Burns and McDonnell - Bloomington	Project: BM011816-SB2	
8201 Norma Center Dr.	Project Number: 65805 / 3505 Pasadena Ave	Reported:
Bloomington, MN 55437	Project Manager: Mr. Erik Brenegan	25-Jan-16 14:41

Notes and Definitions

LCC	Leak Check Compound
ND	Analyte NOT DETECTED at or above the reporting limit
MDL	Method Detection Limit
%REC	Percent Recovery
RPD	Relative Percent Difference

Appendix

H&P Mobile Geochemistry, Inc. is approved as an Environmental Testing Laboratory and Mobile Laboratory in accordance with the DoD-ELAP and the ISO 17025 programs, certification number L11-175.

H&P is approved by the State of Arizona as an Environmental Testing Laboratory and Mobile Laboratory, certification numbers AZM758 and AZ0779.

H&P is approved by the State of California as an Environmental Laboratory and Mobile Laboratory in conformance with the Environmental Laboratory Accreditation Program (ELAP) for the category of Volatile and Semi-Volatile Organic Chemistry of Hazardous Waste, certification numbers 2740, 2741, 2743, 2744, 2745, 2754 & 2930.

H&P is approved by the State of Florida Department of Health under the National Environmental Laboratory Accreditation Conference (NELAC) certification number E871100.

The complete list of stationary and mobile laboratory certifications along with the fields of testing (FOTs) and analyte lists are available at www.handpmg.com/about/certifications.

H&P Method 8260SV (Modified EPA 8260B)
Soil Vapor VOC List per DTSC

Compound - Short List	*CAS #*	*Low RL* Vapor (µg/L)*
Dichlorodifluoromethane (Freon 12)	75-71-8	0.4
Vinyl chloride	75-01-4	0.04
Chloroethane	75-00-3	0.4
Trichlorofluoromethane (F11)	75-69-4	0.4
1,1-Dichloroethene	75-35-4	0.4
1,1,2-Trichlorotrifluoroethane (F113)	76-13-1	0.4
Methylene chloride (Dichloromethane)	75-09-2	0.4
trans-1,2-Dichloroethene	156-60-5	0.4
1,1-Dichloroethane	75-34-3	0.4
cis-1,2-Dichloroethene	156-59-2	0.4
Chloroform	67-66-3	0.08
1,1,1-Trichloroethane	71-55-6	0.4
Carbon tetrachloride	56-23-5	0.08
1,2-Dichloroethane (EDC)	107-06-2	0.08
Benzene	71-43-2	0.08
Trichloroethene	79-01-6	0.08
Toluene	108-88-3	0.8
1,1,2-Trichloroethane	79-00-5	0.4
Tetrachloroethene	127-18-4	0.08
1,1,1,2-Tetrachloroethane	630-20-6	0.4
Ethylbenzene	100-41-4	0.4
m,p-Xylene	179601-23-1	0.4
o-Xylene	95-47-6	0.4
1,1,2,2-Tetrachloroethane	79-34-5	0.4
Leak Check Compound		
1,1-Difluoroethane (LCC)	75-37-6	0.4

**NOTE: Low RLs can be achieved using a 25cc large volume injection - (Commercial CHHSLs)*

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 16-03-1400 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 03/17/16. They were assigned to Work Order 16-03-1400.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Glossary of Terms and Qualifiers

Work Order: 16-03-1400 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

DESCRIPTION

Description of Water : Purge water from Monitoring Wells

Volume/Weight: 500 Units: gallons Container(s): Poly tank

This non-hazardous waste water is monitoring well purge water, auger rinsate, sampling equipment rinsate, tank rinsate, combination thereof, or as described above. Described water may contain dissolved hydrocarbons. I certify that the above named material has been properly described and classified according to applicable regulations, and possesses no characteristics hat would require its handling as hazardous waste.

Re: Summary of Proposed Groundwater Monitoring Well Decommissioning and Annual Groundwater Sampling
Former Welch's Uniform Facility, 3505 N. Pasadena Ave, Los Angeles, CA 90031
DTSC CalStars Site Code 301314
Burns & McDonnell Project No. 96692

Dear Ms. Parnass:

Burns & McDonnell Engineering Company, Inc. (Burns & McDonnell) on behalf of AmeriPride Services Inc. (AmeriPride) has prepared this *Summary of Proposed Groundwater Monitoring Well Decommissioning and Annual Groundwater Sampling* (Summary) for the Former Welch's Uniform Facility (Site) located at 3505 N. Pasadena Avenue, Los Angeles, California (**Figures 1 and 2**). This Summary is intended to provide the California Department of Toxic Substances Control (DTSC) with information regarding the proposed decommissioning of fourteen (14) groundwater monitoring wells associated the Site. Groundwater monitoring of the remaining four (4) groundwater monitoring wells associated with the Site will continue on an annual basis.

Site Background and Remediation Activities
The Site was formerly a commercial linen and apparel laundering and delivery service facility that was established circa 1920 and operated until approximately 1988. All buildings associated with the previous operation were removed in 1993, and the Site is now a vacant parcel. The Site is currently enrolled in a Voluntary Cleanup Agreement executed on June 17, 2007, between the DTSC and AmeriPride.

A soil vapor extraction (SVE) system, which extracted volatile organic compound (VOC) impacted vapors from eleven SVE wells, operated at the Site from December 2013 until July 2015 when it was shut down for rebound testing. The soil vapor rebound testing indicated that all concentrations were below the respective soil vapor cleanup goals, and the cumulative soil vapor risk was evaluated and determined to be below the established risk levels. This information was presented to DTSC in the *Request for NFA of the SVE system and Site Closure* letter, dated April 20, 2016. DTSC subsequently approved the no further action (NFA) and decommissioning of the SVE system in their letter dated August 17, 2016. The SVE system was decommissioned and removed from the Site, and the eleven SVE wells and eight soil vapor monitoring points were decommissioned in December 2016.

Summary of Historical Groundwater Monitoring

There are currently eighteen groundwater monitoring wells associated with the Site, as shown on **Figure 2**. Groundwater has generally been monitored on a semi-annual basis for VOCs by United States Environmental Protection Agency (USEPA) Method 8260B, as well as natural attenuation water quality parameters. VOC concentrations at most monitoring wells are below the California EPA maximum contaminant levels (MCLs), and groundwater concentrations continue to show a decreasing trend of VOCs at all monitoring wells with detectable VOC concentrations. The primary contaminant of concern at the Site is tetrachloroethene (PCE). During the last groundwater monitoring event in March 2016, the highest PCE concentration at the Site was 12 micrograms per liter (µg/L) observed at monitoring well MW-16A. For further information regarding the groundwater monitoring schedule and historical VOC concentrations in groundwater at the Site, please refer to the *First Semi-Annual 2016 Groundwater and Soil Vapor Monitoring Report*, dated August 17, 2016.

As stated in their letter dated August 17, 2016, DTSC agreed to a decrease in groundwater monitoring frequency from a semi-annual basis to an annual basis. Therefore, the next groundwater monitoring event is scheduled for the spring of 2017. In addition, DTSC also agreed to a decrease in the number of groundwater monitoring wells to be sampled. Therefore, Burns & McDonnell is proposing an updated groundwater monitoring schedule for the Site, which includes the decommissioning of 14 groundwater monitoring wells, with four wells remaining for annual sampling. Details regarding this plan are discussed in the following paragraphs.

Groundwater Monitoring Well Decommissioning

As discussed previously, due to the relatively low and decreasing VOC concentrations observed at the Site, Burns & McDonnell is proposing to decommission the following 14 groundwater monitoring wells: MW-2, MW-7, MW-8A, MW-9A, MW-9B, MW-10B, MW-11, MW-12, MW-13A, MW-13B, MW-14, MW-16B, MW-16C, and K-1 (**Figure 2**). The monitoring well construction details for the 14 wells are included as **Table 1**, and the available historical well logs are included as **Attachment 1**.

Prior to decommissioning, Burns & McDonnell will obtain the proper well permits from the Los Angeles County Department of Public Health (DPH), as well as coordinate any necessary inspections as instructed by the DPH.

It is anticipated that Burns & McDonnell will subcontract the monitoring well decommissioning work with J. & H. Drilling Co., Inc. (J&H Drilling), a California licensed environmental drilling company. J&H Drilling intends to decommission the monitoring wells using a pressure grouting technique, as described in the procedures included as **Attachment 2**. However, these procedures

may change depending on well-specific conditions and DPH requirements. Burns & McDonnell anticipates decommissioning the monitoring wells in February or March 2017.

Annual Groundwater Monitoring

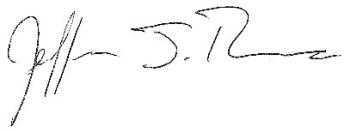
Groundwater monitoring of the following four remaining monitoring wells will continue on an annual basis: MW-3, MW-10A, MW-16A, and MW-15 (**Figure 2**). These four wells are tentatively scheduled to be sampled in March 2017 as part of the 2017 annual groundwater monitoring event. The samples will continue to be analyzed for VOCs and natural attenuation water quality parameters, and the results will be presented to DTSC in the 2017 annual groundwater monitoring report. The analytical results will be evaluated after each monitoring event, and any recommendations for further decommissioning will be presented in the annual groundwater monitoring reports.

Schedule

We plan to complete the monitoring well decommissioning in February or March 2017. The annual monitoring event will be in March 2017. Please respond with questions or your concurrence by February 10, 2017 so the work will not be delayed.

If you have any questions regarding this Summary or the Site in general, please contact Jeff Thuma at 952-656-3668 or jthuma@burnsmcd.com.

Sincerely,
Burns & McDonnell Engineering Company, Inc.



Jeffrey J. Thuma, PG (MN and WI)
Senior Hydrogeologist/Project Manager

WELL DECOMMISSIONING PROCEDURES

Well Abandonment Procedures

Property of J. & H. Drilling Co., Inc.

We were the first drilling company to be officially certified by the Los Angeles County D.H.S. to perform Pressure Grouting.

Shop time check list:

Normal check list for truck engines, oil, water etc.

1. Water tanks filled.
2. Clean grout drum and suction hose loaded.
3. Proper pressure heads loaded and clean. Take 2" and 4".
4. Hoisting bails loaded 2" and 4".
5. Sufficient amount of 2" and 4" slip by FIP or MIP couplers.
6. Fresh PVC cement and cleaner.
7. Screw driver drill and screws.
8. Check sales order for proper amount of grout and concrete materials.
9. Check that all unions are on the truck and in proper working condition.

Destruction of monitoring wells

(per. state bulletin 74-90 part 3 section 16,17,18,19.)

Note: J. & H. Drilling will use the state procedures as a guideline but will adapt the best procedures for each particular situation.

Preferred procedure: Pressure grouting abandonment.

a. Quick and clean.
b. Few drums required.
c. Most cost effective.
d. Assures that the existing sand pack and natural aquifer **actually get sealed.**

Procedure for pressure grouting:

1. Open boxes, identify wells, clean and install slip couplers using screws where possible.
2. Determine well depths and grout placement method.
3. Mix grout, first drum goes on the light side to insure that the grout will flow easily through the screen and into the aquifer.
4. Add grout to the well to approximately 5 feet from the ground surface and install pressure head and all proper fittings. (check that all fittings are tight).
5. Inlet hose to pressure head **shall not** oppose the gauge.
6. Insure that grout pump is at the **low** setting and that the rig is on **slow idle.**
7. Slowly pressure the well to **30 PSI**
8. Allow the well (by observing the pressure gauge on the head) to drop off to 10 PSI or less.
9. Continue step 8 until no pressure drop is observed, then add **25 to 30 PSI** and lock off pressure vales at head. **Maintain pressure for appx. 20 min.** to allow grout to set-up.
10. **Before disconnecting** from pressure head **bleed pressure** from rig system through the valve located to the left of the control panel. Catch excess grout in a container.
11. If doing more than one well at the jobsite, now is the time to move to the next well and repeat steps 2 through 10.
12. After proper setup time has been observed slowly release the pressure in the well casing through the valve on the head into a container and remove the pressure head. (if you are finished with the pressure head clean it up and flush out the grout pump, suction hose, and grout drum.)
13. Set up over well with rig, attach the concrete bit to an auger and drill off top 5 to 10 feet of well casing.
14. If required remove well box at this point.
15. Grout the hole with chip bentonite and seal at surface with concrete mix or with quick set.

Safety procedures for pressure grouting

1. Assure that all pressure fitting are in proper working order and that all connections are tight.

2. Make sure when pressuring up that the pump is in low and you are at an idle.

3. When applying pressure assure that all personnel are at a **safe distance. (min. of 10 ft.)** set up drum barricade to contain splash or shrapnel if pedestrians are present.

4. Hold down on the pressure head with the drill stem.

5. Crew helpers are to remain alert and notify the Driller if any safety hazards exist.

6. Become familiar with the pressure hook-ups and observe all gauges before removing any connections or hoses.

Overdrilling Procedures

Pros and cons for this method:

a. Pro.- will remove the casing all the way to the bottom of the well.
b. Con.- is more expensive and time consuming than pressure grouting.
c. Con.- can result in falling off of the casing center which will preclude drilling out the screen and sand pack.
d. Con- does not insure that the sand pack and aquifer is completely plugged.
e. Con- results in possible contaminated cuttings which must be drummed and removed from site.
f. Con- results in extra clean-up of well site.
g. Con- results in excessive wear on rig and drill components.

1. Center rig over well casing.

2. Attach concrete bit with 2 1/2 or 5 foot guide.

3. Drill out well casing to bottom of well using the proper O.D. augers.

4. Grout up hole with proper county back fill requirements.

5. Use tremie pipe if water is present or if well depth is over 30 ft.

6. Remove well boxes if required.

Pulling casing method

Pros and Cons:

a. Pro-quicker than Overdrilling.
b. Pro-can possibly remove all of the casing.
c. Con-casing can break at any point underground resulting in going to the Overdrill method with the exception that you can not insure centering on the casing.
d. Con-safety problems with hanging casing above ground or breaking casing resulting in a shrapnel situation.
e. Con-results in Overdrilling the original borehole anyway so grout can be tremied into the aquifer area.
f. Con-cuttings and casing must be drummed or removed from the site.
g. Con-once this method has begun the option to pressure grout the aquifer is excluded because the casing can separate at any point underground.

1. Open well boxes, identify well size and depths.

2. Overdrill the upper portion of casing with a large diameter auger to remove concrete plug.

3. Using hoisting plug only attach main hoist to casing. Do not use chains or ropes to pull casing.

4. Attempt to start the casing extraction with a steady pull and if not successful use a jerking motion to start the removal.

5. Stop extraction at the first joint possible to unscrew the casing. Do not hang any more casing than necessary.

6. Upon removal of casing you must plug the auger and ream out the bore hole.

7. Using the augers tremie the hole with bentonite grout upon retraction.

8. Remove well box if required.

9. Install surface seal with chip bentonite and concrete patch at ground surface to specified depth.

Safety procedures for pulling casing methods

1. Insure that the safety latch on the hoisting hook is securely fastened.

2. Insure that all personnel are warned and at a safe distance from falling objects.

3. Take extra precautions when starting the casing pull that breakage and line slap can not hit anyone. Only the Driller should be at the rear of the rig when this procedure begins. Warn all people that you are about to begin and that all conversation ends and everyone is aware of what is happening.

COMMUNITY Notice

The mission of DTSC is to protect California's people and environment from harmful effects of toxic substances through the restoration of contaminated resources, enforcement, regulation and pollution prevention.

Former Welch's Uniform Facility Removal Action Workplan Available for Review and Comment

The State of California Department of Toxic Substances Control (DTSC) invites the community to review and comment on a Removal Action Workplan (RAW) to cleanup contamination beneath the Former Welch's Uniform Facility (Site) located at 3505 Pasadena Avenue, Los Angeles, California. The objective of the RAW is to reduce the potential risk to human health and the environment and address any contamination.

This **Fact Sheet provides Information on:**

- Site Background and History
- Environmental Investigations
- Why Cleanup is Necessary
- Proposed Clean Up Plan
- California Environmental Quality Act (CEQA)
- Next Steps
- Where to Find Site Documents
- Who to Contact at DTSC for More Information

Public Comment Period
Sept. 6, to Oct. 7, 2012

The draft RAW and other related documents for this site are available for public review and comment at the locations listed on page 3. (DTSC) will make a final decision after all public comments have been reviewed and considered. Please submit written comments postmarked or recieved by email by October 7, 2012 to:

Alberto Valmidiano
Project Manager
9211 Oakdale Avenue
Chatsworth, CA 91311

(818) 717-6550

Si desea informacion en espanol, comuniquese con Jeanne Garcia al (818) 717-6573

Site Background and History

AmeriPride Services Inc., the current owner of the property at 3505 Pasadena Avenue, Los Angeles, California (Site), proposes to install a soil vapor extraction (SVE) and treatment system to address soil vapor contamination associated with dry cleaning solvent wastes at the former Welch's Uniform Facility.

The Site consists of an approximate 2.6 acre vacant parcel located in a mixed residential and industrial area of Los Angeles, California. The Site is bordered on the north by the Arroyo Seco Channel and the Pasadena Freeway (110); on the west by a railroad right-of-way; on the east by Pasadena Avenue; and on the south by commercial properties.

The Site is currently vacant and no buildings exist on the property. A chain-link fence is located around the perimeter of the Site with a 10-foot high retaining wall along the northeast Site boundary. Four pole-mounted electrical transformers are located in the center of the Site. Gas and water metering equipment are located near the east gate, and a 6,000 square foot area of asphalt pavement is located in the southeast portion of the Site. The Site was formerly a commercial linen and apparel laundering and delivery service facility that was established circa 1920 and operated until approximately 1988. All buildings associated with the previous operation were removed in 1993.

There are no current redevelopment plans for the property, but future uses may include commercial or industrial projects.

Environmental Investigations

Tetrachloroethene (PCE) was first detected in 1988 when soil boring and vapor extraction wells were completed at the Site. Follow up investigation efforts have included collecting soil and soil vapor samples from numerous locations around the Site, as well as installing and monitoring 14 active monitoring wells located on-site and off-site and 7 active soil vapor monitoring points on-site. The monitoring wells and soil vapor points are sampled and analyzed on a semi-annual basis. Since 2007, the California Department of Toxic Substances Control (DTSC) has been overseeing the site investigation, monitoring and cleanup efforts at the Site.

In 2007, the owner of the Site, AmeriPride Services Inc., entered into a voluntary agreement with DTSC to clean up the Site and to submit planning and monitoring documents to DTSC for review and approval.

Why Clean Up is Necessary

The Site is located in a mixed residential and industrial area of Los Angeles, California. It is bordered on the north by the Arroyo-Seco Channel and the Pasadena (110) freeway; on the west by a railroad right of way; on the east by Pasadena Avenue and on the south by commercial properties.

Historical records indicate that hazardous materials stored and handled at the facility included petroleum hydrocarbon based cleaning solvents used in the dry cleaning process. Previous investigations revealed the presence of PCE and trichloroethene (TCE) beneath the Site. PCE naturally degrades to TCE in the environment; the TCE present is likely a breakdown product from PCE. Exposure to high levels of PCE and TCE in indoor air may result in an increased risk of cancer when breathed continuously for an extended amount of time (generally more than 20 years). Environmental cleanup activities at the Site are necessary to protect public and environmental health.

Proposed Clean Up Plan

Soil vapor extraction (SVE) is the proposed approach to clean up the PCE and TCE detected in the soil and soil gas beneath the Site. SVE is a proven technology for treating volatile contamination. The SVE will be accomplished by the installation of a soil vapor extraction system (SVES). The SVES includes the installation of soil vapor extraction wells. The extracted vapor will be treated with granular activated carbon, before the gas will be released to the atmosphere. The SVES will be monitored to insure gas release into the atmosphere is treated successfully and meets the South Coast Air Quality Management District (SCAQMD) standards and regulations. With DTSC oversight, Ameripride proposes to install an SVE system to clean up the Site.

The SVE system will likely operate until the cleanup goals are achieved. Approximately 12 to 24 months of operation time is the initial estimate to treat the contamination. The system will operate until levels are reached that do not pose a significant risk.

California Environmental Quality Act

Under the California Environmental Quality Act (CEQA), DTSC must evaluate whether the proposed actions may have any significant impact to human health and the environment.

As part of this evaluation, DTSC has proposed a Notice of Exemption (NOE) which states that the Removal Action Workplan will not result in a significant negative effect on human health and the environment.

Next Steps

At the close of the Public Comment Period, DTSC will review and consider any public comments and make a final decision on the Removal Action Workplan. A Response to Comments document will be mailed to everyone who makes a comment and provides their name and address. A copy of the Response to Comments document will be placed in the Information Repositories listed in this fact sheet.

Once the Plan is approved the system will be built and work will likely begin in Fall 2012

Where to Find Project Documents

The RAW and other site related documents are available for public review at the information repositories listed below. The entire Administrative Record is available at the DTSC Chatsworth Office.

Lincoln Heights Branch
Los Ángeles Public Library
2530 Workmen Street
Los Angeles, California 90031
Phone: (323) 226-1692

Department of Toxic Substances Control
Regional Records Room
9211 Oakdale Avenue
Chatsworth, California 91311
Phone: (818) 717-6521

Copies of key technical reports, fact sheets and other site-related information are also available online at DTSC's website: *www.envirostor.dtsc.ca.gov/public*

All documents made available to the public by DTSC can be made available in an alternate format (i.e. Braille, large print, etc.) or in another language as appropriate, in accordance with state and federal law. Please contact Zenzi Poindexter for assistance.

Who to Contact for More Information

For more information about the draft Cleanup Plan or to be added to the site mailing list please contact the following DTSC representatives:

Alberto Valmidiano, DTSC Project Manager
9211 Oakdale Avenue
Chatsworth, California 91311
Phone: (818) 717-6550
alberto.valmidiano@dtsc.ca.gov

Zenzi Poindexter, DTSC Public Participation Specialist
9211 Oakdale Avenue
Chatsworth, California 90630
Phone: (818) 717-6567
Toll-Free: (866) 495-5651 (press 3 then 4)

DTSC

Historial y Antecedentes del Sitio

El dueño actual de la propiedad ubicada en el 3505 Pasadena Avenue, Los Angeles, California (el Sitio), AmeriPride Services Inc., está proponiendo instalar un sistema de extracción de vapor de suelo (SVE, por sus siglas en inglés) para abordar la contaminación de vapor de suelo asociada con los residuos del solvente usado para el lavado en seco en la anterior Instalación de Uniformes Welch.

El consta de un lote baldío ubicado en un área mixta residencial e industrial de Los Angeles, California. . El Sitio tiene linderos al norte con el Canal Arroyo Seco y el Pasadena Freeway (101); al oeste con un derecho de vía ferroviaria; al este con Pasadena Avenue; y al sur con propiedades comerciales.

Actualmente, el Sitio está baldío y no hay edificios en la propiedad. Alrededor del perímetro del Sitio hay una cerca metálica eslabonada y hay un muro de contención de 10 pies de altura a lo largo del lindero noreste del Sitio. Cuatro transformadores eléctricos montados en postes se encuentran en el centro del Sitio. El equipo de medición del gas y agua se encuentra cerca del portón este, y hay un área pavimentada con asfalto de 6,000 pies cuadrados en la porción sureste del Sitio.

El Sitio fue antiguamente una lavenderia comercial del lino y de ropa y servicio de entregas que se estableció alrededor de 1920 y estuvo en operaciones hasta aproximadamente 1988. En 1993, se removieron todos los edificios asociados con la función anterior.

No existen, actualmente, planes de reurbanización para esta propiedad, pero los usos en el futuro pueden incluir proyectos comerciales o industriales.

Investigaciones Ambientales

Se detectó por primera vez el tetracloroeteno (PCE, por sus siglas en ingles) en 1988, cuando concluyeron las perforaciones del suelo y los pozos de extracción de vapor en el Sitio. Esfuerzos subsiguientes de investigación han incluido la recolección de muestras de suelo y de vapor de suelo de numerosas ubicaciones alrededor del sitio, así como la instalación y monitoreo de 14 pozos de monitoreo activos ubicados dentro y fuero del Sitio y 7 puntos de monitoreo de vapor activos en el Sitio. Los pozos de monitoreo y los puntos de vapor de suelo se muestrean y analizan semi-anualmente. Desde el 2007, el Departamento de Control de Sustancias Tóxicas de California ha estado supervisando la investigación, el monitoreo y los esfuerzos de la investigación,el monitoreo y la limpieza del Sitio.

En el 2007, el propietario del Sitio, AmeriPride Services Inc., celebró un acuerdo voluntario con el DTSC para sanear el Sitio y para presentar documentos de planeación y monitoreo al DTSC para su revisión y aprobación.

Por que la Limpieza es Necesaria

El Sitio se encuentra ubicado en un área mixta residencial e industrial de Los Angeles, California. . El Sitio tiene linderos al norte con el Canal Arroyo Seco y el Pasadena Freeway (101); al oeste con un derecho de vía ferroviaria; al este con Pasadena Avenue; y al sur con propiedades comerciales.

Los registros históricos indican que se almacenaron y manejaron en esta instalación, materiales peligrosos, incluyendo solventes para limpieza basados en los hidrocarburos de petróleo, que se usan en el proceso de lavado en seco. Investigaciones previas revelaron la presencia de PCE y de tricloroeteno (TCE) por debajo del Sitio. El PCE se degrada de forma natural en el medio ambiente a TCE; por lo tanto, el TCE que se encuentra presente es probablemente un producto de la degradación del PCE. La exposición a altos niveles de PCE y TCE en el aire en interiores, puede tener como resultado un aumento en el riesgo de cáncer cuando éstos se respiran continuamente por periodos largos de tiempo (generalmente más de 20 años). Las actividades

de limpieza ambiental en el Sitio son necesarias para proteger la salud del público y del medio ambiente.

Plan Propuesto de Limpieza

La extracción de vapor de suelo (SVE, por sus siglas en ingles) es el método propuesto para limpiar el PCE y TCE que se han detectado en los suelos y el gas de suelo por debajo del Sitio. La SVE es una tecnología probada para tratar la contaminación por compuestos volátiles. La SVE se logrará con la instalación de un sistema de extracción de vapor (SVES, por sus siglas en ingles). El SVES incluye la instalación de pozos de extracción del vapor de suelo, el vapor extraído será tratado con carbono activado granular, antes de liberar el gas a la atmósfera. Se monitoreará el SVES para asegurar que el gas que sea liberado a la atmósfera sea tratado exitosamente y que cumpla con las normas y los estándares del Distrito de Manejo de la Calidad de Aire de la Costa Sur. (SCAQMD, por sus siglas en inglés). Bajo la supervisión del DTSC, Ameripride Services Inc. propone instalar un sistema SVE para limpiar el Sitio.

Es probable que el sistema SVE esté en operaciones hasta que se cumplan con las metas de limpieza. El cálculo inicial de tiempo para tratar la contaminación es de aproximadamente 12 a 24 meses. El sistema estará operando hasta que se logren niveles que ya no representen un riesgo significativo.

Ley de Calidad Ambiental de California

De conformidad con la Ley de Calidad Ambiental de California, (CEQA, por sus siglas en inglés), el DTSC deberá evaluar si las acciones propuestas pueden tener algún impacto significativo en la salud humana y en el medio ambiente.

Como parte de la evaluación, el DTSC ha propuesto un Aviso de Exención, el cual indica que el Plan de Trabajo para las Acciones de Remoción no tendrá como resultado un efecto negativo significativo en la salud humana ni en el medio ambiente.

Próximos Pasos

Al concluir el Período para Comentarios del Público, el DTSC revisará y tomará en cuenta todo comentario del público y tomará una decisión final en torno al Plan de Trabajo para las Acciones de Remoción. Se enviará por correo una Respuesta a los Comentarios a toda persona que haya hecho algún comentario y que proporcione su nombre y dirección. Se guardará en los Depósitos de Información enlistados en esta hoja de datos una copia de la Respuesta a los Comentarios.

Una vez que se apruebe el Plan, se construirá el sistema y es probable que empiece el trabajo en el otoño del 2012.

Dónde Encontrar Documentos Sobre el Proyecto

El RAW y otros documentos relacionados están disponibles para revisión por parte del público en los depósitos de información que se enlistan a continuación. El Registro Administrativo está disponible en su totalidad en la Oficina del DTSC de Chatsworth.

Sucursal Lincoln Heights de la
Biblioteca Pública de Los Ángeles
2530 Workmen Street
Los Angeles, California 90031
Teléfono: (323) 226-1692

Departamento de Control de Sustancias Tóxicas
Oficina de Registros Regionales
9211 Oakdale Avenue
Chatsworth, California 91311
Teléfono: (818) 717-6521

Las copias de los reportes técnicos clave, las hojas de datos y otra información relacionada al Sitio también están disponibles en línea en el portal de internet del DTSC: www.envirostor.dtsc.ca.gov/public

Todos los documentos que el DTSC ha puesto a disposición del público pueden estar también disponibles en un formato alterno (i.e. Braille, letra grande, etc.) o en otro idioma, según sea apropiado, de conformidad con las leyes estatales y federales. Favor de comunicarse con Zenzi Poindexter para recibir ayuda.

Con Quien Comunicarse para Recibir Mayor Informacion
Para mayor información sobre el borrador del Plan de Limpieza o para que se le agregue a la lista de correo, favor de comunicarse con alguno de los siguientes representantes del DTSC:

Alberto Valmidiano
Gerente del Proyecto del DTSC
9211 Oakdale Avenue
Chatsworth, California 91311
Teléfono: (818) 717-6611
alberto.valmidiano@dtsc.ca.gov

Zenzi Poindexter
Especialista en Participación Pública del DTSC
9211 Oakdale Avenue

RE: PRA of June 19, 2019, Reference # H010533-061919.

Dear Fulcrum Resources Heather Conner,

The Los Angeles County Fire Department, Health Hazardous Materials Division, being the custodian or keeper of records, certify that a thorough search for the records you requested has been carried out.

Re: 141 W AVENUE 34
LOS ANGELES CA 90031

The search revealed that no records were found for the above noted address.

It should be understood that this does not mean that the records you requested do not exist. It is possible that such records may be misfiled; exist under another spelling, another name, or may have been destroyed based on this Department's Record Retention Policy. However, with the information furnished to our office, and to the best of our knowledge, no records were located.

