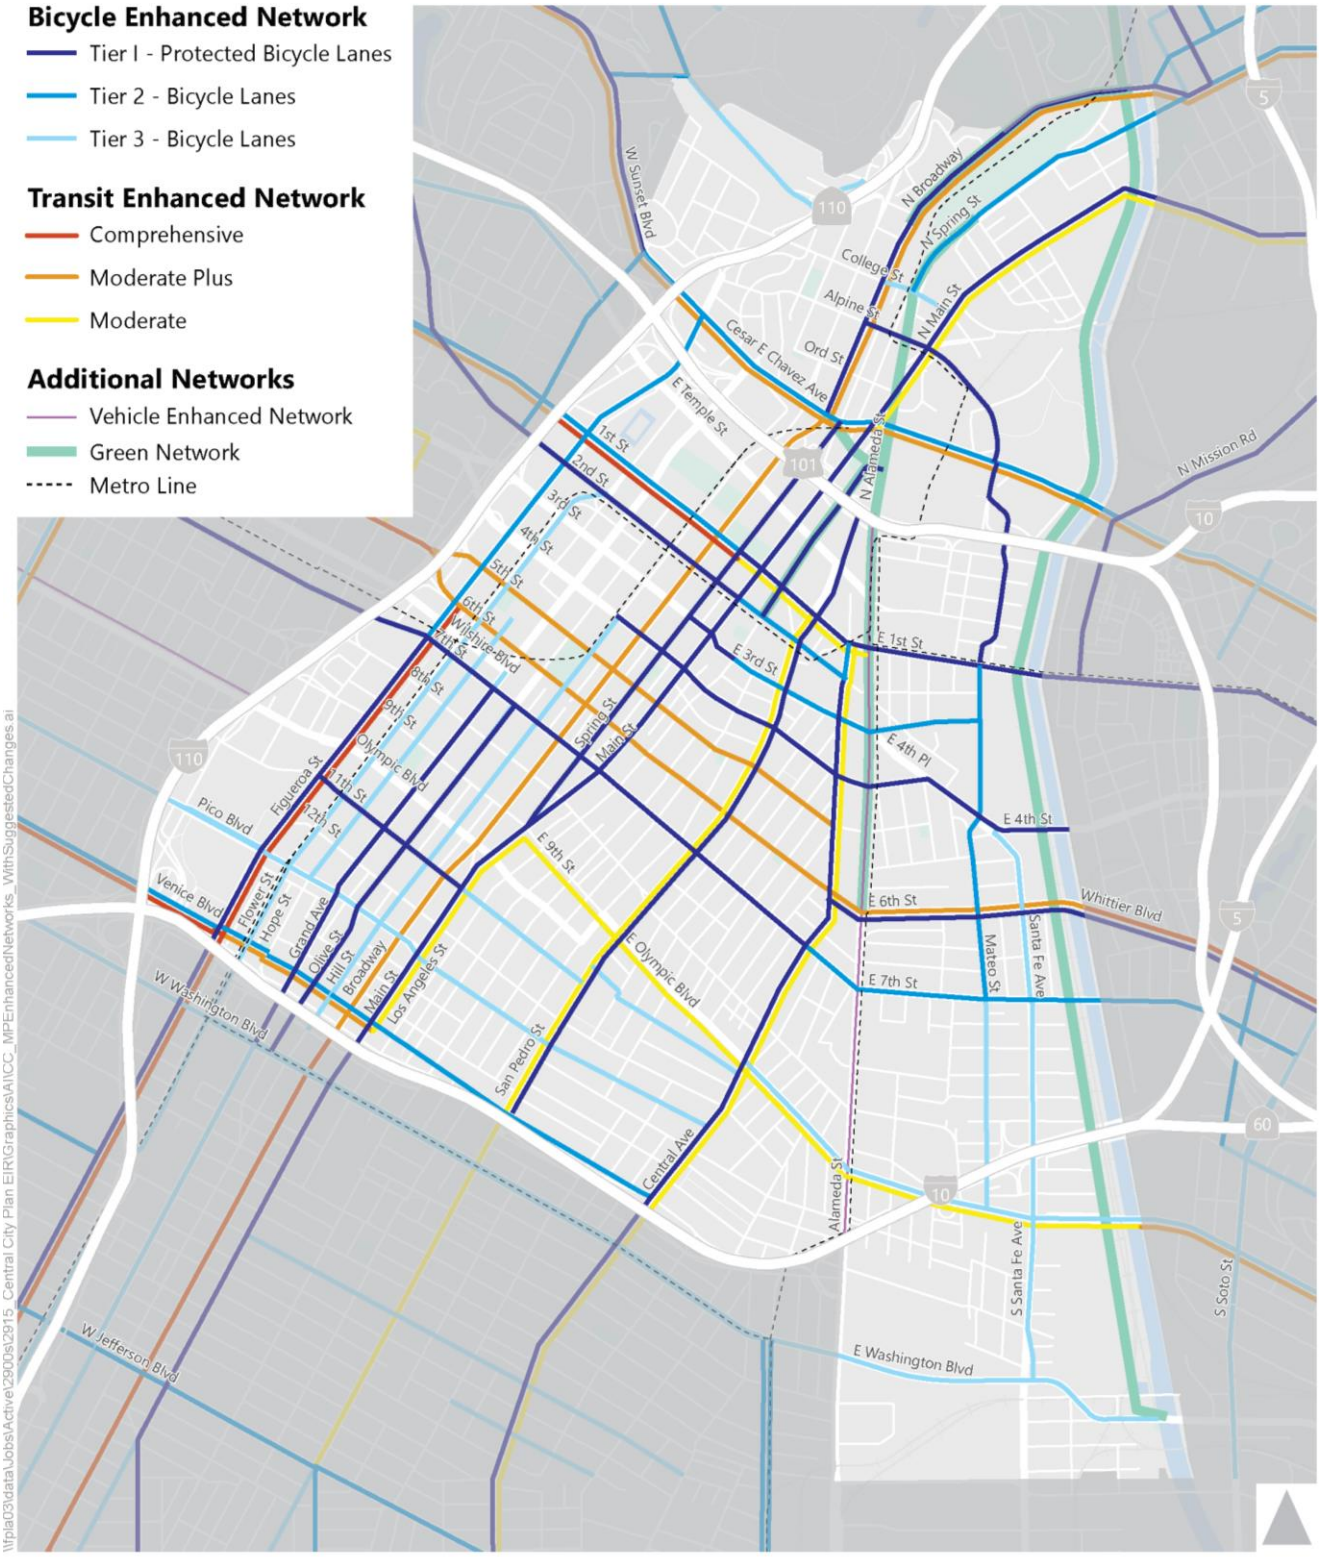

Figure 6

2040 Proposed Plan Network Changes (With Project)

# MODEL OUTPUTS FOR THE COMMUNITY PLAN

One of the primary uses of the Downtown Model is to forecast vehicle miles traveled (VMT) and level of service (LOS) on the roadway network for each analysis scenario. These forecasts help to determine whether a plan would have any environmental impacts. For many years, LOS has been utilized to determine these impacts, but the City of Los Angeles is using VMT as the primary measurement tool. There are two methods for estimating VMT using the travel demand model: the boundary method and the origin-destination (OD) method. Each method is best suited for supporting different types of analysis, such as estimating air pollution and GHG emissions. For purposes of this project, the OD method will be employed.

VMT is a measurement of miles traveled (e.g., private automobiles, trucks and buses) by all land uses (e.g., residential, retail, office) in the Project Area. For this analysis, VMT is reported as Total Daily VMT per Service Population, which equates to all VMT for the Plan Area divided by the number of people living and working within the Plan Area. A reduction in VMT overall and in VMT per capita service population can be used as an indicator of reduced reliance on vehicular travel, primarily by private automobiles. Some VMT metrics focus on VMT per capita and VMT per employee as separate markers of these indications; however, VMT per service population the effects of all vehicular movement in an area. It includes not only trips that are attracted and produced by home and work trips, but those that fit in neither category (i.e. school to grocery store) as well as truck trips. The VMT calculation accounts for internal (II) trips and trips that begin or end (IX or XI) within the Plan Area, as these trips are generated by or attracted to land uses within the Downtown Community Plan Area. The travel behavior effects of land use changes in Downtown can be understood by measuring the VMT of trips originating in and/or destined for the Plan Area.

An alternative way to understand existing traffic conditions is to study existing traffic volumes with an analysis of the operating conditions, indicated through volume-to-capacity (V/C) ratios and Level of Service (LOS). LOS is a measure used to describe the condition of traffic flow, ranging from excellent conditions at LOS A to overloaded conditions at LOS F. LOS can be determined by dividing the number of vehicles (i.e., volume (V)) by roadway capacity (C), and the resulting V/C ratio is then used to obtain the corresponding LOS. To determine the operations of the roadway network during peak commute hours, a LOS analysis was conducted for the roadways in the Project Area.

# APPENDIX A: NETWORK PROJECT ASSUMPTIONS

**TABLE A1 EXISTING 2017 NETWORK EDITS**

| Segment Edited | Type of Network Edit | Description of Network Edit |
|---|---|---|
| Various locations throughout Community Plan Area | Turn Restrictions | Time period turn restrictions |
| Figueroa Street | Bicycle Lanes | Decreased travel lanes as appropriate to account for installation of bicycle facility |
| Grand Avenue | Bicycle Lanes | Decreased travel lanes as appropriate to account for installation of bicycle facility |
| Olive Street | Bicycle Lanes | Decreased travel lanes as appropriate to account for installation of bicycle facility |
| Broadway | Bicycle Lanes | Decreased travel lanes as appropriate to account for installation of bicycle facility |
| Spring Street | Bicycle Lanes | Decreased travel lanes as appropriate to account for installation of bicycle facility |
| Main Street | Bicycle Lanes | Decreased travel lanes as appropriate to account for installation of bicycle facility |
| Los Angeles Street | Bicycle Lanes | Decreased travel lanes as appropriate to account for installation of bicycle facility |
| 1st Street | Bicycle Lanes | Decreased travel lanes as appropriate to account for installation of bicycle facility |
| 2nd Street | Bicycle Lanes | Decreased travel lanes as appropriate to account for installation of bicycle facility |
| 7th Street | Bicycle Lanes | Decreased travel lanes as appropriate to account for installation of bicycle facility |
| Figueroa Street from 8th Street to the 10 Freeway | Construction | Temporarily reduced by up to one lane |
| Flower Street from 11th Street to Pico Boulevard | Construction | Temporarily reduced by one lane |
| Broadway from 11th Street (midblock) to 12th Street | Construction | Changed to two travel lanes in both directions at all times |
| 6th Street/Whittier Boulevard from Mateo Street to Mission Road | Construction | Included construction conditions as bridge currently does not exist |
| 8th Street from Grand Avenue to Hill Street | Construction | Temporarily reduced to two lanes |
| 11th Street from Figueroa Street to Flower Street | Construction | Reduced to one lane of westbound traffic and no eastbound lanes |
| Aliso Street at Alameda Street | Other | Changed to one left-turn lane onto Alameda Street |
| Grand Avenue from 4th Street to Temple Street | Other | Changed to two lanes in both directions without parking restrictions |
| 1st Street from Beaudry Avenue to the 110 Freeway | Other | Updated to three lanes |
| 1st Street from the 110 Freeway to Fremont Avenue | Other | Updated to two lanes |
| 8th between Broadway and Hill | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| 8th between Hill and Olive | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |

| | | |
|---|---|---|
| 8th between Olive and Grand | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| 8th between Grand and Hope | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| 9th between Flower and Hope | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| 9th between Grand and Olive | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| 9th between Olive and Hill | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| 9th between Hill and Broadway | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Olympic between Broadway and Hill | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Olympic between Hill and Olive | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Olympic between Olive and Grand | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Olympic between Grand and Hope | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Olympic between Hope and Flower | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Olympic between Flower and Figueroa | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Olympic between Figueroa and Francisco | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Pico from Hill to Olive | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Pico from Olive to Grand | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Pico from Grand to Hope | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Venice from Hope to Grand | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Venice from Grand to Olive | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Venice from Olive to Hill | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Venice from Hill to Broadway | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Hill from Olympic to 9th | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Hill from Olympic to 11th | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Grand from 8th to 9th | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Flower from Pico to Venice | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| 4th between Hill and Broadway | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |

| | | |
|---|---|---|
| 3rd between Broadway and Hill | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| 1st between Hope & Grand | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| 1st between Grand & Olive | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| 1st between Broadway & Spring | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Spring between 2nd & 3rd | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Spring between 4th & 5th | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Spring between 5th & 6th | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Spring between 6th & 7th | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Hill between 2nd & 3rd | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Hill between 3rd & 4th | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Hill between 4th & 5th | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Hill between 6th & 7th | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Hill between 7th & 8th | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Olive between 6th & 5th | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Grand between Hope Pl & 5th | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Grand between 6th & Wilshire | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Flower between 7th & 8th | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Cesar Chavez between Fig and Bunker Hill | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Cesar Chavez between Bunker Hill and Grand | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Cesar Chavez between Grand and N Hill | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Cesar Chavez between Hill and Broadway | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Figueroa between Alpine and Bartlett | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Figueroa between Bartlett and Cesar Chavez | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| 1st street between Dewap and Hope | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| 1st Street between Hope and Grand | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |

| | | |
|---|---|---|
| 1st Street between Grand and Olive | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| 1st Street between Olive and Hill | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| 1st Street between Hill and Broadway | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Alpine between Yale and Hill | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Spring between Elmyra and Ann | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Spring between Ann and Sotello | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Spring between Sotello and Mesnagers | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Spring between Mesangers and Wilhardt | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Spring between Elmyra and College | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Main between Bruno and College | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Main between College and Rondout | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Main between Rondout and Llewellyn | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Main between Llewellyn and Elmyra | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Main between Elmyra and Bloom | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Main between Bloom and Leroy | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| College between Alameda/Spring and New High | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| College between New High and Broadway | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |
| Alpine between Spring and Broadway | Parking Restrictions | Increased peak period travel lanes as appropriate to accommodate peak period parking restrictions |

**TABLE A2 PROPOSED PLAN TRANSPORTATION IMPROVEMENT PROJECT LIST**

| **Proposed Plan Transportation Improvement Project List** | | |
|---|---|---|
| PRIMARY MODE | PROJECT NAME | PROJECT DESCRIPTION |
| **Active Modes** | Mobility Hub Amenities | Encourage projects located near transit nodes and Mobility Hubs to provide people-oriented amenities such as shade trees, countdown crosswalk signals, bus shelters, bicycle racks or lockers and enhanced or decorated crosswalks. |
| | Pedestrian Access to Major Transit Stations | Provide enhanced amenities at major transit stops, including widened sidewalks, where possible, pedestrian waiting areas, transit shelters, comfortable seating, enhanced lighting, information kiosks and wayfinding signage (directing pedestrians to transit stops and stations, and from transit facilities to points of interest in the surrounding neighborhood), advanced fare collection mechanisms, shade trees and landscaping, bicycle access, self-cleaning restrooms, and enhanced, ADA compliant street crossing elements adjacent to transit stops and stations (ie. enhanced crosswalks, crossing signals, and accessible ramps). |
| | Path Network | Support the construction of pedestrian pathways, bicycle paths and facilities. |
| | | Class I Bike Path: the Los Angeles River Bike Path |
| | Bicycle Enhanced Network & Bike Lanes | Figueroa St: 10 Fwy to 7th St<br>Protected Bike Lane |

| | | 16th St: Main St to Hooper Ave<br>Tier 2 Bike Lane |
| | | Washington Blvd: Alameda St to LA River<br>Tier 3 Bike Lane |
| | Bikeshare | Provide public bicycle rental in "pods" located throughout the city. |
| **Roadways & ITS** | Congestion Monitoring | Implement or enhance "Smart Corridors" to coordinate Caltrans' freeway traffic management system with the ATSAC/Adaptive Traffic Control System (ATCS) highway and street traffic signal management system to enhance incident management and motorist information to reduce traffic delays. |
| | ITS Corridor & Signal Upgrades | Implement signalization improvements to facilitate traffic flow.<br>Install Automated Traffic Surveillance and Control (ATSAC) at all signalized intersections and all intersections along Boulevards and Avenues in Downtown. |
| | Intersection Improvements | Identify intersections where congestion related to left turns can be improved and implement improvements, taking into consideration impacts on pedestrians and bicyclists. |
| | Access Improvements | Support the planning and construction of new roadway connections as deemed necessary for Downtown. |
| | Vehicle Enhanced Network | Alameda St: 10 Freeway to Temple St |
| **Transit** | Transit Enhanced Network | Figueroa St: 10 Fwy to 7th St<br>Comprehensive Treatment |
| | | Hill St: 10 Fwy to 4th St<br>Comprehensive Treatment |
| | | Broadway: 10 Fwy to Pasadena Ave/LA River<br>Moderate Plus Treatment |
| | | Main St: Venice Blvd to 9th St<br>Moderate Treatment |
| | | Main St: Cesar Chavez Ave to Albion St/LA River<br>Moderate Treatment |
| | | San Pedro St: 10 Fwy to 1st St<br>Moderate Treatment |
| | | Central Ave: 10 Fwy to 1st St |

| **Proposed Plan Transportation Improvement Project List** | | |
|---|---|---|
| | | Moderate Treatment |
| | | Cesar Chavez Ave: Beaudry Ave to Spring St<br>Moderate Plus Treatment |
| | | Cesar Chavez Ave: Spring St to Mission Rd/LA River<br>Comprehensive Treatment |
| | | 1st St: 110 Fwy to Spring St<br>Comprehensive Treatment |
| | | 1st St: Spring St to Alameda St<br>Moderate Treatment |
| | | 5th St: 110 Fwy to Central Ave<br>Moderate Plus Treatment |
| | | 6th St: 110 Fwy to Mission Rd/LA River<br>Moderate Plus Treatment |
| | | 9th St: Main St to San Pedro St<br>Moderate Treatment |
| | | Olympic Blvd: San Pedro St to LA River<br>Moderate Treatment |
| | | Venice Blvd: 110 Fwy to Figueroa St<br>Comprehensive Treatment |
| | | Venice Blvd: Figueroa St to Main St<br>Moderate Plus Treatment |
| **Auto-Trip Reduction** | Strategic Parking Program | Implement a parking program and update parking requirements to reflect mixed-use developments, shared parking opportunities, and parking needs at developments adjacent to major transit stations. |
| | Rideshare Toolkit | The Toolkit would develop an online Transportation Demand Management (TDM) Toolkit with information for transit users, cyclists, and pedestrians as well as ridesharing. It would include incentive programs for employers, schools, and residents. Additionally, it would be specific to City businesses, employees, and visitors and would integrate traveler information. It would also include carpooling/vanpooling and alternative work schedules. |
| | Transportation Demand Management (TDM) Program | The program would provide start-up costs for Transportation Management Organizations/Associations (TMOs/TMAs). It would also provide guidance and implementation of a TDM program. |

RE: Downtown Community Plan Update
CASE NO.: CPC-2017-432-CPU; ENV-2017-433-EIR

Dear Tribal Representative,

This letter is to inform you that the Los Angeles Department of City Planning is preparing an Environmental Impact Report ("EIR") for the Downtown Community Plan Update Program ("Proposed Project") in accordance with the requirements of the California Environmental Quality Act ("CEQA"). This notification is being forwarded to Native American tribes that are understood to be traditionally, culturally, and/or geographically affiliated with the Proposed Project area pursuant to the statutory requirements of Assembly Bill 52 (AB 52). Per AB 52, your tribe has the right to consult on the Proposed Project prior to the release of the related EIR and your tribe has 30 calendar days from receipt of this letter to notify us in writing that it wishes to consult on the Proposed Project. The Proposed Project is a long-range land use plan that does not consist of any proposed development projects, includes no ground disturbing activity or any related construction activity.

## PROJECT LOCATION:

The boundaries of the entire Downtown Community Plan Update Program are shown in **Figure 1** (Project Location Map). The boundaries of the two community plans, the Central City Community Plan and the Central City North Community Plan, (collectively, the "Downtown Plans") that will be updated are as follows:

The Central City Community Plan Area is comprised of approximately 2,161 acres, and is generally bounded on the north by Sunset Boulevard/Cesar Chavez Avenue, on the south by the Santa Monica Freeway (Interstate 10), on the west by the Harbor Freeway (Interstate 110), and on the east by Alameda Street. Immediately to the east of Alameda Street is the Central City North Community Plan Area.

The Central City North Community Plan area is comprised of approximately 2,005 acres, and is generally bounded by on the north by Stadium Way, Lilac Terrace, and North Broadway, on the south by the City of Vernon, on the west by Alameda Street, and on the east by the Los Angeles River. The Project Area is bordered by the communities of Boyle Heights, Silver Lake-Echo Park, Westlake, Southeast and South Los Angeles, and the City of Vernon.

**PROJECT DESCRIPTION**

The Proposed Project is comprised of three components: (1) general plan text and land use map updates to the Downtown Plans; (2) adoption of the new Downtown Zoning Code for Downtown Los Angeles (as part of **re:code LA**); and (3) related amendments to other general plan elements (e.g. Mobility Plan, General Plan Framework Element, etc.), specific plans, and related zoning ordinances necessary for consistency and to implement the Proposed Project.

Downtown Plans

The general plan text and land use map amendments to the Downtown Plans are intended to guide development through the year 2040 by informing the general public of the City's broad planning goals, policies, and objectives, as well as specific development standards for the Project area. The Downtown Plans are intended to improve the link between land use and transportation in a manner that is consistent with the City's adopted General Plan Framework Element and state law.

Downtown Zoning Code

The Proposed Project also includes the adoption of the new Downtown Zoning Code for Downtown Los Angeles. The Downtown Zoning Code is a portion of the **re:code LA** program. **re:code LA** is a program to comprehensively revise the City of Los Angeles Zoning Code. In summary, the **re:code LA** program will amend the text of the LAMC to replace the City's existing Zoning Ordinance (Chapter 1 of the LAMC) with a new City zoning ordinance (New Zoning Ordinance) and the community plan update process will apply the zoning regulations to land in the Project Area. The New Zoning Ordinance will include, among other provisions, new zone classifications and revised/reorganized development standards and requirements for those new zone classifications.

If not already adopted at the time of Project approval, the Proposed Project will also include the adoption of citywide provisions of the New Zoning Code, including: citywide development standards (such as parking stall dimensions, grading haul route standards, minimum pedestrian walkways, and others); definition of terms; rules of measurement (such as how to measure lot width and building height); possible land use incentive system(s), modifications to existing nonconforming provisions; maintenance of current rules for division of land; creation of new streetscape requirements and maintenance of street improvement requirements; establishment of new overlay districts; and potentially new minimum parking requirements. These regulations will only be operative in other parts of the City when property is rezoned as part of a community plan update process. This is expected to occur through future community plan updates.

**DEADLINE TO REQUEST CONSULTATION:**

As stated above, your tribe has 30 calendar days from receipt of this letter to notify us in writing that it wants to consult on the Proposed Project pursuant to AB 52. In your request, please provide any updated contact information for your tribe's representative. Please mail your tribe's request to:

RE: Downtown Community Plan Update
CASE NO.: CPC-2017-432-CPU; ENV-2017-433-EIR

Dear Tribal Representative,

This letter is to inform you that the Los Angeles Department of City Planning is preparing an Environmental Impact Report ("EIR") for the Downtown Community Plan Update Program ("Proposed Project") in accordance with the requirements of the California Environmental Quality Act ("CEQA"). This notification is being forwarded to Native American tribes that are understood to be traditionally, culturally, and/or geographically affiliated with the Proposed Project area pursuant to the statutory requirements of Assembly Bill 52 (AB 52). Per AB 52, your tribe has the right to consult on the Proposed Project prior to the release of the related EIR and your tribe has 30 calendar days from receipt of this letter to notify us in writing that it wishes to consult on the Proposed Project. The Proposed Project is a long-range land use plan that does not consist of any proposed development projects, includes no ground disturbing activity or any related construction activity.

## PROJECT LOCATION:

The boundaries of the entire Downtown Community Plan Update Program are shown in **Figure 1** (Project Location Map). The boundaries of the two community plans, the Central City Community Plan and the Central City North Community Plan, (collectively, the "Downtown Plans") that will be updated are as follows:

The Central City Community Plan Area is comprised of approximately 2,161 acres, and is generally bounded on the north by Sunset Boulevard/Cesar Chavez Avenue, on the south by the Santa Monica Freeway (Interstate 10), on the west by the Harbor Freeway (Interstate 110), and on the east by Alameda Street. Immediately to the east of Alameda Street is the Central City North Community Plan Area.

The Central City North Community Plan area is comprised of approximately 2,005 acres, and is generally bounded by on the north by Stadium Way, Lilac Terrace, and North Broadway, on the south by the City of Vernon, on the west by Alameda Street, and on the east by the Los Angeles River. The Project Area is bordered by the communities of Boyle Heights, Silver Lake-Echo Park, Westlake, Southeast and South Los Angeles, and the City of Vernon.

**PROJECT DESCRIPTION**

The Proposed Project is comprised of three components: (1) general plan text and land use map updates to the Downtown Plans; (2) adoption of the new Downtown Zoning Code for Downtown Los Angeles (as part of **re:code LA**); and (3) related amendments to other general plan elements (e.g. Mobility Plan, General Plan Framework Element, etc.), specific plans, and related zoning ordinances necessary for consistency and to implement the Proposed Project.

Downtown Plans

The general plan text and land use map amendments to the Downtown Plans are intended to guide development through the year 2040 by informing the general public of the City's broad planning goals, policies, and objectives, as well as specific development standards for the Project area. The Downtown Plans are intended to improve the link between land use and transportation in a manner that is consistent with the City's adopted General Plan Framework Element and state law.

Downtown Zoning Code

The Proposed Project also includes the adoption of the new Downtown Zoning Code for Downtown Los Angeles. The Downtown Zoning Code is a portion of the **re:code LA** program. **re:code LA** is a program to comprehensively revise the City of Los Angeles Zoning Code. In summary, the **re:code LA** program will amend the text of the LAMC to replace the City's existing Zoning Ordinance (Chapter 1 of the LAMC) with a new City zoning ordinance (New Zoning Ordinance) and the community plan update process will apply the zoning regulations to land in the Project Area. The New Zoning Ordinance will include, among other provisions, new zone classifications and revised/reorganized development standards and requirements for those new zone classifications.

If not already adopted at the time of Project approval, the Proposed Project will also include the adoption of citywide provisions of the New Zoning Code, including: citywide development standards (such as parking stall dimensions, grading haul route standards, minimum pedestrian walkways, and others); definition of terms; rules of measurement (such as how to measure lot width and building height); possible land use incentive system(s), modifications to existing nonconforming provisions; maintenance of current rules for division of land; creation of new streetscape requirements and maintenance of street improvement requirements; establishment of new overlay districts; and potentially new minimum parking requirements. These regulations will only be operative in other parts of the City when property is rezoned as part of a community plan update process. This is expected to occur through future community plan updates.

**DEADLINE TO REQUEST CONSULTATION:**

As stated above, your tribe has 30 calendar days from receipt of this letter to notify us in writing that it wants to consult on the Proposed Project pursuant to AB 52. In your request, please provide any updated contact information for your tribe's representative. Please mail your tribe's request to:

Dear Tribal Representative,

This letter is to inform you that the Los Angeles Department of City Planning is preparing an Environmental Impact Report ("EIR") for the Downtown Community Plan Update Program ("Proposed Project") in accordance with the requirements of the California Environmental Quality Act ("CEQA"). This notification is being forwarded to Native American tribes that are understood to be traditionally, culturally, and/or geographically affiliated with the Proposed Project area pursuant to the statutory requirements of Assembly Bill 52 (AB 52). Per AB 52, your tribe has the right to consult on the Proposed Project prior to the release of the related EIR and your tribe has 30 calendar days from receipt of this letter to notify us in writing that it wishes to consult on the Proposed Project. The Proposed Project is a long-range land use plan that does not consist of any proposed development projects, includes no ground disturbing activity or any related construction activity.

## PROJECT LOCATION:

The boundaries of the entire Downtown Community Plan Update Program are shown in **Figure 1** (Project Location Map). The boundaries of the two community plans, the Central City Community Plan and the Central City North Community Plan, (collectively, the "Downtown Plans") that will be updated are as follows:

The Central City Community Plan Area is comprised of approximately 2,161 acres, and is generally bounded on the north by Sunset Boulevard/Cesar Chavez Avenue, on the south by the Santa Monica Freeway (Interstate 10), on the west by the Harbor Freeway (Interstate 110), and on the east by Alameda Street. Immediately to the east of Alameda Street is the Central City North Community Plan Area.

