DEPARTMENT OF CITY PLANNING
APPEAL REPORT

City Planning Commission

Date: October 8, 2020
Time: **After 8:30 a.m.***
Place: In conformity with the Governor's Executive Order N-29-20 (March 17, 2020) and due to concerns over COVID-19, the CPC meeting will be conducted entirely telephonically by Zoom [https://zoom.us/].

Public Hearing: Required
Appeal Status: Not Further Appealable
Expiration Date: October 8, 2020

Case No.: **DIR-2019-6048-TOC-SPR-WDI-1A**
CEQA No.: ENV-2016-273-MND-REC1
Incidental Case: None
Related Case: None
Council No.: 1 - Gilbert Cedillo
Plan Area: Northeast Los Angeles
Specific Plan: Cornfield / Arroyo Seco
Certified NC: Lincoln Heights
GPLU: Commercial Manufacturing
Zone: [T][Q]CM-2D
Applicant: Jay Stark, R Cap Avenue 34, LLC
Representative: Andrew Brady, DLA Piper, LLP
Appellant: Patricia Camacho

PROJECT LOCATION: **135 – 153 West Avenue 34**

PROPOSED PROJECT: The proposed project is the construction, use, and maintenance of a new, five-story, 514,756 square-foot mixed-use building with 468 dwelling units, including 66 dwelling units set aside for Very Low Income Households (or 14% of the proposed density) and 16,395 square feet of commercial space. The development will be constructed within two (2) phases, and is designed as one (1) building which includes two (2) levels of subterranean parking across the entire site with three (3) structures above that include residential and commercial uses. The structures will be four (4) and five (5) stories tall with a total of 311 automobile parking spaces, 35 short-term and 264 long-term bicycle parking spaces, and a total of 49,152 square feet of open space for residents.

APPEAL ACTION: Pursuant to Los Angeles Municipal Code (LAMC) Sections 12.22-A,25(g) and 12.22-A,31, an appeal of the Director of Planning's Determination approving a Transit Oriented Communities Affordable Housing Incentive Program project allowing a 70% increase in density for a Tier 3 project totaling 468 dwelling units with 66 units set aside as affordable housing units for Very Low Income (VLI) Households for a period of 55 years along with the following two (2) Additional Incentives:

a. **Setback.** To permit the use of any or all the yard requirements for the RAS3 Zone in lieu of the [T][Q]CM-2D, and

b. **Transitional Height.** To utilize the Transit Oriented Communities transitional height requirements in lieu of those found in LAMC Section 12.21.1-A,10;

Pursuant to LAMC Section 16.05-H, an appeal of the Director of Planning's Determination approving a Site Plan Review for the construction, use and maintenance of a new, five-story, mixed-use building with 468 dwelling units, and 16,395 square feet of commercial space in the [T][Q]CM-2D Zone;

An appeal of the adoption of the addendum to the previously adopted Mitigated Negative Declaration (Case No. ENV-2016-273-MND).

RECOMMENDED ACTIONS:

1. **Find**, based on the independent judgment of the decision-maker, after consideration of the whole of the administrative record, the project was assessed in Mitigated Negative Declaration No. ENV-2016-273-MND, adopted on August 22, 2017; and pursuant to CEQA Guidelines 15162 and 15164, as supported by the Addendum dated December 2019 no major revisions are required to the Mitigated Negative Declaration; and no subsequent EIR or negative declaration is required for approval of the project;

2. **Deny** the appeal and **sustain** the Director of Planning's Determination approving a Transit Oriented Communities Affordable Housing Incentive Program project allowing a 70% increase in density for a Tier 3 project totaling 468 dwelling units with 66 units set aside as affordable housing units for Very Low Income (VLI) Households for a period of 55 years along with the following two (2) Additional Incentives:

   a. **Setback**. To permit the use of any or all the yard requirements for the RAS3 Zone in lieu of the [T][Q]CM-2D, and

   b. **Transitional Height**. To utilize the Transit Oriented Communities transitional height requirements in lieu of those found in LAMC Section 12.21.1-A,10;

3. **Deny** the appeal and **sustain** the Director of Planning's Determination approving a Site Plan Review for the construction, use and maintenance of a new, five-story, mixed-use building with 468 dwelling units, and 16,395 square feet of commercial space in the [T][Q]CM-2D Zone; and

5. **Adopt** the Findings.

VINCENT P. BERTONI, AICP
Director of Planning

Nicholas Hendricks, Senior City Planner

Oliver Netburn, City Planner

Michelle Carter, City Planning Associate
Michelle.Carter@lacity.org

ADVICE TO PUBLIC: *The exact time this report will be considered during the meeting is uncertain since there may be several other items on the agenda. Written communications may be mailed to the City Planning Commission Secretariat, 200 North Spring Street, Room 272, Los Angeles, CA 90012 (Phone No. 213-978-1300). While all written communications are given to the Commission for consideration, the initial packets are sent to the week prior to the Commission's meeting date. If you challenge these agenda items in court, you may be limited to raising only those issues you or someone else raised at the public hearing agendized herein, or in written correspondence on these matters delivered to this agency at or prior to the public hearing. As a covered entity under Title II of the Americans with Disabilities Act, the City of Los Angeles does not discriminate on the basis of disability, and upon request, will provide reasonable accommodation to ensure equal access to this programs, services and activities. Sign language interpreters, assistive listening devices, or other auxiliary aids and/or other services may be provided upon request. To ensure availability of services, please make your request not later than three working days (72 hours) prior to the meeting by calling the Commission Secretariat at (213) 978-1300.

PROJECT ANALYSIS

The proposed project was presented to the City Planning Commission on August 13, 2020. At the meeting, the Commission continued the item until the August 27, 2020 meeting. On August 17, 2020, the Planning Department received correspondence from the applicant's representative requesting further continuance until the October 8, 2020 City Planning Commission meeting.

Additionally, at the August 13, 2020 meeting a Technical Modification was submitted by the Planning Department modifying Condition Nos. 9.d.iii, and 9.f. The modifications to Condition Nos. 9.d.iii and 9.f are consistent with the City's tree planter size and renewable energy policies, respectively. Therefore, staff recommends incorporation of the modifications to Condition Nos. 9.d.iii and 9.f, as follows:

9. Site Plan Review

d. Landscaping and Street Trees.

iii. All planters containing trees in grade shall have a minimum depth of 48 inches (48"). ~~, including t~~Those located on the rooftop area or above a parking garage shall have a minimum depth of 42 inches of soil and shall provide the minimum soil required to support the growth of healthy plants as follows, based on canopy at maturity:

Canopy at Maturity	Soil Volume
15' - 19'	220 cu. ft.
20' - 24'	400 cu. ft.
25' - 29'	620 cu. ft.
30' - 34'	900 cu. ft.

f. Solar Panels. Solar thermal panels shall be installed on the project's rooftop space to be connected to the building's electrical system. A minimum ~~15~~ 4% of the available roof area shall be reserved for the installation of a solar ~~photovoltaic~~ thermal system, to be installed prior to the issuance of a certificate of occupancy, in substantial conformance with the plans stamped "Exhibit A".

There has been no additional correspondence submitted to the case file.

PROJECT BACKGROUND

The subject property is comprised of seven (7) lots measuring approximately 219,296 square-foot (5.03 acres) with a frontage of 685 feet along Avenue 34 and a frontage of 379 feet along Pasadena Avenue. The subject property is zoned [T][Q]CM-2D within the Northeast Los Angeles Community Plan Area with a Commercial Manufacturing land use designation. The project site is located with Transit Oriented Communities (TOC), Tier 3.

The property is currently developed with industrial and commercial uses and associated surface parking lot. The proposed project is the construction, use, and maintenance of a new, five-story, 514,756 square-foot mixed-use building with 468 dwelling units, including 66 dwelling units set aside for Very Low Income Households (or 14% of the proposed density) and 16,395 square feet of commercial space. The project will provide a total of 311 automobile parking spaces, 35 short-term and 264 long-term bicycle parking spaces. The development will be constructed within two phases, and is designed as one (1) building which includes two (2) levels of subterranean parking

across the entire site and with three (3) structures that include residential and commercial uses. The structures will be four (4) and five (5) stories tall with a total of 222 studio, 152 one-bedroom, and 94 two-bedroom dwelling units, and a total of 49,152 square feet of open space for residents.

SURROUNDING PROPERTIES

Surrounding uses are within commercial manufacturing, urban center and public facilities zones and are generally developed residential single-family, and commercial manufacturing structures. The property to the north abutting the site is zoned UC(CA) and is currently vacant. The properties to east, across Pasadena Avenue, are zoned [Q]RD2-1D, [Q]RD1.5-1D, [Q]PF-1D and [T][Q]CM-2D and are developed with commercial, educational, and multi-family residential uses. The properties to the south, across Avenue 34, are zoned UC(CA) and are improved with commercial uses and a single-family and multi-family residential structures. The property to the west is zoned PF-1 and is developed with the Metro Gold Line light rail.

STREETS AND CIRCULATION

Pasadena Avenue, abutting the property to the east, is designated as a Modified Avenue II dedicated to a varying width of 76 to 81 feet, improved with asphalt roadway, curb, gutter, and concrete sidewalks.

Avenue 34, abutting the property to the south, is a Modified Local Street-Standard dedicated to a width of 50 feet, improved with asphalt roadway, curb, gutter, and concrete sidewalks.

TRANSIT ORIENTED COMMUNITIES

Pursuant to the voter-approved Measure JJJ, Los Angeles Municipal Code (LAMC) 12.22-A,31 was added to create the Transit Oriented Communities (TOC) Affordable Housing Incentive Program (TOC Program). The Measure requires the Department of City Planning to create TOC Affordable Housing Incentive Program Guidelines (TOC Guidelines) for all Housing Developments located within a one-half mile (or 2,640-foot) radius of a Major Transit Stop. These Guidelines provide the eligibility standards, incentives, and other necessary components of the TOC Program consistent with LAMC 12.22-A,31.

A qualifying TOC Project shall be granted Base Incentives with regard to increased residential density, increased floor area ratio, and reduced automobile parking requirements. In addition to these Base Incentives, an eligible project may be granted Additional Incentives with regard to yards and setbacks, open space, lot coverage, lot width, averaging, density calculation, height, and developments in public facilities zones. Up to three (3) Additional Incentives may be granted in exchange for providing the requisite set aside of affordable housing as enumerated in the TOC Guidelines.

The proposed project is located less than a ½ mile from the Heritage Square Metro Gold Line Rail Station and is therefore defined as a Major Transit Stop. Furthermore, as the project will set aside 14% of the total number of units for Very Low Income Households and meets all other eligibility requirements of the TOC Affordable Housing Incentive Program, the project is entitled to the Base Incentives.

In addition, as the project is 1,350 feet from the Heritage Square Metro Gold Line Rail Station the project is located within Tier 3 of the TOC Guidelines. Therefore, as the project will set aside 10% of the base number of units for Very Low Income Households, the project is entitled to two (2) Additional Incentives. The applicant is requesting two (2) Additional Incentives.

Given the above, the proposed project includes the following Base and Additional Incentives for a qualifying Tier 3 Project:

Tier 3 Base Incentives:

a. **Density:** The subject property is zoned [T][Q]CM-2D and limited to a maximum density of one (1) dwelling unit per 800 square feet of lot area. With a lot area totaling 219,296 square feet, the project is permitted to construct up to 275 dwelling units (rounding up from 274.12). As an eligible Housing Development, the project is entitled for a 70 percent density increase for a maximum of 468 total units; 468 units are proposed.

b. **Floor Area Ratio (FAR)**: The subject property is zoned [T][Q]CM-2D and limited to an FAR of 3 to 1. As an eligible Housing Development, the project is entitled to a 50 percent FAR increase, or 4.5 to 1. As proposed, the project has a maximum FAR of 3 to 1.

c. **Parking**: Pursuant to LAMC Section 12.21-A,4, the proposed 468-unit project would be required to provide a total of 638 residential and 33 commercial automobile parking spaces. As an Eligible Housing Development, the project is entitled to provide ½ parking space per unit (or 234 parking spaces) and 24 commercial automobile parking spaces. As proposed, the project is providing a total of 311 parking spaces.

Tier 3 Additional Incentives:

a. **Setbacks.** Eligible Housing Developments located in any commercial zone may utilize any or all of the yard requirements for the RAS3 zone per LAMC 12.10.5. In this case, the project would be required to provide side and rear yard conforming to the requirements of the R4 Zone for portions of building erected and used for residential purposes, which includes seven-foot side yards, and a 15-foot rear yard. The project as proposed, will provide yard requirements conforming to the RAS3 zone.

b. **Transitional Height**. Eligible Housing Developments in Tier 3 may utilize transitional height requirements in lieu of those found in LAMC 12.21.1-A,10, or any applicable transitional height limits in a Specific Plan, including any requirements for reduced building heights when a building is adjoining a more restrictive zone. Eligible Housing Developments in Tier 3 may have the building height limit stepped-back at a 45 degree angle as measured from a horizontal plane originating 25 feet above grade at the property line of the adjoining lot in the RW1 Zone or more restrictive residential zone. However, because the subject property does not adjoin a lot in the RW1 or more restrictive residential zone, transitional height requirements described above do not apply. As proposed, the project height of 73 feet is in conformance with this Additional Incentive.

Public Correspondence

Approximately 16 email correspondences were received in opposition of the proposed project. The primary concerns included the size of the building, traffic, pedestrian safety, and parking in the vicinity, as well as concerns regarding a neighboring lot that has been vacant for years due to alleged dangerous ground contamination and a request for public hearing.

Issues

Metro concerns: correspondence was received regarding coordination with LA Metro. Staff met and corresponded with representatives from LA Metro several times between April 2-23, 2020

regarding the project and received comments and off-site recommendations which included; 1) clearer/additional signage for westbound traffic on Avenue 33 to ensure cars stop at the “Wait Here” line when a train is oncoming and 2) a flashing signal on southbound Artesian Street and Avenue 33 that indicates “No Right Turn” and/or “Train Approaching” that would be triggered when trains pass through the crossing. To help ensure that cars from the project do not turn right into the oncoming trains from Artesian Street.

The recommendations were not included in the Director’s Determination as Conditions of Approval as these are off-site improvements. However, the recommendations were provided to the applicant who agreed to working with the Council Office and Metro to implement feasible safety features on Avenue 33 and Artesian Street.

APPEAL ANALYSIS

On June 12, 2020, the Director of Planning issued a Determination that conditionally approved a Transit Oriented Communities Affordable Housing Incentive Program project for the proposed project. On June 23, 2020, an appeal was filed by Patricia Camacho for the entire decision of the Director of Planning.

The following statements have been compiled from the submitted appeal. The appeal in its entirety have been attached herein for reference (Exhibit A).

1. **The Director is incorrect in claiming that the main egress will be on Avenue 34 and Pasadena Avenue. Instead, the appellant argues that Artesian Street will be the main path of egress which is not designed to handle the increase in vehicle trips**

   Page 14 claims the main egress will be on Ave 34 and Pasadena. That is factually incorrect. The building's plans show that the parking lot exits onto Artesian St. Traffic patterns show that the majority of car trips will exit from Ave 34 to Artesian, then to the Ave 33 Gold Line crossing, then to Lacy Street. In addition to being a shorter and more obvious route, driving down Artesian and crossing the train tracks onto Lacy Street is the way that traffic apps such as Google Maps and Waze recommend for trips to most destinations originating anywhere on this block of W Avenue 34. Any other suggestion is factually wrong. Artesian is a one-way 14-foot wide alley with no sidewalk and no lighting while also providing some parking. Pedestrians walk in the traffic lane, as for instance, the residents of the proposed building would do when walking from the building to the nearby Lincoln/Cypress Metro station. This is not a place for 800 car trips a day.

   Staff Response:

   The subject property fronts Pasadena Avenue to the east and Avenue 34 to the south. In an effort to reduce the number of curb cuts and to avoid automobile and pedestrian conflicts, all automobile ingress and egress to the proposed project would be from Avenue 34 through one (1), two-way driveway. Artesian Street, which is southwest of the subject property that terminates at Avenue 34, is a one-way street in the direct away from the subject property. While Artesian Street is near the subject property it does not abut the site and direct egress is not through Artesian Street.

   Nevertheless, the traffic study reviewed and approved by the Los Angeles Department of Transportation (LADOT) found that the proposed project would result in approximately 188 a.m. peak hour outbound trips. Those trips would either exit the site to the west toward Artesian Street, or to the east toward Pasadena Avenue. During the p.m. peak hour, approximately 166 outbound trips would occur which would also either exit the site to the west toward Artesian Street, or to the east toward Pasadena Avenue. LADOT did not require the intersections of Artesian Street and Avenue 34 or Avenue 33 to be analyzed.

   Therefore, given the current capacity of the surrounding roadway network, LADOT has determined that Artesian Street would not be significantly impacted (as it did not require any impact analysis) and the project would only result in significant impact at the intersections at Figueroa Street and Avenue 26 and Pasadena Avenue/Avenue 26 and Daly Street.

   In addition, no substantial evidence has been submitted to the record to demonstrate that the conclusions of the MND and the addendum to the MND are incorrect.

2. <u>The description of surrounding properties is incorrect.</u>

Appeal Comment:

Page 15 states the surrounding properties to the South, across Avenue 34, are commercial use with “a single-family residential structure.” This is incorrect as there are many single-family residential structures, and the majority of properties on this block of W Avenue 34 are for residential, not commercial use. Page 26 also states, in error, that this project is “not located within an existing residential neighborhood.” These are blatant falsehoods and mischaracterizations of our residential neighborhood, used to justify new housing under false pretenses.

Staff Response

The surrounding uses are within commercial manufacturing, urban center and public facilities zones and are generally developed residential and commercial manufacturing structures. The property to the north abutting the site is zoned UC(CA) and is currently vacant. The properties to east, across Pasadena Avenue, are zoned [Q]RD2-1D, [Q]RD1.5-1D, [Q]PF-1D and [T][Q]CM-2D and are developed with commercial, educational, and multi-family residential uses. The properties to the south, across Avenue 34, are zoned UC(CA) and are improved with commercial uses and single-family and multi-family residential uses. The property to the west is zoned PF-1 and is developed with the Metro Gold Line light rail.

Therefore, while there are residential uses within the immediately neighborhood, the Letter of Determination characterizes the neighborhood as a mixed neighborhood

3. <u>The application requires Pro-Forma documentation and third-party peer review.</u>

Appeal Comment

Page 20 starts with the claim that the application is in accordance with LAMC Section 12.22-A,25(g). However 12.22-A,25(g)3 requires that a Pro-Forma or other documentation is required to show that the waiver or modification is needed in order to make the Restricted Affordable Units economically feasible. A third-party peer review of the pro-forma is also required. It appears the affordable units will be available for a limited time, less than one generation, and will result in the eviction of these community members once the limited time has expired. This provision on page 20 needs to be addressed prior to any approval. It is not in compliance with that directive.

Staff Response

Projects which are subject to the TOC Guidelines follow the procedures of LAMC Section 12.22-A,25(g)(2) which subsequently follows the procedures of the State Density Bonus Law. On September 28, 2016, Governor Brown signed AB 2501, AB 2556, AB 2442, and AB 1934 which amended State Density Bonus Law that went into effect January 1, 2017. According to a staff memo dated January 18, 2017 regarding implementation of State Density Bonus Law, AB 2501 clarified and amended a number of density bonus procedures; one (1) of which is that the requirement for provision of special studies such as financial pro-formas is no longer required in order for an application to be deemed complete. Thus, the applicant is not required to submit financial pro-formas in order for the application to move forward or in order for the Director to act.

4. <u>The addendum to the MND has adequately analyzed project impacts to the nearby schools.</u>

Appeal Comment:

Page 21 and 22 state that the project will not have an adverse impact on public health or safety. This is not factual. Adding 800 trips daily at a number of crossings that disregard three local schools is not in compliance with that statement. These schoolchildren will be adversely affected as the project shows a clear preference to exiting toward Artesian and the Ave 33 Gold Line crossing. It is at this location that "Routes to School" from LA DOT clearly shows the preferred route.

Staff Response

The traffic study was reviewed and approved by the Los Angeles Department of Transportation. Mitigation Measures have been incorporated in the Director's Determination as Conditions of Approval and the applicant is required to maintain ongoing contact with the administrators of Hillside Elementary School, Loreta Street Elementary School, and Los Angeles Leadership Academy Charter School and notify the administrative offices when demolition, grading and construction activity are scheduled to begin on the project site so that students and their parents will know when such activities are to occur. Additionally, the developer is required to obtain school walk and bus routes to the schools from either the administrators or from the Los Angeles Unified School District (LAUSD) Transportation Branch and guarantee that safe and convenient pedestrian and bus routes to the school are maintained. Furthermore, the conditions require installation of appropriate traffic signs around the site to ensure pedestrian and vehicle safety and no staging or parking of construction vehicles, including vehicles to transport workers on Pasadena Avenue, adjacent to the school. To mitigate noise impacts on the schools, no construction vehicles or haul trucks are to be staged or idled on Pasadena Avenue, adjacent to the school, during school hours.

In addition, no substantial evidence has been submitted to the record to demonstrate that the conclusions of the MND and the addendum to the MND are incorrect.

5. <u>The addendum to the MND has adequately analyzed project impacts existing hazards and the loss of existing trees.</u>

Appeal Comment

The adjoining lot is contaminated with ground and water pollution of petroleum and VOC's. There are oil pipelines under this property that may be conduits for the spread of pollutants. The environmental review being used for this project (ENV-2016-273) was conducted in 2016 for a different proposal by a different developer that made different use of the property. The ENV approves a host of actions that differ substantially from the current proponent's proposal. For instance, the ENV calls for preserving some existing structures on the property, rather than a complete tear-down of all structures. The ENV calls for 372 residential units and 467 parking spaces, however the Letter of Determination approves 468 residential units and 286 parking spaces for residents. The ENV approves 1 story only of underground excavated parking, although the Letter of Determination approves 2 stories of excavation. The ENV requires the planting of 241 trees, however the Letter of Determination ignores that requirement and approves the reduced planting of 219 trees. This Letter of Determination makes no attempt to reconcile these blatant inconsistencies. Additionally, the ENV cites

"Potentially Significant Impact" of this project on Public Services, Transportation/Circulation, Biological Resources, and the release of Noise and Hazardous Materials. The lack of an environmental review that specifically examines the project under consideration must be corrected, and a new environmental review must be conducted that considers the new proposal. The known pollution on this site combined with an outdated and non-applicable environmental review make the city's approval of this project and the denial of a public hearing highly suspect. We find the Letter of Determination to be in contradiction to the Environmental Review, and appeal its determinations.

Staff Response

All mitigation measures in Mitigated Negative Declaration, Case No. ENV-2016-273-MND adopted on August 22, 2017, have been incorporated in the Director's Determination as Conditions of Approval. No major revisions are required to the Mitigated Declaration and no subsequent EIR or negative declaration is required for approval of the project. Additionally, the adopted MND is the environmental document associated with the project along with the revisions incorporated in the addendum dated December 2019**.** The project is required to comply with all regulatory compliance measures related to pollutant discharge, dewatering, stormwater conditions; and Best Management Practices for stormwater runoff.

Staff is unclear where the appellant finds that the MND requires planting 241 trees. The MND does require the replacement of non-protected but "significant" trees (8-inch or greater trunk diameter, or cumulative trunk diameter if multi-trunked, as measured 54 inches above the ground) at a ratio of 1:1. The requirement to plant a minimum of 219 trees is a LAMC requirement based on the number of dwelling units. If the replacement requirement of the existing, "significant" trees is greater than 219 trees, then the applicant would be required to plant the greater number.

In addition, no substantial evidence has been submitted to the record to demonstrate that the conclusions of the MND and the addendum to the MND are incorrect.

6. <u>Artesian Street is not a dead-end</u>

Appeal Comment

Page 22 contains the statement that Ave 34 is a dead-end street. Incorrect. In fact this "dead-end" turns onto Artesian Street, and becomes the main egress for 800 (at least) cars daily. It is a severe transportation oversight that was condemned locally with many emails to City Planning, CD1, LA DOT and State elected officials. We refute entirely the Director Finding that claims there is evidence that no improvement is necessary. That statement is false and we Appeal the Finding.

Staff Response

The Letter of Determination does not say that Artesian Street is a dead-end street, but that it is "effectively a dead-end street." This statement is made in response the finding needed to approve the Waiver of Dedication and Improvement. Specifically, while traffic heading west on Avenue 34 may turn left and continue onto Artesian Street, because Artesian is a one-way street in the direction away from Avenue 34, no traffic from Artesian Street can directly access Avenue 34. Therefore, the Director characterized Avenue 34 as "effectively a dead-end" because only westbound traffic on Avenue 34 can continue through to Artesian Street and neither Artesian Street or any other street contributes to traffic on Avenue 34 which

terminates at Artesian Street and thus determined that the Waiver of Dedication and Improvement was warranted Avenue 34 will not be utilized to the full extent of a typical Local Street within the next 20 years

7. Northeast Los Angeles Community Plan Consistency (Residential)

Appeal Comment

Page 23 specifically states that Policy Objective 1-2 is to "allocate land for new housing to accommodate a growth of population that is consistent with and promotes the health, safety, welfare, convenience, and pleasant environment of those who live and work in the community based on adequate infrastructure and government services, especially schools." This Determination violates that Objective. Infrastructure in this immediate area is severely lacking for a project of this scale. As to “health, safety, and welfare,” the absence and deficiency of sidewalks, street lights, stop lights, crosswalks, and street parking for the areas affected by this development directly contradict the Policy Objectives.

Staff Response

The Framework Element Objective 1-2 is followed by two (2) policies which are intended to be used to implement the intent of the Objective. Specifically to 1) “[l]ocate higher residential densities near commercial and institutional centers, light rail transit stations, and major bus routes to encourage pedestrian activity and use of public transportation, providing that infrastructure, public service facilities, utilities, and topography will fully accommodate this development” (Policy 1-2.2); and 2) [e]ncourage mixed-use development in selected commercially-zoned areas.

As stated in the Letter of Determination, “the subject property is located less than a ½-mile from the Heritage Square Metro Gold Line Rail Station, thereby reducing vehicular trips to and from the project site and congestion around the site;” and is located “within a primarily commercial and industrial area…”

In addition, as stated by the appellant, there a number of public school within the vicinity.

8. Northeast Los Angeles Community Plan Consistency (Industrial)

Appeal Comment

Page 25 claims that under Objective 3-2 Policy 3-2.2 "Require compatibility through design treatments, compliance with environmental protection standards, and health and safety requirements for industrial uses that adjoin residential neighborhoods and commercial uses." The adjacent stakeholders have addressed this lack of design treatment, environmental and other inconsistencies with compatibility and safety. We have objected to the loss of parking and transportation issues. None of these have been addressed, so therefore this is untrue and refuted. We have, through exhaustive efforts through meetings and letters, seen "design treatments, compliance with environmental protection standards, and health and safety requirements" called for. This portion of the Determination Letter is false.

Staff Response

As discussed, the immediate neighborhood is a mix of residential and commercial manufacturing uses and the subject property is currently improved with industrial and commercial uses and associated surface parking lot. The proposed 468-unit mixed-use

development includes 16,395 square feet of commercial floor area that will provide neighborhood serving uses to support the surrounding and create job opportunities in the community. In addition, the project will provide 49,152 square feet of open space for residents and 65,789 square feet of publicly accessible open space.

9. Mobility Plan 2035 Consistency

Appeal Comment

Page 27 states the Mobility Element of the General Plan (Mobility Plan 2035) is not likely to be affected by the recommended action. This section states the varying widths of surrounding streets and fails to mention that Artesian Street does not meet LA City standard street dimensions, and has no sidewalks. One of the key policy initiates of Mobility Plan 2035 is to consider community input before implementation of any Mobility Plan projects. Community input regarding the safety of using Artesian Street as a main access when exiting the project has not been taken into consideration. The overarching General Plan Framework and all other elements of the General Plan are intended to promote an arrangement of land uses, streets and services which will encourage and contribute to the economic, social and physical health, safety, welfare and convenience of the people who live and work in each of the communities. Oversight of the width, absence of sidewalks, and volume of vehicles which will pass through Artesian Street will be detrimental to the safety, welfare, and convenience of the existing residential community.

Staff Response

As discussed above, the subject property does not immediately abut Artesian Street and therefore to the extent that Artesian Street is not fully improved, the proposed project has no ability to widen or otherwise improve the roadway. In addition, as a result of the Metro Gold Line right-of-way, the right-of-way of Artesian Street has been shifted from the planned street grid and instead runs through property using either an roadway easement or was claimed through eminent domain. As such, any roadway widening or improvement would require the modification of such easement or claim of eminent domain.

10. LA DOT Routes to School

Appeal Comment

Page 28 calls for a pedestrian route that is nonconforming with the LA DOT Routes to School that Loreto, Hillside, LA Leadership Academy, and Nightingale use. This implementation will result in confusion and further exacerbate the safety issues for our children when 800 trips (minimum) occur at the Gold Line crossing where the trains run at eight minute intervals. Combined with the new and existing commercial traffic, city tow yard, the North East Animal Shelter, the Lacy Studios as a film location will result in life-safety issues.

Staff Response

The applicant has agreed to provide additional enhanced pedestrian safety features off-site that are to be reviewed and approved by LADOT. The pedestrian safety features are not intended to serve as an alternative pedestrian route to neighboring schools but to enhance pedestrian activity in the immediate vicinity of the project site. The project will include pedestrian safety features such as pedestrian-activated crosswalk with in-pavement rapid flashing beacons or an equivalent system, striped crosswalk across Avenue 34 adjacent to

the project site, striping on Avenue 34, installation of appropriate wayfinding and safety signage on Avenue 34 adjacent to the project site and on Artesian Street between Avenue 34 and Avenue 33.

11. LADOT Coordination

Appeal Comment

Page 30 makes the same ill-conceived determination and is found to be contradictory with LA DOT rulings. Also we received an email from Wes Pringle from LA DOT that placed blame on the Bureau of Engineering for this failure.

Staff Response

As an Eligible Housing Development in TOC Tier 3, the project is entitled to base incentives including providing ½ parking space per unit and a reduced number of commercial automobile parking spaces. The project will provide a total of 311 automobile parking spaces 287 residential automobile parking spaces located within two (2) subterranean levels. Twenty-four off-street parking spaces will be provided for the commercial space which will be located within the two (2) subterranean parking levels. Vehicular access to the proposed project will be provided via a driveway off of Avenue 34. All private residential parking spaces and the commercial parking spaces would be accessed via this driveway.

In his response to Violeta Martinez, Wes Pringle explained that LADOT's role in development projects is to determine and review the state mandated environmental analysis of a project and not "approving" projects and clarified that the number of trips that the project is expected to produce is not based on the parking spaces and the request for reduction in parking had no influence the outcome of the study. He further stated that LADOT found that each study followed the guidelines and was done correctly. Additionally, he stated that per LADOT and LACP guidelines, driveways for residential buildings are preferred to be located on alleys or Local Streets and mentioned Bureau of Engineering (BOE) to highlight that street standards are enforced by the BOE's Land Development Group.

12. Consistency with the Northeast Los Angeles Community Plan

Appeal Comment

a. Section 3 of the NELA CDO, Section titled "Community Issues and opportunities" calls for compatibility with the transportation needs of the residents.

b. NELA CDO Objective 1-2 states as a Policy that development must encourage using public transportation providing that infrastructure will be fully accommodated.

c. NELA CDO Objective 2-3 is to "minimize conflicts between auto-related and pedestrian-oriented activities".

d. NELA CDO Industrial Goal 3 states that developments "are safe for the environment and the workforce, and have minimal adverse impact on adjacent uses".

e. NELA CDO Goal 9 requires that at light rail crossings circulation must be maintained so that there is "minimal impact" at crossing where auto and truck traffic is "severely impacted".

f. NELA CDO Section Circulation, Section titled Transportation Demand Management (TDM) Strategies calls for Neighborhood protection (e. g. traffic control measures and plan)

g. NELA CDO Goal 10 Objective 10-1 says that development will "comply with Citywide performance standards for acceptable levels of service and ensure that necessary road access and street improvements are provided to accommodate traffic generated by new development.

h. NELA CDO Chapter IV Coordination Opportunities for Public Agencies looks at the community's quality of life. It asks to "maintain and preserve the character and integrity of existing neighborhoods and encourage participation in self-help preventative maintenance to promote neighborhood conservation, beautification and rehabilitation. Many of the residential structures have deferred maintenance issues and recognizing would be a step forward.

i. NELA CDO, under the Framework provision, calls for monitoring. This has not been done even though City Planning is the largest planning bureaucracy in the world. We find that to be inexcusable. We note all the provisions in the Framework that say projects will be approved as long as there is no controversy. We have sent dozens of emails, from many stakeholders and local residents, that while we are supporting the affordable housing this project brings, and that we are not NIMBY, we strenuously object to being cut out of the conversation as our participation is required. We are contesting this project and require to be heard at a public meeting per the coronavirus stipulations.

Staff Response

The appellant improperly referenced a Community Design Overlay, but instead was citing Goals, Objectives and Policies from the Northeast Los Angeles Community Plan. That said, the finding necessary as part of the Site Plan Review request requires the Director of Planning find substantial conformance with the applicable Community Plan. In this case, as discussed above and stated in the Letter of Determination, the Director made various findings to demonstrate conformance with the residential, commercial and industrial land use sections of the Community Plan.

With regard to Goals 9 and 10, the project has been conditioned to worked with LADOT in an effort to implement a number of pedestrian safety measures, including, but not limited to: 1) installation of a pedestrian-activated crosswalk with in-pavement rapid flashing beacons across Pasadena Avenue adjacent to site; 2) installation of appropriate additional wayfinding and safety signage on Avenue 34 adjacent to the project site and on Artesian Street between Avenue 34, and 3) improve sidewalks adjacent to the Project Site on Avenue 34 consistent with the City’s Vision Zero Policy.

Lastly, the MND requires the implementation of a detailed Transportation Demand Management (TDM) Program. The purpose of a TDM plan is to reduce the use of single occupant vehicles (SOV) by increasing the number of trips by walking, bicycle, carpool, vanpool and transit. A TDM plan should include design features, transportation services, education, and incentives intended to reduce the amount of SOV during commute hours. Through strategic building design and orientation, this project can facilitate access to transit, can provide a pedestrian-friendly environment, can promote non-automobile travel and can support the goals of a trip-reduction program.

13. Lack of a Public Hearing

Appeal Comment

We appeal the approval of the Letter of Determination without having held a public hearing prior to its passage. The Zoning Administrator's Adjustment for this property (ZA-2016-272-ZAA-SPR-CLQ) stipulates that a public hearing may only be avoided as long as the project does not "have a significant effect on adjoining properties or the immediate neighborhood" or is "likely to evoke public controversy". As evidenced by the many letters written by our community to the city, this project has evoked public controversy. As the largest development in the history of our neighborhood, robbing residents and local businesses of their only parking spots, risking the survival of local businesses, adding hundreds of new tenants to our small block, disrupting traffic patterns, endangering pedestrians, creating years of noise and pollution during construction, all across the street from an elementary school, this project will certainly "have a significant effect on adjoining properties or the immediate neighborhood". Some of us have been told that the scheduling of a hearing was a director's determination. If this is the case, that determination was made in outright disregard for the stated concerns of the community. Upon the successful repeal of this Letter of Determination, we call for the immediate scheduling of a public hearing, and for all usual processes of approval (Neighborhood Council, City Council, etc.) to be implemented before any further progress may be made on this project.

Staff Response

As an Eligible Housing Development in TOC Tier 3 a public hearing is not required. However, procedures for Site Plan Review states that the Director may set the matter for public hearing if the Director finds that the matter may have a significant effect on neighboring properties. The Mitigated Negative Declaration and the associated addendum did not identify any significant negative impacts to neighboring properties. Therefore, a public hearing was not held.

STAFF CONCLUSION AND RECOMMENDATION

For the reasons stated herein, and in the findings of the Director's Determination, the proposed project does comply with the applicable provisions of the Transit Oriented Communities Affordable Housing Incentive Program and the California Environmental Quality Act (CEQA). Planning staff evaluated the proposed project and determined it meets the Transit Oriented Communities Program requirements and that the project was assessed in Mitigated Negative Declaration No. ENV-2016-273-MND, adopted on August 22, 2017; and pursuant to CEQA Guidelines 15162 and 15164, as supported by the Addendum dated December 2019 no major revisions are required to the Mitigated Negative Declaration; and no subsequent EIR or negative declaration is required for approval of the project. Based on the complete plans submitted by the applicant and considering the appellant's arguments for appeal, staff finds that the project meets the required findings.

Therefore, it is recommended that the City Planning Commission deny the appeal, sustain the Determination by the Director of Planning, and include the modifications to Condition No. 9.d.iii and 9.f.

Exhibit A

Appeal Application

APPLICATIONS:

APPEAL APPLICATION

Instructions and Checklist

Related Code Section: Refer to the City Planning case determination to identify the Zone Code section for the entitlement and the appeal procedure.

Purpose: This application is for the appeal of Department of City Planning determinations authorized by the Los Angeles Municipal Code (LAMC).

A. APPELLATE BODY/CASE INFORMATION

1. APPELLATE BODY

☐ Area Planning Commission ☑ City Planning Commission ☐ City Council ☐ Director of Planning
☐ Zoning Administrator

Regarding Case Number: DIR-2019-6048-TOC-SPR-WDI

Project Address: 135-153 W Avenue 34 Los Angeles, CA 90031

Final Date to Appeal: 06/26/2020

2. APPELLANT

Appellant Identity: (check all that apply)
☐ Representative ☐ Property Owner
☐ Applicant ☐ Operator of the Use/Site

☑ Person, other than the Applicant, Owner or Operator claiming to be aggrieved
Patricia Camacho and Neighbors, Abutting Property Owners and Tenants

☐ Person affected by the determination made by the **Department of Building and Safety**
☐ Representative ☐ Owner ☐ Aggrieved Party
☐ Applicant ☐ Operator

3. APPELLANT INFORMATION

Appellant's Name: Patricia Camacho

Company/Organization:

Mailing Address: 118 W Avenue 34

City: Los Angeles State: CA Zip: 90031

Telephone: 323-632-7550 E-mail: machocamacho73@yahoo.com

a. Is the appeal being filed on your behalf or on behalf of another party, organization or company?

☑ Self ☐ Other:

b. Is the appeal being filed to support the original applicant's position? ☐ Yes ☑ No

4. REPRESENTATIVE/AGENT INFORMATION

Representative/Agent name (if applicable): _____

Company: _____

Mailing Address: _____

City: _____ State: _____. Zip: _____

Telephone: _____ E-mail: _____

5. JUSTIFICATION/REASON FOR APPEAL

a. Is the entire decision, or only parts of it being appealed? ☑ Entire ☑ Part

b. Are specific conditions of approval being appealed? ☐ Yes ☑ No

If Yes, list the condition number(s) here: _____

Attach a separate sheet providing your reasons for the appeal. Your reason must state:

- ☑ The reason for the appeal
- ☑ How you are aggrieved by the decision
- ☑ Specifically the points at issue
- ☑ Why you believe the decision-maker erred or abused their discretion

6. APPLICANT'S AFFIDAVIT

I certify that the statements contained in this application are complete and true:

Appellant Signature: Patricia Camacho Date: Jun 22, 2020

Patricia Camacho (Jun 22, 2020 20:33 PDT)

GENERAL APPEAL FILING REQUIREMENTS

B. ***ALL CASES REQUIRE THE FOLLOWING ITEMS - SEE THE ADDITIONAL INSTRUCTIONS FOR SPECIFIC CASE TYPES***

1. Appeal Documents

a. Three (3) sets - The following documents are required for each appeal filed (1 original and 2 duplicates) Each case being appealed is required to provide three (3) sets of the listed documents.

- ☑ Appeal Application (form CP-7769)
- ☑ Justification/Reason for Appeal
- ☑ Copies of Original Determination Letter

b. Electronic Copy

☑ Provide an electronic copy of your appeal documents on a flash drive (planning staff will upload materials during filing and return the flash drive to you) or a CD (which will remain in the file). The following items must be saved as individual PDFs and labeled accordingly (e.g. "Appeal Form.pdf", "Justification/Reason Statement.pdf", or "Original Determination Letter.pdf" etc.). **No file should exceed 9.8 MB in size.**

c. Appeal Fee

- ☑ Original Applicant - A fee equal to 85% of the original application fee, provide a copy of the original application receipt(s) to calculate the fee per LAMC Section 19.01B 1.
- ☑ Aggrieved Party - The fee charged shall be in accordance with the LAMC Section 19.01B 1.

d. Notice Requirement

- ☐ Mailing List - All appeals require noticing per the applicable LAMC section(s). Original Applicants must provide noticing per the LAMC
- ☐ Mailing Fee - The appeal notice mailing fee is paid by the project applicant, payment is made to the City Planning's mailing contractor (BTC), a copy of the receipt must be submitted as proof of payment.

SPECIFIC CASE TYPES - APPEAL FILING INFORMATION

C. DENSITY BONUS / TRANSIT ORIENTED COMMUNITES (TOC)

1. Density Bonus/TOC
Appeal procedures for Density Bonus/TOC per LAMC Section 12.22.A 25 (g) f.

NOTE:
- Density Bonus/TOC cases, only the *on menu or additional incentives* items can be appealed.
- Appeals of Density Bonus/TOC cases can only be filed by adjacent owners or tenants (must have documentation), and always only appealable to the Citywide Planning Commission.

☑ Provide documentation to confirm adjacent owner or tenant status, i.e., a lease agreement, rent receipt, utility bill, property tax bill, ZIMAS, drivers license, bill statement etc.

D. WAIVER OF DEDICATION AND OR IMPROVEMENT

Appeal procedure for Waiver of Dedication or Improvement per LAMC Section 12.37 I.

NOTE:
- Waivers for By-Right Projects, can only be appealed by the owner.
- When a Waiver is on appeal and is part of a master land use application request or subdivider's statement for a project, the applicant may appeal pursuant to the procedures that governs the entitlement.

E. TENTATIVE TRACT/VESTING

1. Tentative Tract/Vesting - Appeal procedure for Tentative Tract / Vesting application per LAMC Section 17.54 A.

NOTE: Appeals to the City Council from a determination on a Tentative Tract (TT or VTT) by the Area or City Planning Commission must be filed within 10 days of the date of the written determination of said Commission.

☐ Provide a copy of the written determination letter from Commission.

F. BUILDING AND SAFETY DETERMINATION

☐ **1.** Appeal of the *Department of Building and Safety* determination, per LAMC 12.26 K 1, an appellant is considered the **Original Applicant** and must provide noticing and pay mailing fees.

a. Appeal Fee
☐ Original Applicant - The fee charged shall be in accordance with LAMC Section 19.01B 2, as stated in the Building and Safety determination letter, plus all surcharges. (the fee specified in Table 4-A, Section 98.0403.2 of the City of Los Angeles Building Code)

b. Notice Requirement
☐ Mailing Fee - The applicant must pay mailing fees to City Planning's mailing contractor (BTC) and submit a copy of receipt as proof of payment.

☐ **2.** Appeal of the *Director of City Planning* determination per LAMC Section 12.26 K 6, an applicant or any other aggrieved person may file an appeal, and is appealable to the Area Planning Commission or Citywide Planning Commission as noted in the determination.

a. Appeal Fee
☐ Original Applicant - The fee charged shall be in accordance with the LAMC Section 19.01 B 1 a.

b. Notice Requirement
☐ Mailing List - The appeal notification requirements per LAMC Section 12.26 K 7 apply.
☐ Mailing Fees - The appeal notice mailing fee is made to City Planning's mailing contractor (BTC), a copy of receipt must be submitted as proof of payment.

G. NUISANCE ABATEMENT

1. **Nuisance Abatement -** Appeal procedure for Nuisance Abatement per LAMC Section 12.27.1 C 4

NOTE:
- Nuisance Abatement is only appealable to the City Council.

a. Appeal Fee

☐ Aggrieved Party the fee charged shall be in accordance with the LAMC Section 19.01 B 1.

2. **Plan Approval/Compliance Review**
Appeal procedure for Nuisance Abatement Plan Approval/Compliance Review per LAMC Section 12.27.1 C 4.

a. Appeal Fee

☐ Compliance Review - The fee charged shall be in accordance with the LAMC Section 19.01 B.
☐ Modification - The fee shall be in accordance with the LAMC Section 19.01 B.

NOTES

A Certified Neighborhood Council (CNC) or a person identified as a member of a CNC or as representing the CNC may not file an appeal on behalf of the Neighborhood Council; persons affiliated with a CNC may only file as an individual on behalf of self.

***Please note** that the appellate body must act on your appeal within a time period specified in the Section(s) of the Los Angeles Municipal Code (LAMC) pertaining to the type of appeal being filed. The Department of City Planning will make its best efforts to have appeals scheduled prior to the appellate body's last day to act in order to provide due process to the appellant. If the appellate body is unable to come to a consensus or is unable to hear and consider the appeal prior to the last day to act, the appeal is automatically deemed denied, and the original decision will stand. The last day to act as defined in the LAMC may only be extended if formally agreed upon by the applicant.*

After reviewing the Letter of Determination for DIR-2019-6048-TOC-WDI that was signed June 12, 2020, we find that pages 14-33 are inconsistent and false, and therefore we appeal:

Page 14 claims the main egress will be on Ave34 and Pasadena. That is factually incorrect. The building's plans show that the parking lot exits onto Artesian St. Traffic patterns show that the majority of car trips will exit from Ave 34 to Artesian, then to the Ave 33 Gold Line crossing, then to Lacy Street. In addition to being a shorter and more obvious route, driving down Artesian and crossing the train tracks onto Lacy Street is the way that traffic apps such as Google Maps and Waze recommend for trips to most destinations originating anywhere on this block of W Avenue 34. Any other suggestion is factually wrong. Artesian is a one-way 14-foot wide alley with no sidewalk and no lighting while also providing some parking. Pedestrians walk in the traffic lane, as for instance, the residents of the proposed building would do when walking from the building to the nearby Lincoln/Cypress Metro station. This is not a place for 800 car trips a day.

Page 15 states the surrounding properties to the South, across Avenue 34, are commercial use with "a single-family residential structure." This is incorrect as there are many single-family residential structures, and the majority of properties on this block of W Avenue 34 are for residential, not commercial use. Page 26 also states, in error, that this project is "not located within an existing residential neighborhood." These are blatant falsehoods and mischaracterizations of our residential neighborhood, used to justify new housing under false pretenses.

Page 20 starts with the claim that the application is in accordance with LAMC Section 12.22-A,25(g). However 12.22-A,25(g)3 requires that a Pro-Forma or other documentation is required to show that the waiver or modification is needed in order to make the Restricted Affordable Units economically feasible. A third-party peer review of the pro-forma is also required. It appears the affordable units will be available for a limited time, less than one generation, and will result in the eviction of these community members once the limited time has expired. This provision on page 20 needs to be addressed prior to any approval. It is not in compliance with that directive.

Page 21 and 22 state that the project will not have an adverse impact on public health or safety. This is not factual. Adding 800 trips daily at a number of crossings that disregard three local schools is not in compliance with that statement. These schoolchildren will be adversely affected as the project shows a clear preference to exiting toward Artesian and the Ave 33 Gold Line crossing. It is at this location that "Routes to School" from LA DOT clearly shows the preferred route.

Additionally, the adjoining lot is contaminated with ground and water pollution of petroleum and VOC's. There are oil pipelines under this property that may be conduits for the spread of pollutants. The environmental review being used for this project (ENV-2016-273) was conducted in 2016 for a different proposal by a different developer that made different use of the property. The ENV approves a host of actions that differ substantially from the current proponent's

proposal. For instance, the ENV calls for preserving some existing structures on the property, rather than a complete tear-down of all structures. The ENV calls for 372 residential units and 467 parking spaces, however the Letter of Determination approves 468 residential units and 286 parking spaces for residents. The ENV approves 1 story only of underground excavated parking, although the Letter of Determination approves 2 stories of excavation. The ENV requires the planting of 241 trees, however the Letter of Determination ignores that requirement and approves the reduced planting of 219 trees. This Letter of Determination makes no attempt to reconcile these blatant inconsistencies. Additionally, the ENV cites “Potentially Significant Impact” of this project on Public Services, Transportation/Circulation, Biological Resources, and the release of Noise and Hazardous Materials. The lack of an environmental review that specifically examines the project under consideration must be corrected, and a new environmental review must be conducted that considers the new proposal. The known pollution on this site combined with an outdated and non-applicable environmental review make the city’s approval of this project and the denial of a public hearing highly suspect. We find the Letter of Determination to be in contradiction to the Environmental Review, and appeal its determinations.

Page 22 contains the statement that Ave34 is a dead-end street. Incorrect. in fact this "dead-end" turns onto Artesian Street, and becomes the main egress for 800 (at least) cars daily. It is a severe transportation oversight that was condemned locally with many emails to City Planning, CD1, LA DOT and State elected officials. We refute entirely the Director Finding that claims there is evidence that no improvement is necessary. That statement is false and we Appeal the Finding.

Page 23 specifically states that Policy Objective 1-2 is to "allocate land for new housing to accommodate a growth of population that is consistent with and promotes the health, safety, welfare, convenience, and pleasant environment of those who live and work in the community based on adequate infrastructure and government services, especially schools." This Determination violates that Objective. Infrastructure in this immediate area is severely lacking for a project of this scale. As to “health, safety, and welfare,” the absence and deficiency of sidewalks, street lights, stop lights, crosswalks, and street parking for the areas affected by this development directly contradict the Policy Objectives.

Page 25 claims that under Objective 3-2 Policy 3-2.2 "Require compatibility through design treatments, compliance with environmental protection standards, and health and safety requirements for industrial uses that adjoin residential neighborhoods and commercial uses." The adjacent stakeholders have addressed this lack of design treatment, environmental and other inconsistencies with compatibility and safety. We have objected to the loss of parking and transportation issues. None of these have been addressed, so therefore this is untrue and refuted. We have, through exhaustive efforts through meetings and letters, seen "design treatments, compliance with environmental protection standards, and health and safety requirements" called for. This portion of the Determination Letter is false.

Page 27 states the Mobility Element of the General Plan (Mobility Plan 2035) is not likely to be affected by the recommended action. This section states the varying widths of surrounding streets and fails to mention that Artesian Street does not meet LA City standard street dimensions, and has no sidewalks. One of the key policy initiates of Mobility Plan 2035 is to consider community input before implementation of any Mobility Plan projects. Community input regarding the safety of using Artesian Street as a main access when exiting the project has not been taken into consideration. The overarching General Plan Framework and all other elements of the General Plan are intended to promote an arrangement of land uses, streets and services which will encourage and contribute to the economic, social and physical health, safety, welfare and convenience of the people who live and work in each of the communities. Oversight of the width, absence of sidewalks, and volume of vehicles which will pass through Artesian Street will be detrimental to the safety, welfare, and convenience of the existing residential community.

Page 28 calls for a pedestrian route that is nonconforming with the LA DOT Routes to School that Loreto, Hillside, LA Leadership Academy, and Nightingale use. This implementation will result in confusion and further exacerbate the safety issues for our children when 800 trips (minimum) occur at the Gold Line crossing where the trains run at eight minute intervals. Combined with the new and existing commercial traffic, city tow yard, the North East Animal Shelter, the Lacy Studios as a film location will result in life-safety issues.

Page 30 makes the same ill-conceived determination and is found to be contradictory with LA DOT rulings. Also we received an email from Wes Pringle from LA DOT that placed blame on the Bureau of Engineering for this failure.

We refute pages 14-34 of the Determination and Appeal it's findings.

Furthermore,

Section 3 of the NELA CDO, Section titled "Community Issues and opportunities" calls for compatibility with the transportation needs of the residents.

NELA CDO Objective 1-2 states as a Policy that development must encourage using public transportation providing that infrastructure will be fully accommodated.

NELA CDO Objective 2-3 is to “minimize conflicts between auto-related and pedestrian-oriented activities".

NELA CDO Industrial Goal 3 states that developments "are safe for the environment and the workforce, and have minimal adverse impact on adjacent uses".

NELA CDO Gole 9 requires that at light rail crossings circulation must be maintained so that there is "minimal impact" at crossing where auto and truck traffic is "severely impacted".

NELA CDO Section Circulation, Section titled Transportation Demand Management (TDM) Strategies calls for Neighborhood protection (e. g. traffic control measures and plan)

NELA CDO Goal 0 Objective 10-1 says that development will "comply with Citywide performance standards for acceptable levels of service and ensure that necessary road access and street improvements are provided to accommodate traffic generated by new development.

NELA CDO CHapter IV Coordination Opportunities for Public Agencies looks at the community's quality of life. It asks to "maintain and preserve the character and integrity of existing neighborhoods and encourage participation in self-help preventative maintenance to promote neighborhood conservation, beautification and rehabilitation. Many of the residential structures have deferred maintenance issues and recognizing would be a step forward.

NELA CDO, under the Framework provision, calls for monitoring. This has not been done even though City Planning is the largest planning bureaucracy in the world. We find that to be inexcusable. We note all the provisions in the Framework that say projects will be approved as long as there is no controversy. We have sent dozens of emails, from many stakeholders and local residents, that while we are supporting the affordable housing this project brings, and that we are not NIMBY, we strenuously object to being cut out of the conversation as our participation is required. We are contesting this project and require to be heard at a public meeting per the coronavirus stipulations.

Finally,

We appeal the approval of the Letter of Determination without having held a public hearing prior to its passage. The Zoning Administrator’s Adjustment for this property (ZA-2016-272-ZAA-SPR-CLQ) stipulates that a public hearing may only be avoided as long as the project does not "have a significant effect on adjoining properties or the immediate neighborhood" or is "likely to evoke public controversy". As evidenced by the many letters written by our community to the city, this project has evoked public controversy. As the largest development in the history of our neighborhood, robbing residents and local businesses of their only parking spots, risking the survival of local businesses, adding hundreds of new tenants to our small block, disrupting traffic patterns, endangering pedestrians, creating years of noise and pollution during construction, all across the street from an elementary school, this project will certainly "have a significant effect on adjoining properties or the immediate neighborhood". Some of us have been told that the scheduling of a hearing was a director’s determination. If this is the case, that determination was made in outright disregard for the stated concerns of the community. Upon the successful repeal of this Letter of Determination, we call for the immediate scheduling of a public hearing, and for all usual processes of approval (Neighborhood Council, City Council, etc.) to be implemented before any further progress may be made on this project.

Sincerely,

Aggrieved Residents and Businesses who live or work on the block adjacent to the property and support this Appeal:

Last Day to File an Appeal: June 26, 2020

DETERMINATION - Transit Oriented Communities Affordable Housing Incentive Program, Waiver of Dedication and Improvements, & Site Plan Review

Pursuant to the Los Angeles Municipal Code (LAMC) Sections 12.22-A,31, 12.37-I, and 16.05, I have reviewed the proposed project and as the designee of the Director of City Planning, I hereby:

1. **Approve** a 70% increase in density bonus consistent with the provisions of the Transit Oriented Communities Affordable Housing Incentive Program for a Tier 3 project with a total of 468 dwelling units, including 66 dwelling units reserved for Very Low Income (VLI) Households occupancy for a period of 55 years, along with the following two (2) Additional Incentives;

   a. **Setback**. To permit the use of any or all the yard requirements for the RAS3 Zone in lieu of the [T][Q]CM-2D, and

b. **Transitional Height**. To utilize the Transit Oriented Communities transitional height requirements in lieu of those found in LAMC Section 12.21.1-A,10;

2. **Approve** a Waiver of Dedication and Improvement for a five-foot dedication and three-foot widening along Avenue 34 and a 15 feet by 15 feet chamfer or a 20 foot radius corner cut along northwest intersection of Avenue 34 and Pasadena Avenue, in order to maintain the existing condition along Avenue 34 and the corner of Avenue 34 and Pasadena Avenue;

3. **Conditionally Approve** a Site Plan Review for the construction, use and maintenance of a new, five-story, mixed-use building with 468 dwelling units, and 16,395 square feet of commercial space in the [T][Q]CM-2D Zone; and

4. **Adopt** the attached Findings.

CONDITIONS OF APPROVAL

Pursuant to LAMC Section 12.22-A,31, 12.37 and 16.05, the following conditions are hereby imposed upon the use of the subject property:

1. **Site Development.** Except as modified herein, the project shall be in substantial conformance with the plans and materials submitted by the applicant, stamped "Exhibit A," and attached to the subject case file. No change to the plans will be made without prior review by the Department of City Planning, Expedited Processing Section, and written approval by the Director of Planning. Each change shall be identified and justified in writing. Minor deviations may be allowed in order to comply with the provisions of the Los Angeles Municipal Code or the project conditions.

2. **Base Incentives.**

    a. **Residential Density**. The project shall be limited to a maximum density of 468 residential units, including On-site Restricted Affordable Units.

    b. **Floor Area Ratio (FAR)**. The project is permitted a maximum FAR of 3 to 1.

    c. **Parking.**

        i. **Automobile Parking.** The project shall provide a minimum of 0.5 automobile parking spaces per unit.

        ii. **Bicycle Parking.** Bicycle parking shall be provided in compliance with the Municipal Code and to the satisfaction of the Department of Building and Safety. No variance from the bicycle parking requirements has been requested or granted herein.

        iii. **Adjustment of Parking.** In the event that the number of Restricted Affordable Units should increase or the composition of such units should change (i.e. the number of bedrooms, or the number of units made available to Senior Citizens and/or Disabled Persons), and no other Condition of Approval or incentive is affected, then no modification of this determination shall be necessary, and the number of parking spaces shall be re-calculated by the Department of Building and Safety based upon the ratios set forth pursuant to LAMC Section 12.22-A,25.

        iv. **Unbundling.** Required parking may be sold or rented separately from the units, with the exception of all Restricted Affordable Units which shall include any required parking in the base rent or sales price, as verified by the Los Angeles Department of Housing and Community Investment (HCIDLA).

