Completed Date: 03/16/1994
Comments: The Department received a referral dated March 8, 1994 from the County of Los Angeles, Fire Department. The site was previously a battery recycler whose owner, Victor Pena, was under investigation by LA County and the LA City Attorney's Office for the illegal discharge of hazardous waste onto the subject property. The waste materials were being discharged into an unlined pit in the rear of the property and the driveway. The RP was subsequently convicted of illegal discharge of hazardous waste, sentenced and ordered to remediate the site. The "Subsurface Investigation Report" indicates that the maximum concentration of lead in the soil is 30,000 mg/kg and minimum pH is 0.48. RP has not been compiled with the County's directives. Therefore, the site was referred to the Department. Due to the

VICTOR S INDUSTRIAL BATTERIES (Continued) **S105689620**

evidence of onsite contamination, the Department recommends a PEA. The RP will be notified of this recommendation.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

AHA Hospitals:

UTM Y (Meters):	3772023.8
Elevation:	372 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5630795 LOS ANGELES, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

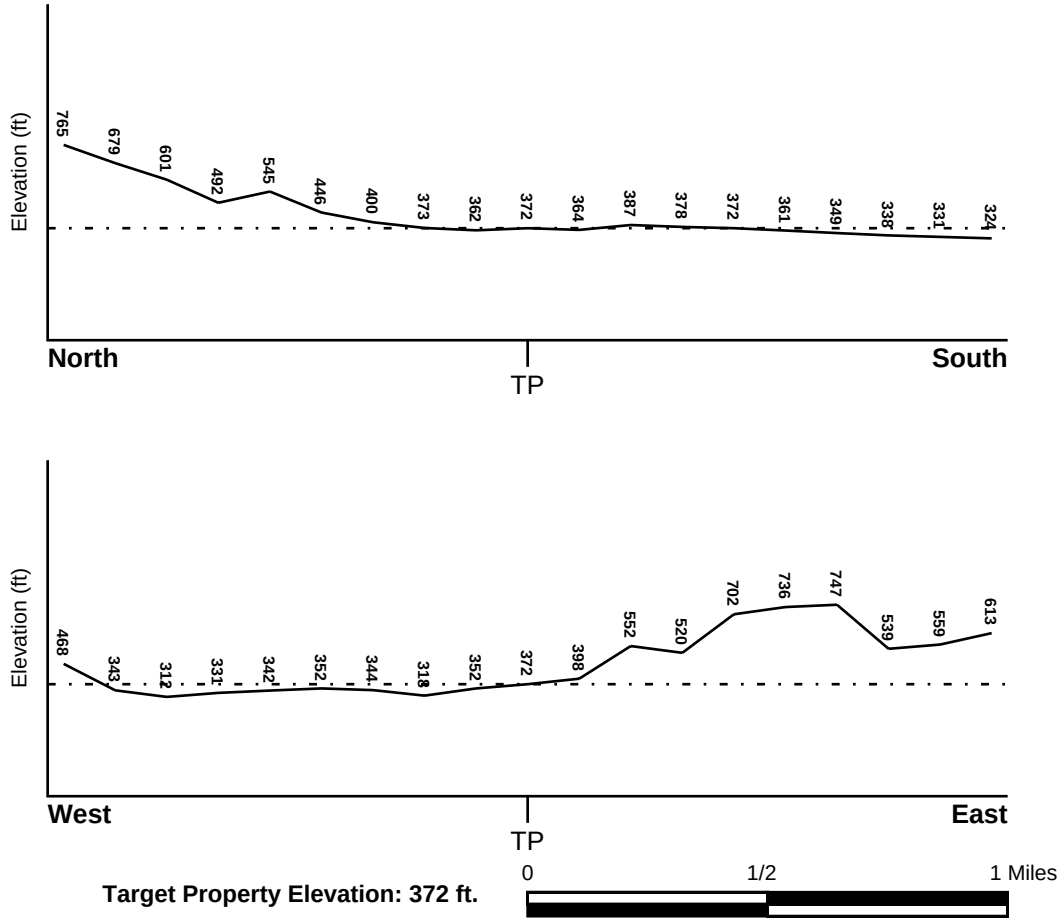
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06037C1629F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06037C1626F	FEMA FIRM Flood data
06037C1627F	FEMA FIRM Flood data
06037C1628F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
LOS ANGELES	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
2	1/2 - 1 Mile SSW	Not Reported
1G	1/2 - 1 Mile SSW	Not Reported

For additional site information, refer to Physical Setting Source Map Findings.

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	HAMBRIGHT
Soil Surface Texture:	gravelly - loam
Hydrologic Group:	Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.
Soil Drainage Class:	Well drained. Soils have intermediate water holding capacity. Depth to water table is more than 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel:	MODERATE
Depth to Bedrock Min:	> 10 inches
Depth to Bedrock Max:	> 20 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	7 inches	gravelly - loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 2.00 Min: 0.60	Max: 7.30 Min: 6.10
2	7 inches	16 inches	very gravelly - loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel. COARSE-GRAINED SOILS, Gravels, Gravels with fines, Clayey Gravel.	Max: 2.00 Min: 0.60	Max: 7.30 Min: 6.10
3	16 inches	20 inches	unweathered bedrock	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: loam
silty clay loam
shaly - clay loam
sandy loam
clay
loamy sand
clay loam

Surficial Soil Types: loam
silty clay loam
shaly - clay loam
sandy loam
clay
loamy sand
clay loam

Shallow Soil Types: silty clay

Deeper Soil Types: weathered bedrock
clay loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

Environmental Assessments & Consulting

September 28, 2012

Mr. Robert Gonzales
Citizens Business Bank
1010 East Colorado Boulevard
Pasadena, CA 91106

Re: Phase I Environmental Site Assessment Report

Dear Robert:

Enclosed is our Phase I Environmental Site Assessment Report on the multi-tenant commercial property located at 135, 141 and 153 West Avenue 34 and 3401 and 3433 Pasadena Avenue in Los Angeles. Also enclosed is our invoice for services.

Effective July 1, 2012, the Governor of California terminated the California Registered Environmental Assessors (REA) Program. What does this mean for our clients? Nothing. Orswell & Kasman, Inc. will continue to prepare the same quality reports our customers have been accustomed to receiving. The USEPA and ASTM International have set standards which define the qualifications of environmental professionals. Although there is no longer a California registration program, all of our reports will be prepared by trained environmental assessors and reviewed by an ASTM Qualified Environmental Professional

If you should have any questions concerning any information in the report, please feel free to call me. Thanks again for the opportunity to be of service.

Sincerely,

James Orswell
Environmental Assessor

PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT

MULTI-TENANT COMMERCIAL PROPERTY
135, 141 AND 153 WEST AVENUE 34
3401 AND 3433 PASADENA AVENUE
LOS ANGELES, CALIFORNIA 90031

1.0 SUMMARY

Based on a review of regulatory records, historical site information, and a visual inspection of the subject property and surrounding area, this assessment has revealed no *recognized environmental conditions* or *historical recognized environmental conditions* in connection with the Property, except as follows:

1) The subject property is occupied by multiple tenants. The 3433 Pasadena Avenue building is currently occupied by Warner Brothers Studios, a prop and set design business. The business stores and uses large quantities of water-based paint, and waste paint is generated by the business activities. The hazardous materials and hazardous wastes appear to be properly stored and managed and no significant spills or leaks were observed on the premises; and

2) Eleven offsite locations have been identified as potential risks or threats to the subject property. According to the data, ten of the sites are not located in the near vicinity, and there is no indication that contaminants from these sites have migrated onto the subject property.

   The former Welch's Uniform Facility site (#5 on map), 3505 Pasadena Avenue, is located on the adjacent property to the north, and the business is identified by State of California Environmental Protection Agency (CAL-EPA) Department of Toxic Substances Control (DTSC) as an active hazardous waste site. According to the DTSC CalSite database records, the site was previously occupied by Welch's Uniform and the property was used as a laundry and uniform rental facility over a 70 year period. Environmental studies indicate the soil and groundwater beneath the facility is contaminated with volatile organic compounds including trichloroethene (TCE). In addition, the former Welch's Uniform Rental site is identified by the State of California Regional Water Quality Control Board (RWQCB) as having two open RWQCB Cleanup Program sites. The first case was first opened in December 1987. According to the RWQCB records, the groundwater was contaminated with non-petroleum hydrocarbons, and the site is undergoing verification monitoring. The second case was opened in December 1998 and the site is undergoing an assessment. A review of the City of Los Angeles Fire Department (LAFD) records revealed Welch's Uniform applied for a permit to remove a 2,000-gallon underground diesel fuel tank in 1987. Soil sampling beneath the tank revealed significant Total Petroleum Hydrocarbon as gasoline (TPH-g)

contamination (8,600 ppm). The groundwater beneath the site was determined to be about 35 feet below the ground surface, and the groundwater flows away from the subject property in a west-northwest direction. In February 1988, Welch's Uniform applied for a permit to abandon five underground storage tanks in-place, and in December 1988, Welch's Uniform applied for a permit to remove five additional underground storage tanks. In May 2004, Welch's Uniform applied for a permit to remove one additional 1,000-gallon underground storage tank. Soil sampling beneath the tank did not detect any contamination problems, and on October 26, 2004, the DPW/UGT issued a no further action letter for the closure of the 1,000-gallon underground tank. An inspection of the property revealed the site is currently a vacant lot, and remedial activities were being conducted on the site.

Should it be determined the groundwater beneath the subject property has in fact been impacted by the Former Welch's Uniform Rental site, it is the policy of the State of California and the United States Environmental Protection Agency not to hold property owners responsible for costs to clean up contaminated groundwater beneath their property, unless the owners contributed to the problem. There is no indication from a review of the regulatory records and a site inspection that the subject property has had any problems concerning the storage, usage or disposal of hazardous materials, and it appears the former Welch's Uniform Rental site is in the process of addressing the contamination problem.

Our review of regulatory and historical records, a visual inspection of the site and surrounding area, and interviews with the property owner and the safety manager for Warner Brothers Studios has found no evidence of other *recognized environmental conditions or historical recognized environmental conditions* which are likely to impact the subject property. Although data failure occurred in the historical uses of the Property prior to 1906, it is unlikely the data failure will impact the ability to identify *recognized environmental conditions.* Based on the results of this assessment, no further environmental studies are recommended for the site.

2.0 INTRODUCTION

2.1 Purpose

The purpose of this Phase I Environmental Site Assessment is to determine if any *recognized environmental conditions* or *historical recognized environmental conditions* exist on or near the subject property. As defined by ASTM Standard Practice E 1527-05, a *recognized environmental condition* is the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions that generally do not present a material risk of harm to public

health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

The ASTM Standard defines a *historical recognized environmental condition* as a condition which in the past would have been considered a *recognized environmental condition*, but which may or may not be considered a *recognized environmental condition* currently. If a past release of any hazardous substance or petroleum products has occurred in connection with the property and has been remediated, with such remediation accepted by the responsible regulatory agency, this condition shall be considered a *historical recognized environmental condition.*

The ASTM Standard Practice E 1527-05 requires all obvious uses of the Property shall be identified at five year intervals from the present, back to the Property's first developed use, or back to 1940, whichever is earlier, using standard historical sources. Developed use includes agricultural uses or placement of fill dirt. Data failure occurs when these objectives are not met. Our review of standard historical sources include aerial photographs, fire insurance maps, local street directories, and building department or assessor's property records. Our experience in performing Phase I Environmental Site Assessments since 1990 has determined that the other standard historical sources identified in the ASTM Standard Practice E 1527-05 are not reasonably obtainable or likely to be sufficiently useful, accurate, or complete in terms of satisfying the objectives.

2.2 Detailed Scope of Services

This report is based on a preliminary study into the past and current uses of the subject property and the surrounding area. The report includes a visual inspection of the property and adjacent sites, and a review of regulatory agency records, aerial photographs, and other historic record sources. Also included in this report are maps, diagrams, and photographs pertaining to this site.

2.3 Significant Assumptions

The information in this report is furnished in good faith and was obtained from sources and databases considered to be reliable; however, nothing in this report should be construed as a promise or guarantee that the subject property is free of environmental hazards. In many instances, this report relies on regulatory database information provided by federal, state and local governmental agencies. Although the database information used in this report consists of the most recently released records, it may not reflect the actual current status of the case.

2.4 Limitations and Exceptions

This report was prepared in conformance to meet or exceed the scope and practice as set forth by the American Society for Testing & Materials (ASTM) Standard Practice E 1527-05, "Standard Practice of Environmental Site Assessments: Phase I Environmental Site Assessment Process." No tests were conducted, and no samples of air, water, soil or building materials were taken.

This report is limited in nature and should not be construed to be a characterization of environmental regulatory compliance or of any conditions above or below grade. The evaluations in this report are based on information provided by interviews, readily accessible regulatory and historical records and observations made during the site inspection. No independent verification of the information was obtained or performed by Orswell & Kasman, Inc.

Orswell & Kasman, Inc. prepared this report in a competent and professional manner in accordance with sound industry standards, practices and procedures. No warranty is provided regarding the actual site conditions described in this report beyond matters amenable to visual confirmation. We make no representation or warranty regarding the accuracy or reliability of information or documents provided by others and contained within this report.

2.5 Special Terms and Conditions

No special terms or conditions have been incorporated into the preparation of this report. There were also no limiting physical conditions such as rain or lack of electrical power, that had a limiting effect on the site inspection.

2.6 User Reliance

This report is prepared for the express use of the client, and its contents are considered to be privileged and confidential. Acceptance of this report constitutes an agreement by the client to assume full liability for information contained herein. This report is for the sole use and interpretation of the client and it is not be reproduced or distributed to outside parties.

3.0 SITE DESCRIPTION

3.1 Location and Legal Description

The subject property, 135, 141 and 153 West Avenue 34 and 3401 and 3433 Pasadena Avenue, Los Angeles, California, is located at the northwest corner of West Avenue 34 and Pasadena Avenue. The property is described as Los Angeles County Tax Assessor's Parcel Numbers (APNs) 5205-004-003, 5205-004-005, 5205-004-007 and 5205-004-011.

3.2 Site and Vicinity General Characteristics

The site consists of five industrial buildings with paved parking and storage areas, located in a mixed industrial, commercial and residential area of Los Angeles (see site plan).

3.3 Current Use of Property

The subject property is currently occupied by Ortiz Bros. Moving and Storage, Submission Factory, Water Wellness and Warner Brothers Studios. No heavy manufacturing activities take place on the site.

3.4 Descriptions of Structures, Roads, Other Improvements On Site

The subject property is occupied by five single-story light-industrial buildings, which are described as follows:

The 3401 Pasadena Avenue building consists of a single-story wood-frame and brick light-industrial structure which is divided into an office area and a warehouse area.

The 3433 Pasadena Avenue building consists of a single-story wood-frame and concrete-block light-industrial structure which is divided into an office area and a production area.

The 135 West Avenue 34 building consists of a single-story corrugated steel warehouse.

The 141 West Avenue 34 building consists of a large industrial warehouse which is divided into an office area and a warehouse area.

The 153 West Avenue 34 building consists of a single-story brick light-industrial building.

The heating, ventilation and air conditioning (HVAC) systems for the buildings appear to be mounted on the roofs of the three larger buildings and on the side of the 141 Avenue 34 building. No HVAC systems were observed for the smaller buildings located on Avenue 34. There are asphalt and concrete paved parking areas and open storage areas surrounding the buildings. The site and surrounding area are fairly level, and the subject property is connected to the municipal water and sewage systems.

3.5 Current Uses of the Adjoining Properties

North of the subject property is a vacant lot. Pasadena Avenue is to the east, and further east is Hillside Elementary School, an apartment building and several residences. Avenue 34 is to the south, and further south are several residences, three unidentified commercial buildings, a parking lot and two additional commercial buildings which are occupied by VGA Apparel and an unidentified screen printing business. West of the site is a railroad right-of-way and further west is an unidentified industrial building and a large parking lot.

4.0 USER PROVIDED INFORMATION

4.1 Title Records

No recorded land title records were provided by the client for review.

4.2 Environmental Liens or Activity and Use Limitations

The client has not provided any information concerning environmental liens or activity and use limitations.

4.3 Specialized Knowledge

No specialized knowledge of *recognized environmental conditions* or *historical recognized environmental conditions* in connection with the subject property has been provided by the client.

4.4 Commonly Known or Reasonably Ascertainable Information

The client has not provided any commonly known or reasonably ascertainable information within the local community about the subject property that is material to *recognized environmental conditions* in connection with the site.

4.5 Valuation Reduction for Environmental Issues

No information has been provided by the client which indicates the subject property is being sold or purchased at a significantly reduced price due to outstanding environmental issues.

4.6 Owner, Property Manager, and Occupant Information

Information provided by the owner, property manager, and/or occupants of the site are included in this report under Section 7.0, Interviews.

4.7 Reasons for Performing Phase I Environmental Site Assessment

The reasons for performing this Phase I Environmental Site Assessment are to satisfy commercial real estate lending requirements or provide due diligence information concerning the historical uses and current condition of the site.

4.8 Other User Provided Information

A Phase I Environmental Site Assessment Report was completed for the 141 Avenue 34 building by Orswell & Kasman, Inc. on March 2, 2000. The report indicates that the 141 Avenue 34

building was occupied by Studio 34, a film production studio and Select Storage, a storage facility. The report states that small quantities of water-based and oil-based paints were used and stored inside the building and the materials appeared to be properly stored and managed. The report stated that the property owner, Eric Ortiz was interviewed, and Mr. Ortiz stated the production companies are responsible for the disposal of any paint wastes which are generated inside the production areas. He was not aware of any chemical spills or contamination problems with the site. The report concluded that the adjacent property to the north (Welch's Uniforms) was identified as a clean-up site that was addressing the contamination problem, and based on the results of the assessment, no further environmental studies were recommended for the site.

A Phase I Environmental Site Assessment Report was completed on the 135 Avenue 34 and 3401 Pasadena Avenue buildings by Orswell & Kasman, Inc. on August 1, 2005. The report indicates that the buildings were occupied by United Finishing and Laminating, a commercial laminating business. The report states that small quantities of lubricating oil, bio-degradable detergents, glues and gear oil were observed to be used and stored inside the building and the materials appeared to be properly stored and managed. The report stated that the business owner, Pat Moller was interviewed, and Mr. Moller stated the business used and stored small quantities of hazardous materials, which were stored in five-gallon containers inside a fenced compound in the storage yard, and he said no hazardous wastes are generated from the business operations. He was not aware of any chemical spills or contamination problems with the site. The report concluded that the adjacent property to the north (Welch's Uniforms) was identified as a clean-up site that was addressing the contamination problem, and based on the results of the assessment, no further environmental studies were recommended for the site.

5.0 RECORDS REVIEW

5.1 Standard Environmental Records Sources

FEDERAL AGENCY RECORDS

United States Environmental Protection Agency (USEPA)
National Priorities List

The National Priorities List (NPL) identifies abandoned or uncontrolled hazardous waste sites which have been identified as possibly representing a long-term threat to the public health or environment. These sites have been identified as being highly contaminated with hazardous substances and represent the USEPA's target enforcement and cleanup efforts. Studies of individual sites are conducted by the USEPA to determine level of contamination, and the sites are then compared and ranked to other sites on the NPL.

A review of the USEPA National Priorities List dated September 2011 indicates there are no proposed, final or delisted sites within one mile of the subject property.

Phase I Environmental Site Assessment Report
135, 141 and 153 West Avenue 34
3401 and 3433 Pasadena Avenue
September 28, 2012

United States Environmental Protection Agency (USEPA)
Federal Superfund Liens List

The USEPA maintains a list of Superfund Lien sites that have been issued on properties throughout the United States. These sites have been remediated through the expenditures of Superfund monies; the purpose of the lien is to prevent the property owner from gaining a financial benefit from the federal government's cleanup and restoration activities.

A review of the July 2011 Federal Superfund List revealed there are no Superfund Liens on or adjacent to the site.

United States Environmental Protection Agency (USEPA)
Comprehensive Environmental Response, Compensation
and Liability Information System (CERCLIS)

The USEPA has developed a database known as CERCLIS which contains information on potential hazardous waste sites located throughout the United States. There are over 33,000 sites on the CERCLIS inventory. All sites are subjected to a preliminary assessment and thereafter are either placed on the National Priority List (NPL) or are placed in a category for those sites requiring no further Federal Superfund action.

A review of the September 2011 CERCLIS report indicates there are three CERCLIS sites within a ½ mile radius of the subject property:

Kennington Ltd. (ITT Cannon) (#1 on map)
3209 Humboldt Street
Los Angeles, CA 90031

This site investigation was opened in February 1994. According to the records, a preliminary assessment was completed in August 2001, and a site reassessment was completed in May 2006. No further remedial action has been reported for this site.

NI West Incorporated (#2 on map)
3011 Humboldt Street
Los Angeles, CA 90031

This site investigation was opened in January 1993. According to the records, a combined preliminary assessment and site assessment was completed in September 2005. No further remedial action has been reported for this site.

Jaybee Ajax Manufacturing (#3 on map)
301 West Avenue 26
Los Angeles, CA 90031

This site investigation was opened in March 2000. According to the records, a preliminary assessment was started in October 2002 and in July 2007. No further remedial action has been reported for this site.

There is one listed "No Further Required Action Planned" (NFRAP) site identified within a ½ mile radius:

Baron Manufacturing (#4 on map)
241 Avenue 26
Los Angeles, CA 90031

This site investigation was opened in June 1981, and a preliminary assessment was completed in September 1984. The investigation concluded that the facility does not qualify for the NPL and no further required actions are planned for this site.

United States Environmental Protection Agency (USEPA)
Resource Conservation and Recovery Act (RCRA)
Treatment, Storage or Disposal Facilities (TSDF)

The USEPA maintains a list of facilities which have been authorized to receive hazardous waste. These facilities have permits to treat, store, or dispose of the waste, as determined by the RCRA regulations. In addition, the USEPA publishes a list of those facilities who are subject to a corrective action, based on the facilities' waste handling and storage procedures. The facilities which are subject to a corrective action are identified as CORRACTS sites.

A review of the March 2011 RCRA TSDF list determined there are no known CORRACTS facilities within a one mile radius of the subject property. In addition, there are no non-CORRACTS TSD facilities listed within a ½ mile radius.

United States Environmental Protection Agency (USEPA)
Resource Conservation and Recovery Act (RCRA)
Hazardous Waste Generators

The USEPA maintains a list of facilities which are identified as generators of large and small quantities of hazardous waste. These facilities have permits to generate, store and dispose of the waste, as determined by the RCRA regulations.

A review of the March 2011 RCRA Hazardous Waste Generators list determined the subject property (American Caster Corporation, 141 West Avenue 34; Bad Teacher Construction

Warehouse, 3433 Pasadena Avenue) is identified as a small quantity hazardous waste generator. In addition, there are records of a large quantity hazardous waste generator identified on the adjacent property to the north (former Welch's Uniform site, 3505 Pasadena Avenue), and a small quantity hazardous waste generator to the east (Los Angeles Unified School District Hillside Elementary, 120 East Avenue 35),

United States Environmental Protection Agency (USEPA)
Institutional Control / Engineering Control Registries

The USEPA maintains a list of institutional and engineering controls for the purpose of tracking sites that may contain residual contamination or have activity and use limitations. Engineering controls are engineering measures designed to minimize the potential for human exposure to contamination by either limiting direct contact with contaminated areas or controlling migration of contaminants. Institutional controls are non-engineering controls used to restrict land use or land access in order to protect people and the environment from exposure to hazardous substances remaining at the site or facility.

A review of the September 2006 USEPA Institutional Control / Engineering Control Registry did not identify the subject property as having institutional or engineering controls.

United States Environmental Protection Agency (USEPA)
Office of Emergency and Remedial Response
Emergency Response Notification System (ERNS)

The USEPA maintains a list of locations which have reported a release of oil or hazardous substances to the federal government. Most of the data in this system is based on information that was received during the initial notification.

A review of the ERNS list for 1999 determined there are no reported incidents on the subject property.

United States Department of Homeland Security
United States Coast Guard
National Response Center (NRC)

The NRC is the national point of contact for reporting all oil, chemical, radiological, biological and etiological discharges into the environment anywhere in the United States and its territories. In addition to gathering and distributing spill data for Federal On-Scene Coordinators and serving as the communications and operations center for the National Response Team, the NRC maintains agreements with a variety of federal entities to make additional notifications regarding incidents meeting established trigger criteria.

Phase I Environmental Site Assessment Report
135, 141 and 153 West Avenue 34
3401 and 3433 Pasadena Avenue
September 28, 2012

A review of the NRC list for 2012 determined there are no reported incidents on the subject property.

STATE AGENCY RECORDS

State of California
Environmental Protection Agency (CAL-EPA)
Department of Toxic Substances Control (DTSC)

CAL-EPA is responsible for the regulation and enforcement of environmental health laws within the state of California, as set forth by the California Health and Safety Code. CAL-EPA is also designated by the USEPA to assist in enforcing federal environmental laws. CAL-EPA regulates companies involved in the generation, transportation, storage and disposal of hazardous substances. CAL-EPA records include the "CalSites" database, which is a listing of 7,800 known active, inactive and abandoned hazardous waste sites. These sites have previously been reported in the Abandoned Site Program Information System (ASPIS), Bond Expenditure Plan (BEP), and Cortese databases. CAL-EPA records also include a listing of the California Integrated Waste Management Board's "Active" and "Closed and Inactive" landfills database.

A review of the January 2012 CAL-EPA records determined there are six listed "CalSite" facilities within one mile of the subject property:

Kennington (#1 on map)
3209 Humboldt Street
Los Angeles, CA 90031

This site was placed in "Active" status in April 1996. According to the records, the soil is contaminated with polychlorinated biphenyls (PCBs), tetrachloroethylene (PCE), and other chemicals. A site investigation or remediation of the site is currently in progress.

Jaybee Site at Lincoln Heights (#3 on map)
301 West Avenue 26
Los Angeles, CA 90031

This site was placed in "Active" status in April 2004. According to the records, the soil is contaminated with naphthalene, toluene, and other chemicals. A site investigation or remediation of the site is currently in progress.

Phase I Environmental Site Assessment Report
135, 141 and 153 West Avenue 34
3401 and 3433 Pasadena Avenue
September 28, 2012

Former Welch's Uniform Facility (#5 on map)
3505 Pasadena Avenue
Los Angeles, CA 90031

This site was placed in "Active" status in May 2007. According to the records, the soil is contaminated with trichloroethylene (TCE). A site investigation or remediation of the site is currently in progress. According to the records, the site was previously occupied by Welch's Uniform and has been used as a laundry and uniform rental facility over a 70 year period. Environmental studies conducted at the site indicate the soil and groundwater beneath the facility is contaminated with volatile organic compounds including trichloroethene (TCE).

Loreto Street Elementary School Addition (#6 on map)
3408 Arroyo Seco Avenue
Los Angeles, CA 90065

This site was placed in "Inactive - Needs Evaluation" status in September 2006. DTSC has determined that a Preliminary Endangerment Assessment or other evaluation is required.

Victor Industrial Battery (#7 on map)
138 North San Fernando Road
Los Angeles, CA 90031

This site was placed in "Certified Operation and Maintenance – Land Use Restrictions" status in March 1995. According to the records, the soil is potentially contaminated with liquids with PH<=2, acid solution 2>PH with metals, and other chemicals. Properties with Land Use Restrictions have limits on future property uses required by DTSC due to residual levels of contamination or the type of cleanup actions conducted.

National Aircraft Equipment Co. (#8 on map)
275 North Avenue 19
Los Angeles, CA 90031

This site was placed in "Inactive - Needs Evaluation" status in July 2005. DTSC has determined that a Preliminary Endangerment Assessment or other evaluation is required.

There are no active, closed or inactive landfill sites within a ½ mile radius of the subject property.

Phase I Environmental Site Assessment Report
135, 141 and 153 West Avenue 34
3401 and 3433 Pasadena Avenue
September 28, 2012

State of California
Environmental Protection Agency (CAL-EPA)
Department of Toxic Substances Control (DTSC)
Land Use Covenants

CAL-EPA/DTSC utilizes Land Use Covenants (LUCs) to protect the public from unsafe exposures to residual contamination that is left in place after site remediation activities have been completed. The LUC imposes limitations on land use when hazardous materials, wastes, or substances remain on the property at levels which are not suitable for unrestricted use of the land. The LUC includes easements, servitudes, covenants, and restrictions which run with the land and continue into perpetuity unless modified or terminated in accordance with applicable law. All LUCs are signed by the DTSC and the landowner, and recorded in the county where the land is located.

A review of the January 2012 DTSC database records did not identify any deed restrictions on the subject property.

State of California
Water Resources Control Board
Regional Water Quality Control Board (RWQCB)
Land Use Covenants

RWQCB utilizes Land Use Covenants (LUCs) to protect the public from unsafe exposures to residual contamination that is left in place after site remediation activities have been completed. The LUC imposes limitations on land use when hazardous materials, wastes, or substances remain on the property at levels which are not suitable for unrestricted use of the land. The LUC includes easements, servitudes, covenants, and restrictions which run with the land and continue into perpetuity unless modified or terminated in accordance with applicable law. All LUCs are signed by the RWQCB and the landowner, and recorded in the county where the land is located.

A review of the June 2011 RWQCB database records did not identify any deed restrictions on the subject property.

State of California
Water Resources Control Board
Regional Water Quality Control Board (RWQCB)

The RWQCB is responsible for monitoring the quality and flow of groundwater, and they address other potential threats to the groundwater from surface spills and leaks. The RWQCB monitors the contamination problem, the investigation and any remedial action. Their database information includes active and closed Cleanup Program Sites, Land Disposal Sites, Leaking Underground Storage Tank (LUST) Sites, Military Cleanup Sites, Military Privatized Sites,

Military Underground Storage Tank Sites and registered underground storage tank sites (RWQCB sites) within the State of California.

A review of the January 2012 RWQCB records determined the subject property is not listed as a known RWQCB site. According to the records, there is one known open RWQCB LUST site within a ½ mile radius of the subject property:

Chevron Station #9-3707 (#9 on map)
2601 North Figueroa Street
Los Angeles, CA 90065

This site was opened in September 1992. According to the records, the site is identified as an open LUST Cleanup Site that is undergoing a site assessment.

According to the records, there are one active non-LUST RWQCB Cleanup sites adjacent to the subject property:

Former Welch's Uniform Rental Site (#5 on map)
3505 Pasadena Avenue
Los Angeles, CA 90031

This case was first opened in December 1987, and the site is identified as an open Cleanup Program Site that is undergoing verification monitoring. According to the records, the groundwater is contaminated with non-petroleum hydrocarbon. A second case was opened in December 1998. According to the records, the site is identified as an open Cleanup Program Site that is undergoing a site assessment.

There are no records of registered underground storage tanks on the subject property, however, there are historical records of an underground storage tank on the adjacent property to the north (Welch's Uniform Rental Site, 3505 Pasadena Avenue).

5.2 Additional Environmental Record Sources

State of California
Department of Conservation
Division of Mines and Geology (CDMG)

The CDMG conducts studies, publishes maps, and provides information concerning the geological formations throughout the state of California. CDMG research information is combined with information from the United States Geological Survey and the ensuing geologic maps of the state are prepared. These geologic maps also illustrate the approximate locations of known earthquake faults.

A review of the area map published by CDMG indicates the geologic area surrounding the subject property consists of Recent alluvium, which includes alluvial fan, flood-plain, and streambed deposits. The client may wish to refer to the enclosed geologic map.

State of California
Department of Oil
Gas and Geothermal Resources (DOGGR)

The DOGGR regulates the drilling, operation and abandonment of gas and oil wells throughout the state of California. If an active, idle or abandoned well is located on or adjacent to a proposed construction site, DOGGR requires a site plan review prior to issuing a building permit. Abandoned oil wells must meet standards established in 1984.

A review of the area map published by DOGGR indicates there are no producing, idle or abandoned oil wells on or adjacent to the subject property. The client may wish to review the enclosed map.

South Coast Air Quality
Management District (AQMD)

The AQMD is responsible for the development and enforcement of regulations concerning air emissions and airborne hazards from stationary sources in the South Coast Air Basin. AQMD maintains a "Hot Spot" list of facilities whose air emissions pose as a risk to the surrounding community.

A review of the AQMD records determined there are no "Hot Spot" facilities on or adjacent to the subject property.

Los Angeles County
Department of Public Works
Waste Management Division (DPW/WMD)

DPW/WMD maintains maps showing the locations of active, inactive or future solid waste landfill sites in Los Angeles County.

A review of DPW's major waste systems map determined there are two landfill sites within a ½ mile radius of the subject property:

Los Angeles City (Lacy Street) (#10 on map)
400 Avenue 26
Los Angeles, CA 90031

According to the records, this site is listed as an inactive, Class II (municipal waste) landfill.

Phase I Environmental Site Assessment Report
135, 141 and 153 West Avenue 34
3401 and 3433 Pasadena Avenue
September 28, 2012

Unnamed Site (#11 on map)
Avenue 26 and Figueroa Street
Los Angeles, CA 90031

According to the records, this site is listed as an inactive, Class II (municipal waste) landfill.

Los Angeles County
Department of Public Works
Hydraulic/Water Conservation Division (DPW/HWC)

DPW/HWC maintains contour maps and data of the groundwater levels in the Los Angeles County area. The map shows the depth to the aquifer, as well as the approximate flow direction.

A review of this data revealed the site is located at an elevation of approximately 380 feet above sea level, and the closest well is located about ½ mile northwest of the site, at Cypress Avenue and Huron Street. The elevation of the well is 366 feet above sea level, and the groundwater levels are 327 feet above sea level, or 39 feet below the ground surface. Based on the topography of the area, the groundwater flow is expected to be to the west, although this cannot be confirmed due to lack of nearby wells.

Los Angeles County
Fire Department (LACOFD)
Health Hazardous Materials Division

LACOFD maintains inspection and inventory records of companies involved in the storage and use of hazardous materials, petrochemicals, or hazardous waste. LACOFD attempts to maintain a current record of the types of hazardous substances that are utilized or stored at a particular site, and conducts periodic inspections for safety and compliance. In addition, LACOFD maintains records concerning hazardous material sites in Los Angeles County, which are reported to LACOFD by various regulatory agencies. Upon receiving the report, LACOFD monitors the cleanup process on the contaminated site.

According to the LACOFD files, there are no records of hazardous material handlers or hazardous waste generators for the subject or adjacent properties. A review of the Active Mitigation Complaint Control Logs determined there are no listed sites on or adjacent to the subject property.

City of Los Angeles
Fire Department (LAFD)

LAFD maintains inspection and inventory records of companies involved in the storage and use of hazardous materials or petrochemicals. LAFD attempts to maintain a current record of the types of materials that are utilized at a particular site, and conducts periodic inspections for

safety and compliance. LAFD also maintains records on underground storage tanks, issues installation and removal permits, and monitors the contamination cleanup process.

A review of the LAFD files determined there are no records of underground storage tanks or hazardous materials inventories for the subject property.

A review of the LAFD files for 3505 Pasadena Avenue, which is the adjacent property to the north, revealed the site was previously occupied by Welch's Uniform. In 1987, Welch's Uniform applied for a permit to remove a 2,000-gallon underground diesel fuel tank. Soil sampling beneath the tank revealed significant Total Petroleum Hydrocarbon as gasoline (TPH-g) contamination (8,600 ppm). The groundwater beneath the site was determined to be about 35 feet below the ground surface, and the groundwater flows away from the subject property in a west-northwest direction. In February 1988, Welch's Uniform applied for a permit to abandon five underground storage tanks in-place, and in December 1988, Welch's Uniform applied for a permit to remove five additional underground storage tanks. In May 2004, Welch's Uniform applied for a permit to remove one additional 1,000-gallon underground storage tank. Soil sampling beneath the tank did not detect any contamination problems, and on October 26, 2004, the DPW/UGT issued a no further action letter for the closure of the 1,000-gallon underground tank.

5.3 Physical Setting Sources

A United States Geological Survey (USGS) 7.5 Minute Topographical map of the subject property and surrounding area is included in the appendices of the report. The map shows the locations of the identified offsite environmental risks or threats described in the report.

5.4 Historical Use Information on the Property

City of Los Angeles
Building Department

A review of the building records for the subject property located the following records:

Date	Activity	Owner
	135 Avenue 34	
01/23	Reroof building	East/Northeast Economic Dev. Corp.
	137 Avenue 34	
01/23	Move residence from 2639 Lacy Bel Avenue	Charles Mattingly
04/61	Demolish dwelling	Cannon Electric Co.

Phase I Environmental Site Assessment Report
135, 141 and 153 West Avenue 34
3401 and 3433 Pasadena Avenue
September 28, 2012

Date	Activity	Owner
	137½ Avenue 34	
01/23	Move residence from 2641 Lacy Bel Avenue	Charles Mattingly
04/61	Demolish dwelling	Cannon Electric Co.
	139 Avenue 34	
01/23	Move residence from 2643 Lacy Bel Avenue	Charles Mattingly
04/61	Demolish dwelling	Cannon Electric Co.
	141 Avenue 34	
07/16	Add two rooms to residence	Chas Fishback
07/16	Construct garage	Chas Fishback
02/28	Add two bedrooms to house	Felipe Villarreal
07/53	Construct garage	Joseph Gomez
08/56	Demolish building	Teal House Wreckers
08/74	Demolish storage building	East/Northeast Economic Dev. Corp.
	141-149 Avenue 34	
09/56	Construct parking lot	Cannon Electric Co.
04/77	Grade for building site	Los Angeles Economic Dev. Corp.
04/77	Encroach into 169 Ave. 34 & 3505 Pasadena Ave.	Los Angeles Economic Dev. Corp.
07/77	Construct foundation only for factory	Los Angeles Economic Dev. Corp.
08/77	Construct light manufacturing building	Los Angeles Economic Dev. Corp.
11/77	Add office partitions	Los Angeles Economic Dev. Corp.
12/77	Add storage tank for plastic pellets	Los Angeles Growing Corp.
	143 Avenue 34	
08/06	Construct dwelling	F.H. Small
08/56	Demolish building	Teal House Wreckers
08/74	Demolish storage building	East/Northeast Economic Dev. Corp.
	145 Avenue 34	
08/06	Construct dwelling	F.H. Small
08/56	Demolish building	Teal House Wreckers
08/74	Demolish storage building	East/Northeast Economic Dev. Corp.
	147 Avenue 34	
08/06	Construct dwelling	F.H. Small
08/56	Demolish building	Teal House Wreckers
08/74	Demolish storage building	East/Northeast Economic Dev. Corp.

Phase I Environmental Site Assessment Report
135, 141 and 153 West Avenue 34

September 28, 2012

Date	Activity	Owner
	149 Avenue 34	
08/06	Construct dwelling	F.H. Small
08/56	Demolish building	Teal House Wreckers
08/74	Demolish storage building	East/Northeast Economic Dev. Corp.
	151 Avenue 34	
08/74	Demolish storage building	East/Northeast Economic Dev. Corp.
	153 Avenue 34	
10/29	Construct factory	Frank Mark
08/05	Alter roof on dwelling	George Harris
03/66	Parapet corrections	M. Guillermo
12/00	Full compliance with division 88	Guillermo
	3407 Pasadena Avenue	
4/25	Construct private garage	John Murphy
--/45	Move building to 1037 North Avenue 63	Anne Bremer
06/45	Move garage to 123 West Avenue 34	Cubbison Bakery
08/46	Construct baking supply storage building	Cubbison Bakery
	3409 Pasadena Avenue	
08/12	Construct shed	John Murphy
02/23	Addition to residence	John Murphy
11/41	Add concrete floor for rat proofing	Cubbison Cracker Co.
	3411 Pasadena Avenue	
12/10	Construct shed	John Murphy
09/11	Construct shed	John Murphy
08/14	Rebuild porch on residence	John Murphy
09/36	Construct truck shelter	Sophie Cubbison
12/36	Construct storage building	Sophie Cubbison
09/40	Move residence to 9815 Telfair Avenue	L. Simon
04/54	Reroof shed and loading dock with metal roof	Cubbison's Bakery
	3413 Pasadena Avenue	
06/41	Add 30' x 96' to bakery	Cubbison Cracker Co.
	3415 Pasadena Avenue	
07/87	Reroof building	Illig Construction Co.
	3415-3419 Pasadena Avenue	
07/65	Parapet correction	Crocker Citizen Bank Trust Dept.
03/87	Full compliance with Division 88	Illig Investment Co.

Phase I Environmental Site Assessment Report
135, 141 and 153 West Avenue 34
3401 and 3433 Pasadena Avenue
September 28, 2012

Date	Activity	Owner
	3419 Pasadena Avenue	
09/25	Addition to bakery	Cubbison Bakery
09/25	Demolish old building	Cubbison Bakery
11/25	Construct private garage	Cubbison Bakery
06/28	Enlarge building	C.H. Cubbison
06/28	Remove brick and wood building	C.H. Cubbison
08/28	Add mezzanine	C.H. Cubbison
03/47	Add mezzanine	Cubbison Cracker Co.
04/55	Add toilets	Cubbison Cracker Co.
07/56	Interior partitions	Canon Electric Co., Lessee
	3421 Pasadena Avenue	
01/08	Construct residence	Mary Lawson
05/14	Add gas outlets	May Lawson
01/17	Add room to rear of house	James Smith
10/61	Demolish residence	Cannon Electric Co.
	3421-3423 Pasadena Avenue	
10/12	Repair residence	Jerry Hickey
	3423 Pasadena Avenue	
10/12	Construct residence	Mary Lawson
01/24	Construct real estate office	Catherine L. Condra
10/61	Demolish residence	Cannon Electric Co.
	3425 Pasadena Avenue	
07/51	Demolish residence	Stran Steel Products Co.
07/67	Prepare building site	Smith Mailer Co.
07/67	Construct industrial building	Smith Mailer Co.
08/67	Remove and re-compact loose fill soil	Smith Mailer Co.
08/67	Add 20'x85' to manufactured building	Smith Mailer Co.
	3429 Pasadena Avenue	
11/12	Add chimney to residence	Mrs. Zonberg
07/51	Demolish residence	Stran Steel Co.
	3431 Pasadena Avenue	
06/11	Add 6' to back porch	A. Fornberg
12/12	Build outside chimney	A. Fornberg
07/51	Demolish residence	Stran Steel Co.

Phase I Environmental Site Assessment Report
135, 141 and 153 West Avenue 34
3401 and 3433 Pasadena Avenue
September 28, 2012

Date	Activity	Owner
	3433 Pasadena Avenue	
01/74	Add 26'x96' metal carport	Smith Mailer Co.
	3437 Pasadena Avenue	
04/06	Construct cow barn	Mrs. Sherman Smith
01/37	Construct private garage	William G. Short
09/38	General repairs	H.H. Moser
08/56	Demolish residence	Teal House Wreckers

No other building or demolition permits were on file for the subject property.

County of Los Angeles
Assessor's Office

A review of the Assessor's records for the subject property determined that the light industrial building located at 3401 Pasadena Avenue was constructed in 1948. In addition, the light industrial building located at 3433 Pasadena Avenue was constructed in 1967, the warehouse located at 135 West Avenue 34 was constructed in the early 1940's, the warehouse located at 141 West Avenue 34 was constructed in 1977, and the commercial building located at 153 West Avenue 34 was constructed in 1929. The current property owner is identified as ED 1125 LLC.

Historical Aerial Photographs

A review of historical aerial photographs of the subject property determined the following information:

Date of Photo	Description
May 1938	The subject property is occupied by two industrial buildings, several residences and an open storage yard.
July 1948	The subject property is occupied by nine industrial buildings, several residences and an open storage yard.
August 1952	The subject property appears to be about the same as the 1948 photograph.
July 1964	The subject property is occupied by nine industrial buildings, two residences, several vacant lots and parking areas.
October 1972	The subject property is occupied by ten industrial buildings, open storage areas and parking areas.

Date of Photo	Description
October 1980	The subject property is occupied by the five existing industrial building buildings.
August 1989	The subject property appears to be about the same as the 1980 photograph.
May 1994	The subject property is occupied by the five existing industrial buildings.
March 1997	The subject property appears to be about the same as the 1994 photograph.
June 2002	The subject property is occupied by the five existing industrial buildings.
March 2011	The subject property appears to be about the same as the 2002 photograph.

Historic Sanborn Fire Insurance Maps

Sanborn Fire Insurance Maps provide information on commercial and industrial properties, based on risk data gathered for the fire insurance companies. The maps show the number of buildings located on the property, and the type of construction. The maps also describe the various businesses located nearby, and show the locations of tanks, boilers, and other potential hazards.

A review of the Sanborn Fire Insurance Map collections from 1867-1970, located three maps for the subject property:

Date of Map	Description
1906	The subject property is occupied by 16 residences, 10 sheds, two barns and a small bakery.
1920	The subject property is occupied by 21 residences, nine sheds, seven garages, a bakery and portions of the Los Angeles Rock and Gravel Co., which consisted of eight buildings which were used as oil houses, greases houses, a tool house, an office and an auto repair canopy.
1951	The subject property is occupied by 22 residences, eight garages, a bakery and 10 commercial buildings which were used for offices, warehousing, storage and as workshops.

Historic City Directory Search

City Directories provide information on residential, commercial and industrial properties, and list the business name and address. A review of the historic directories provides an overview of the current and previous occupants of the site.

A search of the Haines Criss Cross City Directories, dated 1972-2009, determined the subject property has been previously occupied by Smith Mailer Inc. (1972-1987), GT Price Products (1972), Alta Canada Corp. (1987), American Bearing (1987), Laramada Corp. (1987), Lorac Financial Services (1987), Metal Service Corp. (1987), American Caster Corp. (1987-1992), Ann Mar Inc. (1987), Empire Button Co. (1987), William Pile Printing (1987-1992) and Bob Baker Productions (1992).

A review of the building permit records, historical aerial photographs, Sanborn fire insurance maps, assessor records and historic city directories determined the 153 Avenue 34 building was constructed over 83 years ago and the site was previously occupied by residences. The 141 Avenue building was constructed in 1977, and the site was previously occupied by portions of the Los Angeles Rock and Gravel Co., which included structures used for auto repair and two oil houses. The 141 Avenue 34 building was previously occupied by The Steel Framing and Building Corporation, several light-industrial buildings and several residences. The 135 Avenue 34 building was constructed over 62 years ago and the site was previously occupied by residences. The 3401 Pasadena Avenue was constructed in 1948, and the site was previously occupied by another commercial building and residences. The 3433 Pasadena Avenue building was constructed in 1967 and the site was previously occupied by several residences. The city directory listings indicate the subject property was previously occupied by metal work and printing businesses.

5.5 Historical Use Information on the Adjoining Properties

Historical Aerial Photographs

A review of historical aerial photographs of the adjoining properties determined the following information:

Date of Photo	Description
May 1938	North of the subject property is a large industrial facility with several industrial buildings. To the east is Pasadena Avenue, and further east is a commercial building and several residences. To the south is Avenue 34, and further south is a commercial building and several residences. To the west is a railroad right-of-way, and further west is an industrial facility with several light-industrial buildings.
July 1948	North of the subject property is a large industrial facility with several industrial buildings. To the east is Pasadena Avenue, and further east is a commercial building and several residences. To the south is Avenue 34, and further south is a commercial building and several residences. To the west is a railroad right-of-way, and further west is an industrial facility with several light-industrial buildings.

Phase I Environmental Site Assessment Report
135, 141 and 153 West Avenue 34
3401 and 3433 Pasadena Avenue
September 28, 2012

Date of Photo	Description
August 1952	The surrounding properties appear to be about the same as the 1948 photograph.
July 1964	North of the subject property is a large industrial facility with several industrial buildings. To the east is Pasadena Avenue, and further east is a commercial building and several residences. To the south is Avenue 34, and further south is a commercial building, several residences and a large parking lot. To the west is a railroad right-of-way, and further west is an industrial facility with several light-industrial buildings.
October 1972	North of the subject property is a large industrial facility with several industrial buildings. To the east is Pasadena Avenue, and further east are several commercial buildings and several residences. To the south is Avenue 34, and further south is a commercial building, several residences and a large parking lot. To the west is a railroad right-of-way, and further west is an open storage yard.
October 1980	The surrounding properties appear to be about the same as the 1972 photograph.
August 1989	North of the subject property is a large industrial facility with several industrial buildings. To the east is Pasadena Avenue, and further east are several commercial buildings and several residences. To the south is Avenue 34, and further south are several commercial buildings, several residences and a large parking lot. To the west is a railroad right-of-way, and further west is a vacant lot.
May 1994	North of the subject property is a vacant lot. To the east is Pasadena Avenue, and further east are several commercial buildings and several residences. To the south is Avenue 34, and further south are several commercial buildings, several residences and a large parking lot. To the west is a railroad right-of-way, and further west is a vacant lot.
March 1997	The surrounding properties appear to be about the same as the 1994 photograph.
June 2002	North of the subject property is a vacant lot. To the east is Pasadena Avenue, and further east are several commercial buildings and several residences. To the south is Avenue 34, and further south are several commercial buildings, several residences and a large parking lot. To the west is a railroad right-of-way, and further west is a parking lot.

Date of Photo	Description
March 2011	North of the subject property is a vacant lot. To the east is Pasadena Avenue, and further east are several commercial buildings and several residences. To the south is Avenue 34, and further south are several commercial buildings, several residences and a large parking lot. To the west is a railroad right-of-way, and further west is an industrial building and a parking lot.

Historic Sanborn Fire Insurance Maps

Sanborn Fire Insurance Maps provide information on commercial and industrial properties, based on risk data gathered for the fire insurance companies. The maps show the number of buildings located on the property, and the type of construction. The maps also describe the various businesses located nearby, and show the locations of tanks, boilers, and other potential hazards.

A review of the Sanborn Fire Insurance Map collections from 1867-1970, located three maps for the area surrounding the subject property:

Date of Map	Description
1906	The property to the north is occupied by six residences, a barn and three sheds. Pasadena Avenue is to the east and there is no map coverage available for the property east of Pasadena Avenue. South of the subject property is Avenue 34 and further south are two stores, 12 residences, nine sheds, a barn and a fruit packing building. West of the subject property is a railroad right-of-way and further west is vacant land and the Arroyo Seco wash.
1920	The property to the north is occupied by several residences, garages and sheds, and further north is a large industrial facility which is occupied by Pacific Laundry. Pasadena Avenue is east and further east are several residences, garages and sheds. South of the subject property is Avenue 34 and further south are several residences, garages, sheds and a fuel storage area. West is of the subject property is a railroad right-of-way and further west is vacant land and the Arroyo Seco wash.

Date of Map	Description
1951	The property to the north is occupied by several residences, garages and sheds and further north is a large industrial facility which is occupied by Welch's Uniform and Overall Cleaning Co. A dry-cleaning building is located within the Welch's Facility. Pasadena Avenue is to the east and further east are several residences, garages, sheds and Hillside Elementary School. South of the subject property is Avenue 34 and further south are two stores, several residences, garages, sheds and a scrap metal storage yard. West of the subject property is a railroad right-of-way and further west is a lumber yard which is occupied by Alliance Lumber and Investment Co.

Historic City Directory Search

City Directories provide information on residential, commercial and industrial properties, and list the business name and address. A review of the historic directories provides an overview of the current and previous occupants of the adjoining properties.

A search of the Haines Criss Cross City Directories, dated 1972-2009, found no listings for the adjacent property to the north. The property east of Pasadena Avenue has been previously occupied by Hillside Elementary School (1972-2009) and residences (1972-2009). The property south of Avenue 34 has been occupied by residences (1972-2009), Ishizaki Studios (1987), Argus Tool Manufacturing (1987), Smart Saver (1987-1992), Pasadena Avenue Market (1987-1992), AAA Fashions (1992), Tere's Fashions (1992-2009), Allied Die Cutting (1992), Three Star Refrigeration (1992), ACW Apparel Inc. (2009) and Water Land Inc. (2009). No listings were found for the adjacent property to the west

A review of historical aerial photographs, Sanborn fire insurance maps and historic city directories determined the adjacent property to the north has been vacant land for over 18 years and the site was previously occupied by Welch's Uniform and Overall Cleaning Co. The apartment complex east of Pasadena Avenue was constructed in the early 1970's and the site was previously occupied by residences. The Hillside Elementary School and residences east of Pasadena Avenue were constructed over 74 years ago and the school property was previously occupied by residences. The commercial buildings south of Avenue 34 were constructed over 40 years ago and the sites were previously occupied by residences. The residences south of Avenue 34 were constructed over 74 years ago. The industrial building west of the railroad right-of-way was constructed within the past ten years and the site was previously occupied by a large parking lot and open storage yard. Prior to the development of the storage yard and parking lot, the property west of the railroad right-of-way was occupied by Alliance Lumber and Investment Co. The city directory listings identified the surrounding properties have been occupied by manufacturing and metal work businesses.

6.0 SITE RECONNAISSANCE

6.1 Methodology and Limiting Conditions

The site reconnaissance consisted of a walk through the entire property, and visually observing the structures, storage areas, and parking lots. No inspection was conducted under floors, above ceilings, or behind walls.

6.2 General Site Setting

The site consists of five industrial buildings with paved parking and storage areas, located in a mixed industrial, commercial and residential area of Los Angeles (see site plan).

6.3 Subject Property Observations

On September 19, 2012, an inspection of the subject property and surrounding area was conducted by Environmental Assessor James Robert Orswell. The subject property is occupied by five single-story industrial buildings, described as follows:

The 3401 Pasadena Avenue building consists of a single-story wood-frame and brick light-industrial structure (see photos #1 and #2) which is occupied by the Water Wellness Center, a business office, and Warner Brothers Studios, a warehouse television props. The building is divided into an office area and a warehouse area. Inside, the building has an open wood beam and an exposed concrete floor (see photos #3 and #4). A storage mezzanine is located above the offices and is accessed via a stairwell. There is no elevator in the building. The heating, ventilation and air conditioning (HVAC) system for the building appears to be mounted on the roof.

The 3433 Pasadena Avenue building consists of a single-story wood-frame and concrete-block light-industrial structure (see photo # 5) which is occupied by the Warner Brothers Studios prop department. The building is divided into an office area and a production area. Inside, the office ceilings are covered with suspended-grid acoustic tile and the floors are covered with vinyl tile (see photo #6). The production area has open wood beam ceilings and the floors are exposed concrete. Large quantities of water-based paint are stored and used inside the production area (see photo #7). No significant spills or leaks were observed on the production area floors. A sign on the exterior of the building indicates the building has previously been occupied by a die and metal stamping business. The HVAC system for the building appears to be mounted on the roof.

The 135 West Avenue 34 building consists of a single-story corrugated steel warehouse (see photo #8). A sign on the exterior of the building indicates the structure is occupied by the Submission Factory, a gym. The business was closed and the interior of the building was not available for inspection. No HVAC system was observed for the building.

The 141 West Avenue 34 building consists of a single-story concrete tilt-up, wood frame and brick warehouse (see photo # 9) which is occupied by Ortiz Bros. Moving and Storage. The building is divided into an office area and a warehouse area. Inside, the office ceilings are covered with suspended-grid acoustic tile and the floors are covered with vinyl tile or carpeting (see photo #10). The warehouse has an open wood beam ceiling and an exposed concrete floor (see photos #11 and #12). The warehouse area is used to store customers' personal belongings, and no hazardous materials were observed to be stored inside the warehouse area. There are several loading docks on the east side of the building. The HVAC system for the building appears to be mounted on the roof and side of the building.

The 153 West Avenue 34 building consists of a single-story brick commercial structure (see photo #13). The building was locked and access to the interior of the building was not available for inspection. No HVAC system was observed for the building.

Outside, between the buildings are paved parking and open storage areas (see photo #14). On the west side of the subject property, there is another large paved open storage area (see photo #15). Portions of the parking and storage areas were inaccessible for inspection due to the cluttered storage of large crates, trucks, miscellaneous objects and cars (see photo #16). Several roll-off storage containers were stored at the site, and access to the containers was unavailable at the time of inspection. Commercial trash bins are located in the paved parking and storage areas (see photo #17), and no signs of improper solid waste disposal were observed. The electrical power in the area is supplied by overhead utility lines which bisect the subject property (see photo #18) and also runs along Avenue 34. A ground-mounted electrical transformer is located on the west side of the 141 Avenue 34 building, and no signs were observed on the transformer indicating the presence of polychlorinated biphenyls (PCBs). No signs of illegal dumping or distressed vegetation were observed on the property. There was no evidence of underground storage tanks, septic tanks or monitoring wells on the property, and there was no indication of obvious contamination on the site.

6.4 Adjoining Property Observations

Northern Border

North of the subject property is a vacant lot (see photo #19). The property is identified by the State of California Environmental Protection Agency (CAL-EPA) Department of Toxic Substances Control (DTSC) as an active hazardous waste site and by the State of California Regional Water Quality Control Board (RWQCB) as having two open RWQCB Cleanup Program sites, and it appears that the property is in the process of undergoing remediation.

Eastern Border

East of the subject property is Pasadena Avenue, and further east is Hillside Elementary School, an apartment complex (see photo #20) and several residences. There were no visible signs of spills or contamination on the adjacent properties.

Southern Border

South of the subject property is Avenue 34. Located at the western terminus of Avenue 34, there were two groundwater monitoring wells (see photo #21). The wells were installed to monitor the groundwater contamination in the area from the former Welch's Uniform facility located further north. South of Avenue 34 are several residences (see photo #22), a parking lot and five commercial buildings which are occupied by VGA Apparel and several other unidentified tenants (see photo #23). There were no visible signs of spills or contamination on the adjacent properties.

Western Border

West of the subject property is a railroad right-of-way, and further west is an unidentified industrial building and a large parking lot (see photo #24). There were no visible signs of spills or contamination on the adjacent properties.

7.0 INTERVIEWS

7.1 Interview with Owner

Mr. Eric Ortiz, the property owner and owner of Ortiz Bros. Moving and Storage, advised he purchased the subject property in 2000, and he has occupied the site since 1993. He stated the buildings have been used for distribution and warehousing purposes. He said his business stores customers' personal items, and no hazardous materials are allowed to be stored inside the 141 Avenue 34 building. Mr. Ortiz advised the site has a closed and abandoned wastewater clarifier located on the west side of the 141 Avenue 34 building. Mr. Ortiz said the 135 Avenue 34 building is occupied by The Submission Factory, a gym and he is unaware of any hazardous materials being stored inside the building. In addition, Mr. Ortiz stated the 153 Avenue 34 building is used for storage of water, and no large quantities of hazardous materials are used or stored in the building. Mr. Ortiz said the property to the north was previously occupied by Welch's Uniform and the State of California has been conducting activities at the site for over a decade. Mr. Ortiz said he is unaware of the two groundwater monitoring wells located near the southwest corner of the site. Mr. Ortiz advised to the best of his knowledge, there are no underground storage tanks, septic tanks or wells on the site, and he is not aware of any other chemical spills or contamination problems.

7.2 Interview with Site Manager

Mr. Ortiz is the property manager (see Section 7.1 - Interview with Owner).

7.3 Interviews with Occupants

The unidentified safety manager for Warner Brothers Studios provided Orswell & Kasman, Inc with a copy of the hazardous materials handler permit for the small quantities of water-based paint stored and used within the 3433 Pasadena Avenue building. The safety manager stated that hazardous wastes in the form of waste paint are generated by the business activities and the wastes are collected by Rinco Environmental Services. The safety manager stated he is unaware of any contamination problems at the 3433 Pasadena Avenue building.

7.4 Interviews with Local Government Officials

No interviews with local government officials were conducted.

7.5 Interview with Others

No interviews with other people were conducted concerning the subject property.

8.0 FINDINGS

8.1 Recognized Environmental Conditions

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Standard Practice E 1527-05 on the multi-tenant commercial property located at 135, 141 and 153 West Avenue 34 and 3401 and 3433 Pasadena Avenue, Los Angeles, California, the Property. Any exceptions to, or deletions from the Standard Practice are described in Section 2.4 of this report. This assessment has revealed no evidence of *recognized environmental conditions* in connection with the Property, except as follows:

1) The subject property is occupied by multiple tenants. The 3433 Pasadena Avenue building is currently occupied by Warner Brothers Studios, a prop and set design business. The business stores and uses large quantities of water-based paint, and waste paint is generated by the business activities. The hazardous materials and hazardous wastes appear to be properly stored and managed and no significant spills or leaks were observed on the premises; and

2) Eleven offsite locations have been identified as potential risks or threats to the subject property. According to the data, ten of the sites are not located in the near vicinity, and there is no indication that contaminants from these sites have migrated onto the subject property.

The former Welch's Uniform Facility site (#5 on map), 3505 Pasadena Avenue, is located on the adjacent property to the north, and the business is identified by State of California Environmental Protection Agency (CAL-EPA) Department of Toxic Substances Control (DTSC) as an active hazardous waste site. According to the DTSC CalSite database records, the site was previously occupied by Welch's Uniform and the property was used as a laundry and uniform rental facility over a 70 year period. Environmental studies indicate the soil and groundwater beneath the facility is contaminated with volatile organic compounds including trichloroethene (TCE). In addition, the former Welch's Uniform Rental site is identified by the State of California Regional Water Quality Control Board (RWQCB) as having two open RWQCB Cleanup Program sites. The first case was first opened in December 1987. According to the RWQCB records, the groundwater was contaminated with non-petroleum hydrocarbons, and the site is undergoing verification monitoring. The second case was opened in December 1998 and the site is undergoing an assessment. A review of the City of Los Angeles Fire Department (LAFD) records revealed Welch's Uniform applied for a permit to remove a 2,000-gallon underground diesel fuel tank in 1987. Soil sampling beneath the tank revealed significant Total Petroleum Hydrocarbon as gasoline (TPH-g) contamination (8,600 ppm). The groundwater beneath the site was determined to be about 35 feet below the ground surface, and the groundwater flows away from the subject property in a west-northwest direction. In February 1988, Welch's Uniform applied for a permit to abandon five underground storage tanks in-place, and in December 1988, Welch's Uniform applied for a permit to remove five additional underground storage tanks. In May 2004, Welch's Uniform applied for a permit to remove one additional 1,000-gallon underground storage tank. Soil sampling beneath the tank did not detect any contamination problems, and on October 26, 2004, the DPW/UGT issued a no further action letter for the closure of the 1,000-gallon underground tank. An inspection of the property revealed the site is currently a vacant lot, and remedial activities were being conducted on the site.

8.2 Historical Recognized Environmental Conditions

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Standard Practice E 1527-05 on the multi-tenant commercial property located at 135, 141 and 153 West Avenue 34 and 3401 and 3433 Pasadena Avenue, Los Angeles, California, the Property. Any exceptions to, or deletions from the Standard Practice are described in Section 2.4 of this report. This assessment has revealed no evidence of *historical recognized environmental conditions* in connection with the Property.

9.0 OPINION

Should it be determined the groundwater beneath the subject property has in fact been impacted by the Former Welch's Uniform Rental site, it is the policy of the State of California and the United States Environmental Protection Agency not to hold property owners responsible for

costs to clean up contaminated groundwater beneath their property, unless the owners contributed to the problem. There is no indication from a review of the regulatory records and a site inspection that the subject property has had any problems concerning the storage, usage or disposal of hazardous materials, and it appears the former Welch's Uniform Rental site is in the process of addressing the contamination problem.

Based on a review of regulatory and historical records, and interviews with the property owner and the safety manager for Warner Brothers Studios, and a visual inspection of the site and surrounding area, this assessment has found no evidence of *recognized environmental conditions or historical recognized environmental conditions* which are likely to impact the subject property. Although data failure occurred in the historical uses of the Property prior to 1906, it is unlikely the data failure will impact the ability to identify *recognized environmental conditions.*

10.0 CONCLUSIONS

Based on the results of this assessment, no further environmental studies are recommended for the site.

11.0 DEVIATIONS

This report was prepared in conformance to meet or exceed the scope and practice as set forth by the American Society for Testing & Materials (ASTM) Standard Practice E 1527-05, "Standard Practice of Environmental Site Assessments: Phase I Environmental Site Assessment Process." No significant deviations, deletions, or client-imposed constraints were made from this practice.

12.0 ADDITIONAL SERVICES

No additional services including a broader scope of services, liability/risk evaluations, or remedial activities are included in this report.

13.0 REFERENCES

All government records and maps were obtained directly from the regulatory agencies identified in this report. The fire insurance map information was obtained from Digital Sanborn Maps, 1867-1970, Ann Arbor, Michigan. The aerial photographs were obtained from BBL Consultants, Solana Beach, California; the United States Geological Survey, Menlo Park, California; or the United States Department of Agriculture, Salt Lake City, Utah. The city directory search information was obtained from Sherman Library and Gardens, Corona Del Mar, California.

14.0 STATEMENT OF ENVIRONMENTAL PROFESSIONALS

We declare that, to the best of our professional knowledge and belief, we meet the definition of *Environmental Professionals* as defined in §312.10 of 40 CFR 312. We have the specific

qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquires in conformance with the standards and practices set forth in 40 CFR Part 312. The individual qualifications of these professionals are included in the appendices of this report.

15.0 APPENDICES

15.1 Site and Vicinity Map

A United States Geological Survey (USGS) 7.5 Minute Topographical map of the subject property and surrounding area is included in the appendices of the report. The map shows the locations of the identified offsite environmental risks or threats described in the report.

15.2 Site Plan

A site plan of the subject property is included in the appendices of the report. The site plan shows the general location of the structures on the property, and other items of interest which were identified in the description of the site.

15.3 Site and Vicinity Photographs

Photographs of the subject property and surrounding neighborhood are attached to this report. These photographs were taken at the time of the site inspection.

15.4 Historical Research Documentation

Building permit records were obtained directly from the regulatory agency identified in this report. The aerial photographs summarized in this report were obtained from BBL Consultants, Solana Beach, California; the United States Geological Survey, Menlo Park, California; or the United States Department of Agriculture, Salt Lake City, Utah. The Sanborn Fire Insurance Map information was obtained from Digital Sanborn Maps, 1867-1970, Ann Arbor, Michigan. The city directory search information was obtained from Sherman Library and Gardens, Corona Del Mar, California.

15.5 Regulatory Records Documentation

All government records were obtained directly from the regulatory agencies identified in this report.

15.6 Interview and Research Documentation

All of the field notes and supporting information obtained from interviews and research concerning the subject property are maintained in the report file at the offices of Orswell & Kasman, Inc.

15.7 Special Contractual Conditions between User and Environmental Professional

No special contractual conditions or agreements exist between the client and any of the employees of Orswell & Kasman, Inc., and Orswell & Kasman, Inc. does not have any financial interest in the subject property.

15.8 Qualifications of the Environmental Professionals

Attached to this report are the résumés of Marty Kasman and James Orswell, who conducted the site inspection, the records review, and prepared the report.

APPENDIX

MARTY KASMAN

Marty Kasman, a principal of the company, is a Registered Environmental Health Specialist (#4927) and a Registered Environmental Assessor (#4022) with the State of California. He is also a USEPA/AHERA accredited Asbestos Management Planner and California Certified Asbestos Consultant (#99-2553). He received his Bachelor of Science and Master of Science degrees in Environmental and Occupational Health Science from California State University at Northridge. He also has a Certificate in Hazardous Materials Management from the University of California at Los Angeles (UCLA). In addition, Mr. Kasman also received specialized hazardous materials training at the Federal Law Enforcement Training Center in Georgia.

Mr. Kasman served fourteen years with the Los Angeles County Fire Department, as a Supervising Hazardous Material Specialist and Deputy Health Officer. For a majority of his Fire Department career, Mr. Kasman worked in the Criminal Investigations Unit, and he was assigned to the Los Angeles County District Attorney's Environmental crimes Task Force. His responsibilities included field and laboratory work in hazardous materials management, conducting inspections of industrial plant operations, and monitoring cleanup activities. In addition, Mr. Kasman has investigated hundreds of abandoned waste sites and other cases involving the illegal dumping of hazardous materials throughout Los Angeles County.

Mr. Kasman currently serves as an environmental consultant to industry management in the proper handling of hazardous materials and waste. He has taught courses in hazardous materials regulatory compliance and waste management at UCLA, California State University at Northridge, and the California Specialized Training Institute at San Luis Obispo. Mr. Kasman served on the State of California Local Unified Program Implementation Committee (LUPIC) to develop a standardized hazardous materials contingency plan.

Mr. Kasman's extensive education, training, and experience in hazardous materials management make him fully qualified to conduct environmental assessments and investigations. He is the former president, director, and a life-time member of the California Hazardous Materials Investigators Association. He is also a former director of the Local Environmental Enforcement Officers Association, and the Los Angeles County Association of Environmental Health Specialists. He is a member of California and National Environmental Health Associations, and the National Association of Government Guarantee Lenders.

JAMES ROBERT ORSWELL

James R. Orswell is a Registered Environmental Assessor with the State of California. Since graduating from Utah Valley University, he has participated in thousands of Phase I Environmental Site Assessment reports, Transaction Screen reports, soil vapor surveys, methane assessments, historical use reports and Phase II projects on commercial, industrial, and residential properties.

Mr. Orswell is an expert document writer, data collector and is an experienced mortgage loan officer. Since 2002, Mr. Orswell has worked in the environmental assessment and consulting field, researching and conducting numerous environmental investigations throughout the United States. He has worked directly with major lending institutions, real estate professionals, lawyers, city planners, and private clients. Mr. Orswell has worked along with the Department of Defense in plotting Former Used Defense Sites (FUDS) and is a Certified Mold Inspector. He has managed multiple underground storage tank removals, installation of soil vapor extraction systems and has overseen several subsurface investigations in Southern California.

He is also an Eagle Scout, volunteer with many non-profit organizations, and an avid outdoors enthusiast. Mr. Orswell's education, training, and experience provide him with the qualifications to conduct environmental assessments and investigations.

CONTOUR INTERVAL 200 FEET
WITH SUPPLEMENTARY CONTOURS AT 100 FOOT INTERVALS

GEOLOGIC MAP OF CALIFORNIA

EXPLANATION

SEDIMENTARY AND METASEDIMENTARY ROCKS

CENOZOIC

QUATERNARY

Recent

- Qs — Dune sand
- Qal — Alluvium
- Qsc — Stream channel deposits
- Qf — Fan deposits
- Qb — Basin deposits

GREAT VALLEY

- Qsl — Salt deposits
- Ql — Quaternary lake deposits
- Qg — Glacial deposits

Pleistocene

- Qt — Quaternary nonmarine terrace deposits
- Qm — Pleistocene marine and marine terrace deposits
- Qc — Pleistocene nonmarine
- QP — Plio-Pleistocene nonmarine

TERTIARY

Pliocene

- Pc — Undivided Pliocene nonmarine
- Puc — Upper Pliocene nonmarine
- Pu — Upper Pliocene marine
- Pmlc — Middle and/or lower Pliocene nonmarine
- Pml — Middle and/or lower Pliocene marine

Miocene

- Mc — Undivided Miocene nonmarine
- Muc — Upper Miocene nonmarine
- Mu — Upper Miocene marine
- Mmc — Middle Miocene nonmarine
- Mm — Middle Miocene marine
- Ml — Lower Miocene marine

Oligocene

- Φc — Oligocene nonmarine
- Φ — Oligocene marine

Eocene

- Ec — Eocene nonmarine
- E — Eocene marine

Paleocene

- Epc — Paleocene nonmarine
- Ep — Paleocene marine

IGNEOUS AND META-IGNEOUS ROCKS

- Qrv — Recent volcanic: Q_{rv}^{r} —rhyolite; Q_{rv}^{a} —andesite; Q_{rv}^{b} —basalt; Q_{rv}^{p} —pyroclastic rocks
- Qpv — Pleistocene volcanic: Q_{pv}^{r} —rhyolite; Q_{pv}^{a}—andesite; Q_{pv}^{b} —basalt; Q_{pv}^{p} —pyroclastic rocks
- Quaternary and/or Pliocene cinder cones
- Pv — Pliocene volcanic: P_{v}^{r} —rhyolite; P_{v}^{a}—andesite; P_{v}^{b} —basalt; P_{v}^{p} —pyroclastic rocks
- Mv — Miocene volcanic: M_{v}^{r} —rhyolite; M_{v}^{a} —andesite; M_{v}^{b} —basalt; M_{v}^{p} —pyroclastic rocks
- Φv — Oligocene volcanic: Φ_{v}^{r}—rhyolite; Φ_{v}^{a} —andesite; Φ_{v}^{b}—basalt; Φ_{v}^{p}—pyroclastic rocks
- Ev — Eocene volcanic: E_{v}^{r} —rhyolite; E_{v}^{a}—andesite; E_{v}^{b} —basalt; E_{v}^{p} —pyroclastic rocks

Los Angeles, CA 90071

PREPARED FOR:
Mr. Andy Meyers
Shangri-La Industries

PROJECT NUMBER:
T15024

PREPARED BY:

James Robert Orswell
ASTM Environmental Professional

REVIEWED BY:

Martin A. Kasman
Project Manager

This report was prepared in conformance to meet or exceed the scope and limitations as set forth by the American Society for Testing & Materials (ASTM) Standard Practice E 1528-06. It is for the express use of the client, and its contents are considered to be privileged and confidential. Acceptance of this report constitutes an agreement by the client to assume full liability for information contained herein. This report is for the sole use and interpretation of the client, and it is not to be reproduced or distributed to outside parties. The information in this report is furnished in good faith and was obtained from sources and databases considered to be reliable; however, the accuracy of the information cannot be guaranteed. We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professionals as defined in §312.10 of 40 CFR 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquires in conformance with the standards and practices set forth in 40 CFR Part 312.

This report is limited to an inspection of the property and the surrounding area, an interview with the current owner or occupant of the building, and a review of records and documents published by federal, state and local government regulatory agencies. The purpose of the environmental site assessment transaction screen is to identify *potential environmental concerns*.

SITE INSPECTION

Site and Vicinity Characteristics

The site consists of five industrial buildings with paved parking and storage areas, located in a mixed industrial, commercial and residential area of Los Angeles (Lincoln Heights District), California.

Descriptions of Structures and
Other Site Improvements

On April 17, 2015, an inspection of the subject property and surrounding area was conducted by ASTM Environmental Professional James Robert Orswell. The subject property consists of five separate, single-story industrial buildings, which are described as follows:

3401 Pasadena Avenue

On the east side of the subject property is a single-story wood-frame, masonry brick and concrete-block industrial building (see photos #1 and #2) which is currently occupied by Loot Crate, an online computer gaming service. The building is divided into an office area and a work area. Inside, the building has an open wood beam ceiling and an exposed concrete floor (see photos #3 and #4). A storage mezzanine is located above the offices (see photo #5) and is accessed via a stairwell. There is no elevator in the building. The heating, ventilation and air conditioning (HVAC) system for the building appears to be mounted on the roof.

In the southeast corner of the site is a single-story corrugated steel industrial building (see photos #6 and #7) which is currently occupied by The Submission Factory, a gym. The business was closed and the interior of the building was not available for inspection. No HVAC system was observed for the building.

3433 Pasadena Avenue

In the northeast corner of the subject property is a single-story, steel and wood-frame with masonry brick and concrete-block industrial building (see photos #8 and #9) which is also occupied by Loot Crate. The building is divided into an office area and a work area. Inside, the office ceilings are covered with suspended-grid acoustic tile and the floors are covered with vinyl tile. The work area has an open steel and wood beam ceiling and an exposed concrete floor which is partially covered with carpeting (see photo #10). A sign on the exterior of the building indicates the building was previously occupied by a die and metal stamping business. The HVAC system for the building appears to be mounted on the roof.

135 and 141 West Avenue 34

In the northwest corner of the site is a concrete tilt-up industrial building (see photos #11, #12 and #13) which is primarily occupied by Ortiz Bros. Moving and Storage & Atlas Van Lines, a moving business. The building is divided into two separate units, and each unit is divided into an office area and a warehouse area. Inside, the office ceilings are covered with suspended-grid acoustic tile and the floors are covered with vinyl tile or carpeting (see photo #14). The warehouses have open wood beam ceilings and exposed concrete floors (see photos #15 and #16). The 141 Avenue 34 warehouse area is used to store customers' personal belongings, and no hazardous materials are stored inside the warehouse area. There are several loading docks on the east side of the building. The 135 Avenue 34 unit is currently vacant and unoccupied (see photos #17, #18 and #19), and the unit was most recently occupied by Ortiz Bros. Moving & Storage. The HVAC system for the building appears to be mounted on the roof and side of the building.

153 West Avenue 34

In the southwest corner of the subject property is a single-story masonry brick and corrugated steel industrial building (see photos #20 and #21) which is currently occupied by Ortiz Bros. Moving, and is used to store non-hazardous items. The building was locked and access to the interior of the building was not available for inspection. The HVAC system appears to be mounted on the roof of the building.

Outside, between the buildings are asphalt-paved parking and open storage areas (see photos #22 and #23). On the west side of the subject property is another large asphalt-paved open storage area (see photos #24 and #25). A wastewater clarifier is located on the north side of the 153 Avenue 34 building. A storage canopy is also located in the southwest storage yard area (see photo #26). No large quantities of hazardous materials were observed to be stored or used at the site, and no hazardous wastes are generated by the business activities. No manufacturing activities take place at the site. Commercial trash bins are located in the paved parking and storage areas (see photos #27, #28 and #29), and no signs of improper solid waste disposal were observed in or around the trash bins. The electrical power in the area is supplied by overhead utility lines located along Pasadena Avenue and Avenue 34. Overhead power lines with pole-mounted electrical transformers also bisect the subject property from north to south (see photo #30). A ground-mounted electrical transformer is located on the west side of the 141 Avenue 34 building. No signs were observed on the ground-mounted or pole-mounted electrical transformers indicating the presence of polychlorinated biphenyls (PCBs). No signs of illegal dumping or distressed vegetation were observed on the property. There was no evidence of underground storage tanks, septic tanks or wells on the property, and there was no indication of obvious contamination on the site.

Current Uses of the Adjoining Properties

Northern Border

North of the subject property is a vacant lot (see photos #31 and #32). There are several piezometers and monitoring wells located on the site. The property is identified by the State of California Environmental Protection Agency (CAL-EPA) Department of Toxic Substances Control (DTSC) as an active hazardous waste site and by the State of California Regional Water Quality Control Board (RWQCB) as having two open RWQCB Cleanup Program sites. It appears that the property is in the process of undergoing remediation. There were no visible signs of spills or obvious contamination on the adjacent property.

Eastern Border

East of the subject property is Pasadena Avenue, and further east is Hillside Elementary School (see photo #33), an apartment complex (see photo #34) and several residences (see photo #35). There were no visible signs of spills or contamination on the adjacent properties.

Southern Border

South of the subject property is Avenue 34. Located at the western terminus of Avenue 34 are two groundwater monitoring wells (see photo #36). The wells are currently monitoring the groundwater contamination in the area from the former Welch's Uniform facility located further north. South of Avenue 34 are several residences (see photos #37 and #38), an unidentified commercial property (see photo #39), a parking lot (see photo #40), an unidentified water distribution business (see photo #41) and five commercial buildings which are occupied by VGA Apparel; an unidentified screen printing business; and several other unidentified tenants (see photos #42, #43 and #44). There were no visible signs of spills or contamination on the adjacent properties.

Western Border

West of the subject property is a light-rail right-of-way (see photo #45), and further west is an unidentified industrial building and a large parking lot (see photo #46). Although the adjacent property to the west (Metro Rail Pasadena Blue Line between Avenue 33 and French Avenue) is identified by the Department of Toxic Substances Control (DTSC) as a hazardous waste site that has been referred to the Regional Water Quality Control Board for oversight, there were no visible signs of spills, contamination or remedial efforts on the adjacent properties.

INTERVIEW WITH OWNER/OCCUPANT

Mr. Eric Ortiz, the property owner and owner of Ortiz Bros. Moving and Storage, advised he purchased the subject property in 2000, and he has occupied the site since 1993. He said the buildings have been previously used for warehousing, distribution, office space, a gym and a prop designer. Mr. Ortiz stated the 153 Avenue 43 building is used for storage of non-hazardous

items. He said the 141 Avenue 34 building is currently occupied by Ortiz Bros. Moving, and is used to store customer's non-hazardous personal items. Mr. Ortiz advised there is a closed and abandoned wastewater clarifier located between the 141 Avenue 34 and 153 Avenue 34 buildings. Mr. Ortiz said the 135 Avenue 34 unit is currently vacant and unoccupied, and was most recently occupied by Ortiz Bros. Moving. He advised the 3401 Pasadena Avenue property consists of two separate buildings. One of the buildings is occupied by Loot Crate, an online computer gaming service; and the other building is occupied by The Submission Factory, a gym. Mr. Ortiz stated the 3433 Pasadena Avenue is also occupied by Loot Crate. He said no large quantities of hazardous materials are stored or used at the site, and no hazardous wastes are generated by the business activities. No heavy manufacturing activities take place at the site. Mr. Ortiz said the property to the north was previously occupied by Welch's Uniform Facility and the State of California has been conducting activities at the site for over a decade. Mr. Ortiz said he is unaware of the two groundwater monitoring wells located near the southwest corner of the site, and has no information about the remedial efforts of the nearby site. Mr. Ortiz advised to the best of his knowledge, there are no underground storage tanks, septic tanks or wells on the site, and he is not aware of any other chemical spills or contamination problems. Additional details concerning the site are presented in the completed Transaction Screen Questionnaire, which is attached to this report.

REVIEW OF GOVERNMENT RECORDS

United States Environmental Protection Agency (USEPA)
National Priorities List

The National Priorities List (NPL) identifies abandoned or uncontrolled hazardous waste sites which have been identified as possibly representing a long-term threat to the public health or environment. These sites have been identified as being highly contaminated with hazardous substances and represent the USEPA's target enforcement and cleanup efforts. Studies of individual sites are conducted by the USEPA to determine level of contamination, and the sites are then compared and ranked to other sites on the NPL.

A review of the USEPA National Priorities List dated December 2012 indicates there are no proposed, final or delisted sites within one mile of the subject property.

United States Environmental Protection Agency (USEPA)
Federal Superfund Liens List

The USEPA maintains a list of Superfund Lien sites that have been issued on properties throughout the United States. These sites have been remediated through the expenditures of Superfund monies; the purpose of the lien is to prevent the property owner from gaining a financial benefit from the federal government's cleanup and restoration activities.

A review of the July 2011 Federal Superfund List revealed there are no Superfund Liens on or adjacent to the site.

United States Environmental Protection Agency (USEPA)
Comprehensive Environmental Response, Compensation
and Liability Information System (CERCLIS)

The USEPA has developed a database known as CERCLIS which contains information on potential hazardous waste sites located throughout the United States. There are over 33,000 sites on the CERCLIS inventory. All sites are subjected to a preliminary assessment and thereafter are either placed on the National Priority List (NPL) or are placed in a category for those sites requiring no further Federal Superfund action.

A review of the December 2012 CERCLIS report indicates there are three CERCLIS sites within a ½ mile radius of the subject property:

Kennington Ltd. (ITT Cannon) (#1 on map)
3209 Humboldt Street
Los Angeles, CA 90031

This site investigation was opened in February 1994. A preliminary assessment was completed in August 2001, and a site reassessment was completed in May 2006. According to the records, no further remedial actions have been reported for this site. Due to the distance, it is unlikely any contaminants from this site will have a significant impact on the subject property.

NI West Incorporated (#2 on map)
3011 Humboldt Street
Los Angeles, CA 90031

This site investigation was opened in January 1993. A combined preliminary assessment and site assessment was completed in September 2005. According to the records, no further remedial actions have been reported for this site. Due to the distance, it is unlikely any contaminants from this site will have a significant impact on the subject property.

Jaybee Ajax Manufacturing (#3 on map)
301 West Avenue 26
Los Angeles, CA 90031

This site investigation was opened in March 2000, and preliminary assessments were started in October 2002 and in July 2007. According to the records, no further remedial actions have been reported for this site. Due to the distance, it is unlikely any contaminants from this site will have a significant impact on the subject property.

There is one listed "No Further Required Action Planned" (NFRAP) site identified within a ½ mile radius:

Baron Manufacturing (#4 on map)
241 Avenue 26
Los Angeles, CA 90031

This site investigation was opened in June 1981, and a preliminary assessment was completed in September 1984. The investigation concluded that the facility does not qualify for the NPL and no further required actions are planned for this site. It is unlikely any contaminants from this closed site will have a significant impact on the subject property.

United States Environmental Protection Agency (USEPA)
Resource Conservation and Recovery Act (RCRA)
Treatment, Storage or Disposal Facilities (TSDF)

The USEPA maintains a list of facilities which have been authorized to receive hazardous waste. These facilities have permits to treat, store, or dispose of the waste, as determined by the RCRA regulations. In addition, the USEPA publishes a list of those facilities that are subject to a corrective action, based on the facilities waste handling and storage procedures. The facilities which are subject to a corrective action are identified as CORRACTS sites.

A review of the November 2013 RCRA TSDF list determined there are no known CORRACTS facilities within a one mile radius of the subject property. In addition, there are no non-CORRACTS TSD facilities listed within a ½ mile radius.

United States Environmental Protection Agency (USEPA)
Resource Conservation and Recovery Act (RCRA)
Hazardous Waste Generators

The USEPA maintains a list of facilities which are identified as generators of large and small quantities of hazardous waste. These facilities have permits to generate, store and dispose of the waste, as determined by the RCRA regulations.

A review of the November 2013 RCRA Hazardous Waste Generators list determined the subject property (American Caster Corporation, 141 West Avenue 34) is identified as a small quantity hazardous waste generator. In addition, there are records of a large quantity hazardous waste generator identified on the adjacent property to the north (Former Welch's Uniform Site, 3505 Pasadena Avenue), and a small quantity hazardous waste generator to the east (Los Angeles Unified School District Hillside Elementary, 120 East Avenue 35).

United States Environmental Protection Agency (USEPA)
Office of Emergency and Remedial Response
Emergency Response Notification System (ERNS)

The USEPA maintains a list of locations which have reported a release of oil or hazardous substances to the federal government. Most of the data in this system is based on information that was received during the initial notification.

A review of the ERNS list for 1999 determined there are no reported incidents identified on the subject property.

United States Department of Transportation
United States Coast Guard
National Response Center (NRC)

The NRC is the national point of contact for reporting all oil, chemical, radiological, biological and etiological discharges into the environment anywhere in the United States and its territories. In addition to gathering and distributing spill data for Federal On-Scene Coordinators and serving as the communications and operations center for the National Response Team, the NRC maintains agreements with a variety of federal entities to make additional notifications regarding incidents meeting established trigger criteria.

A review of the NRC list for 2012 determined there are no reported incidents on the subject property.

United States Environmental Protection Agency (USEPA)
Institutional Control / Engineering Control Registries

The USEPA maintains a list of institutional and engineering controls for the purpose of tracking sites that may contain residual contamination or have activity and use limitations. Engineering controls are engineering measures designed to minimize the potential for human exposure to contamination by either limiting direct contact with contaminated areas or controlling migration of contaminants. Institutional controls are non-engineering controls used to restrict land use or land access in order to protect people and the environment from exposure to hazardous substances remaining at the site or facility.

A review of the September 2006 USEPA Institutional Control / Engineering Control Registry did not identify the subject property as having institutional or engineering controls.

State of California
Environmental Protection Agency (CAL-EPA)
Department of Toxic Substances Control (DTSC)

CAL-EPA is responsible for the regulation and enforcement of environmental health laws within the state of California, as set forth by the California Health and Safety Code. CAL-EPA is also designated by the USEPA to assist in enforcing federal environmental laws. CAL-EPA regulates companies involved in the generation, transportation, storage and disposal of hazardous substances. CAL-EPA records include the "CalSites" database, which is a listing of over 7,700 known active, inactive and abandoned hazardous waste sites. These sites have previously been reported in the Abandoned Site Program Information System (ASPIS), Bond Expenditure Plan (BEP), and Cortese databases. CAL-EPA records also include a listing of the California Integrated Waste Management Board's "Active" and "Closed and Inactive" landfills database.

A review of the October 2013 CAL-EPA records determined the adjacent property to the west (Metro Rail Pasadena Blue Line between Avenue 33 and French Avenue) is identified as a hazardous waste site that was referred to the Regional Water Quality Control Board for oversight on December 27, 2001. According to the records, the site has had no known uses other than train traffic, and analytical test results indicated high concentrations of lead, polychlorinated bi phenyls (PCBs), tetrachloroethane (PCE) and trichloroethylene (TCE) contamination in the soil and groundwater beneath the right-of-way. No further information is available at this time. In addition, there are five listed "CalSite" facilities within one mile of the subject property:

Kennington (#1 on map)
3209 Humboldt Street
Los Angeles, CA 90031

This site was placed in "Active" status in July 2013. According to the records, the soil is contaminated with polychlorinated biphenyls (PCBs), tetrachloroethylene (PCE), and other chemicals. A site investigation or remediation of the site is currently in progress. Due to the distance, it is unlikely any contaminants from this site will have a significant impact on the subject property.

Jaybee Site at Lincoln Heights (#3 on map)
301 West Avenue 26
Los Angeles, CA 90031

This site was placed in "Active" status in April 2004. According to the records, the soil is contaminated with naphthalene, toluene, and other chemicals. A site investigation or remediation of the site is currently in progress. Due to the distance, it is unlikely any contaminants from this site will have a significant impact on the subject property.

Former Welch's Uniform Facility (#5 on map)
3505 Pasadena Avenue
Los Angeles, CA 90031

This site was placed in "Active" status in May 2007. According to the records, the soil is contaminated with trichloroethylene (TCE). A site investigation or remediation of the site is currently in progress. The 2.6 acre site was previously occupied by Welch's Uniform, a commercial linen and apparel laundering and delivery service. The former business operated at the site from the 1920s throughout 1988. TCE was first discovered at the site in 1988 when vapor extraction wells were first installed on the property. Several follow-up investigations have been completed at the site which included soil sampling, soil vapor sampling, the installation of 14 groundwater monitoring wells, the installation of seven soil vapor wells and semi-annual soil and soil vapor monitoring. In 1993, the buildings at the former Welch's Uniform Facility were demolished and removed from the site. In 2007, the Department of Toxic Substances Control

(DTSC) began overseeing the site investigations, monitoring and clean-up efforts at the site. Previous environmental studies conducted at the site indicate the soil and groundwater beneath the facility was contaminated with volatile organic compounds (VOCs) and petroleum based hydrocarbon cleaning solvents including tetrachloroethene (PCE) and TCE.
The current owner (AmeriPride Services Inc.) and the DTSC entered into a voluntary agreement to clean up the site. In 2013, a soil vapor extraction (SVE) system and 32 SVE wells were installed at the site to remediate the PCE and TCE contamination. The SVE system is scheduled to operate at the site until contamination levels are reached which do not pose a significant risk to human health and the environment.

Victor Industrial Battery (#6 on map)
138 North San Fernando Road
Los Angeles, CA 90031

This site was placed in "Certified Operation and Maintenance – Land Use Restrictions" status in March 1995. According to the records, the soil is potentially contaminated with liquids with PH<=2, acid solution 2>PH with metals, and other chemicals. Properties with Land Use Restrictions have limits on future property uses required by DTSC due to residual levels of contamination or the type of cleanup actions conducted. Due to the distance, it is unlikely any contaminants from this site will have a significant impact on the subject property.

National Aircraft Equipment Co. (#7 on map)
275 North Avenue 19
Los Angeles, CA 90031

This site was placed in "Inactive - Needs Evaluation" status in July 2005. DTSC has determined that a Preliminary Endangerment Assessment or other evaluation is required. Due to the distance, it is unlikely any contaminants from this site will have a significant impact on the subject property.

There are no active, closed or inactive landfill sites within a ½ mile radius of the subject property.

State of California
Environmental Protection Agency (CAL-EPA)
Department of Toxic Substances Control (DTSC)
Land Use Covenants

CAL-EPA/DTSC utilizes Land Use Covenants (LUCs) to protect the public from unsafe exposures to residual contamination that is left in place after site remediation activities have been completed. The LUC imposes limitations on land use when hazardous materials, wastes, or substances remain on the property at levels which are not suitable for unrestricted use of the land. The LUC includes easements, servitudes, covenants, and restrictions which run with the

land and continue into perpetuity unless modified or terminated in accordance with applicable law. All LUCs are signed by the DTSC and the landowner, and recorded in the county where the land is located.

A review of the October 2013 DTSC database records did not identify any deed restrictions on the subject property.

State of California
Water Resources Control Board
Regional Water Quality Control Board (RWQCB)
Land Use Covenants

RWQCB utilizes Land Use Covenants (LUCs) to protect the public from unsafe exposures to residual contamination that is left in place after site remediation activities have been completed. The LUC imposes limitations on land use when hazardous materials, wastes, or substances remain on the property at levels which are not suitable for unrestricted use of the land. The LUC includes easements, servitudes, covenants, and restrictions which run with the land and continue into perpetuity unless modified or terminated in accordance with applicable law. All LUCs are signed by the RWQCB and the landowner, and recorded in the county where the land is located.

A review of the November 2014 RWQCB database records did not identify any deed restrictions on the subject property.

State of California
Water Resources Control Board
Regional Water Quality Control Board (RWQCB)

The RWQCB is responsible for monitoring the quality and flow of groundwater, and they address other potential threats to the groundwater from surface spills and leaks. The RWQCB monitors the contamination problem, the investigation and any remedial action. Their database information includes active and closed Cleanup Program Sites, Land Disposal Sites, Leaking Underground Storage Tank (LUST) Sites, Military Cleanup Sites, Military Privatized Sites, Military Underground Storage Tank Sites and registered underground storage tank sites (RWQCB sites) within the State of California.

A review of the November 2014 RWQCB records determined the subject property is not listed as a known RWQCB site. There are also no known open RWQCB LUST sites within a ½ mile radius of the subject property. According to the records, there are three active non-LUST RWQCB Cleanup sites within a ½ mile radius of the subject property:

Cannon Electrical (#1 on map)
3209 Humbolt Avenue
Los Angeles, CA 90031

According to the records, the site is identified as an open Cleanup Program Site that is currently inactive. No information on potential contaminants has been reported. Due to the distance, it is unlikely any contaminants from this site will have a significant impact on the subject property.

Former Welch's Uniform Rental Site (#5 on map)
3505 Pasadena Avenue
Los Angeles, CA 90031

This case was first opened in December 1987, and the site is identified as an open Cleanup Program Site that is currently inactive. According to the records, the groundwater is potentially contaminated with solvents and non-petroleum hydrocarbons. A second case was opened in December 1998, and the site is identified as an open Cleanup Program Site that is undergoing a site assessment. According to the records, the site is potentially contaminated with petroleum, unidentified fuels, oil and volatile organic compounds (VOCs). Both of the cases were transferred to the Department of Toxic Substances Control (DTSC) for oversight on December 18, 2006.

Lacy's Street Dump (#8 on map)
Los Angeles, CA 90031

According to the records, the site is identified as an open Land Disposal Site that is currently inactive. No information on potential contaminants has been reported. Due to the distance, it is unlikely any contaminants from this site will have a significant impact on the subject property.

There are no records of registered underground storage tanks on the subject property; however, there are historical records of an underground storage tank on the adjacent property to the north (3505 Pasadena Avenue).

South Coast Air Quality
Management District (AQMD)

The AQMD is responsible for the development and enforcement of regulations concerning air emissions and airborne hazards from stationary sources in the South Coast Air Basin. AQMD maintains a "Hot Spot" list of facilities whose air emissions pose as a risk to the surrounding community. In addition, the AQMD Facility INformation Detail (FIND) database provides public information about facilities in the AQMD basin.

A review of the AQMD records determined there are no "Hot Spot" facilities identified on or adjacent to the subject property. According to the FIND database, the subject property (Bob Baker Productions, 3401 Pasadena Avenue) is identified as having inactive permits for a paint and solvent spray booth.

Los Angeles County
Department of Public Works
Waste Management Division (DPW/WMD)

DPW/WMD maintains maps showing the locations of active, inactive or future solid waste landfill sites in Los Angeles County.

A review of DPW's major waste systems map determined there are two landfill sites within a ½ mile radius of the subject property:

Los Angeles City (Lacy Street) (#8 on map)
400 Avenue 26
Los Angeles, CA 90031

According to the records, this site is listed as an inactive, Class II (municipal waste) landfill. Due to the distance, it is unlikely any contaminants from this site will have a significant impact on the subject property.

Unnamed Site (#9 on map)
Avenue 26 and Figueroa Street
Los Angeles, CA 90031

According to the records, this site is listed as an inactive, Class II (municipal waste) landfill. Due to the distance, it is unlikely any contaminants from this site will have a significant impact on the subject property.

Los Angeles County
Fire Department (LACOFD)
Health Hazardous Materials Division

LACOFD maintains inspection and inventory records of companies involved in the storage and use of hazardous materials, petrochemicals, or hazardous waste. LACOFD attempts to maintain a current record of the types of hazardous substances that are utilized or stored at a particular site, and conducts periodic inspections for safety and compliance. In addition, LACOFD maintains records concerning hazardous material sites in Los Angeles County, which are reported to LACOFD by various regulatory agencies. Upon receiving the report, LACOFD monitors the cleanup process on the contaminated site.

According to the LACOFD files, there are no records of hazardous material handlers or hazardous waste generators for the subject or adjacent properties. A review of the Active Mitigation Complaint Control Logs determined there are no listed sites on or adjacent to the subject property.

City of Los Angeles
Fire Department (LAFD)

LAFD maintains inspection and inventory records of companies involved in the storage and use of hazardous materials or petrochemicals. LAFD attempts to maintain a current record of the types of materials that are utilized at a particular site, and conducts periodic inspections for safety and compliance. LAFD also maintains records on underground storage tanks, issues installation and removal permits, and monitors the contamination cleanup process.

A review of the LAFD files determined there are no records of underground storage tanks or current hazardous materials inventories for the subject property.

According to the LAFD files for 3505 Pasadena Avenue, which is the adjacent property to the north, the records revealed the site was previously occupied by Welch's Uniform, a commercial laundering business. In 1987, Welch's Uniform applied for a permit to remove a 2,000-gallon underground diesel fuel tank. Soil sampling beneath the tank revealed significant Total Petroleum Hydrocarbon as gasoline (TPH-g) contamination (8,600 ppm). The groundwater beneath the site was determined to be about 35 feet below the ground surface, and the groundwater flows away from the subject property in a west-northwest direction. In February 1988, Welch's Uniform applied for a permit to abandon five underground storage tanks in-place, and in December 1988, Welch's Uniform applied for a permit to remove five additional underground storage tanks. In May 2004, Welch's Uniform applied for a permit to remove one additional 1,000-gallon underground storage tank. Soil sampling beneath the tank did not detect any contamination problems, and on October 26, 2004, the DPW/UGT issued a no further action letter for the closure of the 1,000-gallon underground tank.

HISTORICAL SOURCES

Historic Sanborn Fire Insurance Maps

Sanborn Fire Insurance Maps provide information on commercial and industrial properties, based on risk data gathered for the fire insurance companies. The maps show the number of buildings located on the property, and the type of construction. The maps also describe the various businesses located nearby, and show the locations of tanks, boilers, and other potential hazards.

A review of the Sanborn Fire Insurance Map collections from 1867-1970, located three maps for the subject property:

Date of Map	Description
1906	The subject property is occupied by 16 residences, 10 sheds, two barns and a small bakery.
1920	The subject property is occupied by 21 residences, nine sheds, seven garages, a bakery and portions of the Los Angeles Rock and Gravel Co., which consisted of eight buildings which were used as oil houses, greases houses, a tool house, an office and an auto repair canopy.
1951	The subject property is occupied by 22 residences, eight garages, a bakery and 10 commercial buildings which were used for offices, warehousing, storage and as workshops. The commercial buildings were occupied by "Steel Framing & Building Corporation."

A review of the Sanborn Fire Insurance Map collections from 1867-1970, located three maps for the area surrounding the subject property:

Date of Map	Description
1906	The property to the north is occupied by six residences, a barn and three sheds. Pasadena Avenue is to the east and there is no map coverage available for the property east of Pasadena Avenue. South of the subject property is Avenue 34 and further south are two stores, 12 residences, nine sheds, a barn and a fruit packing building. West of the subject property is a railroad right-of-way and further west is vacant land and the Arroyo Seco flood control channel.
1920	The property to the north consists of several residences, garages, sheds and three commercial buildings which are occupied by the Los Angeles Rock & Gravel Co. Further north is a large industrial facility which is occupied by Pacific Laundry. Pasadena Avenue is east and further east are several residences, garages and sheds. South of the subject property is Avenue 34 and further south are several residences, garages, sheds and a fuel storage area. West is of the subject property is a railroad right-of-way and further west is vacant land and the Arroyo Seco flood control channel.

Date of Map	Description
1951	The property to the north is occupied by a residence, a garage, two commercial storage building and a ten-car auto storage building. Further north is a large industrial facility which is occupied by Welch's Uniform and Overall Cleaning Co. A dry-cleaning building, a washing room and a 25-car auto storage building are located within the Welch's Facility. Pasadena Avenue is to the east and further east are several residences, garages, sheds and Hillside Elementary School. South of the subject property is Avenue 34 and further south are two stores, several residences, garages, sheds and a scrap metal storage yard. West of the subject property is a railroad right-of-way and a lumber yard which is occupied by Alliance Lumber and Investment Co. Further west is the Arroyo Seco flood control channel.

Historic City Directory Search

City Directories provide information on residential, commercial and industrial properties, and list the business name and address. A review of the historic directories provides an overview of the current and previous occupants of the site.

A search of the Haines Criss Cross City Directories, dated 1972-2009, determined the subject property has been previously occupied by Smith Mailer Inc. (1972-1987), GT Price Products (1972), Alta Canada Corp. (1987), American Bearing (1987), Laramada Corporation (1987), Lorac Financial Services (1987), Metal Service Corporation (1987), American Caster Corporation (1987-1992), Ann Mar Inc. (1987), Empire Button Co. (1987), William Pile Printing (1987-1992), Bob Baker Productions (1992), American Medical Wholesale (2009), Ortiz Transfer & Storage (2009), Ortiz Brothers Moving & Storage (2009), Select Storage (2009) and Studio 34 (2009).

A search of the Haines Criss Cross City Directories, dated 1972-2009, did not identify any listings for the adjacent property to the north. The properties east of Pasadena Avenue have been previously occupied by Hillside Elementary School (1972-2009) and residences (1972-2009). The properties south of Avenue 34 have been occupied by residences (1972-2009), Ishizaki Studios (1987), Argus Tool Manufacturing (1987), Smart Saver (1987-1992), Pasadena Avenue Market (1987-1992), AAA Fashions (1992), Tere's Fashions (1992-2009), Allied Die Cutting (1992), Three Star Refrigeration (1992), ACW Apparel Inc. (2009) and Water Land Inc. (2009). No listings were identified for the adjacent property to the west.

City of Los Angeles
Building Department

A review of the building records for the subject property located the following records:

Date	Activity	Owner
	135 Avenue 34	
01/23	Reroof building	East/Northeast Economic Dev. Corp.
	137 Avenue 34	
01/23	Move residence from 2639 Lacy Bel Avenue	Charles Mattingly
04/61	Demolish dwelling	Cannon Electric Co.
	137½ Avenue 34	
01/23	Move residence from 2641 Lacy Bel Avenue	Charles Mattingly
04/61	Demolish dwelling	Cannon Electric Co.
	139 Avenue 34	
01/23	Move residence from 2643 Lacy Bel Avenue	Charles Mattingly
04/61	Demolish dwelling	Cannon Electric Co.
	141 Avenue 34	
07/16	Add two rooms to residence	Chas Fishback
07/16	Construct garage	Chas Fishback
02/28	Add two bedrooms to house	Felipe Villarreal
07/53	Construct garage	Joseph Gomez
08/56	Demolish building	Teal House Wreckers
08/74	Demolish storage building	East/Northeast Economic Dev. Corp.
	141-149 Avenue 34	
09/56	Construct parking lot	Cannon Electric Co.
04/77	Grade for building site	Los Angeles Economic Dev. Corp.
04/77	Encroach into 169 Ave. 34 & 3505 Pasadena Ave.	Los Angeles Economic Dev. Corp.
07/77	Construct foundation only for factory	Los Angeles Economic Dev. Corp.
08/77	Construct light manufacturing building	Los Angeles Economic Dev. Corp.
11/77	Add office partitions	Los Angeles Economic Dev. Corp.
12/77	Add storage tank for plastic pellets	Los Angeles Growing Corp.
	143 Avenue 34	
08/06	Construct dwelling	F.H. Small
08/56	Demolish building	Teal House Wreckers
08/74	Demolish storage building	East/Northeast Economic Dev. Corp.

Date	Activity	Owner (continued)
	145 Avenue 34	
08/06	Construct dwelling	F.H. Small
08/56	Demolish building	Teal House Wreckers
08/74	Demolish storage building	East/Northeast Economic Dev. Corp.
	147 Avenue 34	
08/06	Construct dwelling	F.H. Small
08/56	Demolish building	Teal House Wreckers
08/74	Demolish storage building	East/Northeast Economic Dev. Corp.
	149 Avenue 34	
08/06	Construct dwelling	F.H. Small
08/56	Demolish building	Teal House Wreckers
08/74	Demolish storage building	East/Northeast Economic Dev. Corp.
	151 Avenue 34	
08/74	Demolish storage building	East/Northeast Economic Dev. Corp.
	153 Avenue 34	
10/29	Construct factory	Frank Mark
08/05	Alter roof on dwelling	George Harris
03/66	Parapet corrections	M. Guillermo
12/00	Full compliance with division 88	Guillermo
	3407 Pasadena Avenue	
4/25	Construct private garage	John Murphy
--/45	Move building to 1037 North Avenue 63	Anne Bremer
06/45	Move garage to 123 West Avenue 34	Cubbison Bakery
08/46	Construct baking supply storage building	Cubbison Bakery
	3409 Pasadena Avenue	
08/12	Construct shed	John Murphy
02/23	Addition to residence	John Murphy
11/41	Add concrete floor for rat proofing	Cubbison Cracker Co.
	3411 Pasadena Avenue	
12/10	Construct shed	John Murphy
09/11	Construct shed	John Murphy
08/14	Rebuild porch on residence	John Murphy
09/36	Construct truck shelter	Sophie Cubbison
12/36	Construct storage building	Sophie Cubbison
09/40	Move residence to 9815 Telfair Avenue	L. Simon
04/54	Reroof shed and loading dock with metal roof	Cubbison's Bakery

Date	Activity	Owner (continued)
	3413 Pasadena Avenue	
06/41	Add 30' x 96' to bakery	Cubbison Cracker Co.
	3415 Pasadena Avenue	
07/87	Reroof building	---- Construction Co.
	3415-3419 Pasadena Avenue	
07/65	Parapet correction	Crocker Citizen Bank Trust Dept.
03/87	Full compliance with Division 88	---- Investment Co.
	3419 Pasadena Avenue	
09/25	Addition to bakery	Cubbison Bakery
09/25	Demolish old building	Cubbison Bakery
11/25	Construct private garage	Cubbison Bakery
06/28	Enlarge building	C.H. Cubbison
06/28	Remove brick and wood building	C.H. Cubbison
08/28	Add mezzanine	C.H. Cubbison
03/47	Add mezzanine	Cubbison Cracker Co.
04/55	Add toilets	Cubbison Cracker Co.
07/56	Interior partitions	Canon Electric Co., Lessee
	3421 Pasadena Avenue	
01/08	Construct residence	Mary Lawson
05/14	Add gas outlets	May Lawson
01/17	Add room to rear of house	James Smith
10/61	Demolish residence	Cannon Electric Co.
	3421-3423 Pasadena Avenue	
10/12	Repair residence	Jerry Hickey
	3423 Pasadena Avenue	
10/12	Construct residence	Mary Lawson
01/24	Construct real estate office	Catherine L. Condra

08/67	Add 20'x85' to manufactured building	Smith Mailer Co.