For businesses in Burbank, CulverCity, Downey, City of LA, La Habra, Monrovia, Pasadena, Santa Monica, Torrance& Underground Storage Tanks in Los Angeles County jurisdiction click here.

If you have any questions regarding your request, please contact our office at (323) 890-4107.

ORSWELL & KASMAN, INC.
Environmental Assessments & Consulting

September 28, 2012

Mr. Robert Gonzales
Citizens Business Bank
1010 East Colorado Boulevard
Pasadena, CA 91106

Re: Phase I Environmental Site Assessment Report

Dear Robert:

Enclosed is our Phase I Environmental Site Assessment Report on the multi-tenant commercial property located at 135, 141 and 153 West Avenue 34 and 3401 and 3433 Pasadena Avenue in Los Angeles. Also enclosed is our invoice for services.

Effective July 1, 2012, the Governor of California terminated the California Registered Environmental Assessors (REA) Program. What does this mean for our clients? Nothing. Orswell & Kasman, Inc. will continue to prepare the same quality reports our customers have been accustomed to receiving. The USEPA and ASTM International have set standards which define the qualifications of environmental professionals. Although there is no longer a California registration program, all of our reports will be prepared by trained environmental assessors and reviewed by an ASTM Qualified Environmental Professional

If you should have any questions concerning any information in the report, please feel free to call me. Thanks again for the opportunity to be of service.

Sincerely,

James Orswell
Environmental Assessor

PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT

MULTI-TENANT COMMERCIAL PROPERTY
135, 141 AND 153 WEST AVENUE 34
3401 AND 3433 PASADENA AVENUE
LOS ANGELES, CALIFORNIA 90031

1.0 SUMMARY

Based on a review of regulatory records, historical site information, and a visual inspection of the subject property and surrounding area, this assessment has revealed no *recognized environmental conditions* or *historical recognized environmental conditions* in connection with the Property, except as follows:

1) The subject property is occupied by multiple tenants. The 3433 Pasadena Avenue building is currently occupied by Warner Brothers Studios, a prop and set design business. The business stores and uses large quantities of water-based paint, and waste paint is generated by the business activities. The hazardous materials and hazardous wastes appear to be properly stored and managed and no significant spills or leaks were observed on the premises; and

2) Eleven offsite locations have been identified as potential risks or threats to the subject property. According to the data, ten of the sites are not located in the near vicinity, and there is no indication that contaminants from these sites have migrated onto the subject property.

   The former Welch's Uniform Facility site (#5 on map), 3505 Pasadena Avenue, is located on the adjacent property to the north, and the business is identified by State of California Environmental Protection Agency (CAL-EPA) Department of Toxic Substances Control (DTSC) as an active hazardous waste site. According to the DTSC CalSite database records, the site was previously occupied by Welch's Uniform and the property was used as a laundry and uniform rental facility over a 70 year period. Environmental studies indicate the soil and groundwater beneath the facility is contaminated with volatile organic compounds including trichloroethene (TCE). In addition, the former Welch's Uniform Rental site is identified by the State of California Regional Water Quality Control Board (RWQCB) as having two open RWQCB Cleanup Program sites. The first case was first opened in December 1987. According to the RWQCB records, the groundwater was contaminated with non-petroleum hydrocarbons, and the site is undergoing verification monitoring. The second case was opened in December 1998 and the site is undergoing an assessment. A review of the City of Los Angeles Fire Department (LAFD) records revealed Welch's Uniform applied for a permit to remove a 2,000-gallon underground diesel fuel tank in 1987. Soil sampling beneath the tank revealed significant Total Petroleum Hydrocarbon as gasoline (TPH-g)

contamination (8,600 ppm). The groundwater beneath the site was determined to be about 35 feet below the ground surface, and the groundwater flows away from the subject property in a west-northwest direction. In February 1988, Welch's Uniform applied for a permit to abandon five underground storage tanks in-place, and in December 1988, Welch's Uniform applied for a permit to remove five additional underground storage tanks. In May 2004, Welch's Uniform applied for a permit to remove one additional 1,000-gallon underground storage tank. Soil sampling beneath the tank did not detect any contamination problems, and on October 26, 2004, the DPW/UGT issued a no further action letter for the closure of the 1,000-gallon underground tank. An inspection of the property revealed the site is currently a vacant lot, and remedial activities were being conducted on the site.

Should it be determined the groundwater beneath the subject property has in fact been impacted by the Former Welch's Uniform Rental site, it is the policy of the State of California and the United States Environmental Protection Agency not to hold property owners responsible for costs to clean up contaminated groundwater beneath their property, unless the owners contributed to the problem. There is no indication from a review of the regulatory records and a site inspection that the subject property has had any problems concerning the storage, usage or disposal of hazardous materials, and it appears the former Welch's Uniform Rental site is in the process of addressing the contamination problem.

Our review of regulatory and historical records, a visual inspection of the site and surrounding area, and interviews with the property owner and the safety manager for Warner Brothers Studios has found no evidence of other *recognized environmental conditions or historical recognized environmental conditions* which are likely to impact the subject property. Although data failure occurred in the historical uses of the Property prior to 1906, it is unlikely the data failure will impact the ability to identify *recognized environmental conditions.* Based on the results of this assessment, no further environmental studies are recommended for the site.

2.0 INTRODUCTION

2.1 Purpose

The purpose of this Phase I Environmental Site Assessment is to determine if any *recognized environmental conditions* or *historical recognized environmental conditions* exist on or near the subject property. As defined by ASTM Standard Practice E 1527-05, a *recognized environmental condition* is the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions that generally do not present a material risk of harm to public

health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

The ASTM Standard defines a *historical recognized environmental condition* as a condition which in the past would have been considered a *recognized environmental condition*, but which may or may not be considered a *recognized environmental condition* currently. If a past release of any hazardous substance or petroleum products has occurred in connection with the property and has been remediated, with such remediation accepted by the responsible regulatory agency, this condition shall be considered a *historical recognized environmental condition.*

The ASTM Standard Practice E 1527-05 requires all obvious uses of the Property shall be identified at five year intervals from the present, back to the Property's first developed use, or back to 1940, whichever is earlier, using standard historical sources. Developed use includes agricultural uses or placement of fill dirt. Data failure occurs when these objectives are not met. Our review of standard historical sources include aerial photographs, fire insurance maps, local street directories, and building department or assessor's property records. Our experience in performing Phase I Environmental Site Assessments since 1990 has determined that the other standard historical sources identified in the ASTM Standard Practice E 1527-05 are not reasonably obtainable or likely to be sufficiently useful, accurate, or complete in terms of satisfying the objectives.

2.2 Detailed Scope of Services

This report is based on a preliminary study into the past and current uses of the subject property and the surrounding area. The report includes a visual inspection of the property and adjacent sites, and a review of regulatory agency records, aerial photographs, and other historic record sources. Also included in this report are maps, diagrams, and photographs pertaining to this site.

2.3 Significant Assumptions

The information in this report is furnished in good faith and was obtained from sources and databases considered to be reliable; however, nothing in this report should be construed as a promise or guarantee that the subject property is free of environmental hazards. In many instances, this report relies on regulatory database information provided by federal, state and local governmental agencies. Although the database information used in this report consists of the most recently released records, it may not reflect the actual current status of the case.

2.4 Limitations and Exceptions

This report was prepared in conformance to meet or exceed the scope and practice as set forth by the American Society for Testing & Materials (ASTM) Standard Practice E 1527-05, "Standard Practice of Environmental Site Assessments: Phase I Environmental Site Assessment Process." No tests were conducted, and no samples of air, water, soil or building materials were taken.

This report is limited in nature and should not be construed to be a characterization of environmental regulatory compliance or of any conditions above or below grade. The evaluations in this report are based on information provided by interviews, readily accessible regulatory and historical records and observations made during the site inspection. No independent verification of the information was obtained or performed by Orswell & Kasman, Inc.

Orswell & Kasman, Inc. prepared this report in a competent and professional manner in accordance with sound industry standards, practices and procedures. No warranty is provided regarding the actual site conditions described in this report beyond matters amenable to visual confirmation. We make no representation or warranty regarding the accuracy or reliability of information or documents provided by others and contained within this report.

2.5 Special Terms and Conditions

No special terms or conditions have been incorporated into the preparation of this report. There were also no limiting physical conditions such as rain or lack of electrical power, that had a limiting effect on the site inspection.

2.6 User Reliance

This report is prepared for the express use of the client, and its contents are considered to be privileged and confidential. Acceptance of this report constitutes an agreement by the client to assume full liability for information contained herein. This report is for the sole use and interpretation of the client and it is not be reproduced or distributed to outside parties.

3.0 SITE DESCRIPTION

3.1 Location and Legal Description

The subject property, 135, 141 and 153 West Avenue 34 and 3401 and 3433 Pasadena Avenue, Los Angeles, California, is located at the northwest corner of West Avenue 34 and Pasadena Avenue. The property is described as Los Angeles County Tax Assessor's Parcel Numbers (APNs) 5205-004-003, 5205-004-005, 5205-004-007 and 5205-004-011.

3.2 Site and Vicinity General Characteristics

The site consists of five industrial buildings with paved parking and storage areas, located in a mixed industrial, commercial and residential area of Los Angeles (see site plan).

3.3 Current Use of Property

The subject property is currently occupied by Ortiz Bros. Moving and Storage, Submission Factory, Water Wellness and Warner Brothers Studios. No heavy manufacturing activities take place on the site.

3.4 Descriptions of Structures, Roads, Other Improvements On Site

The subject property is occupied by five single-story light-industrial buildings, which are described as follows:

The 3401 Pasadena Avenue building consists of a single-story wood-frame and brick light-industrial structure which is divided into an office area and a warehouse area.

The 3433 Pasadena Avenue building consists of a single-story wood-frame and concrete-block light-industrial structure which is divided into an office area and a production area.

The 135 West Avenue 34 building consists of a single-story corrugated steel warehouse.

The 141 West Avenue 34 building consists of a large industrial warehouse which is divided into an office area and a warehouse area.

The 153 West Avenue 34 building consists of a single-story brick light-industrial building.

The heating, ventilation and air conditioning (HVAC) systems for the buildings appear to be mounted on the roofs of the three larger buildings and on the side of the 141 Avenue 34 building. No HVAC systems were observed for the smaller buildings located on Avenue 34. There are asphalt and concrete paved parking areas and open storage areas surrounding the buildings. The site and surrounding area are fairly level, and the subject property is connected to the municipal water and sewage systems.

3.5 Current Uses of the Adjoining Properties

North of the subject property is a vacant lot. Pasadena Avenue is to the east, and further east is Hillside Elementary School, an apartment building and several residences. Avenue 34 is to the south, and further south are several residences, three unidentified commercial buildings, a parking lot and two additional commercial buildings which are occupied by VGA Apparel and an unidentified screen printing business. West of the site is a railroad right-of-way and further west is an unidentified industrial building and a large parking lot.

4.0 USER PROVIDED INFORMATION

4.1 Title Records

No recorded land title records were provided by the client for review.

4.2 Environmental Liens or Activity and Use Limitations

The client has not provided any information concerning environmental liens or activity and use limitations.

4.3 Specialized Knowledge

No specialized knowledge of *recognized environmental conditions* or *historical recognized environmental conditions* in connection with the subject property has been provided by the client.

4.4 Commonly Known or Reasonably Ascertainable Information

The client has not provided any commonly known or reasonably ascertainable information within the local community about the subject property that is material to *recognized environmental conditions* in connection with the site.

4.5 Valuation Reduction for Environmental Issues

No information has been provided by the client which indicates the subject property is being sold or purchased at a significantly reduced price due to outstanding environmental issues.

4.6 Owner, Property Manager, and Occupant Information

Information provided by the owner, property manager, and/or occupants of the site are included in this report under Section 7.0, Interviews.

4.7 Reasons for Performing Phase I Environmental Site Assessment

The reasons for performing this Phase I Environmental Site Assessment are to satisfy commercial real estate lending requirements or provide due diligence information concerning the historical uses and current condition of the site.

4.8 Other User Provided Information

A Phase I Environmental Site Assessment Report was completed for the 141 Avenue 34 building by Orswell & Kasman, Inc. on March 2, 2000. The report indicates that the 141 Avenue 34

building was occupied by Studio 34, a film production studio and Select Storage, a storage facility. The report states that small quantities of water-based and oil-based paints were used and stored inside the building and the materials appeared to be properly stored and managed. The report stated that the property owner, Eric Ortiz was interviewed, and Mr. Ortiz stated the production companies are responsible for the disposal of any paint wastes which are generated inside the production areas. He was not aware of any chemical spills or contamination problems with the site. The report concluded that the adjacent property to the north (Welch's Uniforms) was identified as a clean-up site that was addressing the contamination problem, and based on the results of the assessment, no further environmental studies were recommended for the site.

A Phase I Environmental Site Assessment Report was completed on the 135 Avenue 34 and 3401 Pasadena Avenue buildings by Orswell & Kasman, Inc. on August 1, 2005. The report indicates that the buildings were occupied by United Finishing and Laminating, a commercial laminating business. The report states that small quantities of lubricating oil, bio-degradable detergents, glues and gear oil were observed to be used and stored inside the building and the materials appeared to be properly stored and managed. The report stated that the business owner, Pat Moller was interviewed, and Mr. Moller stated the business used and stored small quantities of hazardous materials, which were stored in five-gallon containers inside a fenced compound in the storage yard, and he said no hazardous wastes are generated from the business operations. He was not aware of any chemical spills or contamination problems with the site. The report concluded that the adjacent property to the north (Welch's Uniforms) was identified as a clean-up site that was addressing the contamination problem, and based on the results of the assessment, no further environmental studies were recommended for the site.

5.0 RECORDS REVIEW

5.1 Standard Environmental Records Sources

FEDERAL AGENCY RECORDS

United States Environmental Protection Agency (USEPA)
National Priorities List

The National Priorities List (NPL) identifies abandoned or uncontrolled hazardous waste sites which have been identified as possibly representing a long-term threat to the public health or environment. These sites have been identified as being highly contaminated with hazardous substances and represent the USEPA's target enforcement and cleanup efforts. Studies of individual sites are conducted by the USEPA to determine level of contamination, and the sites are then compared and ranked to other sites on the NPL.

A review of the USEPA National Priorities List dated September 2011 indicates there are no proposed, final or delisted sites within one mile of the subject property.

Phase I Environmental Site Assessment Report
135, 141 and 153 West Avenue 34
3401 and 3433 Pasadena Avenue
September 28, 2012

United States Environmental Protection Agency (USEPA)
Federal Superfund Liens List

The USEPA maintains a list of Superfund Lien sites that have been issued on properties throughout the United States. These sites have been remediated through the expenditures of Superfund monies; the purpose of the lien is to prevent the property owner from gaining a financial benefit from the federal government's cleanup and restoration activities.

A review of the July 2011 Federal Superfund List revealed there are no Superfund Liens on or adjacent to the site.

United States Environmental Protection Agency (USEPA)
Comprehensive Environmental Response, Compensation
and Liability Information System (CERCLIS)

The USEPA has developed a database known as CERCLIS which contains information on potential hazardous waste sites located throughout the United States. There are over 33,000 sites on the CERCLIS inventory. All sites are subjected to a preliminary assessment and thereafter are either placed on the National Priority List (NPL) or are placed in a category for those sites requiring no further Federal Superfund action.

A review of the September 2011 CERCLIS report indicates there are three CERCLIS sites within a ½ mile radius of the subject property:

Kennington Ltd. (ITT Cannon) (#1 on map)
3209 Humboldt Street
Los Angeles, CA 90031

This site investigation was opened in February 1994. According to the records, a preliminary assessment was completed in August 2001, and a site reassessment was completed in May 2006. No further remedial action has been reported for this site.

NI West Incorporated (#2 on map)
3011 Humboldt Street
Los Angeles, CA 90031

This site investigation was opened in January 1993. According to the records, a combined preliminary assessment and site assessment was completed in September 2005. No further remedial action has been reported for this site.

Jaybee Ajax Manufacturing (#3 on map)
301 West Avenue 26
Los Angeles, CA 90031

This site investigation was opened in March 2000. According to the records, a preliminary assessment was started in October 2002 and in July 2007. No further remedial action has been reported for this site.

There is one listed "No Further Required Action Planned" (NFRAP) site identified within a ½ mile radius:

Baron Manufacturing (#4 on map)
241 Avenue 26
Los Angeles, CA 90031

This site investigation was opened in June 1981, and a preliminary assessment was completed in September 1984. The investigation concluded that the facility does not qualify for the NPL and no further required actions are planned for this site.

United States Environmental Protection Agency (USEPA)
Resource Conservation and Recovery Act (RCRA)
Treatment, Storage or Disposal Facilities (TSDF)

The USEPA maintains a list of facilities which have been authorized to receive hazardous waste. These facilities have permits to treat, store, or dispose of the waste, as determined by the RCRA regulations. In addition, the USEPA publishes a list of those facilities who are subject to a corrective action, based on the facilities' waste handling and storage procedures. The facilities which are subject to a corrective action are identified as CORRACTS sites.

A review of the March 2011 RCRA TSDF list determined there are no known CORRACTS facilities within a one mile radius of the subject property. In addition, there are no non-CORRACTS TSD facilities listed within a ½ mile radius.

United States Environmental Protection Agency (USEPA)
Resource Conservation and Recovery Act (RCRA)
Hazardous Waste Generators

The USEPA maintains a list of facilities which are identified as generators of large and small quantities of hazardous waste. These facilities have permits to generate, store and dispose of the waste, as determined by the RCRA regulations.

A review of the March 2011 RCRA Hazardous Waste Generators list determined the subject property (American Caster Corporation, 141 West Avenue 34; Bad Teacher Construction

Warehouse, 3433 Pasadena Avenue) is identified as a small quantity hazardous waste generator. In addition, there are records of a large quantity hazardous waste generator identified on the adjacent property to the north (former Welch's Uniform site, 3505 Pasadena Avenue), and a small quantity hazardous waste generator to the east (Los Angeles Unified School District Hillside Elementary, 120 East Avenue 35),

United States Environmental Protection Agency (USEPA)
Institutional Control / Engineering Control Registries

The USEPA maintains a list of institutional and engineering controls for the purpose of tracking sites that may contain residual contamination or have activity and use limitations. Engineering controls are engineering measures designed to minimize the potential for human exposure to contamination by either limiting direct contact with contaminated areas or controlling migration of contaminants. Institutional controls are non-engineering controls used to restrict land use or land access in order to protect people and the environment from exposure to hazardous substances remaining at the site or facility.

A review of the September 2006 USEPA Institutional Control / Engineering Control Registry did not identify the subject property as having institutional or engineering controls.

United States Environmental Protection Agency (USEPA)
Office of Emergency and Remedial Response
Emergency Response Notification System (ERNS)

The USEPA maintains a list of locations which have reported a release of oil or hazardous substances to the federal government. Most of the data in this system is based on information that was received during the initial notification.

A review of the ERNS list for 1999 determined there are no reported incidents on the subject property.

United States Department of Homeland Security
United States Coast Guard
National Response Center (NRC)

The NRC is the national point of contact for reporting all oil, chemical, radiological, biological and etiological discharges into the environment anywhere in the United States and its territories. In addition to gathering and distributing spill data for Federal On-Scene Coordinators and serving as the communications and operations center for the National Response Team, the NRC maintains agreements with a variety of federal entities to make additional notifications regarding incidents meeting established trigger criteria.

Phase I Environmental Site Assessment Report
135, 141 and 153 West Avenue 34
3401 and 3433 Pasadena Avenue
September 28, 2012

A review of the NRC list for 2012 determined there are no reported incidents on the subject property.

STATE AGENCY RECORDS

State of California
Environmental Protection Agency (CAL-EPA)
Department of Toxic Substances Control (DTSC)

CAL-EPA is responsible for the regulation and enforcement of environmental health laws within the state of California, as set forth by the California Health and Safety Code. CAL-EPA is also designated by the USEPA to assist in enforcing federal environmental laws. CAL-EPA regulates companies involved in the generation, transportation, storage and disposal of hazardous substances. CAL-EPA records include the "CalSites" database, which is a listing of 7,800 known active, inactive and abandoned hazardous waste sites. These sites have previously been reported in the Abandoned Site Program Information System (ASPIS), Bond Expenditure Plan (BEP), and Cortese databases. CAL-EPA records also include a listing of the California Integrated Waste Management Board's "Active" and "Closed and Inactive" landfills database.

A review of the January 2012 CAL-EPA records determined there are six listed "CalSite" facilities within one mile of the subject property:

Kennington (#1 on map)
3209 Humboldt Street
Los Angeles, CA 90031

This site was placed in "Active" status in April 1996. According to the records, the soil is contaminated with polychlorinated biphenyls (PCBs), tetrachloroethylene (PCE), and other chemicals. A site investigation or remediation of the site is currently in progress.

Jaybee Site at Lincoln Heights (#3 on map)
301 West Avenue 26
Los Angeles, CA 90031

This site was placed in "Active" status in April 2004. According to the records, the soil is contaminated with naphthalene, toluene, and other chemicals. A site investigation or remediation of the site is currently in progress.

Phase I Environmental Site Assessment Report
135, 141 and 153 West Avenue 34
3401 and 3433 Pasadena Avenue
September 28, 2012

Former Welch's Uniform Facility (#5 on map)
3505 Pasadena Avenue
Los Angeles, CA 90031

This site was placed in "Active" status in May 2007. According to the records, the soil is contaminated with trichloroethylene (TCE). A site investigation or remediation of the site is currently in progress. According to the records, the site was previously occupied by Welch's Uniform and has been used as a laundry and uniform rental facility over a 70 year period. Environmental studies conducted at the site indicate the soil and groundwater beneath the facility is contaminated with volatile organic compounds including trichloroethene (TCE).

Loreto Street Elementary School Addition (#6 on map)
3408 Arroyo Seco Avenue
Los Angeles, CA 90065

This site was placed in "Inactive - Needs Evaluation" status in September 2006. DTSC has determined that a Preliminary Endangerment Assessment or other evaluation is required.

Victor Industrial Battery (#7 on map)
138 North San Fernando Road
Los Angeles, CA 90031

This site was placed in "Certified Operation and Maintenance – Land Use Restrictions" status in March 1995. According to the records, the soil is potentially contaminated with liquids with PH<=2, acid solution 2>PH with metals, and other chemicals. Properties with Land Use Restrictions have limits on future property uses required by DTSC due to residual levels of contamination or the type of cleanup actions conducted.

National Aircraft Equipment Co. (#8 on map)
275 North Avenue 19
Los Angeles, CA 90031

This site was placed in "Inactive - Needs Evaluation" status in July 2005. DTSC has determined that a Preliminary Endangerment Assessment or other evaluation is required.

There are no active, closed or inactive landfill sites within a ½ mile radius of the subject property.

Phase I Environmental Site Assessment Report
135, 141 and 153 West Avenue 34
3401 and 3433 Pasadena Avenue
September 28, 2012

State of California
Environmental Protection Agency (CAL-EPA)
Department of Toxic Substances Control (DTSC)
Land Use Covenants

CAL-EPA/DTSC utilizes Land Use Covenants (LUCs) to protect the public from unsafe exposures to residual contamination that is left in place after site remediation activities have been completed. The LUC imposes limitations on land use when hazardous materials, wastes, or substances remain on the property at levels which are not suitable for unrestricted use of the land. The LUC includes easements, servitudes, covenants, and restrictions which run with the land and continue into perpetuity unless modified or terminated in accordance with applicable law. All LUCs are signed by the DTSC and the landowner, and recorded in the county where the land is located.

A review of the January 2012 DTSC database records did not identify any deed restrictions on the subject property.

State of California
Water Resources Control Board
Regional Water Quality Control Board (RWQCB)
Land Use Covenants

RWQCB utilizes Land Use Covenants (LUCs) to protect the public from unsafe exposures to residual contamination that is left in place after site remediation activities have been completed. The LUC imposes limitations on land use when hazardous materials, wastes, or substances remain on the property at levels which are not suitable for unrestricted use of the land. The LUC includes easements, servitudes, covenants, and restrictions which run with the land and continue into perpetuity unless modified or terminated in accordance with applicable law. All LUCs are signed by the RWQCB and the landowner, and recorded in the county where the land is located.

A review of the June 2011 RWQCB database records did not identify any deed restrictions on the subject property.

State of California
Water Resources Control Board
Regional Water Quality Control Board (RWQCB)

The RWQCB is responsible for monitoring the quality and flow of groundwater, and they address other potential threats to the groundwater from surface spills and leaks. The RWQCB monitors the contamination problem, the investigation and any remedial action. Their database information includes active and closed Cleanup Program Sites, Land Disposal Sites, Leaking Underground Storage Tank (LUST) Sites, Military Cleanup Sites, Military Privatized Sites,

Military Underground Storage Tank Sites and registered underground storage tank sites (RWQCB sites) within the State of California.

A review of the January 2012 RWQCB records determined the subject property is not listed as a known RWQCB site. According to the records, there is one known open RWQCB LUST site within a ½ mile radius of the subject property:

Chevron Station #9-3707 (#9 on map)
2601 North Figueroa Street
Los Angeles, CA 90065

This site was opened in September 1992. According to the records, the site is identified as an open LUST Cleanup Site that is undergoing a site assessment.

According to the records, there are one active non-LUST RWQCB Cleanup sites adjacent to the subject property:

Former Welch's Uniform Rental Site (#5 on map)
3505 Pasadena Avenue
Los Angeles, CA 90031

This case was first opened in December 1987, and the site is identified as an open Cleanup Program Site that is undergoing verification monitoring. According to the records, the groundwater is contaminated with non-petroleum hydrocarbon. A second case was opened in December 1998. According to the records, the site is identified as an open Cleanup Program Site that is undergoing a site assessment.

There are no records of registered underground storage tanks on the subject property, however, there are historical records of an underground storage tank on the adjacent property to the north (Welch's Uniform Rental Site, 3505 Pasadena Avenue).

5.2 Additional Environmental Record Sources

State of California
Department of Conservation
Division of Mines and Geology (CDMG)

The CDMG conducts studies, publishes maps, and provides information concerning the geological formations throughout the state of California. CDMG research information is combined with information from the United States Geological Survey and the ensuing geologic maps of the state are prepared. These geologic maps also illustrate the approximate locations of known earthquake faults.

A review of the area map published by CDMG indicates the geologic area surrounding the subject property consists of Recent alluvium, which includes alluvial fan, flood-plain, and streambed deposits. The client may wish to refer to the enclosed geologic map.

State of California
Department of Oil
Gas and Geothermal Resources (DOGGR)

The DOGGR regulates the drilling, operation and abandonment of gas and oil wells throughout the state of California. If an active, idle or abandoned well is located on or adjacent to a proposed construction site, DOGGR requires a site plan review prior to issuing a building permit. Abandoned oil wells must meet standards established in 1984.

A review of the area map published by DOGGR indicates there are no producing, idle or abandoned oil wells on or adjacent to the subject property. The client may wish to review the enclosed map.

South Coast Air Quality
Management District (AQMD)

The AQMD is responsible for the development and enforcement of regulations concerning air emissions and airborne hazards from stationary sources in the South Coast Air Basin. AQMD maintains a "Hot Spot" list of facilities whose air emissions pose as a risk to the surrounding community.

A review of the AQMD records determined there are no "Hot Spot" facilities on or adjacent to the subject property.

Los Angeles County
Department of Public Works
Waste Management Division (DPW/WMD)

DPW/WMD maintains maps showing the locations of active, inactive or future solid waste landfill sites in Los Angeles County.

A review of DPW's major waste systems map determined there are two landfill sites within a ½ mile radius of the subject property:

Los Angeles City (Lacy Street) (#10 on map)
400 Avenue 26
Los Angeles, CA 90031

According to the records, this site is listed as an inactive, Class II (municipal waste) landfill.

Phase I Environmental Site Assessment Report
135, 141 and 153 West Avenue 34
3401 and 3433 Pasadena Avenue
September 28, 2012

Unnamed Site (#11 on map)
Avenue 26 and Figueroa Street
Los Angeles, CA 90031

According to the records, this site is listed as an inactive, Class II (municipal waste) landfill.

Los Angeles County
Department of Public Works
Hydraulic/Water Conservation Division (DPW/HWC)

DPW/HWC maintains contour maps and data of the groundwater levels in the Los Angeles County area. The map shows the depth to the aquifer, as well as the approximate flow direction.

A review of this data revealed the site is located at an elevation of approximately 380 feet above sea level, and the closest well is located about ½ mile northwest of the site, at Cypress Avenue and Huron Street. The elevation of the well is 366 feet above sea level, and the groundwater levels are 327 feet above sea level, or 39 feet below the ground surface. Based on the topography of the area, the groundwater flow is expected to be to the west, although this cannot be confirmed due to lack of nearby wells.

Los Angeles County
Fire Department (LACOFD)
Health Hazardous Materials Division

LACOFD maintains inspection and inventory records of companies involved in the storage and use of hazardous materials, petrochemicals, or hazardous waste. LACOFD attempts to maintain a current record of the types of hazardous substances that are utilized or stored at a particular site, and conducts periodic inspections for safety and compliance. In addition, LACOFD maintains records concerning hazardous material sites in Los Angeles County, which are reported to LACOFD by various regulatory agencies. Upon receiving the report, LACOFD monitors the cleanup process on the contaminated site.

According to the LACOFD files, there are no records of hazardous material handlers or hazardous waste generators for the subject or adjacent properties. A review of the Active Mitigation Complaint Control Logs determined there are no listed sites on or adjacent to the subject property.

City of Los Angeles
Fire Department (LAFD)

LAFD maintains inspection and inventory records of companies involved in the storage and use of hazardous materials or petrochemicals. LAFD attempts to maintain a current record of the types of materials that are utilized at a particular site, and conducts periodic inspections for

safety and compliance. LAFD also maintains records on underground storage tanks, issues installation and removal permits, and monitors the contamination cleanup process.

A review of the LAFD files determined there are no records of underground storage tanks or hazardous materials inventories for the subject property.