3. **Additional Incentives.**

    a. **Setback.** The project shall be permitted the use of any or all the yard requirements for the RAS3 Zone.

    b. **Transitional Height.** The project shall be permitted to utilize the Transit Oriented Communities transitional height requirements in lieu of those found in LAMC Section 12.21.1-A,10.

4. **On-site Restricted Affordable Units.**

    a. Prior to issuance of a building permit, the owner shall execute a covenant to the satisfaction of HCIDLA to make 14% of the total number of units for Very Low Income Households, as defined by HCIDLA, for sale or rental as determined to be affordable to such households by HCIDLA for a period of 55 years. In the event, the applicant reduces the proposed density of the project, the number of required reserved On-site Restricted Units may be adjusted, consistent with LAMC Section 12.22-A,31, to the satisfaction of HCIDLA. Enforcement of the terms of said covenant shall be the responsibility of HCIDLA. The applicant shall provide a copy of the recorded covenant to the Department of City Planning for inclusion in this file.

    b. The project shall be permitted to provide all required On-site Restricted Affordable Units for the entire project in Phase 1 of the proposed project, subject to the following conditions:

        i. Prior to the issuance of a Certificate of Occupancy for Phase 1 of the proposed project, the applicant shall submit plans for both Phase 1 and 2 to HCIDLA. In designating the On-site Restricted Affordable Units, HCIDLA shall consider the design (including total square footage, bedroom size, closet space amenities, number of bathrooms, etc.) of all of the units to be constructed in both Phase 1 and 2; in addition, HCIDLA shall consider access to, and distribution of amenities; and

        ii. The project shall comply with the Guidelines for the Affordable Housing Incentives Program adopted by the City Planning Commission and with any monitoring requirements established by HCIDLA.

5. **Changes in On-site Restricted Units**. Deviations that increase the number of On-site Restricted Units or that change the composition of units or change parking numbers shall be consistent with LAMC Section 12.22-A,31.

6. **Housing Replacement Requirements.** The Housing and Community Investment Department has determined that the proposed project is not required to provide replacement units.

7. **Mechanical Equipment.** All mechanical equipment on the roof shall be screened from view. The transformer, if located in the front yard, shall be screened with landscaping.

8. **Maintenance.** The subject property (including all trash storage areas, associated parking facilities, sidewalks, yard areas, parkways, and exterior walls along the property lines) shall be maintained in an attractive condition and shall be kept free of trash and debris.

9. **Site Plan Review.**

    a. **Architecture.**

        i. Submit Elevations for all facades of all three (3) structures that are consistent with the architecture, including design and materials, of the Elevations included in Exhibit “A”, for review and approval by the Director.

        ii. Revised the Floor Plans for Building A at the emergency exits located toward the middle and western portion of the building to match the South Elevation, including window treatment, exterior staircase and other architectural elements.

b. **Mechanical Equipment Screening and Trash Containers.**

   i. All exterior mechanical equipment, including HVAC equipment, satellite dishes, cellular antennas and air conditioners, shall not be visible from public rights-of-way or adjacent residences or placed in window or door openings.

   ii. Trash storage bins shall be located within the building or a gated, covered enclosure constructed of materials identical to the exterior wall materials of the building and screened with landscaping, so as not to be viewed from public right-of way or adjacent residences.

c. **Lighting.** Outdoor lighting shall be designed and installed with shielding, such that the light source cannot be seen from adjacent residential properties, the public right-of-way, nor from above.

d. **Landscaping and Street Trees.**

   i. The project shall provide a minimum of 219 trees.

   ii. All open areas not used for buildings, driveways, parking areas, recreational facilities or walks shall be attractively landscaped, including an automatic irrigation system, and maintained in accordance with a landscape plan prepared by a licensed landscape architect or licensed architect, and submitted for approval to the Department of City Planning.

   iii. All planters containing trees shall have a minimum depth of 48 inches (48”), including those located on the rooftop area or above a parking garage.

   iv. Street trees shall be removed and planted as required by the Urban Forestry Division of the Bureau of Street Services. All street tree plantings shall be brought up to current standards. The actual number and location of new trees shall be determined at the time of tree planting.

e. **Electric Vehicle Parking.** All electric vehicle charging spaces (EV Spaces) and electric vehicle charging stations (EVCS) shall comply with the regulations outlined in Sections 99.04.106 and 99.05.106 of Article 9, Chapter IX of the LAMC.

f. **Solar Panels.** Solar panels shall be installed on the project’s rooftop space to be connected to the building’s electrical system. A minimum 15% of the available roof area shall be reserved for the installation of a solar photovoltaic system, to be installed prior to the issuance of a certificate of occupancy, in substantial conformance with the plans stamped “Exhibit A”.

g. **Pedestrian and Safety.**

   i. Install pedestrian-activated crosswalk with in-pavement rapid flashing beacons or an equivalent system as approved by LADOT across Pasadena Avenue adjacent to the project site, subject to LADOT review and approval.

   ii. Install continental striped crosswalk across Avenue 34 adjacent to the project site, subject to LADOT review and approval.

iii. Install road striping on Avenue 34, subject to LADOT review and approval.

iv. Coordinate with the Department of City Planning during the building permit plan check process regarding the installation of appropriate additional wayfinding and safety signage on Avenue 34 adjacent to the project site and on Artesian Street between Avenue 34.

v. Subject to the review and approval of BOE and City Planning Department, improve sidewalks adjacent to the Project Site on Avenue 34 consistent with the City's Vision Zero Policy.

10. **Waiver of Dedication and Improvements.**

a. A five-foot wide strip of land along Avenue 34 shall be dedicated to complete the 30-foot half right-of-way in accordance with Mobility Plan 2035.

b. No roadway improvement shall be required for the widening of Avenue 34, maintaining the existing 17-foot half roadway.

c. A five-foot sidewalk improvement (in addition to the existing sidewalk) shall be constructed within the dedicated area along Avenue 34 adjoining the property. The owner shall obtain the necessary permits and approvals from the Bureau of Engineering (BOE) and all sidewalk improvements shall to be done to the satisfaction of BOE.

d. The project shall not be required to provide a 15-foot by 15-foot chamfer or a 20-foot radius corner cut along northwest intersection of Avenue 34 and Pasadena Avenue.

11. The project shall comply with all provision of Ordinance No. 179,280, except as otherwise permitted herein.

Environmental Conditions

12. **Tree Removal (Non-Protected Trees).**

a. Prior to the issuance of any permit, a plot plan shall be prepared indicating the location, size, type, and general condition of all existing trees on the site and within the adjacent public right(s)-of-way.

b. All significant (8-inch or greater trunk diameter, or cumulative trunk diameter if multi-trunked, as measured 54 inches above the ground) non-protected trees on the site proposed for removal shall be replaced at a 1:1 ratio with a minimum 24-inch box tree. Net, new trees, located within the parkway of the adjacent public right(s)-of-way, may be counted toward replacement tree requirements.

c. Removal or planting of any tree in the public right-of-way requires approval of the Board of Public Works. Contact Urban Forestry Division at: 213-847-3077. All trees in the public right-of-way shall be provided per the current standards of the Urban Forestry Division the Department of Public Works, Bureau of Street Services.

13. **Habitat Modification (Native Nesting Birds).**

    a. Proposed project activities (including disturbances to native and non-native vegetation, structures and substrates) should take place outside of the breeding bird season which generally runs from March 1- August 31 (as early as February 1 for raptors) to avoid take (including disturbances which would cause abandonment of active nests containing eggs and/or young). Take means to hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture of kill (Fish and Game Code Section 86).

    b. If project activities cannot feasibly avoid the breeding bird season, beginning thirty days prior to the disturbance of suitable nesting habitat, the applicant shall:

        i. Arrange for weekly bird surveys to detect any protected native birds in the habitat to be removed and any other such habitat within 300 feet of the construction work area (within 500 feet for raptors) as access to adjacent areas allows. The surveys shall be conducted by a Qualified Biologist with experience in conducting breeding bird surveys. The surveys shall continue on a weekly basis with the last survey being conducted no more than 3 days prior to the initiation of clearance/construction work.
        ii. If a protected native bird is found, the applicant shall delay all clearance/construction disturbance activities within 300 feet of suitable nesting habitat for the observed protected bird species (within 500 feet for suitable raptor nesting habitat) until August 31.
        iii. Alternatively, the Qualified Biologist could continue the surveys in order to locate any nests. If an active nest is located, clearing and construction within 300 feet of the nest (within 500 feet for raptor nests) or as determined by a qualified biological monitor, shall be postponed until the nest is vacated and juveniles have fledged and when there is no evidence of a second attempt at nesting. The buffer zone from the nest shall be established in the field with flagging and stakes. Construction personnel shall be instructed on the sensitivity of the area.
        iv. The applicant shall record the results of the recommended protective measures described above to document compliance with applicable State and Federal laws pertaining to the protection of native birds. Such record shall be submitted and received into the case file for the associated discretionary action permitting the project.

14. **Existing Toxic/Hazardous Construction Materials.** (Lead Paint) Prior to the issuance of any permit for demolition or alteration of the existing structure(s), a lead-based paint survey shall be performed to the written satisfaction of the Department of Building of Safety. Should lead-based paint materials be identified, standard handling and disposal practices shall be implemented pursuant to Occupational Safety and Health Administration (OSHA) regulations.

15. **Construction Activity Near Schools.**

    a. The Applicant and contractors shall maintain ongoing contact with the administrators of Hillside Elementary School, Loreta Street Elementary School, and Los Angeles Leadership Academy Charter School. The administrative offices shall be contacted when demolition, grading and construction activity begin on the project site so that students and their parents will know when such activities are to occur. The developer shall obtain school walk and bus routes to the schools from either the administrators or from the Los Angeles Unified School District (LAUSD) Transportation Branch (323) 342-1400 and guarantee that safe and convenient pedestrian and bus routes to the school be maintained.

b. The Applicant shall install appropriate traffic signs around the site to ensure pedestrian and vehicle safety.

c. There shall be no staging or parking of construction vehicles, including vehicles to transport workers on Pasadena Avenue, adjacent to the school.

d. Due to noise impacts on the schools, no construction vehicles or haul trucks shall be staged or idled on Pasadena Avenue, adjacent to the school, during school hours.

16. **Schools Affected by Haul Route.** Haul route scheduling shall be sequenced to minimize conflicts with pedestrians, school buses and cars at the arrival and dismissal times of the school day. Haul route trucks shall not be routed past the school during periods when school is in session especially when students are arriving or departing from the campus.

17. **Increased Noise Levels (Demolition, Grading, and Construction Activities).** In addition to satisfying the noise-related conditions identified in [Q] Condition 10 of Ordinance 179,280, the project contractor shall erect a temporary noise-attenuating sound barrier along the perimeter of the Project Site's southerly and easterly property line to minimize construction noise levels at off-site properties. The sound wall shall be a minimum of 8 feet in height to block the line of site of construction equipment and off site receptors at the ground level. The sound barrier shall include ¾-inch plywood or other sound absorbing material capable of achieving a 10-dBA reduction in sound level.

18. **Increased Noise Levels (Parking Structure Ramps).**

a. Concrete, not metal, shall be used for construction of parking ramps.

b. The interior ramps shall be textured to prevent tire squeal at turning areas.

19. **Police.** The plans shall incorporate the Design Guidelines (defined in the following sentence) relative to security, semi-public and private spaces, which may include but not be limited to access control to building, secured parking facilities, walls/fences with key systems, well-illuminated public and semi-public space designed with a minimum of dead space to eliminate areas of concealment, location of toilet facilities or building entrances in high-foot traffic areas, and provision of security guard patrol throughout the project site if needed. Please refer to "Design Out Crime Guidelines: Crime Prevention Through Environmental Design," published by the Los Angeles Police Department. Contact the Community Relations Division, located at 100 W. 1st Street, #250, Los Angeles, CA 90012; (213) 486-6000. These measures shall be approved by the Police Department prior to the issuance of building permits.

20. **Transportation and Traffic.** In addition to the TDM measures, implementing measure(s) detailed in DOT's communication to the Planning Department (DOT Case No. CEN 15-43306 dated January 28, 2016, attached) shall be complied with.

21. **Transportation Demand Management (TDM) Program.**

a. The purpose of a TDM plan is to reduce the use of single occupant vehicles (SOV) by increasing the number of trips by walking, bicycle, carpool, vanpool and transit. A TDM plan should include design features, transportation services, education, and incentives intended to reduce the amount of SOV during commute hours. Through strategic building design and orientation, this project can facilitate access to transit, can provide a

pedestrian-friendly environment, can promote non-automobile travel and can support the goals of a trip-reduction program.

b. A preliminary TDM program shall be prepared and provided for DOT review prior to the issuance of the first building permit for this project and a final TDM program approved by DOT is required prior to the issuance of the first certificate of occupancy for the project. The TDM program should include, but not be limited to, the following strategies:

   i. Provide an internal Transportation Management Coordination Program with an on-site transportation coordinator;
   ii. Design the project to ensure a bicycle, transit, and pedestrian friendly environment;
   iii. Provide unbundled parking that separates the cost of obtaining assigned parking spaces from the cost of purchasing or renting residential units;
   iv. Accommodate flexible/alternative work schedules and telecommuting programs;
   v. A provision requiring compliance with the State Parking Cash-out Law in all leases:
   vi. Coordinate with DOT to determine if the project location is eligible for future Integrated Mobility Hub (which can include space for a bike share kiosk, and/or parking spaces on-site for car-share vehicles;
   vii. Provide on-site transit routing and schedule information;
   viii. Provide a program to discount transit passes for residents/employees possibly through negotiated bulk purchasing passes with transit providers;
   ix. Provide rideshare matching services;
   x. Preferential rideshare loading/unloading or parking location;
   xi. Contribute to a one-time fixed fee contribution of $75,000 to be deposited into the City's Bicycle Plan Trust Fund to implement bicycle improvements in the vicinity of the project.

   In addition to these TDM measures, DOT also recommends that the Applicant explore the implementation of an on-demand van, shuttle or tram service that connects the project employees to off-site transit stops based on the transportation needs of the project employees. Such a service can be included as an additional measure in the TDM program if it is deemed feasible and effective by the applicant.

22. The Applicant shall implement a TDM/TMP to reduce the project trip generation by 15 percent. Specifically, the project shall not exceed a driveway trip volume count of 179 trips during the a.m. peak hour and 222 trips during the pm peak hour, at full occupancy. To achieve this peak hour driveway trip volume requirement through implementation of an on-site Transportation Demand Management (TDM) Plan the project shall implement a Trip Monitoring Program (TMP).

23. The Applicant shall record a covenant and agreement to annually monitor and submit reports on the progress of the driveway trip reduction plan to DOT. Annual reports shall include a report on the observed trip generation and on the project's mode share. The detailed goals, objectives, terms and strategies of the TDM plan and reporting requirements shall be determined during the preparation of the final. The TDM plan is due prior to the issuance of any temporary or final certificate of occupancy permit for the project. The plan should also identify any appropriate penalties, should the project not achieve compliance with the targeted number of driveway trips within a year of exceeding the limits. The TMP shall continue until such time that the project has shown, for five (5) consecutive years, at a minimum of 85% occupancy, accomplishment of the peak hour driveway trip volume requirement as listed.

24. **Transportation Systems Management (TSM) Improvements.** The Applicant shall implement the upgrades, detailed below by LADOT's ATSAC Section, through the B-Permit process. LADOT's ATSAC Section has identified the need to update the existing traffic signal system. Specifically, install one CCTV camera, a new type 2070 controller, and the necessary infrastructure (including, but not limited to, fiber optic and interconnect) to activate the new installation, at the Pasadena Avenue / Avenue 26 and Daly Street intersection. The video fiber / fiber optic improvements must be guaranteed prior to the issuance of any building permit and complete prior to the issuance of any certificate of occupancy. Temporary certificates of occupancy may be granted in the events of any delay through no fault of the applicant, provided that, in each case, the applicant has demonstrated reasonable efforts and due diligence to the satisfaction of DOT.

25. **Construction Management Plan.**

    a. A construction work site traffic control plan shall be submitted to DOT for review and approval prior to the start of any construction work. The plans shall show the location of any roadway or sidewalk closures, traffic detours, haul routes, hours of operation, protective devices, warning signs and access to abutting properties. All construction related traffic shall be restricted to off-peak hours.

    b. All delivery truck loading and unloading shall take place on site or within the boundaries of an approved traffic control plan.

26. **Transportation and Traffic (Construction).** The developer shall install appropriate traffic signs around the site to ensure pedestrian and vehicle safety at all times during the construction period.

27. **Pedestrian Safety During Construction.**

    a. The Applicant shall plan construction and construction staging as to maintain pedestrian access on adjacent sidewalks throughout all construction phases. This requires the applicant to maintain adequate and safe pedestrian protection, including physical separation (including utilization of barriers such as K-Rails or scaffolding, etc.) from work space and vehicular traffic, and overhead protection, due to sidewalk closure or blockage, at all times.

    b. Should permanent pedestrian routes be unavailable due to construction, safe and accessible temporary pedestrian routes shall be provided adjacent to the project site.

    c. Covered walkways should be provided where pedestrians are exposed to potential injury from falling objects.

    d. The Applicant shall keep sidewalk open during construction until only when it is absolutely required to close or block sidewalk for construction and/or construction staging. Sidewalk shall be reopened as soon as reasonably feasible taking construction and construction staging into account.

Administrative Conditions

28. **Final Plans.** Prior to the issuance of any building permits for the project by the Department of Building & Safety, the applicant shall submit all final construction plans that are awaiting issuance of a building permit by the Department of Building & Safety for final review and

approval by the Department of City Planning. All plans that are awaiting issuance of a building permit by the Department of Building & Safety shall be stamped by Department of City Planning staff “Final Plans”. A copy of the Final Plans, supplied by the applicant, shall be retained in the subject case file.

29. **Covenant**. Prior to the effectuation of this grant, a covenant acknowledging and agreeing to comply with all the terms and conditions established herein shall be recorded in the County Recorder's Office. The agreement (standard master covenant and agreement form CP-6770) shall run with the land and shall be binding on any subsequent owners, heirs or assigns. The agreement with the conditions attached must be submitted to the Department of City Planning for approval before being recorded. After recordation, a certified copy bearing the Recorder's number and date shall be provided for inclusion in case file.

30. **Notations on Plans.** Plans submitted to the Department of Building & Safety, for the purpose of processing a building permit application shall include all of the Conditions of Approval herein attached as a cover sheet, and shall include any modifications or notations required herein.

31. **Approval, Verification and Submittals.** Copies of any approvals, guarantees or verification of consultations, review of approval, plans, etc., as may be required by the subject conditions, shall be provided to the Department of City Planning prior to clearance of any building permits, for placement in the subject file.

32. **Code Compliance.** Use, area, height, and yard regulations of the zone classification of the subject property shall be complied with, except where granted conditions differ herein.

33. **Department of Building & Safety.** The granting of this determination by the Director of Planning does not in any way indicate full compliance with applicable provisions of the Los Angeles Municipal Code Chapter IX (Building Code). Any corrections and/or modifications to plans made subsequent to this determination by a Department of Building & Safety Plan Check Engineer that affect any part of the exterior design or appearance of the project as approved by the Director, and which are deemed necessary by the Department of Building & Safety for Building Code compliance, shall require a referral of the revised plans back to the Department of City Planning for additional review and sign-off prior to the issuance of any permit in connection with those plans.

34. **Department of Water and Power.** Satisfactory arrangements shall be made with the Los Angeles Department of Water and Power (LADWP) for compliance with LADWP’s Rules Governing Water and Electric Service. Any corrections and/or modifications to plans made subsequent to this determination in order to accommodate changes to the project due to the under-grounding of utility lines, that are outside of substantial compliance or that affect any part of the exterior design or appearance of the project as approved by the Director, shall require a referral of the revised plans back to the Department of City Planning for additional review and sign-off prior to the issuance of any permit in connection with those plans.

35. **Enforcement.** Compliance with and the intent of these conditions shall be to the satisfaction of the Department of City Planning.

36. **Expiration.** In the event that this grant is not utilized within three years of its effective date (the day following the last day that an appeal may be filed), the grant shall be considered null and void. Issuance of a building permit, and the initiation of, and diligent continuation of, construction activity shall constitute utilization for the purposes of this grant.

37. **Expedited Processing Section Fee.** Prior to the clearance of any conditions, the applicant shall show proof that all fees have been paid to the Department of City Planning, Expedited Processing Section.

38. **Indemnification and Reimbursement of Litigation Costs.**

Applicant shall do all of the following:

a. Defend, indemnify and hold harmless the City from any and all actions against the City relating to or arising out of, in whole or in part, the City's processing and approval of this entitlement, including but not limited to, an action to attack, challenge, set aside, void, or otherwise modify or annul the approval of the entitlement, the environmental review of the entitlement, or the approval of subsequent permit decisions, or to claim personal property damage, including from inverse condemnation or any other constitutional claim.

b. Reimburse the City for any and all costs incurred in defense of an action related to or arising out, in whole or in part, of the City's processing and approval of the entitlement, including but not limited to payment of all court costs and attorney's fees, costs of any judgments or awards against the City (including an award of attorney's fees), damages, and/or settlement costs.

c. Submit an initial deposit for the City's litigation costs to the City within 10 days' notice of the City tendering defense to the applicant and requesting a deposit. The initial deposit shall be in an amount set by the City Attorney's Office, in its sole discretion, based on the nature and scope of action, but in no event shall the initial deposit be less than $50,000. The City's failure to notice or collect the deposit does not relieve the applicant from responsibility to reimburse the City pursuant to the requirement in paragraph (b).

d. Submit supplemental deposits upon notice by the City. Supplemental deposits may be required in an increased amount from the initial deposit if found necessary by the City to protect the City's interests. The City's failure to notice or collect the deposit does not relieve the applicant from responsibility to reimburse the City pursuant to the requirement in paragraph (b).

e. If the City determines it necessary to protect the City's interest, execute an indemnity and reimbursement agreement with the City under terms consistent with the requirements of this condition.

The City shall notify the applicant within a reasonable period of time of its receipt of any action and the City shall cooperate in the defense. If the City fails to notify the applicant of any claim, action, or proceeding in a reasonable time, or if the City fails to reasonably cooperate in the defense, the applicant shall not thereafter be responsible to defend, indemnify or hold harmless the City.

The City shall have the sole right to choose its counsel, including the City Attorney's office or outside counsel. At its sole discretion, the City may participate at its own expense in the defense of any action, but such participation shall not relieve the applicant of any obligation imposed by this condition. In the event the applicant fails to comply with this condition, in whole or in part, the City may withdraw its defense of the action, void its approval of the entitlement, or take any other action. The City retains the right to make all decisions with respect to its representations in any legal proceeding, including its inherent right to abandon or settle litigation.

For purposes of this condition, the following definitions apply:

"City" shall be defined to include the City, its agents, officers, boards, commissions, committees, employees, and volunteers.

"Action" shall be defined to include suits, proceedings (including those held under alternative dispute resolution procedures), claims, or lawsuits. Actions includes actions, as defined herein, alleging failure to comply with any federal, state or local law.

Nothing in the definitions included in this paragraph are intended to limit the rights of the City or the obligations of the applicant otherwise created by this condition.

PROJECT BACKGROUND

The subject property is comprised of seven (7) lots measuring approximately 219,296 square-foot (5.03 acres) with a frontage of 685 feet along Avenue 34 and a frontage of 379 feet along Pasadena Avenue. The subject property is currently developed with industrial and commercial uses and associated surface parking lot.

The subject property is zoned [T][Q]CM-2D within the Northeast Los Angeles Community Plan Area with a Commercial Manufacturing land use designation. The project site is located with Transit Oriented Communities (TOC), Tier 3. The site is located within an Urban Agriculture Incentive Zone, and is 1.48 kilometers from the Upper Elysian Park Fault. The site is not located within a flood zone, methane area, a landslide, or a Special Grading Area.

The proposed project is the construction, use, and maintenance of a new, five-story, 514,756 square-foot mixed use building with 468 dwelling units, including 66 dwelling units set aside for Very Low Income Households (or 14% of the proposed density) and 16,395 square feet of commercial space. The development will be constructed within two phases, and is designed as one (1) building which includes two (2) levels of subterrean parking across the entire site and with three (3) structures that include residential and commercial uses. The structures will be four (4) and five (5) stories tall with a total of 222 studio, 152 one-bedroom, and 94 two-bedroom dwelling units, and a total of 49,152 square feet of open space for residents.

The project will provide a total of 311 automobile parking spaces, 35 short-term and 264 long-term bicycle parking spaces. Vehicular access to the site is provided via a two way driveway that is accessible off of Avenue 34. Pedestrian access is located on Pasadena Avenue.

The project is located in Tier 3 of the Transit Oriented Communities Incentive Areas and therefore, pursuant to the Transit Oriented Communities Affordable Housing Incentive Program Guidelines (TOC Guidelines), by setting aside 14% of the total number of dwelling units for Very Low Income Households, the project is eligible for the Base Incentives (Residential Density, Floor Area Ratio (FAR) and Automobile Parking). There are no additional incentives requested.

The subject property is zoned [T][Q]CM-2D which allows a residential density of one (1) dwelling unit per 800 square feet of lot area. At 219,296 square feet in size, the property has a base density of 275 units (219,296 square feet of lot area divided by 800 square feet equals 274.12 - rounded up to 275). Pursuant to the TOC Guidelines, projects within Tier 3 which are eligible for the Base Incentives are eligible for a 70% density increase from the base density. Therefore, the project is permitted a maximum of 468 total units. The project proposes a total of 468 residential units.

The project proposes all affordable units will be provided in Phase 1 of the construction of the project. As determined by Housing and Community Investment Department (HCIDLA), the affordable dwelling units will be comparable to market rate dwelling units, including total square footage, bedroom size, closet space amenities, number of bathrooms, etc., the quality of interior “finish” materials (e.g., floor and wall coverings) will also be comparable. Affordable units will not be less than 90% of the average square footage of the market rate units with the same number of bedrooms. The design of restricted dwelling units will generally reflect the average number of bedrooms per dwelling unit in the development. Additionally, affordable dwelling units must be reasonably interspersed among market-rate dwelling units within buildings A and B that will be constructed during Phase 1.

As the subject property is zoned [T][Q]CM-2D, located in Tier 3 and meets the eligibility criteria in the TOC Guidelines for the Base Incentives, the project is allowed a percentage increase of the FAR up to 50%. The [T][Q]CM-2D zone allows for a 3:1 FAR. Therefore, the project is permitted a maximum FAR of 3:1.

In addition, as the project is located in Tier 3, the project is eligible for the Base Incentive to allow a parking at a ratio of 0.5 parking spaces per unit. As such, the project will provide a total of 311 automobile parking spaces. The project also proposes a total of 299 bicycle parking spaces (35 short-term and 264 long-term bicycle parking spaces).

The project includes a Waiver of Dedication and Improvement for a five-foot dedication and three-foot widening along Avenue 34, and a 15-foot by 15-foot chamfer or a 20-foot radius corner cut along northwest intersection of Avenue 34 and Pasadena Avenue, in order to maintain the existing condition along Avenue 34 and the corner of Avenue 34 and Pasadena Avenue to maximize available lot area to provide floor area for residential units.

SURROUNDING PROPERTIES

Surrounding uses are within commercial manufacturing, urban center and public facilities zones and are generally developed residential single-family, and commercial manufacturing structures. The property to the north abutting the site is zoned UC(CA) and is currently vacant. The properties to east, across Pasadena Avenue, are zoned [Q]RD2-1D, [Q]RD1.5-1D, [Q]PF-1D and [T][Q]CM-2D and are developed with commercial, educational, and multi-family residential uses. The properties to the south, across Avenue 34, are zoned UC(CA) and are improved with commercial uses and a single-family residential structure. The property to the west is zoned PF-1 and is developed with the Metro Gold Line light rail.

STREETS

Pasadena Avenue, abutting the property to the east, is designated as a Modified Avenue II dedicated to a varying width of 76 to 81 feet, improved with asphalt roadway, curb, gutter, and concrete sidewalks.

Avenue 34, abutting the property to the south, is a Modified Local Street -Standard dedicated to a width of 50 feet, improved with asphalt roadway, curb, gutter, and concrete sidewalks.

TRANSIT ORIENTED COMMUNITIES

Pursuant to the voter-approved Measure JJJ, Los Angeles Municipal Code (LAMC) 12.22-A,31 was added to create the Transit Oriented Communities (TOC) Affordable Housing Incentive Program (TOC Program). The Measure requires the Department of City Planning to create TOC Affordable Housing Incentive Program Guidelines (TOC Guidelines) for all Housing Developments located within a ½-mile (or 2,640-foot) radius of a Major Transit Stop. These Guidelines provide the eligibility standards, incentives, and other necessary components of the TOC Program consistent with LAMC 12.22-A,31.

A qualifying TOC Project shall be granted Base Incentives with regard to increased residential density, increased floor area ratio, and reduced automobile parking requirements. In addition to these Base Incentives, an eligible project may be granted Additional Incentives with regard to yards and setbacks, open space, lot coverage, lot width, averaging, density calculation, height, and developments in public facilities zones. Up to three (3) Additional Incentives may be granted

in exchange for providing the requisite set aside of affordable housing as enumerated in the TOC Guidelines.

The proposed project is located less than a ½ mile from the Heritage Square Metro Gold Line Rail Station and is therefore defined as a Major Transit Stop. Furthermore, as the project will set aside 14% of the total number of units for Very Low Income Households and meets all other eligibility requirements of the TOC Affordable Housing Incentive Program, the project is entitled to the Base Incentives.

In addition, as the project is 1,350 feet from the Heritage Square Metro Gold Line Rail Station the project is located within Tier 3 of the TOC Guidelines. Therefore, as the project will set aside 10% of the base number of units for Very Low Income Households, the project is entitled to two (2) Additional Incentives. The applicant is requesting two (2) Additional Incentives.

Given the above, the proposed project includes the following Base and Additional Incentives for a qualifying Tier 3 Project:

Tier 3 Base Incentives:

a. **Density:** The subject property is zoned [T][Q]CM-2D and limited to a maximum density of one (1) dwelling unit per 800 square feet of lot area. With a lot area totaling 219,296 square feet, the project is permitted to construct up to 275 dwelling units (rounding up from 274.12). As an eligible Housing Development, the project is entitled for a 70 percent density increase for a maximum of 468 total units; 468 units are proposed.

b. **Floor Area Ratio (FAR)**: The subject property is zoned [T][Q]CM-2D and limited to an FAR of 3 to 1. As an eligible Housing Development, the project is entitled to a 50 percent FAR increase, or 4.5 to 1. As proposed, the project has a maximum FAR of 3 to 1.

c. **Parking**: Pursuant to LAMC Section 12.21-A,4, the proposed 468-unit project would be required to provide a total of 638 residential and 33 commercial automobile parking spaces. As an Eligible Housing Development, the project is entitled to provide ½ parking space per unit (or 234 parking spaces) and 24 commercial automobile parking spaces. As proposed, the project is providing a total of 311 parking spaces.

Tier 3 Additional Incentives:

a. **Setbacks.** Eligible Housing Developments located in any commercial zone may utilize any or all of the yard requirements for the RAS3 zone per LAMC 12.10.5. In this case, the project would be required to provide side and rear yard conforming to the requirements of the R4 Zone for portions of building erected and used for residential purposes, which includes seven-foot side yards, and a 15-foot rear yard. The project as proposed, will provide yard requirements conforming to the RAS3 zone.

b. **Transitional Height**. Eligible Housing Developments in Tier 3 may utilize transitional height requirements in lieu of those found in LAMC 12.21.1-A,10, or any applicable transitional height limits in a Specific Plan, including any requirements for reduced building heights when a building is adjoining a more restrictive zone. Eligible Housing Developments in Tier 3 may have the building height limit stepped-back at a 45 degree angle as measured from a horizontal plane originating 25 feet above grade at the property line of the adjoining lot in the RW1 Zone or more restrictive residential zone. Because the subject property does not adjoin a lot in the RW1 or more restrictive residential zone,

transitional height does not apply. As proposed, the project height of 73 feet is in conformance with this Additional Incentive.

HOUSING REPLACEMENT

Pursuant to LAMC Section 12.22-A,31(b)(1), a Housing Development located within a Transit Oriented Communities (TOC) Affordable Housing Incentive Area shall be eligible for TOC Incentives if it meets any applicable replacement requirements of California Government Code Section 65915(c)(3) (California State Density Bonus Law).

Assembly Bill 2222 (AB 2222) amended the State Density Bonus Law to require applicants of density bonus projects filed as of January 1, 2015 to demonstrate compliance with the housing replacement provisions which require replacement of rental dwelling units that either exist at the time of application of a Density Bonus project, or have been vacated or demolished in the five-year period preceding the application of the project. This applies to all pre-existing units that have been subject to a recorded covenant, ordinance, or law that restricts rents to levels affordable to persons and families of lower or very low income; subject to any other form of rent or price control; or occupied by Low or Very Low Income Households.

On September 28, 2016, Governor Brown signed Assembly Bill 2556 (AB 2556) which further amended the State Density Bonus Law. The amendments took effect on January 1, 2017. AB 2556 clarifies the implementation of the required replacement of affordable units in Density Bonus projects, first introduced by AB 2222. AB 2556 further defines "equivalent size" to mean that as a whole, the new units must contain at least the same total number of bedrooms as the units being replaced.

Pursuant to the Determination made by the Housing and Community Investment Department (HCIDLA) dated August 30, 2019, the proposed project is not required to provide replacement units. However, 66 units restricted to Very Low Income Households are proposed through the Transit Oriented Communities Affordable Housing Incentive Program project. This is reflected in the Conditions of Approval. Refer to the Transit Oriented Communities Affordable Housing Incentive Program Background section of this determination for additional information.

TRANSIT ORIENTED COMMUNITIES AFFORDABLE HOUSING INCENTIVE PROGRAM ELIGIBILITY REQUIREMENTS

To be an eligible Transit Oriented Communities (TOC) Housing Development, a project must meet the Eligibility criteria set forth in Section IV of the Transit Oriented Communities Affordable Housing Incentive Program Guidelines (TOC Guidelines). A Housing Development located within a TOC Affordable Housing Incentive Area shall be eligible for TOC Incentives if it meets all of the following requirements, **which it does**:

1. ***On-Site Restricted Affordable Units.*** *In each Tier, a Housing Development shall provide On-Site Restricted Affordable Units at a rate of at least the minimum percentages described below. The minimum number of On-Site Restricted Affordable Units shall be calculated based upon the total number of units in the final project.*

    a. *Tier 1 - 8% of the total number of dwelling units shall be affordable to Extremely Low Income (ELI) income households, 11% of the total number of dwelling units shall be affordable to Very Low (VL) income households, or 20% of the total number of dwelling units shall be affordable to Lower Income households.*
    b. *Tier 2 - 9% ELI, 12% VL or 21% Lower.*

c. Tier 3 - 10% ELI, 14% VL or 23% Lower.
d. Tier 4 - 11% ELI, 15% VL or 25% Lower.

The project site is located within a Tier 3 Transit Oriented Communities Affordable Housing Incentive Area. As part of the proposed development, the project is required to reserve a total of 66 on-site dwelling units for Very Low Income Households which is 14% of the 468 total dwelling units proposed as part of the Housing Development. As such, the project meets the eligibility requirement for On-Site Restricted Affordable Units.

2. ***Major Transit Stop.*** *A Housing Development shall be located on a lot, any portion of which must be located within 2,640 feet of a Major Transit Stop, as defined in Section II and according to the procedures in Section III.2 of the TOC Guidelines.*

   As defined in the TOC Guidelines, a Major Transit Stop is a site containing a rail station or the intersection of two or more bus routes with a service interval of 15 minutes or less during the morning and afternoon peak commute periods. The stations or bus routes may be existing, under construction or included in the most recent Southern California Association of Governments (SCAG) Regional Transportation Plan (RTP). The subject property is located less than 2,640 feet from the Heritage Square Metro Gold Line Rail Station and is therefore defined as a Major Transit Stop. Therefore, the project meets the eligibility requirement for proximity to a Major Transit Stop.

3. ***Housing Replacement.*** *A Housing Development must meet any applicable housing replacement requirements of California Government Code Section 65915(c)(3), as verified by the Department of Housing and Community Investment (HCIDLA) prior to the issuance of any building permit. Replacement housing units required per this section may also count towards other On-Site Restricted Affordable Units requirements.*

   Pursuant to the Determination made by the Housing and Community Investment Department (HCIDLA) dated August 30, 2019, the proposed project is not required to provide replacement units. 66 units restricted to Very Low Income Households are proposed through the Transit Oriented Communities Affordable Housing Incentive Program project. Therefore, the project meets the eligibility requirement for providing replacement housing consistent with California Government Code Section 65915(c)(3).

4. ***Other Density or Development Bonus Provisions.*** *A Housing Development shall not seek and receive a density or development bonus under the provisions of California Government Code Section 65915 (state Density Bonus law) or any other State or local program that provides development bonuses. This includes any development bonus or other incentive granting additional residential units or floor area provided through a General Plan Amendment, Zone Change, Height District Change, or any affordable housing development bonus in a Transit Neighborhood Plan, Community Plan Implementation Overlay (CPIO), Specific Plan, or overlay district.*

   There are no additional requests for density or development bonuses under the provisions of the State Density Bonus Law or any other State or local program that provides development bonuses, including, but not limited to a General Plan Amendment, Zone Change, Height District Change, or any affordable housing development bonus in a Transit Neighborhood Plan, Community Implementation Overlay (CPIO), Specific Plan, or overlay district. Therefore, the project meets this eligibility requirement.

5. ***Base Incentives and Additional Incentives.*** *All Eligible Housing Developments are eligible to receive the Base Incentives listed in Section VI of the TOC Guidelines. Up to three Additional Incentives listed in Section VII of the TOC Guidelines may be granted based upon the affordability requirements described below. For the purposes of this section below "base units" refers to the maximum allowable density allowed by the zoning, prior to any density increase provided through these Guidelines. The affordable housing units required per this section may also count towards the On-Site Restricted Affordable Units requirement in Section IV.1 above (except Moderate Income units).*

    a. *Two Additional Incentives may be granted for projects that include at least 7% of the base units for Extremely Low Income Households, at least 10% of the base units for Very Low Income Households, at least 20% of the base units for Lower Income Households, or at least 20% of the base units for persons and families of Moderate Income in a common interest development.*

    As an Eligible Housing Development, the project is eligible to receive the Base Incentives listed in the TOC Guidelines. The project may be granted two (2) Additional Incentives for reserving at least 10% of the base units for Very Low Income Households. (Base units are the maximum allowable density allowed by the zone, prior to any requests for increase in density provided by the Guidelines.) The project is requesting two (2) Additional Incentives: 1) utilizing any or all of the yard requirements for the RAS3 zone per LAMC 12.10.5 and; 2) to allow the building height limit be stepped-back at a 45 degree angle as measured from a horizontal plane originating 25 feet above grade at the property line. The subject site is zoned [T][Q]CM-2D with a Commercial Manufacturing land use designation and has a base density of 275 units. The project is setting aside 66 units for Very Low Income Households which equates to more than 10% of the 275 base units permitted through the underlying zoning of the site. Therefore, the project meets the eligibility requirement for Base and Additional Incentives because the project will reserve at least 10% of the base units for Very Low Income Households.

6. ***Projects Adhering to Labor Standards.*** *Projects that adhere to the labor standards required in LAMC 11.5.11 may be granted two Additional Incentives from the menu in Section VII of these Guidelines (for a total of up to five Additional Incentives).*

    The project is not seeking additional incentives. Therefore, the project is not required to adhere to the labor standards required in LAMC Section 11.5.11; this eligibility requirement does not apply.

7. ***Multiple Lots.*** *A building that crosses one or more lots may request the TOC Incentives that correspond to the lot with the highest Tier permitted by Section III above.*

    The proposed building crosses seven (7) lots that are located within Tier 3 of the Transit Oriented Communities Affordable Housing Incentive Area. Therefore, this eligibility requirement does not apply.

8. ***Request for a Lower Tier.*** *Even though an applicant may be eligible for a certain Tier, they may choose to select a Lower Tier by providing the percentage of On-Site Restricted Affordable Housing units required for any lower Tier and be limited to the Incentives available for the lower Tier.*

The applicant has not selected a Lower Tier and is not providing the percentage of On-Site Restricted Affordable Housing units required for any lower Tier. Therefore, this eligibility requirement does not apply.

9. ***100% Affordable Housing Projects.*** *Buildings that are Eligible Housing Developments that consist of 100% On-Site Restricted Affordable units, exclusive of a building manager's unit or units shall, for purposes of these Guidelines, be eligible for one increase in Tier than otherwise would be provided.*

   The project does not consist of 100 percent On-Site Restricted Affordable units. It is not eligible for or seeking an increase in Tier. As such, this eligibility requirement does not apply.

TRANSIT ORIENTED COMMUNITIES AFFORDABLE HOUSING INCENTIVE PROGRAM /AFFORDABLE HOUSING INCENTIVES COMPLIANCE FINDINGS

Pursuant to LAMC Section 12.22-A,31(e), the Director of Planning shall review a Transit Oriented Communities Affordable Housing Incentive Program project application in accordance with the procedures outlined in LAMC Section 12.22-A,25(g).

1. **The incentives are <u>not required</u> to provide for affordable housing costs as defined in California Health and Safety Code Section 50052.5 or Section 50053 for rents for the affordable units.**

   The California Health & Safety Code Sections 50052.5 and 50053 define formulas for calculating affordable housing costs for very low, low, and moderate income households. Section 50052.5 addresses owner-occupied housing and Section 50053 addresses rental households. Affordable housing costs are a calculation of residential rent or ownership pricing not to exceed 25 percent gross income based on area median income thresholds dependent on affordability levels. There were no substantial evidence that would allow the Director to make a finding that the requested incentives are not necessary to provide for affordable housing costs per State Law.

   The list of base incentives in the Transit Oriented Communities Guidelines were pre-evaluated at the time the Transit Oriented Communities Affordable Housing Incentive Program Ordinance was adopted to include various types of relief that minimize restrictions on the size of the project. The base incentives are required to provide for affordable housing costs because the incentives by their nature may result in increasing the scale of the project.

   The additional incentives requested to utilize any or all of the yard requirements for the RAS3 Zone and the TOC Transitional Height would result in building design and construction efficiencies that provide for affordable housing costs. Therefore, the Director finds that the incentives are required to provide for affordable housing costs as defined in California Health and Safety Code Section 50052.5 or Section 50053 for rents for the affordable units.

2. **The Incentive <u>will have</u> a specific adverse impact upon public health and safety or the physical environment, or on any real property that is listed in the California Register of Historical Resources and for which there are no feasible method to satisfactorily mitigate or avoid the specific adverse Impact without rendering the development unaffordable to Very Low, Low and Moderate Income households. Inconsistency with**

the zoning ordinance or the general plan land use designation shall not constitute a specific, adverse impact upon the public health or safety.

There has been no evidence provided that indicated that the proposed incentives will have a specific adverse impact upon public health and safety or the physical environment, or on any real property that is listed in the California Register of Historical Resources. A "specific adverse impact" is defined as, "a significant, quantifiable, direct and unavoidable impact, based on objective, identified written public health or safety standards, policies, or conditions as they existed on the date the application was deemed complete" (LAMC Section 12.22.A.25(b)).

The project does not involve a contributing structure in a designated Historic Preservation Overlay Zone or on the City of Los Angeles list of Historical-Cultural Monuments. The proposed project and potential impacts were analyzed in accordance with the California Environmental Quality Act (CEQA) Guidelines and the project was determined to result in less than significant impacts with the incorporation of mitigation measures related to biological resources, hazards and hazardous materials, noise, police, and transportation and traffic as reflected in the addendum dated December 2019 to the previously adopted MND.

Therefore, there is no substantial evidence that the proposed project will have a specific adverse impact on the physical environment, on public health and safety, or on property listed in the California Register of Historic Resources.

3. The incentives/waivers are contrary to state or federal law.

There is no substantial evidence in the record that the proposed incentives/waivers are contrary to state or federal law.

WAIVER OF DEDICATION AND IMPROVEMENT FINDINGS

Pursuant to LAMC Section 12.37-I, the Director may waive, reduce, or modify the required dedication or improvement as appropriate after making any of the following findings, in writing, based on substantial evidence in the record.

a. The dedication or improvement requirement does not bear a reasonable relationship to any project impact.

b. The dedication or improvement is not necessary to meet the City's mobility needs for the next 20 years based on guidelines the Streets Standards Committee has established.

c. The dedication or improvement requirement is physically impractical.

4. The Director Finds, based on substantial evidence in the record that the dedication or improvement is not necessary to meet the City's mobility needs for the next 20 years based on guidelines the Streets Standards Committee has established.

The City’s General Plan Transportation Element was updated with Mobility Plan 2035 which aims to guide the continuing development of a citywide transportation system and provide efficient movement of people and goods to achieve a transportation system that will balance the needs of all road uses. The Plan recognizes that since the 1999 Transportation Element was adopted, “there has been growing interest in restricting streets from being widened to match their currently assigned designation.” With this in mind, community and specific plans

have been updated and/or introduced with added footnotes and street modifications that would restrict a street from future widening. Most streets retained its named designation “but the footnotes and modifications indicated that the street was not to be widened in the future.”

Pasadena Avenue is designated as a Modified Avenue II, dedicated to a varying width of 76 to 81 feet, improved with asphalt roadway, curb, gutter, and concrete sidewalks. Avenue 34 is a Modified Local Street – Standard, dedicated to a width of 50 feet, and improved with asphalt roadway, curb, gutter, and concrete sidewalks. In order to comply with the applicable Mobility Plan 2035 standards, the project would be required to provide a five-foot dedication along Avenue 34 to provide half right-of-way of 30 feet, a three-foot widening along Avenue 34 to provide half roadway of 20 feet, and a 15-foot by 15-foot chamfer or a 20-foot radius corner cut along the northwest intersection of Avenue 34 and Pasadena Avenue.

This portion of Avenue 34 west of Pasadena Avenue terminates at Artesian Street. Given that Avenue 34 is effectively a dead-end street, the level of traffic does not warrant the increase roadway widening. Therefore, as Avenue 34 will not be utilized to the full extent of a typical Local Street within the next 20 years, the three-foot roadway improvement is not necessary to meet the City's mobility needs for the next 20 years.

In lieu of the aforementioned requirements, the project will provide the required five-foot dedication and a five-foot sidewalk widening improvement.

SITE PLAN REVIEW FINDINGS

5. The project is in substantial conformance with the purposes, intent and provisions of the General Plan, applicable community plan, and any applicable specific plan.

The Los Angeles General Plan sets forth goals, objectives, and policies that guide both Citywide and community specific land use policies. The General Plan is comprised of a range of State-mandated elements, including, but not limited to, Land Use, Housing, Transportation/Mobility, Noise, and Safety. Each of these Elements establishes policies that provide for the regulatory environment in managing the City and for addressing environmental concerns and problems. The majority of the policies derived from these Elements are in the form of Code Requirements of the Los Angeles Municipal Code. The City’s Land Use Element is divided into 35 community plans that establish parameters for land use decisions within those sub-areas of the City. While the General Plan sets out a long-range vision and guide to future development, the 35 Community Plans provide the specific, neighborhood-level detail, relevant policies, and implementation strategies necessary to achieve the General Plan objectives. The project site is located in the Northeast Los Angeles Community Plan area and is not subjected to any applicable specific plans.

Northeast Los Angeles Community Plan

The subject property is located within the Northeast Los Angeles Community Plan which was updated by the City Council on June 15, 1999. The Northeast Los Angeles Community Plan designates the subject property for Commercial Manufacturing land use, corresponding to the CM and P Zones. The subject property is zoned [T][Q]CM-2D. The proposed project advances the following goals, objectives and policies of the Community Plan:

Goal 1: A safe, secure, and attractive residential environment for all economic, age, and ethnic segments of the community.

Objective 1-1: To preserve and enhance existing residential neighborhoods.

Policy 1-1.1: Protect existing stable single-family and other lower density residential neighborhoods from encroachment by higher density residential and other uses that are incompatible as to scale and character or would otherwise diminish the quality of life.

Objective 1-2: To allocate land for new housing to accommodate a growth of population that is consistent with and promotes the health, safety, welfare, convenience, and pleasant environment of those who live and work in the community based on adequate infrastructure and government services, especially schools.

Policy 1-2.2: Locate higher residential densities near commercial and institutional centers, light rail transit stations, and major bus routes to encourage pedestrian activity and use of public transportation, providing that infrastructure, public service facilities, utilities, and topography will fully accommodate this development.

Policy 1-2.3: Encourage mixed-use development in selected commercially-zoned areas.

Objective 1-6: To promote and ensure the provision of fair and equal housing opportunities for all persons regardless of income and age groups or ethnic, religious, or racial background.

Policy 1-6.1: Promote individual choice in type, quality, price, and location of housing.

Policy 1-6.2: Promote mixed use in all multiple-family residential projects in commercial zones.

Policy 1-6.3: Ensure that redevelopment activity minimizes displacement of residents.

The proposed project is a new mixed-use development with a total of 468 dwelling units (including 66 units reserved for Very Low Income Households) and 16,395 square feet of commercial floor area. The project increases the housing stock and satisfies the needs and desires of all economic segments of the community by maximizing the opportunity for individual housing choice, and displaces no residents. Additionally, the subject property is located less than a ½-mile from the Heritage Square Metro Gold Line Rail Station, thereby reducing vehicular trips to and from the project site and congestion around the site.

Lastly, the construction of 468 new dwelling units within a primarily commercial and industrial area will support the city's housing needs while protecting existing stable single-family and other lower density residential neighborhoods from encroachment by higher density residential.

Goal 2: Strong and competitive commercial areas that suitably serve the needs of the community and attracts customers from outside the plan area by satisfying market demand and maximizing convenience and accessibility while preserving unique historic and cultural identities of each commercial area.

Objective 2-1: To conserve and strengthen potentially viable commercial areas in order to stimulate and revitalize existing businesses and create opportunities for appropriate new commercial development**.**

Policy 2-1.1: Consolidate commercial areas through appropriate planning and zoning actions to strengthen the economic base and expand market opportunities.

Policy 2-1.2: Protect commercially planned/zoned areas from encroachment by residential only development.

Objective 2-2: To enhance the identity and appearance of commercial districts.

Policy 2-2.2: Require that projects in commercial areas be designed and developed to achieve a high level of quality, distinctive character, and compatibility with appropriate existing uses and development.

The subject property is zoned [T][Q]CM-2D (Commercial Manufacturing). The property is currently improved with industrial and commercial uses and associated surface parking lot. The proposed 468-unit mixed-use project includes 16,395 square feet of commercial floor area. The 16,395 square feet of commercial floor area is proposed as neighborhood-serving commercial retail uses within three (3) ground floor spaces that will serve the needs of the community and help stimulate and revitalize development within the area.

The project has been well-designed, prioritizing the pedestrian experience, minimizing the number of driveways, and providing a consistent and unified architectural design throughout the entire development. The project also provides 65,789 square feet of publicly accessible open space, which the general public will be able to access from Pasadena Avenue and Avenue 34.

Goal 3: Sufficient land for the range of industrial uses necessary to provide maximum employment opportunities, especially for local residents; that are safe for the environment and the work force; and have minimal adverse impact on adjacent uses and infrastructure resources.

Objective 3-1: To resolve conflicts between industrial uses and other adjacent uses.

Policy 3-1.1: Preserve existing industrial areas that have the greatest viability and compatibility and the least adverse impact on nearby uses.

Objective 3-2: To provide for existing and future industrial uses that contribute job opportunities for residents and minimize adverse environmental and visual impacts on the community.

Policy 3-2.1: Designate lands for the continuation of appropriate existing industry and development of new industrial parks, research and development uses, light manufacturing, and similar uses that are compatible with nearby uses, provide employment opportunities, and have minimal impact on the environment.

Policy 3-2.2: Require compatibility through design treatments, compliance with environmental protection standards, and health and safety requirements for industrial uses that adjoin residential neighborhoods and commercial uses.

The subject property is zoned [T][Q]CM-2D (Commercial Manufacturing) and is currently improved with industrial and commercial uses and associated surface parking lot. The proposed 468-unit mixed-use development includes 16,395 square feet of commercial floor area that will provide neighborhood serving uses to support the surrounding and create job opportunities in the community. The project have been conditioned to compatible through design treatments, compliance with environmental protection standards, and health and safety requirements.

Therefore, the proposed 468-unit, mixed-use development is consistent with the goals, objectives and policies of the Northeast Los Angeles Community Plan.

The **Framework Element** for the General Plan (Framework Element) was adopted by the City of Los Angeles in December 1996 and re-adopted in August 2001. The Framework Element provides guidance regarding policy issues for the entire City of Los Angeles, including the project site. The Framework Element also sets forth a Citywide comprehensive long-range growth strategy and defines Citywide polices regarding such issues as land use, housing, urban form, neighborhood design, open space, economic development, transportation, infrastructure, and public services. The Framework Element includes the following goals, objectives and policies relevant to the instant request:

Goal 3A: A physically balanced distribution of land uses that contributes towards and facilitates the City's long-term fiscal and economic viability, revitalization of economically depressed areas, conservation of existing residential neighborhoods, equitable distribution of public resources, conservation of natural resources, provision of adequate infrastructure and public services, reduction of traffic congestion and improvement of air quality, enhancement of recreation and open space opportunities, assurance of environmental justice and a healthful living environment, and achievement of the vision for a more liveable city.

Objective 3.1: Accommodate a diversity of uses that support the needs of the City's existing and future residents, businesses, and visitors.

Policy 3.1.4: Accommodate new development in accordance with land use and density provisions of the General Plan Framework Long-Range Land Use Diagram.

Objective 3.2: Provide for the spatial distribution of development that promotes an improved quality of life by facilitating a reduction of vehicular trips, vehicle miles traveled, and air pollution.

Policy 3.2.1: Provide a pattern of development consisting of distinct districts, centers, boulevards, and neighborhoods that are differentiated by their functional role, scale, and character. This shall be accomplished by considering factors such as the existing concentrations of use, community-oriented activity centers that currently or potentially service adjacent

neighborhoods, and existing or potential public transit corridors and stations.

Policy 3.2.2: Establish, through the Framework Long-Range Land Use Diagram, community plans, and other implementing tools, patterns and types of development that improve the integration of housing with commercial uses and the integration of public services and various densities of residential development within neighborhoods at appropriate locations.

Objective 3.4: Encourage new multi-family residential, retail commercial, and office development in the City's neighborhood districts, community, regional, and downtown centers as well as along primary transit corridors/boulevards, while at the same time conserving existing neighborhoods and related districts.

Policy 3.4.1: Conserve existing stable residential neighborhoods and lower-intensity commercial districts and encourage the majority of new commercial and mixed-use (integrated commercial and residential) development to be located (a) in a network of neighborhood districts, community, regional, and downtown centers, (b) in proximity to rail and bus transit stations and corridors, and (c) along the City's major boulevards, referred to as districts, centers, and mixed-use boulevards, in accordance with the Framework Long-Range Land Use Diagram.

The proposed project will result in the development of a mixed-use building that will provide 468 dwelling units, including 66 units reserved for Very Low Income Households, and 16,395 square feet of commercial space thereby contributing toward and facilitating the City's long-term economic viability and vision for a more liveable city.

The project is not located within an existing residential neighborhood, and its proximity to the Heritage Square Metro Gold Line Rail Station is consistent with the policy of locating mixed-use developments in proximity to rail and bus transit stations and corridors, while at the same time conserving existing neighborhoods. The approval of the requested TOC allows for more intense use of the subject property, while reducing vehicular trips to and from the project, vehicle miles traveled, and air pollution.

The project site is zoned for commercial manufacturing uses and is currently developed with industrial and commercial uses and associated surface parking lot. The development of the site will enable the City to conserve nearby existing stable residential neighborhoods and lower-intensity commercial districts by allowing controlled growth away from such neighborhoods and districts. Therefore, the proposed 468-unit mixed use building with 16,395 square feet of commercial space is consistent with the Distribution of Land Use goals, objectives and policies of the General Plan Framework Element.

The **Housing Element** is the City's blueprint for meeting housing and growth challenges. It identifies the City's housing conditions and needs, reiterates goals, objectives, and policies that are the foundation of the City's housing and growth strategy, and provides the array of programs the City has committed to implement to create sustainable, mixed-

income neighborhoods across the City. The Housing Element includes the following objectives and policies relevant to the instant request:

Goal 1: Housing Production and Preservation.

Objective 1.1: Produce an adequate supply of rental and ownership housing in order to meet current and projected needs.

Policy 1.1.3: Facilitate new construction and preservation of a range of different housing types that address the particular needs of the city's households.

Objective 1.4: Reduce regulatory and procedural barriers to the production and preservation of housing at all income levels and needs.

Policy 1.4.1: Streamline the land use entitlement, environmental review, and building permit processes, while maintaining incentives to create and preserve affordable housing.

The approval of the request would permit 468 dwelling units through the TOC process with 66 dwelling units set aside for Very Low Income Households. The project would achieve the production of new housing opportunities, meeting the needs of the city, while ensuring a range of different housing types (studio, one- and two-bedroom rental units) that address the needs of the city's households.