The Central City North Community Plan area is comprised of approximately 2,005 acres, and is generally bounded by on the north by Stadium Way, Lilac Terrace, and North Broadway, on the south by the City of Vernon, on the west by Alameda Street, and on the east by the Los Angeles River. The Project Area is bordered by the communities of Boyle Heights, Silver Lake-Echo Park, Westlake, Southeast and South Los Angeles, and the City of Vernon.

## PROJECT DESCRIPTION

The Proposed Project is comprised of three components: (1) general plan text and land use map updates to the Downtown Plans; (2) adoption of the new Downtown Zoning Code for Downtown Los Angeles (as part of **re:code LA**); and (3) related amendments to other general plan elements (e.g. Mobility Plan, General Plan Framework Element, etc.), specific plans, and related zoning ordinances necessary for consistency and to implement the Proposed Project.

Downtown Plans

The general plan text and land use map amendments to the Downtown Plans are intended to guide development through the year 2040 by informing the general public of the City's broad planning goals, policies, and objectives, as well as specific development standards for the Project area. The Downtown Plans are intended to improve the link between land use and transportation in a manner that is consistent with the City's adopted General Plan Framework Element and state law.

Downtown Zoning Code

The Proposed Project also includes the adoption of the new Downtown Zoning Code for Downtown Los Angeles. The Downtown Zoning Code is a portion of the **re:code LA** program. **re:code LA** is a program to comprehensively revise the City of Los Angeles Zoning Code. In summary, the **re:code LA** program will amend the text of the LAMC to replace the City's existing Zoning Ordinance (Chapter 1 of the LAMC) with a new City zoning ordinance (New Zoning Ordinance) and the community plan update process will apply the zoning regulations to land in the Project Area. The New Zoning Ordinance will include, among other provisions, new zone classifications and revised/reorganized development standards and requirements for those new zone classifications.

If not already adopted at the time of Project approval, the Proposed Project will also include the adoption of citywide provisions of the New Zoning Code, including: citywide development standards (such as parking stall dimensions, grading haul route standards, minimum pedestrian walkways, and others); definition of terms; rules of measurement (such as how to measure lot width and building height); possible land use incentive system(s), modifications to existing nonconforming provisions; maintenance of current rules for division of land; creation of new streetscape requirements and maintenance of street improvement requirements; establishment of new overlay districts; and potentially new minimum parking requirements. These regulations will only be operative in other parts of the City when property is rezoned as part of a community plan update process. This is expected to occur through future community plan updates.

## DEADLINE TO REQUEST CONSULTATION:

As stated above, your tribe has 30 calendar days from receipt of this letter to notify us in writing that it wants to consult on the Proposed Project pursuant to AB 52. In your request, please provide any updated contact information for your tribe's representative. Please mail your tribe's request to:

RE: Downtown Community Plan Update
CASE NO.: CPC-2017-432-CPU; ENV-2017-433-EIR

Dear Tribal Representative,

This letter is to inform you that the Los Angeles Department of City Planning is preparing an Environmental Impact Report ("EIR") for the Downtown Community Plan Update Program ("Proposed Project") in accordance with the requirements of the California Environmental Quality Act ("CEQA"). This notification is being forwarded to Native American tribes that are understood to be traditionally, culturally, and/or geographically affiliated with the Proposed Project area pursuant to the statutory requirements of Assembly Bill 52 (AB 52). Per AB 52, your tribe has the right to consult on the Proposed Project prior to the release of the related EIR and your tribe has 30 calendar days from receipt of this letter to notify us in writing that it wishes to consult on the Proposed Project. The Proposed Project is a long-range land use plan that does not consist of any proposed development projects, includes no ground disturbing activity or any related construction activity.

## PROJECT LOCATION:

The boundaries of the entire Downtown Community Plan Update Program are shown in **Figure 1** (Project Location Map). The boundaries of the two community plans, the Central City Community Plan and the Central City North Community Plan, (collectively, the "Downtown Plans") that will be updated are as follows:

The Central City Community Plan Area is comprised of approximately 2,161 acres, and is generally bounded on the north by Sunset Boulevard/Cesar Chavez Avenue, on the south by the Santa Monica Freeway (Interstate 10), on the west by the Harbor Freeway (Interstate 110), and on the east by Alameda Street. Immediately to the east of Alameda Street is the Central City North Community Plan Area.

The Central City North Community Plan area is comprised of approximately 2,005 acres, and is generally bounded by on the north by Stadium Way, Lilac Terrace, and North Broadway, on the south by the City of Vernon, on the west by Alameda Street, and on the east by the Los Angeles River. The Project Area is bordered by the communities of Boyle Heights, Silver Lake-Echo Park, Westlake, Southeast and South Los Angeles, and the City of Vernon.

## PROJECT DESCRIPTION

The Proposed Project is comprised of three components: (1) general plan text and land use map updates to the Downtown Plans; (2) adoption of the new Downtown Zoning Code for Downtown Los Angeles (as part of **re:code LA**); and (3) related amendments to other general plan elements (e.g. Mobility Plan, General Plan Framework Element, etc.), specific plans, and related zoning ordinances necessary for consistency and to implement the Proposed Project.

Downtown Plans

The general plan text and land use map amendments to the Downtown Plans are intended to guide development through the year 2040 by informing the general public of the City's broad planning goals, policies, and objectives, as well as specific development standards for the Project area. The Downtown Plans are intended to improve the link between land use and transportation in a manner that is consistent with the City's adopted General Plan Framework Element and state law.

Downtown Zoning Code

The Proposed Project also includes the adoption of the new Downtown Zoning Code for Downtown Los Angeles. The Downtown Zoning Code is a portion of the **re:code LA** program. **re:code LA** is a program to comprehensively revise the City of Los Angeles Zoning Code. In summary, the **re:code LA** program will amend the text of the LAMC to replace the City's existing Zoning Ordinance (Chapter 1 of the LAMC) with a new City zoning ordinance (New Zoning Ordinance) and the community plan update process will apply the zoning regulations to land in the Project Area. The New Zoning Ordinance will include, among other provisions, new zone classifications and revised/reorganized development standards and requirements for those new zone classifications.

If not already adopted at the time of Project approval, the Proposed Project will also include the adoption of citywide provisions of the New Zoning Code, including: citywide development standards (such as parking stall dimensions, grading haul route standards, minimum pedestrian walkways, and others); definition of terms; rules of measurement (such as how to measure lot width and building height); possible land use incentive system(s), modifications to existing nonconforming provisions; maintenance of current rules for division of land; creation of new streetscape requirements and maintenance of street improvement requirements; establishment of new overlay districts; and potentially new minimum parking requirements. These regulations will only be operative in other parts of the City when property is rezoned as part of a community plan update process. This is expected to occur through future community plan updates.

## DEADLINE TO REQUEST CONSULTATION:

As stated above, your tribe has 30 calendar days from receipt of this letter to notify us in writing that it wants to consult on the Proposed Project pursuant to AB 52. In your request, please provide any updated contact information for your tribe's representative. Please mail your tribe's request to:

RE: Downtown Community Plan Update
CASE NO.: CPC-2017-432-CPU; ENV-2017-433-EIR

Dear Tribal Representative,

This letter is to inform you that the Los Angeles Department of City Planning is preparing an Environmental Impact Report ("EIR") for the Downtown Community Plan Update Program ("Proposed Project") in accordance with the requirements of the California Environmental Quality Act ("CEQA"). This notification is being forwarded to Native American tribes that are understood to be traditionally, culturally, and/or geographically affiliated with the Proposed Project area pursuant to the statutory requirements of Assembly Bill 52 (AB 52). Per AB 52, your tribe has the right to consult on the Proposed Project prior to the release of the related EIR and your tribe has 30 calendar days from receipt of this letter to notify us in writing that it wishes to consult on the Proposed Project. The Proposed Project is a long-range land use plan that does not consist of any proposed development projects, includes no ground disturbing activity or any related construction activity.

## PROJECT LOCATION:

The boundaries of the entire Downtown Community Plan Update Program are shown in **Figure 1** (Project Location Map). The boundaries of the two community plans, the Central City Community Plan and the Central City North Community Plan, (collectively, the "Downtown Plans") that will be updated are as follows:

The Central City Community Plan Area is comprised of approximately 2,161 acres, and is generally bounded on the north by Sunset Boulevard/Cesar Chavez Avenue, on the south by the Santa Monica Freeway (Interstate 10), on the west by the Harbor Freeway (Interstate 110), and on the east by Alameda Street. Immediately to the east of Alameda Street is the Central City North Community Plan Area.

The Central City North Community Plan area is comprised of approximately 2,005 acres, and is generally bounded by on the north by Stadium Way, Lilac Terrace, and North Broadway, on the south by the City of Vernon, on the west by Alameda Street, and on the east by the Los Angeles River. The Project Area is bordered by the communities of Boyle Heights, Silver Lake-Echo Park, Westlake, Southeast and South Los Angeles, and the City of Vernon.

## PROJECT DESCRIPTION

The Proposed Project is comprised of three components: (1) general plan text and land use map updates to the Downtown Plans; (2) adoption of the new Downtown Zoning Code for Downtown Los Angeles (as part of **re:code LA**); and (3) related amendments to other general plan elements (e.g. Mobility Plan, General Plan Framework Element, etc.), specific plans, and related zoning ordinances necessary for consistency and to implement the Proposed Project.

Downtown Plans

The general plan text and land use map amendments to the Downtown Plans are intended to guide development through the year 2040 by informing the general public of the City's broad planning goals, policies, and objectives, as well as specific development standards for the Project area. The Downtown Plans are intended to improve the link between land use and transportation in a manner that is consistent with the City's adopted General Plan Framework Element and state law.

Downtown Zoning Code

The Proposed Project also includes the adoption of the new Downtown Zoning Code for Downtown Los Angeles. The Downtown Zoning Code is a portion of the **re:code LA** program. **re:code LA** is a program to comprehensively revise the City of Los Angeles Zoning Code. In summary, the **re:code LA** program will amend the text of the LAMC to replace the City's existing Zoning Ordinance (Chapter 1 of the LAMC) with a new City zoning ordinance (New Zoning Ordinance) and the community plan update process will apply the zoning regulations to land in the Project Area. The New Zoning Ordinance will include, among other provisions, new zone classifications and revised/reorganized development standards and requirements for those new zone classifications.

If not already adopted at the time of Project approval, the Proposed Project will also include the adoption of citywide provisions of the New Zoning Code, including: citywide development standards (such as parking stall dimensions, grading haul route standards, minimum pedestrian walkways, and others); definition of terms; rules of measurement (such as how to measure lot width and building height); possible land use incentive system(s), modifications to existing nonconforming provisions; maintenance of current rules for division of land; creation of new streetscape requirements and maintenance of street improvement requirements; establishment of new overlay districts; and potentially new minimum parking requirements. These regulations will only be operative in other parts of the City when property is rezoned as part of a community plan update process. This is expected to occur through future community plan updates.

## DEADLINE TO REQUEST CONSULTATION:

As stated above, your tribe has 30 calendar days from receipt of this letter to notify us in writing that it wants to consult on the Proposed Project pursuant to AB 52. RE: Downtown Community Plan Update
CASE NO.: CPC-2017-432-CPU; ENV-2017-433-EIR

Dear Tribal Representative,

This letter is to inform you that the Los Angeles Department of City Planning is preparing an Environmental Impact Report ("EIR") for the Downtown Community Plan Update Program ("Proposed Project") in accordance with the requirements of the California Environmental Quality Act ("CEQA"). This notification is being forwarded to Native American tribes that are understood to be traditionally, culturally, and/or geographically affiliated with the Proposed Project area pursuant to the statutory requirements of Assembly Bill 52 (AB 52). Per AB 52, your tribe has the right to consult on the Proposed Project prior to the release of the related EIR and your tribe has 30 calendar days from receipt of this letter to notify us in writing that it wishes to consult on the Proposed Project. The Proposed Project is a long-range land use plan that does not consist of any proposed development projects, includes no ground disturbing activity or any related construction activity.

## PROJECT LOCATION:

The boundaries of the entire Downtown Community Plan Update Program are shown in **Figure 1** (Project Location Map). The boundaries of the two community plans, the Central City Community Plan and the Central City North Community Plan, (collectively, the "Downtown Plans") that will be updated are as follows:

The Central City Community Plan Area is comprised of approximately 2,161 acres, and is generally bounded on the north by Sunset Boulevard/Cesar Chavez Avenue, on the south by the Santa Monica Freeway (Interstate 10), on the west by the Harbor Freeway (Interstate 110), and on the east by Alameda Street. Immediately to the east of Alameda Street is the Central City North Community Plan Area.

The Central City North Community Plan area is comprised of approximately 2,005 acres, and is generally bounded by on the north by Stadium Way, Lilac Terrace, and North Broadway, on the south by the City of Vernon, on the west by Alameda Street, and on the east by the Los Angeles River. The Project Area is bordered by the communities of Boyle Heights, Silver Lake-Echo Park, Westlake, Southeast and South Los Angeles, and the City of Vernon.

## PROJECT DESCRIPTION

The Proposed Project is comprised of three components: (1) general plan text and land use map updates to the Downtown Plans; (2) adoption of the new Downtown Zoning Code for Downtown Los Angeles (as part of **re:code LA**); and (3) related amendments to other general plan elements (e.g. Mobility Plan, General Plan Framework Element, etc.), specific plans, and related zoning ordinances necessary for consistency and to implement the Proposed Project.

Downtown Plans

The general plan text and land use map amendments to the Downtown Plans are intended to guide development through the year 2040 by informing the general public of the City's broad planning goals, policies, and objectives, as well as specific development standards for the Project area. The Downtown Plans are intended to improve the link between land use and transportation in a manner that is consistent with the City's adopted General Plan Framework Element and state law.

Downtown Zoning Code

The Proposed Project also includes the adoption of the new Downtown Zoning Code for Downtown Los Angeles. The Downtown Zoning Code is a portion of the **re:code LA** program. **re:code LA** is a program to comprehensively revise the City of Los Angeles Zoning Code. In summary, the **re:code LA** program will amend the text of the LAMC to replace the City's existing Zoning Ordinance (Chapter 1 of the LAMC) with a new City zoning ordinance (New Zoning Ordinance) and the community plan update process will apply the zoning regulations to land in the Project Area. The New Zoning Ordinance will include, among other provisions, new zone classifications and revised/reorganized development standards and requirements for those new zone classifications.

If not already adopted at the time of Project approval, the Proposed Project will also include the adoption of citywide provisions of the New Zoning Code, including: citywide development standards (such as parking stall dimensions, grading haul route standards, minimum pedestrian walkways, and others); definition of terms; rules of measurement (such as how to measure lot width and building height); possible land use incentive system(s), modifications to existing nonconforming provisions; maintenance of current rules for division of land; creation of new streetscape requirements and maintenance of street improvement requirements; establishment of new overlay districts; and potentially new minimum parking requirements. These regulations will only be operative in other parts of the City when property is rezoned as part of a community plan update process. This is expected to occur through future community plan updates.

## DEADLINE TO REQUEST CONSULTATION:

As stated above, your tribe has 30 calendar days from receipt of this letter to notify us in writing that it wants to consult on the Proposed Project pursuant to AB 52. In your request, please provide any updated contact information for your tribe's representative. Please mail your tribe's request to:

RE: Downtown Community Plan Update
CASE NO.: CPC-2017-432-CPU; ENV-2017-433-EIR

Dear Tribal Representative,

This letter is to inform you that the Los Angeles Department of City Planning is preparing an Environmental Impact Report ("EIR") for the Downtown Community Plan Update Program ("Proposed Project") in accordance with the requirements of the California Environmental Quality Act ("CEQA"). This notification is being forwarded to Native American tribes that are understood to be traditionally, culturally, and/or geographically affiliated with the Proposed Project area pursuant to the statutory requirements of Assembly Bill 52 (AB 52). Per AB 52, your tribe has the right to consult on the Proposed Project prior to the release of the related EIR and your tribe has 30 calendar days from receipt of this letter to notify us in writing that it wishes to consult on the Proposed Project. The Proposed Project is a long-range land use plan that does not consist of any proposed development projects, includes no ground disturbing activity or any related construction activity.

## PROJECT LOCATION:

The boundaries of the entire Downtown Community Plan Update Program are shown in **Figure 1** (Project Location Map). The boundaries of the two community plans, the Central City Community Plan and the Central City North Community Plan, (collectively, the "Downtown Plans") that will be updated are as follows:

The Central City Community Plan Area is comprised of approximately 2,161 acres, and is generally bounded on the north by Sunset Boulevard/Cesar Chavez Avenue, on the south by the Santa Monica Freeway (Interstate 10), on the west by the Harbor Freeway (Interstate 110), and on the east by Alameda Street. Immediately to the east of Alameda Street is the Central City North Community Plan Area.

The Central City North Community Plan area is comprised of approximately 2,005 acres, and is generally bounded by on the north by Stadium Way, Lilac Terrace, and North Broadway, on the south by the City of Vernon, on the west by Alameda Street, and on the east by the Los Angeles River. The Project Area is bordered by the communities of Boyle Heights, Silver Lake-Echo Park, Westlake, Southeast and South Los Angeles, and the City of Vernon.

## PROJECT DESCRIPTION

The Proposed Project is comprised of three components: (1) general plan text and land use map updates to the Downtown Plans; (2) adoption of the new Downtown Zoning Code for Downtown Los Angeles (as part of **re:code LA**); and (3) related amendments to other general plan elements (e.g. Mobility Plan, General Plan Framework Element, etc.), specific plans, and related zoning ordinances necessary for consistency and to implement the Proposed Project.

Downtown Plans

The general plan text and land use map amendments to the Downtown Plans are intended to guide development through the year 2040 by informing the general public of the City's broad planning goals, policies, and objectives, as well as specific development standards for the Project area. The Downtown Plans are intended to improve the link between land use and transportation in a manner that is consistent with the City's adopted General Plan Framework Element and state law.

Downtown Zoning Code

The Proposed Project also includes the adoption of the new Downtown Zoning Code for Downtown Los Angeles. The Downtown Zoning Code is a portion of the **re:code LA** program. **re:code LA** is a program to comprehensively revise the City of Los Angeles Zoning Code. In summary, the **re:code LA** program will amend the text of the LAMC to replace the City's existing Zoning Ordinance (Chapter 1 of the LAMC) with a new City zoning ordinance (New Zoning Ordinance) and the community plan update process will apply the zoning regulations to land in the Project Area. The New Zoning Ordinance will include, among other provisions, new zone classifications and revised/reorganized development standards and requirements for those new zone classifications.

If not already adopted at the time of Project approval, the Proposed Project will also include the adoption of citywide provisions of the New Zoning Code, including: citywide development standards (such as parking stall dimensions, grading haul route standards, minimum pedestrian walkways, and others); definition of terms; rules of measurement (such as how to measure lot width and building height); possible land use incentive system(s), modifications to existing nonconforming provisions; maintenance of current rules for division of land; creation of new streetscape requirements and maintenance of street improvement requirements; establishment of new overlay districts; and potentially new minimum parking requirements. These regulations will only be operative in other parts of the City when property is rezoned as part of a community plan update process. This is expected to occur through future community plan updates.

## DEADLINE TO REQUEST CONSULTATION:

As stated above, your tribe has 30 calendar days from receipt of this letter to notify us in writing that it wants to consult on the Proposed Project pursuant to AB 52. The Proposed Project is a long-range land use plan that does not consist of any proposed development projects, includes no ground disturbing activity or any related construction activity.

## PROJECT LOCATION:

The boundaries of the entire Downtown Community Plan Update Program are shown in **Figure 1** (Project Location Map). The boundaries of the two community plans, the Central City Community Plan and the Central City North Community Plan, (collectively, the "Downtown Plans") that will be updated are as follows:

The Central City Community Plan Area is comprised of approximately 2,161 acres, and is generally bounded on the north by Sunset Boulevard/Cesar Chavez Avenue, on the south by the Santa Monica Freeway (Interstate 10), on the west by the Harbor Freeway (Interstate 110), and on the east by Alameda Street. Immediately to the east of Alameda Street is the Central City North Community Plan Area.

The Central City North Community Plan area is comprised of approximately 2,005 acres, and is generally bounded by on the north by Stadium Way, Lilac Terrace, and North Broadway, on the south by the City of Vernon, on the west by Alameda Street, and on the east by the Los Angeles River. The Project Area is bordered by the communities of Boyle Heights, Silver Lake-Echo Park, Westlake, Southeast and South Los Angeles, and the City of Vernon.

## PROJECT DESCRIPTION

The Proposed Project is comprised of three components: (1) general plan text and land use map updates to the Downtown Plans; (2) adoption of the new Downtown Zoning Code for Downtown Los Angeles (as part of **re:code LA**); and (3) related amendments to other general plan elements (e.g. Mobility Plan, General Plan Framework Element, etc.), specific plans, and related zoning ordinances necessary for consistency and to implement the Proposed Project.

Downtown Plans

The general plan text and land use map amendments to the Downtown Plans are intended to guide development through the year 2040 by informing the general public of the City's broad planning goals, policies, and objectives, as well as specific development standards for the Project area. The Downtown Plans are intended to improve the link between land use and transportation in a manner that is consistent with the City's adopted General Plan Framework Element and state law.

Downtown Zoning Code

The Proposed Project also includes the adoption of the new Downtown Zoning Code for Downtown Los Angeles. The Downtown Zoning Code is a portion of the **re:code LA** program. **re:code LA** is a program to comprehensively revise the City of Los Angeles Zoning Code. In summary, the **re:code LA** program will amend the text of the LAMC to replace the City's existing Zoning Ordinance (Chapter 1 of the LAMC) with a new City zoning ordinance (New Zoning Ordinance) and the community plan update process will apply the zoning regulations to land in the Project Area. The New Zoning Ordinance will include, among other provisions, new zone classifications and revised/reorganized development standards and requirements for those new zone classifications.

If not already adopted at the time of Project approval, the Proposed Project will also include the adoption of citywide provisions of the New Zoning Code, including: citywide development standards (such as parking stall dimensions, grading haul route standards, minimum pedestrian walkways, and others); definition of terms; rules of measurement (such as how to measure lot width and building height); possible land use incentive system(s), modifications to existing nonconforming provisions; maintenance of current rules for division of land; creation of new streetscape requirements and maintenance of street improvement requirements; establishment of new overlay districts; and potentially new minimum parking requirements. These regulations will only be operative in other parts of the City when property is rezoned as part of a community plan update process. This is expected to occur through future community plan updates.

## DEADLINE TO REQUEST CONSULTATION:

As stated above, your tribe has 30 calendar days from receipt of this letter to notify us in writing that it wants to consult on the Proposed Project pursuant to AB 52. In your request, please provide any updated contact information for your tribe's representative. Please mail your tribe's request to:

City of Los Angeles Department of City Planning
Bryan Eck, City Planner
200 N. Spring Street, Room 667
Los Angeles, CA 90012
Phone: (213) 978-1304
Email: bryan.eck@lacity.org

If you have any questions, please contact us at your earliest opportunity.

Sincerely,

Bryan Eck

RE: Downtown Community Plan Update
CASE NO.: CPC-2017-432-CPU; ENV-2017-433-EIR

Dear Tribal Representative,

This letter is to inform you that the Los Angeles Department of City Planning is preparing an Environmental Impact Report ("EIR") for the Downtown Community Plan Update Program ("Proposed Project") in accordance with the requirements of the California Environmental Quality Act ("CEQA"). This notification is being forwarded to Native American tribes that are understood to be traditionally, culturally, and/or geographically affiliated with the Proposed Project area pursuant to the statutory requirements of Assembly Bill 52 (AB 52). Per AB 52, your tribe has the right to consult on the Proposed Project prior to the release of the related EIR and your tribe has 30 calendar days from receipt of this letter to notify us in writing that it wishes to consult on the Proposed Project. The Proposed Project is a long-range land use plan that does not consist of any proposed development projects, includes no ground disturbing activity or any related construction activity.

## PROJECT LOCATION:

The boundaries of the entire Downtown Community Plan Update Program are shown in **Figure 1** (Project Location Map). The boundaries of the two community plans, the Central City Community Plan and the Central City North Community Plan, (collectively, the "Downtown Plans") that will be updated are as follows:

The Central City Community Plan Area is comprised of approximately 2,161 acres, and is generally bounded on the north by Sunset Boulevard/Cesar Chavez Avenue, on the south by the Santa Monica Freeway (Interstate 10), on the west by the Harbor Freeway (Interstate 110), and on the east by Alameda Street. Immediately to the east of Alameda Street is the Central City North Community Plan Area.

The Central City North Community Plan area is comprised of approximately 2,005 acres, and is generally bounded by on the north by Stadium Way, Lilac Terrace, and North Broadway, on the south by the City of Vernon, on the west by Alameda Street, and on the east by the Los Angeles River. The Project Area is bordered by the communities of Boyle Heights, Silver Lake-Echo Park, Westlake, Southeast and South Los Angeles, and the City of Vernon.

## PROJECT DESCRIPTION

The Proposed Project is comprised of three components: (1) general plan text and land use map updates to the Downtown Plans; (2) adoption of the new Downtown Zoning Code for Downtown Los Angeles (as part of **re:code LA**); and (3) related amendments to other general plan elements (e.g. Mobility Plan, General Plan Framework Element, etc.), specific plans, and related zoning ordinances necessary for consistency and to implement the Proposed Project.

Downtown Plans

The general plan text and land use map amendments to the Downtown Plans are intended to guide development through the year 2040 by informing the general public of the City's broad planning goals, policies, and objectives, as well as specific development standards for the Project area. The Downtown Plans are intended to improve the link between land use and transportation in a manner that is consistent with the City's adopted General Plan Framework Element and state law.

Downtown Zoning Code

The Proposed Project also includes the adoption of the new Downtown Zoning Code for Downtown Los Angeles. The Downtown Zoning Code is a portion of the **re:code LA** program. **re:code LA** is a program to comprehensively revise the City of Los Angeles Zoning Code. In summary, the **re:code LA** program will amend the text of the LAMC to replace the City's existing Zoning Ordinance (Chapter 1 of the LAMC) with a new City zoning ordinance (New Zoning Ordinance) and the community plan update process will apply the zoning regulations to land in the Project Area. The New Zoning Ordinance will include, among other provisions, new zone classifications and revised/reorganized development standards and requirements for those new zone classifications.

If not already adopted at the time of Project approval, the Proposed Project will also include the adoption of citywide provisions of the New Zoning Code, including: citywide development standards (such as parking stall dimensions, grading haul route standards, minimum pedestrian walkways, and others); definition of terms; rules of measurement (such as how to measure lot width and building height); possible land use incentive system(s), modifications to existing nonconforming provisions; maintenance of current rules for division of land; creation of new streetscape requirements and maintenance of street improvement requirements; establishment of new overlay districts; and potentially new minimum parking requirements. These regulations will only be operative in other parts of the City when property is rezoned as part of a community plan update process. This is expected to occur through future community plan updates.

## DEADLINE TO REQUEST CONSULTATION:

As stated above, your tribe has 30 calendar days from receipt of this letter to notify us in writing that it wants to consult on the Proposed Project pursuant to AB 52. In your request, please provide any updated contact information for your tribe's representative. Please mail your tribe's request to:

| Public Facilities | 26,464 jobs | 46.4 | 1,228,000 |
| **Total 2040 with Alternative 2 Wastewater Generation** | | | **37,074,000** |
| **Alternative 3** | | | |
| Single-family Residential | 6,733 du | 144.3 | 972,000 |
| Multi-family Residential | 131,949 du | 137.9 | 18,196,000 |
| Commercial | 240,909 jobs | 59.8 | 14,406,000 |
| Industrial | 96,383 jobs | 123 | 11,855,000 |
| Public Facilities | 26,464 jobs | 46.4 | 1,228 |
| **Total 2040 with Alternative 3 Wastewater Generation** | | | **46,657,000** |
| **Alternative 4** | | | |
| Single-family Residential | 6,733 du | 144.3 | 972,000 |
| Multi-family Residential | 52,361 du | 137.9 | 7,221,000 |
| Commercial | 169,955 jobs | 59.8 | 10,163,000 |
| Industrial | 51,689 jobs | 123 | 6,358,000 |
| Public Facilities | 56,795 jobs | 46.4 | 2,635,000 |
| **Total 2040 with Alternative 4 Wastewater Generation** | | | **27,348,513** |

**NOTES:**

du = dwelling unit (2017 baseline numbers actually represent households, which is slightly different than dwelling units insofar as households do not include vacant units. For consistency, the unit of measurement for households is denoted as dwelling units).

gpd – gallons per day

sf – square feet

Totals may not add up due to rounding.

1. For existing scenario, single-family and multi-family units were estimated by assuming that 20 percent of total household units are single-family and 80 percent are multi-family.

**SOURCE:** Wastewater is assumed to be 100% of indoor water use. Per Exhibit 2D of the 2015 UWMP, indoor water use constitutes the following percentages of overall water use: Residential single family – 46%; Residential multi-family – 68%; Commercial – 76%; Industrial – 98%; and Government – 59%. Per the UWMP, per unit water demand is forecast to decline over time; the forecast 2040 rates are assumed to apply to new development.