A review of the LAFD files for 3505 Pasadena Avenue, which is the adjacent property to the north, revealed the site was previously occupied by Welch's Uniform. In 1987, Welch's Uniform applied for a permit to remove a 2,000-gallon underground diesel fuel tank. Soil sampling beneath the tank revealed significant Total Petroleum Hydrocarbon as gasoline (TPH-g) contamination (8,600 ppm). The groundwater beneath the site was determined to be about 35 feet below the ground surface, and the groundwater flows away from the subject property in a west-northwest direction. In February 1988, Welch's Uniform applied for a permit to abandon five underground storage tanks in-place, and in December 1988, Welch's Uniform applied for a permit to remove five additional underground storage tanks. In May 2004, Welch's Uniform applied for a permit to remove one additional 1,000-gallon underground storage tank. Soil sampling beneath the tank did not detect any contamination problems, and on October 26, 2004, the DPW/UGT issued a no further action letter for the closure of the 1,000-gallon underground tank.

5.3 Physical Setting Sources

A United States Geological Survey (USGS) 7.5 Minute Topographical map of the subject property and surrounding area is included in the appendices of the report. The map shows the locations of the identified offsite environmental risks or threats described in the report.

5.4 Historical Use Information on the Property

City of Los Angeles
Building Department

A review of the building records for the subject property located the following records:

Date	Activity	Owner
	135 Avenue 34	
01/23	Reroof building	East/Northeast Economic Dev. Corp.
	137 Avenue 34	
01/23	Move residence from 2639 Lacy Bel Avenue	Charles Mattingly
04/61	Demolish dwelling	Cannon Electric Co.

Phase I Environmental Site Assessment Report
135, 141 and 153 West Avenue 34
3401 and 3433 Pasadena Avenue
September 28, 2012

Date	Activity	Owner
	137½ Avenue 34	
01/23	Move residence from 2641 Lacy Bel Avenue	Charles Mattingly
04/61	Demolish dwelling	Cannon Electric Co.
	139 Avenue 34	
01/23	Move residence from 2643 Lacy Bel Avenue	Charles Mattingly
04/61	Demolish dwelling	Cannon Electric Co.
	141 Avenue 34	
07/16	Add two rooms to residence	Chas Fishback
07/16	Construct garage	Chas Fishback
02/28	Add two bedrooms to house	Felipe Villarreal
07/53	Construct garage	Joseph Gomez
08/56	Demolish building	Teal House Wreckers
08/74	Demolish storage building	East/Northeast Economic Dev. Corp.
	141-149 Avenue 34	
09/56	Construct parking lot	Cannon Electric Co.
04/77	Grade for building site	Los Angeles Economic Dev. Corp.
04/77	Encroach into 169 Ave. 34 & 3505 Pasadena Ave.	Los Angeles Economic Dev. Corp.
07/77	Construct foundation only for factory	Los Angeles Economic Dev. Corp.
08/77	Construct light manufacturing building	Los Angeles Economic Dev. Corp.
11/77	Add office partitions	Los Angeles Economic Dev. Corp.
12/77	Add storage tank for plastic pellets	Los Angeles Growing Corp.
	143 Avenue 34	
08/06	Construct dwelling	F.H. Small
08/56	Demolish building	Teal House Wreckers
08/74	Demolish storage building	East/Northeast Economic Dev. Corp.
	145 Avenue 34	
08/06	Construct dwelling	F.H. Small
08/56	Demolish building	Teal House Wreckers
08/74	Demolish storage building	East/Northeast Economic Dev. Corp.
	147 Avenue 34	
08/06	Construct dwelling	F.H. Small
08/56	Demolish building	Teal House Wreckers
08/74	Demolish storage building	East/Northeast Economic Dev. Corp.

Phase I Environmental Site Assessment Report
135, 141 and 153 West Avenue 34
3401 and 3433 Pasadena Avenue
September 28, 2012

Date	Activity	Owner
	149 Avenue 34	
08/06	Construct dwelling	F.H. Small
08/56	Demolish building	Teal House Wreckers
08/74	Demolish storage building	East/Northeast Economic Dev. Corp.
	151 Avenue 34	
08/74	Demolish storage building	East/Northeast Economic Dev. Corp.
	153 Avenue 34	
10/29	Construct factory	Frank Mark
08/05	Alter roof on dwelling	George Harris
03/66	Parapet corrections	M. Guillermo
12/00	Full compliance with division 88	Guillermo
	3407 Pasadena Avenue	
4/25	Construct private garage	John Murphy
--/45	Move building to 1037 North Avenue 63	Anne Bremer
06/45	Move garage to 123 West Avenue 34	Cubbison Bakery
08/46	Construct baking supply storage building	Cubbison Bakery
	3409 Pasadena Avenue	
08/12	Construct shed	John Murphy
02/23	Addition to residence	John Murphy
11/41	Add concrete floor for rat proofing	Cubbison Cracker Co.
	3411 Pasadena Avenue	
12/10	Construct shed	John Murphy
09/11	Construct shed	John Murphy
08/14	Rebuild porch on residence	John Murphy
09/36	Construct truck shelter	Sophie Cubbison
12/36	Construct storage building	Sophie Cubbison
09/40	Move residence to 9815 Telfair Avenue	L. Simon
04/54	Reroof shed and loading dock with metal roof	Cubbison's Bakery
	3413 Pasadena Avenue	
06/41	Add 30' x 96' to bakery	Cubbison Cracker Co.
	3415 Pasadena Avenue	
07/87	Reroof building	Illig Construction Co.
	3415-3419 Pasadena Avenue	
07/65	Parapet correction	Crocker Citizen Bank Trust Dept.
03/87	Full compliance with Division 88	Illig Investment Co.

Phase I Environmental Site Assessment Report
135, 141 and 153 West Avenue 34
3401 and 3433 Pasadena Avenue
September 28, 2012

Date	Activity	Owner
	3419 Pasadena Avenue	
09/25	Addition to bakery	Cubbison Bakery
09/25	Demolish old building	Cubbison Bakery
11/25	Construct private garage	Cubbison Bakery
06/28	Enlarge building	C.H. Cubbison
06/28	Remove brick and wood building	C.H. Cubbison
08/28	Add mezzanine	C.H. Cubbison
03/47	Add mezzanine	Cubbison Cracker Co.
04/55	Add toilets	Cubbison Cracker Co.
07/56	Interior partitions	Canon Electric Co., Lessee
	3421 Pasadena Avenue	
01/08	Construct residence	Mary Lawson
05/14	Add gas outlets	May Lawson
01/17	Add room to rear of house	James Smith
10/61	Demolish residence	Cannon Electric Co.
	3421-3423 Pasadena Avenue	
10/12	Repair residence	Jerry Hickey
	3423 Pasadena Avenue	
10/12	Construct residence	Mary Lawson
01/24	Construct real estate office	Catherine L. Condra
10/61	Demolish residence	Cannon Electric Co.
	3425 Pasadena Avenue	
07/51	Demolish residence	Stran Steel Products Co.
07/67	Prepare building site	Smith Mailer Co.
07/67	Construct industrial building	Smith Mailer Co.
08/67	Remove and re-compact loose fill soil	Smith Mailer Co.
08/67	Add 20'x85' to manufactured building	Smith Mailer Co.
	3429 Pasadena Avenue	
11/12	Add chimney to residence	Mrs. Zonberg
07/51	Demolish residence	Stran Steel Co.
	3431 Pasadena Avenue	
06/11	Add 6' to back porch	A. Fornberg
12/12	Build outside chimney	A. Fornberg
07/51	Demolish residence	Stran Steel Co.

Phase I Environmental Site Assessment Report
135, 141 and 153 West Avenue 34
3401 and 3433 Pasadena Avenue
September 28, 2012

Date	Activity	Owner
	3433 Pasadena Avenue	
01/74	Add 26'x96' metal carport	Smith Mailer Co.
	3437 Pasadena Avenue	
04/06	Construct cow barn	Mrs. Sherman Smith
01/37	Construct private garage	William G. Short
09/38	General repairs	H.H. Moser
08/56	Demolish residence	Teal House Wreckers

No other building or demolition permits were on file for the subject property.

County of Los Angeles
Assessor's Office

A review of the Assessor's records for the subject property determined that the light industrial building located at 3401 Pasadena Avenue was constructed in 1948. In addition, the light industrial building located at 3433 Pasadena Avenue was constructed in 1967, the warehouse located at 135 West Avenue 34 was constructed in the early 1940's, the warehouse located at 141 West Avenue 34 was constructed in 1977, and the commercial building located at 153 West Avenue 34 was constructed in 1929. The current property owner is identified as ED 1125 LLC.

Historical Aerial Photographs

A review of historical aerial photographs of the subject property determined the following information:

Date of Photo	Description
May 1938	The subject property is occupied by two industrial buildings, several residences and an open storage yard.
July 1948	The subject property is occupied by nine industrial buildings, several residences and an open storage yard.
August 1952	The subject property appears to be about the same as the 1948 photograph.
July 1964	The subject property is occupied by nine industrial buildings, two residences, several vacant lots and parking areas.
October 1972	The subject property is occupied by ten industrial buildings, open storage areas and parking areas.

Date of Photo	Description
October 1980	The subject property is occupied by the five existing industrial building buildings.
August 1989	The subject property appears to be about the same as the 1980 photograph.
May 1994	The subject property is occupied by the five existing industrial buildings.
March 1997	The subject property appears to be about the same as the 1994 photograph.
June 2002	The subject property is occupied by the five existing industrial buildings.
March 2011	The subject property appears to be about the same as the 2002 photograph.

Historic Sanborn Fire Insurance Maps

Sanborn Fire Insurance Maps provide information on commercial and industrial properties, based on risk data gathered for the fire insurance companies. The maps show the number of buildings located on the property, and the type of construction. The maps also describe the various businesses located nearby, and show the locations of tanks, boilers, and other potential hazards.

A review of the Sanborn Fire Insurance Map collections from 1867-1970, located three maps for the subject property:

Date of Map	Description
1906	The subject property is occupied by 16 residences, 10 sheds, two barns and a small bakery.
1920	The subject property is occupied by 21 residences, nine sheds, seven garages, a bakery and portions of the Los Angeles Rock and Gravel Co., which consisted of eight buildings which were used as oil houses, greases houses, a tool house, an office and an auto repair canopy.
1951	The subject property is occupied by 22 residences, eight garages, a bakery and 10 commercial buildings which were used for offices, warehousing, storage and as workshops.

Historic City Directory Search

City Directories provide information on residential, commercial and industrial properties, and list the business name and address. A review of the historic directories provides an overview of the current and previous occupants of the site.

A search of the Haines Criss Cross City Directories, dated 1972-2009, determined the subject property has been previously occupied by Smith Mailer Inc. (1972-1987), GT Price Products (1972), Alta Canada Corp. (1987), American Bearing (1987), Laramada Corp. (1987), Lorac Financial Services (1987), Metal Service Corp. (1987), American Caster Corp. (1987-1992), Ann Mar Inc. (1987), Empire Button Co. (1987), William Pile Printing (1987-1992) and Bob Baker Productions (1992).

A review of the building permit records, historical aerial photographs, Sanborn fire insurance maps, assessor records and historic city directories determined the 153 Avenue 34 building was constructed over 83 years ago and the site was previously occupied by residences. The 141 Avenue building was constructed in 1977, and the site was previously occupied by portions of the Los Angeles Rock and Gravel Co., which included structures used for auto repair and two oil houses. The 141 Avenue 34 building was previously occupied by The Steel Framing and Building Corporation, several light-industrial buildings and several residences. The 135 Avenue 34 building was constructed over 62 years ago and the site was previously occupied by residences. The 3401 Pasadena Avenue was constructed in 1948, and the site was previously occupied by another commercial building and residences. The 3433 Pasadena Avenue building was constructed in 1967 and the site was previously occupied by several residences. The city directory listings indicate the subject property was previously occupied by metal work and printing businesses.

5.5 Historical Use Information on the Adjoining Properties

Historical Aerial Photographs

A review of historical aerial photographs of the adjoining properties determined the following information:

Date of Photo	Description
May 1938	North of the subject property is a large industrial facility with several industrial buildings. To the east is Pasadena Avenue, and further east is a commercial building and several residences. To the south is Avenue 34, and further south is a commercial building and several residences. To the west is a railroad right-of-way, and further west is an industrial facility with several light-industrial buildings.
July 1948	North of the subject property is a large industrial facility with several industrial buildings. To the east is Pasadena Avenue, and further east is a commercial building and several residences. To the south is Avenue 34, and further south is a commercial building and several residences. To the west is a railroad right-of-way, and further west is an industrial facility with several light-industrial buildings.

Phase I Environmental Site Assessment Report
135, 141 and 153 West Avenue 34
3401 and 3433 Pasadena Avenue
September 28, 2012

Date of Photo	Description
August 1952	The surrounding properties appear to be about the same as the 1948 photograph.
July 1964	North of the subject property is a large industrial facility with several industrial buildings. To the east is Pasadena Avenue, and further east is a commercial building and several residences. To the south is Avenue 34, and further south is a commercial building, several residences and a large parking lot. To the west is a railroad right-of-way, and further west is an industrial facility with several light-industrial buildings.
October 1972	North of the subject property is a large industrial facility with several industrial buildings. To the east is Pasadena Avenue, and further east are several commercial buildings and several residences. To the south is Avenue 34, and further south is a commercial building, several residences and a large parking lot. To the west is a railroad right-of-way, and further west is an open storage yard.
October 1980	The surrounding properties appear to be about the same as the 1972 photograph.
August 1989	North of the subject property is a large industrial facility with several industrial buildings. To the east is Pasadena Avenue, and further east are several commercial buildings and several residences. To the south is Avenue 34, and further south are several commercial buildings, several residences and a large parking lot. To the west is a railroad right-of-way, and further west is a vacant lot.
May 1994	North of the subject property is a vacant lot. To the east is Pasadena Avenue, and further east are several commercial buildings and several residences. To the south is Avenue 34, and further south are several commercial buildings, several residences and a large parking lot. To the west is a railroad right-of-way, and further west is a vacant lot.
March 1997	The surrounding properties appear to be about the same as the 1994 photograph.
June 2002	North of the subject property is a vacant lot. To the east is Pasadena Avenue, and further east are several commercial buildings and several residences. To the south is Avenue 34, and further south are several commercial buildings, several residences and a large parking lot. To the west is a railroad right-of-way, and further west is a parking lot.

Date of Photo	Description
March 2011	North of the subject property is a vacant lot. To the east is Pasadena Avenue, and further east are several commercial buildings and several residences. To the south is Avenue 34, and further south are several commercial buildings, several residences and a large parking lot. To the west is a railroad right-of-way, and further west is an industrial building and a parking lot.

Historic Sanborn Fire Insurance Maps

Sanborn Fire Insurance Maps provide information on commercial and industrial properties, based on risk data gathered for the fire insurance companies. The maps show the number of buildings located on the property, and the type of construction. The maps also describe the various businesses located nearby, and show the locations of tanks, boilers, and other potential hazards.

A review of the Sanborn Fire Insurance Map collections from 1867-1970, located three maps for the area surrounding the subject property:

Date of Map	Description
1906	The property to the north is occupied by six residences, a barn and three sheds. Pasadena Avenue is to the east and there is no map coverage available for the property east of Pasadena Avenue. South of the subject property is Avenue 34 and further south are two stores, 12 residences, nine sheds, a barn and a fruit packing building. West of the subject property is a railroad right-of-way and further west is vacant land and the Arroyo Seco wash.
1920	The property to the north is occupied by several residences, garages and sheds, and further north is a large industrial facility which is occupied by Pacific Laundry. Pasadena Avenue is east and further east are several residences, garages and sheds. South of the subject property is Avenue 34 and further south are several residences, garages, sheds and a fuel storage area. West is of the subject property is a railroad right-of-way and further west is vacant land and the Arroyo Seco wash.

Date of Map	Description
1951	The property to the north is occupied by several residences, garages and sheds and further north is a large industrial facility which is occupied by Welch's Uniform and Overall Cleaning Co. A dry-cleaning building is located within the Welch's Facility. Pasadena Avenue is to the east and further east are several residences, garages, sheds and Hillside Elementary School. South of the subject property is Avenue 34 and further south are two stores, several residences, garages, sheds and a scrap metal storage yard. West of the subject property is a railroad right-of-way and further west is a lumber yard which is occupied by Alliance Lumber and Investment Co.

Historic City Directory Search

City Directories provide information on residential, commercial and industrial properties, and list the business name and address. A review of the historic directories provides an overview of the current and previous occupants of the adjoining properties.

A search of the Haines Criss Cross City Directories, dated 1972-2009, found no listings for the adjacent property to the north. The property east of Pasadena Avenue has been previously occupied by Hillside Elementary School (1972-2009) and residences (1972-2009). The property south of Avenue 34 has been occupied by residences (1972-2009), Ishizaki Studios (1987), Argus Tool Manufacturing (1987), Smart Saver (1987-1992), Pasadena Avenue Market (1987-1992), AAA Fashions (1992), Tere's Fashions (1992-2009), Allied Die Cutting (1992), Three Star Refrigeration (1992), ACW Apparel Inc. (2009) and Water Land Inc. (2009). No listings were found for the adjacent property to the west

A review of historical aerial photographs, Sanborn fire insurance maps and historic city directories determined the adjacent property to the north has been vacant land for over 18 years and the site was previously occupied by Welch's Uniform and Overall Cleaning Co. The apartment complex east of Pasadena Avenue was constructed in the early 1970's and the site was previously occupied by residences. The Hillside Elementary School and residences east of Pasadena Avenue were constructed over 74 years ago and the school property was previously occupied by residences. The commercial buildings south of Avenue 34 were constructed over 40 years ago and the sites were previously occupied by residences. The residences south of Avenue 34 were constructed over 74 years ago. The industrial building west of the railroad right-of-way was constructed within the past ten years and the site was previously occupied by a large parking lot and open storage yard. Prior to the development of the storage yard and parking lot, the property west of the railroad right-of-way was occupied by Alliance Lumber and Investment Co. The city directory listings identified the surrounding properties have been occupied by manufacturing and metal work businesses.

6.0 SITE RECONNAISSANCE

6.1 Methodology and Limiting Conditions

The site reconnaissance consisted of a walk through the entire property, and visually observing the structures, storage areas, and parking lots. No inspection was conducted under floors, above ceilings, or behind walls.

6.2 General Site Setting

The site consists of five industrial buildings with paved parking and storage areas, located in a mixed industrial, commercial and residential area of Los Angeles (see site plan).

6.3 Subject Property Observations

On September 19, 2012, an inspection of the subject property and surrounding area was conducted by Environmental Assessor James Robert Orswell. The subject property is occupied by five single-story industrial buildings, described as follows:

The 3401 Pasadena Avenue building consists of a single-story wood-frame and brick light-industrial structure (see photos #1 and #2) which is occupied by the Water Wellness Center, a business office, and Warner Brothers Studios, a warehouse television props. The building is divided into an office area and a warehouse area. Inside, the building has an open wood beam and an exposed concrete floor (see photos #3 and #4). A storage mezzanine is located above the offices and is accessed via a stairwell. There is no elevator in the building. The heating, ventilation and air conditioning (HVAC) system for the building appears to be mounted on the roof.

The 3433 Pasadena Avenue building consists of a single-story wood-frame and concrete-block light-industrial structure (see photo # 5) which is occupied by the Warner Brothers Studios prop department. The building is divided into an office area and a production area. Inside, the office ceilings are covered with suspended-grid acoustic tile and the floors are covered with vinyl tile (see photo #6). The production area has open wood beam ceilings and the floors are exposed concrete. Large quantities of water-based paint are stored and used inside the production area (see photo #7). No significant spills or leaks were observed on the production area floors. A sign on the exterior of the building indicates the building has previously been occupied by a die and metal stamping business. The HVAC system for the building appears to be mounted on the roof.

The 135 West Avenue 34 building consists of a single-story corrugated steel warehouse (see photo #8). A sign on the exterior of the building indicates the structure is occupied by the Submission Factory, a gym. The business was closed and the interior of the building was not available for inspection. No HVAC system was observed for the building.

The 141 West Avenue 34 building consists of a single-story concrete tilt-up, wood frame and brick warehouse (see photo # 9) which is occupied by Ortiz Bros. Moving and Storage. The building is divided into an office area and a warehouse area. Inside, the office ceilings are covered with suspended-grid acoustic tile and the floors are covered with vinyl tile or carpeting (see photo #10). The warehouse has an open wood beam ceiling and an exposed concrete floor (see photos #11 and #12). The warehouse area is used to store customers' personal belongings, and no hazardous materials were observed to be stored inside the warehouse area. There are several loading docks on the east side of the building. The HVAC system for the building appears to be mounted on the roof and side of the building.

The 153 West Avenue 34 building consists of a single-story brick commercial structure (see photo #13). The building was locked and access to the interior of the building was not available for inspection. No HVAC system was observed for the building.

Outside, between the buildings are paved parking and open storage areas (see photo #14). On the west side of the subject property, there is another large paved open storage area (see photo #15). Portions of the parking and storage areas were inaccessible for inspection due to the cluttered storage of large crates, trucks, miscellaneous objects and cars (see photo #16). Several roll-off storage containers were stored at the site, and access to the containers was unavailable at the time of inspection. Commercial trash bins are located in the paved parking and storage areas (see photo #17), and no signs of improper solid waste disposal were observed. The electrical power in the area is supplied by overhead utility lines which bisect the subject property (see photo #18) and also runs along Avenue 34. A ground-mounted electrical transformer is located on the west side of the 141 Avenue 34 building, and no signs were observed on the transformer indicating the presence of polychlorinated biphenyls (PCBs). No signs of illegal dumping or distressed vegetation were observed on the property. There was no evidence of underground storage tanks, septic tanks or monitoring wells on the property, and there was no indication of obvious contamination on the site.

6.4 Adjoining Property Observations

Northern Border

North of the subject property is a vacant lot (see photo #19). The property is identified by the State of California Environmental Protection Agency (CAL-EPA) Department of Toxic Substances Control (DTSC) as an active hazardous waste site and by the State of California Regional Water Quality Control Board (RWQCB) as having two open RWQCB Cleanup Program sites, and it appears that the property is in the process of undergoing remediation.

Eastern Border

East of the subject property is Pasadena Avenue, and further east is Hillside Elementary School, an apartment complex (see photo #20) and several residences. There were no visible signs of spills or contamination on the adjacent properties.

Southern Border

South of the subject property is Avenue 34. Located at the western terminus of Avenue 34, there were two groundwater monitoring wells (see photo #21). The wells were installed to monitor the groundwater contamination in the area from the former Welch's Uniform facility located further north. South of Avenue 34 are several residences (see photo #22), a parking lot and five commercial buildings which are occupied by VGA Apparel and several other unidentified tenants (see photo #23). There were no visible signs of spills or contamination on the adjacent properties.

Western Border

West of the subject property is a railroad right-of-way, and further west is an unidentified industrial building and a large parking lot (see photo #24). There were no visible signs of spills or contamination on the adjacent properties.

7.0 INTERVIEWS

7.1 Interview with Owner

Mr. Eric Ortiz, the property owner and owner of Ortiz Bros. Moving and Storage, advised he purchased the subject property in 2000, and he has occupied the site since 1993. He stated the buildings have been used for distribution and warehousing purposes. He said his business stores customers' personal items, and no hazardous materials are allowed to be stored inside the 141 Avenue 34 building. Mr. Ortiz advised the site has a closed and abandoned wastewater clarifier located on the west side of the 141 Avenue 34 building. Mr. Ortiz said the 135 Avenue 34 building is occupied by The Submission Factory, a gym and he is unaware of any hazardous materials being stored inside the building. In addition, Mr. Ortiz stated the 153 Avenue 34 building is used for storage of water, and no large quantities of hazardous materials are used or stored in the building. Mr. Ortiz said the property to the north was previously occupied by Welch's Uniform and the State of California has been conducting activities at the site for over a decade. Mr. Ortiz said he is unaware of the two groundwater monitoring wells located near the southwest corner of the site. Mr. Ortiz advised to the best of his knowledge, there are no underground storage tanks, septic tanks or wells on the site, and he is not aware of any other chemical spills or contamination problems.

7.2 Interview with Site Manager

Mr. Ortiz is the property manager (see Section 7.1 - Interview with Owner).

7.3 Interviews with Occupants

The unidentified safety manager for Warner Brothers Studios provided Orswell & Kasman, Inc with a copy of the hazardous materials handler permit for the small quantities of water-based paint stored and used within the 3433 Pasadena Avenue building. The safety manager stated that hazardous wastes in the form of waste paint are generated by the business activities and the wastes are collected by Rinco Environmental Services. The safety manager stated he is unaware of any contamination problems at the 3433 Pasadena Avenue building.

7.4 Interviews with Local Government Officials

No interviews with local government officials were conducted.

7.5 Interview with Others

No interviews with other people were conducted concerning the subject property.

8.0 FINDINGS

8.1 Recognized Environmental Conditions

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Standard Practice E 1527-05 on the multi-tenant commercial property located at 135, 141 and 153 West Avenue 34 and 3401 and 3433 Pasadena Avenue, Los Angeles, California, the Property. Any exceptions to, or deletions from the Standard Practice are described in Section 2.4 of this report. This assessment has revealed no evidence of *recognized environmental conditions* in connection with the Property, except as follows:

1) The subject property is occupied by multiple tenants. The 3433 Pasadena Avenue building is currently occupied by Warner Brothers Studios, a prop and set design business. The business stores and uses large quantities of water-based paint, and waste paint is generated by the business activities. The hazardous materials and hazardous wastes appear to be properly stored and managed and no significant spills or leaks were observed on the premises; and

2) Eleven offsite locations have been identified as potential risks or threats to the subject property. According to the data, ten of the sites are not located in the near vicinity, and there is no indication that contaminants from these sites have migrated onto the subject property.

The former Welch's Uniform Facility site (#5 on map), 3505 Pasadena Avenue, is located on the adjacent property to the north, and the business is identified by State of California Environmental Protection Agency (CAL-EPA) Department of Toxic Substances Control (DTSC) as an active hazardous waste site. According to the DTSC CalSite database records, the site was previously occupied by Welch's Uniform and the property was used as a laundry and uniform rental facility over a 70 year period. Environmental studies indicate the soil and groundwater beneath the facility is contaminated with volatile organic compounds including trichloroethene (TCE). In addition, the former Welch's Uniform Rental site is identified by the State of California Regional Water Quality Control Board (RWQCB) as having two open RWQCB Cleanup Program sites. The first case was first opened in December 1987. According to the RWQCB records, the groundwater was contaminated with non-petroleum hydrocarbons, and the site is undergoing verification monitoring. The second case was opened in December 1998 and the site is undergoing an assessment. A review of the City of Los Angeles Fire Department (LAFD) records revealed Welch's Uniform applied for a permit to remove a 2,000-gallon underground diesel fuel tank in 1987. Soil sampling beneath the tank revealed significant Total Petroleum Hydrocarbon as gasoline (TPH-g) contamination (8,600 ppm). The groundwater beneath the site was determined to be about 35 feet below the ground surface, and the groundwater flows away from the subject property in a west-northwest direction. In February 1988, Welch's Uniform applied for a permit to abandon five underground storage tanks in-place, and in December 1988, Welch's Uniform applied for a permit to remove five additional underground storage tanks. In May 2004, Welch's Uniform applied for a permit to remove one additional 1,000-gallon underground storage tank. Soil sampling beneath the tank did not detect any contamination problems, and on October 26, 2004, the DPW/UGT issued a no further action letter for the closure of the 1,000-gallon underground tank. An inspection of the property revealed the site is currently a vacant lot, and remedial activities were being conducted on the site.

8.2 Historical Recognized Environmental Conditions

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Standard Practice E 1527-05 on the multi-tenant commercial property located at 135, 141 and 153 West Avenue 34 and 3401 and 3433 Pasadena Avenue, Los Angeles, California, the Property. Any exceptions to, or deletions from the Standard Practice are described in Section 2.4 of this report. This assessment has revealed no evidence of *historical recognized environmental conditions* in connection with the Property.

9.0 OPINION

Should it be determined the groundwater beneath the subject property has in fact been impacted by the Former Welch's Uniform Rental site, it is the policy of the State of California and the United States Environmental Protection Agency not to hold property owners responsible for

costs to clean up contaminated groundwater beneath their property, unless the owners contributed to the problem. There is no indication from a review of the regulatory records and a site inspection that the subject property has had any problems concerning the storage, usage or disposal of hazardous materials, and it appears the former Welch's Uniform Rental site is in the process of addressing the contamination problem.

Based on a review of regulatory and historical records, and interviews with the property owner and the safety manager for Warner Brothers Studios, and a visual inspection of the site and surrounding area, this assessment has found no evidence of *recognized environmental conditions or historical recognized environmental conditions* which are likely to impact the subject property. Although data failure occurred in the historical uses of the Property prior to 1906, it is unlikely the data failure will impact the ability to identify *recognized environmental conditions.*

10.0 CONCLUSIONS

Based on the results of this assessment, no further environmental studies are recommended for the site.

11.0 DEVIATIONS

This report was prepared in conformance to meet or exceed the scope and practice as set forth by the American Society for Testing & Materials (ASTM) Standard Practice E 1527-05, "Standard Practice of Environmental Site Assessments: Phase I Environmental Site Assessment Process." No significant deviations, deletions, or client-imposed constraints were made from this practice.

12.0 ADDITIONAL SERVICES

No additional services including a broader scope of services, liability/risk evaluations, or remedial activities are included in this report.

13.0 REFERENCES

All government records and maps were obtained directly from the regulatory agencies identified in this report. The fire insurance map information was obtained from Digital Sanborn Maps, 1867-1970, Ann Arbor, Michigan. The aerial photographs were obtained from BBL Consultants, Solana Beach, California; the United States Geological Survey, Menlo Park, California; or the United States Department of Agriculture, Salt Lake City, Utah. The city directory search information was obtained from Sherman Library and Gardens, Corona Del Mar, California.

14.0 STATEMENT OF ENVIRONMENTAL PROFESSIONALS

We declare that, to the best of our professional knowledge and belief, we meet the definition of *Environmental Professionals* as defined in §312.10 of 40 CFR 312. We have the specific

qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquires in conformance with the standards and practices set forth in 40 CFR Part 312. The individual qualifications of these professionals are included in the appendices of this report.

15.0 APPENDICES

15.1 Site and Vicinity Map

A United States Geological Survey (USGS) 7.5 Minute Topographical map of the subject property and surrounding area is included in the appendices of the report. The map shows the locations of the identified offsite environmental risks or threats described in the report.