Additionally, to reduce regulatory and procedural barriers that may impede the production of housing at all income levels and needs the project proposes all affordable units will be provided in Phase 1 of the construction of the project.

Therefore, the project is consistent with the Housing Element goals, objectives and policies of the General Plan.

The **Mobility Element** of the General Plan (Mobility Plan 2035) is not likely to be affected by the recommended action herein. Pasadena Avenue, abutting the property to the east, is designated as a Modified Avenue II dedicated to a varying width of 76 to 81 feet, improved with asphalt roadway, curb, gutter, and concrete sidewalks. Additionally, Avenue 34, abutting the property to the south, is a Modified Local Street-Standard dedicated to a width of 50 feet, improved with asphalt roadway, curb, gutter, and concrete sidewalks.

Pasadena Avenue is part of the Bicycle Lane Network and identified as a Tier 2 Bicycle Lane, and is part of the Pedestrian Enhanced Districts.

The project as designed will support the development of these Networks and meets the following goals and objectives of Mobility Plan 2035:

Policy 2.3: Recognize walking as a component of every trip, and ensure high-quality pedestrian access in all site planning and public right-of-way modifications to provide a safe and comfortable walking environment.

Vehicular access to the project site will be provided via a two-way driveway off Avenue 34. All private residential parking spaces and the commercial parking spaces would be accessed via this driveway. The existing driveways will removed. Pedestrian access will

be off of Pasadena Avenue. Pasadena Avenue will be activated with new commercial uses and publicly accessible open space, which will create a safe and comfortable walking environment.

The project will include pedestrian safety features such as pedestrian-activated crosswalk with in-pavement rapid flashing beacons or an equivalent system, striped crosswalk across Avenue 34 adjacent to the project site, striping on Avenue 34, installation of appropriate wayfinding and safety signage on Avenue 34 adjacent to the project site and on Artesian Street between Avenue 34 and Avenue 33.

Policy 3.1: Recognize all modes of travel, including pedestrian, bicycle, transit, and vehicular modes - including goods movement - as integral components of the City's transportation system.

Policy 3.3: Promote equitable land use decisions that result in fewer vehicle trips by providing greater proximity and access to jobs, destinations, and other neighborhood services.

Policy 3.5: Support "first-mile, last-mile solutions" such as multi-modal transportation services, organizations, and activities in the areas around transit stations and major bus stops (transit stops) to maximize multi-modal connectivity and access for transit riders.

Policy 3.7: Improve transit access and service to major regional destinations, job centers, and inter-modal facilities.

Policy 3.8: Provide bicyclists with convenient, secure and well-maintained bicycle parking facilities.

The project's proximity to existing regional transit services (within ½ mile of the Heritage Square Metro Gold Line Rail Station) will reduce vehicular trips to and from the project, vehicle miles traveled, and will contribute to the improvement of air quality. The adjacency of the regional transit services along with the creation of 468 dwelling units, ties the proposed project into a regional network of transit and housing.

In addition, the project will provide a total of 228 bicycle parking spaces (28 short-term and 200 long-term bicycle parking spaces) in storage rooms located within the parking garages to provide bicyclists with convenient, secure and well-maintained bicycle parking facilities to support "first-mile, last-mile solutions" to maximize multi-modal connectivity and access for transit riders.

Policy 5.4: Continue to encourage the adoption of low and zero emission fuel sources, new mobility technologies, and supporting infrastructure.

As conditioned, a minimum of 20% of the total parking spaces provided shall be capable of supporting future electric vehicle supply equipment (EVSE) and of those 20% EV Ready parking spaces, 5% of the total parking spaces provided shall be further provided with EV chargers to immediately accommodate electric vehicles within the parking areas.

Therefore, the project is consistent with Mobility Plan 2035 goals, objectives and policies of the General Plan.

The **Air Quality Element** of the General Plan will be implemented by the recommended action herein. The Air Quality Element sets forth the goals, objectives and policies which will guide the City in the implementation of its air quality improvement programs and strategies. The Air Quality Element recognizes that air quality strategies must be integrated into land use decisions and represent the City's effort to achieve consistency with regional Air Quality, Growth Management, Mobility and Congestion Management Plans. The Air Quality Element includes the following Goal and Objective relevant to the instant request:

Goal 5: Energy efficiency through land use and transportation planning, the use of renewable resources and less polluting fuels, and the implementation of conservation measures including passive methods such as site orientation and tree planting.

Objective 5.1: It is the objective of the City of Los Angeles to increase energy efficiency of City facilities and private developments.

As conditioned, a minimum of 15% of the project roof area shall be reserved for the installation of a solar photovoltaic system. Therefore, the project is in conformance with the goals and policies of the Air Quality Element.

Therefore, the project is in substantial conformance with the purposes, intent and provisions of the General Plan and does not conflict with any applicable regulations or standards.

6. The project consists of an arrangement of buildings and structures (including height, bulk and setbacks), off-street parking facilities, loading areas, lighting, landscaping, trash collection, and other such pertinent improvements that is or will be compatible with existing and future development on adjacent properties and neighboring properties.

The subject property is a 219,296 square-foot (5.03 acre) lot comprised of seven (7) contiguous parcels with a frontages along Avenue 34 and Pasadena Avenue. The subject property is currently developed with industrial and commercial uses and associated surface parking lot.

The land use and zoning within close proximity of the subject site are within commercial manufacturing, residential, urban center zoning district (as stipulated by the Cornfield/Arroyo Seco Specific Plan) and public facilities zones and are generally developed residential single-family, and commercial manufacturing structures. The property to the north abutting the site is zoned UC(CA) and is currently vacant. The properties to east, cross Pasadena Avenue are zoned [Q]RD2-1D, [Q]RD1.5-1D, [Q]PF-1D and [T][Q]CM-2D and are developed with commercial, educational, and multi-family residential uses. The properties to the south, across Avenue 34 are zoned UC(CA) and are improved with commercial and a single-family residential structure. The property to the west is zoned PF-1 and is developed with the Metro Gold Line light rail.

The proposed 519,829 square foot, five-story mixed-use building located on a 219,296 square foot lot is compatible with the existing and future surrounding developments. The project is within the allowable 3 to 1 FAR and provides the required setbacks as allowed by the RAS3 Zone. Additionally, the project will comply with transitional height

requirements in lieu of those found in LAMC 12.21.1-A,10 to ensure compatibility with the adjacent uses.

The proposed project is the construction, use, and maintenance of a new, five-story, 519,829 square-foot mixed use building with 468 dwelling units, including 66 dwelling units set aside for Very Low Income Households and two (2) levels of subterranean parking.

The project is designed as one (1) building which includes two (2) levels of subterrean parking across the entire site and with three (3) structures that include residential and commercial uses. The structures will be four (4) and five (5) stories tall with a total of 222 studio, 152 one-bedroom, and 94 two-bedroom dwelling units, and a total of 49,152 square feet of open space for residents.

The project also includes approximately 65,789 square feet of publicly accessible open space, that the general public will be able to access from Pasadena Avenue and Avenue 34. As part of the publicly accessible open space, the project will include a north-south pedestrian pathway as required by the associated "Q" Conditions.

The project will provide 287 residential automobile parking spaces located within two (2) subterranean levels. Twenty-four off-street parking spaces will be provided for the commercial space which will be located within the two (2) subterranean parking levels. Vehicular access to the proposed project will be provided via a driveway off of Avenue 34. All private residential parking spaces and the commercial parking spaces would be accessed via this driveway and will not be visible from the street.

The project will include pedestrian safety features such as pedestrian-activated crosswalk with in-pavement rapid flashing beacons or an equivalent system, striped crosswalk across Avenue 34 adjacent to the project site, striping on Avenue 34, installation of appropriate wayfinding and safety signage on Avenue 34 adjacent to the project site and on Artesian Street between Avenue 34 and Avenue 33.

Height, Bulk, and Setbacks

The project is zoned [T][Q]CM-2D and proposes a maximum height of 75 feet. The [T][Q]CM-2D zone does not have a maximum height limit.

The project has a maximum FAR of 3:1. The [T][Q]CM-2D zone has a maximum permitted FAR of 3:1 and 4.5:1 FAR permitted by the TOC Base Incentive.

The height, bulk, and setbacks of the subject project are consistent with the existing development in the immediate surrounding area and with the underlying [T][Q]CM-2D Zone. Therefore, in consideration of other existing and future development in the area, the project is consistent with the surrounding.

Parking

As an Eligible Housing Development in TOC Tier 3, the project is entitled to base incentives including providing ½ parking space per unit and a reduced number of commercial automobile parking spaces. The project will provide a total of 311 automobile parking spaces (287 residential automobile parking spaces and 24 commercial automobile parking spaces) and 264 long-term bicycle parking spaces. 35 short-term bicycle parking

stalls will be located within the building within close proximity to the commercial spaces and will be accessible from Pasadena Avenue and Avenue 34.

The proposed parking is located within the building and therefore will not be visible from the public right-of-way. Pedestrian access will be located from Pasadena Avenue and Avenue 34. Vehicular ingress and egress for the parking will be located on Avenue 34. Therefore, the parking facilities will be compatible with the existing and future developments in the neighborhoods.

Lighting

Lighting is required to be provided per LAMC requirements. The project proposes security lighting will be provided to illuminate building, entrances, walkways and parking areas. The project is required to provide outdoor lighting with shielding, so that the light source cannot be seen from adjacent residential properties. There, the lighting will be compatible with the existing and future developments in the neighborhood.

On-Site Landscaping

The project will provide approximately 49,152 square feet total of open space, which includes a 2,141 square foot interior amenity space on the ground floor of Building A, a 29,395 square foot south courtyard with a pool, spa and lounge areas, a 1,616 square foot interior amenity space on the ground floor of Building B, a 14,976 square foot north courtyard that includes lounge areas and community dinning space, a 1,024 interior amenity space on the ground floor of Building C. Additionally, the project includes 24,575 square feet of landscaped area distributed throughout the project. The project has been conditioned so that all open areas not used for buildings, driveways, parking areas, recreational facilities or walks will be attractively landscaped and maintained in accordance with a landscape plan, including an automatic irrigation plan, prepared by a licensed landscape architect. The planting of any required trees and street trees will be selected and installed per the Bureau of Street Services, Urban Forestry Divisions' requirements. Therefore, the on-site landscaping will be compatible with the existing and future developments in the neighborhood.

Loading/Trash Area

The development is not required to provide a loading area pursuant to LAMC Section 12.21-C,6. Waiting and drop areas for residents will be on the ground level. Tenants moving in or out of the building will be able to park moving trucks on the street level adjacent to the parking entrance and the lobby.

The project will include on-site trash collection for both refuse and recyclable materials, in conformance with the LAMC. Compliance with these regulations will allow the project to be compatible with existing and future development. The service area for trash and recycling collection will be conditioned to be located at grade level and accessible from the parking area. Additionally, service area for trash collection is to be located on all upper floors. Therefore, as proposed and conditioned, the project is compatible with existing and future development on neighboring properties.

As described above and as depicted within the plans and elevations submitted with the instant application, the project consists of a five-story, mixed-use building, with parking on-site for residents and commercial parking spaces, lighting, landscaping, trash

collection, and other pertinent improvements, that is compatible with existing and future development in the surrounding area.

7. Any residential project provides recreational and service amenities to improve habitability for its residents and minimize impacts on neighboring properties.

The project proposes provide a variety of unit types which includes: 222 studio units, 152 one-bedroom units, and 94 two-bedroom units. Pursuant to LAMC section 12.21-G, the project would be required to provide 49,150 square feet of open space. As approved, the project will provide 49,152 square feet of open space. The project provides approximately 49,152 square feet total of open space, which includes a 2,141 square foot interior amenity space on the ground floor of Building A, a 29,395 square foot south courtyard with a pool, spa and lounge areas, a 1,616 square foot interior amenity space on the ground floor of Building B, a 14,976 square foot north courtyard that includes lounge areas and community dinning space, a 1,024 interior amenity space on the ground floor of Building C. The project also provides 65,789 square feet of publicly accessible open space, which the general public will be able to access from Pasadena Avenue and Avenue 34. Additionally, the project includes 24,575 square feet of landscaped area distributed throughout the project.

ADDITIONAL MANDATORY FINDINGS

8. After consideration of the whole of the administrative record, the project was assessed in Mitigated Negative Declaration, No. ENV-2016-273-MND adopted on August 22, 2017; and pursuant to CEQA Guidelines 15162 and 15164, as supported by the addendum dated December 2019, no major revisions are required to the Mitigated Declaration; and no subsequent EIR or negative declaration is required for approval of the project.

9. The National Flood Insurance Program rate maps, which are a part of the Flood Hazard Management Specific Plan adopted by the City Council by Ordinance No. 172,081, have been reviewed and it has been determined that this project is located in Zone X, which is categorized as an area of minimal flood hazard.

TRANSIT ORIENTED COMMUNITIES AFFORDABLE HOUSING INCENTIVE PROGRAM BACKGROUND

Measure JJJ was adopted by the Los Angeles City Council on December 13, 2016. Section 6 of the Measure instructed the Department of City Planning to create the Transit Oriented Communities (TOC) Affordable Housing Incentive Program, a transit-based affordable housing incentive program. The measure required that the Department adopt a set of TOC Guidelines, which establish incentives for residential or mixed-use projects located within ½ mile of a major transit stop. Major transit stops are defined under existing State law.

The TOC Guidelines, adopted September 22, 2017, establish a tier-based system with varying development bonuses and incentives based on a project's distance from different types of transit. The largest bonuses are reserved for those areas in the closest proximity to significant rail stops or the intersection of major bus rapid transit lines. Required affordability levels are increased incrementally in each higher tier. The incentives provided in the TOC Guidelines describe the range of bonuses from particular zoning standards that applicants may select.

TIME LIMIT – OBSERVANCE OF CONDITIONS

All terms and conditions of the Director's Determination shall be fulfilled before the use may be established. Pursuant to LAMC Section 12.25-A,2, the instant authorization is further conditional upon the privileges being utilized within **three years** after the effective date of this determination and, if such privileges are not utilized, building permits are not issued, or substantial physical construction work is not begun within said time and carried on diligently so that building permits do not lapse, the authorization shall terminate and become void.

The applicant's attention is called to the fact that this grant is not a permit or license and that any permits and licenses required by law must be obtained from the proper public agency. Furthermore, if any condition of this grant is violated or not complied with, then the applicant or his successor in interest may be prosecuted for violating these conditions the same as for any violation of the requirements contained in the Municipal Code, or the approval may be revoked.

Verification of condition compliance with building plans and/or building permit applications are done at the Development Services Center of the Department of City Planning at either Figueroa Plaza in Downtown Los Angeles, West Los Angeles Development Services Center, or the Marvin Braude Constituent Service Center in the Valley. In order to assure that you receive service with a minimum amount of waiting, applicants are encouraged to schedule an appointment with the Development Services Center either by calling (213) 482-7077, (310) 231-2901, (818) 374-5050, or through the Department of City Planning website at http://cityplanning.lacity.org. The applicant is further advised to notify any consultant representing you of this requirement as well.

Section 11.00 of the LAMC states in part (m): "It shall be unlawful for any person to violate any provision or fail to comply with any of the requirements of this Code. Any person violating any of the provisions or failing to comply with any of the mandatory requirements of this Code shall be guilty of a misdemeanor unless that violation or failure is declared in that section to be an infraction. An infraction shall be tried and be punishable as provided in Section 19.6 of the Penal Code and the provisions of this section. Any violation of this Code that is designated as a misdemeanor may be charged by the City Attorney as either a misdemeanor or an infraction. Every violation of this determination is punishable as a misdemeanor unless provision is otherwise made, and shall be punishable by a fine of not more than $1,000 or by imprisonment in the County Jail for a period of not more than six months, or by both a fine and imprisonment."

TRANSFERABILITY

This determination runs with the land. In the event the property is to be sold, leased, rented or occupied by any person or corporation other than yourself, it is incumbent that you advise them regarding the conditions of this grant. If any portion of this approval is utilized, then all other conditions and requirements set forth herein become immediately operative and must be strictly observed.

APPEAL PERIOD - EFFECTIVE DATE

The Determination in this matter will become effective after June 26, 2020 unless an appeal there from is filed with the City Planning Department. It is strongly advised that appeals be filed early during the appeal period and in person so that imperfections/incompleteness may be corrected before the appeal period expires. Any appeal must be filed on the prescribed forms, accompanied by the required fee, a copy of this Determination, and received and receipted at a public office of the Department of City Planning on or before the above date or the appeal will not be accepted. Forms are available on-line at www.cityplanning.lacity.org.

Planning Department public offices are located at:

Figueroa Plaza	Marvin Braude San Fernando Valley Constituent Service Center	West Los Angeles Development Services Center
201 North Figueroa Street, 4th Floor	6262 Van Nuys Boulevard, Suite 251	1828 Sawtelle Boulevard, 2nd Floor
Los Angeles, CA 90012	Van Nuys, CA 91401	Los Angeles, CA 90025
(213) 482-7077	(818) 374-5050	(310) 231-2901

Pursuant to LAMC Section 12.22-A,25(f), only abutting property owners and tenants can appeal the Transit Oriented Communities Affordable Housing Incentive Program portion of this determination. Per the Density Bonus Provision of State Law (Government Code Section §65915) the Density Bonus increase in units above the base density zone limits and the appurtenant parking reductions are not a discretionary action and therefore cannot be appealed. Only the requested incentives are appealable. Per Section 12.22-A,25 of the LAMC, appeals of Density Bonus Compliance Review cases are heard by the City Planning Commission.

The time in which a party may seek judicial review of this determination is governed by California Code of Civil Procedures Section 1094.6. Under that provision, a petitioner may seek judicial review of any decision of the City pursuant to California Code of Civil Procedure Section 1094.5, only if the petition for writ of mandate pursuant to that section is filed no later than the 90th day following the date on which the City's decision becomes final.

Note of Instruction Regarding the Notice of Exemption: Applicant is hereby advised to file the Notice of Exemption for the associated categorical exemption after the issuance of this letter. If filed, the form shall be filed with the County of Los Angeles, 12400 Imperial Highway, Norwalk, CA 90650, pursuant to Public Resources Code Section 21152 (b). More information on the associated fees can be found online here: https://www.lavote.net/home/county-clerk/environmental-notices-fees. The best practice is to go in person and photograph the posted notice in order to ensure compliance. Pursuant to Public Resources Code Section 21167 (d), the filing of this notice of exemption starts a 35-day statute of limitations on court challenges to the approval of the project. Failure to file this notice with the County Clerk results in the statute of limitations, **and the possibility of a CEQA appeal**, being extended to 180 days.

LEGAL DESCRIPTION

THE LAND REFERRED TO HEREIN BELOW IS SITUATED IN THE COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AND IS DESCRIBED AS FOLLOWS:

PARCEL 1:
PARCEL A, IN THE CITY OF LOS ANGELES, COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AS SHOWN ON PARCEL MAP L.A. NO. 541, FILED IN BOOK 5, PAGE 85 OF PARCEL MAPS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY. EXCEPT FROM THAT PORTION OF SAID LAND INCLUDED WITHIN THE LINES OF THE LAND DESCRIBED AS PARCEL 1 IN DEED RECORDED JUNE 11, 1954 IN BOOK 44787, PAGE 225, OFFICIAL RECORDS ALL OIL, GAS, MINERALS AND OTHER HYDROCRABON SUBSTANCES LYING BELOW THE SURFACE OF SIAD LAND, BUT WITH NO RIGHT OF SURFACE ENTRY, AS PROVIDED IN DEED BOTH RECORDED SEPTEMBER 17, Y1951 IN BOOK 37217, PAGE 371 AND IN BOOK 37217, PAGE 275 OF OFFICIAL RECORDS. ALSO, EXCEPT FROM THAT PORTION OF SAID LAND INCLUDED WITHIN THE LINES OF THE LAND DESCRIBED IN DEED RECORDED AUGUST 22, 1941 IN BOOK 18660, PAGE 227 OFFICIAL RECORDS ALL COAL, OIL AND OIL INORGANIC SUBSTANCES INCLUDING OIL AND NATURAL GAS TOGETHER WITH THE EXCLUSIVE AND PERPETUAL RIGHT TO REMOVE ANY AND ALL SUCH SUBSTANCES AT WITHOUT THE RIGHT TO USE ANY SURFACE OF SIAD LAND, AS RESERVED BY LOS ANGELES AND SALT LAKE RAILROAD COMPANY, ET AL, IN SAID DEED LAST ABOVE MENTIONED.

PARCEL 2:
LOT 62 AND THOSE PORTIONS OF LOTS 64 AND 65 OF WHITTAKER RICHARDSON AND ERNEST SUBDIVISION OF LOTS 2, AND 3 GRIFFIN TRACT, IN THE CITY OF LOS ANGELES, COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 10, PAGE 2 OF MISCELLANEOUS RECORDS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY, LYING TERMINAL RAILWAY COMPANY, RECORDED IN OCTOBER 20, 1898 AS INSTRUMENT NOS. 33 AND 34, IN BOOK 1261, PAGE 1 OF DEEDS AND IN BOOK 1358, PAGE 98 OF DEEDS RESPECTIVELY OF SAID COUNTY.

PARCEL 3:
LOT 61 OF THE WHITTAKER RICHARDSON AND ERNEST SUBDIVISION, EAST LOS ANGELES OF GRIFFIN ARROYO LOTS 2 AND 3, IN THE CITY OF LOS ANGELES, COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 10, PAGE 2 OF MISCELLANEOUS RECORDS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.

PARCEL 4:
PARCEL B, IN THE CITY OF LOS ANGELES, COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AS SHOWN ON PARCEL MAP NO. 541, FILED IN BOOK 5, PAGE 85 OF PARCEL MAPS, IN THE OFFICE OF THE COUNTRY RECORDER OF SAID COUNTY. EXCEPT FROM SAID LAND, ALL OIL GAS, MINERALS AND OTHER HYDROCARBON SUBSTANCES LYING BELOW THE SURFACE OF SAID LAND, BUT WITH NO RIGHT OF SURFACE ENTRY, AS PROVIDED IN DEED RECORDED SEPTEMBER 17, 1951 IN BOOK 37217, PAGE 371 AND IN BOOK 37217, PAGE 275, BOTH OF OFFICIAL RECORDS AND JUNE 11, 1954 IN BOOK 44787, PAGE 255 OF OFFICIAL RECORDS.
ALSO, EXCEPT ALL COAL, OIL AND OIL INORGANIC SUBSTANCES OIL AND NATURAL GAS IN THAT PORTION OF SAID LAND, INCLUDED IN THE LAND DESCRIBED IN THE DEED RECORDED AUGUST 22, 1941 IN BOOK 18660, PAGE 227, OFFICIAL RECORDS.

PARCEL 5:
LOT 3 OF TRACT NO. 23801, IN THE CITY OF LOS ANGELES, COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 582, PAGES 49 AND 50 OF MAPS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.

APN: 5205-004-003, 005, 007, AND 011

THE ABOVE DESCRIBED PARCEL IS THE SAME LAND DESCRIBED IN CHICAGO TITLE COMPANY, ORDER NO. 00033686-994-X59, AND EFFECTIVE DATE OF JANUARY 12, 2015.

Q-CONDITIONS - PEDESTRIAN ACESS & LANDSCAPING

PEDESTRIAN ACCESS
PEDESTRIAN PATHS SHALL DIVIDE SUBAREA 4 INTO A MINIMUM OF FOUR SECTIONS.
A. THERE SHALL BE AN EASUWEST AND A NORTH/SOUTH PEDESTRIAN PATH THROUGH SUBAREA 4.
B. THE PATHS SHALL BE ALIGNED THROUGH THE MIDPOINT OF SUBAREA 4 AND CROSS EACH OTHER AT A PERPENDICULAR ANGLE.
C. THE REQUIRED PEDESTRIAN PATHS SHALL BE A MINIMUM OF 16 FEET IN WIDTH AND MAY INCLUDE UP TO 2 FEET OF LANDSCAPING ON EACH SIDE.
D. THE REQUIRED PEDESTRIAN PATHS SHALL BE COMPRISED OF ATTRACTIVE HARDSCAPE MATERIALS OR APPROPRIATE PERMEABLE ALTERNATIVES. THE USE OF ASPHALT IS PROHIBITED.
E. DEVELOPMENTS ON PARCELS THAT ABUT THE REQUIRED PEDESTRIAN PATHS SHALL CONTRIBUTE THEIR PROPORTIONAL SHARE OF SAID PATHS.
F. PEDESTRIAN PATHS SHALL BE ILUMINATED WITH PEDESTRIAN-SCALE LIGHTING INSTALLED ON EITHER SIDE OF EACH PEDESTRIAN PATH AT A MINIMUM INTERVAL OF ONE FIXTURE EVERY 20 LINEAR FEET.
G. THESE PEDESTRIAN PATHS SHALL BE OPEN AND ACCESSIBLE TO THE PUBLIC FROM DAWN UNTIL DUSK OR THE CLOSE OF ON-SITE BUSINESSES, WHICHEVER OCCURS LATER.
H. THESE PEDESTRIAN PATHS MAY COUNT TOWARD THE CODE-REQUIRED OPEN SPACE.
I. THESE PEDESTRIAN PATHS MAY BE INCLUDED IN THE BUILDABLE AREA FOR THE PURPOSES OF CALCULATING THE FLOOR AREA RATIO (FAR).

LANDSCAPING
A. OPEN SPACE SHALL BE PROVIDED PER LAMC.
B. ALL OPEN AREAS NOT USED FOR BUILDINGS, DRIVEWAYS, SURFACE PARKING AREAS, RECREATIONAL FACILITIES, PEDESTRIAN PATHS OR WALKWAYS SHALL BE ATTRACTIVELY LANDSCAPED AND INCLUDE AN AUTOMATIC IRRIGATION SYSTEM. IN ACCORDANCE WITH A LANDSCAPE PLAN PREPARED BY A LICENSED LANDSCAPE ARCHITECT, LICENSED ARCHITECT, OR LANDSCAPE CONTRACTOR TO THE SATISFACTION OF THE PLANNING DEPARTMENT.
C. A MINIMUM OF FIVE PERCENT OF THE TOTAL SURFACE AREA OF A SURFACE PARKING LOT SHALL BE LANDSCAPED WITH TREES, SHRUBBERY AND GROUND COVER
D. A MINIMUM OF 50 PERCENT OF COMMON USABLE OPEN SPACE, INCLUDING PLAZAS AND COURTYARDS, SHALL BE PLANTED IN GROUND COVER, SHRUBS OR TREES. TREES SHALL BE PLANTED AT A RATIO OF ONE TREE FOR EVERY 1,000 SQUARE FEET OF LOT AREA. TREES SHALL BE AT MINIMUM 24-INCH BOX TREES, AND SHALL BE PLANTED WITHIN OPEN SPACE AREAS. LANDSCAPED AREAS LOCATED ON TOP OF A PARKING GARAGE OR DECK SHALL INCLUDE PERMANENT PLANTERS AT LEAST 30 INCHES IN DEPTH (12 INCHES FOR LAWN/GROUND COVER) AND BE PROPERLY IRRIGATED AND DRAINED TO THE SATISFACTION OF THE PLANNING DEPARTMENT.
E. PAVED SURFACES WITHIN USABLE PUBLIC SPACES SHALL BE COMPRISED OF STAMPED CONCRETE, TILE OR OTHER DECORATIVE PAVING SURFACES. ASPHALT SHALL BE PROHIBITED AS A PAVING SURFACE WITHIN USABLE PUBLIC SPACES.
F. ANY PORTION OF A PARKING LEVEL WHICH EXCEEDS GRADE SHALL BE SCREENED FROM THE VIEW OF THE PUBLIC RIGHT-OF-WAY BY LANDSCAPE FEATURES INCLUDING TREES, SHRUBBERY, PLANTER BOXES OR BERMS, NONE OF WHICH SHALL BE SHORTER THAN THREE (3) FEET IN HEIGHT. ANY PLANTER BOX OR BERM SHALL NOT BE CONSIDERED IN CALCULATING ADDITIONAL HEIGHT OF A STRUCTURE.

LANDSCAPING
G. ALL SURFACE PARKING AREAS SHALL INCLUDE A PEDESTRIAN WALKWAY FROM THE PRIMARY STRUCTURE SERVED BY THE PARKING AREA UP TO A DISTANCE MEASURING 50 STRAIGHTLINE FEET. THE PEDESTRIAN WALKWAY SHALL BE PAVED WITH STAMPED CONCRETE OR ANOTHER DECROATIVE SURFACE IN KEEPING WITH THE ARCHITECTURAL STYLE OF THE SURROUNDING STRUCTURES.
H. LANDSCAPE SETBACKS, WHERE REQUIRED, SHALL INCLUDE A 24-INCH BOX TREE FOR EVERY 20 FEET OF STREET FRONTAGE. TREES INSTALLED SHALL HAVE A MINIMUM CANOPY DIAMETER OF 20 FEET AT THE TIME OF MATURITY.
I. LANDSCAPE SETBACKS, WHERE REQUIRED, SHALL INCLUDE 90 PERCENT GROUND COVERING THROUGH THE USE OF TURF, GRASS, FLOWERING PLANTS AND SHRUBS.
J. STREET TREE TYPE SHALL MATCH THE PREVAILING STREET TREE OF THE STREET PROVIDED THAT IT IS AN ACCEPTABLE TREE SPECIES, TO THE SATISFACTION OF THE BUREAU OF URBAN FORESTRY.

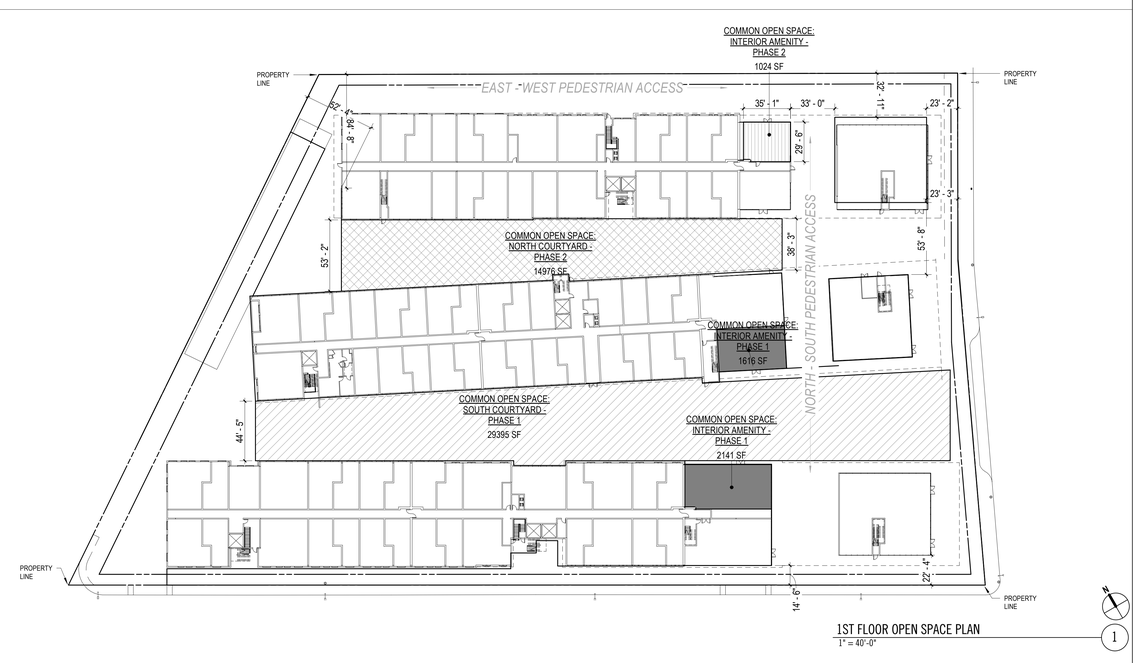
1" = 40'-0"
3



1ST FLOOR OPEN SPACE PLAN
1" = 40'-0"
1

PUBLICLY ACCESSIBLE OPEN SPACE AND PEDESTRIAN PATHS

PER Q CONDITION, A MINIMUM OF 30% OF THE SUBAREA SHALL BE DEVOTED TO PUBLICLY ACCESSIBLE OPEN SPACE AND PEDESTRIAN PATHS THAT SHALL BE ACCESSIBLE BEGINNING AT DAWN AND ENDING AT DUSK OR CLOSE OF ON-SITE BUSINESSES, WHICHEVER OCCURS LATER.

A MINIMUM OF 75% OF ALL USABLE OUTDOOR PUBLIC SPACE SHALL BE LOCATED AT GROUND LEVEL AND SHALL BE DIRECTLY ACCESSIBLE TO THE GENERAL PUBLIC FROM PASADENA AVENUE AND/OR AVENUE 34.

A MINIMUM OF 20 PERCENT OF EACH COURTYARD SHALL CONSIST OF PLANTED GROUND COVER, SHRUBS, TREES, WATER FEATURES OR PERMANENT PLANTER BOXES.

THERE SHALL BE AN EAST/WEST AND A NORTH/SOUTH PEDESTRIAN PATH THROUGH SUBAREA 4.

THE PATHS SHALL BE ALIGNED THROUGH THE MIDPOINT OF SUBAREA 4 AND CROSS EACH OTHER AT A PERPENDICULAR ANGLE.

THE REQUIRED PEDESTRIAN PATHS SHALL BE A MINIMUM OF 16FEET IN WIDTH AND MAY INCLUDE UP TO 2FEET OF LANDSCAPING ON EACH SIDE.

SITE AREA = 219,296 SF PER ZIMAS
REQ'D PUBLICLY ACCESSIBLE OPEN SPACE AND PEDESTRIAN PATHS = 219,296 SF x 0.30 = 65,789 SF

PUBLICLY OPEN SPACE PROVIDED	
Name	Area
PUBLICLY ACCESSIBLE OPEN SPACE	65789 SF
	65789 SF

REQUIRED OPEN SPACE

OPEN SPACE REQUIREMENTS PER LAMC 12.21 G:
- 100 SF/UNIT < 3 HABITABLE ROOMS (STUDIO & 1 BEDROOM UNITS)
- 125 SF/UNIT = 3 HABITABLE ROOMS (2 BEDROOM UNITS)
- 175 SF/UNIT > 3 HABITABLE ROOMS (3 BR UNITS)

NOTE:
1. A KITCHEN IS NOT CONSIDERED A HABITABLE ROOM FOR PURPOSES OF CALCULATING OPEN SPACE.

PERCENT OF LANDSCAPED OPEN SPACE
LANDSCAPED OPEN 50% = 24,575 SF

TREES -REQUIRED: 219 TREES
TREES PROVIDED: 219 TREES *(SEE LANDSCAPE DWGS.)*

PHASE 1 - REQUIRED OPEN SPACE
STUDIOS = 158 X 100 SF = 15,800 SF
1 BEDROOMS = 96 X 100 SF = 9,600 SF
2 BEDROOMS = 62 X 125 SF = 7,750 SF
TOTAL REQ'D = 33,150 SF

PHASE 2 - REQUIRED RESIDENTIAL PARKING
STUDIOS = 64 X 100 = 6,400 SF
1 BEDROOMS = 56 X 100 = 5,600 SF
2 BEDROOMS = 32 x 125 = 4,000 SF
TOTAL REQ'D PARKING = 16,000 SF

TOTAL REQUIRED RESIDENTIAL OPEN SPACE = 49,150 SF

PROPOSED OPEN SPACE

NAME	LEVEL	AREA (SF)
PHASE 1		
COMMON OPEN SPACE: INTERIOR AMENITY - PHASE 1	1ST FLOOR	3757
COMMON OPEN SPACE: SOUTH COURTYARD - PHASE 1	1ST FLOOR	29395
		33152
PHASE 2		
COMMON OPEN SPACE: INTERIOR AMENITY - PHASE 2	1ST FLOOR	1024

LOT 2 OF TRACT NO. 23801, IN THE CITY OF LOS ANGELES, COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 682, PAGES 49 AND 50 OF MAPS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.

POSSIBLE ENCROACHMENT NOTES

THIS IS A LISTING OF OBSERVED IMPROVEMENTS THAT CROSS PROPERTY LINES. STATEMENT OF OWNERSHIP OR POSSESSION IS NOT THE INTENT OF THIS LISTING.

1. BUILDING OVERHANG OVERLAPS INTO PASADENA AVENUE RIGHT-OF-WAY
2. BUILDING OVERLAPS INTO EASEMENTS 6, 7 & 8 PER TITLE REPORT.
3. CHAIN LINK FENCE AND IRON FENCE OVERLAPS INTO THE NORTHERLY PROPERTY (A.P.N. 5205-044-010)

ITEMS CORRESPONDING TO TABLE A ITEMS

– ITEM 14
THE NEAREST INTERSECTION STREET TO THE PROPERTY IS AVENUE THIRTY-FOUR AND PASADENA AVENUE AS SHOWN HEREON.

– ITEM 16
NO EVIDENCE OF RECENT EARTH MOVING WORK, BUILDING CONSTRUCTION OR BUILDING ADDITIONS OBSERVED IN THE PROCESS OF CONDUCTION THE FIELD WORK.

– ITEM 17
NO EVIDENCE OF RECENT STREET OR SIDEWALK CONSTRUCTION OR REPAIRS OBSERVED IN THE PROCESS OF CONDUCTING THE FIELD WORK.

– ITEM 18
NO EVIDENCE OF WETLANDS ON THE SUBJECT PROPERTY. NO DELINEATION MARKERS OF WETLANDS WERE OBSERVED IN THE PROCESS OF CONDUCTIONG THE FIELD WORK.

SURVEYOR'S NOTES

– THE UTILITIES SHOWN HEREON ARE BASED ON OBSERVED EVIDENCE ONLY. THIS SURVEY WOULD NOT SHOW UTILITIES COVERED BY CARS/TRUCKS OR RECENTLY PAVED ASPHALT/CONCRETE OR OVERGROWN BRUSH, TREES AND SHRUBS.

– THIS SURVEY HAS BEEN PREPARED FOR TITLE INSURANCE PURPOSES ONLY. THIS SURVEY DOES NOT CONTAIN SUFFICIENT DETAIL FOR DESIGN PURPOSES. THE BOUNDARY DATA AND TITLE MATTERS AS SHOWN HEREON HAVE BEEN DEVELOPED FROM THE REFERENCED TITLE REPORT.

– UNLESS THIS PLAN HAS THE SEAL AND SIGNATURE OF THE SURVEYOR AND/OR ENGINEER RESPONSIBLE FOR ITS PREPARATION, THIS IS NOT AN AUTHENTIC COPY OF THE ORIGINAL SURVEY AND SHALL NOT BE DEEMED RELIABLE.

SURVEYOR'S CERTIFICATE

TO ED 1125, LLC, A CALIFORNIA LIMITED LIABILITY COMPANY AND FIDELITY NATIONAL TITLE COMPANY:

THIS IS TO CERTIFY THAT THIS MAP OR PLAT AND THE SURVEY ON WHICH IT IS BASED WERE MADE IN ACCORDANCE WITH THE 2016 MINIMUM STANDARD DETAIL REQUIREMENTS FOR ALTA/NSPS LAND TITLE SURVEYS, JOINTLY ESTABLISHED AND ADOPTED BY ALTA AND NSPS, AND INCLUDES ITEMS 2, 3, 4, 6(a), 7(a), 7(b)(1), 7(c), 8, 9, 10(a), 11, 13, 14, 16 AND 17 OF TABLE A THEREOF. THE FIELD WORK WAS COMPLETED ON JULY 15, 2019

DATE OF PLAT OR MAP: JULY 24, 2019

Q-CONDITIONS

BUILDING DESIGN

a.) A break in the building wall along Figueroa Street or Pasadena Avenue shall only be permitted when vehicular access cannot be obtained from side streets or private alleyways, as determined by LADOT. The break in the wall, when permitted, shall not exceed a distance of the linear feet required for driveways and other vehicular access. When vehicular access must be taken from the primary street, the driveway entry gate shall be recessed from the sidewalk by a minimum of 20 feet.
b. All ground floor storefronts in new buildings that are greater than 30 feet in length shall provide architectural features on the building façade that will help to create a pattern along the street frontage and avoid the presence of a monotonous façade through the use of vertical elements, such as columns, placed in a pattern, or recesses in the façade, at minimum intervals of 20 feet.
c. All facades on new buildings shall be designed with articulation that provides relief for every 20 horizontal feet and 15 vertical feet.
d. The front elevation of all new structures shall be stepped back a minimum of five (5) feet from the front property line at the third story and again at the fifth story.
e. Wall openings, such as windows and doors, shall occupy at least 70 percent of the ground floor street façade along Pasadena Avenue and Figueroa Street.
f. Storefront windows shall be a minimum of 18 vertical inches and a maximum of 36 vertical inches from sidewalk grade.

ARCHITECTURAL DETAILS

a. Articulation and architectural detail shall be applied equally on all building elevations.
b. All balconies shall be flush with the exterior wall and made of an opaque materials for the first four feet.
c. All balconies shall be of a usable dimension, a minimum of six feet wide.
d. Building entrances shall meet the following criteria:
(i) All projects shall provide a prominent residential entry that is accessible from the public right-of-way abutting the front yard; and
(ii) Each commercial premise shall provide a front door that is accessible from the public right-of-way abutting the front yard.
e. All buildings shall provide security lighting for pedestrians on the ground floor of building facades fronting public rights-of-way.
f. Windows shall allow a minimum of gO-percent light transmission. Nonreflective glass shall be used to allow maximum visibility from the sidewalk areas into the interior of all commercial uses.
g. Storefront windows shall be recessed at least 3 inches from the front plane of the building.
h. Where awnings and canopies are used on storefronts greater than 25 feet in length, one awning or canopy shall be provided for each structural bay where such bays exist.
i. Awnings and canopies shall project a maximum of 36-inches into the sidewalk.
j. Awnings and canopies shall be attached to the building, without support poles on the sidewalk.
k. All rooflines that exceed 40 linear feet shall provide some kind of relief either through the application of a gable, dormer, change of material or other type of articulation.

WALLS AND FENCES

a. Exterior walls shall be treated with graffiti resistant-surfaces. Such treatment may include specialized coatings and the installation of vegetation.
b. All free-standing walls shall provide a break in plane, or a change in material, or an opening in the surface of the wall at minimum every 20 feet in horizontal length, or by an articulation or architectural detail such as a staggered wall, an indentation, patterned block or a symmetrical spacing of columns at minimum every 20 feet.
c. Free-standing walls or fences shall not use barbed wire or razor wire to adorn the tops of walls within view of the public right-of-way.
d. Walls or fences in the front yard shall not exceed 42 inches in height, as measured from the lowest adjacent grade, and shall be constructed of transparent decorative materials that are integrated into the design and architecture of the building.
e. Where taller walls or fences, up to a maximum of 6 feet in height, are required for security reasons, the fence or wall shall be located inside the setback landscape buffer, integrated into the architecture of the building and screened by landscaping or otherwise designed to be obscured from view from the public way. This condition applies to walls or fences in side or rear yards only.

MECHANICAL, SECURITY, & TRASH EQUIPMENT

a. All service areas and loading docks shall be located at the rear of structures.
b. All exterior rooftop and ground level mechanical equipment, including HV AC equipment, exhaust fans and satellite dishes shall be screened from public view.
c. All service areas shall be enclosed or completely screened from public view. Enclosures shall consist of fencing, walls, or landscaping.
d. Exterior security grills or permanently affixed security bars shall be prohibited.
e. Interior security grils shall be retractable and shall recess completely into pockets that completely conceal the grill when it is retracted. Such pockets shall be integrated into the design ot the building.
f. Roll-down security grills that conceal storefront windows shall be prohibited.

ENVIRONMENTAL CONDITIONS

1. Aesthetics (Landscaping)
All open areas not used for buildings, driveways, parking areas, recreational facilities or walks shall be attractively landscaped and maintained in accordance with a landscape plan, including an automatic irrigation plan, prepared by a licensed landscape architect to the satisfaction of the Planning Department.

2. Aesthetics (Surface Parking)
A minimum of one 24-inch box tree (minimum trunk diameter of two inches and a height of eight feet at the time of planting) shall be planted for every four new surface parking spaces. The trees shall be dispersed within the parking area so as to shade the surface parking area and shall be protected by a minimum 6-inch high curb and landscape. An automatic irrigation plan shall be approved by the City Planning Department.

3. Aesthetics (Graffiti)
The owners shall maintain the subject property clean and free of debris and rubbish and to promptly remove any graffiti from the walls, pursuant to Municipal Code Sections 91.8101-F, 91.8904-1 and 91.1707-E. Exterior walls of new commercial and residential buildings of other than glass may be covered with clinging vines, screened by oleander trees or similar vegetation capable of covering or screening entire walls up to heights of at least 9-feet, excluding windows and signs or the walls may be covered with graffti proof coatings.

4. Aesthetics (Signage)
On-site signs are limited to the maximum allowable under the Municipal Code. Multiple temporary signs in the store windows and along the building walls shall be prohibited.

ENVIRONMENTAL CONDITIONS (CONTINUED)

5. Aesthetics (Light)
Outdoor lighting shall be designed and installed with shielding so that the light source cannot be seen from adjacent residential properties.

6. Aesthetics (Glare)
The exterior of the proposed building shall be constructed of materials such as high-performance tinted non-reflective glass and pre-cast concrete or fabricated wall surfaces.

I. INTRODUCTION

A. BACKGROUND

The purpose of this document is to evaluate whether a modified design ("Modified Project") to a mixed-use project on a 5.03-acre infill property at 141 W. Avenue 34 would result in new significant environmental effects or a substantial increase in the severity of previously identified significant effects in comparison to the impacts of a previously approved, original version of the mixed-use project ("Original Project") for which a Mitigated Negative Declaration ("MND") was previously adopted in Case ENV-2016-273-MND. The subject property is located on the northwestern corner of the intersection of West Avenue 34 and Pasadena Avenue in the Northeast Los Angeles Community Plan Area of the City of Los Angeles ("City"), and is currently developed with light industrial and warehouse facilities and associated parking lots. The existing structures and other improvements would be replaced with new multi-family residential and commercial buildings with implementation of either the Original Project or the Modified Project. The Modified Project would primarily differ from the Original Project in the number of residential units and commercial office space provided, as well as including a revised site plan design.

This addendum will address the proposed Modified Project's potential environmental impacts in relation to the Original Project for which the MND was adopted in 2017, pursuant to the California Environmental Quality Act[1] ("CEQA"). Based on this evaluation, an addendum to the prior MND ("Addendum") is warranted, as discussed further below.

B. CEQA AUTHORITY FOR THE ADDENDUM

CEQA and the CEQA Guidelines,[2] establish the type of environmental documentation that is required when changes to a project occur or new information arises after a Negative Declaration is adopted. CEQA Guidelines Section 15164 defines the appropriate use of Addendums and CEQA Guidelines Section 15162 establishes criteria for determining whether more detailed information such as the preparation of subsequent Environmental Impact Reports ("EIRs") and Negative Declarations is needed.

Section 15164(b) states that:

> "An addendum to an adopted negative declaration may be prepared if only minor technical changes or additions are necessary or none of the conditions described in Section 15162 calling for preparation of a subsequent EIR or negative declaration have occurred."

Section 15162 of the CEQA Guidelines establishes that when an MND has been adopted for a project, no subsequent MND or EIR must be prepared unless the lead agency determines, on the basis of substantial evidence in light of the whole record, one or more of the following:

1. Substantial changes are proposed in the project which will require major revisions of the previous negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects;
2. Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the previous negative declaration due to the involvement of

[1] California Public Resources Code, Division 13. Environmental Quality, Section 21000 et seq., California Environmental Quality Act (CEQA).

[2] California Code of Regulations, Title 14, Guidelines for the Implementation of the California Environmental Quality Act, Section 15000 et seq., (State CEQA Guidelines).

new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or

3. New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous negative declaration was adopted, shows any of the following:
    a. The project will have one or more significant effects not discussed in the previous negative declaration;
    b. Significant effects previously examined will be substantially more severe than shown in the previous negative declaration;
    c. Mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or
    d. Mitigation measures or alternatives, which are considerably different from those analyzed in the previous negative declaration would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative.

As demonstrated by the analysis herein, none of the conditions above were found. No substantial changes have occurred with respect to the circumstances under which the project is undertaken. The proposed project site remains without significant changes since analysis of the MND. The impacts associated with the Modified Project would not result in any new significant environmental effects or a substantial increase in the severity of previously identified significant effects as compared to those of the Original Project. All potentially significant impacts would be mitigated to a level of insignificance with implementation of the mitigation measures specified in the MND, as modified, where required, in this Addendum. The mitigation measures in the previous MND would apply, with only minor technical modifications and clarifications to reflect codes, regulations and policies applicable to the Modified Project. For consistency with the previously-adopted MND, this evaluation will be organized using the same format and section numbering of the Initial Study Checklist used in the MND. Consistent with CEQA Guidelines Sections 15162 and 15164, only minor revisions to the MND analysis are required.

C. ADDENDUM CONTENT

The Addendum consists of this Introduction and the following additional sections:

II. Project Description: This section provides a description of the Original Project, the Modified Project, and a summary comparison of the differences, as well as a list of required approvals.

III. Addendum Analysis: This section addresses:

- **Environmental Setting/Existing Conditions -** Establishes that no changed circumstances of onsite conditions exist that would require the preparation of a subsequent or supplemental CEQA document.
- **Environmental Impact Analysis –** For each environmental Checklist topic the following is provided:
    - Original Project Analysis: Summarizes the evaluation and significance conclusions of the Original Project.
    - Modified Project Analysis: Identifies the effect of the Modified Project on the physical

environment.

- Comparison and Conclusion: Compares the Modified Project's impacts to those of the Original Project and provides conclusions establishing that an Addendum is the appropriate CEQA document pursuant to Sections 15164 and 15162 of the CEQA Guidelines. Specifically, a finding that the Modified Project would not result in new significant environmental effects or a substantial increase in the severity of a previously identified significant effect as compared to the MND.

- **Addendum Conclusion** - Summarizes the findings of this Addendum.

II. PROJECT DESCRIPTION

A. PREVIOUSLY APPROVED PROJECT

The Department of City Planning issued an MND (Case No. ENV-2016-273-MND) in 2017 for a proposed mixed-use development on a 5.03-acre property located at 123-167 West Avenue 34, and 3401-3437 North Pasadena Avenue, Los Angeles, CA, 90031, in the Northeast Los Angeles Community Plan area. The project site (the "Project Site") encompasses lots associated with Assessor Parcel Numbers ("APNs") 5205-004-003; -005; -007; and -011. The Project Site is located in a Transit Priority Area pursuant to ZI-2452, and is located in a Transit Oriented Community ("TOC") Tier 3 area. A regional and vicinity map showing the Project Site is shown in **Figure 1, Regional Location Map**. The property is fully developed with existing structures and paving as shown in **Figure 2, Site Location and Existing Development**. The Project Site's General Plan land use designation is for Commercial Manufacturing, which allows for development of multi-family residential uses, as well as limited retail and office space, and the zoning is [T][Q]CM-2D.

The zoning designation includes a permanent "Q" Qualified Classification (denoted as [Q]), which indicates development of the Project Site is subject to applicable limitations imposed upon the use of property pursuant to Ordinance 179,280. The stated intent of Ordinance 179,280 is to change the zones and height districts of numerous properties in order to promote mixed-use development in close proximity to a transit station. The Project Site is located within Subarea 4 of the Northeast Los Angeles Community Plan Ordinance Maps associated with Ordinance 179,280, and thus development of the Project Site would be subject to [Q] conditions applicable to that subarea.

The applicable [Q] conditions include Design Conditions that relate to site planning, pedestrian access, building design, architectural details, walls and fences, landscaping, and mechanical, security and trash equipment. The Project Site's [Q] Conditions also impose site-specific Environmental Conditions that specify Regulatory Compliance Measures that projects in the area are required to implement to reduce potential environmental impacts associated with aesthetics, air quality, geologic conditions, asbestos removal, stormwater runoff, noise, public services, utilities, and transportation.

On August 22, 2017, the City issued a decision (Case No. ZA-2016-272-ZAA-SPR-CLQ) approving a Zoning Administrator's Adjustment, Site Plan Review, and Q Clarification for the proposed development evaluated within the MND (Case No.ENV-2016-273-MND). The MND evaluated the re-development of the in-fill site by removing the majority of existing warehouse and light industrial buildings and constructing a mixed-use development consisting of 372 residential units, and a total of 40,000 square feet of commercial floor area (30,000 square feet of creative office, and 10,000 square feet of retail). The Original Project would include 31 units as Very Low Income housing to qualify for a ministerial density bonus. The Original Project included a total of five buildings ranging in height from one to five stories with a maximum height of 75 feet, and included a total of approximately 534,600 square feet of floor area. The development as evaluated in the MND included 467 parking spaces that would be primarily located within a single level basement garage level that would cover nearly the entirety of the Project Site. The Original Project would require the export of an estimated 98,000 cubic yards ("cy") of soil during grading activities. Portions of two existing buildings on the Project Site would be incorporated into the new structures as part of the Original Project. As discussed further below, the MND identified applicable [Q] Conditions applicable to any project developed at the Project Site that would reduce potential environmental impacts.

B. MODIFIED PROJECT

The currently proposed Modified Project would redevelop the same property by removing all existing structures and constructing a mixed-use development with 468 multi-family residential units, and 16,395 square feet of ground-level commercial space that would be located along Pasadena Avenue. The 468 residential units would include 66 units reserved for covenanted affordable housing at the Very Low Income level. The Modified Project would consist of three structures with a total of approximately 519,829 square feet of floor area, including the proposed commercial space. A site plan for the proposed Modified Project is shown in **Figure 3, Site Plan**, which also includes an inset of the previously approved site plan for comparison. Site sections for the Modified Project are provided in **Figure 4, Modified Project Site Sections**. Two of the structures would be four stories, and one structure would be five stories, with a maximum height of approximately 75 feet above the lowest point of the existing grade. Pursuant to a transitional height limitation for structures within 199 feet of an Open Space (OS) zone, the western end of the five-story structure would be limited to a four-story height not to exceed 61 feet, where the building would be within the specified distance from an off-site OS zone located northwest of the Project Site. The portion of the Project Site subject to the transitional height requirement is depicted in Figure 3.

A total of 401 vehicle parking spaces would be provided within two basement levels of subterranean garages that would be constructed beneath the western and central portions of the Project Site, covering approximately half of the Project Site. Additionally, a total of 200 long-term bicycle parking spaces (192 for residents, and eight for the commercial use) would be provided, as well as a total of 28 short-term bicycle parking spaces for both the residential and commercial uses. A paseo would be provided between the residential and commercial uses on the ground level of the three structures to allow north-south pedestrian movement across the Project Site. The parking garage entrance would be at the western end of the property and would be accessed via a driveway accessible from Avenue 34 near the intersection with Artesian Street. A total of approximately 91,000 cy of excavated soil would be exported during grading. The zoning for the Project Site would require that the Modified Project comply with applicable limitations and conditions for development of the property pursuant to Ordinance 179,280, including [Q] Conditions that impose site-specific Environmental Conditions that specify Regulatory Compliance Measures to be implemented.

C. COMPARISON TO THE ORIGINAL PROJECT

The proposed Modified Project is similar to the Original Project in that they both would redevelop the same property by removing existing structures and constructing a mixed-use development with multi-family and commercial uses, although the Modified Project would remove all existing structures. The proposed Modified Project would consist of three structures rather than five, and would have a maximum height of approximately 75 feet at the top of pitch above the lowest point of the existing grade, the same height as the as previously evaluated in the MND. The number of residential apartment units would be increased from 372 to 468 units, and the number of Very Low Income affordable units would be increased from 31 to 66 units. The amount of commercial space would be reduced from 40,000 square feet (30,000 square feet creative office and 10,000 square feet retail), to 16,395 square feet retail space. The Modified Project would include approximately 66 fewer parking spaces than the Original Project, pursuant to applicable requirements, and would confine the two basement parking levels to the western and central portions of the Project Site, while the Original Project's single-level subterranean garage would extend across the majority of the Project Site. The Modified Project grading would require export of approximately 7,000 cy less soil than the Original Project. **Table II-1, Project Comparison Table**, provides a summary comparison of key features of the Original Project and the Modified Project.

Table II-1
Project Comparison Table

Project Components	Previously Approved Project	Modified Project
Residential Units	372 units	468 units
Affordable Units [a]	31 units (Very Low Income)	66 units (Very Low Income)
Commercial – Office	30,000 sf	0
Commercial – Retail	10,000 sf	16,395 sf
Total Floor Area	524,600 sf	519,829 sf
Maximum Height	5 stories (75 feet)	5 stories (75 feet)
Parking	467 spaces	401 spaces
Garage Levels	1 Full Level	2 Half Levels
Grading Export	98,000 cy	91,000 cy
[a] Affordable units are included in the Residential Units count.		

D. REQUIRED APPROVALS

This Addendum may be utilized for all proposed project approvals, which include:

- Site Plan Review, for the construction of 50 or more new dwelling units;
- Grading, excavation, foundation, and associated building permits; and
- Other discretionary and ministerial permits and approvals that may be deemed necessary.