Date	Activity	Owner (continued)
		3429 Pasadena Avenue
11/12	Add chimney to residence	Mrs. Zonberg
07/51	Demolish residence	Stran Steel Co.
		3431 Pasadena Avenue
06/11	Add 6' to back porch	A. Fornberg
12/12	Build outside chimney	A. Fornberg
07/51	Demolish residence	Stran Steel Co.
		3433 Pasadena Avenue
01/74	Add 26'x96' metal carport	Smith Mailer Co.
		3437 Pasadena Avenue
04/06	Construct cow barn	Mrs. Sherman Smith
01/37	Construct private garage	William G. Short
09/38	General repairs	H.H. Moser
08/56	Demolish residence	Teal House Wreckers

No other building or demolition permits were on file for the subject property.

SUMMARY OF PREVIOUS ENVIRONMENTAL REPORT

On March 2, 2000, Orswell & Kasman, Inc. (OKI) prepared a Phase I Environmental Site Assessment Report on the 141 Avenue 34 building. The OKI report included a review of the regulatory records, a review of the historical documents, an inspection of the surrounding properties and an interview with the property owner. At the time of the inspection, the 141 Avenue 34 building was occupied by Studio 34, a film production studio; and by Select Storage, a storage facility. The report stated that small quantities of water-based paint and oil-based paint were stored and used inside the building and the hazardous materials appeared to be properly stored and managed. Mr. Eric Ortiz, the property owner, stated the tenants are responsible for the disposal of any waste paints which are generated by the business activities. He said he was not aware of any chemical spills or contamination problems with the site. The report concluded that the adjacent property to the north (Welch's Uniforms) was identified as a clean up site that was addressing the contamination problem. Based on the results of the assessment, OKI concluded that no further environmental studies were recommended for the site.

On August 1, 2005, OKI prepared a Phase I Environmental Site Assessment Report on the 135 Avenue 34 and 3401 Pasadena Avenue buildings. The OKI report included a review of the regulatory records, a review of the historical documents, an inspection of the surrounding properties and an interview with the tenant. At the time of the inspection, the buildings were occupied by United Finishing and Laminating, a commercial laminating business. The report stated that small quantities of lubricating oil, bio-degradable detergents, glues and gear oil were stored and used inside the building and the materials appeared to be properly stored and managed. Pat Moller, the tenant at the site, stated the business stored and used small quantities

of hazardous materials, which were stored in five-gallon containers inside a fenced compound in the storage yard. Mr. Moller advised no hazardous wastes were generated from the business activities, and he was not aware of any chemical spills or contamination problems with the site. The OKI report concluded that the adjacent property to the north (Welch's Uniforms) was identified as a clean up site that was addressing the contamination problem. Based on the results of their assessment, no further environmental studies were recommended for the site.

On September 28, 2012, OKI prepared a Phase I Environmental Site Assessment report on the subject and surrounding properties. The OKI report included a review of the regulatory records, a review of the historical documents, an inspection of the surrounding properties and interviews with the property owner and the tenant. The property consisted of five separate industrial buildings with paved parking and storage areas. At the time of the inspection, the subject property was occupied by Ortiz Bros. Moving & Storage, a moving company; The Submission Factory, a gym; Water Wellness, an office; and Warner Brothers Studios, a prop design business. Large quantities of water-based paint were stored and used inside the 3433 Pasadena Avenue building, and hazardous waste in the form of waste paint was generated by the business activities. The safety manager for Warner Brothers Studios, provided a hazardous waste manifest from Rinco Environmental Services stating an unknown amount of waste paint was collected and removed from the site. Eric Ortiz, the property owner, stated the tenant is responsible for disposing any hazardous wastes which are generated by the business activities. He said he was not aware of any chemical spills or contamination problems with the site. No signs of illegal dumping or distressed vegetation were observed on the property. There was no evidence of underground storage tanks, wells, or septic tanks on the property, and there was no indication of obvious contamination on the site.

A review of the building permit records, historical aerial photographs, Sanborn fire insurance maps, assessor records and historic city directories determined the 153 Avenue 34 building was constructed over 83 years ago and the site was previously occupied by residences. The 141 Avenue building was constructed in 1977, and the site was previously occupied by portions of the Los Angeles Rock and Gravel Co., which included structures used for auto repair and two oil houses. The 141 Avenue 34 building was previously occupied by The Steel Framing and Building Corporation, several light-industrial buildings and several residences. The 3401 Pasadena Avenue buildings were constructed between 1948 and 1953, and the site was previously occupied by another commercial building and several residences. The 3433 Pasadena Avenue building was constructed in 1967 and the site was previously occupied by several residences.

A review of environmental regulatory agency records did not identify any reported contamination problems with the subject property. Eleven offsite locations were identified as potential risks or threats to the subject property. According to the data, ten of the sites were not located in the near vicinity, and there was no indication that contaminants from those sites had migrated onto the subject property. The adjacent property to the north (Welch's Uniform Facility) was identified by State of California Environmental Protection Agency (CAL-EPA) Department of Toxic Substances Control (DTSC) as an active hazardous waste site. In addition, the adjacent property was also identified by the State of California Regional Water Quality

Control Board (RWQCB) as having two open RWQCB Cleanup Program cases. There was no indication from a review of the regulatory records and a site inspection of the subject property that the property had any problems concerning the storage, usage or disposal of hazardous materials. Based on the results of their assessment, the OKI report concluded, no further environmental studies were recommended for the site.

SUMMARY

Based on a review of regulatory records and a visual inspection of the site and surrounding area, no *potential environmental concerns* were identified with the subject property, except as follows:

Nine offsite locations have been identified as potential risks or threats to the subject property. According to the data, seven of the sites are not located in the near vicinity, and there is no indication that contaminants from these sites have migrated onto the subject property.

A review of the October 2013 State of California Environmental Protection Agency (CAL-EPA) Department of Toxic Substances Control (DTSC) records determined the adjacent property to the west (Metro Rail Pasadena Blue Line between Avenue 33 and French Avenue) is identified as a hazardous waste site that was referred to another agency for cleanup in December 2001. According to the records, the site has had no known uses other than train traffic. Seventeen borings were advanced along the railroad right-of-way area, and analytical test results indicated high concentrations of lead, polychlorinated bi-phenyls (PCBs), tetrachloroethane (PCE) and trichloroethylene (TCE) contamination in the soil and groundwater beneath the site. On December 27, 2001, the case was referred to the Regional Water Quality Control Board (RWQCB) for oversight, and no further information is available at this time; and

The former Welch's Uniform Rental Facility site (#5 on map), 3505 Pasadena Avenue, is located on the adjacent property to the north, and the business is identified by State of California Environmental Protection Agency (CAL-EPA) Department of Toxic Substances Control (DTSC) as an active hazardous waste site. According to the DTSC database records, the soil is contaminated with trichloroethylene (TCE). A site investigation or remediation of the site is currently in progress. According to the records, the 2.6 acre site was previously occupied by Welch's Uniform, a commercial linen and apparel laundering and delivery service. The former business operated at the site from the 1920s throughout 1988. TCE was first discovered at the site in 1988 when vapor extraction wells were first installed on the property. Several follow-up investigations have been completed at the site which included soil sampling, soil vapor sampling, the installation of 14 groundwater monitoring wells, the installation of seven soil vapor wells and semi-annual soil and soil vapor monitoring. In 1993, the buildings at the former Welch's Uniform Facility were demolished and removed from the site. In 2007, the Department of Toxic Substances Control (DTSC) began overseeing the site investigations, monitoring and clean up efforts at the site. Previous environmental studies conducted at the site indicate the soil and groundwater beneath the facility was

contaminated with volatile organic compounds (VOCs) and petroleum based hydrocarbon cleaning solvents including tetrachloroethene (PCE) and TCE. The current owner (AmeriPride Services Inc.) and the DTSC entered into a voluntary agreement to clean-up the site. In 2013, a soil vapor extraction (SVE) system and 32 SVE wells were installed at the site to remediate the PCE and TCE contamination. The SVE system is scheduled to operate at the site until contamination levels are reached which do not pose a significant risk to human health and the environment. In addition, the former Welch's Uniform Rental site is also identified by the State of California Regional Water Quality Control Board (RWQCB) as having two open RWQCB Cleanup Program cases. The case was first opened in December 1987, and the site is identified as an open Cleanup Program Site that is currently inactive. According to the records, the groundwater is potentially contaminated with solvents and non-petroleum hydrocarbons. A second case was opened in December 1998, and the site is identified as an open Cleanup Program Site that is undergoing a site assessment. According to the records, the site is potentially contaminated with petroleum, unidentified fuels, oil and volatile organic compounds (VOCs). Both of the cases were transferred to the Department of Toxic Substances Control (DTSC) for oversight on December 18, 2006. Lastly, a review of the City of Los Angeles Fire Department (LAFD) records revealed Welch's Uniform applied for a permit to remove a 2,000-gallon underground diesel fuel tank in 1987. Soil sampling beneath the tank revealed significant Total Petroleum Hydrocarbon as gasoline (TPH-g) contamination (8,600 ppm). The groundwater beneath the site was determined to be about 35 feet below the ground surface, and the groundwater flows away from the subject property in a west-northwest direction. In February 1988, Welch's Uniform applied for a permit to abandon five underground storage tanks in-place, and in December 1988, Welch's Uniform applied for a permit to remove five additional underground storage tanks. In May 2004, Welch's Uniform applied for a permit to remove one additional 1,000-gallon underground storage tank. Soil sampling beneath the tank did not detect any contamination problems, and on October 26, 2004, the DPW/UGT issued a no further action letter for the closure of the 1,000-gallon underground tank. An inspection of the property revealed the site is currently a vacant lot, and remedial activities were being conducted on the site.

Should it be determined the groundwater beneath the subject property has in fact been impacted by the Former Welch's Uniform Rental site or the Metro Rail Pasadena Blue Line site, it is the policy of the State of California and the United States Environmental Protection Agency not to hold property owners responsible for costs to clean up contaminated groundwater beneath their property, unless the owners contributed to the problem. There is no indication from a review of the regulatory records and a site inspection that the subject property has had any problems concerning the storage, usage or disposal of hazardous materials, and it appears the responsible parties are in the process of addressing the contamination problem.

RECOMMENDATIONS

Based on the results of this assessment, no further environmental studies are recommended for the site.

Appendix F

Professional Qualifications and Liability Insurance

Don Kellar, M.S., REP, PG
National Client Manager/Hydrogeologist
Los Angeles Office
don@frenviro.com
(310) 876 4128

Don Kellar is National Client Manager Manager and Hydrogeologist within Fulcrum Resources Environmental

Don specializes in helping clients with the following:

- Transaction Screen Assessment
- Phase I and II environmental site assessment
- Site investigation and assessment
- Technical site review
- RFI sample program management
- Alternative Energy
- Asbestos inspections associated with demolition, restoration and renovation
- Remediation and Monitoring Tactics
- Health and Safety- Environmental Construction/drilling
- CEQA/NEPA
- Agency Oversight Assistance

Key Experience/Key Projects -

World Oil Groundwater Monitoring and Sampling

- Performed field work, project management, budgeting, client management, and completion of report for over 200 sites nationwide. Mr. Kellar managed a total of 18 sites under World Oil Corporation, and an additional 10 sites under Exxon/Mobil. Mr. Kellar also had the privilege of conducting this work nationwide throughout California, Arizona, Colorado, Maine, Rhode Island, Connecticut, New York, Massachusetts, Nevada, and Michigan.

Phase I and II Environmental Site Assessments

- Performed over 2,000 environmental site assessments nationwide since 2001 that include but not limited to gas stations, dry cleaners, heavy manufacturing sites, multi-tract residential apartments and housing. Mr. Kellar also has extensive involvement with Non-CERCLA sampling per specific client protocol that include asbestos sampling, lead-based paint sampling, radon testing, and lead in water sampling.

  Mr. Kellar managed Bank of America's REO portfolio between 2008 and 2010 throughout the western United States. These assessments included a former landfill turned golf course, a former silver mine, numerous farming and agricultural parcels, brownfield redevelopments; recycling facilities; medical facilities; small and large shopping plazas; and developed or partially developed residential communities.

  Experienced as a client and project manager for over 30 Shell Oil Sites with duties ranging from surface and subsurface investigations; pilot studies; assistance with onsite engineer for Phase III remediation; and agency correspondence. Under the mentorship of numerous PGs, CHGs, and PEs, Mr. Kellar has become very experienced in the troubleshooting remediation options for prospective clients.

Health and Safety

- As former Health and Safety Officer for Geologic Services Corporation's West Coast Office, Mr. Kellar gained experience in identification, handling, disposal of different hazardous wastes, and the development of emergency response plans for gas stations and industrial sites.

Education

Bachelors of Science in Physical Geography, University of Michigan, 2002 Minor Music
Scholar Award 2001

Masters of Science in Hydrogeology, California State University Los Angeles, 2005

Professional Papers

Identification of Water Sources during Wet and Dry Months within Medea Creek Through Ion and Isotope Analysis. Research Paper for California State University-Los Angeles, October 2009

Certifications

- California Registered Environmental Assessor #30026
- 40-hour OSHA HAZWOPER with Refresher
- United States Green Building Council Member-Los Angeles
- National Registry of Environmental Professionals #624658052
- California Licensed Professional Geologist-#9192
- Florida Licensed Professional Geologist-#2858

Languages-English, Moderate Speaker of Spanish and Chinese

Ling (Caroline) Cao, M.S.
Principal Consultant/West Coast Operation's Manager
Los Angeles Office
ling@frenviro.com
(626) 429 1480

Ms. Cao is the Principal Consultant and West Coast Operation's Manager within Fulcrum Resources Environmental

Ms. Cao specializes in helping clients with the following:

- Transaction Screen Assessment
- Phase I and II environmental site assessment
- Site investigation and assessment
- Technical site review
- Biology and Ecology
- Property Condition Assessments
- Asbestos and Lead-based Paint inspections associated with demolition, restoration and renovation
- Lead-in-water and Radon Testing
- Consulting with Chinese Community
- Health and Safety- Environmental Construction/drilling
- CEQA/NEPA

Key Experience/Key Projects -

Palos Verde and El Sobrante Landfills
Corona Granite and Silicone Quarry

- Performed field work, project management, budgeting, client management, and completion of Phase I Reports. Ms. Cao was able to identify multiple environmental issues and provide client with direction and assistance with respective agencies.

Phase I and II Environmental Site Assessments

- Performed over 1,000 environmental site assessments nationwide since 2003 that include but not limited to former Talley Corporation in Thousand Oaks, SCGA Golf Course in Murrieta, the 536-acre Dos Lagos master-planned and mix-used development in Corona, and silica mines. Ms. Cao also performed due diligence on various gas stations, dry cleaners, chemical plants, heavy manufacturing sites, multi-tract residential apartments and housing. Ms. Cao also has extensive involvement with Non-CERCLA sampling per specific client protocol that include asbestos sampling, lead-based paint sampling, radon testing, and lead in water sampling.

  Mr. Cao has extensive experience with portfolio HUD projects under Fannie Mae and Freddie Mac Guidelines.

Business Development/Customer Service

- Ms. Cao has earned a stellar reputation with providing numerous clients with the excellent customer service on over 1,000 nationwide transactions. Ms. Cao's technical experience combined with customer service has played a vital role in the growth to date of Fulcrum Resources Environmental.

Ms. Cao is majority owner of Fulcrum Resource Environmental and is currently heading the company towards Government 8A status.

John Winkler, PG
Senior Geologist/Regional Manager
Thousand Oaks, California Office
Los Angeles, Ventura, Kern, Santa Barbara, and San Luis Obispo Counties
john@frenviro.com
(805) 338 8008

Mr. John Winkler is a Senior Geologist within Fulcrum Resources Environmental

John specializes in helping clients with the following:

- Phase I and II environmental site assessment
- Site remediation
- Technical site review
- Well installation – Monitoring/extraction/production/injection
- Groundwater monitoring and compliance activities
- Health and Safety
- Environmental Construction/drilling – Direct push/hollow-stem auger/mud rotary/air rotary/reverse circulation/CPT
- Hazardous Materials Management
- Waste profiling/treatment/disposal

Key Experience/Key Projects -

Restaurant Property, Malibu, CA

- Mr. Winkler provided environmental consulting for the seller of a property that was developed as a restaurant, but historically was occupied by a gasoline service station. The gas station was closed in the 1960's, prior to purchase by the property owner, and USTs were discovered and removed in 2004. Site assessments indicated petroleum hydrocarbon impact to soil and groundwater. Furthermore, seepage pits for wastewater complicated contaminant transport in the subsurface. Mr. Winkler assisted the property owner to identify the former UST owner/operator, who then agreed to assume Responsible Party status. Subsequently the property owner was able to complete the sale of the property.

Commercial Retail Center, Montebello, CA

- Mr. Winkler provided environmental consulting for a property owner seeking a refinance loan of a 7.56-acre multi-tenant retail shopping center. A Phase I ESA was conducted and an existing dry cleaner unit was determined to have operated for over 25 years, indicating a risk of a release of dry cleaning solvent. A Phase II assessment was conducted at areas of Haz Mat use. Results indicated low levels of PCE in soil and soil vapor below the unit, with no threat to groundwater, but a risk for vapor intrusion. To mitigate the risk, Mr. Winkler managed the following: 1) improvement of secondary containment; 2) improvement of engineered air flow; and, 3) installation of a vapor barrier. Based on the mitigation of the risk of vapor intrusion, the lender approved the loan.

.

Commercial Property, Pomona, CA

- Mr. Winkler provided environmental consulting for a property that was placed in receivership, partly to provide time to assess the environmental risks. A Phase I ESA was conducted and research indicated the site was developed in 1961, and USTs were installed on the property and subsequently removed, but closure was not documented. Additionally, data gaps on past site use existed. Site assessments indicated no significant impact from the fuel USTs; however, elevated concentrations of PCE in soil were detected. A nearby property had a catastrophic train derailment that released PCE to the subsurface and the elevated levels on the subject property were determined to have an off-site source. The UST case was successfully closed with the oversight agency.

Fields of Competence
- Environmental site assessments
- Environmental remediation
- Hazardous Materials Management

Education
- Bachelors of Science in Geology, University of New York at Cortland
- Certificate in Hazardous Materials Management, University of California, Santa Barbara

Certification

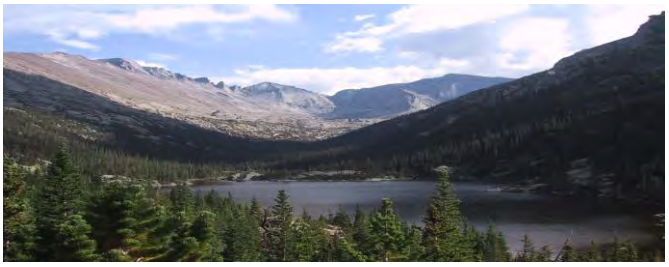
Jeffrey R. King, CPG
Regional Project Manager/Environmental Consultant
Hawaii Office
jeff@frenviro.com
(808) 344-2871



Jeff King is a Regional Project Manager and Environmental Consultant within Fulcrum Resources Environmental.

Jeff specializes in helping clients with the following:

- Transaction Screen assessment
- Phase I and II environmental site assessment
- Site investigation and assessment
- Senior technical review and peer review
- Subsurface investigation with various drill rig technologies
- Underground Storage Tank (UST) investigation, removal, and closure
- Asbestos, lead-based paint, hazardous materials inspection and sampling
- Mold and indoor air quality investigation
- Regulatory compliance/waste management/permitting
- Environmental health and safety
- Emergency response
- Storm water sampling
- Geophysics
- SPCC plans
- Remediation system O & M

Key Experience/Key Projects:

Environmental Site Assessments

- Performed hundreds of Phase I and II environmental site assessments (ESAs) nationwide for various clients on various commercial, industrial, residential, agricultural, and undeveloped properties. Also performed peer review for a national client of other consultant's ESAs.
- Project manager for Phase I ESA of a west Maui 4,000+ acre group of properties slated for future residential and commercial development. The properties consisted of former agricultural, industrial, commercial, and forest reserve lands.
- Project manager for Phase I ESAs and updates of several Oahu and Maui wind and solar farm properties for major alternative energy producers.

Site Characterization and Remedial Activities

- As a Michigan Certified UST Professional, performed senior technical review and oversight for numerous leaking UST sites throughout the state.
- Performed field investigation and report preparation for 14 previously removed USTs (within nine excavation areas) and two UST piping areas at the former Raco Airfield and BOMARC Missile Site in Michigan's Upper Peninsula. Most of the analytical testing was performed onsite using a mobile laboratory in order to delineate the extent of impact while at the site.
- Performed field investigation and report preparation for the removal of six USTs at an automotive repair facility in Highland Park, Michigan. Closure was obtained through application of RBCA techniques including indoor air quality evaluation, maintenance of pavement and floors, and filing appropriate notices of corrective action with affected parties and the Register of Deeds.

Asbestos, Lead-Based Paint, and Hazardous Materials

- Performed many inspections and surveys for various Maui and Hawaii properties including state hospitals, county facilities, major shopping malls and resorts, and other various sites.

Education

Bachelor of Science, Geology, University of California, Los Angeles, California, 1979

Graduate Courses in Hazardous Materials Management, Wayne State University, Detroit, Michigan, 1988-89

Risk-Based Corrective Action (RBCA) Course, Michigan Department of Environmental Quality, 1995

Certified Hazardous Materials Manager (CHMM) Overview Course, CHMM-Michigan, 2008

Certification

- Indiana Licensed Professional Geologist (LPG No. 1795)
- Hawaii Certified Asbestos Building Inspector (HI ASB No. 3545)
- Hawaii Certified Lead Risk Assessor (Cert. No. PB-0663)
- 40-hour OSHA HAZWOPER Training and current 8-hour refresher

Languages

- English, native speaker

Honors and Activities

Received a letter of commendation from Ford Motor Co. Environmental Services for outstanding project performance.

Served as local membership chair for Association of Environmental and Engineering Geologists (AEG). Also served on meeting committee for October 2004 national AEG meeting in Dearborn, Michigan.

Bryan Miles, P.G.
Regional Client Manager, Professional Geologist
San Diego & Orange County
bryan@frenviro.com
425.270.9914

Bryan Miles has been managing environmental site assessment and remediation projects in California since 2001. He has been a licenced Professional Geologist (CA 8739) since 2010.

Bryan specializes in environmental site assessment and remediation including the following specialties:

- Phase I and II environmental site assessment
- Contaminated site closure strategy (NFA)
- Vapor intrusion modeling
- Vapor intrusion mitigation
- Indoor air quality assessment and monitoring
- Groundwater modeling
- Contamination fate and transport modeling
- Site Conceptual Modeling
- Soil, soil vapor and groundwater sampling
- UST Removal
- Soil Vapor Extraction
- Chemical contamination analysis
- In-situ Chemical Remediation
- Remediation Action Plan preparation and implementation
- Geologic assessment and interpretation
- Regulatory guidance, interaction and management
- Health and Safety - Environmental Remediation/Construction/drilling

Key Experience/Key Projects:

Phase I and II Environmental Site Assessments

- Completed numerous environmental site assessments nationwide since 2001, including but not limited to retail gas stations, dry cleaners, metal plating facilities, railroad; and industrial, commercial and residential transactions.

- Vapor Intrusion, groundwater, and site conceptual modelling; as well as contaminant fate and transport.

- UST removal; soil, soil vapor and groundwater monitoring and sampling, monitoring well design and install.

Site Assessment and Remedial Project Highlights

- Successfully guided contaminated properties towards no further action (NFA) for numerous clientele including lenders, property owners, insurance agencies and brokers.

- Managed site investigation and remediation activities; including design and installation of two dual-phase extraction systems, for multiple responsible parties for a commingled free product and petroleum hydrocarbon groundwater plume encompassing two city blocks in the Harbor District to San Diego

- Guided oversight and technical support for In-situ bioremediation injection using Hydrogen Release Compound (HRC) and Oxygen Release Compound (ORC). at the BNSF Railroad Trigo Facility in Trigo, California

- Managed hydrogeologic and soil assessment related to leaking heating oil UST in downtown Seattle. Assessment included, soil sampling, indoor air sampling, well installation and LNAPL assessment. Project involved coordination with Ecology and neighboring stakeholders regarding off-site dissolved-phase and LNAPL plume migration.

- First responder involved with assessment and remediation for two major gasoline tanker spill (>2000 gallons) on Interstate 90 in Cle Elum Washington; spills occurred at separate times within 2015.

- Managed vapor intrusion source, assessment and mitigation including Johnson & Ettinger Vapor Intrusion Model for numerous site sites throughout California.

Education

B.S. Geological Sciences, University of California Santa Barbara, 2002

Certification

- California Licensed Professional Geologist (P.G.) #8739
- Washington Licenced Geologist (L.G.) #3090
- 40-hour OSHA HAZWOPER Training
- Adult and Pediatric First Aid/CPR/AED

Personal Interests

I have a passion for music, surfing and trail running. I have completed three ultra-marathons, three marathons, a 3-day stage race through the Colorado Rockies and numerous half marathons and shorter distances. I am a musician and singer-songwriter. I recorded an album and play at local restaurants and coffee shops. My greatest satisfaction comes from spending time with my family.

Hao Zhang, M.S., PE, QSD
Regional Project Manager/Engineer
San Francisco Office
hao@frenviro.com
(626) 840-7843

Hao Zhang is a Regional Project Manager and Engineer within Fulcrum Resources Environmental.

Hao specializes in helping clients with the following:

- Transaction Screen Assessment
- Phase I and II environmental site assessment
- Site investigation and assessment
- Technical site review
- RFI sample program management
- Hazardous Waste Tank System CUPA PE Certification
- Remediation and Monitoring Tactics
- Soil Vapor Extraction
- In-situ Chemical Remediation
- Remediation Action Plans Implementation
- Vapor Intrusion Mitigation
- Contaminated Site Closure
- Oil Well Abandonment
- Soil Management Plan Implementation
- Health and Safety - Environmental Remediation/Construction/drilling

Key Experience/Key Projects:

Phase I and II Environmental Site Assessments

- Performed over 200 environmental site assessments nationwide since 2014, including but not limited to gas stations, dry cleaners, heavy manufacturing sites, and multi-tract residential apartments and housing.

- Performed soil, soil vapor, and groundwater sampling and investigations.

- Supervised and conducted well installations, trenching, well gauging, groundwater monitoring, and MIP investigations.

Site Characterization and Remedial Activities

- Performed site investigation and remediation activities to address chlorinated solvents (PCE, TCE), petroleum hydrocarbons, benzene, ethylbenzene, MTBE, and chromium contamination in soil and groundwater;

- Prepared Corrective Action Plans (CAPs)/Remediation Action Plans (RAPs), pilot test and treatability study work plans, Soil Management Plans (SMPs), remediation status reports, and groundwater monitoring reports to meet environmental permitting requirements;

- Performed soil excavation, Soil Vapor Extraction (SVE), in-situ chemical injections, and soil flushing remediation strategies to achieve site clean-up goals and No Further Action letter for multiple contaminated sites.

- Performed vapor intrusion investigation and vapor mitigation system installation in construction of new buildings.

Health and Safety

As former Health and Safety Officer for Tetra Tech's Southern California Office, Ms. Zhang gained experience in identification, handling, and disposal of different hazardous wastes, and the development of emergency response plans for brownfield redevelopment and remediation sites.

Education

Bachelors of Science in Environmental Science, Nankai University, China 2007-2011

Master of Science in Environmental Science and Engineering, California Institute of Technology, U.S. 2011-2013

Certification

cell: (847) 404 9982

Technical Expertise

- Transaction Screening Assessments
- Phase I Environmental Site Assessments
- Phase II Environmental Site Investigations
- Technical Site Review
- Site Characterization
- Brownfield Remediation
- NEPA Environmental Impact Statements
- Environmental Regulatory Compliance

Phase I and II Environmental Site Assessments

- Performed 500+ Phase I Site Assessments, including restaurants, commercial storage properties, office and residential properties, gas stations, dry cleaners, manufacturing sites, communications facilities, public works projects (such as roadway & sewer improvement projects) and former military installations (2011-2019).

- Extensive experience in proposal preparation and field work involving Phase II Assessments. Phase II Subsurface Investigations range from investigating dry cleaner sites, heavy manufacturing sites, or gas stations. I have been involved from proposal preparation and client management to completion of report and agency correspondence (2011-2019).

Remediation / Regulatory Closure

- Extensive experience with site characterization and remedial action / closure projects. Also experienced in preparing Corrective Action Plans, Remediation Action Plans, Site Closure Reports, and status/monitoring reports. (2011-2019).

Federal Compliance Experience

- Experience with facility regulatory environmental compliance inspections to assess and remediate facility compliance with local, state, and federal laws in the following states and territories: Washington, Oregon, California, Nevada, Montana, Arizona, and Guam.

Municipal Consulting Experience

- 6+ years as a consultant for municipal clients, providing a wide variety of environmental services, which include: Phase I & Phase II projects; agency negotiation and compliance expertise; brownfield remediation and site redevelopment; waste characterization; soil management; and technical environmental oversight of public works projects, such as wetland and stream management, local roads and sewer improvements, and grants (2011-2017).

- Project Manager for 3.5-million dollar Illinois Department of Transportation (IDOT) Hazardous Waste Contract as a consultant conducting Preliminary Environmental Site Assessments (PESA) and Preliminary Site Investigations (PSI), Soil Management Plans, and waste disposal management (2016-2017).

Education

Bachelors of Science in Geology, Northern Illinois University, 2009

Master of Science in Geology and Geospatial Science, Missouri State University, 2011

Certifications

- 40-hour OSHA HAZWOPER
- Washington Licensed Professional Geologist #3209
- Illinois Licensed Professional Geologist #196.001427
- Indiana Licensed Professional Geologist #2575
- Wisconsin Licensed Professional Geologist #1348

Professional Affiliations

ASTM Environmental Committee E50

Greg L. Gavasse, MSSE, P.E.
Senior Engineer
Los Angeles Office
calquake@roadrunner.com
(805) 202 1362

Greg Gavasee is Senior Engineer within Fulcrum Resources Environmental

Greg specializes in helping clients with the following:

- Building Engineering Reports (over 3,500 Property Condition Assessments)
- Seismic Evaluations (PMLs, SELs, and SULs)
- Technical site review
- HUD, ASTM, FNMA, FREDDIE MAC, and GMAC
- Building Design Consulting
- Drainage, pavement, life safety, electrical, plumbing, mechanical, and structural analysis
- Government Agency Contracting

Key Experience/Key Projects -

High Rise Building-777 Tower, Los Angeles, CA

- Conducted a building engineering report that included a review of "as-built" plans, construction and maintenance documents; analysis of the electrical, plumbing, mechanical, conveyance, structural and life safety systems; review of the building interior and exterior components, and a complete review of the facilities compliance with the Americans with Disabilities Act (ADA). A seismic assessment (SEL/SUL) was also performed.

Los Angeles MTA Rapid Bus Project, Los Angeles, CA

- Mr. Gavasee was the project director in charge of consultant procurement/management, design development and final design, construction management, project scheduling using CPM, project compliance with federal, state, and local regulations, permitting, and construction monitoring. This public works project involved the installation of 62 Rapid Bus Shelters, which included street lighting, kiosks, changeable message signs, and hardscape. This state of the art bus shelter system communicates with busses via modern communication and updates passengers on bus arrival times. This project was completed in 21 days ahead of schedule and $630,000 of the set $4.6 million dollar budget.

Structural Engineering, Southern California

- Mr. Gavasee has conducted over 3,500 Property Condition Assessments and contains a wealth of knowledge within structural design and engineering. Design experience includes concrete tilt-up structures; wood, steel, and concrete frame structures; pier foundation for steel erector crane; pier foundations for monopole and lattice tower antennas; bridge load rating and retrofitting; fatigue and fracture critical analysis of steel bridges, and concrete and GFRC panels.

Fields of Competence

- Structural Engineering and Design
- Structural Assessments
- Technical Review
- Consulting

Education

Bachelors of Arts in Business, University of California at Santa Barbara, Santa Barbara California

Masters of Science in Structural Engineering, San Jose State University, Los Angeles

Certification

- California Professional Engineer, CA License No. 61447
- General Engineering Contractor, California "A" License No. 560011
- General Building Contractor, California "B" License No. 560011

Previous representative employers –

- Cal-Quake Engineering, Inc

Jyh-Yih (Jerry) Ren, PhD, P.E.
Project Manager, Principal Consultant
Anaheim Office
renjyhyih@yahoo.com
(626) 780-8960

Jerry Ren is Project Manager and Project Engineer

Jerry specializes in helping clients with the following:

- Combustible soil gas control
- Residential area gas barrier design
- Oil field soil vapor control
- Landfill gas collection system design
- Landfill gas to energy
- Blower and flare station
- Gas recovery and treatment system design

Key Experience/Key Projects -

Norco Corona School District (Corona, CA)

- Served as Project engineer for the methane protection system design of Rosa Parks Elementary School. The system design included trench plan, membrane plan, and vent risers details.

Methane Mitigation Projects (Los Angeles, CA)

- Responsibility included soil gas test and methane barrier design for several clients where methane gas mitigation for building structures was required by local building codes.

Brea Olinda Master Community Association

- Responsibility included field supervising of monitoring of tar seeps and methane mitigation systems as well as directing of non-routine and emergency response services as required in accordance with the requirements of the Orange County Fire Authority and the City of Brea. The project experience included soil remediation system design.

University of Irvine (Irvine, CA)

- Responsibility included assisting in the preparation of a Remedial Action Plan (RAP) and feasibility study for soil and groundwater remediation using dual phase vapor extraction technology at a fleet services facility. The project experience included assisting in the design of a remediation system for soil and groundwater cleanup to bring the site to closure. Remediation of soil and groundwater was completed and verified by post-closure monitoring of groundwater.

Blue Ridge Landfill (Fresno, TX)

- Served as Project engineer for the engineering and construction of a $6M landfill gas (LFG) energy recovery system with 34-mile gas pipeline. The system designed for an initial capacity of 5,000 SCFM and a maximum capacity of 9,000 SCFM LFG. The compressor plant includes a screw gas compressor, gas dehydration in a custom designed heat exchanger skid, redundant outlet gas scrubbers, and gas analyzers to measure gas quality before injection into the pipeline.

Enoree Landfill (Greer, SC)

- Served as Project engineer for the engineering of a $500K siloxane removal skid assembly for a LFG energy recovery project. The skid assembly treated 1,200 SCFM LFG prior to burning in two Caterpillar 3520 engines. The process dehydrated the gas with a chilled water system and remove siloxane in several beds.

California Energy Commission (Los Angeles, CA)

- Served as Co-Principal Investigator for a CEC funded project ($95K) to develop an economical and robust process to remove siloxanes from biogas by evaluating the technical feasibility of a novel photodecomposition technology within the context of biogas treatment. Responsibility included: proposal preparation, system design, conducting experiments, budget preparation/management and final report preparation.

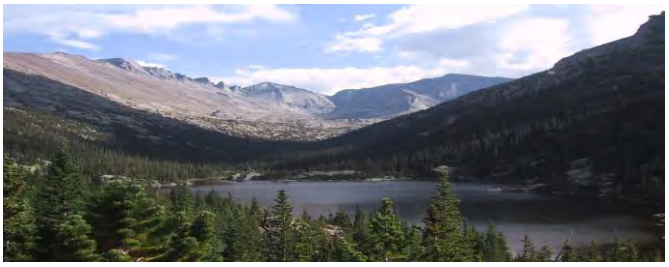
Christina Vickers, M.S.
Regional Director/Environmental Professional
Phoenix Office
Christina@frenviro.com
(313) 303-2316



Christina Vickers is a Regional Director and Environmental Professional within Fulcrum Resources Environmental.

Ms. Vickers specializes in helping clients with the following:

- Transaction Screen Assessments
- Database Reviews
- Phase I and II Environmental Site Assessments

Phase I and II Environmental Site Assessments

- Ms. Vickers has worked on hundreds of Phase I Environmental Site Assessments (ESAs) throughout the United States for sites including multi-family residences, high-rise offices, retail shopping centers, gasoline stations, automotive repair facilities, hotels, agricultural land, schools and industrial/manufacturing facilities.

- Ms. Vickers has completed Phase I ESAs for numerous real estate developers, brokers, attorneys and property owners in order to complete due diligence requirements for property transfers and acquisitions.

- Ms. Vickers has provided assistance with Phase II Subsurface Investigations by collecting groundwater and soil samples, preparing the samples for laboratory analysis, characterizing soil lithology and technical report writing. In addition, Ms. Vickers has provided assistance with Hazardous Materials Surveys and Asbestos Surveys by identifying hazardous building materials and potential asbestos containing materials within commercial properties, collecting and preparing the samples for laboratory analysis and technical report writing.

- Ms. Vickers has provided Quality Assurance/Quality Control reviews for hundreds of Phase I ESA reports completed on properties located throughout the Western United States.

Key Experience/Key Projects

Former Manufacturing Facility; Chandler, AZ.

- Ms. Vickers performed a Phase I Environmental Site Assessment for a retail shopping center with five tenant suites. The property was formerly developed with a circuit board manufacturing facility for approximately 37 years. Due to Volatile Organic Compound (VOC) impacts to soil, the property was accepted into the Arizona Department of Environmental Quality's Voluntary Remediation Program.

Car Dealership; Yuma, AZ.

- Ms. Vickers performed a Phase I Environmental Site Assessment of a forty-year-old car dealership. The property encompassed two non-contiguous parcels of land and included five automotive sales and service buildings, multiple aboveground storage tanks, underground storage tanks, spray paint booths, hazardous materials storage areas, and in-ground hydraulic lifts.

Truck Stop; Phoenix, AZ.

- Ms. Vickers performed a Phase I Environmental Site Assessment for a truck stop and travel center which included a convenience store, fast food restaurant, and a truck wash and repair facility. Over the course of 26 years, the property maintained a total of ten underground storage tanks with multiple releases reported for the tanks. In addition, the property included eight drywells, multiple aboveground storage tanks, oil/water separators and sumps.

Former Circuit Board Manufacturer; Tempe, AZ.

- Ms. Vickers performed a Phase I Environmental Site Assessment for a flex office/warehouse with a history of circuit board manufacturing. Ms. Vickers performed lengthy file reviews and discovered past tenants illegally dumped hazardous waste into an on-site drywell. A former tenant of this property was identified by the EPA as a responsible party for the South Indian Bend Wash Superfund site, with a documented VOC plume located beneath this property.

Gasoline Station Portfolio; Northern Arizona.

- Ms. Vickers completed Phase I Environmental Site Assessments for a mini-portfolio of gasoline stations located throughout northern Arizona. The gasoline stations either had multiple generations of underground storage tanks, documented releases, oil/water separators, car wash facilities, septic systems or on-site potable water wells etc.

Education

Bachelors of Science in Earth Sciences, University of Michigan-Dearborn, 2007

Master of Science in Environmental Science, University of Michigan-Dearborn, 2010

Heather N. Conner
Principal Consultant/East Coast Operation's Manager
Balitmore Office
heathernconner@gmail.com
(443) 735 8540

Heather Conner is the Principal Consultant and East Coast Operation's Manager within Fulcrum Resources Environmental

Heather specializes in helping clients with the following:

- Transaction Screen Assessment
- Phase I and II environmental site assessment
- Property Condition Assessment
- Technical consulting
- Project Management
- RFI sample program management
- Chesapeake Bay Critical Areas Plan Review and Inspection
- Regulatory Records Research and Review
- Asbestos-Containing Material (ACM) Operations & Maintenance Plan
- Lead-in-water and Radon Testing
- Remediation and Monitoring Tactics
- Agency Oversight Assistance

Key Experience/Key Projects -

Phase I and II Environmental Site Assessments

- Conducted over 1,000 nationwide Phase I environmental site assessments on sites ranging in nature from small commercial businesses to Superfund redevelopment areas, including but not limited to Lanterman Development Center (LDC); Beverly Center; City of Hope Medical Group; Fess Parker Resort Hotel Development Property; US Foodservices; portfolio project of various Residence Inn Extended Stay Hotels; River Rail Apartments; monitoring current landfills in City of Puyallup, Washington; and Tires Plus Total Car Care. Ms. Conner also performed technical consultant and remedial support for Brownfield redevelopment of historical Berk Oil and Pacific Metal Craft Sites.

  Ms. Conner is the Due Diligence Specialist for LRS Federal and works closely with the Project team, providing guidance for Phase I assessment activities.

Lanterman Development Center (LDC)

- Performed Site Assessment and Managed LDC Project. LDC is a 900-acre, State-owned campus for the developmentally disabled located in the city of Pomona, California. With a rich 100-year history, assessment of the LDC involved the inspection of 21 client residences, an acute hospital with sewage lift station, an auditory clinic, a library, a cafeteria, a vocational training center, storage buildings, recycling center, garden center, various staff buildings including residential dorms and dwellings, administration building, staff training facility, research building, conference center, credit union, police and emergency services, motor pool, grounds maintenance facility, power plant with underground storage tanks and boiler room, machine shop, laundry services, paint/woodworking shop, auto repair building, gas station, car wash, motor pool, and hazardous materials and waste storage facilities. Recreational facilities assessed included an auditorium, school, day care facility, swimming pool, playgrounds, camp with concession stand, cabins, and an amphitheater, carousel, equestrian center with a petting zoo, track, and a ballpark. In addition to these structures, the LDC campus utilizes its own water distribution system, equipped with two large reservoirs, a pump house, and various on-site water wells.

Education

Bachelors of Science in Biology with a concentration in Environmental Science, Salisbury University, 2001

Certification

- 40-hour OSHA HAZWOPER Training Certificate
- 4-Hour Disaster Training Certificate
- Maryland Sediment Erosion Control Certificate

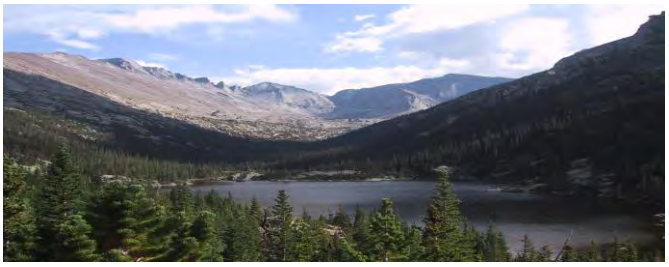
Wendy Moore, B.S.
Client Manager/Senior Environmental Scientist
Los Angeles Office
wendy@frenviro.com
(323) 315-0996



Wendy Moore is a Client Manager and Senior Environmental Scientist within Fulcrum Resources Environmental.

Wendy specializes in helping clients with the following:

- Transaction Screen Assessment
- Phase I and II Environmental Site Assessment
- Site investigation and assessment
- Peer report review
- Asbestos and lead inspections pre demolition, restoration and renovation
- CEQA/NEPA
- Agency oversight assistance

Key Experience/Key Projects -

- Managed and completed over 1,500 Phase I Environmental Site Assessments (ESAs) for various industries and properties including wireless telecommunications, hospitals, industrial, commercial, and landfills across North America since 2000. Implementation of American Society for Testing and Materials (ASTM) Standard Practice E1527-13 and U.S. Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) in the United States and CAN/CSA-Z768-01 and Ontario Regulation 153/04 in Canada (Ontario).

- Completed numerous National Environmental Policy Act (NEPA) Screening reports and Environmental Impact Assessment reports for the telecommunications industry.

- Completed numerous limited asbestos surveys and lead-based paint surveys for various facilities and properties. Activities included limited sampling and report writing

- Completed and assisted with various Phase I ESA and Phase II Investigations around the Los Angeles metropolitan area for the Albert Sweet Development Corporation.

- Managed and trained staff in completing a variety of environmental service related tasks.

- Managed numerous sub-consultants nationwide assisting with Phase I ESAs conducted nationwide.

- Assisted in various Phase II Investigations around the Los Angeles metropolitan area. Investigations included quarterly groundwater monitoring undertaken for Pentair, 2001 and groundwater well installation and soil sampling for Parish, Inc.

- Preparation of Quarterly RECLAIM reports and Annual Emissions reports for clients such as American Airlines, Inc. and Kal Kan Foods, Inc.

- Provided technical support on numerous major projects including the Charnock Initial Regional Response Activities on behalf of Shell Oil Company. Work on this and other projects involved data acquisition, processing as well as electronic conversion of boring logs.

- Participated in major subsurface investigation at Vernon Steel, California, including quarterly groundwater monitoring.

- Assisted with compilation of remediation team in New Orleans subsequent to hurricane Katrina (2006).

Education

Bachelors of Science in Earth Sciences, University of Johannesburg, South Africa, 1998*

Bachelors of Science Hons. in Geography and Environmental Management, University of Johannesburg, South Africa, 1999*

*Bachelors of Science certification issued by the University of Toronto - Comparative Education Service, 2000

Professional Papers

Key author in preparation of an *Initial Study and Mitigated Negative Declaration for the City of Hawthorne Refuse and Recycling Services System Update and Redesign*, 2002.

Certification

Darren Johnston
Director of Sustainability Consulting Services
Colorado Office
djohnston@uhgconsulting.com
(603) 661-5167

Darren Johnston is Director of Sustainability Consulting Services for UHG Consulting.

Darren specializes in helping clients with the following:

- Energy Audits
- LEED Certification
- AB1103
- Energy Star
- Water Audits
- Waste Audits
- Alternative Energy
- Sustainability Audits

Key Experience/Key Projects -

Energy Audits

- Performed field work, project management, budgeting, client management, and completion of report for clients in sites nationwide. Energy Audit reports have identified millions of dollars of opportunities to reduce energy consumption. Recently helped a client in Colorado reduce their energy consumption by over million dollars a year.

LEED Certification

- Have led LEED Certification efforts for clients seeking LEED-NC, LEED-EB, and LEED-ND. Responsible for managing the LEED process, project credit selection, LEED budgets, documentation, and LEED reports. Recently helped a corporate headquarters in Colorado receive a LEED Gold certification, and hotel in Florida receive a LEED Silver certification.

Energy Star

- Responsible for maintaining multiple client Energy Star portfolios. Manage, edit, input, and update Energy Star portfolios to maximize Energy Star scores. Recently helped multiple County buildings in Colorado achieve Energy Star awards.

Water Audits

- Responsible for analyzing the water usage of multiple clients across the United States. Through analysis and project management have assisted clients in implementing improved water reduction strategies. Recently helped a 250 unit apartment complex in Ohio reduce their water usage by greater than 50%, reducing their monthly bills by over $100,000 a year.

Sustainability Audits

- Responsible for analyzing the practices of organizations and providing input on how to operate their organizations more efficiently. Recently completed an audit for a domestic airline, analyzing their operations and providing recommendations on how to operate more efficiently.

Education

Bachelors of Science in Computer Science, Boston University, 1996

Masters of Business Administration, Stanford University, 2003

Kristina Krissakova-Thomas
Environmental Assessor, Project Manager
Orange County Office
(949) 266 7173

Kristina Krissakova-Thomas is an environmental scientist and the Environmental Assessor and Project Manager within Fulcrum Resources Environmental primarily for Orange County and San Diego County.

Kristina specializes in helping clients with the following:

- Transaction Screen Assessment
- Phase I and II environmental site assessment
- Property Condition Assessment
- Project Management
- Regulatory Records Research and Review
- Agency Oversight Assistance

Key Experience/Key Projects -

Project Management

Ms. Krissakova-Thomas in an experienced environmental assessor and project manager. She conducted over 100 Phase I environmental site assessments on sites ranging in nature from small commercial businesses to Superfund redevelopment areas. Ms. Krissakova-Thomas is involved in all aspects of Phase I projects including field work, tenant/owner interviews, extensive agency file reviews, historical analysis, database reviews and the generation of final reports. Ms. Krissakova-Thomas is also an expert in consulting with owners, investors, lenders, and brokers.

Ms. Krissakova-Thomas prepared over 150 California Hazardous Material Business Plans for a major nationwide contractor's retail chain.

Ms. Krissakova-Thomas assisted in preparation of Health and Safety Plans and Work Plans as a part of environmental subsurface conditions assessments.

Ms. Krissakova-Thomas is also experienced in conducting environmental health and safety tenant audits for commercial and industrial facilities.

Proposals and Cost Preparation

Mr. Krissakova-Thomas is experienced in planning and assembling project proposals for Phase I Site Assessments. She is responsible for building and maintaining of a professional network and sourcing of new clients, primarily in the Orange and San Diego County area.

Tiffany N. Tona, M.S.
Project Manager
San Jose and Southern California
tiffany@frenviro.com
(657) 203-5549

Tiffany Tona is a Project Manager within Fulcrum Resources Environmental.

Tiffany specializes in helping clients with the following:

- Transaction Screen Assessment
- Phase I Environmental Site Assessments
- Historical Research Investigations
- NEPA Checklists and Compliance Assessments
- SHPO Compliance Assessments

Key Experience/Key Projects -

Phase I Environmental Site Assessments

- Performed Phase I Environmental Site Assessments since 2013, for various facilities that include but not limited to gas stations, car dealerships, manufacturing facilities, telecommunications facilities, commercial buildings, auto repair, agricultural farmland, apartment complexes, commercial offices, storage facilities, industrial facilities, and restaurants. Work performed in Northern and Southern California. Followed ASTM E 1527-05/All Appropriate Inquires Standards and current ASTM E 1527-13 Standards.

- Subsurface investigation projects include: leaking underground storage tank historical research and remediation planning for former and existing gas stations and automotive repair shops in Southern California; subsurface analysis of former and existing tank farms in Northern and Southern California; and remedial investigations of proposed and existing Telecom facilities for Verizon Wireless and AT&T.

NEPA Checklists and Compliance

- Performed NEPA Checklist reviews for compliance under the National Environmental Policy Act (NEPA) for proposed and existing Telecom facilities, and colocation agreements for Verizon Wireless and AT&T. Determination of compliance included the review and verification of environmental impact assessments conducted at proposed and existing telecom facilities regarding the facility's impact on migratory birds, local endangered flora and fauna, 100- and 500-year flood zone influences, as well as potential impact to human health. All compliance reviews were conducted in accordance with NEPA telecommunications standards.

Education

Bachelors of Arts in Japanese, University of Oregon, 2006

Masters of Science in Environmental Management, University of San Francisco, 2012
Thesis: Swift advancements in electronic waste management for New York City: Electronic Equipment Recycling and Reuse Act

Shauna Davis, M.S.
Midwest Regional Manager/Environmental Professional
Chicago Office
shauna@frenviro.com
(661) 331 1842

Shauna Davis is Midwest Regional Manager and Environmental Professional within Fulcrum Resources Environmental

Shauna specializes in helping clients with the following:

- Transaction Screen Assessment
- Phase I and II environmental site assessment
- Site investigation and assessment
- Technical site review
- Remediation and Monitoring Tactics
- Health and Safety
- NEPA
- Agency Oversight Assistance
- Conceptual Site Models

Key Experience/Key Projects -

Phase I and II Environmental Site Assessments

- Performance of over 400 environmental site assessments nationwide since 2007 that include but are not limited to gas stations, dry cleaners, heavy manufacturing sites, retail sites, oil and gas sites, multi-tract residential apartments and housing, power generation facilities, and landfills. Ms. Davis also has extensive involvement with Non-CERCLA sampling per specific client protocol that include radon testing and lead in water sampling.

- Ms. Davis also has experience in completion of Phase II Environmental Site Assessment reports and Groundwater Monitoring Reports for former and current industrial facilities undergoing remediation.

- Ms. Davis has experience in hydrogeological concepts effecting the fate and transport of contaminants in the environment and has participated in the completion of fate and transport models, capture zone analysis of remediation systems, and interpretation and analysis of water level transducer data.

Health and Safety

- Ms. Davis has performed annual Environmental Health and Safety Audits for commercial properties located throughout Southern California. Audits include assessment of fire suppression safety, warehouse safety, chemical inventory practices, and permitting and licensing.

- As former Chemical Hygiene Manager for the Environmental Protection Agency's research vessel Lake Guardian, Ms. Davis supervised safety of sampling activities, laboratory activities, chemical usage and storage, and performed quality control drinking water sampling and analysis.

Education

Bachelors of Science in Earth and Environmental Science, University of California - Irvine, 2006

Masters of Science in Geology, Emphasis in Hydrogeology, California State University - Los Angeles, 2012

Professional Papers

Analysis of the Geochemistry of Permafrost Fed River Samples and Glacial Fed River Samples Collected from Tributaries of the Yukon, Tanana, and Copper Rivers in Alaska. Research Paper for California State University-Los Angeles, August 2012

Gabe Touma, CHMM
Midwest Operations Manager
Denver Office
Gabe@frenviro.com
(720) 468 2420

Gabe Touma is Midwest Operations Manager within Fulcrum Resources Environmental

Gabe specializes in helping clients with the following:

- Phase I and II environmental site assessment
- Site investigation and assessment
- Technical site review
- RFI sample program management
- Alternative Energy/solar/wind
- Asbestos in soil project management and remediation
- Asbestos inspections associated with demolition, restoration and renovation
- Lead in soil/surveys
- Indoor air quality
- Monitoring/remedial Well installation
- Health and Safety- Environmental Construction/drilling
- Noise surveys
- Waste profiling/treatment/disposal

Key Experience/Key Projects -

Santa Susanna Field Laboratory

- Under the direct oversight of the California Department of Toxic Substances Control (DTSC), conducted a Phase I Environmental assessment and historic review of a 3,000-acre property that operated as cold war facility. Operations included nuclear reactor experiments, rocket testing, space shuttle engine testing and missile development. Prepared a sampling analysis program and conducted RFI sampling and management of over 600 boring locations. Such efforts included the management of up to four field personnel as well as health and safety.

Stapleton International Airport

- Management for large construction projects involving excavation of hazardous materials including the Former Stapleton International Airport. Management of up to eight field personnel. Tasks included technical site management as well as health and safety.

Fields of Competence

- Industrial hygiene
- Environmental site assessments
- Environmental remediation

Education

Bachelors of Science in Biological Science, California State University, Fullerton, California

Jeff Clifton
Environmental Engineer/Southern Operations Manager
(Dallas, TX)
jeffsclifton@gmail.com
(214) 862 5620

Jeff Clifton is a Senior Environmental Scientist that performs Phase I Environmental Site Assessments/ Phase II Environmental Site Assessments/ Property Condition Assessments

Jeff specializes in helping clients with the following:

- Government FDIC Checklists for single-family residences
- Phase I and II environmental site assessment
- Site investigation and assessment
- Technical site review
- Property Condition Assessments
- Asbestos, lead, mold, and microbial inspections associated with demolition, restoration and renovation
- Remediation and Monitoring Tactics
- Health and Safety- Environmental Construction/drilling
- Agency Oversight Assistance
- Soil Engineering
- Environmental Compliance Audits

Key Experience/Key Projects -

Geotechnical Experience

- Mr. Clifton performed geotechnical testing involving Atterberg Limits, Plastic Limits, Sieve Analysis, Free Swell Analysis, and Unconfined Strength Testing. Mr. Clifton is also experienced in performing duties involving construction materials testing, soil density gauge testing, soil moisture/density relationships, concrete sampling and testing, and pier inspection.

Phase I and II Environmental Site Assessments

Performed over 2,000 environmental site assessments nationwide since 2003 that include but not limited to gas stations, dry cleaners, heavy manufacturing sites, multi-tract residential apartments and housing. Mr. Clifton is experienced in handling government FDIC work and portfolio work involving dual-scope or multi-scopes of Phase I Environmental Site Assessment, Property Condition Assessments, and/or asbestos and lead testing.

Jeff is also experienced with handling aspects of Non-CERCLA items and soil vapour intrusion related to ASTM Standards.

Jeff's Phase II experience involves dry cleaners, gas stations, and major industrial facilities.

Client Management

Mr. Clifton currently assists with client relationship and management through attending quarterly meetings, and educating clients on environmental issues.

Ian Culp
Environmental Assessor
Bay Area Region Offices
ian@frenviro.com
(925) 200-2230

Ian is an associate environmental assessor that specializes in conducting field assessment work and Phase I Environmental Site Assessments.

Ian is experienced with the following tasks:

- Phase I Environmental Site Assessments
- Soil and groundwater sampling
- Air monitoring

Key Experience/Key Projects -

Master Phase I Environmental Site Assessment of Industrial Facility (Richmond, California)

- Conducted a master Phase I Environmental Site Assessment of a 10 acre, multi-tenant industrial facility. The facility contained a UST, and multiple hazardous materials

Phase I Environmental Site Assessment Report of Industrial Facility (Oakland, California)

- Former City of Oakland Firehouse, built in the early 1960's and had been vacant for several years. Responsibilities included identification of asbestos building materials, extensive water damage, pest damage, a large amount of pesticide/herbicide being stored, and a large gasoline AST.

Phase II Environmental Site Assessment of Retail Commercial Facility (Sea Ranch, California)

- Responsible for obtaining groundwater permits, and choosing groundwater sample locations with Senior Geologist. Also responsible for collecting groundwater sampling and setting temporary wells

Phase I and Phase II Environmental Site Assessment of Gas Station (Dunnigan, California)

- Responsibility included assisting in the preparation of a Phase II Proposal and obtaining proper files for Phase I and Phase II Assessment

Caitlin D. Culp
Environmental Professional and Project Manager
Santa Clara/South Bay Offices
caitlin@frenviro.com
(925) 200-7032

Caitlin is an Environmental Professional and Client Manager within Fulcrum Resources Environmental. Caitlin has managed multiple clients and Phase I/II Reports throughout greater Northern California.

Caitlin is experienced with the following tasks:

- Phase I Environmental Site Assessments
- UST Compliance
- Subsurface Investigations
- Project Management
- Health Risk Assessments
- Asbestos and Lead Sampling
- Soil and groundwater sampling
- Air monitoring

Key Experience/Key Projects -

Subsurface Investigation of Former UST Site (Gilroy, California)

- Conducted a geophysical investigation via ground-penetrating radar and found location of former UST. Continued to assess the area of the former tank with soil vapour, soil, and groundwater sampling. Completed health risk assessment with vapour data

Phase I Environmental Site Assessment Report of Industrial Facility (Freemont, California)

- Conducted a Phase I Environmental Site Assessment of former SLIC Site within area of multiple open SLIC cases with the waterboard. Was able to consult with client and agency to obtain clearance letter from SFRWQCB.

Phase I Environmental Site Assessment & Asbestos and Lead Sampling of Industrial Facility (San Jose, California)

- Assisted with collecting asbestos and lead sampling while also conducting a Phase I Environmental Site Assessment of warehouse portion of industrial facility to be renovated.

Portfolio of Phase I Environmental Site Assessments for ground floor commercial and residential apartments (Oakland and San Francisco, California)

- Conducted 15 site walks of multi-story commercial and residential apartment buildings throughout greater San Francisco and Oakland area, and managed client demands. Some of the structures had issues with former tanks onsite, or dry cleaners where a indoor air monitoring and a health risk assessment was necessary. One of the apartments had a dry cleaner operation.

Subsurface Investigation of Former Manufacturing Facility and Machine Shop (Sunnyvale, California)

- Assisted Senior Geologist with proposed locations to drill at manufacturing facility. The investigation consisted of collecting groundwater, soil, and soil vapor samples, in which a J&E Model was conducted.

Andrew J. Dziedzic, REPA
Regional Project Manager
Philadelphia, Pennsylvania Office
(215) 534 4155

Andrew Dziedzic is a Regional Project Manager within Fulcrum Resources Environmental.

Andrew specializes in helping clients with the following:

- Transaction Screen Assessment
- Phase I and II environmental site assessment
- Site investigation and assessment
- Technical site review
- Asbestos and lead-based paint
- Remediation
- Business Development

Key Experience/Key Projects:

Phase I, II, and III Environmental Site Assessments

- Extensive expertise on many portfolio and debt and equity transactions throughout the United States and Mexico.

- Proven track record of providing timely and accurate technical information and professional opinions regarding potential issues to assist clientele in environmental liabilities and tasks.

- Performed thousands of environmental investigations of all property types including commercial, residential, multi-family, and industrial properties. These investigations have been in accordance with Freddie Man, Fannie Mae, and ASTM Guidelines.

- Extensive knowledge of state and federal regulations with over 20 years of experience.

- Expertise in asbestos and lead-based paint, subsurface investigations, and remediation.

Previous Employment Experience

Land America Commercial Services, Brinkerhoff Environmental Services, Raritan Enviro Sciences, & GA Environmental Services 1994-2004

- Managed and supervised the performance of multiple Phase I and II Environmental Assessments, Site Investigations, and Remedial Investigations for private equity groups, commercial mortgage and construction lenders, real estate investment trusts, and commercial mortgage backed securities, including preparation and review of expert reports.
- Managed and performed UST removal, subsurface evaluation and soil and groundwater investigations.

- Performed ISRA Preliminary Assessments for commercial/industrial properties governed under the New Jersey Industrial Site Recovery Act including historical site characteristics, area of concern identification, and soil and groundwater sampling and report preparation.

Advantage Environmental Consultants and Property Solutions, Inc. 2006-2009

- Developed bid packages and won Phase I & II, soil & groundwater remediation and UST projects including Brownfields redevelopment investigation, Asbestos abatement projects, New Jersey ISRA compliance projects and mercury contaminated soil removals.
- Responsible for client management and business development for the Philadelphia Regional Office, scheduling of personnel and direction of resources, financial tracking, coordination of daily business and office activities, as well as perform and manage all aspects of Phase I and Phase II Environmental Site Assessments, Site Investigations and UST closures on projects throughout the Pennsylvania/New Jersey region.
  Technical Manager and Regional Manager of the Irvine, California office, responsible for managing the environmental operations and staff of the Western Region.

Education

Bachelors of Art, Earth and Environmental Sciences with Minor in Business, Wilkes University, 1993

Certification

- 40-hour OSHA HAZWOPER Training
- 8-hour OSHA HAZWOPER Supervisor Training
- Licensed Subsurface Evaluator/UST Closure, NJDEP No. 18809

Anthony Ligutom
Geologist
North Dakota Office
ajligutom@gmail.com
(701) 202-9179

Anthony Ligutom is a Geologist at Fulcrum Resources Environmental.

Anthony specializes in assisting clients with the following:

- Phase I Site Assessment
- Phase II Site Remediation
- Monitoring and production well installation
- Soil and groundwater sampling
- Technical report writing
- Site investigation and assessment
- Health and safety audits and documentation
- State and federal environmental regulation knowledge for North Dakota.
- Environmental Research

KEY EXPERIENCE/PROJECTS -

Project Management

- Project proposal writing, budgeting and field preparation with respect to the clients and regulations. Consistent and reliable communication with all stakeholders regarding progress of the project. Post field work report writing.
- These projects were in the North Dakota Bakken oil fields. Some were for emergency response to spills and leaks in adverse weather and remote locations.

Health and Safety

- Developed and prepared job safety and project safety specific programs. I was part of risk management teams that were used to not only determine the scope of work but how to best mitigate potential hazards. Trained new staff with respect to behaviour-based safety and ensured they were properly equipped to work in adverse weather conditions.

Phase I and II Environmental Site Assessments

- Performed fieldwork, project management, budgeting, client management, and completion of report for clients throughout North Dakota. Performed environmental site assessments for properties such as commercial and industrial buildings. Environmental investigations to determine the nature and extent of soil, sediment, and groundwater impacts.

Field Work

- Experienced in installing monitoring and production wells. Soils logging using the USCS. Groundwater and soil sampling conducted in many states through various methods. Contractor oversite for emergency response, drilling, well installations, UST removals and for remediation system installations. Operations and maintenance for remediations systems.

Education

Bachelor of Science in Geology, California State University of Los Angeles, 2005

Certifications

- 40-hour OSHA HAZWOPER
- OSHA 10 Hour

Steffany Goetz
Southeast Operations and Client Manager
Orlando, Florida Office
steffany@frenviro.com
(321) 312-8342

Steffany is an environmental professional and also manages the South-eastern division for Fulcrum…

Steffany specializes in helping clients with the following:

- • Phase I and II Environmental Site Assessments
- • Soil and groundwater sampling
- • Site Closure
- • Technical site review
- • Health and Safety
- • Well Abandonment
- • Hazardous Materials Management

Key Experience

LUST closure-Wyndham Bay Point Resort Golf Course (Panama City, Florida)

Ms. Goetz was the point person and onsite field technician in conducting well installations, scheduling and coordinated of staff, well sampling, and client and agency correspondence for an open LUST case for two former USTs located within the maintenance yard portion of a golf course located at the Wyndham Bay Resort. Ms. Goetz's experience proved beneficial in assisting the client in obtaining a low-threat closure, and saving time and money.

Phase I Restaurant Portfolio in Counties of Brevard and Orange, Florida

Ms. Goetz scheduled and oversaw the management of eleven Phase I reports for Dennys and IHOP restaurants within Brevard and Orange County, Florida. Ms. Goetz was also the key point of contact in communicated with client as several of the restaurants were former gas stations that required additional due-diligence.

Statewide Florida Gas Station Portfolio Acquisition Involving Phase I & II Site Assessments

Ms. Goetz was personally in charge is coordinating and visiting a total of 25 gas stations throughout the state of Florida. Ms. Goetz oversaw compliance issues, and also addressed all RECs at the gas stations where further subsurface investigation and initiating of groundwater monitoring under the Florida Department of Environmental Protection was needed.

ARCO Gas Station (Ocala, Florida)

Ms. Goetz conducted the Phase I investigation of a two generation gas station in Ocala, Florida that also required additional due-diligence. Ms. Goetz was also responsible for coordinating with the client the need for additional assessment, and was also the field technician involved with the geophysical survey and subsurface investigation.

Car Wash (Key Largo, Florida)

Ms. Goetz had conducted a cursory review of a car wash that was a former auto repair site, and that had impacted groundwater. The other consultant recommended additional remediation, where Ms. Goetz disagreed and was able to get a closure status through the Florida Department of Environmental Protection based on low levels of BTEX in groundwater. Ms. Goetz was able to save the client nearly 100k in remediation efforts.

Drycleaner Investigation (Daytona Beach, Florida)

Ms. Goetz conducted a Phase I of a commercial-retail plaza that consisted of five parcels, which also led to the discovery of a former drycleaner operation between the 1960s-1980s that the former consultant missed. Ms. Goetz organized the subsurface investigation, consisting of installation five shallow groundwater wells. Low levels of vinyl chloride and PCE were discovered, but after several monitoring events, Ms. Goetz was able to show it was contributing to an offsite source. The Florida Department of Environmental Protection was able to issue closure.

APPENDIX E
Traffic Impact Analysis Update

CRAIN & ASSOCIATES

Transportation Planning / Traffic Engineering

June 18, 2019

Mr. Wes Pringle
Transportation Engineer
Metro Development Review Division
Department of Transportation
100 S. Main Street, 9th Floor
Los Angeles, CA 90012

RE: Avenue 34 & Pasadena Mixed-Use Project Traffic Impact Analysis Update

Dear Mr. Pringle,

Crain & Associates has been requested to provide an update to the approved *Traffic Impact Report for Avenue 34 & Pasadena Mixed-Use Project*, January 2016 ("2016 Traffic Study"). Since the approval of the 2016 Traffic Study, the project team has decided to refine the project components which results in a reduction of the peak periods traffic generation. This technical memorandum has been prepared to address the refined project description and its potential impacts.

Background

The proposed project analyzed in the 2016 Traffic Study, which was approved by LADOT per the January 28, 2016 assessment letter, included the construction of 410 apartment units, 10,000 square feet of shopping center and 30,000 square feet of office spaces. The traffic study analyzed existing (2016) and future (2020) traffic conditions at ten study intersections located in the vicinity of the project. That study concluded the project would result in significant traffic impacts at the following intersections:

1. Figueroa Street and Avenue 26
2. Pasadena Avenue/Avenue 26 and Daly Street

To mitigate the project's significant traffic impacts at the above two intersections, the project proposed to implement Transportation Demand Management (TDM) Program and

300 Corporate Pointe
Suite 470
Culver City, CA 90230
310 473 6508 (main)
310 444 9771 (fax)

www.crainandassociates.com

Transportation Systems Management (TSM) Improvements. With the implementation of the mitigation measures, the project's significant traffic impacts at the above two intersections would be mitigated to a less than significant level.

As noted earlier, the project has recently been refined. The current proposed project would include up to 421 market rate apartment units, 47 affordable units and 16,444 square feet of shopping center uses. Therefore, while the amount of total units has increased, the total square footage of commercial space has been reduced.

Project Trip Generation Update

To be conservative, the project trip generation update has implemented the same trip generation rates and assumptions as the 2016 Traffic Study for the same land use types. For the affordable residential component, the LADOT affordable housing survey trip generation rates provided in Appendix A were used to determine the daily, AM and PM peak-hour trips generated by the proposed affordable residential uses. The refined project would generate less peak hour trips due to the refined project components. As shown in Table 1 and Attachment B, compared to the project trip generations included in the 2016 Traffic Study, it is estimated that the refined project will generate approximately 78 more daily trips and 4 less AM peak-hour trips and 4 less PM peak-hour trips.

Table 1
Project Trip Generation Comparison

	Daily	AM Peak Hour	PM Peak Hour
2016 Traffic Study	2128	161	199
Refined Project	2206	157	195
Net Difference	**78**	**-4**	**-4**

Findings/Conclusions

This analysis concludes that the refinements to the proposed project will not introduce any new peak hour project traffic. The project access locations will remain the same as in the 2016 Traffic Study. As Table 1 shows, compared to the trip generation for the proposed project in the 2016 Traffic Study, the trip generation values from the refined project will be 78 trips higher for daily trips, but 4 trips lower during the AM peak hour and 4 trips lower during the PM peak hour. Therefore, the project refinements will generate less peak hour trips and would not adversely change the previous traffic impact conclusions.

Sincerely,

Helen Shi, PE
Senior Transportation Engineer

MITIGATION MONITORING PROGRAM

Section 21081.6 of the Public Resources Code requires a Lead Agency to adopt a "reporting or monitoring program for the changes made to the project or conditions of project approval, adopted in order to mitigate or avoid significant effects on the environment" (Mitigation Monitoring Program, Section 15097 of the *CEQA Guidelines* provides additional direction on mitigation monitoring or reporting). This Mitigation Monitoring Program (MMP) has been prepared in compliance with the requirements of CEQA, Public Resources Code Section 21081.6, and Section 15097 of the CEQA Guidelines. The City of Los Angeles is the Lead Agency for this project.

A Mitigated Negative Declaration (MND) has been prepared to address the potential environmental impacts of the Project. Where appropriate, this environmental document identified Project design features, regulatory compliance measures, or recommended mitigation measures to avoid or to reduce potentially significant environmental impacts of the Proposed Project. This Mitigation Monitoring Program (MMP) is designed to monitor implementation of the mitigation measures identified for the Project.

The MMP is subject to review and approval by the City of Los Angeles as the Lead Agency as part of the approval process of the project, and adoption of project conditions. The required mitigation measures are listed and categorized by impact area, as identified in the MND.

The Project Applicant shall be responsible for implementing all mitigation measures, unless otherwise noted, and shall be obligated to provide documentation concerning implementation of the listed mitigation measures to the appropriate monitoring agency and the appropriate enforcement agency as provided for herein. All departments listed below are within the City of Los Angeles unless otherwise noted. The entity responsible for the implementation of all mitigation measures shall be the Project Applicant unless otherwise noted.
As shown on the following pages, each required mitigation measure for the proposed Project is listed and categorized by impact area, with accompanying discussion of:

Enforcement Agency – the agency with the power to enforce the Mitigation Measure.

Monitoring Agency – the agency to which reports involving feasibility, compliance, implementation and development are made, or whom physically monitors the project for compliance with mitigation measures.

Monitoring Phase – the phase of the Project during which the Mitigation Measure shall be monitored.

- Pre-Construction, including the design phase
- Construction
- Pre-Operation
- Operation (Post-construction)

Monitoring Frequency – the frequency of which the Mitigation Measure shall be monitored.

Action Indicating Compliance – the action of which the Enforcement or Monitoring Agency indicates that compliance with the required Mitigation Measure has been implemented.

The MMP performance shall be monitored annually to determine the effectiveness of the measures implemented in any given year and reevaluate the mitigation needs for the upcoming year.

It is the intent of this MMP to:

Verify compliance of the required mitigation measures of the MND;

Provide a methodology to document implementation of required mitigation;

Provide a record and status of mitigation requirements;

Identify monitoring and enforcement agencies;

Establish and clarify administrative procedures for the clearance of mitigation measures;

Establish the frequency and duration of monitoring and reporting; and

Utilize the existing agency review processes' wherever feasible.

This MMP shall be in place throughout all phases of the proposed Project. The entity responsible for implementing each mitigation measure is set forth within the text of the mitigation measure. The entity responsible for implementing the mitigation shall also be obligated to provide certification, as identified below, to the appropriate monitoring agency and the appropriate enforcement agency that compliance with the required mitigation measure has been implemented.

After review and approval of the final MMP by the Lead Agency, minor changes and modifications to the MMP are permitted, but can only be made by the Applicant or its successor subject to the approval by the City of Los Angeles through a public hearing. The Lead Agency, in conjunction with any appropriate agencies or departments, will determine the adequacy of any proposed change or modification. The flexibility is necessary in light of the proto-typical nature of the MMP, and the need to protect the environment with a workable program. No changes will be permitted unless the MMP continues to satisfy the requirements of CEQA, as determined by the Lead Agency.

MITIGATION MONITORING PROGRAM

BIOLOGY

MM-BIO-1 Tree Removal (Non-Protected Trees):

- Prior to the issuance of any permit, a plot plan shall be prepared indicating the location, size, type, and general condition of all existing trees on the site and within the adjacent public right(s)-of-way.
- All significant (8-inch or greater trunk diameter, or cumulative trunk diameter if multi-trunked, as measured 54 inches above the ground) non-protected trees on the site proposed for removal shall be replaced at a 1:1 ratio with a minimum 24-inch box tree. Net, new trees, located within the parkway of the adjacent public right(s)-of-way, may be counted toward replacement tree requirements.
- Removal or planting of any tree in the public right-of-way requires approval of the Board of Public Works. Contact Urban Forestry Division at: 213-847-3077. All trees in the public right-of-way shall be provided per the current standards of the Urban Forestry Division the Department of Public Works, Bureau of Street Services.

Enforcement Agency: Board of Public Works Urban Forestry Division

Monitoring Agency: Board of Public Works Urban Forestry Division

Monitoring Phase: Pre-construction

Monitoring Frequency: Once, at plan check, and once at field inspection

Action Indicating Compliance: Issuance of Certificate of Occupancy

MM-BIO-2 Habitat Modification (Native Nesting Birds):

- Proposed project activities (including disturbances to native and non-native vegetation, structures and substrates) should take place outside of the breeding bird season which generally runs from March 1- August 31 (as early as February 1 for raptors) to avoid take (including disturbances which would cause abandonment of active nests containing eggs and/or young). Take means to hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture of kill (Fish and Game Code Section 86).
- If project activities cannot feasibly avoid the breeding bird season, beginning thirty days prior to the disturbance of suitable nesting habitat, the applicant shall:
    - Arrange for weekly bird surveys to detect any protected native birds in the habitat to be removed and any other such habitat within 300 feet of the construction work area (within 500 feet for raptors) as access to adjacent areas allows. The surveys shall be conducted by a Qualified Biologist with experience in conducting breeding bird surveys. The surveys shall continue on

a weekly basis with the last survey being conducted no more than 3 days prior to the initiation of clearance/construction work.

- If a protected native bird is found, the applicant shall delay all clearance/construction disturbance activities within 300 feet of suitable nesting habitat for the observed protected bird species (within 500 feet for suitable raptor nesting habitat) until August 31.
- Alternatively, the Qualified Biologist could continue the surveys in order to locate any nests. If an active nest is located, clearing and construction within 300 feet of the nest (within 500 feet for raptor nests) or as determined by a qualified biological monitor, shall be postponed until the nest is vacated and juveniles have fledged and when there is no evidence of a second attempt at nesting. The buffer zone from the nest shall be established in the field with flagging and stakes. Construction personnel shall be instructed on the sensitivity of the area.
- The applicant shall record the results of the recommended protective measures described above to document compliance with applicable State and Federal laws pertaining to the protection of native birds. Such record shall be submitted and received into the case file for the associated discretionary action permitting the project.

Enforcement Agency: Los Angeles Department of Building and Safety

Monitoring Agency: Los Angeles Department of Building and Safety

Monitoring Phase: Construction

Monitoring Frequency: Once, prior to issuance of building permit; or, if vegetation removal, building demolition or grading is initiated during the nesting season, as determined by a qualified biologist

Action Indicating Compliance: if vegetation removal, building demolition, or grading is initiated during the nesting season, submittal of a survey report by a qualified biologist.

HAZARDS AND HAZARDOUS MATERIALS

MM-HAZ-1 Existing Toxic/Hazardous Construction Materials:

- (Lead Paint) Prior to the issuance of any permit for demolition or alteration of the existing structure(s), a lead-based paint survey shall be performed to the written satisfaction of the Department of Building of Safety. Should lead-based paint materials be identified, standard handling and disposal practices shall be implemented pursuant to Occupational Safety and Health Administration (OSHA) regulations.

Enforcement Agency: Los Angeles Department of Building and Safety

Monitoring Agency: Los Angeles Department of Building and Safety

Monitoring Phase: Pre-construction

Monitoring Frequency: Once, at plan check

Action Indicating Compliance: Issuance of building permits

MM-HAZ-2 Construction Activity Near Schools:

- The Applicant and contractors shall maintain ongoing contact with the administrators of Hillside Elementary School, Loreta Street Elementary School, and Los Angeles Leadership Academy Charter School. The administrative offices shall be contacted when demolition, grading and construction activity begin on the project site so that students and their parents will know when such activities are to occur. The developer shall obtain school walk and bus routes to the schools from either the administrators or from the Los Angeles Unified School District (LAUSD) Transportation Branch (323) 342-1400 and guarantee that safe and convenient pedestrian and bus routes to the school be maintained.
- The Applicant shall install appropriate traffic signs around the site to ensure pedestrian and vehicle safety.
- There shall be no staging or parking of construction vehicles, including vehicles to transport workers on Pasadena Avenue, adjacent to the school.
- Due to noise impacts on the schools, no construction vehicles or haul trucks shall be staged or idled on Pasadena Avenue, adjacent to the school, during school hours.

Enforcement Agency: Los Angeles Department of Building and Safety

Monitoring Agency: Los Angeles Department of Building and Safety

Monitoring Phase: Construction

Monitoring Frequency: Ongoing, during construction.

Action Indicating Compliance: Issuance of a Certificate of Occupancy

MM-HAZ-3 Schools Affected by Haul Route:

- Haul route scheduling shall be sequenced to minimize conflicts with pedestrians, school buses and cars at the arrival and dismissal times of the school day. Haul route trucks shall not be routed past the school during periods when school is in session especially when students are arriving or departing from the campus.

Enforcement Agency: Los Angeles Department of Building and Safety, Los Angeles Department of Transportation

Monitoring Agency: Los Angeles Department of Building and Safety

Monitoring Phase: Construction

Monitoring Frequency: Ongoing, during construction.

Action Indicating Compliance: Issuance of a Certificate of Occupancy

NOISE

MM-N-1 Increased Noise Levels (Demolition, Grading, and Construction Activities):

- In addition to satisfying the noise-related conditions identified in [Q] Condition 10 of Ordinance 179,280, the project contractor shall erect a temporary noise-attenuating sound barrier along the perimeter of the Project Site's southerly and easterly property line to minimize construction noise levels at off-site properties. The sound wall shall be a minimum of 8 feet in height to block the line of site of construction equipment and off site receptors at the ground level. The sound barrier shall include 3/4-inch plywood or other sound absorbing material capable of achieving a 10-dBA reduction in sound level.

Enforcement Agency: Los Angeles Department of Building and Safety

Monitoring Agency: Los Angeles Department of Building and Safety

Monitoring Phase: Construction

Monitoring Frequency: Ongoing during field inspection

Action Indicating Compliance: Issuance of a Certificate of Occupancy

MM-N-2 Increased Noise Levels (Parking Structure Ramps):

- Concrete, not metal, shall be used for construction of parking ramps.
- The interior ramps shall be textured to prevent tire squeal at turning areas.

Enforcement Agency: Los Angeles Department of Building and Safety

Monitoring Agency: Los Angeles Department of Building and Safety

Monitoring Phase: Pre-construction; Construction

Monitoring Frequency: Once, at plan check for Project; Once, during field inspection

Action Indicating Compliance: Plan approval and issuance of applicable building permit (Preconstruction); Issuance of Certificate of Occupancy (Construction)

PUBLIC SERVICES

MM-PS-1 Police:

- The plans shall incorporate the Design Guidelines (defined in the following sentence) relative to security, semi-public and private spaces, which may include but not be limited to access control to building, secured parking facilities, walls/fences with key systems, well-illuminated public and semi-public space designed with a minimum of dead space to eliminate areas of concealment, location of toilet facilities or building entrances in high-foot traffic areas, and provision of security guard patrol throughout the project site if needed. Please refer to "Design Out Crime Guidelines: Crime Prevention Through Environmental Design," published by the Los Angeles Police Department. Contact the Community Relations Division, located at 100 W. 1st Street, #250, Los Angeles, CA 90012; (213) 486-6000. These measures shall be approved by the Police Department prior to the issuance of building permits.

Enforcement Agency: Los Angeles Department of Building and Safety

Monitoring Agency: Los Angeles Department of Building and Safety

Monitoring Phase: Pre-Construction

Monitoring Frequency: Once, at plan check

Action Indicating Compliance: Issuance of building permits

TRANSPORTATION AND TRAFFIC

MM-T-1 Transportation and Traffic:

- In addition to the TDM measures, implementing measure(s) detailed in DOT's communication to the Planning Department (DOT Case No. CEN 15-43306 dated January 28, 2016, attached) shall be complied with.

Enforcement Agency: Los Angeles Department of Building and Safety, Los Angeles Department of Transportation

Monitoring Agency: Los Angeles Department of Building and Safety

Monitoring Phase: Pre-construction; Construction

Monitoring Frequency: Once, at plan check for Project; Once, during field inspection

Action Indicating Compliance: Plan approval and issuance of applicable building permit (Preconstruction); Issuance of Certificate of Occupancy (Construction)

MM-T-2 Transportation Demand Management (TDM) Program:

- The purpose of a TDM plan is to reduce the use of single occupant vehicles (SOV) by increasing the number of trips by walking, bicycle, carpool, vanpool and transit. A TDM plan should include design features, transportation services, education, and incentives intended to reduce the amount of SOV during commute hours. Through strategic building design and orientation, this project can facilitate access to transit, can provide a pedestrian-friendly environment, can promote non-automobile travel and can support the goals of a trip-reduction program.
- A preliminary TDM program shall be prepared and provided for DOT review prior to the issuance of the first building permit for this project and a final TDM program approved by DOT is required prior to the issuance of the first certificate of occupancy for the project. The TDM program should include, but not be limited to, the following strategies:
    - Provide an internal Transportation Management Coordination Program with an on-site transportation coordinator;
    - Design the project to ensure a bicycle, transit, and pedestrian friendly environment;
    - Provide unbundled parking that separates the cost of obtaining assigned parking spaces from the cost of purchasing or renting residential units;
    - Accommodate flexible/alternative work schedules and telecommuting programs;
    - A provision requiring compliance with the State Parking Cash-out Law in all leases:
    - Coordinate with DOT to determine if the project location is eligible for future Integrated Mobility Hub (which can include space for a bike share kiosk, and/or parking spaces on-site for car-share vehicles;
    - Provide on-site transit routing and schedule information;
    - Provide a program to discount transit passes for residents/employees possibly through negotiated bulk purchasing passes with transit providers;
    - Provide rideshare matching services;
    - Preferential rideshare loading/unloading or parking location;
    - Contribute to a one-time fixed fee contribution of $75,000 to be deposited into the City's Bicycle Plan Trust Fund to implement bicycle improvements in the vicinity of the project.

In addition to these TDM measures, DOT also recommends that the Applicant explore the implementation of an on-demand van, shuttle or tram service that connects the project employees to off-site transit stops based on the transportation needs of the project employees. Such a service can be included as an additional measure in the TDM program if it is deemed feasible and effective by the applicant.

- The Applicant shall implement a TDM/TMP to reduce the project trip generation by 15 percent. Specifically, the project shall not exceed a driveway trip volume count of 179 trips during the a.m. peak hour and 222 trips during the pm peak hour, at full occupancy. To achieve this peak hour driveway trip volume requirement through implementation of an on-site Transportation Demand

Management (TDM) Plan the project shall implement a Trip Monitoring Program (TMP).

- The Applicant shall record a covenant and agreement to annually monitor and submit reports on the progress of the driveway trip reduction plan to DOT. Annual reports shall include a report on the observed trip generation and on the project's mode share. The detailed goals, objectives, terms and strategies of the TDM plan and reporting requirements shall be determined during the preparation of the final. The TDM plan is due prior to the issuance of any temporary or final certificate of occupancy permit for the project. The plan should also identify any appropriate penalties, should the project not achieve compliance with the targeted number of driveway trips within a year of exceeding the limits. The TMP shall continue until such time that the project has shown, for five (5) consecutive years, at a minimum of 85% occupancy, accomplishment of the peak hour driveway trip volume requirement as listed.

Enforcement Agency: Los Angeles Department of Building and Safety, Los Angeles Department of Transportation

Monitoring Agency: Los Angeles Department of Building and Safety

Monitoring Phase: Pre-construction; Construction

Monitoring Frequency: Once, at plan check for Project; Once, prior to issuance of Certificate of Occupancy

Action Indicating Compliance: Plan approval and issuance of applicable building permit (Preconstruction); Issuance of Certificate of Occupancy (Construction)

MM-T-3 Transportation Systems Management (TSM) Improvements:

- The Applicant shall implement the upgrades, detailed below by LADOT's ATSAC Section, through the B-Permit process. LADOT's ATSAC Section has identified the need to update the existing traffic signal system. Specifically, install one CCTV camera, a new type 2070 controller, and the necessary infrastructure (including, but not limited to, fiber optic and interconnect) to activate the new installation, at the Pasadena Avenue / Avenue 26 and Daly Street intersection. The video fiber / fiber optic improvements must be guaranteed prior to the issuance of any building permit and complete prior to the issuance of any certificate of occupancy. Temporary certificates of occupancy may be granted in the events of any delay through no fault of the applicant, provided that, in each case, the applicant has demonstrated reasonable efforts and due diligence to the satisfaction of DOT.

Enforcement Agency: Los Angeles Department of Building and Safety, Los Angeles Department of Transportation

Monitoring Agency: Los Angeles Department of Building and Safety

Monitoring Phase: Construction

Monitoring Frequency: Once, during field inspection

Action Indicating Compliance: Issuance of Certificate of Occupancy. Temporary certificates of occupancy may be granted in the events of any delay through no fault of the applicant, provided that, in each case, the applicant has demonstrated reasonable efforts and due diligence to the satisfaction of DOT.

MM-T-4 Construction Management Plan:

- A Construction work site traffic control plan shall be submitted to DOT for review and approval prior to the start of any construction work. The plans shall show the location of any roadway or sidewalk closures, traffic detours, haul routes, hours of operation, protective devices, warning signs and access to abutting properties. All construction related traffic shall be restricted to off-peak hours.
- All delivery truck loading and unloading shall take place on site or within the boundaries of an approved traffic control plan.

Enforcement Agency: Los Angeles Department of Building and Safety, Los Angeles Bureau of Engineering, Los Angeles Department of Transportation

Monitoring Agency: Los Angeles Department of Building and Safety

Monitoring Phase: Pre-construction; Construction

Monitoring Frequency: Once, at plan check; Ongoing during field inspection

Action Indicating Compliance: Plan approval and issuance of applicable building permit (Preconstruction); Issuance of Certificate of Occupancy of Use of Land (Construction)

MM-T-5 Transportation and Traffic (Construction):

- The developer shall install appropriate traffic signs around the site to ensure pedestrian and vehicle safety at all times during the construction period.

Enforcement Agency: Los Angeles Department of Building and Safety

Monitoring Agency: Los Angeles Department of Building and Safety

Monitoring Phase: Construction

Monitoring Frequency: Ongoing, during construction

Action Indicating Compliance: Issuance of a Certificate of Occupancy

MM-T-6 Pedestrian Safety During Construction:

- The Applicant shall plan construction and construction staging as to maintain pedestrian access on adjacent sidewalks throughout all construction phases. This requires the applicant to maintain adequate and safe pedestrian protection, including physical separation (including utilization of barriers such as K-Rails or scaffolding, etc.) from work space and vehicular traffic, and overhead protection, due to sidewalk closure or blockage, at all times.
- Should permanent pedestrian routes be unavailable due to construction, safe and accessible temporary pedestrian routes shall be provided adjacent to the project site.
- Covered walkways should be provided where pedestrians are exposed to potential injury from falling objects.
- The Applicant shall keep sidewalk open during construction until only when it is absolutely required to close or block sidewalk for construction and/or construction staging. Sidewalk shall be reopened as soon as reasonably feasible taking construction and construction staging into account.

Enforcement Agency: Los Angeles Department of Building and Safety, Los Angeles Bureau of Engineering, Los Angeles Department of Transportation

Monitoring Agency: Los Angeles Department of Building and Safety, Los Angeles Department of Transportation

Monitoring Phase: Construction

Monitoring Frequency: Ongoing

Action Indicating Compliance: Issuance of Certificate of Occupancy

Avenue 34 Project

ZA-2016-272-ZAA-SPR-CLQ

ENV-2016-273-MND

Project Location: 3401-3437 N. Pasadena Avenue and 123-167 W. Avenue 34, Los Angeles, CA 90031

Council District: 1 – Gilbert Cedillo

Project Description: The Project involves the demolition of an 86,712 square-foot warehouse building, a 4,033 square-foot metal building, and portions of a 24,018 square-foot building and 3,521 square-foot building (constructed circa 1977, 1948, 1967 and 1929, respectively), and the construction of a mixed-use development with 372 residential dwelling units and 40,000 square feet of commercial floor area (comprised of 30,000 square feet of creative office and 10,000 square feet of retail space). The Project would renovate a portion of the existing floor area for creative office space. The Project would also reserve 11% of its base density (approximately 31 dwelling units) as very low income housing and include a ministerial density bonus. The development would include five buildings spanning the property, with approximately 524,600 square feet of floor area and a Floor Area Ratio (FAR) of 2.6:1, below the maximum FAR of 3:1. The proposed buildings would range in height from one to five stories, with a maximum building height of approximately 67 feet above grade, or 75 feet as measured by the Los Angeles Municipal Code (LAMC). The Project would provide a total of 467 on-site parking spaces within one level of subterranean parking and at grade, and a total of 428 on-site bicycle parking stalls. All 39 on-site trees will be removed (all non-protected species); a total of 241 trees are proposed, including roof areas and street trees. No fireplaces or wood stoves are proposed.

The Applicant is requesting the following discretionary approvals: (1) Zoning Administrator's Adjustment to allow a 0-foot southerly side yard in lieu of 8 feet to preserve an existing building with a non-conforming yard; (2) Site Plan Review to permit the construction, use, and maintenance of the Project with more than 50 dwelling units; and (3) Clarification of Q Conditions to clarify Condition A.1.c of Subarea 4 in Ordinance 179,280. The Applicant will also request approvals and permits from the Department of Building and Safety (and other regulatory agencies) for project construction activities which may include, but are not limited to, the following: excavation, shoring, grading, foundation, haul route (for the export of approximately 98,000 cubic yards (cy) of soil), removal and replacement of street trees, and building and tenant improvements for the Project Site.

FINDING: The Department of City Planning of the City of Los Angeles has proposed that a Mitigated Negative Declaration be adopted for this Project. The mitigation measures outlined on the attached pages will reduce any potentially significant adverse effects to a level of insignificance.

SEE ATTACHED SHEET(S) FOR ANY MITIGATION MEASURES IMPOSED

Any written comment received during the public review period are attached together with the response of the Lead City Agency. The project decision-maker may adopt the Mitigated Negative Declaration, amend it, or require preparation of an EIR. Any changes made should be supported by substantial evidence in the record and appropriate findings made.

THE INITIAL STUDY PREPARED FOR THIS PROJECT IS ATTACHED.

The Project would also reserve 11% of its base density (approximately 31 dwelling units) as very low income housing and include a ministerial density bonus. The development would include five buildings spanning the property, with approximately 524,600 square feet of floor area and an FAR of 2.6:1, below the maximum FAR of 3:1. The proposed buildings would range in height from one to five stories, with a maximum building height of approximately 67 feet above grade (75 feet as measured by LAMC). The Project would provide a total of 467 on-site parking spaces within one level of subterranean parking and at grade, and a total of 428 on-site bicycle parking stalls. All 39 on-site trees will be removed (all non-protected species); a total of 241 trees are proposed, including roof areas and street trees. No fireplaces or wood stoves are proposed.

The Applicant requests the following discretionary approvals: (1) Zoning Administrator's Adjustment to allow a 0-foot southerly side yard in lieu of 8 feet to preserve an existing building with a non-conforming yard; (2) Site Plan Review to permit the construction, use, and maintenance of the Project with more than 50 dwelling units; and (3) Clarification of Q Conditions to clarify Condition A.1.c of Subarea 4 in Ordinance 179,280. The Applicant will also request approvals and permits from the Department of Building and Safety (and other regulatory agencies) for project construction activities which may include, but are not limited to, the following: excavation, shoring, grading, foundation, haul route (for the export of approximately 98,000 cubic yards (cy) of soil), removal and replacement of street trees, and building and tenant improvements for the Project Site.

ENVIRONMENTAL SETTING: The Project Site includes 219,320 square feet of lot area (5.03 acres). The Project Site currently includes four light manufacturing and warehouse buildings with paved surface loading areas and parking. The surrounding properties are developed with multi-family residential, single-family residential, office, commercial, and educational and uses, and a vacant and undeveloped lot to the north of the Project Site. Further details are provided in the expanded IS/MND analysis (attached).

PROJECT LOCATION: 3401-3437 N. Pasadena Avenue and 123-167 W. Avenue 34, Los Angeles, CA 90031			
COMMUNITY PLAN AREA: Northeast Los Angeles **STATUS:** ☐ Preliminary ☒ Does Conform to Plan ☐ Proposed ☐ Does NOT Conform to Plan ☒ Adopted (1999)		**AREA PLANNING COMMISSION:** East Los Angeles	**CERTIFIED NEIGHBORHOOD COUNCIL:** Lincoln Heights
EXISTING ZONING: [T][Q]CM-2D	**MAX DENSITY ZONING:** 3:1	**LA River Adjacent:** No	
GENERAL PLAN LAND USE: Commercial Manufacturing	**MAX. DENSITY PLAN:** 3:1	**PROPOSED PROJECT DENSITY:** 2.61:1 FAR	

Determination (To be completed by Lead Agency)

On the basis of this initial evaluation:

- ☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.
- ☒ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions on the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.
- ☐ I find the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.
- ☐ I find the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.
- ☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

Signature	Planning Assistant Title	213-978-1345 Phone

Evaluation of Environmental Impacts:

1. A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants based on a project-specific screening analysis).
2. All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.
3. Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less that significant with mitigation, or less than significant. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect may be significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.
4. "Negative Declaration: Less Than Significant With Mitigation Incorporated" applies where the incorporation of a mitigation measure has reduced an effect from "Potentially Significant Impact" to "Less Than Significant Impact." The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level (mitigation measures from "Earlier Analysis," as described in (5) below, may be cross referenced).

5. Earlier analysis must be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR, or negative declaration. Section 15063 (c)(3)(D). In this case, a brief discussion should identify the following:
   a. Earlier Analysis Used. Identify and state where they are available for review.
   b. Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.
   c. Mitigation Measures. For effects that are "Less Than Significant With Mitigation Measures Incorporated," describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.
6. Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated
7. Supporting Information Sources: A sources list should be attached, and other sources used or individuals contacted should be cited in the discussion.
8. This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whichever format is selected.
9. The explanation of each issue should identify:
   a. The significance criteria or threshold, if any, used to evaluate each question; and
   b. The mitigation measure identified, if any, to reduce the impact to less than significant.