15.2 Site Plan

A site plan of the subject property is included in the appendices of the report. The site plan shows the general location of the structures on the property, and other items of interest which were identified in the description of the site.

15.3 Site and Vicinity Photographs

Photographs of the subject property and surrounding neighborhood are attached to this report. These photographs were taken at the time of the site inspection.

15.4 Historical Research Documentation

Building permit records were obtained directly from the regulatory agency identified in this report. The aerial photographs summarized in this report were obtained from BBL Consultants, Solana Beach, California; the United States Geological Survey, Menlo Park, California; or the United States Department of Agriculture, Salt Lake City, Utah. The Sanborn Fire Insurance Map information was obtained from Digital Sanborn Maps, 1867-1970, Ann Arbor, Michigan. The city directory search information was obtained from Sherman Library and Gardens, Corona Del Mar, California.

15.5 Regulatory Records Documentation

All government records were obtained directly from the regulatory agencies identified in this report.

15.6 Interview and Research Documentation

All of the field notes and supporting information obtained from interviews and research concerning the subject property are maintained in the report file at the offices of Orswell & Kasman, Inc.

15.7 Special Contractual Conditions between User and Environmental Professional

No special contractual conditions or agreements exist between the client and any of the employees of Orswell & Kasman, Inc., and Orswell & Kasman, Inc. does not have any financial interest in the subject property.

15.8 Qualifications of the Environmental Professionals

Attached to this report are the résumés of Marty Kasman and James Orswell, who conducted the site inspection, the records review, and prepared the report.

APPENDIX

MARTY KASMAN

Marty Kasman, a principal of the company, is a Registered Environmental Health Specialist (#4927) and a Registered Environmental Assessor (#4022) with the State of California. He is also a USEPA/AHERA accredited Asbestos Management Planner and California Certified Asbestos Consultant (#99-2553). He received his Bachelor of Science and Master of Science degrees in Environmental and Occupational Health Science from California State University at Northridge. He also has a Certificate in Hazardous Materials Management from the University of California at Los Angeles (UCLA). In addition, Mr. Kasman also received specialized hazardous materials training at the Federal Law Enforcement Training Center in Georgia.

Mr. Kasman served fourteen years with the Los Angeles County Fire Department, as a Supervising Hazardous Material Specialist and Deputy Health Officer. For a majority of his Fire Department career, Mr. Kasman worked in the Criminal Investigations Unit, and he was assigned to the Los Angeles County District Attorney's Environmental crimes Task Force. His responsibilities included field and laboratory work in hazardous materials management, conducting inspections of industrial plant operations, and monitoring cleanup activities. In addition, Mr. Kasman has investigated hundreds of abandoned waste sites and other cases involving the illegal dumping of hazardous materials throughout Los Angeles County.

Mr. Kasman currently serves as an environmental consultant to industry management in the proper handling of hazardous materials and waste. He has taught courses in hazardous materials regulatory compliance and waste management at UCLA, California State University at Northridge, and the California Specialized Training Institute at San Luis Obispo. Mr. Kasman served on the State of California Local Unified Program Implementation Committee (LUPIC) to develop a standardized hazardous materials contingency plan.

Mr. Kasman's extensive education, training, and experience in hazardous materials management make him fully qualified to conduct environmental assessments and investigations. He is the former president, director, and a life-time member of the California Hazardous Materials Investigators Association. He is also a former director of the Local Environmental Enforcement Officers Association, and the Los Angeles County Association of Environmental Health Specialists. He is a member of California and National Environmental Health Associations, and the National Association of Government Guarantee Lenders.

JAMES ROBERT ORSWELL

James R. Orswell is a Registered Environmental Assessor with the State of California. Since graduating from Utah Valley University, he has participated in thousands of Phase I Environmental Site Assessment reports, Transaction Screen reports, soil vapor surveys, methane assessments, historical use reports and Phase II projects on commercial, industrial, and residential properties.

Mr. Orswell is an expert document writer, data collector and is an experienced mortgage loan officer. Since 2002, Mr. Orswell has worked in the environmental assessment and consulting field, researching and conducting numerous environmental investigations throughout the United States. He has worked directly with major lending institutions, real estate professionals, lawyers, city planners, and private clients. Mr. Orswell has worked along with the Department of Defense in plotting Former Used Defense Sites (FUDS) and is a Certified Mold Inspector. He has managed multiple underground storage tank removals, installation of soil vapor extraction systems and has overseen several subsurface investigations in Southern California.

He is also an Eagle Scout, volunteer with many non-profit organizations, and an avid outdoors enthusiast. Mr. Orswell's education, training, and experience provide him with the qualifications to conduct environmental assessments and investigations.

EXECUTIVE SUMMARY

AmeriPride Service Inc. (AmeriPride) retained ENSR International, Inc. (ENSR) to review prior environmental site assessments and conditions for the former Welch's Uniform Facility located at 3505 Pasadena Avenue, Los Angeles, California (site; see Figure 1) in order to submit a Site Conceptual Model (SCM) and work plan to the Los Angeles Regional Water Quality Control Board (LARWQCB).

The site is located in a relatively low-density, mixed residential and industrial area of Los Angeles, CA, approximately 3.5 miles northeast of downtown Los Angeles, California. According to City Directories provided by EDR, the site address was noted as being a Welch's Uniform Facility in 1924 (EDR, 2005d). Adjoining the western boundary of the site is a railroad spur. To the north is the Arroyo Seco, across which is the Pasadena Freeway. To the south are industrial buildings, and to the east are residential homes and Hillside Elementary school. The site is currently an undeveloped parcel of land. Buildings and surface structures were demolished and removed in 2003.

Areas of Concern:

- Lingering Presence of Subsurface VOC's in the Vicinity of the Former UST Locations (North of the North Building): Based on the confirmation borings collected in August 2000 in the area previously remediated using soil vapor extraction (SVE), concentrations of PCE and TCE were reported at a maximum concentration of 79 mg/kg (CB-1-35), and 66 mg/kg (CB-2-35), respectively (CAPE, 2000). Based on these concentrations, the LARWQCB denied the request for no further action, and requested additional site assessment activities in the vicinity of the former PCE USTs in correspondence dated January 10, 2001.

- Further Definition of VOC's in the Southwest Corner of the Site: Based on a soil vapor survey conducted in 2001, elevated concentrations of PCE (260 ug/L; SV-10-10) were detected in the southwest corner of the site and in areas of the former solvent USTs. Two additional soil vapor points, SV-43 and SV-44 were installed to the north and east of SV-10. Minor concentrations of PCE were only detected in the northern soil vapor location (SV-44), however, no assessment was conducted to the south of SV-10 (adjacent property).

- Delineation of Offsite Dissolved-Phase VOC's Southwest of the Site: Concentrations of PCE and TCE were detected in the furthest downgradient monitoring wells, MW-14 and MW-15, at 10 times the MCL for drinking water. The downgradient protion of the dissolved-phase VOC plume is undefined.

- The Site is in Close Proximity to the Pollock Wellfield: The Pollock Wellfield is located approximately 3,835 feet west of the site (cross gradient). The Pollock Wellfield is defined as approximately 5,860 acres of land which groundwater produced from public wells was identified as being impacted by PCE, TCE, and 1,1-DCE. To alleviate this contamination, wells were taken out of service, and produced groundwater from the Pollock Wellfield was blended with clean sources to ensure that the public receives water with concentrations below the State's guideline. The Pollock Wellfield is on the State's AWP.

- Potential presence of USTs that were Abandoned in Place: According to the permits reviewed, 5 USTs were abandoned in place by filling with a slurry. However, permits were vague as to the location, size and former contents of the USTs filled in place. In addition, Thorne Environmental has a figure listing all former USTs as being removed (Appendix B). With the geophysical survey conducted by CAPE in 2002, and the subsequent removal of a 1,000-gallon UST in 2004, the possibility of other existing USTs that may have been abandoned in-place in the vicinity of the former north building is less likely.

Recommendations:

Based on the results of the SCM, ENSR recommends the following scope of work:

- Prefield Activities: ENSR will apply for encroachment permits, and well installation permits with the Los Angeles DHS, and the City of Los Angeles. In addition, a subsurface utility survey may be conducted in the vicinity of the former location of the solvent USTs north of the former North Building.

- Additional Soil Assessment: ENSR recommends a Phase II soil assessment in the vicinity of the former UST area north of the North Building (in the vicinity of CB-1 and CB-2), and the southwest corner (vicinity of SV-10) of the site in a two-phase approach. Soil borings SB-31 through SB-38 will be advanced to a depth of approximately 35 feet bgs or first encountered groundwater using a hollow-stem auger drilling rig during the first phase of the soil assessment in the aforementioned areas of concern (Figure 5). Upon receipt of analytical results from the soil samples collected during the initial phase, an additional round of soil sampling may occur to further define adsorbed-phase concentrations detected. Up to eight additional soil borings (designated as SB-39 through SB-46) will be advanced to further define VOCs detected during the initial phase.

- Groundwater Monitoring Well Installation: ENSR proposes to install one additional onsite and four additional offsite groundwater monitoring wells (MW-16 through MW-20) to further define PCE/VOCs in the dissolved-phase groundwater plume. The onsite well, MW-16, will replace well MW-11 which was supposedly destroyed during site demolition activities. Offsite well MW-17 will be located to the west of the property to further define the cross gradient portion of the dissolved-phase plume. Wells MW-18 through MW-20 will be placed southwest of monitoring wells MW-14 and MW-15 to define the downgradient portion of the dissolved-phase plume (Figure 6).

1.0 INTRODUCTION

AmeriPride Service Inc. (AmeriPride) retained ENSR International, Inc. (ENSR) to review prior environmental site assessments and conditions for the former Welch's Uniform Facility located at 3505 Pasadena Avenue, Los Angeles, California (site; see Figure 1) in order to submit a Site Conceptual Model (SCM) and work plan to the Los Angeles Regional Water Quality Control Board (LARWQCB).

1.1 Purpose

The purpose of the SCM is to provide a summary of previous site assessments, remedial activities, and identify nearby potential receptors. In addition, a work plan for additional soil and groundwater assessment is provided to address data gaps that exist in the soil and groundwater samples collected to date.

2.0 SITE DESCRIPTION

2.1 Location and Legal Description of the Site

Site Location:	3505 Pasadena Avenue Los Angeles, CA 90031
Site Owner:	AmeriPride Services Inc. 10801 Wayzata Boulevard Minnetonka, Minnesota 55305
County:	Los Angeles County
Assessors Parcel Number:	5205-004-010
U.S.G.S. Quadrangle:	34118-A2 Los Angeles, CA
Latitude, Longitude:	34° 5' 8.9", 118° 12' 47.2"
UTM Co-ordinates:	388079.9, 3772138.8
Global ID Number:	SL2044P1598

The location of the site is shown on Figure 1.

2.2 Site and Vicinity Characteristics

The site is located in a relatively low-density, mixed residential and industrial area of Los Angeles, CA, approximately 3.5 miles northeast of downtown Los Angeles, California. According to City Directories provided by EDR, the site address was noted as being a Welch's Uniform Facility in 1924 (EDR, 2005d). Adjoining the western boundary of the site is a railroad spur. To the north is the Arroyo Seco, across which is the Pasadena Freeway. To the south are industrial buildings, and to the east are residential homes and Hillside Elementary school.

2.3 Description of Structures, Roads, and Other Improvements on Site

The site does not currently have any structures or improvements on site. See Figure 2 for former site structures, locations of groundwater monitoring wells, former boring locations, and soil vapor extraction wells.

2.4 Current Site Use

The site is currently an undeveloped parcel of land. Buildings and surface structures were demolished and removed in 2003.

2.5 Site Geology, Hydrology, and Topography

2.5.1 Geology

The site is located in the northernmost portion of the Downey Plain in the Los Angeles Basin near the confluence of the Los Angeles River and Arroyo Seco. The site vicinity is underlain by Recent age alluvial and stream channel deposits consisting of coarse grained sand, gravel, and cobbles. These sediments are approximately 50 to 100 feet thick beneath the site (California Department of Water Resources [CDWR], 1961).

Based on previous site assessments, interbedded poorly graded gravels and sands were observed to depths of approximately 75 feet below ground surface (bgs). Prior soil borings have met drilling refusal (hollow stem auger) at approximately 30 feet bgs, possibly due to the presence of cobbles. Cross sections A-A' and B-B' are included as Figures 3 and 4, respectively.

2.5.2 Hydrology

The site is included in the northern portion of the Central Basin Hydrogeologic Area as defined by CDWR (1961). Regional groundwater information and previous subsurface investigations (Kleinfelder Associates [Kleinfelder], 1987) indicate that the first water bearing zone beneath the site vicinity is the Gaspur aquifer at about 35 to 50 feet bgs. The thickness of the Gaspur aquifer is about 50 feet and is generally unconfined. Transmissivities in this aquifer in this area are on the order of 250,000-gallons per day per foot (CDWR, 1961). The Gaspur aquifer is underlain by non-water bearing sedimentary rocks. The regional groundwater gradient in the Gaspur aquifer, as reported by the Los Angeles County Flood Control District (LACFCD, 1986), is south-southeast. However, Kleinfelder reported a west-northwest gradient beneath the site. Groundwater in the Gaspur aquifer in the vicinity of the site is not used as a water supply source (Los Angeles Department of Water and Power [LADWP], 1988).

Based on results of the available groundwater monitoring and sampling report for the Third Quarter 2005 by Cape Environmental Management, Inc. (CAPE), static groundwater was measured at depths ranging from 32.08 to 40.05 feet bgs (approximately 317.16 to 333.41 feet above MSL, [CAPE, 2005]) in on and offsite wells on August 24, 2005. The groundwater flows to the southwest (CAPE, 2005). Groundwater gauging and analytical data through the Third Quarter 2005 are summarized in Tables 1 through 3. Well construction details are summarized in Table 4. Graphs of total petroleum hydrocarbons as gasoline (TPHg), tetrachlorethene (PCE), trichloroethene (TCE), methyl tertiary butyl ether (MTBE), and groundwater elevation versus time for select wells are included as Graphs 1 through 9.

2.5.3 Topography

Topographic map coverage of the site is provided by the USGS Los Angeles Quadrangle Map. Based upon the USGS topographic map, the site elevation is approximately 366 feet above mean sea level. The subject property is relatively flat with a very slight sloping gradient to the southwest (EDR, 2005c).

3.0 SITE HISTORY

3.1 Site Assessment Activities

In 1987, J.H. Kleinfelder & Associates (Kleinfelder) conducted a limited site characterization at the site (Kleinfelder, 1987). Four soil borings, B-1 through B-4, and three groundwater monitoring wells, MW-1 through MW-3 (now known as K-1 through K-3), near two former underground storage tanks (UST). The USTs were removed prior to the site assessment activities and reportedly contained diesel (2,000-gallons) and gasoline (10,000-gallons). Wells K-1 and K-2 were installed in the vicinity of the former diesel UST. TPHg and total petroleum hydrocarbons as diesel (TPHd) were reported in all the soil samples collected. Maximum hydrocarbon concentration of 8,800 milligrams per kilogram (mg/kg) was detected in boring B1 at 20 feet bgs. The only other analyte detected was xylenes at a maximum concentration of 39 mg/kg in boring B1 at 20 feet bgs (Kleinfelder, 1987).

In 1988, Thorne Environmental, Inc. (Thorne) supervised the removal and conducted the closure investigation of 10 USTs and three sumps at the site. The former USTs had previously contained products such as gasoline, diesel fuel, and PCE. Five of the ten USTs, ranging in size from 750 to 1,500-gallons and located on the north side of the former North Building, were identified as containing a slurry mixture of PCE, TCE, and other associated hydrocarbons. Analytical results of soil samples collected from beneath the former USTs and sumps indicated that gasoline, diesel fuel, and benzene, toluene, ethylbenzene, and total xylenes (collectively BTEX), and organic solvents were present in the soil beneath a majority of the USTs and sumps. The following maximum concentrations were detected: 3,800 mg/kg TPHd (SB-7-29); 5,900 mg/kg TPHg (SB-1-35); 52 mg/kg TCE (SB-26-30), and 33,000 mg/kg PCE (SB-19-29)(Thorne, 1989).

From 1988 to 1989, Thorne advanced 28 soil borings and installed 16 vapor extraction wells (VEWs) and 12 groundwater monitoring wells (MW-1 through MW-8, MW-9A, MW-9B, MW-10A, and MW-10B). Analytical results of the groundwater samples collected from the 12 monitoring wells indicated that gasoline, diesel fuel, BTEX, and halogenated organic compounds were present. Free product was observed in wells K-1, K-2, MW-1, and MW-3 through MW-7 during previous investigations at apparent thicknesses of 0.1 to 9.5 inches. Thorne subsequently bailed 160 gallons of free product from the wells before initiating a vapor extraction remediation program in June 1990 (Thorne, 1989 and 1990).

In June 1990, Thorne installed and began operation of a soil vapor extraction (SVE) system at the site. The VES consisted of three separate extraction units connected to VEWs in three areas of impacted soil. The extracted vapor was treated with activated carbon before being released to the atmosphere. VES Unit 1 was connected to VEWs SB-1 through SB-5 in the vicinity of the two former fuel USTs.

VES Unit 2 was connected to wells MW-1 and MW-4, and VEWs SB-6 and SB-7 in the area between the former North and South buildings. VES Unit 3 was connected to VEWs SB-10, SB-11, SB-12, SB-14, SB-15, SB-16, SB-18, and SB-19 in the area of the former PCE USTs, north of the North Building. By September 1991, the total hydrocarbon concentrations entering the VES treatment units decreased from 9,400 parts per million (ppm) to 230 ppm. Based on VES monitoring data, CAPE estimated the removal of approximately 11,940 pounds of volatile organic compounds (VOCs) were removed during the period June 1990 to August 1991.

In June and August, 1991, CET drilled three soil borings (SB-28 through SB-30), and converted SB-29 into a vadose zone monitoring well. Boring SB-28 was drilled near the two former fuel USTs (2,000 and 10,000-gallon) and had a maximum concentration of TPHd of 400 mg/kg in the 20 and 25 foot bgs soil samples; boring SB-29 was drilled near a former clarifier between the North and South buildings (maximum TPHd of 11 mg/kg in the 30 foot bgs soil sample), and boring SB-30 was drilled in the vicinity of the former USTs containing PCE, and near former borings SB-15 and SB-16. A maximum PCE concentration of 0.23 mg/kg was detected in the 5 foot bgs soil sample. In summary, minor concentrations of TPHd were detected in boring SB-28 adjacent to the former 2,000-gallon diesel UST, minor concentrations of TPHd and TPHmo were detected in boring SB-29, and minor concentrations of PCE were detected in boring SB-30 (CET, 1998).

In 1993, the site structures and buildings were removed. No site assessment or remediation activities were performed from September 1991 to July 1998. In July 1998, CAPE, as CET Environmental Services, Inc. (CET), redeveloped 11 of the groundwater monitoring wells, repaired several of the monitoring well box lids, and performed Third Quarter 1998 groundwater monitoring and sampling for AmeriPride (CET, 1998).

During August 2000, CAPE drilled and sampled six soil borings (CB-1 through CB-6) at the site to collect confirmatory soil samples from areas previously remediated using SVE. In September 2000, CAPE installed five additional monitoring wells (MW-8A, MW-11, MW-12, MW-13A, and MW-13B) to assess the lateral and upgradient extent of the dissolved-phase hydrocarbon plume. The results of the confirmatory soil sampling and the additional well installation activities indicated that VOCs were still present in the capillary fringe and in the dissolved-phase (CAPE, 2000).

In November 2001, CAPE conducted a soil gas survey consisting of 44 vapor sampling points (SV-1 through SV-44) in the vicinity of the former USTs, pump islands, buildings, sumps, and a vehicle maintenance shop. Most of the vapor sampling points with detectable levels of VOCs were located in the north-central area of the site (SV-25, SV-26, SV-27, SV-29 through SV-37, and SV-39). This was the area where known solvent releases occurred and SVE was performed in the past. Elevated concentrations of PCE (260 micrograms per liter [ug/L]) and TCE (10.3 ug/L) were also detected in the extreme southwest corner of the property in sampling point SV-10-10'. Two additional points,

SV-43-7.5', and SV-44-10', were installed approximately 35 feet east and 30 feet north of SV-10 to further assess the lateral extent of PCE and TCE. PCE was detected at a concentration of 8.8 ug/L in the northern probe, and nothing was detected in the eastern probe; indicating that the extent of the impacted soil vapor is limited. No known storage or past release of VOCs in the southwest corner of the property has been identified (CAPE, 2001).

In September 2002, CAPE installed two additional groundwater monitoring wells (MW-14 and MW-15) along Avenue 33 near Lacy Street, to further assess the downgradient portion of the dissolved-phase plume. VOCs were not detected in the soil samples collected during well installation. Analytical results of the groundwater samples collected from both of these downgradient wells indicated that the dissolved-phase plume extends to these wells (CAPE, 2002).

In July 2004, CAPE oversaw the removal of a single, 1,000-gallon steel UST. Former contents of the UST were not known. The UST was discovered by geophysical means during site investigation activities in July 2002. A single soil sample (UST-EX Bottom) was collected from beneath the UST, and laboratory analysis indicated that TPHg, VOCs (including BTEX), ethanol, and methanol were not detected (CAPE, 2004).

Historic soil data is included as Appendix A. Historic figures showing sampling locations, former UST locations, and cross-sections are included as Figure B. Soil boring logs are included as Appendix C, and well construction details are included as Table 4.

3.2 Past Uses of Adjoining Properties

The following sources were utilized in research for the historic land uses of the site abutters: aerial photographs, topographic maps, and Sanborn Fire Insurance Maps. Historic aerial photographs are included as Appendix E, historic topographic maps are included as Appendix F, and Sanborn Maps, and a City Directory Report are included as Appendix G.

Table 1 summarizes the information pertaining to the historic land use of the surrounding properties.

The former use of properties such as metal stamping shop are considered low concerns due to the potential of hazardous materials used at these sites.

3.3 Offsite Receptor Survey

3.3.1 Production Well Information

The Los Angeles County Department of Public Works (LACDPW) was previously contacted for production well information. Two wells (2781 and 2771I) were identified within a 1-mile radius of the site.

- Well 2781 was a test hole drilled to a total depth of 84 feet with an open end. Hole was drilled in 1938. Location is approximately 0.75 mile northwest (upgradient) from the site.
- Well 2771I was completed to a depth of 76 feet. Well was drilled in 1931. Location is approximately 0.85 mile west (cross-gradient) from the site.

Based on the distance, location, and usage of these wells, the potential environmental impact on these wells from the site is minimal. Information provided by the LACDPW is included in Appendix G. Well locations are shown on Figure 1.

3.3.2 Schools, Daycare Centers, Hospitals, and Retirement Centers

A database search performed by EDR in a 1-mile search radius around the site resulted in the following:

- Eight Day Care centers: the closest of which is Avenue 28 Head Start, located approximately 0.5-mile south (down to cross-gradient) of the site.
- One nursing home: Sycamore Park Convalescent Hospital is located approximately 1-mile north-northeast (upgradient) of the site.
- Seventeen schools: the closest of which is Hillside Elementary School located approximately 246 feet southeast (down to cross-gradient) of the site. The next closest school is Loreto Street Elementary located approximately 1,217 feet west-northwest (upgradient) of the site.

Based on the proximity and location of the Hillside Elementary School, proposed remedial methods should address this potential receptor. The EDR Offsite Receptor Report is included in Appendix D.

4.0 RECORDS REVIEW

EDR performed an environmental database review of the subject property and the surrounding area. EDR conducted a search of federal and state environmental databases. A copy of the EDR report is included as Appendix D.

4.1 Federal and State Database Review

USEPA: National Priority List (NPL)

The site is not listed on the USEPA NPL as a disposal site. However, one USEPA NPL site located within one mile of the site. The NPL site is Pollock Wellfield, located approximately 3,835 feet west. The Pollock Wellfield is defined as approximately 5,860 acres of land which groundwater produced from public wells was identified as being impacted by PCE, TCE, and 1,1-dichloroethene (DCE). To alleviate this contamination, wells were taken out of service, and produced groundwater from the Pollock Wellfield was blended with clean sources to ensure that the public receives water with concentrations below the State's guideline. The Pollock Wellfield is on the State's Annual Work Plan (AWP).

USEPA: Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS)

The site is not listed on the USEPA CERCLIS list. However, two sites within the prescribed search radius are listed on the CERCLIS database. These sites were Kennington Ltd., located 1,396 feet southwest and Ni West Incorporated located 1,919 south-southwest.

USEPA: Resource Conservation and Recovery Information System (RCRIS): Treatment, Storage, and Disposal (TSD) Facility

The site is not listed as a RCRIS TSD facility, and no TSD facilities were identified within 0.25 mile of the site. Five sites were identified as RCRA-SQG, however no violations were reported for any of the adjacent sites. Based on the distance, direction, and absence of reported violations, the operations at five adjacent sites are unlikely to impact the site.

USEPA: Resource Conservation and Recovery Information System (RCRIS)

The subject site is listed as a RCRIS- small quantity generator (SQG), and no violations were found.

USEPA: Emergency Response Notification System (ERNS)

The site is not listed on the ERNS database.

STATE: List of Sites Producing Hazardous Waste Manifests (HAZNET)

The subject site is listed on the HAZNET database as American Linen Supply Company (3505 Pasadena Avenue) for the generation of aqueous solutions containing oxygenated solvents (acetone, butanone, ethyl acetate, etc.).

STATE: List of Known or Potential Sites with Hazardous Substances (Cal-Sites)

The subject site is not listed on the Cal-Sites database. However, there is one site within the prescribed search radius (one mile). This site is identified as the Pollock Wellfield located 3835 feet west of the site.

STATE: Solid Waste Landfill (SWL)

The subject site is not listed as a SWL facility. One SWL, Lacy Street Dump located at 400 26th Avenue, was identified within 0.5 mile of the site.

STATE: Registered Underground Storage Tanks

The site is listed on the UST, Historical UST and CA Facility Inventory Database (CA FID) UST database. The site is listed as having 10 USTs: One 2,000-gallon diesel, one 10,000-gallon gasoline, one 6,000-gallon diesel, one 1,000-gallon diesel, one 1,700-gallon waste oil, one 3,200-gallon waste oil, one 3,590-gallon unreported content, one 1,800-gallon unreported content, one 800-gallon waste oil, and one 7,200-gallon unreported content. One other site had reported USTs within the search distance of 0.25 mile:

- 945 Larkin Street, approximately 349 feet north-northeast (upgradient), one UST with unreported size and content, closed January 2000.

The CA FID UST and Historical UST databases identify three other sites in the vicinity with USTs:

- Food For Life, 3580 Pasadena Avenue, approximately 797 feet north-northeast (upgradient), three 9,000-gallon gasoline USTs removed. Leak to soil being confirmed.
- Mike's Transmission, 3500 North Figueroa Street, approximately 1,241 feet north-northwest (up or cross gradient), three 500-gallon gasoline USTs.
- Ileasco, 3577 North Figueroa Street, approximately 1,304 feet north-northwest (up or cross gradient), three USTs (one 4,000-gallon diesel, one 8,000-gallon gasoline, and one 7,500-gallon gasoline).

STATE: Leaking Underground Storage Tanks

The subject site is listed as a LUST site due to the initial discovery of contaminated soil during diesel and gasoline UST removal activities. Impacted soil was excavated and removed, groundwater monitoring was initiated, and soil vapor extraction was operated from June 1990 to August 1991.

In addition, four LUST sites were identified within a 0.5 mile search radius:

- Food For Life/Flavor Foods Inc., 3580 Pasadena Avenue, approximately 797 feet north-northeast (upgradient), three 9,000-gallon gasoline USTs removed. Hydrocarbon release reported 10/28/1986; leak to soil being confirmed.
- Bill's Automotive #1, 100 East Avenue 28, approximately 2,429 feet south-southwest (downgradient); leak to groundwater discovered 7/31/91, case closed 6/20/98.
- Unger Fabrik, 3225 Lacy Street, approximately 1,660 feet west-southwest (downgradient); soil only release discovered 7/13/95 during tank closure, case closed 11/1/95.
- Lincoln Heights Service Department of Public Works (DPW), 3101 Artesian Street, approximately 1,766 feet southwest (downgradient); hydrocarbon release discovered on 3/26/91, case closed on12/19/97.

Based on its distance from the subject property, status, and the inferred groundwater gradient (i.e., to the west-southwest), it is likelythat the Food for Life/Flavor Foods Inc. site has impacted the site.

Other Database Listings

In addition to the databases listed above, the subject property is also listed on the CORTESE database, which is a state database of hazardous substance sites selected for remedial action. Petroleum Hydrocarbons and VOCs were listed, but the remedial action was not reported. In ENSR's opinion, this listing refers to the LUST and the SVE that occurred. Subsequent remedial action included pumping the free-product out of the wells.

USEPA: The Facility Index System (FINDS)

The subject site is listed on the USEPA FINDS list due to its listing on other databases (i.e., RCRA-SQG, LUST, CORTESE, SLIC, CA FID UST, HIST UST, SWEEPS UST, HAZNET). The search of the FINDS database was limited to the subject property.

4.2 Underground and/or Aboveground Storage Tanks (AST)

4.2.1 Current UST

The site does not currently operate any USTs.

4.2.2 Former USTs

Prior to site assessment activities by Kleinfelder in 1987, two USTs were removed and reportedly contained diesel (2,000-gallons) and gasoline (10,000-gallons). In 1988, Thorne supervised the

removal and conducted the closure investigation of 10 USTs and three sumps at the site. The former USTs had previously contained products such as gasoline, diesel fuel, and PCE. Five of the ten USTs, ranging in size from 750 to 1,500-gallons and located on the north side of the former North Building, were identified as containing a slurry mixture of PCE, TCE, and other associated hydrocarbons.

A review of files, reports and permits at the Los Angeles Fire Department revealed a UST removal report dated August 2004. The report by CAPE indicated that a single, 1,000-gallon steel UST was removed on July 8, 2004. Former contents of the UST were not known. The UST was discovered by geophysical means during site investigation activities in July 2002. A single soil sample (UST-B(Bottom) was collected from beneath the UST, and laboratory analysis indicated that TPHg, VOCs (including BTB(), ethanol, and methanol were not detected (CAPE, 2004).