III. ENVIRONMENTAL EVALUATION OF IMPACTS

A. ENVIRONMENTAL SETTING / EXISTING CONDITIONS

The environmental setting and existing conditions within the Project Site remain the same as that evaluated for the MND. No significant changes have occurred regarding the existing conditions under which the project would be implemented. The Project Site consists of approximately 5.03 acres that is fully developed with four light manufacturing and warehouse buildings with paved surface loading areas and parking. The existing structures on the Project Site consist of an 86,712 square-foot warehouse building, a 4,033 square-foot metal building, and portions of a 24,018 square-foot building and 3,521 square-foot building. Adjacent land uses consist of multi-family and single-family residences, commercial uses, a vacant lot, and a light rail right-of-way. **Figures 5A and 5B, Site Photos,** show existing conditions photos of the Project Site and adjacent land uses. A photo location map inset is included in Figure 5B. The photos shown in Figure 5A and 5B depict existing conditions as viewed from similar locations as those shown in the MND, which show little if any noticeable change in the existing conditions within the Project Site or in the surrounding vicinity. As described in the analysis herein, there are no substantial changes in setting or conditions that would result in changed circumstances or new information that would result in new significant environmental effects or a substantial increase in the severity of previously identified significant effects.

B. ENVIRONMENTAL IMPACT ANALYSIS

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
I. AESTHETICS.				
a. Would the project have a substantial adverse effect on a scenic vista?	☐	☐	☒	☐
b. Would the project substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings, or other locally recognized desirable aesthetic natural feature within a city-designated scenic highway?	☐	☐	☒	☐
c. Would the project substantially degrade the existing visual character or quality of the site and its surroundings?	☐	☐	☒	☐
d. Would the project create a new source of substantial light or glare, which would adversely affect day or nighttime views in the area?	☐	☐	☒	☐

Impact Analysis

a. Less Than Significant Impact.

Original Project Analysis: The MND notes that, pursuant to Senate Bill 743 (SB 743), "aesthetic and parking impacts of a residential, mixed-use residential, or employment center project on an infill site within a transit priority area shall not be considered significant impacts on the environment." As the Original Project is a mixed-use residential project and is located on an infill site within a Transit Priority Area as defined by CEQA and the Department of City Planning's Zoning Information File ZI No. 2452, the MND stated that aesthetic impacts of the Original Project would be less than significant.

Modified Project Analysis: The currently proposed Modified Project also consists of a mixed-use residential project, and the Project Site continues to be an infill site within a Transit Priority Area as defined by CEQA and the Department of City Planning's Zoning Information File ZI No. 2452. Therefore, the Modified Project's aesthetic impacts would be less than significant.

Comparison and Addendum Conclusion: The Original Project and the Modified Project both consist of mixed-use residential developments within a Transit Priority Area as defined by CEQA and the Department of City Planning's Zoning Information File ZI No. 2452. As such, aesthetic impacts for either would not be considered significant impacts on the environment, and the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project , as both would be less than significant.

b. Less Than Significant Impact.

Original Project Analysis: The MND notes that pursuant to SB 743, "aesthetic and parking impacts of a residential, mixed-use residential, or employment center project on an infill site within a transit priority area shall not be considered significant impacts on the environment." As the previously proposed project is

a mixed-use residential project and is located on an infill site within a Transit Priority Area as defined by CEQA and the Department of City Planning's Zoning Information File ZI No. 2452, the MND stated that aesthetic impacts of the Original Project would be less than significant.

Modified Project Analysis: The Modified Project also consists of a mixed-use residential project, and the Project Site is an infill site within a Transit Priority Area as defined by CEQA and the Department of City Planning's Zoning Information File ZI No. 2452. Therefore, the Modified Project's aesthetic impacts would be less than significant. In addition, in light of the fact that SB 743 does not apply to cultural and historic resources, the Modified Project's aesthetic impacts to cultural or historic resources would also be less than significant, with mitigation as to cultural resources, as described further below under Cultural Resources. As also set forth in the Cultural Resources analysis below, the Project Site does not contain any built historic resources, and as a result the Project, which consists of three mid-rise buildings and ample open space, would not result in any direct or indirect aesthetic impacts on any historic resources.

Comparison and Addendum Conclusion: The Original Project and the Modified Project both consist of mixed-use residential developments within a Transit Priority Area as defined by CEQA and the Department of City Planning's Zoning Information File ZI No. 2452. As such, aesthetic impacts for either would not be considered significant impacts on the environment, and the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project, including less than significant impacts with respect to cultural and historic resources, as both would be less than significant.

c. Less Than Significant Impact.

Original Project Analysis: The MND notes that pursuant to SB 743, "aesthetic and parking impacts of a residential, mixed-use residential, or employment center project on an infill site within a transit priority area shall not be considered significant impacts on the environment." As the previously proposed project is a mixed-use residential project and is located on an infill site within a Transit Priority Area as defined by CEQA and the Department of City Planning's Zoning Information File ZI No. 2452, the MND stated that aesthetic impacts of the Original Project would be less than significant.

Modified Project Analysis: The currently proposed Modified Project also consists of a mixed-use residential project, and the Project Site is located on an infill site within a Transit Priority Area as defined by CEQA and the Department of City Planning's Zoning Information File ZI No. 2452. Therefore, the Modified Project's aesthetic impacts would be less than significant.

Comparison and Addendum Conclusion: The Original Project and the Modified Project both consist of mixed-use residential developments within a Transit Priority Area as defined by CEQA and the Department of City Planning's Zoning Information File ZI No. 2452. As such, aesthetic impacts for either would not be considered significant impacts on the environment, and the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project, as both would be less than significant.

d. Less Than Significant Impact.

Original Project Analysis: The MND notes that pursuant to SB 743, "aesthetic and parking impacts of a residential, mixed-use residential, or employment center project on an infill site within a transit priority area shall not be considered significant impacts on the environment." As the Original Project is a mixed-use residential project and is located on an infill site within a Transit Priority Area as defined by CEQA and

the Department of City Planning's Zoning Information File ZI No. 2452, the MND stated that aesthetic impacts of the previously proposed project would be less than significant.

Modified Project Analysis: The currently proposed Modified Project also consists of a mixed-use residential project, and the Project Site is located on an infill site within a Transit Priority Area as defined by CEQA and the Department of City Planning's Zoning Information File ZI No. 2452. Therefore, the Modified Project's aesthetic impacts would be less than significant.

Comparison and Addendum Conclusion: The Original Project and the Modified Project both consist of mixed-use residential developments within a Transit Priority Area as defined by CEQA and the Department of City Planning's Zoning Information File ZI No. 2452. As such, aesthetic impacts for either would not be considered significant impacts on the environment, and the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project, as both would be less than significant.

Cumulative Impacts

Pursuant to SB 743, "aesthetic and parking impacts of a residential, mixed-use residential, or employment center project on an infill site within a transit priority area shall not be considered significant impacts on the environment." As the Original Project is a mixed-use residential project and is located on an infill site within a Transit Priority Area as defined by CEQA and the Department of City Planning's Zoning Information File ZI No. 2452 the Modified Project would not result in a significant cumulative impact on aesthetics as its individual contribution to any such impact is nonsignificant as a matter of law. Moreover, aesthetic impacts to cultural and historic resources tend to be site and project-specific impacts, and here the Project would not contribute incrementally to any cumulatively significant impacts to cultural and historic resources. Accordingly, the Project would not, in addition to other related projects, result in significant cumulative aesthetic impacts.

		Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
II.	**AGRICULTURE AND FORESTRY RESOURCES**.				
a.	Would the project convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☐	☒
b.	Would the project conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☐	☒
c.	Would the project conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	☐	☐	☐	☒
d.	Would the project result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	☒
e.	Would the project involve other changes in the existing environment, which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use?	☐	☐	☐	☒

Impact Analysis

a-e. No Impact.

Original Project Analysis: The Project Site is located within a developed area in the City. According to the California Natural Resources Agency, Department of Conservation, Division of Land Resource Protection, Farmland Mapping and Monitoring Program (FMMP), the Project Site is not located within an area containing Prime Farmland, Unique Farmland, or other Farmland of Statewide Importance.[3] The Project Site is not zoned for agricultural production and no Williamson Act Contracts[4] are in effect for the Project Site. The Project Site is not located within forested lands. As such, the Original Project would have no impact on agricultural or forestry resources.

Modified Project Analysis: The Modified Project is also located in the same fully developed area of the City as the Modified Project. The Modified Project is thus also not located within an area containing Prime Farmland, Unique Farmland, or other Farmland of Statewide Importance, is not zoned for agricultural

[3] California Natural Resources Agency. 2016. Department of Conservation, Division of Land Resource Protection, Farmland Mapping and Monitoring Program. Los Angeles County Important Farmland.

[4] California Department of Conservation. 2017. State of California Williamson Act Contract Land.

production and no Williamson Act Contracts are in effect. Therefore, the Modified Project would have no impact on agricultural resources.

Comparison and Addendum Conclusion: The Original Project and the Modified Project would both redevelop the same property by removing existing structures and constructing a mixed-use development with multi-family and commercial uses. Neither contain Prime Farmland, Unique Farmland, or other Farmland of Statewide Importance, are not zoned for agricultural production and no Williamson Act Contracts are in effect. As such, neither the Original Project nor the Modified Project would have a substantial impact pertaining to agricultural or forestry resources, and the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project, as both would have no impact.

Cumulative Impacts

As stated in the MND, development of the Original Project would not result in a cumulative environmental impact with respect to agriculture and forestry resources. As the Modified Project proposes a similar mixed-use development on the same urban infill property, and would not result in a greater or different impact with respect to agricultural and forestry resources, the Modified Project would not result in a significant cumulative impact on agricultural and forestry resources.

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
III. AIR QUALITY.				
Would the project result in:				
a. Conflict with or obstruct implementation of the applicable air quality plan?	☐	☐	☒	☐
b. Violate any air quality standard or contribute substantially to an existing or projected air quality violation?	☐	☐	☒	☐
c. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?	☐	☐	☒	☐
d. Expose sensitive receptors to substantial pollutant concentrations?	☐	☐	☒	☐
e. Create objectionable odors affecting a substantial number of people?	☐	☐	☒	☐

Impact Analysis

a. Less Than Significant Impact.

Original Project Analysis: The MND determines that redevelopment of the Project Site with a mixed-use development with multi-family residential and commercial uses would not conflict with or obstruct implementation of the South Coast Air Quality Management District ("SCAQMD") 2012 Air Quality Management Plan ("AQMP") because the Original Project would be consistent with the growth projections and regional land use planning policies of the 2016-2040 Regional Transportation Plan/ Sustainable Communities Strategy ("RTP/SCS"), and impacts would be less than significant.

Modified Project Analysis: The Modified Project would redevelop the same property, replacing the existing commercial, light industrial, and warehouse uses, with a mixed-use development of residential and commercial uses. The currently applicable AQMP is the 2016 AQMP. As stated in the MND, projects that are consistent with the growth forecast projections of employment and population forecasts identified in the Southern California Association of Government's ("SCAG's") recently adopted 2016-2040 RTP/SCS are considered consistent with the AQMP, since the growth projections contained in the RTP/SCS form the basis of the land use and transportation control portions of the AQMP. As discussed in Section XIII(a), Population and Housing, the population generated by the Modified Project and the employees generated would be consistent with the anticipated increase of population and jobs within the City between 2012 and 2040. Additionally, the Project Site is located within approximately 0.25 miles from a light rail public transit station, and within approximately 300 feet of existing Metro bus stops along Pasadena Avenue, and therefore, the Modified Project would concentrate residential and commercial uses within a Transit Priority Area as defined by CEQA Sections 21099 and 21064.3. As the Modified Project would be consistent with

the growth projections and regional land use planning policies of the RTP/SCS, the Modified Project would not conflict with or obstruct implementation of the 2016 AQMP, and impacts would be less than significant.

Comparison and Addendum Conclusion: The Original Project and the Modified Project would both result in construction and operation of a mixed-use development as an infill project within a Transit Priority Area, replacing existing light industrial and warehouse uses. The MND determines redevelopment of the Project Site with a mixed-use development consistent with growth projections of the RTP/SCS would have a less than significant impact regarding implementation of the applicable air quality plan. For the reasons discussed above, the Modified Project would result in no new significant effects regarding the potential to conflict with the AQMP, and no substantial increase in the severity of previously identified significant effects as compared to the MND.

b. Less Than Significant Impact.

Original Project Analysis: The Original Project's estimated maximum daily emissions of criteria pollutants were quantified utilizing the California Emissions Estimator Model ("CalEEMod") Version 2016.3.1.[5]

The quantified emissions during construction assumed a total duration of approximately 34 months for buildout, and included an estimated soil export hauling quantity of 98,000 cy of soil during grading. The emissions quantification also assumed required compliance with SCAQMD Rule 403 Dust

Suppression, and also Rule 1113 Architectural Coatings, which limits the content of volatile organic compounds ("VOC") within architectural coatings. Construction emissions were determined to not exceed the significance thresholds of the SCAQMD.

The operational emissions of the Original Project were also determined to not exceed the SCAQMD significance thresholds. The MND also provided a quantification of the existing uses operational emissions, which were subtracted from the Original Project's emissions to determine a net difference. The net difference in emissions was thus even farther below significance thresholds, and no mitigation measures were required.

Modified Project Analysis: A project may have a significant impact if project-related emissions exceed any federal, State, or regional standards or thresholds of significance, or if project-related emissions substantially contribute to an existing or projected air quality violation. Emissions of the Modified Project were quantified using CalEEMod, a Statewide land use emissions computer model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify potential criteria pollutant emissions associated with both construction and operations from a variety of land use projects. The model quantifies direct emissions from construction and operation activities (including vehicle use), as well as indirect emissions, such as from energy use, solid waste disposal, vegetation planting and/or removal, and water use. The model was developed for the California Air Pollution Officers Association ("CAPCOA") in collaboration with the California Air Districts.

The SCAQMD has designated significant emissions levels of criteria pollutants for evaluating whether a project's emissions could result in significant regional air quality impacts. Projects with daily emissions that exceed the thresholds shown in **Table III-1, SCAQMD CEQA Daily Emissions Thresholds in Pounds per Day (1lb/day)**, are recommended by the SCAQMD to be considered significant under CEQA.

[5] The most current version of CalEEMod is Version 2016.3.2, which was used to model the Modified Project's emissions.

Construction Emissions

The Modified Project's estimated construction emissions were modeled using CalEEMod Version 2016.3.2 to identify maximum daily emissions for each pollutant during project construction. The output reports from CalEEMod for the Modified Project are included as **Appendix B**. Construction emissions were modeled based on the size of the Project Site, the size of the existing structure to be removed (demolition), and the estimated soil excavation and export of 91,000 cy, as well as the proposed number of residential units, commercial space area, and number of parking spaces. A conceptual construction equipment fleet list and approximate duration of each construction phase is shown in **Table III-2, Conceptual Construction Equipment Fleet and Duration**. The construction phase durations used in the model may be shorter than actually required, which provides a conservative analysis, as longer durations would result in reducing the maximum daily emission rates on which the significance of impacts is based. The project's maximum daily construction emissions as calculated by CalEEMod, as well as the applicable SCAQMD thresholds, are listed in **Table III-3, Construction Activity Maximum Daily Emissions.**

All construction grading projects in the City must comply with the requirements of SCAQMD Rule 403, Fugitive Dust, which requires the implementation of Best Available Control Measures ("BACM") for all fugitive dust sources. SCAQMD Rule 403, Control Measure 08-2 states that during earth moving activities, projects are required to "[r]e-apply water as necessary to maintain soils in a damp condition and to ensure that visible emissions do not exceed 100 feet in any direction." Therefore, pursuant to SCAQMD Rule 403, the Modified Project would be required to implement adequate watering of exposed surfaces during grading. As seen in Table III-3, peak daily construction activity emissions of criteria air pollutants would not exceed SCAQMD standards for determining significance during construction, and therefore, would not violate air quality standards or contribute substantially to an existing or projected air quality violation. Therefore, construction period air quality impacts of the Modified Project would be less than significant.

Operational Emissions

During operations, the Modified Project would result in air quality emissions of criteria pollutants from area sources, energy sources, and mobile sources. The Modified Project's estimated operational emissions were modeled using CalEEMod Version 2016.3.2. The operational trip generation was adjusted in the CalEEMod model based on the Traffic Impact Analysis Update[6] dated June 18, 2019 (**Appendix E**). To determine the Modified Project's net change in emissions over existing conditions, the operational emissions from the existing uses, which were quantified in the MND, were subtracted from the daily

[6] Crain & Associates, Letter to Mr. Wes Pringle RE: Avenue 34 & Pasadena Mixed-Use Project Traffic Impact Analysis Update, June 18, 2019.

operational emissions for the Modified Project. The Modified Project output reports from CalEEMod are included as Appendix B.

[a] Required compliance with SCAQMD Rule 403, Fugitive Dust, would include wetting disturbed portions of the site at least twice daily for dust control.

The SCAQMD thresholds for air quality impacts from operations are shown above in Table III-1. As seen in **Table III-4**, **Operational Maximum Daily Emissions**. The Modified Project's maximum daily operational emissions of criteria air pollutants would not exceed SCAQMD standards for determining

significance, and therefore, would not violate air quality standards or contribute substantially to an existing or projected air quality violation. Additionally, the removal of existing light industrial and warehouse uses from the Project Site would result in an even lower net change in emissions associated with use of the subject site. Therefore, operational impacts would be less than significant.

[a] For a conservative evaluation, the Modified Project emissions as shown do not incorporate reductions associated with higher density development in an urbanized area, nearby transit access, or other efficiency requirements or features.

[b] Source: City of Los Angeles Department of City Planning, Initial Study Mitigated Negative Declaration Avenue 34 Project, February 13, 2017, Table III-2. (Appendix A)

Comparison and Addendum Conclusion: The MND evaluated redevelopment of the Project Site with a mixed-use development consisting of 372 residential units, 30,000 square feet of creative office space, and 10,000 square feet of commercial space. The Modified Project would redevelop the Project Site with a mixed-use development consisting of 468 residential units and 16,395 square feet of commercial space. As shown in the tables above, the Modified Project's maximum daily emissions of criteria pollutants during construction and operations would not exceed significance thresholds established by SCAQMD. The Original Project's construction and operations emissions would likewise not exceed the applicable significance thresholds, and would not substantially differ from the Modified Project's emissions. Emissions of criteria pollutants from either the Original Project and the Modified Project would be less than significant.

For the reasons discussed above, the Modified Project would result in no new significant effects and no substantial increase in the severity of previously identified significant effects as compared to the MND.

c. Less Than Significant Impact.

Original Project Analysis: The MND notes that the SCAQMD recommends that a project's potential contribution to cumulative impacts should be assessed utilizing the same significance criteria as those for analyzing project specific impacts. The MND also notes that the SCAQMD states that if an individual development project generates less than significant construction or operational emissions, then the development project would not generate a cumulatively considerable increase in emissions for those pollutants for which the South Coast Air Basin (the "Basin") is in non-attainment. As such, the MND concludes that development of the Previously Approved Project would not generate a cumulatively considerable increase in emissions of the pollutants for which the Basin is in non-attainment, and impacts would be less than significant.

Modified Project Analysis: The construction or operation of the Modified Project would not exceed the SCAQMD significance thresholds for criteria pollutants, as discussed in Section III(b). As development of the Modified Project's emissions would be less than significant during construction or operations, the Modified Project would not generate a cumulatively considerable increase in emissions for those criteria pollutants for which the Basin is in non-attainment, and impacts would be less than significant.

Comparison and Addendum Conclusion: The MND determines that the Previously Approved Project would not result in an impact regarding cumulative emissions of pollutants, since it would not exceed the applicable significance thresholds of the SCAQMD. Likewise, the Modified Project would not exceed the applicable significance thresholds for emissions of criteria pollutants.

For the reasons discussed above, the Modified Project would result in no new significant effects and no substantial increase in the severity of previously identified significant effects as compared to the Previously Approved Project.

d. Less Than Significant Impact.

Original Project Analysis: The MND determines that pollutant emissions during construction and operations of the Original Project would not exceed the SCAQMD Localized Significance Threshold ("LST") screening levels for sensitive receptors. Additionally, it was determined that the potential for Toxic Air Contaminant ("TAC") emissions during construction would be less than significant due to the limited duration of construction activities. Also, redevelopment of Project Site with residential, commercial, and office uses would result in fewer diesel truck trips during operations than the existing industrial and warehouse uses that would be removed.

Modified Project Analysis: Sensitive receptors are populations that are generally more susceptible to the effects of air pollution than the population at large. Land uses considered to be sensitive receptors include residences, long-term care facilities, schools, playgrounds, parks, hospitals, and outdoor athletic facilities. Project construction activities could potentially result in impacts on adjacent residences.

The LSTs were developed in response to the SCAQMD Governing Board's Environmental Justice Enhancement Initiative 1-4, using a methodology that was formally approved by SCAQMD's Mobile Source Committee in February 2005. LSTs are only applicable for certain criteria pollutants: oxides of nitrogen (NOx), carbon monoxide (CO), and particulate matter (PM-10 and PM-2.5), and are applicable for sensitive receptor land uses where it is possible that an individual could remain for 24 hours, such as a residence, hospital or convalescent facility. For the Modified Project, the primary source of possible LST impacts would be construction activities.

SCAQMD provides tables for determining LST impacts of development projects based on the site size and the distance to sensitive receptors from the project site being evaluated. The nearest sensitive receptors to the Project Site are residences and a school, which are located on the opposite side of adjacent roadways. Therefore, this analysis is based on the LST screening table's most stringent source-receptor distance of 25 meters.[7] As shown in **Table III-5**, **LST and Project Construction Emissions**, onsite daily construction emissions would not exceed LST thresholds and therefore impacts would be less than significant. The maximum on-site daily emissions shown in Table III-5 are the maximum generated by any of the construction phases.

Table III-5
LST and Project Emissions

LST 5.0 acre/25 meters Central Los Angeles	**Project Construction LST Emissions (pounds/day)**			
	NOx	**CO**	**PM-10**	**PM-2.5**
Max On-Site Daily Emissions [a]	44.3	28.0	7.7	5.0
LST Threshold	161	1,861	16	8
Significant Impact?	**No**	**No**	**No**	**No**

Source: CalEEMod2016.3.2 Avenue 34 Mixed-Use Modified Project Output, October 9, 2019. (Appendix B)
[a] Maximum on-site daily emissions of relevant pollutants during construction would be the same during summer and winter seasons.

Similar to the analysis of the MND, based on the limited duration of construction activities, and because the Modified Project would remove existing uses that generate diesel truck trips, and construct uses that would not generate substantial diesel truck trips, the potential for the Modified Project to generate TACs associated with diesel particulate matter would be less than significant. Therefore, the potential for the Modified Project to expose sensitive receptors to substantial pollutant concentrations would be less than significant. ***Comparison and Addendum Conclusion:*** Onsite emissions of NOx, CO, PM-10, and PM-2.5 would not exceed SCAQMD LST screening levels with development of either the Original Project or the Modified Project. Additionally, the potential for emissions of TACs would be less than significant with either the Original Project or the Modified Project.

[7] Projects with boundaries located closer than 25 meters to the nearest receptor should use the LSTs for receptors located at 25 meters. South Coast Air Quality Management District, Final Localized Significance Threshold Methodology, Revised July 2008. Accessed at: http://www.aqmd.gov/docs/default-source/ceqa/handbook/localized-significance-thresholds/final-lst-methodology-document.pdf?sfvrsn=2 on October 29, 2019.

For the reasons discussed above, the Modified Project would result in no new significant effects and no substantial increase in the severity of previously identified significant effects as compared to the MND.

e. Less Than Significant Impacts.

Original Project Analysis: Significant odor impacts are generally associated with industrial land uses, or public infrastructure such as waste disposal or treatment facilities, which are not proposed by the Original Project. The MND notes that development on Project Site would be subject to City design requirements and a Site Plan Review approval regarding the provision and location of trash receptacles. It was determined that good housekeeping practices would be sufficient to prevent nuisance odors, in addition to compliance with SCAQMD Rule 402 (Nuisance), and SCAQMD Best Available Control Technology Guidelines that would limit potential objectionable odor impacts. The Original Project's odor impacts would be less than significant.

Modified Project Analysis: The Modified Project would not introduce land uses that are typically associated with significant odor impacts, such as manufacturing facilities that use chemicals or other strong-smelling materials, wastewater treatment facilities, or landfills. In addition to applicable requirements regulating the placement and design of trash receptacles, the Modified Project would be subject to SCAQMD Rule 402 (Nuisance), which prohibits emissions of odors that would cause injury, detriment, nuisance, or annoyance to any considerable number of persons. Odor impacts would be less than significant.

Comparison and Addendum Conclusion: The MND concludes that the Original Project's potential to emit substantial odors would be less than significant. The Modified Project would construct a similar mix of land uses on Project Site, and would be subject to the same requirements regarding trash receptacles and prohibitions on emissions of odors that would affect a substantial number of persons, and would likewise be less than significant.

For the reasons discussed above, the Modified Project would result in no new significant effects and no substantial increase in the severity of previously identified significant effects as compared to the MND.

Cumulative Impacts

Cumulative development can affect implementation of the 2016 AQMP, the applicable air quality plan. The 2016 AQMP was prepared to accommodate growth, reduce pollutants within the areas under SCAQMD jurisdiction, improve the overall air quality of the region, and minimize the impacts of poor air quality on the economy. Growth considered to be consistent with the 2016 AQMP would not interfere with attainment because this growth is included in the projections utilized in the formulation of the AQMP. Consequently, as long as growth in the Air Basin is within the projections for growth identified by SCAG, implementation of the 2016 AQMP would not be obstructed by such growth and cumulative impacts would be less than significant. Since the Modified Project is consistent with SCAG's growth projections set forth in the 2016-2040 RTP/SCS, the Modified Project would not have a cumulatively considerable contribution to an impact regarding a potential conflict with or obstruction of the implementation of the applicable air quality plan. Thus, cumulative impacts related to conformance with the 2016 AQMP would be less than significant.

Cumulative air quality impacts from construction and operation of a project, based on SCAQMD guidelines, are analyzed in a manner similar to project-specific air quality impacts. The SCAQMD recommends that a project's potential contribution to cumulative impacts should be assessed utilizing the same significance criteria as those for project specific impacts because the project-level thresholds are set at levels to ensure the entire basin will come into attainment. Therefore, according to the SCAQMD, individual development projects that generate construction or operational emissions that exceed the

SCAQMD recommended daily thresholds for project-specific impacts would also cause a considerable increase in emissions for those pollutants for which the Air Basin is in non-attainment. Thus, as discussed in Question III(c) above, because the construction-related and operational daily emissions associated with the Modified Project would not exceed the SCAQMD's recommended thresholds, these emissions associated with the Modified Project would not be cumulatively considerable. Therefore, cumulative air quality impacts would be less than significant.

With respect to cumulative odor impacts, the Modified Project would be required to comply with SCAQMD rules and other applicable standards referenced above regulating objectionable odors in the same manner as the Original Project, for which the MND finds that the Previously Approved Project would not result in a cumulative impact. Based on mandatory compliance with SCAQMD Rules and other applicable standards, construction and operational activities under the Modified Project would not result in a significant cumulative odor impact.

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
IV. BIOLOGICAL RESOURCES.				
Would the project:				
a. Have a substantial adverse effect, either directly or through habitat modification, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☒	☐	☐
b. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in the City or regional plans, policies, regulations by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☐	☐	☒
c. Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☐	☐	☐	☒
d. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☐	☐	☒
e. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	☒	☐	☐
f. Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional or state habitat conservation plan?	☐	☐	☐	☒

Impact Analysis

a. Less Than Significant Impact With Mitigation.

Original Project Analysis: The MND indicated that the Project Site does not contain any critical habitat or support any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations. The Project Site does contain a total of thirty-nine trees that measure eight inches or greater in diameter at breast height (i.e. significant trees), all of which are non-native and non-protected

species according to the City's Native Protected Tree Ordinance.[8] Development of the Original Project would require removal of all existing trees and potentially up to three street trees. The MND included mitigation measures to address potential biological resource impacts associated with removal of the onsite trees. These consist of **MM-BIO-1**, which specifies tree replacement requirements, and **MM-BIO-2,** which specifies actions to avoid impacting nesting birds to ensure compliance with the Federal Migratory Bird Treaty Act ("MBTA") and applicable sections of the California Fish and Game Code. The MND concludes that implementation of MM-BIO-1 and MM-BIO-2 would reduce potential impacts to candidate, sensitive, or special status species to less than significant after mitigation.

Modified Project Analysis: As established by the MND, the Project Site does not contain any critical habitat or support any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations. As with the Original Project, the Modified Project would require removal of all thirty-nine onsite trees, which have been determined to be non-native and non-protected species according to the Native Protected Tree Ordinance. Therefore, implementation of MM-BIO-1 and MM-BIO-2 would also ensure potential impacts to candidate, sensitive, or special status species would be reduced to less than significant after mitigation.

Comparison and Addendum Conclusion: The Original Project and the Modified Project would both develop similar land uses within the same site, and would require removal of existing non-native, non-protected trees on Project Site. The MND concludes that potential impacts to candidate, sensitive, or special status species would be reduced to less than significant with implementation of MM-BIO-1 and MM-BIO-2, which specify replacement requirements for non-native tree removals, and actions to avoid affecting nesting birds as required by the MBTA and applicable sections of the California Fish and Game Code. Therefore, implementation of MM-BIO-1 and MM-BIO-2 would also reduce the Modified Project's potential impacts to candidate, sensitive, or special status species to less than significant after mitigation. As such, the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project, and both would result in less than significant impacts with the incorporation of MM-BIO-1 and MM-BIO-2.

Mitigation Measures:

MM-BIO-1 Tree Removal (Non-Protected Trees):

- Prior to the issuance of any permit, a plot plan shall be prepared indicating the location, size, type, and general condition of all existing trees on the site and within the adjacent public right(s)-of-way.
- All significant (8-inch or greater trunk diameter, or cumulative trunk diameter if multi-trunked, as measured 54 inches above the ground) non-protected trees on the site proposed for removal shall be replaced at a 1:1 ratio with a minimum 24-inch box tree. Net, new trees, located within the parkway of the adjacent public right(s)-of-way, may be counted toward replacement tree requirements.
- Removal or planting of any tree in the public right-of-way requires approval of the Board of Public Works. Contact Urban Forestry Division at: 213-847-3077. All trees in the public right-of-way shall be provided per the current standards of the Urban Forestry Division the Department of Public Works, Bureau of Street Services.

[8] Los Angeles Municipal Code ("LAMC") 12.21.A.12; Ord. No. 177,404.

MM-BIO-2 Habitat Modification (Native Nesting Birds):

- Proposed project activities (including disturbances to native and non-native vegetation, structures and substrates) should take place outside of the breeding bird season which generally runs from March 1- August 31 (as early as February 1 for raptors) to avoid take (including disturbances which would cause abandonment of active nests containing eggs and/or young). Take means to hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture of kill (Fish and Game Code Section 86).
- If project activities cannot feasibly avoid the breeding bird season, beginning thirty days prior to the disturbance of suitable nesting habitat, the applicant shall:
    - Arrange for weekly bird surveys to detect any protected native birds in the habitat to be removed and any other such habitat within 300 feet of the construction work area (within 500 feet for raptors) as access to adjacent areas allows. The surveys shall be conducted by a Qualified Biologist with experience in conducting breeding bird surveys. The surveys shall continue on a weekly basis with the last survey being conducted no more than 3 days prior to the initiation of clearance/construction work.
    - If a protected native bird is found, the applicant shall delay all clearance/construction disturbance activities within 300 feet of suitable nesting habitat for the observed protected bird species (within 500 feet for suitable raptor nesting habitat) until August 31.
    - Alternatively, the Qualified Biologist could continue the surveys in order to locate any nests. If an active nest is located, clearing and construction within 300 feet of the nest (within 500 feet for raptor nests) or as determined by a qualified biological monitor, shall be postponed until the nest is vacated and juveniles have fledged and when there is no evidence of a second attempt at nesting. The buffer zone from the nest shall be established in the field with flagging and stakes. Construction personnel shall be instructed on the sensitivity of the area.
    - The applicant shall record the results of the recommended protective measures described above to document compliance with applicable State and Federal laws pertaining to the protection of native birds. Such record shall be submitted and received into the case file for the associated discretionary action permitting the project.

b. No Impact.

Original Project Analysis: As evaluated in the MND, the Project Site is currently occupied by existing buildings and paved surfaces. The MND also notes that the Project Site is nearly one hundred percent impervious and no natural waterways exist on site. There are no riparian or other sensitive natural communities on site. Therefore, the Original Project would have no impact on riparian habitat or other sensitive natural communities.

Modified Project Analysis: The Modified Project would develop the same property as the Previously Approved Project, which, as established in the MND, is currently occupied by existing buildings and paved areas. There are no riparian or sensitive natural communities within the Project Site. Therefore, the Modified Project would have no impact on riparian habitat or other sensitive natural communities.

Comparison and Addendum Conclusion: The Original Project and the Modified Project would both develop similar land uses within the same Project Site, which does not contain riparian habitat or other sensitive natural communities. Therefore, both would have no impact regarding such resources. As such,

the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project.

c. No Impact.

Original Project Analysis: The Project Site is entirely developed with impermeable surfaces and does not contain any wetlands or natural drainage channels. Therefore, the Project Site does not support any riparian or wetland habitat and no impact would occur as a result of the redevelopment of the Project Site proposed by the Original Project.

Modified Project Analysis: The Modified Project also proposes the redevelopment of a Project Site that is entirely developed with impermeable surfaces and does not contain any wetlands or natural drainage channels. Therefore, the Modified Project does not support any riparian or wetland habitat and no impact would occur as a result of the redevelopment of the Project Site proposed by the Modified Project.

Comparison and Addendum Conclusion: The Original Project and the Modified Project would both develop similar land uses within the same site, which is entirely developed with urban uses and does not contain any riparian or wetland habitat. Therefore, both would have no impact regarding wetlands, and the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project.

d. No Impact.

Original Project Analysis: The Original Project would redevelop an infill site located in an urbanized area with no wildlife corridors or native wildlife nursery sites in the project vicinity. Therefore, the Original Project would not interfere with the movement of any resident or migratory fish or wildlife and no impact would occur.

Modified Project Analysis: The Modified Project would redevelop the same site as the Original Project, which is located in an urbanized area and is fully developed with urban uses. There are no wildlife corridors or native wildlife nursery sites within or adjacent to Project Site. Therefore, the Modified Project would not interfere with the movement of any residents or migratory fish or wildlife and no impact would occur.

Comparison and Addendum Conclusion: The Original Project and the Modified Project would both develop similar land uses within the same site, which is located in an urbanized area with no wildlife corridors or native wildlife nursery sites in the project vicinity. Therefore, both would have no impact regarding such resources. As such, the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project, as both would have no impact.

e. Less Than Significant Impact With Mitigation.

Original Project Analysis: As stated previously, thirty-nine trees that measure eight inches or greater in diameter at breast height (i.e. significant trees), all of which are non-native and non-protected species according to the Native Protected Tree Ordinance, were identified on the Project Site. Development of the Original would require removal of all thirty-nine existing trees and potentially up to three street trees along Pasadena Avenue. The MND determines that implementation of MM-BIO-1, as discussed above, which specifies tree replacement requirements, would reduce potential impacts to less than significant. In addition, the MND discussed compliance with the MBTA and applicable sections of the California Fish and Game code, as well as implementation of MM-BIO-2, to avoid impacting nesting birds if residing in trees to be removed.

The Original Project would comply with the City's tree ordinance and its potential impacts associated with loss of on-site trees would be reduced to less than significant with mitigation.

Modified Project Analysis: The Modified Project would develop the same property with a similar use as the Original Project, and would likewise require removal of onsite non-native and non-protected tree species. As stated above, compliance with MM-BIO-1, which specifies tree replacement requirements, would reduce the potential impact regarding loss of on-site trees to less than significant with mitigation. Additionally, as discussed above, implementation of MM-BIO-2 would reduce potential impacts to nesting birds. Accordingly, the Modified Project would comply with the City's tree ordinance and would not conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance result in less than significant impacts with the implementation of mitigation.

Comparison and Addendum Conclusion: The Original Project and the Modified Project would both develop similar land uses within the same site, and would require removal of non-native and non-protected tree from Project Site. With compliance with the City's tree ordinance and the inclusion of the previously identified MM-BIO-1 and MM-BIO-2, the Modified Project would result in less than significant impacts pertaining to conflict with local policies or ordinances protecting biological resources. As such, impacts for either would have less than significant impacts with mitigation incorporated, and the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project.

f. No Impact.

Previously Approved Project Analysis: The Original Project would redevelop an urban site that is not a part of, or in the vicinity of any draft or adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan. Therefore, the Original Project would not conflict with any applicable habitat conservation plan and no impact would occur.

Modified Project Analysis: The Modified Project would redevelop the same urban site as the Original Project, which is not part of any draft or adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan. Therefore, the Modified Project would not conflict with any applicable habitat conservation plan and no impact would occur.

Comparison and Addendum Conclusion: The Original Project and the Modified Project would both develop similar land uses within the same site, which is not located within any draft or adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan. Therefore, development of either the Original Project or the Modified Project on Project Site would not conflict with such plans, and there would be no impact. As such, the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project.

Cumulative Impacts

The MND concludes that the Original Project would result in a less than significant cumulative impact to biological resources in conjunction with the identified related projects. In accordance with the above analysis, the Modified Project proposes a similar mixed-use development on the same urban infill property, and would not result in a greater impact to biological resources as the Original Project. Therefore, cumulative impacts to biological resources under the Modified Project would be less than significant.

V. CULTURAL RESOURCES.	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a. Cause a substantial adverse change in significance of a historical resource as defined in CEQA Section 15064.5?	☐	☐	☒	☐
b. Cause a substantial adverse change in significance of an archaeological resource pursuant to CEQA Section 15064.5?	☐	☐	☒	☐
c. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☐	☐	☒	☐
d. Disturb any human remains, including those interred outside of formal cemeteries?	☐	☐	☒	☐
e. Cause a substantial adverse change in significance of a site, feature, place, cultural landscape, sacred place, or object with cultural value to a California Native American Tribe that is listed or determined eligible for listing on the California register of historical resources, listed on a local historical register, or otherwise determined by the lead agency to be tribal cultural resource?	☐	☐	☒	☐

Impact Analysis

Section 15064.5 of the State CEQA Guidelines defines a historical resource as: (1) a resource listed in or determined to be eligible by the State Historical Resources Commission for listing in the California Register of Historical Resources; (2) a resource listed in a local register of historical resources or identified as significant in an historical resource survey meeting certain State guidelines; or (3) an object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California, provided that the lead agency's determination is supported by substantial evidence in light of the whole record. A substantial adverse change in the significance of a historic resource means demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of a historical resource would be materially impaired.

a. Less Than Significant Impact.

Original Project Analysis: As stated in the MND, the Department of City Planning, Los Angeles Historic Resources Inventory and Survey LA, had reviewed each of the buildings on-site, and only identified the 3,521 square foot light manufacturing building located at 153 W. Avenue 34 for further review. The Los Angeles Historic Resources Inventory and Survey LA determined that this building does not meet the eligibility standards for historic listing, due to alterations to the façade windows and entrance. Although the Original Project would have retained a portion of the building at 153 W. Avenue 34, as well as a portion of

an existing building that fronts Pasadena Avenue, the Project Site does not contain any historic or potentially historic resources, and therefore, the Original Project does not have the potential to result in a substantial adverse change to a historic resource, and potential impacts to historic resources would be less than significant.

Modified Project Analysis: The Modified Project would redevelop the same property as the Original Project, and similarly would remove existing structures for construction of new structures. Although the Modified Project would remove all existing structures from the Project Site, as discussed in the MND, the Project Site does not contain any historic or potentially historic resources, and therefore, the Modified Project does not have the potential to result in a substantial adverse change to a historic resource, and potential impacts to historic resources would be less than significant.

Comparison and Addendum Conclusion: The Project Site does not contain any historic or potentially historic resources, and therefore, neither the Original Project or Modified Project have the potential to result in a substantial adverse change to a historic resource, and potential impacts to historic resources for either the Original Project or the Modified Project would be less than significant. For the reasons discussed above, the Modified Project would result in no new significant effects and no substantial increase in the severity of previously identified significant effects as compared to the Original Project.

b. Less Than Significant Impact.

Original Project Analysis: As evaluated in the MND, there are no known archaeological sites identified within the Project Site, and there is no evidence that suggests the Project Site contains any archaeological sites or archaeological resources. Additionally, it notes that the Project Site has been previously developed and is located in an urbanized area within the City. The Original Project would include excavation to a depth of approximately 15 feet below grade across the majority of the Project Site, to construct a one level subterranean parking garage. Thus, it was determined that the potential exists for the accidental discovery of unknown and unrecorded archaeological materials. However, an existing regulatory compliance measure detailing the required protocol that must be followed in the unlikely event any archaeological resources are encountered during the construction phase would be implemented in order to ensure that potential impacts to unknown archaeological resources would be less than significant.

The MND concludes that due to the absence of any known archeological resources and with compliance with applicable regulatory compliance measures, no mitigation measures are warranted. Because the presence or absence of such materials cannot be determined until Project Site is excavated, compliance with the regulatory compliance measure would ensure that if construction of the Original Project would encounter any unanticipated archaeological resources, potential impacts to such resources would be less than significant.

Modified Project Analysis: The Modified Project would redevelop the same subject property as the Original Project, and would also include excavation for subterranean parking. The Modified Project would include two levels of subterranean parking, which would be approximately twice the depth of the Original Project. However, the two levels of subterranean parking would be confined to a smaller portion of the Project Site area than the Original Projects' subterranean garage level, and the volume of soil export from excavations onsite would be slightly less than the soil export under the Original Project.

A records search was conducted at the South Central Coastal Information Center (SCCIC) in 2019, as reported in the Cultural Resource Assessment Letter (**Appendix C**) to determine if any archaeological resources have been identified within the Project Site or in the vicinity since the adoption of the MND.

Additionally, a letter was sent to the Native American Heritage Commission (NAHC) to request if there are any known archaeological resources within the Project Site according to their records. The results of the records search and request of the SCCIC and the NAHC were negative for any recorded archaeological resources within or in the immediate vicinity of the Project Site.

Therefore, similar to the evaluation of the Original, the Modified Project would comply with the regulatory compliance measure below, which describes the required protocol that would be followed in the unlikely event that archaeological resources are encountered during site disturbance and grading construction activities. Compliance with the applicable regulatory compliance measure would ensure that potential impacts to unknown archaeological resources would be less than significant. This regulatory compliance measure is stated as follows:

> (**Archaeological**): If archaeological resources are discovered during excavation, grading, or construction activities, work shall cease in the area of the find until a qualified archaeologist has evaluated the find in accordance with federal, State, and local guidelines, including those set forth in California Public Resources Code Section 21083.2. Personnel of the proposed Modified Project shall not collect or move any archaeological materials and associated materials. Construction activity may continue unimpeded on other portions of the Project Site. The found deposits would be treated in accordance with federal, State, and local guidelines, including those set forth in California Public Resources Code Section 21083.2.

Due to the absence of any known archeological resources within Project Site in light of compliance with the identified regulatory compliance measure, no mitigation measures are warranted. Because the presence or absence of such materials cannot be determined until Project Site is excavated, compliance with the regulatory compliance measure above would ensure that if construction of the Modified Project would encounter any unanticipated archaeological resources, potential impacts to such resources would be less than significant.

Comparison and Addendum Conclusion: The Project Site is not known to contain archaeological resources. The Original and the Modified Project would both excavate below grade for construction of a subterranean parking garage, resulting in disturbance and removal of a similar volume of soil from Project Site. The existing regulatory compliance measure identified for the Original Project would also apply to the Modified Project, which requires that specific protocols be followed in the unlikely event that archaeological resources are encountered during construction of the Original Project or the Modified Project.

For the reasons discussed above, the Modified Project would result in no new significant effects and no substantial increase in the severity of previously identified significant effects regarding archaeological resources as compared to the Original Project.

c. Less Than Significant Impact.

Original Project Analysis: As evaluated in the MND, the Project Site has been developed since the early 1900s, and was developed into its current layout in the late 1970s. Additionally, the MND indicates that the Project Site is not shown to contain any known vertebrate paleontological resources based on a map of Vertebrate Paleontological Resources in the City.[9] However, if unknown paleontological resources would

[9] City of Los Angeles Department of City Planning, Environmental and Public Facilities Maps: Vertebrate Paleontological Resources in the City of Los Angeles, September 1996.

be encountered during construction of the Original Project, an existing regulatory compliance measure detailing the required protocol that must be followed would ensure potential impacts to such resources would be less than significant.

Modified Project Analysis: The Modified Project would redevelop the same subject property as the Original Project. Although the Project Site has been disturbed in the past by previous development activities, and is currently fully developed with industrial and commercial uses, the Modified Project would require excavation for construction of a two-level subterranean parking garage under the western and central portions of the Project Site that could disturb native soils at depth. Onsite grading would result in approximately 91,000 cy of soil export from the Project Site.

Similar to the Original Project, the Modified Project would be subject to a regulatory compliance measure that specifies required protocol to follow in the event that unknown paleontological resources would be encountered during site disturbance and grading construction activities. The required compliance measure is as follows:

> **(Paleontological)**: If paleontological resources are discovered during excavation, grading, or construction, the City of Los Angeles Department of Building and Safety shall be notified immediately, and all work shall cease in the area of the find until a qualified paleontologist evaluates the find. Construction activity may continue unimpeded on other portions of the Project Site. The paleontologist shall determine the location, the time frame, and the extent to which any monitoring of earthmoving activities shall be required. The found deposits would be treated in accordance with federal, State, and local guidelines, including those set forth in California Public Resources Code Section 21083.2

Comparison and Addendum Conclusion: The Project Site is not known to contain paleontological resources. The Original Project and the Modified Project would both excavate below grade for construction of a subterranean parking garage, resulting in disturbance and removal of a similar volume of soil from the Project Site, though the Modified Project would require less soil removal and export overall. The existing regulatory compliance measure identified for the Original Project would also apply to the Modified Project, which requires that specific protocols be followed in the unlikely event that paleontological resources are encountered during site disturbance and grading construction activities for the Original Project and Modified Project.

For the reasons discussed above, the Modified Project would result in no new significant effects and no substantial increase in the severity of previously identified significant effects regarding paleontological resources as compared to the Original Project.

d. Less Than Significant Impact.

Original Project Analysis: If human remains are encountered unexpectedly during construction activities, State Health and Safety Code Section 7050.5 requires that no further disturbance shall occur until the County Coroner has made the necessary findings as to origin and disposition pursuant to California Public Resources Code Section 5097.98

Modified Project Analysis: The Modified Project is similar to the Original Project in that State Health and Safety Code Section 7050.5 requires that if human remains are encountered unexpectedly during construction activities, no further disturbance shall occur until the County Coroner has made the necessary findings as to origin and disposition pursuant to California Public Resources Code Section 5097.98. If

human remains are discovered, the following regulatory compliance measure would ensure that impacts would be less than significant:

> **(Human Remains):** If human remains are encountered unexpectedly during construction demolition and/or grading activities, State Health and Safety Code Section 7050.5 requires that no further disturbance shall occur until the County Coroner has made the necessary findings as to origin and disposition pursuant to California Public Resources Code (PRC) Section 5097.98. In the event that human remains are discovered during excavation activities, the following procedure shall be observed:
>
> - Stop immediately and contact the County Coroner:
>
> 1104 N. Mission Road
> Los Angeles, CA 90033
> 323-343-0512 (8 a.m. to 5 p.m. Monday through Friday) or
> 323-343-0714 (After Hours, Saturday, Sunday, and Holidays)
>
> - If the remains are determined to be of Native American descent, the Coroner has 24 hours to notify the Native American Heritage Commission (NAHC).
> - The NAHC will immediately notify the person it believes to be the most likely descendent of the deceased Native American.
> - The most likely descendent has 48 hours to make recommendations to the owner, or representative, for the treatment or disposition, with proper dignity, of the human remains and grave goods.
> - If the owner does not accept the descendant's recommendations, the owner or the descendent may request mediation by the NAHC.

Comparison and Addendum Conclusion: The Project Site is not known to contain human remains. The Original and the Modified Project would both excavate below grade for construction of a subterranean parking garage, resulting in disturbance and removal of a similar volume of soil from the Project Site, though the Modified Project would require less soil removal and export. The existing regulatory compliance measure identified for the Original Project would also apply to the Modified Project, which requires that specific protocols be followed in the unlikely event that human remains are encountered during site disturbance and grading construction activities.

For the reasons discussed above, the Modified Project would result in no new significant effects and no substantial increase in the severity of previously identified significant effects as compared to the Original Project.

e. Less Than Significant Impact.

Original Project Analysis: As documented in the MND, pursuant to AB 52, the Department of City Planning sent pre-consultation request letters on May 25, 2016 to the recognized Native American Tribal Representatives within the Los Angeles region, regarding the proposed redevelopment of the infill site associated with the Original Project. The City did not receive any responses.

Because the Project Site has been subject to ground disturbance activities in the past and is not known to be associated with any cultural or sacred sites, and no Native American Tribal Representatives requested consultation regarding redevelopment of the Project Site, the MND determines that the probability for the discovery of a known site, feature, place, cultural landscape, sacred place, or object with cultural value to a California Native American Tribe is considered low. In the absence of any known cultural resources

within the Project Site, the MND determines that required adherence to regulatory compliance measures described above that must be followed if unknown archaeological resources or human remains are encountered during construction would ensure the Original Project's potential to impact tribal cultural resources would be less than significant.

Modified Project Analysis: The Modified Project would redevelop the same subject property as the Original Project. Updated records searches did not indicate that the Project Site contains any known archaeological or historical resources, and no known tribal cultural resources have been identified on the Project Site. However, as with the Original Project, in the event that ground disturbance during construction of the Modified Project encounters an unknown cultural resource, the existing regulatory compliance measures discussed above specifying the protocols to follow if such resources are encountered would also reduce potential impacts to unknown tribal cultural resources to less than significant.

Comparison and Addendum Conclusion: Both the Original Project and the Modified Project would redevelop the same previously developed infill property, and would both include excavations for construction of underground garage levels within the Project Site. Although the Project Site has not been shown to contain known cultural resources, in the event that unknown cultural resources are discovered during construction, both the Original Project and the Modified Project would be required to follow the applicable regulatory compliance measures described above. Adherence to these regulatory compliance measures would reduce potential impacts to unknown tribal cultural resources during construction to less than significant. For the reasons discussed above, the Modified Project would result in no new significant effects and no substantial increase in the severity of previously identified significant effects as compared to the Original Project.

Cumulative Impacts

The MND concludes that the Original Project would result in a less than significant cumulative impact to cultural resources in conjunction with the identified related projects. Impacts to cultural resources tend to be site-specific and are assessed on a site-by-site basis. The above analysis of the Modified Project's impacts to cultural resources indicates that the Modified Project would not have a greater impact on cultural resources than the Original Project, and would have no significant impacts with respect to cultural resources following appropriate regulatory compliance measures. Therefore, the Modified Project's incremental contribution to a cumulative impact would not be considerable, and cumulative impacts to cultural resources would be less than significant.

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
VI. GEOLOGY AND SOILS.				
Would the project:				
a. Expose people or structures to potential substantial adverse effects, including the risk of loss, injury or death involving:				
i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☐	☐	☒	☐
ii. Strong seismic ground shaking?	☐	☐	☒	☐
iii. Seismic-related ground failure, including liquefaction?	☐	☐	☒	☐
iv. Landslides?	☐	☐	☐	☒
b. Result in substantial soil erosion or the loss of topsoil?	☐	☐	☒	☐
c. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?	☐	☐	☒	☐
d. Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?	☐	☐	☐	☒
e. Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?	☐	☐	☐	☒

Impact Analysis

The MND's analysis of potential impacts associated with geology and soils included information provided in a Geotechnical Investigation[10] prepared for the Original Project, as well as a Soils Report Approval Letter provided by the City's Department of Building and Safety (dated January 26, 2016).

[10] Geocon West, Inc., Geotechnical Investigation: Proposed Mixed-Use Residential Development, 141 West Avenue 34, Los Angeles, California, July 23, 2015.

a.i. Less Than Significant Impact.

Original Project Analysis: The MND determines that the Project Site is not within an established Alquist-Priolo Earthquake Fault Zone for surface fault rupture hazards, and there are no known active or potentially active faults with the potential for surface fault rupture directly beneath the Project Site. Therefore, the potential for surface rupture due to faulting occurring within the Project Site is considered low, and the previous analysis concluded that the potential for impacts associated with surface fault rupture would be considered less than significant.

Additionally, the previous analysis states that the Original Project would be required by law and Environmental [Q] Condition C.9, to adhere to current engineering standards, the seismic safety requirements set forth in the City of Los Angeles Building Code ("LABC") and the Los Angeles Municipal Code ("LAMC"), and design recommendations set forth in the Geotechnical Investigation so that the proposed structures may withstand typical seismic ground shaking. The MND also determined that potential seismic safety impacts would be further reduced by incorporation of the following regulatory compliance measure:

> **(Seismic and Geotechnical Safety):** The project shall comply with the conditions contained within the Department of Building and Safety's Geology and Soils Report Approval Letter (dated January 26, 2016) and Project's Geotechnical Investigation prepared by Geocon West, Inc. (dated July 23, 2015), and as it may be subsequently amended or modified.

Modified Project Analysis: As established in the MND, the Project Site is not located within an Alquist-Priolo Earthquake Fault Zone, and there are no known active or potentially active faults within the Project Site. Therefore, the Modified Project would not expose people or structures to substantial adverse effects involving rupture of a known earthquake fault, as there are no faults known that could cause a surface rupture within the Project Site.

The Modified Project would also be required to comply with applicable engineering standards, as well as the LABC and LAMC. Pursuant to [Q] Condition C.9, the Modified Project's design and construction would be required to conform to the Uniform Building Code seismic standards as approved by the Department of Building and Safety. With compliance with these regulatory compliance measures, the Modified Project's impacts regarding rupture of a known earthquake fault would be less than significant.

Comparison and Addendum Conclusion: The Original Project and the Modified Project would both develop similar land uses within the same site, which is not located within an Alquist-Priolo Earthquake Fault Zone, and does not contain a known active or potentially active fault. Pursuant to applicable regulations, development of either the Original Project or the Modified Project would be required to comply with applicable building regulations regarding preparation of geotechnical studies and implementation of recommendations to address seismic hazards. As such, potential impacts pertaining to rupture of a known earthquake fault for either would be less than significant, and the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project, as both would be less than significant.

a.ii. Less Than Significant Impact.

Original Project Analysis: The MND determines that because the Project Site is located in seismically active Southern California, the Original Project could be subject to moderate to strong ground shaking in the event of an earthquake. The MND stated that conformance with [Q] Condition C.9 and current building codes and engineering practices would reduce the potential effects of ground shaking in addition to

compliance with the 2016 Geotechnical Investigation design recommendations. As the Original Project would not expose people or structures to potential adverse effects due to strong seismic ground shaking with compliance with regulatory compliance measures, impacts would be less than significant.

Modified Project Analysis: As established by the MND, the Project Site is located in seismically active Southern California and could be subjected to moderate to strong ground shaking in the event of an earthquake. The Modified Project would comply with all applicable codes and regulations, as well as [Q] Condition C.9, which requires the design and construction to conform to the Uniform Building Code seismic standards as approved by the Department of Building and Safety. The Modified Project plans would be required to be submitted to the Department of Building and Safety for review and approval prior to issuance of building permits. As such, the Modified Project's impacts regarding strong seismic ground shaking would be less than significant.

Comparison and Addendum Conclusion: The Original Project and the Modified Project would both develop similar land uses within the same site, which is located in seismically active Southern California. The Modified Project would be subject to the current building codes, engineering practices and Geotechnical Report design recommendations to reduce the potential effects of ground shaking, as would the Original Project. As such, impacts associated with strong seismic ground shaking would be less than significant for either the Original Project or the Modified Project.

For the reasons discussed above, the Modified Project would result in no new significant effects and no substantial increase in the severity of previously identified significant effects as compared to the Original Project.

a.iii. Less Than Significant Impact.

Original Project Analysis: As stated in the MND, liquefaction is a phenomenon in which loose, saturated, relatively cohesionless soil deposits lose shear strength during strong ground motions. Primary factors controlling liquefaction include intensity and duration of ground motion, gradation characteristics of the subsurface soils, in-situ stress conditions, and the depth to groundwater. The MND established that the Project Site is located within an area mapped as being susceptible to liquefaction during a seismic event. Therefore, pursuant to [Q] Condition C.11, the Geotechnical Investigation included a liquefaction analysis of the soil underlying the Project Site to assess potential consequences of any liquefaction and soil strength loss, estimation of settlement, lateral movement or reduction in foundation soil-bearing capacity. Notably, this liquefaction analysis concluded that the alluvial soils below the historic high groundwater level would not be susceptible to liquefaction settlement during a design level earthquake ground motion and a maximum considered earthquake. Nevertheless, in compliance with Environmental [Q] Condition C.11, the Proposed Project would adhere to current engineering standards, the seismic safety requirements set forth in the LABC and the LAMC, and design recommendations set forth in the Geotechnical Investigation. Therefore, with these regulatory compliance measures, potential impacts related to liquefaction would be less than significant.

Modified Project Analysis: As established in the MND, the Project Site is located within an area mapped as being susceptible to liquefaction during a seismic event. Pursuant to [Q] Condition C.11, the Modified Project would be required to submit a geotechnical report including a liquefaction analysis to the Department of Building and Safety for review and approval during the plan check process prior to obtaining building permits. The Modified Project would be required to comply with all applicable state and local

regulatory compliance measures, including current engineering standards, and the seismic safety requirements set forth in the LABC and the LAMC. As such, with these regulatory compliance measures, the Modified Project's impacts regarding liquefaction would be less than significant.