Environmental Factors Potentially Affected:

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

☐ AESTHETICS	☐ GREENHOUSE GAS EMISSIONS	☐ POPULATION AND HOUSING
☐ AGRICULTURE AND FOREST RESOURCES	☒ HAZARDS AND HAZARDOUS MATERIALS	☒ PUBLIC SERVICES
☐ AIR QUALITY	☐ HYDROLOGY AND WATER QUALITY	☐ RECREATION
☒ BIOLOGICAL RESOURCES	☐ LAND USE AND PLANNING	☒ TRANSPORTATION/CIRCULATION
☐ CULTURAL RESOURCES	☐ MINERAL RESOURCES	☐ UTILITIES
☐ GEOLOGY AND SOILS	☒ NOISE	☒ MANDATORY FINDINGS OF SIGNIFICANCE

INITIAL STUDY CHECKLIST (To be completed by the Lead City Agency)

PROPONENT NAME: ED1125, LLC **PHONE NUMBER:** (310) 242-7305

APPLICANTS ADDRESSES:
ED1125, LLC Attn: Eric Ortiz
141 W. Avenue 34
Los Angeles, CA 90031

AGENCY REQUIRING CHECKLIST: City of Los Angeles Department of City Planning **DATE SUBMITTED:** Nov. 8, 2016

PROPOSAL NAME (If Applicable): Avenue 34 Project

		Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
PLEASE NOTE THAT EACH AND EVERY RESPONSE IN THE CITY OF LOS ANGELES INITIAL STUDY AND CHECKLIST IS SUMMARIZED FROM AND BASED UPON THE ENVIRONMENTAL ANALYSIS CONTAINED IN ATTACHEMENT B, EXPLANATION OF CHECKLIST DETERMINATIONS. PLEASE REFER TO THE APPLICABLE RESPONSE IN ATTACHMENT B FOR A DETAILED DISCUSSION OF CHECKLIST DETERMINATIONS.					
I.	**AESTHETICS**				
a.	HAVE A SUBSTANTIAL ADVERSE EFFECT ON A SCENIC VISTA?	☐	☐	☒	☐
b.	SUBSTANTIALLY DAMAGE SCENIC RESOURCES, INCLUDING, BUT NOT LIMITED TO, TREES, ROCK OUTCROPPINGS, AND HISTORIC BUILDINGS, OR OTHER LOCALLY RECOGNIZED DESIRABLE AESTHETIC NATURAL FEATURE WITHIN A CITY-DESIGNATED SCENIC HIGHWAY?	☐	☐	☒	☐
c.	SUBSTANTIALLY DEGRADE THE EXISTING VISUAL CHARACTER OR QUALITY OF THE SITE AND ITS SURROUNDINGS?	☐	☐	☒	☐
d.	CREATE A NEW SOURCE OF SUBSTANTIAL LIGHT OR GLARE WHICH WOULD ADVERSELY AFFECT DAY OR NIGHTTIME VIEWS IN THE AREA?	☐	☐	☒	☐
II.	**AGRICULTURE AND FOREST RESOURCES**				
a.	CONVERT PRIME FARMLAND, UNIQUE FARMLAND, OR FARMLAND OF STATEWIDE IMPORTANCE, AS SHOWN ON THE MAPS PREPARED PURSUANT TO THE FARMLAND MAPPING AND MONITORING PROGRAM OF THE CALIFORNIA RESOURCES AGENCY, TO NON-AGRICULTURAL USE?	☐	☐	☐	☒
b.	CONFLICT WITH EXISTING ZONING FOR AGRICULTURAL USE, OR A WILLIAMSON ACT CONTRACT?	☐	☐	☐	☒
c.	CONFLICT WITH EXISTING ZONING FOR, OR CAUSE REZONING OF, FOREST LAND (AS DEFINED IN PUBLIC RESOURCES CODE SECTION 1220(G)), TIMBERLAND (AS DEFINED BY PUBLIC RESOURCES CODE SECTION 4526), OR TIMBERLAND ZONED TIMBERLAND PRODUCTION (AS DEFINED BY GOVERNMENT CODE SECTION 51104(G))?	☐	☐	☐	☒
d.	RESULT IN THE LOSS OF FOREST LAND OR CONVERSION OF FOREST LAND TO NON-FOREST USE?	☐	☐	☐	☒
e.	INVOLVE OTHER CHANGES IN THE EXISTING ENVIRONMENT WHICH, DUE TO THEIR LOCATION OR NATURE, COULD RESULT IN CONVERSION OF FARMLAND, TO NON-AGRICULTURAL USE OR CONVERSION OF FOREST LAND TO NON-FOREST USE?	☐	☐	☐	☒
III.	**AIR QUALITY**				
a.	CONFLICT WITH OR OBSTRUCT IMPLEMENTATION OF THE SCAQMD AIR QUALITY MANAGEMENT PLAN OR CONGESTION MANAGEMENT PLAN?	☐	☐	☒	☐
b.	VIOLATE ANY AIR QUALITY STANDARD OR CONTRIBUTE SUBSTANTIALLY TO AN EXISTING OR PROJECTED AIR QUALITY VIOLATION?	☐	☐	☒	☐
c.	RESULT IN A CUMULATIVELY CONSIDERABLE NET INCREASE OF ANY CRITERIA POLLUTANT FOR WHICH THE AIR BASIN IS NON-ATTAINMENT (OZONE, CARBON MONOXIDE, & PM 10) UNDER AN APPLICABLE FEDERAL OR STATE AMBIENT AIR QUALITY STANDARD?	☐	☐	☒	☐
d.	EXPOSE SENSITIVE RECEPTORS TO SUBSTANTIAL POLLUTANT CONCENTRATIONS?	☐	☐	☒	☐
e.	CREATE OBJECTIONABLE ODORS AFFECTING A SUBSTANTIAL NUMBER OF PEOPLE?	☐	☐	☒	☐

		Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
IV.	**BIOLOGICAL RESOURCES**				
a.	HAVE A SUBSTANTIAL ADVERSE EFFECT, EITHER DIRECTLY OR THROUGH HABITAT MODIFICATION, ON ANY SPECIES IDENTIFIED AS A CANDIDATE, SENSITIVE, OR SPECIAL STATUS SPECIES IN LOCAL OR REGIONAL PLANS, POLICIES, OR REGULATIONS BY THE CALIFORNIA DEPARTMENT OF FISH AND GAME OR U.S. FISH AND WILDLIFE SERVICE ?	☐	☒	☐	☐
b.	HAVE A SUBSTANTIAL ADVERSE EFFECT ON ANY RIPARIAN HABITAT OR OTHER SENSITIVE NATURAL COMMUNITY IDENTIFIED IN THE CITY OR REGIONAL PLANS, POLICIES, REGULATIONS BY THE CALIFORNIA DEPARTMENT OF FISH AND GAME OR U.S. FISH AND WILDLIFE SERVICE?	☐	☐	☐	☒
c.	HAVE A SUBSTANTIAL ADVERSE EFFECT ON FEDERALLY PROTECTED WETLANDS AS DEFINED BY SECTION 404 OF THE CLEAN WATER ACT (INCLUDING, BUT NOT LIMITED TO, MARSH VERNAL POOL, COASTAL, ETC.) THROUGH DIRECT REMOVAL, FILLING, HYDROLOGICAL INTERRUPTION, OR OTHER MEANS?	☐	☐	☐	☒
d.	INTERFERE SUBSTANTIALLY WITH THE MOVEMENT OF ANY NATIVE RESIDENT OR MIGRATORY FISH OR WILDLIFE SPECIES OR WITH ESTABLISHED NATIVE RESIDENT OR MIGRATORY WILDLIFE CORRIDORS, OR IMPEDE THE USE OF NATIVE WILDLIFE NURSERY SITES?	☐	☐	☐	☒
e.	CONFLICT WITH ANY LOCAL POLICIES OR ORDINANCES PROTECTING BIOLOGICAL RESOURCES, SUCH AS TREE PRESERVATION POLICY OR ORDINANCE (E.G., OAK TREES OR CALIFORNIA WALNUT WOODLANDS)?	☐	☒	☐	☐
f.	CONFLICT WITH THE PROVISIONS OF AN ADOPTED HABITAT CONSERVATION PLAN, NATURAL COMMUNITY CONSERVATION PLAN, OR OTHER APPROVED LOCAL, REGIONAL, OR STATE HABITAT CONSERVATION PLAN?	☐	☐	☐	☒
V.	**CULTURAL RESOURCES**				
a.	CAUSE A SUBSTANTIAL ADVERSE CHANGE IN SIGNIFICANCE OF A HISTORICAL RESOURCE AS DEFINED IN STATE CEQA SECTION 15064.5?	☐	☐	☒	☐
b.	CAUSE A SUBSTANTIAL ADVERSE CHANGE IN SIGNIFICANCE OF AN ARCHAEOLOGICAL RESOURCE PURSUANT TO STATE CEQA SECTION 15064.5?	☐	☐	☒	☐
c.	DIRECTLY OR INDIRECTLY DESTROY A UNIQUE PALEONTOLOGICAL RESOURCE OR SITE OR UNIQUE GEOLOGIC FEATURE?	☐	☐	☒	☐
d.	DISTURB ANY HUMAN REMAINS, INCLUDING THOSE INTERRED OUTSIDE OF FORMAL CEMETERIES?	☐	☐	☒	☐
e.	CAUSE A SUBSTANTIAL ADVERSE CHANGE IN THE SIGNIFICANCE OF A SITE, FEATURE, PLACE, CULTURAL LANDSCAPE, SACRED PLACE, OR OBJECT WITH CULTURAL VALUES TO A CALIFORNIA NATIVE AMERICAN TRIBE THAT IS LISTED OR DETERMINED ELIGIBLE FOR LISTING ON THE CALIFORNIA REGISTER OF HISTORICAL RESOURCES, LISTED ON A LOCAL HISTORICAL REGISTER, OR OTHERWISE DETERMINED BY THE LEAD AGENCY TO BE A TRIBAL CULTURAL RESOURCE?	☐	☐	☒	☐
VI.	**GEOLOGY AND SOILS**				
a.	EXPOSURE OF PEOPLE OR STRUCTURES TO POTENTIAL SUBSTANTIAL	☐	☐	☒	☐

		Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
	ADVERSE EFFECTS, INCLUDING THE RISK OF LOSS, INJURY OR DEATH INVOLVING: RUPTURE OF A KNOWN EARTHQUAKE FAULT, AS DELINEATED ON THE MOST RECENT ALQUIST-PRIOLO EARTHQUAKE FAULT ZONING MAP ISSUED BY THE STATE GEOLOGIST FOR THE AREA OR BASED ON OTHER SUBSTANTIAL EVIDENCE OF A KNOWN FAULT? REFER TO DIVISION OF MINES AND GEOLOGY SPECIAL PUBLICATION 42.				
b.	STRONG SEISMIC GROUND SHAKING?	❑	❑	☒	❑
c.	SEISMIC-RELATED GROUND FAILURE, INCLUDING LIQUEFACTION?	❑	❑	☒	❑
d.	LANDSLIDES?	❑	❑	❑	☒
e.	RESULT IN SUBSTANTIAL SOIL EROSION OR THE LOSS OF TOPSOIL?	❑	❑	☒	❑
f.	BE LOCATED ON A GEOLOGIC UNIT OR SOIL THAT IS UNSTABLE, OR THAT WOULD BECOME UNSTABLE AS A RESULT OF THE PROJECT, AND POTENTIAL RESULT IN ON- OR OFF-SITE LANDSLIDE, LATERAL SPREADING, SUBSIDENCE, LIQUEFACTION, OR COLLAPSE?	❑	❑	☒	❑
g.	BE LOCATED ON EXPANSIVE SOIL, AS DEFINED IN TABLE 18-1-B OF THE UNIFORM BUILDING CODE (1994), CREATING SUBSTANTIAL RISKS TO LIFE OR PROPERTY?	❑	❑	❑	☒
h.	HAVE SOILS INCAPABLE OF ADEQUATELY SUPPORTING THE USE OF SEPTIC TANKS OR ALTERNATIVE WASTE WATER DISPOSAL SYSTEMS WHERE SEWERS ARE NOT AVAILABLE FOR THE DISPOSAL OF WASTE WATER?	❑	❑	❑	☒
VII.	**GREENHOUSE GAS EMISSIONS**				
a.	GENERATE GREENHOUSE GAS EMISSIONS, EITHER DIRECTLY OR INDIRECTLY, THAT MAY HAVE A SIGNIFICANT IMPACT ON THE ENVIRONMENT?	❑	❑	☒	❑
b.	CONFLICT WITH AN APPLICABLE PLAN, POLICY OR REGULATION ADOPTED FOR THE PURPOSE OF REDUCING THE EMISSIONS OF GREENHOUSE GASES?	❑	❑	☒	❑
III.	**HAZARDS AND HAZARDOUS MATERIALS**				
a.	CREATE A SIGNIFICANT HAZARD TO THE PUBLIC OR THE ENVIRONMENT THROUGH THE ROUTINE TRANSPORT, USE, OR DISPOSAL OF HAZARDOUS MATERIALS	❑	❑	☒	❑
b.	CREATE A SIGNIFICANT HAZARD TO THE PUBLIC OR THE ENVIRONMENT THROUGH REASONABLY FORESEEABLE UPSET AND ACCIDENT CONDITIONS INVOLVING THE RELEASE OF HAZARDOUS MATERIALS INTO THE ENVIRONMENT?	❑	☒	❑	❑
c.	EMIT HAZARDOUS EMISSIONS OR HANDLE HAZARDOUS OR ACUTELY HAZARDOUS MATERIALS, SUBSTANCES, OR WASTE WITHIN ONE-QUARTER MILE OF AN EXISTING OR PROPOSED SCHOOL?	❑	☒	❑	❑
d.	BE LOCATED ON A SITE WHICH IS INCLUDED ON A LIST OF HAZARDOUS MATERIALS SITES COMPILED PURSUANT TO GOVERNMENT CODE SECTION 65962.5 AND, AS A RESULT, WOULD IT CREATE A SIGNIFICANT HAZARD TO THE PUBLIC OR THE ENVIRONMENT?	❑	❑	☒	❑
e.	FOR A PROJECT LOCATED WITHIN AN AIRPORT LAND USE PLAN OR, WHERE SUCH A PLAN HAS NOT BEEN ADOPTED, WITHIN TWO MILES OF A PUBLIC AIRPORT OR PUBLIC USE AIRPORT, WOULD THE PROJECT RESULT IN A SAFETY HAZARD FOR PEOPLE RESIDING OR	❑	❑	❑	☒

		Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
	WORKING IN THE PROJECT AREA?				
f.	FOR A PROJECT WITHIN THE VICINITY OF A PRIVATE AIRSTRIP, WOULD THE PROJECT RESULT IN A SAFETY HAZARD FOR THE PEOPLE RESIDING OR WORKING IN THE AREA?	☐	☐	☐	☒
g.	IMPAIR IMPLEMENTATION OF OR PHYSICALLY INTERFERE WITH AN ADOPTED EMERGENCY RESPONSE PLAN OR EMERGENCY EVACUATION PLAN?	☐	☐	☐	☒
h.	EXPOSE PEOPLE OR STRUCTURES TO A SIGNIFICANT RISK OF LOSS, INJURY OR DEATH INVOLVING WILDLAND FIRES, INCLUDING WHERE WILDLANDS ARE ADJACENT TO URBANIZED AREAS OR WHERE RESIDENCES ARE INTERMIXED WITH WILDLANDS?	☐	☐	☐	☒
IX.	**HYDROLOGY AND WATER QUALITY**				
a.	VIOLATE ANY WATER QUALITY STANDARDS OR WASTE DISCHARGE REQUIREMENTS?	☐	☐	☒	☐
b.	SUBSTANTIALLY DEPLETE GROUNDWATER SUPPLIES OR INTERFERE WITH GROUNDWATER RECHARGE SUCH THAT THERE WOULD BE A NET DEFICIT IN AQUIFER VOLUME OR A LOWERING OF THE LOCAL GROUNDWATER TABLE LEVEL (E.G., THE PRODUCTION RATE OF PRE-EXISTING NEARBY WELLS WOULD DROP TO A LEVEL WHICH WOULD NOT SUPPORT EXISTING LAND USES OR PLANNED LAND USES FOR WHICH PERMITS HAVE BEEN GRANTED)?	☐	☐	☒	☐
c.	SUBSTANTIALLY ALTER THE EXISTING DRAINAGE PATTERN OF THE SITE OR AREA, INCLUDING THROUGH THE ALTERATION OF THE COURSE OF A STREAM OR RIVER, IN A MANNER WHICH WOULD RESULT IN SUBSTANTIAL EROSION OR SILTATION ON- OR OFF-SITE?	☐	☐	☒	☐
d.	SUBSTANTIALLY ALTER THE EXISTING DRAINAGE PATTERN OF THE SITE OR AREA, INCLUDING THROUGH THE ALTERATION OF THE COURSE OF A STREAM OR RIVER, OR SUBSTANTIALLY INCREASE THE RATE OR AMOUNT OF SURFACE RUNOFF IN AN MANNER WHICH WOULD RESULT IN FLOODING ON- OR OFF SITE?	☐	☐	☒	☐
e.	CREATE OR CONTRIBUTE RUNOFF WATER WHICH WOULD EXCEED THE CAPACITY OF EXISTING OR PLANNED STORMWATER DRAINAGE SYSTEMS OR PROVIDE SUBSTANTIAL ADDITIONAL SOURCES OF POLLUTED RUNOFF?	☐	☐	☒	☐
f.	OTHERWISE SUBSTANTIALLY DEGRADE WATER QUALITY?	☐	☐	☐	☒
g.	PLACE HOUSING WITHIN A 100-YEAR FLOOD PLAIN AS MAPPED ON FEDERAL FLOOD HAZARD BOUNDARY OR FLOOD INSURANCE RATE MAP OR OTHER FLOOD HAZARD DELINEATION MAP?	☐	☐	☐	☒
h.	PLACE WITHIN A 100-YEAR FLOOD PLAIN STRUCTURES WHICH WOULD IMPEDE OR REDIRECT FLOOD FLOWS?	☐	☐	☐	☒
i.	EXPOSE PEOPLE OR STRUCTURES TO A SIGNIFICANT RISK OF LOSS, INQUIRY OR DEATH INVOLVING FLOODING, INCLUDING FLOODING AS A RESULT OF THE FAILURE OF A LEVEE OR DAM?	☐	☐	☒	☐
j.	INUNDATION BY SEICHE, TSUNAMI, OR MUDFLOW?	☐	☐	☐	☒
X.	**LAND USE AND PLANNING**				
a.	PHYSICALLY DIVIDE AN ESTABLISHED COMMUNITY?	☐	☐	☐	☒
b.	CONFLICT WITH APPLICABLE LAND USE PLAN, POLICY OR REGULATION OF AN AGENCY WITH JURISDICTION OVER THE	☐	☐	☒	☐

		Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
	PROJECT (INCLUDING BUT NOT LIMITED TO THE GENERAL PLAN, SPECIFIC PLAN, COASTAL PROGRAM, OR ZONING ORDINANCE) ADOPTED FOR THE PURPOSE OF AVOIDING OR MITIGATING AN ENVIRONMENTAL EFFECT?				
c.	CONFLICT WITH ANY APPLICABLE HABITAT CONSERVATION PLAN OR NATURAL COMMUNITY CONSERVATION PLAN?	☐	☐	☐	☒
XI.	**MINERAL RESOURCES**				
a.	RESULT IN THE LOSS OF AVAILABILITY OF A KNOWN MINERAL RESOURCE THAT WOULD BE OF VALUE TO THE REGION AND THE RESIDENTS OF THE STATE?	☐	☐	☐	☒
b.	RESULT IN THE LOSS OF AVAILABILITY OF A LOCALLY-IMPORTANT MINERAL RESOURCE RECOVERY SITE DELINEATED ON A LOCAL GENERAL PLAN, SPECIFIC PLAN, OR OTHER LAND USE PLAN?	☐	☐	☐	☒
XII.	**NOISE**				
a.	EXPOSURE OF PERSONS TO OR GENERATION OF NOISE IN LEVEL IN EXCESS OF STANDARDS ESTABLISHED IN THE LOCAL GENERAL PLAN OR NOISE ORDINANCE, OR APPLICABLE STANDARDS OF OTHER AGENCIES?	☐	☒	☐	☐
b.	EXPOSURE OF PEOPLE TO OR GENERATION OF EXCESSIVE GROUNDBORNE VIBRATION OR GROUNDBORNE NOISE LEVELS?	☐	☒	☐	☐
c.	A SUBSTANTIAL PERMANENT INCREASE IN AMBIENT NOISE LEVELS IN THE PROJECT VICINITY ABOVE LEVELS EXISTING WITHOUT THE PROJECT?	☐	☒	☐	☐
d.	A SUBSTANTIAL TEMPORARY OR PERIODIC INCREASE IN AMBIENT NOISE LEVELS IN THE PROJECT VICINITY ABOVE LEVELS EXISTING WITHOUT THE PROJECT?	☐	☒	☐	☐
e.	FOR A PROJECT LOCATED WITHIN AN AIRPORT LAND USE PLAN OR, WHERE SUCH A PLAN HAS NOT BEEN ADOPTED, WITHIN TWO MILES OF A PUBLIC AIRPORT OR PUBLIC USE AIRPORT, WOULD THE PROJECT EXPOSE PEOPLE RESIDING OR WORKING IN THE PROJECT AREA TO EXCESSIVE NOISE LEVELS?	☐	☐	☐	☒
f.	FOR A PROJECT WITHIN THE VICINITY OF A PRIVATE AIRSTRIP, WOULD THE PROJECT EXPOSE PEOPLE RESIDING OR WORKING IN THE PROJECT AREA TO EXCESSIVE NOISE LEVELS?	☐	☐	☐	☒
XIII.	**POPULATION AND HOUSING**				
a.	INDUCE SUBSTANTIAL POPULATION GROWTH IN AN AREA EITHER DIRECTLY (FOR EXAMPLE, BY PROPOSING NEW HOMES AND BUSINESSES) OR INDIRECTLY (FOR EXAMPLE, THROUGH EXTENSION OF ROADS OR OTHER INFRASTRUCTURE)?	☐	☐	☒	☐
b.	DISPLACE SUBSTANTIAL NUMBERS OF EXISTING HOUSING NECESSITATING THE CONSTRUCTION OF REPLACEMENT HOUSING ELSEWHERE?	☐	☐	☐	☒
c.	DISPLACE SUBSTANTIAL NUMBERS OF PEOPLE NECESSITATING THE CONSTRUCTION OF REPLACEMENT HOUSING ELSEWHERE?	☐	☐	☐	☒
XIV.	**PUBLIC SERVICES**				
a.i.	FIRE PROTECTION?	☐	☐	☒	☐
a.ii.	POLICE PROTECTION?	☐	☒	☐	☐

		Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
a.iii.	SCHOOLS?	☐	☐	☒	☐
a.iv.	PARKS?	☐	☐	☒	☐
a.v.	OTHER PUBLIC FACILITIES?	☐	☐	☒	☐
XV.	**RECREATION**				
a.	WOULD THE PROJECT INCREASE THE USE OF EXISTING NEIGHBORHOOD AND REGIONAL PARKS OR OTHER RECREATIONAL FACILITIES SUCH THAT SUBSTANTIAL PHYSICAL DETERIORATION OF THE FACILITY WOULD OCCUR OR BE ACCELERATED?	☐	☐	☒	☐
b.	DOES THE PROJECT INCLUDE RECREATIONAL FACILITIES OR REQUIRE THE CONSTRUCTION OR EXPANSION OF RECREATIONAL FACILITIES WHICH MIGHT HAVE AN ADVERSE PHYSICAL EFFECT ON THE ENVIRONMENT?	☐	☐	☒	☐
XVI.	**TRANSPORTATION/CIRCULATION**				
a.	CONFLICT WITH AN APPLICABLE PLAN, ORDINANCE OR POLICY ESTABLISHING MEASURES OF EFFECTIVENESS FOR THE PERFORMANCE OF THE CIRCULATION SYSTEM, TAKING INTO ACCOUNT ALL MODES OF TRANSPORTATION INCLUDING MASS TRANSIT AND NON-MOTORIZED TRAVEL AND RELEVANT COMPONENTS OF THE CIRCULATION SYSTEM, INCLUDING BUT NOT LIMITED TO INTERSECTIONS, STREETS, HIGHWAYS AND FREEWAYS, PEDESTRIAN AND BICYCLE PATHS AND MASS TRANSIT?	☐	☒	☐	☐
b.	CONFLICT WITH AN APPLICABLE CONGESTION MANAGEMENT PROGRAM, INCLUDING BUT NOT LIMITED TO LEVEL OF SERVICE STANDARDS AND TRAVEL DEMAND MEASURES, OR OTHER STANDARDS ESTABLISHED BY THE COUNTY CONGESTION MANAGEMENT AGENCY FOR DESIGNATED ROADS OR HIGHWAYS?	☐	☐	☒	☐
c.	RESULT IN A CHANGE IN AIR TRAFFIC PATTERNS, INCLUDING EITHER AN INCREASE IN TRAFFIC LEVELS OR A CHANGE IN LOCATION THAT RESULTS IN SUBSTANTIAL SAFETY RISKS?	☐	☐	☐	☒
d.	SUBSTANTIALLY INCREASE HAZARDS TO A DESIGN FEATURE (E.G., SHARP CURVES OR DANGEROUS INTERSECTIONS) OR INCOMPATIBLE USES (E.G., FARM EQUIPMENT)?	☐	☒	☐	☐
e.	RESULT IN INADEQUATE EMERGENCY ACCESS?	☐	☐	☒	☐
f.	CONFLICT WITH ADOPTED POLICIES, PLANS OR PROGRAMS REGARDING PUBLIC TRANSIT, BICYCLE, OR PEDESTRIAN FACILITIES, OR OTHERWISE DECREASE THE PERFORMANCE OR SAFETY OF SUCH FACILITIES?	☐	☐	☒	☐
XVII.	**UTILITIES**				
a.	EXCEED WASTEWATER TREATMENT REQUIREMENTS OF THE APPLICABLE REGIONAL WATER QUALITY CONTROL BOARD?	☐	☐	☒	☐
b.	REQUIRE OR RESULT IN THE CONSTRUCTION OF NEW WATER OR WASTEWATER TREATMENT FACILITIES OR EXPANSION OF EXISTING FACILITIES, THE CONSTRUCTION OF WHICH COULD CAUSE SIGNIFICANT ENVIRONMENTAL EFFECTS?	☐	☐	☒	☐
c.	REQUIRE OR RESULT IN THE CONSTRUCTION OF NEW STORMWATER DRAINAGE FACILITIES OR EXPANSION OF EXISTING FACILITIES, THE CONSTRUCTION OF WHICH COULD CAUSE SIGNIFICANT ENVIRONMENTAL EFFECTS?	☐	☐	☒	☐

		Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
d.	HAVE SUFFICIENT WATER SUPPLIES AVAILABLE TO SERVE THE PROJECT FROM EXISTING ENTITLEMENTS AND RESOURCE, OR ARE NEW OR EXPANDED ENTITLEMENTS NEEDED?	❑	❑	☒	❑
e.	RESULT IN A DETERMINATION BY THE WASTEWATER TREATMENT PROVIDER WHICH SERVES OR MAY SERVE THE PROJECT THAT IT HAS ADEQUATE CAPACITY TO SERVE THE PROJECT'S PROJECTED DEMAND IN ADDITION TO THE PROVIDER'S EXISTING COMMITMENTS?	❑	❑	☒	❑
f.	BE SERVED BY A LANDFILL WITH SUFFICIENT PERMITTED CAPACITY TO ACCOMMODATE THE PROJECT'S SOLID WASTE DISPOSAL NEEDS?	❑	❑	☒	❑
g.	COMPLY WITH FEDERAL, STATE, AND LOCAL STATUTES AND REGULATIONS RELATED TO SOLID WASTE?	❑	❑	☒	❑
XVIII.	**MANDATORY FINDINGS OF SIGNIFICANCE**				
a.	DOES THE PROJECT HAVE THE POTENTIAL TO DEGRADE THE QUALITY OF THE ENVIRONMENT, SUBSTANTIALLY REDUCE THE HABITAT OF FISH OR WILDLIFE SPECIES, CAUSE A FISH OR WILDLIFE POPULATION TO DROP BELOW SELF-SUSTAINING LEVELS, THREATEN TO ELIMINATE A PLANT OR ANIMAL COMMUNITY, REDUCE THE NUMBER OR RESTRICT THE RANGE OF A RARE OR ENDANGERED PLANT OR ANIMAL OR ELIMINATE IMPORTANT EXAMPLES OF THE MAJOR PERIODS OF CALIFORNIA HISTORY OR PREHISTORY?	❑	❑	❑	☒
b.	DOES THE PROJECT HAVE IMPACTS WHICH ARE INDIVIDUALLY LIMITED, BUT CUMULATIVELY CONSIDERABLE? ("CUMULATIVELY CONSIDERABLE" MEANS THAT THE INCREMENTAL EFFECTS OF AN INDIVIDUAL PROJECT ARE CONSIDERABLE WHEN VIEWED IN CONNECTION WITH THE EFFECTS OF PAST PROJECTS, THE EFFECTS OF OTHER CURRENT PROJECTS, AND THE EFFECTS OF PROBABLE FUTURE PROJECTS).	❑	❑	☒	❑
c.	DOES THE PROJECT HAVE ENVIRONMENTAL EFFECTS WHICH CAUSE SUBSTANTIAL ADVERSE EFFECTS ON HUMAN BEINGS, EITHER DIRECTLY OR INDIRECTLY?	❑	☒	❑	❑

DISCUSSION OF THE ENVIRONMENTAL EVALUATION (Attach additional sheets if necessary)

The Environmental Impact Assessment includes the use of official City of Los Angeles and other government source reference materials related to various environmental impact categories (e.g., Hydrology, Air Quality, Biology, Cultural Resources, etc.). The State of California, Department of Conservation, Division of Mines and Geology – Seismic Hazard Maps and reports, are used to identify potential future significant seismic events; including probable magnitudes, liquefaction, and landslide hazards. Based on Applicant information provided in the Master Land Use Application and Environmental Assessment Form, impact evaluations were based on stated facts contained therein, including but not limited to, reference materials indicated above, field investigation of the project site, and other reliable reference materials known at the time.

Project specific impacts were evaluated based on all relevant facts indicated in the Environmental Assessment Form and expressed through the Applicant's project description and supportive materials. Both the Initial Study Checklist and Checklist Explanations, in conjunction with the City of Los Angeles's Adopted Thresholds Guide and CEQA Guidelines, were used to reach reasonable conclusions on environmental impacts as mandated under the California Environmental Quality Act (CEQA).

The project as identified in the project description may cause potentially significant impacts on the environment without mitigation. Therefore, this environmental analysis concludes that a Mitigated Negative Declaration shall be issued to avoid and mitigate all potential adverse impacts on the environment by the imposition of mitigation measures and/or conditions contained and expressed in this document; the environmental case file known as **ENV-2016-273-MND** and the associated case(s), **ZA-2016-272-ZAA-SPR-CLQ**. Finally, based on the fact that these impacts can be feasibly mitigated to less than significant, and based on the findings and thresholds for Mandatory Findings of Significance as described in the California Environmental Quality Act, section 15065, the overall project impacts(s) on the environment (after mitigation) **will not**:

- Substantially degrade environmental quality.
- Substantially reduce fish or wildlife habitat.
- Cause a fish or wildlife habitat to drop below self sustaining levels.
- Threaten to eliminate a plant or animal community.
- Reduce number, or restrict range of a rare, threatened, or endangered species.
- Eliminate important examples of major periods of California history or prehistory.
- Achieve short-term goals to the disadvantage of long-term goals.
- Result in environmental effects that are individually limited but cumulatively considerable.
- Result in environmental effects that will cause substantial adverse effects on human beings.

MITIGATION MEASURES

AESTHETICS

No mitigation measures are required.

AGRICULTURE AND FORESTRY RESOURCES

No mitigation measures are required.

AIR QUALITY

No mitigation measures are required.

BIOLOGICAL RESOURCES

MM-BIO-1 Tree Removal (Non-Protected Trees)

- Prior to the issuance of any permit, a plot plan shall be prepared indicating the location, size, type, and general condition of all existing trees on the site and within the adjacent public right(s)-of-way.
- All significant (8-inch or greater trunk diameter, or cumulative trunk diameter if multi-trunked, as measured 54 inches above the ground) non-protected trees on the site proposed for removal shall be replaced at a 1:1 ratio with a minimum 24-inch box tree. Net, new trees, located within the parkway of the adjacent public right(s)-of-way, may be counted toward replacement tree requirements.
- Removal or planting of any tree in the public right-of-way requires approval of the Board of Public Works. Contact Urban Forestry Division at: 213-847-3077. All trees in the public right-of-way shall be provided per the current standards of the Urban Forestry Division the Department of Public Works, Bureau of Street Services.

MM-BIO-2 Habitat Modification (Nesting Native Birds)

- Proposed project activities (including disturbances to native and non-native vegetation, structures and substrates) should take place outside of the breeding bird season which generally runs from March 1- August 31 (as early as February 1 for raptors) to avoid take (including disturbances which would cause abandonment of active nests containing eggs and/or young). Take means to hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture of kill (Fish and Game Code Section 86).
- If project activities cannot feasibly avoid the breeding bird season, beginning thirty days prior to the disturbance of suitable nesting habitat, the applicant shall:
    - Arrange for weekly bird surveys to detect any protected native birds in the habitat to be removed and any other such habitat within 300 feet of the construction work area (within 500 feet for raptors) as access to adjacent areas allows. The surveys shall be conducted by a Qualified Biologist with experience in conducting breeding bird surveys. The surveys shall continue on a weekly basis with the last survey being conducted no more than 3 days prior to the initiation of clearance/construction work.

- If a protected native bird is found, the applicant shall delay all clearance/construction disturbance activities within 300 feet of suitable nesting habitat for the observed protected bird species (within 500 feet for suitable raptor nesting habitat) until August 31.
- Alternatively, the Qualified Biologist could continue the surveys in order to locate any nests. If an active nest is located, clearing and construction within 300 feet of the nest (within 500 feet for raptor nests) or as determined by a qualified biological monitor, shall be postponed until the nest is vacated and juveniles have fledged and when there is no evidence of a second attempt at nesting. The buffer zone from the nest shall be established in the field with flagging and stakes. Construction personnel shall be instructed on the sensitivity of the area.
- The applicant shall record the results of the recommended protective measures described above to document compliance with applicable State and Federal laws pertaining to the protection of native birds. Such record shall be submitted and received into the case file for the associated discretionary action permitting the project.

CULTURAL RESOURCES

No mitigation measures are required.

GEOLOGY AND SOILS

No mitigation measures are required.

GREENHOUSE GAS EMISSIONS

No mitigation measures are required.

HAZARDS AND HAZARDOUS MATERIALS

MM-HAZ-1 (Existing Toxic/Hazardous Construction Materials)

- (Lead Paint) Prior to the issuance of any permit for demolition or alteration of the existing structure(s), a lead-based paint survey shall be performed to the written satisfaction of the Department of Building and Safety. Should lead-based paint materials be identified, standard handling and disposal practices shall be implemented pursuant to OSHA regulations.

MM-HAZ-2 Construction Activity Near Schools

- The Applicant and contractors shall maintain ongoing contact with administrator of Hillside Elementary School, Loreta Street Elementary School, and Los Angeles Leadership Academy Charter School. The administrative offices shall be contacted when demolition, grading and construction activity begin on the project site so that students and their parents will know when such activities are to occur. The developer shall obtain school walk and bus routes to the schools from either the administrators or from the LAUSD's Transportation Branch (323)342-1400 and guarantee that safe and convenient pedestrian and bus routes to the school be maintained.

- The Applicant shall install appropriate traffic signs around the site to ensure pedestrian and vehicle safety.
- There shall be no staging or parking of construction vehicles, including vehicles to transport workers on Pasadena Avenue, adjacent to the school.
- Due to noise impacts on the schools, no construction vehicles or haul trucks shall be staged or idled on Pasadena Avenue, adjacent to the school, during school hours.

MM-HAZ-3 Schools Affected by Haul Route

- Haul route scheduling shall be sequenced to minimize conflicts with pedestrians, school buses and cars at the arrival and dismissal times of the school day. Haul route trucks shall not be routed past the school during periods when school is in session especially when students are arriving or departing from the campus.

HYDROLOGY AND WATER QUALITY

No mitigation measures are required.

LAND USE AND PLANNING

No mitigation measures are required.

MINERAL RESOURCES

No mitigation measures are required.

NOISE

MM-N-1 Increased Noise Levels (Demolition, Grading, and Construction Activities)

- In addition to satisfying the noise-related conditions identified in [Q] Condition 10 of Ordinance 179,280, the project contractor shall erect a temporary noise-attenuating sound barrier along the perimeter of the Project Site's southerly and easterly property line to minimize construction noise levels at off site properties. The sound wall shall be a minimum of 8 feet in height to block the line of site of construction equipment and off site receptors at the ground level. The sound barrier shall include ¾ inch plywood or other sound absorbing material capable of achieving a 10 dBA reduction in sound level.

MM-N-2 Increased Noise Levels (Parking Structure Ramps)

- Concrete, not metal, shall be used for construction of parking ramps.
- The interior ramps shall be textured to prevent tire squeal at turning areas.

POPULATION AND HOUSING

No mitigation measures are required.

PUBLIC SERVICES

MM-PS-1 Police

- **(Police):** The plans shall incorporate the Design Guidelines (defined in the following sentence) relative to security, semi-public and private spaces, which may include but not be limited to access control to building, secured parking facilities, walls/fences with key systems, well-illuminated public and semi-public space designed with a minimum of dead space to eliminate areas of concealment, location of toilet facilities or building entrances in high-foot traffic areas, and provision of security guard patrol throughout the project site if needed. Please refer to "Design Out Crime Guidelines: Crime Prevention Through Environmental Design", published by the Los Angeles Police Department. Contact the Community Relations Division, located at 100 W. 1st Street, #250, Los Angeles, CA 90012; (213) 486-6000. These measures shall be approved by the Police Department prior to the issuance of building permits.

RECREATION

No mitigation measures are required.

TRANSPORTATION AND TRAFFIC

MM-T-1 Transportation and Traffic

- In addition to the TDM measures, all implementing measure(s) detailed in DOT's communication to the Planning Department (DOT Case No. CEN 15-43306 dated January 28, 2016, attached) shall be complied with.

MM-T-2 Transportation Demand Management (TDM) Program

- The purpose of a TDM plan is to reduce the use of single occupant vehicles (SOV) by increasing the number of trips by walking, bicycle, carpool, vanpool and transit. A TDM plan should include design features, transportation services, education, and incentives intended to reduce the amount of SOV during commute hours. Through strategic building design and orientation, this project can facilitate access to transit, can provide a pedestrian-friendly environment, can promote non-automobile travel and can support the goals of a trip-reduction program.
- A preliminary TDM program shall be prepared and provided for DOT review prior to the issuance of the first building permit for this project and a final TDM program approved by DOT is required prior to the issuance of the first certificate of occupancy for the project. The TDM program should include, but not be limited to, the following strategies:
    - Provide an internal Transportation Management Coordination Program with an on-site transportation coordinator;
    - Design the project to ensure a bicycle, transit, and pedestrian friendly environment;
    - Provide unbundled parking that separates the cost of obtaining assigned parking spaces from the cost of purchasing or renting residential units;

- Accommodate flexible/alternative work schedules and telecommuting programs;
- A provision requiring compliance with the State Parking Cash-out Law in all leases;
- Coordinate with DOT to determine if the project location is eligible for future Integrated Mobility Hub (which can include space for a bike share kiosk, and/or parking spaces on-site for car-share vehicles;
- Provide on-site transit routing and schedule information;
- Provide a program to discount transit passes for residents/employees possibly through negotiated bulk purchasing passes with transit providers;
- Provide rideshare matching services;
- Preferential rideshare loading/unloading or parking location;
- Contribute to a one-time fixed fee contribution of $75,000 to be deposited into the City's Bicycle Plan Trust Fund to implement bicycle improvements in the vicinity of the project.

In addition to these TDM measures, DOT also recommends that the Applicant explore the implementation of an on-demand van, shuttle or tram service that connects the project employees to off-site transit stops based on the transportation needs of the project employees. Such a service can be included as an additional measure in the TDM program if it is deemed feasible and effective by the applicant.

- The Applicant shall implement a TDM/TMP to reduce the project trip generation by 15 percent. Specifically, the project shall not exceed a driveway trip volume count of 179 trips during the a.m. peak hour and 222 trips during the pm peak hour, at full occupancy. To achieve this peak hour driveway trip volume requirement through implementation of an on-site Transportation Demand Management (TDM) Plan the project shall implement a Trip Monitoring Program (TMP).
- The Applicant shall record a covenant and agreement to annually monitor and submit reports on the progress of the driveway trip reduction plan to DOT. Annual reports shall include a report on the observed trip generation and on the project's mode share. The detailed goals, objectives, terms and strategies of the TDM plan and reporting requirements shall be determined during the preparation of the final. The TDM plan is due prior to the issuance of any temporary or final certificate of occupancy permit for the project. The plan should also identify any appropriate penalties, should the project not achieve compliance with the targeted number of driveway trips within a year of exceeding the limits. The TMP shall continue until such time that the project has shown, for five (5) consecutive years, at a minimum of 85% occupancy, accomplishment of the peak hour driveway trip volume requirement as listed.

MM-T-3 Transportation Systems Management (TSM) Improvements

- The Applicant shall implement the upgrades, detailed below by LADOT's ATSAC Section, through the B-Permit process. LADOT's ATSAC Section has identified the need to update the existing traffic signal system. Specifically, install one CCTV camera, a new type 2070 controller, and the necessary infrastructure (including, but not limited to, fiber optic and interconnect) to activate the new installation, at the Pasadena Avenue / Avenue 26 and Daly Street intersection. The video fiber / fiber optic improvements must be guaranteed prior to the issuance of any building

permit and complete prior to the issuance of any certificate of occupancy. Temporary certificates of occupancy may be granted in the event of any delay through no fault of the applicant, provided that, in each case, the applicant has demonstrated reasonable efforts and due diligence to the satisfaction of DOT

MM-T-4 Construction Management Plan

- A Construction work site traffic control plan shall be submitted to DOT for review and approval prior to the start of any construction work. The plans shall show the location of any roadway or sidewalk closures, traffic detours, haul routes, hours of operation, protective devices, warning signs and access to abutting properties. All construction related traffic shall be restricted to off-peak hours.
- All delivery truck loading and unloading shall take place on site or within the boundaries of an approved traffic control plan.

MM-T-5 Transportation and Traffic (Construction)

- The developer shall install appropriate traffic signs around the site to ensure pedestrian and vehicle safety at all times during the construction period.

MM-T-6 Pedestrian Safety During Construction

- The Applicant shall plan construction and construction staging as to maintain pedestrian access on adjacent sidewalks throughout all construction phases. This requires the applicant to maintain adequate and safe pedestrian protection, including physical separation (including utilization of barriers such as K-Rails or scaffolding, etc.) from work space and vehicular traffic, and overhead protection, due to sidewalk closure or blockage, at all times.
- Should permanent pedestrian routes be unavailable due to construction, safe and accessible temporary pedestrian routes shall be provided adjacent to the project site.
- Covered walkways should be provided where pedestrians are exposed to potential injury from falling objects.
- The Applicant shall keep sidewalk open during construction until only when it is absolutely required to close or block sidewalk for construction and/or construction staging. Sidewalk shall be reopened as soon as reasonably feasible taking construction and construction staging into account.

UTILITIES AND SERVICE SYSTEMS

No mitigation measures are required.

MANDATORY FINDINGS OF SIGNIFICANCE

See above mitigation measures.

REGULATORY COMPLIANCE MEASURES

The Proposed Project is located within Subarea 4 of the Northeast Los Angeles Community Plan Ordinance Maps and is zoned [T][Q]CM-2D. Pursuant to Ordinance 179280, limitations imposed upon the use of property subject to the permanent "Q" Qualified Classification or "D" Development Limitation are imposed pursuant to Section 12.32K and 12.32G, respectively, of the Los Angeles Municipal Code. The "Q" Qualified Conditions are indicated by the symbol "Q" in brackets proceeding the proposed zoning designation (for example, [Q]C2). The "D" Development Limitations are indicated by a "D" following the height district designation (for example, C2-2D). The "D" Limitations and "[Q]" Conditions that are applicable to the Project Site and that will be fully addressed in Project design and entitlement are identified below:

"D" Development Limitations

1. Floor Area.

The total floor area of all buildings on the subject lots shall be limited to a Height District 2D with a maximum FAR of 3:1. An additional FAR of 1:1 may be granted for mixed-use projects that incorporate affordable housing at income levels and dwelling unit percentages consistent with State Code. An additional FAR incentive of 0.5:1 may be granted for the inclusion of a childcare facility. Therefore, mixed-use developments which incorporate affordable housing may have a maximum FAR of 4.0:1; mixed-use developments which include a childcare facility without an affordable housing component may have a maximum FAR of 3.5:1; mixed-use developments which include both affordable housing and a childcare facility may have a maximum FAR of 4.5:1.

[Q] QUALIFIED CONDITIONS OF APPROVAL

Pursuant to Section 12.32 G of the Municipal Code; the following limitations are hereby imposed upon the use of the subject property, subject to the "Q" Qualified classification.

A. General Conditions

1. Use Limitations

a. There shall be no 100% Commercial and/or Industrial projects allowed.

b. There shall be no 100% Residential projects allowed.

c. A minimum of 50% of the non-residential floor area shall be limited to Neighborhood Retail and Neighborhood Services as permitted by LAMC 13.07C.

d. The following uses shall be prohibited:

(i) Any drive-through facilities, such as those associated with restaurants, kiosk banks and drugstores;

(ii) Automobile dismantling and automobile salvage yards, and automobile storage yards;

(iii) Outdoor storage yards for junk and salvage items, machinery or construction materials that are not associated with a retail establishment or entertainment production facility;

(iv) Recycling Centers;

(v) Off-site alcoholic beverage sales.

e. Property owners shall satisfy any requirements from the State Department of Toxic Substances Control (DTSC) in relation to potential contamination on the subject site. Prior to the issuance of any clearances by the Department of City Planning (DCP), property owners shall provide to DCP a letter from DTSC that establishes DTSC's satisfaction that the subject site currently meets DTSC requirements for the proposed use or, alternatively, that establishes DTSC's satisfaction with the property owner's contamination testing plan for the proposed use.

2. Parking.

a. Surface Parking. Approval of plans by the Director of Planning shall be required for any project for which surface parking exceeds 20% of the total lot area.

b. Surface and Below-Grade Parking. Parking for commercial uses or guests may be located at grade, but shall not be adjacent to Pasadena Avenue; parking for residences shall be located below grade.

c. Shared Parking. Residential and mixed-use commercial/residential projects shall provide parking as required by the Los Angeles Municipal Code. Commercial parking shall be made available to residents and residential visitors during off-business hours. In the event that the project is developed under the regulations contained in Section 12.22 A 25 of the Municipal Code (Affordable Housing Incentives/Density Bonuses), parking may be provided as permitted by that Section for the length of time that the residential units remain as restricted affordable units.

(i) Tandem parking may be used only for the spaces which are assigned and designated for a single residential unit.

(ii) Signs shall be clearly posted at project entrances directing residential visitors to commercial parking during off-business hours. The signs shall be in large, easy-to-read lettering and shall indicate the general location of the parking. Sign wording shall be to the satisfaction of the Planning Department.

B. Design Conditions

1. Site Planning

a. Development fronting Figueroa Street or Pasadena Avenue shall designate Figueroa Street or Pasadena Avenue as the front yard.

b. All new buildings fronting Figueroa Street or Pasadena Avenue shall provide a pedestrian entrance for each business along Figueroa Street or Pasadena Avenue.

c. Ground floor commercial uses shall be built to the front lot line except where publicly accessible open spaces are provided, such as plazas and outdoor dining areas, and have been incorporated into the site design.

d. All projects shall be subject to approval of plans by the Director of Planning, to be conducted by the Community Planning Bureau.

e. A minimum of 30% of the Subarea shall be devoted to publicly accessible open space and pedestrian paths that shall be accessible beginning at dawn and ending at dusk or close of on-site businesses, whichever occurs later.

f. All new buildings that abut Pasadena Avenue shall provide a pedestrian entrance for each business along Pasadena Avenue.

g. For surface parking areas, the applicant shall provide drainage bioswales along any boundary abutting the Arroyo Seco, and shall design parking areas, landscaped areas and rooftops to direct drainage into the bioswales.

h. Courtyards.

(i) For buildings fronting Pasadena Avenue with over 150 linear feet in width or depth, a front courtyard shall be provided adjacent to the front yard setback at ground level, with a minimum width and depth of 20 linear feet, respectively, and a minimum total area of 700 square feet.

(ii) Required courtyards shall be open to the sky and not be located within 40 linear feet of a side property line.

(iii) Any courtyard fencing shall be predominantly open or transparent in design, shall not exceed 36 inches in height and shall be recessed a minimum of 5 feet.

(iv) Required courtyards shall be located no more than three (3) vertical feet from sidewalk grade.

(v) A minimum of 20 percent of each courtyard shall consist of planted ground cover, shrubs, trees, water features or permanent planter boxes.

(vi) Courtyards shall contain pedestrian amenities, such as shade trees, landscaped trellises, benches, trash bins, etc.

i. A minimum of 75 percent of all usable outdoor public space shall be located at ground level and shall be directly accessible to the general public from Pasadena Avenue and/or Avenue 34.

j. Ground floor frontage along Pasadena Avenue shall be designated for commercial or industrial uses. Ground floor uses shall be designed with a minimum depth of 25 feet.

k. Non-residential uses fronting onto Pasadena Avenue shall maintain a presence and a secondary pedestrian entrance on the interior of the lot.

2. Pedestrian Access

Pedestrian paths shall divide Subarea 4 into a minimum of four sections.

a. There shall be an easUwest and a north/south pedestrian path through Subarea 4.

b. The paths shall be aligned through the midpoint of Subarea 4 and cross each other at a perpendicular angle.

c. The required pedestrian paths shall be a minimum of 16 feet in width and may include up to 2 feet of landscaping on each side.

d. The required pedestrian paths shall be comprised of attractive hardscape materials or appropriate permeable alternatives. The use of asphalt is prohibited.

e. Developments on parcels that abut the required pedestrian paths shall contribute their proportional share of said paths.

f. Pedestrian paths shall be illuminated with pedestrian-scale lighting installed on either side of each pedestrian path at a minimum interval of one fixture every 20 linear feet.

g. These pedestrian paths shall be open and accessible to the public from dawn until dusk or the close of on-site businesses, whichever occurs later.

h. These pedestrian paths may count toward the Code-required open space.

i. These pedestrian paths may be included in the buildable area for the purposes of calculating the floor area ratio (FAR).

3. Building Design

a. A break in the building wall along Figueroa Street or Pasadena Avenue shall only be permitted when vehicular access cannot be obtained from side streets or private alleyways, as determined by LADOT. The break in the wall, when permitted, shall not exceed a distance of the linear feet required for driveways and other vehicular access. When vehicular access must be taken from the primary street, the driveway entry gate shall be recessed from the sidewalk by a minimum of 20 feet.

b. All ground floor storefronts in new buildings that are greater than 30 feet in length shall provide architectural features on the building fa<;ade that will help to create a pattern along the street frontage and avoid the presence of a monotonous fa<;ade through the use of vertical elements, such as columns, placed in a pattern, or recesses in the fa<;ade, at minimum intervals of 20 feet.

c. All facades on new buildings shall be designed with articulation that provides relief for every 20 horizontal feet and 15 vertical feet.

d. The front elevation of all new structures shall be stepped back a minimum of five (5) feet from the front property line at the third story and again at the fifth story.

e. Wall openings, such as windows and doors, shall occupy at least 70 percent of the ground floor street facade along Pasadena Avenue and Figueroa Street.

f. Storefront windows shall be a minimum of 18 vertical inches and a maximum of 36 vertical inches from sidewalk grade.

4. Architectural Details

a. Articulation and architectural detail shall be applied equally on all building elevations.

b. All balconies shall be flush with the exterior wall and made of an opaque materials for the first four feet.

c. All balconies shall be of a usable dimension, a minimum of six feet wide.

d. Building entrances shall meet the following criteria:

(i) All projects shall provide a prominent residential entry that is accessible from the public right-of-way abutting the front yard; and

(ii) Each commercial premise shall provide a front door that is accessible from the public right-of-way abutting the front yard.

e. All buildings shall provide security lighting for pedestrians on the ground floor of building facades fronting public rights-of-way.

f. Windows shall allow a minimum of 90-percent light transmission. Non-reflective glass shall be used to allow maximum visibility from the sidewalk areas into the interior of all commercial uses.

g. Storefront windows shall be recessed at least 3 inches from the front plane of the building.

h. Where awnings and canopies are used on storefronts greater than 25 feet in length, one awning or canopy shall be provided for each structural bay where such bays exist.

i. Awnings and canopies shall project a maximum of 36-inches into the sidewalk.

j. Awnings and canopies shall be attached to the building, without support poles on the sidewalk.

k. All rooflines that exceed 40 linear feet shall provide some kind of relief either through the application of a gable, dormer, change of material or other type of articulation.

5. Walls and Fences:

a. Exterior walls shall be treated with graffiti resistant-surfaces. Such treatment may include specialized coatings and the installation of vegetation.

b. All free-standing walls shall provide a break in plane, or a change in material, or an opening in the surface of the wall at minimum every 20 feet in horizontal length, or by an articulation or architectural detail such as a staggered wall, an indentation, patterned block or a symmetrical spacing of columns at minimum every 20 feet.

c. Free-standing walls or fences shall not use barbed wire or razor wire to adorn the tops of walls within view of the public right-of-way.

d. Walls or fences in the front yard shall not exceed 42 inches in height, as measured from the lowest adjacent grade, and shall be constructed of transparent decorative materials that are integrated into the design and architecture of the building.

e. Where taller walls or fences, up to a maximum of 6 feet in height, are required for security reasons, the fence or wall shall be located inside the setback landscape buffer, integrated into the architecture of the building and screened by landscaping or otherwise designed to be obscured from view from the public way. This condition applies to walls or fences in side or rear yards only.

f. Fences and walls exceeding 42 inches in side or rear yards may be located at the property line only when permitted portions of the required yard are used for private or common open space, as allowed by the Los Angeles Municipal Code. Otherwise these walls and fences shall be located within the landscaped setback, per Condition C-4(e).

6. Landscaping

a. Open space shall be provided per LAMC.

b. All open areas not used for buildings, driveways, surface parking areas, recreational facilities, pedestrian paths or walkways shall be attractively landscaped and include an automatic irrigation system, in accordance with a landscape plan prepared by a licensed landscape architect, licensed architect, or landscape contractor to the satisfaction of the Planning Department.

c. A minimum of five percent of the total surface area of a surface parking lot shall be landscaped with trees, shrubbery and ground cover.

d. A minimum of 50 percent of common usable open space, including plazas and courtyards, shall be planted in ground cover, shrubs or trees. Trees shall be planted at a ratio of one tree for every 1,000 square feet of lot area. Trees shall be at minimum 24-inch box trees, and shall be planted within open space areas. Landscaped areas located on top of a parking garage or deck shall include permanent planters at least 30 inches in depth (12 inches for lawn/ground cover) and be properly irrigated and drained to the satisfaction of the Planning Department.

e. Paved surfaces within usable public spaces shall be comprised of stamped concrete, tile or other decorative paving surfaces. Asphalt shall be prohibited as a paving surface within usable public spaces.

f. Any portion of a parking level which exceeds grade shall be screened from the view of the public right-of-way by landscape features including trees, shrubbery, planter boxes or berms, none of which shall be shorter than three (3) feet in height. Any planter box or berm shall not be considered in calculating additional height of a structure.

g. All surface parking areas shall include a pedestrian walkway from the primary structure served by the parking area up to a distance measuring 50 straightline feet. The pedestrian walkway shall be paved with stamped concrete or another decorative surface in keeping with the architectural style of the surrounding structures.

h. Landscape setbacks, where required, shall include a 24-inch box tree for every 20 feet of street frontage. Trees installed shall have a minimum canopy diameter of 20 feet at the time of maturity.

i. Landscape setbacks, where required, shall include 90 percent ground covering through the use of turf, grass, flowering plants and shrubs.

j. Street trees shall be 24-inch box trees planted along the street frontage, spaced 20 feet on center with root collars to prevent uplifting of sidewalks. Street tree type shall match the

prevailing street tree of the street provided that it is an acceptable tree species, to the satisfaction of the Bureau of Urban Forestry.

7. Mechanical, Security & Trash Equipment

a. All service areas and loading docks shall be located at the rear of structures.

b. All exterior rooftop and ground level mechanical equipment, including HVAC equipment, exhaust fans and satellite dishes shall be screened from public view.

c. All service areas shall be enclosed or completely screened from public view. Enclosures shall consist of fencing, walls, or landscaping.

d. Exterior security grills or permanently affixed security bars shall be prohibited.

e. Interior security grills shall be retractable and shall recess completely into pockets that completely conceal the grill when it is retracted. Such pockets shall be integrated into the design of the building.

f. Roll-down security grills that conceal storefront windows shall be prohibited.

C. Environmental Conditions

1. Aesthetics (Landscaping) All open areas not used for buildings, driveways, parking areas, recreational facilities or walks shall be attractively landscaped and maintained in accordance with a landscape plan, including an automatic irrigation plan, prepared by a licensed landscape architect to the satisfaction of the Planning Department.

2. Aesthetics (Surface Parking) A minimum of one 24-inch box tree (minimum trunk diameter of two inches and a height of eight feet at the time of planting) shall be planted for every four new surface parking spaces. The trees shall be dispersed within the parking area so as to shade the surface parking area and shall be protected by a minimum 6-inch high curb and landscape. An automatic irrigation plan shall be approved by the City Planning Department.

3. Aesthetics (Graffiti) The owners shall maintain the subject property clean and free of debris and rubbish and to promptly remove any graffiti from the walls, pursuant to Municipal Code Sections 91.8101-F, 91.8904-1 and 91.1707-E. Exterior walls of new commercial and residential buildings of other than glass may be covered with clinging vines, screened by oleander trees or similar vegetation capable of covering or screening entire walls up to heights of at least 9-feet, excluding windows and signs or the walls may be covered with graffiti proof coatings.

4. Aesthetics (Signage) On-site signs are limited to the maximum allowable under the Municipal Code. Multiple temporary signs in the store windows and along the building walls shall be prohibited.

5. Aesthetics (Light) Outdoor lighting shall be designed and installed with shielding so that the light source cannot be seen from adjacent residential properties.

6. Aesthetics (Glare) The exterior of the proposed building shall be constructed of materials such as high-performance tinted non-reflective glass and pre-cast concrete or fabricated wall surfaces.

7. Air Pollution (Stationary)

RESIDENTIAL - The applicant shall install air filters capable of achieving a Minimum Efficiency Rating Value (MERV) of at least 8 or better in order to reduce the effects of diminished air quality on the occupants of the project.

COMMERCIAL/INSTITUTIONAL- The applicant shall install air filters capable of achieving a Minimum Efficiency Rating Value (MERV) of at least 11 or better in order to reduce the effects of diminished air quality on the occupants of the project.

8. Air Quality (Objectionable Odors) The trash receptacle shall be relocated at least 50-feet away from the property line of adjacent residential properties or trash receptacles shall be located within the walls of a covered concrete block enclosure.

9. Seismic The design and construction of the project shall conform to the Uniform Building Code seismic standards as approved by the Department of Building and Safety.

10. Erosion/Grading/Short-Term Construction Impacts

Air Quality

a. All unpaved demolition and construction areas shall be wetted at least twice daily during excavation and construction, and temporary dust covers shall be used to reduce dust emissions and meet SCAQMD District Rule 403.

b. The owner or contractor shall keep the construction area sufficiently dampened to control dust caused by construction and hauling, and at all times provide reasonable control of dust caused by wind.

c. All loads shall be secured by trimming, watering or other appropriate means to prevent spillage and dust.

d. All materials transported off-site shall be either sufficiently watered or securely covered to prevent the generation of excessive amounts of dust.

e. General contractors shall maintain and operate construction equipment so as to minimize exhaust emissions.

Noise

a. The project shall comply with the City of Los Angeles Noise Ordinance No. 144,331 and 161,574, and any subsequent ordinances, which prohibit the emission or creation of noise beyond certain levels at adjacent uses unless technically unfeasible.

b. Construction and demolition shall be restricted to the hours of 7:00 am to 6:00 pm Monday through Friday, and 8:00 am to 6:00 pm on Saturday.

c. Construction and demolition activities shall be scheduled so as to avoid operating several pieces of equipment simultaneously.

d. The project contractor shall use power construction equipment with state-of the art noise shielding and muffling devices.

e. The project sponsor shall comply with the Noise Insulation Standards of Title 24 of the California Code Regulations, which insure an acceptable interior noise environment.

General Construction

a. All waste shall be disposed of properly. Use appropriately labeled recycling bins to recycle construction materials including: solvents, water-based paints, vehicle fluids, broken asphalt and concrete, wood, and vegetation. Nonrecyclable materials/wastes shall be taken to an appropriate landfill. Toxic wastes must be discarded at a licensed regulated disposal site.

b. Leaks, drips and spills shall be cleaned up immediately to prevent contaminated soil on paved surfaces that can be washed away into the storm drains.

c. Pavement shall not be hosed down at material spills. Dry cleanup methods shall be used whenever possible.

d. Dumpsters shall be covered and maintained. Uncovered dumpsters shall be placed under a roof or be covered with tarps or plastic sheeting.

e. Gravel approaches shall be used where truck traffic is frequent to reduce soil compaction and the tracking of sediment into streets shall be limited.

f. All vehicle/equipment maintenance, repair, and washing shall be conducted away from storm drains. All major repairs shall be conducted off-site. Drip pans or drop cloths shall be used to catch drips and spills.

11. Liquefaction

All projects shall comply with the Uniform Building Code Chapter 18. Division 1 Section 1804.5 Liquefaction Potential and Soil Strength Loss which requires the preparation of a geotechnical report. The geotechnical report shall assess potential consequences of any liquefaction and soil strength loss, estimation of settlement, lateral movement or reduction in foundation soil-bearing capacity, and discuss

mitigation measures that may include building design consideration. Building design considerations shall include, but are not limited to: ground stabilization, selection of appropriate foundation type and depths, selection of appropriate structural systems to accommodate anticipated displacements or any combination of these measures.

12. Explosion/Release (Asbestos Containing Materials)

Prior to the issuance of any demolition permit, the applicant shall provide a letter to the Department of Building and Safety from a qualified asbestos abatement consultant that no ACM are present in the building. If ACM are found to be present, it will need to be abated in compliance with the South Coast Air Quality Management District's Rule 1403 as well as all other State and Federal Rules and regulation.

13. All Runoff (All Subareas)

a. Project applicants are required to implement stormwater BMPs to retain or treat the runoff from a storm event producing 3/4 inch of rainfall in a 24 hour period. The design of structural BMPs shall be in accordance with the Development Best Management Practices Handbook Part B Planning Activities. A signed certificate from a California licensed civil engineer or licensed architect that the proposed BMPs meet this numerical threshold standard is required.

b. Post development peak stormwater runoff discharge rates shall not exceed the estimated pre-development rate for developments where the increase peak stormwater discharge rate will result in increased potential for downstream erosion.

c. Maximize trees and other vegetation at each site by planting additional vegetation, clustering tree areas, and promoting the use of native and/or drought tolerant plants.

d. Any connection to the sanitary sewer must have authorization from the Bureau of Sanitation.

e. Reduce impervious surface area by using permeable pavement materials where appropriate, including: pervious concrete/asphalt; unit pavers, i.e. turf block; and granular materials, i.e. crushed aggregates, cobbles.

f. Paint messages that prohibits the dumping of improper materials into the storm drain system adjacent to storm drain inlets (such as NO DUMPINGDRAINS TO OCEAN) and/or graphical icons. Prefabricated stencils can be obtained from the Department of Public Works, Stormwater Management Division.

g. Legibility of stencils and signs must be maintained.

h. Promote natural vegetation by using parking islands and other landscaped areas.

i. Materials with the potential to contaminate stormwater must be: (1) placed in an enclosure such as, but not limited to, a cabinet, shed, or similar stormwater conveyance system; or (2) protected by secondary containment structures such as berms, dikes, or curbs.

j. The storage area must be paved and sufficiently impervious to contain leaks and spills.

k. The storage area must have a roof or awning to minimize collection of stormwater within the secondary containment area.

l. The owner(s) of the property will prepare and execute a covenant and agreement (Planning Department General form CP-6770) satisfactory to the Planning Department binding the owners to post construction maintenance on the structural BMPs in accordance with the Standard Urban Stormwater Mitigation Plan and/or per manufacturer's instructions.

14. Stormwater Runoff 10+ Home Subdivision/Multi Family

a. Install Roof runoff systems where site is suitable for installation.

b. Surface parking lots constitute a significant portion of the impervious land coverage. To reduce the quantity of runoff, surface parking lots can be designed one of two ways;

(i) Hybrid Lot - parking stalls utilize permeable materials, such as crushed aggregate, aisles are constructed of conventional materials such as asphalt.

(ii) Parking Grove - is a variation on the permeable stall design, a grid of trees and bollards are added to delineate parking stalls. This design presents an attractive open space when cars are absent, and shade when cars are present.

c. Design an efficient irrigation system to m1mm1ze runoff including: drip irrigation for shrubs to limit excessive spray; shutoff devices to prevent irrigation after significant precipitation; and flow reducers.

15. Stormwater Runoff Commercial and Industrial Development (Lot Size 100,000 sf)

a. Cover loading dock areas or design drainage to minimize run-on and run-off stormwater.

b. Direct connections to storm drains from depressed loading docks (truck wells) are prohibited.

c. Repair/maintenance bays must be indoors or designed in such a way that doesn't allow stormwater run-on or contact with stormwater runoff.

d. Design repair/maintenance bay drainage system to capture all washwater, leaks and spills. Connect drains to a standard sump for collection and disposal. Direct connection of the repair/maintenance bays to the storm drain system is prohibited. If required, obtain an Industrial Waste Discharge Permit.

e. Vehicle/equipment wash areas must be self-contained and/or covered, equipped with a clarifier, or other pretreatment facility, and property connected to the sanitary sewer.

f. The following activities are to be conducted under proper cover with drain routed to the sanitary sewer:

(i) Storage of industrial wastes.

(ii) Handling or storage of hazardous wastes.

(iii) Metal fabrication or Pre-cast concrete fabrication.

(iv) Welding, Cutting or Assembly.

(v) Painting, Coating or Finishing.

g. Store above ground liquid storage tanks (drums and dumpsters) in areas with impervious surfaces in order to contain leaks and spills. Install a secondary containment system such as berms, dikes, liners, vaults, and double-wall tanks. Where used oil or dangerous waste is stored, a dead- end sump should be installed in the drain.

h. Toxic wastes must be discarded at a licensed regulated disposal site. Store trash dumpsters either under cover and with drains routed to the sanitary sewer or use non-leaking and water-tight dumpsters with lids. Use drip pans or absorbent materials whenever grease containers are emptied. Wash containers in an area with properly connected sanitary sewer.

i. Reduce and recycle wastes, including: paper; glass; aluminum; oil; and grease.

j. Reduce the use of hazardous materials and wastes by: using detergent based or water-based cleaning systems; and avoid chlorinated compounds, petroleum distillates, phenols, and formaldehyde.

k. Control or reduce or eliminate flow to natural drainage systems to the maximum extent practicable.

l. Cleaning of vehicles and equipment to be performed within designated covered or bermed wash area paved with Portland concrete, sloped for wash water collection, and with a pretreatment facility for wash water before discharging to properly connected sanitary sewer with a CPI type oil/water separator. The separator unit must be: designed to handle the quantity of flows; removed for cleaning on a regular basis (at least twice a year) to remove any solids; and the oil absorbent pads must be replaced regularly, once in fall just before the wet season, and in accordance with manufacturer's specifications.

16. Stormwater Runoff Food Service Industry (Restaurants, Bakeries, Food Processors)

a. Cleaning of oily vents and equipment to be performed within designated covered area, sloped for wash water collection, and with a pretreatment facility for wash water before discharging to properly connected sanitary sewer with a CPI type oil/water separator. The separator unit must be: designed to handle the quantity of flows; removed for cleaning on a regular basis to remove any solids; and the oil absorbent pads must be replaced regularly according to manufacturer's specifications.

b. Store trash dumpsters either under cover and with drains routed to the sanitary sewer or use non-leaking and water tight dumpsters with lids. Wash containers in an area with properly connected sanitary sewer.

c. Reduce and recycle wastes, including oil and grease.

d. Store liquid storage tanks (drums and dumpsters) in designated paved areas with impervious surfaces in order to contain leaks and spills. Install a secondary containment system such as berms, curbs, or dikes. Use drip pans or absorbent materials whenever grease containers are emptied.

e. Infiltrate runoff before it reaches the storm drain system.

f. Runoff must be treated prior to release into the storm drain. Three types of treatments are available, (1) dynamic flow separator; (2) a filtration or (3) infiltration. Dynamic flow separator uses hydrodynamic force to remove debris, and oil and grease, and are located underground. Filtration involves catch basins with filter inserts. Filter inserts must be inspected every six months and after major storms, cleaned at least twice a year. Infiltration methods are typically constructed on-site and are determined by various factors such as soil types and groundwater table.

17. Stormwater Runoff Surface Parking Lots with 25 or More Spaces or 5,000 Square-feet of Lot Area (Residential, Commercial, Industrial, Public Facility)

a. Trash container areas must have drainage from adjoining roofs and pavement diverted around the area(s).

b. Trash container areas must be screened or walled to prevent off-site transport of trash.

c. Reduce impervious land coverage of parking lot areas.

d. Infiltrate runoff before it reaches the storm drain system.

e. Runoff must be treated prior to release into the storm drain. Three types of treatments are available, (1) dynamic flow separator; (2) filtration or (3) infiltration. Dynamic flow separator uses hydrodynamic force to remove debris, and oil and grease, and are located underground. Filtration involves catch basins with filter inserts. Filter inserts must be inspected every six

months and after major storms, and cleaned at least twice a year. Infiltration methods are typically constructed on-site and are determined by various factors such as soil type and groundwater table.

18. Increased Noise Levels (Parking Wall)

A 6-foot-high solid decorative masonry wall, as measured from the lowest adjacent grade shall be constructed along any lot line that separates any surface parking area from an adjacent residential use.

19. Increased Noise Levels (Retail Markets, Bars, Entertainment, etc.) No window openings shall be permitted along any side (excluding the front facade) of the building that is adjacent to a residential use.

20. Severe Noise Levels (Residential Only)

All exterior windows having a line of sight to the MTA Gold Line, Figueroa Street, Pasadena Avenue, and the 1-110 (Pasadena) Freeway shall be constructed with double-pane glass and use exterior wall construction which provides a Sound Transmission Class of 50 or greater as defined in UBC No. 35-1, 1979 edition or any amendment thereto. The applicant, as an alternative, may retain an acoustical engineer to submit evidence, along with the application for a building permit, any alternative means of sound insulation sufficient to mitigate interior noise levels below a CNEL of 45 dBA in any habitable room.

21. Public Services (Fire)

The following recommendations of the Fire Department relative to fire safety shall be incorporated into the building plans, which includes the submittal of a plot plan for approval by the Fire Department either prior to the recordation of a final map or the approval of a building permit. The plot plan shall include the following minimum design features: fire lanes, where required, shall be a minimum of 20 feet in width; all structures must be within 300 feet of an approved fire hydrant, and entrances to any dwelling unit or guest room shall not be more than 150 feet in distance in horizontal travel from the edge of the roadway of an improved street or approved fire lane.

22. Public Services (Schools)

a. The developer shall install appropriate traffic signs around the site to ensure pedestrian and vehicle safety.

b. Haul route scheduling shall be sequenced to minimize conflicts with pedestrians, school buses and cars at arrival and dismissal times of the school day. Haul route trucks shall not be routed past the school during periods when students are arriving or departing from the campus.

c. There shall be no staging or parking of construction vehicles, including vehicles to transport workers on any of the streets adjacent to any school.

d. Due to noise impacts on the schools, no construction vehicles or haul trucks shall be staged or idled on these streets during school hours.

e. Fences shall be constructed around the site to minimize trespassing, vandalism, short-cut attractions and attractive nuisances.

f. The developer and contractors shall maintain ongoing contact with the administrator of Hillside Elementary School, Loreto Street Elementary School and Nightingale Middle School. The administrative offices shall be contacted when demolition, grading and construction activity begin on the project site so that students and their parents will know when such activities are to occur. The developer shall obtain school walk and bus routes to the schools from either the administrators or from the LAUSD's Transportation Branch (323) 342-1400 and guarantee that safe and convenient pedestrian and bus routes to the school be maintained.

23. Utilities (Solid Waste)

Recycling bins shall be provided at appropriate locations to promote recycling of paper, metal, glass, and other recyclable material. The bins shall be picked up and recycled accordingly as a part of the project's regular solid waste removal program.

24. Transportation and Air Quality

Individual projects of more than 50 dwelling units or 11,000 square feet of commercial or industrial uses shall undergo Site Plan Review per LAMC Section 16.05. The Site Plan Review shall include an assessment of air quality impacts. Individual projects of more than 70 dwelling units or 11,000 square feet of commercial or industrial uses shall be reviewed by LADOT to determine if a traffic study will be required.

D. Administrative Conditions

1. Approval, Verification and Submittals. Copies of any approvals; guarantees or verification of consultations, review or approval, plans, etc., as may be required by the subject conditions, shall be provided to the Department of City Planning for placement in the subject file.

2. Code Compliance. Area, height and use regulations of the zone classification of the subject property shall be complied with, except where herein conditions may vary.

3. Covenant. Prior to the issuance of any permits relative to this matter, an agreement concerning all the information contained in these conditions shall be recorded in the County Recorder's Office. The agreement shall run with the land and shall be binding on any subsequent property owners, heirs or assigns. The agreement shall be submitted to the Department of City Planning for approval before being recorded. After recordation, a copy bearing the Recorder's number and date shall be provided to the Department of City Planning for attachment to the file.

4. Definition. Any agencies, public officials or legislation referenced in these conditions shall mean those agencies, public offices, legislation or their successors, designees or amendment to any legislation.

5. Enforcement. Compliance with these conditions and the intent of these conditions shall be to the satisfaction of the Department of City Planning and any designated agency, or the agency's successor and in accordance with any stated laws or regulations, or any amendments thereto.

6. Building Plans. Page 1 of the grant and all the conditions of approval shall be printed on the building plans submitted to the Department of City Planning and the Department of Building and Safety.

7. Corrective Conditions. The authorized use shall be conducted at all times with due regard for the character of the surrounding district, and the right is reserved to the City Planning Commission, or the Director pursuant to Section 12.27.1 of the Municipal Code, to impose additional corrective conditions, if, in the Commission's or Director's opinion, such conditions are proven necessary for the protection of persons in the neighborhood or occupants of adjacent proper.

8. Indemnification. The applicant shall defend, indemnify and hold harmless the City, its agents, officers, or employees from any claim, action, or proceeding against the City or its agents, officers, or employees to attack, set aside, void or annul this approval which action is brought within the applicable limitation period. The City shall promptly notify the applicant of any claim, action, or proceeding and the City shall cooperate fully in the defense. If the City fails to promptly notify the applicant of any claim, action, or proceeding, or if the City fails to cooperate fully in the defense, the applicant shall not thereafter be responsible to defend, indemnify, or hold harmless the city.

REGULATORY COMPLIANCE MEASURES

In addition to the Mitigation Measures, "D" limitations and "[Q]" Conditions that are identified above, and any proposed Project Design Features, the Applicant shall also adhere to any applicable Regulatory Compliance Measures required by law. Listed below is a list of Regulatory Compliance Measures that are applicable to the Project and have been relied on to support the conclusions in the attached IS/MND.

Cultural Resources

- **(Archaeological):** If archaeological resources are discovered during excavation, grading, or construction activities, work shall cease in the area of the find until a qualified archaeologist has evaluated the find in accordance with federal, State, and local guidelines, including those set forth in California Public Resources Code Section 21083.2. Personnel of the proposed Modified Project shall not collect or move any archaeological materials and associated materials. Construction activity may continue unimpeded on other portions of the Project site. The found deposits would be treated in accordance with federal, State, and local guidelines, including those set forth in California Public Resources Code Section 21083.2.

- **(Paleontological):** If paleontological resources are discovered during excavation, grading, or construction, the City of Los Angeles Department of Building and Safety shall be notified immediately, and all work shall cease in the area of the find until a qualified paleontologist evaluates the find. Construction activity may continue unimpeded on other portions of the Project site. The paleontologist shall determine the location, the time frame, and the extent to which any monitoring of earthmoving activities shall be required. The found deposits would be treated in accordance with federal, State, and local guidelines, including those set forth in California Public Resources Code Section 21083.2.

- **(Human Remains):** If human remains are encountered unexpectedly during construction demolition and/or grading activities, State Health and Safety Code Section 7050.5 requires that no further disturbance shall occur until the County Coroner has made the necessary findings as to origin and disposition pursuant to California Public Resources Code (PRC) Section 5097.98. In the event that human remains are discovered during excavation activities, the following procedure shall be observed:

    - Stop immediately and contact the County Coroner:
      1104 N. Mission Road
      Los Angeles, CA 90033
      323-343-0512 (8 a.m. to 5 p.m. Monday through Friday) or
      323-343-0714 (After Hours, Saturday, Sunday, and Holidays)
    - If the remains are determined to be of Native American descent, the Coroner has 24 hours to notify the Native American Heritage Commission (NAHC).
    - The NAHC will immediately notify the person it believes to be the most likely descendent of the deceased Native American.

- The most likely descendent has 48 hours to make recommendations to the owner, or representative, for the treatment or disposition, with proper dignity, of the human remains and grave goods.
- If the owner does not accept the descendant's recommendations, the owner or the descendent may request mediation by the NAHC.

Geology and Soils

- **(Seismic and Geotechnical Safety):** The project shall comply with the conditions contained within the Department of Building and Safety's Geology and Soils Report Approval Letter (dated January 26, 2016) and Project's Geotechnical Investigation prepared by Geocon West, Inc. (dated July 23, 2015), and as it may be subsequently amended or modified.

- **(Erosion/Grading/Short-Term Construction Impacts):** Chapter IX, Division 70 of the Los Angeles Municipal Code addresses grading, excavations, and fills. All grading activities require grading permits from the Department of Building and Safety. Additional provisions are required for grading activities within Hillside areas. The application of BMPs includes but is not limited to the following mitigation measures:

  - Excavation and grading activities should be scheduled during dry weather periods. If grading occurs during the rainy season (October 15 through April 1), diversion dikes shall be constructed to channel runoff around the site. Channels shall be lined with grass or roughened pavement to reduce runoff velocity.

  - Stockpiles, excavated, and exposed soil shall be covered with secured tarps, plastic sheeting, erosion control fabrics, or treated with a bio-degradable soil stabilizer.

Greenhouse Gas Emissions

- The Proposed Project shall comply with the low- and non-VOC requirements established by the AQMD for architectural coatings (AQMD Rule 1113).

- To encourage carpooling and the use of electric vehicles by Project residents and visitors, pursuant to LAMC Section 99.04.106.4.1, at least five (5)% of the total code-required parking spaces provided for all types of parking facilities, but in no case less than one location, shall be capable of supporting future electric vehicle supply equipment (EVSE). Plans shall indicate the proposed type and location(s) of EVSE and also include raceway method(s), wiring schematics and electrical calculations to verify that the electrical system has sufficient capacity to simultaneously charge all electric vehicles at all designated EV charging locations at their full rated amperage. Plan design shall be based upon Level 2 or greater EVSE at its maximum operating ampacity. Only raceways and related components are required to be installed at the time of construction. When the application of the 5% results in a fractional space, round up to the next whole number. A label stating "EVCAPABLE" shall be posted in a conspicuous place at the service panel or subpanel and next to the raceway termination point.

Hydrology and Water Quality

- **(Dewatering):** If required, any dewatering activities during construction shall comply with the requirements of the Waste Discharge Requirements for Discharges of Groundwater from Construction and Project Dewatering to Surface Waters in Coastal Watersheds of Los Angeles and Ventura Counties (Order No. R4-2008-0032, National Pollutant Discharge Elimination System No. CAG994004) or subsequent permit. This will include submission of a Notice of Intent for coverage under the permit to the Los Angeles Regional Water Quality Control Board at least 45 days prior to the start of dewatering and compliance with all applicable provisions in the permit, including water sampling, analysis, and reporting of dewatering-related discharges.

Public Services

- **(Payment of School Development Fee):** Prior to issuance of a building permit, the General Manager of the City of Los Angeles, Department of Building and Safety, or designee, shall ensure that the Applicant has paid all applicable school facility development fees in accordance with California Government Code Section 65995.

- **(Increased Demand For Parks Or Recreational Facilities):** Pursuant to Ordinance 184,505, the applicant shall pay the park mitigation fees for construction of apartment buildings.

Public Utilities

- **(Green Building Code):** The Project shall implement all applicable mandatory measures within the LA Green Building Code that would have the effect of reducing the Project's water use.

- **(Landscape):** The Project shall comply with Ordinance No. 170,978 (Water Management Ordinance), which imposes numerous water conservation measures in landscape, installation, and maintenance (e.g., use drip irrigation and soak hoses in lieu of sprinklers to lower the amount of water lost to evaporation and overspray, set automatic sprinkler systems to irrigate during the early morning or evening hours to minimize water loss due to evaporation, and water less in the cooler months and during the rainy season).

- **(Construction Waste Recycling):** In accordance with LAMC Section 99.04.408, the Proposed Project would reduce construction waste by at least 50 percent. In compliance with the LAMC Section 66.32, the General Contractor shall utilize solid waste haulers, contractors, and recyclers who have obtained an Assembly Bill (AB) 939 Compliance Permit from the City of Los Angeles Bureau of Sanitation.

END

I. INTRODUCTION

PROJECT INFORMATION

Project Title: Avenue 34 Project

Project Location: 3401-3437 N. Pasadena Avenue and 123-167 W. Avenue 34
Los Angeles, CA 90031

Project Applicant: ED1125, LLC
141 W. Avenue 34
Los Angeles, CA 90031

Lead Agency: City of Los Angeles
Department of City Planning
200 N. Spring Street, Room 621
Los Angeles, CA 90012

PROJECT SUMMARY

The Project involves the demolition of an 86,712 square-foot warehouse building, a 4,033 square-foot metal building, and portions of a 24,018 square-foot building and 3,521 square-foot building (constructed circa 1977, 1948, 1967 and 1929, respectively), and the construction of a mixed-use development with 372 residential dwelling units and 40,000 square feet of commercial floor area (comprised of 30,000 square feet of creative office and 10,000 square feet of retail space). The Project would renovate a portion of the existing floor area for creative office space. The Project would also reserve 11% of its base density (approximately 31 dwelling units) as very low income housing and include a ministerial density bonus. The development would include five buildings spanning the property, with approximately 524,600 square feet of floor area and an FAR of 2.6:1, below the maximum FAR of 3:1. The proposed buildings would range in height from one to five stories, with a maximum building height of approximately 67 feet above grade (75 feet as measured by LAMC). The Project would provide a total of 467 on-site parking spaces within one level of subterranean parking and at grade, and a total of 428 on-site bicycle parking stalls. All 39 on-site trees will be removed (all non-protected species); a total of 241 trees are proposed, including roof areas and street trees. No fireplaces or wood stoves are proposed.

The Applicant is requesting the following discretionary approvals: (1) Zoning Administrator's Adjustment to allow a 0-foot southerly side yard in lieu of 8 feet to preserve an existing building with a non-conforming yard; (2) Site Plan Review to permit the construction, use, and maintenance of the Project with more than 50 dwelling units; and (3) Clarification of Q Conditions to clarify Condition A.1.c of Subarea 4 in Ordinance 179,280. The Applicant will also request approvals and permits from the

Department of Building and Safety (and other regulatory agencies) for project construction activities which may include, but are not limited to, the following: excavation, shoring, grading, foundation, haul route (for the export of approximately 98,000 cubic yards (cy) of soil), removal and replacement of street trees, and building and tenant improvements for the Project Site.

ORGANIZATION OF THE INITIAL STUDY

This expanded IS/MND is organized into six sections as follows:

Initial Study Checklist: This Section contains the completed IS Checklist showing the significance level under each environmental impact category.

Introduction: This Section provides introductory information such as the Proposed Project title, the Project Applicant, and the lead agency for the Proposed Project.

Project Description: This Section provides a detailed description of the Proposed Project including the environmental setting, project characteristics, related project information, and environmental clearance requirements.

Environmental Impact Analysis: This Section contains an assessment and discussion of impacts for each environmental issue identified in the Initial Study Checklist. Where the evaluation identifies potentially significant effects, mitigation measures are provided to reduce such impacts to less-than-significant levels.

Preparers of the Initial Study and Persons Consulted: This Section provides a list of consultant team members and governmental agencies that participated in the preparation of the IS.

References, Acronyms and Abbreviations: This Section includes various documents and information used and referenced during the preparation of the IS, along with a list of commonly used acronyms.

Technical Appendices: Technical appendices that have been referenced and summarized in the IS/MND are provided in a separate bound volume. The technical appendices include technical reports and calculation worksheets for the following issue areas: air quality, trees, geology/soils, greenhouse gas emissions, environmental hazards, drainage, noise, traffic, and utility will serve letters. A complete list of technical appendices is identified in the table of contents to the IS/MND.

II. PROJECT DESCRIPTION
A. PROJECT LOCATION

PROJECT LOCATION

The Project Site is located in the Northeast Los Angeles Community Plan area within the City of Los Angeles, approximately 2.5 miles north of Downtown Los Angeles. The location of the Project Site within the City of Los Angeles and the greater Los Angeles region is depicted in Figure II-1, Project Location Map. The Project Site includes approximately 219,320 square feet of lot area (5.03 acres). The Project Site's property addresses, Assessor's Parcel Numbers (APN), land use and lot area are summarized in Table II-1, Summary of the Project Site, below.

Table II-1
Summary of the Project Site

Address	APN	Existing Land Use	Approximate Lot Area (square feet)
3401 N. Pasadena Avenue 3407 N. Pasadena Avenue 3411 N. Pasadena Avenue 3413 N. Pasadena Avenue 3415 N. Pasadena Avenue 3417 N. Pasadena Avenue 3419 N. Pasadena Avenue	5205004003	One 24,018 square foot light manufacturing facility building and paved surface parking	28,793
153 W. Avenue 34	5205004005	One 3,521 square foot light manufacturing building and paved surface loading/parking area	4,800
3425 N. Pasadena Avenue 3431 N. Pasadena Avenue 3433 N. Pasadena Avenue 3437 N. Pasadena Avenue	5205004007	One 4,033 square foot light manufacturing facility building and paved surface parking	28,145
123 W. Avenue 34 131 W. Avenue 34 135 W. Avenue 34 141 W. Avenue 34 143 W. Avenue 34 145 W. Avenue 34 147 W. Avenue 34 149 W. Avenue 34 151 W. Avenue 34 161 W. Avenue 34	5205004011	One 86,712 square foot warehouse facility and paved surfacing loading/parking area	149,503
155 W. Avenue 34	5205004011	Paved surface loading/parking area	4,800
165 W. Avenue 34	5205004011	Paved surface loading/parking area	2,981
167 W. Avenue 34	5205004011	Paved surface loading/parking area	275
		TOTAL SITE AREA:	**219,320**[a]

[a] *The approximate lot area identified for each individual lot is based on the City's ZIMAS database. The total lot area is based on the Alta Survey, which was prepared for purposes of determining the total lot area of the Project Site.*

PARKER ENVIRONMENTAL CONSULTANTS

Figure II-1
Project Location Map

REGIONAL AND LOCAL ACCESS

Primary regional access to the Project Site is provided by the Arroyo Seco Parkway (SR-110) to the north and west and the Golden State Freeway (I-5) to the west. The Arroyo Seco Parkway and Golden State Freeway interchange is located to the west of the Project Site.

Local street access is provided by Pasadena Avenue and Avenue 34. Pasadena Avenue, which borders the Project Site to the east, is a two-way north and southbound street providing one travel lane in each direction in the vicinity of the Project Site. Pasadena Avenue is designated as an Avenue II roadway. Avenue 34, which borders the Project Site to the south, is a two-way east and westbound street providing one travel lane in each direction in the vicinity of the Project Site. Avenue 34 is designated as a modified local street.

The Los Angeles County Metropolitan Transportation Authority (MTA) provides an extensive system of bus lines in the Northeast Los Angeles Community Plan area. The Metro Gold Line Rail Station and a number of MTA bus routes are within reasonable walking distance from the Project Site (less than approximately one-quarter mile), providing access for residents, employees and patrons of the Project Site. Local MTA Rail service includes the Metro Gold Line that provides light rail service from Azusa to East Los Angeles via Downtown Los Angeles. MTA bus lines that provide service in the vicinity of the Project Site include MTA Line 83 (between Downtown Los Angeles and Eagle Rock area) and Line 251/252 (between Montecito Heights and Lynwood area). Given the transfer opportunities through the MTA Gold Line and bus services, the Project Site is easily accessible and highly connected with the City of Los Angeles and the greater Los Angeles area.

HIGH PRIORITY TRANSIT AREA

In 2013, the State of California enacted Senate Bill 743 (SB 743), which provides that "aesthetic and parking impacts of a residential, mixed-use residential, or employment center project on an infill site within a transit priority area shall not be considered significant impacts on the environment." Public Resources Code Section 21099 defines a "transit priority area" as an area within one-half mile of a major transit stop that is "existing or planned, if the planned stop is scheduled to be completed within the planning horizon included in a Transportation Improvement Program adopted pursuant to Section 450.216 or 450.322 of Title 23 of the Code of Federal Regulations." Public Resources Code Section 21064.3 defines "Major Transit Stop" as "a site containing an existing rail transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods." Public Resources Code Section 21061.3 defines an "Infill Site" as a lot located within an urban area that has been previously developed, or on a vacant site where at least 75 percent of the perimeter of the site adjoins, or is separated only by an improved public right-of-way from, parcels that are developed with qualified urban uses.

The Proposed Project is classified as a mixed-use residential project and is located on an infill site within a Transit Priority Area as defined by CEQA. The City of Los Angeles also identifies the Project Site as being within a transit priority area per the Department of City Planning's Zoning Information File ZI No. 2452, Transit Priority Areas (TPAs)/Exemptions to Aesthetics and Parking within TPAs Pursuant to CEQA.[1] As shown in Figure II-1, Project Vicinity Map the Project Site is approximately 600 feet (walking distance) south of the Heritage Square/Arroyo Metro rail transit station, which is a transit hub served by Metro Red Line and provides access to other parts of the City of Los Angeles and the metropolitan area. Public bus and rail transit services within the Project Site are currently provided by Los Angeles County Metropolitan Transit Authority (Metro), and LADOT DASH.

ZONING AND LAND USE DESIGNATIONS

Project Site

The Proposed Project is located within Subarea 4 of the Northeast Los Angeles Community Plan Ordinance Maps and is zoned [T][Q]CM-2D. Pursuant to Ordinance 179280, limitations imposed upon the use of property subject to the permanent "Q" Qualified Classification or "D" Development Limitation are imposed pursuant to Section 12.32K and 12.32G, respectively, of the Los Angeles Municipal Code. The "Q" Qualified Conditions are indicated by the symbol "[Q]" in brackets proceeding the proposed zoning designation (for example, [Q]C2). The "D" Development Limitations are indicated by a "D" following the height district designation (for example, C2-2D). The Proposed Project would be required to comply with the site-specific "D" Development Limitations and [Q] Conditions, which relate to site planning, pedestrian access, building design, architectural details, walls and fences, landscaping, and mechanical, security and trash equipment. The Project Site's [Q] Conditions also impose site-specific Environmental Conditions, which relate to the general aesthetic appearance, upkeep, and character of the Project Site. The Proposed project would be designed and operated in a manner that complies with all applicable [Q] Qualified Zoning and Environmental Conditions as identified in the Regulatory Compliance Measures section of this document.

Northeast Los Angeles Community Plan

The Project Site is located within Lincoln Heights neighborhood within the Northeast Los Angeles Community Plan ("Community Plan") area of the City of Los Angeles. The Community Plan area ("CPA") was greatly influenced by the development of the freeway system, suburbanization, and the decentralization of commercial and industrial land uses that followed WWII. This caused the arrangement of land uses within the CPA to change, and the relationship of the CPA with the rest of the expanding metropolis. The Northeast Los Angeles Community Plan aims to preserve and enhance the character of Northeast Los Angeles by strengthening the viability and identity of its neighborhoods and communities and improving the quality of life of all its residents. Lincoln Heights is located east of the Los Angeles

[1] *City of Los Angeles, Department of City Planning, Zoning Information File, ZI No. 2452, Transit Priority Areas (TPAs) / Exemptions to Aesthetics and Parking within TPAs Pursuant to CEQA, website: http://zimas.lacity.org/documents/zoneinfo/ZI2452.pdf, accessed March 7, 2016.*

River and south of the Arroyo Seco. The Project Site is designated as "Commercial Manufacturing." The Commercial Manufacturing land use designation corresponds to the CM and P zones. The Project is consistent with the existing General Plan Land Use and Zoning Designations.

The Project Site is also located within several identified or mapped planning policy areas that have been adopted for the purposes of incentivizing development and/or providing specific development standards that are appropriate for the Project area. Namely, these plans and policy areas include the following: the Cornfield Arroyo Seco Specific Plan Area, the East Los Angeles State Enterprise Zone, the Adaptive Reuse Incentive Area, and a Transit Oriented Development Site.

Cornfield Arroyo Seco Specific Plan

The Project Site was initially included within the proposed boundaries of the Cornfield Arroyo Seco Specific Plan (CASP) study area and was evaluated within the scope of the CASP EIR.[2] However, the Project Site was specifically omitted from the CASP prior to adoption and instead is uniquely regulated by a specific set of development standards and guidelines established by Ordinance 179,280 independent from the surrounding Specific Plan Area.[3] Therefore, the underlying provisions of the LAMC and the site-specific "[Q]" Conditions under Ordinance 179,280 prevail, and are the basis for all development standards and guidelines for the Project Site.

EXISTING CONDITIONS

Figure II-3, Aerial Photograph and Photograph Location Map, shows an aerial view of the Project Site and identifies the location points for the site photographs and surrounding land use photographs. Site photographs and photographs of surrounding land uses are shown in Figure II-4, Views of the Project Site, and Figure II-5, Views of the Surrounding Land Uses, respectively. The Project Site is currently developed with a an active warehouse facility that is comprised of four light manufacturing and warehouse buildings, paved surface parking, and loading areas, as seen in Figure II-4, below. The buildings include an 86,712 square-foot warehouse building, a 4,033 square-foot metal building, a 24,018 square-foot building, and a 3,521 square-foot building, constructed circa 1977, 1948, 1967 and 1929, respectively. The Los Angeles Historic Resources Inventory and Survey LA determined that none of the four buildings meet the eligibility standards for historic listing. The perimeter of the Project Site is lined with a fence. Six driveways off the north side of Avenue 34 and two driveways off the west side of Pasadena Avenue provide access to the Project Site. Sliding gates secure the driveways and access on-site.

---

2 *Final EIR for the Cornfield Arroyo Specific Plan (ENV-2009-599-EIR, CPC-2009-598-SP, State Clearinghouse No. 2009031002, dated August 2012.*

3 *Although several of the maps and exhibits in the printed version of the CASP still show the Project Site as being within the CASP boundaries, the map exhibits on pages 2-13 and 2-35 of the CASP properly exclude the Project Site.*

A total of 39 non-protected ornamental trees and shrubs exist throughout the Project Site. The trees are mainly located along Avenue 34 and along the large warehouse building and the two smaller buildings on Avenue 34. The trees species consist of Canary Pine, Raywood Ash, Olive, Fan Palm, Chinese Elm, and Silver Dollar Eucalyptus. Three street trees exist along Pasadena Avenue bordering the Project Site.

Utility posts and cables border the Project Site along the west side of Pasadena Avenue. Utility posts and cables line the south side of Avenue 34, not directly bordering the Project Site. Utility cables from the south side of Avenue 34 extend onto the Project Site and connect to utility posts on-site. Additionally there are four street lights along the north side of Avenue 34 and three street lights along the west side of Pasadena Avenue that border the Project Site.

SURROUNDING LAND USES

The properties surrounding the Project Site include commercial, multi-family residential, single-family residential, and vacant lot. Photographs of the land uses immediately surrounding the Project Site are provided in Figure II-5, Photographs of the Surrounding Land Uses. The Project Site is generally bound by a vacant undeveloped lot to the north, Pasadena Avenue to the east, Avenue 34 to the south, and rail right-of-way to the west. Pasadena Avenue is a Modified Avenue II with a designated half right-of-way of 38 feet and a current half right-of-way of 38 feet. Avenue 34 is a Modified Local Street (Standard) with a designated half right-of-way of 30 feet; the current half right-of-way is 25 feet.

North: To the north, the Project Site is bordered by a vacant undeveloped lot. The lot is secure with a fence along the perimeter. See Figure II-5, Views 7. The property to the north of the Project Site has a land use designation of Hybrid Industrial. Properties to the north of the Project Site on the west side of Pasadena Ave south of Arroyo Seco that connects with the Los Angeles River is zoned Urban Center within the Cornfield Arroyo Seco Specific Plan (CASP).

East: Properties to the east of the Project Site along the east side of Pasadena Avenue are zone [Q]RD2-1D, [Q]RD1.5-1D, [Q]PF-1D, and [T][Q]CM-2D and are developed with commercial, educational, and multi-family residential land uses. The properties to the east have a land use designation of Commercial Manufacturing, Public Facilities, and Low Medium II Residential. See Figure II-5, View 8 and View 9.

South: The properties along Avenue 34 to the south of the Project Site are zoned Urban Center within the CASP and are improved with commercial and single-family uses. The properties to the south of the Project Site have a land use designation of Hybrid Industrial and Low Medium Residential. See Figure II-5, View 10 and View 11.

West: A railroad right-of-way serving the light-rail Metro Gold Line borders the Project Site along the west side of the site. The property beyond the railroad right-of-way is zoned Urban Innovation within the CASP and is developed with industrial uses. This property has a land use designation of Hybrid Industrial. See Figure II-5, View 12.

1. PROPOSED DEVELOPMENT

The Proposed Project would is a transit-oriented mixed-use development that would include the construction of a mixed-use, transit-adjacent creative campus that would include 372 residential dwelling units and 40,000 square feet of commercial floor area (comprised of 30,000 square feet of creative office and 10,000 square feet of retail and restaurant space). The Proposed Project would reserve 11 percent of its base density (approximately 31 units) as very low income housing. The Proposed Project would renovate and reuse a portion of existing floor area. The Proposed Project would provide a total of 467 on-site parking spaces within one level of subterranean parking with some at grade surface parking. The development would include five buildings spanning the property, with approximately 524,600 square feet of floor area. The proposed buildings would range in height from one to five stories, with a maximum building height of approximately 67 feet above grade. A summary of the Proposed Project is provided in Table II-2, Proposed Development Program, below.

Table II-2
Proposed Development Program

Land Uses	Proposed Dwelling Units Mix	Proposed Floor Area (Square Feet)
Residential		
Building A		
Studio Units	29	--
1-Bedroom Units	4	--
2-Bedroom Units	34	--
Building B		
Studio Units	62	--
1-Bedroom Units	53	--
2-Bedroom Units	33	--
Building C		
Studio Units	76	--
1-Bedroom Units	53	--
2-Bedroom Units	28	--
Subtotal Residential	**372**	**484,600**
Commercial		
Creative Office Space	--	30,000
Retail/Restaurant		10,000
Subtotal Commercial	--	**40,000**
TOTAL	**372**	**524,600**

Source: Killefer Flammang Architects, November 4, 2016.

The Proposed Project has been designed to comply with the site-specific "D" Development Limitations and [Q] Conditions, which relate to site planning, pedestrian access, building design, architectural details, walls and fences, landscaping, and mechanical, security and trash equipment. The plan layout of the Proposed Project is depicted in Figure II-6, Conceptual Site Diagram.

Residential Uses

As shown in Table II-2, the Project proposes a total of 372 residential units in three buildings. The Proposed Project would reserve eleven percent of its base density (approximately 31 dwelling units) as very low income units. As such, the Proposed Project would include a ministerial density bonus pursuant to LAMC Section 12.22 A.25 for a 35 percent increase in permitted density to allow for 372 dwelling units in lieu of the base density of 275 dwelling units. The Proposed Project would include a total of 167 studio lofts, 110 one-bedroom apartments, and 95 two-bedroom apartments. The units would vary in size and configuration; units would range between approximately 500 square feet studio to 1,040 square feet two-bedroom apartment. An existing industrial building (approximately 3,521 square feet) at the southwest corner of the Project Site would be rehabilitated into the leasing office for the residential buildings. Residential amenities would be located throughout the Project Site, and would include a community room, gym, and swimming pool, among other amenities. Refer to Figure II-7, through Figure II-11 for the floor plans.

Commercial Uses

The Project also proposes 40,000 square feet of commercial space, including 30,000 square feet of creative office space and 10,000 square feet of retail and restaurant space. The retail component will be located on the ground floor of Building A, along Pasadena Avenue. The creative office component would be located in two creative office buildings, located on the southeast corner of the Project Site. One creative office building would front Pasadena Avenue and Avenue 34. The second creative office building would be located just north of the aforementioned creative office building and would front Pasadena Avenue; this creative office building would be one story and include entirely rehabilitated floor area (approximately 7,963 square feet).

FLOOR AREA

The Project Site includes approximately 219,320 square feet (5.03 acres) of gross lot area and approximately 203,960 square feet of buildable area. Pursuant to the LAMC, the allowable FAR on-site is 3:1, which would allow a total floor area of approximately 611,880 square feet. The Project proposes a total of 524,600 square feet with a corresponding FAR of 2.6:1.

DENSITY

Pursuant to LAMC Section 12.17.1.A.1, residential land uses are permitted in a CM Zone with compliance with all the regulations of the R3 Zone, with the exception of any required front yard setbacks. As such, residential uses on the Project Site are limited to one dwelling unit per 800 square feet (or approximately 275 dwelling units for the Project Site based on a lot area of 219,320 square feet).

BUILDING HEIGHT

There is a 61'-0" height restriction for the portion of the Project Site within 199'-0" feet of the OS zone. The Project proposes a maximum height of approximately 67 feet (five stories) above grade and 75 feet as measured by the Los Angeles Municipal Code. The Project includes five buildings with varying elevations and step-backs. The Proposed Project's building elevations and building cross sections are depicted in Figures II-12 and II-13, and in Figure II-14, Building Sections, respectively.

ARCHITECTURAL FEATURES

The Proposed Project includes the development of a mixed-use creative campus with multi-family units, creative office space, and retail/restaurant space. The proposed development includes the rehabilitation of a portion of the existing buildings on-site. The Proposed Project consists of a total of five buildings with the maximum height of five stories and approximately 67 feet above grade. The building facades are dynamic to break up the building massing and scale. The proposed buildings are developed around the village center with pedestrian paths radiating outward to site amenities on the periphery and to public sidewalk and streets. The Proposed Project would provide the majority of parking for the Project within the one level of subterranean parking. Additional spaces would be provided at grade for access to the leasing office off of the north side of Avenue 34 and commercial and creative office uses on the east side of the property. Building elevations and sections depicting the scale and massing of the proposed structure are shown in Figures II-12 through II-14. Illustrations depicting the scale and massing of the proposed structure is depicted in Figure II-15, Illustrative Renderings.

OPEN SPACE AND LANDSCAPING

The residential open space requirements and amount of open space proposed for the Project are summarized in Table II-3, below. Pursuant to the LAMC 12.21.G, the Project would be required to provide 39,575 square feet of open space on site. The Project proposes 39,575 square feet of open space pursuant to the LAMC. The Proposed Project may include a variety of on-site amenities including, but not limited to, common open space, community gardens, a roof deck, pool deck, barbecue pits, and a gymnasium. Refer to Figure II-16, Residential Open Space Plan, for the location of the proposed residential open space areas.

Table II-3
Summary of Required and Proposed Residential Open Space Areas

Open Space Requirements	Dwelling Units	Open Space (square feet)
LAMC 12.21.G		
Less than 3 Habitable Rooms (100 sf/du) [a]	277	27,700
3 Habitable Rooms (125 sf/du) [b]	95	11,875
Total Common Open Space Required		**39,575**
Proposed Open Space	**Open Space (square feet)**	
Building A Common Open Space Courtyard	7,550	
Building B Common Open Space	15,625	
Building C Common Open Space	14,227	
Building C Common Open Space (Gym)	2,173	
Total Residential Open Space Provided	***39,575***	

Notes: du = dwelling unit; sq = square feet; PAOS = publically accessible open space.
[a] *Includes studio and one-bedroom apartments.*
[b] *Includes two-bedroom apartments.*
Source: Killefer Flammang Architects, November 4, 2016.

Pursuant to Ordinance No. 179,280, which establishes the [Q] on-site, the Project would be required to provide 30% of the Subarea as publically accessible open space (PAOS), which results in a requirement of 64,744 square feet. The Proposed Project would include a total of 64,744 square feet of publically accessible open space pursuant to Ordinance 179,280. Refer to Figure II-17, Publicly Accessible Open Space Plan, for the location of publicly accessible areas on the Project Site.

Existing street trees adjacent to the property along Pasadena Avenue would remain in place or be replaced in consultation with the City of Los Angeles Division of Urban Forestry and approved by the Department of Public Works. Refer to Figure II-18, Conceptual Landscape Plan, for the proposed landscaping and open space amenities throughout the Project Site.

PARKING AND ACCESS

Parking for the proposed creative office, retail and residential uses on-site will be provided in the one level of subterranean parking beneath the Project Site and at-grade. Vehicular access to the Project Site will be provided via two ingress/egress driveways on the north side of Avenue 34. Access to residential parking and commercial parking would be provided from the western driveway and eastern driveway, respectively. The Proposed Project meets all of the requisite criteria of a Transit Oriented Infill Project pursuant to SB 743. Under Public Resources Code Section 21099, aesthetic and parking impacts of a residential, mixed-use residential, or employment center project on an infill site within a transit priority area shall not be considered significant impacts on the environment.

As summarized in Table II-4, and discussed in further detail below, the Proposed Project would be consistent with the applicable parking requirements of the LAMC and the Bicycle Ordinance (No. 182,386). As proposed, the Proposed Project would require a total of 313 parking spaces, which includes: 233 residential spaces and 80 commercial spaces. Residential parking is determined based on California State Assembly Bill (AB) 744. AB 744 allows a ratio of 0.5 parking space per bedroom for a development that includes the maximum percentage of low- or very low income units and is located within ½ mile of a major transit stop and there is unobstructed access to the transit stop from the development. The Project would provide a total of 467 parking spaces, which includes: 384 residential spaces, 80 commercial spaces, and 3 residential guest parking spaces.

Table II-4
Summary of Required and Proposed Vehicle Parking Spaces

Description	Quantity	Parking per LAMC [a, b]		Parking Provided
		Rate	Spaces	
Residential				
Studios	167	0.5/du	83.5	--

The Proposed Project provides on-site bicycle parking in bicycle storage spaces as required by the City's Bicycle Ordinance. According to LAMC Section 12.21 A.16 (a)(2), the Proposed Project is required to provide on-site bicycle parking spaces. For residential uses, a project is required to provide 1 short-term bicycle parking space per every 10 dwelling units and 1 long-term bicycle parking space per every one dwelling unit. For creative office space, a project is required to provide 1 short-term bicycle parking for each 10,000 square feet and 1 long-term bicycle parking for each 5,000 square feet. For retail space, a project is required to provide 1 short-term bicycle parking space for each 2,000 square feet and 1 long-term parking space for each 2,000 square feet. As summarized in Table II-5, below, the Proposed Project would be consistent with the applicable bicycle parking requirements of the LAMC. The Project would be required to provide 428 bicycle parking spaces, which includes 45 short term spaces and 383 long term spaces. The Proposed Project would provide 428 bicycle parking spaces, which includes 409 residential bicycle spaces and 19 commercial bicycle spaces.

Table II-5
Summary of Required and Proposed Bicycle Parking Spaces

Description	Quantity	Parking Required [a]		Total Spaces Required	Total Spaces Provided
		Short Term	Long Term		
Residential					
		(1 per 10 DUs)	*(1 per DU)*		
Residential Units	372 du	37	372	409	409
Commercial					
		(1 per 10,000 sf)	*(1 per 5,000 sf)*		
Creative Office	30,000 sf	3	6	9	9
		(1 per 2,000 sf)	*(1 per 2,000 sf)*		
Retail	10,000 sf	5	5	10	10
	TOTAL	**45**	**383**	**428**	**428**

Notes:

CONSTRUCTION

Construction Schedule/Phasing

For purposes of analyzing impacts associated with air quality, this analysis assumes a Project construction schedule of approximately 34 months, with final buildout occurring in 2020. Construction activities associated with the Project would be undertaken in four main steps: (1) demolition/site clearing, (2) excavation, grading and foundations, (3) building construction, and (4) architectural coating and finishing.

Unless stated otherwise, all construction activities would be performed in accordance with all applicable state and federal laws and City Codes and policies with respect to building construction and activities. "[Q]" Condition 10 specifies that construction and demolition shall be further restricted to the hours of 7:00 a.m. to 6:00 p.m. Monday through Friday, and 8:00 a.m. to 6:00 p.m. on Saturday. This condition is more restrictive than the permissible hours of construction pursuant to LAMC 41.40, which allow

construction activities until 9:00 p.m. Monday through Friday. No construction activities are permitted on Sundays. The Proposed Project would comply with these restrictions.

Demolition/Site Clearing Phase

This phase would include the demolition of the large warehouse building on-site, the one-story metal building located on the southeast corner of the Project Site, and portions of the 24,018 square foot building and a portion of the 3,521 square foot building, and the removal of supporting structures and materials, paved surfaces, and landscaping. In addition, this phase may include the removal of street trees, walls, fences, and associated debris. The demolition/site clearing would be completed in approximately two months.

Excavation, Grading and Foundation Phase

After the completion of demolition/site clearing, the excavation phase for the Proposed Project would occur for approximately three months and would involve the cut and fill of land to ensure the proper base and slope for the building foundations. The Proposed Project would require approximately 98,000 cy of soil to be hauled off-site in order to build the subterranean parking garage. Haul trips would occur outside of the peak hours and during the permissible hauling hours identified in the haul route to be approved by the Department of Building and Safety.

Building Construction Phase

The building construction phase consists of below grade and above grade structures and is expected to occur for approximately 24 months. Upon completion of the structures, architectural coating, finishing, and paving would occur.

Architectural Coating and Finishing

It is estimated that architectural coatings would occur over the final four months of the building construction phase, and paving would occur during the final month of construction.

Roadway Closures

Construction activities may necessitate temporary lane closures on streets adjacent to the Project Site on an intermittent basis for utility relocations/hook-ups, delivery of materials, and other construction activities as may be required. However, site deliveries and the staging of all equipment and materials would be organized in the most efficient manner possible on-site to mitigate any temporary impacts to the neighborhood and surrounding traffic. Construction equipment would be staged on-site for the duration of construction activities. Traffic lane and right-of-way closures, if required, will be properly permitted by City agencies and will conform to City standards.

Haul Route

All construction and demolition debris would be recycled to the maximum extent feasible. All construction and demolition debris would be hauled to the Waste Management Downtown Diversion facility, which sorts construction and demolition waste for recycling and diversion. It is located approximately 5 miles south of the Project Site (approx. 10 miles round trip). Demolition debris and soil materials from the Site that cannot be recycled or diverted would be hauled to the Sunshine Canyon or Chiquita Canyon landfills, which accept construction and demolition debris and inert waste from areas within the City of Los Angeles. The Sunshine Canyon Landfill is approximately 26 miles northwest of the Project Site (approx. 52 miles round trip). The Chiquita Canyon Landfill is approximately 43 miles to the northwest of the Project Site (approx. 86 miles round trip).

For purposes of analyzing the construction-related impacts, it is anticipated that the excavation and soil export would involve 18-wheel bottom-dump trucks with a 20 cubic yard hauling capacity (i.e., 30 tons maximum gross weight). All truck staging would either occur on-site or at designated off-site locations and radioed into the site to be filled. Pursuant to Ordinance No. 107,022, vehicles over 6,000 pounds are prohibited from using the Pasadena 110 Freeway between the 101 Freeway and Glenarm Street in Pasadena. Therefore, the local haul route from the Project Site to the 5 Freeway would be restricted to Pasadena Avenue southbound to W. Avenue 33, W. Avenue 33 from Pasadena Avenue to Lacy Street, Lacy Street from W. Avenue 33 to Avenue 26, and northbound on Avenue 26 to access the south bound I-5 Freeway on-ramp or to N. Figueroa Street to connect to the northbound I-5 on-ramp. Northbound returning trucks from the I-5 Freeway to the Project Site would exit the I-5 Freeway at the Lacy Street exit and would utilize Avenue 33 and Pasadena Avenue to access the Project Site. Southbound returning trucks from the I-5 Freeway would exit the I-5 Freeway at the 137A off-ramp and would take W. Avenue 26 eastbound to the I-5 northbound on-ramp exiting on Lacy Street and continuing on to W. Avenue 33 and Pasadena Avenue. The haul route may be modified in compliance with City policies, provided DOT and/or Street Services approves any such modification.

RELATED PROJECTS

In accordance with CEQA Guidelines Section 15064(h), this IS/MND includes an evaluation of the Project's cumulative impacts. The guidance provided under CEQA Guidelines Section 15064 (h) is as follows:

> *"(1) When assessing whether a cumulative effect requires an EIR, the lead agency shall consider whether the cumulative impact is significant and whether the effects of the project are cumulatively considerable. An EIR must be prepared if the cumulative impact may be significant and the project's incremental effect, though individually limited, is cumulatively considerable. "Cumulatively considerable" means that the incremental effects of an individual project are significant when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.*

(2) A lead agency may determine in an initial study that a project's contribution to a significant cumulative impact will be rendered less than cumulatively considerable and thus is not significant. When a project might contribute to a significant cumulative impact, but the contribution will be rendered less than cumulatively considerable through mitigation measures set forth in a mitigated negative declaration, the initial study shall briefly indicate and explain how the contribution has been rendered less than cumulatively considerable.

(3) A lead agency may determine that a project's incremental contribution to a cumulative effect is not cumulatively considerable if the project will comply with the requirements in a previously approved plan or mitigation program (including, but not limited to, water quality control plan, air quality attainment or maintenance plan, integrated waste management plan, habitat conservation plan, natural community conservation plan, plans or regulations for the reduction of greenhouse gas emissions) that provides specific requirements that will avoid or substantially lessen the cumulative problem within the geographic area in which the project is located. Such plans or programs must be specified in law or adopted by the public agency with jurisdiction over the affected resources through a public review process to implement, interpret, or make specific the law enforced or administered by the public agency. When relying on a plan, regulation or program, the lead agency should explain how implementing the particular requirements in the plan, regulation or program ensure that the project's incremental contribution to the cumulative effect is not cumulatively considerable. If there is substantial evidence that the possible effects of a particular project are still cumulatively considerable notwithstanding that the project complies with the specified plan or mitigation program addressing the cumulative problem, an EIR must be prepared for the project.

(4) The mere existence of significant cumulative impacts caused by other projects alone shall not constitute substantial evidence that the proposed project's incremental effects are cumulatively considerable."

In light of the guidance summarized above, an adequate discussion of a project's significant cumulative impact, in combination with other closely related projects, can be based on either: (1) a list of past, present, and probable future producing related impacts; or (2) a summary of projections contained in an adopted local, regional, statewide plan, or related planning document that describes conditions contributing to the cumulative effect. (CEQA Guidelines Section 15130(b)(1)(A)-(B)). The lead agency may also blend the "list" and "plan" approaches to analyze the severity of impacts and their likelihood of occurrence. Accordingly, all proposed, recently approved, under construction, or reasonably foreseeable projects that could produce a related or cumulative impact on the local environment, when considered in conjunction with the Project, were identified for evaluation.

The related projects identified are included in Table II-6, Related Projects List, below. A total of three related projects were identified within the affected Project area. For purposes of identifying the affected project area, the DOT generally considers a 2 mile radius around the Project Site for purposes of evaluating cumulative traffic impacts. An analysis of the cumulative impacts associated with these related

projects and the Project are provided under each individual environmental impact category in Section III of this IS/MND. The locations of the related projects are shown in Figure II-19, Related Projects Location Map.

Table II-6
Related Projects List

Project Number	Location/Address	Project Description	Number	Units
1	1555 N. San Fernando Road	Apartment	64	du
		Condominium	290	du
		Retail	25,000	sf
2	3303 N. Broadway	Senior Apartment	100	du

II. PROJECT DESCRIPTION
C. ENTITLEMENT REQUESTS

ED1125, LLC ("Owner" and "Applicant") is requesting approval of the following discretionary actions:

(1) **Zoning Administrator's Adjustment** pursuant to LAMC Section 12.28.A to permit the maintenance of a minimum 0-foot side yard in lieu of 8-feet, as required by LAMC 12.17.1.C, to preserve existing buildings on-site with non-conforming yards.

(2) **Site Plan Review** pursuant to LAMC Section 16.05 to permit the construction, use and maintenance of 372 residential units, 30,000 square feet of commercial office space, 10,000 square feet of retail space, and 467 on-site parking spaces.

(3) **Clarification of Q Conditions** pursuant to LAMC Section 12.32 H to clarify Condition A.1.c of Subarea 4 in Ordinance 179,280.

The Applicant will also request approvals and permits from the Department of Building and Safety (and other regulatory agencies) for project construction activities which may include, but are not limited to, the following: excavation, shoring, grading, foundation, haul route (for the export of approximately 98,000 cubic yards of soil), removal of street trees, and building and tenant improvements for the Project Site.