According to the permits reviewed, 5 USTs were abandoned in place by filling with a slurry. However, permits were vague as to the location, size and former contents of the USTs filled in place. In addition, Thorne Environmental has a figure listing all former USTs as being removed (Appendix B). With the geophysical survey conducted by CAPE in 2002, and the subsequent UST removal in 2004, the possibility of other existing USTs that may have been abandoned in-place in the vicinity north of the former north building is less likely.

4.2.3 Current ASTs

There are no currents ASTs onsite.

4.2.4 Former ASTs

Five former ASTs (two 1,000-gallon, two 250-gallon, and one 800-gallon) were located on the north side of the North Building in the vicinity of the former PCE and TCE USTs.

5.0 SUMMARY AND RECOMMENDATIONS

5.1 Summary

The subject of this SCM is the former Welch's Uniform Facility located at 3505 Pasadena Avenue, Los Angeles, California. This work was performed in accordance with our proposal to AmeriPride Services Inc. dated August 4, 2005. The purpose of this investigation was to evaluate the existing environmental assessments and to assess the need for additional assessment if warranted.

The following issues of potential concern were identified:

- Lingering Presence of Subsurface VOC's in the Vicinity of the Former UST Locations (North of the North Building): Based on the confirmation borings collected in August 2000 in the area previously remediated using SVE, concentrations of PCE and TCE were reported at a maximum concentration of 79 mg/kg (CB-1-35), and 66 mg/kg (CB-2-35), respectively (CAPE, 2000). Based on these concentrations, the LARWQCB denied the request for no further action, and requested additional site assessment activities in the vicinity of the former PCE USTs in correspondence dated January 10, 2001.

- Further Definition of VOC's in the Southwest Corner of the Site: Based on a soil vapor survey conducted in 2001, elevated concentrations of PCE (260 ug/L; SV-10-10) were detected in the southwest corner of the site and in areas of the former solvent USTs. Two additional soil vapor points, SV-43 and SV-44 were installed to the north and east of SV-10. Minor concentrations of PCE were only detected in the northern soil vapor location (SV-44), however, no assessment was conducted to the south of SV-10 (adjacent property).

- Delineation of Offsite Dissolved-Phase VOC's Southwest of the Site: Concentrations of PCE and TCE were detected in the furthest downgradient monitoring wells, MW-14 and MW-15, at 10 times the MCL for drinking water. The downgradient protion of the dissolved-phase VOC plume is undefined.

- The Site is in Close Proximity to the Pollock Wellfield: The Pollock Wellfield is located approximately 3,835 feet west of the site (cross gradient). The Pollock Wellfield is defined as approximately 5,860 acres of land which groundwater produced from public wells was identified as being impacted by PCE, TCE, and 1,1-DCE. To alleviate this contamination, wells were taken out of service, and produced groundwater from the Pollock Wellfield was blended with clean sources to ensure that the public receives water with concentrations below the State's guideline. The Pollock Wellfield is on the State's AWP.

- Potential presence of USTs that were Abandoned in Place: According to the permits reviewed, 5 USTs were abandoned in place by filling with a slurry. However, permits were vague as to the location, size and former contents of the USTs filled in place. In addition, Thorne Environmental has a figure listing all former USTs as being removed (Appendix B). With the geophysical survey conducted by CAPE in 2002, and the subsequent removal of a 1,000-gallon UST in 2004, the possibility of other existing USTs that may have been abandoned in-place in the vicinity of the former north building is less likely.

5.2 Recommendations

Based on the above, ENSR recommends the following scope of work:

5.2.1 Prefield Activities

ENSR will apply for encroachment permits, and well installation permits with the Los Angeles DHS, and the City of Los Angeles. In addition, Underground Service Alert will be notified a minimum of 2 working days prior to initiating drilling activities.

In order to avoid subsurface utilities, monitoring well locations located on and offsite will be hand-augured or air-knifed to a depth of at least 5 feet prior to drilling. In addition, a subsurface utility survey may be conducted in the vicinity of the former location of the solvent USTs north of the former North Building.

5.2.2 Additional Soil Assessment

Initial Sampling Phase

ENSR recommends a Phase II soil assessment in the vicinity of the former UST area north of the North Building (in the vicinity of CB-1 and CB-2), and the southwest corner (vicinity of SV-10) of the site in a two-phase approach. Soil borings SB-31 through SB-38 will be advanced to a depth of approximately 35 feet bgs or first encountered groundwater using a hollow-stem auger drilling rig during the first phase of the soil assessment in the aforementioned areas of concern (Figure 5).

Analytical Method

Soil samples will be collected at 5-foot depth intervals and submitted for VOC analysis by EPA Method 8260B, and using field preservation method (EPA Method 5035). One hydropunch groundwater sample will be collected from SB-38 in the southwest corner of the site. One soil sample collected from the former UST area and one sample from the southwest corner of the site will be analyzed for physical properties typically used in vapor transport modeling (Johnson-Ettinger Model).

Additional Characterization Step Out Phase

Upon receipt of analytical results from the soil samples collected during the initial phase, an additional round of soil sampling may occur to further define adsorbed-phase concentrations detected. Up to eight additional soil borings (designated as SB-39 through SB-46) will be advanced to further define VOCs detected during the initial phase.

General field procedures are included in Appendix H, and a site specific Health and Safety Plan is included as Appendix I.

5.2.3 Groundwater Monitoring Well Installation

ENSR proposes to install one additional onsite and four additional offsite groundwater monitoring wells (MW-16 through MW-20) to further define PCE/VOCs in the dissolved-phase groundwater plume. The onsite well, MW-16, will replace well MW-11 which was supposedly destroyed during site demolition activities. Offsite well MW-17 will be located to the west of the property to further define the cross gradient portion of the dissolved-phase plume. Wells MW-18 through MW-20 will be placed southwest of monitoring wells MW-14 and MW-15 to define the downgradient portion of the dissolved-phase plume (Figure 6).

Based on the historical release of VOCs from the Kennington property located at 3209 Humboldt Street, and the proximity of the site to the Pollock Wellfield, ENSR believes that these three additional

downgradient wells will adequately assess the dissolved-phase plume that may have originated from the Former Welch's Uniform Facility. Any wells placed further downgradient than these locations may be assessing commingled VOCs from multiple sources.

All wells will be advanced to a depth of approximately 65 feet bgs, and screened from 20 to 65 feet. Monitoring wells will be constructed of 4-inch diameter polyvinyl chloride (PVC), with 0.020-inch slotted screen. Each well will have a traffic rated 12-inch diameter well box, with a locking well cap. Upon completion of well installation activities, each well will be developed, and the location and top of well casing will be surveyed by a licensed land surveyor. All newly installed groundwater monitoring wells will be added to the quarterly groundwater monitoring and sampling program. ENSR recommends joint quarterly groundwater monitoring with the Kennington property since several of the groundwater monitoring wells that were installed to assess dissolved-phase concentrations beneath the Kennington property are in a downgradient position relative to the site.

Analytical Methods

Groundwater samples collected from the newly installed wells will be analyzed for the same constituents as the other monitoring wells in the program. Additional analysis of select wells for natural attenuation parameters such as dissolved-oxygen (DO, field instrument), pH (field instrument), oxidation-reduction potential (ORP; field instrument), nitrate and nitrite (EPA Method 300), sulfate (EPA Method 300), ferrous iron (SM3500-FeD), methane (EPA Method RSK-175M),

5.2.4 Waste Handling

All waste materials generated during soil and groundwater assessment will be temporarily stored onsite in Department of Transportation approved 55-gallon drums or covered roll-off containers pending analytical results. Soil and groundwater will then be transported under manifest once characterized to a soil or groundwater recycling facility.

5.2.5 Updated Site Conceptual Model

An updated SCM will be submitted incorporating additional soil and groundwater data collected during the proposed assessment activities. In addition, an analysis of the groundwater data using the natural attenuation parameters will be conducted to determine if the site is a candidate for monitored natural attenuation (MNA).

NOTES:

Table 3 Abbreviations (page 1)
TPHg = Total Petroleum Hydrocarbons as Gasoline
TPHd = Total Petroleum Hydrocarbons as Diesel
TPHmo = Total Petroleum Hydrocarbons as Motor Oil
TPHmo = Total Petroleum Hydrocarbons as Mineral Oil or Waste Oil
MTBE = Methyl tert-butyl ether
TCE = Trichloroethene
NA = Not analyzed

Notes:

ND<1 = Not Detected above the indicated reporting limit for the particular compound in the sample

PCE = Tetrachloroethene
TCE = Trichloroethene
cis-1,2-DCE = cis-1,2-dichloroethene
MTBE = Methyl Tertiary Butyl Ether

All soil gas samples analyzed by HP Labs mobile laboratory by U.S. EPA Method 8260, see HP Labs' report for list of other compounds analyzed.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc. (EDR). The report meets the government records search requirements of ASTM Standard Practice for Environmental Site Assessments, E 1527-00. Search distances are per ASTM standard or custom distances requested by the user.

WELCH UNIFORM 3505 PASADENA LOS ANGELES, CA 90031	SLIC	N/A

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable") government records either on the target property or within the ASTM E 1527-00 search radius around the target property for the following databases:

FEDERAL ASTM STANDARD

Proposed NPL — Proposed National Priority List Sites
CERC-NFRAP — CERCLIS No Further Remedial Action Planned
CORRACTS — Corrective Action Report
RCRA-TSDF — Resource Conservation and Recovery Act Information
RCRA-LQG — Resource Conservation and Recovery Act Information
ERNS — Emergency Response Notification System

STATE ASTM STANDARD

CHMIRS — California Hazardous Material Incident Report System
Toxic Pits — Toxic Pits Cleanup Act Sites
SWF/LF — Solid Waste Information System
CA BOND EXP. PLAN — Bond Expenditure Plan
INDIAN UST — Underground Storage Tanks on Indian Land
INDIAN LUST — Leaking Underground Storage Tanks on Indian Land

FEDERAL ASTM SUPPLEMENTAL

CONSENT — Superfund (CERCLA) Consent Decrees
ROD — Records Of Decision
Delisted NPL — National Priority List Deletions
HMIRS — Hazardous Materials Information Reporting System
MLTS — Material Licensing Tracking System
MINES — Mines Master Index File
NPL Liens — Federal Superfund Liens
PADS — PCB Activity Database System
UMTRA — Uranium Mill Tailings Sites
US ENG CONTROLS — Engineering Controls Sites List
ODI — Open Dump Inventory
FUDS — Formerly Used Defense Sites
DOD — Department of Defense Sites
INDIAN RESERV — Indian Reservations
RAATS — RCRA Administrative Action Tracking System
TRIS — Toxic Chemical Release Inventory System
TSCA — Toxic Substances Control Act
SSTS — Section 7 Tracking Systems
FTTS INSP — FIFRA/TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)

STATE OR LOCAL ASTM SUPPLEMENTAL

AST — Aboveground Petroleum Storage Tank Facilities
CLEANERS — Cleaner Facilities
CA WDS — Waste Discharge System

NFE — Properties Needing Further Evaluation
WIP — Well Investigation Program Case List
EMI — Emissions Inventory Data
REF — Unconfirmed Properties Referred to Another Agency
NFA — No Further Action Determination
LOS ANGELES CO. HMS — HMS: Street Number List
LA Co. Site Mitigation — Site Mitigation List
ACCONCERN — San Gabriel Valley Areas of Concern

BROWNFIELDS DATABASES

US BROWNFIELDS — A Listing of Brownfields Sites
US INST CONTROL — Sites with Institutional Controls

EDR PROPRIETARY HISTORICAL DATABASES

See the EDR Proprietary Historical Database Section for details

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in *bold italics* are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL ASTM STANDARD

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 07/01/2005 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA).
CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites

which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 05/27/2005 has revealed that there are 2 CERCLIS sites within approximately 0.5 miles of the target property.

RCRAInfo: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-SQG list, as provided by EDR, and dated 05/20/2005 has revealed that there are 5 RCRA-SQG sites within approximately 0.25 miles of the target property.

STATE ASTM STANDARD

AWP: California DTSC's Annual Workplan, formerly known as BEP, identifies known hazardous substance sites targeted for clean up. The source is the California Environmental Protection Agency.

A review of the AWP list, as provided by EDR, and dated 08/08/2005 has revealed that there is 1 AWP site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Dist / Dir	Map ID	Page
SAN FERNANDO VALLEY (AREA 4)	POLLOCK WELL FIELD	1/2 - 1 W	0	15

CAL-SITES: Formerly known as ASPIS, this database contains both known and potential hazardous substance sites. The source is the California Department of Toxic Substance Control.

A review of the Cal-Sites list, as provided by EDR, has revealed that there is 1 Cal-Sites site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Dist / Dir	Map ID	Page
SAN FERNANDO VALLEY (AREA 4)	POLLOCK WELL FIELD	1/2 - 1 W	0	15

CORTESE: This database identifies public drinking water wells with detectable levels of contamination, hazardous substance sites selected for remedial action, sites with known toxic material identified through the abandoned site assessment program, sites with USTs having a reportable release and all solid waste disposal facilities from which there is known migration. The source is the California Environmental Protection Agency/Office of Emergency Information.

A review of the Cortese list, as provided by EDR, has revealed that there are 4 Cortese sites within approximately 0.5 miles of the target property.

Final Date: 09/10/1986

NPL SUMMARY:
Summary: Conditions at proposal October 15, 1984): San Fernando Valley (Area 4) is an area of contaminated ground water in the Pollock Well Field area in the City of Los Angeles, Los Angeles County, California. The area is part of the San Fernando Valley
Basin, a natural underground reservoir that represents an important source of drinking water for at least 3 million people in the Los Angeles metropolitan area. The contaminated ground water, which underlies an area of approximately 5,280 acres, co
ntains perchloroethylene (PCE), according to tests conducted by the California Department of Health Services, as well as numerous local government agencies. The State s recommended drinking water guideline for PCE (4 parts per billion) is exceeded
in a number of public wells in this area. To alleviate this contamination, wells are either taken out of service or blended with water from clean sources to ensure that the public receives water with concentrations below the State s guideline Statu
s June 10, 1986): EPA and the Los Angeles Department of Water and Power are entering into a cooperative agreement for a remedial investigation of the San Fernando Valley Basin and a feasibility study targeted at Area 1, the most contaminated area.
The R/I is scheduled to begin in early 1986.

Background Info: The site is a large warehouse-type building with cement flooring and an adjoining parking lot that is also paved.
The PEA initially performed recommended further investigation. PCBs as high as 24,076 ppm; and TPH and TRPH as high as 73,050 ppm were identified. The final Remedial Investigation Report has been reviewed and approved by the Department.

Comments Date : 01052005
Comments : Groundwater monitoring Plan objective is to update the groundwater monitoring plan originally proposed in the RAP and RAD to describe the groundwater monitoring that will be performed for two years after the completion of soil excavation. The monitoring plan was changed due to the greater amount and

KENNINGTON LTD. (Continued) 1000366946

extent of excavation and removal of TCE and PCE impacted soil to below the capillary fringe and into groundwater. Operation and maintenance Plan (OMP). The purpose of this OMP is to identify soil and groundwater activities that need to be followed and maintained in order to protect human health and the environment. Other activities outlined in this OMP include maintaining a fence and erosion control until the site is sold and developed.
Meeting held with RP's to discuss issue raised at 12/3/96. RPs given opportunity to provide additional information prior to DTSC issuing final determinations.
Not reported
AN AMENDED VOLUNTARY CLEANUP AGREEMENT WAS SIGNED BY THE PROJECT PROPONENTS AND THE DEPARTMENT OF TOXIC SUBSTANCES CONTROL FOR A REMEDIAL INVESTIGATION.
DTSC approved a submitted Work Plan for demolition of the existing buildings on he property.
Not reported
Not reported
An operation maintenance agreement is executed for the implementation of a plan to identify soil and groundwater activities that need to be followed and maintained in order to protect human health and the environment.
Amended VCA includes DTSC review/oversight of data on soil, groundwater and building interiors. Approximately forty (40) documents and reports prepared by ITT and Kenrington consultants regarding historical investigations for the site are scheduled to be reviewed as part of the Remedial Investigation.
An operation maintenance agreement is executed for the implementation of a plan to identify soil and groundwater activities that need to be followed and maintained in order to protect human health and the environment.
The soil remedial action involved the excavation to +5 feet below ground surface, and offsite disposal of approximately 18,000 cubic yards of soil impacted with PCB's, PCE, TCE and lead.
Final Soil Remedial Action Implementation Report. The soil remedial action involved the excavation to +5 feet below ground surface, and offsite disposal of approximately 18,000 cubic yards of soil impacted with PCB's, PCE, TCE, and lead.
Kennington's consultant submitted a new site specific Health & Safety Plan regarding building demolition and asbestos abatement.
Not reported
DTSC signed the Voluntary Cleanup Agreement (VCA). VCA was signed on 4/11/01. Purpose of VCA is for ITT Cannon to complete the Site Investigation, and prepare and implement a Removal Action Workplan.
Meeting held with RPs to discuss DTSC's preliminary determination regarding the building interior.
Not reported
A VOLUNTARY CLEAN-UP AGREEMENT WAS SIGNED BY THE RPS AND DTSC. PER THE AGREEMENT THE RPS WOULD PAY IN ADVANCE TO HAVE DTSC REVIEW AND COMMENT ON THE RPS SITE CHARACTERIZATION REPORT. WALK-IN PROGRAM PROJECT.

KENNINGTON LTD. (Continued) 1000366946

An RI review was completed to evaluate the completeness of past investigations in characterizing the nature and extent of soil, groundwater and building interior surfaces contamination. Hazardous substances currently present include TPH, PCBs, PCDDs, PCDFs, VOC, metals, VOCs. Final determination: Further investigation necessary.
DTSC approved Phase two of the demolition workplan to remove the existing concrete foundation of he buildings.
Not reported
Not reported
DTSC COMPLETED REVIEW OF SITE CHARACTERIZATION REPORT AND SUBMITS COMMENTS AND RECOMMENDATIONS TO THE RPS. THEY ARE AS FOLLOWS:1) DTSC CONCURS THAT BASED ON THE BUILDINGS ENGINEERING CERTIFICATE OF THE CONCRETE FLOOR AND THE PRESENT USE OF THE SITE, AS LONG AS THE FLOORING STAYS INTACT THERE SHOULD BE NO SIGNIFICANT HEALTH RISKS TO BLDG. PERSONNEL. IF THE INTEGRITY OF THE CONCRETE FLOORING BECOMES DAMAGED, SO AS TO EXPOSE BLDG. PERSONNEL TO THE CONTAMINATED SOIL IMMEDIATE ACTIONS SHALL BE TAKEN TO CORRECT THE PROBLEM. IF MAINTENANCE IS NEEDED BELOW THE CONCRETE FLOOR (EG. REPAIR OF UTILITY LINES), PERSONNEL CONDUCTING THE WORK SHALL BE NOTIFIED OF THE HAZARDS AND APPROPRIATE PROTECTIVE CLOTHING SHALL BE WORN. IN THE EVENT THAT KENNINGTON, LTD, INC. PROPOSES TO CHANGE OWNERSHIP OR USE OF THE SITE, DTSC BELIEVES THAT FURTHER RESPONSE ACTION IS REQUIRED. DTSC RECOMMENDS THE FURTHER ACTION BE IN THE FORM OF A) REMEDIATION OF THE CONTAMINATED AREA(S), OR B) IMPLEMENTATION OF LAND USE RESTRICTIONS.
SITE SCREENING DONE PRELIMINARY ENDANGERMENT ASSESSMENT (PEA) REQUIRED. SITE WAS USED BY VARIOUS FORMER COMPANIES FROM ELECTRONIC COMPONENT ASSEMBLY TO ANTI POISON MANUFACTURING.
A Preliminary Assessment Report was submitted to U.S. EPA Region IX for review and approval. Sampling is recommended by U.S. EPA.
Negotiations of enforceable agreement with ITT, currently ongoing, for additional oversight.
Remedial Investigation/Feasibility Study completed right on time.
Statement of Facts completed in anticipation of a Consent Decree.
DTSC staff(Hinojosa, Sallocks, Guerre), were deposed by Kennington legal counsel in July/August, regarding its oversight activities.
Not reported
Negotiations of consent order with ITT currently ongoing.
Not reported
Not reported
The Remedial Action Plan (RAP) includes the excavation and disposal of about 5,000 cubic yards of soil contaminated with polychlorinated biphenls (PCBs), volatile organic compounds (TCE and PCE), lead, and groundwater remediation.
Not reported
Based on the analyses and conclusion found in the Special Initial Study, DTSC finds that the project may result in a potentially significant impact on the archaeological resources, thus a Mitigated Negative Declaration was prepared for the

KENNINGTON LTD. (Continued) 1000366846

protect. An archaeologist will monitor the excavation on Site as a mitigation measure to reduce any potential impact to less than significant levels.
O NCO RTESE LIST
PRELIM ASSESS DONE PEA COMPLETED AND FURTHER INVESTIGATIO N IS NEC ESSARY. PCBS FOUND AS HIGH AS 24,076 PPM AND TPH & TRPH AS HIGH AS 73,050 PPM. SITE IS A LARGE WAREHOUSE-TYPE BUILDING WITH CEMENT FLOO RING & AN ADJOINING PARKING LOT WHICH IS ALSO PAVED. WORKPLAN FO R SITE CHARACTERIZA-TIO N APPROVED WITH APPROX 20 SOIL BO R-INGS PRO POSED; 5 O F WHICH WILL BE CON-VERTED INTO GRO UNDWATER MO NITO RING WELLS
Negotiations of consent order currently ongoing.
Not reported
Negotiations consent order currently on hold due to Kennington PRP negotiations/litigations settlement.
Not reported
Meeting held with RP's to discuss DTSC's preliminary determination regarding sites soil and groundwater.
Sometime in 1988, ITT Canon repurchased the Kennigton site and became the new owner of the site. On 12/18/98, DTSC and ITT had a meeting to discuss entering into a consent agreement with DTSC in order to clean up the site for future development with DTSC's oversight.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Elapsed ASTM days: Provides confirmation that this EDR report meets or exceeds the 90-day updating requirement of the ASTM standard.

FEDERAL ASTM STANDARD RECORDS

NPL: National Priority List
Source: EPA
Telephone: N/A
National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 07/01/05
Date Made Active at EDR: 08/22/05
Database Release Frequency: Quarterly
Date of Data Arrival at EDR: 08/03/05

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System
Source: EPA
Telephone: 703-413-0223
CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 05/27/05
Date Made Active at EDR: 08/17/05
Database Release Frequency: Quarterly
Date of Data Arrival at EDR: 07/22/05
Elapsed ASTM days: 35
Date of Last EDR Contact: 07/22/05

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned
Source: EPA
Telephone: 703-413-0223
As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to limit the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

RCRA: Resource Conservation and Recovery Act Information
Source: EPA
Telephone: 800-424-9346
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

FEDERAL ASTM SUPPLEMENTAL RECORDS

BRS: Biennial Reporting System
Source: EPA/NTIS
Telephone: 800-424-9346
The Biennial Reporting System is a national system administered by the EPA that collects data on the generation and management of hazardous waste. BRS captures detailed data from two groups: Large Quantity Generators (LQG) and Treatment, Storage, and Disposal Facilities.

Date of Government Version: 12/31/03
Database Release Frequency: Biennially
Date of Last EDR Contact: 06/17/05
Date of Next Scheduled EDR Contact: 09/12/05

CONSENT: Superfund (CERCLA) Consent Decrees
Source: Department of Justice, Consent Decree Library
Telephone: Varies
Major legal settlements that establish responsibility and standards for cleanup at NPL (Superfund) sites. Released periodically by United States District Courts after settlement by parties to litigation matters.

Date of Government Version: 12/14/04 — Date of Last EDR Contact: 07/25/05
Database Release Frequency: Varies — Date of Next Scheduled EDR Contact: 10/24/05

ROD: Records Of Decision
Source: EPA
Telephone: 703-416-0223
Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid in the cleanup.

Date of Government Version: 06/08/05 — Date of Last EDR Contact: 07/06/05
Database Release Frequency: Annually — Date of Next Scheduled EDR Contact: 10/03/05

DELISTED NPL: National Priority List Deletions
Source: EPA
Telephone: N/A
The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 07/01/05 — Date of Last EDR Contact: 08/03/05

Database Release Frequency: Quarterly — Date of Next Scheduled EDR Contact: 10/03/05

HMIRS: Hazardous Materials Information Reporting System
Source: U.S. Department of Transportation
Telephone: 202-366-4555
Hazardous Materials Incident Report System. HMIRS contains hazardous material spill incidents reported to DOT.

Date of Government Version: 06/27/05 — Date of Last EDR Contact: 07/22/05
Database Release Frequency: Annually — Date of Next Scheduled EDR Contact: 10/17/05

MLTS: Material Licensing Tracking System
Source: Nuclear Regulatory Commission
Telephone: 301-415-7169
MLTS is maintained by the Nuclear Regulatory Commission and contains a list of approximately 8,100 sites which possess or use radioactive materials and which are subject to NRC licensing requirements. To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 07/14/05 — Date of Last EDR Contact: 07/05/05
Database Release Frequency: Quarterly — Date of Next Scheduled EDR Contact: 10/03/05

MINES: Mines Master Index File
Source: Department of Labor, Mine Safety and Health Administration
Telephone: 303-231-5959
Contains all mine identification numbers issued for mines active or opened since 1971. The data also includes violation information.

Date of Government Version: 05/13/05 — Date of Last EDR Contact: 06/27/05
Database Release Frequency: Semi-Annually — Date of Next Scheduled EDR Contact: 09/26/05

NPL LIENS: Federal Superfund Liens
Source: EPA
Telephone: 202-564-4267
Federal Superfund Liens. Under the authority granted the USEPA by the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner receives notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/91 — Date of Last EDR Contact: 08/22/05
Database Release Frequency: No Update Planned — Date of Next Scheduled EDR Contact: 11/21/05

PADS: PCB Activity Database System
Source: EPA
Telephone: 202-564-3887
PCB Activity Database. PADS Identifies generators, transporters, commercial storers and/or brokers and disposers of PCB's who are required to notify the EPA of such activities.

Date of Government Version: 03/30/05 — Date of Last EDR Contact: 08/25/05
Database Release Frequency: Annually — Date of Next Scheduled EDR Contact: 11/07/05

DOD: Department of Defense Sites
Source: USGS
Telephone: 703-692-8801
This data set consists of federally owned or administered lands, administered by the Department of Defense, that have any area equal to or greater than 640 acres of the United States, Puerto Rico, and the U.S. Virgin Islands.

Date of Government Version: 10/01/03 — Date of Last EDR Contact: 08/09/05
Database Release Frequency: Semi-Annually — Date of Next Scheduled EDR Contact: 11/07/05

UMTRA: Uranium Mill Tailings Sites
Source: Department of Energy
Telephone: 505-845-0011
Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized. In 1978, 24 inactive uranium mill tailings sites in Oregon, Idaho, Wyoming, Utah, Colorado, New Mexico, Texas, North Dakota, South Dakota, Pennsylvania, and on Navajo and Hopi tribal lands, were targeted for cleanup by the Department of Energy.

Date of Government Version: 12/29/04 — Date of Last EDR Contact: 07/05/05
Database Release Frequency: Varies — Date of Next Scheduled EDR Contact: 09/19/05

ODI: Open Dump Inventory
Source: Environmental Protection Agency
Telephone: 800-424-9346
An open dump is defined as a disposal facility that does not comply with one or more of the Part 257 or Part 258 Subtitle D Criteria.

Date of Government Version: 06/30/85 — Date of Last EDR Contact: 05/23/95
Database Release Frequency: No Update Planned — Date of Next Scheduled EDR Contact: N/A

FUDS: Formerly Used Defense Sites
Source: U.S. Army Corps of Engineers
Telephone: 202-528-4285
The listing includes locations of Formerly Used Defense Sites properties where the US Army Corps of Engineers is actively working or will take necessary cleanup actions.

Date of Government Version: 12/31/04 Date of Last EDR Contact: 06/29/05
Database Release Frequency: Varies Date of Next Scheduled EDR Contact: 10/03/05

INDIAN RESERV: Indian Reservations
Source: USGS
Telephone: 202-208-3710
This map layer portrays Indian administered lands of the United States that have any area equal to or greater than 640 acres.

Database Release Frequency: Semi-Annually Date of Next Scheduled EDR Contact: 11/07/05

US ENG CONTROLS: Engineering Controls Sites List
Source: Environmental Protection Agency
Telephone: 703-603-8867
A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or affect human health.

Date of Government Version: 01/10/05 Date of Last EDR Contact: 07/05/05
Database Release Frequency: Varies Date of Next Scheduled EDR Contact: 10/03/05

RAATS: RCRA Administrative Action Tracking System
Source: EPA
Telephone: 202-564-4104
RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/95 Date of Last EDR Contact: 06/09/05
Database Release Frequency: No Update Planned Date of Next Scheduled EDR Contact: 09/05/05

TRIS: Toxic Chemical Release Inventory System
Source: EPA
Telephone: 202-566-0250
Toxic Release Inventory System. TRIS identifies facilities which release toxic chemicals to the air, water and land in reportable quantities under SARA Title III Section 313.

Date of Government Version: 12/31/03 Date of Last EDR Contact: 07/13/05
Database Release Frequency: Annually Date of Next Scheduled EDR Contact: 09/19/05

TSCA: Toxic Substances Control Act
Source: EPA
Telephone: 202-260-5521
Toxic Substances Control Act. TSCA identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory list. It includes data on the production volume of these substances by plant site.

Date of Government Version: 12/31/02 Date of Last EDR Contact: 07/18/05
Database Release Frequency: Every 4 Years Date of Next Scheduled EDR Contact: 10/17/05

FTTS INSP: FIFRA/TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)

CA FID UST: Facility Inventory Database
Source: California Environmental Protection Agency
Telephone: 916-341-5851
The Facility Inventory Database (FID) contains a historical listing of active and inactive underground storage tank locations from the State Water Resource Control Board. Refer to local/county source for current data.

Date of Government Version: 10/31/94
Date Made Active at EDR: 09/29/95
Database Release Frequency: No Update Planned
Date of Data Arrival at EDR: 09/05/95
Elapsed ASTM days: 24
Date of Last EDR Contact: 12/28/98

HIST UST: Hazardous Substance Storage Container Database
Source: State Water Resources Control Board
Telephone: 916-341-5851
The Hazardous Substance Storage Container Database is a historical listing of UST sites. Refer to local/county source for current data.