## II. Water

| Land Use | Dwelling Units or Jobs in Plan Area | Daily Water Use Rate (gpd/unit) | Daily Water Demand (gpd) | Annual Water Demand (afy) |
|---|---|---|---|---|
| **Existing** | | | | |
| Single-family[1] | 6,733 du | 337.2 | 2,270,368 | 2,543 |
| Multi-family[2] | 26,932 du | 219.3 | 5,906,188 | 6,616 |
| Commercial | 154,674 jobs | 84.7 | 13,100,888 | 14,675 |
| Industrial | 29,126 jobs | 135.1 | 3,934,923 | 4,408 |
| Public Facilities | 35,084 jobs | 84.7 | 2,971,615 | 3,329 |
| **Total** | | | **28,183,980** | **31,570** |
| **With Downtown Plan** | | | | |
| Single-family Residential | 6,733 du | 313.8 | 2,113,000 | 2,000 |
| Multi-family Residential | 126,540 du | 202.8 | 25,662,000 | 29,000 |
| Commercial | 249,279 jobs | 78.7 | 19,618,000 | 22,000 |
| Industrial | 33,735 jobs | 125.5 | 4,234,000 | 5,000 |
| Public Facilities | 21,716 jobs | 78.7 | 1,709,000 | 2,000 |
| **Total 2040 with Downtown Plan Water Demand** | | | **53,336,000** | **60,000** |
| **Alternative 1** | | | | |
| Single-family Residential | 6,733 du | 313.8 | 2,113,000 | 2,367 |
| Multi-family Residential | 89,962 du | 202.8 | 18,244,000 | 20,436 |
| Commercial | 229,638 jobs | 78.7 | 18,072,000 | 20,244 |
| Industrial | 33,163 jobs | 125.5 | 4,162,000 | 4,662 |
| Public Facilities | 26,633 jobs | 78.7 | 2,096,000 | 2,348 |
| **Total 2040 with Alternative 1 Demand** | | | **44,688,000** | **50,057** |
| **Alternative 2** | | | | |
| Single-family Residential | 6,733 | 313.8 | 2,113,000 | 2,367 |
| Multi-family Residential | 120,246 du | 202.8 | 24,386,000 | 27,316 |
| Commercial | 237,249 jobs | 78.7 | 18,671,000 | 20,915 |
| Industrial | 33,373 jobs | 125.5 | 4,188,000 | 4,691 |
| Public Facilities | 26,464 jobs | 78.7 | 2,083,000 | 2,333 |
| **Total 2040 with Alternative 2 Demand** | | | **51,441,000** | **57,622** |
| **Alternative 3** | | | | |
| Single-family Residential | 6,733 du | 313.8 | 2,113,000 | 2,367 |
| Multi-family Residential | 131,949 du | 202.8 | 26,759,000 | 29,974 |
| Commercial | 240,909 jobs | 78.7 | 18,960,000 | 21,237 |
| Industrial | 96,383 jobs | 125.5 | 12,096,000 | 13,549 |
| Public Facilities | 26,464 jobs | 78.7 | 2,083,000 | 2,333 |
| **Total 2040 with Alternative 3 Demand** | | | **62,010,000** | **64,461** |
| **Alternative 4** | | | | |
| Single-family Residential | 6,733 du | 313.8 | 2,113,000 | 2,367 |
| Multi-family Residential | 52,361 du | 202.8 | 10,619,000 | 11,895 |
| Commercial | 169,955 jobs | 78.7 | 13,375,000 | 14,982 |
| Industrial | 51,689 jobs | 125.5 | 6,487,000 | 7,266 |

| | | | | |
|---|---|---|---|---|
| Public Facilities | 56,795 jobs | 78.7 | 4,470,000 | 5,007 |
| **Total 2040 with Alternative 4 Demand** | | | **37,064,000** | **41,517** |

**NOTES:**

du - dwelling units

gpd – gallons per day

afy – acre feet per year (1 af = 325,850 gallons)

Totals may not add up due to rounding.

1. Single-family and multi-family units were estimated by assuming that 20 percent of total household units are single-family and 80 percent are multi-family.

2. Rates for multi-family residential include 0.3 gal/unit for landscaping, per Exhibits 2H and 2K of the 2015 UWMP

**SOURCE:** Water demand rates for existing uses were obtained from the LADWP's 2015 Urban Water Management Plan (UWMP), Exhibit2H (LADWP 2016a). Water demand rates for all other scenarios were obtained from the LADWP's 2015 Urban Water Management Plan (UWMP), Exhibit 2K (LADWP 2016a). Per the UWMP, per unit water demand is forecast to decline over time; the forecast 2040 rates are assumed to apply to new development.

## III. Solid Waste

| Land Use | Dwelling Units (du) or Jobs in Plan Area | Annual Waste Generation Rate | Annual Waste Generation (tons) | Daily Waste Generation (tons) |
|---|---|---|---|---|
| **Existing** | | | | |
| Single-family Residential | 6,733 du | 1.17 ton/du[1] | 7,878 | 22 |
| Multi-family Residential | 26,932 du | 0.46 ton/du | 12,389 | 34 |
| Commercial | 105,376,578 sf | 3.01 ton/1,000 sf | 317,183 | 869 |
| Industrial | 40,101,581 sf | 1.24 ton/1,000 sf | 49,726 | 136 |
| Public Facilities | 3,865,922 sf | 0.93/1,000 sf | 3,595 | 10 |
| **Total** | | | **390,771** | **1,071** |
| **With Downtown Plan** | | | | |
| Single-family Residential | 6,733 du | 1.17 ton/du[1] | 7,878 | 22 |
| Multi-family Residential | 126,540 du | 0.46 ton/du | 58,208 | 159 |
| Commercial | 199,504,737 sf | 3.01 ton/1,000 sf | 600,509 | 1,645 |
| Industrial | 76,758,424 sf | 1.24 ton/1,000 sf | 95,180 | 261 |

## Section 1: Introduction

The Broadway Theater and Entertainment District Design guide (Broadway Design guide or Design guide) provides guidelines and standards for development projects along Broadway between 2nd street and Olympic Boulevard in Downtown Los Angeles. The intent of the Broadway Design guide is to provide guidance and direction in the rehabilitation of existing structures and the design of new buildings to improve the appearance, enhance the identity and promote the pedestrian environment of the Broadway corridor and to encourage the development of a regional entertainment district centered around its twelve historic theaters.

### Broadway Design Guide Overview

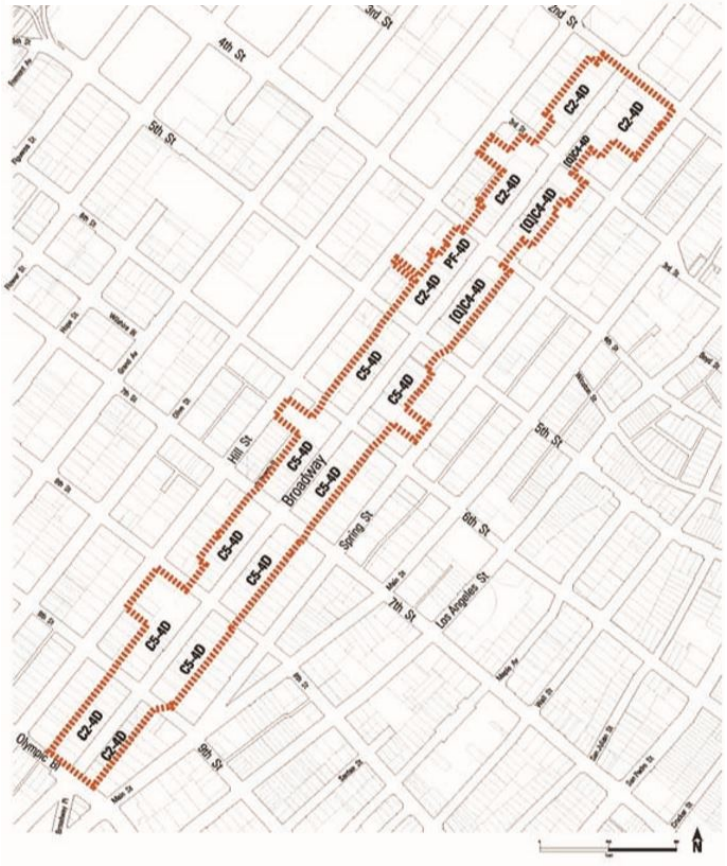
This document has been developed as part of a public-private partnership between the City of Los Angeles, Broadway property owners and the Downtown community. During 2008 and early 2009, a working group of Downtown and Broadway stakeholders helped develop these guidelines with the goal to create a vibrant corridor with entertainment, cultural and retail amenities that will complement and connect the various Downtown districts and activity centers. Subsequent workshops and open houses have involved broader segments of the Downtown community in this process. These guidelines reflect community goals for a lively, attractive, pedestrian-oriented Broadway that encourages entertainment, theater, and retail uses; preserves the historic architecture of the corridor; and activates the upper floors of existing buildings. These guidelines also support community aspirations for a true entertainment hub, with theaters, dining, shopping and inviting public spaces.

Guidelines for the Historic Core were developed over time with the input of a large number of stakeholders. Those documents, specifically, the Historic Downtown Los Angeles Design Guidelines (2002) and the Historic Downtown Los Angeles Building Facades Lighting Master Plan (2005) served as the basis for these guidelines.

### Broadway Design Guide Boundaries

The boundaries affected by the Broadway Design guide are shown on the map in **Figure 1**. The guidelines and standards of the Broadway Design guide apply to commercially designated parcels on the portion of Broadway generally bounded by Second Street to the north and Olympic Boulevard to the south. This boundary encompasses the six blocks of the Broadway Theater and Commercial District which is a national Register Historic District.

*Figure 1: Broadway Design Guide Boundary*



**Broadway Setting**

From the turn of the century through the 1930s, crowds of Angelenos and tourists were attracted to this lively stretch of Broadway to enjoy the entertainment and shopping offered in this theater and retail district. Broadway was a bustling street of constant activity with street cars, major department stores, film and vaudeville theaters and office space for professionals. Vaudeville first arrived on the scene in the early 1900s. Two leading vaudeville circuits located their theaters on Broadway — the Orpheum and the Pantages — securing Broadway as Downtown's entertainment center. Beginning in the 1910s, a number of grand movie palaces also made their home on Broadway.

Architecturally, Broadway contains some of the best examples of commercial and theater architecture in southern California and, for structures of this type, constructed during this period, display a progressive design aesthetic. The tall commercial buildings, including the first Broadway department store and the flagship stores for Bullocks, the May Company and the fifth street store, were built in a variety of classical styles. The theater architecture was more flamboyant and offered an environment of escape for audiences. The variety of architectural styles contributes to the unique character of Broadway.

The great era of movie-palace building on Broadway lasted until 1931, and ended as a result of the great Depression. The street remained a center for shopping and entertainment until the World War II era when many of the district's patrons and a majority of the City's urban dwellers moved to the suburbs. Suburban movie theaters, department stores and shopping centers developed in the suburban areas to serve their needs which resulted in a change in patronage along Broadway. As the market changed, the theaters and department stores converted to other uses or began to close, and historic storefronts were removed or altered. Currently, Broadway's commercial street frontage is lined with small, active retail establishments but lacks the kind of complementary night-time uses necessary to support the sustained reuse of the corridor's historic theaters. Although several historic theaters and structures have been rehabilitated, the theaters and upper stories of many of the buildings are still significantly underused. Specifically, attempts to attract consistent programming to the theaters have been undermined by the lack of complementary night-time uses.

### Design Guide Goals and Objectives

The goal of the Broadway Design guide is to ensure that development reflects the overall vision of a cohesive, pedestrian-friendly and vibrant entertainment, commercial and mixed-use district. Additionally, by encouraging a mix of retail, services, office uses, entertainment uses and housing, the Design guide can help generate concentrations of pedestrian activity to support both transit and an active street environment. The Design guide can ensure that storefronts and building façades invite the pedestrian and maintain visual continuity. This can be achieved through a consistent streetwall at the property line, with appropriate recesses for entrances; adequate transparency; appropriate signage; increased landscape detailing (as appropriate) and protection of historic structures.

The design guidelines and standards presented for new construction are flexible in application, providing direction for design treatment without mandating one particular architectural style or form. The implementation of these guidelines ensures that each project contributes to a more functional, walkable, and appealing district, while enhancing the designated national Register Historic District. In this way, improvements to individual properties can, over time, enhance the function of Broadway as a regional cultural and entertainment district and social center.

The Broadway Design guide provides design guidelines and standards intended to promote and enhance the identity of the District. Specifically, the goals of the Design guide are to:

- Create a recognizable and attractive entertainment district on Broadway that enlivens the corridor, serves as a regional entertainment draw and encourages the reuse of its numerous historic theaters;
- Promote land uses in Central City that will address the needs of all the visitors to Downtown for business, conventions, trade shows and tourism;
- Encourage the location of entertainment-related uses in the district, including, but not limited to: restaurants, cafes, hotels, bars, cabarets, clubs, museums, and live theater to create a cohesive entertainment district that is anchored by the corridor's historic theaters;
- Encourage reuse of all historic buildings on Broadway for entertainment, retail, commercial, office, residential and other appropriate uses;
- Encourage development patterns and a mix of uses that contribute to a pedestrian-friendly environment on Broadway and promote an active street life 24 hours a day, with an emphasis on night-time and entertainment uses for residents, workers, visitors and tourists;
- Encourage pedestrian-oriented and visitor-serving uses during the evening hours to expand activity centers within Downtown and create better, safer linkages among Downtown districts;

- Preserve architecturally significant buildings by ensuring appropriate rehabilitation of those buildings that contribute to the Broadway Theater and Commercial National Register Historic District, in accordance with Secretary of the Interior's Standards for Rehabilitation.
- Provide guidelines for appropriate design of infill development that will be complementary to and enhance the Broadway Theater and Commercial national Register Historic District;
- Ensure that any potential infill projects maintain the urban form of Broadway, in particular, by reinforcing the existing streetwall;
- Promote projects that are designed to ensure compatibility among the wide range of uses encouraged in the district and which incorporate measures that help diminish noise, improve energy efficiency and mitigate other potential impacts;
- Promote outdoor dining, including sidewalk dining on the ground floor and reuse of basements and upper floors, including the roof, as appropriate;
- Encourage development that contributes to the safety and comfort of Downtown residents and visitors.

### Design Principles

The Broadway Design guide is based upon the following principles: Activity, Context, Compatibility, Interest, Quality, Maintenance and Sustainability.

**1. Activity.** Good building and site design is integral to a thriving and animated pedestrian-oriented, mixed-use district. By facilitating an active street interface in new and existing buildings, design guidelines play an essential role in encouraging pedestrian activity, invigorating commercial uses and creating a safe and pleasant environment. Inviting storefronts, paseos, arcades, plazas, sidewalk dining, and attractive pedestrian-oriented signage promote sidewalk activity. Encouraging new and viable uses for the district's under-used theaters and other historic buildings will help transform the area into a vibrant, 24-hour cultural and entertainment hub.

**2. Context.** Design guidelines and standards provide regulatory flexibility to allow project applicants to take cues from the environment, historical precedent and physical site data of the surrounding district. Successful district projects help positively reinforce the identity of the Broadway Corridor by considering its context. Projects should contribute to the aesthetic and physical character of Broadway. Infill developments fit into the existing context by continuing the prevailing streetwall and paying particular attention to massing, façade articulation and site planning. Guidelines and standards, along with discretionary review, will ensure compatibility with the designated national Register Historic District while permitting creativity for new infill development.

**3.) Compatibility.** Projects should promote compatibility with its surroundings, both with respect to design and use. Additionally, when feasible and consistent with preservation goals, projects should incorporate design features that improve compatibility amongst a wide range of uses. Project applicants should consider rehabilitation techniques that help diminish noise, improve energy efficiency and mitigate other potential impacts. For example, the use of storm windows when rehabilitating a historic structure can serve both to attenuate sound and improve energy efficiency.

**4.) Interest.** Architectural and landscape detailing that is attractive to pedestrians can help improve the appeal and identity of the Broadway Corridor. This detailing includes storefront ornamentation, reduction of blank walls, and the appropriate variation of scale, color and texture. Guidelines and standards based upon this principle address wall surfaces, awnings, signage, architectural treatments, the provision of consistent setbacks and ground floor transparency.

**5.) Quality.** As new development occurs within the district, it must positively contribute to the overall visual identity of the Broadway Corridor. Broadway's visual appearance can be enhanced by the use of quality building materials, attention to design details, limitations on signs (size, location, number), and increased landscaping and maintenance.

**6.) Maintenance.** The proper maintenance of historic structures is an overarching principle promoted within this Design guide and will contribute to the overall attractiveness and vibrancy of the area. Building materials such as terra cotta, masonry, wood, metal, tile and terrazzo should be properly cleaned and maintained as a primary means of preserving important historic features and preventing further building deterioration. Proper drainage should be provided to prevent water from damaging surfaces. Appropriate methods prescribed in recognized preservation guidelines should be employed.

The application of protective coatings to preserve restoration work is encouraged. Please refer to section 8104 of the Los Angeles Building Code for Basic Maintenance and Repair of Existing Buildings and Premises for local maintenance regulations. Additionally, the U.S. Department of the Interior's National Park service Historic Preservation Briefs are available for guidance on preserving, rehabilitating, and restoring historic buildings online at: https://www.nps.gov/tps/how-to-preserve/briefs.htm

**7.) Sustainability.** The combination of old and new buildings on Broadway will add interest and richness to the urban fabric of Downtown. Rehabilitation of existing structures as well as new building construction present opportunities to integrate sustainable or "Green Building" concepts that reduce resource consumption and encourage natural systems for cooling, lighting and shading. The Leadership in Energy and Environmental Design (LEED) Green Building Rating System is a benchmark for the design, construction, and operation of high performance green buildings. New construction projects are encouraged to meet LEED certification requirements and to comply with the City's Green Building Program, as applicable. Rehabilitation projects are also encouraged to incorporate as many green building standards as possible. Moreover, adaptive reuse reduces the amount of demolition and construction waste deposited in landfills and lessens unnecessary demand for energy and consumption of natural resources required to build new buildings. Reinvestment into the historic core is highly encouraged because it maximizes the energy embedded in buildings and infrastructure (i.e. roads, sewer lines, etc.).

## Relevance to other Plans

This Design guide will implement the general Plan framework and the Downtown Community Plan by helping to achieve the goals and objectives of the district, consistent with the general Plan. The Broadway Design guide is consistent with the Historic Downtown Los Angeles Design guidelines (2002).

### General Plan Framework & Existing Downtown Community Plan

The City of Los Angeles general Plan framework identifies focal points in each community that function as centers of activity and where new growth and development is expected to occur. The Broadway Design guide area is contained entirely within the boundary of the Downtown Community Plan Area, which is designated in the general Plan framework as the "Downtown Center." The Downtown Center is considered an international center for finance and trade that serves the five county metropolitan region and encourages considerable density and floor area ratios up to 13.0:1 (high-rise residential towers, financial institutions and corporate headquarters). It is also the primary economic, governmental and social center of Los Angeles. The largest government center in the region, the Downtown Center is also the location of the region's major cultural and entertainment facilities and its principal transportation hub.

As the primary center of urban activity for the Los Angeles region, the Downtown Center's development should reflect a high design standard and host a variety of uses. Additionally, downtown's visitors and growing residential population should benefit from street activation and enhanced public safety as a result of future downtown development. Promoting the rehabilitation of Broadway's rare collection of historic theaters, the Downtown Community Plan also supports the corridor's revitalization and establishment as a regional, night-time, entertainment district, with night clubs, bars and restaurants that contribute to an active, 24-hour downtown. The revitalization of Broadway is consistent with the goals of the general Plan framework and the Downtown Community Plan to expand and reinforce the distinct districts of downtown and to eventually link pockets of activity via vibrant, pedestrian friendly streets. This Design guide aims to foster a Broadway that lives up to the vision in the General Plan Framework and to be consistent with the previously stated goals and objectives.

### City Center Redevelopment Plan

The Broadway Design guide area also lies within the City of Los Angeles Community Redevelopment Agency (CRA) City Center Redevelopment Project area **(refer to Figure 2, on page 8)**.

The CRA has identified the City Center as a redevelopment area for focused efforts to counter blighted conditions and foster redevelopment through various revitalization efforts. Its goal is to encourage developments that are consistent with the character of Central City, and that enhance the community's overall image. Among its several goals, the City Center Redevelopment Plan aims to:

- Eliminate and prevent the spread of blight and deterioration;
- Rehabilitate and redevelop the project area;

- further the development of Downtown as the major center of the Los Angeles metropolitan region;
- Promote the development and rehabilitation of economic enterprises including retail, commercial, service, sports and entertainment, manufacturing, industrial and hospitality uses that are intended to provide employment and improve the project area's tax base; and
- Preserve key landmarks which highlight the history and unique character of the City.

*These particular goals echo the spirit and intent of the Broadway Design Guide guidelines and standards in reinforcing a blend of old and new and facilitating the adaptive reuse of structures of architectural, historic or cultural merit.*

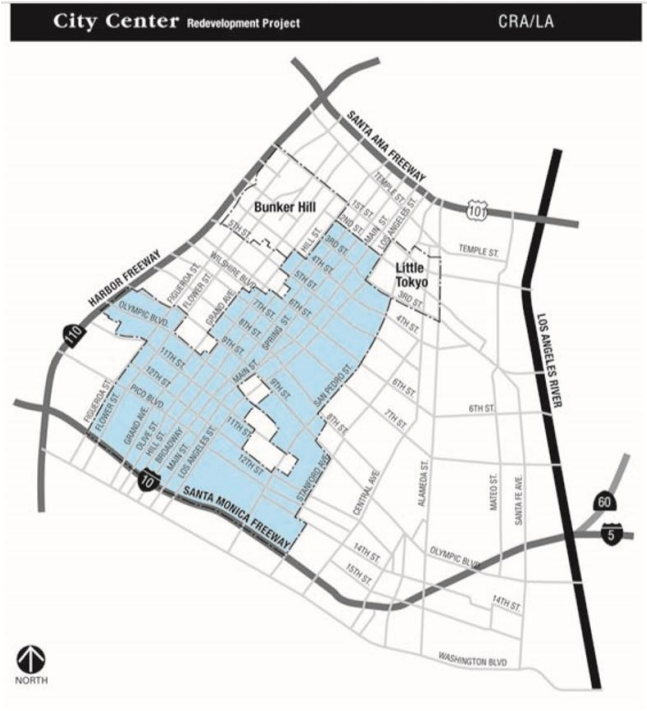


*Figure 2: City Center Redevelopment Project area*

# Section 2: Administrative Procedures

## Project Thresholds

General regulations pertaining to the function and administration of the Broadway Design guide will be consistent with those of the Community Design overlay Zones as outlined in Section 8.2.5 of the Los Angeles Municipal Code (LAMC). A project within the Design guide boundary is defined in section 8.2.5 of the LAMC. Consistent with that section, the following project definition and exemptions apply specifically to the Broadway Theater and Entertainment District Design guide:

### Broadway Design Guide Project

The following constitutes a project: The erection, construction, addition to, or exterior alteration to any building or structure within the boundary area of the Broadway Design guide including wall signs, window signs, canopies/awnings, façade alterations, the addition of roof equipment, and significant landscaping.

These guidelines and standards apply to all projects located in whole or in part within the Broadway Theater and Entertainment District boundary area-regardless of the proposed or existing use (residential, commercial, industrial).

All Projects within the Broadway Design guide boundary area should comply with the guidelines and standards of this Design guide.

### Exemptions

A project does not include the following: (a) construction that consists solely of interior remodeling or interior rehabilitation or repair work and (b) alterations of, including structural repairs, or additions to any existing building or structure façade that does not front a public street, and in which the aggregate value of the work, in any one 24-month period, is less than 50 percent of the building or structure's replacement value before the alterations or additions, as determined by the Department of Building and safety. (The exemption does not apply if the alterations or additions are to any exterior wall fronting a public street.)

All applicants proposing a project within the boundaries of the Broadway Design guide will file an application with the Department of City Planning at one of its public counters, in accordance with section 8.2.5, after a consultation with Community Planning staff. Applicants will find more details on the project review process below. The Department of City Planning will coordinate Design guide applications with the following City entities as a part of the project compliance review process:

## General Procedures

### Coordination with the Department of City Planning Office of Historic Resources (OHR)

All designated Historic Cultural Monuments (HCMs) and properties listed in or determined eligible for the national Register of Historic Places (Appendix A) will be reviewed by the Office of Historic Resources for compliance with the Secretary of Interior's Standards.

## Application Process

### Project Applications

All Broadway Design guide projects require the submittal of an application, referred to as a "Design Overlay Plan," which includes plans and materials as defined in section 8.2.5 of the Los Angeles Municipal Code. The Director of Planning may require additional documents or materials as deemed necessary. Prior to the issuance of a building permit, projects will be reviewed by the Director of Planning for compliance with these design guidelines and standards, per the procedures established in section 8.2.5 of the LAMC regarding Director Determinations.

For projects involving historic resources, staff may require that a historic assessment or some other appropriate evaluation, as determined by staff, be conducted by an approved historic consultant.

A historic assessment will be required when necessary to assist staff in evaluating a project's impacts on historic resources. Such an assessment may also be necessary for staff to make a determination about the feasibility of repairs. The Design guide guidelines encourage repair over replacement whenever feasible, a determination that will be made by staff, with the assistance of any necessary historic assessment.

### Procedures for Permit Clearances

Notwithstanding the procedures established in section 8.2.5 of the LAMC regarding CDO Director Determinations for all other projects, the Director of Planning may issue a Building Permit clearance for the following minor projects that **comply fully** with the Design guidelines and Development standards:

1. Signs
2. Landscaping totaling less than 20 square feet;
3. Modifications to a building façade that do not involve a decrease in storefront transparency and that do not involve a change in materials;
4. The installation of awnings or other non-permanent decorative features; or
5. The installation of mechanical equipment.

### Definitions

The following words and phrases, whenever used in this document, shall be construed as defined in this section. Words and phrases not defined herein shall be construed as defined in sections of the LAMC.

**Arcade:** an arched or covered passageway, usually with shops on each side.

**Articulation:** Clear and distinct separation between design elements or sections of a building façade, including variation in detail, color and materials and modulation of wall planes.

**Awnings and canopies:** Awnings are usually made of cloth and are framed by wood or metal. Canopies are permanently affixed to buildings, are flat and constructed of solid materials.

**Baffle:** An artificial obstruction for deflecting the flow of sound or light.

**Bulkhead (or Base):** Base of the storefront between the sidewalk and the window.

**Forecourt:** A courtyard before the entrance to a building or group of buildings.

**Historic assessment:** A supplemental report that may be required by staff to determine the effects of a proposed project on a historic resource. Staff will determine the level of evaluation that will be required. Applicants will be required to engage a qualified historic consultant to prepare any such required evaluations.

**Mixed Use Project:** A development comprised of one or more building uses, such as retail space and residential space.

**Overdoor:** An ornamented carving, painting, or section of decorated woodwork over a doorway.

**Paseo or Pedestrian Walkway:** Walkway that is typically open to the sky and that provides pedestrian passage between structures, or through landscaping, or parking lots, which is distinguished by ground surface treatments that provide for pedestrian safety and ease of movement.

**Pedestrian orientation:** neighborhood design that incorporates design features and elements that are human scaled and can be used and enjoyed by pedestrians. An urban development pattern where buildings and landscaping are proportioned and located so that walking is safe, comfortable and inviting.

**Plant-ons (or architectural implantations):** Molding overlays that are attached to a building's exterior. Plant-ons typically project from the exterior wall and serve to accent a building feature. They are typically used to frame windows in order to create the appearance of recessed windows.

**Premise:** A building or portion thereof used as a location for a single business.

**Preservation:** Repair or renovation to a historic building that is sensitive to those features and characteristics that contribute to its historic significance.

**Prevailing Setback: (also see Property line):** The most commonly reoccurring line between the property line and the façade of the building on the same block or street frontage. Along Broadway, the prevailing setback in many cases coincides with the property line or is offset from the property line between 6 inches and 1 foot. For purposes of this plan, the main structural elements of a building must be located on the prevailing setback line to maintain the streetwall, while storefronts and building entryways may be recessed.

**Project:** The erection, construction, addition to, or exterior alterations to any building or structure within the boundary area of the Broadway Design guide including wall signs, window signs, canopies/awnings, façade alterations, the addition of roof equipment, and significant landscaping. A project does not include the following: (a) construction that consists solely of interior remodeling or interior rehabilitation or repair work and (b) alterations of, including structural repairs, or additions to any existing building or structure façade that does not front a public street, and in which the aggregate value of the work, in any one 24-month period, is less than 50 percent of the building or structure's replacement value before the alterations or additions, as determined by the Department of Building and safety. (The exemption does not apply if the alterations or additions are to any exterior wall fronting a public street.).