In addition to the discretionary actions that will be requested from the lead agency as identified above, certain responsible agencies with jurisdiction over certain aspects of the Project may be required to provide additional permits or have permitting authority over the Project. Such permits and/or approvals may include but are not limited to the following:

- Air Quality Management District (AQMD) (permitting authority over localized and regional air quality impacts and enforcement of any applicable air quality mitigation measures).
- Regional Water Quality Control Board (permitting authority over surface water runoff and water quality impacts with enforcement of any applicable mitigation measures).

III. ENVIRONMENTAL IMPACT ANALYSIS

INTRODUCTION

This section of the Initial Study contains an assessment and discussion of impacts associated with the environmental issues and subject areas identified in the Initial Study Checklist (Appendix G to the State CEQA Guidelines, C.C.R. Title 14, Chapter 3, 15000-15387). The analytical methodology and thresholds of significance are based on the *L.A. CEQA Thresholds Guide (2006)* unless otherwise noted.

ENVIRONMENTAL IMPACT ANALYSIS

I. AESTHETICS

Senate Bill 743 - Environmental Quality: Transit Oriented Infill Projects

In 2013, the State of California enacted Senate Bill 743 (SB 743),[1] which provides that "aesthetic and parking impacts of a residential, mixed-use residential, or employment center project on an infill site within a transit priority area shall not be considered significant impacts on the environment." Public Resources Code Section 21099 defines a "transit priority area" as an area within one-half mile of a major transit stop that is "existing or planned, if the planned stop is scheduled to be completed within the planning horizon included in a Transportation Improvement Program adopted pursuant to Section 450.216 or 450.322 of Title 23 of the Code of Federal Regulations." Public Resources Code Section 21064.3 defines "Major Transit Stop" as "a site containing an existing rail transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods." Public Resources Code Section 21061.3 defines an "Infill Site" as a lot located within an urban area that has been previously developed, or on a vacant site where at least 75 percent of the perimeter of the site adjoins, or is separated only by an improved public right-of-way from, parcels that are developed with qualified urban uses. This state law supersedes the aesthetic impact thresholds of significance that were previously adopted in the *L.A. CEQA Thresholds Guide* (2006).

The Proposed Project is classified as a mixed-use residential project and is located on an infill site within a Transit Priority Area as defined by CEQA. The City of Los Angeles also identifies the Project Site as being within a transit priority area per the Department of City Planning's Zoning Information File ZI No. 2452, Transit Priority Areas (TPAs)/Exemptions to Aesthetics and Parking within TPAs pursuant to CEQA.[2] The Project Site is located approximately ¼ mile from the Heritage Square Arroyo Transit Station, an existing rail transit station that serves the Metro Light-Rail Gold Line running between Downtown Los Angeles and Azusa. Accordingly, the Project's aesthetic impacts shall not be considered

---

[1] *SB 743 is codified as Public Resources Code Section 21099.*

[2] *City of Los Angeles, Department of City Planning, Zoning Information File, ZI No. 2452, Transit Priority Areas (TPAs) / Exemptions to Aesthetics and Parking within TPAs Pursuant to CEQA, website: http://zimas.lacity.org/documents/zoneinfo/ZI2452.pdf, accessed March 7, 2016.*

significant impacts on the environment pursuant to Public Resources Code Section 21099. While Section 21009 prohibits aesthetic impacts from being considered significant environmental impacts pursuant to CEQA, it does not affect the ability of the City of Los Angeles to implement design review through its ordinances or other discretionary powers.

a) Would the project have a substantial adverse effect on a scenic vista?

Less Than Significant Impact. As noted above, the Proposed Project is classified as a mixed-use residential project and is located on an infill site within a Transit Priority Area as defined by CEQA. The City of Los Angeles also identifies the Project Site as being within a transit priority area per the Department of City Planning's Zoning Information File ZI No. 2452, Transit Priority Areas (TPAs)/Exemptions to Aesthetics and Parking within TPAs pursuant to CEQA. The Project Site is located approximately ¼ mile from the Heritage Square Arroyo Transit Station, an existing rail transit station that serves the Metro Light-Rail Gold Line running between Downtown Los Angeles and Azusa. Accordingly, the Project's aesthetic impacts shall not be considered significant impacts on the environment pursuant to Public Resources Code Section 21099.

b) Would the project substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a city-designated scenic highway?

Less Than Significant Impact. As noted above, the Proposed Project is classified as a mixed-use residential project and is located on an infill site within a Transit Priority Area as defined by CEQA. The City of Los Angeles also identifies the Project Site as being within a transit priority area per the Department of City Planning's Zoning Information File ZI No. 2452, Transit Priority Areas (TPAs)/Exemptions to Aesthetics and Parking within TPAs pursuant to CEQA. The Project Site is located approximately ¼ mile from the Heritage Square Arroyo Transit Station, an existing rail transit station that serves the Metro Light-Rail Gold Line running between Downtown Los Angeles and Azusa. Accordingly, the Project's aesthetic impacts shall not be considered significant impacts on the environment pursuant to Public Resources Code Section 21099.

c) Would the project substantially degrade the existing visual character or quality of the site and its surroundings?

Less Than Significant Impact. As noted above, the Proposed Project is classified as a mixed-use residential project and is located on an infill site within a Transit Priority Area as defined by CEQA. The City of Los Angeles also identifies the Project Site as being within a transit priority area per the Department of City Planning's Zoning Information File ZI No. 2452, Transit Priority Areas (TPAs)/Exemptions to Aesthetics and Parking within TPAs pursuant to CEQA. The Project Site is located approximately ¼ mile from the Heritage Square Arroyo Transit Station, an existing rail transit station that serves the Metro Light-Rail Gold Line running between Downtown Los Angeles and Azusa. Accordingly, the Project's aesthetic impacts shall not be considered significant impacts on the environment pursuant to Public Resources Code Section 21099.

d) Would the project create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?

Less Than Significant Impact. As noted above, the Proposed Project is classified as a mixed-use residential project and is located on an infill site within a Transit Priority Area as defined by CEQA. The City of Los Angeles also identifies the Project Site as being within a transit priority area per the Department of City Planning's Zoning Information File ZI No. 2452, Transit Priority Areas (TPAs)/Exemptions to Aesthetics and Parking within TPAs pursuant to CEQA. The Project Site is located approximately ¼ mile from the Heritage Square Arroyo Transit Station, an existing rail transit station that serves the Metro Light-Rail Gold Line running between Downtown Los Angeles and Azusa. Accordingly, the Project's aesthetic impacts shall not be considered significant impacts on the environment pursuant to Public Resources Code Section 21099.

Cumulative Impacts

Less Than Significant Impact. The application of Public Resources Code Section 21099 provides that the aesthetic impacts of a mixed-use project, such as the Proposed Project, upon an infill site within a transit priority area shall not be considered significant impacts on the environment.

II. AGRICULTURE AND FORESTRY RESOURCES

a) Would the project convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

No Impact. The Project Site is located in a developed area within the City of Los Angeles. No farmland or agricultural activity exists on the Project Site, nor are there any farmland or agricultural activities in the vicinity of the Project Site. According to the "Los Angeles County Important Farmland 2014" map, which was prepared by the California Department of Conservation, Division of Land Resource Protection, the soils at the Project Site are not candidate for listing as Prime Farmland, Unique Farmland, or Farmland of Statewide Importance.[4] Therefore, under current analysis, no impact to agricultural lands would occur.

b) Would the project conflict with existing zoning for agricultural use, or a Williamson Act Contract?

No Impact. The Project Site is located within the jurisdiction of the City of Los Angeles and is, therefore, subject to the applicable land use and zoning requirements in the Los Angeles Municipal Code (LAMC). The Project Site is currently zoned [T][Q]CM-2D with the land use designation of Commercial Manufacturing and is not zoned for agricultural production, and no farmland activities exist on-site. In

---

4 *State of California Department of Conservation, Division of Land Resource Protection, Farmland Mapping and Monitoring Program, Los Angeles County Important Farmland 2014, Map. ftp://ftp.consrv.ca.gov/pub/dlrp/FMMP/pdf/2014/los14.pdf, accessed October 2016.*

addition, no Williamson Act Contracts are in effect for the Project Site.[5] Therefore, no impact would occur.

c) Would the project conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?

No Impact. The Project Site is zoned [T][Q]CM-2D, which has a land use designation of Commercial Manufacturing in the Northeast Los Angeles Community Plan. The Project Site is not zoned as forestland or timberland, and there is no timberland production at the Project Site. Therefore, no impact would occur.

d) Would the project result in the loss of forest land or conversion of forest land to non-forest use?

No Impact. The Project Site is fully developed and currently contains four light manufacturing and warehouse buildings and paved surface loading areas and parking. The Project Site is located in a developed area within the City of Los Angeles. There is no significant vegetation on-site. No forested lands or protected vegetation exist on or in the vicinity of the Project Site. Therefore, no impact would occur.

e) Would the project involve other changes in the existing environment, which due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?

No Impact. Neither the Project Site, nor nearby properties, are currently utilized for agricultural or forestry uses. As discussed above, the Project Site is not classified in any "Farmland" category designated by the State of California. According to the "Los Angeles County Important Farmland 2014" map, which was prepared by the California Department of Conservation, Division of Land Resource Protection, the soils at the Project Site is not candidates for listing as Prime Farmland, Unique Farmland, or Farmland of Statewide Importance.[6] Therefore, no impact would occur.

Cumulative Impacts

No Impact. Development of the Proposed Project in combination with the three related projects would not result in the conversion of State-designated agricultural land from agricultural use to a non-agricultural use, nor result in the loss of any forest land or conversion of forest land to non-forest use. The Los Angeles County Important Farmland 2014 Map maintained by the California Division of Land

---

5 *California Department of Conservation, State of California Williamson Act Contract Land Map 2015-2016, website: http://www.conservation.ca.gov/dlrp/lca, accessed October 2016.*

6 *State of California Department of Conservation, Division of Land Resource Protection, Farmland Mapping and Monitoring Program, Los Angeles County Important Farmland 2014, Map. ftp://ftp.consrv.ca.gov/pub/dlrp/FMMP/pdf/2014/los14.pdf, accessed October 2016.*

Resource Protection indicates that the Project Site and the surrounding area are not included in the Important Farmland category.[7] The Project Site is located in an urbanized area in the Northeast Los Angeles Community Plan area within the City of Los Angeles and does not include any State-designated agricultural lands or forest uses. Therefore, no cumulative impact would occur.

III. AIR QUALITY

a) Would the project conflict with or obstruct implementation of the applicable air quality plan?

Less Than Significant Impact. A significant air quality impact could occur if the Proposed Project is not consistent with the applicable Air Quality Management Plan (AQMP) or would in some way represent a substantial hindrance to employing the policies or obtaining the goals of that plan. The most recent AQMP was adopted by the Governing Board of the South Coast Air Quality Management District (SCAQMD) on December 7, 2012 ("2012 AQMP"). The transportation strategy and transportation control measures (TCMs), included as part of the 2012 AQMP and SIP for the South Coast Air Basin, are based on SCAG's previously adopted 2008 Regional Comprehensive Plan (RCP) and 2011 Federal Transportation Improvement Program (FTIP). For purposes of assessing a project's consistency with the AQMP, projects that are consistent with the growth forecast projections of employment and population forecasts identified in the SCAG's recently adopted 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) are considered consistent with the AQMP, since the growth projections contained in the RTP/SCS form the basis of the land use and transportation control portions of the AQMP.

As discussed in Section XIII(a), Population and Housing, the Proposed Project is consistent with the regional growth projections for the Los Angeles Subregion and is consistent with the smart growth policies of the RTP/SCS to increase housing density within close proximity to High-Quality Transit Areas (HQTA). An HQTA is defined as a generally walkable transit village or corridor within one half-mile of a well-serviced transit stop or a transit corridor with 15-minute or less service frequency during peak commute hours. The Proposed Project would concentrate new development and jobs within a half of a mile (walking distance) from the Heritage Square Arroyo Gold Line Station and is served by several Metro bus lines. Thus the Project's location provides opportunities for employees, guests, visitors, and residents to use public transit to reduce vehicle trips. The Project Site is also located in a Transit Priority Area as defined by CEQA Sections 21099 and 21064.3. Studies by the California Department of Transportation, the U.S. Environmental Protection Agency and the Metropolitan Transportation Commission have found that focusing development in areas served by transit can result in local, regional and statewide benefits including reduced air pollution and energy consumption. The Proposed Project's mixed-use nature and close proximity to neighborhood-serving commercial/retail land uses and regional transit would result in fewer trips and a reduction to the Proposed Project's vehicle miles traveled (VMTs) as compared to the base trip rates for similar stand-alone land uses that are not located in close proximity to transit. Thus, because the Proposed Project would be consistent with the growth projections and

[7] *Ibid.*

regional land use planning policies of the RTP/SCS, the Proposed Project would not conflict with or obstruct implementation of the 2012 AQMP, and impacts would be less than significant.

b) Would the project violate any air quality standard or contribute substantially to an existing or projected air quality violation?

Less Than Significant Impact. Based on the *L.A. CEQA Thresholds Guide*, a project may have a significant impact where project-related emissions would exceed federal, State, or regional standards or thresholds, or where project-related emissions would substantially contribute to an existing or projected air quality violation.

Construction Emissions

For purposes of analyzing impacts associated with air quality, this analysis assumes a construction schedule of approximately 34 months with buildout anticipated in 2020. This assumption is conservative and yields the maximum daily impacts. Construction activities associated with the Proposed Project would be undertaken in three main steps: (1) demolition/site clearing, (2) excavation, grading and foundations, and (3) building construction. The building construction phase includes the construction of the proposed buildings, connection of utilities to the buildings, paving, architectural coatings, and landscaping the Project Site. Construction activities would temporarily create emissions of dusts, fumes, equipment exhaust, and other air contaminants. Construction activities involving foundation preparation would primarily generate $PM_{2.5}$ and PM_{10} emissions. Mobile sources (such as diesel-fueled equipment onsite and traveling to and from the Project Site) would primarily generate NO_x emissions. The application of architectural coatings would primarily result in the release of ROG emissions. The amount of emissions generated on a daily basis would vary, depending on the amount and types of construction activities occurring at the same time. As required by CEQA and Environmental [Q] Condition C.24, the Proposed Project's construction emissions were quantified utilizing the California Emissions Estimator Model (CalEEMod *Version 2016.3.1*) as recommended by the SCAQMD. Table III-1, Estimated Peak Daily Construction Emissions, identifies the maximum daily emissions that are estimated to occur on peak construction days for each phase of Project construction. These calculations assume that appropriate dust control measures would be implemented as part of the Proposed Project during each phase of development, as required and regulated by SCAQMD. AQMD Rule 403 (Fugitive Dust Suppression) is required by law and is further imposed by Environmental [Q] Condition C.10 (Erosion/Grading/Short-term Construction Impacts) (see Section II., Project Description and the Regulatory Compliance Measures appended to the IS/MND Checklist). The calculations also assume compliance with SCAQMD Rule 1113 (Architectural Coatings) as required by law, that no fireplaces or woodstoves are proposed, and a total of 202 net new trees on site. As shown in Table III-1, construction-related daily emissions associated with the Proposed Project would not exceed any regional SCAQMD significance thresholds for criteria pollutants during the construction phases. Therefore, construction impacts are considered to be less than significant.

Operational Emissions

Air pollutant emissions are currently generated at the Project Site by the existing manufacturing facilities. These uses generate air pollutant emissions from stationary sources, such as space and water heating, architectural coatings (paint), and mobile vehicle traffic traveling to and from the Project Site. The

existing warehouse uses also generate diesel exhaust and associated toxic air contaminants from trucking and hauling activities. The average daily emissions generated by the existing uses at the Project Site have been estimated utilizing the California Emissions Estimator Model (CalEEMod *Version 2016.3.1*) recommended by the SCAQMD. As shown in Table III-2, motor vehicles are the primary source of air pollutant emissions associated with existing uses at the Project Site.

Similar to existing conditions, operational emissions generated by both stationary and mobile sources would result from normal day-to-day activities of the Proposed Project. Area source emissions would be generated by the consumption of natural gas and landscape maintenance. Mobile emissions would be generated by the motor vehicles traveling to and from the Project Site.

The Proposed Project's regional operational emissions are presented in Table III-3, Proposed Project Estimated Daily Operational Emissions. The calculations reflect above-average transit accessibility, higher than average density, and below market-rate housing, as reflected in the Project description. As shown, the Proposed Project's net operational emissions would not exceed the regional thresholds of significance set by the SCAQMD. Therefore, impacts associated with regional operational emissions from the Proposed Project would be less than significant.

Table III-1
Estimated Peak Daily Construction Emissions

Emission Source	Emissions in Pounds per Day (lb/day)					
	ROG	NO_x	CO	SO_2	PM_{10}	$PM_{2.5}$
Demolition						
On-Site Fugitive Dust	--	--	--	--	2.28	0.35

c) Would the project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions, which exceed quantitative threshold for ozone precursors)?

Less Than Significant Impact. Based on the *L.A. CEQA Thresholds Guide*, a significant impact may occur if a project adds a considerable cumulative contribution to federal or State non-attainment pollutants. As the Basin is currently in State non-attainment for ozone, PM_{10}, and $PM_{2.5}$, related projects could exceed an air quality standard or contribute to an existing or projected air quality exceedance. In regards to determining the significance of the Project contribution, the SCAQMD neither recommends quantified analyses of construction and/or operational emissions from multiple development projects nor provides methodologies or thresholds of significance to be used to assess the cumulative emissions generated by multiple cumulative projects. Instead, the SCAQMD recommends that a project's potential contribution to cumulative impacts should be assessed utilizing the same significance criteria as those for project specific impacts. Furthermore, SCAQMD states that if an individual development project generates less than significant construction or operational emissions, then the development project would not generate a cumulatively considerable increase in emissions for those pollutants for which the Basin is in non-attainment.

As discussed under Question III(b) above, the Proposed Project would not generate construction or operational emissions that exceed the SCAQMD's recommended regional thresholds of significance. Therefore, the Proposed Project would not generate a cumulatively considerable increase in emissions of the pollutants for which the Basin is in non-attainment, and impacts would be less than significant.

d) Would the project expose sensitive receptors to substantial pollutant concentrations?

Less Than Significant Impact. Based on the *L.A. CEQA Thresholds Guide*, a significant impact may occur if a project were to generate pollutant concentrations to a degree that would significantly affect sensitive receptors. Sensitive receptors are populations that are more susceptible to the effects of air pollution than are the population at large. The SCAQMD identifies the following as sensitive receptors: long-term health care facilities, rehabilitation centers, convalescent centers, retirement homes, residences, schools, playgrounds, child care centers, and athletic facilities.[8]

Localized Significance Thresholds

The SCAQMD has developed localized significance thresholds (LSTs) that are based on the amount of pounds of emissions per day that can be generated by a project that would cause or contribute to adverse localized air quality impacts. These localized thresholds, which are found in the mass rate look-up tables

[8] *South Coast Air Quality Management District, CEQA Air Quality Handbook, 1993, page 5-1.*

in the "Final Localized Significance Threshold Methodology" document prepared by the SCAQMD,[9] apply to projects that are less than or equal to five acres in size and are only applicable to the following criteria pollutants: NO_x, CO, PM_{10}, and $PM_{2.5}$. LSTs represent the maximum emissions from a project that are not expected to cause or contribute to an exceedance of the most stringent applicable federal or State ambient air quality standards, and are developed based on the ambient concentrations of that pollutant for each SRA. For PM_{10}, the LSTs were derived based on requirements in SCAQMD Rule 403 — Fugitive Dust. For $PM_{2.5}$, the LSTs were derived based on a general ratio of $PM_{2.5}$ to PM_{10} for both fugitive dust and combustion emissions.

LSTs are provided for each of SCAQMD's 38 source receptor areas (SRA) at various distances from the source of emissions. The Project Site is located within SRA 1, which covers the Central Los Angeles County area. The nearest sensitive receptors that could potentially be subject to localized air quality impacts associated with construction of the Proposed Project include multi-family residences, single-family residences, and schools. Given the proximity of these sensitive receptors to the Project Site, the LSTs with receptors located within 25 meters (82.02 feet) are used to address the potential localized air quality impacts associated with the construction-related NO_x, CO, PM_{10}, and $PM_{2.5}$ emissions for each construction phase.

Localized Construction Emissions

Emissions from construction activities have the potential to generate localized emissions that may expose sensitive receptors to harmful pollutant concentrations, especially during the demolition and grading phases. The Project Site's lot area is approximately 5.03 acres. However, the Project proposes to demolish only portions of the Project Site and excavate at most up to 4 acres of the Project Site. Because the SCAQMD sets thresholds for 1-, 2-, and 5-acre sites, the localized thresholds for the Project Site were estimated using linear regression, which is suggested in the SCAQMD Final LST Document for project sites that are between 2 and 5 acres. As shown in Table III-4, Localized On-Site Peak Daily Construction Emissions, peak daily emissions generated within the Project Site during construction activities for each phase would not exceed the applicable construction LSTs for an approximate 4-acre site in SRA 1. These calculations assume that appropriate dust control measures would be implemented as part of the Proposed Project during each phase of development, as required by SCAQMD Rule 403 - Fugitive Dust and Environmental [Q] Conditions C.8 and C.10(a). Specific Rule 403 control requirements include, but are not limited to, applying water in sufficient quantities to prevent the generation of visible dust plumes, applying soil binders to uncovered areas, reestablishing ground cover as quickly as possible, utilizing a wheel washing system to remove bulk material from tires and vehicle undercarriages before vehicles exit the Project Site, and maintaining effective cover over exposed areas. Therefore, with implementation of the regulatory code compliance measures identified above, localized air quality impacts from construction activities to the off-site sensitive receptors would be less than significant.

---

[9] *South Coast Air Quality Management District, Final Localized Significance Threshold Methodology, June 2003, Revised July 2008.*

Table III-4
Localized On-Site Peak Daily Construction Emissions

Construction Phase	Total On-site Emissions (Pounds per Day)			
	NO_x [b]	CO	PM_{10}	$PM_{2.5}$
Demolition	42.75	23.01	4.48	2.39
Grading	51.31	28.11	5.69	4.19
Building Construction	71.49	43.06	4.15	3.89
Paving	15.24	14.66	0.82	0.76
Architectural Coatings	47.41	23.90	2.52	2.33
SCAQMD Localized Thresholds [a]	**143**	**1,590**	**13**	**7**
Potentially Significant Impact?	*No*	*No*	*No*	*No*

Notes:
[a] *The localized thresholds for all phases are based on a receptor within a distance of 82 feet (25 meters) in SCAQMD's SRA 1 for a Project Site of 4 acres. Thresholds for a 4-acre site were estimated using linear regression.*
[b] *The localized thresholds listed for NO_x takes into consideration the gradual conversion of NO_x to NO_2, and are provided in the mass rate look-up tables in the SCAQMD's "Final Localized Significance Threshold Methodology" guidance document. The analysis of localized air quality impacts associated with NO_x emissions is focused on NO_2 levels as they are associated with adverse health effects.*
Sources: SCAQMD, Final LST Methodology Document, Appendix C – Mass Rate LST Look-Up Tables, October 21, 2009; Sample Construction Scenarios for Projects Less than Five Acres in Size, Appendix K; and CalEEMod 2016.3.1, Calculation worksheets are included in the case file.

Localized Operational Emissions

With regard to localized emissions from motor vehicle travel, traffic congested roadways and intersections have the potential to generate localized high levels of carbon monoxide (CO). Historically, the SCAQMD has suggested conducting a CO hotspot analysis for any intersection where a project would worsen the Level of Service (LOS) to any level below C, and for any intersection rated D or worse where the project would increase the V/C ratio by two percent or more. Based on a review of the Project's Traffic Study, only one of the study intersections would meet these criteria; Pasadena Avenue / Avenue 26 & Daly Street. However, the Basin is currently in attainment for CO emissions and, based on existing ambient CO levels within the basin, the Proposed Project's mobile source emissions at this intersection would not exceed the 1-hour or 8-hour CO hotspot concentration threshold for creating a significant impact. This finding is consistent with the AQMD's 2003 AQMP, which modeled localized CO emissions at the four highest traffic volume intersections within the Basin and found the localized emissions to be well below the thresholds of significance for both the 1-hour and 8-hour thresholds. Thus since the total volume at the Pasadena Avenue / Avenue 26 & Daly Street intersection would not exceed the traffic volumes modeled at the four highest traveled intersections in the Basin, it can be concluded that the Proposed Project would not result in a significant localized CO Hotspot impact. Therefore, no further analysis for CO hotspots is warranted and localized operational emissions would be less than significant.

Toxic Air Contaminants (TAC)

Construction Emissions

The Proposed Project's construction activities would generate toxic air contaminants in the form of diesel particulate emissions associated with the use of heavy trucks and construction equipment. The SCAQMD has not published guidance directly related to quantitatively assessing health risk impacts associated with construction activities. The dose to which receptors are exposed is the primary factor used to determine health risk (i.e., potential exposure to TAC emission levels that exceed applicable standards). Dose is a function of the concentration of a substance or substances in the environment and the duration of exposure to the substances. Dose is positively correlated with time, meaning that a longer exposure period would result in a higher exposure level for the maximally exposed individual. Thus, the risks estimated for a maximally exposed individual are higher is a fixed exposure occurs over a long duration. For example, according to the Office of Environmental Health Hazard Assessment, estimating the cancer risk from toxic air contaminants should be based on a lifetime (i.e., 70-year) exposure period. The construction period would occur over an approximate 34-month period. Therefore, it is not meaningful to evaluate long-term cancer impacts from construction activities that occur over a relatively short duration. The Proposed Project would be required to comply with the CARB Air Toxics Control Measure that limits diesel powered equipment and vehicle idling to no more than 5 minutes at a location. In addition, as discussed above, the Proposed Project would not result in a localized significant impact. Therefore, the Proposed Project would result in a less than significant impact related to construction TACs.

Operational Emissions

The Proposed Project consists of a mixed-use development containing residential units, creative offices, and retail uses and would not support any land uses or activities that would involve the use, storage, or processing of carcinogenic or non-carcinogenic toxic air contaminants. As part of the Project, the existing warehouse uses, which are estimated to generate up to 400 trips per day, mostly consisting of large diesel-engine trucks, would be removed from service. As such no significant toxic airborne emissions would result from Proposed Project implementation. In addition, construction activities would be subject to the regulations and laws relating to toxic air pollutants at the regional, State, and federal level that would protect sensitive receptors from substantial concentrations of these emissions. Therefore, impacts associated with the release of toxic air contaminants would be less than significant.

e) Would the project create objectionable odors affecting a substantial number of people?

Less Than Significant Impact. A significant impact may occur if objectionable odors occur which would adversely impact sensitive receptors. Odors are typically associated with industrial projects involving the use of chemicals, solvents, petroleum products, and other strong-smelling elements used in manufacturing processes, as well as sewage treatment facilities and landfills. As the Proposed Project involves no elements related to these types of activities, no odors from these types of uses are anticipated. Garbage collection areas for the Project Site would have the potential to generate foul odors if the areas are located in close proximity to habitable areas. Objectionable odors from trash receptacles are addressed under Environmental [Q] Condition C.8, which requires trash receptacles be relocated at least 50-feet away from the property line of adjacent residential properties or within the walls of a covered concrete

block enclosure. Good housekeeping practices would be sufficient to prevent nuisance odors. In addition, SCAQMD Rule 402 (Nuisance), and SCAQMD Best Available Control Technology Guidelines would limit potential objectionable odor impacts during the Proposed Project's long-term operations phase. The proposed restaurant land uses would also be required to install odor-reducing equipment in accordance with SCAQMD Rule 1138.

Compliance with SCAQMD Rules 402 and 1138 and Environmental Condition C.8, described above, would ensure any potential objectionable odor impacts are less than significant.

Cumulative Impacts

Less Than Significant Impact. Development of the Proposed Project in conjunction with the related projects in the Project Site vicinity would result in an increase in construction and operational emissions in the already urbanized area of the City of Los Angeles.

Cumulative development can affect implementation of the 2012 AQMP. The 2012 AQMP was prepared to accommodate growth, reduce pollutants within the areas under SCAQMD jurisdiction, improve the overall air quality of the region, and minimize the impact on the economy. Growth considered to be consistent with the 2012 AQMP would not interfere with attainment because this growth is included in the projections utilized in the formulation of the AQMP. Consequently, as long as growth in the Basin is within the projections for growth identified by SCAG, implementation of the 2012 AQMP would not be obstructed by such growth and cumulative impacts would be less than significant. Since the Proposed Project is consistent with SCAG's growth projections, it would not have a cumulatively considerable contribution to an impact regarding a potential conflict with or obstruction of the implementation of the applicable air quality plan. Thus, cumulative impacts related to conformance with the 2012 AQMP would be less than significant.

Cumulative air quality impacts from construction and operation of the Proposed Project, based on SCAQMD guidelines, are analyzed in a manner similar to Project-specific air quality impacts. The SCAQMD recommends that a project's potential contribution to cumulative impacts should be assessed utilizing the same significance criteria as those for project specific impacts. Therefore, according to the SCAQMD, individual development projects that generate construction or operational emissions that exceed the SCAQMD recommended daily thresholds for project-specific impacts would also cause a cumulatively considerable increase in emissions for those pollutants for which the Basin is in non-attainment. Thus, as discussed in Question III(c) above, because the construction-related and operational daily emissions associated with Proposed Project would not exceed the SCAQMD's recommended thresholds, these emissions associated with the Proposed Project would not be cumulatively considerable. Therefore, cumulative air quality impacts would be less than significant.

With respect to cumulative odor impacts, potential sources that may emit odors during construction activities at each related project include the use of architectural coatings, solvents, and asphalt paving. SCAQMD Rule 1108 and 1113 limits the amount of volatile organic compounds from cutback asphalt and architectural coatings and solvents, respectively. Based on mandatory compliance with SCAQMD Rules, construction activities and materials used in the construction of the Proposed Project and related projects would not combine to create objectionable construction odors. With respect to operations,

SCAQMD Rules 402 (Nuisance) and Rule 1138 (Odor Reducing Equipment) would regulate any objectionable odor impacts from the related projects and the Proposed Project's long-term operations phase. Thus, cumulative odor impacts would be less than significant.

IV. BIOLOGICAL RESOURCES

a) Would the project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulation, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

Potentially Significant Unless Mitigation Incorporated. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a project would normally have a significant impact on biological resources if it could result in: (a) the loss of individuals, or the reduction of existing habitat, of a state or federal listed endangered, threatened, rare, protected, candidate, or sensitive species or a Species of Special Concern; (b) the loss of individuals or the reduction of existing habitat of a locally designated species or a reduction in a locally designated natural habitat or plant community; or (c) interference with habitat such that normal species behaviors are disturbed (e.g., from the introduction of noise or light) to a degree that may diminish the chances for long-term survival of a sensitive species. The Project Site is improved with four light manufacturing and warehouse buildings, paved loading areas, and surface parking.

Based on the information presented in the Protected Tree Report, there are thirty-nine trees on site that are eight inches or greater in diameter at breast height (significant trees). All of the trees on-site are non-native and are non-protected tree species under the Native Protected Tree Ordinance. The trees identified on site include twenty-six Canary Island Pine trees, four Olive trees, three Silver Dollar Eucalyptus trees, three Fan Palm trees, two Evergreen Ash trees, and one Chinese Elm tree. Development of the Project would require the removal of all existing trees and potentially up to three street trees. With the compliance with Mitigation Measure MM-BIO-1, below, the Project would be required to plant replacement trees at a ratio of 1 to 1 (this replacement ratio may be increased at the discretion of the City's Urban Forestry Division). Further, the Proposed Project would be required to comply with the Federal Migratory Bird Treaty Act (MBTA) of 1918 (50 C.F.R Section 10.13). Sections 3503, 3503.5 and 3513 of the California Fish and Game Code prohibit take of all birds and their active nests including raptors and other migratory non-game birds (as listed under the Federal MBTA).

The Project Site does not contain any critical habitat or support any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service. No protected tree species exist on site. However, nesting birds may reside in the thirty-nine tress on-site; for this reason, the Proposed Project would incorporate Mitigation Measure MM-BIO-2, below.

The Proposed Project would incorporate Mitigation Measures MM-BIO-1 and MM-BIO-2, below to ensure that the removal of the thirty-nine non-protected trees on site would result in less than significant impact. With compliance with the following mitigation measures, the Proposed Project would result in a less than significant impact.

Mitigation Measures:

MM-BIO-1 (Tree Removal (Non-Protected Trees)):

- Prior to the issuance of any permit, a plot plan shall be prepared indicating the location, size, type, and general condition of all existing trees on the site and within the adjacent public right(s)-of-way.
- All significant (8-inch or greater trunk diameter, or cumulative trunk diameter if multi-trunked, as measured 54 inches above the ground) non-protected trees on the site proposed for removal shall be replaced at a 1:1 ratio with a minimum 24-inch box tree. Net, new trees, located within the parkway of the adjacent public right(s)-of-way, may be counted toward replacement tree requirements.
- Removal or planting of any tree in the public right-of-way requires approval of the Board of Public Works. Contact Urban Forestry Division at: 213-847-3077. All trees in the public right-of-way shall be provided per the current standards of the Urban Forestry Division the Department of Public Works, Bureau of Street Services.

MM-BIO-2 (Habitat Modification (Nesting Native Birds)):

- Proposed project activities (including disturbances to native and non-native vegetation, structures and substrates) should take place outside of the breeding bird season which generally runs from March 1- August 31 (as early as February 1 for raptors) to avoid take (including disturbances which would cause abandonment of active nests containing eggs and/or young). Take means to hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture of kill (Fish and Game Code Section 86).
- If project activities cannot feasibly avoid the breeding bird season, beginning thirty days prior to the disturbance of suitable nesting habitat, the applicant shall:
    - Arrange for weekly bird surveys to detect any protected native birds in the habitat to be removed and any other such habitat within 300 feet of the construction work area (within 500 feet for raptors) as access to adjacent areas allows. The surveys shall be conducted by a Qualified Biologist with experience in conducting breeding bird surveys. The surveys shall continue on a weekly basis with the last survey being conducted no more than 3 days prior to the initiation of clearance/construction work.
    - If a protected native bird is found, the applicant shall delay all clearance/construction disturbance activities within 300 feet of suitable nesting habitat for the observed protected bird species (within 500 feet for suitable raptor nesting habitat) until August 31.
    - Alternatively, the Qualified Biologist could continue the surveys in order to locate any nests. If an active nest is located, clearing and construction within 300 feet of the nest (within 500 feet for raptor nests) or as determined by a qualified biological monitor, shall be postponed until the nest is vacated and juveniles have fledged and when there is no evidence of a second attempt at nesting. The buffer zone from the nest shall be established in the field with flagging and stakes. Construction personnel shall be instructed on the sensitivity of the area.
    - The applicant shall record the results of the recommended protective measures described above to document compliance with applicable State and Federal laws pertaining to the

protection of native birds. Such record shall be submitted and received into the case file for the associated discretionary action permitting the project.

b) Would the project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, and regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

No Impact. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a project would normally have a significant impact on biological resources if it could result in: (a) the loss of individuals, or the reduction of existing habitat, of a state or federal listed endangered, threatened, rare, protected, candidate, or sensitive species or a Species of Special Concern; (b) the loss of individuals or the reduction of existing habitat of a locally designated species or a reduction in a locally designated natural habitat or plant community; (c) the alternation of an existing wetland habitat; or (d) interference with habitat such that normal species behaviors are disturbed (e.g., from the introduction of noise, light) to a degree that may diminish the chances for long-term survival of a sensitive species. The Project Site is occupied by four light manufacturing and warehouse buildings and contains paved loading areas and surface parking. The Drainage Report (February 2, 2016, Forma Engineering, Inc.; available in the case file for review) determines that the Project Site is nearly one-hundred percent impervious and no natural waterways exist on site. The Protected Tree Report (January 11, 2016, The Tree Resource) determined that all significant trees located on site are non-protected, non-native tree species. No riparian or other sensitive natural vegetation communities are located on or adjacent to the Project Site. Therefore, implementation of the Proposed Project would not result in any adverse impacts to riparian habitat or other sensitive natural communities, and no impact would occur.

c) Would the project have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

No Impact. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a project would normally have a significant impact on biological resources if it could result in the alteration of an existing wetland habitat. As discussed above, the Project Site is entirely developed with impermeable surfaces and does not contain any wetlands or natural drainage channels. Therefore, the Project Site does not support any riparian or wetland habitat, as defined by Section 404 of the Clean Water Act (see Section 4(b), above), and no impacts to riparian or wetland habitats would occur with implementation of the Proposed Project.

d) Would the project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

No Impact. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a project would normally result in a significant impact on biological resources if it results in the interference with wildlife movement/migration corridors that may diminish the chances for long-term survival of a sensitive species. The Project Site is located in an urbanized area of the City of Los Angeles. Due to the urbanized surroundings, there are no wildlife corridors or native wildlife nursery sites in the Project vicinity. Thus,

the Proposed Project would not interfere with the movement of any residents or migratory fish or wildlife. Therefore, no impact would occur.

e) Would the project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance (e.g., oak trees or California walnut woodlands)?

Potentially Significant Unless Mitigation Incorporated. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a project-related significant adverse effect could occur if a project were to cause an impact that is inconsistent with local regulations pertaining to biological resources, such as the City of Los Angeles Protected Tree Ordinance, 177,404. The Project Site is improved with four light manufacturing and warehouse buildings, paved loading areas, and parking areas. There are no protected tree species located on the Project Site. Therefore, the Proposed Project would not have the potential to conflict with the City of Los Angeles Protected Tree Ordinance. However, it is anticipated that all 39 trees on-site would be removed during the construction of the Proposed Project. Further, the Proposed Project may require the removal of three street trees along Pasadena Avenue. In the event that the construction of the Proposed Project would require the removal of street trees, the removal of street trees is subject to the approval and tree replacement conditions set forth by the Board of Public Works, Urban Forestry Division. Further, the Project would be required to comply with the Federal Migratory Bird Treaty Act and Sections 3503, 3503.5, and 3513 of the California Fish and Game Code, which prohibits take of all birds and their active nests including raptors and other migratory non-game birds. Compliance with MM-BIO-1 and MM-BIO-2, above, would ensure that impacts upon the loss of on-site trees and street trees would be less than significant.

f) Would the project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

No Impact. A significant impact would occur if the Proposed Project would be inconsistent with maps or policies in any conservation plans of the types cited. The Project Site and its vicinity are not part of any draft or adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional or state habitat conservation plan. Therefore, no impact would occur with implementation of the Proposed Project.

Cumulative Impacts

Less Than Significant Impact. The Proposed Project would have a less than significant impact upon biological resources with mitigation. Development of the Proposed Project in combination with the three related projects would not significantly impact wildlife corridors or habitat for any candidate, sensitive, or special status species identified in local plans, policies, or regulations, or by the CDFG or the USFWS. No such habitat occurs in the vicinity of the Project Site or related projects due to the existing urban development. Development of any of the related projects would be subject to the City of Los Angeles Protected Tree Ordinance, Federal Migratory Bird Treaty Act, and Sections 3503, 3503.5, and 3513 of the California Fish and Game Code. Thus, cumulative impacts to biological resources would be considered less than significant.

V. CULTURAL RESOURCES

a) Would the project cause a substantial adverse change in the significance of an historic resource pursuant to CEQA § 15064.5?

Less Than Significant Impact. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a significant impact may occur if the Proposed Project results in a substantial adverse change in the significance of a historic resource. Section 15064.5 of the State CEQA Guidelines defines a historical resource as: (1) a resource listed in or determined to be eligible by the State Historical Resources Commission for listing in the California Register of Historical Resources; (2) a resource listed in a local register of historical resources or identified as significant in an historical resource survey meeting certain State guidelines; or (3) an object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California, provided that the lead agency's determination is supported by substantial evidence in light of the whole record. A substantial adverse change in the significance of a historic resource means demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of a historical resource would be materially impaired.[10]

The Project Site is currently developed with four light manufacturing and warehouse buildings and paved loading areas and surface parking. These four buildings include:

1. One 24,018 square foot light manufacturing facility building, which fronts the west side of Pasadena Avenue, constructed circa 1967;
2. One 3,521 square foot light manufacturing facility building, located on the southwest corner of the Project Site, constructed circa 1929;
3. One 4,033 square foot light manufacturing facility building, located on the southeast corner of the Project Site, constructed circa 1948; and
4. One 86,712 square foot warehouse facility building, which fronts the north side of Avenue 34, constructed circa 1977.

The City of Los Angeles Department of City Planning, Los Angeles Historic Resources Inventory and Survey LA, had reviewed the buildings on-site and identified the 3,521 square foot light manufacturing building located at 153 W. Avenue 34 for further review. The Los Angeles Historic Resources Inventory and Survey LA determined that, upon further review, this building does not meet the eligibility standards for historic listing, due to alterations to the façade windows and entrance.[11] Nevertheless, as part of the Proposed Project, the Project includes the rehabilitation and adaptive reuse of a portion the

[11] *City of Los Angeles Department of City Planning, Los Angeles Historic Resources Inventory, 153 W. Avenue 34 Historic Resource Report, website: http://www.historicplacesla.org/reports/aeef3669-d0cc-4703-9e2b-c9e78de172a3, accessed: February 2016.*

aforementioned building (No. 2 listed above) and 7,963 square feet of the building that fronts Pasadena Avenue (No. 1 listed above).

As the Project Site does not contain any historic or potentially historic resources, the Proposed Project would result in a less than significant impact to historic resources.

b) Would the project cause a substantial adverse change in the significance of an archaeological resource pursuant to CEQA § 15064.5?

Less Than Significant Impact. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a significant impact may occur if grading or excavation activities associated with the Proposed Project would disturb archaeological resources. No known archaeological sites are identified on the Project Site. There is no evidence that suggests any archaeological sites or archaeological resources exist on the Project Site. The Project Site has been previously developed and is located in an urbanized area within the City of Los Angeles. The Proposed Project would include excavation to a depth of approximately 15 feet below grade to construct a one level subterranean parking garage. Thus, the potential exists for the accidental discovery of unknown and unrecorded archaeological materials. In the unlikely event any archaeological resources are encountered during the construction phase, the discovery of such materials would be mitigated to less than significant levels through compliance with the following applicable regulatory compliance measure:

- **(Archaeological):** If archaeological resources are discovered during excavation, grading, or construction activities, work shall cease in the area of the find until a qualified archaeologist has evaluated the find in accordance with federal, State, and local guidelines, including those set forth in California Public Resources Code Section 21083.2. Personnel of the proposed Modified Project shall not collect or move any archaeological materials and associated materials. Construction activity may continue unimpeded on other portions of the Project site. The found deposits would be treated in accordance with federal, State, and local guidelines, including those set forth in California Public Resources Code Section 21083.2.

Due to the absence of any known archeological resources, no mitigation measures are warranted. Because the presence or absence of such materials cannot be determined until the Project Site is excavated, compliance with the regulatory compliance measure above would ensure that if any archaeological resources are encountered during construction, impacts to such resources would be mitigated to a less than significant level.

c) Would the project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Less Than Significant Impact. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a significant impact may occur if grading or excavation activities associated with the Proposed Project were to disturb paleontological resources or geologic features which presently exist within the Project Site. As discussed above, the Project Site has been developed since the early 1900s. In the late 1970s, the

Project Site was developed into its current layout. The Project Site and immediate surrounding areas do not contain any known vertebrate paleontological resources.[12] Although no paleontological resources are known to exist on-site, there is a potential for paleontological resources to exist at sub-surface levels on the Project Site, which may be uncovered during excavation of the proposed parking garage. Implementation of the regulatory compliance measure, identified below, would ensure that if any such resources are found during construction of the Proposed Project, they would be handled according to the proper regulations and any potential impacts would be reduced to less than significant levels.

Regulatory Compliance Measure:

- **(Paleontological)**: If paleontological resources are discovered during excavation, grading, or construction, the City of Los Angeles Department of Building and Safety shall be notified immediately, and all work shall cease in the area of the find until a qualified paleontologist evaluates the find. Construction activity may continue unimpeded on other portions of the Project site. The paleontologist shall determine the location, the time frame, and the extent to which any monitoring of earthmoving activities shall be required. The found deposits would be treated in accordance with federal, State, and local guidelines, including those set forth in California Public Resources Code Section 21083.2.

d) Would the project disturb any human remains, including those interred outside of formal cemeteries?

Less Than Significant Impact. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a project-related significant adverse effect could occur if grading or excavation activities associated with the proposed project would disturb previously interred human remains. No known human burials have been identified on the Project Site or its vicinity. However, it is possible that unknown human remains could occur on the Project Site, and if proper care is not taken during construction, damage to or destruction of these unknown remains could occur. The following regulatory compliance measure would ensure potential impacts related to the disturbance of unknown human remains are less than significant.

Regulatory Compliance Measure:

- **(Human Remains):** If human remains are encountered unexpectedly during construction demolition and/or grading activities, State Health and Safety Code Section 7050.5 requires that no further disturbance shall occur until the County Coroner has made the necessary findings as to origin and disposition pursuant to California Public Resources Code (PRC) Section 5097.98. In the event that human remains are discovered during excavation activities, the following procedure shall be observed:
    - Stop immediately and contact the County Coroner:

[12] *City of Los Angeles Department of City Planning, Environmental and Public Facilities Maps: Vertebrate Paleontological Resources in the City of Los Angeles, September 1996.*

1104 N. Mission Road
Los Angeles, CA 90033
323-343-0512 (8 a.m. to 5 p.m. Monday through Friday) or
323-343-0714 (After Hours, Saturday, Sunday, and Holidays)

- If the remains are determined to be of Native American descent, the Coroner has 24 hours to notify the Native American Heritage Commission (NAHC).
- The NAHC will immediately notify the person it believes to be the most likely descendent of the deceased Native American.
- The most likely descendent has 48 hours to make recommendations to the owner, or representative, for the treatment or disposition, with proper dignity, of the human remains and grave goods.
- If the owner does not accept the descendant's recommendations, the owner or the descendent may request mediation by the NAHC.

e) Cause a substantial adverse change in the significance of a site, feature, place, cultural landscape, sacred place, or object with cultural value to a California Native American Tribe that is listed or determined eligible for listing on the California register of historical resources, listed on a local historical register, or otherwise determined by the lead agency to be a tribal cultural resource?

Less Than Significant Impact. Pursuant to AB 52, the Department of City Planning sent pre-consultation request letters on May 25, 2016 to the recognized Native American Tribal Representatives within the Los Angeles region. The City of Los Angeles did not receive any responses. Therefore, because the Project Site has been subject to ground disturbance activities in the past and is not known to be associated with any cultural or sacred sites, and no Native American Tribal Representatives have requested consultation, the probability for the discovery of a known site, feature, place, cultural landscape, sacred place, or object with cultural value to a California Native American Tribe is considered low. Thus, in the absence of any known cultural resources, adherence to the regulatory compliance measures relating to archeological, paleontological, and human remains (referenced above), would ensure impacts associated with the accidental discovery of any archaeological resources or human remains, including Native American resources would be avoided or reduced to less than significant levels.

Cumulative Impacts

Less Than Significant Impact. Development of the Proposed Project, in combination with the other three related projects in the Project Site vicinity, would result in the continued redevelopment and revitalization of the surrounding area. Impacts to cultural resources tend to be site-specific and are assessed on a site-by-site basis. The analysis of the Proposed Project's impacts to cultural resources concluded that the Proposed Project would have no significant impacts with respect to cultural resources following appropriate regulatory compliance measures. Therefore, the Proposed Project's incremental contribution to a cumulative impact would not be considerable, and cumulative impacts to cultural resources would be less than significant.

VI. GEOLOGY AND SOILS

The following section summarizes and incorporates the reference information from the Geotechnical Investigation prepared by Geocon West, Inc.: Geotechnical Investigation: Proposed Mixed-Use Residential Development, 141 West Avenue 34, Los Angeles, California, dated July 23, 2015 ("Geotechnical Investigation") and the City of Los Angeles Department of Building and Safety's Soils Report Approval Letter, dated January 26, 2016 ("Soils Approval Letter"). The Project Geotechnical Investigation and Soils Approval Letter are included in the case file.

a) Would the project expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.

Less Than Significant Impact. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a significant impact may occur if a project site is located within a State-designated Alquist-Priolo Zone or other designated fault zone.

The Project Site is located within the former Arroyo Seco streambed and within the central portion of the Los Angeles Basin. The Los Angeles Basin, located in the northern portion of the Peninsular Ranges geomorphic province, is northwest-trending alleviated lowland plain, sometimes called the Coastal Plain of Los Angeles. The prominent structural features within the Los Angeles Basin include the central lowland plain, the uplifted Palos Verdes Hills, the northwest-trending line of low hills and mesas within the Newhall-Inglewood Fault Zone.

Geocon performed six borings (identified as B1-B6) as part of their field investigation. Based on the information contained in the Geotechnical Investigation by Geocon West, Inc., the Project Site is underlain by artificial fill and Holocene age alluvial fan deposits consisting of varying amounts of unconsolidated gravel, sand and silt. The artificial fill was encountered to a maximum depth of two feet below the ground surface, except in Boring B3. Artificial fill was locally encountered in Boring B3 to a maximum depth of 30 feet below the ground surface. The artificial fill generally consists of light brown to dark brown, fine- to coarse-grained silty sand and sandy clay. The artificial fill is characterized as slightly moist to moist and medium dense to dense or firm. The alluvial fan deposits underlays the artificial fill. The alluvial deposits consistent of primarily light brown to brown poorly graded sand with varying amounts of gravel and cobbles. The gravel and cobbles were observed to vary both laterally and vertically within the alluvial deposits. The alluvial soils are primarily slightly moist and medium dense to very dense and generally become denser with increase in depth. A detailed description of the soil conditions may be obtained from the individual logs of the subsurface excavations in the Geotechnical Investigation.

The closest active fault to the Project Site is the Raymond Fault located 1.8 miles north of the Project Site. Other nearby active faults are the Hollywood Fault, the Verdugo Fault, the Sierra Madre Fault, and the Newport-Inglewood Fault Zone located 3.2 miles north northwest, 3.9 miles north, 8.8 miles north, and 10.5 miles southwest of the Project Site, respectively. The active San Andreas Fault Zone is located approximately 30 miles northeast of the Project Site. The closest potentially active faults to the Project

Site are the Coyote Pass Fault and Macarthur Park Fault located approximately 3.4 miles to the south and 3.6 miles southwest of the Project Site, respectively.

Several buried thrust faults, commonly referred to as blind thrusts, underlie the Los Angeles Basin at depth. These faults are not exposed at the ground surface and are typically identified at depths greater than 3.0 kilometers. The October 1, 1987 Whittier Narrows earthquake and the January 17, 1994 Northridge earthquake were a result of movement on the Puente Hills Blind Thrust and the Northridge Thrust, respectively. The Project Site is within the vertical projection of both the Los Angeles Segment of the Puente Hills Blind Thrust and the Upper Elysian Park Blind Thrust. These thrust faults are not exposed at the surface and do not present a potential surface fault rupture hazard; however, these are active features capable of generating future earthquakes that would result in strong ground shaking at the Project Site.

The Project Site is not within a currently established Alquist-Priolo Earthquake Fault Zone for surface fault rupture hazards. No active or potentially active faults with the potential for surface fault rupture are known to pass directly beneath the Project Site. Therefore, the potential for surface rupture due to faulting occurring beneath the Project Site during the design life of the proposed development is considered low. However, the Project Site is located in the seismically active Southern California region, and could be subjected to moderate to strong ground shaking in the event of an earthquake on one of the many active Southern California faults.

Based on the conclusions of the Geotechnical Investigation, the potential for surface ground rupture at the Project Site is considered remote, and the potential for impacts associated with surface fault rupture would be considered less than significant. As required by law and Environmental [Q] Condition C.9, the Project would adhere to current engineering standards, the seismic safety requirements set forth in the City of Los Angeles Building Code (LABC) and the Los Angeles Municipal Code (LAMC), and design recommendations set forth in the Geotechnical Investigation so that the proposed structures may withstand typical seismic ground shaking. In addition, geologic and geotechnical evaluations of the proposed Project would follow the guidelines presented in CGS *Special Publication 117, Guidelines for Evaluating and Mitigating Seismic Hazards in California,* which provides guidance for evaluation and mitigation of earthquake-related hazards (other than fault rupture). Thus, impacts related to strong seismic shaking would be reduced to less than significant levels. Potential impacts associated with seismic safety would be further reduced to less than significant levels with incorporation of the following regulatory compliance measure:

- **(Seismic and Geotechnical Safety):** The project shall comply with the conditions contained within the Department of Building and Safety's Geology and Soils Report Approval Letter (dated January 26, 2016) and Project's Geotechnical Investigation prepared by Geocon West, Inc. (dated July 23, 2015), and as it may be subsequently amended or modified.

b) Would the project expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving strong seismic ground shaking?

Less Than Significant Impact. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a significant impact may occur if a project represents an increased risk to public safety or destruction of property by exposing people, property, or infrastructure to seismically induced ground shaking hazards

that are greater than the average risk associated with other locations in Southern California. The Project Site is located in the seismically active Southern California region, and could be subjected to moderate to strong ground shaking in the event of an earthquake on one of the many active Southern California faults. The intensity of ground shaking depends upon the earthquake magnitude, the distance from the source, and the site response characteristics. The primary seismic hazard for the Proposed Project is the potential for strong ground motion from future earthquakes within the Los Angeles Basin. However, this hazard and the effects of ground shaking are common in Southern California. Conformance with current building codes and engineering practices during the Project's design and construction would mitigate the potential effects of ground shaking. Accordingly, the Geotechnical Investigation establishes seismic design criteria.

Seismically induced settlement is often caused when loose to medium-dense granular soils are densified during ground shaking. Settlement of the foundation system is expected to occur on initial application of loading. Differential settlement is not expected to exceed one half inch over a distance of 20 feet. Seismically induced settlement is considered to be less than significant impact. The Project Site is considered suitable for the construction of the Proposed Project provided that the recommendations specified in the Geotechnical Investigation are included in the design and construction of the Proposed Project to the satisfaction of the Department of Building and Safety. Accordingly, compliance with Environmental [Q] Condition C.9 and the regulatory compliance measure pertaining to seismic and geotechnical safety, above, would ensure impacts associated with seismic hazards are reduced to a less than significant level.

c) Would the project expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving seismic-related ground failure, including liquefaction?

Less Than Significant Impact. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a significant impact may occur if a Project Site is located within a liquefaction zone. Liquefaction is a phenomenon in which loose, saturated, relatively cohesionless soil deposits lose shear strength during strong ground motions. Primary factors controlling liquefaction include intensity and duration of ground motion, gradation characteristics of the subsurface soils, in-situ stress conditions, and the depth to groundwater. Liquefaction is typified by a loss of shear strength in the liquefied layers due to rapid increases in pore water pressure generated by earthquake accelerations. Liquefaction typically occurs in areas where the soils below the water table are composed of poorly consolidated, fine to medium-grained, primarily sandy soil.

Based on the State of California Seismic Hazards Map for the Los Angeles 7½-Minute Quadrangle and the City of Los Angeles General Plan Safety Element, the Project Site is located in an area designated as "liquefiable." Pursuant to Environmental [Q] Condition C.11, Geocon performed a liquefaction analysis of the soil underlying the Project Site to assess potential consequences of any liquefaction and soil strength loss, estimation of settlement, lateral movement or reduction in foundation soil-bearing capacity. A liquefaction analysis was performed for a design level earthquake by using a historic high groundwater table of 20 feet below the ground surface, a magnitude of 6.63 earthquake, and a peak horizontal acceleration of 0.698g. A liquefaction analysis was also performed for a maximum considered earthquake by using a historic high groundwater table of 20 feet below the ground surface, a magnitude 6.62 earthquake, and a peak horizontal acceleration of 1.047g. Geocon concluded that the alluvial soils below

the historic high groundwater level would not be susceptible to liquefaction settlement during a design level earthquake ground motion and a maximum considered earthquake.

In compliance with Environmental [Q] Condition C.11, the Proposed Project would adhere to current engineering standards, the seismic safety requirements set forth in the City of Los Angeles Building Code (LABC) and the Los Angeles Municipal Code (LAMC), and design recommendations set forth in the Geotechnical Investigation. Therefore, potential impacts related to liquefaction would be less than significant.

d) Would the project expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving landslides?

No Impact. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a project would normally have a significant geologic hazard impact if it would cause or accelerate geologic hazards which would result in substantial damage to structures or infrastructure, or expose people to substantial risk of injury. A project-related significant adverse effect may occur if a project is located in a hillside area with soil conditions that would suggest a high potential for sliding. According to the Geotechnical Investigation, the Project Site is not located within a City of Los Angeles Hillside Grading Area or Hillside Ordinance Area. The City of Los Angeles General Plan Safety Element further indicates that the Project Site is not located in an area susceptible to landslides.[13] The Project Site is not within an area identified as having a potential for seismic slope instability. There are no known landslides near the Project Site, nor is the Project Site in the path of any known or potential landslides. Therefore, the potential for slope stability hazards to adversely affect the proposed development is considered low. Therefore, no impact would occur.

e) Would the project result in substantial soil erosion or the loss of topsoil?

Less Than Significant Impact. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a project would normally have significant sedimentation or erosion impact if it would: (a) constitute a geologic hazard to other properties by causing or accelerating instability from erosion; or (b) accelerate natural processes of wind and water erosion and sedimentation, resulting in sediment runoff or deposition which would not be contained or controlled on-site. Although development of the Proposed Project has the potential to result in the erosion of soils during site preparation and construction activities, erosion would be reduced by implementation of stringent erosion controls imposed by the City of Los Angeles through grading and building permit regulations. Minor amounts of erosion and siltation could occur during grading. The potential for soil erosion during the ongoing operation of the Proposed Project is extremely low due to the generally level topography of the Project Site, and the fact that the Project Site would be mostly paved-over or built upon so little soil would be exposed. All grading activities require grading permits from the Department of Building and Safety, which include requirements and standards designed to limit potential impacts to acceptable levels. In addition, all on-site grading and site preparation would comply with applicable provisions of Chapter IX, Division 70 of the LAMC, which

[13] *City of Los Angeles Department of City Planning, Safety Element of the Los Angeles City General Plan, Exhibit C: Landslide Inventory & Hillside Areas In the City of Los Angeles, June 1994.*

addresses grading, excavations, and fills. Additionally, implementation of the regulatory compliance measure, below, would further ensure a less-than-significant impact would occur with respect to erosion or loss of topsoil.

Regulatory Compliance Measure:

- **(Erosion/Grading/Short-Term Construction Impacts):** Chapter IX, Division 70 of the Los Angeles Municipal Code addresses grading, excavations, and fills. All grading activities require grading permits from the Department of Building and Safety. Additional provisions are required for grading activities within Hillside areas. The application of BMPs includes but is not limited to the following mitigation measures:
  - Excavation and grading activities should be scheduled during dry weather periods. If grading occurs during the rainy season (October 15 through April 1), diversion dikes shall be constructed to channel runoff around the site. Channels shall be lined with grass or roughened pavement to reduce runoff velocity.
  - Stockpiles, excavated, and exposed soil shall be covered with secured tarps, plastic sheeting, erosion control fabrics, or treated with a bio-degradable soil stabilizer.

f) Would the project be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?

Less Than Significant Impact. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a project would normally have a significant geologic hazard impact if it could cause or accelerate geologic hazards causing substantial damage to structures or infrastructure, or expose people to substantial risk of injury. A significant impact may occur if the Proposed Project is built in an unstable area without proper site preparation or design features to provide adequate foundations for buildings, thus posing a hazard to life and property. The Geotechnical Investigation concluded that the potential for seismically induced settlement at the Project Site is considered small, and the geotechnical conditions are favorable for the Proposed Project provided that the recommendations specified in the Geotechnical Investigation are included in the design and construction of the Proposed Project to the satisfaction of the Department of Building and Safety. The Geotechnical Investigation finds that the Project Site is not located within an area that is susceptible to landslides and subsidence. Further, the Geotechnical Investigation finds that although the Project Site is located within an area identified as "liquefiable," the soils on the Project Site would not be susceptible to liquefaction settlement during a design level earthquake ground motion and a maximum considered earthquake. The Proposed Project would comply with the Los Angeles Building Code as entitled and in accordance with the conditions contained within the Department of Building and Safety's Geology and Soils Report Approval Letter for the Proposed Project.

The Proposed Project includes the development of a creative campus with multi-family residential units, creative office space, and retail/restaurant space. No large-scale extraction of groundwater, gas, oil, or geothermal energy is occurring or is planned to occur with the development of the Proposed Project or in the general Project Site vicinity. The Proposed Project would not create unstable geologic conditions on or off site, and the Project impacts would be less than significant.

g) Would the project be located on expansive soil, as identified in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?

No Impact. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a project would normally have a significant geologic hazard impact if it would cause or accelerate geologic hazards, which would result in substantial damage to structures or infrastructure, or expose people to substantial risk of injury. A significant impact may occur if the Proposed Project is built on expansive soils without proper site preparation or design features to provide adequate foundations for buildings, thus posing a hazard to life and property. Based on the results of the Geotechnical Investigation, the soils at the Project Site are considered to have a "very low" expansive potential and are classified as "non-expansive" in accordance with the 2013 California Building Code Section 1803.5.3. Therefore, no impact would occur with respect to expansive soils.

h) Would the project have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?

No Impact. This question would apply to the Proposed Project only if it was located in an area not served by an existing sewer system. The Project Site is located in a developed area within the City of Los Angeles, which is served by a wastewater collection, conveyance and treatment system operated by the City of Los Angeles. No septic tanks or alternative disposal systems neither are necessary, nor are they proposed. Thus, no impact would occur.

Cumulative Impacts

Less Than Significant Impact. Geotechnical hazards are site-specific and there is little, if any, cumulative geological relationship between the Proposed Project and any of the three related projects. Similar to the Proposed Project, potential impacts related to geology and soils would be assessed on a case-by-case basis and, if necessary, the applicants of the related projects would be required to implement the appropriate mitigation measures. Furthermore, the analysis of the Proposed Project's geology and soils impacts concluded that, through adherence with the regulatory compliance measures listed above, Proposed Project impacts would be reduced to less than significant levels. Therefore, the Proposed Project would not make a cumulatively considerable contribution to any potential cumulative impacts, and cumulative geology and soil impacts would be less than significant.

VII. GREENHOUSE GAS EMISSIONS

Greenhouse gas (GHG) emissions refer to a group of emissions that have the potential to trap heat in the atmosphere and consequently affect global climate conditions. Scientific studies have concluded that there is a direct link between increased emission of GHGs and long-term global temperature. The principal GHGs are carbon dioxide (CO_2), methane (CH_4), nitrous oxide (N_2O), sulfur hexafluoride (SF_6), perfluorocarbons (PFCs), hydrofluorocarbons (HFCs), and water vapor (H_2O). CO_2 is the reference gas for climate change because it is the predominant greenhouse gas emitted. To account for the varying warming potential of different GHGs, GHG emissions are often quantified and reported as CO_2 equivalents (CO_2e).

California Global Warming Solutions Act of 2006

The California Global Warming Solutions Act of 2006, widely known as AB 32, set a mandate for the California Air Resources Board (CARB) to develop and enforce regulations for the reporting and verification of statewide GHG emissions. The heart of the bill is the requirement that statewide GHG emissions be reduced to 1990 levels by 2020. In its Climate Change Scoping Plan (2008), ARB developed a California statewide GHG emission inventory for years 1990–2004 to support the effort of determining the 1990 level and 2020 near-term emissions limit. To determine the amount of GHG emission reductions needed to reduce to 1990 emissions, ARB then developed a forecast of 2020 emissions in a business-as-usual scenario (2020 BAU), which is an estimate of the emissions expected to occur in the year 2020 if none of the foreseeable measures included in the Scoping Plan were implemented.

In May 2014, CARB published the First Update to the Climate Change Scoping Plan, where it revised the previously adopted 1990 GHG emissions level from 427 $MMTCO_2e$ to 431 $MMTCO_2e$ based on the scientifically updated global warming potential (GWP) values in the Intergovernmental Panel on Climate Change's (IPCC's) Fourth Assessment Report.[14] The total future emissions forecasted in the 2020 BAU scenario were also updated from the previously adopted estimate of 596 $MMTCO_2e$ to 509 $MMTCO_2e$. The updated 2020 BAU scenario includes reductions anticipated from the implementation of several policies aimed at reducing the statewide greenhouse gas emissions inventory which are now adopted into law (i.e., California's Low Carbon Fuel Standard, Pavley I and the Renewable Electricity Standard). As shown in Table III-5, below, the State anticipates it will meet its 2020 GHG emissions limit of 431 $MMTCO_2e$ through reductions in energy, transportation, waste and high-GWP sectors. The Cap-and-Trade Regulation provides a firm cap, ensuring that the 2020 statewide emission limit will not be exceeded. Thus, the estimated emission reductions attributed to the Cap-and-Trade Program depend on the emissions forecast. For example, if the emissions forecast increases, the reductions associated with the Cap-and- Trade Program will increase.

Table III-5
Climate Change Scoping Plan 2020 Emissions Target

Category	2020 CO_2e Emissions ($MMTOC_2e$) [a]
AB 32 Baseline 2020 Forecast Emissions (2020 BAU)	509
Expected Reductions from Sector-Based Measures	
Energy	-25
Transportation	-23
High-GWP	-5
Waste	-2

[14] *The IPCC is the leading international body for the scientific assessment of climate change established in 1988 under the auspices of the United Nations.*

Cap and Trade Reductions	-23 [b]
2020 Limit	=431

[a] Based on AR4 GWP values.
[b] Cap and Trade emissions reductions depend on the emission forecast.
Source: CARB, First Update to the Climate Change Scoping Plan, May 2014.

While the Scoping Plan does not provide any specific mandates or policies that directly applies to CEQA Projects, statewide reductions in GHG emissions from construction is being accomplished through continuous updates to the California Green Building Standards (CALGreen) Code and other State-mandated laws and regulations. Originally adopted in 2008, the CALGreen Code included all voluntary standards that went beyond the basic building code requirements and introduced new standards for reducing water use, provisions for reducing and recycling construction and demolition waste, criteria for site development to locate buildings near public transit, and measures for improving indoor air quality to protect the health of building occupants. In 2010, the CALGreen Code became mandatory on a statewide basis. Effective January 2014, the scope of the CALGreen Code was expanded to all residential buildings, including high-rise residential, as well as to additions or alterations with increases in conditioned space.

LA Green Plan

The City of Los Angeles has addressed the issue of global climate change through implementation of the *Green L.A., An Action Plan to Lead the Nation in Fighting Global Warming (L.A. Green Plan)* and has updated its zoning Code to mandate increased energy efficiency measures in new construction. The *L.A. Green Plan* outlines the goals and actions that the City has established to reduce the generation and emission of GHGs from both public and private activities. According to the *L.A. Green Plan*, Los Angeles is committed to the goal of reducing emissions of CO_2 to 35 percent below 1990 levels. To achieve this, the City is increasing the generation of renewable energy, improving energy conservation and efficiency, and changing transportation and land use patterns to reduce dependence on automobiles.

LA Green Building Code

The City of Los Angeles *L.A. Green Building Code* (Ordinance No. 181480), which incorporates applicable provisions of the CALGreen Code, and in many cases outlines more stringent GHG reduction measures available to development projects in the City of Los Angeles is consistent with statewide goals and policies in place for the reduction of greenhouse gas emissions, including AB 32 and the corresponding Scoping Plan. Among the many GHG reduction measures outlined later in this Section, the *L.A. Green Building Code* requires new development projects to achieve a 20 percent reduction in potable water use and wastewater generation, meet and exceed Title 24 Standards adopted by the California Energy Commission on December 17, 2008, and meet 50 percent construction waste recycling levels. New development projects are required to comply with the *L.A. Green Building Code,* and therefore are generally considered consistent with statewide GHG-reduction goals and policies, including AB 32.

2016-2040 RTP/SCS

On April 7, 2016, SCAG adopted the 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy: Towards a Sustainable Future (RTP/SCS). Within the RTP/SCS, the SCS demonstrates the region's ability to attain and exceed the GHG emission-reduction targets set forth by CARB. The SCS sets forth a regional plan for integrating the transportation network and related strategies with an overall land use pattern that responds to projected growth, housing needs, changing demographics, and transportation demands. The regional vision of the SCS maximizes current voluntary local efforts that support the goals of SB 375, as evidenced by several Compass Blueprint Demonstration Projects and various county transportation improvements. The SCS focuses the majority of new housing and job growth in high-quality transit areas and other opportunity areas in existing main streets, downtowns, and commercial corridors, resulting in an improved jobs-housing balance and more opportunity for transit-oriented development. This overall land use development pattern supports and complements the proposed transportation network that emphasizes system preservation, active transportation, and transportation demand management measures. By analyzing the performance of land use changes and transportation strategies related to GHG emissions reductions, the 2016-2040 RTP/SCS concluded that GHG emissions per capita relative to 2005 emissions would be reduced by 8% in 2020, 18% in 2035, and 21% in 2040 in the SCAG region, which would exceed CARB's required reduction targets. These future GHG goals and conditions would be met in 2040 if investments and strategies detailed in the 2016-2040 RTP/SCS are fully realized.

Sustainable Communities and Climate Protection Act (SB 375)

California's Sustainable Communities and Climate Protection Act, also referred to as Senate Bill 375 (SB 375) became effective January 1, 2009. The goal of SB 375 is to help achieve AB 32's GHG emissions reduction goals by aligning the planning processes for regional transportation, housing, and land use. SB 375 requires CARB to develop regional reduction targets for GHGs, and prompts the creation of regional plans to reduce emissions from vehicle use throughout the state. California's 18 Metropolitan Planning Organizations (MPOs) have been tasked with creating "Sustainable Community Strategies" (SCS) in an effort to reduce the region's vehicle miles traveled (VMT) in order to help meet AB 32 targets through integrated transportation, land use, housing and environmental planning. Pursuant to SB 375, CARB set per-capita GHG emissions reduction targets from passenger vehicles for each of the State's 18 MPOs. For the SCAG region, the targets are set at eight percent below 2005 per capita emissions levels by 2020 and 13 percent below 2005 per capita emissions levels by 2035.

SCAQMD

SCAQMD has released draft guidance regarding interim CEQA GHG significance thresholds. In October 2008, SCAQMD proposed the use of a percent emission reduction target to determine significance for commercial/residential projects that emit greater than 3,000 metric tons of CO2e per year. On December 5, 2008, the SCAQMD Governing Board adopted the staff proposal for an interim GHG significance threshold for stationary source/industrial projects where SCAQMD is lead agency. However, SCAQMD has yet to formally adopt a GHG significance threshold for land use development projects (e.g.,

residential/commercial projects) and has formed a GHG Significance Threshold Working Group to further evaluate potential GHG significance thresholds.

a) Would the project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Less Than Significant Impact. Notwithstanding the regulatory plans and building code updates discussed above, there are no federal, state or local adopted thresholds of significance for addressing a residential project's GHG emissions pursuant to CEQA. Section 15064.4 of the CEQA Guidelines provides direction to lead agencies in determining the significance of the impacts of GHGs, however, it does not establish a specific threshold of significant. Since neither the SCAQMD nor the City of Los Angeles have adopted quantitative thresholds of significance for a residential project's generation of greenhouse gas emissions, the following analysis is based on a combination of the requirements outlined in the CEQA Guidelines. As required in Section 15064.4 of the CEQA Guidelines, this analysis includes an impact determination based on the following: (1) The extent to which the project may increase or reduce greenhouse gas emissions as compared to the existing environmental setting; (2) Whether the project emissions exceed a threshold of significance that the lead agency determines applies to the project; (3) The extent to which the project complies with regulations or requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of greenhouse gas emissions. The Guidelines do not mandate the use of absolute numerical thresholds to measure the significance of greenhouse gas emissions.

For purposes of this analysis, a significant impact would occur if the Proposed Project's design features are not substantially consistent with the applicable policies and/or regulations outlined in the Scoping Plan, SB 375, SCAG's RTP/SCS, and the LA Green Building Code.

Construction

Construction of the Proposed Project would emit GHG emissions through the combustion of fossil fuels by heavy-duty construction equipment and through vehicle trips generated by construction workers traveling to and from the Project Site. These impacts would vary day to day over the approximate 34-month duration of construction activities.

Emissions of GHGs were calculated using CalEEMod *Version 2016.3.1* for the construction duration of the Proposed Project and the results of this analysis are presented in Table III-6, Project Construction-Related Greenhouse Gas Emissions. As shown in Table III-6, the total GHG emissions from construction activities related to the Proposed Project would be approximately 2,491.42 metric tons with the greatest annual emissions of 926.71 metric tons occurring in year 2018.

Table III-6
Proposed Project Construction-Related Greenhouse Gas Emissions

Year	CO_2e Emissions (Metric Tons per Year) [a]
2017	609.62
2018	926.71
2019	827.66
2020	127.43
Total Construction GHG Emissions	**2,491.42**

[a] Construction CO_2 values were derived using CalEEMod Version 2016.3.1 Calculation data and results are provided in Greenhouse Gas Emissions Calculations Worksheets in the case file..

Operation

The average daily GHG emissions generated by the existing Project Site have been estimated utilizing CalEEMod as recommended by the SCAQMD. Table III-7, Existing Project Site Greenhouse Gas Emissions, presents the GHG emissions associated with existing operations at the Project Site. As shown in Table III-7, the existing industrial operations on the Project Site generate approximately 2,254.11 CO_2e $MTYCO_2e$.

Table III-7
Existing Project Site Greenhouse Gas Emissions

Emissions Source	CO_2e Emissions (Metric Tons per Year)
Area	<0.01
Energy	861.93
Mobile	1,082.42
Waste	73.76
Water	236.00
Total	**2,254.11**

Calculation data and results provided in Greenhouse Gas Emissions Calculations Worksheets in the case file.

Proposed Project GHG Emissions

The GHG emissions resulting from operation of the Proposed Project, which involves the usage of on-road mobile vehicles, electricity, natural gas, water, landscape equipment and generation of solid waste and wastewater, were calculated under two separate scenarios in order to illustrate the effectiveness of the Project's compliance with AB 32, the *L.A. Green Building Code, SCAG's 2016-2040 RTP/SCS, SB 375,* and other mitigating features that would be effective in reducing GHG emissions, such as the Project Site being an infill lot, its proximity to transit. For purposes of demonstrating the Proposed Project's consistency with AB32 and the State's goals for reducing GHG emissions to 1990 levels by 2020, the Proposed Project's greenhouse gas emissions were quantified to reflect the Project's design features such as being an infill development with applicable trip credits for increased density, walkability, transit

accessibility, proposing Energy Star-rated appliances, and as otherwise being built in compliance with all applicable Green Building Code requirements and applicable regulatory measures (i.e., compliance with Rule 403 (dust suppression), low VOC coatings, increasing energy conservation beyond Title 24, implementing on-site solid waste recycling program).

As shown in Table III-8, below, the Proposed Project's annual generation of GHG emissions is estimated to be 5,101.48 CO_2e MTY, representing an approximate 2,847.37 CO_2e MTY increase as compared to the existing emissions generated on-site under current conditions. Because the Proposed Project would be replacing existing uses, the annual net increase in GHG emissions is estimated to be 2,847.37 CO_2e MTY.

For comparative purposes, the GHG emissions from a similar project of the same size and proposed land uses, but without the GHG-reducing design features described above for the Proposed Project was quantified. This comparative analysis demonstrates the effect the Proposed Project's compliance with SB 375's siting criteria on an infill lot in a High Priority Transit Area, the Project's re-use of existing buildings, and the structural and operational design features such as installing energy efficient lighting, low flow plumbing fixtures, Energy Star-rated appliances, and implementing a construction and operational recycling program during the life of the Proposed Project would have with respect to reducing GHG emissions. As shown in Table III-8, the Proposed Project's consistency with applicable plans, policies and code requirements imposed through the City of Los Angeles Green Building Ordinance for purposes of conserving resources and reducing GHG emissions, yields an approximate 61 percent reduction as compared to a base project without such design features and compliance measures.

Table III-8
Proposed Project Operational Greenhouse Gas Emissions

Emissions Source	Estimated Project Generated CO_2e Emissions (Metric Tons per Year)		
	Base Project Without GHG Reduction Features	Proposed Project	Percent Reduction
Area	6.43	6.43	0%
Energy	2,179.03	1,905.56	13%
Mobile (Motor Vehicles)	4,469.16	2,750.29	38%
Waste	105.37	52.68	50%
Water	379.34	303.47	20%
Construction Emissions [a]	83.05	83.05	--
Project Total	**7,222.38**	**5,101.48**	**29%**
Less Existing Project Site	-- [b]	*-2,254.11*	--
Project NET TOTAL	**7,222.38**	**2,847.37**	**61%**

[a] *The total construction GHG emissions were amortized over 30 years and added to the operation of the Project.*
[b] *The existing uses were not deducted from the Project Without GHG Reduction Measures to demonstrate the benefit of developing on an infill lot with an active commercial land use. The Project will displace an estimated 440 existing vehicle trips daily (see Traffic Study Table 5) by displacing the existing warehouse land uses. If an alternative project site were selected, it is reasonable to assume the existing warehouse uses would continue to generate GHG emissions in addition to the Project's emissions.*
Calculation data and results provided in Greenhouse Gas Emissions Calculations Worksheets, included in the case file.

Through required implementation of the L.A. Green Building Code, the Project's mixed-use design, and the Project Site's location on an infill site, the Proposed Project would be consistent with local and statewide goals and policies aimed at reducing the generation of GHGs, including CARB's AB 32 Scoping Plan aimed at achieving 1990 GHG emission levels by 2020. The following describes the benefits and applicability of the Proposed Project's compliance measures and design features that serve to reduce the carbon footprint of the development:

1. **Infill Development.** The Proposed Project is located on an infill site that is currently developed with light industrial land uses and that is located within a transit priority area. The Project Site is also located in an area that is adequately served by existing infrastructure and would not require the extension of utilities or roads to accommodate the proposed development.

2. **Transit Priority Area.** The Proposed Project is also located in a Transit Priority Area as defined by CEQA Sections 21099 and 21064.3. Studies by the California Department of Transportation, the U.S. Environmental Protection Agency and the Metropolitan Transportation Commission have found that focusing development in areas served by transit can result in local, regional and statewide benefits including reduced air pollution and energy consumption. The Proposed Project's mixed-use nature and close proximity to regional transit would result in fewer trips and a reduction to the Proposed Project's vehicle miles traveled (VMTs) as compared to the base trip rates for similar uses that are not located in close proximity to transit.

3. **Energy Conservation**. As mandated by the L.A. Green Building Code, the Proposed Project would be required to exceed Title 24 standards and include ENERGY STAR appliances.

4. **Solid Waste Reduction Efforts**. The Proposed Project would be subject to construction waste reduction of at least 50 percent. In addition, operation of the Project is subject to AB 939 requirements to divert 50 percent of solid waste to landfills through source reduction, recycling, and composting. As required by the California Solid Waste Reuse and Recycling Access Act of 1991, the Proposed Project would provide adequate storage areas for collection and storage of recyclable waste materials.

5. **Water Conservation**. The Project would be required to provide a schedule of plumbing fixtures and fixture fittings that reduce potable water use within the development by at least 20 percent. It must also provide irrigation design and controllers that are weather- or soil moisture-based and automatically adjust in response to weather conditions and plants' needs. Therefore, the Project's generation of GHG emissions would not make a project-specific or cumulatively considerable contribution to GHG emissions, and impacts would be less than significant.

Consistency with AB 32

The California Air Resources Board's (CARB's) AB 32 Scoping Plan (2008) and First Update (2014) identify the state programs necessary to meet the 2020 target. The Scoping Plan is a plan for reducing greenhouse gas emissions statewide, but does not itself establish the regulations by which it is to be implemented; rather, it sets out how existing regulations, and new ones yet to be adopted at the time of the Scoping Plan, will be used to reach AB 32's emission reduction goal. Neither AB 32 nor the Scoping Plan establishes regulations for specific development projects evaluated under CEQA. Thus, for purposes

of this analysis, the extent to which the Proposed Project complies with AB 32 is based on the following qualitative discussion on consistency with the Scoping Plan measures that are generally relevant to land use development. As discussed below, the Proposed Project would be substantially consistent with the measures associated with maximizing energy efficiency, employing green building strategies, recycling waste, and conserving water.

Consistency with Applicable AB 32 Scoping Plan Measures

Energy Efficiency. Maximize energy efficiency building and appliance standards and pursue additional efficiency efforts including new technologies, and new policy and mechanisms. Pursue comparable investment in energy efficiency from all retail providers of electricity in California.	**Consistent**. The Proposed Project would be designed and constructed to meet LA Green Building Code standards by including several measures designed to reduce energy consumption.
Renewables Portfolio Standard. Achieve 33 percent renewable energy mix statewide.	**Consistent**. The Proposed Project would use energy from the Los Angeles Department of Water and Power (LADWP), which has goals to diversify its portfolio of energy sources to increase the use of renewable energy.
Green Building Strategy. Expand the use of green building practices to reduce the carbon footprint of California's new and existing inventory of buildings.	**Consistent**. The Proposed Project would be designed and constructed to meet Cal Green building standards and will include several measures designed to reduce energy consumption.
Recycling and Waste. Reduce methane emissions at landfills. Increase waste diversion, composting and other beneficial uses of organic materials and mandate commercial recycling. Move toward zero waste.	**Consistent**. The Proposed Project would result in a less than significant impact on landfill capacity. (see response to Checklist Question 17(f), below)
Water. Continue efficiency programs and use cleaner energy sources to move and treat water.	**Consistent**. The Proposed Project would use water-efficient landscaping including point-to-point irrigation and a smart controller drip system to reduce water use.
Measures not listed are not applicable to this Proposed Project. *Source: Parker Environmental Consultants, 2016.*	

Consistency with SB 375

As discussed above, SB 375 requires integration of planning processes for transportation, land-use and housing. Under the bill, each Metropolitan Planning Organization would be required to adopt a Sustainable Community Strategy to encourage compact development that reduces passenger vehicle miles traveled and trips so that the region will meet the target provided in the Scoping Plan, created by CARB, for reducing GHG emissions. SB 375 requires SCAG to direct the development of the RTP/SCS for the region. A discussion of the Project's consistency with the 2016-2040 RTP/SCS is provided further below.

Consistency with the 2016-2040 RTP/SCS

The Proposed Project would be consistent with the following key GHG reduction strategies in SCAG's 2016-2040 RTP/SCS which are based on changing the region's land use and travel patterns:

- Compact growth in areas accessible to transit;
- More multi-family housing;
- Jobs and housing closer to transit;
- New housing and job growth focused in High Quality Transit Areas (HQTA); and
- Biking and walking infrastructure to improve active transportation options, transit access.

The Proposed Project represents an infill development within an existing urbanized area that would concentrate new residential and neighborhood serving commercial uses within a High Priority Transit Area. In addition, the Proposed Project would also provide bicycle storage areas for Project residents and guests. The Proposed Project would provide residents and visitors with convenient access to public transit and opportunities for walking and biking, which would facilitate a reduction in vehicle miles traveled and related vehicular GHG emissions. These and other measures would further promote a reduction in vehicle miles traveled and subsequent reduction in GHG emissions, which would be consistent with the goals of SCAG's 2016–2040 RTP/SCS.

Consistency with L.A. Green Building Code

The Los Angeles Green Building Ordinance requires that all projects filed on or after January 1, 2014, must comply with the L.A. Green Building Code. Mandatory measures under the L.A. Green Building Code that would help reduce GHG emissions include short- and long-term bicycle parking measures; designated parking measure; and electric vehicle supply wiring. The Proposed Project would comply with these mandatory measures as the Proposed Project would provide 46 short-term bicycle parking spaces and 383 long-term bicycle parking spaces; and would include a minimum number of equal to five percent of the total number of parking spaces with Electric Vehicle (EV) Charging Stations, pursuant to the L.A. Green Building Code. Furthermore, the L.A. Green Building Code includes energy and conservation measures that would further increase energy efficiency of the Project, such as, but not limited to, installing Energy Star rated appliances, installation of a submeter, and installation of water-conserving fixtures. Therefore, the Project would be consistent with the L.A. Green Building Code.

As demonstrated above, the Proposed Project's design features and compliance with regulatory measures would be consistent with local and statewide goals and policies aimed at reducing the generation of GHGs, including CARB's AB 32 Scoping Plan aimed at achieving 1990 GHG emission levels by 2020. The Proposed Project would adhere to the following regulatory compliance measures that would further reduce its GHG emissions. Therefore, the Project's generation of GHG emissions would not make a project-specific or cumulatively considerable contribution to conflicting with an applicable plan, policy or regulation for the purposes of reducing the emissions of greenhouse gases and, the Proposed Project's impact would be less than significant.

Regulatory Compliance Measures:

- The Proposed Project shall comply with the low- and non-VOC requirements established by the AQMD for architectural coatings (AQMD Rule 1113).

- To encourage carpooling and the use of electric vehicles by Project residents and visitors, pursuant to LAMC Section 99.04.106.4.1, at least five (5)% of the total code-required parking spaces provided for all types of parking facilities, but in no case less than one location, shall be capable of supporting future electric vehicle supply equipment (EVSE). Plans shall indicate the proposed type and location(s) of EVSE and also include raceway method(s), wiring schematics and electrical calculations to verify that the electrical system has sufficient capacity to simultaneously charge all electric vehicles at all designated EV charging locations at their full

rated amperage. Plan design shall be based upon Level 2 or greater EVSE at its maximum operating ampacity. Only raceways and related components are required to be installed at the time of construction. When the application of the 5% results in a fractional space, round up to the next whole number. A label stating "EVCAPABLE" shall be posted in a conspicuous place at the service panel or subpanel and next to the raceway termination point.

b) Would the project conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Less Than Significant Impact. As described above and in Question VII(a), the Proposed Project would be consistent with local and statewide goals and policies aimed at reducing the generation of GHGs, including CARB's AB 32 Scoping Plan aimed at achieving 1990 GHG emission levels by 2020. Therefore, the Proposed Project's generation of GHG emissions in excess of existing baseline would not make a project-specific or cumulatively considerable contribution to conflicting with an applicable plan, policy or regulation for the purposes of reducing the emissions of greenhouse gases and, the Proposed Project's impact would be less than significant.

Cumulative Impacts

The GHG emissions from a mixed-use development with residential, office, and commercial uses is relatively very small in comparison to state or global GHG emissions and, consequently, they would, in isolation, have no significant direct impact on climate change. Rather, it is the increased accumulation of GHG from more than one project and many sources in the atmosphere that may result in global climate change, which can cause the adverse environmental effects previously discussed. Accordingly, the threshold of significance for GHG emissions determines whether a project's contribution to global climate change is "cumulatively considerable." Many regulatory agencies, including the SCAQMD, concur that GHG and climate change should be evaluated as a potentially significant cumulative impact, rather than a project direct impact. Accordingly, the GHG analysis presented above analyzes whether the Proposed Project's impact would be cumulatively considerable using a plan-based approach (and quantitative and qualitative analysis) to determine the Proposed Project's contributing effect on global warming. As concluded above, the Proposed Project's generation of GHG emissions would represent a 61% reduction in GHG emissions with GHG reduction measures in place as compared to the Proposed Project's emissions in the absence of all of the GHG reducing measures and project design features. Furthermore, the Proposed Project would be consistent with all applicable local ordinances, regulations and policies that have been adopted in furtherance of the state and City's goals of reducing GHG emissions. Thus, the Proposed Project would not make a cumulatively considerable contribution to GHG emissions and impacts would be less than significant.

VIII. HAZARDS AND HAZARDOUS MATERIALS

The following section summarizes and incorporates the reference information from the following report, Phase I Environmental Site Assessment Update Report, Multi-Tenant Commercial Property 135, 141, & 153 West Avenue 34 and 3401 & 3433 Pasadena Avenue, Los Angeles California 90031, prepared by Orswell & Kasman, Inc. ("OKI"), dated April 28, 2015 ("Phase I ESA").

a) Would the project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

Less Than Significant Impact. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a significant impact may occur if a project would involve the use or disposal of hazardous materials as part of its routine operations, or would have the potential to generate toxic or otherwise hazardous emissions that could adversely affect sensitive receptors. The Proposed Project includes the construction of a mixed-use project with up to 372 residential units, 30,000 square feet of creative office space, and 10,000 square feet of neighborhood-serving retail. During the operation of the Proposed Project, no hazardous materials other than modest amounts of typical cleaning supplies and solvents used for housekeeping and janitorial purposes would routinely be transported to the Project Site. The use of these substances would comply with State Health Codes and Regulations.

Construction could involve the use of potentially hazardous materials, including vehicle fuels, oils, and transmission fluids. However, all potentially hazardous materials would be contained, stored, and used in accordance with manufacturers' instructions and handled in compliance with applicable standards and regulations, which include requirements for disposal of hazardous materials at a facility licensed to accept such waste based on its waste classification and the waste acceptance criteria of the permitted disposal facilities. Therefore, the Proposed Project would not create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials and impacts would be less than significant.

b) Would the project create significant hazard to the public or the environment through reasonably foreseeable upset and accidental conditions involving the release of hazardous materials into the environment?

Potentially Significant Impact Unless Mitigation Incorporated. A significant impact may occur if a project utilizes quantities of hazardous materials as part of its routine operations and could potentially pose a hazard to nearby sensitive receptors under accident or upset conditions.

A review of the Sanborn Fire Insurance Map collections show that the Project Site was occupied by six residences, a barn, and three sheds in 1906. In 1920, the Project Site was occupied by 21 residences, nine sheds, seven garages, a bakery, oil houses, grease houses, a tool house, an office, and an auto repair canopy. By 1951, the Project Site was occupied by 22 residences, eight garages, a bakery, and 10 commercial buildings used for office, warehousing, storage, and workshops. The Project Site has experienced many construction and demolitions of numerous buildings that were used for a variety of land uses, including residential, office, commercial, and industrial. A complete historical record of the building activities and owners of the buildings on the Project Site are listed in the Phase I ESA. The Project Site is currently occupied by light manufacturing facilities.

Site Reconnaissance / Database Search

On April 17, 2015, an ASTM Environmental Professional conducted a site inspection of the Project Site. The purpose of the Phase I ESA was to identify business risks related to the Project Site associated with environmental conditions. No signs were observed on the ground-mounted or pole-mounted electrical

transformers on-site indicating the presence of polychlorinated biphenyls (PCBs). No signs of illegal dumping or distressed vegetation were observed on the Project Site. There was no evidence of underground storage tanks (USTs), septic tanks or wells on the Project Site, and there was no indication of obvious contamination on the Project Site.

Database research determined two adjacent properties, Metro Rail Pasadena Blue Line (between Avenue 33 and French Avenue) and the former Welch's Uniform Rental Facility site (3505 Pasadena Avenue), are recorded as hazardous waste sites. The soils underneath these properties are contaminated with lead, polychlorinated biphenyls (PCBs), tetrachloroethane (PCE), and trichloroethylene (TCE). However, there is no indication from a review of regulatory records and a Project Site inspection that the Project Site has had any problems concerning the storage, usage or disposal of hazardous materials in relation to these properties. No areas of significant environmental concern were observed during the Project Site reconnaissance. The Phase I ESA revealed no evidence of Recognized Environmental Conditions (RECs), Historical RECs (HRECs), or Controlled RECs (CRECs) in connection with the property. Pursuant to [Q] Condition A.1(e), the Applicant would be required to satisfy any requirements from the State Department of Toxic Substances Control (DTSC) in relation to potential contamination on the Project Site. Prior to the issuance of any clearances by the Department of City Planning (DCP), property owners are required to provide to DCP a letter from DTSC that establishes DTSC's satisfaction that the Project Site currently meets DTSC requirements for the proposed use or, alternatively, that establishes DTSC's satisfaction with the property owner's contamination testing plan for the proposed use. Thus, with compliance with this measure hazards associated with potential risk of upset would be less than significant.

Asbestos-Containing Materials (ACMs)

Commercial use of asbestos containing materials (ACM) as a building material was banned by the federal government in 1989. Since the on-site buildings were built prior to 1989, asbestos-containing materials may be present. No asbestos testing was conducted by OKI. Exposure to ACMs during demolition activities would be harmful to construction workers. As required under Environmental [Q] Condition C.12, a complete asbestos survey would be conducted prior to the demolition activities to identify all sources of asbestos, as required by the U.S. EPA National Emission Standard for Hazardous Air Pollutants (NESHAP) regulation and the South Coast Air Quality Management District's (SCAQMD's) Rule 1403. Bulk samples of all materials that are suspected of containing asbestos would be collected and analyzed for asbestos content. Asbestos removal is stringently controlled by Federal Regulations and SCAQMD Rule 1403. Removal of asbestos in a building is not unusual and can be readily accomplished. In accordance with the EPA's NESHAP regulation and SCAQMD's Rule 1403, all materials that are identified as ACMs would be removed by a trained and licensed asbestos abatement contractor. The asbestos removal operations would be conducted in accordance with CAL-OSHA Asbestos for the Construction Industry Standard, SCAQMD and EPA rules and regulations and industry standards. The contractor selected for the removal process would be chosen based on experience, reputation, and relationship with local agencies such as SCAQMD and OSHA regional offices. Generally, asbestos removal operations are low risk. When following asbestos-related regulations, the possibility of exposure to airborne asbestos fibers from asbestos removal projects is limited. The SCAQMD has very specific regulations for asbestos emissions. Provided the identification, removal and disposal of ACMs from the Project Site is conducted in compliance with Environmental [Q] Condition C.12 and such activities

follow the various guidelines required by SCAQMD Rule 1403, as well as all other applicable state and federal rules and regulations, hazardous materials impacts relative to exposure to asbestos would be less than significant.

Lead-Based Paint (LBPs)

The federal government also banned the use of lead in household paints in 1978. Based on the age of the on-site buildings, there is a potential for lead-based paint at the Project Site. Exposure of workers to lead-based paint during demolition of the existing structures would be a hazardous to the health of the construction workers. A qualified lead-paint abatement consultant would be required to comply with applicable state and federal rules and regulations governing lead paint abatement. Compliance with mandatory state and federal regulations would ensure that the potential lead-based paint on-site would be handled properly and impacts associated with the exposure to lead-based paint would be less than significant. Further, the Proposed Project would implement Mitigation Measure MM-HAZ-1 (below) that would require a lead-based paint survey prior to the issuance of a demolition permit. Incorporation of Mitigation Measure MM-HAZ-1 would further ensure that impacts relating to lead-based paint would be less than significant.

With the Proposed Project's compliance with [Q] Condition A.1(e), mandatory state and federal regulatory compliance measures, and Mitigation Measure MM-HAZ-1 (below) potential impacts associated with the release of a hazardous material would be less than significant.

Mitigation Measure:

MM-HAZ-1 (Existing Toxic/Hazardous Construction Materials):

- (Lead Paint) Prior to the issuance of any permit for demolition or alteration of the existing structure(s), a lead-based paint survey shall be performed to the written satisfaction of the Department of Building and Safety. Should lead-based paint materials be identified, standard handling and disposal practices shall be implemented pursuant to OSHA regulations.

c) Would the project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

Potentially Significant Unless Mitigation Incorporated. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a project would normally have a significant impact to hazards and hazardous materials if: (a) the project involved a risk of accidental explosion or release of hazardous substances (including, but not limited to oil, pesticides, chemicals or radiation); or (b) the project involved the creation of any health hazard or potential health hazard. The determination of significance shall be made on a case-by-case basis considering the following factors: (a) the regulatory framework for the health hazard; (b) the probable frequency and severity of consequences to people or property as a result of a potential accidental release or explosion of a hazardous substance; (c) the degree to which project design will reduce the frequency or severity of a potential accidental release or explosion of a hazardous substance; (d) the probable frequency and severity of consequences to people from exposure to the health

hazard; and (e) the degree to which project design would reduce the frequency of exposure or severity of consequences of exposure to the health hazard.

There are three Los Angeles Unified School District (LAUSD) schools that are approximately within one-quarter mile from the Project Site:

- Hillside Elementary School, located at 120 E. Avenue 35 (over 100 feet east of the Project Site);
- Loreta Street Elementary School, located at 3408 Arroyo Seco Avenue (over 400 feet northwest of the Project Site); and
- Los Angeles Leadership Academy Charter School, located at 234 E. Avenue 33 (over 900 feet east of the Project Site).

The Proposed Project has the potential to expose students and staff of the identified schools to potentially hazardous materials, substances, or waste during the construction period. Localized construction impacts associated with noise, dust and localized air quality emissions, and construction traffic/hauling activities generally occur within an area of 500 feet or less of the Project Site. The school that would most likely experience the highest construction impacts is Hillside Elementary School. The Proposed Project would provide appropriate construction measures to reduce the Project's impacts upon the nearby school facility. Further, the Project's proposed haul route would be designed to minimize, to the greatest degree possible, hauling impacts on Hillside Elementary School. The proposed haul route traveling to and from the I-5 Freeway would utilize Avenue 34, Pasadena Avenue, Avenue 33, Lacy Street, and Avenue 26. Hauling activity utilizing Pasadena Avenue will pass the rear side of Hillside Elementary School, which is improved with landscaping, trees and the façade of school structures. The active playground areas for Hillside Elementary are located towards the east of the campus fronting on Griffin Avenue and Avenue 35, which would not be utilized by hauling trucks. Implementation of Mitigation Measures MM-HAZ-2 and MM-HAZ-3, below, would reduce any construction impacts related to nearby schools to less than significant levels.

Mitigation Measures:

MM-HAZ-2 Construction Activity Near Schools

- The Applicant and contractors shall maintain ongoing contact with the administrators of Hillside Elementary School, Loreta Street Elementary School, and Los Angeles Leadership Academy Charter School. The administrative offices shall be contacted when demolition, grading and construction activity begin on the project site so that students and their parents will know when such activities are to occur. The developer shall obtain school walk and bus routes to the schools from either the administrators or from the LAUSD's Transportation Branch (323)342-1400 and guarantee that safe and convenient pedestrian and bus routes to the school be maintained.
- The Applicant shall install appropriate traffic signs around the site to ensure pedestrian and vehicle safety.
- There shall be no staging or parking of construction vehicles, including vehicles to transport workers on Pasadena Avenue, adjacent to the school.

- Due to noise impacts on the schools, no construction vehicles or haul trucks shall be staged or idled on Pasadena Avenue, adjacent to the school, during school hours.

MM-HAZ-3 Schools Affected by Haul Route

- Haul route scheduling shall be sequenced to minimize conflicts with pedestrians, school buses and cars at the arrival and dismissal times of the school day. Haul route trucks shall not be routed past the school during periods when school is in session especially when students are arriving or departing from the campus.

Furthermore, no hazardous materials other than modest amounts of typical cleaning supplies and solvents used for housekeeping and janitorial purposes would be typically associated with the operation and activities of the proposed land uses, and the use of these substances would comply with State Health Codes and Regulations. The Proposed Project's operational impacts would have a less than significant impact.

d) Would the project be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

Less Than Significant Impact. California Government Code Section 65962.5 requires various state agencies to compile lists of hazardous waste disposal facilities, unauthorized releases from underground storage tanks, contaminated drinking water wells, and solid waste facilities from which there is known migration of hazardous waste, and submit such information to the Secretary for Environmental Protection on at least an annual basis. A significant impact may occur if the Project Site is included on any of the above lists and poses an environmental hazard to surrounding sensitive uses.

Environmental records were reviewed to determine if there are any on- or off-site sources of documented environmental concerns. The Project Site was listed on the Resource Conservation and Recovery Act – Hazardous Waste Generator with no reported violations. The following are database records of hazardous sites within a ½-mile of the Project Site: three Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) sites, a RCRA – large quantity hazardous waste generator site (Former Welch's Uniform Site), a RCRA - small quantity waste generator site (Hillside Elementary School), five CAL-EPA sites, and three active non-LUST RWQCB Cleanup sites. However, OKI has determined that it is unlikely that any contaminants from these sites would have a significant impact on the Project Site.

Based on the absence of any outstanding violations or reported releases, as well as the results from a previous on-site assessments, the Project Site poses no significant environmental concerns, and there is no evidence of RECs in connection with the Project Site. With the Proposed Project's compliance with mandatory state and federal regulatory compliance measures, potential impacts associated with the release of a hazardous material would be less than significant.

e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?

No Impact. A significant project-related impact may occur if the Proposed Project were placed within a public airport land use plan area, or within two miles of a public airport, and subject to a safety hazard. The Project Site is not located within two miles of a public airport. Furthermore, the Project Site is not in an airport hazard area. Therefore, no impact would occur.

f) For a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area?

No Impact. This question would apply to the Proposed Project only if it were in the vicinity of a private airstrip and would subject area residents and workers to a safety hazard. The Project Site is not within the vicinity of a private airstrip. Therefore, no impact would occur.

g) Would the project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

No Impact. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a project would normally have a significant impact to hazards and hazardous materials if: (a) the project involved possible interference with an emergency response plan or emergency evacuation plan. According to the *L.A. CEQA Thresholds Guide*, the determination of significance shall be made on a case-by-case basis considering the degree to which the project may require a new, or interfere with an existing emergency response or evacuation plan, and the severity of the consequences. The Project Site is not located on an identified disaster route or an adopted emergency response or evacuation plan.[15,16] Development of the Project Site may require temporary and/or partial street closures due to construction activities. Nonetheless, while such closures may cause temporary inconvenience, they would not be expected to substantially interfere with emergency response or evacuation plans. The Proposed Project would not cause permanent alterations to vehicular circulation routes and patterns, impede public access, or travel upon public rights-of-way. Therefore, the Proposed Project would not be expected to interfere with any adopted emergency response plan or emergency evacuation plan, and no impact would occur.

h) Would the project expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?

No Impact. The Project Site is located in a highly urbanized area of the City of Los Angeles and does not include wildlands or high fire hazard terrain or vegetation. The Project Site is not located in a Very High

---

[15] *Los Angeles County Department of Public Works, City of Los Angeles Central Area Disaster Route Map, August 13, 2008.*

[16] *City of Los Angeles, Safety Element Exhibit H, Critical Facilities and Lifeline Systems in the City of Los Angeles, April 1995.*

Fire Hazard Severity Zone (VHFHSZ).[17] Therefore, no impacts from wildland fires are expected to occur.

Cumulative Impacts

Less Than Significant Impact. Development of the Proposed Project in combination with the three related projects has the potential to increase to some degree the risks associated with the use and potential accidental release of hazardous materials in the City of Los Angeles. However, the potential impact associated with the Proposed Project would be less than significant and, therefore, not cumulatively considerable. With respect to the related projects, the potential presence of hazardous substances would require evaluation on a case-by-case basis, in conjunction with the development proposals for each of those properties. Further, local municipalities are required to follow local, state, and federal laws regarding hazardous materials, which would further reduce impacts associated with the related projects. Therefore, with compliance with local, state, and federal laws pertaining to hazardous materials, the Proposed Project in conjunction with related projects would be expected to result in less-than-significant cumulative impacts with respect to hazardous materials.

IX. HYDROLOGY AND WATER QUALITY

a) Would the project violate any water quality standards or waste discharge requirements?

Less Than Significant Impact. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a project would normally have a significant impact on surface water quality if discharges associated with the project would create pollution, contamination, or nuisance as defined in Section 13050 of the California Water Code or that cause regulatory standards to be violated, as defined in the applicable National Pollution Discharge Elimination System (NPDES) stormwater permit or Water Quality Control Plan for the receiving body of water. A significant impact may occur if a project would discharge water which does not meet the quality standards of agencies which regulate surface water quality and water discharge into stormwater drainage systems. Significant impacts would also occur if a project does not comply with all applicable regulations with regard to surface water quality as governed by the State Water Resources Control Board (SWRCB) through its nine Regional Boards. The Project Site lies within the Los Angeles Regional Water Quality Control Board (RWQCB). Applicable regulations include compliance with NPDES permitting system, LAMC Article 4.4, and the low impact development requirements, which reduces potential water quality impacts during the construction and operation of a project.

Construction

Three general sources of potential short-term, construction-related stormwater pollution associated with the Proposed Project include: (1) the handling, storage, and disposal of construction materials containing pollutants; (2) the maintenance and operation of construction equipment; and (3) earth moving activities which, when not controlled, may generate soil erosion via storm runoff or mechanical equipment.

---

[17] *City of Los Angeles, Department of City Planning, City of Los Angeles Zoning Information and Map Access System (ZIMAS), website: www.zimas.lacity.org, accessed February 2016.*

Prior to issuance of a grading permit, the Applicant shall obtain coverage under the State Water Resources Control Board NPDES Construction General Permit. The Applicant shall provide the Waste Discharge Identification Number to the City of Los Angeles to demonstrate proof of coverage under the Construction General Permit. A Storm Water Pollution Prevention Plan (SWPPP) would be prepared and implemented for the Proposed Project in compliance with the requirements of the Construction General Permit. The SWPPP shall identify construction Best Management Practices (BMPs) to be implemented to ensure that the potential for soil erosion and sedimentation is minimized and to control the discharge of pollutants in stormwater runoff as a result of construction activities.

The SWPPP would incorporate the required implementation of Best Management Practices (BMPs) for erosion control and other measures to meet the NPDES requirements for stormwater quality. Implementation of the BMPs identified in the SWPPP and compliance with the NPDES and City discharge requirements would ensure that the construction of the Proposed Project would not violate any water quality standards or discharge requirements, or otherwise substantially degrade water quality. Additionally, City of Los Angeles Ordinance No. 173,494 further sets procedures for stormwater pollution control for the planning and construction of development and redevelopment projects. As such, the implementation of the code-required SWPPP and compliance with Ordinance No. 173,494 would ensure that the Proposed Project's construction-related water quality impacts would be less than significant.

Operation

The Project Site is currently developed with four light manufacturing and warehouse buildings and paved loading areas and surface parking. Aside from small landscaped areas, the Project Site is completely covered with impervious surfaces. Thus, nearly 100 percent of the surface water runoff from the Project Site is directed to adjacent storm drains and does not percolate into the groundwater table beneath the Project Site. Forma Engineering Inc. prepared a Drainage Report for the Project Site, dated February 2, 2016. As discussed in the Drainage Report, the Project Site currently drains from north to south, and rainfall is conveyed via surface flow to multiple drainage paths before being discharged to various points on Avenue 34. In the Project Site's current layout, nearly 100 percent of rainfall runoff from the Project Site is conveyed to Avenue 34.

The Proposed Project would maintain the Project Site at nearly 100 percent impervious area and would continue to generate surface water runoff. The Proposed Project would not be expected to increase surface water runoff compared to existing conditions, because the Proposed Project would be required to comply with low impact development (LID) requirements, further discussed below.

In November 2012, the Los Angeles adopted Order No. R4-2012-0175 the NPDES Stormwater Permit for the County of Los Angeles and cities within (NPDES No. CASOO4001). The primary objectives of the stormwater program requirements are to: (1) effectively prohibit non-stormwater discharge and (2) reduce the discharge of pollutants from stormwater conveyance systems to the maximum extent practicable statutory standard.