Date of Government Version: 10/15/90
Date Made Active at EDR: 02/13/91
Database Release Frequency: No Update Planned
Date of Data Arrival at EDR: 01/25/91
Elapsed ASTM days: 18
Date of Last EDR Contact: 07/26/01

SWEEPS UST: SWEEPS UST Listing
Source: State Water Resources Control Board
Telephone: N/A
Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contracted by the SWRCB in the early 1980's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

Date of Government Version: 06/01/94
Date Made Active at EDR: 08/11/05
Database Release Frequency: No Update Planned
Date of Data Arrival at EDR: 07/07/05

Database Release Frequency: Quarterly — Date of Next Scheduled EDR Contact: 09/19/05

DEED: Deed Restriction Listing
Source: Department of Toxic Substances Control
Telephone: 916-323-3400
Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Date of Government Version: 08/02/05 — Date of Last EDR Contact: 07/05/05
Database Release Frequency: Semi-Annually — Date of Next Scheduled EDR Contact: 10/03/05

NFA: No Further Action Determination
Source: Department of Toxic Substances Control
Telephone: 916-323-3400
This category contains properties at which DTSC has made a clear determination that the property does not pose a problem to the environment or to public health.

Date of Government Version: 05/04/05 — Date of Last EDR Contact: 06/01/05
Database Release Frequency: Quarterly — Date of Next Scheduled EDR Contact: 09/26/05

EMI: Emissions Inventory Data
Source: California Air Resources Board
Telephone: 916-322-2990
Toxics and criteria pollutant emissions data collected by the ARB and local air pollution agencies.

Database Release Frequency: Varies — Date of Next Scheduled EDR Contact: 10/24/05

REF: Unconfirmed Properties Referred to Another Agency
Source: Department of Toxic Substances Control
Telephone: 916-323-3400
This category contains properties where contamination has not been confirmed and which were determined as not requiring direct DTSC Site Mitigation Program action or oversight. Accordingly, these sites have been referred to another state or local regulatory agency.

Date of Government Version: 05/04/05 — Date of Last EDR Contact: 06/01/05
Database Release Frequency: Quarterly — Date of Next Scheduled EDR Contact: 09/26/05

SCH: School Property Evaluation Program
Source: Department of Toxic Substances Control
Telephone: 916-323-3400
This category contains proposed and existing school sites that are being evaluated by DTSC for possible hazardous materials contamination. In some cases, these properties may be listed in the CalSites category depending on the level of threat to public health and safety or the environment they pose.

Date of Government Version: 05/04/05 — Date of Last EDR Contact: 06/01/05
Database Release Frequency: Quarterly — Date of Next Scheduled EDR Contact: 09/26/05

NFE: Properties Needing Further Evaluation
Source: Department of Toxic Substances Control
Telephone: 916-323-3400
This category contains properties that are suspected of being contaminated. These are unconfirmed contaminated properties that need to be assessed using the PEA process. PEA In Progress indicates properties where DTSC is currently conducting a PEA. PEA Required indicates properties where DTSC has determined a PEA is required, but not currently underway.

HAZNET: Facility and Manifest Data
Source: California Environmental Protection Agency
Telephone: 916-255-1136
Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

EDR PROPRIETARY HISTORICAL DATABASES

EDR Historical Gas Station and Dry Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner and gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning and gas station/filling station/service station establishments. The categories reviewed included, but were not limited to: *gas, gas station; gasoline station; filling station; auto, automobile repair; auto service station; service station; dry cleaner, cleaners, laundry, laundromat, cleaning/laundry, wash &/or dry, etc.*

This information is meant to assist and complement environmental professionals in their conduct of environmental site assessments, and is not meant to be a substitute for a full Historical Investigation as defined in ASTM E1527. The information provided in this proprietary database may or may not be complete; i.e., the absence of a dry cleaner or gas station/filling station/service station site does not necessarily mean that such a site did not exist in the area covered by this report.

(And on "dry cleaning" sites, it is not possible for EDR to differentiate between establishments that use PERC on-site as a cleaning solvent and sites that function simply as drop-off and pick-up locations or that are traditional "wet cleaning/laundry facilities. Therefore, it is essential for environmental professionals to incorporate professional judgment in the evaluation of each site.)

Former Manufactured Gas (Coal Gas) Sites: The existence and location of Coal Gas sites is provided exclusively to EDR by Real Property Scan, Inc. ©Copyright 1998 Real Property Scan, Inc. For a technical description of the types of hazards which may be found at such sites, contact your EDR customer service representative.

Disclaimer Provided by: Real Property Scan, Inc.

The information contained in this report has predominantly been obtained from publicly available sources produced by entities other than Real Property Scan. While reasonable steps have been taken to insure the accuracy of this report, Real Property Scan does not guarantee the accuracy of this report. Any liability on the part of Real Property Scan is strictly limited to a refund of the amount paid. No claim is made for the actual existence of toxins at any site. This report does not constitute a legal opinion.

BROWNFIELDS DATABASE

US BROWNFIELDS: A Listing of Brownfields Sites
Source: Environmental Protection Agency
Telephone: 202-566-2777
Included in the listing are brownfields properties addressed by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments- EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian Tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Date of Government Version: 01/10/05 — Date of Last EDR Contact: 05/13/05
Database Release Frequency: Semi-Annually — Date of Next Scheduled EDR Contact: 08/12/05

VCP: Voluntary Cleanup Program Properties
Source: Department of Toxic Substances Control
Telephone: 916-323-3400
Contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have request that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

Date of Government Version: 03/03/05 — Date of Last EDR Contact: 03/29/05
Database Release Frequency: Quarterly — Date of Next Scheduled EDR Contact: 11/28/05

US INST CONTROL: Sites with Institutional Controls
Source: Environmental Protection Agency
Telephone: 703-603-8867
A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 01/10/05 — Date of Last EDR Contact: 07/05/05
Database Release Frequency: Varies — Date of Next Scheduled EDR Contact: 10/03/05

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data
Source: PennWell Corporation
Telephone: (800) 823-6277
This map includes information copyrighted by PennWell Corporation. This information is provided on an 'as is' basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities
Source: Department of Social Services
Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 from the U.S. Fish and Wildlife Service.

GEOCHECK®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

AMERIPRIDE SERVICES INC.
3505 PASADENA AVENUE
LOS ANGELES, CA 90031

TARGET PROPERTY COORDINATES

Latitude (North):	34.083800 - 34° 5' 0.9"
Longitude (West):	118.213097 - 118° 12' 47.1"
Universal Transverse Mercator:	Zone 11
UTM X (Meters):	388079.9
UTM Y (Meters):	3772138.8
Elevation:	366 ft. above sea level

EDR's GeoCheck Physical Setting Source Addendum has been developed to assist the environmental professional with the collection of physical setting source information in accordance with ASTM 1527-00, Section 7.2.3. Section 7.2.3 requires that a current USGS 7.5 Minute Topographic Map (or equivalent, such as the USGS Digital Elevation Model) be reviewed. It also requires that one or more additional physical setting sources be sought when (1) conditions have been identified in which hazardous substances or petroleum products are likely to migrate to or from the property, and (2) more information than is provided in the current USGS 7.5 Minute Topographic Map (or equivalent) is generally obtained, pursuant to local good commercial or customary practice, to assess the impact of migration of recognized environmental conditions in connection with the property. Such additional physical setting sources generally include information about the topographic, hydrologic, hydrogeologic, and geologic characteristics of a site, and wells in the area.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata. EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

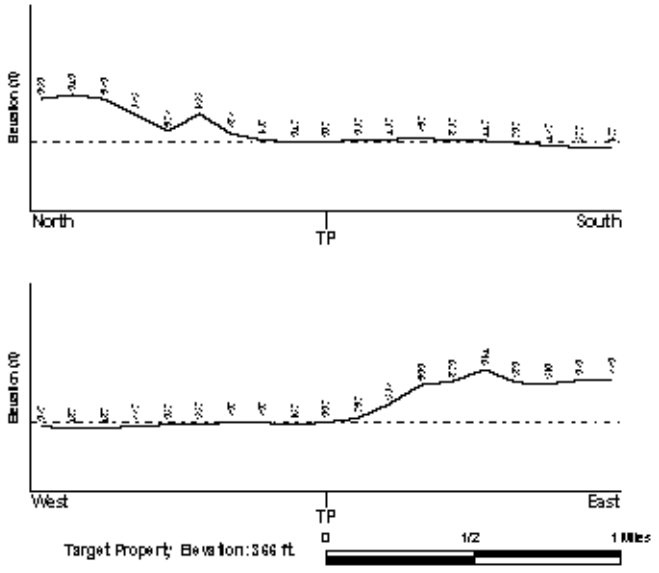
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

USGS Topographic Map:	34118-A2 LOS ANGELES, CA
General Topographic Gradient:	General West
Source:	USGS 7.5 min quad index

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
LOS ANGELES, CA	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property:	0601370066C
Additional Panels in search area:	0601370057C

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
LOS ANGELES	Not Available

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data:*

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
1	1/2 - 1 Mile SSW	Not Reported

For additional site information, refer to Physical Setting Source Map Findings.

* [illegible]

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soils strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

GEOLOGIC AGE IDENTIFICATION

Era: Cenozoic
System: Quaternary
Series: Quaternary
Code: Q *(decoded above as Era, System & Series)*

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: HAMBRIGHT

Soil Surface Texture: gravelly - loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Well drained. Soils have intermediate water holding capacity. Depth to water table is more than 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: MODERATE

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 20 inches

Soil Layer Information

	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	7 inches	gravelly - loam	Silt-Clay Materials (more than 35 pct. passing No. 200, Silty Soils.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 2.00 Min: 0.60	Max: 7.30 Min: 6.10
2	7 inches	16 inches	very gravelly - loam	Granular materials (35 pct. or less passing No. 200, Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel. COARSE-GRAINED SOILS, Gravels, Gravels with fines, Clayey Gravel.	Max: 2.00 Min: 0.60	Max: 7.30 Min: 6.10
3	16 inches	20 inches	unweathered bedrock	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: loam
silty clay loam
silaly - clay loam
sandy loam
loamy sand
clay
clay loam

Surficial Soil Types: loam
silty clay loam
silaly - clay loam
sandy loam
loamy sand
clay
clay loam

Shallow Soil Types: silty clay

Deeper Soil Types: weathered bedrock
clay loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

ADDITIONAL ENVIRONMENTAL RECORD SOURCES

According to ASTM E 1527-00, Section 7.2.2, "one or more additional state or local sources of environmental records may be checked, in the discretion of the environmental professional, to enhance and supplement federal and state sources... Factors to consider in determining which local or additional state records, if any, should be checked include (1) whether they are reasonably ascertainable, (2) whether they are sufficiently useful, accurate, and complete in light of the objectives of the records review (see 7.1.1), and (3) whether they are obtained, pursuant to local, good commercial or customary practice." One of the record sources listed in Section 7.2.2 is water well information. Water well information can be used to assist the environmental professional in assessing sources that may impact groundwater flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

EXECUTIVE SUMMARY

A search of available records was conducted by Environmental Data Resources, Inc. (EDR). The EDR Offsite Receptor Report provides information which may be used to comply with the Clean Air Act Risk Management Program 112-R. *"The rule requires that you estimate in the RMP residential populations within the circle defined by the endpoint for your worst-case and alternative release scenarios (i.e., the center of the circle is the point of release and the radius is the distance to the endpoint). In addition, you must report in the RMP whether certain types of public receptors and environmental receptors are within the circles."*

The address of the subject property, for which the search was intended, is:

AMERIPRIDE SERVICES INC.
3505 PASADENA AVENUE
LOS ANGELES, CA 90031

Distance Searched: 1.000 miles from subject property

RECORDS SEARCHED/DATA CURRENCY TRACKING

Census
Source: U.S. Census Bureau
Telephone: 301-457-4100
2000 U.S. Census data was used to estimate residential population following these EPA guidelines:
"Census data are presented by Census tract. If your circle covers only a portion of the tract, you should develop an estimate for that portion...Determine the population density per square mile (total population of the Census tract divided by the number of square miles in the tract) and apply that density figure to the number of square miles within your circle."

FED_LAND: Federal Lands
Source: USGS
Telephone: 888-275-8747
Federal lands data. Includes data from several Federal land management agencies, including Fish and Wildlife Service, Bureau of Land Management, National Park Service, and Forest Service. Includes National Parks, Forests, Monuments; Wildlife Sanctuaries, Preserves, Refuges; Federal Wilderness Areas.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-6991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

Environmental Data Resources, Inc.
Aerial Photography Print Service

Environmental Data Resources, Inc.'s (EDR) Aerial Photography Print Service is a screening tool designed to assist professionals in evaluating potential liability on a target property resulting from past activities. ASTM E 1527-00, Section 7.3 on Historical Use Information, identifies the prior use requirements for a Phase I environmental site assessment. The ASTM standard requires a review of *reasonably ascertainable standard historical sources. Reasonably ascertainable means information that is publicly available, obtainable from a source with reasonable time and cost constraints, and practically reviewable.*

To meet the prior use requirements of ASTM E 1527-00, Section 7.3.4, the following *standard historical sources* may be used: aerial photographs, fire insurance maps, property tax files, land title records (although these cannot be the sole historical source consulted), topographic maps, city directories, building department records, or zoning/land use records. ASTM E 1527-00 requires *"All obvious uses of the property shall be identified from the present, back to the property's obvious first developed use, or back to 1940, whichever is earlier. This task requires reviewing only as many of the standard historical sources as are necessary, and that are reasonably ascertainable and likely to be useful."* (ASTM E 1527-00, Section 7.3.2, page 12.)

Aerial Photographs

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Aerial photographs are a valuable historical resource for documenting past land use and can be particularly helpful when other historical sources (such as city directories or fire insurance maps) are not reasonably ascertainable. The EDR Aerial Photograph Print Service includes a search of local aerial photograph collections flown by public and private agencies. EDR's professional field-based researchers provide digitally reproduced historical aerial photographs at ten year intervals.

Please call Environmental Data Resources, Inc. Nationwide Customer Service at

EDR Historical Topographic Map Report

Environmental Data Resources, Inc.'s (EDR) Historical Topographic Map Report is designed to assist professionals in evaluating potential liability on a target property, and its surrounding area, resulting from past activities. ASTM E 1527-00, Section 7.3 on Historical Use Information, identifies the prior use requirements for a Phase I environmental site assessment. The ASTM standard requires a review of *reasonably ascertainable standard historical sources. Reasonably ascertainable is defined as information that is publicly available, obtainable from a source with reasonable time and cost constraints, and practically reviewable.* To meet the prior use requirements of ASTM E 1527-00, Section 7.3.4, the following *standard historical sources* may be used: aerial photographs, city directories, fire insurance maps, topographic maps, property tax files, land title records (although these cannot be the sole historical source consulted), building department records, or zoning/land use records. ASTM E 1527-00 requires *"All obvious uses of the property shall be identified from the present, back to the property's obvious first developed use, or back to 1940, whichever is earlier. This task requires reviewing only as many of the standard historical sources as are necessary, and that are reasonably ascertainable and likely to be useful."* (ASTM E 1527-00, Section 7.3.2 page 12.)

EDR's Historical Topographic Map Report includes a search of available public and private color historical topographic map collections.

Topographic Maps
A topographic map (topo) is a color coded line-and-symbol representation of natural and selected artificial features plotted to a scale. Topos show the shape, elevation, and development of the terrain in precise detail by using contour lines and color coded symbols. Many features are shown by lines that may be straight, curved, solid, dashed, dotted, or in any combination. The colors of the lines usually indicate similar classes of information. For example, topographic contours (brown); lakes, streams, irrigation ditches, etc. (blue); and grids and important roads (red); secondary roads and trails, railroads, boundaries, etc. (black); and features that have been updated using aerial photography but not field verified, such as disturbed land areas (e.g. gravel pits) and newly developed water bodies (purple).

For more than a century, the USGS has been creating and revising topographic maps for the entire country at a variety of scales. There are about 60,000 U.S. Geological Survey (USGS) produced topo maps covering the United States. Each map covers a specific quadrangle (quad) defined as a four-sided area bounded by latitude and longitude. Historical topographic maps are a valuable historical resource for documenting the prior use of a property and its surrounding area, and due to their frequent availability can be particularly helpful when other standard historical sources (such as city directories, fire insurance maps, or aerial photographs) are not reasonably ascertainable.

USER'S GUIDE

This User's Guide provides guidelines for accessing Sanborn Map® images and for transferring them to your Word Processor.

Reading Sanborn Maps

- Sanborn Maps document historical property use by displaying property information through words, abbreviations, and map symbols. The Sanborn Map Key provides information to help interpret the symbols and abbreviations used on Sanborn Maps. The Key is available from EDR's Web Site at: http://www.edrnet.com/reports/samples/key.pdf

Organization of Electronic Sanborn Image File

- Sanborn Map Report, listing years of coverage
- User's Guide
- Oldest Sanborn Map Image
- Most recent Sanborn Map Image

Navigating the Electronic Sanborn Image File

1. Open file on screen.
2. Identify TP (Target Property) on the most recent map.
3. Find TP on older printed images.
4. Using Acrobat® Reader®, zoom to 250 % in order to view more clearly. (200-250 % is the approximate equivalent scale of hardcopy Sanborn Maps.)
   A. On the menu bar, click "View" and then "Zoom to..."
   B. Or, use the magnifying tool and drag a box around the TP

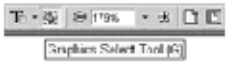
Printing a Sanborn Map From the Electonic File

- EDR recommends printing images at 300 dpi (300 dpi prints faster than 600 dpi)
- To print only the TP area, cut and paste from Acrobat to your word processor application.

<u>Acrobat Versions 6 and 7</u>

1. Go to the menu bar
2. Click the "Select Tool"
3. Draw a box around the area selected
4. "Right click" on your mouse
5. Select "Copy Image to Clipboard"
6. Go to Word Processor such as Microsoft Word, paste and print.

<u>Acrobat Version 5</u>



1. Go to the menu bar
2. Click the "Graphics Select Tool"
3. Draw a box around the area selected
4. Go to "Menu"
5. Highlight "Edit"
6. Highlight "Copy"
7. Go to Word Processor such as Microsoft Word, paste and print.

Important Information about Email Delivery of Electronic Sanborn Map Images

- Images are grouped intro one file, up to 2MB.
- In cases where in excess of 6-7 map years are available, the file size typically exceeds 2MB. In these cases, you will receive multiple files, labeled as "1 of 3", "2 of 3", etc. including all available map years.
- Due to file size limitations, certain ISPs, including AOL, may occasionally delay or decline to deliver files. Please contact your ISP to identify their specific file size limitations.

Environmental Data Resources, Inc.
City Directory Abstract

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist professionals in evaluating potential liability on a target property resulting from past activities. ASTM E 1527-00, Section 7.3 on Historical Use Information, identifies the prior use requirements for a Phase I environmental site assessment. The ASTM standard requires a review of *reasonably ascertainable standard historical sources. Reasonably ascertainable means information that is publicly available, obtainable from a source with reasonable time and cost constraints, and practically reviewable.*

To meet the prior use requirements of ASTM E 1527-00, Section 7.3.4, the following *standard historical sources* may be used: aerial photographs, fire insurance maps, property tax files, land title records (although these cannot be the sole historical source consulted), topographic maps, city directories, building department records, or zoning/land use records. ASTM E 1527-00 requires *"All obvious uses of the property shall be identified from the present, back to the property's obvious, first developed use, or back to 1940, whichever is earlier. This task requires reviewing only as many of the standard historical sources as are necessary, and that are reasonably ascertainable and likely to be useful."* (ASTM E 1527-00, Section 7.3.2, page 12.)

EDR's City Directory Abstract includes a search and abstract of available city directory data.

City Directories
City directories have been published for cities and towns across the U.S. since the 1700s. Originally a list of residents, the city directory developed into a sophisticated tool for locating individuals and businesses in a particular urban or suburban area. Twentieth century directories are generally divided into three sections: a business index, a list of resident names and addresses, and a street index. With each address, the directory lists the name of the resident or, if a business is operated from this address, the name and type of business (if unclear from the name). While city directory coverage is comprehensive for major cities, it may be spotty for rural areas and small towns. ASTM E 1527-00 specifies that a *"review of city directories (standard historical sources) at less than approximately five year intervals is not required by this practice" (ASTM E 1527-00, Section 7.3.2.1, page 12.)*

NAICS (North American Industry Classification System) Codes
NAICS is a unique, all-new system for classifying business establishments. Adopted in 1997 to replace the prior Standard Industry Classification (SIC) system, it is the system used by the statistical agencies of the United States. It is the first economic classification system to be constructed based on a single economic concept. To learn more about the background, the development and difference between NAICS and SIC, visit the following Census website: http://www.census.gov/epcd/www/naicsdev.htm.

4. SUMMARY

- *City Directories:*

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2004. (These years are not necessarily inclusive.) A summary of the information obtained is provided in the text of this report.

This report compiles information by geocoding the subject properties (that is, plotting the latitude and longitude for such subject properties and obtaining data concerning properties within 1/16th of a mile of the subject properties). There is no warranty or guarantee that geocoding will report or list all properties within the specified radius of the subject properties and any such warranty or guarantee is expressly disclaimed. Accordingly, some properties within the aforementioned radius and the information concerning those properties may not be referenced in this report.

APPENDIX H
GENERAL FIELD PROCEDURES

STANDARD PROTOCOL FOR MONITORING WELL CONSTRUCTION AND DEVELOPMENT

Monitoring Well Construction

All groundwater monitoring wells are constructed with flush threaded, 4 inch-outside-diameter (O.D.), Schedule 40 PVC blank casing and 4-inch-O.D., machine slotted PVC screen. The screened interval extends approximately 5 feet above the static water level. The annular space between each well screen and borehole is packed with a clean, graded sand, which extends from the bottom of the borehole to 2 feet above the screened interval. During emplacement of the filter pack, the well was surged in approximately 3-foot intervals, which forces groundwater to flow into and out of the well screen and allows the filter pack to settle effectively and fine-grained sediments to break up, become suspended, and then migrate into the well.

A 2- to 3-foot bentonite pellet seal is placed above the sand pack followed by a hydrated bentonite chip or bentonite grout sanitary seal to approximately 3 feet below grade. Concrete is placed to ground surface, and both a locking cap and traffic-rated, watertight vault box are installed.

Well Development

Monitoring wells are developed with a SMRAT-5 Development Rig using standard surging and bailing techniques prior to groundwater sampling. Each monitoring well is surged using an appropriately sized surge block attached to a 10-foot section of steel AW rod and a stainless steel line. The wells are then bailed with a clean stainless steel bailer to remove silts and clays which have migrated into the well borehole. The wells are further developed by having a minimum of 10 casing volumes of groundwater removed by pumping or bailing. This reduces the turbidity of the water-bearing zone and allows representative aquifer water to enter the well. During development, water temperature, pH, conductivity, and turbidity are monitored at least one time per casing volume removed.

Surveying

The well lid and top of casing are surveyed by a State licensed land surveyor to a City or County benchmark. Longitude and Latitude is also collected for each well location, and results of the survey are uploaded to the State of California Water Resources Database (Geotracker).

Groundwater Monitoring and Sample Collection

The depth to groundwater and well total depth is measured in all wells using an electronic oil/water interface probe. If free product is present in the well, its thickness is noted at this time. Wells which contain free product are not sampled because the purging process may "smear" the free product and affect previously unaffected soil below the water table.

The volume of groundwater in each well is calculated using the measurements acquired above. Each well is purged of at least three casing volumes prior to collection of groundwater samples. The temperature, pH, conductivity, and turbidity of the groundwater is measured at intervals and sampling may also occur after these parameters have stabilized (less than 10% change over 3 measurements), indicating that a representative sample from the saturated zone is attained.

Prior to sampling and between samples, all reusable sampling equipment is decontaminated by washing in a detergent solution (phosphate free) and water. The equipment is then double-rinsed with water.

Ground water samples are then collected with a disposable 2-inch-diameter polyethylene bailer with a stopcock, which is lowered down the well via nylon cord. After reaching static water level, the bailer is gently bobbed up and down allowing the groundwater to fill the bailer. The bailer is retrieved from the well and a sampling port is attached to the bottom of the bailer. The groundwater is collected in the appropriate glassware and sealed. After sample collection, the disposable bailer, nylon cord, sampling port, and nitrile gloves are disposed of and a new set is used for the next well to be sampled. All groundwater samples being analyzed for EPA Method 8015M (TPH) are decanted into 1 liter amber bottles and all groundwater samples being analyzed for 8020 (BTEX) are decanted into 40-milliliter glass vials with Teflon septum, that have been preserved with hydrochloric acid (HCL), sealed, labeled, and either immediately hand delivered to an on-site mobile laboratory or stored in airtight plastic bags, placed in a thermally insulated chest with ice and couriered or shipped under chain-of custody procedures to a State-certified hazardous waste testing laboratory. The sample labels attached to each sample vial identify a specific identification number specific to that sample vial and also identify the location of that sample as well as the date the sample was collected, and the type of analysis to be performed on the sample.

A sample blank and trip blank are also obtained for analysis. The sample blank is a vial of distilled water that is circulated through the bailer prior to sampling. The trip blank is a vial of distilled water included in the thermally-insulated ice chest during sampling and shipping. These blanks are used to provide an indication of contamination introduced as a consequence of the sampling and shipping procedure.

Purged groundwater and decontamination water is transferred to Department of Transportation-approved, 55 gallon drums and temporarily stored onsite or transported offsite in a vacuum truck for disposal. After receipt of analytical results, the drums of decontamination water are transported offsite under waste manifest for disposal.

1. INTRODUCTION

1.1. Purpose

This Health and Safety Plan (HASP) has been developed by ENSR Corporation (ENSR). The purpose of this plan is to minimize potential risk to personnel implementing environmental investigation, including soil boring, well installation, and soil and water sampling, at the former Welch's Uniform site, located at 3505 Pasadena Avenue, in Los Angeles, California. The provisions of this HASP apply to ENSR personnel who will be potentially exposed to safety and/or health hazards associated with the investigative tasks outlined in Section 3.0 of this HASP.

This HASP has been written to comply with the California Occupational Safety and Health Administration's (Cal-OSHA) Hazardous Waste Operations and Emergency Response Standard (Title 8, California Code of Regulation Section 5192). All activities covered by this HASP must be conducted in complete compliance with all applicable federal, state and local health and safety regulations. Personnel covered by this HASP who cannot or will not comply with these requirements will be excluded from site activities

1.2. Modifications

Every effort has been made to address the hazards associated with the types of chemical contamination that may be encountered at this site. Similarly, this document also discusses the physical hazards associated with the typical types of activities that may be performed by ENSR employees or subcontractors during an environmental investigation. Unanticipated site-specific conditions or situations may occur during the implementation of the proposed environmental investigations that are not addressed in this document. As such, this HASP must be considered a working document that is subject to change to meet the needs of each site investigation.

Prior to working at this site, the Project Manager (PM) or Field Technician will review with the Regional Health and Safety Manager (RHSM), the scope of work and the expected nature and extent of contamination at the site. If unique site hazards are present or different investigative tasks are proposed that have not been addressed in this HASP, it will be necessary to modify this HASP. All proposed modifications to this HASP must be reviewed and approved by the RHSM before such modifications are implemented in the field. Modifications to the HASP will be incorporated into the document as addenda.

1.3. Approval and Dissemination

All ENSR personnel covered by this HASP must read a copy of it and return the HASP signoff sheet (Attachment A) to the ENSR Site Safety Officer (SSO) prior to the start of on-site activities.

1.4. Responsibilities

The implementation of health and safety at this project location will be the shared responsibility of the ENSR Project Manager (PM), the ENSR Regional Health and Safety Manager (RHSM), the ENSR Project Site Safety Officer (SSO) and all other ENSR personnel.

1.4.1. Project Manager

The ENSR PM (Jeff Otter) is responsible for ensuring that the requirements of this HASP are implemented at this project location. Some of the PM's specific responsibilities include:

- Assuring that all personnel to whom this HASP applies have received a copy of it;
- Providing the RHSM with updated information regarding environmental conditions at the site and the scope of site work;
- Providing adequate authority and resources to the on-site SSO to allow for the successful implementation of all necessary safety procedures;
- Supporting the decisions made by the SSO and RHSM;
- Maintaining regular communications with the SSO and, if necessary, the RHSM; and,
- Providing project scheduling and planning activities.

1.4.2. Regional Health and Safety Manager

The ENSR RHSM (Joe Sanders) is the individual responsible for the preparation, interpretation and modification of this HASP. Modifications to this HASP which may result in less stringent precautions cannot be undertaken by the PM or the SSO without the approval of the RHSM. Specific duties of the RHSM include:

- Writing, approving and amending the HASP for this project;
- Advising the PM and SSOs on matters relating to health and safety;

- Recommending appropriate personal protective equipment (PPE) and air monitoring instrumentation; and

- Maintaining regular contact with the PM and SSO to evaluate the conditions at the property and new information which might require modifications to the HASP.

1.4.3. Site Safety Officer

All ENSR field technicians are responsible for implementing the safety requirements specified in this HASP. However, one field technician will serve as the SSO at each site. The SSO will be appointed by the PM for the investigation at this AmeriPride site. S/he will be on-site during all activities covered by this HASP. The SSO is responsible for enforcing the requirements of this HASP once work begins. The SSO has the authority, and the responsibility, to immediately correct all situations where noncompliance with this HASP is noted and to immediately stop work in cases where an immediate danger is perceived. Some of the SSO's specific responsibilities include:

- Assuring that all ENSR personnel to whom this HASP applies have submitted a completed copy of the HASP sign-off form;

- Assuring that all ENSR personnel to whom this HASP applies have attended a pre-entry briefing prior to entering a restricted area;

- Maintaining a high level of health and safety consciousness among ENSR employees at the work site;

- Procuring and distributing the PPE needed for this project for ENSR employees;

- Procuring the air monitoring instrumentation required and performing air monitoring for ENSR activities;

- Verifying that all PPE and health and safety equipment used by ENSR employees is in good working order;

- Setting up and maintaining the cleanup zone within the restricted areas;

- Notifying the PM of all noncompliance situations and stopping work in the event that an immediate danger situation is perceived;

- Monitoring and controlling the safety performance of ENSR personnel within the established restricted areas to ensure that required safety and health procedures are being followed and correcting any deficiencies;

- Conducting accident/incident investigations and preparing accident/incident investigation reports;

- Conducting the pre-entry briefing as required by Section 9.3 of the HASP; and,

- Initiating emergency response in accordance with Section 10.0 of this HASP.