Comparison and Addendum Conclusion: The Original and the Modified Project would both develop the same Project Site that is located within an area mapped as potentially susceptible to liquefaction during a seismic event. Both the Original Project and Modified Project would be subject to the applicable regulatory compliance measures addressing liquefaction. As such, the potential for environmental impacts pertaining to liquefaction for both are less than significant

For the reasons discussed above, the Modified Project would result in no new significant effects and no substantial increase in the severity of previously identified significant effects as compared to the Original Project.

a.iv. No Impact.

Original Project Analysis: The MND notes that the Project Site is not located within a City Hillside Grading Area or Hillside Ordinance Area. The City of Los Angeles General Plan Safety Element further indicates that the Project Site is not located in an area susceptible to landslides.[11] As the Project Site is not within an area identified as having a potential for seismic slope instability, the Original would have no impact.

Modified Project Analysis: As established in the MND, the Project Site is not located within a City Hillside Grading Area, Hillside Ordinance Area, or an area susceptible to landslides. As the Modified Project site is not within an area identified as having a potential for seismic slope instability, the Modified Project would have no impact.

Comparison and Addendum Conclusion: As the Project Site is not located within a City Hillside Grading Area, Hillside Ordinance Area, or an area susceptible to landslides, the Original and the Modified Project would have no impact regarding landslides.

For the reasons discussed above, the Modified Project would result in no new significant effects and no substantial increase in the severity of previously identified significant effects as compared to the Original Project.

b. Less Than Significant Impact.

Original Project Analysis: The MND determines that the Original Project would potentially result in erosion of soils during site preparation and construction activities. However, erosion would be reduced by implementation of stringent erosion controls imposed by the City through grading and building permit regulations. During operations, the potential for substantial erosion on the Project Site would be low due to the generally level topography of the Project Site, and because so little soil would remain exposed after redevelopment.

As stated in the MND, all grading activities require grading permits from the Department of Building and Safety, which include requirements and standards designed to limit potential impacts to acceptable levels. In addition, all on-site grading and site preparation would comply with applicable provisions of Chapter

[11] City of Los Angeles Department of City Planning, Safety Element of the Los Angeles City General Plan, Exhibit C: Landslide Inventory & Hillside Areas In the City of Los Angeles, June 1994.

IX, Division 70 of the LAMC, which addresses grading, excavations, and fills. Additionally, implementation of the regulatory compliance measure, below, would further ensure the Original Project's potential impact regarding erosion or loss of topsoil would be less than significant.

> **(Erosion/Grading/Short-Term Construction Impacts)**: Chapter IX, Division 70 of the Los Angeles Municipal Code addresses grading, excavations, and fills. All grading activities require grading permits from the Department of Building and Safety. Additional provisions are required for grading activities within Hillside areas. The application of BMPs includes but is not limited to the following mitigation measures:
>
> - Excavation and grading activities should be scheduled during dry weather periods. If grading occurs during the rainy season (October 15 through April 1), diversion dikes shall be constructed to channel runoff around the site. Channels shall be lined with grass or roughened pavement to reduce runoff velocity.
> - Stockpiles, excavated, and exposed soil shall be covered with secured tarps, plastic sheeting, erosion control fabrics, or treated with a bio-degradable soil stabilizer.

Modified Project Analysis: As established by the MND, the Project Site is relatively level. During operations, the potential for substantial erosion on the Project Site would be low due to the generally level topography of the Project Site, and because so little soil would remain exposed after redevelopment.

During construction, the Modified Project would be required to comply with Chapter IX, Division 70 of the LAMC, which addresses grading, excavations, and fills, as well as all Department of Building and Safety permit regulations that would reduce potential erosion referenced above. Additionally, the applicant would be required to obtain coverage under the State Water Resources Control Board National Pollution Discharge Elimination System ("NPDES") Construction General Permit, create a Storm Water Pollution Prevention Plan ("SWPPP"), and identify construction Best Management Practices ("BMPs") that would be implemented to minimize potential soil erosion and sedimentation during construction. As such, the Modified Project's impacts regarding erosion would be less than significant.

Comparison and Addendum Conclusion: The Original Project and the Modified Project would both develop the same site, which would remove existing impervious surfaces and result in exposed soils on the Project Site during construction. Development of the Project Site would be required to implement BMPs to reduce potential erosion pursuant to required permitting and LAMC requirements. During operations, both the Original Project and the Modified Project would have a low potential for erosion during operations as the Project Site is relatively level and would be developed with urban uses. Both would be required to comply with all Department of Building and Safety permit regulations, the LAMC grading, excavation and fill provisions, and NPDES requirements and environmental impacts pertaining to erosion for both are less than significant.

For the reasons discussed above, the Modified Project would result in no new significant effects and no substantial increase in the severity of previously identified significant effects as compared to the Original Project.

c. Less Than Significant Impact.

Original Project Analysis: The MND notes that the potential for seismically induced settlement at the Project Site is small and the Project Site is not located within an area that is susceptible to landslides and subsidence. As stated above, although the Project Site is located within an area identified as susceptible to

liquefaction, the Geotechnical Investigation determined that the soils underlying the Project Site would not be susceptible to liquefaction during a seismic event.

As the Original Project would be required to comply with the Department of Building and Safety's Soils Approval Letter, and as no large-scale extraction of groundwater, gas, oil, or geothermal energy is occurring or is planned to occur within the Project Site or the general vicinity, development of the Original Project would not create unstable geologic conditions on or off the Project Site, and impacts would be less than significant.

Modified Project Analysis: As established by the MND, the Project Site is not located within an area susceptible to landslides or subsidence. Additionally, the Geotechnical Investigation prepared for the Original Project determined that the soils underlying the Project Site would not be susceptible to liquefaction during a seismic event. Nevertheless, pursuant to [Q] Condition C.11, a Geotechnical Report including a liquefaction analysis would be required for the Modified Project and would be submitted to the Department of Building and Safety for review and approval during the plan check process prior to obtaining a building permit.

The Modified Project does not propose large-scale extraction of groundwater, gas, oil, or geothermal energy and thus would not create unstable geologic conditions on or off the Project Site. As such, the Modified Project's impacts regarding unstable geologic conditions would be less than significant.

Comparison and Addendum Conclusion: The MND concludes that the Original Project would not be located in an area susceptible to landslides and subsidence. The Modified Project would construct a similar mix of land uses on the Project Site, and would be subject to the same requirements. As both the Original Project and the Modified Project would be required to comply with applicable regulations to ensure soil stability, impacts pertaining to unstable geologic conditions for either would be less than significant.

For the reasons discussed above, the Modified Project would result in no new significant effects and no substantial increase in the severity of previously identified significant effects as compared to the Original Project.

d. No Impact.

Original Project Analysis: The MND notes that soils located at the Project Site are considered to have a "very low" expansive potential and are classified as "non-expansive" in accordance with the 2013 California Building Code Section 1803.5.3. Therefore, the Original Project would have no impact regarding expansive soils.

Modified Project Analysis: As established by the MND, the Project Site has a "very low" expansive potential and the soils located at the Project Site are classified as "non-expansive." Therefore, the Modified Project would have no impact regarding expansive soils.

Comparison and Addendum Conclusion: The Original Project and the Modified Project would both develop the same site, which has a "very low" expansive potential and the soils located at the Project Site are classified as "non-expansive." As such, impacts pertaining to expansive soils for either would have no impact on the environment, and the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project, as both would have no impact.

e. No Impact.

Original Project Analysis: The Original Project would be connected to the City's sewer system and does not propose to install or use septic tanks or alternative wastewater disposal systems. Therefore, the Original Project would have no impact associated with the use of septic tanks.

Modified Project Analysis: The Modified Project would be connected to the City's sewer system and does not propose to install or use septic tanks or alternative wastewater disposal systems. Therefore, the Modified Project would have no impact regarding supporting the use of septic tanks.

Comparison and Addendum Conclusion: The Original Project and the Modified Project would both be connected to the City's sewer system, and neither would install or use septic tanks or alternative wastewater disposal systems. Therefore, both would have no impact on the environment in that regard, and the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project.

Cumulative Impacts

The MND concludes that the Original Project would result in a less than significant cumulative impact with respect to geological and soil resources in conjunction with the identified related projects. As stated in the MND, impacts to geological and soil resources are site-specific, and are to be assessed on a case-by-case basis. In accordance with the above analysis, the Modified Project proposes a similar mixed-use development on the same urban infill Project Site, and would not result in a greater impact to geological and soil resources than the Original Project. Furthermore, the analysis of the Modified Project's geology and soil impacts concluded that, through adherence with the regulatory compliance measures listed above, the Modified Project impacts would be reduced to less than significant levels. As a result of the site specific nature of such impacts and based on the fact that the Modified Project would not result in any significant impacts, the Modified Project would not create a cumulatively considerable contribution to any potential cumulative impacts, and the Modified Project's cumulative geology and soil impacts would be less than significant.

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
VII. GREENHOUSE GAS EMISSIONS.				
Would the project:				
a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☐	☐	☒	☐
b. Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	☐	☐	☒	☐

Impact Analysis

As discussed in the MND, greenhouse gas ("GHG") emissions refer to a group of emissions that have the potential to trap heat in the atmosphere and consequently affect global climate conditions. Scientific studies have concluded that there is a direct link between increased emission of GHGs and long-term global temperature. The principal GHGs are carbon dioxide (CO_2), methane (CHO), nitrous oxide (N_20), sulfur hexafluoride (SF_6), perfluorocarbons (PFCs), hydrofluorocarbons (HFCs), and water vapor (H_20). CO_2 is the reference gas for climate change because it is the predominant GHG emitted. To account for the varying warming potential of different GHGs, GHG emissions are often quantified and reported as CO_2 equivalents (CO_2e), or metric tons of CO_2e ($MTCO_2e$). The MND also provided summaries of the following regulatory and guidance documents regarding GHG reductions:

- California Global Warming Solutions Act of 2006
- LA Green Plan
- LA Green Building Code
- 2016-2040 RTP/SCS
- Sustainable Communities and Climate Protection Act (SB 375)
- SCAQMD (draft guidance regarding interim CEQA GHG significance thresholds)

a. Less Than Significant Impact.

Original Project Analysis: The MND states that the City has not adopted thresholds of significance for addressing a residential and retail mixed-use project's GHG emissions pursuant to CEQA. Therefore, pursuant to the guidance provided in Section 15064.4 of the CEQA Guidelines, the MND evaluated whether the Original Project would generally comply with the applicable policies and/or regulations outlined in the Scoping Plan, SB 375, SCAG's RTP/SCS, and the LA Green Building Code.

The previous analysis also quantified the net change in annual GHG emissions that would result from redevelopment of the Project Site with the Original Project. As shown in the MND, development of the Original Project (including construction emissions amortized over 30 years), would generate an estimated 5,101.48 $MTCO_2e$/year of GHG emissions as estimated using CalEEMod, and with removal of the existing land uses from the Project Site, the net change in GHG emissions would be reduced to 2,847.37 $MTCO_2e$/year.

The following discussion summarizes the MND's evaluation of consistency with the Scoping Plan, SB 375, SCAG's RTP/SCS, and the LA Green Building Code.

AB 32 Scoping Plan

The following list of benefits and applicability of compliance measures and design features that would reduce the carbon footprint of the Original Project was provided in the MND:

1. **Infill Development**. The Project Site is an infill site that is currently developed with light industrial land uses and is located within a transit priority area. The Project Site is also located in an area that is adequately served by existing infrastructure and would not require the extension of utilities or roads to accommodate the proposed development.
2. **Transit Priority Area**. The Project Site is also located in a Transit Priority Area as defined by CEQA Sections 21099 and 21064.3. The MND indicates that a mixed-use development in close proximity to regional transit would result in fewer trips and a reduction in vehicle miles traveled ("VMTs") as compared to similar uses that are not located in close proximity to transit. The Project here is a short walking distance from a light rail station.
3. **Energy Conservation**. As mandated by the L.A. Green Building Code, redevelopment on the Project Site would be required to meet or exceed Title 24 standards and include ENERGY STAR appliances.
4. **Solid Waste Reduction Efforts**. A reduction of at least 50 percent of construction waste [disposal] would be required. In addition, AB 939 requirements to divert 50 percent of solid waste from landfills through source reduction, recycling, and composting would apply, and adequate storage areas for collection and storage of recyclable waste materials would be required by the California Solid Waste Reuse and Recycling Access Act of 1991.
5. **Water Conservation**. Plumbing fixtures and fixture fittings that reduce potable water use by at least 20 percent would be required, and irrigation design and controllers that are weather- or soil moisture-based and automatically adjust in response to weather conditions and plants' needs would be required.

Additionally, the Original Project was determined to be consistent with the California Air Resources Board's ("CARB's") AB 32 Scoping Plan (2008) and First Update (2014) measures to reduce GHG emissions that are generally relevant to land use development.

SB 375

The Original Project was also determined to be consistent with SB 375 in the MND, which requires adoption of a Sustainable Community Strategy by the Metropolitan Planning Organization to encourage compact development for reducing passenger VMT and trips so that the region will meet the target provided in the Scoping Plan, created by CARB, for reducing GHG emissions.

SCAG's RTP/SCS

Likewise, the Original Project was determined to be consistent with key GHG reduction strategies in SCAG's 2016-2040 RTP/SCS, including:

- Compact growth in areas accessible to transit;
- More multi-family housing;
- Jobs and housing closer to transit;
- New housing and job growth focused in High Quality Transit Areas ("HQTAs"); and
- Biking and walking infrastructure to improve active transportation options, transit access.

L.A. Green Building Code

The Original Project would also be required to comply with mandatory measures under the L.A. Green Building Code that would help reduce GHG emissions, including provision of adequate short- and long-term bicycle parking; and electric vehicle (EV) supply wiring.

Therefore, it was determined that the Original Project would not make a project-specific or cumulatively considerable contribution to GHG emissions, as it would be consistent with these regulatory and guidance documents, and therefore, impacts would be less than significant.

Modified Project Analysis: Temporary construction activities to develop the Project Site would result in GHG emissions associated with the use of construction equipment and various construction materials (paint, asphalt, etc.). Long-term operations of the proposed residential project would result in GHG emissions associated with the use of motor vehicles and landscaping equipment, natural gas, offsite generation of electricity, and treatment and/or conveyance of water, wastewater, and solid waste. The Modified Project's estimated GHG emissions were calculated using CalEEMod for construction and operations as recommended by the SCAQMD, and temporary construction emissions were amortized over a 30-year lifetime. The CalEEMod Output sheets are provided in **Appendix B**.

As shown in **Table VII-1, Annual GHG Emissions**, the total annual operational GHG emissions[12] of the Modified Project would be 4,833.99 $MTCO_2e$. As the existing uses would be removed from the Project Site, annual operational GHG emissions for those uses, which were calculated to be 2,254.11 $MTCO_2e$ in the MND, would be subtracted from the Modified Project's emissions, resulting in a net increase in annual GHG emissions of 2,579.88 $MTCO_2e$. This would be approximately 267 $MTCO_2e$ less than the net increase in annual GHG emissions that would be generated by the Original Project .

Table VII-1
Annual GHG Emissions

Generation Source	$MTCO_2e$/year
Project Emissions	
Area Sources	8.08
Energy Utilization	1,984.13
Mobile Source	2,397.58
Solid Waste	58.47
Water	342.70
Construction (Amortized)	43.03
Total Project Operational Emissions [a]	**4,833.99**
Existing Use [b]	
Light Industry and Warehouse	2,254.11
Net Increase	**2,579.88**

Source: CalEEMod2016.3.2 Avenue 34 Mixed-Use Modified Project Output, October 15, 2019.
[a] For comparison purposes, the emissions model incorporates the same reduction benefits associated with infill development and code compliance as the previous project's analysis.
[b] Source: City of Los Angeles Department of City Planning, Initial Study Mitigated Negative Declaration Avenue 34 Project, February 13, 2017. Table III-2 (Appendix A).

[12] Including construction emissions annualized over a 30-year period.

The Modified Project would redevelop the same site with a similar mix of land uses as the Original Project, and would be required to comply with regulatory requirements regarding energy efficiency, water efficiency, and waste reduction as would the Original Project, and in fact would have to comply with an updated building code that requires additional environmental and energy efficiency measures. As such, the same design features and efficiency regulations that would reduce the carbon footprint of the Original Project for consistency with the AB 32 Scoping Plan as discussed in the MND, including infill development, transit priority area, energy conservation, solid waste reduction efforts, and water conservation, would also apply to the Modified Project. The Modified Project would redevelop an infill property with a compact multi-family residential and commercial mixed-use development in a HQTA, which would be consistent with SB 375 and SCAG's 2016-2040 RTP/SCS, and it would be required to comply with applicable mandatory measures of the LA Green Building Code. Therefore, the Modified Project would be consistent with the Scoping Plan, SB 375, SCAG's 2016-2040 RTP/SCS, and the LA Green Building Code in the same or in increased manner than the Original Project.

State Assembly Bill (AB) 32 and the Global Warming Solutions Act of 2006 established mandatory provisions and GHG reduction targets within specified time frames, including a requirement that California's GHG emissions be reduced to 1990 levels by 2020. In 2014, CARB updated its Scoping Plan, which details strategies to meet that goal. Executive Order S-3-05 aims to reduce statewide GHG emissions to 80 percent below 1990 levels by 2050. In 2015, the City released the Sustainable City plan (L.A.'s Green New Deal) with ambitious visions for cutting GHG emissions and reducing the impact of climate change with goals such as to reduce GHG emissions by at least 55 percent by 2035 from the 2008 baseline and to eliminate use of coal-fired electricity by 2025. To reduce GHG emissions from energy usage, the City's Department of Environmental Protection, Environment LA, proposed the following goals in their Green LA and Climate LA plans: increase the amount of renewable energy provided by the Los Angeles Department of Water and Power ("LADWP") to decrease dependence on fossil fuels; present a comprehensive set of green building policies to guide and support private sector development; reduce energy consumed by City facilities and utilize solar heating where applicable; and help citizens to use less energy.

State Senate Bill (SB) 97 required the CEQA Guidelines be updated to include guidance for evaluation of GHG emissions impacts. There are no locally adopted significance thresholds for GHG emissions. The SCAQMD CEQA Greenhouse Gas Significance Threshold working group recommended a tiered set of thresholds for GHG significance adopted for projects where SCAQMD is the lead agency. As there are no other locally-adopted thresholds, the recommended tiered thresholds from the SCAQMD CEQA Greenhouse Gas Significance Threshold working group are used.

The local climate action plan for the City is Green LA: An Action Plan to Lead the Nation in Fighting Global Warming ("Green LA"), adopted in May 2007. Climate LA is the implementation program for Green LA providing details of action items within Green LA. Green LA, the City of Los Angeles' climate action plan, has a goal of reducing GHG emissions to 35% below 1990 levels by 2030. To meet the Green LA goal, several smaller goals and actions associated with those goals were described in Green LA. Climate LA describes details of implementing the goals and actions. **Table VII-2, Project Consistency with Applicable Green LA Measures**, shows project consistency with applicable Green LA measures.

Table VII-2
Project Consistency with Applicable Green LA Measures

Measure	Consistency Analysis
Focus Area: Water	
Reduce per capita water consumption by 20%.	**Consistent.** The Modified Project would replace existing light industrial and warehouse buildings served by LADWP with a mixed-use development with three new structures that would be required to comply with the LA Green Building Code mandatory standards in effect at the time of permit issuance. The Los Angeles Green Building Standards Code requires incorporating low-flow plumbing fixtures and fittings to new and existing buildings, water re-use systems and recycled water to be used if available, and outdoor water use efficiency measures. As required within the Los Angeles Green Building Code, the Modified Project shall provide a 20% reduction in overall use of potable water within a building, based on the maximum allowable water use per plumbing fixture and fittings.
Focus Area: Transportation	
Promote walking and biking to work, within neighborhoods, and to large events and venues.	**Consistent.** The Modified Project is an infill development located within an urban area served with nearby public transit facilities, including bus stops in the immediate vicinity, and a light rail transit station within walking distance (approximately 0.25 miles). To promote the use of biking, the Modified Project would include required long-term and short-term bicycle parking spaces.
Focus Area: Land Use	
Promote high-density housing close to major transportation stops.	**Consistent.** The Modified Project is an infill development located within an urban area served with nearby public transit facilities, including bus stops served by Metro (Route 83) within approximately 250 feet of the site, and a Metro Gold Line light rail station within approximately 0.25 miles.

Comparison and Addendum Conclusion: The Modified Project would generate an estimated net increase in annual GHG emissions that would be approximately 267 $MTCO_2e$ less than the net increase in annual GHG emissions that would be generated by the Original Project. The Original Project and the Modified Project would be consistent with applicable regulations and plans for reduction of GHG emissions; specifically: the Scoping Plan, SB 375, SCAG's 2016-2040 RTP/SCS, and the LA Green Building Code. The Modified Project would develop a similar mix of land uses on the same property, and would be required to comply with the same regulatory measures for reducing GHG emissions that would apply to the Original Project. By redeveloping an infill property, the Modified Project would not contribute to urban sprawl, and would be consistent with Green LA, the City's climate action plan, by providing a compact residential and commercial mixed-use development within an urban area served by existing transit facilities. The Modified Project would be required to comply with current energy and water efficiency codes, and solid waste reduction measures, which reduce GHG emissions. Therefore, the Modified Project would be consistent with relevant plans and regulations adopted for the reduction of GHG emissions identified herein. Additionally, the estimated GHG emissions generated by the Modified Project would be lower than the Original Project's GHG emissions.

For the reasons discussed above, the Modified Project would result in no new significant effects and no substantial increase in the severity of previously identified significant effects as compared to the Original Project.

b. Less Than Significant Impact.

Original Project Analysis: The MND determines that based on the discussion provided in Section VII a), the Original Project of a mixed-use project with multi-family residential and commercial uses on an infill site within an area served by existing transit would be consistent with local and statewide goals and policies aimed at reducing the generation of GHGs, including CARB's AB 32 Scoping Plan aimed at achieving 1990 GHG emission levels by 2020. Therefore, it was determined that the Original Project's generation of GHG emissions would not make a project-specific or cumulatively considerable impact due its consistency with the herein identified applicable plans, policies or regulations for the purposes of reducing the emissions of GHGs and therefore, the impact would be less than significant.

Modified Project Analysis: As discussed within Section VII a), the Modified Project would develop a mixed-use project with multi-family residential and commercial uses on an infill site within an area served by existing transit. As such, the Modified Project would be consistent with local and statewide goals and policies aimed at reducing the generation of GHGs, and the impact would be less than significant.

Comparison and Addendum Conclusion: The Original Project and the Modified Project would both develop a similar mix of land uses on an infill site within an urban area served by existing transit facilities. Both would be considered to be consistent with applicable plans and regulations adopted for reducing GHG emissions, and impacts would be less than significant. Additionally, the estimated GHG emissions generated by the Modified Project would be lower than the Original Project's GHG emissions.

For the reasons discussed above, the Modified Project would result in no new significant effects and no substantial increase in the severity of previously identified significant effects as compared to the MND.

Cumulative Impacts

The GHG emissions from a mixed-use development with residential and commercial uses is relatively small in comparison to state or global GHG emissions, and consequently, such emissions in isolation would have no significant direct impact on global GHG emissions. Accordingly, the threshold of significance for GHG emissions looks to whether a project's contribution to global climate change is "cumulatively considerable." Many regulatory agencies, including the SCAQMD, concur that GHG and climate change should be evaluated as a potentially significant cumulative impact, rather a direct project impact. The MND concludes that the Original Project would not result in a significant cumulative impact on GHG emissions due to its consistency with applicable regulations, plans and policies. As stated above, the Modified Project would be consistent with the same applicable local ordinances, regulations and policies that have been adopted in furtherance of the state and City's goals of reducing GHG emissions. Thus, the Modified Project would not make a cumulatively considerable contribution to GHG emissions and cumulative impacts would be less than significant.

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
VIII. HAZARDS AND HAZARDOUS MATERIALS.				
Would the project:				
a. Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☒	☐
b. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☒	☐	☐
c. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☒	☐	☐
d. Be located on a site that is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	☐	☒	☐
e. For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?	☐	☐	☐	☒
f. For a project within the vicinity of a private airstrip, would the project result in a safety hazard for the people residing or working in the area?	☐	☐	☐	☒
g. Impair implementation of, or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☐	☒
h. Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?	☐	☐	☐	☒

Impact Analysis

A Phase I Environmental Site Assessment, ("Phase I ESA") dated April 28, 2015[13] was prepared for the Original Project to characterize the potential for hazardous materials to be located within the Project Site

[13] Orswell & Kasman. Inc., Phase I Environmental Site Assessment Update Report, Multi-Tenant Commercial Property 135, 141, & 153 West Avenue 34 and 3401 & 3433 Pasadena Avenue, Los Angeles California 90031, April 28, 2015.

or vicinity. In addition, a new Phase I Environmental Site Assessment ("Phase I ESA") dated July 19, 2019[14] was prepared for the site (**Appendix D)** to determine if there are any new or changed conditions regarding the potential for hazardous materials to exist within the site or nearby vicinity.

a. Less Than Significant Impact.

Original Project Analysis: The MND determines that construction activities would involve the use of routine materials such as vehicle fuels, oils and transmission fluids, which would be contained, stored and handled in compliance with applicable standards and regulations. It was also determined that during operations, no hazardous materials other than modest amounts of typical cleaning supplies and solvents used for housekeeping and janitorial purposes would routinely be used and transported as a result of the Original Project, and the use of these substances would comply with State Health Codes and Regulations. Therefore, the Original Project's potential to result in substantial environmental impacts regarding routine transport, use or disposal of hazardous materials was determined to be less than significant.

Modified Project Analysis: The Modified Project would result in similar construction activities as the Original Project, as it would redevelop the same property, and would require removal of existing structures, grading/excavation, and construction of multiple structures for residential and commercial uses. Therefore, construction activities would involve the use of similar materials as the Original Project, including vehicle fuels and other fluids, which would be subject to applicable standards and regulations regarding containment, storage, and use, as described in the MND. During operations, the Modified Project's residential and commercial land uses would not routinely transport, use, or dispose of hazardous materials in quantities that would create a substantial hazard to the public. Common household cleaning products, used in accordance with manufacturers' instructions would not pose a substantial hazard to the public. As such, the Modified Project's impacts regarding routine transport, use or disposal of hazardous materials would be less than significant.

Comparison and Addendum Conclusion: The Original Project and the Modified Project would both require the temporary use of common vehicle fuels, oils, and fluids during construction, and would redevelop the same site, with similar land uses, the operations of which would not require the routine transport, use, or disposal of hazardous materials in quantities that would create a substantial hazard to the public or the environment. Potential impacts for either the Original Project or the Modified Project would be similar, and would be less than significant.

For the reasons discussed above, the Modified Project would result in no new significant effects and no substantial increase in the severity of previously identified significant effects as compared to the Original Project.

b. Less Than Significant Impact With Mitigation.

Original Project Analysis: As stated in the MND, the 2015 Phase I ESA identified no areas of significant environmental concern, and no evidence of Recognized Environmental Conditions ("RECs"), Historic RECs ("HRECs") or Controlled RECs ("CRECs") were observed in connection with the property. As the on-site buildings were built prior to federal bans on Asbestos-Containing Materials ("ACMs") and Lead-Based Paints ("LBP"), ACMs and LBPs may be present on site. The MND reported that database research showed that two adjacent properties (Metro Rail line and 3505 Pasadena Avenue) are recorded as hazardous waste sites, with soil contamination of lead, polychlorinated biphenyls (PCBs), tetrachloroethane (PCE),

[14] Fulcrum Resources Environmental, Phase I Environmental Site Assessment 135, 141, & 153 West Avenue 34, and 3401, & 3433 Pasadena Avenue Los Angeles, California 90031, July 19, 2019.

and trichloroethylene (TCE). However, there was no indication from a review of regulatory records and onsite inspection that the Project Site proposed for redevelopment by the Original Project has had any problems concerning the storage, usage or disposal of hazardous materials in relation to the adjacent properties. The MND notes that the use of the Project Site would be subject to [Q] Condition A.1(e), which specifies:

> "Property owners shall satisfy any requirements from the State Department of Toxic Substances Control (DTSC) in relation to potential contamination on the subject site. Prior to the issuance of any clearances by the Department of City Planning (DCP), property owners shall provide to DCP a letter from DTSC that establishes DTSC's satisfaction that the subject site currently meets DTSC requirements for the proposed use or, alternatively, that establishes DTSC's satisfaction with the property owner's contamination testing plan for the proposed use."

Additionally, as required by [Q] Condition C.12, a complete asbestos survey must be conducted prior to the demolition activities to identify all sources of asbestos, as required by the U.S. EPA National Emission Standard for Hazardous Air Pollutants regulations and the SCAQMD's Rule 1403. The MND determines that removal of asbestos is not unusual and can be readily accomplished, as asbestos removal operations are generally low risk, and the possibility of exposure to airborne asbestos fibers from asbestos removal projects is limited when following asbestos-related regulations.

Demolition of the existing structures during construction of the Original Project could potentially expose workers to lead-based paint, which would be hazardous to the health of the construction workers. The MND determines that compliance with mandatory state and federal regulations would ensure that the potential lead-based paint on-site would be handled properly and impacts associated with the exposure to lead-based paint would be less than significant, and that a qualified lead-paint abatement consultant would be required to comply with applicable state and federal rules and regulations governing lead paint abatement.

To further ensure that impacts relating to lead-based paint would be less than significant, the MND provided Mitigation Measure MM-HAZ-1 to require a lead-based paint survey be conducted prior to the issuance of a demolition permit.

The MND concludes that with incorporation of **MM-HAZ-1** and compliance with [Q] Condition A.l(e), and mandatory state and federal regulatory compliance measures, the Original Project's potential impacts associated with the release of a hazardous material would be less than significant after mitigation.

Modified Project Analysis: A new Phase I ESA (Appendix D) determined that there is no evidence of RECs, HRECs or CRECs and no areas of significant environmental concern were observed on the Project Site. Additionally, the new Phase I ESA (Appendix D) determined that based on available information, separation distance, regulatory closure status, regulatory oversight of cleanup activities, or ongoing remediation and groundwater monitoring at off-site locations in the vicinity, there are no sites within the area that represent a Vapor Encroachment Condition (VEC) to the subject property. However, due to the age of the existing buildings on Project Site, including the demolition of all onsite buildings as compared to the Original Project that would demolish all but one onsite building, ACMs and LBPs may be present, which could pose a hazard to workers during demolition activities. The Modified Project would require demolition activities within the same existing structures, and grading and redevelopment of the same property with residential and commercial uses as the Original Project. Therefore, the potential for the Modified Project to create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment would not substantially differ from the Original Project.

The Modified Project would be required to comply with [Q] Condition A.1(e) to assure the Department of City Planning that any requirements from DTSC in relation to potential contamination on the Project Site have been satisfied. Additionally, the Modified Project would be required to comply with [Q] Condition C.12 by conducting an asbestos survey, and if ACMs are found to be present, removal of such material would be required to comply with SCAQMD's Rule 1403. Removal of asbestos is not unusual and is generally low risk. Implementation of Mitigation Measure MM-HAZ-1, as described above regarding the evaluation in the MND, would ensure that surveys for the presence of LBPs in existing structures would be conducted, and if present, removal would be in accordance with applicable OSHA regulations. Therefore, the Modified Project would have a less than significant impact with MM-HAZ-1 incorporated, and required compliance with regulatory requirements, including applicable [Q] conditions and SCAQMD Rule 1403.

Comparison and Addendum Conclusion: The Original Project and the Modified Project would both demolish the existing buildings and develop similar land uses within the same site. Therefore, the potential for the Modified Project to create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment would not substantially differ from the Original Project. With implementation of the same mitigation measure (MM-HAZ-1) and regulatory compliance, the development of either the Original Project or the Modified Project would reduce impacts to less than significant.

Therefore, the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project, as both would be less than significant with regulatory compliance and MM-HAZ-1 incorporated.

Mitigation Measure:

MM-HAZ-1 Existing Toxic/Hazardous Construction Materials:

- (Lead Paint) Prior to the issuance of any permit for demolition or alteration of the existing structure(s), a lead-based paint survey shall be performed to the written satisfaction of the Department of Building of Safety. Should lead-based paint materials be identified, standard handling and disposal practices shall be implemented pursuant to Occupational Safety and Health Administration (OSHA) regulations.

c. Less Than Significant Impact With Mitigation.

Original Project Analysis: The MND identified three Los Angeles Unified School District ("LAUSD") schools within approximately one-quarter mile from the Project Site, including Hillside Elementary School, Loreta Street Elementary, and Los Angeles Leadership Academy Charter School. The MND determines that the Original Project would have the potential to expose students and staff of the identified schools to potentially hazardous materials, substances or waste during the construction period; specifically, noise, dust, localized air quality emissions, and construction traffic/hauling. To reduce potential construction-related impacts upon the nearby school facility, a proposed haul route was identified to minimize hauling impacts on the nearest school facility. Additionally, the MND concludes that implementation of Mitigation Measures **MM-HAZ-2** and **MM-HAZ-3**, stated below, would reduce the Original Project's construction impacts related to nearby schools to less than significant with mitigation.

The MND determines that no hazardous materials other than modest amounts of typical cleaning supplies and solvents used for housekeeping and janitorial purposes would be typically associated with the operation and activities of the Original Project's land uses, and the use of these substances would comply with State Health Codes and Regulations. Therefore, it was determined that during operations, potential impacts would be less than significant.

Modified Project Analysis: As stated in the MND, three LAUSD schools are located approximately one-quarter mile from the Project Site, including Hillside Elementary School, Loreta Street Elementary, and Los Angeles Leadership Academy Charter School. During construction, the Modified Project would require the temporary use of similar equipment and materials within the Project Site, and would export a similar volume of soil as the Original Project. As such, the Modified Project's potential to result in temporary exposure of students and faculty at nearby schools to hazards during construction would not substantially differ from the Original Project, which would be reduced to less than significant with mitigation.

During operations, the Modified Project's residential and commercial land uses would not require usage of hazardous materials onsite other than modest amounts of typical cleaning supplies and solvents used for housekeeping and janitorial purposes. As such, operational impacts of the Modified Project on nearby schools regarding hazardous materials would be less than significant.

Pursuant to [Q] Condition C.22, the Modified Project would be required to implement the following Environmental Conditions during construction that address potential construction-related hazards at nearby schools:

a. The developer shall install appropriate traffic signs around the site to ensure pedestrian and vehicle safety.
b. Haul route scheduling shall be sequenced to minimize conflicts with pedestrians, school buses and cars at arrival and dismissal times of the school day. Haul route trucks shall not be routed past the school during periods when students are arriving or departing from the campus.
c. There shall be no staging or parking of construction vehicles, including vehicles to transport workers on any of the streets adjacent to any school.
d. Due to noise impacts on the schools, no construction vehicles or haul trucks shall be staged or idled on these streets during school hours.
e. Fences shall be constructed around the site to minimize trespassing, vandalism, short-cut attractions and attractive nuisances.
f. The developer and contractors shall maintain ongoing contact with the administrator of Hillside Elementary School, Loreto Street Elementary School and Nightingale Middle School. The administrative offices shall be contacted when demolition, grading and construction activity begin on the project site so that students and their parents will know when such activities are to occur. The developer shall obtain school walk and bus routes to the schools from either the administrators or from the LAUSD's Transportation Branch (323) 342-1400 and guarantee that safe and convenient pedestrian and bus routes to the school be maintained.

The Regulatory Compliance Measures provided by [Q] Condition C.22 are very similar to the Mitigation Measures MM-HAZ-2 and MM-HAZ-3 stated below, which the MND determines would reduce potential construction-related impacts at nearby schools to less than significant. As such, implementation of the applicable [Q] Condition C.22 Regulatory Compliance Measures, as well as implementation of MM-HAZ-2 and MM-HAZ-3 as stated below would reduce potential construction-related environmental impacts on nearby schools to less than significant.

Comparison and Addendum Conclusion: The Original Project and the Modified Project would both redevelop the same site, which is near LAUSD schools, by removing light industrial and warehouse uses, and constructing a mixed-use development of residential and commercial uses. Both the Modified Project and the Original Project would be required to implement the Regulatory Compliance Measures in [Q] Condition C.22 to address potential construction impacts at nearby schools. Additionally, implementation

of MM-HAZ-2 and MM-HAZ-3 as stated below would reduce potential construction-related environmental impacts of either the Modified Project or the Original Project on nearby schools to less than significant.

For the above reasons, the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project, as both would be less than significant with regulatory compliance and implementation of MM-HAZ-2 and MM-HAZ-3.

Mitigation Measure:

MM-HAZ-2 Construction Activity Near Schools:

- The Applicant and contractors shall maintain ongoing contact with the administrators of Hillside Elementary School, Loreta Street Elementary School, and Los Angeles Leadership Academy Charter School. The administrative offices shall be contacted when demolition, grading and construction activity begin on the project site so that students and their parents will know when such activities are to occur. The developer shall obtain school walk and bus routes to the schools from either the administrators or from the Los Angeles Unified School District (LAUSD) Transportation Branch (323) 342-1400 and guarantee that safe and convenient pedestrian and bus routes to the school be maintained.
- The Applicant shall install appropriate traffic signs around the site to ensure pedestrian and vehicle safety.
- There shall be no staging or parking of construction vehicles, including vehicles to transport workers on Pasadena Avenue, adjacent to the school.
- Due to noise impacts on the schools, no construction vehicles or haul trucks shall be staged or idled on Pasadena Avenue, adjacent to the school, during school hours.

MM-HAZ-3 Schools Affected by Haul Route:

- Haul route scheduling shall be sequenced to minimize conflicts with pedestrians, school buses and cars at the arrival and dismissal times of the school day. Haul route trucks shall not be routed past the school during periods when school is in session especially when students are arriving or departing from the campus.

d. Less Than Significant Impact.

Original Project Analysis: Government Code Section 65962.5 (a) requires the DTSC to compile and update a list of hazardous waste facilities or property, contaminated drinking water wells, leaking underground storage tanks (LUST), solid waste disposal facilities from which hazardous wastes are migrating, cease and desist orders or cleanup and abatement orders for hazardous materials. According to the MND, the Project Site was listed on the Resource Conservation and Recovery Act Hazardous Waste Generator with no reported violations. Although database records indicate that hazardous sites are located in the vicinity of the Project Site, the Phase I ESA determined that it is unlikely that any contaminants from these sites would have a significant impact on the Project Site, and there is no evidence of RECs in connection with the Project Site. The MND determines that compliance with mandatory state and federal regulatory compliance measures would ensure the Original Project's potential impacts associated with the release of a hazardous material would be less than significant.

Modified Project Analysis: A search of the California Environmental Protection Agency's (CalEPA's) Cortese List Data Resources databases[15] showed that the Project Site is not included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5. As stated in the MND, database records indicate that hazardous sites are located in the vicinity of the Project Site. However, the Phase I ESA determined that it is unlikely that any contaminants from these sites would have a significant impact on the Project Site, and there is no evidence of RECs, HRECs, or CRECs in connection with the Project Site, and therefore, the potential impacts of the Modified Project are less than significant.

Comparison and Addendum Conclusion: The Original Project and the Modified Project would both develop similar land uses within the same site. The Project Site is not included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5, and it was determined unlikely that contaminants from nearby sites with hazardous materials would significantly impact the Modified Project. As such, impacts pertaining to hazardous material site listings for either the Modified Project or the Original Project would be less than significant, and the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project, as both would be less than significant.

e. No Impact.

Original Project Analysis: The Project Site is not located within two miles of a public airport or in an airport hazard area. Therefore, the Original Project would not result in a safety hazard to people working or residing within the project area regarding aircraft operations in the vicinity, and no impact would occur.

Modified Project Analysis: As the Project Site is not located within two miles of a public airport or in an airport hazard area, the Modified Project would not result in a safety hazard to people working or residing within the project area regarding aircraft operations in the vicinity, and no impact would occur.

Comparison and Addendum Conclusion: The Project Site that would be redeveloped by either the Original Project or the Modified Project is not located within two miles of a public airport or in an airport hazard area. As such, no impact on the environment pertaining to airport hazard areas would result from either the Original Project or the Modified Project.

For these reasons, the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project.

f. No Impact.

Original Project Analysis: The Project Site is not located within the vicinity of a private airstrip. Therefore, the Original Project would not result in a safety hazard to people working or residing within the project area regarding private airstrip operations in the vicinity, and no impact would occur.

Modified Project Analysis: The Project Site is not located within the vicinity of a private airstrip. Therefore, the Modified Project would not result in a safety hazard to people working or residing within the project area regarding private airstrip operations in the vicinity, and no impact would occur.

Comparison and Addendum Conclusion: The Original Project and the Modified Project would develop similar land uses within the same site, which is not located within the vicinity of a private airstrip. There

[15] California Environmental Protection Agency, Cortese List Data Resources, Accessed on October 2, 2019 at: https://calepa.ca.gov/sitecleanup/corteselist/.

would be no impact on the environment pertaining to private airstrip hazard areas for either the Original Project or the Modified Project.

For these reasons, the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project.

g. No Impact.

Original Project Analysis: The MND stated that the Project Site is not located within an identified disaster route or an adopted emergency response or evacuation plan. Therefore, the Original Project would not impair implementation of an emergency plan and no impact would occur.

Modified Project Analysis: As the Project Site is not located within an identified disaster route or an adopted emergency response or evacuation plan, the Modified Project would not impair implementation of an emergency plan and no impact would occur.

Comparison and Addendum Conclusion: The Original Project and the Modified Project would develop similar land uses within the same site, which is not located within an identified disaster route or an adopted emergency response or evacuation plan. As such, there would be no impact associated with impairment or interference with an adopted emergency response plan or emergency evacuation plan emergency plans for either the Original Project or the Modified Project.

For these reasons, the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project.

h. No Impact.

Original Project Analysis: The Project Site is located in a highly urbanized area of the City and is not within a Very High Fire Hazard Severity Zone ("VHFHSZ"). Therefore, the Original Project would not expose people or structures to wildland fires and no impact would occur.

Modified Project Analysis: As the Project Site is located in a highly urbanized area of the City and is not within a VHFHSZ, the Modified Project would not expose people or structure to wildland fires and no impact would occur.

Comparison and Addendum Conclusion: The Original Project and the Modified Project would develop similar land uses within the same site, which is in a highly urbanized area that is not located in a VHFHSZ. As such, development of either the Original Project or the Modified Project would not expose people or structures to wildland fires and no impact would occur.

For these reasons, the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project.

Cumulative Impacts

As stated in the MND, development of the Original Project would not result in a cumulative environmental impact with respect to hazards and hazardous materials in conjunction with the identified related projects. As the Modified Project proposes a similar mixed-use development on the same urban infill property, would comply with the above-identified regulatory compliance and mitigation measures, and would not result in

a greater impact regarding hazards and hazardous materials as set forth above, the Modified Project would similarly not result in a significant cumulative impact regarding hazards and hazardous materials.

IX. HYDROLOGY AND WATER QUALITY.	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
Would the project:				
a. Violate any water quality standards or waste discharge requirements?	☐	☐	☒	☐
b. Substantially deplete groundwater supplies or interfere with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned land uses for which permits have been granted)?	☐	☐	☒	☐
c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on- or off-site?	☐	☐	☒	☐
d. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner, which would result in flooding on- or off site?	☐	☐	☒	☐
e. Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?	☐	☐	☒	☐
f. Otherwise substantially degrade water quality?	☐	☐	☐	☒
g. Place housing within a 100-year flood plain as mapped on federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?	☐	☐	☐	☒
h. Place within a 100-year flood plain structures, which would impede or redirect flood flows?	☐	☐	☐	☒
i. Expose people or structures to a significant risk of loss, inquiry or death involving flooding, including flooding as a result of the failure of a levee or dam?	☐	☐	☒	☐
j. Inundation by seiche, tsunami, or mudflow?	☐	☐	☐	☒

Impact Analysis

a. Less Than Significant Impact.

Original Project Analysis:

Construction

The Original Project was determined to have potential short-term, construction-related stormwater pollution from three sources including:

1) the handling, storage, and disposal of construction materials containing pollutants;
2) the maintenance and operation of construction equipment; and
3) earth moving activities which, when not controlled, may generate soil erosion via storm runoff or mechanical equipment.

The MND established that prior to the issuance of a grading permit, redevelopment of the Project Site would be required to meet the following regulatory requirements associated with construction-related stormwater runoff:

- Obtain coverage under the State Water Resources Control Board NPDES Construction General Permit.
- Provide the Waste Discharge Identification Number to the City to demonstrate proof of coverage under the Construction General Permit.
- Create a SWPPP that identifies BMPs to be implemented to ensure potential for soil erosion and sedimentation is minimized.

Additionally, the Original Project would be subject to the City of Los Angeles Ordinance No. 173,494, which further sets procedures for stormwater pollution control for the planning and construction of development and redevelopment projects.

As such, it was determined by implementation of the code-required SWPPP and compliance with Ordinance No. 173,494 that construction of the Original Project would not violate any water quality standards or discharge requirements and impacts would be less than significant.

Operations

The MND notes that under existing conditions, the Project Site is nearly 100 percent impervious, thus nearly all stormwater within the Project Site is directed to storm drains, primarily via Avenue 34. According to the MND, the Original Project would also maintain impervious surfaces on nearly 100 percent of the Project Site as well, but would not be expected to increase surface water runoff compared to existing conditions, as it would be required to comply with low impact development ("LID") requirements.

The MND identified the following regulatory requirements regarding stormwater management for redevelopment projects:

- Order No. R4-2012-0175 the NPDES Stormwater Permit for the County of Los Angeles and cities within (NPDES No. CAS004001)
- City of Los Angeles Stormwater and Urban Runoff Pollution Control Ordinance (Ordinance No. 172,176, effectuated October 1998)
- LAMC Sections 64.70 through 64.70.13

- LAMC Article 4.4, Stormwater and Urban Runoff Pollution Control
- LID Ordinance (Ordinance No. 181,899)
- Ordinance No. 183,833

To comply with applicable requirements, the Original Project would be required to prepare a LID Plan and demonstrate compliance with the LID requirements and standards and retain or treat the first 3/4-inch of rainfall in a 24-hour period or the rainfall from an 85th percentile 24-hour runoff event, whichever is greater.[16]

Additionally, redevelopment of the Project Site would be required to comply with [Q] Conditions C.13 through C.17 as applicable, which specify stormwater management requirements for various types of land uses including those that the Original Project would be anticipated to develop within the Project Site. It was determined that compliance with the applicable [Q] Conditions Regulatory Compliance Measures for stormwater management would ensure the Original Project operations would not violate any water quality standards or discharge requirements, and impacts would be less than significant.

Modified Project Analysis: The Modified Project would redevelop the Project Site by removing the existing structures and parking areas that cover nearly one hundred percent of the Project Site with impervious surfaces, and constructing a mixed-use development with residential and commercial uses that would include impervious surfaces on much of the Project Site.

Construction

During construction, the Modified Project would be required to comply with all applicable regulations for managing stormwater runoff from construction site, including requirements to obtain coverage under the latest NPDES Construction General Permit and prepare a SWPPP that specifies BMPs to be installed and maintained during construction.

Operations

The Modified Project would be designed and operated in accordance with applicable LID requirements, as well as [Q] Condition C.13 through C.17 that provide stormwater management measures for the planned uses that would be incorporated.

Therefore, by compliance with applicable regulations and standards, the Modified Project's potential to violate any water quality standards or waste discharge requirements would be less than significant.

Comparison and Addendum Conclusion: The Original Project and the Modified Project would be located on the same site, which is entirely developed with nearly 100 percent coverage by impervious surfaces. Both would redevelop the Project Site with a mixed-use development of residential and commercial uses that maintain impervious surfaces on a substantial portion of the Project Site. Both the Original Project and the Modified Project would be subject to all applicable regulations and standards during construction, including requirements to obtain coverage under the NPDES Construction General Permit, prepare a SWPPP, and implement relevant BMPs. Redevelopment of the Project Site with either the Original Project or the Modified Project would also be required to adhere to applicable LID requirements for management of stormwater during operations, as well as comply with all applicable [Q] Condition requirements for the Project Site. As such, impacts pertaining to violation of water quality standards or waste discharge

[16] City of Los Angeles, Planning and Land Development Handbook for Low Impact Development (LID), Part B Planning Activities, 5th Edition, May 9, 2016.

requirements for either would be less than significant, and the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project, as both would be less than significant.

b. Less Than Significant Impact.

Original Project Analysis: The Original Project's analysis established that the depth of groundwater in the Project Site's vicinity has fluctuated between 25 and 53 feet below existing ground surface. In addition, the Original Project's Geotechnical Investigation encountered groundwater at a depth of 40.75 feet below the surface and concluded that excavation to allow for one level of subterranean parking would not be expected to encounter groundwater.

During operations, the Original Project would continue to be supplied with potable water by the LADWP. As the existing uses on the Project Site include coverage of nearly one hundred percent of the Project Site with impervious surfaces, stormwater runoff from the Project Site is primarily directed to existing storm drains, and onsite percolation of stormwater to groundwater table would be minimal.

The Previously MND identified a regulatory compliance measure (reproduced below) that would apply in the unlikely event that construction activities of the Original Project encountered groundwater. It was concluded that required compliance with all waste discharge requirements for discharge of groundwater, as outlined in Order No. R4-2008-0032, NPDES No. CAG994004 and all applicable regulatory compliance measures concerning dewatering of a construction site would reduce potential impacts regarding groundwater to less than significant.

> **(Dewatering)**: If required, any dewatering activities during construction shall comply with the requirements of the Waste Discharge Requirements for Discharges of Groundwater from Construction and Project Dewatering to Surface Waters in Coastal Watersheds of Los Angeles and Ventura Counties (Order No. R4-2008-0032, National Pollutant Discharge Elimination System No. CAG994004) or subsequent permit. This will include submission of a Notice of Intent for coverage under the permit to the Los Angeles Regional Water Quality Control Board at least 45 days prior to the start of dewatering and compliance with all applicable provisions in the permit, including water sampling, analysis, and reporting of dewatering-related discharges.

Modified Project Analysis: The Modified Project would be served by LADWP during operations, as are the existing uses on the Project Site, and does not propose any onsite groundwater production well(s) to supply the proposed land uses. As the Project Site is currently developed with impervious surfaces over nearly 100 percent of the Project Site, the Modified Project would not result in a reduction of onsite percolation of stormwater into the groundwater table.

During construction of the Modified Project, soil excavation for the two-level subterranean parking garage would extend to approximately 20 feet below the lowest point of the existing grade onsite, which would not be expected to encounter groundwater that was determined to be approximately 40.75 feet below the surface by the previous Geotechnical Investigation. In the unlikely event that construction activities encountered groundwater that must be removed, the Modified Project would be required to comply with applicable discharge requirements for dewatering a construction site, as would redevelopment of any use on the Project Site. Therefore, the proposed Modified Project would have a less than significant impact regarding groundwater.

Comparison and Addendum Conclusion: The Original Project and the Modified Project would be redevelop the same site, removing existing uses with approximately 100 percent of the Project Site covered by impervious surfaces, and construct mixed-use developments with residential and commercial uses that would be served by LADWP water supplies, as is the existing uses. Therefore, operation of either the Original Project or the Modified Project would not substantially affect groundwater levels beneath the Project Site or reduce onsite percolation of stormwater into the groundwater table compared to existing conditions.

During construction, excavation for subterranean parking garages would not be expected to encounter groundwater, as the existing groundwater level was determined to be more than 40 feet below the ground surface, which is considerably farther than the maximum depth of excavation that a two-level subterranean parking garage would require. The regulatory compliance measure identified by the MND concerning waste discharge requirements for construction dewatering, would also apply to the Modified Project in the unlikely event that groundwater were encountered during construction, and any potential groundwater impacts would be less than significant, as would the Original Project. As such, the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project, as both would be less than significant.

c. Less Than Significant Impact.

Original Project Analysis: The evaluation of the Original Project established that the Project Site does not include any streams or river courses, and is currently developed with existing uses that include coverage of nearly 100 percent of the Project Site with impervious surfaces that convey stormwater runoff to various points along Avenue 34. Although the Original Project would maintain Project Site's nearly one hundred percent imperviousness, it would be required to comply with the LID Ordinance, which would reduce the amount of runoff leaving the Project Site as compared to existing conditions. It was concluded that the Original Project would not increase Project Site runoff or result in changes to the local drainage patterns and impacts would be less than significant.

Modified Project Analysis: The Modified Project would redevelop the Project Site, which does not contain streams or river courses, and is located in an urbanized area within the City, and is currently developed with existing uses that include coverage of nearly 100 percent of the Project Site with impervious surfaces that convey stormwater runoff to various points along Avenue 34. The Modified Project would remove the existing uses, and construct a mixed-use development with residential and commercial uses. Although the Modified Project would also develop impervious surfaces on the Project Site, it would be required to comply with the LID Ordinance, which would reduce the amount of runoff leaving the Project Site as compared to existing conditions. As the Modified Project would not alter the course of a stream or river, and would not increase runoff, it would not substantially alter drainage patterns that could result in substantial erosion or siltation on- or off-site, and impacts would be less than significant.

Comparison and Addendum Conclusion: Both the Original Project and the Modified Project would remove existing land uses and associated impervious surfaces, and construct mixed-use developments that would be subject to all applicable LID requirements. Therefore, implementation of either the Original Project or the Modified Project would not increase runoff compared to existing conditions, or substantially alter drainage patterns, and potential erosion or siltation impacts for either would be less than significant. As such, the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project.

d. Less Than Significant Impact.

Original Project Analysis: It was determined that the Original Project would not result in a significant increase in site runoff, or any changes in the local drainage patterns that could result in flooding on-or off-site, and would comply with the LID Ordinance. As such, the MND concludes that impacts would be less than significant.

Modified Project Analysis: The Modified Project would redevelop the Project Site, which is currently developed with nearly one hundred percent impervious areas that contribute stormwater runoff to the existing storm drain system. The Modified Project would remove the existing uses, and construct a mixed-use development with residential and commercial uses. Although the Modified Project would also develop impervious surfaces on the Project Site, it would be required to comply with the LID Ordinance, which would reduce the amount of runoff leaving the Project Site as compared to existing conditions. As the Modified Project would not alter the course of a stream or river, and would not increase runoff, it would not substantially alter drainage patterns that could result in substantial flooding on- or off-site, and impacts would be less than significant.

Comparison and Addendum Conclusion: Both the Original Project and the Modified Project would remove existing land uses and associated impervious surfaces, and construct mixed-use developments that would be subject to all applicable LID requirements. Therefore, implementation of either the Original Project or the Modified Project would not increase runoff compared to existing conditions, or substantially alter drainage patterns, and potential flooding impacts for either would be less than significant. As such, the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project.

e. Less Than Significant Impact.

Original Project Analysis: As established in the MND analysis, the Project Site is currently fully developed with nearly 100 percent impervious surfaces, and runoff primarily discharges from the Project Site at various points onto Avenue 34. Although redevelopment on the Project Site would not result in an increase in impervious surfaces compared to existing conditions, the MND reported that pursuant to local practice and City policy, stormwater retention will be required as part of the LID Ordinance / Standard Urban Stormwater Mitigation Plan ("SUSMP") implementation features.

It was concluded that the Original Project would not create or contribute runoff water that would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff. Further, as stated in the MND, the Original Project would be required to comply with LAMC Section 64.70, Stormwater Runoff and Urban Pollution Control, and all applicable laws and regulations pertaining to stormwater runoff and water quality. Accordingly, any potential impacts would be less than significant.

Modified Project Analysis: The Modified Project would remove the existing land uses within the Project Site, which includes nearly 100 percent coverage by impervious surfaces, including light industrial uses, and warehouses, as well as parking lots and loading docks. The Modified Project would not increase the percentage of impervious surfaces on the Project Site, and would comply with applicable stormwater management regulations, including the LID Ordinance. Additionally, the Modified Project would be required to implement the applicable regulatory compliance measures set forth in [Q] Condition C.13 through C.17, which provide stormwater management measures for the planned uses that would be incorporated. As such, the Modified Project would not result in an increase in stormwater runoff volume

from the Project Site, and would not exceed capacity of existing or planned stormwater drainage systems, or provide substantial sources of polluted runoff.

Comparison and Addendum Conclusion: The Original Project and the Modified Project would be located on the same site, and would remove light industrial and warehouse uses that cover the Project Site with nearly one hundred percent impervious areas that generate surface water runoff directed to adjacent storm drains. The Original Project and the Modified Project would both be subject to all applicable stormwater management regulations, including the LID Ordinance, as well as the applicable [Q] Condition C.13 through C.17. As such, the potential for either the Original Project or the Modified Project to exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff would be less than significant.

For these reasons, the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project.

f. No Impact.

Original Project Analysis: According to the analysis of the MND, the Original Project would not include potential sources of contaminants that could potentially degrade water quality and would comply with all federal, state, and local regulations governing stormwater discharge. Therefore, it was concluded that the Original Project would have no impact regarding the potential to otherwise substantially degrade water quality.

Modified Project Analysis: The Modified Project would remove existing light industrial and warehouse uses, and associated parking and loading dock facilities from the Project Site, and replace those with residential and commercial uses that would be required to comply with all federal, state, and local regulations governing stormwater discharge, including the LID Ordinance as well as the applicable [Q] Condition C.13 through C.17. Therefore, the proposed Modified Project would have no impact and would not result in new significant effects.