The Proposed Project would be required to comply with the City of Los Angeles Stormwater and Urban Runoff Pollution Control Ordinance (Ordinance No. 172,176, effectuated October 1998), which established LAMC Sections 64.70 through 64.70.13 and set the foundation for stormwater management in the City of Los Angeles. Since the adoption of the Stormwater and Urban Runoff Pollution Control Ordinance, many additional ordinances have passed to keep LAMC Article 4.4, Stormwater and Urban Runoff Pollution Control, up to date. Approved in October 2011, the LID Ordinance (Ordinance No. 181,899) expanded LAMC Article 4.4 and expanded the applicability of the existing Standard Urban Stormwater Mitigation Plan (SUSMP) requirements by imposing rainwater low impact development strategies on projects that require building permits. LAMC Article 4.4, including LID requirements, was recently amended in August 2015 with the approval of Ordinance No. 183,833, which incorporates the requirements of the Municipal Separate Storm Sewer (MS4) Permit. The Proposed Project would be required to prepare a LID Plan and demonstrate compliance with the LID requirements and standards and retain or treat the first ¾-inch of rainfall in a 24-hour period or the rainfall from an 85th percentile 24-hour runoff event, whichever is greater.[18]

The Proposed Project falls within the second tier of the LID requirements, which state that development projects that involve five or more units intended for residential use and result in an alteration of at least 50 percent or more of the impervious surfaces on an existing developed site, the entire site must comply with the standards and requirements of Article 4.4 of Chapter VI of the LAMC and with the Development Best Management Practices Handbook. The Project Site shall be designed to manage and capture stormwater runoff to the maximum extent practicable utilizing various LID techniques, including but not limited to infiltration, evapotranspiration, capture for use, and treated through high removal efficiency bio-filtration / bio-treatment systems of all runoff on-site (listed in priority order). On-site stormwater management techniques must be designed so that no stormwater runoff leaving the Project Site for at least the volume of water produced by the Stormwater Quality Design Volume (SWQDv). Development and redevelopment projects are required to prepare a LID Plan, which comply with the provisions of the Development Best Management Practices Handbook. If partial or complete on-site compliance of any type is technically infeasible, the Project Site and LID Plan shall be required to manage the flow from the SWQDv on-site in order to maximize on-site compliance. For the remaining runoff that cannot feasibly be managed on-site, the Proposed Project would be required to implement off-site mitigation on public and/or private land within the same sub-watershed as defined by the MS4 Permit.[19] Compliance with the LID requirements would reduce the amount of surface water runoff leaving the Project Site as compared to existing conditions.[20]

In compliance with the LID Plan, prior to issuance of grading permits, the Applicant shall submit a LID Plan and design plans to the City of Los Angeles Department of Building and Safety and the Bureau of Sanitation Watershed Protection Division for review and approval. The Low Impact Development Plan shall be prepared consistent with the requirements of the Development Best Management Practices

[18] *City of Los Angeles, Planning and Land Development Handbook for Low Impact Development (LID), Part B Planning Activities, 5th Edition, May 9, 2016.*

[19] *City of Los Angeles Ordinance No. 183,833, 2015.*

[20] *Ibid.*

Handbook. The BMPs shall be designed to retain or treat the runoff from a storm event producing ¾-inch of rainfall in a 24-hour period or the rainfall from an 85th percentile 24-hour runoff event (whichever is greater), in accordance with the Planning and Land Development Handbook for Low Impact Development, Part B Planning Activities. A signed certificate from a licensed civil engineer or licensed architect confirming that the proposed BMPs meet the numerical threshold standard shall be provided.

To ensure that all stormwater related BMPs are constructed and / or installed in accordance with the approved LID Plan, the City of Los Angeles requires a Stormwater Observation Report to be submitted to the City prior to the issuance of the Certificate of Occupancy. All projects reviewed and approved would require a Stormwater Observation Report and would be prepared, signed, and stamped by the engineer of record responsible for the approved LID Plan. With approval and issuance of a Certificate of Occupancy from LADBS, the Proposed Project would be determined to be in compliance with all applicable codes, ordinances, and other laws.[21]

Additionally, full compliance with the site-specific Environmental [Q] Conditions C.13 through C.17, listed below, would ensure that the operation of the Proposed Project would not violate any water quality standards or discharge requirements or otherwise substantially degrade water quality.

Environmental [Q] Conditions 13 - 17.

13. All Runoff (All Subareas)

a. Project applicants are required to implement stormwater BMPs to retain or treat the runoff from a storm event producing 3/4 inch of rainfall in a 24 hour period. The design of structural BMPs shall be in accordance with the Development Best Management Practices Handbook Part B Planning Activities. A signed certificate from a California licensed civil engineer or licensed architect that the proposed BMPs meet this numerical threshold standard is required.

b. Post development peak stormwater runoff discharge rates shall not exceed the estimated pre-development rate for developments where the increase peak stormwater discharge rate will result in increased potential for downstream erosion.

c. Maximize trees and other vegetation at each site by planting additional vegetation, clustering tree areas, and promoting the use of native and/or drought tolerant plants.

d. Any connection to the sanitary sewer must have authorization from the Bureau of Sanitation.

e. Reduce impervious surface area by using permeable pavement materials where appropriate, including: pervious concrete/asphalt; unit pavers, i.e. turf block; and granular materials, i.e. crushed aggregates, cobbles.

f. Paint messages that prohibits the dumping of improper materials into the storm drain system

[21] *City of Los Angeles, Planning and Land Development Handbook for Low Impact Development (LID), Part B Planning Activities, 5th Edition, May 9, 2016.*

adjacent to storm drain inlets (such as NO DUMPINGDRAINS TO OCEAN) and/or graphical icons. Prefabricated stencils can be obtained from the Department of Public Works, Stormwater Management Division.

g. Legibility of stencils and signs must be maintained.

h. Promote natural vegetation by using parking islands and other landscaped areas.

i. Materials with the potential to contaminate stormwater must be: (1) placed in an enclosure such as, but not limited to, a cabinet, shed, or similar stormwater conveyance system; or (2) protected by secondary containment structures such as berms, dikes, or curbs.

j. The storage area must be paved and sufficiently impervious to contain leaks and spills.

k. The storage area must have a roof or awning to minimize collection of stormwater within the secondary containment area.

I. The owner(s) of the property will prepare and execute a covenant and agreement (Planning Department General form CP-6770) satisfactory to the Planning Department binding the owners to post construction maintenance on the structural BMPs in accordance with the Standard Urban Stormwater Mitigation Plan and/or per manufacturer's instructions.

14. Stormwater Runoff 10+ Home Subdivision/Multi Family

a. Install Roof runoff systems where site is suitable for installation.

b. Surface parking lots constitute a significant portion of the impervious land coverage. To reduce the quantity of runoff, surface parking lots can be designed one of two ways;

(i) Hybrid Lot - parking stalls utilize permeable materials, such as crushed aggregate, aisles are constructed of conventional materials such as asphalt.

(ii) Parking Grove - is a variation on the permeable stall design, a grid of trees and bollards are added to delineate parking stalls. This design presents an attractive open space when cars are absent, and shade when cars are present.

c. Design an efficient irrigation system to m1mm1ze runoff including: drip irrigation for shrubs to limit excessive spray; shutoff devices to prevent irrigation after significant precipitation; and flow reducers.

15. Stormwater Runoff Commercial and Industrial Development (Lot Size 100,000 sf)

a. Cover loading dock areas or design drainage to minimize run-on and run-off stormwater.

b. Direct connections to storm drains from depressed loading docks (truck wells) are prohibited.

c. Repair/maintenance bays must be indoors or designed in such a way that doesn't allow stormwater

run-on or contact with stormwater runoff.

d. Design repair/maintenance bay drainage system to capture all washwater, leaks and spills. Connect drains to a standard sump for collection and disposal. Direct connection of the repair/maintenance bays to the storm drain system is prohibited. If required, obtain an Industrial Waste Discharge Permit.

e. Vehicle/equipment wash areas must be self-contained and/or covered, equipped with a clarifier, or other pretreatment facility, and property connected to the sanitary sewer.

f. The following activities are to be conducted under proper cover with drain routed to the sanitary sewer:

(i) Storage of industrial wastes.

(ii) Handling or storage of hazardous wastes.

(iii) Metal fabrication or Pre-cast concrete fabrication.

(iv) Welding, Cutting or Assembly.

(v) Painting, Coating or Finishing.

g. Store above ground liquid storage tanks (drums and dumpsters) in areas with impervious surfaces in order to contain leaks and spills. Install a secondary containment system such as berms, dikes, liners, vaults, and double-wall tanks. Where used oil or dangerous waste is stored, a dead- end sump should be installed in the drain.

h. Toxic wastes must be discarded at a licensed regulated disposal site. Store trash dumpsters either under cover and with drains routed to the sanitary sewer or use non-leaking and water-tight dumpsters with lids. Use drip pans or absorbent materials whenever grease containers are emptied. Wash containers in an area with properly connected sanitary sewer.

i. Reduce and recycle wastes, including: paper; glass; aluminum; oil; and grease.

j. Reduce the use of hazardous materials and wastes by: using detergent based or water-based cleaning systems; and avoid chlorinated compounds, petroleum distillates, phenols, and formaldehyde.

k. Control or reduce or eliminate flow to natural drainage systems to the maximum extent practicable.

I. Cleaning of vehicles and equipment to be performed within designated covered or bermed wash area paved with Portland concrete, sloped for wash water collection, and with a pretreatment facility for wash water before discharging to properly connected sanitary sewer with a CPI type oil/water separator. The separator unit must be: designed to handle the quantity of flows; removed for cleaning on a regular basis (at least twice a year) to remove any solids; and the oil absorbent

pads must be replaced regularly, once in fall just before the wet season, and in accordance with manufacturer's specifications.

16. Stormwater Runoff Food Service Industry (Restaurants, Bakeries, Food Processors)

a. Cleaning of oily vents and equipment to be performed within designated covered area, sloped for wash water collection, and with a pretreatment facility for wash water before discharging to properly connected sanitary sewer with a CPI type oil/water separator. The separator unit must be: designed to handle the quantity of flows; removed for cleaning on a regular basis to remove any solids; and the oil absorbent pads must be replaced regularly according to manufacturer's specifications.

b. Store trash dumpsters either under cover and with drains routed to the sanitary sewer or use non-leaking and water tight dumpsters with lids. Wash containers in an area with properly connected sanitary sewer.

c. Reduce and recycle wastes, including oil and grease.

d. Store liquid storage tanks (drums and dumpsters) in designated paved areas with impervious surfaces in order to contain leaks and spills. Install a secondary containment system such as berms, curbs, or dikes. Use drip pans or absorbent materials whenever grease containers are emptied.

e. Infiltrate runoff before it reaches the storm drain system.

f. Runoff must be treated prior to release into the storm drain. Three types of treatments are available, (1) dynamic flow separator; (2) a filtration or (3) infiltration. Dynamic flow separator uses hydrodynamic force to remove debris, and oil and grease, and are located underground. Filtration involves catch basins with filter inserts. Filter inserts must be inspected every six months and after major storms, cleaned at least twice a year. Infiltration methods are typically constructed on-site and are determined by various factors such as soil types and groundwater table.

17. Stormwater Runoff Surface Parking Lots with 25 or More Spaces or 5,000 Square-feet of Lot Area (Residential, Commercial, Industrial, Public Facility)

a. Trash container areas must have drainage from adjoining roofs and pavement diverted around the area(s).

b. Trash container areas must be screened or walled to prevent off-site transport of trash.

c. Reduce impervious land coverage of parking lot areas.

d. Infiltrate runoff before it reaches the storm drain system.

e. Runoff must be treated prior to release into the storm drain. Three types of treatments are

available, (1) dynamic flow separator; (2) filtration or (3) infiltration. Dynamic flow separator uses hydrodynamic force to remove debris, and oil and grease, and are located underground. Filtration involves catch basins with filter inserts. Filter inserts must be inspected every six months and after major storms, and cleaned at least twice a year. Infiltration methods are typically constructed on-site and are determined by various factors such as soil type and groundwater table.

Implementation of the LID Ordinance would reduce the amount of stormwater leaving the Project Site as runoff compared to existing conditions. Therefore, with the implementation of LID requirements and Environmental [Q] Conditions C.13 through C.17, the Proposed Project's operational water quality impacts would be less than significant.

b) Would the project substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?

Less Than Significant Impact. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a project would normally have a significant impact on groundwater level if it would change potable water levels sufficiently to: (a) reduce the ability of a water utility to use the groundwater basin for public water supplies, conjunctive use purposes, storage of imported water, summer/winter peaking, or respond to emergencies and drought; (b) reduce yields of adjacent wells or well fields (public or private); (c) adversely change the rate or direction of flow of groundwater; or (d) result in demonstrable and sustained reduction in groundwater recharge capacity.

The Los Angeles County Department of Public Works (LACDPW) has maintained various groundwater monitoring wells in the vicinity of the Project Site over the past 50 years. The closest LACDPW monitoring well to the Project Site is Well ID No. 2772E (State No. 1S13W15R02), located approximately 0.6 mile to the southwest (LACDPW, 2015a). Review of the available monitoring data for this well for the monitoring period between 1958 and 2010 indicate that the depth to groundwater has fluctuated between 25 and 53 feet below the existing ground surface (LACDPW, 2015a). The most recent groundwater level measurement for Well No. 2772E was measured in January, 2010 at a depth of 33 feet below the existing ground surface (LACDPW, 2015a).

As discussed in Section 9(a) the Project Site is nearly 100 percent impervious. As such, nearly 100 percent of the surface water runoff from the Project Site is directed to adjacent storm drains and does not percolate into the groundwater table beneath the Project Site. According to the Geotechnical Investigation, groundwater was encountered at a depth of 40.75 feet below the ground surface. The historically highest groundwater in the Project Site area is 20 feet below the ground surface. A review of available monitoring data for the past 50 years indicate that the depth of groundwater in the Project area fluctuates between 25 and 53 feet below the existing ground surface. The Proposed Project would excavate soils beneath the Project Site to allow for one level of subterranean parking. The subterranean parking structure will extend to a depth of approximately 15 feet below grade and would generally not impact the groundwater table. Based on the historic high groundwater level in the site vicinity, the depth

of groundwater in on-site borings (drilled to a maximum depth of 50 feet beneath the existing ground surface), and the depth of proposed construction, Geocon concluded that groundwater is neither expected to be encountered during construction, nor have a detrimental effect on the Proposed Project. However, the Geotechnical Investigation states that it is not uncommon for groundwater levels to vary seasonally or for groundwater seepage conditions to develop where none previously existed, especially in impermeable fine-grained soils which are heavily irrigated or after seasonal rainfall. In addition, recent requirements for stormwater infiltration could result in shallower seepage conditions in the immediate site vicinity. In the unlikely event groundwater is encountered during the construction process, the Proposed Project would be required to comply with the requirements of the waste discharge requirements for discharges of groundwater from construction (Order No. R4-2008-0032, National Pollution Discharge Elimination System No. CAG994004). Proper surface drainage of irrigation and precipitation will be critical for future performance of the project. Recommendations for drainage are provided in the Surface Drainage section of this report (see Section 7.17 of the Site Geotechnical Investigation). As discussed in Checklist Question VI (a), the Proposed Project would be required to comply with the Geotechnical Investigation and LADBS's geology and soils report approval letter, which provides recommendations for surface drainage. The Proposed Project would further comply with the regulatory compliance measure, below, regarding dewatering.

Regulatory Compliance Measure:

- **(Dewatering):** If required, any dewatering activities during construction shall comply with the requirements of the Waste Discharge Requirements for Discharges of Groundwater from Construction and Project Dewatering to Surface Waters in Coastal Watersheds of Los Angeles and Ventura Counties (Order No. R4-2008-0032, National Pollutant Discharge Elimination System No. CAG994004) or subsequent permit. This will include submission of a Notice of Intent for coverage under the permit to the Los Angeles Regional Water Quality Control Board at least 45 days prior to the start of dewatering and compliance with all applicable provisions in the permit, including water sampling, analysis, and reporting of dewatering-related discharges.

The Proposed Project would continue to be supplied with potable water by the LADWP. Further, the Proposed Project would comply with LAMC Section 64.70, Stormwater Runoff and Urban Pollution Control. With compliance with the regulatory compliance measure relating to dewatering, listed above, the Proposed Project would not cause the depletion of the groundwater supplies or the interference of groundwater recharge. Therefore, a less than significant impact would occur.

c) Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner, which would result in substantial erosion or siltation on- or off-site?

Less Than Significant Impact. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a project would normally have a significant impact on surface water hydrology if it would result in a permanent, adverse change to the movement of surface water sufficient to produce a substantial change in the current or direction of water flow. As discussed in the Drainage Report, the Project Site is currently nearly 100 impervious and rainfall runoff is conveyed via surface flow (from north to south) to multiple drainage paths on the Project Site before discharging to various points onto Avenue 34. The Project Site

is located in an urbanized area within the City of Los Angeles, and no streams or river courses are located on-site. The Proposed Project would maintain the Project Site's nearly 100 percent imperviousness. However, the Project would comply with the LID Ordinance and retain or treat the first ¾-inch of rainfall in a 24-hour period or the rainfall from an 85th percentile 24-hour runoff event, whichever is greater.. As such, the Project would reduce the amount of runoff leaving the Project Site, as compared to existing conditions. Implementation of the Proposed Project would not increase site runoff or result in any changes in the local drainage patterns. Impacts associated with localized drainage and surface water runoff would therefore be considered less than significant.

d) Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?

Less Than Significant Impact. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a project would normally have a significant impact on surface water hydrology if it would result in a permanent, adverse change to the movement of surface water sufficient to produce a substantial change in the current or direction of water flow. The Proposed Project would not result in a significant increase in site runoff, or any changes in the local drainage patterns. Therefore, as the Proposed Project would not substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site. In addition, the Proposed Project would comply with the LID Ordinance, and impacts would be less than significant.

e) Would the project create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?

Less Than Significant Impact. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a project would normally have a significant impact on surface water quality if discharges associated with the project would create pollution, contamination, or nuisance as defined in Section 13050 of the California Water Code (CWC) or that cause regulatory standards to be violated, as defined in the applicable National Pollution Discharge Elimination System (NPDES) stormwater permit or Water Quality Control Plan for the receiving water body. A significant impact may occur if the volume of stormwater runoff from the Project Site were to increase to a level which exceeds the capacity of the storm drain system serving the Project Site. A significant adverse effect would also occur if a project substantially increases the probability that polluted runoff would reach the storm drain system.

Currently, the Project Site is completely developed with impervious surfaces and nearly 100 percent of surface water runoff is directed to adjacent street storm drains. As discussed in the Drainage Report, rainfall runoff on the Project Site flows from north to south via surface flow to multiple drainage paths on the Project Site before discharging at various points onto Avenue 34. The Proposed Project would not result in a significant increase in site runoff, or any changes in the local drainage pattern. Runoff from the Project Site would to be collected on the Project Site and directed towards existing storm drains in the Project vicinity that have adequate capacity. Pursuant to local practice and City policy, stormwater retention will be required as part of the Low Impact Development (LID) Ordinance / SUSMP implementation features (despite no increase in imperviousness of the site). Any contaminants gathered

during routine cleaning of construction equipment would be disposed of in compliance with applicable stormwater pollution prevention permits. Further any pollutants from the parking areas would be subject to the requirements and regulations of the NPDES and applicable LID Ordinance standards and retain or treat the first ¾ –inch of rainfall in a 24-hour period or the rainfall from an 85th percentile 24-hour runoff event, whichever is greater, which would reduce the Proposed Project's impact to the stormwater infrastructure. Therefore, the Proposed Project would not create or contribute to runoff water which would exceed capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff. Potential impacts to surface water quality would be less than significant. Further, the Proposed Project would comply with LAMC Section 64.70, Stormwater Runoff and Urban Pollution Control, and all applicable laws and regulations pertaining to stormwater runoff and water quality would ensure impacts are reduced to a less than significant level.

f) Would the project otherwise substantially degrade water quality?

No Impact. A significant impact may occur if a project includes potential sources of water pollutants that would have the potential to substantially degrade water quality. The Proposed Project does not include potential sources of contaminants, which could potentially degrade water quality and would comply with all federal, state and local regulations governing stormwater discharge. Therefore, no impact would occur.

g) Would the project place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?

No Impact. A significant impact would occur if the Project were to place housing within a 100-year flood hazard area. A 100-year flood is defined as a flood which results from a severe rainstorm with a probability of occurring approximately once every 100 years. According to the Federal Emergency Management Agency (FEMA), the Project Site is not located in an area designated as a 100-year flood hazard area. The Project Site in a zone designated as Zone X, which signifies that the area is outside the 0.2% annual chance floodplain.[24] Therefore, the Proposed Project would not place housing within a 100-year flood hazard area, and no impact would occur.

h) Would the project place within a 100-year flood hazard area structures which would impede or redirect flood flows?

No Impact. A significant impact may occur if the Project was located within a 100-year flood zone, which would impede or redirect flood flows. The Project Site is not in an area designated as a 100-year flood hazard area as mapped by the FEMA's Flood Insurance Rate Map. The Project Site is in a zone designated as Zone X, which signifies that the area is outside the 0.2% annual chance floodplain.[25] The Project Site is located in an urbanized area. As no changes to the local drainage pattern would occur with implementation of the Proposed Project, the Proposed Project would not have the potential to impede or redirect floodwater flows. Therefore, no impact would occur.

---

[24] *Federal Emergency Management Agency (FEMA), Flood Insurance Rate Map, Los Angeles County, California and Incorporated Areas, Map number 06037C1629F, September 26, 2008.*

[25] *Ibid.*

i) Would the project expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?

Less Than Significant Impact. A significant impact may occur if the Proposed Project exposes people or structures to a significant risk of loss or death caused by the failure of a levee or dam, including but not limited to a seismically-induced inundation. A review of the City of Los Angeles General Plan Safety Element, the Proposed Project lies within a potential inundation area for an earthquake-induced dam failure from the Devil's Gate Dam.[26] [27] However, this reservoir, as well as others in California, are continually monitored by various governmental agencies (such as the State of California Division of Safety of Dams and the U.S. Army Corps of Engineers) to guard against the threat of dam failure. Current design and construction of practices and ongoing programs of review, modification, or total reconstruction of existing dams are intended to ensure that all dams are capable of withstanding the maximum considered earthquake. Therefore, the potential for inundation at the Project Site as a result of an earthquake-induced dam failure is considered low. Therefore, a less than significant impact would occur.

j) Would the project expose people or structures to a significant risk of loss, injury or death involving inundation by seiche, tsunami, or mudflow?

No Impact. A significant impact would occur if the Project Site is sufficiently close to the ocean or other water body to be potentially at risk of the effects of seismically-induced tidal phenomena (i.e., seiche and tsunami), or if the Project Site is located adjacent to a hillside area with soil characteristics that would indicate potential susceptibility to mudslides or mudflows. Seiches are large waves generated in very large enclosed bodies of water or partially enclosed arms of the sea in response to ground shaking.

The Geotechnical Investigation finds that the Project Site is not located within a coastal area. Therefore, tsunamis, seismic sea waves, are not considered a significant hazard at the Project Site. Additionally, no major water-retaining structures are located immediately up gradient from the Project Site. Flooding from seismically-induced seiche is considered low.

The Project Site and the surrounding area are urbanized and relatively flat. The Project's Geotechnical Investigation finds that the Project Site is not located within a landslide area. Additionally, the Project Site is not within an area identified as having a potential for seismic slope instability.[28] Thus, the occurrence of mudflows on the Site is considered remote. Therefore, the Project Site is not subject to slope instability, tsunamis, and seiches. Therefore, no impact would occur.

[27] *Geocon West, Inc., Geotechnical Investigation Proposed Mixed-Use Residential Development 141 West Avenue 34, Los Angeles, California, July 23, 2015.*

[28] *Ibid.*

Cumulative Impacts

Less Than Significant Impact. Development of the Proposed Project in combination with the three related projects would result in the further infilling of uses in a developed area within the City of Los Angeles. As discussed above, the Project Site and the surrounding areas are served by the existing storm drain systems. Runoff from the Project Site and adjacent urban uses is typically directed into the adjacent streets, where it flows to the nearest drainage improvements. It is likely that most, if not all, of the related projects would also drain to the surrounding street system. However, little if any additional cumulative runoff is expected from the Proposed Project and the related project sites. Under the requirements of the LID Ordinance, each related project would be required to implement stormwater BMPs to retain or treat the runoff from a storm event producing ¾-inch of rainfall in a 24-hour period or the rainfall from an 85th percentile 24-hour runoff event, whichever is greater. Mandatory structural BMPs in accordance with the NPDES water quality program will therefore result in a cumulative reduction to surface water runoff, as the development in the surrounding area is limited to infill developments and redevelopment of existing urbanized areas. Therefore, the Proposed Project would not make a cumulatively considerable contribution to impacting the volume or quality of surface water runoff, and cumulative impacts to the existing or planned stormwater drainage systems would be less than significant. Therefore, cumulative water quality impacts would be less than significant.

X. LAND USE AND PLANNING

a) Would the project physically divide an established community?

No Impact. A significant impact may occur if the project would be sufficiently large enough or otherwise configured in such a way as to create a physical barrier within an established community. According to the *L.A. CEQA Thresholds Guide*, the determination of significance shall be made on a case-by-case basis considering the following factors: (a) the extent of the area that would be impacted, the nature and degree of impacts, and the types of land uses within that area; (b) the extent to which existing neighborhoods, communities, or land uses would be disrupted, divided or isolated, and the duration of the disruptions; and (c) the number, degree, and type of secondary impacts to surrounding land uses that could result from implementation of the Proposed Project.

The Project Site is located in an urbanized area within the Northeast Los Angeles community and is consistent with the existing physical arrangement of the properties within the vicinity of the Project Site. No separations of uses or disruption of access between land use types would occur as a result of the Proposed Project. The Proposed Project would improve the Project Site with the development of a creative campus that includes many public pathways and open space areas that would engage the surrounding community. Further, the Proposed Project would incorporate pedestrian scale commercial and creative office uses along Pasadena Avenue, which promotes pedestrian activity along Pasadena Avenue. The Project's design, open spaces, and layout promotes a community environment, as compared to the existing development on-site that is currently fenced off and is developed with light industrial and warehouse uses. Accordingly, implementation of the Proposed Project would not disrupt or divide the physical arrangement of the established community, and development of the Project would create an engaging environment and add public amenities to the area. Therefore, no impact would occur.

b) Would the project conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?

Less Than Significant Impact. A significant impact may occur if a project is inconsistent with the General Plan or zoning designations applicable to the Project Site, and would cause adverse environmental effects, which the General Plan and zoning designations are created to avoid or mitigate.

The Proposed Project would include the development of a creative campus that would include 372 residential units, 30,000 square feet of creative offices, and 10,000 square feet of new retail and restaurant space. As part of the Proposed Project, the large warehouse building (86,712 square feet), the 4,033 square foot building on the southeast, a portion of the 3,521 square foot building on the southwest side of the Project Site, and 16,055 square feet of the 24,018 square foot building that fronts Pasadena Avenue would be demolished. The remaining 7,963 square feet of the aforementioned 24,018 square foot building and the remaining portion of the small building located on the southwest corner of the Project Site would be rehabilitated as part of the Proposed Project.

The Project Site is zoned [T][Q]CM-2D with a land use designation of Commercial Manufacturing. The CM designation indicates that the Project Site has no guidelines for height; required yards shall comply with R4 requirements for residential portions of the Project Site, and the minimum lot area shall comply with R3 requirements for residential uses. Allowable uses within a CM zone include wholesale, storage, clinics, limited manufacturing, limited C2 uses, and R3 uses. The Project Site is located within Height District 2, which imposes no height limitations for the Project Site. There are three conditions on the Project Site, which are put in place by Ordinance No. 179,280, these include: a permanent tentative zone classification ([T]), a qualified classification ([Q]), and a development limitation (D). The "D" Development Limitation designation limits the FAR on-site to 3:1. The [Q] Qualified Classification imposes general conditions to on-site uses, parking, and design conditions (site planning, pedestrian access, building design architectural details, walls and fences, landscaping, and mechanical, security, and trash equipment). The complete list of [Q] Conditions are identified in Section II, Project Description. The following highlights relevant provisions of the [Q] condition as it pertains to new development at the Project Site:

- **Use:** There shall be no 100% Commercial projects allowed. There shall be no 100% Residential projects allowed.
- **Parking:** Surface Parking cannot exceed 20% of the total lot area; No parking areas shall face Pasadena Avenue; All Residential parking must be below grade; and Residential and mixed-use projects shall share parking required by the LAMC during off-hours.
- **Yards:** Pasadena Avenue must be designated as a Front Yard. Ground floor commercial uses shall be built to the property line, except where outdoor dining and public areas are provided.
    - Side and rear yards per the underlying CM Zone, which require yards in accordance with the R4 Zone:
        - Side: 5 feet, plus 1 foot for each story over 2nd floor.
        - Rear: 15 feet, plus 1 foot for each story over 3rd floor.

- **Other:**
  - Pasadena Avenue shall have commercial-facing uses.
  - 30% of the Subarea shall be open space and/or paseos
  - Building Breaks shall be provided at various locations within the site.
  - 1 tree provided per each 1,000 sf. of Land Area; 50% of common open space shall be landscaped.

The Project Site is located within the East Los Angeles State Enterprise Zone, an Adaptive Reuse Incentive Area, and a Transit Priority Area per the Department of City Planning's Zoning Information File ZI No. 2452. Although the Project Site was initially mapped within the boundaries of the proposed Cornfield Arroyo Specific Plan (CASP), the Project Site was subsequently omitted from the CASP boundaries when it was adopted. The Project Site is uniquely located in Subarea 4 of Ordinance 179,280. The intent of Ordinance No. 179,280 is to change the zones and height districts of identified properties in order to promote mixed-use development in close proximity to a transit station. The applicable [Q] Conditions and D Limitations established in the Ordinance are identified in Section II, Project Description.

As part of the requested entitlements, the Applicant is requesting the clarification of "Q" Condition A.1.c of Ordinance No. 179,280 which reads as follows: "A minimum of 50% of the non-residential floor area shall be limited to Neighborhood Retail and Neighborhood Services as permitted by LAMC 13.07C." Those uses as defined in LAMC 13.07C are as follows:

> **"Neighborhood Retail"** Neighborhood retail uses shall be limited to retail sale of goods needed by residents and patrons of a Pedestrian Oriented District, including: Art galleries, Art supplies, Athletic/sporting goods, Bakeries, Books or cards, Bicycle sales and repairs, Clock or watch sales and/or repair, Clothing, Computer sales and repair, Drug stores, Fabrics or dry goods, Florists, Food/grocery stores, including supermarkets, produce, cheese and meat markets and delicatessens, Hardware, Household goods and small appliances, Newsstands, Photographic equipment and repair, Sit Down Restaurants, excluding drive-through service, Stationery, Toys; and Other similar retail goods as determined by the Zoning Administrator.
>
> **"Neighborhood Services"** Neighborhood services are those services used by residents and patrons on a regular basis, including: Barber shop or beauty parlor, Blueprinting, Child care facility, Club or lodge, bridge club, fraternal or religious associations, Copying services, Custom dressmaking, Dry cleaner, Financial services, Laundry or self-service Laundromat, Locksmith, Optician, Photographer, Shoe repair, Tailor, and other similar services as determined by the Zoning Administrator.

The Project proposes 30,000 square feet of creative office space and 10,000 square feet of more traditional retail space. However, the world of "creative office" has expanded significantly to expressly accommodate new smaller entrepreneurial businesses and neighborhood incubator uses. Furthermore, of the above list, as highlighted above, more than 50% of the express uses specified as neighborhood-serving uses may be conducted in either a traditional retail storefront, or within a less conventional creative office complex, in which flexible space and flexible work-space is the national trend to promote the long-term utilization of spaces.

The Applicant is requesting the clarification of "non-residential" to be interpreted to permit a variety of neighborhood-serving commercial support services, which may include both offices/businesses, and other commercial retail services. The design of the Proposed Project would more than achieve the intent of this "Q" Clarification by also providing the availability for goods and services sale and production in *residential* portions of the building through the provision of residential units throughout the Project Site. However, the "Q" Clarification as currently interpreted will limit the feasibility of the Project by shrinking the floor area available for creative office on-site to only accommodate "business" in the traditional sense of a Class "A" office space.

With respect to the applicable yard requirements, the Applicant is seeking approval of a Zoning Administrator's Adjustment pursuant to LAMC Section 12.28.A to permit the maintenance of a minimum 0-foot side yard in lieu of 8-feet, as required by LAMC 12.17.1.C, to preserve existing buildings on-site with non-conforming yards. These adjustments are necessary as they apply to existing buildings that are non-conforming to the yard requirements and are proposed to be retained and re-used as part of the Project.

The proposed mixed-use Project is permitted by the underlying CM zoning, as well as the Commercial Manufacturing classification by the Northeast Los Angeles Community Plan.

Regional Plans

SCAQMD Air Quality Management Plan. The Proposed Project is located within the South Coast Air Basin (Basin) and, therefore, falls under the jurisdiction of the SCAQMD. In conjunction with SCAG, the SCAQMD is responsible for formulating and implementing air pollution control strategies. The SCAQMD's Air Quality Management Plan (AQMP) was recently updated in 2003 to establish a comprehensive air pollution control program leading to the attainment of State and federal air quality standards in the Basin, which is a non-attainment area. The most recent AQMP was adopted on December 7, 2012. The Proposed Project conforms to the zoning and land use designations for the Project Site as identified in the General Plan, and, as such, would not add emissions to the Basin that were not already accounted for in the approved AQMP. Furthermore, as noted in Section 3, Air Quality, the Proposed Project would not exceed the daily emission thresholds during the construction or operational phases of the Proposed Project. Therefore, the Proposed Project would be consistent with the AQMP.

SCAG Regional Comprehensive Plan. The Project Site is located within the six-county region that comprises the SCAG planning area. The SCAG Regional Comprehensive Plan (RCP) includes growth management policies that strive to improve the standard of living, maintain the regional quality of life, and provide social, political, and cultural equity. The Proposed Project would be consistent with policies set forth in the RCP, as the Project is an infill development and would develop a fully developed, underutilized lot with a transit adjacent mixed-use creative campus, which is consistent with both local and regional plans for growth and development. Thus, as the Proposed Project would generate approximately 1,216 new residents in a high priority transit area and would not exceed regional growth projections, the Proposed Project would be consistent with SCAG growth projections (see Checklist Question VIII, Population and Housing).

Local Plans

City of Los Angeles General Plan

The General Plan is a comprehensive, long-range declaration of purposes, policies and programs for the development of the City. The General Plan is a dynamic document consisting of 11 elements, which include a Framework Element, Air Quality Element, Conservation Element, Housing Element, Noise Element, Open Space Element, Service Systems Element / Public Recreation Plan, Safety Element, Mobility Element, a Plan for a Healthy Los Angeles, and the Land Use Element. The Land Use Element is comprised of 35 community plans.[29]

Those elements that would be most applicable to the Proposed Project are the Framework Element and the Housing Element. The Framework Element provides citywide guidelines and a foundation in which Community Plans and other General Plan Elements can base their more specific goals, objectives, and policies on. The Project would promote the Framework Land Use Chapter's objectives and policies for multi-family development. These objectives and policies include: provide for the stability and enhancement of multi-family residential neighborhoods and allowing for growth in areas where there is sufficient public infrastructure and services and the residents' quality of life can be maintained or improved; accommodate the development of multi-family residential units in areas designated in the community plans in accordance with the zoning densities; and improve the quality of new multi-family dwelling units based on the urban form and neighborhood design standards.

The Proposed Project would conform to the General Plan Framework Housing Chapter and the Housing Element goals by enhancing housing supply in the City. The Project provides the area with greater diversity in type and cost of housing that increases housing opportunities for a larger range of income levels. The Project's 372 dwelling units would also be accessible to all persons without discrimination. Additionally, the Proposed Project would reserve 11 percent of its base density residential units (approximately 31 dwelling units) for very low income tenants. The development would generate new residents that are within close proximity to bus and rail lines, Arroyo Seco Parkway (SR-110), and commercial and industrial areas that provide services and job opportunities. Additionally, the Proposed Project would enhance the surrounding community by developing an infill site, which currently contains industrial and warehouse land use, with a pedestrian friendly development.

Los Angeles Municipal Code

The Proposed Project would not conflict with the goals, objectives, and allowable land uses in the Northeast Los Angeles Community Plan and the LAMC. The General Plan land use designation for the Project Site is Commercial Manufacturing and the zoning designation is [T][Q]CM-2D, which allows for residential, commercial retail/restaurant, and office land uses. The Proposed Project would be comprised of multi-family residential uses, creative office, and retail/restaurant uses. Residential uses are permitted

---

[29] *City of Los Angeles Department of City Planning, General Plan Elements, website: http://cityplanning.lacity.org/, accessed August 2016.*

on lots zoned for CM uses that are located within the Northeast Los Angeles CPA. Therefore, the Proposed Project would conform to the allowable land uses pursuant to the LAMC.

The Project Site's total lot area consists of approximately 219,320 square feet (5.03 acres) and 203,960 square feet of buildable area. The Project Site is currently improved with four light industrial and warehouse buildings and paved surface loading and parking areas. The Proposed Project includes the construction of a creative campus that would include five buildings. The Proposed Project would include a total of 372 residential dwelling units, 30,000 square feet creative office space, and 10,000 square feet of retail/restaurant space.

Floor Area

The Project Site is zoned [T][Q]CM-2D with the land use designation of Commercial Manufacturing. The corresponding zones for Commercial Manufacturing are the CM and P Zones. Height District No. 2 does not specify a building height limit; although the 'D' designation limits floor area ratio on-site to FAR 3:1. The Project Site is approximately 219,320 gross square feet and has a buildable area of 203,960 square feet. As such, allowable FAR on-site is 611,880 square feet. The Proposed Project would provide approximately 524,600 square feet of floor area for an approximate 2.6:1 FAR. Therefore, development of the Proposed Project is within the allowable floor area ratio for the Project Site, and a less than significant impact would occur.

Density

Pursuant to LAMC Section 12.17.1.A.1, residential land uses are permitted in a CM Zone with compliance with all the regulations of the R3 Zone, with the exception of any required front yard setbacks. As such, residential uses on the Project Site are limited to one dwelling unit per 800 square feet (or approximately 275 dwelling units for the Project Site based on a lot area of 219,320 square feet). The Proposed Project would reserve eleven percent of its base density (approximately 31 dwelling units) as very low income units. As such, the Proposed Project would include a ministerial density bonus pursuant to LAMC Section 12.22 A.25 for a 35 percent increase in permitted density to allow for 372 dwelling units in lieu of the base density of 275 dwelling units. Therefore, the Proposed Project would be consistent the permitted density for the Project Site. Therefore, a less than significant impact would occur.

Open Space

Open space is provided in accordance with Ordinance 179,280 and LAMC 12.21.G. Pursuant to LAMC 12.21.G, the Project Site is required to provide 39,575 square feet of usable open space for Project residents. In addition to the LAMC requirement for common open space, Ordinance 179,280 further establishes a [Q] Condition (See [Q] Condition B.1.e) which requires a minimum of 30% of the Subarea shall be devoted to publicly accessible open space and pedestrian paths that shall be accessible beginning at dawn and ending at dusk or close of on-site businesses, whichever occurs later. This condition would require 64,744 square feet of publicly available open space. The Proposed Project is providing 64,744 square feet of publicly accessible open space on-site in accordance with the [Q] condition and 39,575 square feet of open space on-site exclusively for residents and their guests. Refer to Table II-3, located in the Project Description, for proposed open space on site. Thus, the Proposed Project would be consistent

with the open space requirements for the Project Site. Therefore, a less than significant impact would occur.

The Proposed Project contains a complex network of public and common open space in a network of connecting paseos, plazas, and gardens. Two indoor community rooms would be provided in Building B. An outdoor pool would be available for residents at the southwest corner of the Project Site, as well as an on-site fitness facility.

In accordance with LAMC Section 12.21 G.2(a)(3), a minimum of 25 percent would be landscaped with a variety of drought-tolerant plant species. The proposed landscaping plan provides a mix of ground cover and trees to compliment the architecture. The Applicant envisions a landscape palette that evokes relationship with the nearby river and Arroyo, using species and materials that mirror the Arroyo ecology. The plant material would be selected for temperature hardiness and low water use.

Parking

As discussed previously in this Section, the Proposed Project meets all of the requisite criteria of a Transit Oriented Infill Project pursuant to SB 743. SB 743, now codified as law under Public Resources Code 21099 provides that "aesthetic and parking impacts of a residential, mixed-use residential, or employment center project on an infill site within a transit priority area shall not be considered significant impacts on the environment." Accordingly, the Proposed Project's parking impacts shall not be considered significant impacts on the environment as a matter of law under Public Resources Code Section 21099. The following impact discussion is provided for informational purposes only.

The Proposed Project would provide 467 total on-site parking spaces provide in one level of subterranean parking beneath the Project Site and at grade. The subterranean levels serve as a basement with vehicle parking and storage and is accessed by two ramps accessed off of Avenue 34. Residential parking is provided in accordance with AB 744, which allows a parking ratio of 0.5 parking spaces per bedroom for a development that includes the maximum percentage of low- or very low-income units and is located within ½ mile of a major transit stop and there is unobstructed access to the transit stop from the development. The Proposed Project requires 233 residential parking spaces, and is proposing to provide 384 residential parking spaces and 3 residential guest parking spaces, which complies with the LAMC code requirement.

For the creative office and retail/restaurant element, the Proposed Project would be required to provide one space for every 500 square feet of office per LAMC 12.21 A.4(x)(3)6, which governs parking requirements in Enterprise Zones for "combined gross floor area of commercial office, business, retail, restaurant, bar, and related uses..." As such, the Project requires 80 non-residential parking spaces, and is providing 80 spaces, which is in compliance with LAMC code requirements.

The Proposed Project is also required to provide a minimum of one long-term bike parking space per unit and one short-term parking space for every 10 units for a total of 409 residential bike parking spaces: 372 long-term and 37 short term. The Proposed Project would provide a total of 409 residential bike parking spaces. The retail/restaurant portion of the Project requires one short-term and one long-term space per 2,000 square feet for a total of 5 short-term and 5 long-term spaces. The creative office portion of the Project requires one short-term space per 10,000 square feet and one long-term space per 5,000 square

feet for a total of 3 short-term spaces and 6 long-term spaces. Thus, the Proposed Project would be required to provide a total of 428 bicycle parking spaces. The Proposed Project would comply with the LAMC and provide 428 bicycle parking spaces.

Exposure to Poor Ambient Air Quality

The Project Site is located within 1,000 feet of the Arroyo Seco Parkway (SR-110), which is located to the north and west of the Project Site. The future occupants of the Proposed Project would be exposed to poor air quality emissions from vehicles traveling on these roadways. While recent court rulings[30] have found that CEQA does not require an analysis of the impacts of the environment on a project, the AQMD and the City Planning Commission continue to recommend that, prior to the approval of a project, the impacts of air pollutants on people who would live in a new project are addressed and appropriately mitigated to the extent feasible. Pursuant to the City Planning Commission's Freeway Adjacent Advisory Notice for Sensitive Uses (ZI-2427)[31], a detailed Health Risk Assessment was conducted for the Proposed Project to determine the carcinogenic risks associated with developing residential land uses within proximity to the freeway.[32] The Project Site is located approximately 210 feet from the 110 Freeway at the closest point and is located adjacent to the Metro Gold Line light railway. As such, the Proposed Project's future residents, employees, and visitors would be exposed to exhaust emissions from the nearby freeway.

As concluded in the HRA, the Project Site's worst-case ground level location would be exposed to cancer risks below 10 per one million for the 9-year and 30-year residential scenarios, and the 25-year worker scenario. While cancer risks would exceed 10 per one million under the 70-year residential scenario, the following disclosure from OEHHA (2015) should be considered. The 9 and 30-year durations correspond to the average and high-end of residency time recommended by U.S. EPA (1997). The California data presented in Appendix L of the Exposure TSD (OEHHA, 2012) are generally supportive of the nationwide data. The 9 and 70-year exposure durations present potential impacts over the range of residency periods, while the 30-year exposure duration is recommended for use as the basis for estimating cancer risk at the maximally exposed individual resident (MEIR) in all HRAs. The Project Site's worst-case ground level location would be exposed to cancer risks below 10 per one million for the 30-year residential scenario. The Freeway Adjacent HRA also concluded all acute and chronic health hazard indices would also be under the SCAQMD recommended threshold of 1.0 (1.0 E-6). In addition, the Proposed Project would not have significant adverse land use consistency issues associated with heavy rail, distribution centers/heavy trucking, industrial facilities, dry cleaners, or gas dispensing facilities. In conclusion, with the installation of MERV 13 filtration, as required by Ordinance No. 184,245 (Clean Up Green Up) for all mechanically ventilated buildings within 1,000 feet of a freeway, and the consideration of the additional strategies aimed at improving future occupants' exposure to ambient air quality

---

[32] *Pomeroy Environmental Services, Health Risk Assessment Avenue 34 Project 123-167 W. Avenue 34; 3401-3437 N. Pasadena Avenue, Los Angeles, California 90031, October 2016.*

conditions, the Proposed Project would be consistent with the requirements of City of Los Angeles Planning Commission ZI No. 2427. As such, impacts associated with the future occupant's exposure to ambient air quality would be less than significant.

East Los Angeles State Enterprise Zone

The Project Site is located in the East Los Angeles State Enterprise Zone, which "provide[s] economic incentives to stimulate local investment and employment through tax and regulation relief and improvement of public services." Projects located within a State Enterprise Zone are afforded certain incentives for development related to reduced parking for commercial/retail uses, and a waiver of Site Plan Review entitlement fees. The Project proposes approximately 372 dwelling units and 40,000 square feet of commercial space and is thereby eligible for the Site Plan Review fee waiver and reduced required commercial parking ratio of two parking spaces for every one thousand square feet.

Adaptive Reuse Incentive Area

The Project Site is also within an Adaptive Reuse Incentive Area (Ordinance No. 175,038). Adaptive reuse is defined as any change of an existing non-residential use to new dwelling units, guest rooms, or joint living and working quarters in all or in any portion an eligible building. The Proposed Project includes the rehabilitation of approximately 7,963 square feet of the 24,018 square foot building on-site, and a portion of the 3,521 square foot building on the southwest corner of the Project Site. The existing floor area is currently used as light manufacturing and commercial uses, and the Proposed Project intends to rehabilitate and use the existing floor area as commercial and office uses. As such, the Proposed Project would not be providing dwelling units, guest rooms, or live-work units within the rehabilitated buildings. The Proposed Project does not anticipate any adaptive reuse of the existing buildings. Thus, the permissions of the Adaptive Reuse Ordinance are not applicable to the Proposed Project.

Transit Priority Area (Zoning Information 2452)

On September 2013, the Senate Bill (SB) 743 was signed into law, which instituted changes to the California Environmental Quality Act (CEQA) when evaluating environmental impacts to projects located in areas served by transit. SB 743 states that project's aesthetics and parking impacts shall not be considered a significant impact on the environment if: (1) the Project is a residential, mixed-use residential, or employment center project, and (2) the project is located on an infill site within a transit priority area. SB 743 is further discussed in Section 1, Aesthetics, and in this Section. The Project Site is designated as a Transit Priority Area and is within ¼ mile of the Heritage Square Station of the Metro Gold Line. As such, the Proposed Project is eligible for parking reductions and other incentives offered for transit oriented district projects.

Public Resources Code 21099 provides that "aesthetic and parking impacts of a residential, mixed-use residential, or employment center project on an infill site within a transit priority area shall not be considered significant impacts on the environment." Accordingly, the Proposed Project's aesthetic and parking impacts shall not be considered significant impacts on the environment as a matter of law under Public Resources Code Section 21099.

Cornfield Arroyo Specific Plan

The Project Site is located within the boundaries of the Cornfield Arroyo Specific Plan Study Area but is excluded from the provisions of the Specific Plan. The Project Site was specifically exempted from rezoning and or land use classification modification under the Specific Plan.[33] Instead, the Project Site is uniquely regulated by a specific set of development standards and guidelines established by Ordinance 179,280 independent from the surrounding Specific Plan Area. Therefore, the underlying provisions of the LAMC and Ordinance 179,280 prevail and are the basis for all development standards and guidelines for the Project Site.

Northeast Los Angeles Community Plan

The Project Site is located within the Lincoln Heights neighborhood within the Northeast Los Angeles Community Plan area (CPA). All development activity on the Project Site is subject to the land use regulations of the Community Plan. A detailed analysis of the Proposed Project's consistency with the applicable provisions of the Northeast Los Angeles Community Plan is presented in Table III-9, below. As discussed in Table III-9, the Project would be in substantial compliance with the applicable provisions of the Northeast Los Angeles Community Plan.

[33] *City of Los Angeles Department of City Planning, Cornfield Arroyo Seco Specific Plan, page 1-18.*

Table III-9
Project Consistency Analysis with Applicable Provisions
in the Northeast Los Angeles Community Plan

Goal/Objective/Policy	Comments
Residential	
Goal 1: A safe, secure, and attractive residential environment for all economic, age, and ethnic segments of the community.	The Los Angeles Police Department (LAPD) would be consulted during the design and construction of the Proposed Project to ensure on-site security and reduce dead zones and attractive nuisances. The Proposed Project would implement principles of the City of Los Angeles Crime Prevention through Environmental Design (CPTED) Guidelines to enhance on-site security. The Proposed Project would be attractively designed and landscaped to encourage pedestrian activity on-site and in the vicinity. The 372 proposed dwelling units would be available to all persons without discrimination. Additionally, the Proposed Project would reserve approximately 31 dwelling units for very low income tenants. As such, the Proposed Project would be consistent with this Goal.
Policy 1-1.1: Protect existing stable single-family and other lower density residential neighborhoods from encroachment by higher density residential and other uses that are incompatible as to scale and character or would otherwise diminish the quality of life.	The Proposed Project would introduce the development of a creative campus that would provide 372 multi-family dwelling units. Low Medium II Residential land uses are located to the southeast of the Project Site, along Pasadena Avenue. Low Medium Residential and Low/ Low I Residential neighborhoods are located further south and east from the Project Site, respectively. The Project Site is zoned [T][Q]CM-2D and has a corresponding General Plan land use designation of Commercial Manufacturing. Land uses to the immediate north and south are designated as hybrid industrial; land uses to the west are designated as public facilities (railroad right-of-way) and hybrid industrial; land uses to the east are designated as public facilities (elementary school) and low medium II residential (multi-family development). General Plan Land Use designation of Low / Low I Residential (single-family development) exists northeast of the Project Site along the north side of Avenue 35 and east of the Project Site, east of Griffin Avenue. Low-density residential neighborhoods do not immediately abut the Project Site. The Proposed Project would not encroach on the single-family neighborhoods. The design of the Proposed Project would ensure that the Project is visually consistent with the scale and massing of the surrounding community. The Proposed Project would not diminish the quality of life in the neighborhood. Thus, the Proposed Project would be consistent with this Policy.
Objective 1-2: To allocate land for new housing to accommodate a growth of population that is consistent with and promotes the health, safety, welfare, convenience, and pleasant environment of those who live and work in the community based on adequate infrastructure and government services, especially schools.	The Proposed Project would be inconsistent with this Objective if the population generated by the project would exceed SCAG's or the Community Plan's population growth forecasts, or if the Project would cause public services or utilities to operate beyond capacity. As discussed in Section XIII, Population and Housing, the Proposed Project's generation of 1,216 permanent residents is within the population growth forecasts for the CPA. The CPA forecasted a housing total of approximately 76,551 dwelling units for 2010, and the 2010 Census shows a housing stock total of approximately 77,817 dwelling units. Therefore, there are 1,266 existing units beyond what was projected for the CPA in

	2010. As such, the Project would be contributing to the increase of dwelling units within the CPA. However, it is worth noting that the projections in the Community Plan are outdated and do not reflect the updated Citywide projections as reported to SCAG for purposes of the RTP/SCS and the updated demographic data as presented in the adopted Regional Housing Needs Assessment. Nevertheless, as discussed in Section XIV. Public Services, and Section XVII. Utilities and Service Systems, the Proposed Project would not create a significant impact that cannot be mitigated to a less than significant level for all public services, utilities, and service systems, including schools. Therefore, the Proposed Project is consistent with this Objective and promotes the health, safety, welfare, convenience, and pleasant environment of the Northeast Los Angeles CPA.
Policy 1-2.1: Designate specific areas to provide for adequate residential development to accommodate anticipated increases in population while maintaining a balance between single-family and multiple-family uses.	The Project Site is currently used for light industrial and warehouse uses. As such, development of the Project Site would not displace any single-family or multiple-family housing. As discussed above, the Project proposes the development of 372 dwelling units on a site that allows for such development. As discussed above, multi-family land uses exist along Pasadena Avenue south of the Project Site. Single-family land uses exist further northeast and east from the Project Site. Development of the Project is consistent with the zoning and land use designation for the Project Site and would be consistent with land uses in the area. The Project would not encroach onto single-family neighborhoods. Additionally, the Project's expected 1,216 new permanent residents are within the CPA's projected population for 2010. Therefore, the Proposed Project is consistent with this Policy.
Policy 1-2.2: Locate higher residential densities near commercial and institutional centers, light rail transit stations, and major bus routes to encourage pedestrian activity and use of public transportation, providing that infrastructure, public service facilities, utilities, and topography will fully accommodate this development.	Pursuant to SB 743, the Project qualifies as a transit infill project (discussed in Section 1, Aesthetics). The Proposed Project would be placing higher density residential development within approximately ¼ mile from the Heritage Square Arroyo Transit Station. The Heritage Square Arroyo Station is an existing rail transit station that serves the Metro Light-Rail Gold Line running between Downtown Los Angeles and the City of Pasadena. Further, the Proposed Project includes the development of 30,000 square feet of creative offices and 10,000 of retail/restaurant uses that would supplement existing commercial and institutional land uses in the vicinity of the Project Site. As such, the Proposed Project would be placing higher density residential near commercial, institutional, and transit opportunities. Pursuant to Ordinance No. 179,280, the Proposed Project reserves 30 percent (approximately 64,744 square feet) of the Project Site as publicly accessible open space. The Proposed Project includes public open space, paths, and landscaped areas throughout the Project Site. The Proposed Project's community-oriented design, public accessibility, location near public transportation and job opportunities encourages pedestrian activity in the Project Site area. As further discussed in Section XIV, Public Services, and Section XVII, Utilities and Service Systems, the Project would

	be adequately served by existing public services and utilities. As such, the Proposed Project would be consistent with this policy.
Policy 1-2.3: Encourage mixed-use development in selected commercially-zoned areas.	The Project Site is zoned for commercial development. The Project Site is also located within a Transit Priority area that encourages mixed-use, infill development near major transit centers. The Proposed Project includes the development of a creative campus that utilizes mixed-use development and integrates residential and commercial uses on-site. As such, the Proposed Project is consistent with this Policy.
Objective 1-3: To preserve and enhance the residential character and scale of existing single- and multi-family neighborhoods.	As discussed above, the Project Site is not located within a single-family or multi-family residential neighborhood. Although, multi-family residential development is located along Pasadena Avenue, southeast of the Project Site. The Proposed Project would add multi-family residential development and commercial development to the community in a manner that would be consistent with the existing neighborhood and allowed land uses on-site. The Proposed Project's commercial component and publicly accessible open space would promote pedestrian activity along abutting thoroughfares and within the Project Site, which would enhance and promote a community environment.
Policy 1-3.1: Protect the quality and scale of the residential environment through attention to the appearance of new construction including site planning and compatible building design.	The Proposed Project would develop an underutilized site with a creative campus that would include 372 dwelling units and 40,000 square feet of retail and office space within five buildings. The Proposed Project would be designed, including building siting, architectural design, architectural materials, and landscaped to be visually consistent with the surrounding neighborhood and promote pedestrian activity on-site and along abutting thoroughfares. Additionally, the Proposed Project would require a Site Plan Review from the City of Los Angeles. Thus, all design and construction plans would be approved by the City of Los Angeles. The Proposed Project would be consistent with this Policy.
Policy 1-3.2: Consider factors, such as neighborhood character and aesthetics, identity; compatibility of land uses; impacts on livability, services, public facilities, and traffic levels, when changes in residential densities are proposed.	The Proposed Project would reserve eleven percent of its base density (approximately 31 dwelling units) as very low income units. As such, the Proposed Project would include a ministerial density bonus pursuant to LAMC Section 12.22 A.25 for a 35 percent increase in permitted density to allow for 372 dwelling units in lieu of the base density of 275 dwelling units. The density bonus would allow a higher residential density than the baseline density. The Project Site is a in a Transit Priority Area and within close proximity to job opportunities and public services. With the compliance to regulatory compliance measures and implementation of identified mitigation measures, the Proposed Project would result in no impact or a less than significant impact to aesthetics, public services, recreation, utilities, and transportation and traffic. Further, development of the Proposed Project would promote a community environment and pedestrian activity on the Project Site and along Pasadena Avenue and Avenue 34, which currently does not exist. Therefore, the Proposed Project would improve livability and services in the area. As such, the Proposed Project would be consistent with this Policy.
Objective 1-6: To promote and ensure the	The Proposed Project's 372 dwelling units would be available

provision of fair and equal housing opportunities for all persons regardless of income and age groups or ethnic, religious, or racial background.	to all persons without discrimination. Thus, the Proposed Project would be consistent with this Objective.
Policy 1-6.1: Promote individual choice in type, quality, price, and location of housing.	The Proposed Project increases the diversity of the housing stock within the CPA; thus, increasing individual choice in type, quality, price, and location of housing. The Proposed Project would support this Policy.
Policy 1-6.2: Promote mixed use in all multiple-family residential projects in commercial zones.	The Project Site is zoned [T][Q]CM-2D and has a corresponding land use designation of Commercial Manufacturing. The Project proposes a creative campus that would include mixed-use development and integration of residential and commercial uses on-site. As such, the Proposed Project would be consistent with the Policy.
Policy 1-6.3: Ensure that redevelopment activity minimizes displacement of residents.	The Project Site is currently developed with warehouse and light industrial land uses. As such, there are no current residents on-site, and the Proposed Project would not displace any residents. Therefore, the Proposed Project would be consistent with this Policy.
Commercial	
Goal 2: Strong and competitive commercial areas that suitably serve the needs of the community and attracts customers from outside the plan area by satisfying marker demand and maximizing convenience and accessibility while preserving unique historic and cultural identities of each commercial area.	Although the Proposed Project would displace approximately 118,284 square feet of warehouse and light industrial uses, the Project would supplement the Project area with 372 residential live work units and 40,000 square feet of commercial uses. Job opportunities would be generated by approximately 30,000 square feet of creative office and 10,000 square feet of retail/restaurant space. Further, the Project Site is located within a Transit Priority Area and qualifies as a Transit-Oriented Infill Project. The Project's commercial component, publicly accessible open space, and location near transit opportunities increases its convenience and accessibility to customers from outside the plan area and supports the needs of the community. Further, as discussed in Section V, Cultural Resources, the Proposed Project would not interfere with any unique historic and cultural resources. The Proposed Project would further rehabilitate a portion of the existing commercial floor area on-site into the Project design, which helps preserve the character of the commercial area. As such, the Proposed Project is consistent with this Goal.
Objective 2-1: To conserve and strengthen potentially viable commercial areas in order to stimulate and revitalize existing businesses and create opportunities for appropriate new commercial development.	The Project Site is located within a Transit Priority Area and qualifies as a Transit-Oriented Infill Project. Development of the Proposed Project would strengthen and revitalize the existing commercial, industrial, and public facilities within the area by providing new residential and commercial space. The Proposed Project would foster new business and employment opportunities for potential customers and residents. Therefore, the Proposed Project supports this Objective.
Policy 2-1.2: Protect commercially planned/zoned areas, from residential-only development.	The Proposed Project includes the development of a creative campus that includes 372 residential units, 30,000 square feet of creative office, and 10,000 square feet of retail/restaurant. The Proposed Project is not a residential-only development. As such, the Proposed Project is consistent with this Policy.
Policy 2-2.2: Require that projects in commercial areas be designed and developed to achieve a high level of quality, distinctive character, and compatibility with appropriate existing uses and development.	The Project Site is zoned for commercial development. The Project is consistent with the allowable uses on-site pursuant to the Los Angeles General Plan and LAMC. The Project would provide a well-designed and landscaped creative campus that would promote pedestrian activity in the area and provide

	commercial opportunities. The Project is consistent with the requirements of Ordinance No. 179,280, which establishes the [T], [Q], and D conditions for the Project Site. As such, the Project is consistent with this Policy.
Objective 2-3: To minimize conflicts between auto-related and pedestrian-oriented activities and encourage use of public transportation in commercial areas.	The Project is a Transit-Oriented Infill Project in accordance with SB 743. The Project would encourage the use of public transportation and pedestrian activity along Pasadena Avenue and Avenue 34 and on site. The Proposed Project would place residential units and ground-floor commercial space in a transit-rich and pedestrian-oriented area. The Project Site's location near mass transit and in walking distance to services, retail stores, and employment opportunities promotes a pedestrian-friendly environment. As such, the Project is consistent with this Objective.
Policy 2-3.2: Encourage the formation of pedestrian-friendly shopping environments.	The Proposed Project encourages a pedestrian-friendly shopping environment with creative design, site amenities, and transit plaza connection with shops and open space. The Proposed Project would provide an enriched streetscape design, publicly accessible sidewalks and paths throughout the Project Site. The Proposed Project would further provide outdoor dining, seating, and other structures to support the retail element. As such, the Proposed Project is consistent with this Policy.
Open Space	
Goal 4: Sufficient open space, in balance with development, to serve the recreational, environmental, and health needs of the community and to protect environmental and aesthetic resources.	Pursuant to LAMC 12.21.G, the Project would provide 39,575 square feet of open space and amenities on-site exclusively for future residents and their guests. Further, pursuant to Ordinance No. 179,280, the Proposed Project would provide 64,744 square feet of publicly accessible open space on-site. Residential amenities include a gym, a pool, community rooms, and rooftop open space. Publicly accessible open space includes open space, paths, and landscaped areas throughout the Project Site. As such, the Proposed Project is consistent with this Goal.
Recreation and Park Facilities	
Goal 5: Adequate recreation and park facilities to meet the needs of the residents in the plan area.	As discussed in Section XIV, Public Services, there are currently approximately 1,210.3 acres of parkland and recreational facilities within two miles of the Project Site. As discussed above, the Proposed Project would provide open space and amenities on-site. The Proposed Project would comply with LAMC requirements and Ordinance 179,280 requirements for residential open space and publicly accessible open space. The Proposed Project's future 1,216 residents would be adequately served by existing park and recreation facilities and proposed on-site open space and amenities. As such, the Proposed Project is consistent with this Goal.
Schools	
Goal 6: Appropriate locations and adequate facilities for schools to serve the needs of existing and future populations.	This Goal is directed toward general City goals and does not specifically pertain to an individual development project. Although, as discussed in Section XIV, Public Services, there is one elementary school, one middle school, and two high schools that currently serve the Project Site. The Applicant would be required to pay all applicable school facility development fees in accordance with California Government Code Section 65995. Payment of Development fees would ensure that the Proposed Project would result in a less than significant impact to local schools. As such, the Proposed

	Project would not hinder this Goal.
Libraries	
Goal 7: Adequate library facilities and services for the area's residents.	As discussed in Section XIV, Public Services, the Project Site is adequately served by existing library facilities within two miles of the Project Site. As such, the Proposed Project is consistent with this Goal.
Police Protection	
Goal 8: Adequate police facilities and services to provide for the public safety needs of the community.	As discussed in Section XIV, Public Services, the Project Site is currently served by Hollenbeck Community Police Station, located at 2111 E. 1st Street, which is approximately 3.6 miles south of the Project Site. Development of the Proposed Project would not require the expansion of current police facilities, and there are no current plans for the expansion of police facilities in the area. As such, the Hollenbeck Community Police Station would adequately serve the Project Site. The Proposed Project would be consistent with this Goal.
Policy 8-1.3: Encourage design of building and facilities in accordance with principles that minimize opportunities for crime and enhance personal safety.	The Proposed Project would implement the principles of the City of Los Angeles Crime Prevention through Environmental Design (CPTED) Guidelines. Additionally, the Proposed Project would be designed and constructed with the recommendations of the LAPD. As such, the Proposed Project's demand in police services is expected to be relatively low. The Proposed Project would be consistent with this Policy.
Fire Protection	
Objective 9-1: Ensure that fire facilities and protective services are sufficient for the existing and future population and land uses.	The Project Site is served by LAFD Station No. 1, located at 2230 Pasadena Avenue, which is approximately 0.7 mile south of the Project Site. Based on the response distance criteria specified in LAMC 57.09.07A and the relatively short distance from Fire Station No. 1 to the Project Site, fire protection response would be considered adequate. The Proposed Project is not expected to necessitate the construction of a new fire station. As such, the Proposed Project would be consistent with this Objective.
Circulation	
Objective 10-1: To comply with Citywide performance standards for acceptable levels of service and ensure that necessary road access and street improvements are provided to accommodate traffic generated by all new development.	The Proposed Project would be designed with the guidance of the Los Angeles Department of Transportation and the Los Angeles Fire Department to ensure adequate site access that ensure that design of the Project would not conflict with vehicle or pedestrian movement. The Proposed Project would comply with Citywide performance standards for acceptable levels of service. With the implementation of the proposed Transportation Demand Management Plan and Trip Monitory Program discussed in the LADOT Traffic Impact Assessment letter, dated January 26, 2016, the Proposed Project would result in a less than significant impact to transportation and traffic (Mitigation Measure MM-T-1).
Policy 10-1.1: Maintain Levels of Service for streets and highways not to exceed LOS "D" for secondary arterials, collector streets, and local streets; not to exceed LOS "E" on Major Highways of in the community's major business districts.	This Policy is directed towards the City and does not specifically pertain to a single project. With the implementation of the Transportation Demand Management Plan and Trip Monitory Program (Mitigation Measure MM-T-1 to T-3) the Project's transportation and traffic impacts would be mitigated to less than significant levels.
Policy 10-1.2: Design new development projects to minimize disturbance to existing traffic flow with proper ingress and egress to parking.	The Proposed Project would be designed with the guidance of the Los Angeles Department of Transportation and the Los Angeles Fire Department to ensure adequate site access to on-site parking facilities would not conflict with vehicle or

	pedestrian movement. Additionally, the proposed driveways to the Project Site would provide properly signalized ingress and egress to the Proposed Project's parking lot to minimize disturbance to existing traffic flow. As such, the Proposed Project would be consistent with this Policy.
Policy 10-1.3: Discourage non-residential traffic flow for streets designed to serve only residential areas by the use of traffic control measures.	Although residential neighborhoods exist to the east and southeast of the Project Site, the Project Site is located in a primarily commercial, public facilities, and industrial area. As such, the Proposed Project's non-residential traffic would not interfere with streets designed to serve only residential areas. As such, the Proposed Project would be consistent with this Policy.
Public Transportation	
Goal 12: A coordinated, integration of development around transit stations in order to improve services, access, and economic vitality of the community.	Pursuant to SB 743, the Project Site qualifies as a Transit Oriented Infill Development and is located within a Transit Priority Area. The Proposed Project would provide residential, creative office, and commercial uses that would increase services near transit and promote accessibility and economic vitality of the existing community. As such, the Proposed Project is consistent with this Goal.
Historic and Cultural Amenities	
Objective 14-2: To protect and enhance historic and architectural resources in commercial areas in a manner that will encourage revitalization and investment in these areas.	The Project Site is currently developed with light industrial and warehouse uses and paved surface loading and parking areas. As discussed in Section V, Cultural Resources, no identified significant cultural or historical resources are present on-site. As such, the Proposed Project would not conflict with this Objective.
Policy 14-2.1: Encourage the preservation, maintenance, enhancement and adaptive reuse of existing buildings in commercial areas through the restoration of original facades and the design of new construction which complements the old in a harmonious fashion, enhancing the historic pattern.	As discussed in Section V, Cultural Resources, no cultural or historic resources are identified on-site. Nonetheless, the Proposed Project includes the rehabilitation of a portion of the existing floor area on site, which includes a portion of the 3,521 square foot building located on the southwest corner of the Project Site and approximately 7,963 square feet the light industrial building that fronts Pasadena Avenue. The Proposed Project integrates these existing building into the design in a harmonious fashion. As such, the Proposed Project would be consistent with this Policy.
Economic Development	
Goal 15: The revitalization of a physical environment conducive to increasing and improving economic activity.	The development of the Proposed Project would revitalize the Project Site with new job and retail/restaurant opportunities within a transit priority area. The Proposed Project would further improve the visual character and promote economic and pedestrian activity in the area. The Proposed Project would foster new business and employment opportunities for potential customers and residents, which would help to improve the economy of the surrounding area. As such, the Proposed Project is consistent with this Goal.
Objective 15-1: To improve the visual environment of existing commercial and industrial areas.	The Proposed Project includes the development and rehabilitation of an underutilized industrial/commercial site. The Proposed Project would provide new job and retail/restaurant opportunities with a well-designed, pedestrian-oriented creative campus. As such, the Project is consistent with this Objective.
Source: City of Los Angeles, Department of City Planning, Northeast Los Angeles Community Plan; and Parker Environmental Consultants, February 2016.	

The Northeast Los Angeles Community Plan addresses planning and land use issues and opportunities in various sectors, such as residential, industrial, commercial, transportation, among others. Northeast Los Angeles Community Plan projected a population of 267,973 persons and 76,551 dwelling units by 2010 within the Community Plan area.[34] The 2010 United States Census shows that the Northeast Los Angeles Community Plan area had a population of 237,483 persons and 77,817 dwelling units.[35] The 2010 Census data shows that the actual population within the CPA is lower than anticipated for 2010 and that housing units are above the anticipated capacity for 2010. Nevertheless, as discussed in Section XIII, Population and Housing, the Proposed Project is consistent with SCAG's population and housing growth projections in the 2016-2040 RTP/SCS. Further, the Proposed Project would help promote the City's goal of diversifying the housing stock and adding multi-family housing near alternative transit opportunities and job opportunities.

The Proposed Project would be consistent with the goals, objectives, and policies set forth in the Northeast Los Angeles Community Plan. Therefore, the Proposed Project is consist with the applicable land use and planning policies in the Northeast Los Angeles Community Plan.

As discussed in the preceding paragraphs, the Proposed Project would not conflict with local and regional plans applicable to the Project Site, and any impacts would be mitigated to less than significant levels.

c) Would the project conflict with any applicable habitat conservation plan or natural community conservation plan?

No Impact. A project-related significant adverse impact could occur if the Project Site were located within an area governed by a habitat conservation plan or natural community conservation plan. As discussed in Section 4(f) above, no such plans presently exist which govern any portion of the Project Site. Further, the Project Site is located in a highly urbanized area, and the Project Site is currently fully developed with light manufacturing land uses and paved surface loading and parking areas. Therefore, the Proposed Project would not have the potential to cause such effects.

Cumulative Impacts

No Impact. Development of the three related project's identified in Section II, Project Description, and any new development within the neighboring CASP study is expected to occur in accordance with adopted plans and regulations applicable to each parcel. It should be noted that of the three related project

---

[34] *City of Los Angeles Department of City Planning, Northeast Los Angeles Community Plan, Plan Population and Dwelling Unit Capacity Table.*

[35] *The Northeast Los Angeles Community Plan Area contains the following tracts: 1810, 1813, 1814, 1815, 1816, 1831.01, 1831.03, 1831.04, 1832.2, 1832.21, 1832.22, 1833, 1834.01, 1834.02, 1835.1, 1835.2, 1836.1, 1836.2, 1837.01, 1837.02, 1838.1, 1838.2, 1851, 1852.02, 1852.03, 1852.04, 1853.1, 1853.2, 1861, 1862.01, 1862.02, 1862.03, 1863.01, 1863.02, 1864.01, 1864.03, 1864.04, 1871.01, 1871.02, 1881, 1883, 1990, 1991.1, 1991.2, 1992.01, 1992.02, 1993, 1994, 1997, 1998, 1999, 2011.1, 2.1102, 2012, 2013.01, 2013.02, 2014.01, 2014.02, 2015.01, 2015.03, 2015.04, 2016.01, 2016.02, 2017, 2031, 2033. The population and dwelling units were calculated by summing the individual tracts together. Source: United States Census Bureau, 2010 Census Interactive Population Map, website: http://www.census.gov/2010census/popmap/, accessed September 2014.*

identified, only Related Project No. 3 (located at 211 S Avenue 20) is located within the CASP. Related Project No. 3 consists of an educational campus with a design capacity of 263 high school students and 74 middle school students. It is expected that most of the related projects would be compatible with the zoning and land use designations of each related project site and its existing surrounding uses. The development of the Proposed Project, including the requested entitlement requests would not result in any cumulative land use or zoning impacts. The Proposed Project's land use impacts would not be cumulatively considerable since the Proposed Project would not conflict with applicable local or regional plans. The Proposed Project's land uses are consistent with the existing zoning and General Plan land use designations and would not create any significant land use compatibility conflicts. Therefore, the Proposed Project's land use impacts would be less than cumulatively considerable and would therefore be considered less than significant on a cumulative basis.

XI. MINERAL RESOURCES

a) Would the project result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

No Impact. A significant impact may occur if a project site is located in an area used or available for extraction of a regionally-important mineral resource, or if the project development would convert an existing or future regionally-important mineral extraction use to another use, or if the project development would affect access to a site used or potentially available for regionally-important mineral resource extraction. According to the *L.A. CEQA Thresholds Guide*, the determination of significance shall be made on a case-by-case basis considering: (a) whether, or the degree to which, the project might result in the permanent loss of, or loss of access to, a mineral resource that is located in a State Mining and Geology Board Mineral Resource Zone MRZ-2 zone or other known or potential mineral resource area, and (b) whether the mineral resource is of regional or statewide significance, or is noted in the Conservation Element as being of local importance. The Project Site is not located within the Los Angeles Downtown Oil Field and Oil Drilling/Surface Mining Supplemental Use District, or an Oil Field/Drilling Area. The Project Site is currently developed with four light manufacturing and warehouse buildings with paved surface loading areas and parking. The Project Site is not currently used for the extraction of mineral resources, and there is no evidence to suggest that the Project Site has been historically used for the extraction of mineral resources.[36] Development of the Project Site would not block or hinder access or availability of mineral resources. Therefore, the development of the Proposed Project would not result in the loss of availability of a known mineral resource, and no impact would occur.

b) Would the project result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?

No Impact. A significant impact may occur if the Project Site is located in an area used or available for extraction of a regionally-important mineral resource, or if the development would convert an existing or future regionally-important mineral extraction use to another use, or if the development would affect access to a site used or potentially available for regionally-important mineral resource extraction. The Project Site is not currently used for the extraction of mineral resources, and there is no evidence to suggest that the Project Site has historically been used for the extraction of mineral resources. Development of the Project Site would not block or hinder access or availability of locally important mineral resources. Therefore, no impact to locally important mineral resources would occur.

XII. NOISE

Fundamentals of Noise

Sound is technically described in terms of amplitude (loudness) and frequency (pitch). The standard unit of sound amplitude measurement is the decibel (dB). The decibel scale is a logarithmic scale that describes the physical intensity of the pressure vibrations that make up any sound. The pitch of the sound is related to the frequency of the pressure vibration. Since the human ear is not equally sensitive to a given sound level at all frequencies, a special frequency-dependent rating scale has been devised to relate noise to human sensitivity. The A-weighted decibel scale (dBA) provides this compensation by discriminating against frequencies in a manner approximating the sensitivity of the human ear.

Noise, on the other hand, is typically defined as unwanted sound. A typical noise environment consists of a base of steady "background" noise that is the sum of many distant and indistinguishable noise sources. Superimposed on this background noise is the sound from individual local sources. These can vary from an occasional aircraft or train passing by to virtually continuous noise from, for example, traffic on a major highway.

Several rating scales have been developed to analyze the adverse effect of community noise on people. Since environmental noise fluctuates over time, these scales consider that the effect of noise upon people is largely dependent upon the total acoustical energy content of the noise, as well as the time of day when the noise occurs. Those that are applicable to this analysis are as follows:

- L_{eq} – An L_{eq}, or equivalent energy noise level, is the average acoustic energy content of noise for a stated period of time. Thus, the L_{eq} of a time-varying noise and that of a steady noise are the same if they deliver the same acoustic energy to the ear during exposure. For evaluating community impacts, this rating scale does not vary, regardless of whether the noise occurs during the day or the night.
- L_{max} – The maximum instantaneous noise level experienced during a given period of time.
- L_{min} – The minimum instantaneous noise level experienced during a given period of time.
- CNEL – The Community Noise Equivalent Level is a 24-hour average L_{eq} with a 5 dBA "weighting" during the hours of 7:00 P.M. to 10:00 P.M. and a 10 dBA "weighting" added to noise during the hours of 10:00 P.M. to 7:00 A.M. to account for noise sensitivity in the evening and nighttime, respectively. The logarithmic effect of these additions is that a 60 dBA 24 hour L_{eq} would result in a measurement of 66.7 dBA CNEL.

Noise environments and consequences of human activities are usually well represented by median noise levels during the day, night, or over a 24-hour period. For residential uses, environmental noise levels are generally considered low when the CNEL is below 60 dBA, moderate in the 60–70 dBA range, and high above 70 dBA. Noise levels greater than 85 dBA can cause temporary or permanent hearing loss. Examples of low daytime levels are isolated, natural settings with noise levels as low as 20 dBA and quiet suburban residential streets with noise levels around 40 dBA. Noise levels above 45 dBA at night can disrupt sleep. Examples of moderate level noise environments are urban residential or semi-commercial

areas (typically 55–60 dBA) and commercial locations (typically 60 dBA). People may consider louder environments adverse, but most will accept the higher levels associated with more noisy urban residential or residential-commercial areas (60–75 dBA) or dense urban or industrial areas (65–80 dBA).

It is widely accepted that in the community noise environment the average healthy ear can barely perceive CNEL noise level changes of 3 dBA. CNEL changes from 3 to 5 dBA may be noticed by some individuals who are extremely sensitive to changes in noise. A 5 dBA CNEL increase is readily noticeable, while the human ear perceives a 10 dBA CNEL increase as a doubling of sound.

Noise levels from a particular source generally decline as distance to the receptor increases. Other factors, such as the weather and reflecting or barriers, also help intensify or reduce the noise level at any given location. A commonly used rule of thumb for roadway noise is that for every doubling of distance from the source, the noise level is reduced by about 3 dBA at acoustically "hard" locations (i.e., the area between the noise source and the receptor is nearly complete asphalt, concrete, hard-packed soil, or other solid materials) and 4.5 dBA at acoustically "soft" locations (i.e., the area between the source and receptor is normal earth or has vegetation, including grass). Noise from stationary or point sources is reduced by about 6 to 7.5 dBA for every doubling of distance at acoustically hard and soft locations, respectively. In addition, noise levels are also generally reduced by 1 dBA for each 1,000 feet of distance due to air absorption. Noise levels may also be reduced by intervening structures – generally, a single row of buildings between the receptor and the noise source reduces the noise level by about 5 dBA, while a solid wall or berm reduces noise levels by 5 to 10 dBA. The normal noise attenuation within residential structures with open windows is about 17 dBA, while the noise attenuation with closed windows is about 25 dBA.[37]

Ambient Noise Levels

To assess the existing ambient noise conditions in the area, ambient noise measurements were taken with a Larson Davis 831 sound level meter, which conforms to industry standards set forth in ANSI S1.4-1983 (R2001) - American National Standard Specification for Sound Level Meters. Figure III-1, Noise Monitoring and Sensitive Receptor Location Map, depicts the noise measurement locations fronting the adjacent residential uses as the most likely sensitive receptors to experience noise level increases during construction. The detailed noise monitoring data are presented in the Noise Monitoring Data, included in the case file, and are summarized below in Table III-10, Existing Ambient Daytime Noise Levels in Project Site Vicinity. As shown in Table III-10, the ambient noise in the vicinity of the Project Site ranges from 59.0 to 67.8 L_{eq}. The maximum noise level during the three 15-minute recordings was 83.4 dB L_{max} along Pasadena Avenue, where there was more vehicle activity. The primary noise source at Location 1 contributing to the ambient noise levels was the Metro Gold Line and the railroad crossing alarms associated with the Metrorail. The primary noise sources at Location 2 and 3 were observed to be vehicle traffic during the daytime hours, including delivery trucks and buses. The Project Site is currently

[37] *National Cooperative Highway Research Program Report 117, Highway Noise: A Design Guide for Highway Engineers, 1971.*

operating with light manufacturing facilities, which contributed to some ambient noise during the noise measurements.

Table III-10
Existing Ambient Daytime Noise Levels in Project Site Vicinity

No.	Location	Primary Noise Sources	Noise Level Statistics[a]		
			L_{eq}	L_{min}	L_{max}
1	On the southwest corner of the Project Site, adjacent to the Metro Gold Line railroad	Metro Gold Line, railroad crossing alarms, light vehicle activity, industrial activity	59.0	44.0	80.4
2	On the northwest corner of Pasadena Avenue and W. Avenue 34; the southeast corner of the Project Site	Light vehicle traffic, pedestrian activity, birds in street trees, delivery trucks, fire trucks, garbage truck	65.9	49.0	80.3
3	On the northwest corner of the Project Site along the west side of Pasadena Avenue	Vehicle traffic, buses, pedestrian activity	67.8	49.6	83.4

[a] *Noise measurements were taken on Tuesday, January 12, 2016 at each location for a duration of 15 minutes. See case file for noise monitoring data sheets.*

Sensitive Receptors

Several noise sensitive land uses are located adjacent to and in the vicinity of the Proposed Project. For purposes of assessing noise impacts on sensitive populations, the following sensitive receptors in close proximity to the Project Site were identified:

1) Single- and multi-family residences along Avenue 34, located south of the Project Site;
2) Single- and multi-family residences along Pasadena Avenue, located east of the Project Site; and
3) Hillside Elementary School, located at 120 E. Avenue 35, east of the Project Site.

The locations of these land uses relative to the Project Site are depicted in Figure III-1, Noise Monitoring and Sensitive Receptor Location Map. For purposes of assessing construction-generated vibration impacts on building damage, there are no buildings abutting the Project Site or within a close enough proximity to the Project Site to be susceptible to building damage from groundborne vibration during construction.

PARKER ENVIRONMENTAL CONSULTANTS

Figure III-1
Noise Monitoring and Sensitive Receptor Location Map

a) Would the project result in exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Potentially Significant Unless Mitigation Incorporated. A significant impact may occur if the Proposed Project would generate excess noise that would cause the ambient noise environment at the Project Site to exceed noise level standards set forth in the City of Los Angeles General Plan Noise Element (Noise Element) and the City of Los Angeles Noise Ordinance (Noise Ordinance). Implementation of the Proposed Project would result in an increase in ambient noise levels during both construction and operation, as discussed in further detail below.

Construction Noise

Construction-related noise impacts upon adjacent land uses would be significant if, as indicated in LAMC Section 112.05, noise from construction equipment within 500 feet of a residential zone exceeds 75 dBA at a distance of 50 feet from the noise source. However, the above noise limitation does not apply where compliance is technically infeasible. Technically infeasible means that the above noise limitation cannot be complied with despite the use of mufflers, shields, sound barriers and/or any other noise reduction device or techniques during the operation of the equipment. Additionally, as defined in the *L.A. CEQA Thresholds Guide* for construction noise impacts, a significant impact would occur if construction activities lasting more than one day would increase the ambient noise levels by 10 dBA or more at any off-site noise-sensitive location. Furthermore, the *L.A. CEQA Thresholds Guide* also states that construction activities lasting more than ten days in a three-month period, which would increase ambient exterior noise levels by 5 dBA or more at a noise sensitive use, would also normally result in a significant impact.

Construction of the Proposed Project would require the use of heavy equipment for demolition/site clearing, grading and site preparation, the installation of utilities, paving, and building construction. During each construction phase there would be a different mix of equipment operating and noise levels would vary based on the amount of equipment in operation and the location of each activity. The U.S. Environmental Protection Agency (EPA) has compiled data regarding the noise generating characteristics of specific types of construction equipment and typical construction activities. The data pertaining to the types of construction equipment and activities that would occur at the Project Site are presented in Table III-11, Typical Outdoor Construction Noise Levels, at a distance of 50 feet from the noise source (i.e., reference distance).

The noise levels shown in Table III-11 represent composite noise levels with sound attenuating mufflers associated with typical construction activities, which take into account both the number of pieces and spacing of heavy construction equipment that are typically used during each phase of construction. Construction noise during the heavier initial periods of construction could be expected to be 86 dBA L_{eq}

when measured at a reference distance of 50 feet from the center of construction activity.[38] These noise levels would diminish rapidly with distance from the construction site at a rate of approximately 6 dBA per doubling of distance. For example, a noise level of 84 dBA L_{eq} measured at 50 feet from the noise source to the receptor would reduce to 78 dBA L_{eq} at 100 feet from the source to the receptor, and reduce by another 6 dBA L_{eq} to 72 dBA L_{eq} at 200 feet from the source to the receptor. Construction activities associated with the Proposed Project would be expected to generate similar noise levels to those shown in Table III-11, below during the approximate 34-month construction period.

Table III-11
Typical Outdoor Construction Noise Levels

Construction Phase	Noise Levels at 50 Feet with Mufflers (dBA L_{eq})	Noise Levels at 60 Feet with Mufflers (dBA L_{eq})	Noise Levels at 100 Feet with Mufflers (dBA L_{eq})	Noise Levels at 200 Feet with Mufflers (dBA L_{eq})
Ground Clearing	82	80	76	70
Excavation, Grading	86	84	80	74
Foundations	77	75	71	65
Structural	83	81	77	71
Finishing	86	84	80	74

Source: United States Environmental Protection Agency, Noise from Construction Equipment and Operations, Building Equipment and Home Appliances, PB 206717, 1971.

As set forth in the *L.A. CEQA Thresholds Guide*, a significant construction noise impact would occur if construction activities lasting more than one day would increase the ambient noise levels by 10 dBA or more at any off-site noise-sensitive location. Construction activities lasting more than ten days in a three-month period, which would increase ambient exterior noise levels by 5 dBA or more at a noise sensitive use, would also normally result in a significant impact. Since construction activities associated with the proposed development at the Project Site would last for more than ten days in a three-month period, is possible that the Proposed Project could exceed these threshold levels on a temporary and intermittent basis during the construction period. Thus, based on criteria established in the *L.A. CEQA Threshold Guide*, a substantial temporary or periodic increase in ambient noise levels could occur at the identified off-site sensitive receptors.

The City of Los Angeles Building Regulations Ordinance No. 178048 requires a construction site notice to be provided that includes the following information: job site address, permit number, name and phone number of the contractor and owner or owner's agent, hours of construction allowed by code or any discretionary approval for the site, and City telephone numbers where violations can be reported. The notice is required to be posted and maintained at the construction site prior to the start of construction and displayed in a location that is readily visible to the public. Pursuant to LAMC Section 41.40, exterior demolition and construction activities that generate noise are prohibited between the hours of 9:00 P.M. and 7:00 A.M. Monday through Friday, and between 6:00 P.M. and 8:00 A.M. on Saturday. Demolition

[38] *Although the peak noise levels generated by certain construction equipment may be greater than 86 dBA at a distance of 50 feet, the equivalent noise level would be approximately 86 dBA L_{eq} (i.e., the equipment does not operate at the peak noise level over the entire duration).*

and construction are prohibited on Sundays and all federal holidays. The construction activities associated with the Proposed Project would comply with these LAMC requirements. Additionally, Environmental [Q] Condition 10 (Noise) requires additional compliance actions for the purposes of reducing construction noise impacts. Specifically, [Q] Condition 10. (Noise a) requires compliance with Ordinances 144,331 and 161,574 which prohibit the emission or creation of noise beyond certain levels at adjacent uses unless technically unfeasible. Environmental [Q] Condition 10 (Noise b) would further restrict the permissible hours of construction to the hours of 7:00 am to 6:00 pm Monday through Friday, and 8:00 am to 6:00 pm on Saturday. Environmental [Q] Condition 10 (Noise (c) and (d) specify that construction and demolition activities shall be scheduled so as to avoid operating several pieces of equipment simultaneously and require the use of power construction equipment with state-of the art noise shielding and muffling devices. In accordance with LAMC Section 112.05, construction noise levels are considered exempt from the 75 dBA noise threshold if all technically feasible noise attenuation measures are implemented.

Table III-12, below, shows the estimated exterior construction noise for the identified sensitive receptors (See calculations in the case file). Although the estimated construction-related noise levels associated with the Proposed Project would exceed the numerical noise threshold of 75 dBA at 50 feet from the noise source as outlined in the City Noise Ordinance, and the typical construction noise levels associated with the Proposed Project would exceed the existing ambient noise levels at all of the identified off-site sensitive receptors by more than the 5 dBA threshold established by the *L.A. CEQA Thresholds Guide* during all construction phases, implementation of the following mitigation measure would reduce the noise levels associated with construction of the Proposed Project. Implementation of noise control measures such as temporary noise barriers or sound blankets around the noise generating equipment would be capable of attenuating the noise level by approximately 10 dBA. Thus, based on the provisions set forth in LAMC 112.05, implementation of Environmental [Q] Condition 10, and Mitigation Measures MM-N-1 would ensure impacts associated with construction-related noise levels are mitigated to the maximum extent feasible, and temporary construction-related noise impacts would be considered less than significant in accordance with City requirements and standards.

Table III-12
Estimated Exterior Construction Noise at Nearest Sensitive Receptors (Unmitigated)

Receptor	Sensitive Land Use	Distance to Project Site (feet)	Existing Monitored Daytime Ambient Noise Levels (dBA L_{eq})	Estimated Peak Construction Noise Levels (dBA L_{eq})	Noise Level Increase
1	Single- and Multi-Family Residential south of Project Site	80	65.9	81.9	16.0
2	Single- and Multi-Family Residential east of Project Site	85	67.8	81.4	13.6
3	Hillside Elementary School	110	67.8	79.2	11.4

See Figure III-1, Noise Monitoring and Sensitive Receptor Location Map.
Source: Calculations based on Federal Transit Administration, Transit Noise and Vibration Impact Assessment, Final Report, May 2006. It should be noted that the peak noise level increase at the nearby sensitive receptors during project construction represents the highest composite noise level that would be generated periodically during a worst-case construction activity and does not represent continuous noise levels occurring throughout the construction day or period.

Localized construction impacts associated with on-site construction noise and off-site construction-related traffic/hauling activities would have the potential to impact students at Hillside Elementary School. The Proposed Project would provide appropriate construction measures to reduce the Project's impacts upon the nearby school facility. A temporary construction noise barrier with a minimum ¾-inch thick plywood or other sound absorbing material capable of achieving a 10 dBA reduction in sound level will be erected around the Project Site's perimeter, which will reduce noise impacts on the adjacent school. Further, the Project's proposed haul route would be designed to minimize, to the greatest degree possible, hauling impacts adjacent to Hillside Elementary School. The proposed haul route traveling to and from the I-5 Freeway would utilize Pasadena Avenue, Avenue 33, Lacy Street, and Avenue 26. Hauling activity utilizing Pasadena Avenue is closest to the rear side of Hillside Elementary School, which is improved with landscaping, trees and the façade of school structures. The active playground areas for Hillside Elementary are located towards the east of the campus fronting on Griffin Avenue and Avenue 35, which will not be utilized by hauling trucks. Implementation of Mitigation Measure MM-N-1 and Mitigation Measures MM-HAZ-2 and MM-HAZ-3 (See response to Checklist Question VIII(c), above) would reduce construction impacts related to nearby schools to less than significant levels.

Mitigation Measure:

MM-N-1 Increased Noise Levels (Demolition, Grading, and Construction Activities)

- In addition to satisfying the noise-related conditions identified in [Q] Condition 10 of Ordinance No. 179,280, the project contractor shall erect a temporary noise-attenuating sound barrier along the perimeter of the Project Site's southerly and easterly property line to noise construction noise levels at off site properties. The sound wall shall be a minimum of 8 feet in height to block the line of site of construction equipment and off site receptors at the ground level. The sound barrier shall include ¾ inch plywood or other sound absorbing material capable of achieving a 10 dBA reduction in sound level.

Operational Noise

HVAC Equipment Noise

Upon completion and operation of the Proposed Project, on-site operational noise would be generated by heating, ventilation, and air conditioning (HVAC) equipment installed on the new structures. However, the noise levels generated by these equipment types are not anticipated to be substantially greater than those generated by the current HVAC equipment serving the existing buildings on the Project Site and in the Project vicinity. As such, the HVAC equipment associated with the Proposed Project would not represent a new source of noise in the Project Site vicinity. In addition, the operation of this and any other on-site stationary sources of noise would be required to comply with the LAMC Section 112.02, which prohibits noise from air conditioning, refrigeration, heating, pumping, and filtering equipment from exceeding the ambient noise level on the premises of other occupied properties by more than five decibels.

Noise from Mixed Use Commercial and Residential Land Uses

Due to the mixed-use nature of the Proposed Project, noise generated from the operation of proposed office and retail uses have the potential to impact the proposed residential uses. In order to ensure that on-site residences would not be adversely impacted by ambient urban noise levels, Environmental [Q] Condition C.20 shall be implemented to ensure that dwelling units associated with the Proposed Project would be constructed with double-pane glass and use exterior wall construction which provides a Sound Transmission Class of 50 or greater as defined in UBC No. 35-1, 1979 edition or any amendment thereto. With implementation of Environmental [Q] Condition C.20, impacts associated with interior noise levels at the proposed residences would be less than significant.

Environmental [Q] Condition C.20:

> 20. Severe Noise Levels (Residential Only)
>
> All exterior windows having a line of sight to the MTA Gold Line, Figueroa Street, Pasadena Avenue, and the 1-110 (Pasadena) Freeway shall be constructed with double-pane glass and use exterior wall construction which provides a Sound Transmission Class of 50 or greater as defined in UBC No. 35-1, 1979 edition or any amendment thereto. The applicant, as an alternative, may retain an acoustical engineer to submit evidence, along with the application for a building permit, any alternative means of sound insulation sufficient to mitigate interior noise levels below a CNEL of 45 dBA in any habitable room.

b) Would the project result in exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?

Potentially Significant Unless Mitigation Incorporated. Vibration is sound radiated through the ground. Vibration can result from a source (e.g., subway operations, vehicles, machinery equipment, etc.) causing the adjacent ground to move, thereby creating vibration waves that propagate through the soil to the foundations of nearby buildings. This effect is referred to as groundborne vibration. The peak

particle velocity (PPV) or the root mean square (RMS) velocity is usually used to describe vibration levels. PPV is defined as the maximum instantaneous peak of the vibration level and is typically used for evaluating potential building damage. RMS is defined as the square root of the average of the squared amplitude of the level. RMS velocity in decibels (VdB) is typically more suitable for evaluating human response.

The background vibration velocity level in residential areas is usually around 50 VdB. The vibration velocity level threshold of perception for humans is approximately 65 VdB. A vibration velocity level of 75 VdB is the approximate dividing line between barely perceptible and distinctly perceptible levels for most people. Most perceptible indoor vibration is caused by sources within buildings such as operation of mechanical equipment, movement of people, or the slamming of doors. Typical outdoor sources of perceptible groundborne vibration are construction equipment, steel-wheeled trains, and traffic on rough roads. If a roadway is smooth, the groundborne vibration from traffic is rarely perceptible. The range of interest is from approximately 50 VdB, which is the typical background vibration velocity level, to 100 VdB, which is the general threshold where minor damage can occur in fragile buildings.

Construction

Excavation and earthwork activities for the Proposed Project have the potential to generate low levels of groundborne vibration. The operation of construction equipment generates vibrations that propagate through the ground and diminishes in intensity with distance from the source. Vibration impacts can range from no perceptible effects at the lowest vibration levels, to low rumbling sounds and perceptible vibration at moderate levels, to slight damage of buildings at the highest levels. Thus, construction activities associated with the Proposed Project could have an adverse impact on both sensitive structures (i.e., building damage) and populations (i.e., annoyance).

Table III-13, Vibration Source Levels for Construction Equipment, identifies various PPV and RMS velocity (in VdB) levels for the types of construction equipment that would operate at the Project Site during construction. As shown in Table III-13, vibration velocities could range from 0.003 to 0.089 inch/sec PPV at 25 feet from the source activity, with corresponding vibration levels ranging from 58 VdB to 87 VdB at 25 feet from the source activity, depending on the type of construction equipment in use.

Table III-13
Vibration Source Levels for Construction Equipment

Equipment	Approximate PPV (in/sec)					Approximate RMS (VdB)				
	25 Feet	50 Feet	60 Feet	75 Feet	100 Feet	25 Feet	50 Feet	60 Feet	75 Feet	100 Feet
Large Bulldozer	0.089	0.031	0.024	0.017	0.011	87	78	76	73	69
Caisson Drilling	0.089	0.031	0.024	0.017	0.011	87	78	76	73	69
Loaded Trucks	0.076	0.027	0.020	0.015	0.010	86	77	75	72	68
Jackhammer	0.035	0.012	0.009	0.007	0.004	79	70	68	65	61
Small Bulldozer	0.003	0.001	0.0008	0.0006	0.0004	58	49	47	44	40

Source: Federal Transit Administration, Transit Noise and Vibration Impact Assessment, Final Report, 2006.

Based on the distances of surrounding buildings within the Project vicinity, no buildings are directly abutting the Project Site. The closest buildings are located across Pasadena Avenue and Avenue 34. Therefore, no buildings are susceptible to building damage from construction groundborne vibration. Thus, construction impacts relative to structural damage from groundborne vibration would be considered less than significant.

For purposes of addressing vibration impacts relative to human annoyance, the following analysis relies on the FTA's vibration impact thresholds, which are 80 VdB and above at residences and buildings where people normally sleep (e.g., nearby residences) and 83 VdB and above at institutional buildings, which includes schools and churches. No thresholds have been adopted or recommended for commercial and office uses.

Residents in the three sensitive receptors previously identified in this section could be exposed to increased vibration levels on a temporary and intermittent basis during the construction period. As shown in Table III-14, Estimated Vibration Levels at Nearest Sensitive Receptors, none of the sensitive receptors would experience vibration levels above the thresholds adopted from the FTA. Furthermore, implementation of the measures identified under Mitigation Measure MM-N-1 would serve to ensure construction related vibration levels to the maximum extent feasible, and thus would further ensure the annoyance factor to an acceptable level. Additionally, in accordance with Environmental [Q] Condition C.10(b), all construction activity would be restricted to the hours of 7:00 A.M. to 6:00 P.M. Monday through Friday, and 8:00 A.M. to 6:00 P.M. on Saturday. Because any vibration level increases experienced at the residential uses in close proximity to the Project Site would occur during the acceptable time periods for construction activities, and would only occur on a temporary and intermittent basis during the construction period, impacts associated with groundborne vibration would be less than significant level.

Table III-14
Estimated Vibration Levels at Nearest Sensitive Receptors (Unmitigated)

Receptor	Sensitive Land Use	Distance to Project Site (feet)	Estimated Vibration Levels (VdB)	Vibration Threshold (VdB)	Significant Impact?
1	Single- and Multi-Family Residential south of Project Site	80	71.9	80	No
2	Single- and Multi-Family Residential east of Project Site	85	71.1	80	No
3	Hillside Elementary School	110	67.7	83	No

See Figure 1, Noise Measurement and Sensitive Receptor Location Map.
Notes: It should be noted that the peak noise level increase at the nearby sensitive receptors during project construction represents the highest composite noise level that would be generated periodically during a worst-case construction activity and does not represent continuous noise levels occurring throughout the construction day or period.
Source: Calculations based on Federal Transit Administration, Transit Noise and Vibration Impact Assessment, Final Report, May 2006.

With respect to temporary hauling activities during construction, the Project Site is located in a Commercial Manufacturing zone which experiences heavy truck traffic on a daily basis. As noted in the Traffic Study, the existing warehouse and light industrial land uses generate approximately 440 trips per day, which are mostly heavy trucks. The hauling activities with soil export and demolition and construction debris removal would thus not generate a significant change in the heavy vehicle traffic that already occurs in the immediate project vicinity on a daily basis. Thus vibration impacts from hauling and construction traffic would be less than significant.

Operation

The Proposed Project is a mixed-use development and would not involve the use of stationary equipment that would result in high vibration levels. Although groundborne vibration at the Project Site and immediate vicinity may currently result from heavy-duty vehicular travel (e.g., refuse trucks and transit buses) on W. Avenue 34 and Pasadena Avenue, the proposed land uses would not result in a substantial increased in the use of these heavy-duty vehicles on the public roadways. While refuse trucks would be used for the removal of solid waste at the Project Site, these trips would typically only occur once a week and would not be any different than those presently occurring in the vicinity of the Project Site. As such, vibration impacts associated with operation of the Proposed Project would be less than significant.

c) Would the project result in a substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?

Potentially Significant Unless Mitigation Incorporated. A significant impact may occur if the Proposed Project were to result in a substantial permanent increase in ambient noise levels above existing ambient noise levels without the Proposed Project. As defined in the *L.A. CEQA Thresholds Guide* for operational noise impacts, a project would normally have a significant impact on noise levels from Proposed Project operations if the Proposed Project causes the ambient noise level measured at the property line of affected uses that are shown in Table III-15, Community Noise Exposure (CNEL), to increase by 3 dBA in CNEL to or within the "normally unacceptable" or "clearly unacceptable" category, or any 5 dBA or greater noise increase. Thus, a significant impact would occur if noise levels associated with operation of the Proposed Project would increase the ambient noise levels by 3 dBA CNEL at homes where the resulting noise level would be at least 70 dBA CNEL. In addition, any long-term increase of 5 dBA CNEL or more is considered to cause a significant impact. Generally, in order to achieve a 3 dBA CNEL increase in ambient noise from traffic, the volume on any given roadway would need to double. In addition to analyzing potential impacts in terms of CNEL, the analysis also addresses increases in on-site noise sources per the provisions of the LAMC, which establishes a L_{eq} standard of 5 dBA over ambient conditions as constituting a LAMC violation.

Table III-15
Community Noise Exposure (CNEL)

Land Use	Normally Acceptable[a]	Conditionally Acceptable[b]	Normally Unacceptable[c]	Clearly Unacceptable[d]
Single-family, Duplex, Mobile Homes	50 - 60	55 - 70	70 - 75	above 75
Multi-Family Homes	50 - 65	60 - 70	70 - 75	above 75
Schools, Libraries, Churches,	50 - 70	60 - 70	70 - 80	above 80

Hospitals, Nursing Homes				
Transient Lodging – Motels, Hotels	50 - 65	60 - 70	70 - 80	above 75
Auditoriums, Concert Halls, Amphitheaters	---	50 - 70	---	above 70
Sports Arena, Outdoor Spectator Sports	---	50 - 75	---	above 75
Playgrounds, Neighborhood Parks	50 - 70	---	67 - 75	above 75
Golf Courses, Riding Stables, Water Recreation, Cemeteries	50 - 75	---	70 - 80	above 80
Office Buildings, Business and Professional Commercial	50 - 70	67 - 77	above 75	---
Industrial, Manufacturing, Utilities, Agriculture	50 - 75	70 - 80	above 75	---

[a] *Normally Acceptable: Specified land use is satisfactory, based upon the assumption that any buildings involved are of normal conventional construction without any special noise insulation requirements.*

[b] *Conditionally Acceptable: New construction or development should be undertaken only after a detailed analysis of the noise reduction requirements is made and needed noise insulation features included in the design. Conventional construction, but with closed windows and fresh air supply systems or air conditioning will normally suffice.*

[c] *Normally Unacceptable: New construction or development should generally be discouraged. If new construction or development does proceed, a detailed analysis of the noise reduction requirements must be made and needed noise insulation features included in the design.*

[d] *Clearly Unacceptable: New construction or development should generally not be undertaken.*

Source: Office of Planning and Research, State of California General Plan Guidelines, October 2003 (in coordination with the California Department of Health Services); City of Los Angeles, General Plan Noise Element, adopted February 1999.

Operational Noise

Traffic Noise

In order for a new noise source to be audible, there would need to be a 3 dBA or greater CNEL noise increase. According to the *L.A. CEQA Thresholds Guide*, if a project would result in traffic that is less than double the existing traffic, then the Proposed Project's mobile noise impacts can be assumed to be less than significant. The existing traffic volumes would need to double with the development of a project in order for traffic noise to increase by 3 dBA CNEL. The Proposed Project would increase traffic volumes on the surrounding roadways, which in turn has the potential to increase roadway noise. According to the Traffic Study, prepared by Crain & Associates, the proposed development would result in a higher vehicle trips compared to the existing trips generated from the Project Site. The proposed development would result in 2,128 daily vehicle trips, including 161 AM peak hour trips and 199 PM peak hour trips. The Proposed Project would not have the potential to double the traffic volumes on any of the surrounding intersections within the Project vicinity. As such, the Proposed Project would not have the potential to double the existing traffic volumes or increase roadway noise levels by 3 dBA, and thus traffic generated noise impacts would be considered less than significant. Moreover, as discussed in Section XVI, Transportation and Traffic, the Traffic Study analyzed a larger project than what is currently proposed as part of the Proposed Project, and as such, the traffic trips are conservative. For this reason, traffic noise generated by the Proposed Project is also conservative.

Furthermore, to quantify the Proposed Project's mobile noise impacts, traffic noise was modeled using the California Department of Transportation, Technical Noise Supplement (2009). Traffic noise was modeled under the Existing (2015) "No Project" scenario and "Existing (2015) with Project" scenarios to determine the environmental baseline and Project impact, respectively. The changes in future noise levels associated with the Proposed Project are estimated using the traffic volumes in the studied intersections in the Project vicinity. The estimated noise levels from increased traffic is based on a worst-case scenario and uses the traffic volumes prior to the implementation of the Traffic Demand Management Plan, which would reduce vehicle trips in the Project area. Table III-16, displays the estimated noise levels from increase traffic volumes in the surrounding intersections due to the Proposed Project. As shown, the Proposed Project would increase local noise levels by a maximum of 0.29 dBA CNEL at the intersection of Pasadena Avenue and Avenue 28 during the PM peak hour, which would be inaudible/imperceptible to most people and would not exceed the thresholds of significance. The remaining street intersections analyzed would all experience a 0.23 dBA CNEL increase or less. Thus, the Proposed Project's mobile noise impacts would not exceed the 3 dBA CNEL threshold, set forth in the *L.A. CEQA Thresholds Guide*, and the Proposed Project's mobile source noise impact would be less than significant.

Table III-16
Projected Intersection Noise Impacts

Street Intersection	Peak Hour	Noise Levels in dBA CNEL			
		Existing (2015) Without Project Traffic Volumes	Existing (2015) with Project Traffic Volumes	Increase	Significant Impact?

Source: Calculations based on the California Department of Transportation (Caltrans), Technical Noise Supplement (Nov. 2009) formula for adding and subtracting equal sound pressure levels. Traffic volumes are based on the Project Traffic Study prepared by Crain & Associates, dated December 2015.

Stationary Noise Sources

New stationary sources of noise, such as mechanical HVAC equipment would be installed for the proposed residences at the Project Site. As discussed in Question XI(a) above, the design of this equipment would be required to comply with LAMC Section 112.02, which prohibits noise from air conditioning, refrigeration, heating, pumping, and filtering equipment from exceeding the ambient noise level on the premises of other occupied properties by more than five decibels. Thus, because the noise levels generated by the HVAC equipment serving the Proposed Project would not be allowed to exceed the ambient noise level by five decibels on the premises of the adjacent properties, a substantial permanent increase in noise levels would not occur at the nearby sensitive receptors. This impact would be less than significant.