1.4.4. Field Personnel

All ENSR personnel are responsible for following the health and safety procedures specified in this HASP and for performing their work in a safe and responsible manner. Some of the specific responsibilities of the field personnel are as follows:

- Reading the HASP in its entirety prior to the start of on-site work;

- Submitting a completed HASP Acceptance Form and documentation of medical surveillance and training to the SSO prior to the start of work;

- Attending the pre-entry briefing prior to beginning on-site work;

- Bringing forth any questions or concerns regarding the content of the HASP to the PM or the SSO prior to the start of work;

- Reporting all accidents, injuries and illnesses, regardless of their severity, to the ENSR SSO; and,

- Complying with the requirements of this HASP and the requests of the SSO.

2. SITE HISTORY / DESCRIPTION

2.1. Property Location and History

The subject property, former Welch's Uniform site, is located at 3505 Pasadena Avenue, in Los Angeles, California. The site is currently vacant.

3. SCOPE OF WORK

The current scope of work will be to perform soil boring and well installation on this former Welch's Uniform site. The soil boring and well installation will be performed with a hollow-stem auger (HAS), however some soil boring may be performed with hand tools. Well installation will be completed for some soil borings. Soil and water samples may be collected.

4. HAZARD ASSESSMENT

The following chemical and physical hazard assessment applies to the proposed tasks as described in Section 3.0.

4.1. Chemical Hazards

The following types of chemicals may be present as contaminants of concern during the proposed investigation at this property.

- Petroleum hydrocarbons including total petroleum hydrocarbons-gasoline type (TPH-G), total petroleum hydrocarbons-Diesel type (TPH-D), benzene, toluene, ethylbezene and xylene (BTEX) and MTBE associated with use as a gasoline additive; and
- Chlorinated hydrocarbons, Trichloroethylene (TCE), and perchloroethylene (PCE).

4.1.1. Gasoline

Gasoline is a highly complex mixture of more than 150 aliphatic and aromatic hydrocarbons including small amounts of benzene, toluene, xylene, and sometimes additives, such as tetraethyl lead or methyl tertiary butyl ether. The actual composition varies with the source of the crude petroleum, the manufacturer, and the time of year.

Gasoline is a colorless, pale brown, or pink liquid. Gasoline is very flammable; it catches on fire quite easily, evaporates quickly, and forms explosive mixtures with air. Most people can begin to smell gasoline at 0.25 parts of gasoline per million parts of air (ppm). Gasoline may be present in the air, groundwater, and soil. Gasoline does not dissolve readily in water. However, some of the chemicals that make up gasoline can dissolve easily in water.

Exposure to the vapors of gasoline above its exposure limit may produce irritation of the mucous membranes of the upper respiratory tract, nose and mouth. Overexposure may also result in the depression of the central nervous system. Symptoms of such exposure include drowsiness, headache, fatigue and drunken-like behaviors. Another common effect is irritation of the skin and mucous membranes of the upper respiratory tract. Repeated or prolonged skin contact may result in dermatitis due to defatting of the skin.

The American Conference of Governmental Industrial Hygienists (ACGIH) has recommended a threshold limit value (TLV) of 300 ppm for gasoline as an 8-hour time weighted average (TWA).

4.1.1.1. Fuel Oils (Diesel, etc.)

Fuel oils are generally considered to be of moderate to low toxicity. Federal or recommended airborne exposure limits have not been established for the vapors of fuel oils. However, inhalation of low concentrations of the vapor of either may cause mucous membrane irritation. Inhalation of high concentrations of the vapors may cause extensive pulmonary edema. Chronic direct skin contact with the liquids may produce skin irritation as a result of defatting. Repeated skin contact may also cause irritation of the hair follicles and block the sebaceous glands. This produces a rash of acne pimples and spots, usually on the arms and legs.

4.1.2. Methyl Tertiary Butyl Ether

Methyl tertiary butyl ether (MBTE) is an additive used to increase the octane ratings of gasoline. Direct contact with the liquid may cause minor skin and eye irritation. Prolonged or repeated inhalation of MTBE vapor may cause irritation of the respiratory tract as well as depression of the central nervous system. The ACGIH recommends a TLV of 50 ppm, as an 8-hr TWA.

4.2. Chlorinated Hydrocarbons

4.2.1. Chlorinated Solvents Associated With Degreasers

Chlorinated organic compound contamination may be present at some properties due to the previous uses of the property including auto repair garages which typically use or have used chlorinated solvents for the degreasing of metal parts. Off-site sources, such as dry-cleaning operations, may also be a source of chlorinated solvent contamination. Typical solvents include tetrachloroethylene (perchloroethylene) and trichloroethylene (TCE).

Overexposure to the chlorinated organic solvents that may be present in the site groundwater and soils may result in depression of the central nervous system, symptoms of which include, dizziness, headache, giddiness and drunken-like behaviors. Chronic overexposures can result in liver and kidney damage. The OSHA PEL for trichloroethylene and tetrachloroethylene is 100 ppm. The ACGIH recommends a TLV of 50 ppm for trichloroethylene and 25 ppm for tetrachloroethylene.

4.2.2. Hazardous Properties of Potential Chemical Contaminants

Chemical Name	PEL[1]	TLV[2]	VP[3]	VD[4]	SG[5]	SOL[6]	FP[7]	LEL[8]	UEL[9]
Gasoline	NE	300	>400	3	0.8	Neg.	<-40	1.4	7.6
Benzene	1	0.5	75	2.8	0.88	0.07	12	1.2	7.8
Toluene	200	50	21	3.1	0.87	0.07	40	1.1	7.1
Ethylbenzene	100	100	7	3.7	0.87	0.01	55	0.8	6.7
Xylene	100	100	7	3.7	0.88	0.02	90	0.9	6.7
MTBE	NE	50	245	3.0	0.74	2	-15	1.5	?
Diesel Fuel Oil	NE	NE	0.5	>2	0.85	Neg.	>52	0.6	7.0
Trichloroethylene	100	50	58	4.5	1.5	0.1	?	8.0	10.5
Tetrachloroethane	100	25	14	5.9	> 1	0.02	NA	NA	NA

1 Permissible Exposure Limit in ppm
2 Threshold Limit Value in ppm
3 Vapor Pressure in mm Hg
4 Vapor Density (air = 1)
5 Specific Gravity (water = 1)
6 Solubility in Water in %
7 Flash Point in F
8 Lower Explosive Limit in % by volume
9 Upper Explosive Limit in % by volume
NE = Not Established
NA = Not Applicable
? = Not known

4.2.3. Hazardous Substances Brought On-Site by ENSR or Subcontractor

A material safety data sheet (MSDS) must be available for each hazardous substance that ENSR or subcontractor brings onto the property. This includes solutions/chemicals that will be used to decontaminate sampling equipment. For this program, Alconox soap is the only solution being used to decontaminate sampling equipment.

In addition, all containers of hazardous materials must be labeled in accordance with OSHA's Hazard Communication Standard. Either the original manufacturer's label or an NFPA 704M label specific for the material (as shown at the right) is considered to be an acceptable label.

4.3. Hazard Potential / Control

4.3.1. Hazard Potential

The potential hazardous exposures based on the proposed activities include:

- Dermal or respiratory exposure to potential contaminants during soil boring and sampling activities; and
- Physical hazards, as discussed in Section 5, below.

4.3.2. Hazard Control

Hazards can be identified and controlled in several ways.

- To reduce the potential for exposure to contaminants, personal protective equipment (PPE), as described in Section 7.1 of this HASP, will be worn; and
- Protection from physical hazards, as addressed in Section 5.

5. PHYSICAL HAZARDS

5.1. Traffic Concerns

Although the site is currently vacant, soil borings and monitoring wells may be located in the street. Therefore, vehicles may be moving through work areas or entering and exiting the property on an ongoing basis during the day. Employees should don traffic safety vests and set up cones to increase their visibility to motorists. Also, drilling vehicles will be used, and must be directed in backing or moving when employees may be exposed.

For soil borings and wells to be installed in the road or right of way, a full traffic control plan (TCP) will be required to protect employees and prevent traffic concerns for the public. Employees must wear traffic vests (minimum Type II), use cones or safety barricades to control traffic, and hire flaggers if necessary, as well as filing a traffic control plan with the authorities.

5.2. Utility Hazards

5.2.1. Underground Utilities

ENSR will contact the appropriate utility clearance organization in California to request a mark-out of natural gas, electric, telephone, cable television, water and sewer lines in the proposed boring or excavation locations. Work will not begin until the required utility clearances have been performed. Table 1 summarizes the utility clearance requirements in Southern California. Public utility clearance organizations typically do not mark-out underground utility lines that are located on private property. ENSR must exercise due diligence and try to identify the location of any private utilities, as well as dispensing lines, on the properties being investigated. ENSR can fulfill this requirement in several ways, including:

- Obtaining as-built drawings for the areas being investigated from the property owner;
- Visually reviewing each excavation location with the property owner or knowledgeable site representative;
- Performing a geophysical survey to locate utilities or hiring a private line locating firm to determine the location of utility lines that are present at the property;
- Identifying a no-dig zone; or
- Hand digging, or air-knifing to 5' in the proposed drilling or excavation locations if insufficient data is available to accurately determine the location of the utility lines.

TABLE I
UTILITY CLEARANCE REQUIREMENTS

State	Notification Time	Contact
CA South	2 Working Days	Underground Service Alert South (800) 227-2600 http://www.digalert.org/

(Work performed in other states requires that the appropriate agency be notified before intrusive work; see the ENSR H&S website: http://intranet.ensr.com/healthweb)

5.2.2. Overhead Utilities

Be particularly aware of overhead power lines in the work area. Any vehicle or equipment capable of having parts of its structure elevated (drill rig, crane etc.) near energized overhead lines shall be operated so that a clearance of at least 10 feet is maintained. If the voltage is higher than 50kV, the clearance shall be increased 4 inches for every 10kV over that voltage. Personnel should also be aware of the limited clearances associated with the canopy that typically covers the dispensing island.

5.3. Drilling Hazards

5.3.1. Conventional Drilling

Use of a drill rig to advance soil borings and install monitoring wells will require all personnel in the vicinity of the operating rig to wear steel-toed boots, hardhats, hearing protection and safety eyewear. Personnel shall not remain in the vicinity of operating equipment unless it is required for their work responsibilities. Additionally, the following safety requirements must be adhered to:

- All drill rigs and other machinery with exposed moving parts must be equipped with an operational emergency stop device. Drillers and geologists must be aware of the location of this device. This device must be tested prior to job initiation and periodically thereafter. The driller and helper shall not simultaneously handle augers unless there is a standby person to activate the emergency stop.
- The driller must never leave the controls while the tools are rotating unless all personnel are kept clear of rotating equipment.

- A long-handled shovel or equivalent must be used to clear drill cuttings away from the hole and from rotating tools. Hands and/or feet are not to be used for this purpose.

- A remote sampling device must be used to sample drill cuttings if the tools are rotating or if the tools are readily capable of rotating. Samplers must not reach into or near the rotating equipment. If personnel must work near any tools which could rotate, the driller must shut down the rig prior to initiating such work.

- Drillers, helpers and geologists must secure all loose clothing when in the vicinity of drilling operations.

- Only equipment which has been approved by the manufacturer may be used in conjunction with site equipment and specifically to attach sections of drilling tools together. Pins that protrude excessively from augers shall not be allowed

- No person shall climb the drill mast while tools are rotating.

- No person shall climb the drill mast without the use of ANSI-approved fall protection (approved belts, lanyards and a fall protection slide rail) or portable ladder which meets the requirements of OSHA standards.

5.4. Cuts and Lacerations

Employees are at an increased risk of cutting themselves since a knife or blade is typically used to cut the tubing or bailer string used to collect groundwater samples. To avoid this hazard, a tube cutter should be used. If such a tool is not available, when using knives or blades, follow the safety precautions listed below:

- Keep your free hand out of the way

- Use only sharp blades; dull blades require more force which results in less knife control

- Pull the knife toward you; pulling motions are easier to manage

- Don't put your knife in your pocket

- Use a utility knife with a self-retracting blade

- Wear leather or Kevlar™ gloves when using knives or blades.

5.5. Electrically Powered Tools

If using portable tools that are electrically powered, follow the safety precautions listed below:

- Check to see that electrical outlets used to supply power during field operations is of the three wire grounding type.

- Extension cords used for field operations should be of the three wire grounding type and designed for hard or extra-hard usage. This type of cord uses insulated wires within an inner insulated sleeve and will be marked S, ST, STO, SJ, SJO or SJTO.

- NEVER remove the ground plug blade to accommodate ungrounded outlets.

- Do not use extension cords as a substitute for fixed or permanent wiring. Do not run extension cords through openings in walls, ceilings or floors.

- Protect the cord from becoming damaged if the cord is run through doorways, windows or across pinch points.

- Examine extension and equipment cords and plugs prior to each use. Damaged cords with frayed insulation or exposed wiring and damaged plugs with missing ground blades MUST BE REMOVED from service immediately.

- All portable or temporary wiring which is used outdoors or in other potentially wet or damp locations must be connected to a circuit that is protected by a ground fault circuit interrupter (GFCI). GFCI's are available as permanently installed outlets, as plug-in adapters and as extension cord outlet boxes. DO NOT CONTINUE TO USE A PIECE OF EQUIPMENT OR EXTENSION CORD THAT CAUSES A GFCI TO TRIP.

- When working in flammable atmospheres, be sure that the electrical equipment being used is approved for use in Class I, Division I atmospheres.

- Do not touch a victim who is still in contact with current. Separate the victim from the source using a dry, nonmetallic item such as a broomstick or cardboard box. Be sure your hands are dry and you are standing on a dry surface. Turn off the main electrical power switch and then begin rescue efforts.

5.6. Back Safety

Using the proper techniques to lift and move heavy pieces of equipment, such as well pumps or buckets of purge water, is important to reduce the potential for back injury. The following precautions should be implemented when lifting or moving heavy objects.

- Use mechanical devices to move objects that are too heavy to be moved manually
- If mechanical devices are not available, ask another person to assist you.
- Bend at the knees, not the waist. Let your legs do the lifting.
- Do not twist while lifting
- Bring the load as close to you as possible before lifting
- Be sure the path you are taking while carrying a heavy object is free of obstructions and slip, trip and fall hazards

5.7. Thermal Stress

Work at this site may be performed in the warm summer months, so the hazards associated with heat stress are discussed in this HASP.

5.7.1. Heat Stress

Types of Heat Stress

Heat related problems include heat rash, fainting, heat cramps, heat exhaustion and heat stroke. Heat rash can occur when sweat isn't allowed to evaporate, leaving the skin wet most of the time and making it subject to irritation. Fainting may occur when blood pools to lower parts of the body and as a result, does not return to the heart to be pumped to the brain. Heat related fainting often occurs during activities that require standing erect and immobile in the heat for long periods of time. Heat cramps are painful spasms of the muscles due to excessive salt loss associated with profuse sweating. Heat exhaustion results from the loss of large amounts of fluid and excessive loss of salt from profuse sweating. The skin will be clammy and moist and the affected individual may exhibit giddiness, nausea and headache.

Heat stroke occurs when the body's temperature regulatory system has failed. The skin is hot, dry, red and spotted. The affected person may be mentally confused and delirious. Convulsions

could occur. EARLY RECOGNITION AND TREATMENT OF HEAT STROKE ARE THE ONLY MEANS OF PREVENTING BRAIN DAMAGE OR DEATH. A person exhibiting signs of heat stroke should be removed from the work area to a shaded area. The person should be soaked with water to promote evaporation. Fan the person's body to increase cooling.

Early Symptoms of Heat-Related Health Problems:

- decline in task performance
- incoordination
- decline in alertness
- unsteady walk
- excessive fatigue
- reduced vigilance
- muscle cramps
- dizziness

Susceptibility to Heat Stress Increases due to:

- lack of physical fitness
- lack of acclimation
- increased age
- dehydration
- obesity
- drug or alcohol use
- sunburn
- infection

People unaccustomed to heat are particularly susceptible to heat fatigue. First timers in PPE need to gradually adjust to the heat.

The Effect of Personal Protective Equipment

Sweating normally cools the body as moisture is removed from the skin by evaporation. However, the wearing of certain personal protective equipment (PPE), particularly chemical protective coveralls (e.g., Tyvek), reduces the body's ability to evaporate sweat and thereby regulate heat buildup. The body's efforts to maintain an acceptable temperature can therefore become significantly impaired by the wearing of PPE.

Measures to Avoid Heat Stress:

The following guidelines should be adhered to when working in hot environments:

- Establish work-rest cycles (short and frequent are more beneficial than long and seldom).
- Identify a shaded, cool rest area.
- Rotate personnel, alternative job functions.
- Water intake should be equal to the sweat produced. Most workers exposed to hot conditions drink less fluids than needed because of an insufficient thirst. DO NOT DEPEND ON THIRST TO SIGNAL WHEN AND HOW MUCH TO DRINK. For an 8-hour workday, 50 ounces of fluids should be drunk.

- Eat lightly salted foods or drink salted drinks such as Gatorade to replace lost salt.
- Save most strenuous tasks for non-peak heat hours such as the early morning or at night.
- Avoid alcohol during prolonged periods of heat. Alcohol will cause additional dehydration.
- Avoid double shifts and/or overtime.

The implementation and enforcement of the above mentioned measures will be the joint responsibility of the project manager, on-site field coordinator, and health and safety officer. Potable water and fruit juices should be made available each day for the field team.

Heat Stress Monitoring Techniques

Site personnel should regularly monitor their heart rate as an indicator of heat strain by the following method: Check radial pulse rates by using fore-and middle fingers and applying light pressure to the pulse in the wrist for one minute at the beginning of each rest cycle. If the pulse rate exceeds 110 beat/minute, shorten the next work cycle by one-third and keep the rest period the same. If, after the next rest period, the pulse rate still exceeds 110 beats/minute, shorten the work cycle by one-third.

.

6. AIR MONITORING

6.1. Direct Reading Instrumentation

Instrument I: Photoionization detector (PID)

A PID, such as a RaeSystems MiniRae 2000 ™ equipped with a 10.6 eV lamp and calibrated to isobutylene-in-air, will be used to screen the breathing zone of employees during the collection of groundwater samples. If breathing zone concentrations are sustained (15 minutes) at 25 units above background, Level C respiratory protection, as described in Section 7.2, will be donned. This 25 unit action limit is based on the PEL for PCE, however, if no PCE is found on site, the action level for TPH is 50 PID units, based on the following:

The current TLV for gasoline is 300 ppm. The most toxic component of gasoline is benzene, whose current TLV is 0.5 ppm. Studies done by McDermott and Killiany in 1978 (Quest for a Gasoline TLV – AIHAJ 39:110-117, 1978) indicate that the benzene content of gasoline vapor is typically in the range of 0.4%. To assure that employee exposures to benzene remain below the current TLV of 0.5 ppm, ENSR has established an action limit of 50 ppm total VOCs (i.e., approximately 0.5 ppm/0.4%) for gasoline contaminated sites. Based upon RaeSystems response data for gasoline on an isobutylene-in-air calibrated instrument (i.e., 1.0), this equates to an instrument reading of 50 units.

6.2. Personal Exposure Monitoring

Personal exposure monitoring will not be conducted.

6.3. Calibration and Recordkeeping

The PID will be calibrated on a daily basis in accordance with ENSR's Standard Operating Procedure and manufacturer's instructions. All PID readings will be recorded in the field notebook or on dedicated air monitoring result sheets. In addition, all calibrations must be recorded.

7. PERSONAL PROTECTIVE EQUIPMENT

To prevent direct dermal contact with potentially contaminated groundwater, the following protective clothing requirements will be followed:

7.1. Protective Clothing

PPE Item	General	Soil Boring and Well Installation	Soil / Water Sampling
Hard hat	√	√	√
Safety glasses	√	√	√
Face shield			
Steel-toed boots	√	√	√
Gloves, Inner PVC			√
Gloves, Outer Nitrile			√
Gloves, Kevlar or Leather		√	(1) (when using knife to cut tubing)
Hearing Protection			
Traffic Vest	√	√	√
Tyvek			
Polycoated Tyvek		1	1
Chainsaw Chaps			

1. When liquid contaminants may be contacted by employees, impervious Gloves and work clothing must be worn.

7.2. Respiratory Protection

A PID will be used to screen the breathing zone of employees during soil boring, well installation, and collection of groundwater samples. If breathing zone concentrations are sustained (15 minutes) at 25 units above background, Level C respiratory protection, will be donned.

Level C Specification - Half-mask air-purifying respirator equipped with organic vapor cartridges

All employees who are expected to don respiratory protection must have successfully passed a qualitative or quantitative fit-test within the past year for the same brand and size respirator they plan to don for this program.

7.3. Other Safety Equipment

The following additional safety equipment will be brought to the site:

- Portable eye wash
- First Aid Kit
- Portable phones

8. SITE CONTROL

To prevent both exposure to unprotected personnel and migration of contamination due to tracking by personnel or equipment, work areas along with personal protective equipment requirements will be clearly defined.

8.1. Designation of Zones

- Exclusion or "hot" Zone
- Contamination Reduction Zone (CRZ)
- Support Zone

8.2. Exclusion Zone

Exclusion zones should be established around each boring or sampling location. The exclusion zone should be outlined with traffic cones, caution tape, or stanchions to prohibit entry by the general public into the work area.

8.3. Contamination Reduction Zone

A mini-contamination reduction zone will be established immediately adjacent to each well location. This is where personnel will remove gloves and dispose of any other items that can not be re-used during the sampling effort. Used PPE can be placed in garbage bags and disposed of as general refuse.

8.4. Support Zone

The support zone will consist of those areas around the exclusion zone where equipment is staged. Eating, drinking and smoking will be limited to this area.

8.5. Safety Measures/Precautions

The following measures are designed to augment the specific health and safety guidelines provided in this plan.

- ENSR personnel are not expected to work alone on remote sites. On most sites, client, subcontractor, or public personnel are generally nearby in case of an emergency or accident. ENSR personnel, through coordination, can rely upon these personnel for assistance in an emergency. If no one else is nearby, scheduled call-in's on a cell phone may be used to assure personal safety.

- Avoidance of contamination is of the utmost importance. Whenever possible, avoid contact with contaminated (or potentially contaminated) surfaces or materials. Walk around (not through) puddles and discolored surfaces. Do not kneel on the ground or set equipment on the ground. Protect air monitoring equipment from water by bagging.

- Eating, drinking, chewing gum or tobacco, smoking or any practice that increases the probability of hand-to-mouth transfer and ingestion of materials is prohibited in the immediate work area and the decontamination zone.

- Hands and face must be thoroughly washed upon leaving the work area and before eating, drinking or any other activities.

- Beards or other facial hair that interfere with respirator fit are prohibited.

- The use of alcohol or illicit drugs is prohibited during the conduct of field operations.

- All equipment must be decontaminated or properly discarded before leaving the site in accordance with the project work plan.

- Safety equipment described in Section 6.0 will be required for all field personnel unless otherwise approved by the RHSM.

9. DECONTAMINATION

Proper decontamination is required of all personnel before leaving potentially contaminated areas. The extent of personnel decontamination will depend on the amount of contamination encountered. Personnel decontamination will be accomplished by following a systematic procedure of cleaning and removing personal protective clothing. Generally, this included a three-basin wash and rinse system, however on sites with a very low potential for contamination, a soap and water wash station may be sufficient.

Regardless of the type of decontamination system required, if washing facilities are unavailable, a container of potable water and liquid soap must be made available so employees can wash their hands and face before leaving the site for lunch or for the day.

10. MEDICAL / TRAINING REQUIREMENTS

10.1. Medical Surveillance

All personnel performing activities covered by this HASP must be active participants in a medical monitoring program which complies with 29 CFR 1910.120 (f). Each individual must have completed an annual surveillance examination and/or an initial baseline examination within the last year prior to performing any work on this site covered by this HASP.

10.1.1. Drug and Alcohol Testing

All employees performing filed-work covered by this HASP must comply with AmeriPride's requirements for drug and alcohol testing requirements.

10.2. Training

All personnel performing activities covered by this HASP must have completed the appropriate training requirements specified in 29 CFR 1910.120 (e). Each individual must have completed an annual 8-hour refresher-training course and/or initial 40-hour training course within the last year prior to performing any work on this site covered by this HASP.

In addition, each project location must have at least one staff member present on site at all times who is currently trained in First Aid and CPR (Cardio Pulmonary Resuscitation).

10.3. Site Safety Meetings

Prior to the commencement of investigative activities at each project location, a site safety meeting will be conducted by the SSO to review the specific requirements of this HASP. Attendance at this pre-entry briefing is mandatory and will be documented (see Attachment B).

Short safety refresher meetings will be conducted at least every 10 days thereafter, or as otherwise needed, throughout the duration of the project.

11. AUDITS AND INSPECTIONS

Safety audits must be conducted and documented for each project location on a monthly basis. In order to meet this requirement, typically these inspections will have to be conducted by the ENSR field team leader and/or project manager.

For short duration jobs (i.e., one week or less), the safety inspection should be conducted shortly after the work has commenced. For longer duration jobs, the inspection should be conducted shortly after commencement and monthly thereafter.

Audits should be documented on the ENSR PM Audit Checklist. To reduce the overall length of this HASP, a copy of the audit checklist is embedded below. Access the checklist by clicking on the icon below. ENSR PMs should print out a copy of the checklist before leaving for the job site, unless a computer and printer will be available at the site.

"Audit Inspection Checklist.xls"

12. INCIDENT RESPONSE

12.1. Emergencies

According to ENSR policy, ENSR personnel shall not participate in any emergency response where there are potential safety or health hazards (i.e., fire, explosion, or chemical exposure). ENSR response actions will be limited to evacuation and medical/first aid as described within this section below. As such, this section of the HASP has been written to comply with 29 CFR 1910.38 (a).

The basic elements of an emergency evacuation plan include employee training, alarm systems, escape routes, escape procedures, critical operations or equipment, rescue and medical duty assignments, designation of responsible parties, emergency reporting procedures and methods to account for all employees after evacuation.

Employee Training: Employees must be instructed in the specific aspects of emergency evacuation applicable to the site as part of the pre-entry briefing prior to the commencement of all on-site activities. On-site refresher or update training is required anytime escape routes or procedures are modified or personnel assignments are changed.

Alarm Systems/Emergency Signals: An emergency communication system must be in effect at all sites. The most simple and effective emergency communication system in many situations will be direct verbal communications.

Due to the small size of the AmeriPride site, direct communications will be sufficient to warn all employees of a site-related emergency. The property is vacant. Therefore, ENSR must bring cellular phones to the to summons emergency responders, if necessary.

Escape Routes and Procedures: The escape route from the work location will be via Gravenstein Highway. The route will be reviewed with all employees during the pre-entry briefing.

Critical Operations and Equipment: All equipment and operations are required to cease in the event of site evacuation. The only exception will be related to health and safety. The PM or SSO must determine at the time of an emergency if health and safety will be jeopardized by immediate stoppage of any particular piece of equipment or personal activities. If such a determination is made, personnel involved in critical duties must be minimized and special instructions must be established.

Rescue and Medical Duty Assignments: Prior to initiating work at the site, an ENSR field team member, usually the SSO, shall be appointed to activate emergency response actions. In

the event an injury or illness requires more than first aid treatment, that individual will accompany the injured person to the medical facility and will remain with the person until release or admittance is determined. The escort will relay all appropriate medical information to the on-site project manager and the RHSM.

If the injured employee can be moved from the accident area, he or she will be brought to the CRZ where their PPE will be removed. If the person is suffering from a back or neck injury the person will not be moved and the requirements for decontamination do not apply. The SSO must familiarize the responding emergency personnel about the nature of the site and the injury. If the responder feels that the PPE can be cut away from the injured person's body, this will be done on-site. If this not feasible, decontamination will be performed after the injured person has been stabilized.

Designation of Responsible Parties: The SSO is responsible for initiating emergency response. In the event the SSO can not fulfill this duty, the alternate SSO will take charge. All personnel on site are responsible for knowing the escape route from the site.

Employee Accounting Method: The on-site project manager or SSO is responsible for identifying all ENSR and subcontractor personnel on-site at all times. On small, short duration jobs this can be done informally as long as accurate accounting, via a head-count, is possible.

12.2. Incident Reporting/Investigation

12.2.1. ENSR Requirements

All work-related injuries and illnesses, regardless of severity, must be reported to the ENSR field team leader and/or project manager immediately. The field team leader and/or project manager must report the incident to the ENSR RHSM as soon as possible. Utilize the RHSMs voice mail or e-mail if the incident occurs after hours.

In addition, all near miss incidents must be reported to the ENSR RHSM as soon as possible.

An ENSR Supervisor's Accident Investigation Report form (Attachment C) must be completed by the ENSR field team leader and/or project manager in accordance with the instructions provided by the RHSM and submitted to the RHSM within 24 hours of occurrence of the incident.

If a subcontractor is injured, he/she should report to their supervisor immediately, who in turn, must report the injury to the ENSR SSO.

12.2.2. AmeriPride Requirements

All significant near misses and serious incidents (e.g., fatalities, lost workday cases, significant property damage) must be immediately reported to one of the AmeriPride Representative listed on the following page.

In addition, all vehicle accidents that occur on AmeriPride property must be investigated and a copy of the accident investigation must be submitted to one of the AmeriPride Representatives within 24 hours of occurrence.