Comparison and Addendum Conclusion: The Original Project and the Modified Project would redevelop the same site, and both would also remove the existing land uses and associated impervious surfaces that cover nearly 100 percent of the Project Site, which currently discharges stormwater runoff primarily at various locations along Avenue 34. The replacement of existing light industrial and warehouse uses with a mixed-use development of residential and commercial uses, which would comply with applicable stormwater management regulations, would not otherwise substantially degrade water quality. As the Original Project and the Modified Project would redevelop the Project Site with a similar mix of residential and commercial uses, both would have no impact regarding this issue.

For these reasons, the Modified Project would not result in new significant effects or a substantial increase in the severity of a previously identified significant environmental effect compared to the Original Project.

g. No Impact.

Original Project Analysis: As stated in the MND, the Project Site is not located in a 100-year flood hazard area, as it is located in an area designated by the Federal Emergency Management Agency ("FEMA") as Zone X, which signifies that the area is outside the 0.2 percent chance floodplain. Therefore, redevelopment of the Project Site with the Original Project would not place housing within a 100-year flood hazard area and no impact would occur.

Modified Project Analysis: The Project Site is located in an area designated by FEMA as Zone X, which signifies that the area is not located in a 100-year flood hazard area. Therefore, the Modified Project would not place housing within a 100-year flood hazard area and no impact would occur.

Comparison and Addendum Conclusion: The Original Project and the Modified Project would redevelop a property that is not located in a 100-year flood hazard area, and would have no impact regarding placement of housing in a flood hazard area. As such, the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project, as both would have no impact.

h. No Impact.

Original Project Analysis: AMND, the Project Site is not located in a 100-year flood hazard area, as it is located in an area designated by FEMA as Zone X, which signifies that the area is outside the 0.2 percent chance floodplain. Therefore, redevelopment of the Project Site with the Original Project would not impede or redirect floodwater flows, and no impact would occur.

Modified Project Analysis: As the Project Site is not located within a 100-year flood hazard area, the Modified Project would not impede or redirect floodwater flows and no impact would occur.

Comparison and Addendum Conclusion: As the Project Site is not located in a 100-year flood hazard area, redevelopment of the Project Site with either the Original Project or the Modified Project would have no impact associated with impeding or redirecting floodwater flows. As such, the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project, as both would have no impact.

i. Less Than Significant Impact.

Original Project Analysis: As stated in the MND, the Project Site is located within a potential inundation area associated with a potential failure of the Devil's Gate Dam. However, the MND determines that dams in California are continually monitored by various governmental agencies (such as the State of California Division of Safety of Dams and the U.S. Army Corps of Engineers) to guard against the threat of dam failure. Current design and construction practices as well as ongoing review and modification to existing dams are intended to ensure all existing dams are capable of withstanding the maximum considered earthquake. Therefore, the concluded that the potential for inundation of the Project Site as a result of dam failure is considered low and impacts would be less than significant.

Modified Project Analysis: The Modified Project would redevelop the Project Site, which is located within a potential inundation area associated with a potential failure of the Devil's Gate Dam, as are existing adjacent and nearby developments, which include residential and commercial uses, and railway and freeway infrastructure. As dams in California are subject to monitoring and ongoing review to ensure the capability to withstand earthquakes, the potential for inundation of the Project Site as a result of dam failure is considered low. The Project Site is not within close proximity to the existing Devil's Gate Dam, and therefore, development of the Modified Project would not exacerbate the potential for failure of the dam. As such, the potential for the Modified Project to substantially increase the risk of dam failure that could cause injury or death would be less than significant.

Comparison and Addendum Conclusion: The Project Site would be redeveloped by removal of existing urban uses and construction of residential and commercial uses under either the Original Project or the Modified Project. Neither of these development options would result in increased risk of dam failure that

could cause death or injury. All dams in California are subject to ongoing monitoring and maintenance to reduce potential risk of failure, and therefore, the potential impact associated with a risk of inundation by dam failure would be less than significant. As such, the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project, as both would be less than significant.

j. No Impact.

Original Project Analysis: The Project Site is not located within a coastal area, and therefore tsunamis are not considered a significant hazard. No major water-retaining structures are located immediately up gradient from the Original Project, and the potential for flooding from seismically-induced seiche is considered low. According to the previous Geotechnical Investigation, the Project Site is not within an area identified as having potential for seismic slope instability and therefore the occurrence of mudflows on site is considered low. As the Previously Approved Project Site is not subject to slope instability, tsunamis and seiche, no impact would occur.

Modified Project Analysis: As stated in the MND, the Project Site is not located in an area susceptible to inundation by seiche, tsunami or mudflow. As the Modified Project Site is not subject to slope instability, tsunamis and seiche, no impact would occur.

Comparison and Addendum Conclusion: As neither the Original Project nor the Modified Project would be located in an area susceptible to inundation by seiche, tsunami or mudflow, there would be no impact with development of either option. As such, the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project, as both would have no impact.

Cumulative Impacts

As stated in the MND, development of the Original Project would not result in a significant cumulative environmental impact with respect to hydrology and water quality in conjunction with the identified related projects. As the Modified Project proposes a similar mixed-use development on the same urban infill property, would comply with the various regulatory compliance measures discussed above, and would not result in a greater impact regarding hydrology and water quality, as set forth in the above analysis, the Modified Project would similarly not result in a significant cumulative impact regarding hydrology and water quality.

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
X. LAND USE AND PLANNING.				
Would the project:				
a. Physically divide an established community?	☐	☐	☐	☒
b. Conflict with applicable land use plan, policy or regulation of an agency with jurisdiction over the project (including but not limited to the general plan, specific plan, coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	☒	☐
c. Conflict with any applicable habitat conservation plan or natural community conservation plan?	☐	☐	☐	☒

Impact Analysis

a. No Impact.

Original Project Analysis: The Project Site is located in an urbanized area within the Northeast Los Angeles community and no separations of uses or disruption of access between land use types would occur as a result of the Original Project. Further, the Original Project would incorporate pedestrian scale commercial and creative office uses along Pasadena Avenue, which promotes pedestrian activity and a community environment compared to the existing fenced-off industrial and warehouse uses. As such, the Original Project would not disrupt or divide the physical arrangement of the established community and would have no impact.

Modified Project Analysis: The Modified Project would redevelop an infill site within an urban area, by replacing existing light industrial and warehouse uses with a mixed-use development of residential and commercial uses. The Modified Project would incorporate multi-family residential housing and commercial uses along Pasadena Avenue, which promotes pedestrian activity and a community environment compared to the existing fenced-off industrial and warehouse uses. As such, the Modified Project would not disrupt or divide the physical arrangement of the established community, and would have no impact.

Comparison and Addendum Conclusion: The Original Project and the Modified Project would both have no impact associated with the potential to physically divide an established community. As such, the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project, as both would have no impact.

b. Less Than Significant Impact.

Original Project Analysis: The Original Project would develop multi-family residential units and commercial space and would be consistent with the [T][Q]CM-2D zoning designation. As stated in the MND, the Original Project would be consistent with the goals, objectives, and policies set forth by applicable regional plans including the SCAQMD Air Quality Management Plan, the SCAG Regional Comprehensive Plan, and local plans and policies including the City of Los Angeles General Plan, the

LAMC, East Los Angeles State Enterprise Zone, Adaptive Reuse Incentive Area, Transit Priority Area, Cornfield Arroyo Specific Plan, and the Northeast Los Angeles Community Plan. The Original Project would have a less than significant impact as the project would not conflict with an applicable land use plan or policy.

Modified Project Analysis: The Modified Project would redevelop the Project Site with a mixed-use development consistent with the zoning and land use designation for the Project Site. The applicable zoning indicates that the Project Site is subject to Ordinance 179,280, the stated intent of which is to promote mixed-use development in close proximity to a transit station. The Modified Project would be consistent with the applicable zoning and would conform with the intent of Ordinance 179,280, as well as the goals, objectives and policies set forth in all applicable regional and local plans. As such, the Modified Project's impacts regarding applicable land use plans or policies are less than significant.

Comparison and Addendum Conclusion: The Original Project and the Modified Project would both develop similar land uses as mixed-use developments on the Project Site, which would both be consistent with the applicable land use plans, policies, regulations, and zoning for the Project Site, with only minor differences in the number of residential units and commercial space to be provided that are consistent with General Plan and zoning requirements and policies and the additional regional and local plans identified herein. As such, the potential for either to result in environmental impacts due to inconsistency with an applicable plan or policy would be less than significant. As such, the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project, as both would be less than significant.

c. No Impact.

Original Project Analysis: The Project Site is located in a highly urbanized area and is currently developed with urban land uses, including light industrial and warehouse uses. The Project Site is not subject to a habitat conservation plan or natural community conservation plan. No impact would occur.

Modified Project Analysis: The Project Site is located in a highly urbanized area and is currently developed with urban land uses, including light industrial and warehouse uses. The Project Site is not subject to a habitat conservation plan or natural community conservation plan. No impact would occur.

Comparison and Addendum Conclusion: No impact associated with a habitat conservation plan or natural community conservation plan would occur with development of the Project Site under either the Original Project or the Modified Project. Therefore, the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project, as both would have no impact.

Cumulative Impacts

As stated in the MND, development of the Original Project would not result in a significant cumulative environmental impact with respect to land use and planning in conjunction with the identified related projects. As the Modified Project proposes a similar mixed-use development on the same urban infill property, would comply with the applicable land use plans, policies or regulations, and would not result in a greater impact regarding land use and planning, as set forth in the above analysis, the Modified Project would similarly not result in a significant cumulative impact regarding land use and planning.

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
XI. MINERAL RESOURCES.				
Would the project:				
a. Would the project result in the loss of availability of a known mineral resource that would be of future value to the region and the residents of the State?	☐	☐	☐	☒
b. Would the project result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?	☐	☐	☐	☒

Impact Analysis

a-b. No Impact.

Original Project Analysis: The Previously Approved Project Site is located within a developed area within the City and the MND concludes that it was not located within the Los Angeles Downtown Oil Field and Oil Drilling/Surface Mining Supplemental Use District or an Oil Field/Drilling Area. The MND stated that the Project Site is not currently used for the extraction of mineral resources, and there is no evidence to suggest the Project Site has been historically used for the extraction of mineral resources. Development of the Project Site would not block or hinder access or availability of mineral resources. As such, the Original Project would have no impact on mineral resources.

Modified Project Analysis As the Project Site was determined to not be located within oil field/drilling areas, has not been historically used for the extraction of mineral resources, and has been previously developed with industrial and commercial uses for decades, the potential for the Modified Project to result in a substantial loss of availability of known important mineral resources would be less than significant. Therefore, the Modified Project would have no impact regarding the availability of mineral resources.

Comparison and Addendum Conclusion: The Project Site is not located within oil field/drilling areas and there is no evidence to suggest that the Project Site has been historically used for the extraction of mineral resources. Development of the Original Project or the Modified Project would have no impacts regarding the availability of a significant mineral resource. As such, the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project, as both would be less than significant.

Cumulative Impacts

As stated in the MND, development of the Original Project would not result in a significant cumulative environmental impact with respect to mineral resources in conjunction with the identified related projects. As the Modified Project proposes a similar mixed-use development on the same urban infill property, and would not result in a greater impact regarding mineral resources, as set forth in the above analysis, the Modified Project would similarly not result in a significant cumulative impact regarding mineral resources.

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
XII. NOISE.				
Would the project result in:				
a. Exposure of persons to or generation of noise in level in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☐	☒	☐	☐
b. Exposure of people to or generation of excessive groundborne vibration or groundborne noise levels?	☐	☐	☒	☐
c. A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?	☐	☐	☒	☐
d. A substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?	☐	☒	☐	☐
e. For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	☒
f. For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	☒

Impact Analysis

a. Less Than Significant Impact With Mitigation.

Original Project Analysis: The MND identified several noise sensitive land uses located adjacent to and in the vicinity of the Project Site, including the following:

(1) Single- and multi-family residences along Avenue 34, located south of the Project Site;
(2) Single- and multi-family residences along Pasadena Avenue, located east of the Project Site; and
(3) Hillside Elementary School, located at 120 E. Avenue 35, east of the Project Site.

The ambient noise in the vicinity of the Project Site was measured at three points within the Project Site, and was found to range from 59.0 to 67.8 Leq,[17] with a maximum noise reported to be 83.4 decibels ("dB") along Pasadena Avenue.[18]

[17] Leq, or equivalent energy noise level, is the average acoustic energy content of noise for a stated period of time.
[18] City of Los Angeles Department of City Planning, Initial Study Mitigated Negative Declaration Northeast Los Angeles Community Plan Area Avenue 34 Project ZA-2016-272-ZAA-SPR-CLQ ENV-2016-273-MND, February 13, 2017. Page III-79; Appendix G: Noise Monitoring Data and Calculation Worksheets.

Construction

Pursuant to the Municipal Code Section 112.05, the MND considered that noise impacts associated with the use of construction equipment would be significant if it exceeds 75 dBA[19] at a distance of 50 feet from the noise source. However, the MND acknowledges that the above noise limitation does not apply where compliance is technically infeasible despite the use of mufflers, shields, sound barriers and/or any other noise reduction device or techniques during the operation of the equipment. The MND also states that construction activities lasting more than one day that increase the ambient noise levels by 10 dBA or more at any off-site noise-sensitive receptor, or construction activities lasting more than 10 days in a three-month period that would increase ambient exterior noise levels by 5 dBA or more at a noise sensitive use, would be a significant impact.

Construction of the Original Project would require the use of heavy equipment for various construction phases that would produce noise levels of up to 86 dBA at 50 feet from the noise source based on the types of equipment used and data provided by the United States Environmental Protection Agency, Noise from Construction Equipment and Operations, Building Equipment and Home Appliances, PB 206717, 1971. Based on the distance to offsite sensitive receptors, and the measured ambient noise levels, the previous analysis determined that construction activities within the Project Site could result in a noise level of up to 81.6 dBA Leq at the nearest sensitive receptor without incorporation of mitigation.

The Original Project would be required to comply with LAMC requirements and Environmental [Q] Condition C.10 regarding short-term construction noise impacts. Specifically, [Q] Condition C.10 requires: compliance with Ordinances 144,331 and 161,574 which prohibit the emission or creation of noise beyond certain levels at adjacent uses unless technically infeasible; restricts the permissible hours of construction to the hours of 7:00 am to 6:00 pm Monday through Friday, and 8:00 am to 6:00 pm on Saturday; construction and demolition activities to be scheduled to avoid operating several pieces of equipment simultaneously; and the use of power construction equipment with state-of-the-art noise shielding and muffling devices. As the MND states that a temporary construction noise barrier with a minimum of ¾-inch thick plywood or other sound absorbing material capable of achieving a 10 dBA reduction in sound level will be erected around the Project Site's perimeter, the Project would comply with the requirements of LAMC Section 112.05 and impacts would be less than significant.

The Original Project would implement mitigation measure **MM-N-1**, which specifies a feasible method for providing an adequate noise barrier to ensure construction noise would be reduced at sensitive receptors, as required for compliance with the LAMC Section 112.05 and [Q] Condition C.10.

The previous analysis also acknowledges that offsite noise impacts at the nearby Hillside Elementary School associated with hauling activities would be reduced by implementing the previously described mitigation measures MM-HAZ-2 and MM-HAZ-3. Therefore, with implementation of mitigation, construction noise impacts would be reduced to less than significant.

Operations

Operational impacts from the Original Project would be generated by heating, ventilation and air conditioning ("HVAC") equipment. These proposed equipment noise levels are not anticipated to be substantially greater than those generated by the current HVAC equipment serving the existing buildings on the Project Site and would not represent a new noise source. Additionally, according to the MND,

[19] The A-weighted decibel scale (dBA) provides compensation by discriminating against frequencies in a manner approximating the sensitivity of the human ear.

operation of HVAC equipment, or any other on-site stationary noise sources would comply with LAMC Section 112.02, which prohibits noise from such equipment to exceed ambient noise levels at other occupied properties by more than five dB. Thus, it was concluded by the MND that the Original Project's HVAC equipment would not be allowed to exceed the ambient noise level by five dB at adjacent properties, the potential for a substantial permanent increase in noise levels would be less than significant.

Modified Project Analysis:

Construction

Construction of the Modified Project would require the use of heavy equipment for various construction phases including demolition, grading and site preparation, paving, and building construction. The Modified Project would require demolition of onsite structures, grading and excavation for a subterranean parking garage, and construction of three buildings with a maximum height of five stories. These activities are all similar to those that the Original Project would require. The Modified Project would also require offsite hauling for export of soils, although the volume of material removed, and thus the number of haul trucks, would be less than that required for the Original Project. Therefore, the types of construction equipment and potential noise generation levels associated with the Modified Project would not be anticipated to substantially differ from that evaluated for the Original Project.

As such, the Modified Project's potential construction equipment noise levels would also be approximately 81.6 dBA without incorporation of a sound barrier. However, implementation of MM-N-1 would require placement of a temporary construction noise barrier with a minimum of ¾-inch thick plywood or other sound absorbing material capable of achieving a 10 dBA reduction in sound level around the Project Site's perimeter, which would reduce the potential construction noise levels to less than 75 dBA, which would comply with the requirements of LAMC Section 112.05 based on a conservative analysis that does not take into account the 50 foot reference distance under Section 112.05.[20] As such, compliance with LAMC Section 112.05, and [Q] Condition C.10, as well as implementation of MM-N-1 would reduce potential onsite construction noise impacts to less than significant with mitigation. In addition, compliance with the previously described mitigation measures MM-HAZ-2 and MM-HAZ-3 would reduce potential noise impacts at Hillside Elementary School from offsite soil hauling to less than significant. Therefore, the Modified Project would have a less than significant impact regarding construction noise impact with mitigation incorporated.

Operations

Operational impacts from the Modified Project would be generated by HVAC equipment, and noises typical of residential, office and retail uses. These proposed equipment noise levels are not anticipated to be substantially greater than those generated by the current HVAC equipment serving the existing buildings, and would not represent a new substantial noise source. However, the following evaluation and discussion describes potential stationary noise impacts from HVAC equipment associated with the Modified Project.

The proposed HVAC equipment would be mounted on rooftops of the proposed buildings would generate noise. A reference noise level for standard HVAC equipment is approximately 64 dBA at a distance of 3.3 feet from the source. Noise levels from point sources are attenuated by distance through spreading losses, which reduce noise levels by approximately six (6) dB for every doubling of distance from the source. Additionally, proposed parapets and/or top floor mezzanines of various heights would provide noise shielding that would further reduce HVAC noise at sensitive receptors. The respective insertion losses of

[20] The nearest sensitive receptor to the Project Site is approximately 80 feet away.

the building parapets or top floor mezzanines were calculated using the FTA Transit Noise and Vibration Impact Assessment Manual.[21] Based on the distances to existing sensitive uses, the Modified Project's HVAC noise levels at nearby sensitive receptors would range from 38.6 dBA to 41.7 dBA. However, based on the existing ambient noise environment as reported in the MND, the HVAC noise levels generated by the Modified Project, assuming simultaneous operation of all units to serve each proposed residential unit, would result in a combined increase of 0.0 dBA to 0.1 dBA at sensitive receptors,[22] as shown in **Table XII-1, HVAC Noise Levels**.

These noise level increases would be less than 5 dBA and would therefore not exceed the LAMC Section 112.02 threshold of a 5 dBA increase above ambient levels. In addition, an increase in noise of less than 3 dBA is typically not discernible to the human ear. Therefore, the Modified Project's HVAC-related permanent increase in ambient noise levels would be less than significant.

Comparison and Addendum Conclusion: The Original Project and the Modified Project would both redevelop an approximately 5.03-acre infill site within a highly urbanized area in the Northeast Los Angeles Community Plan Area. Both would remove existing light industrial and warehouse uses, and construct a mixed-use development of multi-family residential and commercial uses, with subterranean parking. As both would result in the removal of existing structures, grading and export of a similar volume of soil (though slightly less for the Modified Project), and construction of onsite buildings up to five stories in height, there would be a similar duration of construction activities, and similar noise generating equipment, which could affect the same sensitive receptors. As such, the potential short-term effect on the existing noise environment due to construction would be substantially similar between the Original Project and the Modified Project. Both would be required to comply with LAMC requirements and Environmental [Q] Condition C.10 regarding construction noise reduction. As discussed above, noise impacts associated with the use of construction equipment would be significant if it exceeds 75 dBA at a distance of 50 feet from the noise source, pursuant to the Municipal Code Section 112.05 construction noise limitations. Implementation of MM-N-1, which specifies a feasible construction noise reduction method for compliance with the Municipal Code Section 112.05 by reducing potential unmitigated construction equipment noise levels at the nearest sensitive receptor of approximately 81.6 dBA by approximately 10 dB, resulting in a mitigated noise level of about 71.6 dBA, Therefore, potential construction noise impacts to sensitive receptors would be reduced to a less than significant level with mitigation. Additionally, the Modified Project would result in fewer hauling trips for soil export than the Original Project. Further, implementation of the mitigation measures MM-HAZ-2 and MM-HAZ-3 would also reduce potential offsite hauling noise at the nearby school. As such, the construction noise impacts for either the Original Project or the Modified Project would be less than significant with mitigation, and the construction noise mitigation would be the same.

Following completion of construction, the operational noise generated onsite by either of the two mixed-use development options would be similar. During operations, onsite noise generation sources would be required to comply with applicable noise regulations, and as shown in Table XII-1, HVAC noise from the Modified Project would not result in a noticeable noise increase at existing sensitive receptors, and impacts would be less than significant.

[21] Federal Transit Administration, Transit Noise and Vibration Impact Assessment Manual, September 2018, Table 4-28.
[22] Given that decibels are logarithmic units, sound levels cannot be added by ordinary arithmetic means. The sound pressure level from two equal sources is 3 dB greater than the sound pressure level of just one source.

Table XII-1
HVAC Noise Levels

	B	64	146	85.6	370	44.6	9	35.6			
	C	64	158	86.0	300	46.8	15	31.8			

Notes:
[1] Specified sensitive receptors and the distances from the site are as described in the MND Page III-85; Appendix G: Noise Monitoring Data and Calculation Worksheets.
[2] This analysis uses a reference noise level from a Midea Multi-Zone Outdoor HVAC Units (Model #: MCH5U-48PHH2) based on the specifications from Media's 2017 Residential and Light Commercial Ductless catalog.
[3] The number of HVAC Units was based on the number of dwelling units.
[4] As decibels are logarithmic units, sound levels cannot be added by ordinary arithmetic means. The sound pressure level from two equal sources is 3 dB greater than the sound pressure level of just one source.
[5] Represents the average distance from the HVAC units on a given building to the receptor.
[6] Attenuated by spreading losses based on distance from receptor.
[7] Measured noise levels reported in the MND Page III-85; Appendix G: Noise Monitoring Data and Calculation Worksheets.

For these reasons, the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project.

Mitigation Measure:

MM-N-1 Increased Noise Levels (Demolition, Grading, and Construction Activities):

- In addition to satisfying the noise-related conditions identified in [Q] Condition 10 of Ordinance 179,280, the project contractor shall erect a temporary noise-attenuating sound barrier along the perimeter of the Project Site's southerly and easterly property line to minimize construction noise levels at off-site properties. The sound wall shall be a minimum of 8 feet in height to block the line of site of construction equipment and off site receptors at the ground level. The sound barrier shall include ¾-inch plywood or other sound absorbing material capable of achieving a 10-dBA reduction in sound level.

b. Less Than Significant Impact .

Original Project Analysis: During construction, the Original Project could generate low levels of groundborne vibration. The nearest sensitive receptor was determined to be residential uses located approximately 80 feet south of the Project Site. The MND states that based on the distance to existing residences, no buildings would be susceptible to structural damage resulting from construction vibrations generated by the Original Project. An evaluation of vibrations impacts relative to human annoyance was also conducted, which concluded that the maximum construction vibration level of 71.9 VdB at the nearest residence (receptor), would not exceed levels reported by the Federal Transit Administration as causing human annoyance at residential uses. Additionally, the Original Project would be required to comply with [Q] Condition C.10, which restricts construction activities to the hours of 7:00 A.M. to 6:00 P.M. Monday through Friday, and 8:00 A.M. to 6:00 P.M. on Saturday.

Although the previous analysis demonstrates that construction vibration impacts would not exceed thresholds for structural damage or annoyance, and notes that construction would be restricted to specified daytime hours by [Q] Condition C.10, the MND additionally concluded that implementation of the measures identified under Mitigation Measure MM-N-1 would further ensure vibration levels would not exceed the annoyance level. As such, the MND indicated that construction vibration impacts would be less than significant with mitigation.

The MND also notes that the Project Site is located in a Commercial Manufacturing zone which experiences heavy truck traffic on a daily basis, and also notes that the existing warehouse and light industrial land uses within Project Site currently generate approximately 440 trips per day, which are mostly heavy trucks. As such, it was concluded that hauling activities with soil export and demolition and construction debris removal would not generate a significant change in the heavy vehicle traffic that already occurs in the immediate project vicinity on a daily basis. Thus, vibration impacts from hauling and construction traffic would be less than significant.

Modified Project Analysis: As discussed in above in the evaluation in Section XII(a), construction of the Modified Project would require similar equipment, durations, and soil export activities as the Original Project, which could generate vibrations. As the types of construction equipment would be similar, the analysis of the Original Project's potential vibration impacts on sensitive receptors would also apply to the Modified Project.

Vibratory motion is commonly described by either the peak particle velocity (PPV) or the root mean square (RMS) vibration velocity level in the decibel scale (VdB). PPV is defined as the maximum instantaneous

positive or negative peak of the vibration signal. PPV is generally accepted as the most appropriate descriptor for evaluating the potential for building damage. For evaluation of potential human annoyance from vibration, VdB is typically used.

Few local jurisdictions have adopted regulatory standards specifically pertaining to groundborne vibration. Although there are no officially adopted regulatory standards for the point at which groundborne vibration levels could cause structural damage, the FTA provides guidelines for potential vibration damage and potential human annoyance from vibration.[23] The FTA criteria for damage to non-engineered timber and masonry buildings is 0.2 PPV in/sec. For potential human annoyance from vibration, the FTA criteria for infrequent events are 80 VdB and above at residences and buildings where people normally sleep, and 83 VdB and above for institutional land uses with primarily daytime use, such as schools.

Table XII-2, Vibration Levels at Sensitive Receptors shows the vibration levels from various equipment expected to be used for construction of the project. As shown on Table XII-2, vibration levels at the nearest residence would reach 0.016 PPV in/sec or 71.8 VdB and vibration levels at the next nearest residence would reach up to 0.014 PPV in/sec or 71.1 VdB. Table XII-2 also shows that vibration levels at the nearest institutional land use, a school facility, would reach 0.010 PPV in/sec or 67.7 VdB. These vibration levels would be below 0.2 PPV in/sec, and therefore would not exceed levels that could potentially damage non-engineered timber and masonry based on FTA criteria. In addition, the vibration levels of 71.8 VdB and 71.1 VdB at nearby residences would be below the FTA criteria of 80 VdB for potential human annoyance from vibration from infrequent events at residential land uses. The vibration level of 67.7 VdB at the nearest institutional use sensitive receptor would be below the FTA criteria of 83 VdB for potential human annoyance from vibration from infrequent events at institutional land uses.

Table XII-2
Vibration Levels at Sensitive Receptors

Equipment	PPV, in/sec				Approximate RMS Vibration Velocity Level (VdB)			
	Reference level at 25 ft	R-1 (80 ft)	R-2 (85 ft)	R-3 (110 ft)	Reference Level at 25 ft	R-1 (80 ft)	R-2 (85 ft)	R-3 (110 ft)
Large Bulldozer	0.089	0.016	0.014	0.010	87	71.8	71.1	67.7
Loaded Trucks	0.076	0.013	0.012	0.008	86	70.8	70.1	66.7
Jackhammer	0.035	0.006	0.006	0.004	79	63.8	63.1	59.7
Bulldozer	0.003	0.001	0.000	0.000	58	42.8	42.1	38.7

R-1 and R-2 = Residences
R-3 = Institutional Use (School)

Therefore, based on the distance to the nearest sensitive receptors, the Modified Project's generation of construction vibrations would not exceed thresholds for structural damage or human annoyance, and potential impacts would be less than significant. As the Project Site is within an area which experiences heavy truck traffic under existing conditions, and as the Modified Project would result in the removal of

[23] U.S. Department of Transportation, Federal Transit Administration, Office of Planning and Environment, Transit Noise and Vibration Impact Assessment Manual, FTA Report No. 0123, September 2018

existing light industrial and warehouse uses from the Project Site that currently generate heavy truck traffic, the short-term hauling of demolition debris, soils, and construction materials during construction of the Modified Project would not generate a significant change in the heavy vehicle traffic that already occurs in the immediate project vicinity. Additionally, the Modified Project would be required to comply with [Q] Condition C.10, which restricts construction activities to the hours of 7:00 A.M. to 6:00 P.M. Monday through Friday, and 8:00 A.M. to 6:00 P.M. on Saturday.

Operation of the Modified Project would not involve stationary equipment that would produce high vibration levels. In addition, while heavy-duty vehicles such as heavy trucks have the potential to create localized, intermittent vibration levels when traveling on roads with pavement discontinuities,[24] roadways in the project vicinity are smoothly paved and the Modified Project would not substantially increase the use of heavy-duty vehicles on local roadways. Therefore, the Modified Project's potential vibration impacts would be less than significant.

Comparison and Addendum Conclusion: The Original Project and the Modified Project would both remove light industrial and warehouse uses from the Project Site, and construct a mixed-use development of multi-family residential and commercial uses, with subterranean parking. Similar construction activities and equipment would occur on the Project Site to develop either the Original Project or the Modified Project, which could potentially increase vibrations at the existing residences in the vicinity. As evaluated above however, vibrations generated by construction onsite or by offsite hauling would be less than significant for either the Original Project or the Modified Project, and redevelopment of the Project Site would be required to comply with [Q] Condition C.10 which restricts construction activities to the hours of 7:00 A.M. to 6:00 P.M. Monday through Friday, and 8:00 A.M. to 6:00 P.M. on Saturday.

Although the MND demonstrated that the Original Project's vibration impacts would not exceed significance thresholds for structural damage or annoyance, it indicated that the implementation of mitigation measure MM-N-1 could further reduce vibration impacts. While the construction vibration levels potentially generated by the Modified Project would not substantially differ from the Original Project, as demonstrated above, vibrations would not exceed significance thresholds and no mitigation measure such as MM-N-1 would be required. The noise barrier called for MM-N-1 would not be necessary or effective to reduce Project vibration impacts. Accordingly, this Addendum concludes Project vibration impacts would be less than significant and no mitigation is required (the MND does not in reality include any such mitigation).

For these reasons, the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project.

c. Less Than Significant Impact.

Original Project Analysis: The MND considered that a significant impact would occur if noise levels associated with operation of the Original Project would increase the ambient noise levels by 3 dBA Community Noise Exposure Level[25] ("CNEL") at homes where the resulting noise level would be at least 70 dBA CNEL. This analysis considered potential noise increases associated with project-related traffic, as well as onsite stationary noise sources. Generally, an increase of 3 dBA in ambient noise levels requires doubling of the traffic volumes on a given roadway segment.

[24] California Department of Transportation (Caltrans), Transportation Construction Vibration Guidance Manual, September 2013.

[25] The Community Noise Equivalent Level (CNEL) is a 24-hour average Leq with a 5 dBA "weighting" during the hours of 7:00 P.M. to 10:00 P.M. and a 10 dBA "weighting" added to noise during the hours of 10:00 P.M. to 7:00 A.M. to account for noise sensitivity in the evening and nighttime, respectively.

Traffic Noise

Based on the vehicle trips to be generated, and the trip distribution on area roadways, the Original Project would increase local noise levels by a maximum of 0.29 dBA CNEL, which would occur at the intersection of Pasadena Avenue and Avenue 28 during the PM peak hour. Other intersections evaluated would experience traffic noise increases of 0.23 dBA or less. As an increase of less than 3 dBA is typically not discernible to the human ear, the Original Project's potential increase in traffic noise would be imperceptible to most people and impacts would be less than significant.

Stationary Noise

As evaluated in the MND, the Original Project's HVAC equipment would be required to comply with applicable noise restrictions codified in LAMC Section 112.02, which specify that noise generation by stationary sources such as air conditioning, refrigeration, heating, pumping and filtering equipment is not allowed to exceed the ambient noise level on the premises of other occupied properties by more than 5 dBA. The conclusion of the MND was that HVAC noise would be less than significant with required compliance with the applicable code restriction.

The MND states that noise generated within a parking garage could include engines accelerating, doors slamming, car alarms, and people talking, which would be similar to noise currently generated within the Project Site's existing surface parking areas. The Original Project design includes entrances to the parking garage facing Avenue 34. The MND concludes that implementation of Mitigation Measure MM-N-2, which pertains to the design of parking structure ramps, would further reduce the noise associated with the enclosed subterranean parking garage to less than significant levels.

It also notes that operation of vehicles onsite would be subject to the requirements of LAMC Section 114.02, which prohibits the operation of any motor driven vehicles upon any property that would exceed ambient noise level by 5 dBA. The MND concluded with implementation of MM-N-2 and regulatory compliance, the Original Project's impacts related to a permanent increase in ambient noise levels would be less than significant with mitigation.

Modified Project Analysis:

Traffic Noise

The Modified Project would construct a mixed-use development of multi-family residential and commercial uses, as would the Original Project. The number of residential units would be greater and the commercial space would be reduced compared to the Original Project. This modification would result in an estimated four (4) fewer peak hour trips in both the A.M. and P.M. peak hours than the Original Project.[26] As such, traffic-related noise increases resulting from the Modified Project would be slightly reduced compared to the Original Project. Therefore, the Modified Project's traffic related noise increases would be less than 0.29 dBA CNEL, which would be an imperceptible change and would result in a less than significant impact.

Stationary Noise

As discussed above in Section XIIa, and shown in Table XII-1, the Modified Project's HVAC equipment would not result in a significant increase in ambient noise levels at sensitive receptors, and HVAC noise impacts would be less than significant.

[26] Crain & Associates, Letter to Mr. Wes Pringle Transportation Engineer Metro Development Review Division Department of Transportation, Re: Avenue 34 & Pasadena Mixed-Use Project Traffic Impact Analysis Update, June 18, 2019.

The Modified Project would provide all onsite parking within two subterranean levels below the western and central portions of the Project Site, with the entrance (opening) facing the west, adjacent to existing railroad tracks and other non-sensitive receptors. Therefore, noises generated within the basement level garage structure, such as engines accelerating, doors slamming, car alarms, and people talking, would be substantially attenuated by the garage structure itself, and the primary outlet for garage noise to the environment (the entrance) would not be in close proximity to, or directed at nearby sensitive receptors such as residences. Therefore, as no existing sensitive uses are located in proximity to the proposed garage entrance, noise impacts associated with the Modified Project's parking garage activities would be less than significant. However, for consistency with the previous analysis, the implementation of Mitigation Measure MM-N-2 regarding ramp materials and textures to reduce tire squeal will be retained with this Addendum.

Comparison and Addendum Conclusion: The Original Project and the Modified Project would both develop a mixed-use development within the same site, which would result in similar traffic generation in nearby intersections, although peak hour trips would be slightly lower with the Modified Project.[27] Therefore, as traffic noise increases from the Original Project were shown to not exceed significance thresholds within the MND, the Modified Project's slightly reduced number of peak hour trips compared to the Original Project would likewise not exceed significance thresholds. Stationary noise from the Modified Project's HVAC equipment would be less than significant as shown above in Section XIIa. Additionally, as the Modified Project design places the entrance to the subterranean garage on a side of the site that is adjacent to train tracks and other non-sensitive receptors, potential parking garage noise would be less than significant.

However, for consistency with the MND, this Addendum will retain the previously identified mitigation measure MM-N-2 that specifies materials and textures for garage ramp surfaces to reduce noise squeal, although no significant impact regarding tire noise would occur at sensitive receptors from the Modified Project.

Additionally, the City's noise restrictions codified in LAMC Section 112.02 and Section 114.02, which prohibits noise increases of more than 5 dBA upon any property associated with operation of air conditioning, refrigeration, heating, pumping and filtering equipment, or from the operation of vehicles onsite, respectively, would apply to either redevelopment scenario for the site.

For these reasons, the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project.

Mitigation Measure:

MM-N-2 Increased Noise Levels (Parking Structure Ramps):

- Concrete, not metal, shall be used for construction of parking ramps.
- The interior ramps shall be textured to prevent tire squeal at turning areas.

d. Less Than Significant Impact With Mitigation.

Original Project Analysis: As stated above, the Original Project would reduce construction and operational noise levels to less than significant with implementation of MM-N-1 and compliance with [Q] Condition C.10 to reduce short-term construction noise impacts. It was determined that the Original Project would be

[27] Crain & Associates, Letter to Mr. Wes Pringle Transportation Engineer Metro Development Review Division Department of Transportation, Re: Avenue 34 & Pasadena Mixed-Use Project Traffic Impact Analysis Update, June 18, 2019.

consistent with the LAMC and Noise Element of the general plan, and therefore increases in noise levels would be less than significant with mitigation incorporated.

Modified Project Analysis: The Modified Project would also reduce construction and operational noise levels to less than significant with implementation of MM-N-1 and compliance with [Q] Condition C.10 as evaluated in the above analysis Section XII(a). Therefore, temporary and periodic increases in noise levels would be less than significant with mitigation incorporated.

Comparison and Addendum Conclusion: The Original Project and the Modified Project would both result in similar short-term construction activities within the Project Site, and would be required to comply with [Q] Condition C.10 to reduce short-term construction noise impacts. Implementation of mitigation measure MM-N-1 would further reduce potential short-term noise increases to less than significant levels for both the Original Project and the Modified Project.

For these reasons, the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project.

e. No Impact.

Original Project Analysis: There are no airports located within a two-mile radius of the Project Site, and Project Site is not within any airport land use plan or airport hazard zone. Therefore, the Previously Approved Project would not expose people to excessive noise levels associated with airport use, and no impact would occur.

Modified Project Analysis: As there are no airports located within a two-mile radius of the Project Site, and the Project Site is not within any airport land use plan or airport hazard zone, no impact associated with excessive airport noise levels would occur.

Comparison and Addendum Conclusion: The Original Project and the Modified Project would both redevelop the same site, which is not located within a two-mile radius of an airport and is not within any airport land use plan or airport hazard zone. As such, no impact regarding excessive airport noise levels would occur under either the Original Project or the Modified Project.

For these reasons, the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project.

f. No Impact.

Original Project Analysis: The Original Project is not within the vicinity of a private airstrip. Therefore, the Original Project would not subject area residents and workers to excessive noise levels and as such, no impact would occur.

Modified Project Analysis: The Project Site is not within the vicinity of a private airstrip. Therefore, the Modified Project would not subject area residents and workers to excessive noise levels and as such, no impact would occur.

Comparison and Addendum Conclusion: The Original Project and the Modified Project would both be located on the same site, which is not within the vicinity of a private airstrip. As such, no impact associated with excessive noise from private airstrips would occur with either the Original Project or the Modified Project.

For these reasons, the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project.

Cumulative Impacts

As stated in the MND, development of the Original Project would not result in a significant cumulative environmental impact with respect to noise and vibration in conjunction with the identified related projects. As the Modified Project proposes a similar mixed-use development on the same urban infill property, would comply with the various regulatory compliance and mitigation measures discussed above, and would have substantially the same impacts regarding noise and vibration, as set forth in the above analysis, the Modified Project would similarly not result in a significant cumulative impact regarding noise and vibration.

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
XIII. POPULATION AND HOUSING.				
a. Would the project induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	☐	☐	☒	☐
b. Would the project displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒
c. Would the project displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒

Impact Analysis

a. Less Than Significant Impact.

Original Project Analysis: The MND reported the average household size in the Northeast Los Angeles Community Plan area in 2009 was 3.27 persons, and therefore, it was determined that the Original Project's 372 residential units would provide housing for an estimated 1,216 residents. Additionally, it was determined that the commercial space for the Original Project would require approximately 149 employees. The population generated by the Original Project would be within the planned capacity for the Northeast Los Angeles Community Plan Area, and the employees generated would be consistent with the anticipated increase of jobs within the City between 2012 and 2040, as shown in the SCAG 2016-2040 RTP/SCS. As such, the MND stated that the direct and indirect population growth of the Previously Approved Project would not cause a significant impact on the environment.

Modified Project Analysis: The Project Site is an infill site that is currently developed with urban land uses, which are served by existing infrastructure, and therefore, the Modified Project would not result in extending roads or infrastructure that could indirectly cause substantial population growth.

The Modified Project's development of 468 multi-family residential units would provide housing for approximately 1,465 persons[28] based on the current household size of 3.13 persons per household for the Northeast Los Angeles area.[29] Additionally, the Modified Project would provide 16,395 square feet of retail space that would employ an estimated 28 employees, using San Diego Association of Governments (SANDAG) estimate of 383 square feet of space per employee for community retail.[30] The population generated by the Modified Project and the employees generated would be consistent with the anticipated

[28] Using the 2009 household size data relied on for the previous analysis, the number of persons that the Modified Project would provide housing for would be approximately 1,530.

[29] Los Angeles Department of City Planning Demographics Research Unit, 2017 Northeast Los Angeles Demographic Profile, August 6, 2019.

[30] U.S. Green Building Council (USGBC), Building Area Per Employee by Business Type, May 13, 2008. Accessed on October 21, 2019 at: https://www.usgbc.org/drupal/legacy/usgbc/docs/Archive/General/Docs4111.pdf

increase of population and jobs within the City between 2012 and 2040 as projected by the SCAG 2016-2040 RTP/SCS.[31] Therefore, the Modified Project's population impacts would be less than significant.

Comparison and Addendum Conclusion: The Original Project and the Modified Project would both redevelop a light industrial and warehouse site with residential and commercial uses. The Modified Project would provide an additional 96 residential units compared to the Original Project, and would reduce the amount of commercial space by 23,605 square feet compared to the Original Project.

Development under either the Original Project or the Modified Project would be consistent with SCAG's forecasted increase of population and jobs within the City. As such, environmental impacts pertaining to population growth for both would be less than significant, and the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project.

b-c. No Impact.

Original Project Analysis: The Project Site is an infill site currently developed with light industrial and warehouse land uses that do not provide housing, so removal of the existing uses would not displace any housing or persons, and no impact would occur.

Modified Project Analysis: The Project Site is an infill site currently developed with light industrial and warehouse land uses that do not provide housing, so removal of the existing uses would not displace any housing or persons and no impact would occur.

Comparison and Addendum Conclusion: As the Original Project and the Modified Project would not displace any housing or persons, there would be no impact under development of either option. Therefore, the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project, as both would have no impact.

Cumulative Impacts

As stated in the MND, development of the Original Project would not result in a significant cumulative environmental impact with respect to population and housing in conjunction with the identified related projects. As the Modified Project proposes a similar mixed-use development on the same urban infill property, and would only slightly increase the population and employment (though still within the planned population increase for the City) as set forth in the above analysis, the Modified Project would similarly not result in a significant cumulative impact regarding population and housing.

[31] Southern California Association of Governments, 2016-2040 Regional Transportation Plan/ Sustainable Communities Strategy, Adopted April 7, 2016.

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
XIV. PUBLIC SERVICES.				
Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:				
a. Fire protection?	☐	☐	☒	☐
b. Police protection?	☐	☒	☐	☐
c. Schools?	☐	☐	☒	☐
d. Parks?	☐	☐	☒	☐
e. Other public facilities?	☐	☐	☒	☐

Impact Analysis

a. Less Than Significant Impact.

Original Project Analysis: According to the MND, redevelopment of the Project Site would potentially increase the demand for City of Los Angeles Fire Department ("LAFD") fire protection services, which currently provides fire protection services to the existing light industrial and warehouse land uses within the Project Site. The closest fire station to the Project Site is Station No.1, located at 2230 Pasadena Avenue, which is approximately 0.7 miles south of the Project Site, and which meets the LAMC Section 57.507.3.3 response distance criteria.

The MND included a discussion regarding emergency access during construction, and concluded that construction of the Original Project would have less than significant impacts because construction activities would be temporary, would not cause a complete lane closure, would provide flagmen for any partial lane closures, and would have marked emergency access points approved by the LAFD.

Redevelopment of the Project Site would be required to comply with [Q] Condition C.21, which requires Fire Department safety recommendations to be incorporated into the building plans for review and approval. Based on the relatively short response distance for the existing LAFD station, as well as required compliance with [Q] Condition C.21, the MND concludes that the Original Project's potential environmental impacts regarding fire protection facilities would be less than significant.

Modified Project Analysis: The Project Site is located within an urbanized area of the City, and is served by the LAFD Station 1, located approximately 0.7 miles south of the Project Site.[32] The Modified Project would replace existing light industrial and warehouse uses with a mixed-use development of 468 multi-family residential units and 16,395 square feet of commercial retail space within three structures, with

[32] LAFD, Find Your Station, Accessed on September 27, 2019 at: https://www.lafd.org/fire-stations/station-results.

underground garage parking. The Modified Project would be required to comply with all applicable State and local regulations regarding fire protection, including LAMC Section 57.507.3.3 and [Q] Condition C.21. The Modified Project would not require the construction or expansion of LAFD facilities to serve the residential and commercial uses that would replace existing uses on the Project Site. Therefore, potential environmental impacts regarding fire protection services would be less than significant.

Comparison and Addendum Conclusion: The Original Project and the Modified Project would both remove existing light industrial and warehouse uses from the Project Site that is currently provided fire protection by LAFD Station 1, and construct a residential and mixed use development on the Project Site. The Modified Project would provide 96 more residential units than the Original Project, and 23,605 square feet less commercial space. The Project Site is located within 0.7 miles of LAFD Station 1, which meets the City's response criteria. Either development scenario would be required to comply with [Q] Condition C.21, as well as all applicable State and local fire safety regulations, including Site Plan Review. Neither development option would require construction or expansion of LAFD facilities that could cause a significant environmental impact. Therefore, potential impacts of both the Original Project and the Modified Project regarding fire protection would be less than significant.

For these reasons, the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project.

Cumulative Impacts

As stated in the MND, development of the Original Project would not result in a significant cumulative environmental impact with respect to fire protection services in conjunction with the identified related projects. As the Modified Project proposes a similar mixed-use development on the same urban infill property, and would only slightly increase the population residing at the Project Site as set forth in the above analysis, the Modified Project would similarly not result in a significant cumulative impact regarding fire protection services.

b. Less Than Significant Impact With Mitigation.

Original Project Analysis: According to the MND, the Project Site is located within the Hollenbeck area division of the Los Angeles Police Department ("LAPD"). It was determined that the Original Project would provide housing for 1,216 new residents, and employment for 149 new employees within the Project Site, which could potentially increase the demand for police services.

As evaluated in the MND, the Original Project could attract vandals or trespassers during construction, if the construction site were to be unsecured. During operations, the Original Project would result in an increase of site visitors, residents, and employees within the Project Site, which could generate an increase in calls for police services. The Original Project would be designed to provide adequate safety lighting, limit visually obstructed/infrequently accessed "dead zones", and secure parking facilities. The MND concludes that compliance with Mitigation Measure **MM-PS-1**, would reduce potential environmental impacts of the Original Project regarding police services to less than significant with mitigation.

Modified Project Analysis: The Project Site is located within an urbanized area of the Northeast Los Angeles Community Plan Area of the City and would be served by the LAPD. According to the City's Zone Information and Map Access System (ZIMAS),[33] as well as the LAPD Hollenbeck Area – Basic Car

[33] City of Los Angeles Department of City Planning, Zone Information and Map Access System (ZIMAS), Accessed at http://zimas.lacity.org/ on October 22, 2019.

map,[34] the Project Site is within the service area of the Hollenbeck Community Police Station. The LAPD website indicates that the Project Site is located within the adjacent service area of the Northeast Los Angeles Community Police Station[35] rather than the Hollenbeck Community Police Station. However, this inconsistency is inconsequential to the evaluation of potential environmental impacts.

The Modified Project would remove existing light industrial and warehouse uses from the Project Site, and redevelop three new structures as a mixed-use development of multi-family residential and commercial uses. The Modified Project would provide housing for approximately 1,465 residents, and the commercial space could provide employment for approximately 28 persons, using San Diego Association of Governments (SANDAG) estimate of 383 square feet of space per employee for community retail.[36] Although the replacement of existing uses with the new development could potentially increase the demand for LAPD services, the Project is currently served by existing facilities and personnel, and would not be anticipated to require construction or expansion of the existing police facilities that could result in significant environmental impacts. However, implementation of the previously described mitigation measure MM-PS-1 could decrease the amount of service calls to the LAPD. As such, for a conservative analysis, this evaluation of the Modified Project will also include MM-PS-1, and impacts regarding police services would be less than significant with mitigation.

Comparison and Addendum Conclusion: The Modified Project would provide 96 more residential units than the Original Project, and 23,605 square feet less commercial space. The Original Project and Modified Project would both potentially increase the demand for LAPD services. Mitigation measure MM-PS-1, which could reduce potential calls for police services for the Original Project would also apply to the Modified Project. As no additional police service facilities would be required to serve the Project Site under either the Original Project or the Modified Project, the potential for environmental impacts associated with police services would be less than significant with mitigation.

For these reasons, the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project.

Mitigation Measure:

MM-PS-1 Police:

- The plans shall incorporate the Design Guidelines (defined in the following sentence) relative to security, semi-public and private spaces, which may include but not be limited to access control to building, secured parking facilities, walls/fences with key systems, well-illuminated public and semi-public space designed with a minimum of dead space to eliminate areas of concealment, location of toilet facilities or building entrances in high-foot traffic areas, and provision of security guard patrol throughout the project site if needed. Please refer to "Design Out Crime Guidelines: Crime Prevention Through Environmental Design," published by the Los Angeles Police Department. Contact the Community Relations Division, located at 100 W. 1st Street, #250, Los Angeles, CA 90012; (213) 486-6000. These measures shall be approved by the Police Department prior to the issuance of building permits.

[35] Los Angeles Police Department, Community Police Station Address Look Up, Accessed on September 27, 2019: http://lapdonline.org/inside_the_lapd/content_basic_view/41960/Central+Bureau/Northeast/11A89/1189/1569625160.
[36] U.S. Green Building Council (USGBC), Building Area Per Employee by Business Type, May 13, 2008. Accessed on October 21, 2019 at: https://www.usgbc.org/drupal/legacy/usgbc/docs/Archive/General/Docs4111.pdf

Cumulative Impacts

As stated in the MND, development of the Original Project would not result in a significant cumulative environmental impact with respect to police protection services in conjunction with the identified related projects. As the Modified Project proposes a similar mixed-use development on the same urban infill property, would comply with the mitigation measure set forth above, and would only slightly increase the population residing at the Project Site while decreasing the number of employees, the Modified Project would similarly not result in a significant cumulative impact regarding police protection services.

c. Less Than Significant Impact.

Original Project Analysis: The Project Site is located within Los Angeles Unified School District ("LAUSD") and is currently served by Hillside Elementary, Florence Nightingale Middle School, Loreta Street Elementary, Woodrow Wilson Senior High, and Abraham Lincoln Senior High. As shown in **Table XIV-1, Original Project Student Generation,** the Original Project would generate a total of approximately 114 students, which could attend LAUSD schools.

Table XIV-1
Original Project Student Generation

Land Use	Size	Total Students
Multi-Family Residential [a]	372 du	113
Office [b]	30,000 sf	1
Commercial [c]	10,000 sf	0
	TOTAL	**114**

du= dwelling unit
[a] Student generation rates for multi-family residential: 0.1649 elementary, 0.0450 middle and .00943 high school students per unit.
[b] Student generation rates are as follows for office uses: 0.0233 elementary, 0.0108 middle and 0.0104 high school students per 1,000 square feet.
[c] Student generation rates are as follows for retail/commercial uses: 0.0149 elementary, 0.0069 middle and 0.0067 high school students per 1,000 square feet.
Source (for a): Los Angeles Unified School District, School Facilities Needs Analysis for Los Angeles Unified School District, September 2012.
Source (for b and c): Los Angeles Unified School District, School Fee Justification Study, September 2002.

The MND concludes that because the Applicant would be required to pay all applicable Senate Bill (SB) 50 developer fees pursuant to Government Code Section 65995, and because payment of developer fees is deemed full and complete mitigation regarding potential school impacts, the Original Project's impacts related to schools would be less than significant.

Modified Project Analysis: The Modified Project would be served by the same LAUSD schools as the Original Project. As shown in **Table XIV-2, Modified Project Student Generation,** the Modified Project would generate a total of approximately 142 students that could attend LAUSD schools.

Table XIV-2
Modified Project Student Generation

Land Use	Size	Total Students
Multi-Family Residential [a]	468 du	142
Commercial [b]	16,395 sf	0
	TOTAL	**142**

[a] Student generation rates for multi-family residential: 0.1649 elementary, 0.0450 middle and 0.0943 high school students per unit.
[b] Student generation rates are as follows for retail/commercial uses: 0.0149 elementary, 0.0069 middle and 0.0067 high school students per 1,000 square feet.
Source (for a): Los Angeles Unified School District, School Facilities Needs Analysis for Los Angeles Unified School District, September 2012.
Source (for b): Los Angeles Unified School District, School Fee Justification Study, September 2002.

However, the Applicant would be also be required to pay all applicable SB 50 developer fees pursuant to Government Code Section 65995, which are full and complete mitigation for potential school impacts. As such, the Modified Project's impacts regarding schools would be less than significant.

Comparison and Addendum Conclusion: The Modified Project would increase the total number of students generated from the Original Project by 28 students (15 elementary students, 4 middle school students, and 9 high school students). In addition, both projects would be required to pay all applicable SB 50 developer fees, which are full and complete mitigation for potential impacts on school facilities. Any difference in additional school demands would be offset by required payment of developer fees. As such, the potential for either the Original Project or the Modified Project to result in environmental impacts pertaining to school facilities would be less than significant.

For these reasons, the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project.

Cumulative Impacts

As stated in the MND, development of the Original Project would not result in a significant cumulative environmental impact with respect to school services in conjunction with the identified related projects. As the Modified Project proposes a similar mixed-use development on the same urban infill property, would comply with the developer school fees set forth above, and would only slightly increase in the number of students generated, the Modified Project would similarly not result in a significant cumulative impact regarding school services.

d. Less Than Significant Impact.

Original Project Analysis: The MND determines that the Project Site is located within an urbanized area and there is over 1,210 acres of parkland and public recreation facilities within a 2-mile radius of the Project Site including, but not limited to, East Los Angeles Park, Elysian Park and Ernest E. Debs Regional Park. The Original Project would provide approximately 39,575 square feet of total common open space and amenities on-site. Pursuant to Ordinance No. 179,280 the Original Project is required to provide a minimum of 64,744 square feet of publicly accessible public open space throughout Project Site. In addition, the Original Project is subject to Ordinance 184,505, which requires the payment of park mitigation fees for

residential, non-subdivision projects and these fees may be offset or reduced based on the amount of on-site open space and recreational amenities provided on-site. Therefore, according to the MND, impacts related to recreation would be less than significant.

Modified Project Analysis: As stated in the MND, the Project Site is located within an urbanized area with over 1,210 acres of parkland and public recreation facilities available within a 2-mile radius of the Project Site. The Modified Project would provide 49,125 square feet of common open space and landscaped areas. Redevelopment of the Project Site would be subject to the Design Conditions of Ordinance No. 179,280 [Q] Conditions regarding provision of open space areas, including publicly available open space areas, which the Modified Project has been designed to provide.

In addition, the Modified Project is subject to the payment of park mitigation fees for residential, non-subdivision project and these fees may be offset or reduced based on the amount of on-site open space and recreational amenities provided on-site. As such, the Modified Project's impacts regarding park facilities would be less than significant.

Comparison and Addendum Conclusion: The Original Project and Modified Project would both redevelop the same infill property. There is over 1,210 acres of parkland and public recreation facilities available within a 2-mile radius of the Project Site. Both redevelopment options would provide open space amenities onsite, pursuant to applicable [Q] Conditions, which would reduce the demand for off-site park space. Requirements for payment of park mitigation fees for residential, non-subdivision project may be offset or reduced based on the amount of on-site open space and recreational amenities provided on-site. As such, the potential impacts regarding parks for either the Original Project or Modified Project would be less than significant, and the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project, as both would be less than significant.

Cumulative Impacts

As stated in the MND, development of the Original Project would not result in a significant cumulative environmental impact with respect to parkland and public recreation facilities in conjunction with the identified related projects. As the Modified Project proposes a similar mixed-use development on the same urban infill property, would comply with the developer park mitigation fees and regulatory compliance measures set forth above, and would only slightly increase the population residing at the Project Site, the Modified Project would similarly not result in a significant cumulative impact regarding parkland and public recreation facilities.

e. Less Than Significant Impact.

Original Project Analysis: The MND determines that the Project Site would be served by the Los Angeles Public Library (LAPL) including the Lincoln Heights Branch Library located 0.5 miles south of the Project Site, and the Cypress Park Branch Library located approximately one (1) mile northwest of the Project Site. The Original Project analysis anticipated the existing libraries within the area would be able to meet the demands for library services. Therefore, the MND concludes that environmental impacts related to library services would be less than significant.

Modified Project Analysis: The Modified Project would redevelop the infill property with residential and commercial uses. Existing LAPL facilities in the vicinity of the Project Site include the Lincoln Heights Branch Library and the Cypress Park Branch Library. The provision of 468 residential units within a previously developed property in the Northeast Los Angeles Community Plan Area would not substantially

increase demand for existing library services that would necessitate the construction of new or physically expanded LAPL facilities, which could result in significant environmental impacts. Therefore, the Modified Project's environmental impacts regarding library services would be less than significant.