Parking Noise

Activities within the designated subterranean parking structure areas associated with the Proposed Project would have the potential to increase ambient noise levels in the area. Sources of noise within the parking areas would include engines accelerating, doors slamming, car alarms, and people talking. Noise levels within the parking areas would fluctuate with the amount of automobile and human activity. Noise levels would be highest in the early morning and evening when the largest number of people would enter and exit the Project Site. However, any parking noise that may be audible from outside of the parking areas would be substantially similar to the existing noise generated at the surface parking areas on the Project Site. In addition, operational-related noise generated by motor driven vehicles within the Project Site is regulated under the LAMC. Specifically, with regard to motor driven vehicles, LAMC Section 114.02 prohibits the operation of any motor driven vehicles upon any property within the City such that the created noise would cause the noise level on the premises of any occupied residential property to exceed the ambient noise level by more than 5 dBA. Implementation of Mitigation Measure N-2, which pertains to the design of parking structure ramps, would further reduce the noise associated with the enclosed subterranean parking garage to less than significant levels.

Mitigation Measure:

MM-N-2 Increased Noise Levels (Parking Structure Ramps)

- Concrete, not metal, shall be used for construction of parking ramps.
- The interior ramps shall be textured to prevent tire squeal at turning areas.

d) Would the project result in a substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?

Potentially Significant Unless Mitigation Incorporated. A significant impact may occur if the Proposed Project were to result in a substantial temporary or periodic increase in ambient noise levels above existing ambient noise levels without the Proposed Project. As defined in the *L.A. CEQA Thresholds Guide* threshold for construction noise impacts, a significant impact would occur if construction activities lasting more than one day would increase the ambient noise levels by 10 dBA or more at any off-site noise-sensitive location. In addition, the *L.A. CEQA Thresholds Guide* also states that construction activities lasting more than ten days in a three-month period, which would increase ambient exterior noise levels by 5 dBA or more at a noise sensitive use, would also normally result in a significant impact.

As discussed above, impacts are expected to be reduced to less than significant levels for construction noise and vibration, and operational noise and vibration. Implementation of Mitigation Measure MM-N-1 and Environmental [Q] Conditions 10, Noise (a) through (e), would ensure the Proposed Project would ensure all reasonably prudent and feasible measures are taken to reduce the Project's temporary or periodic construction noise impacts. As such, the Proposed Project would be consistent with the LAMC and Noise Element of the General Plan, and as such, construction noise impacts would be less than significant.

e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

No Impact. A significant impact may occur if the Proposed Project were located within an airport land use plan and would introduce substantial new sources of noise or substantially add to existing sources of noise within or in the vicinity of the Project Site. There are no airports within a two-mile radius of the Project Site, and the Project Site is not within any airport land use plan or airport hazard zone. The Proposed Project would not expose people to excessive noise levels associated with airport uses. No impact would occur.

f) For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?

No Impact. This question would apply to a project only if it were in the vicinity of a private airstrip and would subject area residents and workers to a safety hazard. The Project Site is not located in the vicinity of a private airstrip. As no such facilities are located in the vicinity of the Project Site, no impact would occur.

Cumulative Impacts

Less Than Significant Impact. Development of the Proposed Project in conjunction with the three related projects identified in Section II, Project Description, would result in an increase in construction-related and traffic-related noise as well as on-site stationary noise sources in the already urbanized area of the City of Los Angeles. The Project Applicant has no control over the timing or sequencing of the related projects that have been identified within the Proposed Project study area. Therefore, any quantitative analysis that assumes multiple, concurrent construction projects would be speculative. Construction-period noise for the Proposed Project and each related project (that has not yet been built) would be localized. In addition, each of the related projects would be required to comply with the City's noise ordinance, as well as mitigation measures that may be prescribed pursuant to CEQA provisions that require potentially significant impacts to be reduced to the extent feasible.

With respect to cumulative traffic noise impacts, it should be noted that the Proposed Project's mobile source vehicular noise impacts are based on the predicted traffic volumes as presented in the Project Traffic Study. Thus, the future predicted noise levels include the traffic volumes from the Proposed Project and future traffic levels associated with ambient growth and the related projects, as shown in Table III-17, Cumulative Intersection Noise Impacts. The highest increase in local noise levels shows a maximum of 0.53 dBA CNEL at the intersection of Pasadena Avenue and Avenue 28 during the PM peak hour which would be inaudible to most people. This maximum noise increase would not exceed the 3 dBA CNEL threshold of significance. As such, the Proposed Project's noise volumes would not be cumulatively considerable. Thus, the cumulative impact associated with construction noise would be less than significant.

Table III-17
Cumulative Intersection Noise Impacts

Street Intersection	Peak Hour	Noise Levels in dBA CNEL			
		Existing (2015) Without Project Traffic Volumes	Future (2020) with Project Traffic Volumes	Increase	Significant Impact?

XIII. POPULATION AND HOUSING

a) Would the project induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

Less Than Significant Impact. A significant impact may occur if the proposed project would locate new development such as homes, businesses, or infrastructure, with the effect of substantially inducing growth in the proposed area that would otherwise not have occurred as rapidly or in as great a magnitude. Based on the *L.A. CEQA Thresholds Guide*, the determination of whether the project results in a significant impact on population and housing growth shall be made considering: (a) the degree to which a project would cause growth (i.e., new housing or employment generators) or accelerate development in an undeveloped area that exceeds projected/planned levels for the year of project occupancy/buildout, and that would result in an adverse physical change in the environment; (b) whether the project would

introduce unplanned infrastructure that was not previously evaluated in the adopted Community Plan or General Plan; and (c) the extent to which growth would occur without implementation of the project.

In October 2008, SCAG approved and adopted the "2008 Regional Comprehensive Plan for the SCAG Region – Helping Communities Achieve A Sustainable Future" (2008 RCP). The 2008 RCP is a long-term comprehensive plan that provides a strategic vision for handling the region's land use, housing, economic, transportation, environmental, and overall quality of life needs. The 2008 RCP is intended to serve as an advisory document for local agencies in the SCAG region. The following vision statement and guiding principles are based on the region's adopted Compass Growth Vision Principles for Sustaining a Livable Region. These statements further articulate how the RCP can promote and sustain the region's mobility, livability, and prosperity for future generations.

RCP Vision

To foster a Southern California region that addresses future needs while recognizing the interrelationship between economic prosperity, natural resource sustainability, and quality of life. Through measured performance and tangible outcomes, the RCP serves as both a voluntary action plan with short-term guidance and strategic, long-term initiatives that are guided by the following Guiding Principles for sustaining a livable region.

RCP Guiding Principles

- *Improve mobility for all residents.* Improve the efficiency of the transportation system by strategically adding new travel choices to enhance system connectivity in concert with land use decisions and environmental objectives.

- *Foster livability in all communities.* Foster safe, healthy, walkable communities with diverse services, strong civic participation, affordable housing and equal distribution of environmental benefits.

- *Enable prosperity for all people.* Promote economic vitality and new economies by providing housing, education, and job training opportunities for all people.

- *Promote sustainability for future generations.* Promote a region where quality of life and economic prosperity for future generations are supported by the sustainable use of natural resources.

SCAG's Compass Growth Vision Strategy

SCAG's Compass Growth Vision, adopted in 2004, and incorporated into the 2008 RCP, encourages better relationships between housing, transportation, and employment. The Growth Vision is driven by four key principles: (1) Mobility – Getting where we want to go, (2) Livability – Creating positive communities, (3) Prosperity – Long-term health for the region, and (4) Sustainability – Preserving natural surroundings. Additionally, the Compass Growth Vision incorporates a 2% Growth Strategy that will increase the region's mobility by:

- Putting new employment centers and new neighborhoods near major transit systems so that people can have transportation choices other than their cars.
- Designing safe, attractive transit centers and plazas that people enjoy using.
- Creating mini-communities around transit stations, with small businesses, urban housing and restaurants all within an easy walk.

Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS)

On April 2016, SCAG's Regional Council adopted the 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS): A Plan for Mobility, Accessibility, Sustainability, and a High Quality of Life. The RTP/SCS is the culmination of a multi-year effort involving stakeholders from across the SCAG Region. The 2016-2040 RTP/SCS balances the Southern California region's future mobility and housing needs with economic, environmental, and public health goals.

Based on the regional growth projections in the 2016-2040 RTP/SCS, in 2012, the City of Los Angeles had an estimated permanent population of approximately 3,845,500 persons, approximately 1,325,500 residences, and 1,696,400 jobs. By the year 2040, SCAG forecasts the City of Los Angeles will increase to 4,609,400 persons (or a 20 percent increase from the year 2012) with approximately 1,690,300 residences (or an 28 percent increase from the year 2012) and approximately 2,169,100 jobs (or an approximate 28 percent increase from year 2012). SCAG's population, housing and employment projections for the City of Los Angeles, Los Angeles County, and the SCAG region as a whole for 2012 and 2040 are further summarized in Table III-18, below.

Table III-18
SCAG Population and Housing Projections for the City of Los Angeles, Los Angeles County and the SCAG Region

Population			
	2012	2040	%Growth (2012-2040)
Los Angeles City [a]	3,845,500	4,609,400	20%
Los Angeles County [b]	9,923,000	11,514,000	16%
SCAG Region [b]	18,322,000	22,138,000	21%
Households			
	2012	2040	%Growth (2012-2040)
Los Angeles City [a]	1,325,500	1,690,300	28%
Los Angeles County [b]	3,257,000	3,946,000	21%
SCAG Region [b]	5,885,000	7,412,000	26%
Employment			
	2012	2040	%Growth (2012-2040)
Los Angeles City [a]	1,696,400	2,169,100	28%
Los Angeles County [b]	4,246,000	5,226,000	23%
SCAG Region [b]	7,440,000	9,872,000	33%

Notes:
[a] *SCAG, 2016-2040 RTP/SCS Growth Forecast, Demographics and Growth Forecast Appendix, adopted April 2016.*
[b] *SCAG, 2016-2040 RTP/SCS Growth Forecast, adopted April 2016.*

On a policy level, the Proposed Project is consistent with the goals and strategies of the RCP and the Compass Growth Vision Strategy discussed above, as the Proposed Project would revitalize an underutilized, fully developed property in an existing industrial and commercial area. The Proposed Project is an infill development Project within the Northeast Los Angeles Community Plan Area within the City of Los Angeles. Further, the Project Site is located within a Transit Priority Area. With respect to regional growth forecasts, SCAG forecasts the City of Los Angeles Subregion will experience a population increase to 4.6 million persons by 2040. The U.S. Census Bureau reported the City of Los Angeles as having a population of 3,792,621 persons and 1,413,995 housing units in 2010.[39] As shown in Table III-18, SCAG Population and Housing Projections for the City of Los Angeles, Los Angeles County and the SCAG Region, the forecast from 2012 through 2040 envisions growth of 763,900 additional persons, yielding an approximate 20% growth rate. The number of households is anticipated to increase by 364,800 households, or approximately 28% between 2012 and 2040. The number of employment opportunities is anticipated to increase by 472,700 jobs, or approximately 28% between 2012 and 2040.

Based on the community's current household demographics (e.g., an average of 3.27 persons per multi-family household for the Northeast Los Angeles area), the construction of up to 372 multi-family dwelling units would result in an increase of approximately 1,216 net permanent residents in the City of

[39] *U.S. Census Bureau: State and County QuickFacts. Data derived from Population Estimates, American Community Survey, Census of Population and Housing, County Business Patterns, Economic Census, Survey of Business Owners, Building Permits, Census of Governments, Last Revised: Wednesday, 2-Dec-2015.*

Los Angeles.[40] Further, the Project includes approximately 30,000 square feet of creative office space and 10,000 square feet of retail space. The Proposed Project would generate the need of approximately 149 employees.[41] The employees generated by the Proposed Project would be consistent with the anticipated increase of jobs within the City of Los Angeles between 2012 and 2040.

According to the Department of City Planning, Northeast Los Angeles Community Plan anticipated a 2010 population capacity of 267,973 persons and 76,551 housing units within the CPA.[42] According to the 2010 United States Census data, the actual population and housing units within the CPA were approximately 237,483 persons and 77,817 housing units.[43] The comparison of the Community Plan's projected housing and population numbers and the Census' actual housing and population numbers, show that the CPA has a remaining growth capacity of approximately 30,490 persons to meet 2010 forecasts. Additionally, the data shows that the CPA currently has more housing units than projected by the Community Plan. The population generated by the Proposed Project would be within the planned capacity for the CPA, and the Project's housing units would add to the area's housing units that are currently over the planned capacity. Nevertheless, the proposed increase in housing units and population would be consistent with the SCAG forecast of 364,800 additional households and approximately 763,900 persons in the City of Los Angeles between 2012 and 2040. Additionally, the Project's 372 housing units would support the City's goal of addressing the housing crisis and diversifying the housing mix within the City. The Proposed Project would reserve 31 dwelling units as very low income units. As such, the Proposed Project would not cause growth (i.e., new housing or employment generators) or accelerate development in an undeveloped area that exceeds projected/planned levels for the year of Proposed Project occupancy/buildout or that would result in an adverse physical change in the environment. The Project would not introduce unplanned infrastructure that was not previously evaluated in the adopted Community Plan or General Plan.

b) Would the project displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?

No Impact. A significant impact may occur if the Proposed Project would result in the displacement of existing housing units, necessitating the construction of replacement housing elsewhere. The Proposed Project would consist of the development of new housing and commercial land uses on a site that is currently occupied by four light manufacturing buildings and paved surface loading and parking areas. As such, the Proposed Project would not displace any existing housing. The proposed residential, creative office, and retail/restaurant land uses are consistent with the allowable uses as permitted by the zoning and General Plan land use designations. Therefore, no impact would occur.

c) Would the project displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?

No Impact. The Proposed Project would consist of the development of a new housing and commercial land uses on a site that is currently occupied by four light manufacturing buildings and paved surface loading and parking areas. No displacement of existing housing would occur with the development of the Proposed Project. Therefore, no impact would occur.

Cumulative Impacts

Less Than Significant Impact. The related projects would introduce additional residential, medical office, retail, and educational uses to the City of Los Angeles. Any residential related projects would result in direct population growth in the City of Los Angeles, and related project including commercial or educational uses can result in indirect population growth. As shown in Table III-19, the Proposed Project and related projects that involve residential developments would cumulatively contribute 826 new residential dwelling units to the Northeast Los Angeles Community Plan area, generating approximately 2,701 new residents. The cumulative growth generated by the Proposed Project and related projects would be within SCAG's RTP/SCS growth projections for the City of Los Angeles and SCAG region.

As discussed in Question XIII(a), the Proposed Project would not exceed the growth projections of SCAG's RTP/SCS for the City of Los Angeles subregion. Furthermore, the Proposed Project is the type of project encouraged by SCAG and City policies, as the Project would promote and help accommodate growth in urban centers that are close to existing employment opportunities. Because the Proposed Project would not displace any residents, and population growth potentially associated with the Proposed Project has already been anticipated per SCAG projections, the Proposed Project's population growth would not be cumulatively considerable. Therefore, the Proposed Project's cumulative impacts to population and housing would be less than significant.

Table III-19
Projected Cumulative Housing Units

Related Projects (By Housing Type)	Total Housing Units	Total Residents [a]
Apartments/Condominiums [b]	454	1,485

XIV. PUBLIC SERVICES

a) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered government facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objective for any of the following public services:

(i) Fire protection?

Less Than Significant Impact.

Construction

Construction of the Proposed Project would increase the potential for accidental on-site fires from the operation of construction equipment and the use of flammable construction materials. The implementation of best management practices (BMPs) for the operation of mechanical equipment and the use of flammable construction materials by construction contractors and work crews would minimize fire hazards associated with the construction of the Proposed Project. The BMPs that would be implemented during construction of the Project would include: keeping mechanical equipment in good operating condition, and as required by law, carefully storing flammable materials in appropriate containers, and the immediate and complete cleanup of spills of flammable materials when they occur.

Construction activities also have the potential to affect fire protection services, such as emergency vehicle response times, by adding construction traffic to the street network and potentially requiring partial lane closures during street improvements and utility installations. Thus, construction could have the potential to adversely affect fire access. However, these impacts are considered to be less than significant because emergency access would be maintained to the Project Site during construction through marked emergency access points approved by the LAFD, construction impacts are temporary in nature and do not cause

lasting effects, and no complete lane closures are anticipated. Additionally, if any partial street closures are required, flagmen would be used to facilitate the traffic flow until construction is complete.

Operation

Based on the *L.A. CEQA Thresholds Guide*, a project would normally have a significant impact on fire protection if it requires the addition of a new fire station or the expansion, consolidation or relocation of an existing facility to maintain service. Section 15382 of the CEQA guidelines defines "significant effect on the environment" as "a substantial, or potentially substantial, adverse change in any of the physical conditions within the area affected by the project including land, air, water, minerals, flora, fauna, ambient noise, and objects of historic or aesthetic significance. An economic or social change by itself shall not be considered a significant effect on the environment. A social or economic change related to a physical change may be considered in determining whether the physical change is significant." Thus, the addition of a new fire station or the expansion, consolidation or relocation of an existing facility to maintain service would only be considered significant if such activities result in a physical adverse impact upon the environment.

The City of Los Angeles Fire Department (LAFD) considers fire protection services for a project adequate if a project is within the maximum response distance for the land use proposed. Pursuant to Section 57.09.07A of the LAMC, the maximum response distance between residential land uses and a LAFD fire station that houses an engine or truck company is 1.5 miles. If the distance is exceeded, all structures located in the applicable residential or commercial area would be required to install automatic fire sprinkler systems. With such systems installed, fire protection would be considered adequate even if the Proposed Project is located beyond the maximum response distance.

The Proposed Project would include up to 372 dwelling units, 30,000 square feet of office space, and up to 10,000 square feet of retail/restaurant uses. The proposed land uses would generate approximately 1,216 new residents and 149 employees.[44] The Proposed Project would increase the utilization of the Project Site, which is currently used as manufacturing warehouses, and would potentially increase the demand for LAFD services. The Project Site is served by LAFD Station No. 1, located at 2230 Pasadena Avenue, which is approximately 0.7 mile south of the Project Site. Based on the response distance criteria specified in LAMC 57.09.07A and the relatively short distance from Fire Station No. 1 to the Project Site, fire protection response would be considered adequate. Compliance with Environmental [Q] Condition C.21, Public Services (Fire), would ensure impacts upon fire services are reduced to less than significant levels.

Cumulative Impacts

Less Than Significant Impact. The Proposed Project, in combination with the three related projects, could increase the demand for fire protection services in the Project area. Specifically, there could be increased demands for additional LAFD staffing, equipment, and facilities over time. This need would be

[44] *A residential generation rate of 3.27 used. Employee rate of 228 square feet per office employee and 588 square feet per neighborhood retail employee used.*

funded via existing mechanisms (e.g., property taxes, government funding, and developer fees) to which the Proposed Project and related projects would contribute. Similar to the Proposed Project, each of the related projects would be individually subject to LAFD review and would be required to comply with all applicable fire safety requirements of the LAFD in order to adequately mitigate fire protection impacts. Specifically, any related project that exceeded the applicable response distance standards described above would be required to install automatic fire sprinkler systems in order to mitigate the additional response distance. To the extent cumulative development causes the need for additional fire stations to be built throughout the City, the development of such stations would be on small infill lots within existing developed areas and would not likely cause a significant impact upon the environment. Nevertheless, the siting and development of any new fire stations would be subject to further CEQA review and evaluated on a case-by-case basis. However, as the LAFD does not currently have any plans for new fire stations to be developed in proximity to the Project Site, no impacts are currently anticipated to occur. On this basis, the Proposed Project would not make a cumulatively considerable impact to fire protection services, and, as such cumulative impacts on fire protection would be less than significant.

(ii) Police Protection?

Potentially Significant Unless Mitigation Incorporated. A significant impact may occur if the City of Los Angeles Police Department (LAPD) could not adequately serve a project, necessitating a new or physically altered station. Section 15382 of the CEQA guidelines defines "significant effect on the environment" as "a substantial, or potentially substantial, adverse change in any of the physical conditions within the area affected by the project including land, air, water, minerals, flora, fauna, ambient noise, and objects of historic or aesthetic significance. An economic or social change by itself shall not be considered a significant effect on the environment. A social or economic change related to a physical change may be considered in determining whether the physical change is significant." Thus, the addition of a new police station or police substation, if warranted, would only be considered significant if the construction or operation of a new facility results in a physical adverse impact upon the environment. Based on the *L.A. CEQA Thresholds Guide*, the determination of whether the project results in a significant impact on police protection shall be made considering the following factors: (a) the population increase resulting from the Proposed Project, based on the net increase of residential units or square footage of non-residential floor area; (b) the demand for police services anticipated at the time of project buildout compared to the expected level of service available. Consider, as applicable, scheduled improvements to LAPD services (facilities, equipment, and officers) and the project's proportional contribution to the demand; and (c) whether the project includes security and/or design features that would reduce the demand for police services.

The Proposed Project would include up to 372 dwelling units, 30,000 square feet of office space, and up to 10,000 square feet of retail/restaurant uses. The proposed land uses would generate approximately 1,216 new residents and 149 employees. The Proposed Project would increase the utilization of the Project Site, which is currently used as warehouse distributors. These land uses would potentially increase the demand for LAPD services. The Project Site is located in the Hollenbeck area division of the LAPD's Central Bureau. The Hollenbeck Community consists of Aliso Village, Boyle Heights, El Sereno, Estrada Court, Hermon, Hillside Village, Lincoln Heights, Montecito Heights, Monterey Hills, Pico Gardens, Ramona Gardens, Rose Hills Courts, and University Hills. The Project Site is served by the Hollenbeck

Community Police Station, located at 2111 E. 1st Street, which is approximately 3.6 miles south of the Project Site. Table III-20, Hollenbeck Area Crime Statistics, provides crime statistics for the Project area in the City of Los Angeles.

Table III-20
Hollenbeck Area Police Station Crime Statistics

Crimes	2016 (Year to Date)[a]	2015 (Year to Date)	2014 (Year to Date)
Violent Crimes

Construction sites, if left unsecured, have the potential to attract trespassers and/or vandals that would potentially result in graffiti, excess trash, and potentially unsafe conditions for the public. Such occurrences would adversely affect the aesthetic character of the Project Site and surrounding area and could potentially cause public health and safety concerns. With compliance to Mitigation Measure MM-PS-1, below, Project impacts would be less than significant during the construction period.

Implementation of the Proposed Project would result in an increase of site visitors, residents, and employees to the Project Site, thereby generating a potential increase in the number of service calls from the Project Site. Responses to thefts, vehicle burglaries, vehicle damage, traffic-related incidents, and crimes against persons would be anticipated to escalate as a result of the increased on-site activity and increased traffic on adjacent streets and arterials. The Proposed Project would include adequate and strategically positioned functional and thematic lighting to enhance public safety. Visually obstructed and infrequently accessed "dead zones" would be limited and, where possible, security controlled to limit public access. The building and layout design of the Proposed Project would also include crime prevention features, such as nighttime security lighting and secure parking facilities. In addition, the

continuous visible and non-visible presence of residents at all times of the day would provide a sense of security during evening and early morning hours. As such, the Project residents would be able to monitor suspicious activity at the building entry points. These preventative and proactive security measures would decrease the amount of service calls to the LAPD. With adherence to Mitigation Measure MM-PS-1, identified below, the Proposed Project's potential impact upon LAPD services is less than significant.

Mitigation Measure:

MM-PS-1 (Police):

- The plans shall incorporate the Design Guidelines (defined in the following sentence) relative to security, semi-public and private spaces, which may include but not be limited to access control to building, secured parking facilities, walls/fences with key systems, well-illuminated public and semi-public space designed with a minimum of dead space to eliminate areas of concealment, location of toilet facilities or building entrances in high-foot traffic areas, and provision of security guard patrol throughout the project site if needed. Please refer to "Design Out Crime Guidelines: Crime Prevention Through Environmental Design," published by the Los Angeles Police Department. Contact the Community Relations Division, located at 100 W. 1st Street, #250, Los Angeles, CA 90012; (213) 486-6000. These measures shall be approved by the Police Department prior to the issuance of building permits.

Cumulative Impacts

Less Than Significant Impact. The Proposed Project, in combination with the three related projects, would increase the demand for police protection services in the Project area. Specifically, there would be an increased demand for additional LAPD staffing, equipment, and facilities over time. This need would be funded via existing mechanisms (e.g., sales taxes, government funding, and developer fees), to which the Proposed Project and related projects would contribute. In addition, each of the related projects would be individually subject to LAPD review and would be required to comply with all applicable safety requirements of the LAPD and the City of Los Angeles in order to adequately address police protection service demands. Furthermore, each of the related projects would likely install and/or incorporate adequate crime prevention design features in consultation with the LAPD, as necessary, to further decrease the demand for police protection services. To the extent cumulative development causes the need for additional police stations to be built throughout the City, the development of such stations would be on small infill lots within existing developed areas and would not likely cause a significant impact upon the environment. Nevertheless, the siting and development of any new police stations would be subject to further CEQA review and evaluated on a case-by-case basis. However, as the LAPD does not currently have any plans for new police stations to be developed in proximity to the Project Site. No impacts are currently anticipated to occur. On this basis, the Proposed Project would not make a cumulatively considerable impact to police protection services, and cumulative impacts on police protection would be less than significant.

(iii) Schools?

Less Than Significant Impact. A significant impact may occur if a project includes substantial employment or population growth, which could generate a demand for school facilities that would exceed the capacity of the Los Angeles Unified School District (LAUSD). The Project Site is located in LAUSD Board District 2 and 5. The Project Site is currently served by one elementary school, one middle school, and two high schools. Table III-21, Resident Schools Serving the Project Site, details the names, grades served, and location of each school.

Table III-21
Resident Schools Serving the Project Site

School Name	Grades	Address
Hillside Elementary	K-5	120 E. Avenue 35
Florence Nightingale Middle School	6-8	3311 N. Figueroa Street
Woodrow Wilson Senior High	9-12	4500 Multnomah Street
Abraham Lincoln Senior High (includes Lincoln High School Leadership in Entertainment & Media Arts)	9-12	3501 N. Broadway

Notes: Some schools are charter schools and require an application process prior to student enrollment.
Source: Los Angeles Unified School District, Resident School Identifier, website: http://rsi.lausd.net/ResidentSchoolIdentifier/, accessed February 2016.

As shown in Table III-22, Proposed Project Estimated Student Generation, the Proposed Project would generate approximately 60 elementary students, 16 middle school students and 34 high school students, for a total of up to 110 students. This would create an increased demand on local school districts. As shown in the Related Projects List (Table II-6 of Section II. Project Description), Related Project No. 3 includes the development of a middle school with a capacity of 74 students and a high school with a capacity of 263 students. The construction of this related project would further lessen the school demands in the area. Furthermore, the Project Applicant would be required to pay all applicable developer fees to the LAUSD to offset the Proposed Project's demands upon local schools. Pursuant to Government Code Section 65995, the development fees authorized by SB 50 are deemed to be "full and complete school facilities mitigation." Thus, the Proposed Project's potential impact upon public school services would be less than significant by the following regulatory compliance measure:

- **(Payment of School Development Fee)**: Prior to issuance of a building permit, the General Manager of the City of Los Angeles, Department of Building and Safety, or designee, shall ensure that the Applicant has paid all applicable school facility development fees in accordance with California Government Code Section 65995.

Table III-22
Proposed Project Estimated Student Generation

Land Use	Size	Elementary School Students	Middle School Students	High School Students	Total Students
Existing Uses

Cumulative Impacts

Less Than Significant Impact. The Proposed Project, in combination with the three related projects is expected to result in a cumulative increase in the demand for school services. Development of the related projects would likely generate additional demands upon school services. These related projects would have the potential to generate students that would attend the same schools as the Proposed Project. As shown in Table III-23, Projected Cumulative Student Generation, the Proposed Project and related projects would cumulatively contribute approximately 105 elementary school students, 28 middle school students and 60 high school students, for a total of up to 193 students. This would create an increased cumulative demand on local school districts. As noted in Table II-6 in Section II. Project Description, Related Project No. 3 proposes the development of a middle school and high school, which would further lessen the overall demand on schools in the Project area. Additionally, each of the new housing units would be responsible for paying mandatory school fees to mitigate the increased demand for school services. Cumulative impacts on schools would be less than significant.

Table III-23
Projected Cumulative Student Generation

Land Use	Size	Elementary School Students	Middle School Students	High School Students	Total Students
Single-Family Attached [a]	290 du	15	4	9	28
Multi-Family Residences [b]	164 du	27	7	16	50

-Conversions of square feet per occupant are based on California Building Code (2013), Ch.10, Table 1004.1.2.

(iv) Parks?

Less Than Significant Impact. A significant impact would occur if the recreation and park services available could not accommodate the projected population increase resulting from implementation of a project or if the proposed project resulted in the construction of new recreation and park facilities that create significant direct or indirect impacts to the environment. Based on the *L.A. CEQA Thresholds Guide*, the determination of whether the project results in a significant impact on recreation and parks shall be made considering the following factors: (a) the net population increase resulting from the Proposed Project; (b) the demand for recreation and park services anticipated at the time of project buildout compared to the expected level of service available. Consider, as applicable, scheduled improvements to recreation and park services (renovation, expansion, or addition) and the project's proportional contribution to the demand; and (c) whether the project includes features that would reduce the demand for park services (e.g., on-site recreation facilities, land dedication, or direct financial support to the Department of Recreation and Parks).

The Public Recreation Plan (PRP), a portion of the Service Systems Element of the City of Los Angeles General Plan, provides standards for the provision of recreational facilities throughout the City and includes Local Recreation Standards. The desired long-range standard for local parks is based on two acres per 1,000 persons for neighborhood parks and two acres per 1,000 persons for community parks or four acres per 1,000 persons of combined neighborhood and community parks. However, the PRP also notes that these long-range standards may not be reached during the life of the plan, and, therefore, includes more attainable short- and intermediate-range standards of one (1) acre per 1,000 persons for neighborhood parks and one (1) acre per 1,000 persons for community parks, or two (2) acres per 1,000 people of combined neighborhood and community parks. These standards are Citywide goals and are not intended to be requirements for individual development projects. The Public Recreation Element of the City's General Plan also recognizes that the achievement of such goals is not the responsibility of individual development projects and that such goals will be met by "seek[ing] federal, state and private funds to implement acquisition and development of parks and recreational facilities."

The Proposed Project is located within a highly urbanized area within the Northeast Los Angeles Community Plan Area. As shown in Table III-24, there is over 1,210 acres of parkland and public

recreation facilities within a 2-mile radius of the Project Site. These facilities range from 0.46-acres (East Los Angeles Park) to 600 acres (Elysian Park). The Project Site is surrounded by relatively big parks (over 50 acres) such as Elysian Park, Ascot Hills Park, Ernest E. Debs Regional Park, and Arroyo Seco Park. Due to the large sizes, only portions of Arroyo Seco Park and Elysian Park are within the 2-mile radius of the Project Site. As discussed in Checklist Question XII (a), it is estimated that the development of the Proposed Project would result in an increase of 1,216 new residents to the area. Based on the standard parkland ratio goal of 4 acres per 1,000 residents, the Proposed Project would generate a Citywide goal of serving such residents with approximately 4.86 acres of additional public parkland. The Proposed Project would contribute towards the achievement of such goal through a combination of (1) on-site open space proposed within the Project, (2) payment of applicable taxes in accordance with LAMC Section 21.10.3(a)(1), and (3) the availability of existing park and recreation facilities within the area. The Proposed Project would provide approximately 39,575 square feet of total common open space and amenities on-site available to serve Project residents and their guests. The Proposed Project may include a variety of on-site amenities including, but not limited to, common open space, community gardens, a roof deck, pool deck, barbecue pits, and a gymnasium. Pursuant to Ordinance No. 179,280 the Proposed Project is required to provide a minimum of 64,744 square feet of publicly accessible public open space throughout the Project Site in the form of open space, paseos, and paths. The Project proposes to provide 64,744 square feet of publicly accessible open space, thereby achieving the required square feet of open space required by the LAMC and Ordinance No. 179,280.

In addition to the on-site open space provided within the Proposed Project, the Proposed Project is subject to Ordinance 184,505, which requires the payment of park mitigation fees for residential, non-subdivision projects. In accordance with Ordinance 184,505, these fees may be offset or reduced based on the amount of on-site open space and recreational amenities provided on-site. Therefore, under the City's mandatory park mitigation fee, which is collected prior to a certificate of occupancy for residential land uses (see regulatory compliance measure, below), the Proposed Project's impact upon parks and recreational facilities would be reduced to a less-than-significant level.

Regulatory Compliance Measure:

- **(Increased Demand For Parks Or Recreational Facilities):** Pursuant to Ordinance 184,505, the applicant shall pay the park mitigation fees for construction of apartment buildings.

Table III-24
Recreation and Park Facilities within the Project Area

Park Name	Park Size (acres)	Park Amenities	Approx. Distance to Project Site (miles)
1. Lacy Street Neighborhood Park	0.55	Picnic tables, parking lot	0.30
2. Graeyor Oak Mini Park	0.65	Pocket Park	0.37
3. East Los Angeles Park	0.46	Children's play area, picnic tables	0.62
4. Cypress Park and Recreation Center	3.15	Auditorium, barbecue pits, children's play area, indoor gym with weights, picnic tables	0.63
5. Lincoln Heights Recreation Center	1.24	Indoor gym (without weights), auditorium, basketball courts (lighted/indoor), basketball courts (lighted/outdoor),	0.77

Park Name	Park Size (acres)	Park Amenities	Approx. Distance to Project Site (miles)
		children's play area	
6. L.A. Youth Athletic Club	4.80	Indoor gym (with weights), boxing facility, karate/kickboxing room, television area	0.78
7. Elysian Park	600.0	Golf course, arboretum, hiking trails, horseshoe pits, jogging paths, picnic area, children's play area, indoor gym, basketball courts, barbecue pits	0.79
8. Montecito Heights Recreation Center	4.50	Auditorium, basketball courts (lighted/indoor), basketball courts (unlighted/outdoor), children's play area, indoor gym (with weights), picnic tables, tennis courts (unlighted), volleyball courts (unlighted), weight room	0.90
9. Carlin G. Smith Recreation Center	2.70	Auditorium, basketball court (lighted/outdoor), children's play area, picnic area	0.96
10. Downey Pool and Recreation Center	5.96	Pool, auditorium, baseball diamond (lighted), children's play area, outdoor basketball court, picnic tables	1.04
11. Ernest E. Debs Regional Park	282.0	Barbecue pits, picnic tables, recreation center	1.11
12. Sycamore Grove Park	19.10	Barbecue pits, children's play area, picnic tables, tennis courts (lighted), bandshell, concession stand	1.29
13. Rose Hill Park and Recreation Center	2.18	Barbecue pits, baseball diamond (lighted/unlighted), children's play area, picnic tables, community garden	1.33
14. Lincoln Park and Recreation Center	43.80	Auditorium, barbecue pits, baseball diamond (lighted), basketball courts (lighted/indoor), children's play area, indoor gym (with weights), picnic tables, soccer field (unlighted), tennis courts (unlighted), pool, picnic tables	1.34
15. Rio De Los Angeles State Park	21.40	Community room, picnic area, tennis courts (lighted), basketball courts (lighted/outdoor), baseball field (lighted0, softball field (lighted), two soccer fields (lighted), junior soccer fields (unlighted), junior synthetic soccer field (unlighted), walking trail	1.36
16. Ascot Hills Park	94.00	Hiking trails	1.43
17. Moon Canyon Park	4.50	Hike trails, dog park	1.53
18. Hazard Park and Recreation Center	30.60	Auditorium, barbecue pits, basketball courts (lighted/indoor), children's play area, community room, handball courts (unlighted), indoor gym (without weights), picnic tables, tennis courts (lighted), skate park,	1.76
19. El Sereno Recreation Center	12.10	Auditorium, barbecue pits, baseball diamond (lighted), basketball courts (lighted/indoor/outdoor), children's play area, community room, indoor/outdoor gym (without weights), picnic tables, tennis courts (lighted), skate park	1.87
20. Cleland Avenue Bicentennial Park	0.93	Children's play area	1.93
21. Arroyo Seco Park	73.90	Barbecue pits, children's play area, picnic tables, tennis courts (lighted)	2.00
22. Bud Weiner Park	0.65	Pocket park, benches	2.00
23. Elysian Valley Recreation Center	1.13	Auditorium, baseball diamond (lighted), one basketball court (indoor), children's play area, two community rooms, handball court (unlighted)	2.00
Total Parkland (Approximate):	**1,210.3**		

Sources: Park distances, size, and amenities were determined using:
(1) City of Los Angeles, Department of Recreation and Parks, http://www.laparks.org;

(3) Google Earth (when necessary), accessed February 2016.

Cumulative Impacts

Less Than Significant Impact. Development of the Proposed Project in conjunction with the three related projects could result in an increase in permanent residents residing in the greater Project area. Additional cumulative development would contribute to lowering the City's existing parkland to population ratio, which is currently below the preferred standard. However, each of the residential related projects are required to comply with payment of Quimby Fees (for subdivision projects with greater than 50 units) and/or park mitigation fees (for all other residential projects). Each residential related project would also be required to comply with the on-site open space requirements of the LAMC. Therefore, with payment of the applicable recreation fees on a project-by-project basis, the Proposed Project would not make a cumulatively considerable impact to parks and recreational facilities, and cumulative impacts would be less than significant.

(v) Other Public Facilities?

Less Than Significant Impact. A significant impact may occur if a project includes substantial employment or population growth that could generate a demand for other public facilities (such as libraries), which would exceed the capacity available to serve the Project Site. Based on the *L.A. CEQA Thresholds Guide*, the determination of whether the project results in a significant impact on libraries shall be made considering the following factors: (a) the net population increase resulting from the Project; (b) the demand for library services anticipated at the time of project buildout compared to the expected level of service available. Consider, as applicable, scheduled improvements to library services (renovation, expansion, addition or relocation) and the project's proportional contribution to the demand; and (c) whether the project includes features that would reduce the demand for library services (e.g., on-site library facilities or direct financial support to the Los Angeles Public Library).

Within the City of Los Angeles, the Los Angeles Public Library (LAPL) provides library services at the Central Library and 72 regional branch libraries. Approximately 6.5 million books and other materials comprise the LAPL collection. Approximately 6.5 million books and other materials comprise the LAPL collection. The LAPL branches currently serving the Project Site include:

- Lincoln Heights Branch Library, located at 2530 Workman Street, approximately 0.5 mile south of the Project Site; and
- Cypress Park Branch Library, located at 1150 Cypress Avenue, approximately 1.0 mile northwest of the Project Site.[45]

It is anticipated that the existing libraries within the Project area would be able to meet the Proposed Project's demand for library services. Therefore, the Proposed Project's impacts upon library services would be considered less than significant.

---

[45] *City of Los Angeles Public Library, Hours and Locations, website: http://www.lapl.org/branches, accessed February 2016.*

Cumulative Impacts

Less Than Significant Impact. Development of the related projects is projected to generate additional housing and residents within the study area, which would likely generate additional demands upon library services. This increase in resident population, combined with the 1,216 additional residents generated by the Proposed Project, would result in a cumulative increase in demands upon public library services. To meet the increased demands upon the City's Public Library system, Los Angeles voters passed a Library Bond Issue for $178.3 million to improve, renovate, expand, and construct 32 branch libraries. Since the Program's inception in 1998, the Library Department and the Department of Public Works, Bureau of Engineering have made considerable progress in the design and construction of the branch library facilities. Based on the growth forecasts utilized in the 2015-2020 Strategic Plan, much of this growth has already been accounted for in planning new and expanded library facilities. Thus, the 2,701 additional residents generated by the Proposed Project and the related projects would not make a cumulatively considerable impact upon the City's library system. Therefore, the cumulative impacts related to library facilities would be reduced to a less than significant level.

XV. RECREATION

a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

Less Than Significant Impact. For the purpose of this MND, a significant impact may occur if the project would include substantial employment or population growth, which would increase the use of existing neighborhood and regional parks or other recreational facilities, such that substantial physical deterioration of the facility would occur or be accelerated. Based on the *L.A. CEQA Thresholds Guide*, the determination of whether the project results in a significant impact on recreation and parks shall be made considering the following factors: (a) the net population increase resulting from the proposed project; (b) the demand for recreation and park services anticipated at the time of project buildout compared to the expected level of service available. Consider, as applicable, scheduled improvements to recreation and park services (renovation, expansion, or addition) and the project's proportional contribution to the demand; and (c) whether the project includes features that would reduce the demand for park services (e.g., on-site recreation facilities, land dedication, or direct financial support to the Department of Recreation and Parks).

It is reasonable to assume that the future occupants of the Proposed Project would utilize recreation and park facilities in the surrounding area. As noted in Table III-24, above, there are 23 existing new and recently improved parks within the Project area totaling more than 1,210 acres that are available to serve the future residents and retail visitors to the Project Site. The Project Site is surrounded by relatively big parks (over 50 acres) such as Elysian Park, Ascot Hills Park, Ernest E. Debs Regional Park, and Arroyo Seco Park. In addition, the Proposed Project would provide approximately 39,575 square feet of total common open space and amenities on-site available to Project residents and their guests. For the Project's residents and their guests, the Proposed Project may include a variety of on-site amenities including, but not limited to, common open space, community gardens, a roof deck, pool deck, barbecue pits, and a gymnasium. Additionally, pursuant to Ordinance No. 179,280, the Proposed Project would provide

64,744 square feet of publicly accessible public open space throughout the Proposed Project in the form of open space, paseos, and paths. The availability of these on-site recreation amenities and opportunities would serve to reduce the demand for off-site park services, and accordingly the Proposed Project would not substantially increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated. In addition, the Project Applicant would pay the City's mandatory park mitigation fees, which is collected prior to a certificate of occupancy for residential land uses, and comply with regulatory compliance measure relating to parks (discussed above). Accordingly, the Proposed Project's impact upon parks and recreational facilities would be less than significant.

b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?

Less Than Significant Impact. A significant impact may occur if a project includes or requires the construction or expansion of park facilities and such construction would have a significant adverse effect on the environment. As noted above, there are 23 existing, new, or recently improved parks within the Project Area totaling more than 1,210 acres that are available to serve the future residents and retail visitors to the Project Site. As required by [Q] Condition B.1(e) and B.6(a), the Proposed Project would also provide approximately 39,575 square feet of residential open space and recreational facilities and 64,744 square feet of publicly accessible open space on-site. As discussed in Section XIV (iv) above, Citywide park standards are Citywide goals and are not intended to be requirements for individual development projects. The Public Recreation Element of the City's General Plan also recognizes that the achievement of such goals is not the responsibility of individual development projects and that such goals will be met by "seek[ing] federal, state and private funds to implement acquisition and development of parks and recreational facilities." The Proposed Project itself does not include the expansion of park facilities and does not require the construction or expansion of recreational facilities that might have an adverse impact on the environment. Therefore, a less than significant impact would occur.

Cumulative Impacts

Less Than Significant Impact. Section 15355 of the State CEQA Guidelines defines cumulative impacts as "two or more individual effects which, when considered together, are considerable or which compound or increase other environmental impacts." As discussed above, the Proposed Project would have a less than significant impact on recreational resources. The Proposed Project in combination with the three related projects would be expected to increase the cumulative demand for parks and recreational facilities in the City of Los Angeles. A number of new parks and recently renovated park improvements have been made in the downtown area and along San Fernando Road to accommodate cumulative demands created by increased residential development. Similar to the Proposed Project's requirement to pay park mitigation fees to improve recreation and park facilities, the related projects that include residential units would be required to pay similar recreation taxes and/or applicable Quimby fees to mitigate impacts upon park and recreational facilities and to provide additional funds to meet Citywide park goals. Additionally, each related project would be subject to the provisions of the LAMC for providing on-site open space, which is proportionately based on the amount of new development. Because the Proposed Project would have a less than significant incremental contribution to the potential cumulative impact on recreational resources, the Proposed Project would have a less than significant

cumulative impact on such resources.

XVI. TRANSPORTATION AND TRAFFIC

The following section summarizes and incorporates by reference the information:

- Traffic Impact Report for Proposed Avenue 34 & Pasadena Mixed-Use Project, prepared by Crain & Associates, dated December 2015.
- City of Los Angeles Department of Transportation's approval letter, Traffic Impact Assessment for the Proposed Development Project at 167 West Avenue 34 / 3401-3437 North Pasadena Avenue, dated January 28, 2016.

The Traffic Study and related correspondence from the Los Angeles Department of Transportation (LADOT) are attached. The Traffic Study and the discussion below evaluate a larger project that includes 410 dwelling units, 30,000 square feet of creative office, and 10,000 square feet of retail. The Traffic Study was reviewed and approved by DOT in January 2016. The Proposed Project has since been revised to include 372 dwelling units, 30,000 square feet of creative office, and 10,000 square feet of retail. Because the Traffic Study evaluated a larger project than what is currently proposed, the Traffic Study and the analysis below present a conservative analysis of the Project's impacts.

a) Would the project conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit?

Potentially Significant Unless Mitigation Incorporated. The Transportation Research Board Circular 212 Critical Movement Analysis (CMA) Planning Method was used to analyze traffic operating conditions at study intersections. CMA methodology compares the amount of traffic an intersection is able to process (capacity) to the level of traffic during peak hours (volume). The resulting volume-to-capacity ratio (v/c) is expressed in terms of level of service (LOS). LOS A represents free-flow activity and LOS F represents overcapacity operation. LOS is a qualitative assessment of the quantitative effects of such factors as traffic volume, roadway geometrics, speed, delay, and maneuverability on roadway and intersection operations.

The City of Los Angeles determines whether a transportation impact at a signalized intersection is significant according to a sliding scale. At an intersection with a final LOS C, a project impact would occur if the project contributes 0.040 or greater to the intersection v/c. At an intersection with a final LOS D, a project impact would occur if the project contributes 0.020 or greater to the intersection v/c. At an intersection with a final LOS E or F, a project impact would occur if the project contributes 0.010 or greater to the intersection v/c. Refer to Table III-25, Definition of Significant Impact at Intersection, below.

Table III-25
Definition of Significant Impact at Intersection

Level of Service	Volume-to-Capacity (V/C)	Project-related Increase in Volume-to-Capacity (V/C) Ratio
C	0.701–0.800	Equal to or greater than 0.04
D	0.801–0.900	Equal to or greater than 0.02
E, F	> 0.900	Equal to or greater than 0.01

Study Intersections

A total of ten intersections were identified, in conjunction with LADOT staff, for inclusion in the traffic analysis. The analyzed locations are shown in Figure 1 of the Traffic Study. None of these intersections are Los Angeles County Congestion Management Plan (CMP) monitoring locations. In addition, a CMP analysis is not required because the Proposed Project would not add 50 or more peak-hour trips to any CMP arterial monitoring intersections, including freeway on- and off-ramps as discussed below. Furthermore, the Project would not add 150 or more peak-hour trips to freeway mainline monitoring locations. The following intersections were determined in consultation with LADOT:

1. Figueroa Street and Pasadena Avenue/ Marmion Way
2. Figueroa Street and Avenue 26
3. Figueroa Street and SR-110 Freeway Northbound On/Off Ramps
4. I-5 Freeway Northbound Off-Ramp /Lacy Street and Avenue 26
5. Pasadena Avenue and Avenue 35
6. Pasadena Avenue and Avenue 33
7. Pasadena Avenue and Avenue 28
8. Pasadena Avenue/Avenue 26 and Daly Street
9. Pasadena Avenue and I-5 Freeway Northbound On/Off Ramps
10. Pasadena Avenue and I-5 Freeway Southbound On/Off Ramps

Existing Transit Options

The Los Angeles County Metropolitan Transportation Authority (MTA) provides an extensive system of bus lines in the Northeast Los Angeles Community Plan area. Metro Gold Line Rail Station and a number of MTA bus routes are within reasonable walking distance from the Project Site (less than approximately one-quarter mile), providing access for residents, employees and patrons of the Project. The public transit routes serving the Project are described in detail below, and transit routes within the walking distance are shown in Figure 4 of the Traffic Study.

Metro Gold Line is a light rail line running from Azusa to East Los Angeles via Downtown Los Angeles serving several attractions, including Little Tokyo, Union Station, the Southwest Museum, Chinatown, and the shops of Old Town Pasadena. The Metro Gold line is one of six in the Metro Rail system, serving 21 stations (including two subway stations). At Union Station, riders can connect with the Metro Red and Metro Purple Lines, the Metro Silver Line bus rapid transit line as well as the Metrolink regional system. Extension of the Gold Line further eastward extension to Montclair is also planned. The Heritage

Square/Arroyo Station of the Metro Gold Line is within one-quarter mile walking distance from the Project Site. Currently, Metro Gold Line trains run between approximately 4:30 a.m. and 12:45 a.m. daily. Service on Friday and Saturday nights continues until approximately 2:00 a.m. Trains on the Gold Line operate every six minutes during peak hours Monday through Friday. Middays consist of 12-minute headways, while weekends all day have a frequency of seven to eight minutes. Nighttime service operates every 15 minutes, with 20-minute headways during late night weekend service.

Line 83 is a north-south oriented route which operates between the Downtown Los Angeles and Eagle Rock area. Route 83 travels through the communities of Eagle Rock, Highland Park, Cypress and Downtown Los Angeles. Near the Project Site, Line 83 runs north-south along Pasadena Avenue. Line 83 provides stops in the Project vicinity on Pasadena Avenue at Avenue 31, Avenue 33 and Avenue 35. Line 83 operates daily with headways of approximately 20 to 40 minutes during the weekday AM and PM peak hours. Saturday, Sunday and holiday service is provided with longer headways.

Lines 251/252 are north-south oriented routes which operate between the Montecito Heights and Lynwood area. Route 251/252 travel through the communities of Montecito Heights, Cypress Park, Lincoln Heights, Boyle Heights, Vernon, Huntington Park, South Gate and Lynwood. Near the Project Site, only Line 252 runs north-south along Griffin Avenue. Line 252 provides stops in the Project vicinity on Griffin Avenue at Avenue 31, Avenue 33 and Avenue 35. Line 252 operates daily with headways of approximately 20 to 30 minutes during the weekday AM and PM peak hours. Saturday, Sunday and holiday service is provided with longer headways.

As discussed in Question III(a), the Proposed Project is within a High-Quality Transit Areas (HQTA). An HQTA is defined as a generally walkable transit village or corridor within one half-mile of a well-serviced transit stop or a transit corridor with 15-minute or less service frequency during peak commute hours. The Proposed Project would concentrate new development and jobs within a half of a mile (walking distance) from the Heritage Square Gold Line Station and is served by several Metro bus lines. Thus, the Project Site's location provides opportunities for employees, guests, visitors, and residents to use public transit to reduce vehicle trips. The Project Site is also located in a Transit Priority Area as defined by CEQA Sections 21099 and 21064.3. The Proposed Project's mixed-use nature and close proximity to neighborhood-serving commercial/retail land uses and regional transit would result in fewer trips and a reduction to the Proposed Project's vehicle miles traveled (VMTs) as compared to the base trip rates for similar stand-alone land uses that are not located in close proximity to transit. Thus, it is expected that some of the person trips generated by the Proposed Project would utilize public transportation as their primary travel mode instead of private vehicles.

Existing (2015) Traffic Volumes

Traffic volumes for existing conditions at the study intersections were obtained from manual traffic counts conducted in May 2015. In accordance with LADOT Traffic Study Policies and Procedures, the traffic counts conducted for the Traffic Study cover the weekday morning and afternoon peak commute periods.

An analysis of existing weekday AM and PM peak-hour traffic conditions was performed at the 10 study intersections listed above. These intersections were determined in consultation with LADOT. As shown in Table III-27 and Table III-28, below, all ten intersections operate at acceptable levels of service (LOS A through D).

Project Impact

Project Parking and Vehicular Access

Parking for the Proposed Project's uses would be provided underneath the Project buildings, with loading docks and short-term retail parking provided on the surface level. The proposed parking supply is expected to meet the requirements of the City of Los Angeles Municipal Code and site-specific requirements as identified in [Q] Conditions A.2 (Parking) and B.2 (Pedestrian Access). In addition, the Proposed Project would comply with the LAMC bicycle parking requirement by providing enough long-term and short-term bicycle stalls. Vehicular access for the Project parking would be provided via two driveways along Avenue 34 – a residential driveway on the southwest corner of the Project Site opposite Artesian Street and a mixed commercial and residential driveway at the dividing line between the commercial and residential portions of the Project Site. Additionally, a driveway serving the commercial loading dock and short-term retail parking would be located along Pasadena Avenue.

Estimated Trip Generation

The Proposed Project analyzed in the Traffic Study includes the development of up to 410 apartment units, 30,000 square feet of office space, and 10,000 square feet of retail use. The daily and peak-hour trips for the Project were generated using trip rates from the Institute of Transportation Engineers (ITE) *Trip Generation* Manual (9th Edition, 2012). In accordance with the LADOT, vehicle trip generation is reduced by 15 percent for the transit credit, 10 percent for internal trips, and 50 percent for commercial pass-by trips. Project trip generation is presented in Table III-26. As shown in Table III-26, the analysis estimates that the Proposed Project would generate a total of 2,128 daily vehicle trips, 161 AM peak hour vehicle trips and 199 PM peak hour vehicle trips.

Table III-26
Project Trip Generation Estimates

Land Use (Land Use Code)	Size	Unit	ADT [a]	AM Peak			PM Peak		
				In	Out	Total	In	Out	Total
Proposed Project [b]									
Apartments (250)	410	du	2,608	41	164	205	158	85	243
Internal Trip Credit [c]			-76	-1	-5	-6	-6	-3	-9

Net Trip Generation:			**2,128**	**29**	**132**	**161**	**133**	**66**	**199**

ADT = average daily traffic; du =dwelling units; sf = square feet

[a] *Trip rates based on the Institute of Transportation Engineers (ITE) Trip Generation Manual, 9th Edition (2012).*

[b] *As discussed above, the Project metrics analyzed in the Traffic Study and in this table are higher than the actual Proposed Project, and thus, the trip generation amounts are conservative.*

[c] *Internal, transit credit and pass-by trips based on City of Los Angeles Department of Transportation (LADOT) Traffic Study Policies and Procedures (2014).*

Source: Crain & Associates, Traffic Impact Report for Proposed Avenue 34 & Pasadena Mixed-Use Project, dated December 2015.

Existing (2015) With Project Conditions

Table III-27, below, summarizes the results of the Existing (2015) and Existing with Project (2015) AM peak-hour LOS analysis for the ten study area intersections. Figure III-2 and Figure III-3 illustrate the existing traffic volumes of the ten study intersections for the AM and PM peak hours, respectively. Figure III-4 and Figure III-5 illustrate the traffic volumes at the studied intersections with the addition of the Proposed Project during the AM and PM peak hours, respectively. As discussed above, the LOS were determined using the LADOT spreadsheet for calculating CMA methodology. As shown in Table III-27, nine of the ten intersections would continue to operate at acceptable levels of service (LOS A through D) during the AM peak hour. A significant impact would occur at one intersection (Pasadena Avenue/ Avenue 26 and Daly Street) during the AM peak hour with the addition of Project traffic.

Table III-28, below, summarizes the results of the Existing (2015) and Existing with Project (2015) PM peak-hour LOS analysis for the ten study area intersections. All study intersections are not anticipated to have any significant impacts with the addition of Project traffic during the PM peak hour.

As approved by LADOT, the Proposed Project would comply with the Transportation Demand Management (TDM) Ordinance (No. 167,700) by implementing a TDM Plan and Trip Monitoring Program to offset the increased traffic from the Proposed Project (Mitigation Measures MM-T-1 through MM-T-3). Table III-29 shows that there would be a decrease in v/c ratio from incorporating a TDM Plan. Refer to Figure III-6 and Figure III-7 for the Existing (2015) traffic volumes with the implementation of the TDM Plan. Therefore, with implementation of mitigation measures below, the significant impact identified at the Pasadena Avenue/ Avenue 26 and Daly Street intersection during the AM peak hour would be reduced to a less than significant level.

Table III-27
Existing (2015) and Existing with Project Condition

Mitigation Measures:

MM-T-1 Transportation and Traffic

In addition to the TDM measures, implementing measure(s) detailed in DOT's communication to the Planning Department (DOT Case No. CEN 15-43306 dated January 28, 2016, attached) shall be complied with.

MM-T-2 Transportation Demand Management (TDM) Program

- The purpose of a TDM plan is to reduce the use of single occupant vehicles (SOV) by increasing the number of trips by walking, bicycle, carpool, vanpool and transit. A TDM plan should include design features, transportation services, education, and incentives intended to reduce the amount of SOV during commute hours. Through strategic building design and orientation, this project can facilitate access to transit, can provide a pedestrian-

friendly environment, can promote non-automobile travel and can support the goals of a trip-reduction program.

- A preliminary TDM program shall be prepared and provided for DOT review prior to the issuance of the first building permit for this project and a final TDM program approved by DOT is required prior to the issuance of the first certificate of occupancy for the project. The TDM program should include, but not be limited to, the following strategies:
    - Provide an internal Transportation Management Coordination Program with an on-site transportation coordinator;
    - Design the project to ensure a bicycle, transit, and pedestrian friendly environment;
    - Provide unbundled parking that separates the cost of obtaining assigned parking spaces from the cost of purchasing or renting residential units;
    - Accommodate flexible/alternative work schedules and telecommuting programs;
    - A provision requiring compliance with the State Parking Cash-out Law in all leases;
    - Coordinate with DOT to determine if the project location is eligible for future Integrated Mobility Hub (which can include space for a bike share kiosk, and/or parking spaces on-site for car-share vehicles;
    - Provide on-site transit routing and schedule information;
    - Provide a program to discount transit passes for residents/employees possibly through negotiated bulk purchasing passes with transit providers;
    - Provide rideshare matching services;
    - Preferential rideshare loading/unloading or parking location;
    - Contribute to a one-time fixed fee contribution of $75,000 to be deposited into the City's Bicycle Plan Trust Fund to implement bicycle improvements in the vicinity of the project.

  In addition to these TDM measures, DOT also recommends that the Applicant explore the implementation of an on-demand van, shuttle or tram service that connects the project employees to off-site transit stops based on the transportation needs of the project employees. Such a service can be included as an additional measure in the TDM program if it is deemed feasible and effective by the applicant.
- The Applicant shall implement a TDM/TMP to reduce the project trip generation by 15 percent. Specifically, the project shall not exceed a driveway trip volume count of 179 trips during the a.m. peak hour and 222 trips during the pm peak hour, at full occupancy. To achieve this peak hour driveway trip volume requirement through implementation of an on-site Transportation Demand Management (TDM) Plan the project shall implement a Trip Monitoring Program (TMP).
- The Applicant shall record a covenant and agreement to annually monitor and submit reports on the progress of the driveway trip reduction plan to DOT. Annual reports shall include a report on the observed trip generation and on the project's mode share. The detailed goals, objectives, terms and strategies of the TDM plan and reporting requirements shall be determined during the preparation of the final. The TDM plan is due prior to the issuance of any temporary or final certificate of occupancy permit for the project. The plan should also identify any appropriate penalties, should the project not achieve compliance with the targeted number of driveway trips within a year of exceeding the limits. The TMP shall continue until such time that the project has

shown, for five (5) consecutive years, at a minimum of 85% occupancy, accomplishment of the peak hour driveway trip volume requirement as listed.

MM-T-3 Transportation Systems Management (TSM) Improvements

- The Applicant shall implement the upgrades, detailed below by LADOT's ATSAC Section, through the B-Permit process. LADOT's ATSAC Section has identified the need to update the existing traffic signal system. Specifically, install one CCTV camera, a new type 2070 controller, and the necessary infrastructure (including, but not limited to, fiber optic and interconnect) to activate the new installation, at the Pasadena Avenue / Avenue 26 and Daly Street intersection. The video fiber / fiber optic improvements must be guaranteed prior to the issuance of any building permit and complete prior to the issuance of any certificate of occupancy. Temporary certificates of occupancy may be granted in the events of any delay through no fault of the applicant, provided that, in each case, the applicant has demonstrated reasonable efforts and due diligence to the satisfaction of DOT.

Future (2020) Without and With Project Conditions

Future (2020) baseline traffic volumes for the "Without Project" condition were determined by combining area ambient traffic growth with the total related projects traffic volumes. Net Project volumes were then combined with the Future (2020) Without Project traffic volumes to develop the Future (2020) with Project volumes, which were used to determine traffic impacts directly attributable to the Proposed Project. Figure III-8 and Figure III-9 illustrate the Future (2020) traffic volumes at the ten intersections without the Proposed Project during the AM and PM peak hours, respectively. Figure III-10 and Figure III-11 illustrate the traffic volumes for the studied intersections with the addition of the Proposed Project for the AM and PM peak hours, respectively. Tables III-30 and III-31 summarize the level of service for the Future (2020) with Project conditions at the analyzed intersections for the AM and PM peak hours, respectively.

Table III-30 and Table III-31 below show future traffic conditions with and without Project conditions during the AM and PM peak hours, respectively. For the Future (2020) With Project condition, it is estimated that 8 of the study intersections would continue to have acceptable levels of service (LOS A through LOS D) during both peak hours. The remaining two study intersections (Figueroa Street & Avenue 26 and Pasadena Avenue/Avenue 26 & Daly Street) are expected to operate at LOS E during the AM peak hours without the addition of Project traffic. The addition of Project traffic would create a significant impact at Figueroa Street & Avenue 26 intersection and Pasadena Avenue/Avenue 26 & Daly Street intersection during the AM peak hour.

As mentioned above, the Proposed Project would implement a Transportation Demand Management Plan to promote other modes of travel and reduce single occupant vehicles. Table III-32 shows the decrease in the v/c values for the intersections that would be significantly impacted from the Proposed Project. Figure III-12 and Figure III-13 illustrate the traffic volumes at the ten intersections with the TDM Plan. As shown in Table III-32, the impacts would be reduced to less than significant level with implementation of a TDM Plan and Transportation Monitoring Program.

Construction Traffic

The Proposed Project would require the use of haul trucks during site clearing and excavation, and the use of a variety of other construction vehicles throughout the construction of the Proposed Project. The Proposed Project would require approximately 98,000 cy of excavated soil to be exported off site. As noted in the CalEEMod worksheets provided in the Air Quality Study, it is conservatively estimated that the earthwork and grading phase would generate up to 12,250 haul trips over an approximate 3-month period (average of 186 trips per day based on approximately 8 cy per truck[46]). The local haul route traveling to and from the I-5 Freeway would utilize Avenue 34, Pasadena Avenue, Avenue 33, Lacy Street, and Avenue 26. The haul trips would occur outside of the peak hours and during the permissible hauling hours identified in the haul route to be approved by the Department of Building and Safety. The addition of these vehicles onto the street system would contribute to increased traffic in the Project vicinity. However, the Proposed Project's construction trip traffic would be a fraction of the operational traffic that would not cause any significant impacts at the studied intersections. Therefore, it is not anticipated that they would contribute to a significant increase in the overall congestion in the Project vicinity. In addition, any truck trips would be limited to the length of time required for the Project's construction. Due to the temporary nature of the traffic, construction impacts would be less than significant with the incorporation of Mitigation Measures MM-T-4 to MM-T-6, below.

Mitigation Measures:

MM-T-4 Construction Management Plan

- A Construction work site traffic control plan shall be submitted to DOT for review and approval prior to the start of any construction work. The plans shall show the location of any roadway or sidewalk closures, traffic detours, haul routes, hours of operation, protective devices, warning signs and access to abutting properties. All construction related traffic shall be restricted to off-

[46] *The use of double belly haul trucks would increase the hauling capacity to 20 cy reducing the total haul trips to 4,900 trips, or approximately 75 trips per day.*

peak hours.

- All delivery truck loading and unloading shall take place on site or within the boundaries of an approved traffic control plan.

MM-T-5 Transportation and Traffic (Construction)

- The developer shall install appropriate traffic signs around the site to ensure pedestrian and vehicle safety at all times during the construction period.

MM-T-6 Pedestrian Safety During Construction

- The Applicant shall plan construction and construction staging as to maintain pedestrian access on adjacent sidewalks throughout all construction phases. This requires the applicant to maintain adequate and safe pedestrian protection, including physical separation (including utilization of barriers such as K-Rails or scaffolding, etc.) from work space and vehicular traffic, and overhead protection, due to sidewalk closure or blockage, at all times.
- Should permanent pedestrian routes be unavailable due to construction, safe and accessible temporary pedestrian routes shall be provided adjacent to the project site.
- Covered walkways should be provided where pedestrians are exposed to potential injury from falling objects.
- The Applicant shall keep sidewalk open during construction until only when it is absolutely required to close or block sidewalk for construction and/or construction staging. Sidewalk shall be reopened as soon as reasonably feasible taking construction and construction staging into account.

b) Would the project conflict with an applicable congestion management program, including, but not limited to level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways?

Less Than Significant Impact. A significant impact would occur if the project conflicts with an applicable congestion management program, including, but not limited to level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways. The local CMP requires that all CMP monitoring intersections be analyzed where a project would likely add 50 or more trips during the peak hours. In addition, any CMP freeway monitoring segment where a project is expected to add 150 or more trips in any direction during the peak hours is to be analyzed. The study area analyzed in the Traffic Impact Study includes the 10 intersections listed above. None of these intersections are Los Angeles County Congestion Management Plan (CMP) monitoring locations. The nearest such intersection is Sunset Boulevard/Alvarado Street (three miles southwest of the Project Site). A review of the Project trip distribution and net Project traffic additions to the study vicinity shows that Proposed Project would not add 50 or more trips to this CMP intersections. It is estimated that the Proposed Project would generate at most 6 trips during the AM peak hour and 8 trips during the PM peak hour at the intersection of Sunset Boulevard/Alvarado Street. As these volumes are below the threshold of 50 trips, no further CMP intersection analysis is warranted.

Furthermore, the nearest CMP freeway monitoring segments are the Golden State Freeway (US-101) at Stadium Way and the Arroyo Seco Parkway (SR-110) at Pasadena Avenue. Based on the Project trip generation described above, the Proposed Project is expected to add approximately 161 trips during the AM peak hour (29 inbound, 132 outbound) and 199 trips during the PM peak hour (133 inbound, 66 outbound) to the adjacent street system. These direction amounts are less than the freeway threshold of 150 directional trips. Therefore, no significant impact to any CMP freeway monitoring location is forecast and no additional freeway analysis is necessary. As such, the Proposed Project would not conflict with the adopted CMP and Project impacts would be less than significant.

c) Would the project result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks?

No Impact. This question would apply to the Proposed Project only if it involved an aviation-related use or would influence changes to existing flight paths. The Proposed Project does not include any aviation-related uses and would have no airport impact. It would also not require any modification of flight paths for the existing airports in Los Angeles. Therefore, no impact would occur.

d) Would the project substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Potentially Significant Unless Mitigation Incorporated. A significant impact may occur if the Proposed Project includes new roadway design or introduces a new land use or features into an area with specific transportation requirements and characteristics that have not been previously experienced in that area, or if Project Site access or other features were designed in such a way as to create hazard conditions. Current vehicular access to the Project Site is provided by six driveways off the north side of Avenue 34 and two driveways off the west side of Pasadena Avenue. Sliding gates secure the driveways and access on-site. Vehicular access for the Project parking would be provided via two driveways along Avenue 34 for residential and mixed commercial and residential purposes. An additional driveway serving the commercial loading dock and short-term retail parking would be located along Pasadena Avenue.

The proposed site plan for the Project is acceptable to the Department of Transportation. However, the review does not constitute approval of the driveway dimensions and circulation schemes. All new driveways should be Case 2 driveways and 30 feet wide for two-way operations. Any security gates should be minimum of 20 feet from the property line or to the satisfaction of LADOT. The Applicant will consult with LADOT for the applicable driveway width standards, internal circulation and truck loading requirements so that such traffic flow considerations are designed and incorporated early into the building and parking layout plans. As stated in Mitigation Measure MM-T-1, above, the Proposed Project shall comply with the requirements stated in the LADOT Assessment Letter. As such, the Proposed Project would include new vehicular access driveways that would not conflict with pedestrian circulation and traffic. These Site access and circulation schemes would be further reviewed and approved by LADOT. Therefore, the Project's potential increase hazards due to design features or incompatible uses would be mitigated to a less than significant level.

e) Would the project result in inadequate emergency access?

Less Than Significant Impact. A significant impact may occur if the Project design would not provide emergency access meeting the requirements of the LAFD, or in any other way threatened the ability of emergency vehicles to access and serve the Project Site or adjacent uses.

As previously discussed in Section VIII(g), the Proposed Project is not located on or near an adopted emergency response or evacuation plan. Development of the Project Site may require temporary and/or partial street closures due to construction activities. However, any such closures would be temporary in nature and would be coordinated with the Departments of Transportation, Building and Safety, and Public Works. Nonetheless, while such closures may cause temporary inconvenience, they would not be expected to substantially interfere with emergency response or evacuation plans. Therefore, the impacts would be less than significant.

As described in Section XIV(a), the Proposed Project would satisfy the emergency response requirements of the LAFD. There are no hazardous design features included in the access design or site plan for the Proposed Project that could impede emergency access. Furthermore, the Proposed Project would be subject to the site plan review requirements of the LAFD and the LAPD to ensure that all access roads, driveways and parking areas would remain accessible to emergency service vehicles. Therefore, the Proposed Project would not be expected to result in inadequate emergency access, and the impact would be less than significant.

f) Would the project conflict with adopted policies, plans, or programs regarding public transit, bicycles, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities?

Less Than Significant Impact. A significant impact may occur if the Proposed Project would conflict with adopted policies or involve modification of existing alternative transportation facilities located on- or off-site. Development of the Proposed Project would not result in the disruption of public transportation services or the substantial alteration of public transportation routes. Consistent with the City's Bicycle Ordinance, the Proposed Project would provide 383 long-term bicycle stalls and 46 short-term bicycle parking stalls. Furthermore, the Proposed Project would not permanently interfere with any class I or class II bikeway systems or pedestrian facilities; although, the Project would result in temporary construction disturbances to pedestrian and bike lane facilities due to construction vehicles entering and exiting the Project Site and temporary sidewalk closures. Throughout the duration of the Project's construction phase, safe pedestrian access would be maintained along the east side of Pasadena Avenue. Pedestrian access on the west side of Pasadena Avenue may close temporarily during the duration of the Project's construction phase. As such, safe pedestrian access along Pasadena Avenue would be maintained at all times throughout the construction of the Proposed Project. During the construction, Mitigation Measure MM-T-6, above, would ensure pedestrian safety and access along the portions that border the Project Site. Since the Proposed Project would not modify or conflict with any alternative transportation policies, plans or programs, the Proposed Project would have a less than significant impact on such programs.

Cumulative Impacts

Potentially Significant Unless Mitigation Incorporated. Development of the Proposed Project in conjunction with the three related projects would result in an increase in average daily vehicle trips and peak hour vehicle trips in the Northern Los Angeles Community Plan Area. As noted in Table III-30 and III-31, above, two of the ten study intersections would be significantly impacted by Project traffic under Future (2020) conditions. As shown in Table III-32, Mitigation Measures MM-T-1 through MM-T-3 would off set the increased traffic and reduce trips from single occupant vehicles by implementing a Transportation Demand Management Plan. Therefore, the Proposed Project's cumulative impacts would be mitigated to a less than significant level.

XVII. UTILITIES AND SERVICE SYSTEMS

a) Would the project exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?

Less Than Significant Impact. A significant impact would occur if a project exceeds wastewater treatment requirements of the applicable Regional Water Quality Control Board. Section 13260 of the California Water Code states that persons discharging or proposing to discharge waste that could affect the quality of the waters of the State, other than into a community sewer system, shall file a Report of Waste Discharge (ROWD) containing information which may be required by the appropriate Regional Water Quality Control Board (RWQCB). The RWQCB then authorizes an NPDES permit that ensures compliance with wastewater treatment and discharge requirements. The Los Angeles RWQCB (LARWQCB) enforces wastewater treatment and discharge requirements for properties in the Project area.

Wastewater from the Project Site is conveyed via municipal sewage infrastructure maintained by the Los Angeles Bureau of Sanitation to the Hyperion Water Reclamation Plant (HWRP). The HWRP is a public facility and is subject to the State's wastewater treatment requirements. Wastewater from the Project Site is and would continue to be treated according to the wastewater treatment requirements enforced by the LARWQCB. Therefore, impacts associated with wastewater treatment requirements would be less than significant.

b) Would the project require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?

Less Than Significant Impact. A significant impact may occur if a project would increase water consumption or wastewater generation to such a degree that the capacity of facilities currently serving the Project Site would be exceeded. Based on the *L.A. CEQA Thresholds Guide*, the determination of whether a project results in a significant impact on water shall be made considering the following factors: (a) the total estimated water demand for the project; (b) whether sufficient capacity exists in the water infrastructure that would serve the project, taking into account the anticipated conditions at project buildout; (c) the amount by which the project would cause the projected growth in population, housing or employment for the Community Plan area to be exceeded in the year of the project completion; and (d)

the degree to which scheduled water infrastructure improvements or project design features would reduce or offset service impacts.

Water Treatment Facilities and Existing Infrastructure

The Los Angeles Department of Water and Power (LADWP) ensures the reliability and quality of water supply through an extensive distribution system that includes more than 7,200 miles of pipes, more than 100 storage tanks and reservoirs within the City, and eight storage reservoirs along the Los Angeles Aqueducts. Much of the water flows north to south, entering Los Angeles at the Los Angeles Aqueduct Filtration Plant (LAAFP) in Sylmar, which is owned and operated by LADWP. Water entering the LAAFP undergoes treatment and disinfection before being distributed throughout the LADWP's Water Service Area. The LAAFP has the capacity to treat approximately 600 million gallons per day (mgd).[47] The average plant flow is approximately 450 mgd during the non-summer months and 550 mgd during the summer months, and operates at between 75 and 90 percent capacity. Therefore, the LAAFP has a remaining capacity of treating approximately 50 to 150 mgd, depending on the season.[48]

As shown in Table III-33 below, the Proposed Project would generate a net increase in water demand of approximately 53,633 gallons per day (gpd) of water, significantly below available capacity. Because the Proposed Project is consistent with the zoning and General Plan land use designations, and the Project's population growth is within SCAG's forecast, the Project's increased water demand would not measurably reduce the LAAFP's treatment capacity; therefore, no new or expanded water treatment facilities would be required. With respect to water treatment facilities, the Proposed Project would have a less-than-significant impact.

[a] *L.A. CEQA Thresholds Guide (2006), Exhibit M.2-12. Consumption Rates based on 120% of the City of Los Angeles Department of Public Works, Bureau of Sanitation Sewer Generation Rates table, March 20, 2002.*
Parker Environmental Consultants, 2016.

Although no system upgrades are anticipated at this time, the water system would be verified again at the time of construction. In the event that water main and/or other infrastructure upgrades are required for the proposed development, such infrastructure improvements would be conducted within the right-of-way easements serving the Project area, and would not create a significant impact to the physical environment. This is largely due to the fact that (a) any disruption of service would be short-term, (b) the replacement of the water mains would be within public rights-of-way, and (c) any foreseeable infrastructure improvements would be limited to the immediate Project vicinity. Therefore, potential impacts resulting from water infrastructure improvements would be less than significant.

Wastewater Treatment Facilities and Existing Infrastructure

Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a project would normally have a significant wastewater impact if: (a) the project would cause a measurable increase in wastewater flows to a point where, and a time when, a sewer's capacity is already constrained or that would cause a sewer's capacity to become constrained; or (b) the project's additional wastewater flows would substantially or incrementally exceed the future scheduled capacity of any one treatment plant by generating flows greater than those anticipated in the Wastewater Facilities Plan or General Plan and its elements.

The Los Angeles Bureau of Sanitation provides sewer service to the Proposed Project area. Sewage from the Project Site is conveyed via sewer infrastructure to the Hyperion Water Reclamation Plant (HWRP). The Hyperion Water Reclamation Plant treats an average daily flow of 275 million gallons per day (mgd) on a dry weather day. Because the amount of wastewater entering the HWRP can double on rainy days, the plant was designed to accommodate both dry and wet weather days with a maximum daily flow of

450 mgd and a peak wet weather flow of 800 mgd.[49] This equals a remaining capacity of 175 mgd of wastewater able to be treated at the HWRP. As shown in Table III-34, the Proposed Project would generate a net increase of approximately 44,694 gpd of wastewater, representing a fraction of one percent of the available capacity. The Project Site is served by an existing 8-inch sewer pipe located south of the Project Site along the middle of W. Avenue 34. and a 15-inch pipe along Pasadena Avenue.[50] In accordance with the *L.A. CEQA Thresholds Guide*, the estimated sewer flows were based on the sewerage generation factors for residential and commercial categories (City of Los Angeles, Bureau of Sanitation, 1996). The HWRP has a remaining capacity of 175 additional mgd, and as such would have adequate capacity to serve the Project Site. Therefore, impacts to sewer capacity and infrastructure would be less than significant.

Parker Environmental Consultants, 2016.

Based on communication from the Bureau of Sanitation, adequate capacity is available to handle the anticipated discharge from the Proposed Project as indicated in the Sewer Capacity Availability request (SCAR). The Project Site currently served by 8-inch diameter sewer pipes running along Avenue 34 and a 15-inch sewer pipe along Pasadena Avenue. Based on the estimated sewer flows indicated in Table III-34 above, Bureau of Engineering has approved the SCAR request. Through the rules and regulations

---

[49] *City of Los Angeles Department of Public Works, Bureau of Sanitation, Hyperion Water Reclamation Plant, website: http://lasewers.org/treatment_plants/hyperion/tour/index.htm, accessed* October *2016.*

[50] *City of Los Angeles Bureau of Engineering, Sewer Capacity Availability Request (SCAR) Letter, 141 W. Avenue 34, February 1, 2016.*

established in the City of Los Angeles Sewer Allocation Ordinance (Ord. 166,060), the Bureau of Sanitation will verify the gauging of the sewer lines and make the appropriate decisions on how best to connect to the local sewer lines at the time of construction. If it is later determined that the local sewer system has insufficient capacity to serve the Proposed Project, the Applicant would be required to replace or build new sewer lines to a point in the sewer system with sufficient capacity to accommodate the Proposed Project's increased flows. Any infrastructure improvements to update or expand the sewer lines in the Project vicinity, if necessary, would be limited to trenching, excavating and backfilling the sewer lines beneath the public right-of way. Such construction activities would be localized in nature and would generally involve partial lane closures for a relatively short duration of time typically lasting a few days to a few weeks. Impacts to sewer capacity and infrastructure would be less than significant.

c) Would the project require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?

Less Than Significant Impact. A significant impact may occur if the volume of stormwater runoff would increase to a level exceeding the capacity of the storm drain system serving a project site, resulting in the construction of new stormwater drainage facilities. As described in Question IX(c) the Proposed Project would not result in a significant increase in site runoff, or any changes in the local drainage patterns. The Proposed Project would be required to demonstrate compliance with Low Impact Development Ordinance standards and retain or treat the first ¾-inch of rainfall in a 24-hour period. The Proposed Project Site is currently developed with manufacturing facilities and surface loading/parking areas. Runoff from the Project Site currently is and would continue to be directed towards existing storm drains in the Project vicinity. As stated previously in Section IX, the Project shall comply with the LID Plan, Standard Urban Stormwater Mitigation Plan (SUSMP), Environmental [Q] Conditions 13 - 17, and/or the site-specific mitigation plan to mitigate stormwater pollution as required by Ordinance Nos. 172,176 and 173,494. The appropriate design and application of Best Management Practices (BMP) devices and facilities shall be determined by the Watershed Protection Division of the Bureau of Sanitation, Department of Public Works. Thus, development of the Proposed Project would not create or contribute to runoff water, which may exceed the capacity of existing or planned stormwater drainage systems. Therefore, Project impacts would be considered less than significant.

d) Would the project have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed?

Less Than Significant Impact. A significant impact may occur if a project would increase water consumption to such a degree that new water sources would need to be identified. Based on the *L.A. CEQA Thresholds Guide*, the determination of whether the project results in a significant impact on water shall be made considering the following factors: (a) the total estimated water demand for the project; (b) whether sufficient capacity exists in the water infrastructure that would serve the project, taking into account the anticipated conditions at project buildout; (c) the amount by which the project would cause the projected growth in population, housing or employment for the Community Plan area to be exceeded in the year of the project completion; and (d) the degree to which scheduled water infrastructure improvements or project design features would reduce or offset service impacts.

The City's water supply comes from local groundwater sources, the Los Angeles-Owens River Aqueduct, State Water Project, and from the Metropolitan Water District (MWD) of Southern California, which is obtained from the Colorado River Aqueduct. The MWD utilizes a land-use based planning tool that allocates projected demographic data from the SCAG into water service areas for each of MWD's member agencies. The 2015 Urban Water Management Plan (UWMP), which estimates future demand based on population and growth estimated reported in SCAG's RTP/SCS, projects a total water demand and supply of 675,685 AFY in 2040. With its current water supplies, planned future water conservation, and planned future water supplies, LADWP will be able to reliably provide water to its customers through the 25-year planning period covered by the 2015 UWMP. Through various conservation strategies, the LADWP will be able to reduce the City's water demand during dry years to respond to any reductions to water supplies during multiple dry years.

As shown in Table III-33, the Proposed Project's net increase in water demand would be 53,633 gallons per day. The Proposed Project would be consistent with the allowable land uses and density that are planned for the Project Site and is therefore within the growth projections of SCAG's RTP/SCS. Accordingly, the Project's anticipated water demand has been accounted for and would not exceed the water demand estimates of the City's 2015 UWMP. Thus, the Proposed Project would have a less-than-significant impact on water demand. In addition, pursuant to LAMC Section 122.03(a), the Proposed Project is required to utilize water saving devices including, but not limited to, urinals equipped with flush-o-meter valves, which flush with a maximum of 1.28 gallons, which would further reduce impacts associated with this issue to a level that is less than significant. Environmental impacts would further be reduced by implementation of the following regulatory compliance measures:

- **(Green Building Code):** The Project shall implement all applicable mandatory measures within the LA Green Building Code that would have the effect of reducing the Project's water use.

- **(Landscape):** The Project shall comply with Ordinance No. 170,978 (Water Management Ordinance), which imposes numerous water conservation measures in landscape, installation, and maintenance (e.g., use drip irrigation and soak hoses in lieu of sprinklers to lower the amount of water lost to evaporation and overspray, set automatic sprinkler systems to irrigate during the early morning or evening hours to minimize water loss due to evaporation, and water less in the cooler months and during the rainy season).

Compliance with the regulatory compliance measures identified above would reduce the Proposed Project's demands for potable water resources to a less than significant level.

Cumulative Impacts

Less Than Significant Impact. Development of the Proposed Project, related projects and the cumulative growth throughout the City of Los Angeles, would further increase the demand for potable water within the City. Through the 2015 Urban Water Management Plan, the LADWP has demonstrated that it can provide adequate water supplies for the City through the year 2040. This estimate is based in part on demographic projections obtained for the LADWP service area from the Metropolitan Water District (MWD). The MWD utilizes a land-use based planning tool that allocates projected demographic

data from the Southern California Association of Governments (SCAG) into water service areas for each of MWD's member agencies. MWD's demographic projections use data reported in SCAG's 2008 Regional Transportation Plan (RTP). As discussed previously in this section under the Population and Housing subheading, the Proposed Project's growth is consistent with SCAG's growth projections for the City of Los Angeles subregion. The Proposed Project is consistent with the underlying allowable uses per the LAMC and would not exceed the allowable density for the Project Site. As such, the additional water demands generated by the Proposed Project are accounted for in the 2015 Urban Water Management Plan.

Development of the Proposed Project in conjunction with the three related projects would further increase regional demands on LAAFP's capacity. The impact of the continued growth of the region would likely have the effect of diminishing the daily excess capacity of the LAAFP's service to the City of Los Angeles. The Proposed Project and related projects cumulative water demand can be seen in Table III-35, below. As shown in Table III-35, the net water demand of the three related projects and the Proposed Project totals approximately 164,139 gpd or 0.17 mgd. Of the 50 to 150 mgd available water treatment capacity in LAAFP, the cumulative demand of 0.17 mgd would not significantly reduce its capacity. As such, cumulative impacts with respect to water demand would be less than significant.

Table III-35
Estimated Cumulative Water Demand

Type of Use	Size	Water Demand Rate (gpd/unit) [a]	Total Water Demand (gpd)
Related Projects			
Dwelling Units [b]	354 du	192 gpd/du	67,968

School: High School	263 stu	14.4 gpd/stu	3,787
		Total Related Projects Water Demand:	**110,506**
		Total Project Water Demand:	53,633
		TOTAL CUMULATIVE:	**164,139**
		Project % of Cumulative	**33%**

Notes: sf =square feet; du = dwelling units, gpd = gallons per day, stu = student
[a] *L.A. CEQA Thresholds Guide (2006), Exhibit M.2-12. Consumption Rates based on 120% of the City of Los Angeles Department of Public Works, Bureau of Sanitation Sewer Generation Rates table, March 20, 2002.*
[b] *Dwelling units include condominiums and multi-family residential units. Consumption rate was based on two bedrooms per unit as a conservative estimate.*
[c] *Senior Apartments assume one bedroom per dwelling unit.*
Parker Environmental Consultants, 2016.

e) Would the project result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

Less Than Significant Impact. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a project would normally have a significant wastewater impact if: (a) the project would cause a measurable increase in wastewater flows to a point where, and a time when, a sewer's capacity is already constrained or that would cause a sewer's capacity to become constrained; or (b) the project's additional wastewater flows would substantially or incrementally exceed the future scheduled capacity of any one treatment plant by generating flows greater than those anticipated in the Wastewater Facilities Plan or General Plan and its elements. As stated in Checklist Question XVII(b), above, the sewage flow would ultimately be conveyed to the Hyperion Water Reclamation Plant, which has sufficient capacity for the Proposed Project.[51] Therefore, impacts would be less than significant.

Cumulative Impacts

Less Than Significant Impact. Development of the Proposed Project in conjunction with the three related projects would further increase regional demands on the HWRP's capacity. The impact of the continued growth of the region would likely have the effect of diminishing the daily excess capacity of the HWRP's service to the City of Los Angeles. The related projects cumulative wastewater demand can be seen in Table III-36, Projected Cumulative Wastewater Generation. As shown in Table III-36, the net wastewater demand of the three related projects and the Proposed Project totals approximately 136,782 gpd or 0.14 mgd. Of the 175 mgd available in HWRP, the cumulative demand of 0.14 mgd accounts for a small fraction of one percent of the available capacity and would not significantly reduce its capacity. As such, cumulative impacts with respect to wastewater demand would be less than significant.

f) Would the project be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?

Less Than Significant Impact. A significant impact may occur if a project were to increase solid waste generation to a degree such that the existing and projected landfill capacity would be insufficient to accommodate the additional solid waste. Based on the *L.A. CEQA Thresholds Guide*, the determination of whether a project results in a significant impact on solid waste shall be made considering the following factors: (a) amount of projected waste generation, diversion, and disposal during demolition, construction, and operation of the project, considering proposed design and operational features that could reduce typical waste generation rates; (b) need for additional solid waste collection route, or recycling or disposal facility to adequately handle project-generated waste; and (c) whether the project conflicts with solid waste policies and objectives in the Source Reduction and Recycling Element (SRRE) or its updates, the Solid Waste Management Policy Plan (SWMPP), Framework Element of the Curbside Recycling Program, including consideration of the land use-specific waste diversion goals contained in Volume 4 of the SRRE.

Solid waste generated within the City is disposed of at privately owned landfill facilities throughout Los Angeles County. While the Bureau of Sanitation provides waste collection services to single-family and some small multi-family developments, private haulers provide waste collection services for most multi-family residential and commercial developments within the City. Solid waste transported by both public and private haulers is either recycled, reused, transformed at a waste-to-energy facility, or disposed of at a

landfill. Under the City's RENEW LA Plan, the City committed to reaching Zero Waste by diverting 70% of the solid waste generated in the City by 2013, diverting 90% by 2025, and becoming a zero waste city by 2030. State law currently requires at least 50% solid waste diversion and establishes a state-wide goal of 75% diversion by 2020. Moreover, state law requires mandatory commercial recycling in all businesses and multi-family complexes and imposes additional reporting requirements on local agencies, including the City of Los Angeles. In order to meet these requirements and goals, the City has established an exclusive, competitive franchise system for the collection, transportation and processing of commercial and multi-family solid waste that will aid the City in meeting its diversion goals by, among other things: (i) requiring franchisees to meet diversion targets; (ii) increasing the capacity for partnership between the City and solid waste haulers; (iii) allowing the City to establish consistent methods for diversion of recyclables and organics; (iv) increasing the City's ability to track diversion, which will enable required reporting and monitoring of state mandated commercial and multi-family recycling; (v) increasing the City's ability to ensure diversion quality in the processing facilities handling its waste and recyclables; and (vi) increasing the City's capacity to enforce compliance with federal, state, county, and local standards. Pursuant to Section 66.32 of the LAMC, the Project's solid waste contractor must obtain, in addition to all other required permits, an AB 939 Compliance Permit from the Bureau of Sanitation.

Within the City of Los Angeles, the Sunshine Canyon Landfill and the Chiquita Canyon Landfill serve existing land uses within the City. Both landfills accept residential, commercial, and construction waste. The Sunshine Canyon Landfill is jointly operated by the City and the County, has a remaining capacity of 64.68 million tons. The Sunshine Canyon Landfill has an estimated remaining life of 23 years.[52] Currently, Chiquita Canyon Landfill is in the process of an Environmental Impact Report (EIR) and new Conditional Use Permit (CUP) application with the County of Los Angeles. During that period, the Chiquita Canyon Landfill reached the permitted disposal limit of 23 millions tons that was approved in 1997. The Director of Regional Planning granted Chiquita Landfill a limited waiver to continue operation of the landfill until necessary public hearings for the EIR and new CUP are completed. If the new CUP is not approved, then the landfill will close.[53] Until the Chiquita Landfill is forced to close, the Proposed Project would be allowed to dispose solid waste to this landfill. An expansion of the Chiquita Canyon Landfill is currently proposed and would add a capacity of 48,114,000 tons (a 43-year life expectancy based on 2014 average daily disposal of 3,558 tons per day or 15 years based on the maximum permitted rate of disposal of 10,000 tons per day).[54]

The Proposed Project would follow all applicable solid waste policies and objectives that are required by law, statute, or regulation. Environmental [Q] Condition C.10 (General Construction (a)), provides general requirements for recycling efforts and the proper disposal of solid waste. In addition, [Q]

---

[52] *County of Los Angeles Department of Public Works, 2014 Annual Report, Los Angeles Countywide Integrated Waste Management Plan, pages 31 and 32, December 2015.*

[53] *Chiquita Canyon, A Waste Connections Company, website: http://www.chiquitacanyon.com/2016/08/chiquita-canyon-granted-waiver-continues-operations/, accessed August 2016.*

[54] *County of Los Angeles Department of Public Works, 2014 Annual Report, Los Angeles Countywide Integrated Waste Management Plan, page 60, December 2015.*

Condition C.23 requires recycling bins be provided at appropriate locations to promote recycling of paper, metal, glass, and other recyclable material. As shown in Table III-37 below, with the development of 524,600 square feet of floor area (including residential floor area, office/retail area, and the subterranean parking structure), it is estimated that the construction of the Proposed Project would generate approximately 9,726 tons of debris during the demolition and construction process. Under the requirements of the hauler's AB 939 Compliance Permit from the Bureau of Sanitation, all construction and demolition debris would be delivered to a Certified Construction and Demolition Waste Processing Facility.

As shown in Table III-38, Estimated Operational Solid Waste Generation, the Proposed Project's net generation during operation of the Proposed Project would be approximately 2,936 pounds per day. This estimate is conservative, as it does not factor in any recycling or waste diversion programs. The Proposed Project's solid waste would be handled by private waste collection services. The amount of solid waste generated by the Proposed Project is within the available capacities at area landfills, and the Project impacts to regional landfill capacity would be less than significant. Implementation of Environmental [Q] Condition C.10 (General Construction (a)) and C.23, and the following code compliance measure listed below would further reduce the Proposed Project's impacts on solid waste generation.

Table III-37
Estimated Construction and Demolition Debris

Construction Activity	Size	Rate [a] (lbs./sf)	Generated Waste (tons)
Demolition (Approximate)			
Manufacturing Facility	106,800 sf	155 lbs/sf	8,277

Source: Parker Environmental Consultants, 2016.

Regulatory Compliance Measure:

- **(Construction Waste Recycling):** In accordance with LAMC Section 99.04.408, the Proposed Project would reduce construction waste by at least 50 percent. In compliance with the LAMC Section 66.32, the General Contractor shall utilize solid waste haulers, contractors, and recyclers who have obtained an Assembly Bill (AB) 939 Compliance Permit from the City of Los Angeles Bureau of Sanitation.

g) Would the project comply with federal, state, and local statutes and regulations related to solid waste?

Less Than Significant Impact. A significant impact may occur if a project would generate solid waste that was not disposed of in accordance with applicable regulations. The Proposed Project would generate solid waste that is typical of a residential mixed-use building with ground-floor retail and would comply with all federal, state, and local statutes and regulations regarding proper disposal. Therefore, the Project's solid waste impacts would be less than significant.

Cumulative Impacts

Less Than Significant Impact. Development of the Proposed Project in conjunction with the three related projects would further increase regional demands on landfill capacity. The impact of the continued growth of the region would likely have the effect of diminishing the daily excess capacity of the existing landfills serving the City of Los Angeles. Although there are several proposals for new landfills in the region, there are currently few viable options for City of Los Angeles waste past 2029. Table III-39 shows the cumulative solid waste generation in pounds per day. The cumulative operational solid waste generation of the related projects and Proposed Project would contribute approximately 10,086 pounds of solid waste per day (1,841 tons of solid waste per year), which represents a fraction of one percent of the current remaining capacity of the Sunshine Canyon Landfill and the Chiquita Canyon Landfill, which combined have a remaining permitted capacity of approximately 66.51 million tons.

While in the short-term adequate landfill capacity exists to accommodate solid waste generated by the Proposed Project, in the future there would be a need to develop additional landfills and other waste disposal options to accommodate future growth. These options include diversion or transformation as the preferred methods for addressing solid waste and specific and practical applications (i.e., market development, public education and public policy initiatives) within the City.

The City of Los Angeles Solid Waste Management Plan (AB 939) sets forth strategies that would provide adequate landfill capacity through 2037 to accommodate anticipated growth. The Bureau of Sanitation has projected the need for waste disposal capacity based on SCAG's regional population growth projections. The growth associated with Proposed Project is within those projections. Furthermore, projects within the City of Los Angeles must comply with the City's SRRE.

Conversions of floor area per occupant based on California Building Code (2013), Ch.10, Table 1004.1.2.
Parker Environmental Consultants, 2016.

As reported by the Bureau of Sanitation in 2009, the City had achieved a waste diversion rate of 65 percent. The City is exceeding the state-mandated diversion goal of 50 percent by 2000 set by the California Integrated Waste Management Act (CIWMA) of 1989.[55] Waste diversion rates are required to increase to 75 percent by 2025 and through on-going development of waste management infrastructure over the last decade and innovative source reduction, reuse, recycling and composting programs have been implemented. These programs include Green Mulching and Composting workshops, black yard trimming recycling cans, the City-owned Central Los Angeles Refuse Transfer Station (CLARTS) and Residential Special Material and Electronics Recycling or S.A.F.E. Centers. New programs are being implemented to increase the amount of waste diverted by the City, including: multi-family recycling, food waste recycling, commercial recycling and technical assistance and support for City departments to help meet their waste reduction and recycling goals. The City is also developing programs to ultimately meet a goal of zero waste by 2030. Thus, the Proposed Project's contribution to cumulative impacts would continue to decrease as it increases waste diversion rates in accordance with City goals. Therefore, the Project's contribution to cumulative solid waste impacts would be less than cumulatively considerable, and cumulative impacts with respect to solid waste would be less than significant.

[55] *City of Los Angeles Department of Public Works Bureau of Sanitation, Overview of Services for FY 2005/06, updated June 14 2005.*

XVIII. MANDATORY FINDINGS OF SIGNIFICANCE

a) Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?

No Impact. A significant impact may occur only if the Proposed Project would have an identified potentially significant impact for any of the above issues. The Proposed Project is located in a densely populated urban area and would have a less than significant impact to biological resources and cultural resources with adherence to regulatory compliance measures discussed above. The Proposed Project would not degrade the quality of the environment, reduce or threaten any fish or wildlife species (endangered or otherwise), or eliminate important examples of the major periods of California history or pre-history. Therefore, no impact would occur.

b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?

Less Than Significant Impact. A significant impact may occur if the Proposed Project, in conjunction with other three related projects in the area of the Project Site, would result in impacts that would be less than significant when viewed separately, but would be significant when viewed together. As concluded in this analysis, the Proposed Project's incremental contribution to cumulative impacts related to aesthetics, agriculture and forestry resources, air quality, biological resources, cultural quality, hazards and hazardous materials, hydrology and water quality, land use and planning, mineral resources, noise, population and housing, public services, recreation, transportation/traffic, and utilities would be less than significant. As such, the Proposed Project's contribution to cumulative impacts would be less than significant.

c) Does the project have environmental effects, which would cause substantial adverse effects on human beings, either directly or indirectly?

Potentially Significant Unless Mitigation Incorporated. A significant impact may occur if the Proposed Project has the potential to result in significant impacts, as discussed in the preceding sections. Based on the preceding environmental analysis, the Proposed Project would not have significant environmental effects on human beings, either directly or indirectly. As discussed above, the project would not result in any significant impacts upon air quality, either on a regional or localized basis. A Freeway Adjacent health risk assessment concluded acute and chronic health hazard indices would also be under the SCAQMD recommended threshold of 1.0. In addition, with the installation of MERV 13 filtration, as required by Ordinance No. 184,245 (Clean Up Green Up) for all mechanically ventilated buildings within 1,000 feet of a freeway, and the consideration of the additional strategies aimed at improving future occupants' exposure to ambient air quality conditions, the Project would be consistent with the City of Los Angeles Planning Commission ZI No. 2427. With implementation of the applicable

Environmental [Q] Condition No. 7, impacts associated with the future occupant's exposure to ambient air quality would be less than significant. As discussed in the analyses above, potentially significant impacts upon human beings, such as noise, vibration, aesthetics, geotechnical safety, exposure to hazardous conditions and risk of upset, and access to adequate public services would be reduced to less-than-significant levels through the implementation of the applicable mitigation measures identified within this expanded Initial Study analysis.

Avenue 34 Mixed-Use Modified Project

South Coast AQMD Air District, Winter

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Enclosed Parking with Elevator	401.00	Space	0.00	160,400.00	0
Apartments Mid Rise	468.00	Dwelling Unit	5.03	503,434.00	1338
Strip Mall	16.44	1000sqft	0.00	16,395.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	31
Climate Zone	12			**Operational Year**	2022
Utility Company	Los Angeles Department of Water & Power				
CO2 Intensity (lb/MWhr)	1227.89	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Avenue 34 Mixed-Use Modified Project - South Coast AQMD Air District, Winter

Project Characteristics -

Land Use - 5.03 ac. lot. 468 apartments 503,434 sf. 16,395 sf retail. 401 parking spaes

Construction Phase - demo 45, grading 70, building 525, paving 20, coating 85

Off-road Equipment - 2 compressors

Off-road Equipment -

Off-road Equipment -

Off-road Equipment - 2 excavators, 2 dozers, 5 backhoes

Off-road Equipment -

Demolition - 6,000 tons demo debris

Grading - 91,000 cy export. 5.03 ac

Vehicle Trips - Trip generation per traffic letter 6/13/2019

Woodstoves - No hearths

Construction Off-road Equipment Mitigation -

Mobile Land Use Mitigation -

Area Mitigation -

Energy Mitigation -

Water Mitigation -

Waste Mitigation -

DLA Piper LLP (US)
550 S. Hope Street, Suite 2400
Los Angeles, CA 90071

Attn: Mr. Andrew Brady

Subj: Cultural Resources Phase I Assessment for Avenue 34 Project
(Envicom Project #19-082-101)

Dear Mr. Brady,

Envicom Corporation (Envicom) requested a cultural resource record search from the South Central Coastal Information Center (SCCIC) and a Native American cultural resource record search conducted by the California Native American Heritage Commission (NAHC) for the Avenue 34 Project (Project) in Los Angeles County (**Figure 1**). Both record searches examined the Project site plus a 0.25-mile area ("study area") around the Project. The proposed Project site consists of an approximately 5.03-acre infill property located at 141 West Avenue 34 in the Northeast Los Angeles Community Plan area (**Figure 2**). A record search request was also made with the Natural History Museum of Los Angeles (NHM) to determine if known paleontological resources have been recorded in the project site vicinity. All record search request letters are provided in **Appendix A** of this report. All response letters, except for the SCCIC, the contents of which are restricted by law, are provided in **Appendix B** of this report.

The Project proposes to remove existing light industrial and warehouse structures and parking lots from the site, and construct a mixed-use development with 468 multi-family residential units and 16,395 square feet of commercial retail space. The proposed uses would be provided within three structures that would include two four-story buildings and one five-story building, and would include two levels of subterranean parking within the western portion (approximately one-half) of the Project site. Additional construction activities would include connections to existing offsite utilities infrastructure within adjacent streets and landscaping.

A previously proposed mixed-use development of 372 multi-family residential units, and 40,000 square feet of commercial (office and retail) space within five buildings ranging from one to five stories, with a one-level underground parking garage beneath the majority of the site was conditionally approved for the subject property in 2017.

The purpose of the record searches is to identify any known cultural resources previously recorded within or immediately adjacent to the proposed Project area that would represent new information that was not known at the time of the evaluation of the previously approved project, or a change in the overall cultural resource sensitivity of the Project region. A cultural resource is often defined as any building, structure, object, or archaeological site older than 50-years in age, and can include historic or prehistoric locations of human habitation.

Envicom compared the findings of the updated records searches with the findings of the original planning documents to determine if any conditions had changed that would result in a new significant impact to cultural, paleontological, or Native American resources.

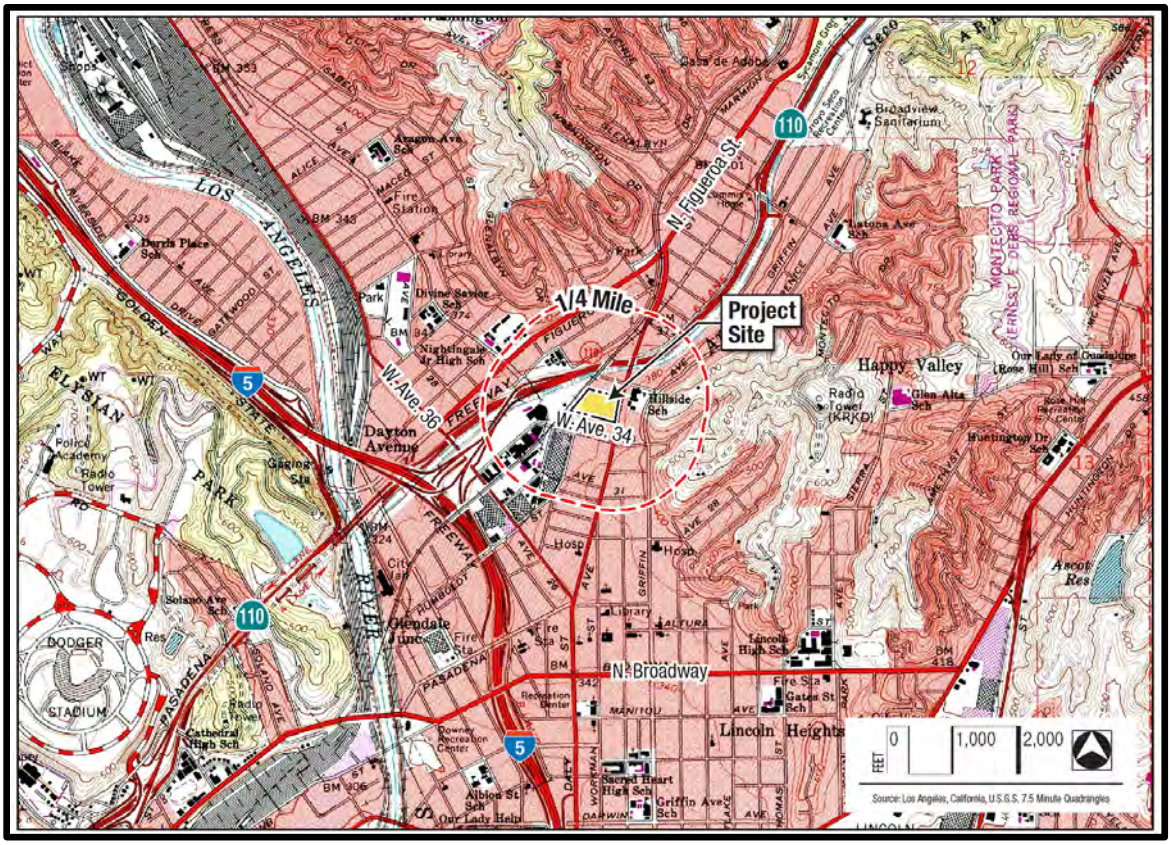

Figure 1: Project location in Los Angeles County, California, with the 0.25-mile study area shown (Los Angeles Quadrangle Topographic Map).

Figure 2: The Project property, showing the current conditions (2019 Google Earth Image).

RECORD SEARCH RESULTS

SCCIC and NAHC Record Searches

On August 8, 2019, Envicom contacted the SCCIC with a request to search their database for cultural resources located within the study area (defined earlier as the Project property, plus a 0.25-mile area) for regional cultural resource context (see Figure 1). The record search included a request for all complete site records for cultural resources as well as copies of any cultural resource technical reports that intersected with the study area. Envicom also contacted the NAHC on August 8, 2019, with a similar record search request.

Envicom received the cultural resource records search results from the SCCIC on August 20, 2019. The SCCIC record search found no previously identified cultural resources located within the Project property, nor adjacent to the project property. The results from the 2019 NAHC record search were received on September 3, 2019, with negative findings.

Envicom also examined fourteen historic USGS maps, dating between 1894 and 1981, as well as historic aerial photographs from the UCSB Library historic aerial photography database to observe previous patterns of development that occurred on the site and in the region. Finally, historic

Google Earth satellite images were reviewed, as was the SurveyLA database. No findings were identified that conflicted with the recommendations of the original cultural resource report.

Field Survey Results

Envicom staff visited the Project property on August 14, 2019. The Project property is fully developed with light industrial buildings, a warehouse facility, and parking lots. One of the onsite buildings incorporates a late 1920s brick building façade. However, as reported by the City's Office of Historic Resources Historic Places LA and Survey LA data, the individual property was assessed for significance in accordance with SurveyLA but does not meet eligibility standards for designation as a historic resource. No intact built environment or archaeological resources were identified during the site visit. The findings were, therefore, negative for cultural resources within the Project property.