**Property line (or lot line):** The line separating the lot from the street.

**Rehabilitation:** Rehabilitation generally refers to a method of treatment of historic structures that focuses on preserving existing historic fabric; repairing rather than replacing deteriorated components; replacing individual components rather than entire features and incorporating new features rather than historic recreations when adequate documentation is not available. Replacement of missing and/or deteriorated (too deteriorated to repair) elements generally requires use of in-kind materials. When in-kind materials are technically or economically infeasible, compatible substitute materials that convey the same form, design and overall visual appearance as the original may be considered.

**Restoration:** Restoration generally refers to a method of treatment of historic structures that focuses on the retention of materials from the most significant time in a property's history, while permitting the removal of materials from other periods.

**Reconstruction:** Reconstruction generally refers to a method of treatment of historic structures that establishes limited opportunities to re-create a non-surviving site, landscape, building, structure, or object in all new materials.

**Setback:** The distance between the property line and the façade of the building.

**Sidewalk grade:** The level of the sidewalk abutting the façade of a building fronting a public right-of-way.

**Sign(s):** Please refer to Appendix C: sign Dictionary

**Streetwall (or street edge):** The vertical face of one or more buildings adjacent and parallel to the sidewalk. The cumulative façade effect created on a pedestrian oriented corridor when structures are built to the front lot-line and built to the edge of each side lot-line or the prevailing setback.

**Storefront Bay:** That area enclosed by the storefront cornice above, piers on the side, and the sidewalk at the bottom. Sometimes storefronts are placed entirely within one storefront bay, usually in older structures. Recessed storefront bays add visual interest to the streetwall, frame display windows, and create an inviting shopping environment.

**Structural Bay:** Any division of a wall marked off by vertical supports.

**Tower:** A building or portion thereof that exceeds 150 feet in height.

## Rehabilitation of Historic Structures

The purpose of these guidelines is to ensure historic structures are rehabilitated in a sensitive manner and that those features that characterize a particular style or period are retained. The guidelines set forth in this section are intended to be consistent with and implement the Secretary of the Interior's Standards for Preservation and Rehabilitation of Historic Buildings.

The **key rules** for rehabilitation of an **historic building** are:

**1) repair rather than replace**

**2) uncover rather than mask**

Where new design elements, architectural features, and materials are required, they should be compatible with the historic character of the building, and not detract from its distinguishing qualities. Prior to modification, historic documentation of the building's original appearance and later alterations should be located.

Applicants are required to rehabilitate and preserve historic buildings; retain character defining features during rehabilitation, and consult historic photographs and other documentation of the building before commencing work.

Use conservative rehabilitation treatments that focus on preserving existing historic fabric; repairing rather than replacing deteriorated components; replacing individual components rather than entire features, and incorporating new features rather than historic recreations when adequate documentation is not available. Reintroduce the building base in cases where alterations have modified this important building element.

Replace elements or portions of elements that are missing or are too deteriorated to repair. If in-kind materials are technically or economically infeasible, compatible substitute materials that convey the same form, design and overall visual appearance as the original may be considered. Staff will determine when elements are too deteriorated to repair, in consultation with OHR and a qualified historic consultant.

*Restoring original design elements is encouraged.*

### Building Articulation and Details

#### *1. Façade Improvements*

**Guideline 1:** *Retain the building's original appearance and all character defining features.*

**Standard 1a:** Character defining features as shown in Appendix B, which articulate a building facade, should be repaired using in-kind materials.

**Standard 1b:** When a character defining feature is determined by review to be too deteriorated to be repaired, but the overall form and detailing are still apparent, replace them in-kind, identical form and materials) or with substitute material that conveys the same form, design and overall visual appearance as the original.

(

**Standard 1c:** Character defining features, as illustrated in Appendix B should not be hidden behind displays, signage and/or building alterations and additions.

**Standard 1d:** Removing non-historic additions is encouraged to expose and restore the original design elements.

### *2. Building Form*

**Guideline 2:** *Preserve, repair and replace, as appropriate, building elements and features that are important in defining historic character (see "rehabilitation" in Section 2: Definitions for more details). Retain the original building continuity, rhythm and form created by these features, such as storefront pattern, structural bays, windows and doors, decorative metalwork, transom windows, glazing systems, clearstory windows, cornices etc. Also retain the traditional three-part configuration of most historic buildings-base, middle and top. Restore or reconstruct the building base in cases where alterations have modified this important element of the design.*

**Standard 2a:** Modifications or additions required to adapt a building for reuse should be designed to clearly differentiate between the historic and new and should be compatible with the overall scale, massing and design of the existing building.

**Standard 2b:** Retain previous alterations that have acquired their own historic significance, as determined by staff review, and are compatible with the remaining historic fabric (to be determined in consultation with a qualified preservation consultant).

**Standard 2c:** New additions and window and door openings should be located on a secondary façade.

### *3. Building Additions*

**Guideline 3:** *Additions should be of a scale and style that is compatible with existing development on the site and with adjacent structures. Building additions on historic buildings should comply with the Secretary of Interior's Standards for additions.*

**Standard 3a:** Provide roof forms on additions that are compatible with existing on-site development and are in keeping with the architecture of the historic structure.

**Standard 3b:** Provide fenestration on additions that is compatible with existing on-site development and is in keeping with the architecture of the historic structure.

**Standard 3c:** Utilize building materials on additions that are compatible with, yet distinctly different from, that of existing on-site development.

**Standard 3d:** Avoid making alterations to existing buildings that cover or obscure elements that might otherwise be desirable-such as a desirable exterior finish, fenestration or roof line-for the purpose of achieving uniformity.

**Standard 3e:** Any alterations or additions to existing buildings should maintain the prevailing setback (see section 2 Definitions) and reinforce the existing streetwall. Storefronts and building entryways may be recessed as long as the main structural elements are built to the front property line or the prevailing setback, whichever applies.

### *4. Corporate Identity Architecture*

**Guideline 4:** *Buildings in the District should contribute to the architectural integrity of the surrounding area. Buildings used for franchise restaurants, retail space or other formula commercial uses that traditionally have a pre-determined corporate architectural identity may not be compatible with these guidelines. In such cases, buildings should be redesigned so as to be consistent with the Design Guide design guidelines and development standards.*

*Corporate establishments should be designed to comply fully with the design guidelines and development standards.*

**Standard 4:** All projects, including those related to franchise or corporate establishments should be designed to comply fully with the design guidelines and development standards.

Corporate establishments should be designed to comply fully with the design guidelines and development standards.

### *5. Roof Lines*

**Guideline 5:** *Retain and preserve the existing roof lines and/or cornice(s) and any other decorative features of historic buildings.*

**Standard 5a:** Existing roof lines and cornices should not be altered. Whenever possible rehabilitate and/or restore the original roof line of altered structures.

**Standard 5b:** Roofs should be repaired with appropriate materials, in keeping with the architecture of the building, so as to ensure proper maintenance and reduce water damage or building deterioration.

**Standard 5c:** When a roof is too deteriorated to repair (as determined by review), but the overall form and detailing are still apparent, the replacement of the roof and its key features using compatible substitute material is encouraged.

**Standard 5d:** New rooftop features, such as skylights, that extend above the roof parapet should not be visible from the street at ground level. Set back all non-historic rooftop features from all street-facing facades.

**Standard 5e:** Roof top additions should be avoided whenever possible. However, if roof top addition(s) are necessary to reuse a historic building, then these additions should be set back from all façades and clearly differentiated.

**Standard 5f:** Use of existing roof tops for active uses or open spaces is encouraged. However, this reuse should not alter the existing roofline or any decorative feature of the historic roof. Any required safety railings or enclosures should be of an open framework or lattice design to maximize transparency. They should be set back to minimize visibility or impact on dominant roofline features and may be subject to review.

### *6. Entry Treatments*

**Guideline 6:** *Retain and preserve entryways and their character defining features such as doors, transoms, integral signage, bases, pilasters, and entablatures as shown in Appendix B.*

**Standard 6a:** Entryways should be repaired by using in-kind materials or through limited replacement using in-kind materials or a compatible substitute material, when there is extensive damage or missing parts of key features.

**Standard 6b:** The replacement of an entryway using compatible substitute material is encouraged when an entryway is too deteriorated to repair, but the overall form and detailing are still apparent.

**Standard 6c:** New entryways may be added as required for a new use, provided these entryways preserve the overall historic character of the building and do not eliminate existing historic storefronts or detract from character defining features.

**Standard 6d:** Features of theater entrances, including ticket kiosks and poster display cases, should be retained; in-filling of theater entrances is inappropriate. Adaptation of existing public assembly places and/or theaters for live performances is strongly encouraged. If such use of a theater is not viable, then other uses are encouraged, as long as all associated physical characteristics are retained. Ticket kiosks can be adapted for other uses, including, display windows, restaurant busing stations, flower stands or newsstands, to be consistent with corridor-wide rehabilitation and preservation efforts.

**Standard 6e:** Highlighting historic building main entrances with canopies or awnings, lighting, planters, or other distinguishing enhancements is encouraged.

**Standard 6f:** Locate new service areas and loading docks on secondary facades whenever feasible.

*Retain and preserve entryways and their character defining features.*

## *7. Storefronts*

**Guideline 7:** *Preserve, repair and highlight storefronts and their character defining features such as doors, transoms, sidelights, windows, pilasters, entablatures, bay divisions and bases.*

**Standard 7a:** Retain or reconstruct the historic storefront configuration: door location, display window dimensions, transoms windows, historic signage (where applicable and appropriate), historic materials and details.

**Standard 7b:** Repair or reconstruct deteriorated storefront elements: broken or missing glazing, metal windows, doors and their frames, wood windows, decorative metalwork, ornamental plaster, terra cotta, and cast stone. Replace in-kind (identical form and material) repetitive elements or portions of elements that are too deteriorated to repair, as determined by review.

**Standard 7c:** When a storefront is too deteriorated to repair, as determined by review, but the overall form and detailing are still apparent, the replacement of a storefront using compatible substitute material is encouraged when in-kind materials are infeasible.

**Standard 7d:** Retention of sensitively installed alterations where historic fabric no longer exists is allowable.

**Standard 7e:** Construct new storefronts when the historic storefront is completely missing. The new storefront may be a replication-where there is adequate historical, pictorial or physical documentation available-or a new design which is compatible with the historic character of the building. Recreate storefronts based on documentation when possible, not conjecture.

**Standard 7f:** The design of the missing storefront or storefront details should be compatible with the size of the opening and the style of the building. Installation of typical storefront elements - base, display windows, and central entrance; vertical elements to define storefront bays; and a glazing system including sliding or swinging doors is encouraged, when the design is not known.

**Standard 7g:** Painting, mirroring, or tinting storefront or transom windows or entry glazing is discouraged. Tinting that is necessary to comply with energy and building code requirements may be appropriate.

**Standard 7h:** individual storefronts should not be used for storage or left empty without window displays.

**Standard 7i:** Locate interior mechanical equipment away from the storefront glazing.

**Standard 7j:** If dropped ceilings are installed, they should not be visible from the street and should not hide original architectural features.

**Standard 7k:** Merchandise displayed out-of-doors should be neatly exhibited within cases constructed to fit within recesses of storefronts and within the interior of the property line. Displays may encroach not more than three feet into the property line, with appropriate approvals from the Bureau of Engineering.

## *8. Windows*

**Guideline 8:** *Repair and maintain windows and character defining features such as the window frame, sash, muntin, glazing, hood mold, paneled or decorated jamb and molding.*

**Standard 8a:** Windows should be repaired whenever possible rather than replaced.

**Standard 8b:** Windows should be repaired by reinforcing historic materials and through limited replacement using compatible substitute material when there is extensive deterioration or missing parts of key features. Compatible alternatives that help attenuate noise and improve energy efficiency may also be considered (see note following this section and cross reference with section Vii: sustainability).

**Standard 8c:** When replacement is necessary, the window(s) should be replaced using compatible substitute materials and a design similar to that of the original window. If an exact match is not possible, then the window's color, finish, mullion and muntin configuration and profile, glass-to-frame ratio, and its frame depth, width, and details should be considered in selecting a replacement. Compatible alternatives that help attenuate noise and improve energy efficiency may also be considered (see note following this section and cross reference with section Vii: sustainability).

**Standard 8d:** filling in or altering the size of historic windows is strongly discouraged particularly on primary facades. If the alteration is to create a new entryway, refer to standard 6c.

**Standard 8e:** Window vents, fans, air conditioning units or any other equipment installed into a window should not project beyond the window on any facade and their number should be minimized.

**Standard 8f:** Windows should be comprised of non-tinted or reflective clear glass, which is free of temporary signage and/or other types of materials that may obstruct visibility. For new windows, low-E glazing for ultraviolet light control is encouraged. Clear mylar on ground floor windows is encouraged to protect against graffiti.

**Standard 8g:** The division of historic window frames is generally inappropriate. Removal of non-historic window frames is encouraged. *Note: Please refer to the U.S. Department of the Interior's National Park Service Historic Preservation Briefs for guidance on best practices for maintenance, repair, and/or installation of replacement windows, including double paned windows, available online at:* ***http://www.nps.gov/hps/tps/briefs/presbhom.htm.***

### *9. Façades, Exterior Surface Materials & Color*

**Guideline 9:** *Retain and preserve building exterior materials which contribute to the overall historic character of the building.*

**Standard 9a:** Exterior materials that have been historically unpainted should not be painted to create a new look. Unpainted masonry, brick, tile or terra cotta should not be painted (see Maintenance section under section 1 Design Principles).

**Standard 9b:** Whenever possible the original coat of paint, should not be removed. However, if an area is to be repainted, colors that are historically appropriate for the style of the building or which are characteristic of the district as a whole should be used.

**Standard 9c:** Colors used for an exterior building finish, plaster or paint should be consistent with the original color of the building based on historical documentation.

**Standard 9d:** Bright or intense colors should not be utilized unless consistent with the historical appearance of the building as shown in historical documentation.

**Standard 9e:** Exterior materials should be repaired by patching, piecing-in or consolidating the original material or by limited replacement with a compatible substitute material.

**Standard 9f:** If the overall form and detailing are still apparent and exterior materials are too deteriorated for repair, as determined by review, they should be replaced with a compatible substitute material.

**Standard 9g:** if adequate historical, pictorial and physical documentation is not available about the type of material used for a historic feature, then new materials compatible with the existing materials, color and finish should be used.

### *10. Lighting*

**Guideline 10:** *Retain and preserve existing historic lighting fixtures and/or incorporate new lighting into the building's overall design to accentuate character defining features and provide a safe pedestrian environment (refer to the Historic Downtown Lighting Guidelines for suggestions for individual buildings).*

**Standard 10a:** Whenever possible existing historic lighting fixtures should be preserved or rehabilitated and upgraded.

**Standard 10b:** New lighting fixtures should be compatible with the architectural design of the building.

**Standard 10c:** Provide lighting along all vehicular access ways and pedestrian walkways. Recessed lighting on the ground along vehicular access ways and pedestrian walkways is highly encouraged.

*United Building shown as example of rehabilitated lighting fixtures.*

**Standard 10d:** Storefront illumination from within is encouraged both during and after business hours to the extent possible.

**Standard 10e:** All exterior lighting should be directed onto the lot, and all flood lighting should be designed to eliminate glare and/or be shielded so as to not spill light on adjoining properties.

**Standard 10f:** Downlighting that illuminates the storefronts and sidewalks for pedestrians is encouraged.

**Standard 10g:** Buildings should be highlighted through uplighting or accent lights placed on the façade where appropriate.

**Standard 10h:** Entry arches should be highlighted with accent lights that are integrated into columns, when appropriate.

**Standard 10i:** Architectural details should be highlighted with washlights or other appropriate lighting fixtures.

**Standard 10j:** Lower level columns should be accented by uplighting with spotlights mounted on appropriate floor ledges.

**Standard 10k:** Eaves or cornices should be highlighted with spotlights mounted on appropriate floor ledges.

**Standard 10l:** Architectural elements above pediments should be highlighted with accent lights on ledges below to uplight the top of the building façade.

**Standard 10m:** Downlights should be installed above entryways to accent main entries and doors and enhance pedestrian safety.

**Standard 10n:** Downlights should be installed above ground level windows to accent display windows and enhance pedestrian safety.

**Standard 10o:** Lighting that uses flashing, strobe, motion or multi-color elements is strongly discouraged unless consistent with the historic character of the structure.

**Standard 10p:** intense lighting which is used solely for advertising purposes is strongly discouraged.

**Standard 10q:** Awnings may not be backlit.

**Standard 10r:** Relighting of basements and illumination and/or rehabilitation of glass block in sidewalks is encouraged.

### *11. Awnings and Canopies*

**Guideline 11:** *Retain and preserve historic canopies or add new canopies or awnings, which do not detract from the historic character of a building. Awnings should be integrated with the architecture of the building (also see Signage Simplicity and Quality standards under Signs Section).*

**Standard 11a:** Canopies and awnings that are character defining features of a historic building should be restored and/or repaired. When there is extensive deterioration or missing parts of such key features, consider limited replacement with a compatible substitute material. Shiny, high-gloss materials are not permitted.

**Standard 11b:** Added awnings or canopies should not obscure character defining features.

**Standard 11c:** Canopies and awnings that span an entire building are discouraged. The careful spacing of awnings that highlight certain features of a storefront or entryway is encouraged.

**Standard 11d:** The valance on an awning may not be more than 16 inches tall.

**Standard 11e:** Standard awnings at street level may project up to 7 feet from the property line. At no point should the underside of the awning structure be less than 8 feet from the ground.

**Standard 11f:** Awnings above street level may project up to 3 feet beyond the property line.

**Standard 11g:** No items are permitted to hang from the awning.

**Standard 11h:** No trellis structures are permitted to be affixed above entryways and storefronts.

## Appurtenances

### *12. Security Grilles*

**Guideline 12:** *Use alternatives to solid roll down security grilles that are attached to building facades so as not to obscure storefront windows or create an inhospitable pedestrian atmosphere. Clear mylar on ground floor windows is encouraged to protect against graffiti.*

**Standard 12a:** Permanently affixed exterior security grilles or bars are prohibited. Stores should use alternatives such as interior security systems or vandal proof glazing which is resistant to impact.

**Standard 12b:** Interior, transparent security grilles are encouraged.

**Standard 12c:** Both interior and exterior security grilles should be constructed of a see-through, open weave, non-solid grate material that is at least 75-percent transparent. They should be integrated into the building and should not detract from or obscure character defining features.

**Standard 12d:** If exterior security grilles must be installed, the exterior security grilles should descend from above and awnings should be used to screen the mechanical housing for the security grilles.

**Standard 12e:** Exterior accordion-style and solid roll down security grilles are discouraged.

**Standard 12f:** Existing security grilles and bars, whether retractable or permanently affixed should be painted with a color that diminishes the appearance of such devices as viewed against the window.

### *13. Utilities, Mechanical Equipment, Trash Containers & Loading*

**Guideline 13:** *Preserve and retain significant visible character defining features of early mechanical equipment and, whenever possible, screen or enclose all other utilities, mechanical equipment, and trash containers.*

**Standard 13a:** New mechanical equipment and/or new distribution systems should be installed in a manner that does not interfere with any character defining features of the building. Required restaurant venting should be installed on the secondary façade to the greatest extent feasible and, be integrated with, and, not detract from, the character defining features, whenever possible.

**Standard 13b:** Window vents, fans, air conditioning units or any other equipment installed into a window should not project beyond any window on any facade and their number should be minimized.

**Standard 13c:** No other mechanical equipment (besides those listed in standard 13b) should be permitted in window or door openings facing public streets.

**Standard 13d:** Rooftop mechanical equipment should be screened and integrated with the architecture of the building.

**Standard 13e:** Screen all exterior rooftop and ground-level mechanical equipment, including HVAC equipment, exhaust fans and satellite dishes from public view.

**Standard 13f:** Locate enclosed trash containers and other service areas at the rear of structures or at the location that is most out of the view of the general public.

**Standard 13g:** Trash storage bins should be located within a gated, covered enclosure constructed of materials identical to the exterior wall of the building. The exterior wall may be screened with landscaping, so as not to be viewed from the public right-of way.

**Standard 13h:** Provide a separate enclosure for trash and recyclable materials.

**Standard 13i:** Service areas, such as those used for storage or maintenance, should be enclosed within a building.

**Standard 13j:** Screen or locate solar panels away from the public right-of-way to the extent possible.

### *14. Sidewalk Dining Enclosures*

**Guideline 14:** *Support an open and safe physical environment by designing enclosures for outdoor eating areas that do not detract from the quality of the pedestrian experience along the sidewalk.*

**Standard 14a:** Enclosures must utilize an open framework of transparent or lattice design elements. The materials and design should be decorative and coordinated with the structures on the site without detracting from the character defining features of the building.

**Standard 14b:** Swinging gates, cantilevered objects or any other obstructions that create an unsafe environment for the blind or physically disabled are discouraged and must meet any other regulations as deemed necessary by the Bureau of Engineering.

**Standard 14c:** Furnishings are limited to moveable chairs, tables, umbrellas, tarps and heaters. Plant material may be placed in moveable planting boxes.

**Standard 14d:** Moderately sized lighting fixtures may be permanently affixed to the front of the main building to light outdoor sidewalk dining areas.

### *15. Wireless Telecommunication Facilities*

**Guideline 15:** *Wireless telecommunication facilities should be designed so as to appear compatible with or complementary to surrounding architecture and structures.*

**Standard 15a:** Where possible, wireless telecommunication facilities should be incorporated into existing buildings and other structures and should appear unobtrusive.

**Standard 15b:** Roof-top wireless facilities should be located in a manner that is least disruptive to the primary visible façade of the building. They should be screened by materials that are simple and do not compete with or attempt to replicate the architectural features of the existing building.

## Rehabilitation of non-Historic Structures

### Site Orientation

#### *1. Setbacks*

**Guideline 1:** *Encourage an inviting pedestrian environment and provide for streetwall continuity locating storefronts, entryways and pedestrian-serving uses at the property line abutting a public street or the prevailing setback, as applicable.*

**Standard 1a:** Any rehabilitation of an existing building should result in minimal breaks in the streetwall.

**Standard 1b:** Locate active, ground floor uses at the property line abutting a public street and/or a publicly accessible walkway to create a vibrant pedestrian realm.

**Standard 1c:** Ground floor uses should be located at front and side property lines or the prevailing setback, whichever applies.

Standard 1d: Architectural treatments and landscaping along the front property line that add visual interest and enhance the pedestrian environment are encouraged.

#### *2. Storefront Orientation*

**Guideline 2:** *Promote ease of pedestrian movement between stores and enhance the level of pedestrian activity by placing pedestrian entrances along the street for each business that fronts a public right-of-way.*

**Standard 2a:** Where paseos or pedestrian walkways exist, the walkways should be retained and improved with materials such as stamped concrete, brick, tile or some decorative paving surface.

**Standard 2b:** Street-facing building facades with expansive blank walls should be used to create storefronts and/or windows to further activate the ground floor and enhance the pedestrian environment.

### Building Articulation and Details

#### *3. Building Form*

**Guideline 3:** *The design of all buildings should be of a quality and character that improves community appearance and representative of an overall architectural theme. Buildings should be composed of forms that are compatible with existing historic buildings and employ attractive and complementary building materials and architectural features. The massing and proportion of buildings at ground level along the public right-of-way should be at a pedestrian scale.*

**Standard 3a:** Rooflines should be designed to be compatible with the building façade and to complement the surrounding area.

**Standard 3b:** Provide appropriate vertical and horizontal breaks in plane on all exterior building elevations that are compatible with and take cues from the historic buildings found on the corridor. This can be accomplished by fenestration, incorporation of architectural details or through a change in material. Windows and doors should not be flush with the plane of the building.

**Standard 3c:** Consider the retention of and creative integration into new infill development of a non-contributing building's surviving architectural features, including those revealed through renovations, partial demolition, or near full demolition. Such features may include fabric such as historic facades, partial facades, cornices, windows, entrances, storefronts, and decorative elements dating from the district's period of significance, 1894 to 1931.

### *4. Building Additions*

**Guideline 4:** *Additions should be of a scale and style that is compatible with existing development on the site and with adjacent structures. Additions should comply with Secretary of the Interior's Standards for Rehabilitation in Historic Districts.*

**Standard 4a:** Design roof forms on additions that are compatible with existing on-site development and are consistent with the existing architectural style.

**Standard 4b:** Provide fenestration on additions that is compatible with existing on-site development and is consistent with the existing architectural style.

**Standard 4c:** Utilize building materials on additions that are compatible with existing on-site development and are consistent with the existing architectural style.

**Standard 4d:** Avoid making alterations to existing buildings that cover or obscure elements that might otherwise be desirable-such as, a desirable exterior finish, fenestration or roof line- for the purpose of achieving uniformity.

**Standard 4e:** Any alterations or additions to existing buildings should maintain the prevailing setback (see section 2 Definitions) and reinforce the existing streetwall. Storefronts and building entryways may be recessed as long as the main structural elements are built to the front property line or the prevailing setback, as applicable.

**Standard 4f:** Any rooftop safety enclosures, including railings, should be open or lattice design maximizing transparency and may be subject to review.

### *5. Corporate Identity Architecture*

**Guideline 5:** *Buildings in the District should contribute to the architectural integrity of the surrounding area. Buildings used for franchise restaurants, retail space or other formula commercial uses that traditionally have a pre-determined corporate architectural identity may not be compatible with these guidelines. In such cases, buildings should be redesigned so as to be consistent with the Broadway Design Guide design guidelines and development standards.*

*The rooftop addition shown here continues the lines and materials of the original building before transitioning into new materials and forms. This technique creates a more seamless intersection between new and old.*

**Standard 5:** All projects, including those related to franchise or corporate establishments should be designed to comply fully with these design guidelines and development standards.

Corporate establishments should be designed to comply fully with the Design guidelines and Development standards.

### 6. Entry Treatments

**Guideline 6:** *Each building should have a prominent main building entrance that allows pedestrians access to a main lobby from Broadway and any perpendicular side street. Existing building entrances should be retained and new building entrances should be introduced, if missing to contribute to an active pedestrian environment.*

**Standard 6a:** Provide the primary building entrance for all buildings from the public street.

**Standard 6b:** Preserve the primary building entrance for all buildings along the public street and maintain them so that they remain unlocked and unobstructed during normal business hours.

**Standard 6c:** Highlight building main entrances with canopies or awnings, lighting, color, planters or other distinguishing architectural treatments around the doorway.

### 7. Storefronts

**Guideline 7:** *Encourage window-shopping and an active pedestrian environment by providing a significant level of storefront transparency at ground floor on building facades along public streets. Storefronts should allow maximum visibility from sidewalk areas into the interior of all commercial uses. Storefront entrances should be designed so that they are a predominant architectural feature on the building façade and so that they create an inviting entrance.*

**Standard 7a:** Preserve the storefront entrances for all buildings along the public street and maintain them so that they remain unlocked and unobstructed during normal business hours.

**Standard 7b:** Entrances should be enhanced through architectural treatments around the doorway, individual awnings or placement of appropriate signage above the entryway.

**Standard 7c:** Storefronts on existing buildings that have been enclosed or have had windows removed or replaced with smaller windows should be improved to be consistent with these guidelines.

.

**Standard 7d:** Use non-reflective glass within minimal tinting, as required, to comply with energy and building codes.

**Standard 7e:** Individual storefronts should not be used for storage or left empty without window displays.

**Standard 7f:** Locate interior mechanical equipment away from the storefront glazing.

**Standard 7g:** Avoid dropped ceilings as they are visible from the street.

**Standard 7h:** Merchandise displayed out-of-doors should be neatly exhibited within cases constructed to fit within storefront recesses and within the interior of the property line. In limited instances, displays may encroach not more than three feet into the property line, with appropriate approvals from the Bureau of Engineering.

## *8. Façades, Exterior Surface Materials & Colors*

**Guideline 8:** *Building façades should be constructed of high quality materials that communicate a sense of permanence and that are complementary to surrounding buildings and features. Buildings should aim for a "timeless design" and employ sustainable materials, when feasible, and careful detailing that has proven longevity. Building material and paint colors should be attractive and complementary to the surrounding buildings and features. Conjectural decorative features are discouraged.*

**Standard 8a:** Plywood siding should not be used on building exteriors.

**Standard 8b:** Stucco, EIFS, and metallic siding/cladding are discouraged.

**Standard 8c:** Foam plant-ons are discouraged.

**Standard 8d:** Fluorescent colors are discouraged for all exterior applications.

**Standard 8d:** Paint all vents, gutters, downspouts, electrical conduits etc. to match the color of the adjacent surface unless being used expressly as a trim or accent element.