Comparison and Addendum Conclusion: The Original Project and Modified Project would both be served by existing LAPL facilities in the vicinity. The Modified Project would develop 96 more residential apartment units than the Original Project, which would not substantially increase demand for library services and no construction of new or expanded library facilities would be required. As such, the potential impacts regarding the demand for library facilities for either the Original Project or Modified Project would be less than significant, and the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project, as both would be less than significant.

Cumulative Impacts

As stated in the MND, development of the Original Project would not result in a significant cumulative environmental impact with respect to library services in conjunction with the identified related projects. As the Modified Project proposes a similar mixed-use development on the same urban infill property, and would only slightly increase the population residing at the Project Site, the Modified Project would similarly not result in a significant cumulative impact regarding library services.

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
XV. RECREATION.				
a. Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☒	☐
b. Does the project include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment?	☐	☐	☒	☐

Impact Analysis

a, b. Less Than Significant Impact.

Original Project Analysis: The MND determines that the Project Site is located within an urbanized area with over 1,210 acres of parkland and public recreation facilities within a 2-mile radius of the Project Site. The Original Project would provide approximately 39,575 square feet of total common open space and 64,744 square feet of publicly accessible open space on-site, as required by [Q] Condition B.1(e) and B.6(a). In addition, the Original Project would pay park mitigation fees for residential, non-subdivision projects and these fees may be offset or reduced based on the amount of on-site open space and recreational amenities provided on-site. Therefore, the MND stated that impacts related to recreation of the previously proposed project would be less than significant.

Modified Project Analysis: The Modified Project would redevelop the same infill property as the Original Project, which is located in an urbanized area with over 1,210 acres of parkland and public recreation facilities available within a 2-mile radius of the Project Site. Pursuant to Ordinance 179,280, [Q] Conditions, redevelopment of the Project Site would be subject to Design Conditions that specify requirements for provision of onsite open space, including publicly accessible open space. The Modified Project has been designed with 49,125 square feet of common open space and landscaped areas for use by residents, as well as approximately 65,789 square feet of publicly accessible open space and walkways to comply with applicable open space requirements, including [Q] Condition B.6(a) and [Q] Condition B.1(e). In addition, the Modified Project is subject to Ordinance 184,505, which requires the payment of park mitigation fees for residential, non-subdivision projects, which may be offset or reduced based on the amount of on-site open space and recreational amenities provided on-site. As such, the Modified Project's impacts regarding recreation would be less than significant.

Comparison and Addendum Conclusion: The Original Project and Modified Project are both located within the same site, served by existing parkland and public recreation facilities in the vicinity, including facilities that are available within a 2-mile radius of Project Site. The Original Project and the Modified Project would be required to provide open space, including publicly accessible open space within the Project Site pursuant to [Q] Conditions, which would reduce the demand on off-site parklands. As environmental impacts pertaining to recreation for either the Original Project or the Modified Project would

be less than significant, the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project, as both would be less than significant.

Cumulative Impacts

As stated in the MND, development of the Original Project would not result in a significant cumulative environmental impact with respect to parkland and public recreation facilities in conjunction with the identified related projects. As the Modified Project proposes a similar mixed-use development on the same urban infill property, would comply with the developer park mitigation fees and regulatory compliance measures set forth above, and would only slightly increase the population residing at the Project Site, the Modified Project would similarly not result in a significant cumulative impact regarding parkland and public recreation facilities.

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
XVI. TRANSPORTATION/CIRCULATION.				
Would the project:				
a. Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit?	☐	☒	☐	☐
b. Conflict with an applicable congestion management program, including, but not limited to level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways?	☐	☐	☒	☐
c. Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks?	☐	☐	☐	☒
d. Substantially increase hazards to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☒	☐	☐
e. Result in inadequate emergency access?	☐	☐	☒	☐
f. Conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities?	☐	☐	☒	☐

Impact Analysis

The MND included information provided within the Traffic Report[37] prepared by Crain & Associates, dated December 2015, which evaluated impacts associated with redevelopment of the Project Site with 410 residential units and 40,000 square feet of commercial uses, as well as the City of Los Angeles Department of Transportation's approval letter, dated January 28, 2016, regarding the Traffic Report. For this evaluation of the Modified Project, Crain & Associates prepared an update to the Traffic Report,[38] dated June 18, 2019, to reflect the change in residential units and commercial space of the Modified Project. The City of Los Angeles Department of Transportation ("LADOT") provided a letter regarding the update, dated July 11, 2019, indicating concurrence with the findings of the update.

[37] Crain & Associates, Traffic Impact Report for Proposed Avenue 34 & Pasadena Mixed-Use Project, December 2015.
[38] Crain & Associates, Letter to Mr. Wes Pringle Re: Avenue 34 & Pasadena Mixed-Use Project Traffic Impact Analysis Update, June 18, 2019.

a. Less Than Significant With Mitigation.

Original Project Analysis: The MND states that the Project Site is located in a Transit Priority Area as defined by CEQA Sections 21099 and 21064.3, and is within a HQTA, which is a generally walkable transit village or corridor within one half-mile of a well-serviced transit stop or a transit corridor with 15-minute or less service frequency during peak commute hours. Additionally, the MND analyzes existing public transit facilities near the Project Site, including a Metro Gold Line Rail Station and a number of MTA bus routes that are within reasonable walking distance from the Project Site (less than approximately one-quarter mile). Due to the mixed-use nature of the Original Project, and close proximity to neighborhood-serving commercial/retail land uses and regional transit, the VMT resulting from the Original Project would be reduced as compared to the base trip rates for similar stand-alone land uses that are not located in close proximity to transit. The MND also acknowledges that redevelopment of the Project Site would be subject to site-specific requirements for parking and pedestrian access identified in [Q] Conditions A.2 and B.2, respectively, and would be required to comply with the applicable regulations for providing long-term and short-term bicycle parking stalls.

Operations

The Original Project would generate a total of 2,128 daily vehicle trips; including 161 AM peak hour vehicle trips and 199 PM peak hour vehicle trips. A total of ten intersections were evaluated in the traffic analysis for the Original Project. The ten study area intersections were evaluated to determine if the net increase in trips from redevelopment of the Project Site would cause a reduction in the Level of Service ("LOS") based on the conditions that existed in 2015, as well as the projected conditions for 2020, that would exceed the City's significance criteria.

As discussed in the MND, one of the ten study area intersections (Pasadena Avenue/Avenue 26 at Daly Street) would have a potentially significant impact as evaluated based on 2015 conditions, and two of the study area intersections (Pasadena Avenue/Avenue 26 at Daly Street; and Figueroa Street at Avenue 26) would have potentially significant impacts based on projected 2020 conditions. It was concluded that implementing mitigation measures MM-T-1 through MM-T-3, to ensure compliance with the requirements of LADOT; communication to the Planning Department regarding the Original Project; compliance with the Transportation Demand Management ("TDM") Ordinance (No. 167,700); and upgrading the City's Automated Traffic Surveillance and Control ("ATSAC") System, would reduce the potentially significant impacts regarding intersection performance to less than significant with mitigation.

Construction

The Original Project would result in construction-related traffic on area roadways, including the use of haul trucks for disposal of demolition debris and soil export, as well a variety of other construction vehicles. As evaluated in the MND, construction-related traffic would be a fraction of the operational traffic, and implementation of mitigation measures MM-T-4 through MM-T-6, requiring a construction management plan ("CMP"), warning signage, and pedestrian safety measures, respectively, would ensure potential impacts would be less than significant with mitigation.

Modified Project Analysis: The Modified Project would redevelop the same infill property as the Original Project, with similar land uses, although with more residential units and less commercial space. The Modified Project would result in a net increase of approximately 157 trips during the AM peak hour (9 inbound, 148 outbound) and 195 trips during the PM peak hour (145 inbound, 50 outbound) to the adjacent street system, which would be four (4) fewer total peak hour trips in both the A.M. and P.M. peak hours compared to the Original Project. Therefore, the Modified Project's effects on the study area intersections would be slightly reduced but similar to the Original Project's impacts. LADOT, in a letter regarding the

Modified Project, dated July 11, 2019, concluded that the "[R]evised [P]roject would also result in the same significant traffic impacts" as the Original Project.

As such, the mitigation measures identified in the MND (listed below) that would reduce potentially significant traffic impacts of the Original Project to less than significant, would also ensure that the Modified Project's potential impact on the study area intersections would be less than significant with mitigation. LADOT further concurred with this evaluation.

During construction, the mitigation measures identified in the MND addressing temporary construction related effects on traffic and pedestrian facilities would also be applicable to the Modified Project, which would ensure construction-related impacts would be less than significant with mitigation.

Comparison and Addendum Conclusion: The Original Project and Modified Project would redevelop the same site, by removing existing light industrial and warehouse uses and constructing a mixed-use development with multi-family residential and commercial spaces, although the number of residential units would be increased, and the total commercial space would be reduced. As stated above, compared to the Original Project, the Modified Project would generate four fewer vehicle trips during the A.M. peak hour and four fewer vehicle trips in the P.M. peak hour. In accordance with this reduction, LADOT concluded that the Modified Project, without mitigation, would result in the same significant traffic impacts at the same intersections as identified in the Original Project. Accordingly, with implementation of the mitigation measures identified in the MND, the Modified Project's potential impacts would be reduced to less than significant. LADOT concurred with this analysis in its July 11, 2019 communication with the Planning Department regarding the Modified Project.

Additionally, similar construction activities would occur with implementation of either the Original Project or the Modified Project, as they proposed similar uses within the same site. Therefore, the mitigation measures identified in the MND addressing potential construction-related impacts would be applicable to both the Original Project as well as the Modified Project, and would ensure potential impacts would be less than significant after mitigation.

For these reasons, the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project.

Mitigation Measure:

MM-T-1 Transportation and Traffic:

- In addition to the TDM measures, implementing measure(s) detailed in DOT's communication to the Planning Department (DOT Case No. CEN 15-43306 dated January 28, 2016, attached) shall be complied with.

MM-T-2 Transportation Demand Management (TDM) Program:

- The purpose of a TDM plan is to reduce the use of single occupant vehicles (SOV) by increasing the number of trips by walking, bicycle, carpool, vanpool and transit. A TDM plan should include design features, transportation services, education, and incentives intended to reduce the amount of SOV during commute hours. Through strategic building design and orientation, this project can facilitate access to transit, can provide a pedestrian-friendly environment, can promote non-automobile travel and can support the goals of a trip-reduction program.

- A preliminary TDM program shall be prepared and provided for DOT review prior to the issuance of the first building permit for this project and a final TDM program approved by DOT is required prior to the issuance of the first certificate of occupancy for the project. The TDM program should include, but not be limited to, the following strategies:
    - Provide an internal Transportation Management Coordination Program with an on-site transportation coordinator;
    - Design the project to ensure a bicycle, transit, and pedestrian friendly environment;
    - Provide unbundled parking that separates the cost of obtaining assigned parking spaces from the cost of purchasing or renting residential units;
    - Accommodate flexible/alternative work schedules and telecommuting programs;
    - A provision requiring compliance with the State Parking Cash-out Law in all leases:
    - Coordinate with DOT to determine if the project location is eligible for future Integrated Mobility Hub (which can include space for a bike share kiosk, and/or parking spaces on-site for car-share vehicles;
    - Provide on-site transit routing and schedule information;
    - Provide a program to discount transit passes for residents/employees possibly through negotiated bulk purchasing passes with transit providers;
    - Provide rideshare matching services;
    - Preferential rideshare loading/unloading or parking location;
    - Contribute to a one-time fixed fee contribution of $75,000 to be deposited into the City's Bicycle Plan Trust Fund to implement bicycle improvements in the vicinity of the project.

In addition to these TDM measures, DOT also recommends that the Applicant explore the implementation of an on-demand van, shuttle or tram service that connects the project employees to off-site transit stops based on the transportation needs of the project employees. Such a service can be included as an additional measure in the TDM program if it is deemed feasible and effective by the applicant.

- The Applicant shall implement a TDM/TMP to reduce the project trip generation by 15 percent. Specifically, the project shall not exceed a driveway trip volume count of 179 trips during the a.m. peak hour and 222 trips during the pm peak hour, at full occupancy. To achieve this peak hour driveway trip volume requirement through implementation of an on-site Transportation Demand Management (TDM) Plan the project shall implement a Trip Monitoring Program (TMP).
- The Applicant shall record a covenant and agreement to annually monitor and submit reports on the progress of the driveway trip reduction plan to DOT. Annual reports shall include a report on the observed trip generation and on the project's mode share. The detailed goals, objectives, terms and strategies of the TDM plan and reporting requirements shall be determined during the preparation of the final. The TDM plan is due prior to the issuance of any temporary or final certificate of occupancy permit for the project. The plan should also identify any appropriate penalties, should the project not achieve compliance with the targeted number of driveway trips within a year of exceeding the limits. The TMP shall continue until such time that the project has shown, for five (5) consecutive years, at a minimum of 85% occupancy, accomplishment of the peak hour driveway trip volume requirement as listed.

MM-T-3 Transportation Systems Management (TSM) Improvements:

- The Applicant shall implement the upgrades, detailed below by LADOT's ATSAC Section, through the B-Permit process. LADOT's ATSAC Section has identified the need to update the existing traffic signal system. Specifically, install one CCTV camera, a new type 2070 controller,

and the necessary infrastructure (including, but not limited to, fiber optic and interconnect) to activate the new installation, at the Pasadena Avenue / Avenue 26 and Daly Street intersection. The video fiber / fiber optic improvements must be guaranteed prior to the issuance of any building permit and complete prior to the issuance of any certificate of occupancy. Temporary certificates of occupancy may be granted in the events of any delay through no fault of the applicant, provided that, in each case, the applicant has demonstrated reasonable efforts and due diligence to the satisfaction of DOT.

MM-T-4 Construction Management Plan:

- A Construction work site traffic control plan shall be submitted to DOT for review and approval prior to the start of any construction work. The plans shall show the location of any roadway or sidewalk closures, traffic detours, haul
- routes, hours of operation, protective devices, warning signs and access to abutting properties. All construction related traffic shall be restricted to off-peak hours.
- All delivery truck loading and unloading shall take place on site or within the boundaries of an approved traffic control plan.

MM-T-5 Transportation and Traffic (Construction):

- The developer shall install appropriate traffic signs around the site to ensure pedestrian and vehicle safety at all times during the construction period.

MM-T-6 Pedestrian Safety During Construction:

- The Applicant shall plan construction and construction staging as to maintain pedestrian access on adjacent sidewalks throughout all construction phases. This requires the applicant to maintain adequate and safe pedestrian protection, including physical separation (including utilization of barriers such as K-Rails or scaffolding, etc.) from work space and vehicular traffic, and overhead protection, due to sidewalk closure or blockage, at all times.
- Should permanent pedestrian routes be unavailable due to construction, safe and accessible temporary pedestrian routes shall be provided adjacent to the project site.
- Covered walkways should be provided where pedestrians are exposed to potential injury from falling objects.
- The Applicant shall keep sidewalk open during construction until only when it is absolutely required to close or block sidewalk for construction and/or construction staging. Sidewalk shall be reopened as soon as reasonably feasible taking construction and construction staging into account.

b. Less Than Significant Impact.

Original Project Analysis: As stated in the MND, the Los Angeles County CMP requires that all CMP monitoring intersections be analyzed where a project would likely add 50 or more trips during the peak hours. In addition, any CMP freeway monitoring segment where a project is expected to add 150 or more trips in any direction during the peak hours is to be analyzed.

The MND determines that the nearest CMP monitoring intersection to the Project Site is at Sunset Boulevard/Alvarado Street, which is three miles southwest of the Project Site. This intersection was not included in the traffic study area due to the distance from the Project Site. However, the previous analysis estimated that the Original Project would generate at most 6 trips during the AM peak hour and 8 trips during the PM peak hour at the intersection of Sunset Boulevard/Alvarado Street, which would not exceed

the threshold of 50 trips for CMP analysis. As such, it was concluded that further CMP intersection analysis was not warranted, and impacts would be less than significant.

The MND also notes that the nearest CMP freeway monitoring segments to the Project Site are the Golden State Freeway at Stadium Way, and the Arroyo Seco Parkway at Pasadena Avenue. The Original Project would add approximately 161 trips during the AM peak hour (29 inbound, 132 outbound) and 199 trips during the PM peak hour (133 inbound, 66 outbound) to the adjacent street system, which would result in less than the CMP analysis threshold of 150 or more trips in any direction. Therefore, it was concluded that no further analysis of CMP freeway monitoring locations was warranted, and that the Original Project would not conflict with the adopted CMP and impacts would be less than significant.

Modified Project Analysis: The Modified Project would redevelop the same infill property as the Original Project. The Modified Project would result in a net increase of approximately 157 trips during the AM peak hour (9 inbound, 148 outbound) and 195 trips during the PM peak hour (145 inbound, 50 outbound) to the adjacent street system, which would be four (4) fewer total peak hour trips in both the A.M. and P.M. peak hours compared to the Original Project. As such, the Modified Project would not cause an increase of 50 peak hour trips at the nearest CMP intersection, and would not exceed 150 new peak hour trips in any one direction on a CMP freeway segment, which would be below thresholds for further CMP analysis. As such, the Modified Project's potential to result in significant impacts due to conflicts with the CMP would be less than significant.

Comparison and Addendum Conclusion: The Modified Project would generate four fewer peak hour trips in both the A.M. and P.M. peak hours than the Original Project. As neither would exceed CMP analysis significance thresholds, the potential to conflict with the CMP would be less than significant for either the Original Project or the Modified Project.

For these reasons, the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project.

c. No Impact.

Original Project Analysis: The MND concludes that as the Original Project did not include aviation-related uses, or require any modification of flight paths at existing airports, no impact would occur.

Modified Project Analysis: The nearest airport is the San Gabriel Valley Airport (previously named El Monte Airport), which is over 10 miles east of the Project Site. The Modified Project would redevelop the same infill property as the Original Project, and would not include aviation-related uses, or require any modification of flight paths at existing airports. Therefore, no impact would occur.

Comparison and Addendum Conclusion: The Original Project and Modified Project would have no impact regarding air traffic patterns. As such, the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project.

d. Less Than Significant With Mitigation.

Original Project Analysis: The Original Project would have three access points for vehicles to enter or exit Project Site, including two driveways from Avenue 34 to access the parking garage, and an additional driveway from Pasadena Avenue to access a commercial use loading dock and short-term retail parking spaces. The MND notes that the driveway dimensions and circulation schemes of the Original Project have not been approved. It was therefore concluded that implementation of the previously described mitigation

measure MM-T-1 would reduce potential impacts associated with hazards due to design features or incompatible uses to less than significant.

Modified Project Analysis: The Modified Project would provide a single driveway accessible from Avenue 34 that would extend along the western boundary of the Project Site to access the parking garage entrance/exit. Implementation of the previously described mitigation measure MM-T-1 would ensure that required driveway standards are met, and would reduce potential impacts associated with hazards due to design features or incompatible uses to less than significant.

Comparison and Addendum Conclusion: The Original Project and Modified Project would redevelop the same site with residential and commercial uses, and would have primary access for vehicles from Avenue 34. Implementation of the previously described mitigation measure MM-T-1 would ensure that required driveway standards for either development option are met, and would reduce potential impacts associated with hazards due to design features or incompatible uses to less than significant.

For these reasons, the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project.

e. Less Than Significant Impact.

Original Project Analysis: The MND notes that the Project Site is not located on or near an adopted emergency response or evaluation plan. Potential temporary lane closures during construction would be coordinated with applicable agencies and would not substantially interfere with emergency access. Redevelopment of the Project Site would be subject to Site Plan Review requirements of the LAFD and LAPD to ensure adequate emergency vehicle access is provided. Therefore, it was concluded that the Original Project would not result in inadequate emergency access and impacts would be less than significant.

Modified Project Analysis: The Modified Project would redevelop the same infill property as the Original Project, which is not located on or near an adopted emergency response or evaluation plan. Potential temporary lane closures during construction would be coordinated with applicable agencies and would not substantially interfere with emergency access. Redevelopment of the Project Site would be subject to Site Plan Review requirements of the LAFD and LAPD to ensure adequate emergency vehicle access is provided. Therefore, the Modified Project would not result in inadequate emergency access and impacts would be less than significant.

Comparison and Addendum Conclusion: The Original Project and Modified Project propose to redevelop the same infill property, by removing existing urban uses and constructing a mixed-use development with multi-family residential and commercial uses. The Project Site is not located within an adopted emergency response or evacuation plan. Redevelopment of the Project Site would be subject to Site Plan Review requirements of the LAFD and LAPD to ensure adequate emergency vehicle access is provided. Therefore, the potential for either the Original Project or Modified Project to result in inadequate emergency access would be less than significant, and the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project.

f. Less Than Significant Impact.

Original Project Analysis: The MND determines that the Original Project would provide bicycle parking spaces to meet applicable code requirements, and would not permanently interfere with Class I or Class II bikeway systems or pedestrian facilities.

During construction, the pedestrian sidewalk along the west side of Pasadena Avenue could be temporarily closed a various times. However, the pedestrian sidewalk on the east side of Pasadena Avenue would be maintained during construction. It notes that implementation of the previously described mitigation measure MM-T-6 would ensure pedestrian safety and access along the Project Site boundary during construction. The MND concluded that there would be no conflict with any alternative transportation policies, plans, or programs, and thus, impacts would be less than significant.

Modified Project Analysis: The Modified Project would provide long-term and short-term bicycle parking facilities to meet applicable code requirements, and would not permanently interfere with Class I or Class II bikeway systems or pedestrian facilities. The Modified Project would also provide pedestrian walkways within and through the Project Site, including a ground level paseo between the commercial and residential uses. As a mixed-use development on an infill property, in close proximity to public transit facilities, the Modified Project would encourage pedestrian or bicycle travel, and would not conflict with any alternative transportation policies, plans, or programs, and thus, impacts would be less than significant.

Comparison and Addendum Conclusion: The Original Project and the Modified Project would develop a mixed-use project on an infill site, in close proximity to transit stops, which would encourage alternative modes of travel. Additionally, either development would be required to provide bicycle parking facilities to meet applicable codes. Although pedestrian access along the west side of Pasadena Avenue could be temporarily closed during construction, pedestrian access along the east side of Pasadena would be maintained throughout temporary construction activities. The potential for either the Original Project or the Modified Project to conflict with alternative transportation policies, plans, or programs would be less than significant.

For the reasons discussed above, the Modified Project would result in no new significant effects and no substantial increase in the severity of previously identified significant effects as compared to the Previously Approved Project.

Cumulative Impacts

The MND concludes that the Original Project would not contribute to a significant cumulative impact regarding traffic and transportation in combination with the identified related projects. Similar to the Original Project, development of the Modified Project would result in an increase in average daily vehicle trips and peak hour vehicle trips in the Northeast Los Angeles Community Plan area. In total, the Modified Project would result in a net increase of approximately 157 trips during the AM peak hour (9 inbound, 148 outbound) and 195 trips during the PM peak hour (145 inbound, 50 outbound) to the adjacent street system, which would be four (4) fewer total peak hour trips in both the A.M. and P.M. peak hours compared to the Original Project. As discussed in the MND and confirmed in LADOT's July 2019 correspondence regarding the Modified Project, both the Modified Project and the Original Project would cause, without mitigation, the same significant project level impacts at the same two (of ten) study intersections. Given that the Modified Project would not result in an increase in significant impacts, over the Original Project, and that impacts would be reduced to a less than significant level with the implementation of the mitigation measures stated above, and the fact that the more impactful Original Project was determined to have a less than significant cumulative traffic or transportation impact, the Modified Project would not result in a significant cumulative impact on traffic or transportation.

g.	Would the project comply with federal, State, and local statutes and regulations related to solid waste?	☐	☐	☒	☐

Impact Analysis

a. Less Than Significant Impact.

Original Project Analysis: According to the MND, wastewater from the Project Site is conveyed via municipal sewage infrastructure maintained by the Los Angeles Bureau of Sanitation to the Hyperion Water Reclamation Plant ("HWRP"), which is a public facility and subject to the State's wastewater treatment requirements. Wastewater from the Original Project would also be treated at the HWRP in accordance with the requirements enforced by the Los Angeles Regional Water Quality Control Board ("LARWQCB"). As such, it was concluded that impacts associated with wastewater treatment requirements would be less than significant.

Modified Project Analysis: The Modified Project's wastewater would also be treated at the HWRP, which is subject to the wastewater treatment requirements enforced by the LARWQCB. Therefore, the Modified Project's potential impacts regarding wastewater treatment requirements would be less than significant.

Comparison and Addendum Conclusion: The Original Project and the Modified Project would both be served by existing sewage infrastructure and treatment facilities that are subject to the wastewater treatment requirements enforced by the LARWQCB. As such, impacts pertaining to wastewater treatment requirements for either would be less than significant, and the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project, as both would be less than significant.

b. Less Than Significant Impact.

Original Project Analysis:

Water Treatment Facilities

LADWP currently provides water supplies to the existing land uses on the Project Site, and would also serve the Original Project. LADWP owns and operates the Los Angeles Aqueduct Filtration Plant ("LAAFP"), which has the capacity to treat approximately 600 million gallons per day ("mgd"), and treats an average of 450 to 550 mgd. Therefore, the remaining treatment capacity would be approximately 50 to 150 mgd.

The Original Project's net increase in water demand over existing uses would be 53,633 gallons per day ("gpd"), which is significantly below the excess water treatment capacity at LAAFP. As such, no new or expanded water treatment facilities would be needed to serve the Original Project, and impacts regarding water treatment facilities would be less than significant.

Wastewater Treatment Facilities

Wastewater treatment would be provided at the HWRP, which has sufficient excess capacity to treat an additional 175 mgd. The Original Project's net increase in wastewater to be treated at HWRP would be 44,694 gpd, which is far below the excess treatment capacity at the HWRP, and potential impacts associated with wastewater treatment capacity would be less than significant.

Modified Project Analysis:

Water Treatment Facilities

The Modified Project would also be served by existing water infrastructure. As shown in **Table XVII-1, Modified Project Water Demand**, the Modified Project would generate a net increase in water demand of 60,751 gpd over existing conditions.

The net increase in water demand would be a small fraction of one percent (i.e., 0.12 percent) of the LAAFP's excess treatment capacity. Therefore, the Modified Project would not have a significant impact pertaining to water treatment facilities.

Wastewater Treatment Facilities

The Modified Project would also be served by existing wastewater infrastructure. As shown in **Table XVII-2, Modified Project Wastewater Generation**, the Modified Project would generate a net increase in wastewater generation of 50,626 gpd.

Table XVII-1
Modified Project Water Demand

Land Use	Size	Water Demand Rate (gpd/unit)	Water Demand (gpd)
Modified Project			
Residential Units			
Studio	205 du	96 gpd/du	19,680
One Bedroom	170 du	144 gpd/du	24,480
Two Bedroom	93 du	192 gpd/du	17,856
Commercial			
Retail	16,395 sf	0.096 gpd/sf	1,574
		Total Water Demand	63,590
Existing Use			
Industrial	118,284 sf	0.024 gpd/sf	2,839
		Net Increase Water Demand	**60,751**
Source: LA CEQA Thresholds Guide (2006), Exhibit M.2-12, Consumption Rates based on 120% of the City of Los Angeles Department of Public Works, Bureau of Sanitation Sewer Generation Rates Table, March 20, 2002.			

Table XVII-2
Modified Project Wastewater Generation

Land Use	Size	Water Demand Rate (gpd/unit)	Water Demand (gpd)
Modified Project			
Residential Units			
Studio	205 du	80 gpd/du	16,400
One Bedroom	170 du	120 gpd/du	20,400
Two Bedroom	93 du	160 gpd/du	14,880
Commercial			
Retail	16,395 sf	0.08 gpd/sf	1,312
		Total Proposed Wastewater Generation	52,992
Existing Use (to be eliminated)			
Industrial	118,284 sf	0.02 gpd/sf	2,366
		Net Increase in Wastewater Generation	**50,626**
Source: LA CEQA Thresholds Guide (2006), Exhibit M.2-12.			

The net increase in wastewater generation resulting from the Modified Project would be a small fraction of one percent (i.e., 0.03 percent) of the HWRP's remaining capacity of 175 mgd. The HWRP would have adequate capacity to serve the Project Site and therefore, the Modified Project's potential impacts regarding wastewater treatment capacity would be less than significant.

Comparison and Addendum Conclusion: The Original Project and the Modified Project would both be served by existing water and wastewater treatment facilities, which maintain adequate excess capacity to accommodate additional development in the City. As such, impacts pertaining to water and wastewater treatment capacity for the Original Project or the Modified Project would be less than significant, and the

Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project, as both would be less than significant.

c. Less Than Significant Impact.

Original Project Analysis: As described in Question IX(e), the Original Project would not result in significant increase in site runoff or any changes to the local drainage pattern. The Original Project would be required to comply with the LID Plan, [Q] Conditions 13-17, and applicable BMPs regarding stormwater management on the Project Site. As such, the MND concluded that the storm water drainage facilities of the Project would be less than significant.

Modified Project Analysis: The Modified Project would also adhere to the City's SUSMP and LID ordinances regarding stormwater management, [Q] Conditions 13 through 17 and all applicable regulations related to storm water facilities. Through compliance with stormwater management regulations, the Modified Project would not result in the need to construct new or expanded stormwater drainage facilities. Therefore, the Modified Project will not have a significant impact pertaining to storm water requirements.

Comparison and Addendum Conclusion: The Project Site is currently occupied with existing structures and parking lots that create a nearly 100 percent impervious surface on the Project Site, which conveys stormwater runoff to existing stormdrains offsite. The Original Project and the Modified Project would both remove the existing uses and redevelop the Project Site with residential and commercial uses. Redevelopment of the Project Site would be required to comply with applicable regulations regarding stormwater management, including the LID Ordinance. As such, impacts pertaining to storm water drainage facilities for either would be less than significant, and the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project, as both would be less than significant.

d. Less Than Significant Impact.

Original Project Analysis: LADWP currently provides water supplies for the existing uses on the Project Site, and would continue to provide water supplies to Original Project if constructed. The LADWP 2015 Urban Water Management Plan ("UWMP") projects that future water demand within its service area in 2040 would be 675,685 acre-feet per year ("AFY"). The Original Project's net increase in water demand would be 53,633 gpd.

The MND concludes that the Original Project would be consistent with allowable land uses and density for the Project Site, and is within the growth projections of the SCAG RTP/SCS, and therefore, the potential to result in substantial environmental impacts regarding water supply would be less than significant.

Additionally, pursuant to LAMC Section 122.03(a), the Original Project would be required to incorporate water saving fixtures. Compliance with the LA Green Building Code and Ordinance No. 270,978, would further reduce potential water demand for the Original Project.

Modified Project Analysis: The Modified Project's demand for water would be 60,751 gpd (approximately 68 AFY), as shown in Table XVII-1. The Modified Project would be consistent with the growth projections of the SCAG RTP/SCS, and would be required to comply with the LA Green Building Code and applicable regulatory compliance measures to reduce water demand. Based on the LADWP UWMP, future water demand for the LADWP in 2040 would be approximately 675,685 AFY, of which the Modified Project's annual demand would represent approximately one-hundredth of a percent (0.01%). LADWP would not

need new or expanded entitlements for water supplies to serve the needs of the Modified Project, and impacts would be less than significant.

Comparison and Addendum Conclusion: The MND concludes that the Original Project would have sufficient water supplies provided by LADWP. The Modified Project would also have sufficient water supplies provided by LADWP. The difference in the estimated water demand between the Original Project and the Modified Project would be approximately 7,118 gpd (7.97 AFY), or approximately one-thousandth of a percent (0.001%) of the LADWP's projected demand for 2040. Redevelopment of the Project Site with either the Original Project or the Modified Project would be required to comply with applicable regulations for incorporation of water-conserving fixtures and landscape irrigation features to reduce water demand.

As such, impacts pertaining to water supplies for either would have less than significant impacts on the environment, and the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project, as both would be less than significant.

e. Less Than Significant Impact.

Original Project Analysis: As evaluated in Section XVII(b), the HWRP has sufficient capacity to treat the increase in wastewater generated by Original Project. Therefore, impacts related to wastewater capacity would be less than significant.

Modified Project Analysis: As evaluated in Section XVII(b), the net increase in wastewater generation resulting from the Modified Project would be 50,626 gpd, or 0.051 mgd, which is a small fraction of one percent (i.e., 0.03 percent) of the HWRP's remaining capacity of 175 mgd. The HWRP would have adequate capacity to serve the Modified Project and therefore, potential impacts associated with wastewater treatment capacity would be less than significant.

Comparison and Addendum Conclusion: As it has been demonstrated that the existing wastewater treatment facility that serves the Project Site would have sufficient wastewater treatment capacity to accommodate either the Original Project or the Modified Project, potential impacts would be less than significant for either.

The Modified Project would not result in new significant effects, or a substantial increase in the severity of a significant environmental impact compared to the Original Project, as both would be less than significant.

f. Less Than Significant Impact.

Original Project Analysis: The MND determines the Project Site would be served by existing landfills, including Sunshine Canyon Landfill. The Original Project would comply with all applicable regulations regarding solid waste policies and objectives. The MND reported that [Q] Condition C.10 provides general requirements for recycling and proper disposal of solid waste, during construction. Additionally, [Q] Condition C.23 requires recycling bins to be provided within the Project Site at appropriate locations. State Law requires diversion of at least 50 percent of demolition and construction waste for recycling.

According to the MND, the Original Project would generate approximately 9,726 tons of debris during construction and demolition, not including recycling. Pursuant to AB 939, all construction and demolition waste would be delivered to a certified construction and demolition waste processing facility. The Original Project's net operational solid waste generation would be approximately 2,936 pounds per day (about 1.5 tons). The MND concludes that the Original Project's solid waste generation during construction and

operations would be within the available capacities at area landfills, and impacts regarding landfill capacity would be less than significant.

In addition to determining that impacts regarding landfill capacity would be less than significant, the MND also indicated that the less-than-significant landfill impacts would be further reduced regulatory compliance measures applicable to the Project Site, including [Q] Conditions C.10 and C.23, described above, as well as LAMC Section 99.04.408 as follows:

(Construction Waste Recycling): In accordance with LAMC Section 99.04.408, the Proposed Project would reduce construction waste by at least 50 percent. In compliance with the LAMC Section 66.32, the General Contractor shall utilize solid waste haulers, contractors, and recyclers who have obtained an Assembly Bill (AB) 939 Compliance Permit from the City of Los Angeles Bureau of Sanitation.

Modified Project Analysis: The Modified Project would be served by existing landfills, including Sunshine Canyon Landfill, which is closest to the Project Site. Solid waste generated within the City is recycled, reused, transformed at a waste-to-energy facility, or disposed of at a landfill. Sunshine Canyon Landfill is permitted to receive up to 12,100 tons per day ("tpd"), and in 2017 received a daily average of 6,469 tpd, and has an estimated closure date in 2037.[39] Based on the average daily throughput, Sunshine Canyon Landfill has an excess daily capacity of 6,404 tpd for additional waste.

Construction

During construction, the Modified Project would generate 9,447 tons of demolition and construction solid waste, which after diversion of 50 percent for recycling as required by California Green Building Standards Code (Sections 4.408 and 5.408) and the LAMC (Section 99.04.408.1, Construction and Demolition), would result in disposal of a total of approximately 4,724 tons of waste at landfills during construction activities as shown in **Table XVII-3, Demolition and Construction Solid Waste Generation**. The demolition debris tonnage was estimated to be approximately 6,000 tons for the evaluation of the Modified Project,[40] which would result in a lower overall disposal amount than reported in Table XVII-3. However, for a conservative analysis of solid waste impacts, this evaluation includes the amount of demolition debris estimated by the MND, which was 8,277 tons.

As the average daily disposal tonnage at Sunshine Canyon Landfill is 6,404 tpd less than the permitted daily input, the Modified Project's disposal of 4,724 tons of demolition and construction solid waste would be less than the excess daily permitted capacity of the Sunshine Canyon Landfill. As such, the existing landfill would have adequate capacity for disposal of the Modified Project's construction and demolition debris, and potential impacts to landfill facilities during construction activities would be less than significant.

Operation

During operations, the Modified Project would generate a net increase of 4,045 pounds per day of municipal solid waste, of which 50 percent would be diverted for recycling, resulting in a net increase of 2,023 pounds of solid waste (about 1 ton) per day to be disposed of at landfills as shown in **Table XVII-4, Operational Solid Waste Generation**. As the Sunshine Canyon Landfill has excess daily input capacity of 6,404 tpd based on daily input tonnage, the Modified Project's net increase in daily disposal would represent less than 0.02 percent of the landfill's excess daily capacity. As there is adequate landfill capacity to accommodate

[39] County of Los Angeles Department of Public Works, Countywide Integrated Waste Management Plan 2017 Annual Report, April 2019, Appendix E-2, Table 1.
[40] Choi, Michael, Kimley-Horn, Email correspondence with Envicom Corporation, September 9, 2019.

the net increase in solid waste disposal associated with the Modified Project, operational waste would not exceed the daily permitted capacity of the Sunshine Canyon Landfill, and potential landfill capacity impacts would be less than significant.

Table XVII-3
Demolition and Construction Solid Waste Generation

Type of Use	Size	Generation Rate [a]	Total Waste (pounds)	Total Waste (tons)
Demolition

[b] Consistent with the MND (Table III-38), employees are projected based on 1 employee per 588 square feet of neighborhood retail/commercial space.
[c] Required by LAMC, Section 99.04.408.1 and 66.32.

Comparison and Addendum Conclusion: The Original Project and the Modified Project would both be served by existing landfills in the area, including Sunshine Canyon Landfill. During construction, the estimated construction and demolition debris to be generated from development of the Modified Project

would be approximately 279 tons less than the Original Project. The amount of construction and demolition debris to be disposed of at landfills would be reduced for either development option, by mandatory diversion of recyclables.

During operations, the Modified Project would generate approximately 1,109 pounds per day (about 0.55 tons) of municipal solid waste more than the Original Project. As the Modified Project or the Original Project would not exceed the daily permitted capacity of Sunshine Canyon Landfill, potential impacts for either regarding landfill capacity would be less than significant.

For these reasons, the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project, as both would be less than significant.

g. Less Than Significant Impact.

Original Project Analysis: The MND concludes that the Original Project would generate solid waste typical of a residential mixed-use building with ground-floor retail and would comply with all federal, state and local regulations regarding proper solid waste disposal. As such, it was concluded that the Original Project shall comply with all applicable solid waste regulations and would have a less than significant impact.

Modified Project Analysis: The Modified Project would replace existing light industrial and warehouse uses from the Project Site and construct a mixed-use project with residential and commercial land uses, which would generate municipal solid waste typical of such developments. As such, the Modified Project's solid waste generation would be anticipated to comply with applicable regulations regarding disposal, and potential impacts would be less than significant.

Comparison and Addendum Conclusion: The Original Project and the Modified Project would both replace existing light industrial and warehouse uses from the Project Site, and develop residential and commercial uses that would generate typical municipal solid waste that would comply with all applicable federal, State and local regulations for disposal. Potential impacts pertaining to solid waste regulations for either of the mixed-use development options on the Project Site would be less than significant, and the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project, as both would be less than significant.

Cumulative Impacts

The MND concludes that the Original Project would not cause significant cumulative impacts on utilities and service systems in conjunction with the identified related projects. With respect to potential significant cumulative impacts due to an increase in demand for water, stormwater treatment services, wastewater treatment services, and solid waste disposal services between the Original Project and the Modified Project, as discussed above, the small increase in demand would be well-accounted for within the preexisting and planned capacities of the relevant utility and service systems in conjunction with the related projects. Accordingly, the Modified Project would not lead to a significant cumulative impact on utilities and service systems.

	Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
XVIII. MANDATORY FINDINGS OF SIGNIFICANCE.				
a. Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	☐	☒	☐	☐
b. Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of an individual project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects).	☐	☐	☒	☐
c. Does the project have environmental effects that cause substantial adverse effects on human beings, either directly or indirectly?	☐	☒	☐	☐

Impact Analysis

a. Less Than Significant Impact With Mitigation.

Original Project Analysis: The Original Project is located within a densely populated urban area and would have a less than significant impact regarding biological and cultural resources with adherence to regulatory compliance. As discussed in Section IV above, with implementation of mitigation measures regarding tree removal permitting and offsets, and nesting bird surveys during construction, potential impacts regarding biological resources would be reduced to less than significant with mitigation. In addition, as discussed in Section V above, adherence to regulatory compliance measures would ensure potential impacts to unknown cultural resources during construction activities would be less than significant.

Modified Project Analysis: The Modified Project would redevelop the same property as the Original Project, which as stated above, is located within a densely populated urban area. The Project Site is currently fenced and is fully developed with existing structures and paving, and does not represent substantial habitat for fish or wildlife species. There are no known cultural resources on the Project Site that would represent an important example of a major period of California history or prehistory. As evaluated above in Section IV and Section V, the Modified Project's potential to impact biological or cultural resources would be less than significant with adherence to the identified mitigation measures and regulatory compliance measures described in this document. Therefore, the Modified Project's potential impacts to the quality of the environment, fish or wildlife species, or cultural resources would be less than significant with mitigation.

Comparison and Addendum Conclusion: The Original Project and the Modified Project would be located on the same site, which is currently developed and is located in an urbanized area in the City. As discussed in Section IV, Biological Resources and Section V, Cultural Resources, potential impacts to biological resources and cultural resources would be less than significant with implementation of mitigation measures and regulatory compliance measures, respectively. As such the Modified Project's potential to degrade the quality of the environment, or reduce or threaten any fish or wildlife species, or eliminate important examples of the major periods of California history or prehistory would be less than significant with mitigation and regulatory compliance measures.

For these reasons, the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project, as neither would be significant after implementation of previously identified mitigation and compliance measures.

b. Less Than Significant Impact.

Original Project Analysis: The MND determines that the Original Project's incremental contribution to cumulative environmental impacts would be less than significant.

Modified Project Analysis: As evaluated above, the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project. As the Original Project's incremental contributions to cumulative environmental impacts would be less than significant, the Modified Project's incremental contribution to cumulative environmental impacts would likewise be less than significant, as there would be no new significant impacts or substantial increase in the severity of significant impacts.

Comparison and Addendum Conclusion: The Modified Project would result in an increase in the number of residential apartment units to be developed on the Project Site from 372 to 468 units, and a reduction in the amount of commercial space to be developed from 40,000 square feet to 16,395 square feet. As the Original Project and the Modified Project's incremental contribution to cumulative environmental impacts would be less than significant, as there would be no new significant impacts or substantial increase in the severity of significant impacts of the Modified Project compared to the Original Project. The Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project.

c. Less Than Significant Impact With Mitigation.

Original Project Analysis: The Original Project would not have any significant impact on human beings directly or indirectly. The previous analysis also indicated that a freeway adjacent health risk assessment concluded acute and chronic health hazard indices for the Original Project would be less than the SCAQMD recommended threshold of 1.0. The MND also notes that applicable regulations, including Ordinance No.184,245, and [Q] Condition C.7 would require use of MERV 13 filtration for redevelopment on the Project Site, which is within 1,000 feet of a freeway.

As discussed in the Original Project analysis, the project would not result in any significant impacts to air quality with the installation of MERV 13 filtration and applicable regulatory compliance including Environmental [Q] Condition No. 7. All potentially significant impacts upon human beings would be less than significant or less than significant with identified mitigation measures and/or required regulatory compliance measures.

Modified Project Analysis: As evaluated above, all potential environmental impacts of the Modified Project would be less than significant, or less than significant with the identified mitigation measures and/or required regulatory compliance measures. Therefore, the Modified Project would not have the potential to result in substantial adverse impacts on human beings either directly or indirectly.

Comparison and Addendum Conclusion: The Original Project and the Modified Project would both develop similar land uses within the same site. Potential environmental impacts would be less than significant, or less than significant with implementation of the same mitigation measures and/or regulatory compliance measures. Therefore, the Original Project or the Modified Project would not result in substantial adverse impacts on human beings either directly or indirectly. As such, the Modified Project would not result in new significant effects or a substantial increase in the severity of a significant environmental impact compared to the Original Project, as both would be less than significant with all mitigation incorporated.

C. ADDENDUM CONCLUSION

The Modified Project would be similar to the Original Project, as it would redevelop the 5.03-acre infill site, which is located within a Transit Priority Area, by replacing existing light industrial and warehouse uses with mixed-use residential and commercial use projects, with subterranean parking.

The primary differences between the Modified Project and the Original Project is that it would provide 468 residential units rather than 372 units, and would provide 16,395 square feet of commercial space rather than 40,000 square feet. All commercial space provided by the Modified Project would be intended for neighborhood retail/restaurant use, whereas the Original Project's commercial space would include areas for creative office use. The Modified Project would consist of three buildings, while the Original Project would have five buildings. Additionally, the Modified Project's subterranean parking would consist of two levels beneath the western and central portions of the Project Site, while the Original Project's subterranean parking would be one level below the majority of the Project Site.

As such, potential impacts associated with the specific Project Site conditions, location, construction methods, and land use (i.e., biological or cultural resources, geology/soils, hazards, construction noise) would be similar to that evaluated in the MND. Potential impacts associated with the proposed number of residential units, amount of commercial space, and/or population (i.e. air quality and greenhouse gas emissions, population/housing, public services, traffic, utilities) would be similar in significance as impacts evaluated in the MND, although with incremental differences resulting from the difference in development densities. Further, as demonstrated in the analysis, no substantial changes have occurred with respect to the circumstances under which the project is undertaken. The proposed Project Site remains without significant changes since analysis of the MND.

As demonstrated by the analysis herein, the impacts associated with the Modified Project would not result in any new or substantially increased significant impacts (CEQA Guidelines 15162) as compared to those of the Original Project addressed in the MND. All potentially significant environmental impacts would be less than significant or reduced to less than significant by compliance with codified regulatory compliance measures and/or implementation of the mitigation measures specified in the MND.

Date: 2/13/17

Avenue 34 Project

ZA-2016-272-ZAA-SPR-CLQ
ENV-2016-273-MND

Project Location: 3401-3437 N. Pasadena Avenue and 123-167 W. Avenue 34, Los Angeles, CA 90031
Council District: 1 – Gilbert Cedillo

Project Description: The Project involves the demolition of an 86,712 square-foot warehouse building, a 4,033 square-foot metal building, and portions of a 24,018 square-foot building and 3,521 square-foot building (constructed circa 1977, 1948, 1967 and 1929, respectively), and the construction of a mixed-use development with 372 residential dwelling units and 40,000 square feet of commercial floor area (comprised of 30,000 square feet of creative office and 10,000 square feet of retail space). The Project would renovate a portion of the existing floor area for creative office space. The Project would also reserve 11% of its base density (approximately 31 dwelling units) as very low income housing and include a ministerial density bonus. The development would include five buildings spanning the property, with approximately 524,600 square feet of floor area and a Floor Area Ratio (FAR) of 2.6:1, below the maximum FAR of 3:1. The proposed buildings would range in height from one to five stories, with a maximum building height of approximately 67 feet above grade, or 75 feet as measured by the Los Angeles Municipal Code (LAMC). The Project would provide a total of 467 on-site parking spaces within one level of subterranean parking and at grade, and a total of 428 on-site bicycle parking stalls. All 39 on-site trees will be removed (all non-protected species); a total of 241 trees are proposed, including roof areas and street trees. No fireplaces or wood stoves are proposed.

The Applicant is requesting the following discretionary approvals: (1) Zoning Administrator's Adjustment to allow a 0-foot southerly side yard in lieu of 8 feet to preserve an existing building with a non-conforming yard; (2) Site Plan Review to permit the construction, use, and maintenance of the Project with more than 50 dwelling units; and (3) Clarification of Q Conditions to clarify Condition A.1.c of Subarea 4 in Ordinance 179,280. The Applicant will also request approvals and permits from the Department of Building and Safety (and other regulatory agencies) for project construction activities which may include, but are not limited to, the following: excavation, shoring, grading, foundation, haul route (for the export of approximately 98,000 cubic yards (cy) of soil), removal and replacement of street trees, and building and tenant improvements for the Project Site.

CALIFORNIA ENVIRONMENTAL QUALITY ACT
PROPOSED MITIGATED NEGATIVE DECLARATION

LEAD CITY AGENCY: City of Los Angeles		COUNCIL DISTRICT: 1 – Gilbert Cedillo
PROJECT TITLE: Avenue 34 Project	ENVIRONMENTAL CASE: ENV-2016-273-MND	CASE NO. ZA-2016-272-ZAA-SPR-CLQ

PROJECT LOCATION 3401-3437 N. Pasadena Avenue and 123-167 W. Avenue 34, Los Angeles, CA 90031

PROJECT DESCRIPTION: The Project involves the demolition of an 86,712 square-foot warehouse building, a 4,033 square-foot metal building, and portions of a 24,018 square-foot building and 3,521 square-foot building (constructed circa 1977, 1948, 1967 and 1929, respectively), and the construction of a mixed-use development with 372 residential dwelling units and 40,000 square feet of commercial floor area (comprised of 30,000 square feet of creative office and 10,000 square feet of retail space). The Project would renovate a portion of the existing floor area for creative office space. The Project would also reserve 11% of its base density (approximately 31 dwelling units) as very low income housing and include a ministerial density bonus. The development would include five buildings spanning the property, with approximately 524,600 square feet of floor area and an FAR of 2.6:1, below the maximum FAR of 3:1. The proposed buildings would range in height from one to five stories, with a maximum building height of approximately 67 feet above grade (75 feet as measured by LAMC). The Project would provide a total of 467 on-site parking spaces within one level of subterranean parking and at grade, and a total of 428 on-site bicycle parking stalls. All 39 on-site trees will be removed (all non-protected species); a total of 241 trees are proposed, including roof areas and street trees. No fireplaces or wood stoves are proposed.

The Applicant requests the following discretionary approvals: (1) Zoning Administrator's Adjustment to allow a 0-foot southerly side yard in lieu of 8 feet to preserve an existing building with a non-conforming yard; (2) Site Plan Review to permit the construction, use, and maintenance of the Project with more than 50 dwelling units; and (3) Clarification of Q Conditions to clarify Condition A.1.c of Subarea 4 in Ordinance 179,280. The Applicant will also request approvals and permits from the Department of Building and Safety (and other regulatory agencies) for project construction activities which may include, but are not limited to, the following: excavation, shoring, grading, foundation, haul route (for the export of approximately 98,000 cubic yards (cy) of soil), removal and replacement of street trees, and building and tenant improvements for the Project Site.

Los Angeles, CA 90031

FINDING: The Department of City Planning of the City of Los Angeles has proposed that a Mitigated Negative Declaration be adopted for this Project. The mitigation measures outlined on the attached pages will reduce any potentially significant adverse effects to a level of insignificance.

SEE ATTACHED SHEET(S) FOR ANY MITIGATION MEASURES IMPOSED

Any written comment received during the public review period are attached together with the response of the Lead City Agency. The project decision-maker may adopt the Mitigated Negative Declaration, amend it, or require preparation of an EIR. Any changes made should be supported by substantial evidence in the record and appropriate findings made.

THE INITIAL STUDY PREPARED FOR THIS PROJECT IS ATTACHED.

Determination (To be completed by Lead Agency)

On the basis of this initial evaluation:

- ☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.
- ☒ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions on the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.
- ☐ I find the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.
- ☐ I find the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.
- ☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

Signature	Planning Assistant Title	213-978-1345 Phone

Evaluation of Environmental Impacts:

1. A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants based on a project-specific screening analysis).
2. All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.
3. Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less that significant with mitigation, or less than significant. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect may be significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.
4. "Negative Declaration: Less Than Significant With Mitigation Incorporated" applies where the incorporation of a mitigation measure has reduced an effect from "Potentially Significant Impact" to "Less Than Significant Impact." The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level (mitigation measures from "Earlier Analysis," as described in (5) below, may be cross referenced).

5. Earlier analysis must be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR, or negative declaration. Section 15063 (c)(3)(D). In this case, a brief discussion should identify the following:
   a. Earlier Analysis Used. Identify and state where they are available for review.
   b. Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.
   c. Mitigation Measures. For effects that are "Less Than Significant With Mitigation Measures Incorporated," describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.
6. Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated
7. Supporting Information Sources: A sources list should be attached, and other sources used or individuals contacted should be cited in the discussion.
8. This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whichever format is selected.
9. The explanation of each issue should identify:
   a. The significance criteria or threshold, if any, used to evaluate each question; and
   b. The mitigation measure identified, if any, to reduce the impact to less than significant.