Paleontological Record Search Results

The NHM record search findings were received on August 22nd. No known paleontological resources were noted by NHM to have been recorded on or adjacent to the subject property or nearby vicinity, and the nearest known vertebrate fossils to the project site were found approximately 1.5 miles distant from the site. As no data was presented by NHM to indicate any known paleontological resources were located within the subject property, the baseline conditions regarding the absence of known paleontological resources within the site or surroundings remains unchanged from the previously approved project.

The NHM notes that the entire site consists of younger Quaternary Alluvium surface deposits, derived from the Arroyo Seco drainage, which typically do not contain significant vertebrate fossils. However, as the NHM states that the younger alluvium soils on the project site are underlain by older alluvium material (at an unspecified depth), the NHM recommended monitoring of deeper excavations that extend into older sedimentary deposits below the upper levels.

The NHM did not indicate a monitor would be required to reduce a potentially significant impact; however, the project will incorporate the recommendation for a monitor as a condition of approval. The prior regulatory compliance measure remains sufficient to reduce any potentially significant impacts to a less than significant level.

Sincerely,

Wayne Bischoff
Envicom Director of Cultural Resources

Subj: Cultural Resources Phase I Assessment for Avenue 34 Project
(Envicom Project #19-082-101)

Dear Ms. St. James:

Envicom Corporation (Envicom) is requesting an **EXPEDITED** record search of the South Central Coastal Information Center (SCCIC) database of cultural resources within the attached Project site, plus a **0.5-mile study area**. The Project site is located at:

United States Geological Survey 7.5' Quadrangles: Los Angeles, CA Township: 1 South Range: 19 West Section: 9 Latitude: 34° 5'5.14"North Longitude: 118°12'52.33"West

We are requesting the following: Resource Database Printout (list), Resource Database Printout (details), Resource Digital Database (spreadsheet), Report Database Printout (list), Report Database Printout (details), Report Digital Database (Spreadsheet), Resource Record Copies, Report Copies Office of Historic Preservation Historic Properties Directory, Archaeological Determinations of Eligibility, Los Angeles Cultural Monuments, and Historic Maps.

We also request the complete reports and/or site records for any cultural resources found within the Project site only, not the 0.25-mile study area. Envicom appreciates the SCCIC's help with this request. For correspondence or questions regarding this Project, please contact Wayne Bischoff at 818-879-4700 or (wbischoff@envicomcorporation.com).

Sincerely,

Dr. Wayne Bischoff
Director of Cultural Resources

To Whom it May Concern,

Envicom Corporation (Envicom) is requesting a record review of the Native American Heritage Commission (NAHC) records of cultural resources for the Project site, plus a **0.25-mile study area**. We also request a list of Tribal Group representatives for the area in the event we need to contact their offices. The Project site is located at:

United States Geological Survey 7.5' Quadrangles: Los Angeles, CA Township: 1 South Range: 19 West Section: 9 Latitude: 34° 5'5.14"North Longitude: 118°12'52.33"West

Envicom appreciates the NAHC's help with this request. For correspondence or questions regarding this Project, please contact Wayne Bischoff at 818-879-4700 or (wbischoff@envicomcorporation.com).

Sincerely,

Dr. Wayne Bischoff

Subj: Cultural Resources Phase I Assessment for Avenue 34 Project
(Envicom Project #19-082-101)

Dear Dr. McLeod:

Envicom Corporation (Envicom) is requesting a record search of the Natural History Museum of Los Angeles County (NHM) database for paleontological resources/sensitivity for the Project site and surrounding area (within 0.25 mile of the Project site), as well as a map/listing of all paleontological resources previously identified within the attached Project site, plus the 0.25-mile study area. The Project site is located at:

United States Geological Survey 7.5' Quadrangles: Los Angeles, CA Township: 1 South Range: 19 West Section: 9 Latitude: 34° 5'5.14"North Longitude: 118°12'52.33"West

Envicom appreciates the NHM's help with this request. For correspondence or questions regarding this Project, please contact Wayne Bischoff, at 818-879-4700 or (wbischoff@envicomcorporation.com).

Sincerely,

Dr. Wayne Bischoff

RE: Avenue 34 Project, Los Angeles County

Dear Mr. Bischoff:

A record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed for the information you have submitted for the above referenced project. The results were negative. However, the absence of specific site information in the SLF does not indicate the absence of cultural resources in any project area. Other sources of cultural resources should also be contacted for information regarding known and recorded sites.

Attached is a list of Native American tribes who may also have knowledge of cultural resources in the project area. This list should provide a starting place in locating areas of potential adverse impact within the proposed project area. I suggest you contact all of those indicated; if they cannot supply information, they might recommend others with specific knowledge. By contacting all those listed, your organization will be better able to respond to claims of failure to consult with the appropriate tribe. If a response has not been received within two weeks of notification, the Commission requests that you follow-up with a telephone call or email to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from tribes, please notify the NAHC. With your assistance, we can assure that our lists contain current information. If you have any questions or need additional information, please contact me at my email address: steven.quinn@nahc.ca.gov.

Sincerely,

Steven Quinn
Associate Governmental Program Analyst

Attn: Wayne Bischoff, Ph.D., Director of Cultural Resources

re: Paleontological resources for the proposed Avenue 34 Project, Envicom Project # 19-082-101, in the City of Los Angeles, Los Angeles County, project area

Dear Wayne:

I have conducted a thorough check of our paleontology collection records for the locality and specimen data for the proposed Avenue 34 Project, Envicom Project # 19-082-101, in the City of Los Angeles, Los Angeles County, project area as outlined on the portion of the Los Angeles USGS topographic quadrangle map that Samantha Whittington sent to me via e-mail on 8 August 2019. We do not have any vertebrate fossil localities that lie directly within the proposed project area boundaries, but we do have vertebrate fossil localities nearby from sedimentary deposits similar to those that occur at depth in the proposed project area.

Surface deposits in the entire proposed project area consist of younger Quaternary Alluvium, derived primarily as alluvial deposits from the Arroyo Seco drainage immediately to the north. These deposits typically do not contain significant vertebrate fossils in the very uppermost layers, but they are underlain by older Quaternary deposits that do contain significant vertebrate fossils. Our closest vertebrate fossil locality from older Quaternary deposits beneath the younger Quaternary Alluvium is LACM 1023, due south of the eastern border of the proposed project area east of the Golden State Freeway (I-5) near the intersection of Workman Street and Alhambra Avenue, where excavations for a storm drain recovered fossil specimens of turkey, *Meleagris californicus,* sabre-toothed cat, *Smilodon fatalis*, horse, *Equus*, and deer, *Odocoileus*, at unstated depth. A specimen of the turkey, *Meleagris*, from this locality was

published in the scientific literatus by D. W. Steadman (1980. A Review of the Osteology and Paleontology of Turkeys (Aves: Meleagridinae). Contributions in Science, Natural History Museum of Los Angeles County, 330:131-207). A little further south, also east of the Golden State Freeway (I-5) near the intersection of Mission Road and Daly Street, we have another locality, LACM 2032, also from older Quaternary deposits beneath the younger Quaternary Alluvium, that produced fossil specimens of pond turtle, *Clemmys mamorata*, ground sloth, *Paramylodon harlani*, mastodon, *Mammut americanum*, mammoth, *Mammuthus imperator*, horse, *Equus*, and camel, *Camelops*, at a depth of 20-35 feet below the surface. The pond turtle specimens from locality LACM 2032 were figured in the scientific literature by B.H. Brattstrom and A. Sturn (1959. A new species of fossil turtle from the Pliocene of Oregon, with notes on other fossil *Clemmys* from western North America. Bulletin of the Southern California Academy of Sciences, 58(2):65-71).

Surface grading or very shallow excavations in the uppermost few feet of the younger Quaternary Alluvium in the proposed project site area are unlikely to uncover significant fossil vertebrate remains. Deeper excavations in the proposed project area that extend down into older sedimentary deposits, however, may well encounter significant vertebrate fossils. Any substantial excavations in the proposed project area below the uppermost layers, therefore, should be closely monitored to quickly and professionally collect any specimens without impeding development. Also, sediment samples should be collected and processed to determine the small fossil potential in the proposed project area. Any fossils recovered during mitigation should be deposited in an accredited and permanent scientific institution for the benefit of current and future generations.

This records search covers only the vertebrate paleontology records of the Natural History Museum of Los Angeles County. It is not intended to be a thorough paleontological survey of the proposed project area covering other institutional records, a literature survey, or any potential on-site survey.

Sincerely,

Samuel A. McLeod

Samuel A. McLeod, Ph.D.

APPENDIX C
Resume of Dr. Wayne Bischoff (author)

Wayne Bischoff, Ph.D.

Envicom Director of Cultural Resources

Dr. Bischoff has over 20 years' experience managing cultural resource projects and ensuring compliance with California Environmental Quality Act (CEQA), Section 106 of the National Historic Preservation Act (NHPA), the National Environmental Protection Act (NEPA), and state, county, city, and local government cultural laws, guidelines, and procedures. He has managed cultural, paleontological, ethnographic, and built environment projects throughout Southern California, including the Counties of Ventura, Los Angeles, Kern, Imperial, San Diego, Orange, Santa Barbara, Riverside, and San Bernardino. Dr. Bischoff has authored cultural resource section of Environmental Impact Reports (EIR), Mitigated Negative Declarations (MND), Environmental Impact Statements (EIS), Environmental Assessments (EA), Programmatic Agreements (PA), Memorandum of Agreements (MOA), and Memorandum of Understanding (MOU).

Dr. Bischoff has been the principal or project manager for hundreds of cultural resource projects in Southern California, including record searches, surveys, evaluations, and data recoveries, built environment and historic architectural inventories, HABS projects, paleontological surveys, ethnographic reports and Native American consultation, and historic structure evaluations. He has also has worked with most of the Tribal Groups of Southern California, including the Chumash, Tongva, Washo, Yokut, Piute, Quechan, Cahuilla, Tataviam, San Manuel, Morongo, Luiseno. He has also provided Native American consultation for the City of Los Angeles and for many other municipalities throughout the region.

Recent Professional Projects

- **Simi BMX Course Phase I Survey, Simi Valley, CA.** Principal and Project Manager for the completion of a record search, NAHC record search request, and a site survey. (July 2018 – Current)
- **Phase I Survey for the Massilia Spa Project, Los Angeles County, CA.** Principal and Project Manager for the completion of a record search, NAHC record search request, and a site survey. Project also includes an inventory and initial assessment of over a dozen 1930 through 1990 structures on the property (June 2018 – Current)
- **Los Angeles Community College District (LAUSD) Environmental On-Call (including cultural resources), Los Angeles County, CA.** Principal, Project Manager, and cultural resource consultant as needed. (February 2018 – Current)
- **Los Angeles Unified Schools Department (LAUSD) Environmental On-Call (including cultural resources), City of Los Angeles, Los Angeles County, CA.** Principal, Project Manager, and cultural resource consultant as needed. Envicom was one of 15 companies to be awarded this large on-call contract. (February 2017 – Current)
- **Phase I Survey of the Butler Ranch, in Ventura County near west Simi Valley, California.** Principal and Project Manager for the completion of a Phase I record search, NAHC record search request, and a site survey of this 332-acre low density residential development project. (May 2018 – Current)

- **Phase I Survey for the 17-acre Olivas Park Extension commercail development project in Ventura, Ventura County, CA.** Principal and Project Manager for the completion of a record search, NAHC record search request, and a site survey, followed by limited monitoring. (January 2018 – Current)
- **Review of Technical Documents and EIR Cultural Section Writing for "The Agroua Villege Expansion" project, Agoura Hills, Los Angeles County, CA.** Professional review of project cultural resource documents and authoring of cultural resource section of MND for this large mixed use project. The primary challenge is that the development is located on a significant prehistoric Native American cultural resource. Native American consultation took place in July with the Chumash and Tataviam Tribal Groups (January 2018 – Current)
- **CA-LAN-321 Phased Evaluation Project, Agoura Hills, Los Angeles County, CA.** Principal and Project Manager for the phased evaluation (Phase II) of CA-LAN-321 in response to potential impacts from the construction of the Conrad N. Hilton Foundation Phase 2 Campus Building. The site is a prehistoric Chumash residential and ceremonial center of over 80-acres in size and that was used by prehistoric Native Americans from 400 A.D. to the late 1700s. Dozens of test units, hundreds of shovel test pits, surface collection, and surface feature mapping have been completed to date planned. Native American consultation took place in July with the Chumash and Tataviam Tribal Groups (August 2015 – Current)
- **City of Thousand Oaks Environmental On-Call (Including Cultural Resources), Los Angeles County, CA.** Envicom was selected as one of a limited number of on-call environmental firms for the City. (June 2015 – Current)
- **Phase I(b) Survey of the proposed Forrest Club 50-acre private club development, Los Angeles County, CA (with Samantha Whittington and Charlie Fazzone).** Principal and Project Manager for the completion of a record search, NAHC record search request, and a site survey. In addition, 24 shovel test pits were excavated across the locations of two 1920s historic cabins. No further work was required. (April 2018 – June 2018)
- **Phase I Survey for the Ascension Lutheran Church Master Plan and MND, Thousand Oaks, California, Los Angeles County, CA.** Principal and Project Manager for the completion of a record search, NAHC record search request, and a site survey. (May 2018 – June 2018)
- **Phase I Survey for the Mulholland Senior Living Project, Los Angeles County, CA.** Principal and Project Manager for the completion of a record search, NAHC record search request, and a site survey. (May 2018 – May 2018)
- **Phase I Survey of the proposed Tapo at Alamo EIR for a mixed-use development project, Simi Valley, Ventura County, CA (with Samantha Whittington and Debbie Balam).** Principal and Project Manager for the completion of a record search, NAHC record search request, and a site survey. (March 2018 – May 2018)
- **Cultural, Paleo, and Native American Monitoring for the Agoura Hills Marriott Development Project.** Principal and Project Manager for this monitoring project. During monitoring, a prehistoric Chumash cultural resource was discovered, which led to artifact collection, analysis, and a final report of findings (January 2018 – May 2018)

- **Phase I Survey of the proposed 113-133 West Plymouth Street multiple unit residential development, Inglewood, Los Angeles County, CA (with Samantha Whittington, Debbie Balam, and Charlie Fazzone).** Principal and Project Manager for the completion of a record search, paleontological record search, NAHC record search request, and a site survey. (April 2018 – April 2018)
- **Phase I Survey of the Upper Bailey Road tract, Sylmar, Los Angeles County, CA (with Samantha Whittington and Debbie Balam).** Principal and Project Manager for the completion of a record search, NAHC record search request, and a site survey. (December 2017 – April 2018)
- **Phase I Survey of the Lower Bailey Road tract, Sylmar, Los Angeles County, CA (with Samantha Whittington and Debbie Balam).** Principal and Project Manager for the completion of a record search, NAHC record search request, and a site survey. (December 2017 – April 2018)
- **Historic Structure Evaluation of Blythe Elementary School for LAUSD.** Project Manager for this project, with Chattel, Inc., being the historic preservation consultant. (February 2018 – April 2018)
- **Historic Structure Evaluation of Robert Hill Lane Elementary School for LAUSD.** Project Manager for this project, with Chattel, Inc., being the historic preservation consultant. (February 2018 – April 2018)
- **Historic Structure Evaluation of James Madison Middle School for LAUSD.** Project Manager for this project, with Chattel, Inc., being the historic preservation consultant. School was found eligible for the CRHR. (February 2018 – April 2018)
- **Historic Structure Evaluation of 54th Street Elementary School for LAUSD.** Project Manager for this project, with Chattel, Inc., being the historic preservation consultant. School was found eligible for the CRHR. (February 2018 – April 2018)
- **Historic Structure Evaluation of Chapman Elementary School for LAUSD.** Project Manager for this project, with Chattel, Inc., being the historic preservation consultant. (February 2018 – April 2018)
- **Historic Structure Evaluation of Dena Street Elementary School for LAUSD.** Project Manager for this project, with Chattel, Inc., being the historic preservation consultant. (February 2018 – April 2018)
- **Historic Structure Evaluation of Patrick Henry Middle School for LAUSD.** Project Manager for this project, with Chattel, Inc., being the historic preservation consultant. School was found eligible for the CRHR. (February 2018 – April 2018)
- **Historic Structure Evaluation of Richland Avenue Elementary School for LAUSD.** Project Manager for this project, with Chattel, Inc., being the historic preservation consultant. (February 2018 – April 2018)
- **Marinette Road Residential Development, Pacific Palisades, Los Angeles County, CA.** Principal and project manager for this development project, which included a record search, site survey, Tribal Group scoping letters, and agency consultation. The major challenge was that the project property was within the Will Rogers State Monument and National Register site boundary. An update for this project was conducted in 2018 to include AB-52 compliance. (February 2015 – May 2015; January 2018 – April 2018)

- **Phase I Survey for 6956 Dume Drive, Malibu, California, Los Angeles County, CA (with Samantha Whittington).** Principal and Project Manager for the completion of an SCCIC and NAHC record search, and a site survey. (February 2018 – March 2018)
- **Phase I Survey of roughly 50-acres for Improvements on the Saddlerock Ranch/Malibu Wines Property in the Santa Monica Mountains, Los Angeles County, CA.** Principal and Project Manager for the completion of a record search, NAHC scoping, and a site survey. This project involves upgrades to the winery existing structures and public buildings, as well as road and parking improvements. Part of this project is located near a National Register Chumash rock art site as well as other prehistoric resources (November 2016 – March 2018)
- **Phase I Survey for 28730 Grayfox, Malibu, California, Los Angeles County, CA (with Samantha Whittington).** Principal and Project Manager for the completion of an SCCIC and NAHC record search, and a site survey. (January 2018 – February 2018)
- **Phase I Survey for 11681 Foothill Boulevard, a multiple-unit residential project in Sylmar, California, Los Angeles County, CA.** Principal and Project Manager for the completion of a record search, NAHC record search request, and a site survey. (November 2017 – February 2018)
- **Phase I Survey for a single family property development along Yerba Buena Road, Ventura County, CA.** Principal and Project Manager for the completion of an SCCIC and NAHC record search, and a site survey. (December 2017 – January 2018)
- **Phase I Survey for 34134 Mulholland Highway, Los Angeles County, CA.** Principal and Project Manager for the completion of a record search, NAHC record search request, and a site survey. (December 2017 – January 2018)
- **Faunal, Osteological, Archaeological, and Fossil Consultation for Citadel Environmental and Turner-Hunt for the Hollywood Park Development Project (new Rams NFL Stadium).** Osteological and paleontological consultant for Kiewit, Turner, and Citadel for the construction of the new Rams NFL stadium in Ingelwood. Project included discovery and recordation of modern and fossil mammal bones. (December 2016 – January 2018)
- **Phase I Survey for 24600 Thousand Peaks Road, Calabassas, California, Los Angeles County, CA.** Principal and Project Manager for the completion of a record search, NAHC record search request, and a site survey. (November 2017 – January 2018)
- **Phase I Survey for 28929 Grayfox, Malibu, California, Los Angeles County, CA.** Principal and Project Manager for the completion of an SCCIC and NAHC record search, and a site survey. (November 2017 – January 2018)
- **Manzanita School Phase Ia Survey for a 20.27-acre private school development in Topanga Canyon, California, Los Angeles County, CA.** Principal and Project Manager for the completion of an SCCIC and NAHC record search, and a site survey. (May 2017 – January 2018)
- **Phase I Survey for the 181 to 187 Monterrey Road Condominium Project, a small residential development near South Pasedena, California, Los Angeles County, CA.** P Principal and Project Manager for the completion of an SCCIC and NAHC record search, and a site survey. (July 2017 – January 2018)

- **Phase I Survey for for the Agoura Village project, a 7.37-acre Commercial Subdivision in the City of Agoura Hills, Los Angeles County, CA.** Principal and Project Manager for the completion of a record search, NAHC scoping, and a Phase Ia site survey. The Phase Ia survey was followed by a Phase Ib subsurface survey and an updated site form for a previously known prehistoric cultural resource that includes the entire project area. (October 2016 – December 2017)
- **Phase I survey for 22866 Beckledge Terrace, Malibu, California.** Principal and Project Manager for the completion of a record search, NAHC record search request, and a site survey. (September 2017 – November 2017)
- **Lynn Road Residentitial Development Project, Construction Monitoring, Newbury Park, CA.** Principal and Project Manager for the surface collection and construction monitoring for this 10-acre residential construction project. (October 2017 – November 2017)
- **Phase II Evaluation of two cultural resources located on the Oakmont project property, City of Agoura Hills, Los Angeles County, CA.** Principal and Project Manager for the evaluation of a prehistoric cultural resource and a 1920s-1980s historic homestead cultural resource. Evaluation tasks included shovel test pits, and a test unit for the prehistoric cultural resource, and detailed mapping and documents research for the historic cultural resource. A combined report for both Oakmont projects was produced for the City. (August 2017 – October 2017)
- **City of Pomona Environmental On-Call (Including Cultural Resources), Los Angeles County, CA.** Envicom successful won inclusion as one of six on-call environmental firms for the City. (October 2014 – October 2017)
- **Phase I Survey for for the Oakmont commercial project, a 5.75-acre development in the City of Agoura Hills, Los Angeles County, CA.** Principal and Project Manager for the completion of NAHC record search, and a Phase Ia site survey. The Phase Ia survey identified two cultural resources; a 1920s historic homestead foundation, and a large prehistoric archaeological site. (August 2017 – October 2017)
- **Phase I Assessment of the West Hills Crest 37-acre Residential Subdivision in West Hills, City of Los Angeles.** Principal and Project Manager for the completion of a record search and project area site survey. A key issue for this project was the record search being positive for a prehistoric cultural resource within the development area. This resource, CA-LAN-1223, was further investigated with 22 shovel test pits, and evaluated as not being a significant cultural resource. (February 2017 – October 2017)
- **Phase I Survey for 15498 LaPeyre Court, a residential development in Moorpark, Ventura County, CA.** Principal and Project Manager for the completion of a record search, NAHC record search request, and a site survey. Project also included coordination with numerous biology tasks. (August 2017 – September 2017)
- **San Bernardino County Cultural, Historic Architecture, and Paleontology On-Call, San Bernardino, CA.** Envicom successful won inclusion in the limited on-call pool. (October 2014 – Current)
- **Pepperdine University Campus Life Project: Updated Cultural Resources Record Search.** Principal and Project Manager for an updated record search and letter report for the Pepperdine Campus Life housing, facilities, and trail development project. This update was part of an ammended campus-wide EIR (December 2017 – June 2017)

- **Fourth and Hewitt, City of Los Angeles, Los Angeles County, CA.** Principal and Project Manager for a cultural resource record search for the development of a new office building within a commercial urban environment. Project also included a paleontological assessment of the property due to an extensively deep planned parking garage and Native American concerns. Also completed with an Ethnographic Report to meet AB-52 criteria. Another key issue was determining whether a historic built environement assessment was needed. (February 2017 – January 2017)
- **Pepperdine University Campus Life Project: Phase I survey of new Baseball Field development.** Principal and Project Manager for the addition of the campus baseball field as part of the larger Pepperdine Campus Life housing, facilities, and trail development project. (February 2017 – June 2017)
- **Phase I Survey for the Copper Canyon Project, a 5-acre residential development near Santa Clarita, California, Los Angeles County, CA.** Principal and Project Manager for the completion of a record search, NAHC record search request, and a site survey. Also part of the project was the resurvey of two previously recorded cultural resources within the project boundary. (May 2017 – July 2017)
- **Phase Ia Survey for the Oneonta Hillside Drive, a residential development in South Pasadena, Los Angeles County, CA.** Principal and Project Manager for the completion of an SCCIC and NAHC record search, and a site survey. (May 2017 – July 2017)
- **North Canyon Ranch 170-acre Residential Subdivision in Simi Valley, Ventura County, CA.** Principal and Project Manager for the completion of a record search and project area site survey. A key issue for this project was a previously disturbed cultural resource within the project area, the destruction of which needed to be addressed in the final report. (May 2017 – August 2017)
- **Construction Monitoring for Parcel 2058-003-010, Lobo Canyon, Los Angeles County.** Principal and Project Manager for the surface collection and construction monitoring for this single family residential construction project. (July 2015 – August 2016)**.**
- **Phase I Survey for the 12300 Valley Boulevard Hotel, a commercial development in El Monte, Los Angeles, CA.** Principal and Project Manager for the completion of a record search, NAHC record search request, and a site survey for this small residential development. (June 2017 – August 2017)
- **Phase Ia Survey for the Holiday Inn Express Hotel, a commercial development in El Monte, Los Angeles, CA.** Principal and Project Manager for the completion of a record search, NAHC record search request, and a site survey for this small residential development. (July 2017 – August 2017)
- **Arcadia Town Homes MND Phase I Cultural Assessment for a multi-unit residential development in Arcadia, Los Angeles, CA.** Principal and Project Manager for the completion of a record search, NAHC record search request, and a site survey for this multi-unit residential development. (May 2017 – August 2017)
- **Phase I Survey for the 6625 Bradley Road, a residential development in Somis, Ventura County, CA.** Principal and Project Manager for the completion of a record search, NAHC record search request, and a site survey for this small residential development. (June 2017 – July 2017)

- **Phase I Survey for 3800 Figueroa, an apartment complex development in Los Angeles, Los Angeles County, CA.** Principal and Project Manager for the completion of a record search, NAHC record search request, and a site survey for apartment complex development. (June 2017 – August 2017)
- **11172 Santa Paula Road Phase Ia Survey for a 5.5-acre Agricultural property in Ojai, California, Ventura County, CA.** Principal and Project Manager for the completion of a record search, NAHC record search request, and a site survey. (May 2017 – June 2017)
- **6658 Reseda Boulevard, City of Reseda, Los Angeles County, CA.** Principal and Project Manager for a Phase 1 record search for this urban mixed use project. (March 2017 – May 2017)
- **Paradise Valley Development Project Environmental Impact Report and Impact Statement, Riverside County, CA.** Author of the cultural section for this EIR for a housing and mixed use development of over 2200-acres east of Indio, California. Also reviewed original techical documents, and incorporated legal and agency comments. Mitigation measures included the management and monitoring of dozens of cultural resources, sensitive soils, and paleontological resources. (October 2014 – March 2017)
- **Phase I Cultural Resources Survey for Parcel 2058-003-010, Lobo Canyon, Los Angeles County, CA.** Principal and Project Manager for completion of a Phase Ia and NEPA permit for the project (USACOE, Los Angeles District). Extensive communications and consultation with the COE and SHPO. Project also involved the mitigation monitoring of a prehistoric cultural resource located on the property. (July 2016 – March 2017)
- **Phase I Survey for a 1.33-acre Mixed-Use development in the City of Northridge at the corner of Nordoff and Darby Streets, Los Angeles County, CA.** Principal and Project Manager for the completion of a record search, NAHC scoping, and a site survey. This project included a built-environment assessment of existing historic structures (October 2016 – February 2017)
- **Phase I Survey for a 0.5-acre Residential Subdivision in the City of Los Angeles at the end of Crisler Way, Los Angeles County, CA.** Principal and Project Manager for the completion of a record search, NAHC record search request, and a site survey. (October 2016 – February 2017)
- **Deer Lake Residential Development Cultural Monitoring, Porter Ranch, Los Angeles, CA.** Principal and Project Manager for the cultural monitoring of eight cultural resources within the project development boundary. This project includes the writing of a final Monitoring Report. (May 2016 – February 2017)
- **Phase I Survey for a 0.5-acre Mixed Use Development Project on Camarillo Avenue in North Hollywood, Los Angeles County, CA.** Principal and Cultural Project Manager for the completion of a record search, NAHC scoping, and a site survey. This project also included a historic built environment assessment (November 2016 – January 2017)
- **Phase I Survey for a 14-acre Residential Subdivision in Woodland Hills, CA.** Principal and Project Manager for the completion of a record search, NAHC scoping, and a site survey. This project involved consultation with the City of Los Angeles on AB-52 (July 2016 – January 2017)

- **Lynn Road Residentitial Development Project, Newbury Park, CA.** Principal and Project Manager for the Phase Ia and Phase Ib survey of this 10-acre parcel. A large prehistoric Middle-Period seasonal settlement was discovered, which required subsurface testing and extensive mapping of surface hearths, yucca roasters, and dwelling features. Project included public testimony before the Thousand Oaks Planning Commission. (September 2015 – December 2016)
- **Pepperdine University Campus Life Project: Debris Basin Excavation Cultural and Paleontolgoical Resource Monitoring, Los Angeles, CA.** Principal and Project Manager for cultural resource monitoring of Phase I of the Pepperdine Campus Life housing, facilities, and trail development project. (August – October 2016)
- **Trail Construction Monitoring, Conrad N. Hilton Foundation.** Principal and Project Manager for the development of a pedestrian foot trail loop between the Foundation and the nearby "Ridge" professional building, including the excavation of dozens of shovel test pits and a major surface collection of prehistoric artifacts, including trail construction monitoring. (August – September 2016)
- **32640 PCH Phase I Cultural Resource Survey, Santa Monica, CA.** Principal and Project Manager for the Phase I cultural resource assessment of a ravine rehabilitation project between the Pacific Coast Highway and the Pacific Ocean. Included a record search, site survey, and technical report. (May 2015 – June 2016)
- **Conrad N. Hilton Foundation Trail Project Cultural Assessment, Agoura Hills, Los Angeles County, CA.** Project Manager for the Phase 1b survey of a new pedestrian access trail linking off-site office space with the Foundation campus buildings. Project included the excavation of over 30 shovel test pits and the recording of numerous prehistoric features. (May – August 2016)
- **CA-LAN-321 Project Compliance Plans, and Native American and Lead Agency Consultation, Agoura Hills, Los Angeles County, CA.** Tasks included the authoring of a cultural resource Treatment and Data Recovery Plan, a cultural resource Management Plan, and a Curation Plan for all artifacts, as well as the organization of meetings with the Chumash Tribal Groups and the Lead Agency. (April 2015 – June 2016)
- **Canyon Park Homes, Sylmar, Los Angeles County, CA.** Native American Tribal Group consultation and pre-construction monitoring for this 80-acre residential property development, as well as EIR section writing. (February 2015 – March 2016)
- **Oakwood Schools Built Enviroment and Archaeological Assessment, North Hollywood, Los Angeles County, CA.** Principal and Project Manager for the Phase I cultural resource assessment of the project property prior to the construction of a new middle and high school campus within the North Hollywood area. Challenging tasks included Native American ghost writing for the lead agency (City of Los Angeles) and addressing a modern human cremation garden in the report (November 2015 – February 2016)
- **Floral Canyon Residential Development Cultural Resource Survey, North Hollywood, CA.** Principal and Project Manager for this Phase Ia cultural resource survey of an 8-acrea property. The cultural resource parts of the CEQA checklist were also completed. (September – December 2015).

- **Hilton Property Phase 3 Construction Site Phase Ib Cultural Resources Survey, Agoura Hills, Los Angeles County, CA.** Principal and Project manager for this extensive preliminary survey project, including excavation of over 200 shovel test pits and 4 test units to define the boundaries of a prehistoric ceremonial site of over 80-acres in size, used by Chumash Native Americans from 400 A.D. to the late 1700s. Recordation of over 190-features and 11,500 artifacts. Second phase will include data recovery tasks and an ammended Environmental Impact Report. (February 2014 – March 2015)
- **Blessed Theresa Church Construction, City of Winchester, Riverside County, CA.** Cultural consultation including cultural/paleo monitoring issues. (April 2014 – July 2014)
- **Village at Los Carneros, City of Goleta, Santa Barbara County, CA.** Reviewed all previous technical studies and wrote part of the cultural sections of the Environmental Impact Report for this residential house development project. (March 2014 – April 2014)
- **3121 Old Topanga Canyon Road Phase I Survey and Literature Search, City of Calabasas, Los Angles County, CA.** Principal and Project manager for this residential development project, including NAHC letters, literature review, site survey, paleontolgoical survey and literature search, final technical report, and the writing of the cultural resources section of the Environmental Impact Report. (March 2014 – April 2014)
- **Beacon Solar, Hecate Energy and LADWP, Kern County, CA.** Business Developer for the archaeology and biological monitoring, pre-construction surveys, and desert totoise fence monitoring for this large, 2000-acre solar project for the Los Angeles Department of Water and Power. (July – October 2013).
- **Q-Cells Solar Survey, Palm Springs, Riverside County, CA.** Principal and Project Manager for a cultural survey and record search of 36-acres north of Palm Springs for solar development. (October 2013 – October 2013)
- **Pacific Gas and Electric NERC Support Monitoring, sub to URS, Northern and Central California.** Principal and Project Manager for this 4-year project in support of the national NERC power pole reliablity project for PG&E. Involves cultural, biological, and paleontological monitoring and field surveys. (October 2013 – October 2013)
- **Gold Bar Transmission Line Survey, McEwen Mining, Eureka County, NV.** Principal and Project Manager for this 2,577-acre cultural survey for the develelopment of a 33-mile transmisstion line to service the Gold Bar Mine in Nevada. Bureau of Land Management was the principal Federal agency. (April 2013 – October 2013).
- **East Kern Wind Resource Area (EKWRA) Power Pole Replacement Project, Environmental Intelligence / Southern California Edison, Kern County, CA.** Principal and Project Manager. This two-year project included cultural resource surveys, the evaluation of numerous cultural sites, and cultural and paleontological monitoring for the construction of over 130-miles of new power poles and fiber optics lines to service Tehachapi Moutain wind farms. (January 2013 – October 2013)
- **Pure Source Power, Victorville, San Bernardino, CA.** Principal and Project Manager for a cultural survey and record search of 140-acres north of Palm Springs for solar development. (September 2013 – October 2013)

- **Dry Ranch Solar Project, Silverado Power, Los Angeles County, CA.** Principal. Dr. Bischoff managed this 64-acre solar project near Lancaster, which included a record search, field survey, and cultural report to meet CEQA compliance. This project included coordination with Southern California Edison for a gen-tie line and telecom attachments. (March - April 2013)
- **Plainview Solar Project, Silverado Power, Los Angeles County, CA.** Principal. Dr. Bischoff managed this 114-acre solar project near Lancaster, which included a record search, field survey, and cultural report to meet CEQA compliance. (April - May 2013)
- **Silverleaf Solar Project, Cultural and Paleontolgoical Survey, Agile Engergy, Imperial County, CA.** Principal and Project Manager. Dr. Bischoff provided general review and quality control for a large solar project south of San Diego. This project involved an over 2,000-acre survey of proposed solar fields and 5-miles of electrical transmission gen-tie lines. The bureau of Land Management was the principal Federal agency. (November 2011 - July 2012)
- **Desert Harvest Solar Project, Build Environment Survey, eneXco Energy, Riverside County, CA.** Project Manager. Dr. Bischoff was the project manager for the built environment survey of 1,600-acre solar field and 12-miles of electrical transmission gen-tie lines. This included the production of a separate technical report for the Bureau of Land Management that included a historic structure inventory, assessment of signficance, and an indirect effects analysis. (November 2011 - June 2012)
- **Silverleaf Solar Project, Built Environment Survey, Agile Engergy, Imperial County, CA.** Project Manager. Project Manager. Dr. Bischoff was the project manager for the built environment survey of 2,000-acre solar field and 5-miles of electrical transmission gen-tie lines. This included the production of a separate technical report for the Bureau of Land Management that included a historic structure inventory, assessment of signficance, and an indirect effects analysis. (November 2011 - July 2012)
- **IVSC2 Solar Project, County of Imperial, Imperial County, CA.** Principal and Project Manager. Dr. Bischoff provided oversight of the 140-acre solar project east of the Salton Sea. This project was notable for the quick response time required to field a survey crew and complete a draft report for the County (Sept-Oct 2012)
- **Desert Harvest Solar Project, Cultural and Paleontological Resource Survey, eneXco Energy, Riverside County, CA.** Principal and Project Manager. Dr. Bischoff provided general review and quality control for a large solar project northeast of Blythe, CA. This project involved an over 1,600-acre survey of proposed solar fields and 12-miles of electrical transmission gen-tie lines. Bureau of Land Management was the principal Federal agency. (November 2011 - July 2012)
- **Desert Harvest Solar Project, Build Environment Survey, eneXco Energy, Riverside County, CA.** Project Manager. Dr. Bischoff was the project manager for the built environment survey of 1,600-acre solar field and 12-miles of electrical transmission gen-tie lines. This included the production of a separate technical report for the Bureau of Land Management that included a historic structure inventory, assessment of signficance, and an indirect effects analysis. (November 2011 - June 2012)

- **AT&T Fiber-optics Renewal Project, Evaluations, Mitigations, and Monitoring, AT&T, San Bernardino County, CA.** Cultural Principal and Project Manager. Dr. Bischoff will provide project management, technical writing, and quality control for the cultural and paleontological evaluations, data recoveries, and monitoring efforts for the AT&T fiber renewal project. This project involved the survey of over 90 miles of proposed new fiber-optic line between Barstow and Las Vegas, NV, and the management of over 100-cultural sites. Bureau of Land Management and Mojave National Preserve were the principal Federal agencies. (July 2013 – October)
- **Fiber Node Evaluations, Freedom Communications, Orange County, CA.** Cultural Principal. Dr. Bischoff provided general project management and quality control for the cultural background record searches and surveys for dozens of telecommunication sites throughout the City of Irvine as part of the Freedom Communications site development project. Dozens more sites are expected to be tested in the coming year. (April 2012 – October 2013)
- **San Diego Churches and Public Building Historic Structure Evaluations, DePratti Inc., City of San Diego, CA.** Principal Investigator. Dr. Bischoff acted as Principal and QA/QC manager for this project, which involved the evaluation of dozens of historic structures as part of the DePratti Communication telecommunication attachment project in the City of San Diego. (November 2011 – October 2013)
- **The Plunge Evaluation, DePratti Inc., City of San Diego, San Diego County, CA.** Principal for this historic architecture project involving the structural evaluation and National Register documentation for The Plunge historic salt-water bath house in San Diego. (September 2013 – September 2013)
- **AT&T Fiber-optics Renewal Project, Surveys, Literature Searches, and Technical Studies, AT&T, San Bernardino County, CA.** Cultural Principal and Project Manager. Dr. Bischoff provided general project management and quality control for the cultural, paleontological, and ethnographic surveys, literature searches, and technical studies. This project involved the survey of over 90 miles of proposed new fiber-optic line between Barstow and Las Vegas, NV, and the management of over 100-cultural sites. Bureau of Land Management and Mojave National Preserve were the principal Federal agencies. (April 2012 – July 2013)
- **Digital West Fiber Line Feasibility Study, San Luis Obispo to Los Angeles, Counties of San Luis Obispo, Sanata Barbara, Ventura, and Los Angeles, CA.** Project Manager for this large feasibility study for placing a new fiber line down the US 101 freeway cooridor. Biological, cultural, paleontological, and permitting constraints were all examined. (April 2012 – July 2013)
- **Digital 395 Broadband Stimulus Project, Praxis and California Broadband Corporation, California and Nevada.** Cultural Director. Dr. Bischoff acted as the California report manager of the cultural division, directed fieldwork, and authored management documents and reports. This project involved the new installation of over 650 miles of fiber-optic line across California and Nevada. The programmatic agreement of this complex project included 10 federal, state, and tribal agencies, with another seven acting as interested parties, and the management, evaluation, and monitoring of over 170 cultural sites. NTIAA was the Principal Federal Agency, but also involved twelve other California and Nevada State and Federal agencies and Tribal Groups (November 2011 – April 2012)

- **Fort Irwin Cell Tower Geotech Boring Monitoring, Northrop-Grumman and Fort Irwin Army Post, San Bernardino County, CA.** Principal. This project involves the cultural and paleo monitoring of sensitive areas as part of the construction of over 24 new cell tower locations. (October 2013 – October 2013)
- **Edwards Airforce Base Telecommunication Cultural Monitoring, Team Fischel Company, Edwards AFB, Kern County, CA.** Project Manager and Principal for the cultural monitoring of 40-miles of telecommunication trenching on Edwards AFB, including pre-construction meetings and a final monitoring report. (May 2013 – Sept. 2013)
- **Fort Irwin Cell Tower Surveys and Monitoring, Northrop-Grumman and Fort Irwin Army Post, San Bernardino County, CA.** Principal. This project involves the cultural and paleo survey of over 24 new cell tower locations and associated access roads on Fort Irwin, as well as construction phase monitoring. (April 2013 – October 2013)
- **Marine Corps Base, Camp Pendleton, Cultural Resources Consultation, Marine Corps Base, Pendleton, San Diego County, CA.** On-Call Senior Cultural Resources Consultant. Dr. Bischoff provided senior-level cultural resource consultation related to Camp Pendleton's Basewide Utilities Infrastructure Improvements project. He provided consulting on cultural resource management for several waste treatment and utility line systems as part of the Camp's "Grow the Force" initiative. (2011 – October 2013)
- **Pacoima Spreading Grounds Improvement Project, LACDPW, Los Angeles County, CA.** Cultural Principal. Dr. Bischoff managed the cultural resources record search and CEQA cultural section mitigation measures of an EIR for the improvement of the Pacoima spreading grounds and related canal resources. (April 2013 – October 2013)
- **Devil's Gate Reservoir Sediment Removal and Management Project, LACDPW, Los Angeles County, CA.** Principal of Cultural Resources. This project involved removal of sediment within the Devil's Gate Reservoir area, which required a preliminary cultural survey and record search under CEQA, as well as an EIR. Dr. Bischoff served as the cultural principal for the project and provided a recommended plan for dealing with sedimentary soils vs. native soils, monitoring criteria, and potential discovery situations. Dr. Bischoff helped write Environmental Impact Report sections, and worked with the Gabrieleno Tribal Group in the protection of archaeological and tribal cultural resources. (2011 – October 2013)
- **Peck Road Spreading Basin Improvement Project, LACDPW, Los Angeles County, CA.** Cultural Principal. Dr. Bischoff managed the cultural resources record searches, field survey, paleontological survey, and CEQA cultural section mitigation measures of an MND for the improvement of the Peck Road Spreading Basin, including a related new water discharge pipe. (June 2013 – September 2013)
- **Marina Del Rey Waterline Replacement Project Cultural Monitoring, LACDPW, Los Angeles County, CA.** Cultural Principal. This project with the Los Angeles Department of Public Works involved the cultural monitoring for the Marina Del Rey 18-inch Waterline Replacement. Chambers Group also provided a qualified archaeological monitor at the project site during excavation activities during construction. (March - May 2013)
- **Dieguto Wetlands Restoration Monitoring, Southern California Edison, Del Mar, San Diego County, CA.** Principal Investigator and Project Manager. This project involved the extensive rehabilitation of Southern California Edison property as part of the Dieguto Wetlands Restoration project. (April 2012 - January 2013)

- **Live Oaks Spreading Grounds Project, LACDPW, Los Angeles County, CA.** Cultural Principal. Dr. Bischoff managed the cultural resources record search and site visit for this public works project. (April 2013 – October 2013)
- **Los Penasquitos Wetlands Monitoring, AMEC, Del Mar, San Diego County, CA.** Principal Investigator. Dr. Bischoff managed the monitoring tasks, budgets, and professional standards for this project near the City of Del Mar as part of the Torrey Pines State Nature Reserve restoration. (October - December 2012)
- **San Gorgonio Creek Water Recharge Basin Construction Monitoring, Beaumont Cherry Valley Water District, Cherry Valley, Riverside County, CA.** Principal and Project Manager. This project involved paleontological and archaeological construction monitoring during construction, including emergency evaluation and monitoring when early 19Th Century structures and materials were unexpectedly encountered during earth moving. (February 2012 – April 2012)
- **Penmar Golf Course Water Quality Improvement Project, Pacific Hydrotech and City of Santa Monica, Santa Monica, CA.** Principal Investigator. Dr. Bischoff managed QA/QC review, budgets, and professional standards for the project in the City of Venice. Penmar was a multi-year waterline and tank improvement project in which evidence of ethnic Japanese barrios and fossil Pleistocene animal bones were discovered. (November 2011 - November 2012)
- **Oxford Retention Basin Flood Protection Project, LACDPW, Los Angeles County, CA.** Principal and Project Manager. The Oxford Basin in Marina Del Rey was receiving enhancement, and Dr. Bischoff managed the completion of the cultural survey, literature review, and construction monitoring for the project. (2011 - 2012)
- **Veterans Administration, VISN 21 On-Call, Western States, Teamed with KAL Architectes.** This project will provide cultural and biological technical services for Veterans Administration projects from October 2013 to October 2018. (October 2013 – October 2013)
- **Historic Structure Evaluations for Statewide Weatherization Efforts, sub to ICF for the State of California, All Counties, CA.** Project Manager and Principal. This project involves meeting NEPA compliance for low-income subsidized weatherization efforts throughout the State of California. Hundreds of structures will be evaluated as part of this project by a Chambers Architectural Historian using a abbreviated format. (November 2011 to October 2013)
- **CEQA Services for Improvements to Polytechnic and Wilson High Schools, LBUSD, City of Long Beach, CA.** Cultural Principal. Dr. Bischoff provided oversight and incorporation of the historic architecture technical reports into the project CEQA documents. (June 2013 – August 2013)
- **Mill Creek Crew Room Cultural Monitoring, Angeles National Forest (ANF), Los Angeles County, CA.** The County of Los Angeles Department of Public Works proposed to replace the crew room building within the Angeles Forest Mill Creek Summit Maintenance Yard facility. This CEQA/NHPA project involved the preparation of a treatment and discovery plan document, ARPA permitting, constant consultation with the ANF, construction monitoring, and a final monitoring report. (April – July 2013)

- **Review of Technical Report and CEQA Documents Relating to the Proposed Demolition of Santa Ana Public Building #16, City of Santa Ana, Santa Ana, CA.** Principal. This project involved the review of technical documents, mitigation measures, and CEQA documents relating to the demolition of a 1950s public building in the City of Santa Ana. (May 2013 – July 2013)
- **Roosevelt School, LBUSD, City of Long Beach, CA.** Cultural Principal. Dr. Bischoff provided oversight, authorship, and counsel on the EIR for the demolition of the Roosevelt Elementary School in Long Beach. This proved to be a complex project, involving an historic built environment resource evaluation and mitigation plan, legal investigation, and extensive responses to public comments. This process resulted in a HABS/HAER mitigation project. (November 2011 - June 2012)
- **Foothill Toll Road Cultural and Paleontological Monitoring, Ghiradelli and Associates, Orange County, CA.** Principal and Project Manager for cultural monitoring related to the upgrade of all tollroad payment stations in Orange County. (October 2013 – October 2013)
- **9th Street Extension Historic Structure Inventory and Evaluation, City of Holtville, Imperial County, CA.** Principal and Project Manager. Dr. Bischoff managed and provided QA/QC for this project involving a Caltrans inventory of project APE historic built environment resources, and the historic evaluation of a canal feature. Final deliverables included a Historic Resources Evaluation Report and a Historic Property Survey Report to CALTRANS standards. (June 2013 – August 2013)
- **Francisquito Bridges Replacement (3-Total), LADWP/CALTRANS, Los Angeles County, CA.** Principal. Dr. Bischoff managed and oversaw the completion of this project in the Angeles Forest. This project involved the replacement of three existing bridges on San Francisquito Canyon Road over San Francisquito Canyon Creek. The proposed improvement project involved widening the two lane bridges, improvement of approachment roadway, and the placement and installation of retaining walls, concrete barriers with tubular-steel handrails, and metal beam guardrails. (2011 – September 2013)
- **Murrieta Whitewood Road Extension, City of Murrieta, Riverside County, CA.** Principal and Project Manager. This road extension project involved a cultural resource survey and records search, a paleontolgoical field study, and native american Consultation due to the historic use of the nearby Murrieta Hot Springs by local Native Americans. (April – June 2012)
- **Nuevo Road/ I-215 Interchange Improvement in the City of Perris, CALTRANS, Riverside County, CA.** Principal. Dr. Bischoff managed and provided QA/QC for this project involving street widening and additional improvements at the Nuevo Road/ I-215 interchange. Final deliverables included a record search and a survey report to CALTRANS standards. (2011 – 2012)
- **Soledad Canyon Road Bridge Replacement Project, LACDPW, Los Angeles County, CA.** Principal. LADPW intends to replace a bridge on Soledad Canyon Road. Chambers Group completed a record search and NAHC records review for potential archaeological resources. This project is on-going and may in the future involve further work, including cultural and historic structure surveys and evaluation. (2011 – 2012)

- **Grove Lumber Facility Cultural and Paleontological Technical Studies, Thatcher Engineering, City of Perris, Riverside County, CA.** Principal for the cultural technical studies for this development project, including cultural and paleontological record searches, NAHC letters, and a cultural study (October 2013 – October 2013)
- **Newport Beach Yacht Club Evaluation, Community Development Department, City of Newport Beach, Orange County, CA.** Principal for this historic architecture project involving the built environment evaluation of the Newport Beach Yacht House. (October 2013 – October 2013)
- **Blossom Plaza Historic Structure Evaluation, China Town, City of Los Angeles, CA.** Principal for this historic architecture project involving the updating of technical reports and a standing structure evaluation. (July 2013 – September 2013)
- **Moreno Valley Residential Building Evaluation, City of Moreno Valley, Riverside, CA.** Principal for the architectural assessment of the J. Langdon Ranch located at 11761 Davis Street, in the city of Moreno Valley, Riverside County, California. (April 2013)
- **Indian Wells Tennis Court Development Project, Indian Wells, Riverside County, CA.** Principal Provided technical review of the planning documents cultural section, as well as oversaw Native American Heritage Commission communication for this project to enhance the Indian Wells Tennis Garden complex. (December 2012 – April 2013)
- **Scripps Hospital Paleontological and Archaeological Monitoring, Worley-Parsons, City of Encinitas, CA.** Principal Investigator. Dr. Bischoff managed QA/QC review, budgets, and professional standards for the cultural and paleontological monitoring of this large development project. (2011 - 2013)
- **Tehachapi Renewable Transmission Project (TRTP), Southern California Edison, Kern, Los Angeles, and San Bernardino Counties, CA.** Principal and Project Manager. Dr. Bischoff was responsible for all office and field operations that ensured the successful inventory and management of cultural resources related to this 300-mile transmission line project, including the management of standing historical structures and paleontological resources. He managed an annual budget in excess of $4 million, a staff of up to 40 persons, wrote compliance documents (Programmatic Agreement Appendices, ARPA permits, Project Agency Yearly Reports, and Management Plans), and managed hazmat situations. Dr. Bischoff completed over 150 individual projects in southern California including survey, evaluation, mitigation, and resource monitoring. He wrote individual budgets for project-specific tasks, as well as construction-related administrative tasks, each with different scopes of work and budget amounts. He reconciled all budgets on a monthly basis and coordinated them with the master construction schedule. Dr. Bischoff managed field compliance with NEPA, with TRTP-specific environmental agency agreements, and with the cultural section of the project EIR/EIS and Programmatic Agreement. He also met legal and agency guidelines for Section 106 of NHPA, CEQA, NAGPRA, and TRTP Cultural Resource Management Plan. The Angeles National Forest was the lead Federal Agency, but the CPUC and other Federal and California State Agencies were also involved. (November 2009 - June 2011)

- **East Kern Wind Resource Area (EKWRA) Power Pole Replacement Project, Southern California Edison, Kern County, CA.** Principal and Project Manager. Dr. Bischoff managed original technical studies for a project designed to replace hundreds of power poles in the Tehachapi Mountains area in support of new wind farm construction. He conducted large area surveys, some on BLM properties, and developed a management plan for dozens of archaeological sites. Bureau of Land Management was the principal Federal agency. (February 2010 - June 2011)
- **San Jose Salt Barge HAER Documentation Project, USACE and Santa Clara Valley Water District, City of San Jose, CA.** Principal. Dr. Bischoff consulted on the excavation and evaluation of a shallow-water shipwreck discovered during a wetlands rehabilitation project. This project involved USACE, San Francisco District as lead agency and the Water District as client. (January – February 2011)
- **Operations and Maintenance Contract, Southern California Edison. Southern California.** I acted as the Principal for all work orders issued to our office under the O/M contract. A major task under this contract was the response to the Crown Fire in 2010. I worked directly with SCE during and immediately after the fire to evaluate and protect cultural resources. (Jan 2010 - June 2011)
- **Crown Fire Survey and Cultural Site Update, Southern California Edison, Los Angeles County, CA.** Project Manager. Dr. Bischoff led the cultural response to the Crown Fire, which included surveying and updating known cultural sites as part of the SCE post-fire power pole and access road inspection. (August – Sept. 2010)

PHASE I ENVIRONMENTAL SITE ASSESSMENT

135, 141 &153 West Avenue 34, and 3401 & 3433 Pasadena Avenue
Los Angeles, California 90031

· EXECUTIVE SUMMARY ·

Fulcrum Resources Environmental (FR) has conducted a Phase I Environmental Site Assessment in accordance with the American Society for Testing and Materials (**ASTM**) Standard Practice E1527-13 and U.S. Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the subject property addressed at **135, 141 &153 West Avenue 34, and 3401 & 3433 Pasadena Avenue, Los Angeles County, Los Angeles, California 90031** (subject property) per the request of MR Real Estate, LLC (Client). The work was authorized by written contract dated June 19, 2019.

Additional Addresses

The subject property was historically associated with the following addresses:

1906
On West Avenue 34: 119, 139, 141, 143, 145, 147, 149, 153, 157
On Pasadena Avenue: 3403, 3407, 3417, 3419, 3423, 3429, 3431, 3437

1920
On West Avenue 34: 119, 139, 141, 143, 145, 147, 149, 153, 157
On Pasadena Avenue: 3401, 3403, 3407, 3411, 3417, 3419, 3423, 3425, 3429, 3431, 3437, 3439, 3441

1951
On West Avenue 34: 119, 123, 129, 133, 139, 141, 145, 149, 153, 155, 169
On Pasadena Avenue: 3401, 3407, 3415, 3417, 3419, 3421, 3423, 3425, 3429, 3431, 3437

1970
On West Avenue 34: 141, 153, 155, 169
On Pasadena Avenue: 3401, 3415, 3417, 3419, 3433, 3437

The additional addresses were researched as part of the subject property address range for the purposes of this Phase I Environmental Site Assessment.

Summary of Property Description

The subject property, 135, 141 &153 West Avenue 34, and 3401 & 3433 Pasadena Avenue, Los Angeles County, Los Angeles, California 90031, is located on the north side of West Avenue 34 and the west side of Pasadena Avenue, between North Artesian Street (to the west), within a highly-developed light industrial/commercial area. According to the Los Angeles County Tax Assessor's Office, the subject property is assigned the following Assessor's Parcel Numbers (APNs):

Address	APN	Land, sq feet	Building(s), sq feet
135 and 141 West Avenue 34	5205-004-011	157,560	87,980
153 West Avenue 34	5205-004-005	4,800	3,520
3401 Pasadena Avenue	5205-004-003	28,794	4,040 and 9,600
3433 Pasadena Avenue	5205-004-007	28,145	14,315

The subject property consists of four lots as described in Section 2.1 comprising a total of approximately 219,299 square-foot commercial lot. The parcels are described below based on publicly available information from the Los Angeles County Assessor Portal and site observations.

135 and 141 West Avenue 34

The property at 135 and 141 West Avenue 34 is currently improved with an industrial-commercial building of concrete construction, built in 1977. The building is comprised of two units, each of which includes office and warehouse space. The units are currently occupied by Ortiz Bros. Moving and Storage and Atlas Van Lines, a moving company; Phil's Transfer & Storage, Inc. for storage space; and Studio 34, Inc. for art studio space. Separate entrances and loading bays for the building are located near the southwest corner of the structure, and customer entry is achieved near the southeast corner of the building. Stacked corrugated steel shipping containers are located outside of the building in the parking areas in the south and central areas of the lot. The property features perimeter fencing of variable design, and motorized gate entry to the south along West Avenue 34.

153 West Avenue 34

The property at 153 West Avenue 34 is currently improved with an industrial-commercial building of brick and corrugated steel construction, built in 1929. The building is currently occupied by Ortiz Bros. Moving and Storage. The structure features a front entrance with a garage door for vehicular access along the southern boundary of the site. All other areas are asphalt paved with landscaped areas near the front entrance. Stacked corrugated steel shipping containers are located outside of the building in the parking areas to the north and northwest of the building. The property shares perimeter fencing with 145 and 141 West Avenue 34.

3401 Pasadena Avenue

The property at 3401 Pasadena Avenue is currently improved with an industrial-commercial building of wood-frame, cinderblock, and brick-façade construction on the east side of the parcel, built in 1925. That building is currently occupied by LootCrate, a merchandise wholesaler of apparel, games, accessories, and other various novelty items and collectables; and Call Time Quenchers, a beverage distribution company. Operational areas within the structure are primarily unfinished warehouse space with concrete flooring, utilized for storage of products, finished office/administrative areas with tile flooring and suspended drop-grid ceilings. The office portion of the structure features a split-level design with the second-story utilized for storage.

In the southeast corner of the site is a second industrial-commercial building of corrugated steel construction, built in 1948. The building is currently utilized as a warehouse for dry-goods storage. The

exterior of the property is asphalt paved with employee parking. An entrance is located near the southeast corner of the structure. The property also features perimeter chain link fencing with barbed wire and a manual gate for vehicular access along Pasadena Avenue.

3433 Pasadena Avenue

The property at 3433 Pasadena Avenue is currently improved with an industrial-commercial building of wood-frame and cinderblock construction with reinforced steel support beams and a brick façade, built in 1967. The building is also occupied by LootCrate. The building is comprised of office and work area space. The work area is partially finished with concrete and carpet flooring, and the office areas feature tile floors with drop-grid ceilings. The property shares parking areas and perimeter chain link fence with the 3401 Pasadena Avenue property.

All four parcels are together enclosed with fencing of variable design. A railroad corridor with a northeast/southwest alignment is present, parallel and adjacent to the western boundary of the subject property.

The subject property is occupied by the following tenants:

Property Address	Business Name	Business Operation
135 and 141 West Avenue 34	Ortiz Bros. Moving and Storage and Atlas Van Lines Phil's Transfer & Storage, Inc	Moving Company and Commercial Storage Moving Company and Commercial Storage
153 West Avenue 34	Ortiz Bros. Moving and Storage and Atlas Van Lines	Moving Company and Commercial Storage
3401 Pasadena Avenue	LootCrate Quick Time Quenchers	Merchandise Wholesaler Beverage Distributor
3433 Pasadena Avenue	LootCrate	Merchandise Wholesaler

The subject property has been owned by Mr. Eric Ortiz of Ortiz Bros. Moving and Storage since 2000, and has occupied the property since 1993.

Summary of Property History

Based on a review of available historical records, the north, west, and central areas of the subject property were vacant, and the east and west areas were developed with private residential structures by as early as 1894. Most of these residential properties persisted until 1964 with few exceptions, including the subject property warehouse building addressed 153 West Avenue 34 (constructed in 1929) along the southern boundary of the site, and the subject property warehouse buildings addressed 3401 Pasadena Avenue (constructed in 1925) and 3433 Pasadena Avenue (constructed in 1967) along the eastern boundary of the site. A railroad corridor has been historically present along the western boundary since at least 1894, and is still currently in use. A bakery occupied the southeast corner of the property (original occupant of the 3401 Pasadena Avenue building) from 1919 until at least 1951, and was redeveloped as a machine and woodworking shop in 1970.

The historic industrial areas of the subject property have a more complicated history, and are discussed here as the "historic industrial areas". These areas include the north, west, and central parts of the site. The historic industrial areas were vacant and undeveloped in 1894 until at least 1906. By 1920, these areas were developed and occupied by the Los Angeles Sand & Gravel Company, which occupied the property until at least 1928, and terminated by 1938, at which time the historic industrial areas of the subject property consisted of vacant land. By 1948, these areas were redeveloped with six industrial structures, occupied by Steel Framing & Building Corporation in 1951, and ITT Cannon Electronics Inc. from at least 1964-1970. The historic industrial areas were demolished and consisted of vacant and graded land in the 1977 aerial photograph, and the subject property buildings addressed 135 and 141 West Avenue 34 were constructed in 1977 according to building department files and tax assessor records, and was occupied by American Caster Corp from 1977 until the property was purchased by the current owner, Mr. Eric Ortiz, in 1999. The subject property has been primarily occupied by Ortiz Brothers Moving & Storage, with a variety of tenants between 1999 and present. Refer to Section 4.1.

Summary of Regulatory Database Concerns

The subject property was not identified on any of the federal, state, or local regulatory records databases in the Environmental Data Resources, Inc. (EDR) Radius report.

Vapor Encroachment Condition (VEC)

A total of 8 sites were identified in the Radius Map Report and historical research within the "Area of Concern" that were considered to pose a potential VEC at the subject property based on the Tier 1 Evaluation. Tier 1 sites are:

- **3505 Pasadena Avenue** (Map ID B41-47) – this site was identified under the operator name Former Welch's Uniform Services and is located adjacent to and north of the subject property. The site is listed in the following databases from the report: UST (2), RCRA-LQG, ENVIROSTOR, LUST, CPS-SLIC (2), VCP, SWEEPS UST, HIST UST, CA FID UST, FINDS, ECHO, EMI, HIST CORTESE, CERS, DRYCLEANERS, HAZMAT, and EDR Hist Cleaner. Based on regulatory oversight and on-going SVE remediation with semi-annual groundwater monitoring, and the most recent (2016) analytical data available, this site does not represent a VEC to the subject property.

- **3500 Pasadena Avenue** (Map ID F61, 62) – this site was identified under the operator names Smith W P and Chuy Carburetors, and is located approximately 250 feet northeast of the subject property. The site is listed in the EDR Hist Cleaner and HAZMAT databases. Based on the available information, this site does not represent a VEC to the subject property.

- **3225 Lacy Street** (Map ID H67-73) – this site was identified under the operator names Heath & Co, and Maintenance and Operations New Maintenance Company for the Los Angeles Unified School District. The site is located approximately 350 feet southwest of the subject property, and is listed in the following databases from the report: HIST UST, UST, SWEEPS UST, CA FID UST,

RCRA-LQG, HAZMAT, LUST, FINDS, ECHO, HIST CORTESE, and CERS. Based on separation distance and site closure status, this site does not represent a VEC to the subject property.

- **3209 East Humboldt Street (**Map ID I74-78) – this property is located approximately 600 feet south of the subject property, and was identified under the operator ITT Cannon / Kennington. The site is listed in the following databases from the report: HAZMAT, UST, RCRA-SQG, FINDS, SEMS, ENVIROSTOR, VCP, SWEEPS UST, CA FID UST, DEED, HIST CORTESE, CPS-SLIC, LA Co. Mitigation, and CERS. Based on separation distance and regulatory oversight of cleanup activities with active groundwater monitoring, this site does not represent a VEC to the subject property.

- **3580 Pasadena Avenue** (Map ID J94-97) – this site was identified under the operator name Flavor Food Inc. and is located approximately 700 feet northeast of the subject property. The site is listed in the following databases from the report: SWEEPS UST, CA FID UST, LUST, HIST UST, HIST CORTESE, CERS, and UST. Based on separation distance and site closure status, this site does not represent a VEC to the subject property.

- **3101 Artesian Street** (Map ID N98-104) – this site was identified under the operator names Lincoln Heights District and P D D Construction MTNC. The site is located approximately 730 feet southwest of the subject property, and is listed in the following databases from the report: SWEEPS UST, CA FID UST, UST (2), LUST (2), RCRA-SQG, FINDS, ECHO, HAZMAT, CERS HAZ WASTE, HIST UST (2), CERS TANKS, HIST CORTESE, and CERS. Based on separation distance from the subject property, this site does not represent a VEC to the subject property.

- **301 West Avenue 26** (Map ID S127-128) – this property is located approximately 1,700 feet southwest of the subject property and was identified under the operator names Jaybee and Ajax Manufacturing. The site is listed in the ENVIROSTOR, VCP, EMI, and SEMS databases. Based on separation distance and regulatory oversight of cleanup activities with active groundwater monitoring, this site does not represent a VEC to the subject property.

- **400 West Avenue 26** (Map ID T129, 130, 133) – this site was identified under the operator name Lacy's Street Dump and is located approximately 1,700 feet southwest of the subject property. The site is listed in the WMUDS/SWAT, LDS, CERS (2), and SWF/LF (2) databases. Based on separation distance and regulatory closure status, this site does not represent a VEC to the subject property.

In our opinion, none of the other sites listed pose a significant threat to the subject property as there is no indication of a release at the respective sites, a release has occurred but the medium affected was the soil only and the site is beyond the critical distance of 100 feet, or the site location and/or plume of contamination is in excess of the critical distance of 100 feet from the subject property. Thus, a VEC can be ruled out because a VEC does not or is not likely to exist at the subject property.

Data Gaps

No significant data gaps were identified.

Refer to Section 1.4 for a discussion of the limitations, data failures, and/or data gaps encountered during this assessment.

· FINDINGS ·

Recognized Environmental Conditions (RECs)

In defining a standard of good commercial and customary practice for conducting an environmental site assessment of a parcel of property, the goal of the processes established by this practice is to identify recognized environmental conditions (RECs). The term recognized environmental conditions means the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the subject property or into the ground, ground water, or surface water of the subject property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are not recognized environmental conditions.

This assessment has revealed no evidence of RECs in connection with the subject property.

Historical Recognized Environmental Condition (HREC)

A Historical Recognized Environmental Condition (HREC) is a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by regulatory authority, without subjecting the property to any required controls (e.g. property use restrictions, AULs, institutional controls, or engineering controls).

This assessment has revealed no evidence of HRECs in connection with the property.

Controlled Recognized Environmental Condition (CREC)

A Controlled Recognized Environmental Condition (CREC) is a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (as evidenced by the issuance of a NFA letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (property use restrictions, AULs, institutional controls, or engineering controls).

This assessment has revealed no evidence of CRECs in connection with the subject property.

· CONCLUSIONS & RECOMMENDATIONS ·

FR has conducted a Phase I Environmental Site Assessment in accordance with the American Society for Testing and Materials (**ASTM**) Standard Practice E1527-13 and Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the subject property addressed at **135, 141 &153 West Avenue 34, and 3401 & 3433 Pasadena Avenue, Los Angeles County, Los Angeles, California 90031**. This assessment has revealed no evidence of Recognized Environmental Conditions (RECs) during the course of this assessment with the property.

FR recommends no further investigations for the subject property at this time.

· 1.0 INTRODUCTION ·

FR has conducted a Phase I Environmental Site Assessment in accordance with the American Society for Testing and Materials (**ASTM**) Standard Practice E1527-13 and Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the subject property addressed 135, 141 &153 West Avenue 34, and 3401 & 3433 Pasadena Avenue, Los Angeles County, Los Angeles, California 90031 (subject property) per the request of MR Real Estate, LLC. The work was authorized by written contract dated June 19, 2019.

1.1 Purpose

The purpose of a Phase I Environmental Site Assessment is to identify potential issues that may impact the subject property. The purpose of this practice is to define good commercial and customary practice in the United States of America for conducting an environmental site assessment of a parcel of commercial real estate with respect to the range of contaminants within the scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. 9601) and petroleum products. The investigation was conducted in accordance with the *Client's* Environmental Site Assessment scope of work for the use and benefit of the *Client* and the U.S. Small Business Administration (U.S. SBA) if financing is to be authorized by U.S. SBA. As such, this practice is intended to permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability (hereinafter, the "landowner liability protections," or "LLPs"): that is, the practice that constitutes "all appropriate inquiry into the previous ownership and uses of the subject property consistent with good commercial or customary practice" as defined at 42 U.S.C. 9601(35)(B).

Controlled substances are not included within the scope of this standard. Persons conducting an environmental site assessment as part of an EPA Brownfields Assessment and Characterization Grant awarded under CERCLA 42 U.S.C. 9604(k)(2)(B) must include controlled substances as defined in the Controlled Substances Act (21 U.S.C. 802) within the scope of the assessment investigations to the extent directed in the terms and conditions of the specific grant or cooperative agreement. Additionally, an evaluation of business environmental risk associated with a parcel of commercial real estate may necessitate investigation beyond that identified in this practice.

The purpose of this report is not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. This report is also not intended to serve as a compliance assessment of the subject property.

The ASTM E1527-13 practice DOES NOT address requirements of any state or local laws or of any federal laws other than the all appropriate inquiry provision of the LLPs. Per the ASTM Standard, Users are cautioned that federal, state, and local laws may impose environmental assessment obligations that are beyond the scope of this practice. Users should also be aware that there are likely to be other legal

obligations with regard to hazardous substances or petroleum products discovered on the subject property that are not addressed in the ASTM practice and that may pose risks of civil and/or criminal sanctions for non-compliance.

1.2 Scope of Work

This report has been prepared per the conditions presented in the agreed contract signed by the client. In accordance with ASTM guidelines, FR's scope of work included:

1. Requested user or one deemed most historically familiar with subject property to complete FR's environmental questionnaire.

2. Conducted visual reconnaissance of the subject property and adjoining properties, including site interviews with past or present owners, occupants, tenants, and/or operators if applicable.

3. Requested and researched historical documentation including but not limited to aerial photographs, city directories, topographic maps, interviews, public agency records, and fire insurance maps. Chain-of-title and environmental liens were reviewed if requested or provided by the client/user.

4. Reviewed federal, state, and local regulatory agency database information for the subject property and neighboring properties to identify potential concerns that could adversely affect the environmental condition of the subject property.

5. Prepared a technical Phase I Environmental Assessment report to document the findings regarding the current environmental condition of the subject property. If warranted, the report contains recommendations for further action. In addition to ASTM scope items, the following ASTM non-scope items were discussed and included in the report based upon a limited review: asbestos containing materials, radon, lead-based paint, lead in drinking water, potential wetlands, air emissions, and mold/water intrusion.

ASTM E1527-13 does not encompass analytical testing to evaluate Asbestos Containing Materials (ACM), radon, lead-based paint (LBP), drinking water quality, lead in drinking water, wetlands, regulatory compliance, cultural and historical resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, biological agents, mold, stored chemicals, debris, fill materials, surface water, or subsurface samples (soil and groundwater) as part of a Phase I ESA. Such additional information regarding non-ASTM E1527-13 issues may be provided merely for the *User's* convenience and cannot be used to bind this report as a whole to the compliance and conformance with ASTM guidelines. No disassembly of systems or building components or physical or invasive testing is to be performed unless Contract Engagement specifically calls for such testing as an additional scope of work. FR Environmental has performed this *Phase I Environmental Site Assessment* in conformance with the scope and limitations of ASTM Practice E1527-13. This *Report* may not include all environmental conditions which can materially impact the Subject Property other than those defined as RECs, HRECs, and CRECs in ASTM E1527-13.

1.3 Significant Assumptions

The following assumptions are made by FR Environmental in this report. FR relied on information derived from secondary sources. FR Environmental has made no independent investigation as to the accuracy and completeness of the information derived from secondary sources including government agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, or personal interviews and has assumed that such information is accurate and complete. FR Environmental assumes information provided by or obtained from governmental agencies including information obtained from government websites is accurate and complete.

Groundwater flow and depth to groundwater, unless otherwise specified by on-site well data, or well data from adjacent sites are assumed based on contours depicted on the United States Geological Survey topographic maps. FR Environmental assumes the subject property has been correctly and accurately identified by the client, designated representative of the client, property contact, property owner, and property owner's representatives.

FR Environmental assumes that the Client, Client representatives, Client Legal Counsel, designated representatives of the Client, property contact, property owner, property owner representatives, and property brokers, used good faith in answering questions and in obtaining information for the subject property as defined in 10.8 of the ASTM E1527-13 practice. This would also include obtaining those helpful documents from previous owners, operators, tenants, brokers, financial institutions etc. FR Environmental also assumes the Client will designate appropriate and knowledgeable people for performance of the Phase I Environmental Assessment.

1.4 Limitations, Data Failures, and Data Gaps

It is important to note that property conditions, as well as federal, state, and local/tribal regulations can change over time. Therefore, the conclusions and information presented in this report apply strictly to regulations and property conditions existing at the time the report was completed. FR Environmental assumes that information provided by local agencies is true. FR Environmental cannot guarantee or warranty that information provided second-hand is accurate to its fullest extent. FR Environmental is not responsible for conditions found at or beneath the subject property or adjacent properties. Accordingly, portions of this report may be invalidated wholly or partially by the changes beyond our control.

The findings, conclusions, and recommendations presented herein are based solely on the scope of work previously described and information gathered. Incomplete or outstanding information identified throughout the body of this report including data gaps is considered a limitation to the assessment. Limitations to the assessment also include weather conditions, vegetation cover, parked cars, trucks, dumpsters, and anything limiting visual observation of or physical access to the subject property and neighboring properties. Vapor intrusion is not included in this scope of services and is considered an

ASTM Non-scope consideration. FR was not contracted to disassemble or perform testing of machinery on-site. This report and scope is not an environmental compliance audit.

Certain policies can differ from lenders or users. For CERCLA landowner liability protection, Phase I ESA reports are valid for 180 days, per ASTM E1527-13.

1.4.1 Limiting Conditions/Deviations

There were no limiting conditions or deviations in the performance of this Phase I ESA.

1.4.2 Data Failures

Data failure is one type of data gap. According to ASTM E1527-13, data failure occurs when all of the standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met. Pursuant to ASTM E1527-13, historical sources are required to document property use back to the property's first developed use or back to 1940, whichever is earlier, or periods of five years or greater.

No data failures were identified during this assessment.

1.4.3 Data Gaps

According to ASTM E1527-13, data gaps occur when the Environmental Professional is unable to obtain information required by the Standard, despite good faith efforts to gather such information. Pursuant to ASTM E1527-13, only significant data gaps, defined as those that affect the ability of the Environmental Professional to identify RECs, need to be documented.

No significant data gaps were identified.

1.5 Qualification Statement of Professional

Our investigation was performed using the degree of care and skill ordinarily exercised, under similar circumstances, by or under direct oversight of an environmental professional as defined by the ASTM. FR Environmental's environmental professional who prepared this assessment possesses the specific qualifications based upon education, training and experience to assess a property of the nature, history, and setting of the subject property. Neither FR Environmental, nor any staff member assigned to this investigation has any interest or contemplated interest, financial or otherwise, in the subject or surrounding properties, or in any entity which owns, leases, or occupies the subject or surrounding properties or which may be responsible for environmental issues identified during the course of this investigation, and has no personal bias with respect to the parties involved. FR Environmental has developed and performed the "*All Appropriate Inquiries*" in accordance with the standards and practices as defined in 40 CFR Part 312.

1.6 User Reliance

This investigation was conducted in accordance with the Client's Environmental Site Assessment scope of work for the use and benefit of the Client and assignees. It is based, in part, upon documents, writings, and information owned, possessed, or secured by the Client. Neither this Report, nor any information contained herein, shall be used or relied upon for any purpose by any other person or entity without the express written permission of the Client.

All reports (whether in paper, digital, electronic, or any other formats) are for the sole use and benefit of the Client. Either verbally or in writing, third parties may come into possession of this Report, whether all or part of the information generated. In the absence of a written agreement with Fulcrum granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against Fulcrum. Unauthorized use of this Report shall constitute acceptance of and commitment to protect, hold and indemnify Fulcrum harmless from any and all claims, damages, losses, liabilities, and expenses (including reasonable attorney's fees) responsibilities, which shall be irrevocable and shall apply regardless of the cause of action or legal theory pled or asserted. Additional legal penalties may apply.

· 2.0 SITE DESCRIPTION ·

2.1 Location and legal description

The subject property, 135, 141 &153 West Avenue 34, and 3401 & 3433 Pasadena Avenue, Los Angeles County, Los Angeles, California 90031, is located on the north side of West Avenue 34 and the west side of Pasadena Avenue, between North Artesian Street (to the west), within a highly-developed light industrial/commercial area. According to the Los Angeles County Tax Assessor's Office, the subject property is assigned the following Assessor's Parcel Numbers (APNs):

Address	APN	Land, sq feet	Building(s), sq feet
135 and 141 West Avenue 34	5205-004-011	157,560	87,980
153 West Avenue 34	5205-004-005	4,800	3,520
3401 Pasadena Avenue	5205-004-003	28,794	4,040 and 9,600
3433 Pasadena Avenue	5205-004-007	28,145	14,315

2.2 General characteristic

The subject property consists of four lots as described in Section 2.1 comprising a total of approximately 219,299 square-foot commercial lot. The parcels are described below based on publicly available information from the Los Angeles County Assessor Portal and site observations.

135 and 141 West Avenue 34

The property at 135 and 141 West Avenue 34 is currently improved with an industrial-commercial building of concrete construction, built in 1977. The building is comprised of two units, each of which includes office and warehouse space. The units are currently occupied by Ortiz Bros. Moving and Storage and Atlas Van Lines, a moving company; Phil's Transfer & Storage, Inc. for storage space; and Studio 34, Inc. for art studio space. Separate entrances and loading bays for the building are located near the southwest corner of the structure, and customer entry is achieved near the southeast corner of the building. Stacked corrugated steel shipping containers are located outside of the building in the parking areas in the south and central areas of the lot. The property features perimeter fencing of variable design, and motorized gate entry to the south along West Avenue 34.

153 West Avenue 34

The property at 153 West Avenue 34 is currently improved with an industrial-commercial building of brick and corrugated steel construction, built in 1929. The building is currently occupied by Ortiz Bros. Moving and Storage. The structure features a front entrance with a garage door for vehicular access along the southern boundary of the site. All other areas are asphalt paved with landscaped areas near the front entrance. Stacked corrugated steel shipping containers are located outside of the building in the parking areas to the north and northwest of the building. The property shares perimeter fencing with 145 and 141 West Avenue 34.

3401 Pasadena Avenue

The property at 3401 Pasadena Avenue is currently improved with an industrial-commercial building of wood-frame, cinderblock, and brick-façade construction on the east side of the parcel, built in 1925. That building is currently occupied by LootCrate, a merchandise wholesaler of apparel, games, accessories, and other various novelty items and collectables; and Call Time Quenchers, a beverage distribution company. Operational areas within the structure are primarily unfinished warehouse space with concrete flooring, utilized for storage of products, finished office/administrative areas with tile flooring and suspended drop-grid ceilings. The office portion of the structure features a split-level design with the second-story utilized for storage.

In the southeast corner of the site is a second industrial-commercial building of corrugated steel construction, built in 1948. The building is currently utilized as a warehouse for dry-goods storage. The exterior of the property is asphalt paved with employee parking. An entrance is located near the southeast corner of the structure. The property also features perimeter chain link fencing with barbed wire and a manual gate for vehicular access along Pasadena Avenue.

3433 Pasadena Avenue

The property at 3433 Pasadena Avenue is currently improved with an industrial-commercial building of wood-frame and cinderblock construction with reinforced steel support beams and a brick façade, built in 1967. The building is also occupied by LootCrate. The building is comprised of office and work area space. The work area is partially finished with concrete and carpet flooring, and the office areas feature tile floors with drop-grid ceilings. The property shares parking areas and perimeter chain link fence with the 3401 Pasadena Avenue property.

All four parcels are together enclosed with fencing of variable design. A railroad corridor with a northeast/southwest alignment is present, parallel and adjacent to the western boundary of the subject property.

2.3 Current property use

The subject property is occupied by the following tenants:

Property Address	Business Name	Business Operation
135 and 141 West Avenue 34	Ortiz Bros. Moving and Storage and Atlas Van Lines Phil's Transfer & Storage, Inc	Moving Company and Commercial Storage Moving Company and Commercial Storage
153 West Avenue 34	Ortiz Bros. Moving and Storage and Atlas Van Lines	Moving Company and Commercial Storage
3401 Pasadena Avenue	LootCrate Quick Time Quenchers	Merchandise Wholesaler Beverage Distributor
3433 Pasadena Avenue	LootCrate	Merchandise Wholesaler

The subject property has been owned by Mr. Eric Ortiz of Ortiz Bros. Moving and Storage since 2000, and has occupied the property since 1993.

2.4 Current adjoining properties description

The subject property is located in a highly-developed, industrial-commercial area of Los Angeles, California. The following land use was observed in the immediate vicinity of the property:

Direction	Property Address	Business Name	Business Operation
North	3505 Pasadena Avenue***	Vacant land, formerly Welch's Uniform Facility	N/A – Vacant Land
East	120 East Avenue 35*** 3412 Pasadena Avenue 3403 Smith Street	Hillside Elementary School N/A - Private Residences N/A – Private Residences	Los Angeles Public Schools N/A - Private Residences N/A - Private Residences
South	170 West Avenue 34 164-166 West Avenue 34 140 West Avenue 34 138 West Avenue 34 134 West Avenue 34 130 West Avenue 34 120 West Avenue 34 118 West Avenue 34 116 West Avenue 34 3305 Pasadena Avenue	N/A – Vacant Fabco Art Services N/A – Private Residence South Bay Catering ACW Apparel N/A – Private Residences Screen Printing & Embroidery N/A – Private Residences N/A – Private Residence Arpine Media Group	Vacant Warehouse Custom Design Company N/A – Private Residence Catering Company Clothing Warehouse N/A – Private Residences Commercial Printing N/A – Private Residences N/A – Private Residence Commercial Printing
West	403 West Avenue 33***	Viertel's Central Division, Los Angeles Police Department	Impoundent Lot & Police Garage

*** Address listed in the Regulatory Records Database (Refer to Section 6.0)

2.5 Municipal Services and Utilities

The provider of municipal services and utilities to the subject property is not known; however, the property was noted to be connected to public water and sewer services.

2.6 Physical Settings

2.6.1 Topography

The United States Geological Survey (USGS), [Los Angeles, California] 7.5 Minute Topographic Quadrangle map of the subject property and surrounding vicinity was reviewed. The elevation of the property is approximately 370 feet above mean sea level (MSL). Topography at the subject property is relatively flat and declines gently to the west towards the nearby Arroyo Seco, a seasonal and generally dry river.

A copy of the USGS 7.5 Minute Topographic Quadrangle Map of Los Angeles, California, is included in the appendices of the report.

2.6.2 Geology/Soil Conditions

The site is located in the Los Angeles basin, within the Downey Plain near the Arroyo Seco, which seasonally drains into the Los Angeles River to the southeast. Surface materials consist of alluvium and channel deposits with poorly graded sand, gravel, and cobbles to depths of to 75 feet below grade.

Based on a site assessment report prepared for Welch's Uniform Service at 3505 Pasadena Avenue, adjacent to and north of the subject property, the site is underlain by sand with trace gravel to 25 feet bgs, below which are sand and gravel mixtures to 55 feet below grade, which transitions to sand from around 55 feet below grade to 80 feet below grade. At approximately 80 feet below grade, the lithology changes to saturated gravel feet to 85 feet, below which is silt to approximately 96 feet below grade, the maximum depth explored (AmeriPride Service, November 2005).

2.6.3 Hydrogeology

The subject property is located within the Los Angeles Coastal Plain; approximately 175 feet west of the Arroyo Seco, and approximately 0.7 miles east of the Los Angeles River, which is a concrete lined storm channel that prevents infiltration of surface water and empties to the Pacific Ocean. Based on the groundwater report monitoring report prepared for the north adjacent property at 3505 Pasadena Avenue in 2005, depth to groundwater is 38-40 feet below grade (AmeriPride Service, November 2005).

Note that groundwater flow direction can be influenced locally and regionally by the presence of local wetland features, surface topography, recharge and discharge areas, horizontal and vertical inconsistencies in the types and location of subsurface soils, and proximity to water pumping wells. Depth and gradient of the water table can change seasonally in response to variation in precipitation and recharge, and over time, in response to urban development such as storm water controls, impervious surfaces, pumping wells, cleanup activities, dewatering, seawater intrusion barrier projects near the coast, and other factors.

· 3.0 PROPERTY RECONNAISANCE ·

3.1 Property Condition Observations

Mr. Eric Ortiz, the subject property Owner, provided full property access to the FR assessor, Mr. Steven Wong, on June 27, 2019. There were no limited property access conditions. The weather conditions were sunny at 72 degrees Fahrenheit. No weather conditions were limiting property observations.

Site characteristics observed by the FR site assessor are described in above Section 2.2.

Please refer to the table below for information on petroleum products, hazardous substances, and/or hazardous wastes observed on the subject property at the time of FR's site visit.

Hazardous Substances/Wastes Observed	Quantity	Location	Spills/Leaks Observed
Propane	8 x 33.5-lb tanks 4 x 20-lb tanks	Under outdoor canopy	No
Gasoline	3 x ~5-gallon jugs	Under outdoor canopy	No

No significant amounts of hazardous substances or processes that generate or handle hazardous wastes were observed on the subject property during FR's site reconnaissance. No Recognized Environmental Conditions (RECs) were observed during the site reconnaissance.

3.2 ASTM Reconnaissance Findings

Recognized Environmental Conditions (RECs) - In defining a standard of good commercial and customary practice for conducting an environmental site assessment of a parcel of property, the goal of the processes established by this practice is to identify recognized environmental conditions. The term recognized environmental conditions means the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the subject property or into the ground, ground water, or surface water of the subject property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are not recognized environmental conditions.

FR conducted a visual review and observation of the subject property and adjoining properties per ASTM Scope Considerations listed below.

Item	Identified
Hazardous Substances and Petroleum Products in Connection with Identified Uses	4 x 20-lb propane tanks; 8 x 33.5-lb propane tanks for forklift operation; and small amounts of gasoline for automotive operation. No leaks, spills, or staining were observed in relation to the petroleum products present on the subject property. No significant amounts of hazardous substances or petroleum products were observed to be used in connection with current business operations.
Aboveground & Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs / USTs)	None identified
Fueling systems	None identified
Pungent or Noxious Odors	None identified
Pools of Liquid	None identified
Drums or Other Containers of Hazardous Substances or Petroleum Products	None identified
Unidentified hazardous substances or petroleum products not in connection with property use	None identified
Unidentified substance containers	None identified
Machinery or equipment likely containing PCBs	None identified
Significant surface staining on interior or exterior portion of property	None identified
Heating/Cooling Equipment with Observed Fuel Sources	None identified
Drains and Sumps	Several floor drains were observed in the bathrooms of the subject property buildings in addition to one floor drain in the warehouse associated with the address 3401 Pasadena Avenue. Due to locality and lack of observed business operations and/or processes that generate or handle hazardous wastes or materials, the observed floor drains are not expected to represent significant point source features for groundwater contamination.

Item	Identified
Regulated or Unregulated Waste Water Discharge	A three-stage clarifier was observed in the southwest portion of the main subject building behind the canopy. According to Mr. Eric Ortiz, subject property Owner, the clarifier has been present on the property since purchase and has not been in use by current business operations. The clarifier appears to be dry and unused. Two former groundwater (GW) monitoring wells were recently closed that are located to the south of the southwest portion of the property on Avenue 34. Due to the lack of reported releases and/or observed business operations that generate or handle hazardous wastes or materials, the clarifier is not expected to represent a significant environmental concern. FR suggests that if there's no planned future uses of the clarifier; it should be properly removed from the subject property.
Pits, Ponds, or Lagoons	None identified
Stockpiled Soils with Visual Evidence of Contamination	None identified
Questionable Fill Material (unknown origin) or Visual Evidence of Buried Wastes	None identified
Septic Systems	None identified
Wells	None identified
Stressed Vegetation	None identified
Surficial Disturbance	None identified
Biohazardous Wastes	None identified
Herbicide or Pesticide Use	None identified
Dry-cleaning Operation	None identified
Other	None identified

3.3 ASTM Non-Scope Considerations

Unless authorized per the user's request, FR did not engage in conducting sampling or an assessment beyond a visual review of the ASTM Non-Scope Considerations. FR conducted a visual review of the following ASTM Non-Scope Considerations included in this assessment:

ASTM Non-Scope Item	Identified
Asbestos-Containing-Materials (ACMs)	Based on the construction date (1929-1977), asbestos-containing building materials could be present. An ACM survey was not included in the current scope of services.
Lead-based paint (LBP)	Based on the construction date (1929-1977), lead-based paints could be present. A LBP survey was not included in the current scope of services.
Radon	A review of the EPA's Map of Radon Zones indicates that Los Angeles County falls within Zone 2, a zone of moderate radon potential. Counties located within Zone 2 have a predicted average indoor radon screening level of between 2 and 4 picocuries per liter (pCi/L), equal to or below the EPA's radon action level of 4 pCi/L for residential structures. A radon survey was not included in the current scope of services.
PCB-oil in hydraulic equipment, ballasts, switcher, transformers, etc.	A caged pad-mounted transformer was observed in the southwest portion the subject property. There were no signs of oil leaks or staining at the base of this pad-mounted transformer that would present an immediate adverse impact to the environmental integrity of the subject site. Several pole-mounted transformers were observed on the subject property. Any transformers related to the power-pole are operated by the Southern California Edison. In the event of a release of dielectric fluid from one of its transformers, the utility company typically performs the cleanup. A PCB survey was not included in the current scope of services.
Lead in Drinking Water	A lead in drinking water survey was not included in the current scope of services.
Flood Zone	Based on a review of a flood zone map contained in the EDR Radius Map Report, the subject property is located within a 500-year flood zone.
Mold and Indoor Air Quality Issues	No obvious indications of water damage or mold growth were observed during FR's visual inspection.

Asbestos Containing Material

Asbestos-containing material (ACM) represents a concern when it is subject to damage that results in the release of fibers. Friable ACM, which can be crumbled by hand pressure and is therefore more susceptible to damage, is of particular concern. Non-friable ACM is a potential concern if it is damaged by maintenance work, demolition or other activities.

For buildings constructed prior to 1981, the Code of Federal Regulations (29 CFR 1926.1101 and 29 CFR 1910.1001) define presumed asbestos-containing material (PACM) as 1. Thermal System Insulation (TSI), e.g., boiler insulation, pipe lagging, fireproofing; and 2. Surfacing Materials, e.g., acoustical ceilings. Building owners/employers are responsible for locating the presence and quantity of PACM. Building Owners/employers can rebut installed material as PACM by either having an inspection in accordance with Asbestos Hazard Emergency Response Act (AHERA) (40 CFR Part 763, Subpart E) or hiring an accredited inspector to take bulk samples of the suspect material.

Typical materials not covered by the presumptive rule include but are not limited to: floor tiles and adhesives, wallboard systems, siding and roofing. Building materials such as wallboard systems may contain asbestos but unless a building owner/employer has specific knowledge or should have known through the exercise of due diligence that these other materials contain asbestos, the standard does not compel the building owner to sample these materials.

The information below is for general informational purposes only and does not constitute an asbestos survey. In addition, the information is not intended to comply with federal, state or local regulations pertaining to ACMs.

Due to the age of the subject buildings (1929-1977), there is a potential that presumed ACMs are present within the subject building. The table below describes the type of material, location, friability, and condition of the suspect ACMs found within the subject building. The table below is not comprehensive as to each and every building material but is intended to provide a general summary based on the limited site reconnaissance.

Material	Location	Friable	Condition
Drywall systems	3433 Pasadena Avenue 135/141 West Avenue 34	No	Good
Roofing Systems	Roof	No	Not inspected

An asbestos building materials inspection was not included in the scope of service agreement with FR. Accordingly; no samples of the suspect materials were taken. At the time of the inspection, all of the materials appeared to be intact and undisturbed (that is, they appeared to be in a non-friable and/or good condition) and, thus, do not pose an immediate environmental concern. Still, these materials may become hazardous if they in fact contain asbestos and are subsequently damaged or disturbed, as, for example, in the course of remodeling. Asbestos-containing materials are considered to be hazardous materials, and their eventual disposal and handling are subject to federal and state regulatory guidelines.

Currently, there are no regulations requiring the removal of ACM unless it will be disturbed during renovation, repairs, or demolition. The USEPA recommends that as long as the ACM does not pose an imminent health threat, the materials can be managed under an Operations and Maintenance (O&M) Plan.

4.1 Historical Aerial Photographs Review

FR reviewed historical aerial photographs supplied by EDR and dated 1923 through 2016. A summary of historical aerial photographs researched is listed below.

Dates	Description
1923	The north, west, and central portions of the site are developed with industrial structures and access roads. The eastern and southern portions of the property are developed with approximately 20 smaller structures on lots which appear residential. Beyond the subject property lies vacant land to the east, vacant land, and the Arroyo Seco, which has the geomorphology of a braided stream feature. Pasadena Avenue and private residences are present to the east and southeast. West Avenue 34 and private residences are present to the south. Adjacent to and west of the subject property is a railroad corridor, which runs parallel to the western boundary of the subject property with a northeast / southwest alignment. The northern adjacent property appears industrial with several large structures. The surrounding area is primarily residential, with industrial-commercial properties to the southeast and northwest.

Dates	Description
1928	The central portion of the subject property is cleared and vacant, with one remaining industrial structure within the west-central area of the site. Aside from a mid-sized industrial structure in the southwest area of the property, he west and south areas remain residential in use and generally unchanged from 1923. Beyond the subject property, the north and west adjacent properties appear further developed with large industrial structures, and the south and east adjacent properties appear residential in use and generally unchanged from 1923.
1938	The industrial structure the west-central area of the site is no longer present in 1938, and the north and west-central areas appear cleared and vacant. The south and east areas of the subject property remain residential, with the exception of an industrial structure near the southeast corner of the property. Beyond the subject property, there are further developments to the north and west adjacent property. Aside from the development of Hillside Elementary School to the east, the adjacent properties to the east and south remain residential and generally unchanged from 1923. Further to the north and west is the Arroyo Seco, which is a constructed canal in 1938, a stark contract to the natural braided stream geomorphological feature depicted in 1928.
1948, 1952	There are six additional industrial structures on the subject property in 1948 compared to 1938. The structures include five towards the north and central areas of the property, and one in the southeast corner. Beyond the subject property are new industrial structures to the north, and outdoor storage yards to the east. The remaining areas to the south and east, and vicinity of the subject property appear generally unchanged from 1923. Arroyo Seco
1964, 1970	The site is completely industrial-commercial in use in the 1964 aerial photograph with approximately 10 industrial structures. All residential structures previously described at the subject property are no longer present, and the remainder of the property appears paved with parking and exterior storage areas. Beyond the subject property, conditions in the surrounding areas appear generally consistent with conditions with those described in 1952.
1977	Most of the site appears vacant and graded in 1977 compared to the 1970 aerial photograph. The only remaining structures from those previously described include the structures along Pasadena Avenue in the western portion of the site (present-day 3401 & 3433 Pasadena Avenue), and a single industrial structure in the southwest corner of the site (present-day 153 West Avenue 34). The remaining areas are graded and vacant land, and the present-day structure addressed 135 and 141 West Avenue 34 is not present. Additional changes in areas beyond the subject property include industrial structures to the southwest and southeast; and the east adjacent property appears vacant graded land. There are no significant changes to adjacent properties north and west of the subject property.

Dates	Description
1983, 1989, 1994, 2002, 2005, 2009, 2012, 2016	The subject property is developed with its present-day structures and general configuration in 1983. There are few changes in the subsequent aerial photographs from 1989 through 2016 to the subject property, or to the properties to the east, and south. The north adjoining property is developed with large industrial structures in 1983 and 1989, which is no longer present in the 1994 aerial photograph. The west adjoining property appears to be a parking lot with no discernable structure until 2012 with the appearance of an industrial structure near the center and western portion of the property.

No environmental concerns were noted on the subject property or adjoining properties.

4.2 Historical Sanborn Map Coverage Review

Sanborn Map Company maps were created for insurance underwriters from 1867 to 1970, and often contain information regarding the uses of individual structures, and the locations of fuel and/or chemical storage tanks that may have been on a particular property. FR subcontracted with EDR to provide copies of Sanborn Map Company maps.

A summary of historical Sanborn map coverage researched is listed below.

Subject Property addresses include the following: On West Avenue 34: 119, 139, 141, 143, 145, 147, 149, 153, and 157 On Pasadena Avenue: 3403, 3407, 3417, 3419, 3423, 3429, 3431, and 3437		
Date	**Description**	
1906	**Subject Property**	The subject property is depicted with primarily residential properties along the eastern and southern boundaries of the property. The structures appear residential with the exception of a shop located at 3419 Pasadena Avenue. The remainder of the subject property appears vacant and undeveloped.
	Adjoining Properties	The parcels north of the subject property are primarily vacant, with one residence addressed 3441 Pasadena Avenue to the north of the subject property. The railroad spur along the western boundary of the subject property is developed and labeled Atchison Topeka & Santa Fe R.R. Main Line and San Pedro Los Angeles & Salt Lake City R.R. Main Line, beyond which is vacant land andthe Arroyo Seco. The adjoining properties south and east are depicted as developed with primarily residential structures, with the exception of a store located just south of the subject property at the corner of West Avenue 34 and Pasadena Avenue and addressed 3019 and 3021 Pasadena Avenue.

Subject Property addresses include the following: On West Avenue 34: 119, 139, 141, 143, 145, 147, 149, 153, and 157 On Pasadena Avenue: 3401 (3403), 3407, 3411, 3417, 3419, 3423, 3425, 3429, 3431, 3437, 3439, and 3441		
Date	**Description**	
1920	**Subject Property**	The subject property is depicted with primarily residential properties along the eastern and southern boundaries of the property, as described in 1912. The structures appear residential with the exception of a bakery located at 3419 Pasadena Avenue. Many of the residences have auto garages. The formerly vacant areas from 1912 are developed in 1920 with structures associated with Los Angeles Rock & Gravel Co at the address 3441 Pasadena Avenue, which extends north beyond the subject property boundaries to West Avenue 35. The structures include: an outhouse; an office addressed 3439 Pasadena Avenue; an auto garage with truck and loading ramp labeled "Tunnel Under Rock Pile; a large auto garage with an oil and grease house, tool shed, and a small unlabeled structure near the center of the subject property. There is an alley traversing the property between the industrial operations at the Los Angeles Rock & Gravel occupied area from the residential properties along Pasadena Avenue. The alley connects West Avenue 45 to West Avenue 34, and extends beyond the subject property between West Avenue 34 and West Avenue 33.
	Adjoining Properties	The north adjoining property is occupied by Los Angeles Rock & Gravel Co structures at the address 3441 Pasadena Avenue, which extend south into the subject property. The structures in the north adjoining property include a mixing house with rock storage; a rock crusher; an electrical utility shed; a chute for loading trucks; a well pumphouse; and additional rock crusher and chute with an electric utility shed. There are residential structures on the remaining adjoining parcels to the north along Pasadena Avenue and West Avenue 35. There are no significant changes to the south, east, and west adjoining property in 1920.

Subject Property addresses include the following: On West Avenue 34: 119, 123, 129, 133, 139, 141, 145, 149, 153, 155, and 169 On Pasadena Avenue: 3401, 3407, 3415, 3417, 3419, 3421, 3423, 3425, 3429, 3431, 3437		
Date	**Description**	
1951	**Subject Property**	The subject property is depicted with primarily residential properties along the eastern and southern boundaries of the property, as described in 1912 and 1920, with the following exceptions: there is a metal working & spinning shop at 153 West Avenue 34 (the present-day structure); the southwest corner of the subject property has been redeveloped from residential plots to an expansion of the bakery, which is comprised of 101 and 111 West Avenue 34, as well as 3401 (present-day structure), 3407, 3415, 3417, and 3419 Pasadena Avenue; and there is an office at the 3421 Pasadena Avenue address. The north, west, and central areas of the property which were occupied by Los Angeles Rock & Gravel Co. in 1920 are redeveloped with six structures different from those previously described, and are occupied by Steel Framing & Building Corporation in 1951 at the address 169 West Avenue 34. The structures include: four office buildings; a shop and warehouse; a steel storage yard; and a large workshop. In addition, a portion of one of the buildings associated with Welch's Overall & Uniform Cleaning extends into the subject property boundaries. The
	Adjoining Properties	The north adjoining property is redeveloped from the previous 1920 Sanborn Map and is occupied by Welch's Overall & Uniform Cleaning in 1951. The west adjoining property is developed with four structures labeled Alliance Lumber & Investment Co. The south and east adjoining properties are generally unchanged from 1920, with the exception of the development of Hillside School to the east of the subject property.

Subject Property addresses include the following: On West Avenue 34: 141, 153, 155, and 169 On Pasadena Avenue: 3401, 3415, 3417, 3419, 3433, 3437		
Date	**Description**	
1970	**Subject Property**	The subject property is redeveloped in 1970, with only one remaining residential structure at 155 West Avenue 34. The present-day structure at 153 West Avenue 34 is labeled General Manufacturing. There is a parking lot at 141 West Avenue 34. The present-day structure at 3401 Pasadena Avenue is labeled Sheet metal shop and woodworking (iron). The addresses 3415, 3417, and 3419 Pasadena Avenue are occupied by a structure comprised of a workshop, storage area, and machine shop. The present-day structure at 3433 Pasadena Avenue is depicted and labeled Metal Stamping. The 3437 Pasadena Avenue address is occupied by a parking lot. The six structures within the north, west, and central areas of the property addressed 169 West Avenue 34 are generally unchanged from 1951, but occupied by ITT Cannon Electronics Inc. in 1970, and the buildings are used for offices, electronics manufacturing, and manufacturing assembly plating & shipping. There remaining areas of the property are occupied by parking lots accessible by West Avenue 34 to the south, and the previously described alley traversing the property from north to south.
	Adjoining Properties	The north adjoining property is occupied by Welch's Overall & Uniform Cleaning in 1970, and has expanded to include the previously residential structures to the east along Pasadena Avenue. The west adjoining property is generally vacant in 1970, with two small structures labeled storage and vac. The south adjoining properties are partially redeveloped to accommodate a parking lot addressed 152 West Avenue 34. The other properties south of the subject property appear generally unchanged from 1951. The east adjoining properties are generally unchanged from 1951, with the exception of the expansion of Hillside School to the east of the subject property, which includes additional areas for classroom space south and west of the original building in 1970.

The north adjoining property addressed 3505 Pasadena Avenue was listed under Welch's Industrial Uniforms, a laundering business, for the years 1924 through 2010, and is further discussed in Section 6.0 of this report.

No other environmental concerns were noted on the subject property or surrounding sites.

4.3 Property Tax File

Based on a review of the Los Angeles County Tax Assessor's parcel information system, the subject property APNs and legal descriptions are summarized as follows:

Address	APN	No. of Buildings	Legal Description
135 and 141 West Avenue 34	5205-004-011	1	LOT COM AT MOST N COR OF LOT 2 TR NO 23801 TH SE ON NE LINE OF SD LOT 326.55 FT TH S 14¢21'15" W 140.01 FT TH S 9¢ 45'05" W 48.51 FT TH S AND FOLLOWING BDRY LINE OF SD LOT TO W LINE OF LOT 61 WHITTAKER RICHARDSON AND ERNEST SUB OF LOTS 2 AND 3 GRIFFIN TR TH S ON SD W LINE TO NE LINE OF AVE 34 TH NW THEREON TO SE LINE OF L A AND S L R R R/W TH NE THEREON TO BEG LOT 62 AND POR OF LOTS 64 AND 65 WHITTAKER RICHARD- SON AND ERNEST SUB OF LOTS 2 AND 3 GRIFFIN TR AND *POR OF LOT 2 TR NO 23801

The property is classified as *industrial* in nature.

4.4 Recorded Land Title Records

Title records were not provided to FR for review.

4.5 USGS 7.5 Minute Topographic Maps

FR reviewed historical USGS 7.5 Minute Topographic Maps supplied by EDR. A summary of historical USGS 7.5 Minute Topographic Maps researched is listed below.

Property Topographic Quadrangle: Los Angeles, California

Dates	Description
1894, 1896, 1900	The subject property is depicted as partially developed with small residential structures along the eastern and southern portions of the property. The central, north, and west areas of the subject property are undeveloped, and there is a small depression near the northeast boundary of the subject property. The present-day railroad corridor is depicted along the western boundary of the subject property, and is within the Arroyo Seco according to the map. Pasadena Avenue and West Avenue 34 are present, and the adjoining properties to the south and east are developed. Areas north of the subject property are undeveloped and labeled Arroyo Seco. The region is identified as East Los Angeles.
1926, 1928	There are new industrial structures depicted on the subject property, and a small closed depression is also depicted near the northeast boundary of the subject property, likely related to the sand and gravel company operations identified in the 1920 Sanborn Map. The east and south portions of the subject property appear developed with a mixture of residential and industrial/commercial structures. Beyond the subject property are new industrial structures to the north, and additional residential developments to the south, and the surrounding area appears further developed in 1926.
1953,1966, 1972, 1981, 1994, 2012	The subject property and adjoining properties are within red shaded areas indicating urban developed areas of Los Angeles. The Arroyo Seco is depicted as an engineered canal, and Pasadena Freeway (Route 66) is present further to the north/west of the subject property.

No environmental concerns were noted on the subject property or surrounding sites.

4.6 Historical City Directory Listings

FR reviewed historical city directory listings provided by EDR for the years 1920 to 2014 for the subject property.

A summary of historical city directory records researched is listed below.

The north adjoining property addressed 3505 Pasadena Avenue was listed under Welch's Industrial Uniforms, a laundering business, for the years 1924 through 2010, and is further discussed in Section 6.0 of this report.

No other environmental concerns were noted on the subject property or adjoining properties.

4.7 Building Department Records

FR visited the City of Los Angeles Building and Safety Department on June 27, 2019 and researched historical building records for the subject property. A summary of historical building department records is provided in the table below.

Subject Property Building Records, Pasadena Avenue Addresses		
Years	**Address**	**Description**
1905	3433 Pasadena Avenue APN 5205-004-007	Building Permit
1906	135 and 141 West Avenue 34 APN 5205-004-011	Building Permit – Bldg New (4)

4.8 Zoning/Land Use Records

FR visited the City of Los Angeles Department of City Planning and researched additional zoning/land use records for the subject property addresses. Based on a review of the zoning map, the subject property is zoned for *commercial manufacturing* use.

4.9 Previous Reports

FR was provided with previous reports pertaining to the subject property (135, 141, and 153 West Avenue 34 and 3401 and 3433 Pasadena Avenue in Los Angeles, CA). The previous reports are summarized below:

Phase I Environmental Site Assessment – 135, 141 and 153 West Avenue 34 and 3401 and 3433 Pasadena Avenue, Los Angeles, California 90031, prepared by Orswell & Kasman, Inc, September 28, 2012.

A Phase I ESA was conducted at the subject property by Orswell & Kasman, Inc (OKI) at the request of Mr. Robert Gonzales in September 2012. The Phase I ESA consisted of public records and historical document review, regulatory agency research, site reconnaissance, and interviews. The report identified the following remarks:

1) *The subject property is occupied by multiple tenants. The 3433 Pasadena Avenue building is currently occupied by Warner Brothers Studios, a prop and set design business. The business stores and uses large quantities of water-based paint, and waste paint is generated by the*

business activities. The hazardous materials and hazardous wastes appear to be properly stored and managed and no significant spills or leaks were observed on the premises; and

2) *Eleven offsite locations have been identified as potential risks or threats to the subject property. According to the data, ten of the sites are not located in the near vicinity, and there is no indication that contaminants from these sites have migrated onto the subject property.*

   The former Welch's Uniform Facility site (#5 on map), 3505 Pasadena Avenue, is located on the adjacent property to the north, and the business is identified by State of California Environmental Protection Agency (CAL-EPA) Department of Toxic Substances Control (DTSC) as an active hazardous waste site. According to the DTSC CalSite database records, the site was previously occupied by Welch's Uniform and the property was used as a laundry and uniform rental facility over a 70 year period. Environmental studies indicate the soil and groundwater beneath the facility is contaminated with volatile organic compounds including trichloroethene (TCE). In addition, the former Welch's Uniform Rental site is identified by the State of California Regional Water Quality Control Board (RWQCB) as having two open RWQCB Cleanup Program sites. The first case was first opened in December 1987. According to the RWQCB records, the groundwater was contaminated with non-petroleum hydrocarbons, and the site is undergoing verification monitoring. The second case was opened in December 1998 and the site is undergoing an assessment.