## *9. Lighting*

**Guideline 9:** *Lighting should be incorporated into the design not only to accentuate architectural features, but also to provide a safe environment for pedestrian activity. All open areas, including parking lots, walkways, and trash areas, should have security lighting for safety.*

**Standard 9a:** New lighting fixtures should be compatible with the architectural design of the building.

**Standard 9b:** Storefront illumination from within is encouraged both during and after business hours to the extent possible.

**Standard 9c:** Provide lighting along all vehicular access ways and pedestrian walkways. Recessed lighting on the ground along vehicular access ways and pedestrian walkways is highly encouraged.

**Standard 9d:** All exterior lighting should be directed onto the lot, and all flood lighting should be designed or shielded to eliminate glare to adjoining properties.

**Standard 9e:** Down lighting that illuminates the storefronts and sidewalks for pedestrians is encouraged.

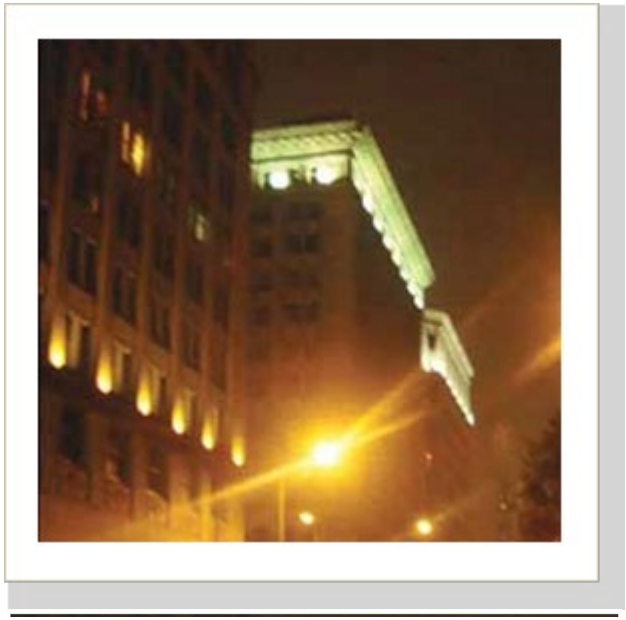
**Standard 9f:** Buildings should be highlighted through uplighting or accent lights placed on the façades where appropriate

**Standard 9g:** Highlighting architectural details with washlights or other appropriate lighting fixtures is encouraged.

**Standard 9h:** Lighting that uses flashing, strobe, motion or multi-color elements is strongly discouraged. Lighting that promotes District identity is encouraged; lighting should offer a unique and visually stimulating experience, accentuate the surrounding architecture, and highlight special uses and activities.

**Standard 9i:** Intense lighting which is used solely for advertising purposes is strongly discouraged.

**Standard 9j:** Relighting of basements and illumination and/or rehabilitation of glass block in sidewalks is encouraged.



### *10. Awnings and Canopies*

Guideline 10: *Add visual interest to storefronts through the use of high-quality awnings and canopies that provide articulation in the streetwall. Awnings should be designed to complement buildings and individual structural bays (also see standards under Section 3: Signs: Sign Simplicity and Quality).*

**Standard 10a:** Awnings and canopies should be constructed of high quality, durable, fade- resistance, fire-retardant materials. Plastic, vinyl and other similar materials should be not be used on storefront awnings. Shiny, high-gloss materials are not permitted.

**Standard 10b:** Avoid single awnings or canopies that span entire buildings. One awning or canopy should be provided for each structural bay or storefront.

**Standard 10c:** Awnings or canopies should not conceal architectural features and should be designed to be architecturally compatible with the structure on which they are to be attached.

**Standard 10d:** No items are permitted to hang from the awning.

**Standard 10e:** The valance on an awning should not be more than 16 inches tall.

**Standard 10f:** Standard awnings at street level may project up to 7 feet from the property line. The underside of the awning structure should not be less than 8 feet from the ground.

**Standard 10g:** Awnings above street level may project up to 3 feet beyond the property line.

**Standard 10h:** Awnings may not be backlit.

**Standard 10i:** No trellis structures are permitted to be affixed above entryways and storefronts.

*Note: Projections into the public right-of-way extending beyond private property must obtain proper approval from the Department of Public Works Bureau of Engineering. A Revocable Permit may be necessary.*

### *11. Graffiti*

**Guideline 11:** *Use exterior surface materials that will reduce the incidence and appearance of graffiti.*

**Standard 11a:** Treat exterior walls with graffiti resistant surfaces. Such treatment may include specialized coatings and the installation of vegetation.

**Standard 11b:** Treat storefront windows on new structures with graffiti resistant film or other specialized coatings so as to protect them from vandalism.

## Appurtenances

### *12. Security Grilles*

**Guideline 12:** *Buildings should be designed with security features that effectively deter criminal activity while maintaining a positive image about the community. When used, security grilles should be screened from view during business hours and should be integrated into the design of the building.*

**Standard 12a:** Permanently affixed exterior security grilles or bars are prohibited.

**Standard 12b:** Security grilles should be retractable and should recess into pockets that completely conceal the grille when it is retracted. Such pockets should be integrated into the design of the building.

**Standard 12c:** Exterior accordion-style and solid roll down security grilles that conceal storefront windows are prohibited.

**Standard 12d:** Existing security grilles and bars, whether retractable or permanently affixed, should be painted with a color that diminishes their appearance

### *13. Utilities, Mechanical Equipment, Trash Containers & Loading*

**Guideline 13:** *Utilities, storage areas, loading docks, mechanical equipment and other service areas should be located to the rear or secondary façades, when feasible, and screened from the adjacent public right-of-way. Equipment can be screened from public view through the use of building parapets, landscaping walls and other similar architectural treatments that are integrated with the design and materials of the building. Plywood and wood lattice screens should be avoided.*

**Standard 13a:** Locate all service areas and loading docks at the rear of structures or at the location that is most concealed from the general public's view.

**Standard 13b:** Screen all exterior rooftop and ground level mechanical equipment, including HVAC equipment, exhaust fans and satellite dishes from public view.

**Standard 13c:** Window vents, fans, air conditioning units and other equipment installed into a window should not project beyond any window on any façade.

**Standard 13d:** No mechanical equipment (other than those listed in standard 14c) shall be permitted in window or door openings facing public streets.

**Standard 13e:** Service areas, such as those used for automobile repair facilities or storage, should be enclosed within a building.

**Standard 13f:** Screen or locate solar panels away from the public right-of-way to the extent possible.

**Standard 13g:** Locate enclosed trash containers to the rear of the building where they are not visible to the public.

**Standard 13h:** Trash storage bins should be located within a gated, covered enclosure constructed of materials identical to the exterior wall of the building to conceal them from view of the public right-of way. Landscaping may be used to screen such enclosures.

**Standard 13i:** Provide a separate enclosure for trash and recyclable materials.

### *14. Sidewalk Dining Enclosures*

**Guideline 14:** *Support an open and safe physical environment by designing enclosures for outdoor eating areas that do not detract from the quality of the pedestrian experience along the sidewalk.*

**Standard 14a:** Enclosures must utilize an open framework of transparent or lattice design elements. The materials and design should be decorative and coordinate with the structures on the site.

**Standard 14b:** Swinging gates, cantilevered objects or any other obstructions that create an unsafe environment for the blind or physically disabled are prohibited, unless deemed safe by Bureau of Engineering.

**Standard 14c:** Furnishings are limited to moveable chairs, tables, umbrellas, heaters and tarps. Plant material may be placed in moveable planting boxes.

**Standard 14d:** Moderately sized lighting fixtures may be permanently affixed to the front of the main building to light outdoor sidewalk dining areas.

**Standard 14f:** When installing sidewalk dining enclosures, the pedestrian path of travel on the sidewalk shall not be less than 7 feet in width and shall not include any border hardware such as parking meters, street lights, signs, news racks, posts, or any other obstruction.

**Standard 14g:** Sidewalk-dining facilities shall be free standing, unattached to the sidewalk and shall be removed from the sidewalk when the dining facility is not open for business.

*Note: Projections into the public right-of-way, extending beyond private property, must obtain proper approval from the Department of Public Works, Bureau of Engineering. A Revocable Permit may be necessary.*

### *15. Wireless Telecommunication Facilities*

**Guideline 15:** *Wireless telecommunication facilities should be designed so as to appear compatible with or complementary to surrounding architecture and structures.*

**Standard 15a:** Where possible, wireless telecommunication facilities should be incorporated into existing buildings and other structures and should appear unobtrusive.

**Standard 15b:** Roof-top wireless facilities should be located in a manner that is least disruptive to the primary visible façade of the building. They should be screened by materials that are simple and do not compete with or attempt to replicate the architectural features of the existing building.

## New Construction

**Site Planning**

Site planning involves the proper placement and orientation of structures, open spaces, parking, and pedestrian and vehicular circulation on a given site. The purpose of good site design is to create a functional and attractive development, to minimize adverse impacts on the surrounding area, and to ensure that a new development project will be an asset to the community.

Proper site planning should promote harmony between new and existing buildings and be sensitive to the scale, form, height and proportion of surrounding development. Factors such as the size and massing of buildings, the orientation of storefronts, and circulation greatly influence the character of an area and its economic vitality as well as the pedestrian experience. Within the boundaries of the Broadway Design guide, site planning of new buildings and additions should promote continuity of the historic context of Broadway. Careful consideration should be given to the relationship of new development with existing buildings and how it fits into the existing historic development pattern. The way parking and vehicular access are addressed can also greatly affect the pedestrian environment and the character and functionality of the corridor. The guidelines and standards below reinforce the existing historic development patterns of the Broadway corridor and provide a site planning framework for infill projects.

### *1. Respecting the Historic Context*

**Guideline 1:** *Pursue creative and innovative contemporary designs for new buildings that will complement Broadway's designated National Register Historic District.*

**Standard 1a:** New construction should continue the pedestrian-oriented, mixed-use pattern of development characteristic of Broadway. Building massing, placement and entryways should be functionally and aesthetically compatible with their surroundings.

**Standard 1b:** Development of large sites should respect the traditional lot patterns, vertical rhythms, horizontal building forms as well as maintain the tradition of articulated, transparent storefronts and storefront entryways and prominent main building entries on the ground floor facing a public street.

**Standard 1c:** New construction should be differentiated from the old yet be compatible with the historic materials, scale, massing and proportions that characterize the historic district and shall otherwise comply with the Secretary of the Interior's Standards for new construction and additions.

### *2. Building Orientation and Frontage*

**Guideline 2:** *Site buildings to promote pedestrian activity along the public right-of-way by placing business entrances on the street. Developments should not face inward, but rather, should be oriented towards the street to reinforce the existing character of the Broadway Corridor.*

**Standard 2a:** Corner buildings shall be built to front and side lot lines with allowances for a visibility triangle as required by Chapter 1, section 12.21 C.7 of the Los Angles Municipal Code (LAMC). At major street intersections, buildings may have corner entrances that emphasize the location of the building at the intersection.

**Standard 2b:** surface parking lots shall not be located between the front property line and the building on the street side but rather to the rear of all structures.

**Standard 2c:** All new buildings shall have a primary entrance which shall be oriented toward the street on all street-facing facades. The primary entrance shall be prominent and easy to locate. It should be distinguished from storefront entrances and highlighted through the use of articulation or other architectural treatment (such as enlarged entryways, appropriately scaled signage or lighting).

**Standard 2d:** Each retail space or storefront should be accessible directly from the sidewalk and/or from a publicly accessible walkway (paseo, arcade, etc.), rather than through common interior lobbies.

**Standard 2e:** Where a building extends through an entire block or is located at a corner, the entrances shall be connected with a suitably scaled public lobby.

**Standard 2f:** Line large expanses of unused linear street frontage with shallow storefronts or veneers.

**Standard 2g:** Accessory parking structures shall be located to the rear of the site, whenever feasible, and shall be visually compatible with other structures associated with the project, in terms of material, color, design and other elements.

### *3. Setbacks*

**Guideline 3:** *Encourage an inviting pedestrian environment and provide for streetwall continuity by locating new buildings at the property line or the prevailing setback (see definitions), as applicable. Where permitted, additional setback areas should encourage active public uses through additional street trees, outdoor seating areas, kiosks, forecourts and arcades.*

**Standard 3a:** When constructing a tower, the portion of the building above 150 feet shall include a lot coverage of no less than 30-percent and not more than 40-percent of lot coverage which can include the minimum 30-foot setback when a 30-foot setback is required.

*Note: Projects incorporating uses or structures in the existing public right-of-way, such as sidewalk dining or awnings, must obtain proper approval from the Department of Public Works Bureau of Engineering. A Revocable Permit (R-Permit) may be necessary to grant conditional encroachment of the public right-of-way by private parties not authorized to occupy the right-of-way. This does not apply to projects that remain solely on private property or within setback areas.*

### *4. Open Space*

**Guideline 4:** *Encourage publicly accessible, urban open spaces as part of a project site design to invite and encourage pedestrian activity. Create inviting spaces, provide shade, screen unattractive areas, and enhance architectural detailing through the thoughtful and careful placement of landscaping. Paseos and arcades should accommodate pedestrian traffic and offer opportunities for amenities such as outdoor dining, sitting areas, and landscaping. The arcade presents the opportunity for pedestrian-oriented retail.*

**Standard 4a:** Paseos and arcades should be strategically located at regular intervals to create pleasant and inviting passageways that are safe, accessible and connect areas of pedestrian activity.

**Standard 4d:** When breaks in the streetwall are necessary to provide publicly accessible open spaces, paseos, arcades etc., design or architectural features should be used to define the street edge at any property line abutting a public street. Where the open space is open to the sky, design techniques may include decorative walls, arches or gates at the property line on the ground floor. For those spaces that are not open to the sky, another technique to define the streetwall is to construct the upper stories to any property line abutting a public street or the prevailing setback, as applicable. In all cases, such design features at the ground floor should be open, transparent and readily permit visual and physical access to the open space or passageway from the abutting public right-of-way.

**Standard 4e:** Rooftop decks should be architecturally integrated through the use of building materials, color, texture, shape, size and other architectural features. As may be required by the fire Department and the Department of Building and safety, rooftop decks should be enclosed by a wall or railing that complements the architectural features of the building. Any rooftop deck railings and/or rooftop enclosures should be of an open framework or lattice design to maximize transparency and may be subject to review.

### *5. Corporate Identity Architecture*

**Guideline 5:** *Buildings in the District should contribute to the architectural integrity of the surrounding area. Buildings used for franchise restaurants, retail space or other formula commercial uses that traditionally have a pre-determined corporate architectural identity may not be compatible with these guidelines. In such cases, buildings shall be redesigned so as to be consistent with these Design Guidelines and Development Standards.*

**Standard 5:** All projects, including those related to franchise or corporate establishments shall be designed to comply fully with the Design guidelines and Development standards.

### Building Articulation and Details

The architectural elements of new buildings and rehabilitation of existing buildings which are not contributors to the Broadway Theater and Commercial national Register Historic District should create and/or maintain continuity of the streetwall. New building facades should employ architectural devices that provide gradual or compatible transitions between existing and new buildings. Such elements include continuity of scale, massing, design, fenestration, façade treatment, building material, color, access and open space that represent a logical evolution of the existing character of the Broadway Corridor. This does not mean that new construction should mimic the architecture of the historic buildings found on the corridor or the surrounding area; rather, the new construction should be differentiated from the old yet maintain continuity through a consistency in proportion and drawing from the character of defining elements of existing facades. Integrating architectural elements or features of historic or important buildings found in the district is highly encouraged.

*The street wall is largely defined by individual building massing.*

### *6. Building Scale and Massing*

**Guideline 6:** *Building massing of new buildings should complement the existing urban form and the prevailing height of existing buildings while considering light, shadows, views, etc.*

Standard 6a: South of Fourth Street, the portion of building above 150 feet (as permitted by tower standards) shall be setback a minimum of 30 feet from Broadway and any perpendicular street.

Standard 6b: When constructing a tower, the portion of the building above 150 feet shall include a lot coverage of no less than 30-percent and not more than 40-percent of lot coverage which can include the minimum 30-foot setback when a 30-foot setback is required.

### *7. Building Articulation*

**Guideline 7:** *Heighten visual interest and enhance pedestrian orientation by incorporating variation in the facades of buildings. These elements and variations may include: architectural features; changes in building materials, texture and color; generously sized, transparent display windows; arcades, canopies and awnings; cornices, and other details such as transom windows and overdoors. New developments should be governed by a formal architectural concept, like the existing historic structures, that exhibits variation in the basic principles of visual order to clarify buildings' uses and differentiate ground floor uses.*

**Standard 7a:** Ground floors of buildings shall have a different architectural treatment than the upper floors and feature high quality materials that add scale, texture and variety at the pedestrian level.

**Standard 7b:** In order to respect existing historic features, the cornice or roof line of adjacent historic structures should be reflected with a demarcation on new adjacent structures.

**Standard 7c:** Large unbroken surfaces shall be avoided through the use of individual storefronts, recessed storefront bays; and large, transparent display windows. Large storefronts should be divided by structural bays to maintain the highly articulated building form found on the corridor, characterized by narrow storefronts and other details. These details present a steady rhythm along the edge of the building at a comfortable human scale and create an inviting pedestrian environment.

**Standard 7d:**-Wall openings, such as storefront windows and doors, shall comprise at least 70-percent of the ground floor façade fronting a public street-

**Standard 7e:** Commercial ground-floor frontage should be distinguishable from the upper floor façades and should provide a strong building base. The ground floor commercial portion of development should relate to the scale, form and proportion of the rest of the building. Ground floor uses should be distinguished from the upper façade with inviting and transparent storefronts and sensitively scaled proportions. Commercial uses should have greater window- to-wall ratios than the upper stories of a building.

## 8. Entry Treatments

**Guideline 8:** *Each building should have a prominent main building entrance that allows pedestrians access to a main lobby from Broadway and any perpendicular side street to an active pedestrian environment.*

**Standard 8a:** A primary pedestrian entrance should be provided from the public street for all buildings.

*The use of different materials on the ground floor and upper floors distinguishes the ground floor commercial uses from the upper story residential uses and contributes to a strong building base.*

**Standard 8b:** Maintain the primary building entrance for all buildings along the public street so that they remain unlocked and unobstructed during normal business hours.

**Standard 8c:** Highlight building main entrances with canopies or awnings, lighting, color, planters or other distinguishing architectural treatments around the doorway.

**Standard 8d:** Locate new service areas and loading docks on secondary facades whenever feasible.

## 9. Storefronts

**Guideline 9:** *Encourage window-shopping and an active pedestrian environment by providing a significant level of storefront transparency at the ground floor on building facades along public streets. Storefronts should allow maximum visibility from sidewalk areas into the interior of all commercial uses. Storefront entrances should be designed so that they are a predominant architectural feature on the building façade and create an inviting entrance.*

**Standard 9a:** Storefront entrances should be enhanced through architectural treatments around the doorway, individual awnings or placement of appropriate signage above the entryway.

**Standard 9b:** Use non-reflective glass that allows a minimum of 90-percent light transmission on all street-fronting facades

**Standard 9c:** Individual storefronts should not be used for storage or left empty without window displays. However, window displays should not cover or block views into the building interior.

**Standard 9d:** Any railings should be transparent and subject to review.

**Standard 9e:** Locate interior mechanical equipment away from the storefront glazing.

**Standard 9f:** Merchandise displayed out-of-doors should be neatly exhibited within cases constructed to fit within storefront recesses and within the interior of the property line. In limited instances, displays may encroach not more than three feet into the property line, with appropriate approvals from the Bureau of Engineering.

### *10. Windows*

**Guideline 10:** *All structures should have as many windows as possible on the ground floor when facing a street or pedestrian walkway. There should be little or no blank wall area, except to separate buildings or retail/office spaces. This increases safety by allowing businesses to have 'eyes on the street' and passersby to see interior building activities. Windows should incorporate passive solar and other green building standards to the extent feasible to reduce energy consumption.*

**Standard 10a:** Windows should be recessed (set back) from the exterior building wall, except where inappropriate to the building's architectural style. The required recess may not be accomplished by the use of plant-ons around the window.

**Standard 10b:** Windows on levels above the ground floor should be evenly and regularly spaced to create a discernible rhythm.

**Standard 10c:** To minimize heat gain, projects should employ high-performance glazing (i.e., dual paned window), coupled with awnings or exterior window shelves - particularly along the southeast, south, and southwest building faces.

**Standard 10d:** The placement of windows should balance light considerations with the need to provide adequate ventilation and allow for cross-ventilation. If single-sided ventilation is necessary, consider horizontal pivot windows, which offer the highest ventilation capacity.

### *11. Facades, Exterior Surface Materials & Color*

**Guideline 11:** *The texture of building facades should be complementary to other buildings in the surrounding area. Large expanses of the same building material detract from the building's aesthetics. The use of varied and complementary building materials reduces the mass of a building and creates visual interest.*

**Standard 11a:** The exterior facade of buildings shall consist of complementary building materials, including but not limited to masonry, brick or stone, consistent with the surrounding architectural character and styles. Textured stucco is prohibited.

**Standard 11b:** Buildings should not have monotonous exteriors, and should employ building materials that reduce massiveness and minimize glare impacts on surrounding uses.

**Standard 11c:** Projects should incorporate tile, terrazzo or other paving materials in building entryways and lobbies and allow the paving to spill out onto the sidewalk, when otherwise compatible with the architectural style of the proposed project.

## *12. Lighting*

**Guideline 12:** *Lighting should be incorporated into the design not only to accentuate architectural features, but also to provide a safe environment for pedestrian activity. All open areas, including parking lots, walkways, and trash areas, should have security lighting for safety.*

**Standard 12a:** New lighting fixtures should be compatible with the architectural design of the building.

**Standard 12b:** Storefront illumination from within is encouraged both during and after business hours to the extent possible.

**Standard 12c:** Provide lighting along all vehicular access ways and pedestrian walkways. Recessed lighting on the ground along vehicular access ways and pedestrian walkways is highly encouraged.

**Standard 12d:** All exterior lighting should be directed onto the lot, and all flood lighting should be designed or shielded to eliminate glare to adjoining properties.

**Standard 12e:** Down lighting that illuminates the storefronts and sidewalks for pedestrians is encouraged.

**Standard 12f:** Buildings should be highlighted through uplighting or accent lights placed on the façade where appropriate.

**Standard 12g:** Lighting architectural details with wash lights or other appropriate lighting fixtures is encouraged.

**Standard 12h:** intense lighting which is used solely for advertising purposes is strongly discouraged.

**Standard 12i:** Lighting that uses flashing, strobe, motion or multi-color elements is strongly discouraged. Lighting that promotes District identity is encouraged; lighting should offer a unique and visually stimulating experience, accentuate the surrounding architecture, and highlight special uses and activities.

**Standard 12j:** Relighting of basements and illumination and/or rehabilitation of glass block in sidewalks is encouraged.

## *13. Awnings and Canopies*

**Guideline 13:** *Where appropriate, use awnings or canopies to define the public realm of the sidewalk, provide shelter and shade, and enhance the building façade by adding variation, color, and horizontal rhythm. Awnings and canopies reinforce a pedestrian scale and add a comfortable sense of enclosure to outdoor seating and other active public uses.*

**Standard 13a:** Size and placement of awnings and canopies should enhance the building's overall frame, detailing, and rhythm. Placement should correspond to the location of a storefront or entrance.

**Standard 13b:** For awnings located above windows, awning shapes should be consistent with window frames.

**Standard 13c:** Awnings and canopies should be constructed of high quality, durable, fade- resistant, and fire-retardant materials. There are several types of awnings and canopies ranging from canvas to structural space frames.

**Standard 13d:** Plastic, vinyl and other similar materials should be not be used on storefront awnings, shiny, high-gloss materials are not permitted.

**Standard 13e:** Avoid single awnings or canopies for buildings. Storefronts should provide one awning or canopy for each structural bay if such bays exist.

**Standard 13f:** Awnings or canopies should not conceal architectural features and should be designed so as to be architecturally compatible with the structure on which they are to be attached.

**Standard 13g:** No items are permitted to hang from the awning.

**Standard 13h:** The valance on an awning should not be more than 16 inches tall

**Standard 13i:** Awnings should not be backlit.

**Standard 13i:** Standard awnings at street level may project up to 7 feet from the property line. At no point should the underside of the awning structure be less than 8 feet from the ground.

**Standard 13j:** Awnings above street level may project up to 3 feet beyond the property line.

**Standard 13k:** Awnings should not be backlit.

**Standard 13j l:** No trellis structures are permitted to be affixed above entryways and storefronts.

*Note: Projections into the public right-of-way, extending beyond private property, must obtain proper approval from the Department of Public Works Bureau of Engineering. A Revocable Permit may be necessary.*

## Appurtenances

### *14. Security Grilles*

**Guideline 14:** *Buildings should be designed with security features that effectively deter criminal activity while maintaining a positive image about the community. When used, security grilles should be screened from view during business hours and should be integrated into the design of the building.*

**Standard 14a:** Permanently affixed exterior security grilles or bars are prohibited.

**Standard 14b:** Security grilles should be retractable and should recess completely into pockets that completely conceal the grill when it is retracted. Such pockets should be integrated into the design of the building.

**Standard 14c:** Exterior accordion-style or roll-down security grilles that conceal storefront windows are prohibited.

### *15. Utilities, Mechanical Equipment, Trash Containers & Loading*

**Guideline 14:** *Utilities, storage areas, loading docks, mechanical equipment and other service areas should be screened from the adjacent public right-of-way. Equipment can be screened from public view through the use of building parapets, landscaping walls and other similar architectural treatments. Plywood and wood lattice screens should be avoided.*

**Standard 15a:** Locate all service areas and loading docks at the rear of structures or at the location that is most out of view to the general public.

**Standard 15b:** Screen all exterior rooftop and ground level mechanical equipment, including HVAC equipment, exhaust fans and satellite dishes from public view.

**Standard 15c:** No mechanical equipment shall be permitted in window or door openings facing public streets.

**Standard 15d:** Service areas, such as those used for storage or automobile repair facilities, should be enclosed within a building.

**Standard 15e:** Screen or locate solar panels away from the public right-of-way to the extent possible.

**Standard 15f:** Locate enclosed trash containers at the rear of the building where they are not visible to the public.

**Standard 15g:** Trash storage bins should be located within a gated, covered enclosure constructed of materials identical to the exterior wall of the building so as not to be viewed from the public right-of way. Landscaping may be used to screen such enclosures.

**Standard 15i:** Provide a separate enclosure for trash and recyclable materials.

### *16. Sidewalk Dining Enclosures*

**Guideline 16:** *Support an open and safe physical environment by designing enclosures for outdoor eating areas that do not detract from the quality of the pedestrian experience along the sidewalk.*

**Standard 16a:** Enclosures should consist of elements that have an open or transparent framework or lattice design. The materials and design should be decorative and coordinate with structures on the site.

**Standard 16b:** Swinging gates, cantilevered objects or any other obstructions that create an unsafe environment for the blind or physically disabled are prohibited, unless deemed safe by the Bureau of Engineering.

**Standard 16c:** Furnishings are limited to moveable chairs, tables, umbrellas, heaters and tarps. Plant material may be placed in moveable planting boxes.

**Standard 16d:** Moderately sized lighting fixtures may be permanently affixed to the front of the main building to light outdoor sidewalk dining areas.

**Standard 16e:** When installing sidewalk dining enclosures, the pedestrian path of travel on the sidewalk should not be less than 7 feet in width and should not include any border hardware such as parking meters, street lights, signs, news racks, posts, or other obstructions.

### *17. Wireless Telecommunication Facilities*

**Guideline 17***: Wireless telecommunication facilities should be designed so as to appear compatible with or complementary to surrounding architecture and structures*

**Standard 17a:** Where possible, wireless telecommunication facilities should be incorporated into existing buildings and other structures and should appear unobtrusive.

**Standard 17b**: Roof-top wireless facilities should be located so as to be least disruptive to the primary visible façade of the building and should be screened by materials that are simple and do not compete with or attempt to replicate the architectural features of the existing building.

## Parking and Parking Structure Design

**Guideline 1:** *Parking lots and structures should fit within the urban fabric; massing, scale and façade articulation should respond to the surroundings and provide a degree of three- dimensional interest. The overall design should promote pedestrian safety by minimizing conflict with vehicles. Parking should encourage a balance between a pedestrian-oriented Broadway and necessary car storage. Protect nearby residents from potential adverse impacts — noise, visual, or otherwise — of parking and parking structures (also see Landscaping section).*

**Standard 1a:** To the extent possible, parking for all new buildings should be located underground or to the rear of the lot.

**Standard 1b:** Rehabilitation of existing buildings should not result in new surface parking areas. Existing parking for all buildings that is already located underground or to the rear should be retained.