RE: 4th Quarter 2006 Groundwater Sampling Results
Former Welch's Uniform Facility
3505 Pasadena Avenue, Los Angeles, California
SLIC Case No. 833, Global ID No. SL2044PI598
ENSR Project No. 10770-003

Dear Ms. Diaz:

On behalf of AmeriPride Services Inc., ENSR Corporation (ENSR) is pleased to present this report documenting the results of the 4th quarter 2006 groundwater monitoring event conducted at the above referenced facility on December 21, December 22, and December 28, 2006. The location of the facility is shown on **Figure 1**. The 4th quarter 2006 groundwater monitoring event included 17 groundwater monitoring wells (MW-2, MW-3, MW-7, MW-8A, MW-9A, MW-9B, MW-10A, MW-10B, MW-13A, MW-13B, MW-14, MW-15, MW-16A, MW-16B, MW-16C, K-1, and K-2) as shown on **Figure 2**. The groundwater monitoring wells were installed at the site between 1987 and 2006 and have generally been sampled on a quarterly basis since installation. Well MW-12 was not included in the recent monitoring event because its wellhead was inadvertently destroyed by an unknown party during unauthorized grading work at the site.

BACKGROUND

The property has historically been used as a commercial dry-cleaning facility that utilized perchloroethylene (PCE) from 1924 to approximately 1993. Degradation products of petroleum solvents are also present in groundwater at varying relative concentrations. The property was last operated by Welch's Uniform, and is now owned by AmeriPride Services Inc (AmeriPride). AmeriPride is considering building a 30,000 square foot Apparel Center on the site within two years. All buildings associated with previous operation have been removed and the site is now a vacant lot (the status of building foundations is unclear). Approximately 25 underground storage tanks (USTs) may have once

been in service at the site, and although there is documentation reporting that 17 USTs have been removed, records describing the status of the other tanks are incomplete.

SITE SETTING

The site is located in a relatively low density, mixed residential and industrial area approximately 3.5 miles northeast of downtown Los Angeles, California. Adjoining the western boundary of the site is a railroad track. The Arroyo Seco Channel is to the north, across from which is the Pasadena Freeway. To the south are industrial buildings, and to the east are residential homes and Hillside Elementary school.

The site vicinity is underlain by recent age alluvial and stream channel deposits consisting of coarse grained sand, gravel, and cobbles. These sediments are approximately 50 to 100 feet thick beneath the site (California Department of Water Resources [CDWR], 1961).

GROUNDWATER GAUGING

Monitoring wells MW-2, MW-3, MW-7, MW-8A, MW-9A, MW-9B, MW-10A, MW-10B, MW-13A, MW-13B, MW-14, MW-15, MW-16A, MW-16B, MW-16C, K-1, and K-2 were gauged on December 21st and 22nd, 2006. Monitoring wells MW-4 and K-3 were not sampled due to an obstruction in the wells. Monitoring well gauging data is summarized in **Table 1** and groundwater elevations and contours are illustrated on **Figure 3**.

The depth to groundwater ranged from 23.35 feet below ground surface (bgs) in MW-8A to 41.11 ft bgs in MW-13B. The groundwater elevation ranged from 350.05 feet above mean sea level (MSL) in MW-8A to 315.72 ft MSL in MW-15. Light Non-Aqueous Phase Liquid (LNAPL) was not measured in any of the monitoring wells. Based upon the December 21st and December 22nd, 2006 gauging data, the calculated direction of groundwater flow is towards the south-southwest, at a gradient of approximately 0.011 feet per foot.

GROUNDWATER SAMPLING

Groundwater purging was completed with a vacuum truck on December 21st and 22nd, 2006 using dedicated stingers installed at each well. Due to inclement weather on December 22nd, 2006, the vacuum truck was unable to access monitoring wells MW-3, MW-16A, MW-16B, and MW-16C. These wells were purged by a grundfos pump on December 28, 2006. The purge water from monitoring wells MW-3, MW-16A, MW-16B, and MW-16C is currently stored onsite in a 55-gallon Department of Transportation (DOT) approved drums.

A downhole instrument was used to measure water quality parameters during purging to help ensure that the monitored parameters are unaffected by the aeration occurring as fluids are air lifted up the stinger. A Horiba U-22 water quality meter was placed into the well and used to measure the following

parameters during well purging: pH, dissolved oxygen, temperature, specific conductivity, turbidity and oxidation-reduction potential. Well purging was deemed complete after at least three well volumes of water were removed, or stabilization of water quality readings was achieved. The stabilized water quality readings are summarized on **Table 2** and groundwater sampling logs are included in **Appendix A**. Groundwater purge forms for wells MW-3, -9A, -9B, 10A, -10B, -16A, -16B and -16C were not completed or submitted for senior review by the sampler. Because of this, ENSR is unable to verify that stabilization of parameters (such as temperature, pH, conductivity or turbidity) was achieved prior to groundwater sample collection for wells MW-3, -9A, -9B, 10A, -10B, -16A, -16B and -16C. However, based on standard operating procedures involving purging with a vacuum truck, the wells were most likely purged of at least three casing volumes prior to sample collection.

Approximately 526 gallons of purged groundwater were temporarily stored inside the vacuum truck then transported to US Filter Recovery Services in Vernon, CA for recycling/disposal. A non-hazardous waste manifest is included in **Appendix B**, which accounts for disposal of the 526 gallons of purged groundwater generated during this 4th quarter 2006 monitoring event.

After well purging had been completed and the water level had recovered to at least 80% of the original water level, groundwater samples were collected with a disposable bailer. Groundwater samples were transferred directly into laboratory supplied containers with the appropriate preservative and were stored on ice in a cooler. Samples were shipped under chain-of-custody to Calscience Environmental Laboratories, Inc. in Garden Grove, California. All samples submitted were analyzed for volatile organic compounds (VOCs) by Environmental Protection Agency (EPA) Method 8260B. Selected samples were analyzed for total petroleum hydrocarbons as gasoline and diesel (TPHg and TPHd, respectively) by modified EPA Method 8015, and for 1,4-Dioxane using EPA Method 8270M. Samples collected from wells MW-2, MW-3, MW-10A, MW-10B, MW-13A, MW-13B, MW-15, MW-16A, MW-16B, and MW-16C were analyzed for nitrate, nitrite, sulfate, ferrous iron, and methane.

VOC ANALYTICAL RESULTS

VOC laboratory analytical results for detected compounds are summarized in **Table 3**. Additional VOC laboratory analytical results from March 1998 to August 1991 are also summarized and presented in **Table 4**. The laboratory analytical report is included as **Appendix C**. The following VOCs were detected in one or more groundwater samples during the quarterly event:

VOCs Detected in One or More Groundwater Samples

acetone	tert-butyl alcohol
tert-butylbenzene	trichloroethene (TCE)
1,2 dichlorobenzene	cis-1,2-dichloroethene
chloroform	ethanol

1,1-dicloroethene	toluene
tetrachloroethene (PCE)	vinyl chloride
trans-1,2-dichloroethene	

Groundwater analytical results were compared to California Department of Health Services (DHS) Maximum Contaminant Level (MCLs) in drinking water because site-specific contaminant concentration goals have not yet been established. For chemicals that don't have established MCLs, analytical results were compared to DHS Action Levels (ALs) based on toxicity to humans, or to the Region 9 EPA Preliminary Remediation Goals (PRGs) for direct-contact with tap water (October 2004). Groundwater analytical results for detected analytes are illustrated on a site plan in **Figure 4.**

The following chemicals exceeded the listed water quality goals for the Fourth Quarter, 2006 sampling event::

- PCE concentrations were reported in well MW-16A at approximately 20 times the MCL, in well MW-3 at approximately 17 times the MCL, and between 1 and 5 times the MCL in wells MW-7, -9A, -10A, -13A, -13B, -14, -15, -16B, -16C, K-1 and K-2;
- TCE concentrations were reported in well MW-16A at approximately 40 times the MCL, and between 1 and 6 times the MCL in wells MW-3, -7, -9A, -10A, -13A, -14, -15, -16C, K-1 and K-2;
- Trans-1,2-dichloroethene (t-DCE) concentrations were reported in MW-15 and MW-16A at 1 to 3 times the MCL; and
- Cis-1,2-dichloroethene (c-DCE) concentrations were reported in well MW-16A at 183 times the MCL, in well MW-10A at 33 times the MCL, and between 1 and 15 times the MCL in wells MW-3, -7, -9A, -13A, -13B, -14, -15, -16C, K-1 and K-2.

The following VOCs were detected in the quality assurance, quality control (QA/QC) samples:

- The method blank analyzed on January 3, 2007 contained 1.1 microgram per liter (µg/L) of naphthalene, 0.48 µg/L of toluene, 0.44 µg/L of 1,2,3-trichlorobenzene, 0.36 µg/L of 1,2,4-tichlorobenzene, and 0.35 µg/L of p/m-xylene.

The VOCs detected in the QA/QC samples indicate potential equipment or lab contaminants that could introduce a high bias error in the analytical results for the groundwater samples. The samples from wells MW-16A and MW-16B were analyzed on January 3, 2007, and tested positive for only toluene of the five VOCs detected in the QA/QC sample. The toluene results of MW-16A and MW-16B may have a high bias error due to toluene being detected in the method blank. This potential error has been indicated in **Table 3** by adding a B-flag next to detections that are less than five times the greatest concentration measured in the QA/QC sample.

NATURAL ATTENUATION

Natural attenuation processes include biodegradation, dilution, dispersion, sorption, volatilization and abiotic degradation. Decreasing concentrations of chemicals dissolved in groundwater are typically the primary evidence that natural attenuation is occurring.

Figures 5 through 13 illustrate PCE, TCE and TPHg concentrations and groundwater elevations over time for wells K-1, K-2, K-3, MW-3, MW-9A, MW-10A, MW-13A, MW-14, and MW-15. Generally, the concentrations of these indicator compounds are stable or show a slightly decreasing trend. In March 2005, concentrations in many wells increased significantly (up to 40 times the concentrations measured during the previous event) and then declined during the following events. This increase in groundwater concentrations generally corresponded with an increase in groundwater elevations and was most pronounced in wells MW-3 and MW-12. There was also an increase in concentrations in wells MW-10B and MW-15 that was not manifested until the following quarter, which may be related to the time needed for an upgradient change in water quality to travel to those wells.

Table 4 provides historical groundwater concentrations of other analytes. The concentrations of c-DCE are particularly significant because it is a byproduct of the reductive dechlorination of PCE and TCE, which typically occurs under anaerobic conditions. If the concentration ratio of c-DCE to PCE and TCE is very small then probably little biodegradation of PCE and TCE is occurring, if the ratio is very large then significant biodegradation has likely occurred.

General water chemistry parameters provide secondary support, after contaminant concentration trends, for demonstrating that biodegradation is occurring in the site plume. Natural attenuation parameter analytical results are summarized in **Table 5**. Low dissolved oxygen concentrations (less than 1 ug/L) and negative oxidation reduction potentials (exceeding -50 millivolts) generally indicate a reducing anaerobic environment conducive to reductive dechlorination; however, these values should not be considered to be an absolute determination of biodegradation potential. It may be more meaningful to compare the relative changes of these parameters to results at wells known to be outside of the chemical plume, such as MW-8A. Also, one should consider that there may be various other transformation mechanisms and different conditions in soil pore spaces than represented in a monitoring well.

Evaluating the ratio of the total concentration of TCE, c-DCE, t-DCE, and vinyl chloride (the daughter products) to the concentration of PCE (the parent compound) and comparing to changes in the general water chemistry parameters is helpful in identifying site specific conditions influencing biodegradation. The ratio of daughter products to PCE is presented in **Table 5**. At this time there are not any meaningful trends apparent in the data.

UPCOMING WORK

The next groundwater monitoring event will be scheduled for March 2007.

If you have any questions or require additional information, please do not hesitate to contact Will Glenn or Jeff Otter at (714) 973-9740 or jotter@ensr.aecom.com.

Table 3
Summary of Detected Chemical Concentrations in Groundwater (ug/L)
Former Welch's Uniform Site
EPA 8015M 3505 Pasadena Avenue **EPA 8260B**
Los Angeles, California

ABBREVIATIONS / LEGEND:

AL: California EPA Action Level based on toxicity to humaNA
B: Potential bias error, analyte detected in quality control blank
EPA: Environmental Protection Agency
J: Estimated value
µg/L: Micrograms per liter
MCL: California EPA Maximum Contaminant Level for drinking water
NA: Not Analyzed
ND: Non-detect at or below method detection limit for samples
PRG: Screening level for direct contact (tap water) EPA Region IX Preliminary Remediation Goals (October 2004)
VOCs: Volatile organic compounds
BOLD Indicates concentrations at or above listed water quality goals
-- Not sampled because well lost, destroyed, or abandoned
Sampling prior to 12/21/05 done by Cape Environmental.

1,1-DCE: 1,1-dichloroethene
cis-DCE: cis-1,2-dichloroethene
trans-DCE: trans-1,2-dichloroethene
MTBE: Methyl tertiary butyl ether
1,1,1,2-PCA: 1,1,1,2-tetrachloroethane
1,1,2,2-PCA: 1,1,2,2-tetrachloroethane
PCE: Tetrachloroethene
TCE: Trichloroethene
TEPH: Total extractable petroleum hydrocarbons expressed as diesel
TVPH: Total volatile petroleum hydrocarbons expressed as gasoline

[1]: A Compilation of Water Quality Goals (August 2003 and updates), CalEPA RWQCB - Central Valley Region (CRWQCBCV 2003)
[2]: California Office of Environmental Health Hazard Assessment Public Health Goal
[3]: Well K-3 not purged on 6/29/00 due to low walter level.

WATER QUALITY GOALS FOR OTHER VOCs

Acetone = 5,550 (PRG)
trans-1,3-Dichloropropene = 0.5 (MCL)
Methylene chloride =5 (MCL)
Naphthalene = 17 (AL)
1,2,4-Trichlorobenzene = 5 (MCL)
1,3,5-Trimethylbenzene = (none)
Vinyl Chloride = 0.5 (MCL)

Table 4

NOTES:

mg/L: milligrams per liter
NA: Not analyzed
TRPH: Total Recoverable Petroleum Hydrocarbons
TPHg: Total Petroleum Hydrocarbons as Gasoline
TPHd: Total Petroleum Hydrocarbons as Diesel Fuel
TPHwo: Total Petroleum Hydrocarbons as Waste Oil or Motor Oil

B: Benzene
T: Toluene
E: Ethyl benzene
X: Total Xylenes
PCE: Tetrachloroethene
TCE: Trichloroethene

Notes:
DO = Dissolved oxygen
mg/L = milligrams per liter
ORP = Oxidation-reduction potential in millivolts
NA = Not applicable, insufficient analytical
ND = Not detected at or above method detection limit
NS = Not sampled
NR = No Purge Record
Daughter to Parent Ratio = (CF+VC+cisDCE+transDCE+TCE)/(PCE)
1. Nitrate, reported as nitrogen
2. Nitrite, reported as nitrogen
3. ORP and DO were measured using in-well field instrumentation after purging wells

CODES:
SWL - Static Water Level (Feet)
IWL - Instant Water Level; Non-Static (Feet)
OIL - Oil Level (Feet)
OWI - Oil/Water Interface (Feet)
MTD - Measured Total Depth (Feet)
FLO - Flow Rate (Gallons/Minute)
CUM - Cumulative (Gallons)
HRS - Total Hours
PSI - Pressure (psi²)
pH - 1 to 14
Ec - Conductivity (µmHOS)
TMP - Temperature (Celsius)
TRB - Turbidity (NTU)
____ - _____ (Additional Code)

Intervals are depth from inner casing - describe any other reference points in comments column; when in doubt, describe reference point.
Note in comments column if well is not : properly labeled, latched or able to be locked. Describe corrective action.
² Negative pressure (Vaccuum) psi = approximately (1/2 mmHg)

Calscience
Environmental
Laboratories, Inc.

January 04, 2007

Jeff Otter
ENSR International
999 W. Town and Country Rd, 4th
Orange, CA 92868-4713

Subject: **Calscience Work Order No.: 06-12-1403**
Client Reference: AmeriPride 10770-003-300

Dear Client:

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received 12/21/2006 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Systems Manual, applicable standard operating procedures, and other related documentation. The original report of subcontracted analysis, if any, is provided herein, and follows the standard Calscience data package. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report, please do not hesitate to contact the undersigned.

Sincerely,

Cecile deGuia

Glossary of Terms and Qualifiers

Work Order Number: 06-12-1403

Qualifier	Definition
*	See applicable analysis comment.
1	Surrogate compound recovery was out of control due to a required sample dilution, therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike or Matrix Spike Duplicate compound was out of control due to matrix interference. The associated LCS and/or LCSD was in control and, therefore, the sample data was reported without further clarification.
4	The MS/MSD RPD was out of control due to matrix interference. The LCS/LCSD RPD was in control and, therefore, the sample data was reported without further clarification.
5	The PDS/PDSD associated with this batch of samples was out of control due to a matrix interference effect. The associated batch LCS/LCSD was in control and, hence, the associated sample data was reported with no further corrective action required.
A	Result is the average of all dilutions, as defined by the method.
B	Analyte was present in the associated method blank.
C	Analyte presence was not confirmed on primary column.
E	Concentration exceeds the calibration range.
H	Sample received and/or analyzed past the recommended holding time.
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
N	Nontarget Analyte.
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
U	Undetected at the laboratory method detection limit.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

We did not receive your trip blank samples. Could you please ammend the attached COC to reflect the omission? Thank you.

Subject: **Calscience Work Order No.: 06-12-1504**
Client Reference: AmeriPride 10770-003-300

Dear Client:

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received 12/22/2006 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Systems Manual, applicable standard operating procedures, and other related documentation. The original report of subcontracted analysis, if any, is provided herein, and follows the standard Calscience data package. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report, please do not hesitate to contact the undersigned.

Sincerely,

Cecile deGuia

Glossary of Terms and Qualifiers

Work Order Number: 06-12-1504

Qualifier	Definition
*	See applicable analysis comment.
1	Surrogate compound recovery was out of control due to a required sample dilution, therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike or Matrix Spike Duplicate compound was out of control due to matrix interference. The associated LCS and/or LCSD was in control and, therefore, the sample data was reported without further clarification.
4	The MS/MSD RPD was out of control due to matrix interference. The LCS/LCSD RPD was in control and, therefore, the sample data was reported without further clarification.
5	The PDS/PDSD associated with this batch of samples was out of control due to a matrix interference effect. The associated batch LCS/LCSD was in control and, hence, the associated sample data was reported with no further corrective action required.
A	Result is the average of all dilutions, as defined by the method.
B	Analyte was present in the associated method blank.
C	Analyte presence was not confirmed on primary column.
E	Concentration exceeds the calibration range.
H	Sample received and/or analyzed past the recommended holding time.
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
N	Nontarget Analyte.
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
U	Undetected at the laboratory method detection limit.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Subject: **Calscience Work Order No.: 06-12-1673**
Client Reference: AmeriPride 10770-003-300

Dear Client:

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received 12/28/2006 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Systems Manual, applicable standard operating procedures, and other related documentation. The original report of subcontracted analysis, if any, is provided herein, and follows the standard Calscience data package. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report, please do not hesitate to contact the undersigned.

Sincerely,

Cecile deGuia

Glossary of Terms and Qualifiers

Work Order Number: 06-12-1673

Qualifier	Definition
*	See applicable analysis comment.
1	Surrogate compound recovery was out of control due to a required sample dilution, therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike or Matrix Spike Duplicate compound was out of control due to matrix interference. The associated LCS and/or LCSD was in control and, therefore, the sample data was reported without further clarification.
4	The MS/MSD RPD was out of control due to matrix interference. The LCS/LCSD RPD was in control and, therefore, the sample data was reported without further clarification.
5	The PDS/PDSD associated with this batch of samples was out of control due to a matrix interference effect. The associated batch LCS/LCSD was in control and, hence, the associated sample data was reported with no further corrective action required.
A	Result is the average of all dilutions, as defined by the method.
B	Analyte was present in the associated method blank.
C	Analyte presence was not confirmed on primary column.
E	Concentration exceeds the calibration range.
H	Sample received and/or analyzed past the recommended holding time.
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
N	Nontarget Analyte.
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
U	Undetected at the laboratory method detection limit.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

CASE SUMMARIES

Note: Information for case summaries is retrieved from the Planning Department's Plan Case Tracking System (PCTS) database.

Case Number:	CPC-2018-5580-SP
Required Action(s):	SP-SPECIFIC PLAN (INCLUDING AMENDMENTS)
Project Descriptions(s):	SPECIFIC PLAN AMENDMENT (11.5.7G)
Case Number:	CPC-2009-598-CA-SP
Required Action(s):	SP-SPECIFIC PLAN (INCLUDING AMENDMENTS)
	CA-CODE AMENDMENT
Project Descriptions(s):	THE CORNFIELD ARROYO SPECIFIC PLAN (CASP) WILL GUIDE THE FUTURE DEVELOPMENT OF AN APPROXIMATELY 660 ACRE AREA THAT IS LOCATED WITHIN PORTIONS OF THE CENTRAL CITY NORTH, NORTHEAST, AND SILVERLAKE-ECHO PARK COMMUNITY PLAN AREAS. THE CASP IS INTENDED TO SERVE AS A FRAMEWORK FOR CREATING AN ENVIRONMENTALLY SUSTAINABLE, INCLUSIVE, AND ECONOMICALLY VIABLE AREA. POLICIES INCLUDED IN THE CASP ACCOMODATE A RANGE OF HOUSING OPTIONS, NEW PUBLIC SPACES, OPPORTUNITIES FOR WALKING AND BICYCLING, AND CLUSTERS FOR BOTH EXISTING INDUSTRIAL BUSINESSES AND THE CLEAN TECHNOLOGY BUSINESSES OF THE FUTURE.
Case Number:	CPC-2008-3125-CA
Required Action(s):	CA-CODE AMENDMENT
Project Descriptions(s):	THE ADDITION OF A RIVER IMPROVEMENT OVERLAY (RIO) DISTRICT AS SECTION 13.12 OF THE L.A.M.C. IN RESPONSE TO THE LOS ANGELES RIVER REVITALIZATION MASTER PLAN (LARRMP) THAT WAS ADOPTED IN MAY 2007. THIS SUPPLEMENTAL USE DISTRICT WOULD ESTABLISH STANDARDS FOR NEW DEVELOPMENT ALONG WATERWAYS
Case Number:	CPC-2006-5242-ZC-GPA
Required Action(s):	GPA-GENERAL PLAN AMENDMENT
	ZC-ZONE CHANGE
Project Descriptions(s):	ZONE CHANGE AND LAND USE PLAN AMENDMENT TO THE NORTHEAST LOS ANGELES COMMUNITY PLAN PORTION OF THE LAND USE ELEMENT OF THE CITY'S GENERAL PLAN.
Case Number:	CPC-1989-177
Required Action(s):	Data Not Available
Project Descriptions(s):	INTERIM CONTROL ORDINANCE FOR THE ENTIRE NORTHEAST LOS ANGELESDISTRICT PLAN
	CONTINUATION OF CPC-89-0177. SEE GENERAL COMMENTS FOR CONTINUATION.
Case Number:	CPC-1986-826-GPC
Required Action(s):	GPC-GENERAL PLAN/ZONING CONSISTENCY (AB283)
Project Descriptions(s):	GENERAL PLAN/ZONING CONSISTENCY - ZONE CHANGES - HEIGHT DISTRICT CHANGES AND PLAN AMENDMENTS - VARIOUS LOCATIONS
Case Number:	ZA-2016-272-ZAA-SPR-CLQ
Required Action(s):	CLQ-CLARIFICATION OF 'Q' CONDITIONS
	SPR-SITE PLAN REVIEW
	ZAA-AREA,HEIGHT,YARD,AND BLDG LINE ADJMNTS GT 20% (SLIGHT MODIFICATIONS)
Project Descriptions(s):	PURSUANT TO LAMC 12.27 THE APPLICANT REQUEST A ZONE VARIANCE TO PERMIT A DENSITY OF 1 DWELLING/534 PER SQUARE IN LIEU OF THE 1/800 AS REQUIRED BY 12.17.1; PURSUANT TO 16.05 THE APPLICANT REQUEST SITE PLAN REVIEW FOR A PROJECT WITH MORE THAN 50 UNITS; AND PURSUANT TO 12.24W1 THE APPLICANT REQUEST A MASTER CUB FOR A 10,000 SQFT RETAIL SPACE, ALL IN CONJUNCTION WITH CONSTRUCTION OF A NEW 410 RESIDENTIAL PROJECT OVER SEVERAL BUILDINGS AND REHABILITATION OF SEVERAL EXISTING BUILDINGS.
Case Number:	ZA-19XX-9131
Required Action(s):	Data Not Available
Project Descriptions(s):	
Case Number:	ZA-19XX-6453
Required Action(s):	Data Not Available
Project Descriptions(s):	
Case Number:	ENV-2016-273-MND
Required Action(s):	MND-MITIGATED NEGATIVE DECLARATION
Project Descriptions(s):	PURSUANT TO LAMC 12.27 THE APPLICANT REQUEST A ZONE VARIANCE TO PERMIT A DENSITY OF 1 DWELLING/534 PER SQUARE IN LIEU OF THE 1/800 AS REQUIRED BY 12.17.1; PURSUANT TO 16.05 THE APPLICANT REQUEST SITE PLAN REVIEW FOR A PROJECT WITH MORE THAN 50 UNITS; AND PURSUANT TO 12.24W1 THE APPLICANT REQUEST A MASTER CUB FOR A 10,000 SQFT RETAIL SPACE, ALL IN CONJUNCTION WITH CONSTRUCTION OF A NEW 410 RESIDENTIAL PROJECT OVER SEVERAL BUILDINGS AND REHABILITATION OF SEVERAL EXISTING BUILDINGS.
Case Number:	ENV-2013-3392-CE
Required Action(s):	CE-CATEGORICAL EXEMPTION
Project Descriptions(s):	THE PROPOSED ORDINANCE MODIFIES SECTION 22.119 OF THE LOS ANGELES ADMINISTRATIVE CODE TO ALLOW ORIGINAL ART MURALS ON LOTS DEVELOPED WITH ONLY ONE SINGLE-FAMILY RESIDENTIAL STRUCTURE AND THAT ARE LOCATED WITHIN COUNCIL DISTRICTS 1, 9, AND 14.
Case Number:	ENV-2009-599-EIR

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 04/11/2019 has revealed that there are 2

SEMS sites within approximately 0.5 miles of the target property.

EPA Id: CAD983578667				

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 04/11/2019 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/25/2019 has revealed that there are 4 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/25/2019 has revealed that there are 11 RCRA-SQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/28/2019 has revealed that there are 10 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, has revealed that there are 2 SWF/LF sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 20 UST sites within approximately 0.25 miles of the target property.

Local Lists of Hazardous waste / Contaminated Sites

SCH: This category contains proposed and existing school sites that are being evaluated by DTSC for possible hazardous materials contamination. In some cases, these properties may be listed in the CalSites category. depending on the level of threat to public health and safety or the. environment they pose.

A review of the SCH list, as provided by EDR, and dated 01/28/2019 has revealed that there is 1 SCH site within approximately 0.25 miles of the target property.

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 9 SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/25/2019 has revealed that

there are 8 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 2 EDR Hist

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: Yes
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Violation Status: No violations found

FINDS:

Registry ID: 110002799767

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS AIR POLLUTANT MAJOR

FINDS:

Registry ID: 110033020308

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

FORMER WELCH'S UNIFORM FACILITY (Continued) **1000169742**

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
AIR EMISSIONS CLASSIFICATION UNKNOWN

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110009541273

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Citation:	22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11
Violation Description:	Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.
Violation Notes:	Returned to compliance on 03/20/2019. OBSERVATION: Per Mr. Morales, the finely divided metal generated from rotor resurfacing and other grinding operations are being either disposed to the trash or sent off as scrap metal. Finely divided metal less than 100 microns in size does not meet the definition of scrap metal. CORRECTIVE ACTION: Submit documentation to the CUPA demonstrating that the finely divided metal has been properly characterized to determine if it is a hazardous waste. If determined to be hazardous submit manifests/receipts documenting proper disposal and a statement demonstrating how you will manage it in the future.

Evaluation:

Eval General Type: Other/Unknown
Eval Date: 06-12-2017
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: Not reported
Eval Division: Los Angeles County Fire Department
Eval Program: HW
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 07-25-2016
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Please comply with the following to avoid legal action. Upon completion notify inspector Hamilton at steven.hamilton@lacity.org so the violations can be cleared. 1. Please remember that CERS needs to be updated 1 time per year between Jan 1 and March 1 2. Attach your contingency plan to the plans section of CERS. I have given you the blank form for you to fill out and upload to the system. If you use this form you can check that the employ training is located in another portion of CERS. 3. Obtain a consolidated permit from the Los Angeles Fire department. Please contact Elva Davila at (213)978-3576 within the next 7 days to avoid legal action. Elva Davila will instruct you how to obtain your permit

Completed Info:
Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Voluntary Cleanup Agreement
Completed Date: 04/07/2004
Comments: The Voluntary Cleanup Agreement was signed by representatives from the Los Angeles Department of Water and Power and the Department of Toxic Substances Control. The purpose of the Agreement is for the Proponent to conduct a Preliminary Endangerment Assessment of the soil under the oversight of DTSC.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 09/14/1995
Comments: The Department received a Non-Emergency Hazardous Substance Release Report dated July 8, 1994. The report indicates that the property was contaminated at the time of purchase in March 1990. Leaking undergound storage tanks have been removed by the previous owner. Some of the contaminated soils have been removed from the site. Soils contaminated with lead are still exist at the site. Due to evidence of a release, DTSC recommended a PEA, and notified the RP thereof.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Workplan
Completed Date: 05/12/2005
Comments: The PEA Workplan was approved

Completed Date: 03/16/1994
Comments: The Department received a referral dated March 8, 1994 from the County of Los Angeles, Fire Department. The site was previously a battery recycler whose owner, Victor Pena, was under investigation by LA County and the LA City Attorney's Office for the illegal discharge of hazardous waste onto the subject property. The waste materials were being discharged into an unlined pit in the rear of the property and the driveway. The RP was subsequently convicted of illegal discharge of hazardous waste, sentenced and ordered to remediate the site. The "Subsurface Investigation Report" indicates that the maximum concentration of lead in the soil is 30,000 mg/kg and minimum pH is 0.48. RP has not been compiled with the County's directives. Therefore, the site was referred to the Department. Due to the

VICTOR S INDUSTRIAL BATTERIES (Continued) **S105689620**

evidence of onsite contamination, the Department recommends a PEA. The RP will be notified of this recommendation.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 04/11/2019

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 04/03/2019

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.