   A review of the City of Los Angeles Fire Department (LAFD) records revealed Welch's Uniform applied for a permit to remove a 2,000-gallon underground diesel fuel tank in 1987. Soil sampling beneath the tank revealed significant Total Petroleum Hydrocarbon as gasoline (TPH-g) contamination (8,600 ppm). The groundwater beneath the site was determined to be about 35 feet below the ground surface, and the groundwater flows away from the subject property in a west-northwest direction. In February 1988, Welch's Uniform applied for a permit to abandon five underground ·storage tanks in-place, and in December 1988, Welch's Uniform applied for a permit to remove five additional underground storage tanks. In May 2004, Welch's Uniform applied for a permit to remove one additional 1,000-gallon underground storage tank. Soil sampling beneath the tank did not detect any contamination problems, and on October 26, 2004, the DPW/UGT issued a no further action letter for the closure of the 1,000-gallon underground tank. An inspection of the property revealed the site is currently a vacant lot, and remedial activities were being conducted on the site.

   Should it be determined the groundwater beneath the subject property has in fact been impacted by the Former Welch's Uniform Rental site, it is the policy of the State of California and the United States Environmental Protection Agency not to hold property owners responsible for costs to clean up contaminated groundwater beneath their property, unless the owners contributed to the problem. There is no indication from a review of the regulatory records and a site inspection that the subject property has had any problems concerning the storage, usage or disposal of hazardous materials, and it appears the former Welch's Uniform Rental site is in the process of addressing the contamination problem.

Our review of regulatory and historical records, a visual inspection of the site and surrounding area, and interviews with the property owner and the safety manager for Warner Brothers Studios has found no evidence of other recognized environmental conditions or historical recognized environmental conditions which are likely to impact the subject property. Although data failure occurred in the historical uses of the Property prior to 1906, it is unlikely the data failure will impact the ability to identify recognized environmental conditions. Based on the results of this assessment, no further environmental studies are recommended for the site.

Phase I Environmental Site Assessment – 135, 141 and 153 West Avenue 34 and 3401 and 3433 Pasadena Avenue, Los Angeles, California 90031, prepared by Orswell & Kasman, Inc, April 28, 2015.

A Phase I ESA Update Report was conducted at the subject property by OKI at the request of Mr. Andy Meyers in April 2015. The Phase I ESA consisted of S site reconnaissance, interviews, government records review, public records and historic document review, and summary of previous environmental report. The update report concludes that, *based on the results of this assessment, no further environmental studies are recommended for the site.*

4.10 Other Historical Records

No additional historical records were obtainable for the subject property.

4.11 Historical Summary

Based on a review of available historical records, the north, west, and central areas of the subject property were vacant, and the east and west areas were developed with private residential structures by as early as 1894. Most of these residential properties persisted until 1964 with few exceptions, including the subject property warehouse building addressed 153 West Avenue 34 (constructed in 1929) along the southern boundary of the site, and the subject property warehouse buildings addressed 3401 Pasadena Avenue (constructed in 1925) and 3433 Pasadena Avenue (constructed in 1967) along the eastern boundary of the site. A railroad corridor has been historically present along the western boundary since at least 1894, and is still currently in use. A bakery occupied the southeast corner of the property (original occupant of the 3401 Pasadena Avenue building) from 1919 until at least 1951, and was redeveloped as a machine and woodworking shop in 1970.

The historic industrial areas of the subject property have a more complicated history, and are discussed here as the “historic industrial areas”. These areas include the north, west, and central parts of the site. The historic industrial areas were vacant and undeveloped in 1894 until at least 1906. By 1920, these areas were developed and occupied by the Los Angeles Sand & Gravel Company, which occupied the property until at least 1928, and terminated by 1938, at which time the historic industrial areas of the subject property consisted of vacant land. By 1948, these areas were redeveloped with six industrial structures, occupied by Steel Framing & Building Corporation in 1951, and ITT Cannon Electronics Inc. from at 1964-1970. The historic industrial areas were demolished and consisted of vacant and graded land in the 1977 aerial photograph, and the subject property buildings addressed 135 and 141 West

Avenue 34 were constructed in 1977 according to building department files and tax assessor records, and was occupied by American Caster Corp from 1977 until the property was purchased by the current owner, Mr. Eric Ortiz, in 1999. Historic site operations by ITT Cannon Electronics are not considered an environmental concern due to the relatively short time-period of occupancy (6 years), and because the site was graded and reworked in association with the current on-site development, which would have dissipated potential concentrations of constituents of concern in soil potentially associated with the former site operations. The subject property has been primarily occupied by Ortiz Brothers Moving & Storage, with a variety of tenants between 1999 and present.

· 5.0 INTERVIEWS/USER INFORMATION ·

5.1 Interviews

Interviews were conducted and attempted with the following personnel listed below.

Personnel Interviewed	Brief Summary
User	Not interviewed
Property Owner	Mr. Eric Ortiz
Previous Owner	Not interviewed
Tenant/Occupant	Not interviewed
Manager	Not Interviewed
Buyer	Not interviewed
Adjoining Property Owner	Not interviewed
Broker	Not interviewed
Government Officials	Not interviewed

Mr. Eric Ortiz, the subject property owner, stated that he had no information pertaining to any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property; any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the subject property; or any notices from a governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

5.2 User Information

5.2.1 Environmental liens and/or Activity and Use Limitations (AULs)

AULs include both legal (institutional) and physical (engineering) controls. Agencies, organizations, and jurisdictions may define or utilize these terms differently.

No AULs were identified during this investigation.

No environmental liens were identified during this investigation.

5.2.2 Specialized Knowledge

No knowledge of recognized environmental conditions or historical recognized environmental concerns was provided by the user.

5.2.3 Valuation Reduction for Environmental Issues

No information was provided by the user that indicated the subject property was being sold or valued lower due to outstanding environmental issues.

5.2.4 Commonly Known or *Reasonably Ascertainable* Information

The user has not provided or is unaware of any commonly known or reasonably ascertainable information for the subject property.

5.2.5 Other User Provided Information

No other user provided information was obtainable or provided.

· 6.0 GOVERNMENT DATABASE SECTION ·

6.1 Environmental Database Summary

As part of the Phase I Environmental Assessment, FR utilized Environmental Data Resources, Inc. (EDR) of Shelton, Connecticut, as an information source for regulatory agency environmental database records. The environmental database report was dated June 24, 2019.

An attempt to locate listed Orphan Sites (facilities that could not be mapped or geocoded due to inadequate address information) within an area or radii of concern to the subject property was attempted by FR. These attempts consisted of a street review, a drive-by view of orphan site, and/or evaluating site type given information provided by government agencies.

A copy of the radius report is included in the appendices.

The subject property addresses were identified in the EDR database report, summarized as follows:

- **135 West Avenue 34** (Map ID A5, 7, 10, 11, 13, 18, 19, 22, 23, 25, 27, 28, 31, 35) – this subject property address was identified in the HAZNET (12), RCRA NonGen/NLR, FINDS, and ECHO databases under the following operator names: Jardinero Productions, Birddog, Warner Bros., All About Steve Movie, Soul Productions LLC Ortiz Brothers Moving, Step Up 3D, Love & Basketball, Nurse Betty Productions, 20th Century Fox, and Olivers Arrow Movie.

  Ten of the HAZNET listings are associated with the disposal of wastes generated during film production, including very small quantities of various paints, latex gloves, fuel blends, and other organic solids (1999-2016); the remaining two HAZNET listings are associated with Ortiz Brothers Moving, including the disposal of waste oil and hydrocarbons (1997-1998).

The RCRA NonGen/NLR listing, FINDS, and ECHO listings refer to the All About Steve Movie Site (2007), a former generator of hazardous ignitable waste from photographic film. There are no reported spills, releases, or violations associated with the 135 West Avenue 34 address. Based on the available information, the listings do not represent a significant environmental concern.

- **141 West Avenue 34** (Map ID A2, 4, 6, 15, 24, 26, 29, 32, 36, 38) – this subject property address was identified in the HAZNET (8), RCRA-SQG, FINDS, ECHO, EMI, HAZMAT, and CERS databases. The listings are associate with the following operator names: Touchstone Pictures, American Caster Corp, Tomcats, Five Continent Imports LLC, Lie To Me, ABC Signatures Studio, Battle of the Sexes, and Dreamworks Productions.

  Seven of the HAZNET listings are associated with the disposal of wastes generated during film production, including very small quantities of various paints, latex gloves, fuel blends, and other organic solids (1997-2017); and the other HAZNET listing is associated with American Caster Corp for the disposal of other organic solids, hydrocarbons, oil-containing waste, and paint sludge (1987-1996).

  The RCRA-SQG refers to American Caster Corp operations on the property in 1987 (specific type of waste not specified). American Caster Corp was also identified under a historic address, 157 West Avenue 34, in the HAZMAT database.

  The ECHO, EMI, and CERS listings refer to regulated air emissions at American Caster Corp, and indicate that the property was classified as a hazardous air pollutant (major). The listed site operations include hardware manufacturing, other metal valve and pipe fitting manufacturing, and ball and roller bearing manufacturing. There are no reported spills, releases, or violations associated with the 141 West Avenue 34 address. Based on the available information, the listings do not represent a significant environmental concern.

- **153 West Avenue 34** (Map ID A1) – this subject property address was identified under the operator name William Pile Enterprises and was identified in the HAZMAT database with a listing dated January 2019. The HAZMAT database is a list of facility and manifest data compiled by DTSC. No further information was provided by the listing. There are no reported spills or violations associated with the 153 West Avenue 34 address. Based on the available information, the listings do not represent a significant environmental concern.

- **3401 Pasadena Avenue** (Map ID A3, 14, 21, 30) – this subject property address was identified in the HAZNET (3) and EMI databases under the operator names 20th Century Fox, E D 1125 Inc, Elastic Coatings Org, and Bob Baker Production.

  Two of the HAZNET listings are associated with the disposal of wastes generated during film production, including very small quantities of various paints, latex gloves, fuel blends, waste oil, and other organic solids (2006-2007); and the other HAZNET listing is related to Elastic Coatings Organization for the disposal of unspecified solvent mixtures, pesticides, and alkaline solution without metals pH > 12.5 (1993).

The EMI listing refers to air emissions (total organic hydrocarbons and reactive organic gases) associated with Bob Baker Productions, a film production company (1990). There are no reported spills, releases, or violations associated with the 3401 Pasadena Avenue address. Based on the available information, the listings do not represent a significant environmental concern.

- **3433 Pasadena Avenue** (Map ID A8, 9, 12, 16, 17, 20, 33, 34, 37) – this subject property address was identified in the HAZNET (8), FINDS, ECHO, and RCRA NonGen/NLR databases under the operator names Gone Girl, Moneyball, Informant Productions, End of Watch LLC, Warner Bros. Hangover 3, Hotel for Dogs, and Fox Gone Girl.

  All of the HAZNET listings are associated with the disposal of wastes generated during film production, including very small quantities of various paints, latex gloves, fuel blends, and other organic solids (2008-2014). The RCRA NonGen/NLR, FINDS, and ECHO listings refer to operations associated with filming the Warner Bros Hangover 3 movie (2010-2012), a former generator of the following hazardous waste: ignitable waste; methyl ethyl ketone; and non-halogenated solvents. There are no reported spills, releases, or violations associated with the 135 West Avenue 34 address. Based on the available information, the listings do not represent a significant environmental concern.

· SUMMARY OF LISTINGS ·

National Priorities List (NPL) Facilities

The NPL, also known as the Superfund List, is an EPA listing of the nation's worst uncontrolled or abandoned hazardous waste facilities. Designation as a Superfund Site is primarily based on a score that the facility receives from the EPA's Hazard Ranking System. These facilities are targeted for possible long-term remedial action. Such prioritized sites with significant risk to human health and the environment receive remedial funding under the Comprehensive Environmental Response Conservation and Liability Act (CERCLA). The NPL is compiled by EPA pursuant to CERCLA, 42 U.S.C.§9605(a)(8)(B). (*http://www.epa.gov/superfund/sites/npl/npl.htm*).

No NPL sites were identified within the specified radius from the subject property.

Federal Delisted NPL List

Federal Delisted NPL List consists of sites that no longer require further response actions as determined by the EPA.

No Federal Delisted NPL List sites were identified within the specified radius from the subject property.

SEMS (Superfund Enterprise Management System) List

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Two SEMS List sites were identified within the specified radius from the subject property.

- **3209 East Humboldt Street (**Map ID I74-78) – this property is located approximately 600 feet south of the subject property, and was identified under the operator ITT Cannon / Kennington. The site is listed in the following databases from the report: HAZMAT, UST, RCRA-SQG, FINDS, SEMS, ENVIROSTOR, VCP, SWEEPS UST, CA FID UST, DEED, HIST CORTESE, CPS-SLIC, LA Co. Mitigation, and CERS.

  The SEMS, ENVIROSTOR, VCP, HIST CORTESE, FINDS, CPS-SLIC, and LA Co. Mitigation listings indicate that the property is a Superfund site with environmental investigations dating back to 1990, due to battery and electronics manufacturing on the property, including lead, PCBs, tetrachloroethene (PCE), and trichloroethene (TCE). The site was enrolled in the Voluntary Cleanup Program (VCP) in 1993, and remedial activities to date have included the excavation of soil approximately 46 feet below ground surface with off-site disposal of 18,000 cubic yards of contaminated soil. The site is still being actively monitored by the DTSC Site Cleanup Program. The DEED listing refers to land-use restrictions imposed on the site as part of the VCP agreement.

  The RCRA-SQG and HAZMAT listings indicate the property is a small quantity generator of hazardous waste, including polychlorinated biphenyls (PCBs) and lead (1998-2006). Based on separation distance and regulatory oversight of cleanup activities with active groundwater monitoring, this site does not represent a significant environmental concern to the subject property.

- **301 West Avenue 26** (Map ID S127-128) – this property is located approximately 1,700 feet southwest of the subject property and was identified under the operator names Jaybee and Ajax Manufacturing. The site is listed in the ENVIROSTOR, VCP, EMI, and SEMS databases. The listings indicate the property was discovered as contaminated in 1994, with a discovery date of 2000. The site was listed as a Superfund site in 2002. The contaminants of concern include lead, PAHs, PCE, diesel fuel, TCE, and other volatile organic compounds associated with former manufacturing operations at the site, and the site is currently active in the VCP. Based on separation distance and regulatory oversight of cleanup activities with active groundwater monitoring, this site does not represent a significant environmental concern to the subject property.

SEMS-ARCHIVE List

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Two SEMS-ARCHIVE List sites were identified within the specified radius from the subject property.

- **3011 Humboldt Street** (Map ID N119) – this site was identified under the operator name NI West Incorporated and is located approximately 1,125 feet south of the subject property. The site is listed in the SEMS-ARCHIVE database. The listing indicates that the site was discovered in 1993 and investigated in 2003. The site was determined to not be included in the NPL with an archived date of 2005. Based on separation distance and the available information, this site does not represent a significant environmental concern to the subject property.

- **241 Avenue 26** (Map ID 136, 145) – this site was identified under the operator name Baron Manufacturing and is located approximately 1,800 feet southwest of the subject property. The site is listed in the ENVIROSTOR and SEMS ARCHIVE databases. The listings indicate the site was discovered in 1983 and investigated in 1984 and 1994 due to steel and sheet metal fabrication. The contaminants of concern include unspecified solvent mixtures. No further information was provided by the listings. Based on separation distance and regulatory oversight of cleanup activities with active groundwater monitoring, this site does not represent a significant environmental concern to the subject property. Based on separation distance and regulatory oversight, this site not represent a significant environmental concern to the subject property.

RCRA CORRACTS List

RCRA CORRACTS List is an EPA-maintained database of Resource Conservation and Recovery Act (RCRA) facilities undergoing "corrective action". A "corrective action order" is issued when there has been a release of hazardous waste or constituents into the environment from a RCRA facility. Corrective actions may be required beyond the facility's boundary and can be required regardless of when the release occurred, even if it predates RCRA.

No RCRA CORRACTS List sites were identified within the specified radius from the subject property. .

RCRA TSDF List

RCRA TSDF List are sites that generate, transport, store, treat, and/or dispose of hazardous waste and are required to register their hazardous waste activity under the Resource Conservation and Recovery Act (RCRA). The list includes small- and large-quantity operators and handler violations.

No RCRA TSDF List sites were identified within the specified radius from the subject property.

RCRA Generators List (Small Quantity and Large Quantity)

RCRA hazardous waste generators are identified as Large Quantity Generators (LQGs), Small Quantity Generators (SQGs), or Conditionally Exempt Small Quantity Generators (CESQGs). RCRA LQGs are identified as those facilities, which generate at least 1,000 kilograms (2,200 pounds) of non-acutely hazardous waste (or 1 kilogram of acutely hazardous waste) in any calendar month. RCRA SQGs are identified as those facilities that generate less than 1,000 kilograms of non-acutely hazardous waste in any calendar month.

The subject property address, 141 West Avenue 34, was identified on the RCRA Generator database

- **141 West Avenue 34** (Map ID A2, 4, 6, 15, 24, 26, 29, 32, 36, 38) – this subject property address was identified in the HAZNET (8), RCRA-SQG, FINDS, ECHO, EMI, HAZMAT, and CERS databases. The listings are associate with the following operator names: Touchstone Pictures, American Caster Corp, Tomcats, Five Continent Imports LLC, Lie To Me, ABC Signatures Studio, Battle of the Sexes, and Dreamworks Productions.

  Seven of the HAZNET listings are associated with the disposal of wastes generated during film production, including very small quantities of various paints, latex gloves, fuel blends, and other organic solids (1997-2017); and the other HAZNET listing is associated with American Caster Corp for the disposal of other organic solids, hydrocarbons, oil-containing waste, and paint sludge (1987-1996).

  The RCRA-SQG refers to American Caster Corp operations on the property in 1987 (specific type of waste not specified). American Caster Corp was also identified under a historic address, 157 West Avenue 34, in the HAZMAT database.

  The ECHO, EMI, and CERS listings refer to regulated air emissions at American Caster Corp, and indicate that the property was classified as a hazardous air pollutant (major). The listed site operations include hardware manufacturing, other metal valve and pipe fitting manufacturing, and ball and roller bearing manufacturing. There are no reported spills, releases, or violations associated with the 141 West Avenue 34 address. Based on the available information, the listings do not represent a significant environmental concern to the subject property.

Two of the neighboring or adjoining properties were identified on the RCRA Generator database.

- **3505 Pasadena Avenue** (Map ID B41-47) – this site was identified under the operator name Former Welch's Uniform Services and is located adjacent to and north of the subject property. The site is listed in the following databases from the report: UST (2), RCRA-LQG, ENVIROSTOR, LUST, CPS-SLIC (2), VCP, SWEEPS UST, HIST UST, CA FID UST, FINDS, ECHO, EMI, HIST CORTESE, CERS, DRYCLEANERS, HAZMAT, and EDR Hist Cleaner.

  The ENVIROSTOR, VCP, and CPS-SLIC (2) listings indicate the site was enrolled in the VCP in 2007 after being transferred to DTSC in 2006. Groundwater beneath the property is being actively monitored, and, according to a 2016 groundwater monitoring report, groundwater concentrations of the contaminants of concern are highest near the center of the site, and the plume appears to be migrating west and then south along the railroad corridor ROW along the western boundary of the subject property. The site is being actively remediated via soil vapor extraction and under the supervision of DTSC. The most recent (2016) groundwater monitoring report indicates that groundwater concentrations have approached cleanup levels at the subject property boundary. It is expected that the concentrations have continued to decline in the last 3 years since the most recent report as remedial activities continue.

  The UST (2), HIST UST, CA FID UST, SWEEPS UST, CERS, and LUST listings indicate that there were former historic USTs containing diesel fuel, gasoline, waste oil, and "product unknown on the site, but none are currently active. The LUST listing refers to a release reported in 1987 (product not specified). The EMI listing refers to South coast Air Quality Management District (SCAQMD) air emissions regulation at the property, including total organic hydrocarbon gases and reactive organic gases. The RCRA-LQG, HAZMAT, and EDR Hist Cleaners listings indicate that the facility was a drycleaner and a historical large-quantity generator of hazardous waste, specifically chlorinate solvents (1924-1987).

  Based on regulatory oversight and on-going SVE remediation with semi-annual groundwater monitoring, and the most recent (2016) analytical data available, this site does not represent a significant environmental concern to the subject property.

- **120 East Avenue 35** (Map ID F65-66) – this site was identified under the operator name Hillside Elementary and is located adjacent to and east of the subject property. The site is listed in the HAZMAT, RCRA-SQG, FINDS, and ECHO databases. The listings indicate that the property is a small-quantity generator of hazardous waste. There are no reported spills, releases, or violations associated with the property. No further information is provided by the listings. Based on the available information, this site does not represent a significant concern to the subject property.

US Engineering Controls

This is a listing of sites with engineering controls in place to control on-site contamination. Engineering controls may include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

The subject property was not identified on the US Engineering Control sites database.

US Institutional Controls

This is a listing of sites with institutional controls in place to control on-site contamination. Institutional controls may include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

The subject property was not identified on the US Institutional Control sites database.

Emergency Response Notification System (ERNS)

ERNS is a national database used to collect information on reported releases of petroleum products or hazardous substances. The database contains information from spill reports made to federal authorities including the EPA, the U.S. Coast Guard, the National Response Center and the U.S. Department of Transportation. The program is a cooperative effort of the EPA, the Department of Transportation Research and Special Program Administration's National Transportation System Center, and the National Response Center. There are five primary Federal statutes that require release reporting: CERCLA Section 103; the Superfund Amendments and Reauthorization Act (SARA) Title III Section 304; the Clean Water Act of 1972 (CWA) Section 311(b) (3); and the Hazardous Material Transportation Act of 1974 (HMTA) Section 1808 (b).

The subject property was not identified on the ERNS database.

State/Tribal NPL (Response)

Response sites identify confirmed release sites where the California Department of Toxic Substances Control (DTSC) is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

No State/Tribal NPL sites were identified within the specified radius from the subject property.

State/Tribal CERCLIS (Envirostor and Historical Cal-Sites)

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) Envirostor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response (RESPONSE), including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. Envirostor provides similar information to the information that was available in Cal-Sites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land

uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Ten-Nine State/Tribal CERCLIS sites were identified within the specified radius from the subject property. Due to the volume of sites, only the three sites within 1,000 feet of the subject property are further discussed.

- **3505 Pasadena Avenue** (Map ID B41-47) – this site was identified under the operator name Former Welch's Uniform Services and is located adjacent to and north of the subject property. The site is listed in the following databases from the report: UST (2), RCRA-LQG, ENVIROSTOR, LUST, CPS-SLIC (2), VCP, SWEEPS UST, HIST UST, CA FID UST, FINDS, ECHO, EMI, HIST CORTESE, CERS, DRYCLEANERS, HAZMAT, and EDR Hist Cleaner. The site was previously described in the RCRA generators sub-section above. Based on regulatory oversight and on-going SVE remediation with semi-annual groundwater monitoring, and the most recent (2016) analytical data available, this site does not represent a significant concern to the subject property.

- **3408 Arroyo Seco Avenue** (Map ID K83-86) – this site was identified under the operator name Los Angeles USD Loreto Elem School and is located approximately 415 feet northwest of the subject property. The site is listed in the RCRA-SQG, FINDS, ECHO, ENVIROSTOR, SCH, UST, and HAZMAT databases. The listings indicate the facility was a small-quantity generator of hazardous waste. The ENVIROSTOR listing refers to an investigation conducted in 2006 and the status is listed as closed and withdrawn with no contaminants found. There are no reported spills, releases, or violations associated with the property. No further information is provided by the listings. Based on the available information, this site does not represent a significant concern to the subject property.

- **3209 East Humboldt Street (**Map ID I74-78) – this property is located approximately 600 feet south of the subject property, and was identified under the operator ITT Cannon / Kennington. The site is listed in the following databases from the report: HAZMAT, UST, RCRA-SQG, FINDS, SEMS, ENVIROSTOR, VCP, SWEEPS UST, CA FID UST, DEED, HIST CORTESE, CPS-SLIC, LA Co. Mitigation, and CERS. The site was previously discussed in the SEMS database review section. Based on separation distance and regulatory oversight of cleanup activities with active groundwater monitoring, this site does not represent a significant environmental concern to the subject property.

Based on the relative distance from the subject property, down-gradient to cross-gradient hydraulic position, continued regulatory oversight, soil-only media impacted, lack of reported violations or releases, and/or current case-closed/NFA status, none of the listed sites are anticipated to represent a significant environmental concern to the subject property.

State/Tribal SWF/LF

State/Tribal Solid Waste Landfills (SWLF) typically contains an inventory of solid waste disposal facilities or landfills in a particular State. Depending on the State, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

One State/Tribal SWF/LF site with two listings was identified within the specified radius from the subject property.

- **400 West Avenue 26** (Map ID T129, 130, 133) – this site was identified under the operator name Lacy's Street Dump and is located approximately 1,700 feet southwest of the subject property. The site is listed in the WMUDS/SWAT, LDS, CERS (2), and SWF/LF (2) databases. The listings indicate that the property operated as a landfill in 1975 and is listed as currently closed. The site achieved regulatory closure status with DTSC in 2016. Based on separation distance and regulatory closure status, this site does not represent a significant environmental concern to the subject property.

State/Tribal LUST and CPS-SLIC

LUST Sites

Leaking Underground Storage Tanks (LUST) sites are a database of sites with confirmed or unconfirmed leaking underground storage tanks.

Seven LUST sites comprised of thirteen listings were identified within the specified radius from the subject property. Due to the volume of listings, only the four sites within 1,000 feet of the subject property are further discussed.

3505 Pasadena Avenue (Map ID B41-47) – this site was identified under the operator name Former Welch's Uniform Services and is located adjacent to and north of the subject property. The site is listed in the following databases from the report: UST (2), RCRA-LQG, ENVIROSTOR, LUST, CPS-SLIC (2), VCP, SWEEPS UST, HIST UST, CA FID UST, FINDS, ECHO, EMI, HIST CORTESE, CERS, DRYCLEANERS, HAZMAT, and EDR Hist Cleaner. The site was previously described in the RCRA generators sub-section above. Based on regulatory oversight and on-going SVE remediation with semi-annual groundwater monitoring, and the most recent (2016) analytical data available, this site does not represent a significant environmental concern to the subject property.

- **3225 Lacy Street** (Map ID H67-73) – this site was identified under the operator names Heath & Co, and Maintenance and Operations New Maintenance Company for the Los Angeles Unified School District. The site is located approximately 350 feet southwest of the subject property, and is listed in the following databases from the report: HIST UST, UST, SWEEPS UST, CA FID UST, RCRA-LQG, HAZMAT, LUST, FINDS, ECHO, HIST CORTESE, and CERS.

The UST, SWEEPS UST, CA FID UST, and LUST listings refer to a 7,500-gallon diesel fuel UST installed in 1964, and a 12,000-gallon gasoline UST installed in 1973. The tanks are listed as active in a 1993 SWEEPS UST listing. The LUST listing refers to a gasoline release reported in July 1995 during tank removal. The site achieved regulatory closure status in November 1995.

The RCRA-LQG, HAZMAT, FINDS, ECHO, HIST CORTESE, and CERS listings indicate the facility is a large-quantity generator of the following hazardous wastes: ignitable waste, corrosive waste, lead, and mercury. There are no reported violations associated with the property. Based on separation distance and site closure status, this site does not represent a significant environmental concern to the subject property.

- **3580 Pasadena Avenue** (Map ID J94-97) – this site was identified under the operator name Flavor Food Inc. and is located approximately 700 feet northeast of the subject property. The site is listed in the following databases from the report: SWEEPS UST, CA FID UST, LUST, HIST UST, HIST CORTESE, CERS, and UST.

  The UST listings refer to three 9,000-gallon gasoline USTs installed in and removed in 1986. The LUST listing refers to a gasoline release reported in October1986 during tank removal with regulatory closure status in November 1986. There are no reported violations associated with the property. Based on separation distance and site closure status, this site does not represent a significant environmental concern to the subject property.

- **3101 Artesian Street** (Map ID N98-104) – this site was identified under the operator names Lincoln Heights District and P D D Construction MTNC. The site is located approximately 730 feet southwest of the subject property, and is listed in the following databases from the report: SWEEPS UST, CA FID UST, UST (2), LUST (2), RCRA-SQG, FINDS, ECHO, HAZMAT, CERS HAZ WASTE, HIST UST (2), CERS TANKS, HIST CORTESE, and CERS.

  The UST listings refer to four active 5,000-gallon diesel fuel USTs on the property. The LUST listings refer to petroleum releases reported in 1991 with regulatory closure status in 1997.

  The CERS HAZWASTE and ECHO listings refer to the following violations: violations reported in 2016 due to failure to comply with one or more of the following, failure to property label hazardous waste accumulation containers, and a violation for failure to maintain uniform hazardous waste manifests for three years; : failure to install a spill bucket, have a functional drain valve or other method for the removal of liquid from the spill bucket/spill container, and/or be resistant to galvanic corrosion; violations reported in 2018 due to failure to submit a complete and accurate application for a permit to operate a UST, or for renewal of the permit, and a violation for failure to submit or maintain a current facility plot plan; a violation reported in 2017 due to the failure to maintain records of repairs, lining, and upgrades on site; and a violation in 2013 for failure to obtain and/or maintain an active hazardous waste generator permit. Refer to the database report for more information.

The RCRA-SQG, FINDS, HAZMAT, and CERS listings indicate the facility is a small-quantity generator of hazardous waste (1996). Based on separation distance from the subject property, this site does not represent a significant environmental concern to the subject property.

Based on the relative distance from the subject property, down-gradient to cross-gradient hydraulic position, continued regulatory oversight, soil-only media impacted, lack of reported violations or releases, and/or current case-closed/NFA status, none of the listed sites are anticipated to represent a significant environmental concern to the subject property.

CPS-SLIC Sites

Three CPS-SLIC sites comprised of four listings were identified within the specified radius from the subject property.

- **3505 Pasadena Avenue** (Map ID B41-47) – this site was identified under the operator name Former Welch's Uniform Services and is located adjacent to and north of the subject property. The site is listed in the following databases from the report: UST (2), RCRA-LQG, ENVIROSTOR, LUST, CPS-SLIC (2), VCP, SWEEPS UST, HIST UST, CA FID UST, FINDS, ECHO, EMI, HIST CORTESE, CERS, DRYCLEANERS, HAZMAT, and EDR Hist Cleaner. The site was previously described in the RCRA generators sub-section above. Based on regulatory oversight and on-going SVE remediation with semi-annual groundwater monitoring, and the most recent (2016) analytical data available, this site not represent a significant environmental concern to the subject property.

- **3209 East Humboldt Street (**Map ID I74-78) – this property is located approximately 600 feet south of the subject property, and was identified under the operator ITT Cannon / Kennington. The site is listed in the following databases from the report: HAZMAT, UST, RCRA-SQG, FINDS, SEMS, ENVIROSTOR, VCP, SWEEPS UST, CA FID UST, DEED, HIST CORTESE, CPS-SLIC, LA Co. Mitigation, and CERS. The site was previously discussed in the SEMS database review section. Based on separation distance and regulatory oversight of cleanup activities with active groundwater monitoring, this site does not represent a significant environmental concern to the subject property.

- **306-360 Avenue 26** (Map ID W137) – this property is located approximately 1,775 feet southwest of the subject property and was identified under the operator name The E B Malone Corp. The site is listed in the CPS-SLIC and CERS databases. There is also an orphan listing for the site in the CPS-SLIC database. The listings indicate that the site was enrolled in the DTSC Cleanup Program and was investigated for VOCs and chromium, and has achieved regulatory closure status as of April 2006. Based on the available information and separation distance, this site does not represent a significant environmental concern to the subject property.

Based on the relative distance from the subject property, down-gradient to cross-gradient hydraulic position, continued regulatory oversight, soil-only media impacted, lack of reported violations or

releases, and/or current case-closed/NFA status, none of the listed sites are anticipated to represent a significant environmental concern to the subject property.

State/Tribal UST (also AST, HIST UST, SWEEPS UST, and CA FID UST list)

State/Tribal Underground Storage Tanks (UST): This is a list of state registered underground storage tanks for the site area. Sites appearing on the UST list have not necessarily released hazardous substances into the environment nor do they necessarily pose environmental threat to surrounding properties. Since Federal and State UST regulations require periodic monitoring for UST leakage and immediate reporting of evidence of UST leakage, only those sites appearing on the Leaking Underground Storage Tanks (LUST) list are considered to have significant potential of environmental impact for the purposes of this Phase I.

The subject property was not identified on the Registered UST/AST database.

One of the adjoining properties was identified on the Registered UST/AST database.

- **3505 Pasadena Avenue** (Map ID B41-47) – this site was identified under the operator name Former Welch's Uniform Services and is located adjacent to and north of the subject property. The site is listed in the following databases from the report: UST (2), RCRA-LQG, ENVIROSTOR, LUST, CPS-SLIC (2), VCP, SWEEPS UST, HIST UST, CA FID UST, FINDS, ECHO, EMI, HIST CORTESE, CERS, DRYCLEANERS, HAZMAT, and EDR Hist Cleaner. The site was previously described in the RCRA generators sub-section above. Based on regulatory oversight and on-going SVE remediation with semi-annual groundwater monitoring, and the most recent (2016) analytical data available, this site does not represent a significant concern to the subject property.

SWEEPS UST: Statewide Environmental Evaluation and Planning System: This is an inactive underground storage tank database. It identifies underground storage tanks and was maintained by a contractor for the State Water Resources Control Board in the early 1980s. The listing is no longer updated or maintained.

The subject property was not identified on the SWEEPS UST database.

One of the adjoining properties was identified on the SWEEPS UST database.

- **3505 Pasadena Avenue** (Map ID B41-47) – this site was identified under the operator name Former Welch's Uniform Services and is located adjacent to and north of the subject property. The site is listed in the following databases from the report: UST (2), RCRA-LQG, ENVIROSTOR, LUST, CPS-SLIC (2), VCP, SWEEPS UST, HIST UST, CA FID UST, FINDS, ECHO, EMI, HIST CORTESE, CERS, DRYCLEANERS, HAZMAT, and EDR Hist Cleaner. The site was previously described in the RCRA generators sub-section above. Based on regulatory oversight and on-going SVE remediation with semi-annual groundwater monitoring, and the most recent (2016) analytical data available, this site does not represent a significant environmental concern to the subject property.

HIST UST: Historical Underground Storage Tank Registered Database: This is a listing of underground storage tanks that have been registered but have been removed or are no longer in service. Data on the HIST UST list was supplied by the State Water Resources Control Board.

The subject property was not identified on the Historical UST database.

One of the adjoining properties was identified on the Historical UST database.

- **3505 Pasadena Avenue** (Map ID B41-47) – this site was identified under the operator name Former Welch's Uniform Services and is located adjacent to and north of the subject property. The site is listed in the following databases from the report: UST (2), RCRA-LQG, ENVIROSTOR, LUST, CPS-SLIC (2), VCP, SWEEPS UST, HIST UST, CA FID UST, FINDS, ECHO, EMI, HIST CORTESE, CERS, DRYCLEANERS, HAZMAT, and EDR Hist Cleaner. The site was previously described in the RCRA generators sub-section above. Based on regulatory oversight and on-going SVE remediation with semi-annual groundwater monitoring, and the most recent (2016) analytical data available, this site does not represent a significant environmental concern to the subject property.

CA Facility Inventory Database (CA FID): This is a list of active and inactive underground storage tank sites. The database is maintained by the California Water Resources Control Board.

The subject property was not identified on the CA FID UST database.

One of the adjoining properties was identified on the CA FID UST database.

- **3505 Pasadena Avenue** (Map ID B41-47) – this site was identified under the operator name Former Welch's Uniform Services and is located adjacent to and north of the subject property. The site is listed in the following databases from the report: UST (2), RCRA-LQG, ENVIROSTOR, LUST, CPS-SLIC (2), VCP, SWEEPS UST, HIST UST, CA FID UST, FINDS, ECHO, EMI, HIST CORTESE, CERS, DRYCLEANERS, HAZMAT, and EDR Hist Cleaner. The site was previously described in the RCRA generators sub-section above. Based on regulatory oversight and on-going SVE remediation with semi-annual groundwater monitoring, and the most recent (2016) analytical data available, this site does not represent a significant environmental concern to the subject property.

State/Tribal VCP

The State Voluntary Cleanup Program list addresses the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

Three State/Tribal VCP sites were identified within the specified radius from the subject property.

- **3505 Pasadena Avenue** (Map ID B41-47) – this site was identified under the operator name Former Welch's Uniform Services and is located adjacent to and north of the subject property. The site is listed in the following databases from the report: UST (2), RCRA-LQG, ENVIROSTOR, LUST, CPS-SLIC (2), VCP, SWEEPS UST, HIST UST, CA FID UST, FINDS, ECHO, EMI, HIST CORTESE, CERS, DRYCLEANERS, HAZMAT, and EDR Hist Cleaner. The site was previously described in the RCRA generators sub-section above. Based on regulatory oversight and on-going SVE remediation with semi-annual groundwater monitoring, and the most recent (2016) analytical data available, this site does not represent a significant environmental concern to the subject property.

- **3209 East Humboldt Street (**Map ID I74-78) – this property is located approximately 600 feet south of the subject property, and was identified under the operator ITT Cannon / Kennington. The site is listed in the following databases from the report: HAZMAT, UST, RCRA-SQG, FINDS, SEMS, ENVIROSTOR, VCP, SWEEPS UST, CA FID UST, DEED, HIST CORTESE, CPS-SLIC, LA Co. Mitigation, and CERS. The site was previously discussed in the SEMS database review section. Based on separation distance and regulatory oversight of cleanup activities with active groundwater monitoring, this site does not represent a significant environmental concern to the subject property.

- **301 West Avenue 26** (Map ID S127-128) – this property is located approximately 1,700 feet southwest of the subject property and was identified under the operator names Jaybee and Ajax Manufacturing. The site is listed in the ENVIROSTOR, VCP, EMI, and SEMS databases. The listings indicate the property was discovered as contaminated in 1994, with a discovery date of 2000. The site was listed as a Superfund site in 2002. The contaminants of concern include lead, PAHs, PCE, diesel fuel, TCE, and other volatile organic compounds associated with former manufacturing operations at the site, and the site is currently active in the VCP. Based on separation distance and regulatory oversight of cleanup activities with active groundwater monitoring, this site does not represent a significant environmental concern to the subject property.

State/Tribal Brownfield Sites

No State/Tribal Brownfield Sites were identified within the specified radius from the subject property.

State/Tribal Institutional Control and Engineering Control

The State/Tribal Institutional Control and Engineering Control list consists of deed-restricted sites with environmental remediation associated with engineering or institutional controls.

The subject property was not listed on the State/Tribal Institutional Control and Engineering Control sites database.

Local Ascertainable Records in Database

The subject property addresses were identified in several of the local ascertainable records databases, summarized as follows:

- **135 West Avenue 34** (Map ID A5, 7, 10, 11, 13, 18, 19, 22, 23, 25, 27, 28, 31, 35) – this subject property address was identified in the HAZNET (12), RCRA NonGen/NLR, FINDS, and ECHO databases under the following operator names: Jardinero Productions, Birddog, Warner Bros., All About Steve Movie, Soul Productions LLC Ortiz Brothers Moving, Step Up 3D, Love & Basketball, Nurse Betty Productions, 20th Century Fox, and Olivers Arrow Movie.

  Ten of the HAZNET listings are associated with the disposal of wastes generated during film production, including very small quantities of various paints, latex gloves, fuel blends, and other organic solids (1999-2016); the remaining two HAZNET listings are associated with Ortiz Brothers Moving, including the disposal of waste oil and hydrocarbons (1997-1998).

  The RCRA NonGen/NLR listing, FINDS, and ECHO listings refer to the All About Steve Movie Site (2007), a former generator of hazardous ignitable waste from photographic film. There are no reported spills, releases, or violations associated with the 135 West Avenue 34 address. Based on the available information, the listings do not represent a significant environmental concern.

- **141 West Avenue 34** (Map ID A2, 4, 6, 15, 24, 26, 29, 32, 36, 38) – this subject property address was identified in the HAZNET (8), RCRA-SQG, FINDS, ECHO, EMI, HAZMAT, and CERS databases. The listings are associate with the following operator names: Touchstone Pictures, American Caster Corp, Tomcats, Five Continent Imports LLC, Lie To Me, ABC Signatures Studio, Battle of the Sexes, and Dreamworks Productions.

  Seven of the HAZNET listings are associated with the disposal of wastes generated during film production, including very small quantities of various paints, latex gloves, fuel blends, and other organic solids (1997-2017); and the other HAZNET listing is associated with American Caster Corp for the disposal of other organic solids, hydrocarbons, oil-containing waste, and paint sludge (1987-1996).

  The RCRA-SQG refers to American Caster Corp operations on the property in 1987 (specific type of waste not specified). American Caster Corp was also identified under a historic address, 157 West Avenue 34, in the HAZMAT database.

  The ECHO, EMI, and CERS listings refer to regulated air emissions at American Caster Corp, and indicate that the property was classified as a hazardous air pollutant (major). The listed site operations include hardware manufacturing, other metal valve and pipe fitting manufacturing, and ball and roller bearing manufacturing. There are no reported spills, releases, or violations associated with the 141 West Avenue 34 address. Based on the available information, the listings do not represent a significant environmental concern.

- **153 West Avenue 34** (Map ID A1) – this subject property address was identified under the operator name William Pile Enterprises and was identified in the HAZMAT database with a listing dated January 2019. The HAZMAT database is a list of facility and manifest data compiled by DTSC. No further information was provided by the listing. There are no reported spills or violations associated with the 153 West Avenue 34 address. Based on the available information, the listings do not represent a significant environmental concern.

- **3401 Pasadena Avenue** (Map ID A3, 14, 21, 30) – this subject property address was identified in the HAZNET (3) and EMI databases under the operator names 20th Century Fox, E D 1125 Inc, Elastic Coatings Org, and Bob Baker Production.

  Two of the HAZNET listings are associated with the disposal of wastes generated during film production, including very small quantities of various paints, latex gloves, fuel blends, waste oil, and other organic solids (2006-2007); and the other HAZNET listing is related to Elastic Coatings Organization for the disposal of unspecified solvent mixtures, pesticides, and alkaline solution without metals pH > 12.5 (1993).

  The EMI listing refers to air emissions (total organic hydrocarbons and reactive organic gases) associated with Bob Baker Productions, a film production company (1990). There are no reported spills, releases, or violations associated with the 3401 Pasadena Avenue address. Based on the available information, the listings do not represent a significant environmental concern.

- **3433 Pasadena Avenue** (Map ID A8, 9, 12, 16, 17, 20, 33, 34, 37) – this subject property address was identified in the HAZNET (8), FINDS, ECHO, and RCRA NonGen/NLR databases under the operator names Gone Girl, Moneyball, Informant Productions, End of Watch LLC, Warner Bros. Hangover 3, Hotel for Dogs, and Fox Gone Girl.

  All of the HAZNET listings are associated with the disposal of wastes generated during film production, including very small quantities of various paints, latex gloves, fuel blends, and other organic solids (2008-2014). The RCRA NonGen/NLR, FINDS, and ECHO listings refer to operations associated with filming the Warner Bros Hangover 3 movie (2010-2012), a former generator of the following hazardous waste: ignitable waste; methyl ethyl ketone; and non-halogenated solvents. There are no reported spills, releases, or violations associated with the 135 West Avenue 34 address. Based on the available information, the listings do not represent a significant environmental concern.

Orphan Listings

Orphan listing consists of sites that are provided in the regulatory database; however, due to poor or inadequate address information were not mapped.

The subject property or other sites in immediate vicinity were not listed in orphan summary. Therefore, the listed sites are not expected to represent a significant environmental concern.

6.2 Proprietary Database Listings

The subject property was not identified on the EDR proprietary records databases.

6.3 Vapor Encroachment Condition

ASTM E2600-10 Standard Guide for Vapor Encroachment Screening (VES) on Property Involved in Real Estate Transactions was used as guidance for conducting a VES for the subject property. The purpose of the screening is to determine whether a Vapor Encroachment Condition (VEC) exists from chemicals of concern (COC*)* that may migrate as vapors onto a property as a result of contaminated soil and groundwater on or near the subject property. Current or past uses such as gas stations (using petroleum hydrocarbons), dry cleaning establishments (using chlorinated volatile organic compounds), former manufactured gas plant sites (using volatile and semi-volatile organic compounds), and former industrial sites such as those that had vapor degreasing or other parts-cleaning operations (using chlorinated volatile organic compounds) are of particular concern. COC vapors are capable of migrating great distances omni-directionally along subsurface conduits such as utility lines, pipelines, sewer and storm water lines, and building fountains which may represent a potential VEC in connection with the subject property. There are two levels of screening for VECs:

<u>Tier 1 Vapor Encroachment Screen</u>
Tier 1 screening is an investigation of known or suspected contaminated properties within a given radius, government records, investigation, historical research, etc. The research radius varies based on the COC at the contaminated site due to chemicals having different migration properties. For sites with petroleum hydrocarbon COC, the search distance is 528 feet (1/10 mile). For contaminated sites with non-petroleum hydrocarbon (other volatile compounds) COC, the search radius is 1,760 feet (1/3 mile) from the contaminated site to the boundary of the subject property.

A total of eight sites were identified in the Radius Map Report and historical research within the "Area of Concern" that were considered to pose a potential VEC at the subject property based on the Tier 1 Evaluation. Tier 1 sites are:

- **3505 Pasadena Avenue** (Map ID B41-47) – this site was identified under the operator name Former Welch's Uniform Services and is located adjacent to and north of the subject property. The site is listed in the following databases from the report: UST (2), RCRA-LQG, ENVIROSTOR, LUST, CPS-SLIC (2), VCP, SWEEPS UST, HIST UST, CA FID UST, FINDS, ECHO, EMI, HIST CORTESE, CERS, DRYCLEANERS, HAZMAT, and EDR Hist Cleaner. The site was previously described in the RCRA generators sub-section above. Based on regulatory oversight and on-going SVE remediation with semi-annual groundwater monitoring, and the most recent (2016) analytical data available, this site does not represent a VEC to the subject property.

- **3500 Pasadena Avenue** (Map ID F61, 62) – this site was identified under the operator names Smith W P and Chuy Carburetors, and is located approximately 250 feet northeast of the subject property. The site is listed in the EDR Hist Cleaner and HAZMAT databases. The EDR Hist Cleaner

database is dated 1924, and the HAZMAT listing is currently active. There are no reported spills, releases, or violations associated with the site. Based on the available information, this site does not represent a VEC to the subject property.

- **3225 Lacy Street** (Map ID H67-73) – this site was identified under the operator names Heath & Co, and Maintenance and Operations New Maintenance Company for the Los Angeles Unified School District. The site is located approximately 350 feet southwest of the subject property, and is listed in the following databases from the report: HIST UST, UST, SWEEPS UST, CA FID UST, RCRA-LQG, HAZMAT, LUST, FINDS, ECHO, HIST CORTESE, and CERS.

  The RCRA-LQG, HAZMAT, FINDS, ECHO, HIST CORTESE, and CERS listings indicate the facility is a large-quantity generator of the following hazardous wastes: ignitable waste, corrosive waste, lead, and mercury. There are no reported violations associated with the property. Based on separation distance and site closure status, this site does not represent a VEC to the subject property.

- **3209 East Humboldt Street (**Map ID I74-78) – this property is located approximately 600 feet south of the subject property, and was identified under the operator ITT Cannon / Kennington. The site is listed in the following databases from the report: HAZMAT, UST, RCRA-SQG, FINDS, SEMS, ENVIROSTOR, VCP, SWEEPS UST, CA FID UST, DEED, HIST CORTESE, CPS-SLIC, LA Co. Mitigation, and CERS.

  The SEMS, ENVIROSTOR, VCP, HIST CORTESE, FINDS, CPS-SLIC, and LA Co. Mitigation listings indicate that the property is a Superfund site with environmental investigations dating back to 1990, due to battery and electronics manufacturing on the property, including lead, PCBs, tetrachloroethene (PCE), and trichloroethene (TCE). The site was enrolled in the Voluntary Cleanup Program (VCP) in 1993, and remedial activities to date have included the excavation of soil approximately 46 feet below ground surface with off-site disposal of 18,000 cubic yards of contaminated soil. The site is still being actively monitored by the DTSC Site Cleanup Program. The DEED listing refers to land-use restrictions imposed on the site as part of the VCP agreement.

  The RCRA-SQG and HAZMAT listings indicate the property is a small quantity generator of hazardous waste, including polychlorinated biphenyls (PCBs) and lead (1998-2006). Based on separation distance and regulatory oversight of cleanup activities with active groundwater monitoring, this site does not represent a VEC to the subject property.

- **3580 Pasadena Avenue** (Map ID J94-97) – this site was identified under the operator name Flavor Food Inc. and is located approximately 700 feet northeast of the subject property. The site is listed in the following databases from the report: SWEEPS UST, CA FID UST, LUST, HIST UST, HIST CORTESE, CERS, and UST.

  The UST listings refer to three 9,000-gallon gasoline USTs installed in and removed in 1986. The LUST listing refers to a gasoline release reported in October1986 during tank removal with

regulatory closure status in November 1986. There are no reported violations associated with the property. Based on separation distance and site closure status, this site does not represent a VEC to the subject property.

- **3101 Artesian Street** (Map ID N98-104) – this site was identified under the operator names Lincoln Heights District and P D D Construction MTNC. The site is located approximately 730 feet southwest of the subject property, and is listed in the following databases from the report: SWEEPS UST, CA FID UST, UST (2), LUST (2), RCRA-SQG, FINDS, ECHO, HAZMAT, CERS HAZ WASTE, HIST UST (2), CERS TANKS, HIST CORTESE, and CERS.

  The UST listings refer to four active 5,000-gallon diesel fuel USTs on the property. The LUST listings refer to petroleum releases reported in 1991 with regulatory closure status in 1997.

  The CERS HAZWASTE and ECHO listings refer to the following violations: violations reported in 2016 due to failure to comply with one or more of the following, failure to property label hazardous waste accumulation containers, and a violation for failure to maintain uniform hazardous waste manifests for three years; : failure to install a spill bucket, have a functional drain valve or other method for the removal of liquid from the spill bucket/spill container, and/or be resistant to galvanic corrosion; violations reported in 2018 due to failure to submit a complete and accurate application for a permit to operate a UST, or for renewal of the permit, and a violation for failure to submit or maintain a current facility plot plan; a violation reported in 2017 due to the failure to maintain records of repairs, lining, and upgrades on site; and a violation in 2013 for failure to obtain and/or maintain an active hazardous waste generator permit. Refer to the database report for more information.

  The RCRA-SQG, FINDS, HAZMAT, and CERS listings indicate the facility is a small-quantity generator of hazardous waste (1996). Based on separation distance from the subject property, this site does not represent a VEC to the subject property.

- **301 West Avenue 26** (Map ID S127-128) – this property is located approximately 1,700 feet southwest of the subject property and was identified under the operator names Jaybee and Ajax Manufacturing. The site is listed in the ENVIROSTOR, VCP, EMI, and SEMS databases. The listings indicate the property was discovered as contaminated in 1994, with a discovery date of 2000. The site was listed as a Superfund site in 2002. The contaminants of concern include lead, PAHs, PCE, diesel fuel, TCE, and other volatile organic compounds associated with former manufacturing operations at the site, and the site is currently active in the VCP. Based on separation distance and regulatory oversight of cleanup activities with active groundwater monitoring, this site does not represent a VEC to the subject property.

- **400 West Avenue 26** (Map ID T129, 130, 133) – this site was identified under the operator name Lacy's Street Dump and is located approximately 1,700 feet southwest of the subject property. The site is listed in the WMUDS/SWAT, LDS, CERS (2), and SWF/LF (2) databases. The listings indicate that the property operated as a landfill in 1975 and is listed as currently closed. The site

achieved regulatory closure status with DTSC in 2016. Based on separation distance and regulatory closure status, this site does not represent a VEC to the subject property.

In our opinion, none of the other sites listed pose a significant threat to the subject property as there is no indication of a release at the respective sites, a release has occurred but the medium affected was the soil only and the site is beyond the critical distance of 100 feet, or the site location and/or plume of contamination is in excess of the critical distance of 100 feet from the subject property. Thus, a VEC can be ruled out because a VEC does not or is not likely to exist at the subject property.

6.4 Agency Records

The following state and local agencies were contacted in reference to the subject property:

- Los Angeles County Fire Department (LACoFD)
- Los Angeles County Department of Public Works (LADPW)
- Department of Toxic Substances Control/ Envirostor (DTSC)
- State Water Resources Control Board (SWRCB)
- South Coast Air Quality Management District (SCAQMD)
- California Department of Conservation – Department of Oil and Geothermal Gas (CA-DOGG)

No records were found for the subject property from the above agencies.

· 7.0 CONCLUSIONS & RECOMMENDATIONS ·

FR has conducted a Phase I Environmental Site Assessment in accordance with the American Society for Testing and Materials (**ASTM**) Standard Practice E1527-13 and Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the subject property addressed at **135, 141 & 153 West Avenue 34, and 3401 & 3433 Pasadena Avenue, Los Angeles, Los Angeles County, California 90031**. This assessment has revealed no evidence of Recognized Environmental Conditions (RECs) during the course of this assessment with the property except for those previously identified in the *Findings* section.

FR recommends no further investigations for the subject property at this time.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Fulcrum Resources Environmental were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Fulcrum Resources Environmental were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Correspondence / Agency Records

ASTM E1527-13 USER QUESTIONNAIRE

When the "User" (the party for whom the assessment is being prepared) of the Phase I is required to help the environmental professional identify recognized environmental conditions at the property, a "User Questionnaire" is completed by the user to help gather information that may identify recognized environmental conditions at the property.

We ask that you answer the six questions below to the best of your knowledge. We understand that, in some circumstances, you may have little or no information. Still, we encourage you to complete and return the questionnaire as soon as possible. This will allow us to reflect the fact that the Questionnaire was completed when we issue our report as is required. Completion of the assessment to the new standard, when conducted in connection with the asset purchase of a real property, may entitle the user to certain federal liability protections that result from conducting "All Appropriate Inquiries" into the previous ownership and uses of a property.

On the second page of this form is a list of documentation. The E1527-13 Standard requires that the User will ensure that the consultant is made aware that any of these materials exist for a site, and if so, that these documents be provided for the consultant's review. Please indicate whether any of these documents are available, and ensure that Fulcrum Resources Environmental will either receive copies or be provided an opportunity to review the relevant materials.

We appreciate your assistance. If you have any questions, feel free to contact us.

1. Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?

   No

2. Are you aware of any Activity and Use Limitations (AULs), such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?

   No

3. As the user of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

   No

4. Does the purchase price/loan amount for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?

   Yes, the purchase price reasonably reflects fair market value of the property.

5. Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user, (a.) Do you know the past uses of the property? (b.) Do you know of specific chemicals that are present or once were present at the property? (c.) Do you know of spills or other chemical releases that have taken place at the property? (d.) Do you know of any environmental cleanups that have taken place at the property?

   Prior uses of buildings on the property include office, storage, metal stamping, moving and storage. More information on prior uses are contained in the 2015 Phase 1 report, provided.

6. As the user of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property?

   No

ASTM E1527-13 USER QUESTIONNAIRE

SUBJECT PROPERTY ADDRESS:135, 141 & 153 W. Ave 34 and 3401 & 3433 Pasadena Ave., Los Angeles, CA 90031

As part of this study, which of the following are you providing?

1. Previous environmental site assessment reports (●) Yes ( ) No
2. Environmental compliance audit reports ( ) Yes (●) No
3. Environmental permits (including but not limited to solid waste disposal permits, hazardous waste disposal permits, wastewater permits, NPDES permits, underground injection permits) ( ) Yes (●) No
4. Registrations for underground and aboveground storage tanks ( ) Yes (●) No
5. Registrations for underground injection systems ( ) Yes (●) No
6. Material safety data sheets ( ) Yes (●) No
7. Community Right-to-Know plan ( ) Yes (●) No
8. Safety plans; preparedness and prevention plans; spill prevention, countermeasure, and control plans; etc. ( ) Yes (●) No
9. Reports regarding hydrogeologic conditions on the property or surrounding area ( ) Yes (●) No
10. Notices or other correspondence from any government agency relating to past or current violations of environmental laws with respect to the property or relating to environmental liens encumbering the property ( ) Yes (●) No
11. Hazardous waste generator notices or reports ( ) Yes (●) No
12. Geotechnical studies (●) Yes ( ) No
13. Risk assessments ( ) Yes (●) No
14. Recorded Activity and Use Limitations (AULs). ( ) Yes (●) No

Please contact us if you have any questions regarding these ASTM requirements.

FORMER WELCH'S UNIFORM FACILITY, 3505 NORTH PASADENA AVENUE,
LOS ANGELES, CALIFORNIA 90031

Dear Mr. Thuma:

The Department of Toxic Substances (DTSC) has reviewed "Request for NFA of the SVE System and Site Closure" (Report) dated April 20, 2016 for the Former Welch's Uniform Facility (Site). The Report requests Site closure for on-site soil and soil vapor because the clean up objectives were met for the identified chemicals of concern (COCs). DTSC also reviewed the Calculation of Site Specific Soil Gas Cleanup Goals dated February 26, 2015 and the Soil Vapor Extraction (SVE) Rebound Testing Workplan dated September 23, 2015. The SVE system operated from December 2013 to July 2016 during which time 254 pounds of volatile organic compounds (195 pounds of perchloroethylene) were removed.

The Site was evaluated for an industrial/commercial with land use covenant (LUC) in place scenario. The Site met an accepted cumulative cancer risk is less than or equal to $1x10^{-5}$ and non-cancer risk is less than or equal to 1. DTSC approves the Site soil closure upon submittal of your response to DTSCs toxicologist comments.

DTSC understands that the groundwater monitoring program will remain in place and has agreed to a decrease in frequency (annual) and scope (TBD). Additionally, DTSC will work with you to develop the Operations and Maintenance (O and M) Plan and the LUC.

Sincerely,

Juli Propes
Unit Chief

1.0 INTRODUCTION

1.1 PURPOSE

Burns & McDonnell Engineering Company, Inc. (Burns & McDonnell), on behalf of AmeriPride Services Inc. (AmeriPride), has prepared this *First Semi-Annual 2016 Groundwater and Soil Vapor Monitoring Report* (Report). This Report summarizes the groundwater and soil vapor monitoring activities conducted in association with the Former Welch's Uniform Facility located at 3505 Pasadena Avenue, Los Angeles, California (Site). The Site is associated with the Department of Toxic Substances Control (DTSC) CalStars Site Code 301314.

The soil vapor extraction (SVE) system at the Site was installed as part of the implementation of the Removal Action Work Plan (RAW) approved in correspondence by the California DTSC on October 18, 2012. The RAW was prepared in accordance with a Voluntary Cleanup Agreement executed between the DTSC and AmeriPride on June 17, 2007 (Docket No. HSA-VCA 06/07-204). The SVE system, which extracted contaminant vapors from eleven SVE wells at the Site, was in operation from December 6, 2013, until July 17, 2015. The extracted vapors were treated and discharged to the atmosphere under South Coast Air Quality Management District (SCAQMD) Permit No. G27490 dated October 1, 2013.

1.2 REPORT STRUCTURE

This Report includes a discussion of 2016 semi-annual groundwater and soil vapor sampling activities. Specific components include:

- **Section 1.0 Introduction** provides an overview and description of the purpose and scope of the Report.
- **Section 2.0 Background** includes a brief Site description and a presentation of physical characteristics of the Site.
- **Section 3.0 Summary of Field Activities** includes a discussion of sampling activities and summarizes the SVE system operation history.
- **Section 4.0 Monitoring Results** presents analytical results from the semi-annual groundwater monitoring and vapor sampling.
- **Section 5.0 Natural Attenuation** includes a discussion of the analytical results and evaluation of natural attenuation.
- **Section 6.0 Recommendations and Conclusions** presents recommendations for future actions and a summary of key actions for the Site.

2.0 BACKGROUND

2.1 SITE DESCRIPTION

The Site is located at 3505 Pasadena Avenue, Los Angeles, California at latitude and longitude coordinates 34º5'9" North and 118º12'48" West, respectively (**Figure 1**).

The Site consists of an approximate 2.6-acre vacant parcel located in a mixed residential and industrial area of Los Angeles, California. The Site is bordered on the north by the Arroyo Seco Channel and the Pasadena Freeway (Interstate-110); on the west by a railroad right-of-way; on the east by Pasadena Avenue; and on the south by commercial properties. The Site is surrounded by a chain-link fence around the perimeter, with a retaining wall in the northeast corner of the Site boundary. Four pole-mounted electrical transformers are located in the center of the Site. Gas and water metering equipment are located near the east gate, and a 6,000 square foot area of asphalt pavement is located in the southeast portion of the Site. The SVE system and associated equipment are located within a 1,400 square foot fenced area in the northeast portion of the Site. The Site contains eleven SVE wells, fourteen operable groundwater monitoring wells, and eight soil vapor monitoring points (SVP) (each nested with sampling points at four discreet depths). Additionally, there are four operable groundwater monitoring wells located off-site. Site features, including the SVE system and well locations, are depicted on **Figure 2**.

There are four designated Areas-of-Concern (AOC) at the Site which relate to former site building locations and facility operations, described as follows:

- **AOC#1**: AOC#1 is a former motor vehicle fueling area, located in the east-central portion of the Site.
- **AOC#2**: AOC#2 is a former dry cleaning area and cleaning solvent storage area located on the northeast portion of the Site.
- **AOC#3**: AOC#3 is a former driveway area located on the northwest portion of the Site and west of AOC#2.
- **AOC#4**: AOC#4 is located in the southwest corner of the Site.

The AOCs at the Site are shown on **Figures 2, 3, 4, 6 and 7**. As discussed in the *Removal Action Work Plan* dated October 8, 2012, active remediation was necessary only in AOC#2.

2.2 GEOLOGY AND HYDROGEOLOGY

The elevation of the Site is approximately 366 feet above mean sea level. Topography of the site is relatively level with a slight slope to the west.

The Site is located at the west end of the Repetto Hills near the confluence of the Arroyo Seco Channel and the Los Angeles River. The sediments that underlie the Site have been identified at Quaternary alluvial stream channel deposits consisting of unconsolidated silts, sands, and gravels. Soils encountered in borings and excavations associated with the Site consist of gravels and fine to coarse-grained sand. Coarse gravel and cobbles have been encountered during excavation in the upper two feet of soils in the northeast portion of the Site. The sedimentary bedrock that underlies the Site is Puente Formation sandstone and is present at approximately 83 feet below ground surface (bgs).

Previous subsurface investigations at the Site indicate that the water table is present at approximately 35 feet bgs. The local groundwater gradient at the Site has consistently been to the southwest as depicted on **Figure 3**.

* * * * *

3.0 SUMMARY OF FIELD ACTIVITIES

3.1 GROUNDWATER SAMPLING

There are eighteen groundwater monitoring wells associated with the Site (**Table 1A**). The groundwater monitoring wells are generally completed at two horizons. The groundwater monitoring wells screened in the shallow horizon are completed at depths ranging from 45 to 70 feet bgs. The groundwater monitoring wells screened in the deep groundwater horizon are completed at depths ranging from 89 to 93 feet bgs.

The First Semi-Annual 2016 groundwater sampling activities were completed on March 15 and 16, 2016. Groundwater elevations (**Table 2**) were measured in 17 monitoring wells and groundwater samples (**Table 3**) were collected from 15 monitoring wells. The groundwater elevation was unable to be measured at MW-8A due to the well being covered by asphalt. The monitoring wells were purged using a 2-inch submersible Grundfos pump using dedicated tubing. Groundwater samples were collected after water quality parameters stabilized and a minimum of three well volumes were purged. Field parameters are summarized in **Table 4**. After purging, groundwater samples were collected with new disposable bailers and transferred to laboratory-supplied sampling vessels. All groundwater samples were analyzed for volatile organic compounds (VOCs) by United States Environmental Protection Agency (US EPA) Method 8260B by Eurofins Calscience, Inc. (Eurofins), a California State Certified laboratory. Groundwater analytical results are summarized in **Table 5** and historical Natural Attenuation parameters are summarized in **Table 6**. Analytical Reports and are provided in **Appendix A**. Groundwater field logs are provided in **Appendix B.**

Purge water from groundwater monitoring wells and decontamination fluids were temporarily stored in two polyethylene tanks located in the secured parking area of the Site; pending off-site disposal at Inviro-Tech Disposal located in Lincoln, California (**Appendix C**).

3.2 SOIL VAPOR POINT SAMPLING

There are eight SVP clusters at the Site, with screens set at depths of 5, 10, 20, and 30 feet bgs at each point (**Table 1B**). Five of the soil vapor monitoring points are associated with the SVE system's rebound testing: VP-1, VP-3, VP-4R, VP-5 and VP-6. These five SVP's were sampled on January 18 and 19, 2016, as part of the six month after SVE shutdown rebound testing at the Site. Refer to **Sections 3.4, 4.2, and 6.0** for additional information regarding the SVE rebound testing events. The SVP clusters were purged, sampled, and analyzed on-Site for VOCs by US EPA Method TO-15. Soil vapor analytical results are listed in **Table 7**. The SVPs were purged at least five volumes of the SVP tubing prior to sample collection. Analytical Reports are provided in **Appendix A**. Soil vapor results in the analytical

reports are documented in micrograms per Liter (µg/L) while this report discusses soil vapor results in micrograms per cubic meter (µg/m^3).

3.3 SOIL VAPOR EXTRACTION WELL SAMPLING

There are eleven SVE wells at the Site. Each SVE well contains a 10-foot screen set between approximately 20 and 30 feet bgs (**Table 1B**). The eleven SVE wells are connected to the SVE system via underground polyvinylchloride (PVC) piping, and SVE well sampling is conducted at the SVE system's manifold using ¼ -inch Teflon tubing, Swagelok fittings and vacuum canisters. Sampling of the SVE wells (SVE-1 through SVE-11) was not conducted during the First Semi-Annual 2016 sampling event due to the SVE system being shut down since July 2015 for rebound testing. Additional details regarding the shutdown and rebound testing are included in **Sections 3.4, 4.2, and 6.0**. Historical soil vapor analytical results are presented in **Table 7**.

3.4 SVE SYSTEM OPERATIONS AND SAMPLING

The SVE system was installed during November and December 2013 and began continuous operation on December 6, 2013. The SVE system extracts contaminant vapors from eleven SVE wells at the Site using a 20-horsepower positive displacement blower. The eleven wells are connected to the system via 3-inch PVC piping. The extracted vapors from each point are combined at the system's intake manifold prior to passing through a vapor liquid separator to recover condensate entrained in the vapor stream. SVE emissions are treated using two 3,000 pound vapor-phase granular activated carbon (GAC) adsorbers, operated in series, prior to discharge to the atmosphere via a 15-foot exhaust stack. The vapor extracted from the SVE system is treated and discharged to the atmosphere under SCAQMD Permit to Construct/Operate No. G27490, dated October 1, 2013. A process and instrumentation diagram of the SVE system is included as **Figure 5**.

Due to the significant decrease in SVE mass removal rates and soil gas concentrations at the Site, the SVE system was shut down to conduct rebound testing. The testing is being conducted to assess soil gas concentrations in the soil vapor monitoring points without the SVE system operating in order to monitor potential rebound and evaluate the SVE system for permanent shutdown. As outlined in the *Calculation of Site-Specific Soil Gas Cleanup Goals* letter, and per phone conversation with the DTSC on July 16, 2015, the SVE system was shut down for rebound testing on July 17, 2015. Additional details regarding the shutdown and rebound testing are discussed in **Sections 4.2 and 6.0**.

While the system was in operation, photoionization detector (PID) readings were taken from each of the eleven extraction points in order to provide an indication of the relative concentration of contaminants in the vapor being extracted from each point. The flow rates at the eleven extraction points were set to maximize air flow from the SVE wells with the highest concentrations in order to maximize mass removal. Historical operational data collected from the SVE system, including vacuum readings at the manifold and wellheads, PID readings, temperatures, and flow rates, is summarized in **Table 8**. **Table 9** summarizes the operational history of the SVE system.

Prior to the SVE system shut down on July 17, 2015 for rebound testing, soil vapor samples were collected from three locations within the SVE system in order to obtain emissions data to calculate contaminant mass removal and to maintain compliance with the SCAQMD Permit to Construct/Operate. While in operation, soil vapor samples were collected on a monthly basis from the SVE system's combined influent, between the GAC adsorbers, and at the SVE system's stack effluent (**Figure 5**). Historical analytical data from these three sample locations are shown on **Table 10, Table 11, and Table 12,** respectively.

*** * * * ***

4.0 MONITORING RESULTS

4.1 GROUNDWATER SAMPLING RESULTS

As described previously in **Section 2.2**, there are four designated AOCs at the Site (**Figure 2**) which relate to former site building locations and facility operations. The AOCs are defined as follows: AOC#1 – Former Motor Vehicle Fueling Area; AOC#2 – Former Dry Cleaning Area; AOC#3 – Former Driveway Area: and AOC#4 – Southwest Corner of Site. The sections below discuss detections in groundwater by AOC.

Groundwater elevations, water quality parameters, and analytical results are summarized in **Tables 2, 4, and 5**, respectively. March 2016 groundwater contours are depicted on **Figure 3**, and VOC concentrations from the March 2016 sampling event are shown on **Figure 4.** Groundwater concentration trend graphs/hydrographs are provided in **Appendix D**. A summary of the March 2016 groundwater elevations and groundwater analytical results is provided below:

Summary of Groundwater Elevations and Analytical Results

Groundwater depths ranged from:	36.27 ft. (MW-16C) to 42.91 ft. (MW-13B) below top of well casing
Groundwater elevations ranged from:	329.12 ft. (MW-3) to 314.34 ft. (MW-15) above mean sea level
Groundwater Direction and Gradient	Southwest, 0.01
Highest PCE concentration (observed in):	12 micrograms per liter (µg/L) (MW-16A)
Highest TCE concentration (observed in):	4.3 µg/L (MW-16A)
Highest cis-1,2-DCE concentration (observed in):	13 µg/L (MW-10A)
Highest trans-1,2-DCE concentration (observed in):	All samples below the laboratory detection limits

PCE = tetrachloroethene

TCE = trichloroethene

cis-1,2-DCE = cis-1,2-dichloroethene

trans-1,2-DCE = trans-1,2-dichloroethene

4.1.1 Groundwater Sampling Results in AOC#1

The one groundwater well located within AOC#1 (K-1) was sampled in March 2016. K-1 is screened in the shallow groundwater horizon. In March 2016, no VOCs were detected above the laboratory method detection limits (MDLs) at K-1 with the exception of PCE with a concentration of 1.1 µg/L. The PCE

concentration has generally decreased in monitoring well K-1; from 187 µg/L in 1998 to below the California EPA maximum contaminant level (MCL) of <5.0 µg/L since March 2013.

4.1.2 Groundwater Sampling Results in AOC#2

The one groundwater well located within AOC#2 (MW-3) was sampled in March 2016. MW-3 is screened in the shallow groundwater horizon. At MW-3, PCE was detected at 7.4 µg/L in March 2016. The PCE concentration at MW-3 has decreased from a historical high of 5,100 µg/L in 2005. TCE, which had a historical high concentration of 180 µg/L in 2001, has been below the MDL of <1.0 µg/L for the past five consecutive sampling events. The cis-1,2-DCE and trans-1,2-DCE concentrations at MW-3 have also been below the MDL of <1.0 µg/L for the past five consecutive sampling events.

4.1.3 Groundwater Sampling Results in AOC#3

The four groundwater wells located within AOC#3 (MW-11, MW-16A, MW-16B, and MW-16C) were sampled in March 2016. In addition, MW-12, located approximately 30 feet west of AOC#3, was sampled in March 2016. Wells MW-11, MW-16A, MW-16B and MW-12 are screened in the shallow groundwater horizon, while MW-16C is screened in the deeper groundwater horizon.

Overall VOC concentrations in the wells of AOC#3 are trending downward. At MW-11, the PCE concentration was 9.3 µg/L in March 2016. The maximum historical PCE concentration at MW-11 was 130 µg/L in 2001. TCE, cis-1,2-DCE, and trans-1,2-DCE concentrations have been below the MDL of <1.0 µg/L at MW-11 since March 2014.

At MW-16A, the PCE concentration was 12 µg/L during both the March 2015 and March 2016 sampling events. The TCE and cis-1,2-DCE concentrations at MW-16A in March 2016 decreased compared to the March 2015 concentrations. At MW-16B, PCE was detected with a concentration of 2.5 µg/L and TCE was detected with a concentrations of 1.5 µg/L, which were both below the California EPA MCLs of 5.0 µg/L. The cis-1,2-DCE concentration at MW-16B has been below the MDL of <1.0 µg/L for the past two sampling events. No VOCs were detected at MW-16C in March 2016. VOCs have been below the MDL of <1.0 µg/L since March 2013.

At MW-12, the PCE and TCE concentrations in March 2016 were 7.8 µg/L and 4.2 µg/L, respectively, which is an overall decrease compared to a historical high PCE concentration of 610 µg/L and a TCE concentration of 1,900 µg/L in 2005. The cis-1,2-DCE concentration at MW-12 in March 2016 was 2.0

µg/L, which is the lowest detection at that well to date. The trans-1,2-DCE concentration at MW-12 was below the MDL of <1.0 µg/L for the fourth consecutive sampling event.

4.1.4 Groundwater Sampling Results in AOC#4

AOC#4 is located in the southwest corner of the property and is down-gradient of the source area. The source area is the location of the former underground storage tanks in the vicinity of AOC#1, AOC#2 and AOC#3. Groundwater wells MW-10A and MW-10B are located to the east of AOC#4, and were sampled in March 2016. MW-10A is screened in the shallow groundwater horizon, and MW-10B is screened in the deeper groundwater horizon.

PCE has decreased in MW-10A from 306 µg/L in 1998 to 3.5 µg/L in the March 2016 sampling event. The PCE concentration at MW-10A has been below the California EPA MCLs of 5.0 µg/L for the past four consecutive sampling events. TCE has decreased in MW-10A from 463 µg/L in 1998 to 2.9 µg/L in March 2016. Cis-1,2-DCE has decreased in MW-10A from 1,680 µg/L in 1998 to 13 µg/L in March 2016. PCE has decreased in MW-10B from 70 µg/L in 1998 to below the MDL of <1.0 µg/L in March 2016. The PCE concentration has been below the MDL of <1.0 µg/L at MW-10B since November 2013. TCE has decreased from 47 µg/L in 1999 to below the MDL of <1.0 µg/L in March 2016, which is the lowest detection of TCE in MW-10B to date.

4.2 SOIL VAPOR POINT SAMPLING RESULTS

In March 2015, the *Calculation of Site-Specific Soil Gas Cleanup Goals* letter was submitted to the DTSC. In the letter, soil gas cleanup goals for the SVE system were proposed that would result in concentrations with no unacceptable risk from long term exposure. The site-specific cleanup goals were calculated in general accordance with the DTSC's *Final Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air,* dated October 2011, and the DTSC's March 2014 *Screening-Level Model for Soil Gas Contamination.* The site-specific soil gas cleanup goals for PCE, TCE, cis-1,2-DCE, and vinyl chloride were calculated for each of the monitoring depths of 5, 10, 20, and 30 feet bgs, and are presented as follows:

Summary of Acceptable Risk-Based Soil Gas Concentrations

	5 feet bgs	10 feet bgs	20 feet bgs	30 feet bgs
PCE	42,000 µg/m³	70,000 µg/m³	125,000 µg/m³	180,000 µg/m³
TCE	15,000 µg/m³	23,000 µg/m³	40,000 µg/m³	57,000 µg/m³

Cis-1,2-DCE	47,000 µg/m³	70,000 µg/m³	116,000 µg/m³	163,000 µg/m³
Vinyl Chloride	2,200 µg/m³	3,200 µg/m³	5,100 µg/m³	7,100 µg/m³

The soil gas cleanup goal concentrations were conservatively calculated using California-specific toxicity values, as well as conservative default model parameters for soil type, building dimensions, and exposure scenarios. Prior to operation of the SVE system, PCE was detected at concentrations ranging up to 3,000,000 µg/m^3 in VP-1-30 in 2011. However, since operation of the SVE began in December 2013, VOC concentrations have remained below the proposed risk-based soil gas concentrations presented above. The historical soil vapor analytical data for the Site compared to the proposed soil gas cleanup goals are presented in **Table 7**.

As outlined in the *Calculation of Site-Specific Soil Gas Cleanup Goals* letter, and per phone conversation with the DTSC on July 16, 2015, the SVE system was shut down for rebound testing on July 17, 2015. In September 2015, the *SVE System Rebound Testing Work Plan* letter was submitted to the DTSC in order to provide additional details regarding the soil vapor rebound testing at the Site. Shutting down the system for rebound testing is intended to assess soil gas concentrations in the soil vapor monitoring points without the SVE system operating in order to monitor potential rebound and evaluate the SVE system for permanent shutdown. The five soil vapor monitoring points associated with the SVE system's rebound testing are VP-1, VP-3, VP-4R, VP-5, and VP-6.

The first soil gas rebound test occurred in October 2015 (three months after the SVE system's shutdown) to coincide with the Site's Second Semi-Annual 2015 sampling event, and the second soil gas rebound test occurred on January 18 and 19, 2016, six months after the SVE system was shut down. All soil gas concentrations observed during the rebound testing period were below the soil gas cleanup goals, with little to no rebound in concentration. Therefore, since the proposed target cleanup goals were still being met six months after shutdown, the remaining cumulative cancer risk and hazard index risk for the chemicals of potential concern (COPCs) were evaluated and determined to be below the target cancer risk and noncancer hazard limits. For additional information regarding this evaluation and request for SVE decommissioning and Site closure, refer to the *Request for NFA of the SVE System and Site Closure*, dated April 20, 2016.

The sections below discuss detections in soil vapor by AOC (which are described in **Section 2.2**) for the six month after shutdown rebound testing event that occurred in January 2016 at VP-1, VP-3, VP-4R, VP-5, and VP-6. The analytical results for VOCs in soil vapor at 5 feet, 10 feet, 20 feet and 30 feet are

summarized in **Table 7** and **Figure 6**. Soil vapor concentration trend graphs are provided in **Appendix E**. A summary of the January 2016 soil vapor analytical results is provided below:

Summary of Soil Vapor Sampling Results

Highest PCE concentration (observed in):	47,000 µg/m^3 (VP-1-30)
Highest TCE concentration (observed in):	6,200 µg/m^3 (VP-3-30)
Highest cis-1,2-DCE concentration (observed in):	70,000 µg/m^3 (VP-3-30)
Highest trans-1,2-DCE concentration (observed in):	All samples below the laboratory detection limits

Note: The Vapor Point naming convention includes the depth in feet. Example: "VP-1-30 (Vapor Point One at Thirty Feet)"

4.2.1 Soil Vapor Point Sampling Results in AOC#1

There is one SVP well cluster (VP-6) located within AOC#1 with wells screened at 5, 10, 20, and 30 feet bgs. In January 2016, PCE was detected at all depths in VP-6 with concentrations ranging from 270 µg/m^3 in VP-6-5 to 2,200 µg/m^3 in VP-6-20. PCE concentrations decreased at the 5, 10, and 30 foot depths compared to the October 2015 sampling event when concentrations at VP-6 ranged from 510 µg/m^3 at VP-6-5 to 2,200 µg/m^3 at VP-6-30. Prior to the operation of the SVE system, the highest historical detection of PCE in VP-6 was 91,000 µg/m^3 in VP-6-30 in 2008. The highest historical detection of TCE at VP-6 was 9,200 µg/m^3 in VP-6-30 in 2008. In January 2016, TCE was detected at the 20 and 30 foot depths with concentrations of 150 µg/m^3 and 160 µg/m^3, respectively. The TCE concentration at VP-6-5 was below the MDL of <80 µg/m^3 for the fifth consecutive sampling event.

4.2.2 Soil Vapor Point Sampling Results in AOC#2

SVP well clusters VP-1, VP-3, VP-4R are located in AOC#2, with wells screened at 5, 10, 20, and 30 feet bgs at each point. Historically, the highest PCE soil vapor concentrations at the Site have been observed at VP-1. Prior to operation of the SVE system, the highest historical detection of PCE in VP-1 was 3,000,000 µg/m^3 in VP-1-30 in 2011. In January 2016, PCE was detected at all depths in VP-1 with concentrations ranging from 5,300 µg/m^3 in VP-1-5 to 47,000 µg/m^3 in VP-1-30. Although PCE concentrations increased slightly at the 5, 10, and 30 foot depths in January 2016 compared to the October 2015 sampling event, the concentrations at VP-1 were still well below the soil gas cleanup goals. In January 2016, TCE was detected at all depths in VP-1 with concentrations ranging from 80 µg/m^3 in VP-1-5 to 410 µg/m^3 in VP-1-30. The highest historical detection of TCE in VP-1 was 110,000 µg/m^3 in VP-1-30 in 2008.

In January 2016, PCE was detected at all depths in VP-3 with concentrations ranging from 280 µg/m^3 at VP-3-5 to 16,000 µg/m^3 at VP-3-30. Although PCE concentrations increased slightly at each depth in January 2016 compared to the October 2015 sampling event, the concentrations at VP-3 were still well below the soil gas cleanup goals. Prior to the operation of the SVE system, the highest historical detection of PCE in VP-3 was 170,000 µg/m^3 in VP-3-20 in 2011. In January 2016, TCE was detected at the 10, 20, and 30 foot depths with concentrations of 160 µg/m^3, 1,800 µg/m^3, and 6,200 µg/m^3, respectively. The highest historical detection of TCE in VP-3 was 60,000 µg/m^3 in VP-3-30 in 2011. Cis-1,2-DCE was detected at VP-3-20 with a concentration of 670 µg/m^3, and also at VP-3-30 with a concentration of 70,000 µg/m^3, which was the highest cis-1,2-DCE concentration detected during the January 2016 sampling event (although still well below the soil gas cleanup goal).

When VP-4R was installed in October 2013, PCE concentrations ranged from 41,000 µg/m^3 in VP-4R-5 to 280,000 µg/m^3 in VP-4R-30, and TCE concentrations ranged from 1,400 µg/m^3 in VP-4R-5 to 38,000 µg/m^3 in VP-4R-30. In January 2016, PCE concentrations ranged from 490 µg/m^3 in VP-4R-5 to 7,100 µg/m^3 in VP-4R-30. TCE concentrations were observed at VP-4R-20 and VP-4R-30 in January 2016 with concentrations of 190 µg/m^3 and 170 µg/m^3, respectively.

4.2.3 Soil Vapor Point Sampling Results in AOC#3

SVP well clusters VP-2 and VP-5 are located in AOC#3 with wells intervals at 5, 10, 20, and 30 feet bgs. VP-5 was sampled in January 2016 as part of the soil gas rebound testing event. PCE was detected at all depths in VP-5 with concentrations ranging from 320 µg/m^3 in VP-5-5 to 1,500 µg/m^3 in VP-5-30. PCE concentrations decreased at the 5 and 20 foot depths compared to the October 2015 sampling event when concentrations ranged from 400 µg/m^3 in VP-5-5 to 1,300 µg/m^3 in VP-5-20. Prior to the operation of the SVE system, the highest historical detection of PCE at VP-5 was 36,000 µg/m^3 in VP-5-20 in 2011. In January 2016, TCE was detected at the 20 and 30 foot depths with concentrations of 250 µg/m^3 and 290 µg/m^3, respectively. Prior to operation of the SVE system, the highest historical detection of TCE in VP-5 was 35,000 µg/m^3 in VP-5-20 in 2011.

4.2.4 Soil Vapor Point Sampling Results in AOC#4

SVP well cluster VP-7, the only SVP within AOC#4, has wells screened at 5, 10, 20, and 30 feet bgs. VP-7 was not sampled in January 2016 as part of the soil gas rebound testing event. In October 2015, PCE concentrations at VP-7 ranged from 2,600 µg/m^3 in VP-7-10 to 3,400 µg/m^3 in VP-7-30.

4.3 SOIL VAPOR EXTRACTION WELL SAMPLING RESULTS

SVE-1 through SVE-11 were installed in October 2013 as part of the SVE system installation. Each extraction well contains 10-foot screens set between approximately 20 and 30 feet bgs. SVE-1 through SVE-7 are located within the general area of AOC#2, SVE-8 and SVE-10 are located within the general area of AOC#1, and SVE-9 and SVE-11 are located within the general area of AOC#3. As discussed previously in **Section 3.3**, the eleven SVE wells were not sampled due to the SVE system being shut down since July 2015 for rebound testing. Historical analytical results for VOCs in soil vapor are summarized in **Table 7**.

4.4 SVE SYSTEM OPERATIONAL AND SAMPLING RESULTS

Since startup of the SVE system in December 2013, concentrations observed at several of the SVE wells have decreased significantly. While the SVE system was operating, the flow rates at the extraction points were set to maximize air flow from the SVE points with the highest concentrations in order to maximize mass removal. Prior to shut down for rebound testing on July 17, 2015, the SVE system had been operating by monthly cycling of the SVE points between two separate sets of SVE points since November 2014 in order to further optimize the system's operations and mass removal. Historical operational data from the SVE system is summarized in **Table 8**. **Table 9** summarizes the operational history of the SVE system from startup through the system's shutdown in July 2015.

Prior to shutting down the system for rebound testing, soil vapor samples were collected from the SVE system's combined influent, between the GAC adsorbers, and the SVE systems' stack effluent. Historical analytical data from the SVE system's combined influent, between the two GAC treatment vessels, and the SVE system's stack effluent are summarized in **Tables 10, 11, and 12**, respectively.

The mass of VOCs removed from the subsurface were calculated using the combined influent concentrations, average flow rate, and hours of operation. When the SVE system was initially started for equipment testing procedures in December 2013, the PCE mass removal was approximately 9 to 13 pounds of PCE per day. Prior to shutting down the system for rebound testing, the PCE mass removal rate ranged from approximately 0.16 to 0.23 pounds of PCE per day (**Table 10** and **Figure 8**). Through July 17, 2015, the SVE system removed approximately 195 pounds of PCE and approximately 254 pounds of total VOCs from the subsurface (**Table 10** and **Figure 9**).

5.0 NATURAL ATTENUATION

5.1 GROUNDWATER

The water quality parameters, including oxygen reduction potential (ORP) and dissolved oxygen (DO), are summarized in **Table 4**. The historical natural attenuation parameters nitrate, sulfate, ferrous iron and methane are presented in **Table 6**.

The groundwater concentration trend graphs presented in **Appendix D** show a decreasing trend of PCE, TCE, and cis-1,2-DCE concentrations over time in all the monitoring wells with detectable VOC concentrations. This indicates the residual VOC plume in attenuating over time. Biodegradation of PCE can occur under anaerobic conditions via reductive dechlorination sequentially to TCE, cis-1,2-DCE, trans-1,2-DCE, vinyl chloride and finally ethene. Water quality parameters, the concentrations of daughter products, and the ratio of the sum of daughter product concentrations to the concentrations of PCE were used to evaluate biodegradation in the groundwater plume. The DO concentrations measured at onsite wells near the source area, located in the northeast portion of the Site, were generally above 1 mg/L and might indicate that conditions are aerobic and not conducive to reductive dechlorination. However, indications of reductive dechlorination of the PCE plume have been observed down gradient of the source area including low DO concentrations, low or negative ORP readings and elevated daughter product to parent ratios. Historically, MW-9A has exhibited the strongest indications of reductive dechlorination with a DO concentration of 0.77 mg/L and a daughter product to parent ratio of 7.63 when last sampled in March 2016. At MW-9A, the ORP measurement was 33 millivolts (mV) in March 2016, but the historical ORP measurements have been negative. In addition, elevated daughter product to parent ratios have been observed at wells MW-7, MW-10A, MW-12, and MW-16A.

6.0 RECOMMENDATIONS AND CONCLUSIONS

Based on the performance of the soil vapor extraction system and the sampling results to date, the following is recommended or has occurred at the Site:

- As presented in the *Request for NFA of the SVE system and Site Closure* letter dated April 20, 2016, the cumulative COPC cancer risk for all depths was below the target cancer risk of less than or equal to 1 x 10^{-5}, and the cumulative COPC noncancer hazard (hazard index) for all sampling depths is below the target noncancer hazard (hazard index) of less than or equal to 1.0. Therefore, since the remedial action has been met, permanent shutdown and no further action (NFA) of the SVE system was requested, in addition to well decommissioning and Site closure. On June 21, 2016, Burns & McDonnell met with DTSC personnel regarding the NFA and Site Closure request. During the meeting, it was agreed upon that the remedial objective presented in the RAW had been met for commercial/industrial land use and that no further active remediation was needed. It was also agreed that the SVE system could be decommissioned as long as a land use covenant (LUC) is prepared, limiting Site land use to commercial/industrial. The DTSC indicated that they will prepare a letter stating that the SVE system can be decommissioned, provide Burns & McDonnell an example LUC letter, and provide suggestions for future groundwater monitoring at the Site that could be incorporated into a future agreement.
- As discussed above, the DTSC indicated that they are currently preparing a letter stating NFA for the SVE system and that the SVE system can be decommissioned. It is anticipated that the SVE system will be decommissioned and removed from the Site and the soil vapor points abandoned by the end of 2016.
- As stated in previous monitoring reports, it was recommended to abandon and seal MW-2, MW-8A, and MW-9B based on VOC concentrations below the California EPA MCLs for several years. The wells have been removed from the annual monitoring plan, and upon DTSC approval, we will schedule the abandonment. Additional monitoring wells to be abandoned will be discussed depending on the DTSC suggestions regarding the future groundwater monitoring schedule at the Site, and will likely be abandoned during the SVE decommissioning event by the end of 2016. The Second Semi-Annual 2016 groundwater monitoring event is tentatively scheduled for September 2016; however, groundwater monitoring may be changed to an annual basis only, and therefore would not occur until March 2017. The sampling schedule will depend upon the DTSC suggestions regarding the continued groundwater monitoring at the Site.

Notes:

ft bgs	Feet below ground surface
in	Inches
Tubing	1/4 inch nylon tubing
Screen	Stainless steel 6 inch 3/8 inch diameter screen with 0.020 in slots

VP-4R and VP-8R

5 feet	Yellow Tape
10 feet	Red Tape
20 feet	Green Tape
30 Feet	Blue Tape

Notes:
E_h = standard reduction potential (calculated from ORP using method recommended by instrument manufacturer)
mV = millivolts
mg/L = milligrams per liter
NTU = nephelometric turbidity units
NM = Not Monitored
NR = No Purge Record
ORP = field measured oxidation-reduction potential (various reference electrodes)
S/M = siemens per meter
ug/cm = Beginning March 2011
Water quality parameters taken inside well with a Horiba U-22 except MW-13A, MW-13B, MW-14, MW-15, K-1 and K-2
* = Dissolved oxygen likely elevated because of air lift techniques
† = Specific conductivity instrument showing an error message
**=Turbidity meter not functioning properly

ABBREVIATIONS / LEGEND:

B: Potential bias error, analyte detected in quality control blank
EPA: Environmental Protection Agency
J: Estimated value
µg/L: Micrograms per liter
MCL: California EPA Maximum Contaminant Level for drinking water August 2015
---: Not analyzed, not available, well lost, destroyed, or abandoned
U: Non-detect at or above method detection limit
VOCs: Volatile organic compounds
BOLD Indicates concentrations at or above listed screening levels
[1]: A Compilation of Water Quality Goals (August 2003 and updates), CalEPA RWQCB - Central Valley
[2]: California Office of Environmental Health Hazard Assessment Public Health Goal
[3]: Well K-3 not purged on 6/29/00 due to low walter level.
[4]: Chloroform, 2013 Tier 1 ESL = 80 ug/L

CF Chloroform
1,1-DCE: 1,1-dichloroethene
c-DCE: cis-1,2-dichloroethene
t-DCE: trans-1,2-dichloroethene
MTBE: Methyl tertiary butyl ether
1,1,1,2-PCA: 1,1,1,2-tetrachloroethane
1,1,2,2-PCA: 1,1,2,2-tetrachloroethane
PCE: Tetrachloroethene
TCE: Trichloroethene
TEPH: Total extractable petroleum hydrocarbons expressed as diesel

Screening Levels for Other VOCs (µg/L)

Methylene chloride = 5 ug/L (MCL)
Vinyl Chloride = 0.5 ug/L (MCL)
1,2-Dichlorobenzene = 600 ug/L (MCL)
1,2,4-Trichlorobenzene = 5 ug/L (MCL)
1,1,1,2-tetrachloroethane = 1.0 ug/L (MCL)

Notes:
DO = Dissolved oxygen
mg/L = milligrams per liter
ORP = Oxidation-reduction potential in millivolts
NA = Not applicable
U = Not detected at or above method detection limit
--- = Not sampled
NR = No Purge Record
Daughter to Parent Ratio = (CF+VC+cisDCE+trans-1,2-DCE+TCE)/(PCE)

1. Nitrate, reported as nitrogen
2. Nitrite, reported as nitrogen
3. ORP and DO were measured in field after purging wells using down hole instrumentation or flow cell

Concentrations in bold print are above the proposed risk-based soil gas cleanup goals.
(Refer to *Calculation of Site-Specific Soil Gas Cleanup Goals* letter, dated February 26, 2015)

Notes:

*	Elevated vacumm encountered during sampling.
µg/m^3:	Micrograms per cubic meter
---:	Well not sampled due to damage or vacuum
U:	Non-detect at or below method detection limit for samples
E:	The concentration indicated for this anlayte is an estimated value above the calibration range of the instrument.
ft bgs:	Feet below ground surface
NE:	Not Established
R	Replacement vapor point
Concentration Units:	Laboratory analytical results were published in units of µg/L. Values on Table 4 have been converted to units of µg/m3.

Notes:

Cycle 1 of SVE Points Operating

Cycle 2 of SVE Points Operating

°F - degrees Fahrenheit

"H_2O - inches of water column

"Hg - inches of mercury

scfm - standard cubic feet per minute

Likely erroneous value

Field Tech indicated that moisture filter was getting older and these results may have been due to moisture

PID reading after primary vessel greater than 13.4 ppmv (as hexane) and efficiency less than 90%.

Samples were collected and system was shut down immediately pending GAC changeout.

TABLE 9
SVE SYSTEM: OPERATIONS LOG
AmeriPride Services Inc.
3505 N. Pasadena Ave., Los Angeles, CA
Burns & McDonnell Project No. 89698

Date	Pacific Time	SVE System Operations and Notes	SVE Points in Operation	SVE System Total Hours of Operation
12/6/2013	1:15 PM	The SVE system begins continous operation after completion of various system equipment testing.	SVE-1 through SVE-11	0
12/12/2013	6:30 PM	Grab samples collected from the Combined Influent, Between GAC Adsorbers, and Stack Effluent. Vapor samples submitted for laboratory analysis of EPA Method TO-3 and TO-15.	SVE-1 through SVE-11	143
12/12/2013 to 12/20/2013	---	The SVE system was shutdown for maintenance.	SVE-1 through SVE-11	193
12/24/2013 to 12/31/2013	---	The SVE system was shutdown for maintenance.	SVE-1 through SVE-11	298
1/10/2014	2:45 PM	Grab samples collected from the Combined Influent, Between GAC Adsorbers, and Stack Effluent. Vapor samples submitted for laboratory analysis of EPA Method TO-3 and TO-15.	SVE-1 through SVE-11	535
2/7/2014	1:10 PM	Grab samples collected from the Combined Influent, Between GAC Adsorbers, and Stack Effluent. Vapor samples submitted for laboratory analysis of EPA Method TO-3 and TO-15.	SVE-1 through SVE-11	1202
2/14/2014 to 2/27/2014	---	The SVE system was shutdown pending a GAC changeout on the primary GAC adsorber. A GAC changeout was completed on Vessel A on February 27, 2014.	SVE-1 through SVE-11	1364
3/10/2014	5:30 PM	Grab samples collected from the Combined Influent, Between GAC Adsorbers, and Stack Effluent. Vapor samples submitted for laboratory analysis of EPA Method TO-3 and TO-15. Grab samples also collected from the individual SVE points (SVE-1 through 11) at the manifold and submitted for laboratory analysis of EPA Method TO-15.	SVE-1 through SVE-11	1630
4/1/2014	7:34 PM	Grab samples collected from the Combined Influent, Between GAC Adsorbers, and Stack Effluent. Vapor samples submitted for laboratory analysis of EPA Method TO-3 and TO-15.	SVE-1 through SVE-11	2159
4/2/2014 to 4/11/2014	---	The SVE system was shutdown for maintenance.	SVE-1 through SVE-11	2178
4/24/2014 to 5/9/2014	---	The SVE system was shutdown for maintenance (replacement of fuses and TVSS).	SVE-1 through SVE-11	2477
5/9/2014	12:10 PM	Grab samples collected from the Combined Influent, Between GAC Adsorbers, and Stack Effluent. Vapor samples submitted for laboratory analysis of EPA Method TO-3 and TO-15.	SVE-1 through SVE-11	2477
5/24/2014 to 5/27/2014	---	The SVE system shutdown due to a power outage.	SVE-1 through SVE-11	2836
6/4/2014	12:00 PM	SVE-1, SVE-2, SVE-5, and SVE-7 were closed at the manifold due to wellheads being either damaged or covered when the Site was cleared of grass/weeds by the City of Los Angeles.	SVE-3, SVE-4, SVE-6, and SVE-8 through SVE-11	3098
6/11/2014	2:24 PM	SVE-2, SVE-5, and SVE-7 were either found or repaired and opened back up at the manifold to operate with the SVE system. Grab samples collected from the Combined Influent, Between GAC Adsorbers, and Stack Effluent. Vapor samples submitted for laboratory analysis of EPA Method TO-3 and TO-15.	SVE-2 through SVE-11	3189
6/22/2014 to 7/3/2014	---	The SVE system was shutdown pending a GAC changeout on the primary GAC adsorber. A GAC changeout was completed on Vessel B on July 3, 2014.	SVE-2 through SVE-11	3441
7/3/2014	10:40 PM	SVE-1 was repaired and opened back up at the manifold to operate with the SVE system. Grab samples collected from the Combined Influent, Between GAC Adsorbers, and Stack Effluent. Vapor samples submitted for laboratory analysis of EPA Method TO-3 and TO-15.	SVE-1 through SVE-11	3445
8/1/2014	3:00 PM	Grab samples collected from the Combined Influent, Between GAC Adsorbers, and Stack Effluent. Vapor samples submitted for laboratory analysis of EPA Method TO-3 and TO-15.	SVE-1 through SVE-11	4131
9/10/2014	4:32 PM	Grab samples collected from the Combined Influent, Between GAC Adsorbers, and Stack Effluent. Vapor samples submitted for laboratory analysis of EPA Method TO-3 and TO-15. Grab samples also collected from the individual SVE points (SVE-1 through 11) at the manifold and submitted for laboratory analysis of EPA Method TO-15.	SVE-1 through SVE-11	5093
9/23/2014 to 9/30/2014	---	The SVE system was shutdown pending a GAC changeout on the primary GAC adsorber. A GAC changeout was completed on Vessel A on September 30, 2014.	SVE-1 through SVE-11	5344
10/13/2014	6:30 PM	Grab samples collected from the Combined Influent, Between GAC Adsorbers, and Stack Effluent. Vapor samples submitted for laboratory analysis of EPA Method TO-3 and TO-15.	SVE-1 through SVE-11	5691
11/5/2014	4:10 PM	Grab samples collected from the Combined Influent, Between GAC Adsorbers, and Stack Effluent. Vapor samples submitted for laboratory analysis of EPA Method TO-3 and TO-15. Monthly cycling of the SVE points begins, and the SVE system is set to operate with Set 1 of the SVE points (Set 1: SVE-2, SVE-3, SVE-4, SVE-7, SVE-8, SVE-9, and SVE-11 in operation).	SVE-2, SVE-3, SVE-4, SVE-7, SVE-8, SVE-9, SVE-11	6239

TABLE 9
SVE SYSTEM: OPERATIONS LOG
AmeriPride Services Inc.
3505 N. Pasadena Ave., Los Angeles, CA
Burns & McDonnell Project No. 89698

Date	Pacific Time	SVE System Operations and Notes	SVE Points in Operation	SVE System Total Hours of Operation
12/8/2014	1:40 PM	Grab samples collected from the Combined Influent, Between GAC Adsorbers, and Stack Effluent. Vapor samples submitted for laboratory analysis of EPA Method TO-3 and TO-15. SVE system is set to operate with Set 2 of the SVE points (Set 2: SVE-1, SVE-4, SVE-5, SVE-6, SVE-7, SVE-9, and SVE-10 in operation).	SVE-1, SVE-4, SVE-5, SVE-6, SVE-7, SVE-9, SVE-10	7010
12/17/2014 to 1/6/2015	---	The SVE system was shutdown pending a GAC changeout on the primary GAC adsorber. A GAC changeout was completed on Vessel B on January 6, 2015.	SVE-1, SVE-4, SVE-5, SVE-6, SVE-7, SVE-9, SVE-10	7229
1/6/2015	3:15 PM	Grab samples collected from the Combined Influent, Between GAC Adsorbers, and Stack Effluent. Vapor samples submitted for laboratory analysis of EPA Method TO-3 and TO-15.	SVE-1, SVE-4, SVE-5, SVE-6, SVE-7, SVE-9, SVE-10	7232
2/1/2015 to 2/4/2015	---	SVE system was shutdown for maintenance (drainage of VLS tank).	SVE-1, SVE-4, SVE-5, SVE-6, SVE-7, SVE-9, SVE-10	7666
2/4/2015	12:50 PM	Grab samples collected from the Combined Influent, Between GAC Adsorbers, and Stack Effluent. Vapor samples submitted for laboratory analysis of EPA Method TO-3 and TO-15. SVE system is set to operate with Set 1 of the SVE points.	SVE-2, SVE-3, SVE-4, SVE-7, SVE-8, SVE-9, SVE-11	7668
2/25/2015 to 2/27/2015	---	SVE system was shutdown for maintenance (drainage of VLS tank).	SVE-2, SVE-3, SVE-4, SVE-7, SVE-8, SVE-9, SVE-11	8162
3/4/2015	11:54 AM	Grab samples collected from the Combined Influent, Between GAC Adsorbers, and Stack Effluent. Vapor samples submitted for laboratory analysis of EPA Method TO-3 and TO-15. Grab samples also collected from the individual SVE points (SVE-1 through 11) at the manifold and submitted for laboratory analysis of EPA Method TO-15. SVE system is set to operate with Set 2 of the SVE points.	SVE-1, SVE-4, SVE-5, SVE-6, SVE-7, SVE-9, SVE-10	8277
4/1/2015	3:34 PM	Grab samples collected from the Combined Influent, Between GAC Adsorbers, and Stack Effluent. Vapor samples submitted for laboratory analysis of EPA Method TO-3 and TO-15. SVE system is set to operate with Set 1 of the SVE points.	SVE-2, SVE-3, SVE-4, SVE-7, SVE-8, SVE-9, SVE-11	8949
4/25/2015 to 5/1/2015	---	The SVE system shutdown due to a power outage.	SVE-2, SVE-3, SVE-4, SVE-7, SVE-8, SVE-9, SVE-11	9502
5/6/2015	2:30 PM	Grab samples collected from the Combined Influent, Between GAC Adsorbers, and Stack Effluent. Vapor samples submitted for laboratory analysis of EPA Method TO-3 and TO-15. Since PID reading after primary vessel was greater than 13.4 ppmv (as hexane) and efficiency was less than 90%, the SVE system was shutdown after collecting monthly samples pending a GAC changeout.	SVE-2, SVE-3, SVE-4, SVE-7, SVE-8, SVE-9, SVE-11	9634
5/6/2015 to 5/19/2015	---	The SVE system was shutdown pending a GAC changeout on the primary GAC adsorber. A GAC changeout was completed on Vessel A on May 19, 2015. SVE system is set to operate with Set 2 of the SVE points.	SVE-1, SVE-4, SVE-5, SVE-6, SVE-7, SVE-9, SVE-10	9636
6/1/2015	11:48 AM	Grab samples collected from the Combined Influent, Between GAC Adsorbers, and Stack Effluent. Vapor samples submitted for laboratory analysis of EPA Method TO-3 and TO-15. SVE system is set to operate with Set 1 of the SVE points.	SVE-2, SVE-3, SVE-4, SVE-7, SVE-8, SVE-9, SVE-11	9946
6/19/2015 to 6/25/2015	---	The SVE system shutdown due to a power outage.	SVE-2, SVE-3, SVE-4, SVE-7, SVE-8, SVE-9, SVE-11	10382
7/7/2015	1:29 PM	Grab samples collected from the Combined Influent, Between GAC Adsorbers, and Stack Effluent. Vapor samples submitted for laboratory analysis of EPA Method TO-3 and TO-15. SVE system is set to operate with Set 2 of the SVE points.	SVE-1, SVE-4, SVE-5, SVE-6, SVE-7, SVE-9, SVE-10	10673
7/17/2015	7:27 AM	Per conversation with DTSC, the SVE system was shutdown to begin rebound testing.	SVE-1, SVE-4, SVE-5, SVE-6, SVE-7, SVE-9, SVE-10	11003

Notes:
All values are expressed in micrograms per cubic meter [µg/m3] unless otherwise noted.
Non-detect results are expressed as "less than laboratory reporting limit."
Concentrations detected above the laboratory reporting limit are bolded.

APPENDIX A

ANALYTICAL REPORTS

Mobile Geochemistry Inc.

25 January 2016

Mr. Erik Brenegan
Burns and McDonnell - Bloomington
8201 Norma Center Dr.
Bloomington, MN 55437

H&P Project: BM011816-SB2
Client Project: 65805 / 3505 Pasadena Ave

Dear Mr. Erik Brenegan:

Enclosed is the analytical report for the above referenced project. The data herein applies to samples as received by H&P Mobile Geochemistry, Inc. on 1/18/2016 -1/19/2016 which were analyzed in accordance with the attached Chain of Custody record(s).

The results for all sample analyses and required QA/QC analyses are presented in the following sections and summarized in the documents:

- Sample Summary
- Case Narrative (if applicable)
- Sample Results
- Quality Control Summary
- Notes and Definitions / Appendix
- Chain of Custody
- Sampling Logs (if applicable)

Unless otherwise noted, I certify that all analyses were performed and reviewed in compliance with our Quality Systems Manual and Standard Operating Procedures. This report shall not be reproduced, except in full, without the written approval of H&P Mobile Geochemistry, Inc.

We at H&P Mobile Geochemistry, Inc. sincerely appreciate the opportunity to provide analytical services to you on this project. If you have any questions or concerns regarding this analytical report, please contact me at your convenience at 760-804-9678.

Sincerely,

Janis Villarreal

Janis Villarreal
Laboratory Director

H&P Mobile Geochemistry, Inc. is certified under the California ELAP, the National Environmental Laboratory Accreditation Conference (NELAC) and the Department of Defense Accreditation Programs.