**Standard 1c:** Locate parking away from the streetwall and minimize direct driveway access from Broadway to improve streetwall continuity and encourage a safe and inviting pedestrian environment. Side streets and alleys should provide the primary point of vehicular access for service and parking facilities for retail, commercial and residential uses as determined by the Director of Planning, in consultation with LADOT.

**Standard 1d:** Surface parking lots should not be located between the front property line and building(s) on the site but should be located to the rear of all structures.

**Standard 1e:** Surface parking is generally discouraged. Any surface parking areas should include a dedicated pedestrian walkway that extends the length of the parking area and leads to the primary structure it serves or the nearest public sidewalk. Pedestrian walkways through surface parking lots should be accompanied by decorative landscaping.

**Standard 1f:** When there is on-site parking and vehicular access should not be taken from a side street or alleyway, one driveway may be permitted per every 200 feet of building frontage. Not more than two driveways shall be permitted per building, and at least 50 feet in distance should span between them.

**Standard 1g:** Parking structures should not overtly appear to be used for parking. Parking structures should be designed with architectural detailing. Above- grade parking levels should be visually integrated into the design of the building façade.

**Standard 1h:** Automobiles on parking levels above the ground floor shall be screened from public view as seen from a public street or alley.

**Standard 1i:** Parking structures should receive landscape treatment to eliminate unattractive views.

**Standard 1j:** Any fences, gates or doors securing any parking garage entry or driveway should be consistent with the streetwall.

**Standard 1k:** Where parking is provided within or to the rear of the building, pedestrian access or an arcade should be provided from the parking or the rear of the building to the building's front property. Pedestrian walkways should be separated from driveways and service access ways.

**Standard 1l:** Parking structures that abut or are adjacent to any residential use should:

i. Contain solid decorative walls and/or baffles to block light and deflect noise along those sides closest to residential use;
ii. Contain solid spandrel panels at a minimum of 3 feet 6 inches in height, installed at the ramps of the structure, to minimize headlight glare;
iii. Construct garage floors and ramps using textured surfaces to minimize tire squeal; and
iv. Not contain exhaust vents along sides closest to residential uses.

**Standard 1m:** The portion of the ground floor in new development not used as habitable floor space should be designed to accommodate commercial and theater loading and staging (i.e. the ability to accommodate semi-trucks and the provision of electrical outlets and high-speed internet access).

## Landscaping

Through the use of a variety of vegetation such as trees, shrubs, perennials and annuals, as well as other materials such as rocks, water, sculpture or paving materials, landscaping unifies streetscape and provides a positive visual experience. Landscaping also can emphasize sidewalk activity by providing shade, defining spaces, accentuating architecture, creating inviting spaces and screening unattractive areas.

**Standard 1a:** Landscaping should not obstruct the pedestrian right-of-way or create inappropriate visual or physical barriers for vehicles and pedestrians.

**Standard 1b:** Landscape plans should include a maintenance plan and be designed by a certified landscape architect.

**Standard 1c:** Blank walls or other unattractive areas of a site or building shall be screened with landscaping

**Standard 1d:** Landscaping should be designed in such a way that is sensitive to, and does not obscure or detract from, the character defining features of the building.

**Standard 1e:** When appropriate, drought-tolerant, California native plants are encouraged. An automatic irrigation system should be installed within landscaped areas of more than 10 square feet. A drip irrigation system is recommended.

**Standard 1f:** The use of less obtrusive landscaping and containers such as window boxes, hanging baskets, small urns, vessels or pots with plant material at entrances, as window and architectural accents, or to screen unattractive areas are encouraged. Plant materials shall be well maintained.

## Sustainability

### *1. Sustainability Standards*

**Guideline 1:** Rehabilitation of existing structures as well as new building construction present opportunities to integrate sustainable design concepts that reduce resource consumption and encourage natural systems for cooling, lighting and shading. New construction projects are highly encouraged to meet the Leadership in Energy and Environmental Design (LEED) Green Building Rating System certification requirements and otherwise comply with the City's Green Building Ordinance, while rehabilitation projects are also encouraged to incorporate as many LEED building standards as possible into their design.

**Standard 1a:** Incorporation of the Leadership in Energy and Environmental Design (LEED) green Building Rating system certification requirements in new construction is strongly encouraged; developments must comply with the City's green Building ordinance.

**Standard 1b:** Adaptive reuse of historic buildings is strongly encouraged as a means to achieve sustainability.

**Standard 1c:** Mixed use development in the transit-oriented Historic Core is strongly encouraged as means to achieve sustainability. Mixed use projects reduce automobile dependence by facilitating more walking trips to basic shopping and services.

**Standard 1d:** Restoration and rehabilitation of historic buildings is highly encouraged due to their site sensitivity, quality of construction, and use of passive heating and cooling-all of which promote energy efficiency. Incorporating sustainable principles during the rehabilitation and restoration of historic buildings, without compromising the building's historic character, is highly encouraged.

**Standard 1e:** The use of recycled and locally sourced materials is encouraged for restoration, rehabilitation, maintenance and new construction.

**Standard 1f:** Increased efficiency in construction methods, water, wastewater and storm water systems is encouraged. During restoration and rehabilitation, compatible building material alternatives are encouraged when possible-such as storm windows or double-paned windows-as a way to minimize noise and improve energy efficiency.

# Appendix B: Architectural Elements Dictionary

## Cast

Concrete with a fine aggregate or mortar which is cast into blocks or small slabs using special moulds so as to resemble natural building stone.

## Cornic

Horizontal projection at the top of a wall or under the overhang of a roof.

## Clerestory Window

A short window, or set of windows, any width, located high on a wall near the ceiling of a vaulted or very high-ceiling room.

## Door

The door is a panel or barrier, usually hinged or sliding, that is used to cover an opening in a wall or partition going into a building or space.

## Entablature

Element consisting of three parts; an **architrave** (plain horizontal beam resting on columns), a **frieze** (decorative panel or relief), which corresponded to the beams supporting the ceiling, and a **cornice** (a set of decorative moldings that overhangs the parts below).

## Fenestration

The placement of window openings in a building wall, one of the important elements in controlling the exterior appearance of a building.

## Entryway

An opening or hallway allowing entry into a structure.

## Framework

The arrangement of support beams that characterize a general shape and size, in this case for the purposes of fencing or enclosing a specific area.

# Appendix B: Architectural Elements dictionary

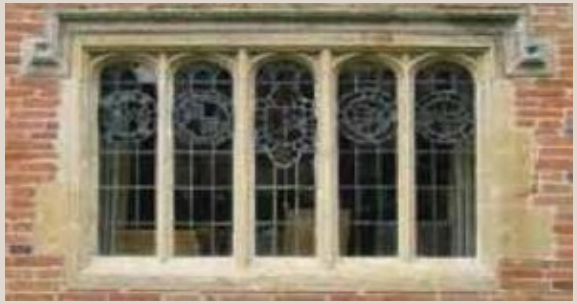
## Hood mold

An arched, external projection above a door or window used to divert rain.

## Muntin

A strip or bar that holds and separates panes of glass in a window, creating the appearance of a grid system.

## Mullion



A vertical post that divides adjacent windows.

## Parapet

Low, wall-like barriers that project above the edge of a platform, roof, or balcony.

## Pediment

A pediment is the triangular space over doors and windows of a building influenced by Greek architecture.

## Sidelights

Narrow window treatments that are vertically oriented on both sides of a doorway.

## Pilaster

A pilaster is a slightly projecting flattened column built into or applied to the face of a wall.

## Spandrel Panels

The space filling the vertical gap in multi-story buildings between the top of a window and the bottom of the story above.

# Appendix B: Architectural Elements dictionary

## Terra cotta

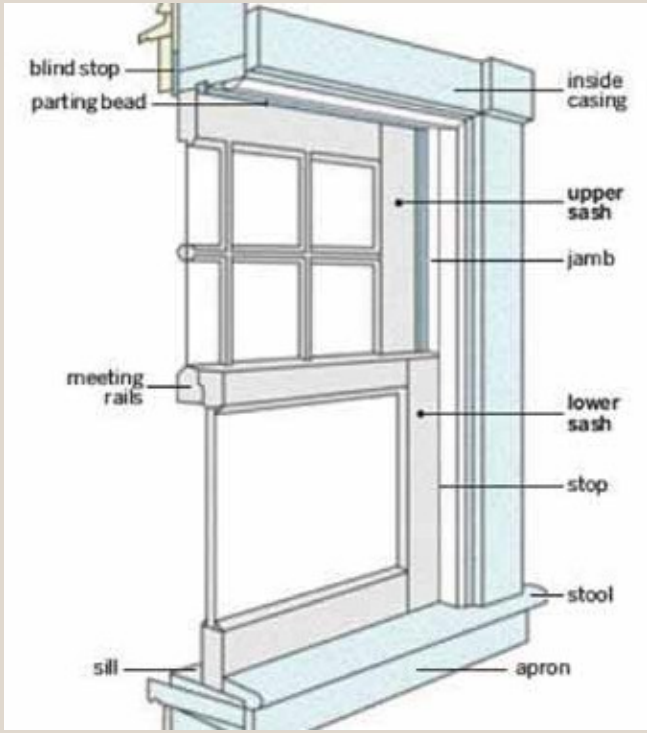
Cast and fired clay units, used as ornamentation.

## Transom

The window sash located above a door. Also called transom light.

## Window components

Various components of a window defined visually.



# Appendix O

Updated Little Tokyo CDO

# LITTLE TOKYO

## Community Design Overlay (CDO) DISTRICT

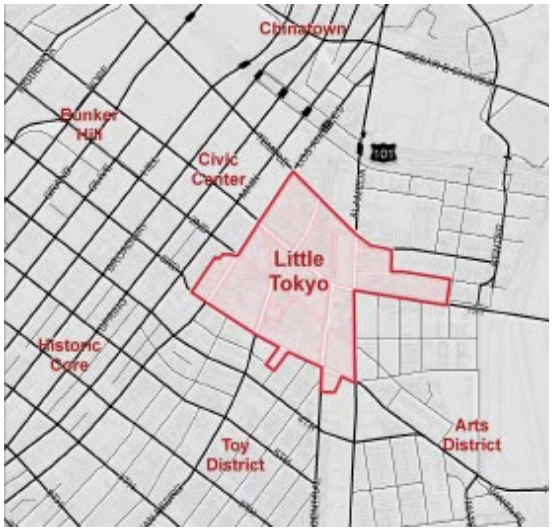
## リトル東京地区の都市デザイン

# Introduction

The Little Tokyo Community Design Overlay (CDO) creates thoughtful development guidelines that reflect the community's vision for the neighborhood. This document establishes design principles that will be used to guide future development within the CDO area.

Today, Little Tokyo remains an active commercial, residential, religious, cultural, and historical community center in Downtown Los Angeles. In addition to being the center for Japanese-American culture and community, Little Tokyo represents a unique intersection of art and history in a neighborhood connected through pedestrian-oriented streets that contribute to a distinctive identity and sense of place.

The neighborhood is part of the greater Downtown Los Angeles community, an interconnected and rapidly changing area of the city. At the heart of changes in recent years are significant mass transportation investments, redevelopment of older neighborhoods, and an influx of new residents. With the planned Regional Connector subway station coming to the neighborhood, extension of the Gold Line (L-Line), and a High-Speed Rail terminal planned at Union Station a few blocks away, Little



Tokyo could potentially face pressures for change in the near future.

In light of these trends, the unique character of Little Tokyo cannot be taken for granted. These significant public investments could create new development pressures for the neighborhood. However, if carefully guided, these investments represent an opportunity to preserve, enhance, and strengthen the community.

The intent of the Little Tokyo CDO is to provide guidance and direction for the design of new buildings and public spaces, to promote a pedestrian-friendly environment, enhance the physical appearance of the area, and preserve the historical and cultural identity of Little Tokyo. These guidelines are intended to help ensure that both public and private projects in the area respect the character of the neighborhood.

## LITTLE TOKYO SETTING

Little Tokyo is located in the heart of Downtown Los Angeles, just south of the city's birthplace at present-day El Pueblo De Los Angeles State Historic Park. The neighborhood is distinct among abutting areas, such as the Civic Center, Arts District, and the Historic Core; however, Little Tokyo is well connected to its neighbors by key pedestrian linkages.

### Community History

Around the turn of the 20th century, a small Issei (first-generation Japanese immigrant) community firmly established here around First and San Pedro Streets. By 1915, over 7,000 Japanese lived in the Los Angeles area, the mainland United States' largest Japanese settlement at the time. It was here that Japanese migrants and immigrants began contributing to Los Angeles' vibrant, multi-ethnic population by bringing their own unique customs and religions.

In the face of legislation such as the Immigration Act of 1924, which ended further immigration from Japan, Little Tokyo continued to develop into a thriving community. However, following the bombing of Pearl Harbor on December 7, 1941, and in response to growing anti - Japanese sentiment, president Franklin Delano Roosevelt signed executive order 9066 on February 19, 1942, resulting in the mass incarceration of 120,000 Japanese Americans from the west coast of the United States. Vibrant communities such as Little Tokyo became virtual ghost towns within a matter of months. Following the war, Japanese Americans, whether released from one of America's 10 concentration camps or returning as heroic veterans who fought for democracy in Europe and Asia, gradually returned to Little Tokyo to rebuild their community and restart their lives.

Following the internment of Japanese and Japanese Americans during World War II, the cultural and economic stature of Little Tokyo never fully recovered to its pre-war status. The importance of Japanese to the state agriculture and produce market was significant – so much so that Little Tokyo had stretched from Temple Street to Olympic Boulevard and Los Angeles street to the Los Angeles river. The loss of this economic center was detrimental to the Little Tokyo community.

In the mid-1950s, community leaders began discussing plans to revitalize Little Tokyo. By 1962, the Little Tokyo Redevelopment Association was formed as a non-profit organization by the Japanese Chamber of Commerce of Southern California with membership made up of both Issei and Nisei (American-born second generation). Los Angeles City Planners met with members of the community, as well as with businesses, property owners and non-profit organizations, in order to support the vision toward revitalization. These discussions led to the identification of a nine-block area designated for redevelopment. A plan was presented to the city, and in 1970, the City Council approved the proposal and created the Little Tokyo Redevelopment Area as a separate district for 30 years. In 2000, a 10-year extension was added. Several one-year extensions were added to the plan, increasing its life to February 2014.

Today, Little Tokyo is just one of the three remaining Japantowns in California (including San Francisco's Nihonmachi and San Jose's Japantown). The north side of First Street, from Central Avenue to Judge John Aiso Street, was declared the Little Tokyo Historic District by the Department Of The Interior.

## Cultural & Economic Characteristics

Today, Little Tokyo remains an active commercial, residential, religious, cultural, and historical community center in Downtown Los Angeles. In addition to being the center for Japanese American culture and community, Little Tokyo offers a unique intersection of art and history on pedestrian - oriented streets that contribute to Little Tokyo's distinctive identity and sense of place.

The neighborhood houses both the Japanese American National Museum and the Geffen Contemporary at MOCA, two prominent cultural institutions that attract visitors from around the region. In addition, the greater Little Tokyo neighborhood is home to a range of cultural and religious institutions: Japanese American Cultural & Community Center; Centenary United Methodist Church; Higashi Hongwanji Buddhist Temple; Jodoshu Buddhist Temple; Koyasan Buddhist Temple; Los Angeles Hompa Hongwanji Buddhist Temple; Maryknoll school and church; Union Church of Los Angeles; Zenshuji Soto Mission.

The Japanese Village Plaza (JVP) is part of the primary pedestrian thoroughfare, known as the 'spine', which connects the major community and cultural institutions in Little Tokyo. Beginning at the Go For Broke Monument, at the northern end of Central Avenue (JANM and MOCA), the thoroughfare cuts through the JVP, transitions into Frances Hashimoto Plaza and ends at the JACCC Plaza. The JACCC Plaza was designed by internationally renowned architect and designer Isamu Noguchi and is surrounded by the Japanese American Cultural and Community Center (and Japanese Garden) and Japan America Theater. When completed, MTA's Regional Connector Little Tokyo/Arts District station will become the nexus between the community and the region's light rail transportation system.

## LAND USE & BUILT FORM

Little Tokyo contains a range of significant Japanese religious and cultural institutions and consists of a mix of residential, commercial, industrial, and institutional uses. It has a varied development pattern that ranges from the pre- dominantly small scale historic buildings on the north side of East First Street, to larger scale development, such as the 13-story Little Tokyo Towers residential project on Third Street and low- to mid-rise industrial and warehouse buildings along the south side of Third Street.

The streets of Little Tokyo are pedestrian-oriented and lined with vibrant neighborhood serving uses, such as small scale retail shops, restaurants, and cafes. The neighborhood also boasts two prominent pedestrian paseos: Astronaut Ellison S. Onizuka street and the Japanese Village Plaza. The pedestrian friendly neighborhood is served by a light rail Gold Line (L-Line) station along the eastern edge of the CDO area, which will become the site of the Regional Connector station.

## PLANNING PROCESS

During 2009 and 2010, a working group of Little Tokyo stakeholders helped develop these guidelines as a way for the Department of City Planning to continue design review activities that had been overseen previously by the community redevelopment agency (CRA/LA) under the authority of the Little Tokyo Redevelopment Plan. Using the former CRA/LA Design Guidelines as the basis for this effort, the group developed this document with the goal of continuing to support the development of Little Tokyo as an active, pedestrian - oriented district with an emphasis on preserving its unique cultural identity. Through subsequent community meetings, the guidelines were reviewed and refined with input from the broader Little Tokyo community before being adopted by the City Planning Commission in 2013. During 2019 and 2020, as part of its process to update the Downtown Community Plan, revisions to the guidelines were set forth with the intention of ensuring compatibility between the guidelines and the new zoning tools proposed as part of the Community Plan.

### Community Design Overlay Boundary

The Little Tokyo Community Design Overlay (CDO) area is generally bounded by Temple Street to the north, Alameda Street to the east, 3rd Street to the south, and Los Angeles Street to the west (see map for detailed boundaries).

## COMMUNITY DESIGN OVERLAY GOALS

The goal of the Little Tokyo CDO is to ensure that development reflects the overall vision of a cohesive, pedestrian-friendly, and vibrant mixed-use district. The CDO guidelines can ensure that new developments and storefronts invite the pedestrian, promote safe and active streets and contribute attractive public open spaces.

The goal of this CDO can be achieved through quality design and architectural detailing; adequate ground-floor transparency; appropriate signage; increased landscape detailing (as appropriate) and the protection of historic structures.

The design and development guidelines presented are flexible in application, providing direction for design treatment without mandating one particular architectural style or form. The implementation of these guidelines ensures that each project contributes to a more functional, walkable, and appealing district. In this way, improvements to individual properties can, over time, enhance the function of Little Tokyo as a vital Downtown Los Angeles neighborhood that maintains a unique cultural identity to be shared with future generations.

The Little Tokyo CDO design and development guidelines are intended to promote and enhance the identity of the district. Specifically, the goals of the CDO are:

### *Respect for the unique cultural and historical heritage of the Little Tokyo neighborhood by:*

- Preserving and promoting Little Tokyo's history and cultural identity and character;
- Encouraging appropriate rehabilitation of structures within the National Register Historic District, in accordance with the Secretary of the Interior's Standards for Rehabilitation, while retaining and promoting the cultural history of Little Tokyo;
- Preserving religious institutions by better connecting them to the community through compatible development and improved pedestrian linkages.
- Promoting and sustaining a thriving and active community;
- Encouraging amenities and promoting publicly accessible spaces in new development that caters to a range of age groups including youth, families, and seniors;
- Attracting people of various cultures and generations;
- Promoting land uses in Little Tokyo that will address the needs of visitors and local residents;
- Creating an urban form that fosters social relationships and a sense of community;
- Creating places for people to socialize and recreate;
- Encouraging development that contributes to the safety and comfort of Little Tokyo residents and visitors.

### *A thriving and sustainable local economy that balances residents and visitors by:*

- Encouraging mixed-income and mixed-use developments;
- Balancing regional attractions with neighborhood-serving uses and amenities;
- Fostering a 24-hour Little Tokyo, allowing for nighttime activities and safe and active public streets;
- Allowing for a variety of land uses, including residential, retail, commercial, religious, cultural, recreational, and entertainment uses;
- Encouraging the addition of more local businesses, especially that promote community culture, history, and a sustainable community economy;
- Encouraging business activity by promoting accessibility and improving circulation within the district.

### *A walkable and connected neighborhood by:*

- Providing a pedestrian-friendly environment with amenities that foster active streets and encourage social interaction;
- Preserving and enhancing the pedestrian "spine" of Little Tokyo (see map on pg 15);
- Fostering better connections with the Arts District, Historic Core, Civic Center, El Pueblo, and other neighboring communities;
- Ensuring that any potential infill projects contribute to the urban form of Little Tokyo, in particular, by reinforcing the pedestrian realm.

## DESIGN PRINCIPLES

The Little Tokyo CDO is based upon the following design principles: activity, community, identity, context, compatibility, interest, and quality.

**1. Activity.** Good building and site design is integral to a thriving and animated pedestrian-oriented, mixed-use district. By facilitating an active street interface in new and existing buildings, design guidelines play an essential role in encouraging pedestrian activity, invigorating commercial uses and creating a safe and pleasant environment. Inviting storefronts, paseos, arcades, plazas, sidewalk dining, and attractive pedestrian-oriented signage promote sidewalk activity.

**2. Community.** New developments should provide places for people to gather and interact and should be inclusive and cater to a variety of age groups and interests.

**3. Identity.** Design guidelines provide an opportunity to express the cultural identity of Little Tokyo in its architecture and landscaping and to preserve the community's unique history in its built environment. Maintaining this identity is essential to its unique image appeal to visitors and residents alike. Urban design elements can reflect Japanese tradition and cultural sensitivity and can be incorporated into landscaping, signage, public art and architecture.

**4. Context.** Design guidelines provide regulatory flexibility to allow project applicants to take cues from the environment, historical precedent and physical site data of the surrounding district. Successful district projects help positively rein- force the identity of Little Tokyo by considering its context. Projects should contribute to the aesthetic and physical character of Little Tokyo. Infill developments fit into the existing context by continuing the prevailing streetwall and paying particular attention to massing and setbacks, façade articulation and site planning. Guidelines, along with discretionary review, will ensure compatibility with the designated National Register Historic District while permitting creativity for new infill development.

**5. Compatibility.** Projects should promote compatibility with its surroundings, both with respect to design and use. Additionally, when feasible and consistent with preservation goals, projects should incorporate design features that improve compatibility amongst a wide range of uses and improve transitions between uses.

**6. Interest.** Architectural and landscape detailing that can be attractive to pedestrians can help improve the appeal and identity of Little Tokyo. This detailing includes storefront ornamentation, reduction of blank walls, and the appropriate variation of scale, color and texture. Guidelines based upon this principle address wall surfaces, awnings, signage, architectural treatments, setbacks and ground floor transparency.

1. **Quality.** As new development occurs within the district, it must positively contribute to the overall visual, historic, and cultural identity of Little Tokyo. Little Tokyo's visual appearance can be enhanced by the use of quality building materials, attention to design details, and increased landscaping and maintenance.

Wherever the provisions of this CDO may be in conflict with any provision applied through the Los Angeles Municipal Code (LAMC), the LAMC shall prevail.

## RELATIONSHIP TO OTHER PLANS

The Little Tokyo CDO will implement the General Plan Framework and the Downtown Community Plan by helping to achieve the goals and objectives of the district, consistent with the General Plan. The Little Tokyo CDO is consistent with the historic Downtown Los Angeles Design Guidelines (2002), and the Downtown street standards (2009).

## GENERAL PLAN FRAMEWORK & DOWNTOWN COMMUNITY PLAN

The City of Los Angeles General Plan Framework identifies focal points in each community that function as centers of activity and where new growth and development is expected to occur. The Little Tokyo CDO is designated as part of the "Downtown Center" as part of the General Plan Framework. The Downtown Center is considered an international center for finance and trade that serves the five-county metropolitan region and encourages considerable density and floor area ratios up to 13:1 (high-rise residential towers, financial institutions and corporate headquarters). It is also the primary economic, governmental and social center of Los Angeles. The intensities permitted in Little Tokyo are generally lower than that of other parts of Downtown.

Downtown Los Angeles is also the largest government center in the region; the Downtown Center is also the location of the region's major cultural and entertainment facilities and its principal transportation hub. As the primary center of urban activity for the Los Angeles region, the Downtown Center's development should reflect a high design standard and host a variety of uses. Additionally, Downtown's visitors and growing residential population should benefit from street activation and enhanced public safety as a result of future Downtown development.

The Downtown Community Plan promotes the revitalization of Downtown districts and encourages projects that contribute to an active, 24-hour Downtown. The goal of the Downtown Community Plan is to expand and reinforce the distinct districts of Downtown and to eventually link pockets of activity via vibrant, pedestrian friendly streets. It also further refines the land use designations as part of the larger "Downtown Center".

# Administrative Procedures

## PROJECT THRESHOLDS

General regulations pertaining to the function and administration of the Little Tokyo Design Guide will be consistent with those of the Community Design Overlay zones as outlined in LAMC Chapter 1A Section 8.2.5. A project within the CDO boundary is defined in LAMC Chapter 1A Section 8.2.5.B.1.

## GENERAL PROCEDURES

The All applicants proposing a project within the boundaries of the Little Tokyo Design Guide will file an application with the Department of City Planning at one of its public counters, in accordance with Section 8.2.5.D and consistent with any administrative procedures established by the Department. Applicants will find more details on the project review process below. The Department of City Planning will coordinate CDO applications with the following City entities as a part of the project compliance review process.

## COORDINATION WITH THE DEPARTMENT OF CITY PLANNING OFFICE OF HISTORIC RESOURCES (OHR)

All designated Historic Cultural Monuments (HCMs) and properties listed in or determined eligible for the National Register of Historic Places will be reviewed by the Office of Historic Resources for compliance with the Secretary of Interior's standards.

## APPLICATION PROCESS

### Project Applications

Prior to the issuance of a building permit, projects will be reviewed by the Director of Planning for compliance with the CDO, per the procedures established in Section 8.2.5.D of the LAMC regarding Design Overlay Plan approvals. All Little Tokyo Design Guide projects require the submittal of an application, referred to as a "Director's Determination" which includes plans and materials as defined in LAMC Chapter 1A Section 8.2.5.D2 of the Los Angeles Municipal Code. The Director of Planning may require additional documents or materials as deemed necessary.

For projects involving historic resources, staff may require that a historic assessment or some other appropriate evaluation, as determined by staff, be conducted by an approved historic consultant. A historic assessment will be required when necessary to assist staff in evaluating a project's impacts on historic resources. Such an assessment may also be necessary for staff to make a determination about the feasibility of repairs. The Design Guide guidelines encourage repair over replacement whenever feasible, a determination that will be made by staff, with the assistance of any necessary historic assessment.

### Procedures For Permit Clearances

A. Procedures for Minor Project Approvals

Notwithstanding Los Angeles Municipal Code 8.2.5.D, a building permit may be issued for the following minor projects, provided that the Director of Planning issues an Administrative Clearance certifying that the project fully complies with the CDO:

1. Modifications to a building façade that do not reduce storefront transparency and that do not involve a change in the type of materials used on the façade;

2. The installation of awnings or other non-permanent decorative features.

B. The installation of mechanical equipment visible from the public right of way (mechanical equipment that is not visible from the public right of way is not subject to the District's Design Guidelines).

C. Procedures for Sign Approvals

Notwithstanding LAMC Chapter 1A Section 8.2.5.D sign approvals are subject to the following procedures:

1. The District's Design Guidelines governing signs are advisory only. They are not standards by which sign applications will be evaluated.

2. For individual signs that total less than 50 square feet in area, the Department of Building and Safety may issue a building permit for the sign if the Director issues an administrative clearance, and if the Department of Building and Safety determines that the sign complies with LAMC Chapter 1A Section 14.4 and all applicable Building Code provisions. The Director shall issue an administrative clearance if the total signage on the lot will not exceed 1.5 square feet for each foot of street frontage, and if the sign does not fall within any of the prohibited sign types listed below. In no case shall the Director consider the content or message of any proposed sign.

3. For individual signs that exceed 50 square feet in area, the Department of Building and Safety may only issue a building permit if the Director issues an approval under LAMC Chapter 1A Section 14.4, and if the Department of Building and Safety determines that the sign complies with Section 14.4 of the Municipal Code, the Director shall make the following findings in writing:

a. The sign does not fall within any of the prohibited sign types listed below;
b. The total signage on the lot will not exceed 1.5 square feet for each foot of street frontage;
c. and the sign is compatible with the surrounding environment, as articulated below.

*Compatibility shall be determined by the relationships of the elements of form, proportion, scale, color, materials, surface treatment, overall sign size and the size and style of lettering. The surrounding environment shall be comprised of other nearby signs, other elements of street and site furniture, and adjacent and surrounding properties, including residential areas. The Director's written findings must explain why the proposed sign is or is not compatible with the surrounding environment. The Director may also conditionally approve a sign, including conditions that would render the proposed sign compatible with the surrounding environment. In no case shall the Director consider the content or message of any proposed sign.*

### C. Procedures for All Other Project Approvals

The provisions of the Los Angeles Municipal Code Section 8.2.5.D shall apply to all other project approvals.

## DEFINITIONS

The following words and phrases, whenever used in this document, shall be construed as defined in this Section. Words and phrases not defined herein shall be construed as defined in LAMC Chapter 1A Article 14.

**Arcade:** An arched or covered passageway, usually with shops on each side.

**Articulation:** Clear and distinct separation between design elements or sections of a building façade, including variation in detail, color and materials and modulation of wall planes.

**Awnings and Canopies:** Awnings are usually made of cloth and are framed by wood or metal. Canopies are permanently affixed to buildings, are flat and constructed of solid materials.

**Baffle:** An artificial obstruction for deflecting the flow of sound or light.

**Bulkhead (or base):** Base of the storefront between the sidewalk and the window.

**Can Sign:** Alternately referred to as Canister or Cabinet Sign. A rectangular, internally illuminated sign, on which plastic sign copy is affixed.

**Forecourt:** A courtyard before the entrance to a building or group of buildings.

**Historic Assessment:** A supplemental report prepared by a qualified architectural historian, that may be required by the Director of Planning to determine the effects of a proposed project on a historic resource. Staff will determine the level of evaluation that will be required. Applicants will be required to engage a qualified historic consultant to prepare any such required evaluations.

**Mixed Use Project:** A development comprised of one or more building uses, such as retail space and residential space.

**Overdoor:** An ornamented carving, painting, or Section of decorated woodwork over a doorway.

**Paseo or Pedestrian Walkway:** Walkway that is typically open to the sky and that provides pedestrian passage between structures, or through landscaping, or parking lots, which is distinguished by ground surface treatments that provide for pedestrian safety and ease of movement.

**Pedestrian Orientation:** Neighborhood design that incorporates design features and elements that are human scaled and can be used and enjoyed by pedestrians. An urban development pattern where buildings and landscaping are proportioned and located so that walking is safe, comfortable and inviting.

**Plant-ons (or architectural implantations):** Molding overlays that are attached to a building's exterior. Plant-ons typically project from the exterior wall and serve to accent a building feature. They are typically used to frame windows in order to create the appearance of recessed windows.

**Premise:** A building or portion thereof used as a location for a single business.

**Preservation:** Repair or renovation to a historic building that is sensitive to those features and characteristics that contribute to its historic significance.

**Prevailing Setback:** (Also see property line): the most commonly reoccurring line between the property line and the façade of the building on the same block or street frontage. In Little Tokyo, the prevailing setback in many cases coincides with the property line or is offset from the property line between 6 and 12 inches for purposes of this plan, the main structural elements of a building must be located on the prevailing setback line to maintain the streetwall, while storefronts and building entryways may be recessed.

**Project:** The erection, construction, addition to, or exterior alterations to any building or structure within the boundary area of the Little Tokyo Design Guide including signs, canopies/awnings, façade alterations, the addition of roof equipment, and significant landscaping. A project does not include the following: (a) construction that consists solely of interior remodeling or interior rehabilitation or repair work and (b) alterations of, including structural repairs, or additions to any existing building or structure façade that does not front a public street, and in which the aggregate value of the work, in any one 24-month period, is less than 50 percent of the building or structure's replacement value before the alterations or additions, as deter- mined by the department of building and safety. (The exemption does not apply if the alterations or additions are to any exterior wall fronting a public street. Property line (or lot line): the line separating the lot from the street.

**Rehabilitation:** Rehabilitation generally refers to a method of treatment of historic structures that focuses on preserving existing historic fabric; repairing rather than replacing deteriorated components; replacing individual components rather than entire features and incorporating new features rather than historic recreations when adequate documentation is not available. Replacement of missing and/or deteriorated (too deteriorated to repair) elements generally requires use of in-kind materials. When in-kind materials are technically or economically infeasible, compatible substitute materials that convey the same form, design and overall visual appearance as the original may be considered.

**Restoration:** Restoration generally refers to a method of treatment of historic structures that focuses on the retention of materials from the most significant time in a property's history, while per- mitting the removal of materials from other periods.

**Reconstruction:** Reconstruction generally refers to a method of treatment of historic structures that establishes limited opportunities to re-create a non-surviving site, landscape, building, structure, or object in all new materials.

**Sail Sign/Wind Banner:** A freestanding or mounted sign that is supported by a flexible or semi-flexible or partial frame within which material constructed of vinyl, paper, or other wind- resistant and move- able materials.

**Setback:** The distance between the property line and the façade of the building.

**Sidewalk Grade:** The level of the sidewalk abutting the façade of a building fronting a public right-of-way.

**Streetwall (or street edge):** The vertical face of one or more buildings adjacent and parallel to the sidewalk. The cumulative façade effect created on a pedestrian oriented corridor when structures are built to the front lot-line and built to the edge of each side lot-line or the prevailing setback.

**Storefront Bay:** That area enclosed by the storefront cornice above, piers on the side, and the sidewalk at the bottom. Sometimes storefronts are placed entirely within one storefront bay, usually in older structures. Recessed storefront bays add visual interest to the streetwall, frame display windows, and create an inviting shopping environment.

**Structural Bay:** Any division of a wall marked off by vertical supports.

**Tower:** A building or portion thereof that exceeds 150 feet in height.

# Design Guidelines & Standards

## SITE PLANNING

Site Planning involves the proper placement and orientation of structures, open spaces, parking, pedestrian and vehicular circulation on a given site. Factors such as the size and massing of buildings, the orientation of storefronts, clearly identifiable and enhanced entries and circulation greatly influence the quality of the pedestrian experience.

The purpose of good site design is to create a functional and attractive development, to minimize adverse impacts, and to ensure that a project will be an asset to the community. Buildings should be sited in a manner that is compatible with the orientation of existing buildings with an emphasis on promoting pedestrian activity along Little Tokyo sidewalks and facilitating pedestrian access to and from the sidewalk to adjacent properties.

The site planning of new buildings and the rehabilitation of existing buildings in the Little Tokyo CDO should encourage:

- Good design (with complementary landscaping) that create vibrant commercial areas fostering a pleasant and desirable character, pedestrian activity, and economic vitality;
- Continuity of the historic and cultural context of buildings in relationship to the existing pattern and scale of streets, sidewalks, meetings areas, and parking;
- Harmony between new and existing buildings, and sensitivity to the scale, form, height, and proportion of surrounding development;
- Compatible building orientation to streets, which promotes pedestrian activity along the sidewalks of Little Tokyo, and facilitates pedestrian access to and from the sidewalk to adjacent properties;
- Easy sidewalk access for pedestrians by locating vehicle access and loading areas where there will be minimal physical or visual impact on pedestrians, the flow of traffic, and/or adjacent uses;
- The incorporation of Japanese architectural and design motifs, where appropriate, into the physical design of a project expresses and reinforces the unique cultural character of Little Tokyo. Projects should consider incorporating concepts of Japanese aesthetics, including grace, subtlety, simplicity, and tranquility, into contemporary building design. This can be reflected through the design of open space, massing, articulation, facades, exterior surface materials, signage, and/or landscaping, drawing from the rich tradition of Japanese aesthetics. Pictorial recreations and ornamental architectural elements should not be included as part of projects.

### *1. Building Orientation and Frontage*

**Guideline 1**: Position buildings to promote pedestrian activity along the public right of way by placing business entrances on the street. Blank walls and driveways are physical intrusions on a pedestrian-oriented street and should be avoided. Developments should not face inward but rather should be oriented towards the street or public walkway to maintain and enhance the pedestrian-oriented character of the district.

**Guideline 1a**: Buildings should be built to the front lot line or required sidewalk easement.

Corner buildings should be built to both the front and side lot lines. Building setbacks may be permitted, consistent with zoning provisions, when the setback area is used for public open space such as patios, Plazas, courtyards, outdoor dining, seating, kiosks, and/or landscaping.

**Guideline 1b**: All buildings should have a primary ground floor entrance that serves the building as a whole. In addition, there should be at least one entryway serving each business fronting a public street or pedestrian facility. Corner buildings atmajorintersections.

**Guideline 1c**: All primary entrances to a building should be oriented to the abutting street(s). When a project abuts a primary or retail street and/or identified pedestrian facilities, primary entrances should be oriented to these streets, alleys and pedestrian facilities. Where a development fronts one of these streets or alleys on more than one side, entrances will be provided on each side or at the corner in a manner that is visible from both streets.

**Guideline 1d**: For portions of projects where the ground floor contains residential units, individual entrances to the ground floor units are encouraged. For such projects, each entrance should be set back three to five feet from the sidewalk, or as allowed by zoning provisions to allow room for transitional landscaping. Walk-up-style units are also encouraged.

**Guideline 1e**: Project design should provide for a variety of shops and extended day activities at ground level street frontages.

**Guideline 1f**: Design for ground-level uses on secondary streets that are neighborhood-oriented and appeal to local residents.

**75% Retail Streets:**

- First Street, from Los Angeles Street to Alameda Street
- Second Street, from Los Angeles Street to Alameda Street
- Third Street, from Los Angeles Street to Alameda Street
- Central Avenue, from 1st Street to Towne Avenue
- Little Tokyo Pedestrian Spine, including Japanese Village Plaza Mall and Azusa Street Onizuka Street

**Guideline 1g**: For industrial buildings, locate all "front of house" operations, i.e. Offices, at the front of the building, closest to the pedestrian walkway.

**Guideline 1h**: Reflect the unique identity of Little Tokyo in building design at identified gateways (see attached map), with an emphasis on establishing a sense of place and marking an entrance to the district with the use of symbols of Japanese culture (E.G., Stone lanterns, banners, etc.) And appropriate materials (E.G., Cloth, stone, wood, etc.). Building design and orientation should prominently identify points of entry into the ethnic neighborhood.

**Guideline 1i**: Consider incorporating Japanese design aesthetics into the arrangement of buildings and spaces to help reinforce the cultural character of the Little Tokyo community. Japanese architecture is characterized by its sensitive appreciation of and harmony with nature. Buildings should be arranged so that interior space is integrated with and interacts with outdoor spaces as much as possible. The traditional Japanese veranda, engawa, reflects this aesthetic by serving to link the inside and outside of a structure as one continuous environment.

## 2. *Open Space*

The linkage between vibrant open space and accessible pedestrian circulation is key. A central path system or "spine" through a community connects important destinations within the community, contributing to its cohesiveness. A central pathway also allows for easy access and circulation. Little Tokyo's central path system near Temple on the north with the Go For Broke Monument and travels southeast past the Japanese American National Museum (JANM), then southwest through the Japanese Village Plaza (JVP) then to the Japanese American Cultural and Community Center (JACCC) Plaza, and then proceeding west along Azusa Street through the Block 8 mixed-use project, leading to the Little Tokyo Library, and the anticipated Little Tokyo Recreation Center on Los Angeles street. (See map.)

Key elements, or branches, along the "spine" include the Museum Of Contemporary Art, East West Players' David Henry Hwang Theater, Weller Court, Little Tokyo Branch Library, New Otani Hotel, Japan America/Aratani Theater, Little Tokyo Towers, Casa Heiwa, Honda Plaza, Little Tokyo Mall (formerly Mitsuwa Plaza).

An easy to follow pedestrian path system would connect the major destinations in Little Tokyo, including those that overlap the Arts District. In addition, the path system would lead to open spaces and gateways, such as the proposed Art Park being planned for the north side of East 1st street. The path system could also incorporate public art and/or other symbols of Japanese culture and heritage.

**Guideline 2**: Encourage open space as part of a project site design to invite and encourage pedestrian activity. Create inviting spaces, provide shade, screen unattractive areas and enhance architectural detailing through the thoughtful and careful placement of landscaping. Paseos, arcades, forecourts and plazas should accommodate and promote pedestrian traffic and offer opportunities for amenities such as outdoor dining, sitting areas and landscaping.

**Guideline 2a**: Residential, commercial, and mixed-use projects are encouraged to provide public open space in the form of a plaza, paseo, outdoor dining area, or another similar space. Midblock pedestrian pathways or paseos should be encouraged through large sites, in conformance with the Downtown Design Guide. Forecourts, plazas and outdoor areas should include seating, dining areas, landscaping and/or shade elements. Shade-trees, sculptures and/or water features are also encouraged.

**Guideline 2b**: Buildings should have entrances that are oriented to its public open spaces and ground floor uses should activate those spaces.

Public open spaces should be designed to enhance visual connections with surrounding buildings, in order to promote safety and comfort.

**Guideline 2c**: Public open spaces should plan for and incorporate symbols of Little Tokyo's ethnic and cultural community, where appropriate. Existing public art and special features should be preserved and new public art and special community-oriented features should be incorporated into the design of new projects.

**Guideline 2d**: Projects are encouraged to use enriched paving and other distinctive materials to create user-friendly open spaces. The spaces should be easily maintainable and kept clean.

**Guideline 2e**: Consider incorporating different elements of nature, including water, natural features, etc. in garden and open space areas.

**Guideline 2f**: Projects should identify and prioritize opportunities for creating special places that capture significant history, memorialize special features, individuals, or characteristics of the neighborhood and which propose design solutions for specific sites.

**Guideline 2g**: Design open space elements to mark important places and create a sense of direction, movement, and arrival.

**Guideline 2h**: Public and private plazas are encouraged. Exterior building walls may define open spaces, but open spaces may not be surrounded by blank walls nor be separated from (either above or below) the sidewalk grade.

**Guideline 2i**: Projects abutting identified pedestrian facilities should contribute to, maintain, and enhance such facilities by lining them with retail, providing entryways for storefronts abutting such facilities and orienting any open space to such facilities.

**Guideline 2j**: Support improvements in public spaces that enable use of wireless communication technology (such as computer laptops and personal digital assistants).

**Guideline 2k**: Improve edges of public open spaces by providing active uses on the ground floor of buildings.

**Guideline 2l:** Existing public art and special features should be preserved and new public art and special community-oriented features should be incorporated into the design of new projects, in public gathering areas and other key locations.

**Guideline 2m**: Design elements in open spaces should aim to capture significant history and memorialize special features, individuals or characteristics of the neighborhood. Promote the installation of kiosks with maps of the area with notable elements identified and described.

## *3. Parking and Vehicular Access*

**Guideline 3**: Projects should accommodate vehicular access and parking in a way that is compatible with the context of the Little Tokyo district and maintains the integrity of street walls and street uses. Parking lots and structures should fit within the urban fabric; the massing, scale and façade articulation of parking structures should respond to the surroundings and provide a degree of three-dimensional interest. Parking design should minimize conflicts between pedestrians and vehicles, reduce the visibility of parked cars, and contribute to pedestrian-friendly street frontages.

**Guideline 3a**: On-site parking should be oriented away from adjacent street frontages and lined with habitable space to the extent feasible. To the extent possible, parking for all new buildings should be located underground or located to the rear of the lot in a structure.

**Guideline 3b**: Surface parking areas that adjoin a street should be screened by a durable barrier, such as a solid wall, fence, berm, hedge or landscaping that is tall enough to screen at least vehicle headlights.

**Guideline 3c**: For industrial buildings, locate both parking and loading facilities behind buildings and when possible, provide access through an alley or secondary street.

**Guideline 3d**: Parking structures should be designed with architectural detailing and fenestration. Where associated with a larger project, parking levels or structures shall be visually integrated with other project components, in terms of material, color and other design elements. Structures should not overtly appear to be used for parking.

### *4. Pedestrian Orientation*

**Guideline 4:** Develop interesting elements at street level that respect the pedestrian scale and that help to make walking a pleasant experience. Landscaping, wall treatments, and lighting are elements that should be incorporated into the design.

**Guideline 4a:** Enhance blank walls with artwork, such as relief works, murals, cascading landscape plantings and wall sculptures.

**Guideline 4b:** Wherever possible, parking should be easily identified with prominent, uniform signage designed to fit into its architectural context and support a pedestrian-friendly environment.

**Guideline 4c:** Locate loading areas at the rear of structures for minimum visibility from the primary or Retail Streets or identified pedestrain facilities where there will be minimal negative impact on pedestrians, the flow of traffic, and uses adjacent to and across the street from the loading area.

**Guideline 4d:** Passenger loading zones located on the street should not impede foot traffic or sidewalks and should complement the pedestrian experience.

**Guideline 4e:** Parking lots and structures should be designed to provide safe pedestrian circulation between parked vehicles and the primary building through the use of clearly marked pedestrian walkways, stop signs, speed bumps, lighting, or other similar measures.

### *5. Corporate Identity Architecture*

**Guideline 5**: Buildings in the district should contribute to the architectural integrity of the surrounding area. Buildings prototypes used for franchise restaurants, retail space or other formula commercial uses that traditionally have a pre-determined corporate architectural identity may not be compatible with these guidelines. In such cases, buildings should be carefully designed so as to be consistent with this CDO.

**Guideline 5a**: All projects, including those related to franchise or corporate establishments, should be designed to comply fully with the design and development guidelines.

## BUILDING ARTICULATION AND DETAILS

Development in Little Tokyo is often characterized as a "bowl," with low - to medium - scale buildings at the core and surrounded at the edge by taller buildings. The neighborhood is further characterized by its pedestrian-oriented character. Travel through Little Tokyo is facilitated by a complete network of pedestrian pathways that link to the surrounding neighborhoods. The design and orientation of buildings along the pedestrian circulation network further contribute to a pedestrian-friendly environment. There is a largely consistent streetwall of transparent store-fronts and detailed building facades that create a pleasant experience for pedestrians. Large windows along many of the restaurants and retail establishments and visible activity on both sides of the glass puts "eyes on the street" and helps create perceptions of pedestrian safety. Finally, a system of signage for pedestrians helps with movement and orientation.

When a building's ground-level space is walled off, boarded-up, or screened with security grilles, the quality of the pedestrian environment suffers. Blank walls at the ground floor reflect a missed opportunity to reinforce the character of the district, and the pedestrian experiences a sense of separation from the activity within the building. Additionally, conditions that visually block pedestrians' views from the interiors of ground floors communicate a lack of safety.

Japanese architecture is characterized by its sense of order and control, as well as simplicity of form and proportion. A strong sense of proportion leads to structural harmony. Colors, textures, and materials should be as natural and harmonious as possible.

### 6. *Building Scale and Massing*

**Guideline 6:** Variations in massing can enhance the character and visual quality of a building, thereby establishing a comfortable scale. Building massing should be modulated and articulated to break up the scale of development, create a pedestrian friendly environment, and stimulate and enhance visual interest. Industrial buildings should be compatible with and complementary to the surrounding residential and commercial buildings by respecting the prevailing architectural scale and character.

**Guideline 6a**: The commercial heart of the district, generally bounded by Central Avenue, Third Street, San Pedro Street, and the Historic District along the north side of First Street, has an overall lower scale than much of the remaining area. New buildings within these boundaries should help to complement this development pattern in their scale and massing.

**Guideline 6b:** The remainder of the district provides an opportunity for sensitively designed mid-rise (four to six stories or under 75 feet) and high-rise (over 75 feet) buildings that are integrated into the urban context. Avoid perimeter block massing and vary massing and elements within the site. New mid- and high-rise buildings should be strategically located to mark important nodes and intersections within Little Tokyo. Projects should be designed with appropriate stepbacks and height transitions when abutting or across the street, alley or pedestrian facility from the lower scale portion of the district.

**Guideline 6c:** Mixed-use projects that combine multi-family residential uses and small-scale neighborhood commercial uses with small offices or studios are encouraged, particularly along the south side of 3rd Street.

**Guideline 6d**: The commercial portion of mixed-use development should relate to the scale, form, height and proportion of the residential portion. Ground floor uses should be distinguished from the upper façade with inviting and transparent storefronts and sensitively scaled proportions. Commercial ground floor frontage should be distinguishable from the residential facades and should provide a strong building base. Commercial uses should have greater window-to-wall ratios than a residential component.

## *7. Building Articulation*

**Guideline 7**: Heighten visual interest and enhance pedestrian orientation by incorporating three-dimensional elements and material variation into the façade of buildings. These elements and variations include: Architectural features; changes in building materials, texture and color; generously sized transparent display windows; arcades, canopies, and awnings; cornices; and other details such as transom windows and overdoors. New developments should be governed by a formal architectural concept that integrates architectural details with massing, scale, and site design.

**Guideline 7a:** Building facades should be modulated and articulated to create interest and variety. The project should employ one or more of the following vertical elements: Columns, pilasters, indentations, storefront bays, or vertical landscaping to break up the horizontal massing of a building.

**Guideline 7b**: Projects should differentiate the sidewalk-level of the building from the middle and top portions through building articulation, projections, cornices, change in materials, etc. On building facades, emphasis should be placed on horizontal lines.

**Guideline 7c**: Provide variety in façade treatments along a block face through the design of building frontages, while adhering to a cohesive and unifying design concept.

**Guideline 7d:** For renovations of existing commercial buildings, the building base (the first two (2) to five (5) feet above the sidewalk) should be differentiated from the rest of the building façade with treatments such as change in material and/or color.

**Guideline 7e**: Ground floor facades should be particularly detailed through the use of storefronts, storefront glazing, entryways, awnings and canopies and other design elements.

**Guideline 7f**: Large unbroken surfaces should be avoided by creating breaks in the streetwall and by dividing wide storefronts into structural bays. Storefront bays create articulation in low-rise buildings and contribute to a pedestrian-oriented street. Recessed storefront bays add visual interest to the streetwall, frame display windows, and create an inviting environment.

**Guideline 7g**: Consider exposing structural elements on building facades to add articulation and reflect a Japanese-influenced design. Exterior roof eaves, beams, posts, columns, and other exposed framing can be either a function part of the structural support of a building or purely decorative in nature. Wood, clay, steel, or concrete materials can all be successfully utilized in this way. Where appropriate to a chosen building design, wood cladding or adornment can also be used to enhance articulation on a building facade.

**Guideline 7h**: Mixed use and residential developments are encouraged to integrate balconies and terraces to provide building articulation, particularly on facades facing streets and walkways, to encourage "eyes on the street."

**Guideline 7i**: Industrial building facades with loading docks should maintain a level of detail and style used on the main facility, especially if visible from residential uses.

## *8. Entry Treatments*

**Guideline 8**: The entrance to a building has an important relationship to the street and is one of the most important parts of the building facade. Dominant entryways reinforce the character of the building, add visual interest, break the monotony of flat surfaces, add a vertical element and create an inviting entrance. Emphasize pedestrian orientation and accessibility by creating well-articulated and inviting building entrances, and by orienting these entrances towards the adjacent primary/Retail Streets.

**Guideline 8a**: Building entrances are encouraged to be recessed and/or defined by distinct architectural treatments. These treatments can include: Variation in materials, lighting, awnings, textured paving, attractive signage, and planters. Identify the building entry by recessing or projecting the opening, by using awnings or special signage, or by varying the façade treatment around the entry. Consider moveable walls to open up and create more flexible interior/exterior relationships.

**Guideline 8b**: Storefront entrances should be designed so that they are a predominant architectural feature on the building façade and create an inviting entrance.

**Guideline 8c**: Each individual tenant or business space located on the ground floor should have an entrance directly accessible from the street at the same grade as the sidewalk. Primary access should be from a public open space, public street, fore- court or arcade or identified pedestrian facility. Ground floor residential units should be directly accessible from the street.

**Guideline 8d:** For industrial developments, pedestrian access paths to public entrances should be delineated clearly from vehicular and truck access, especially as they transition to the public sidewalk.

## *9. Windows*

**Guideline 9**: All projects should have as many windows as possible on the ground floor when facing a street or pedestrian walkway. There should be little or no blank wall area, except to separate buildings or retail/office space. This increases safety by allowing businesses to have 'eyes on the street' while people on the street see interior building activities. Pedestrians should be able to sense the ground floor activity inside the building.

**Guideline 9a**:–Encourage an active and attractive pedestrian environment by providing a significant level of transparency at the ground floor on building facades facing public streets.

**Guideline 9b**: Doors and windows should be of clear, untinted, and non-reflective glass for all portions of a building, except for architectural or decorative accent, and except where any tinting or similar applications are necessary to

comply with Energy and Building Code regulations.

**Guideline 9c**: Residential units with individual entrances should include windows at ground level.

**Guideline 9d:** Windows should project or be recessed (set back) from the exterior building wall, except where inappropriate to the building's architectural style. The required change in plane may not be accomplished by the use of plant-ons around the window.

**Guideline 9e:** Windows on levels above the ground floor should be evenly and regularly spaced to create a discernible rhythm. Planter boxes are encouraged to create a softening of the architectural façade.

**Guideline 9f:** For projects with industrial uses, screen ground floor industrial activities from the street.

## *10. Facades, Exterior Surface materials & Color*

**Guideline 10**: The texture of building facades should be complementary to other buildings in the surrounding area. Large expanses of the same building material detract from the aesthetics of a building. Use of varied and complementary building material reduces the mass of a building, and creates visual interest.

**Guideline 10a:** The exterior facade of low-and mid-rise buildings should incorporate no more than three complementary building materials, including but not limited to glass, tile, smooth stucco or stone. Textured stucco is strongly discouraged.

**Guideline 10b:** Mid and high-rise buildings should not have monotonous exteriors, and should employ building materials that create an interesting variety of facades to reduce massiveness and glare impacts on surrounding uses and motorists.

**Guideline 10c**: Encourage the use of high-quality and/or enriched materials, particularly along the ground floor and at key locations, such as inter-sections, major entries, and places of significance.

**Guideline 10d**: Differentiate the ground floor from the upper stories through the use of complementary but different building materials, textures, colors, and size of openings.

**Guideline 10e**: Strengthen the connection between the sidewalk and street-facing building facades by enhancing visual interest to pedestrians.

**Guideline 10f:** Planter boxes are encouraged on upper story windows and patio areas to cascade and create a softening of the architectural façade, where feasible.

**Guideline 10g:** Paved areas, excluding parking and driveway areas, should consist of enhanced paving materials such as stamped concrete, permeable paved surfaces, tile and/or brick pavers.

**Guideline 10h:** Color schemes should be selected in relation to the overall design intent of the building and should be simple, harmonious and should complement adjacent structures.

**Guideline 10i**: Techniques to deter graffiti, such as wall coating, and/or plantings are encouraged.

## *11. Cultural Design Details*

**Guideline 11:** Consider façade treatments that subtly express Japanese-inspired design aesthetics, where appropriate to the overall design concept.

**Guideline 11a**: Consider exposing structural elements on building facades. Exterior roof eaves, beams, posts, columns, and other exposed framing are a common characteristic of Japanese-influenced designs, and can be either functional or purely decorative in nature. Wood, clay, steel, or concrete materials can all be successfully utilized in this way. Half-timbering applied to stucco surfaces is also a traditional Japanese representation of this type of treatment. Where appropriate to a chosen building design, wood cladding or adornment should be considered for use on exterior building facades.

**Guideline 11b**: Consider the use of natural materials, particularly wood and stone. Wood should be left with its natural finish, rather than painted over.

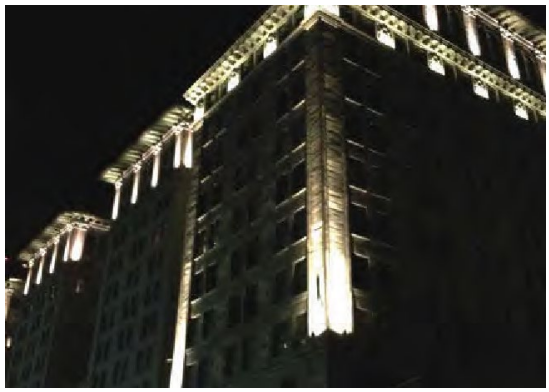
**Guideline 11c**: Consider whole facades that can be opened, as the boundary between the interior and exterior of a building is typically fluid rather than rigidly defined. One way to reach this goal is through increased transparency, possibly through the use of glass or light-weight translucent materials.

**Guideline 11d**: Overall, strive for simplicity. Designs should be understated—not cluttered or distractingly ornamented.

## *12. Lighting*

Lighting can be used as a unifying element, defining districts and streets and conveying moods. Lighting should be used to light both vehicular and pedestrian pathways.

**Guideline 12:** Lighting should be incorporated into the design not only to accentuate architectural features, but also to provide a safe environment for pedestrian activity. Outdoor lighting in front of buildings provides security for pedestrians at nighttime. All open areas, including parking lots, walkways, and trash areas, should have security lighting for safety.



**Guideline 12a**: Provide lighting along all vehicular access ways and pedestrian walkways. Recessed lighting on the ground along vehicular access ways and pedestrian walkways is highly encouraged.

**Guideline 12b:** Incorporate wall-mounted fixtures into the design of buildings to emphasize and define building entrances and to contribute to the nighttime ambience.

**Guideline 12c:** Encourage building owners to illuminate signage and to use interior lighting for nighttime effect.

**Guideline 12d:** Illuminate landmarks and use lighted trees along major pedestrian streets at night.

**Guideline 12e:** Locate lights in areas of pedestrian/ vehicular interface and other safety areas.

**Guideline 12f:** Provide for nighttime illumination of showcases and other building interiors abutting Retail Streets.

**Guideline 12g:** Provide a secondary source of sidewalk illumination through exterior lighting on street-facing building facades.

**Guideline 12h:** Exterior lighting fixtures should be compatible with the architectural design of the building. Japanese design motifs for lighting are strongly encouraged.

**Guideline 12i:** All exterior lighting should be directed onto the lot and away from neighboring development, and all flood lighting should be designed to eliminate glare to adjoining properties. Flood lamps or floodlights, or similar contemporary lighting fixtures will not be permitted.

**Guideline 12j:** Circular, arch or gooseneck types of light fixtures are highly recommended.

## *13. Awnings and Canopies*

**Guideline 13:** Where appropriate, use awnings or canopies to define the public realm of the sidewalk, provide shelter and shade, and enhance the building façade by adding variation, color, and horizontal rhythm. Awnings and canopies reinforce a pedestrian scale and add a comfort- able sense of enclosure to outdoor seating and other active public uses.

**Note:** Projections into the public right-of-way, extending beyond private property, must obtain proper approval from the Department of Public Works bureau of engineering.

**Guideline 13a:** Size and placement of awnings and canopies should enhance the building's overall frame, detailing, and rhythm. Placement should correspond to the location of a store-front or entrance.

**Guideline 13b:** For awnings located above windows, awning shapes should be consistent with window frames.

**Guideline 13c:** Awnings and canopies should be constructed of high-quality, durable, fade-resistant, and fire-retardant materials. There are several types of awnings and canopies ranging from canvas to structural space frames.

**Guideline 13d:** All awnings must be retractable, and can be attached above the display windows and below the cornice or sign panel. It is highly recommended that the awning be mounted between the transom and the display windows, as this will allow light into the store while shading the merchandise and pedestrian from the sun.

APPURTENANCES

## *14. Security Grilles*

Many building owners and tenants hesitate to allow large areas of unprotected glass at the ground level because of security and safety concerns. Common responses to those concerns include boarding up of the entire ground floor or adding security grilles. These conditions deface the built environment as well as create a sense of danger for residents and visitors.

**Guideline 14**: Provide storefront security as needed without obscuring storefront windows and creating blank walls along the sidewalk. Minimize the presence of security grilles and bars as visible from the street.

**Guideline 14a**: Premises should employ non-barrier (alarm or sensor) theft-deterrent systems where possible. If such security systems are not feasible, interior security grilles or vandal-proof glazing that is resistant to impact should be used on any storefronts.

**Guideline 14b**: External security grilles or roll-down security grilles that conceal storefront windows are discouraged.

## *15. Utilities, Mechanical Equipment, Trash Containers & Loading*

**Guideline 15**: Improve the pedestrian environment along the sidewalk and minimize visual blight by obscuring unsightly equipment adjacent to streets and other public rights-of-way.

**Guideline 15a**: Utility lines should be placed underground to the best extent feasible and approved by the Department of Water and Power.

**Guideline 15b**: All utility boxes or facilities should be installed below grade in the public rights-of-way.

**Guideline 15c**: Utilities, storage areas, trash bins, air conditioning units, fire alarms, and similar equipment should be placed to the rear of the site or underground when feasible. Otherwise, structures housing such elements shall be enclosed or screened with landscaping, and designed in a way as to be as inconspicuous as possible.

**Guideline 15d**: All exterior mechanical equipment, including HVAC equipment, satellite dishes, cellular antennas, should not be visible from public rights-of-way. No mechanical equipment (e.g. air conditioners should be permitted in window or door openings.)

**Guideline 15e**: Consider using HVAC elements such as ducts and vents as opportunities for creative expression, particularly where these elements are visible to surrounding buildings.

**Guideline 15f**: Rooftop mechanical equipment should be screened with materials that are architecturally integrated into the building.

## *16. Sidewalk Dining Enclosures*

**Guideline 16:** Encourage outdoor dining on sidewalks near restaurants and cafes. Support an open and safe physical environment by de- signing enclosures for outdoor eating areas that do not detract from the quality of the pedestrian experience along the sidewalk.

***Note:*** *projections into the public right-of-way, extending beyond private property, must obtain proper approval from the Department of Public Works Bureau of Engineering.*

**Guideline 16a:** Enclosures must utilize open fence work. The materials and design should be decorative and coordinate with the structures on the site.

# SIGNS

Signage is used to identify the character of a business, advertise its location, and assist people in locating their destination. Signage should be de- signed in such a way that it accomplishes these objectives without creating visual clutter or dominating the visual appearance of the area.

Since the Little Tokyo Community Design Overlay aims to create a more pedestrian friendly environment, signs should be sized and oriented to persons walking along adjacent sidewalks and pedestrian pathways. Pedestrian-scale signage (i.e., at a height and of a size that is visible to pedestrians) can help to identify the structure and use and facilitate access to the entrance. Signage directed toward automobile users is typically over- scaled for a pedestrian environment.

Without standards, most signage is developed for maximum visibility. The result is often a state of visual chaos in which signage conflicts with architecture, and there is no coordination between the signage of neighboring buildings. The overall size, materials and graphic composition of signs should be integrated with the building and land- scape design and should complement the façade or architectural element on which it is placed.

Additionally, the signage guidelines for the Little Tokyo Historic District (Appendix A) shall apply to the National Register Historic District Area along the north side of 1st Street, between Judge John Aiso and Central Avenue.

## *S1. General – All Signs*

**Guideline S1a:** Promote the identity and success of individual businesses while enhancing the visual quality of Little Tokyo through context-sensitive signage design. Ensure that signage design is appropriate in terms of location, layout, and style. Minimize sign clutter and emphasize pedestrian-scale design.

**Guideline S1b:** Signs should be considered as a component of building design and should complement buildings with respect to style, design, materials, and colors. Signage should be integrated with architectural elements, where feasible.

**Guideline S1c:** The size and location of signage should be designed to respect the viewing experience of the pedestrian over those in vehicles, especially along pedestrian-oriented Retail Streets. Project applicants are encouraged to consider pedestrian oriented signage options such as projecting signs.

**Guideline S1d:** Encourage the use of Japanese writing (e.g., katakana, kanji, calligraphy) in project signage, to reinforce the cultural character of Little Tokyo.

**Guideline S1e:** Projects should provide a unified signage system, while incorporating a cohesive range of sign design for individual identity.

## *S2. Directional Signage*

**Guideline S2:** Signage directing visitors should be coordinated and provide a cohesive, unified design for the district.

**Guideline S2a:** Incorporate a bold and legible signage system at neighborhood gateways, entry points, and strategic locations within Little Tokyo. The use of Japanese writing (e.g., Katakana) is encouraged, as well as the use of symbols of Japanese culture (e.g., Stone lanterns, banners) and appropriate materials

**Guideline S2b**: In areas of pedestrian concentration and visitor-serving uses, projects should provide orientation maps, directional signs, tourist information boards, kiosks, or other wayfinding signage.

**Guideline S2c**: Projects are encouraged to provide plaques at the pedestrian level to identify notable gateway and other important elements within Little Tokyo.

## *S3. Sign Illumination*

**Guideline S3**: Signage illumination should be used sparingly and at a pedestrian scale. Overly bright illumination, digital signage and internally lit signage that is intended to capture the attention of motorists generally does not invite pedestrian use or prolonged visits to the district outside of immediate car trips. External illumination for signage is encouraged in lieu of internally lit signage.

**Guideline S3a**: Reverse channel letters or externally lit individually cut letters are encouraged in lieu of internally lit channel letters.

# LANDSCAPING

## *L1. Site Landscaping*

**Guideline L1**: Landscaping should complement building design in a way that creates vibrant commercial areas by enhancing architectural detailing, screening unattractive areas, supporting pedestrian activity, promoting economic vitality, and fostering a pleasant and desirable character. Landscaping may include plant materials such as trees, shrubs, ground cover, perennials, annuals, as well as rocks, water features, sculpture, art, or paving materials.

**Guideline L1a**: All areas of a site not occupied by buildings, driveways, or used for outdoor dining should be landscaped; 80% of landscaped areas shall consist of plant materials.

**Guideline L1b**: For new developments trees should be planted in the adjacent public right-of-way at a minimum ratio of one (1) tree for every 25 feet of lot length, to the extent feasible, determined by the Urban Forestry Division, Bureau of Street Services, Department of Public Works or to the Department of Transportation.

**Guideline L1c**: Utilize small urns, vessels, or pots with plant material at entrances, as window and architectural accents, or to screen unattractive areas. Plant materials should be well maintained.

**Guideline L1d**: Blank walls or other unattractive areas of a site or building should be screened with landscaping.

**Guideline L1e**: Utilize plant vines on existing blank walls to prevent graffiti.

**Guideline L1f**: Projects are encouraged to include elements in the landscape that mark important places in the community and create a sense of direction, movement, arrival.

**Guideline L1g**: Landscape the street and building edges of parking lots and enhance existing chain link fences with landscaping, or replace with wrought iron or "art fences". The use of razor wire is prohibited.

## *L2. Landscaping Design*

**Guideline L2**: Encourage the expression of Japanese-inspired aesthetics through landscape design, without limiting the use of other design concepts.

**Guideline L2a**: Consider landscaping design elements that reflect symbols of Little Tokyo's ethnic and cultural community, such as stone lanterns, banners, and use of natural materials (e.g., cloth, stone, wood). This should be considered particularly at identified neighborhood gateways, to prominently mark the points of entry into Little Tokyo and establish a sense of place in conjunction with a unified building design.

**Guideline L2b**: Utilize plant species and materials in landscaping that reflect Japanese cultural character, as desired and appropriate to an overall design concept.

**Guideline L2c**: Increase the quantity of native and drought-tolerant plant species to reduce water use and promote sustainability goals.

**Guideline L2d**: Landscaped areas should be designed to provide effective stormwater management functions, where feasible.

**Guideline L2e**: Buildings designed for industrial uses should provide a minimum 5-foot landscaped setback along the sidewalk open to the sky. Plant a combination of vines and shrubs to provide a continuous "green screen." The setback may include stormwater collection/treatment planters, which may be a maximum of 3 feet high. The planters face should be planted with climbing plants or otherwise screened with landscaping to reduce the potential for graffiti.

**Guideline L2f:** Install a high-efficiency "smart" irrigation system, which includes a weather-based controller and, where feasible, in-line drip and bubblers, rather than overhead spray. Where overhead spray is used, heads should have low-precipitation nozzles to reduce run-off.

**Guideline L2g:** Landscape setbacks, where required, should include a minimum 24-inch box tree for every 20 feet of street frontage. Trees installed should have a minimum canopy diameter of 20 feet at the time of maturity.

**Guideline L2h**: Landscape setbacks, where required, should include a 90-percent ground covering through the use of turf, grass, flowering plants and shrubs.

## *L3. Landscaping Design*

**Guideline L3**: Enhance parking areas by providing landscaping that shades, buffers, and screens unattractive views of parking. Parking lots and structures should receive landscape treatment that is well integrated with the building design to enhance the aesthetic appearance of parking garages. Landscaping should provide a pleasing, safe, and secure environment for pedestrians on the street.

**Note**: Standards apply to areas that include six or more parking stalls and should be in addition to, and consistent with, the requirements set forth in Sections 12.21.A.6(G), a.6(H), and 12.21.A.6(I) of the Los Angeles Municipal Code.

**Guideline L3a**: Ground covers that provide interest and complete coverage without excessive maintenance or water usage should be utilized. The landscaping should provide a buffer between the parking and other uses, soften glare from vehicles, and filter noise.

**Guideline L3b**: Where parking structures are not wrapped with retail uses at the ground floor, they should be visually screened from frontage streets and adjoining uses by a landscape buffer consisting of trees, planters, and vegetation around their perimeters.

**Guideline L3c**: A five (5) foot landscaped buffer should be located between parking areas and the property line wherever a surface parking lot abuts the public right-of-way. The landscaped buffer area should contain 24-inch box trees planted at a ratio of one (1) for every ten (10) linear feet. At a minimum, these trees should measure a trunk diameter of two (2) inches and a height of ten (10) feet at the time of planting.

**Guideline L3d**: A minimum of seven (7) percent of the total area of surface parking should be landscaped, including one (1) tree from every four (4) parking spaces evenly dispersed throughout the lot. Tree species should be of a variety that produces a large canopy, but does not produce excessive plant material.

**Guideline L3e**: Landscape the street and building edges of any parking lots and enhance existing chain link fences with landscaping, or replace with wrought iron or "art fences". The use of razor wire is prohibited.

REHABILITATION OF HISTORIC BUILDINGS AND CONTEXT SENSITIVE INFILL DEVELOPMENT.

## *H1. Historic Structures*

**Guideline H1**: Historic structures in Little Tokyo, particularly those in the Little Tokyo Historic District symbolize the cultural and social history of the Japanese- American community in Los Angeles. Improvements to the historic structures of Little Tokyo are meant to improve the quality of the pedestrian and commercial environment while preserving the community's architectural and historic resources.

**Guideline H1a**: All projects within the Little Tokyo Historic District should comply with the provisions of the Secretary of Interior's standards for the treatment of historic properties, with Guidelines for Preserving, Rehabilitating, Restoring and Reconstructing Historic Buildings and the Historic Guidelines found in Appendix A.

PRIMARY GATEWAYS

## *G1. Primary Gateways*

**Guideline G1**: Gateways are the points of entry that establish an image or identity for the community being entered. Special attention should be given to important entry points to the community to bolster the historic and cultural character of Little Tokyo. The primary gateways into Little Tokyo are identified on the accompanying map.

**Guideline G1a**: Projects at the identified primary gateways into Little Tokyo should include features to accentuate arrival into the neighborhood. A gateway should reflect the unique identity of Little Tokyo through the subtle use of certain symbols of Japanese culture and appropriate materials.

# LITTLE TOKYO GUIDELINES CHECKLIST

LOS ANGELES CITY PLANNING

## APPLICANT INFORMATION

Name: Case Number:

Address: Zip Code:

Phone Number: Zone

Project Description:

**INSTRUCTIONS:** Check the appropriate boxes that apply to your project:

## GUIDELINE 1: BUILDING ORIENTATION AND FRONTAGE

* **1a:** Buildings about front lot line or required sidewalk easement, except where setback area is used for patios, plazas, courtyards, outdoor dining, seating, kiosks, and/or landscaping.
* **1b:** Buildings have a primary ground floor entrance. Refer to Standard 1b and 1c for specifications regarding individual businesses and corner buildings.
* **1c:** Primary ground floor entrances are oriented to abutting streets, alleys, and other pedestrian facilities.
* **1d:** Residential units have individual entrances that are set back 3 to 5-ft. from the sidewalk, to allow for transitional landscaping.
* **1e:** Pedestrian entrances are easily identifiable from abutting street, alley, or parking lot.
* **1f:** Design provides for a variety of shops and extended day activities at ground level street frontages.
* **1g:** Design provides for ground level uses on secondary streets that appeal are neighborhood-oriented and appeal to local residents.
* **1h:** All “front of house” operations ofindustrial buildings, i.e. offices, are located close to the pedestrian walkway.
* **1i:** If located at Little Tokyo’s identified gateways (see map), prominently marks the entrance to a unique ethnic community in its building design as well as its use of Japanese cultural symbols and appropriate materials.
* **1j:** Design incorporates Japanese design aesthetics into the arrangement of buildings and spaces to reinforce the cultural character of the Little Tokyo community.

## GUIDELINE 2: OPEN SPACE

* **2a:** Provides open space in the form of a plaza, paseo, outdoor dining area, landscaping, shade elements, sculptures, or water features.
* **2b:** Building entrances are oriented to public open spaces.
* **2c:** Design incorporates public art and other special community-oriented features that emphasize symbols of Little Tokyo's ethnic and cultural community in public open spaces.
* **2d:** Uses enriched paving and other distinctive materials to create user-friendly open spaces.
* **2e:** Incorporates different elements of nature, such as water or trees in gardens and public open spaces.
* **2f:** Incorporates open space elements that mark important places and create a sense of direction, movement, and arrival.
* **2g:** Incorporates plazas or open spaces that are neither surrounded by blank walls nor separated from sidewalk.
* **2h:** Provides retail experiences and entryways to storefronts or public open spaces.
* **2i:** Supports the use of wireless communication technology in public spaces.
* **2j:** Improves the edges of public open spaces by providing active uses on the ground floor of buildings.
* **2k:** Provides seating opportunities for more user-friendly spaces.
* **2l:** Preserves existing public art and character-defining features and/or incorporates new public art and community-oriented features into its design.
* **2m:** Captures significant history and memorializes special features, individuals or characteristics of neighborhood through design elements in open spaces.

## GUIDELINE 3: PEDESTRIAN ORIENTATION

* **3a:** Enhances blank walls with artwork, such as relief works, murals, cascading landscape plantings and wall sculptures.
* **3b:** Clearly identifies parking with prominent, uniform signage that aesthetically complements the structure's architecture and supports a pedestrian-friendly environment.
* **3c:** Ensures loading areas are inconspicuous from primary or retail streets and minimally impacts pedestrians, the flow of traffic, and the functions of nearby activities.
* **3d:** Passenger loading zones complement the pedestrian experience by permitting the flow of foot traffic on sidewalks.
* **3e:** Uses are clearly marked pedestrian walkways, stop signs, speed bumps, lighting, or other similar measures in parking lots and structures.

## GUIDELINE 4: CORPORATE IDENTITY ARCHITECTURE

* **4a:** Fully complies with the Design Guidelines and Development Standards in all aspects including corporate architectural identities of franchises or corporate establishment have.

## GUIDELINE 5: BUILDING SCALE AND MASSING

* **5a:** Ensures that the design complements the lower scale and massing of existing buildings in the district's commercial heart, generally bounded by Central Avenue, Third Street, San Pedro Street, and the historic district along the north side of First Street.
* **5b:** If located outside of the commercial heart, has heterogeneous massing and strategically locates new mid- and high-rise buildings in important nodes and intersections in Little Tokyo.
* **5c:** Combines multi-family residential uses and small-scale neighborhood commercial uses with small offices or studios.
* **5d:** Ensures commercial portion of mixed-use development complements the scale, form, height, and proportion of the residential portion but has distinct facades, transparent floor fronts with greater window-to-wall ratios.

## GUIDELINE 6: BUILDING ARTICULATION

* **6a:** Incorporates vertical elements on façade, such as columns, pilasters, indentations, storefront bays, or vertical landscaping to break up horizontal massing of building and to create interest/variety.
* **6b:** Differentiates the sidewalk-level of the building from the middle and top portions through building articulation, projections, cornices, change in materials, etc.
* **6c:** Employs various façade treatments throughout its frontages while adhering to a cohesive and unifying design concept.
* **6d:** Differentiates building's base (first 2-5 ft. above the sidewalk) from the rest of the building's façade using material and/or color.
* **6e:** Ground- floor façades are particularly detailed through use of storefronts, storefront glazing, entry-ways, awnings and canopies and other design elements.
* **6f:** Creates breaks in the streetwall and divides wide store fronts into structural bays to deter large homogenous surfaces.
* **6g:** Articulates Japanese-influenced design on building facades through exposed structural support elements.
* **6h:** Mixed use and residential developments integrate balconies and terraces on street facing facades and walkways to provide building articulation and visually highlight the street.
* **6i:** Loading docks complement the same level of detail and style present in the main facility.

## GUIDELINE 7: ENTRY TREATMENTS

* **7a:** Prominently highlights one or more of the following architectural treatments at building entrances: variation in materials, lighting, awnings, textured paving, attractive signage, planters, façade treatments; projected or recessed openings; use of awnings or special signage; movable walls that open up and create more flexible interior/exterior relationships.
* **7b:** Creates inviting storefront entrances by making them the predominant architectural feature on the building façade.
* **7c:** Provides an entrance for each individual tenant or business space that is directly accessible from a public street, open space, forecourt, arcade or other identified pedestrian facility at the same grade as the sidewalk.
* **7d:** Prominently identifies pedestrian entrances in projects that have rear lot lines abutting a street, alley, or parking lot, are pedestrian entrances in addition to those on primary pedestrian-oriented corridors.
* **7e:** Clearly delineates pedestrian access paths to public entrances along vehicular and truck pathways

in industrial developments.

## GUIDELINE 8: WINDOWS

* **8a:** Includes windows on ground level of residential project.
* **8b:** Projects or recesses windows to visually differentiate from exterior facade.
* **8c:** Evenly spaces windows on ground floor apart in order to convey a discernable rhythm.
* **8d:** Screens ground floor industrial activities from street activity in industrial projects.

## GUIDELINE 9: FACADES, EXTERIOR SURFACE MATERIALS & COLOR

* **9a:** Incorporates three or less complementary building materials, including but not limited to glass, tile, smooth stucco or stone on exterior façade of low-and mid-rise buildings.
* **9b:** Uses high-quality and/or enriched materials particularly along the ground floor and at intersections, major entries, and other key locations.
* **9c:** Differentiates the ground floor from the upper stories through the use of distinct but complementary building materials, textures, colors, and window sizes.
* **9d:** Incorporates planter boxes on upper story windows and patio areas to soften the architectural façade.
* **9e:** Incorporates enhanced paved materials, such as stamped concrete, permeable surfaces, tile and/ or brick areas in all paved areas, excluding parking lots and driveways.
* **9f:** Employs a harmonious color scheme that complements all adjacent structures.

## GUIDELINE 10: CULTURAL DESIGN DETAILS

* **10a:** Expresses Japanese design aesthetics by exposing structural support elements such as exterior roof eaves, beams, posts, columns and utilizing traditional Japanese material treatments such as half-timbering on stucco surfaces.

**10b:** Employs natural materials, particularly stone and natural finish wood.

* **10c:** Encourages fluidity and connection between interior and exterior spaces through the use of glass or light-weight translucent materials or open facades.
* **10d:** Employs simplicity as an overall design theme.

## GUIDELINE 11: LIGHTING

* **11a:** Provides lighting along all vehicular access ways and pedestrian walkways.
* **11b:** Incorporates wall-mounted fixtures into design of building to define entrances and to create a nighttime ambiance.
* **11c:** Uses illuminated signage and uses interior lighting to create a nighttime effect.
* **11d:** Illuminates landmarks and installs lighted trees along major pedestrian streets at night.
* **11e:** Locates lights in areas of pedestrian/vehicular interface and other safety areas.
* **11f:** Provides for nighttime illumination of showcases and other building interiors abutting Retail Streets at night.
* **11g:** Installs exterior lighting on street-facing building facades to provide a secondary source of sidewalk illumination.
* **11h:** Includes exterior lighting fixtures that express Japanese design motifs or complement the architectural design of the building in other ways.
* **11i:** Minimizes the impact of exterior light on neighboring development by directing the glare away from adjoining properties.
* **11j:** Incorporates circular, arch or gooseneck light fixture types.

## GUIDELINE 12: AWNINGS AND CANOPIES

* **12a:** Size of placement of awnings and canopies enhance the building's overall frame, detailing, and rhythm.
* **12b:** Awnings above windows are consistent in shape with the window frame.
* **12c:** Awnings and canopies are constructed of high quality, durable, fade resistant, and fire-retardant materials.
* **12d:** Awnings are retractable and permit sufficient light to enter store while shading merchandise and pedestrians.

## GUIDELINE 13: SECURITY GRILLES

* **13a:** Employs non-barrier theft-deterrent systems if feasible OR interior security grilles or vandal-proof glazing resistant to impact.
* **13b:** Does not use external security grilles or roll-down security grilles that conceal storefront windows.
* **13c:** Visibility for security purposes is balanced with the screening of stored goods and industrial activities from public view. Windows with additional protection do not block out more than 30% of natural light to the interior.

## GUIDELINE 14: UTILITIES, MECHANICAL EQUIPMENT, TRASH CONTAINERS & LOADING.

* **14a:** Places utility lines underground.
* **14b:** Utility boxes or facilities are below grade along all public rights-of-way.
* **14c:** Utilities, storage areas, trash bins, air conditioning units, fire alarms, and similar equipment are located underground or are designed to be as in- conspicuous as possible.
* **14d:** Ensures all exterior mechanical equipment, including HVAC equipment, satellite dishes and cellular antennas are not visible from the public right-of-way and are absent from window or door openings.
* **14e:** Uses HVAC elements such as ducts and vents as opportunities for creative expression, particularly where these elements are visible to surrounding buildings.
* **14f:** Screens rooftop mechanical equipment with

materials that are architecturally integrated into the building.

## GUIDELINE 15: SIDEWALK DINING ENCLOSURES

* **15a:** Employs decorative open fence enclosures that visually complement structures on the site.

## S1: GENERAL – ALL SIGNS

* **S1a:** Signage is compatible in its form, proportion, scale, color, materials, surface treatment, and overall sign size with the surrounding environment.
* **S1b:** Signs complement the building design with respect to style, design, materials, and colors. Signs are integrated with architectural elements, where feasible.
* **S1c:** The size and location of signage are designed to respect the viewing experience of the pedestrian over those in vehicles, especially along pedestrian-oriented Retail streets.
* **S1d:** Uses Japanese writing, cultural symbols, and traditional materials in project signage to reinforce the cultural character of Little Tokyo.
* **S1e:** Provides a unified signage system, while incorporating a cohesive range of sign design for individual identity.

## S2: DIRECTIONAL SIGNAGE

* **S2a:** Incorporates a bold and legible signage system at neighborhood gateways, entry points, and strategic locations within Little Tokyo.
* **S2b:** Provides orientation maps, directional signs, tourist information boards, kiosks, or other way finding signage in areas of pedestrian concentration and visitor-serving uses.
* **S2c:** Provides plaques at the pedestrian level to identify notable gateway and other important elements within Little Tokyo.
* **S2d:** Incorporates Little Tokyo logo into all visual references to Little Tokyo such as maps, web sites, printed materials, and brochures.

## S3: PROHIBITED SIGNAGE

* **S3a:** Project does not include the following prohibited signs:

Can Signs

Monument Signs

Pole Signs

Sail Signs/Wind Banners

## S4: SIGN ILLUMINATION

* **S4a:** Includes reverse channel letters or externally lit individually cut letters in lieu of internally lit channel

letters.

## L2: LANDSCAPING DESIGN

* **L2a:** Employs landscaping design elements that reflect symbols of Little Tokyo's ethnic and cultural community, such as stone lanterns, banners, and use of natural materials.
* **L2b:** Installs plant species and landscaping materials that reflect Japanese cultural character.
* **L2c:** Increases the quantity of native and drought-tolerant plant species.
* **L2d:** Provides effective stormwater management functions.
* **L2e:** INDUSTRIAL ONLY. Incorporates a minimum 5-foot landscaped setback along the sidewalk.
* **L2f:** Incorporates a high-efficiency "smart" irrigation system, which includes a weather-based controller; in-line drip and bubblers or overhead spray with low-precipitation nozzles.
* **L2g:** Landscape setbacks include a 24-in. box tree every 20-ft. of street frontage, per Standard L2g guidelines.
* **L2h:** Landscape setbacks, where required, include a 90-percent ground covering through the use of turf, grass, flowering plans and shrubs.

## L3: LANDSCAPING FOR PARKING LOTS AND STRUCTURES

* **L3a:** Uses ground covers that provide interest and complete coverage without excessive maintenance or water usage.
* **L3b:** Includes landscape buffer consisting of trees, planters, and vegetation to screen parking structures that do not have retail uses on ground floor from street frontages.
* **L3c:** Includes a 5-ft. landscape buffer where surface parking abuts public right-of-way between property line and parking area. Refer to specifications stated in Standard L3c.
* **L3d:** Includes landscaping on at least 7% of the lot's total surface area. Refer to specifications stated in Standard L3d.
* **L3e:** Uses landscaping or special features such as wrought-iron or "art fences" to enhance parking lots or existing chain link fences.

## H1: HISTORIC STRUCTURES

* **H1a:** Complies with the provisions of the Secretary of Interior's Standards for the Treatment of Historic Properties, with guidelines for Preserving, Rehabilitating, Restoring and Reconstructing Historic Buildings
and the Historic Guidelines.

## G1: PRIMARY GATEWAYS

* **G1a:** Projects at the primary gateways into Little Tokyo include features reflect the unique identity of Little Tokyo through the subtle use of certain symbols of Japanese culture and appropriate materials .