Environmental Factors Potentially Affected:

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

☐ AESTHETICS	☐ GREENHOUSE GAS EMISSIONS	☐ POPULATION AND HOUSING
☐ AGRICULTURE AND FOREST RESOURCES	☒ HAZARDS AND HAZARDOUS MATERIALS	☒ PUBLIC SERVICES
☐ AIR QUALITY	☐ HYDROLOGY AND WATER QUALITY	☐ RECREATION
☒ BIOLOGICAL RESOURCES	☐ LAND USE AND PLANNING	☒ TRANSPORTATION/CIRCULATION
☐ CULTURAL RESOURCES	☐ MINERAL RESOURCES	☐ UTILITIES
☐ GEOLOGY AND SOILS	☒ NOISE	☒ MANDATORY FINDINGS OF SIGNIFICANCE

PLEASE NOTE THAT EACH AND EVERY RESPONSE IN THE CITY OF LOS ANGELES INITIAL STUDY AND CHECKLIST IS SUMMARIZED FROM AND BASED UPON THE ENVIRONMENTAL ANALYSIS CONTAINED IN ATTACHEMENT B, EXPLANATION OF CHECKLIST DETERMINATIONS. PLEASE REFER TO THE APPLICABLE RESPONSE IN ATTACHMENT B FOR A DETAILED DISCUSSION OF CHECKLIST DETERMINATIONS.					
I.	**AESTHETICS**				
a.	HAVE A SUBSTANTIAL ADVERSE EFFECT ON A SCENIC VISTA?	☐	☐	☒	☐
b.	SUBSTANTIALLY DAMAGE SCENIC RESOURCES, INCLUDING, BUT NOT LIMITED TO, TREES, ROCK OUTCROPPINGS, AND HISTORIC BUILDINGS, OR OTHER LOCALLY RECOGNIZED DESIRABLE AESTHETIC NATURAL FEATURE WITHIN A CITY-DESIGNATED SCENIC HIGHWAY?	☐	☐	☒	☐
c.	SUBSTANTIALLY DEGRADE THE EXISTING VISUAL CHARACTER OR QUALITY OF THE SITE AND ITS SURROUNDINGS?	☐	☐	☒	☐
d.	CREATE A NEW SOURCE OF SUBSTANTIAL LIGHT OR GLARE WHICH WOULD ADVERSELY AFFECT DAY OR NIGHTTIME VIEWS IN THE AREA?	☐	☐	☒	☐
II.	**AGRICULTURE AND FOREST RESOURCES**				
a.	CONVERT PRIME FARMLAND, UNIQUE FARMLAND, OR FARMLAND OF STATEWIDE IMPORTANCE, AS SHOWN ON THE MAPS PREPARED PURSUANT TO THE FARMLAND MAPPING AND MONITORING PROGRAM OF THE CALIFORNIA RESOURCES AGENCY, TO NON-AGRICULTURAL USE?	☐	☐	☐	☒
b.	CONFLICT WITH EXISTING ZONING FOR AGRICULTURAL USE, OR A WILLIAMSON ACT CONTRACT?	☐	☐	☐	☒
c.	CONFLICT WITH EXISTING ZONING FOR, OR CAUSE REZONING OF, FOREST LAND (AS DEFINED IN PUBLIC RESOURCES CODE SECTION 1220(G)), TIMBERLAND (AS DEFINED BY PUBLIC RESOURCES CODE SECTION 4526), OR TIMBERLAND ZONED TIMBERLAND PRODUCTION (AS DEFINED BY GOVERNMENT CODE SECTION 51104(G))?	☐	☐	☐	☒
d.	RESULT IN THE LOSS OF FOREST LAND OR CONVERSION OF FOREST LAND TO NON-FOREST USE?	☐	☐	☐	☒
e.	INVOLVE OTHER CHANGES IN THE EXISTING ENVIRONMENT WHICH, DUE TO THEIR LOCATION OR NATURE, COULD RESULT IN CONVERSION OF FARMLAND, TO NON-AGRICULTURAL USE OR CONVERSION OF FOREST LAND TO NON-FOREST USE?	☐	☐	☐	☒
III.	**AIR QUALITY**				
a.	CONFLICT WITH OR OBSTRUCT IMPLEMENTATION OF THE SCAQMD AIR QUALITY MANAGEMENT PLAN OR CONGESTION MANAGEMENT PLAN?	☐	☐	☒	☐
b.	VIOLATE ANY AIR QUALITY STANDARD OR CONTRIBUTE SUBSTANTIALLY TO AN EXISTING OR PROJECTED AIR QUALITY VIOLATION?	☐	☐	☒	☐
c.	RESULT IN A CUMULATIVELY CONSIDERABLE NET INCREASE OF ANY CRITERIA POLLUTANT FOR WHICH THE AIR BASIN IS NON-ATTAINMENT (OZONE, CARBON MONOXIDE, & PM 10) UNDER AN APPLICABLE FEDERAL OR STATE AMBIENT AIR QUALITY STANDARD?	☐	☐	☒	☐
d.	EXPOSE SENSITIVE RECEPTORS TO SUBSTANTIAL POLLUTANT CONCENTRATIONS?	☐	☐	☒	☐
e.	CREATE OBJECTIONABLE ODORS AFFECTING A SUBSTANTIAL NUMBER OF PEOPLE?	☐	☐	☒	☐

		Potentially Significant Impact	Potentially Significant Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
IV.	**BIOLOGICAL RESOURCES**				
a.	HAVE A SUBSTANTIAL ADVERSE EFFECT, EITHER DIRECTLY OR THROUGH HABITAT MODIFICATION, ON ANY SPECIES IDENTIFIED AS A CANDIDATE, SENSITIVE, OR SPECIAL STATUS SPECIES IN LOCAL OR REGIONAL PLANS, POLICIES, OR REGULATIONS BY THE CALIFORNIA DEPARTMENT OF FISH AND GAME OR U.S. FISH AND WILDLIFE SERVICE ?	☐	☒	☐	☐
b.	HAVE A SUBSTANTIAL ADVERSE EFFECT ON ANY RIPARIAN HABITAT OR OTHER SENSITIVE NATURAL COMMUNITY IDENTIFIED IN THE CITY OR REGIONAL PLANS, POLICIES, REGULATIONS BY THE CALIFORNIA DEPARTMENT OF FISH AND GAME OR U.S. FISH AND WILDLIFE SERVICE?	☐	☐	☐	☒
c.	HAVE A SUBSTANTIAL ADVERSE EFFECT ON FEDERALLY PROTECTED WETLANDS AS DEFINED BY SECTION 404 OF THE CLEAN WATER ACT (INCLUDING, BUT NOT LIMITED TO, MARSH VERNAL POOL, COASTAL, ETC.) THROUGH DIRECT REMOVAL, FILLING, HYDROLOGICAL INTERRUPTION, OR OTHER MEANS?	☐	☐	☐	☒
d.	INTERFERE SUBSTANTIALLY WITH THE MOVEMENT OF ANY NATIVE RESIDENT OR MIGRATORY FISH OR WILDLIFE SPECIES OR WITH ESTABLISHED NATIVE RESIDENT OR MIGRATORY WILDLIFE CORRIDORS, OR IMPEDE THE USE OF NATIVE WILDLIFE NURSERY SITES?	☐	☐	☐	☒
e.	CONFLICT WITH ANY LOCAL POLICIES OR ORDINANCES PROTECTING BIOLOGICAL RESOURCES, SUCH AS TREE PRESERVATION POLICY OR ORDINANCE (E.G., OAK TREES OR CALIFORNIA WALNUT WOODLANDS)?	☐	☒	☐	☐
f.	CONFLICT WITH THE PROVISIONS OF AN ADOPTED HABITAT CONSERVATION PLAN, NATURAL COMMUNITY CONSERVATION PLAN, OR OTHER APPROVED LOCAL, REGIONAL, OR STATE HABITAT CONSERVATION PLAN?	☐	☐	☐	☒
V.	**CULTURAL RESOURCES**				
a.	CAUSE A SUBSTANTIAL ADVERSE CHANGE IN SIGNIFICANCE OF A HISTORICAL RESOURCE AS DEFINED IN STATE CEQA SECTION 15064.5?	☐	☐	☒	☐
b.	CAUSE A SUBSTANTIAL ADVERSE CHANGE IN SIGNIFICANCE OF AN ARCHAEOLOGICAL RESOURCE PURSUANT TO STATE CEQA SECTION 15064.5?	☐	☐	☒	☐
c.	DIRECTLY OR INDIRECTLY DESTROY A UNIQUE PALEONTOLOGICAL RESOURCE OR SITE OR UNIQUE GEOLOGIC FEATURE?	☐	☐	☒	☐
d.	DISTURB ANY HUMAN REMAINS, INCLUDING THOSE INTERRED OUTSIDE OF FORMAL CEMETERIES?	☐	☐	☒	☐

d.	HAVE SUFFICIENT WATER SUPPLIES AVAILABLE TO SERVE THE PROJECT FROM EXISTING ENTITLEMENTS AND RESOURCE, OR ARE NEW OR EXPANDED ENTITLEMENTS NEEDED?	❑	❑	☒	❑
e.	RESULT IN A DETERMINATION BY THE WASTEWATER TREATMENT PROVIDER WHICH SERVES OR MAY SERVE THE PROJECT THAT IT HAS ADEQUATE CAPACITY TO SERVE THE PROJECT'S PROJECTED DEMAND IN ADDITION TO THE PROVIDER'S EXISTING COMMITMENTS?	❑	❑	☒	❑
f.	BE SERVED BY A LANDFILL WITH SUFFICIENT PERMITTED CAPACITY TO ACCOMMODATE THE PROJECT'S SOLID WASTE DISPOSAL NEEDS?	❑	❑	☒	❑
g.	COMPLY WITH FEDERAL, STATE, AND LOCAL STATUTES AND REGULATIONS RELATED TO SOLID WASTE?	❑	❑	☒	❑
XVIII.	**MANDATORY FINDINGS OF SIGNIFICANCE**				
a.	DOES THE PROJECT HAVE THE POTENTIAL TO DEGRADE THE QUALITY OF THE ENVIRONMENT, SUBSTANTIALLY REDUCE THE HABITAT OF FISH OR WILDLIFE SPECIES, CAUSE A FISH OR WILDLIFE POPULATION TO DROP BELOW SELF-SUSTAINING LEVELS, THREATEN TO ELIMINATE A PLANT OR ANIMAL COMMUNITY, REDUCE THE NUMBER OR RESTRICT THE RANGE OF A RARE OR ENDANGERED PLANT OR ANIMAL OR ELIMINATE IMPORTANT EXAMPLES OF THE MAJOR PERIODS OF CALIFORNIA HISTORY OR PREHISTORY?	❑	❑	❑	☒
b.	DOES THE PROJECT HAVE IMPACTS WHICH ARE INDIVIDUALLY LIMITED, BUT CUMULATIVELY CONSIDERABLE? ("CUMULATIVELY CONSIDERABLE" MEANS THAT THE INCREMENTAL EFFECTS OF AN INDIVIDUAL PROJECT ARE CONSIDERABLE WHEN VIEWED IN CONNECTION WITH THE EFFECTS OF PAST PROJECTS, THE EFFECTS OF OTHER CURRENT PROJECTS, AND THE EFFECTS OF PROBABLE FUTURE PROJECTS).	❑	❑	☒	❑
c.	DOES THE PROJECT HAVE ENVIRONMENTAL EFFECTS WHICH CAUSE SUBSTANTIAL ADVERSE EFFECTS ON HUMAN BEINGS, EITHER DIRECTLY OR INDIRECTLY?	❑	☒	❑	❑

DISCUSSION OF THE ENVIRONMENTAL EVALUATION (Attach additional sheets if necessary)

The Environmental Impact Assessment includes the use of official City of Los Angeles and other government source reference materials related to various environmental impact categories (e.g., Hydrology, Air Quality, Biology, Cultural Resources, etc.). The State of California, Department of Conservation, Division of Mines and Geology – Seismic Hazard Maps and reports, are used to identify potential future significant seismic events; including probable magnitudes, liquefaction, and landslide hazards. Based on Applicant information provided in the Master Land Use Application and Environmental Assessment Form, impact evaluations were based on stated facts contained therein, including but not limited to, reference materials indicated above, field investigation of the project site, and other reliable reference materials known at the time.

Project specific impacts were evaluated based on all relevant facts indicated in the Environmental Assessment Form and expressed through the Applicant's project description and supportive materials. Both the Initial Study Checklist and Checklist Explanations, in conjunction with the City of Los Angeles's Adopted Thresholds Guide and CEQA Guidelines, were used to reach reasonable conclusions on environmental impacts as mandated under the California Environmental Quality Act (CEQA).

The project as identified in the project description may cause potentially significant impacts on the environment without mitigation. Therefore, this environmental analysis concludes that a Mitigated Negative Declaration shall be issued to avoid and mitigate all potential adverse impacts on the environment by the imposition of mitigation measures and/or conditions contained and expressed in this document; the environmental case file known as **ENV-2016-273-MND** and the associated case(s), **ZA-2016-272-ZAA-SPR-CLQ**. Finally, based on the fact that these impacts can be feasibly mitigated to less than significant, and based on the findings and thresholds for Mandatory Findings of Significance as described in the California Environmental Quality Act, section 15065, the overall project impacts(s) on the environment (after mitigation) **will not**:

- Substantially degrade environmental quality.
- Substantially reduce fish or wildlife habitat.
- Cause a fish or wildlife habitat to drop below self sustaining levels.
- Threaten to eliminate a plant or animal community.
- Reduce number, or restrict range of a rare, threatened, or endangered species.
- Eliminate important examples of major periods of California history or prehistory.
- Achieve short-term goals to the disadvantage of long-term goals.
- Result in environmental effects that are individually limited but cumulatively considerable.
- Result in environmental effects that will cause substantial adverse effects on human beings.

ADDITIONAL INFORMATION:

All supporting documents and references are contained in the Environmental Case File referenced above and may be viewed in the Environmental Analysis Unit, Room 750, City Hall.

MITIGATION MEASURES

AESTHETICS

No mitigation measures are required.

AGRICULTURE AND FORESTRY RESOURCES

No mitigation measures are required.

AIR QUALITY

No mitigation measures are required.

BIOLOGICAL RESOURCES

MM-BIO-1 Tree Removal (Non-Protected Trees)

- Prior to the issuance of any permit, a plot plan shall be prepared indicating the location, size, type, and general condition of all existing trees on the site and within the adjacent public right(s)-of-way.
- All significant (8-inch or greater trunk diameter, or cumulative trunk diameter if multi-trunked, as measured 54 inches above the ground) non-protected trees on the site proposed for removal shall be replaced at a 1:1 ratio with a minimum 24-inch box tree. Net, new trees, located within the parkway of the adjacent public right(s)-of-way, may be counted toward replacement tree requirements.
- Removal or planting of any tree in the public right-of-way requires approval of the Board of Public Works. Contact Urban Forestry Division at: 213-847-3077. All trees in the public right-of-way shall be provided per the current standards of the Urban Forestry Division the Department of Public Works, Bureau of Street Services.

MM-BIO-2 Habitat Modification (Nesting Native Birds)

- Proposed project activities (including disturbances to native and non-native vegetation, structures and substrates) should take place outside of the breeding bird season which generally runs from March 1- August 31 (as early as February 1 for raptors) to avoid take (including disturbances which would cause abandonment of active nests containing eggs and/or young). Take means to hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture of kill (Fish and Game Code Section 86).
- If project activities cannot feasibly avoid the breeding bird season, beginning thirty days prior to the disturbance of suitable nesting habitat, the applicant shall:
    - Arrange for weekly bird surveys to detect any protected native birds in the habitat to be removed and any other such habitat within 300 feet of the construction work area (within 500 feet for raptors) as access to adjacent areas allows. The surveys shall be conducted by a Qualified Biologist with experience in conducting breeding bird surveys. The surveys shall continue on a weekly basis with the last survey being conducted no more than 3 days prior to the initiation of clearance/construction work.

- If a protected native bird is found, the applicant shall delay all clearance/construction disturbance activities within 300 feet of suitable nesting habitat for the observed protected bird species (within 500 feet for suitable raptor nesting habitat) until August 31.
- Alternatively, the Qualified Biologist could continue the surveys in order to locate any nests. If an active nest is located, clearing and construction within 300 feet of the nest (within 500 feet for raptor nests) or as determined by a qualified biological monitor, shall be postponed until the nest is vacated and juveniles have fledged and when there is no evidence of a second attempt at nesting. The buffer zone from the nest shall be established in the field with flagging and stakes. Construction personnel shall be instructed on the sensitivity of the area.
- The applicant shall record the results of the recommended protective measures described above to document compliance with applicable State and Federal laws pertaining to the protection of native birds. Such record shall be submitted and received into the case file for the associated discretionary action permitting the project.

CULTURAL RESOURCES

No mitigation measures are required.

GEOLOGY AND SOILS

No mitigation measures are required.

GREENHOUSE GAS EMISSIONS

No mitigation measures are required.

HAZARDS AND HAZARDOUS MATERIALS

MM-HAZ-1 (Existing Toxic/Hazardous Construction Materials)

- (Lead Paint) Prior to the issuance of any permit for demolition or alteration of the existing structure(s), a lead-based paint survey shall be performed to the written satisfaction of the Department of Building and Safety. Should lead-based paint materials be identified, standard handling and disposal practices shall be implemented pursuant to OSHA regulations.

MM-HAZ-2 Construction Activity Near Schools

- The Applicant and contractors shall maintain ongoing contact with administrator of Hillside Elementary School, Loreta Street Elementary School, and Los Angeles Leadership Academy Charter School. The administrative offices shall be contacted when demolition, grading and construction activity begin on the project site so that students and their parents will know when such activities are to occur. The developer shall obtain school walk and bus routes to the schools from either the administrators or from the LAUSD's Transportation Branch (323)342-1400 and guarantee that safe and convenient pedestrian and bus routes to the school be maintained.

- The Applicant shall install appropriate traffic signs around the site to ensure pedestrian and vehicle safety.
- There shall be no staging or parking of construction vehicles, including vehicles to transport workers on Pasadena Avenue, adjacent to the school.
- Due to noise impacts on the schools, no construction vehicles or haul trucks shall be staged or idled on Pasadena Avenue, adjacent to the school, during school hours.

MM-HAZ-3 Schools Affected by Haul Route

- Haul route scheduling shall be sequenced to minimize conflicts with pedestrians, school buses and cars at the arrival and dismissal times of the school day. Haul route trucks shall not be routed past the school during periods when school is in session especially when students are arriving or departing from the campus.

HYDROLOGY AND WATER QUALITY

No mitigation measures are required.

LAND USE AND PLANNING

No mitigation measures are required.

MINERAL RESOURCES

No mitigation measures are required.

NOISE

MM-N-1 Increased Noise Levels (Demolition, Grading, and Construction Activities)

- In addition to satisfying the noise-related conditions identified in [Q] Condition 10 of Ordinance 179,280, the project contractor shall erect a temporary noise-attenuating sound barrier along the perimeter of the Project Site's southerly and easterly property line to minimize construction noise levels at off site properties. The sound wall shall be a minimum of 8 feet in height to block the line of site of construction equipment and off site receptors at the ground level. The sound barrier shall include ¾ inch plywood or other sound absorbing material capable of achieving a 10 dBA reduction in sound level.

MM-N-2 Increased Noise Levels (Parking Structure Ramps)

- Concrete, not metal, shall be used for construction of parking ramps.
- The interior ramps shall be textured to prevent tire squeal at turning areas.

POPULATION AND HOUSING

No mitigation measures are required.

PUBLIC SERVICES

MM-PS-1 Police

- **(Police):** The plans shall incorporate the Design Guidelines (defined in the following sentence) relative to security, semi-public and private spaces, which may include but not be limited to access control to building, secured parking facilities, walls/fences with key systems, well-illuminated public and semi-public space designed with a minimum of dead space to eliminate areas of concealment, location of toilet facilities or building entrances in high-foot traffic areas, and provision of security guard patrol throughout the project site if needed. Please refer to "Design Out Crime Guidelines: Crime Prevention Through Environmental Design", published by the Los Angeles Police Department. Contact the Community Relations Division, located at 100 W. 1st Street, #250, Los Angeles, CA 90012; (213) 486-6000. These measures shall be approved by the Police Department prior to the issuance of building permits.

RECREATION

No mitigation measures are required.

TRANSPORTATION AND TRAFFIC

MM-T-1 Transportation and Traffic

- In addition to the TDM measures, all implementing measure(s) detailed in DOT's communication to the Planning Department (DOT Case No. CEN 15-43306 dated January 28, 2016, attached) shall be complied with.

MM-T-2 Transportation Demand Management (TDM) Program

- The purpose of a TDM plan is to reduce the use of single occupant vehicles (SOV) by increasing the number of trips by walking, bicycle, carpool, vanpool and transit. A TDM plan should include design features, transportation services, education, and incentives intended to reduce the amount of SOV during commute hours. Through strategic building design and orientation, this project can facilitate access to transit, can provide a pedestrian-friendly environment, can promote non-automobile travel and can support the goals of a trip-reduction program.
- A preliminary TDM program shall be prepared and provided for DOT review prior to the issuance of the first building permit for this project and a final TDM program approved by DOT is required prior to the issuance of the first certificate of occupancy for the project. The TDM program should include, but not be limited to, the following strategies:
    - Provide an internal Transportation Management Coordination Program with an on-site transportation coordinator;
    - Design the project to ensure a bicycle, transit, and pedestrian friendly environment;
    - Provide unbundled parking that separates the cost of obtaining assigned parking spaces from the cost of purchasing or renting residential units;

- Accommodate flexible/alternative work schedules and telecommuting programs;
- A provision requiring compliance with the State Parking Cash-out Law in all leases;
- Coordinate with DOT to determine if the project location is eligible for future Integrated Mobility Hub (which can include space for a bike share kiosk, and/or parking spaces on-site for car-share vehicles;
- Provide on-site transit routing and schedule information;
- Provide a program to discount transit passes for residents/employees possibly through negotiated bulk purchasing passes with transit providers;
- Provide rideshare matching services;
- Preferential rideshare loading/unloading or parking location;
- Contribute to a one-time fixed fee contribution of $75,000 to be deposited into the City's Bicycle Plan Trust Fund to implement bicycle improvements in the vicinity of the project.

In addition to these TDM measures, DOT also recommends that the Applicant explore the implementation of an on-demand van, shuttle or tram service that connects the project employees to off-site transit stops based on the transportation needs of the project employees. Such a service can be included as an additional measure in the TDM program if it is deemed feasible and effective by the applicant.

- The Applicant shall implement a TDM/TMP to reduce the project trip generation by 15 percent. Specifically, the project shall not exceed a driveway trip volume count of 179 trips during the a.m. peak hour and 222 trips during the pm peak hour, at full occupancy. To achieve this peak hour driveway trip volume requirement through implementation of an on-site Transportation Demand Management (TDM) Plan the project shall implement a Trip Monitoring Program (TMP).
- The Applicant shall record a covenant and agreement to annually monitor and submit reports on the progress of the driveway trip reduction plan to DOT. Annual reports shall include a report on the observed trip generation and on the project's mode share. The detailed goals, objectives, terms and strategies of the TDM plan and reporting requirements shall be determined during the preparation of the final. The TDM plan is due prior to the issuance of any temporary or final certificate of occupancy permit for the project. The plan should also identify any appropriate penalties, should the project not achieve compliance with the targeted number of driveway trips within a year of exceeding the limits. The TMP shall continue until such time that the project has shown, for five (5) consecutive years, at a minimum of 85% occupancy, accomplishment of the peak hour driveway trip volume requirement as listed.

MM-T-3 Transportation Systems Management (TSM) Improvements

- The Applicant shall implement the upgrades, detailed below by LADOT's ATSAC Section, through the B-Permit process. LADOT's ATSAC Section has identified the need to update the existing traffic signal system. Specifically, install one CCTV camera, a new type 2070 controller, and the necessary infrastructure (including, but not limited to, fiber optic and interconnect) to activate the new installation, at the Pasadena Avenue / Avenue 26 and Daly Street intersection. The video fiber / fiber optic improvements must be guaranteed prior to the issuance of any building

permit and complete prior to the issuance of any certificate of occupancy. Temporary certificates of occupancy may be granted in the event of any delay through no fault of the applicant, provided that, in each case, the applicant has demonstrated reasonable efforts and due diligence to the satisfaction of DOT

MM-T-4 Construction Management Plan

- A Construction work site traffic control plan shall be submitted to DOT for review and approval prior to the start of any construction work. The plans shall show the location of any roadway or sidewalk closures, traffic detours, haul routes, hours of operation, protective devices, warning signs and access to abutting properties. All construction related traffic shall be restricted to off-peak hours.
- All delivery truck loading and unloading shall take place on site or within the boundaries of an approved traffic control plan.

MM-T-5 Transportation and Traffic (Construction)

- The developer shall install appropriate traffic signs around the site to ensure pedestrian and vehicle safety at all times during the construction period.

MM-T-6 Pedestrian Safety During Construction

- The Applicant shall plan construction and construction staging as to maintain pedestrian access on adjacent sidewalks throughout all construction phases. This requires the applicant to maintain adequate and safe pedestrian protection, including physical separation (including utilization of barriers such as K-Rails or scaffolding, etc.) from work space and vehicular traffic, and overhead protection, due to sidewalk closure or blockage, at all times.
- Should permanent pedestrian routes be unavailable due to construction, safe and accessible temporary pedestrian routes shall be provided adjacent to the project site.
- Covered walkways should be provided where pedestrians are exposed to potential injury from falling objects.
- The Applicant shall keep sidewalk open during construction until only when it is absolutely required to close or block sidewalk for construction and/or construction staging. Sidewalk shall be reopened as soon as reasonably feasible taking construction and construction staging into account.

UTILITIES AND SERVICE SYSTEMS

No mitigation measures are required.

MANDATORY FINDINGS OF SIGNIFICANCE

See above mitigation measures.

REGULATORY COMPLIANCE MEASURES

The Proposed Project is located within Subarea 4 of the Northeast Los Angeles Community Plan Ordinance Maps and is zoned [T][Q]CM-2D. Pursuant to Ordinance 179280, limitations imposed upon the use of property subject to the permanent "Q" Qualified Classification or "D" Development Limitation are imposed pursuant to Section 12.32K and 12.32G, respectively, of the Los Angeles Municipal Code. The "Q" Qualified Conditions are indicated by the symbol "Q" in brackets proceeding the proposed zoning designation (for example, [Q]C2). The "D" Development Limitations are indicated by a "D" following the height district designation (for example, C2-2D). The "D" Limitations and "[Q]" Conditions that are applicable to the Project Site and that will be fully addressed in Project design and entitlement are identified below:

"D" Development Limitations

1. Floor Area.

The total floor area of all buildings on the subject lots shall be limited to a Height District 2D with a maximum FAR of 3:1. An additional FAR of 1:1 may be granted for mixed-use projects that incorporate affordable housing at income levels and dwelling unit percentages consistent with State Code. An additional FAR incentive of 0.5:1 may be granted for the inclusion of a childcare facility. Therefore, mixed-use developments which incorporate affordable housing may have a maximum FAR of 4.0:1; mixed-use developments which include a childcare facility without an affordable housing component may have a maximum FAR of 3.5:1; mixed-use developments which include both affordable housing and a childcare facility may have a maximum FAR of 4.5:1.

[Q] QUALIFIED CONDITIONS OF APPROVAL

Pursuant to Section 12.32 G of the Municipal Code; the following limitations are hereby imposed upon the use of the subject property, subject to the "Q" Qualified classification.

A. General Conditions

1. Use Limitations

a. There shall be no 100% Commercial and/or Industrial projects allowed.

b. There shall be no 100% Residential projects allowed.

c. A minimum of 50% of the non-residential floor area shall be limited to Neighborhood Retail and Neighborhood Services as permitted by LAMC 13.07C.

d. The following uses shall be prohibited:

(i) Any drive-through facilities, such as those associated with restaurants, kiosk banks and drugstores;

(ii) Automobile dismantling and automobile salvage yards, and automobile storage yards;

(iii) Outdoor storage yards for junk and salvage items, machinery or construction materials that are not associated with a retail establishment or entertainment production facility;

(iv) Recycling Centers;

(v) Off-site alcoholic beverage sales.

e. Property owners shall satisfy any requirements from the State Department of Toxic Substances Control (DTSC) in relation to potential contamination on the subject site. Prior to the issuance of any clearances by the Department of City Planning (DCP), property owners shall provide to DCP a letter from DTSC that establishes DTSC's satisfaction that the subject site currently meets DTSC requirements for the proposed use or, alternatively, that establishes DTSC's satisfaction with the property owner's contamination testing plan for the proposed use.

2. Parking.

a. Surface Parking. Approval of plans by the Director of Planning shall be required for any project for which surface parking exceeds 20% of the total lot area.

b. Surface and Below-Grade Parking. Parking for commercial uses or guests may be located at grade, but shall not be adjacent to Pasadena Avenue; parking for residences shall be located below grade.

c. Shared Parking. Residential and mixed-use commercial/residential projects shall provide parking as required by the Los Angeles Municipal Code. Commercial parking shall be made available to residents and residential visitors during off-business hours. In the event that the project is developed under the regulations contained in Section 12.22 A 25 of the Municipal Code (Affordable Housing Incentives/Density Bonuses), parking may be provided as permitted by that Section for the length of time that the residential units remain as restricted affordable units.

(i) Tandem parking may be used only for the spaces which are assigned and designated for a single residential unit.

(ii) Signs shall be clearly posted at project entrances directing residential visitors to commercial parking during off-business hours. The signs shall be in large, easy-to-read lettering and shall indicate the general location of the parking. Sign wording shall be to the satisfaction of the Planning Department.

B. Design Conditions

1. Site Planning

a. Development fronting Figueroa Street or Pasadena Avenue shall designate Figueroa Street or Pasadena Avenue as the front yard.

b. All new buildings fronting Figueroa Street or Pasadena Avenue shall provide a pedestrian entrance for each business along Figueroa Street or Pasadena Avenue.

c. Ground floor commercial uses shall be built to the front lot line except where publicly accessible open spaces are provided, such as plazas and outdoor dining areas, and have been incorporated into the site design.

d. All projects shall be subject to approval of plans by the Director of Planning, to be conducted by the Community Planning Bureau.

e. A minimum of 30% of the Subarea shall be devoted to publicly accessible open space and pedestrian paths that shall be accessible beginning at dawn and ending at dusk or close of on-site businesses, whichever occurs later.

f. All new buildings that abut Pasadena Avenue shall provide a pedestrian entrance for each business along Pasadena Avenue.

g. For surface parking areas, the applicant shall provide drainage bioswales along any boundary abutting the Arroyo Seco, and shall design parking areas, landscaped areas and rooftops to direct drainage into the bioswales.

h. Courtyards.

(i) For buildings fronting Pasadena Avenue with over 150 linear feet in width or depth, a front courtyard shall be provided adjacent to the front yard setback at ground level, with a minimum width and depth of 20 linear feet, respectively, and a minimum total area of 700 square feet.

(ii) Required courtyards shall be open to the sky and not be located within 40 linear feet of a side property line.

(iii) Any courtyard fencing shall be predominantly open or transparent in design, shall not exceed 36 inches in height and shall be recessed a minimum of 5 feet.

(iv) Required courtyards shall be located no more than three (3) vertical feet from sidewalk grade.

(v) A minimum of 20 percent of each courtyard shall consist of planted ground cover, shrubs, trees, water features or permanent planter boxes.

(vi) Courtyards shall contain pedestrian amenities, such as shade trees, landscaped trellises, benches, trash bins, etc.

i. A minimum of 75 percent of all usable outdoor public space shall be located at ground level and shall be directly accessible to the general public from Pasadena Avenue and/or Avenue 34.

j. Ground floor frontage along Pasadena Avenue shall be designated for commercial or industrial uses. Ground floor uses shall be designed with a minimum depth of 25 feet.

k. Non-residential uses fronting onto Pasadena Avenue shall maintain a presence and a secondary pedestrian entrance on the interior of the lot.

2. Pedestrian Access

Pedestrian paths shall divide Subarea 4 into a minimum of four sections.

a. There shall be an easUwest and a north/south pedestrian path through Subarea 4.

b. The paths shall be aligned through the midpoint of Subarea 4 and cross each other at a perpendicular angle.

c. The required pedestrian paths shall be a minimum of 16 feet in width and may include up to 2 feet of landscaping on each side.

d. The required pedestrian paths shall be comprised of attractive hardscape materials or appropriate permeable alternatives. The use of asphalt is prohibited.

e. Developments on parcels that abut the required pedestrian paths shall contribute their proportional share of said paths.

f. Pedestrian paths shall be illuminated with pedestrian-scale lighting installed on either side of each pedestrian path at a minimum interval of one fixture every 20 linear feet.

g. These pedestrian paths shall be open and accessible to the public from dawn until dusk or the close of on-site businesses, whichever occurs later.

h. These pedestrian paths may count toward the Code-required open space.

i. These pedestrian paths may be included in the buildable area for the purposes of calculating the floor area ratio (FAR).

3. Building Design

a. A break in the building wall along Figueroa Street or Pasadena Avenue shall only be permitted when vehicular access cannot be obtained from side streets or private alleyways, as determined by LADOT. The break in the wall, when permitted, shall not exceed a distance of the linear feet required for driveways and other vehicular access. When vehicular access must be taken from the primary street, the driveway entry gate shall be recessed from the sidewalk by a minimum of 20 feet.

b. All ground floor storefronts in new buildings that are greater than 30 feet in length shall provide architectural features on the building fa<;ade that will help to create a pattern along the street frontage and avoid the presence of a monotonous fa<;ade through the use of vertical elements, such as columns, placed in a pattern, or recesses in the fa<;ade, at minimum intervals of 20 feet.

c. All facades on new buildings shall be designed with articulation that provides relief for every 20 horizontal feet and 15 vertical feet.

d. The front elevation of all new structures shall be stepped back a minimum of five (5) feet from the front property line at the third story and again at the fifth story.

e. Wall openings, such as windows and doors, shall occupy at least 70 percent of the ground floor street facade along Pasadena Avenue and Figueroa Street.

f. Storefront windows shall be a minimum of 18 vertical inches and a maximum of 36 vertical inches from sidewalk grade.

4. Architectural Details

a. Articulation and architectural detail shall be applied equally on all building elevations.

b. All balconies shall be flush with the exterior wall and made of an opaque materials for the first four feet.

c. All balconies shall be of a usable dimension, a minimum of six feet wide.

d. Building entrances shall meet the following criteria:

(i) All projects shall provide a prominent residential entry that is accessible from the public right-of-way abutting the front yard; and

(ii) Each commercial premise shall provide a front door that is accessible from the public right-of-way abutting the front yard.

e. All buildings shall provide security lighting for pedestrians on the ground floor of building facades fronting public rights-of-way.

f. Windows shall allow a minimum of 90-percent light transmission. Non-reflective glass shall be used to allow maximum visibility from the sidewalk areas into the interior of all commercial uses.

g. Storefront windows shall be recessed at least 3 inches from the front plane of the building.

h. Where awnings and canopies are used on storefronts greater than 25 feet in length, one awning or canopy shall be provided for each structural bay where such bays exist.

i. Awnings and canopies shall project a maximum of 36-inches into the sidewalk.

j. Awnings and canopies shall be attached to the building, without support poles on the sidewalk.

k. All rooflines that exceed 40 linear feet shall provide some kind of relief either through the application of a gable, dormer, change of material or other type of articulation.

5. Walls and Fences:

a. Exterior walls shall be treated with graffiti resistant-surfaces. Such treatment may include specialized coatings and the installation of vegetation.

b. All free-standing walls shall provide a break in plane, or a change in material, or an opening in the surface of the wall at minimum every 20 feet in horizontal length, or by an articulation or architectural detail such as a staggered wall, an indentation, patterned block or a symmetrical spacing of columns at minimum every 20 feet.

c. Free-standing walls or fences shall not use barbed wire or razor wire to adorn the tops of walls within view of the public right-of-way.

d. Walls or fences in the front yard shall not exceed 42 inches in height, as measured from the lowest adjacent grade, and shall be constructed of transparent decorative materials that are integrated into the design and architecture of the building.

e. Where taller walls or fences, up to a maximum of 6 feet in height, are required for security reasons, the fence or wall shall be located inside the setback landscape buffer, integrated into the architecture of the building and screened by landscaping or otherwise designed to be obscured from view from the public way. This condition applies to walls or fences in side or rear yards only.

f. Fences and walls exceeding 42 inches in side or rear yards may be located at the property line only when permitted portions of the required yard are used for private or common open space, as allowed by the Los Angeles Municipal Code. Otherwise these walls and fences shall be located within the landscaped setback, per Condition C-4(e).

6. Landscaping

a. Open space shall be provided per LAMC.

b. All open areas not used for buildings, driveways, surface parking areas, recreational facilities, pedestrian paths or walkways shall be attractively landscaped and include an automatic irrigation system, in accordance with a landscape plan prepared by a licensed landscape architect, licensed architect, or landscape contractor to the satisfaction of the Planning Department.

c. A minimum of five percent of the total surface area of a surface parking lot shall be landscaped with trees, shrubbery and ground cover.

d. A minimum of 50 percent of common usable open space, including plazas and courtyards, shall be planted in ground cover, shrubs or trees. Trees shall be planted at a ratio of one tree for every 1,000 square feet of lot area. Trees shall be at minimum 24-inch box trees, and shall be planted within open space areas. Landscaped areas located on top of a parking garage or deck shall include permanent planters at least 30 inches in depth (12 inches for lawn/ground cover) and be properly irrigated and drained to the satisfaction of the Planning Department.

e. Paved surfaces within usable public spaces shall be comprised of stamped concrete, tile or other decorative paving surfaces. Asphalt shall be prohibited as a paving surface within usable public spaces.

f. Any portion of a parking level which exceeds grade shall be screened from the view of the public right-of-way by landscape features including trees, shrubbery, planter boxes or berms, none of which shall be shorter than three (3) feet in height. Any planter box or berm shall not be considered in calculating additional height of a structure.

g. All surface parking areas shall include a pedestrian walkway from the primary structure served by the parking area up to a distance measuring 50 straightline feet. The pedestrian walkway shall be paved with stamped concrete or another decorative surface in keeping with the architectural style of the surrounding structures.

h. Landscape setbacks, where required, shall include a 24-inch box tree for every 20 feet of street frontage. Trees installed shall have a minimum canopy diameter of 20 feet at the time of maturity.

i. Landscape setbacks, where required, shall include 90 percent ground covering through the use of turf, grass, flowering plants and shrubs.

j. Street trees shall be 24-inch box trees planted along the street frontage, spaced 20 feet on center with root collars to prevent uplifting of sidewalks. Street tree type shall match the

prevailing street tree of the street provided that it is an acceptable tree species, to the satisfaction of the Bureau of Urban Forestry.

7. Mechanical, Security & Trash Equipment

a. All service areas and loading docks shall be located at the rear of structures.

b. All exterior rooftop and ground level mechanical equipment, including HVAC equipment, exhaust fans and satellite dishes shall be screened from public view.

c. All service areas shall be enclosed or completely screened from public view. Enclosures shall consist of fencing, walls, or landscaping.

d. Exterior security grills or permanently affixed security bars shall be prohibited.

e. Interior security grills shall be retractable and shall recess completely into pockets that completely conceal the grill when it is retracted. Such pockets shall be integrated into the design of the building.

f. Roll-down security grills that conceal storefront windows shall be prohibited.

C. Environmental Conditions

1. Aesthetics (Landscaping) All open areas not used for buildings, driveways, parking areas, recreational facilities or walks shall be attractively landscaped and maintained in accordance with a landscape plan, including an automatic irrigation plan, prepared by a licensed landscape architect to the satisfaction of the Planning Department.

2. Aesthetics (Surface Parking) A minimum of one 24-inch box tree (minimum trunk diameter of two inches and a height of eight feet at the time of planting) shall be planted for every four new surface parking spaces. The trees shall be dispersed within the parking area so as to shade the surface parking area and shall be protected by a minimum 6-inch high curb and landscape. An automatic irrigation plan shall be approved by the City Planning Department.

3. Aesthetics (Graffiti) The owners shall maintain the subject property clean and free of debris and rubbish and to promptly remove any graffiti from the walls, pursuant to Municipal Code Sections 91.8101-F, 91.8904-1 and 91.1707-E. Exterior walls of new commercial and residential buildings of other than glass may be covered with clinging vines, screened by oleander trees or similar vegetation capable of covering or screening entire walls up to heights of at least 9-feet, excluding windows and signs or the walls may be covered with graffiti proof coatings.

4. Aesthetics (Signage) On-site signs are limited to the maximum allowable under the Municipal Code. Multiple temporary signs in the store windows and along the building walls shall be prohibited.

5. Aesthetics (Light) Outdoor lighting shall be designed and installed with shielding so that the light source cannot be seen from adjacent residential properties.

6. Aesthetics (Glare) The exterior of the proposed building shall be constructed of materials such as high-performance tinted non-reflective glass and pre-cast concrete or fabricated wall surfaces.

7. Air Pollution (Stationary)

RESIDENTIAL - The applicant shall install air filters capable of achieving a Minimum Efficiency Rating Value (MERV) of at least 8 or better in order to reduce the effects of diminished air quality on the occupants of the project.

COMMERCIAL/INSTITUTIONAL- The applicant shall install air filters capable of achieving a Minimum Efficiency Rating Value (MERV) of at least 11 or better in order to reduce the effects of diminished air quality on the occupants of the project.

8. Air Quality (Objectionable Odors) The trash receptacle shall be relocated at least 50-feet away from the property line of adjacent residential properties or trash receptacles shall be located within the walls of a covered concrete block enclosure.

9. Seismic The design and construction of the project shall conform to the Uniform Building Code seismic standards as approved by the Department of Building and Safety.

10. Erosion/Grading/Short-Term Construction Impacts

Air Quality

a. All unpaved demolition and construction areas shall be wetted at least twice daily during excavation and construction, and temporary dust covers shall be used to reduce dust emissions and meet SCAQMD District Rule 403.

b. The owner or contractor shall keep the construction area sufficiently dampened to control dust caused by construction and hauling, and at all times provide reasonable control of dust caused by wind.

c. All loads shall be secured by trimming, watering or other appropriate means to prevent spillage and dust.

d. All materials transported off-site shall be either sufficiently watered or securely covered to prevent the generation of excessive amounts of dust.

e. General contractors shall maintain and operate construction equipment so as to minimize exhaust emissions.

Noise

a. The project shall comply with the City of Los Angeles Noise Ordinance No. 144,331 and 161,574, and any subsequent ordinances, which prohibit the emission or creation of noise beyond certain levels at adjacent uses unless technically unfeasible.

b. Construction and demolition shall be restricted to the hours of 7:00 am to 6:00 pm Monday through Friday, and 8:00 am to 6:00 pm on Saturday.

c. Construction and demolition activities shall be scheduled so as to avoid operating several pieces of equipment simultaneously.

d. The project contractor shall use power construction equipment with state-of the art noise shielding and muffling devices.

e. The project sponsor shall comply with the Noise Insulation Standards of Title 24 of the California Code Regulations, which insure an acceptable interior noise environment.

General Construction

a. All waste shall be disposed of properly. Use appropriately labeled recycling bins to recycle construction materials including: solvents, water-based paints, vehicle fluids, broken asphalt and concrete, wood, and vegetation. Nonrecyclable materials/wastes shall be taken to an appropriate landfill. Toxic wastes must be discarded at a licensed regulated disposal site.

b. Leaks, drips and spills shall be cleaned up immediately to prevent contaminated soil on paved surfaces that can be washed away into the storm drains.

c. Pavement shall not be hosed down at material spills. Dry cleanup methods shall be used whenever possible.

d. Dumpsters shall be covered and maintained. Uncovered dumpsters shall be placed under a roof or be covered with tarps or plastic sheeting.

e. Gravel approaches shall be used where truck traffic is frequent to reduce soil compaction and the tracking of sediment into streets shall be limited.

f. All vehicle/equipment maintenance, repair, and washing shall be conducted away from storm drains. All major repairs shall be conducted off-site. Drip pans or drop cloths shall be used to catch drips and spills.

11. Liquefaction

All projects shall comply with the Uniform Building Code Chapter 18. Division 1 Section 1804.5 Liquefaction Potential and Soil Strength Loss which requires the preparation of a geotechnical report. The geotechnical report shall assess potential consequences of any liquefaction and soil strength loss, estimation of settlement, lateral movement or reduction in foundation soil-bearing capacity, and discuss

mitigation measures that may include building design consideration. Building design considerations shall include, but are not limited to: ground stabilization, selection of appropriate foundation type and depths, selection of appropriate structural systems to accommodate anticipated displacements or any combination of these measures.

12. Explosion/Release (Asbestos Containing Materials)

Prior to the issuance of any demolition permit, the applicant shall provide a letter to the Department of Building and Safety from a qualified asbestos abatement consultant that no ACM are present in the building. If ACM are found to be present, it will need to be abated in compliance with the South Coast Air Quality Management District's Rule 1403 as well as all other State and Federal Rules and regulation.

13. All Runoff (All Subareas)

a. Project applicants are required to implement stormwater BMPs to retain or treat the runoff from a storm event producing 3/4 inch of rainfall in a 24 hour period. The design of structural BMPs shall be in accordance with the Development Best Management Practices Handbook Part B Planning Activities. A signed certificate from a California licensed civil engineer or licensed architect that the proposed BMPs meet this numerical threshold standard is required.

b. Post development peak stormwater runoff discharge rates shall not exceed the estimated pre-development rate for developments where the increase peak stormwater discharge rate will result in increased potential for downstream erosion.

c. Maximize trees and other vegetation at each site by planting additional vegetation, clustering tree areas, and promoting the use of native and/or drought tolerant plants.

d. Any connection to the sanitary sewer must have authorization from the Bureau of Sanitation.

e. Reduce impervious surface area by using permeable pavement materials where appropriate, including: pervious concrete/asphalt; unit pavers, i.e. turf block; and granular materials, i.e. crushed aggregates, cobbles.

f. Paint messages that prohibits the dumping of improper materials into the storm drain system adjacent to storm drain inlets (such as NO DUMPINGDRAINS TO OCEAN) and/or graphical icons. Prefabricated stencils can be obtained from the Department of Public Works, Stormwater Management Division.

g. Legibility of stencils and signs must be maintained.

h. Promote natural vegetation by using parking islands and other landscaped areas.

i. Materials with the potential to contaminate stormwater must be: (1) placed in an enclosure such as, but not limited to, a cabinet, shed, or similar stormwater conveyance system; or (2) protected by secondary containment structures such as berms, dikes, or curbs.

j. The storage area must be paved and sufficiently impervious to contain leaks and spills.

k. The storage area must have a roof or awning to minimize collection of stormwater within the secondary containment area.

l. The owner(s) of the property will prepare and execute a covenant and agreement (Planning Department General form CP-6770) satisfactory to the Planning Department binding the owners to post construction maintenance on the structural BMPs in accordance with the Standard Urban Stormwater Mitigation Plan and/or per manufacturer's instructions.

14. Stormwater Runoff 10+ Home Subdivision/Multi Family

a. Install Roof runoff systems where site is suitable for installation.

b. Surface parking lots constitute a significant portion of the impervious land coverage. To reduce the quantity of runoff, surface parking lots can be designed one of two ways;

(i) Hybrid Lot - parking stalls utilize permeable materials, such as crushed aggregate, aisles are constructed of conventional materials such as asphalt.

(ii) Parking Grove - is a variation on the permeable stall design, a grid of trees and bollards are added to delineate parking stalls. This design presents an attractive open space when cars are absent, and shade when cars are present.

c. Design an efficient irrigation system to m1mm1ze runoff including: drip irrigation for shrubs to limit excessive spray; shutoff devices to prevent irrigation after significant precipitation; and flow reducers.

15. Stormwater Runoff Commercial and Industrial Development (Lot Size 100,000 sf)

a. Cover loading dock areas or design drainage to minimize run-on and run-off stormwater.

b. Direct connections to storm drains from depressed loading docks (truck wells) are prohibited.

c. Repair/maintenance bays must be indoors or designed in such a way that doesn't allow stormwater run-on or contact with stormwater runoff.

d. Design repair/maintenance bay drainage system to capture all washwater, leaks and spills. Connect drains to a standard sump for collection and disposal. Direct connection of the repair/maintenance bays to the storm drain system is prohibited. If required, obtain an Industrial Waste Discharge Permit.

e. Vehicle/equipment wash areas must be self-contained and/or covered, equipped with a clarifier, or other pretreatment facility, and property connected to the sanitary sewer.

f. The following activities are to be conducted under proper cover with drain routed to the sanitary sewer:

(i) Storage of industrial wastes.

(ii) Handling or storage of hazardous wastes.

(iii) Metal fabrication or Pre-cast concrete fabrication.

(iv) Welding, Cutting or Assembly.

(v) Painting, Coating or Finishing.

g. Store above ground liquid storage tanks (drums and dumpsters) in areas with impervious surfaces in order to contain leaks and spills. Install a secondary containment system such as berms, dikes, liners, vaults, and double-wall tanks. Where used oil or dangerous waste is stored, a dead- end sump should be installed in the drain.

h. Toxic wastes must be discarded at a licensed regulated disposal site. Store trash dumpsters either under cover and with drains routed to the sanitary sewer or use non-leaking and water-tight dumpsters with lids. Use drip pans or absorbent materials whenever grease containers are emptied. Wash containers in an area with properly connected sanitary sewer.

i. Reduce and recycle wastes, including: paper; glass; aluminum; oil; and grease.

j. Reduce the use of hazardous materials and wastes by: using detergent based or water-based cleaning systems; and avoid chlorinated compounds, petroleum distillates, phenols, and formaldehyde.

k. Control or reduce or eliminate flow to natural drainage systems to the maximum extent practicable.

l. Cleaning of vehicles and equipment to be performed within designated covered or bermed wash area paved with Portland concrete, sloped for wash water collection, and with a pretreatment facility for wash water before discharging to properly connected sanitary sewer with a CPI type oil/water separator. The separator unit must be: designed to handle the quantity of flows; removed for cleaning on a regular basis (at least twice a year) to remove any solids; and the oil absorbent pads must be replaced regularly, once in fall just before the wet season, and in accordance with manufacturer's specifications.

16. Stormwater Runoff Food Service Industry (Restaurants, Bakeries, Food Processors)

a. Cleaning of oily vents and equipment to be performed within designated covered area, sloped for wash water collection, and with a pretreatment facility for wash water before discharging to properly connected sanitary sewer with a CPI type oil/water separator. The separator unit must be: designed to handle the quantity of flows; removed for cleaning on a regular basis to remove any solids; and the oil absorbent pads must be replaced regularly according to manufacturer's specifications.

b. Store trash dumpsters either under cover and with drains routed to the sanitary sewer or use non-leaking and water tight dumpsters with lids. Wash containers in an area with properly connected sanitary sewer.

c. Reduce and recycle wastes, including oil and grease.

d. Store liquid storage tanks (drums and dumpsters) in designated paved areas with impervious surfaces in order to contain leaks and spills. Install a secondary containment system such as berms, curbs, or dikes. Use drip pans or absorbent materials whenever grease containers are emptied.

e. Infiltrate runoff before it reaches the storm drain system.

f. Runoff must be treated prior to release into the storm drain. Three types of treatments are available, (1) dynamic flow separator; (2) a filtration or (3) infiltration. Dynamic flow separator uses hydrodynamic force to remove debris, and oil and grease, and are located underground. Filtration involves catch basins with filter inserts. Filter inserts must be inspected every six months and after major storms, cleaned at least twice a year. Infiltration methods are typically constructed on-site and are determined by various factors such as soil types and groundwater table.

17. Stormwater Runoff Surface Parking Lots with 25 or More Spaces or 5,000 Square-feet of Lot Area (Residential, Commercial, Industrial, Public Facility)

a. Trash container areas must have drainage from adjoining roofs and pavement diverted around the area(s).

b. Trash container areas must be screened or walled to prevent off-site transport of trash.

c. Reduce impervious land coverage of parking lot areas.

d. Infiltrate runoff before it reaches the storm drain system.

e. Runoff must be treated prior to release into the storm drain. Three types of treatments are available, (1) dynamic flow separator; (2) filtration or (3) infiltration. Dynamic flow separator uses hydrodynamic force to remove debris, and oil and grease, and are located underground. Filtration involves catch basins with filter inserts. Filter inserts must be inspected every six

months and after major storms, and cleaned at least twice a year. Infiltration methods are typically constructed on-site and are determined by various factors such as soil type and groundwater table.

18. Increased Noise Levels (Parking Wall)

A 6-foot-high solid decorative masonry wall, as measured from the lowest adjacent grade shall be constructed along any lot line that separates any surface parking area from an adjacent residential use.

19. Increased Noise Levels (Retail Markets, Bars, Entertainment, etc.) No window openings shall be permitted along any side (excluding the front facade) of the building that is adjacent to a residential use.

20. Severe Noise Levels (Residential Only)

All exterior windows having a line of sight to the MTA Gold Line, Figueroa Street, Pasadena Avenue, and the 1-110 (Pasadena) Freeway shall be constructed with double-pane glass and use exterior wall construction which provides a Sound Transmission Class of 50 or greater as defined in UBC No. 35-1, 1979 edition or any amendment thereto. The applicant, as an alternative, may retain an acoustical engineer to submit evidence, along with the application for a building permit, any alternative means of sound insulation sufficient to mitigate interior noise levels below a CNEL of 45 dBA in any habitable room.

21. Public Services (Fire)

The following recommendations of the Fire Department relative to fire safety shall be incorporated into the building plans, which includes the submittal of a plot plan for approval by the Fire Department either prior to the recordation of a final map or the approval of a building permit. The plot plan shall include the following minimum design features: fire lanes, where required, shall be a minimum of 20 feet in width; all structures must be within 300 feet of an approved fire hydrant, and entrances to any dwelling unit or guest room shall not be more than 150 feet in distance in horizontal travel from the edge of the roadway of an improved street or approved fire lane.

22. Public Services (Schools)

a. The developer shall install appropriate traffic signs around the site to ensure pedestrian and vehicle safety.

b. Haul route scheduling shall be sequenced to minimize conflicts with pedestrians, school buses and cars at arrival and dismissal times of the school day. Haul route trucks shall not be routed past the school during periods when students are arriving or departing from the campus.

c. There shall be no staging or parking of construction vehicles, including vehicles to transport workers on any of the streets adjacent to any school.

d. Due to noise impacts on the schools, no construction vehicles or haul trucks shall be staged or idled on these streets during school hours.

e. Fences shall be constructed around the site to minimize trespassing, vandalism, short-cut attractions and attractive nuisances.

f. The developer and contractors shall maintain ongoing contact with the administrator of Hillside Elementary School, Loreto Street Elementary School and Nightingale Middle School. The administrative offices shall be contacted when demolition, grading and construction activity begin on the project site so that students and their parents will know when such activities are to occur. The developer shall obtain school walk and bus routes to the schools from either the administrators or from the LAUSD's Transportation Branch (323) 342-1400 and guarantee that safe and convenient pedestrian and bus routes to the school be maintained.

23. Utilities (Solid Waste)

Recycling bins shall be provided at appropriate locations to promote recycling of paper, metal, glass, and other recyclable material. The bins shall be picked up and recycled accordingly as a part of the project's regular solid waste removal program.

24. Transportation and Air Quality

Individual projects of more than 50 dwelling units or 11,000 square feet of commercial or industrial uses shall undergo Site Plan Review per LAMC Section 16.05. The Site Plan Review shall include an assessment of air quality impacts. Individual projects of more than 70 dwelling units or 11,000 square feet of commercial or industrial uses shall be reviewed by LADOT to determine if a traffic study will be required.

D. Administrative Conditions

1. Approval, Verification and Submittals. Copies of any approvals; guarantees or verification of consultations, review or approval, plans, etc., as may be required by the subject conditions, shall be provided to the Department of City Planning for placement in the subject file.

2. Code Compliance. Area, height and use regulations of the zone classification of the subject property shall be complied with, except where herein conditions may vary.

3. Covenant. Prior to the issuance of any permits relative to this matter, an agreement concerning all the information contained in these conditions shall be recorded in the County Recorder's Office. The agreement shall run with the land and shall be binding on any subsequent property owners, heirs or assigns. The agreement shall be submitted to the Department of City Planning for approval before being recorded. After recordation, a copy bearing the Recorder's number and date shall be provided to the Department of City Planning for attachment to the file.

4. Definition. Any agencies, public officials or legislation referenced in these conditions shall mean those agencies, public offices, legislation or their successors, designees or amendment to any legislation.

5. Enforcement. Compliance with these conditions and the intent of these conditions shall be to the satisfaction of the Department of City Planning and any designated agency, or the agency's successor and in accordance with any stated laws or regulations, or any amendments thereto.

6. Building Plans. Page 1 of the grant and all the conditions of approval shall be printed on the building plans submitted to the Department of City Planning and the Department of Building and Safety.

7. Corrective Conditions. The authorized use shall be conducted at all times with due regard for the character of the surrounding district, and the right is reserved to the City Planning Commission, or the Director pursuant to Section 12.27.1 of the Municipal Code, to impose additional corrective conditions, if, in the Commission's or Director's opinion, such conditions are proven necessary for the protection of persons in the neighborhood or occupants of adjacent proper.

8. Indemnification. The applicant shall defend, indemnify and hold harmless the City, its agents, officers, or employees from any claim, action, or proceeding against the City or its agents, officers, or employees to attack, set aside, void or annul this approval which action is brought within the applicable limitation period. The City shall promptly notify the applicant of any claim, action, or proceeding and the City shall cooperate fully in the defense. If the City fails to promptly notify the applicant of any claim, action, or proceeding, or if the City fails to cooperate fully in the defense, the applicant shall not thereafter be responsible to defend, indemnify, or hold harmless the city.

REGULATORY COMPLIANCE MEASURES

In addition to the Mitigation Measures, "D" limitations and "[Q]" Conditions that are identified above, and any proposed Project Design Features, the Applicant shall also adhere to any applicable Regulatory Compliance Measures required by law. Listed below is a list of Regulatory Compliance Measures that are applicable to the Project and have been relied on to support the conclusions in the attached IS/MND.

Cultural Resources

- **(Archaeological):** If archaeological resources are discovered during excavation, grading, or construction activities, work shall cease in the area of the find until a qualified archaeologist has evaluated the find in accordance with federal, State, and local guidelines, including those set forth in California Public Resources Code Section 21083.2. Personnel of the proposed Modified Project shall not collect or move any archaeological materials and associated materials. Construction activity may continue unimpeded on other portions of the Project site. The found deposits would be treated in accordance with federal, State, and local guidelines, including those set forth in California Public Resources Code Section 21083.2.

- **(Paleontological):** If paleontological resources are discovered during excavation, grading, or construction, the City of Los Angeles Department of Building and Safety shall be notified immediately, and all work shall cease in the area of the find until a qualified paleontologist evaluates the find. Construction activity may continue unimpeded on other portions of the Project site. The paleontologist shall determine the location, the time frame, and the extent to which any monitoring of earthmoving activities shall be required. The found deposits would be treated in accordance with federal, State, and local guidelines, including those set forth in California Public Resources Code Section 21083.2.

- **(Human Remains):** If human remains are encountered unexpectedly during construction demolition and/or grading activities, State Health and Safety Code Section 7050.5 requires that no further disturbance shall occur until the County Coroner has made the necessary findings as to origin and disposition pursuant to California Public Resources Code (PRC) Section 5097.98. In the event that human remains are discovered during excavation activities, the following procedure shall be observed:

    - Stop immediately and contact the County Coroner:
      1104 N. Mission Road
      Los Angeles, CA 90033
      323-343-0512 (8 a.m. to 5 p.m. Monday through Friday) or
      323-343-0714 (After Hours, Saturday, Sunday, and Holidays)
    - If the remains are determined to be of Native American descent, the Coroner has 24 hours to notify the Native American Heritage Commission (NAHC).
    - The NAHC will immediately notify the person it believes to be the most likely descendent of the deceased Native American.

- The most likely descendent has 48 hours to make recommendations to the owner, or representative, for the treatment or disposition, with proper dignity, of the human remains and grave goods.
- If the owner does not accept the descendant's recommendations, the owner or the descendent may request mediation by the NAHC.

Geology and Soils

- **(Seismic and Geotechnical Safety):** The project shall comply with the conditions contained within the Department of Building and Safety's Geology and Soils Report Approval Letter (dated January 26, 2016) and Project's Geotechnical Investigation prepared by Geocon West, Inc. (dated July 23, 2015), and as it may be subsequently amended or modified.

- **(Erosion/Grading/Short-Term Construction Impacts):** Chapter IX, Division 70 of the Los Angeles Municipal Code addresses grading, excavations, and fills. All grading activities require grading permits from the Department of Building and Safety. Additional provisions are required for grading activities within Hillside areas. The application of BMPs includes but is not limited to the following mitigation measures:

  - Excavation and grading activities should be scheduled during dry weather periods. If grading occurs during the rainy season (October 15 through April 1), diversion dikes shall be constructed to channel runoff around the site. Channels shall be lined with grass or roughened pavement to reduce runoff velocity.

  - Stockpiles, excavated, and exposed soil shall be covered with secured tarps, plastic sheeting, erosion control fabrics, or treated with a bio-degradable soil stabilizer.

Greenhouse Gas Emissions

- The Proposed Project shall comply with the low- and non-VOC requirements established by the AQMD for architectural coatings (AQMD Rule 1113).

- To encourage carpooling and the use of electric vehicles by Project residents and visitors, pursuant to LAMC Section 99.04.106.4.1, at least five (5)% of the total code-required parking spaces provided for all types of parking facilities, but in no case less than one location, shall be capable of supporting future electric vehicle supply equipment (EVSE). Plans shall indicate the proposed type and location(s) of EVSE and also include raceway method(s), wiring schematics and electrical calculations to verify that the electrical system has sufficient capacity to simultaneously charge all electric vehicles at all designated EV charging locations at their full rated amperage. Plan design shall be based upon Level 2 or greater EVSE at its maximum operating ampacity. Only raceways and related components are required to be installed at the time of construction. When the application of the 5% results in a fractional space, round up to the next whole number. A label stating "EVCAPABLE" shall be posted in a conspicuous place at the service panel or subpanel and next to the raceway termination point.

Hydrology and Water Quality

- **(Dewatering):** If required, any dewatering activities during construction shall comply with the requirements of the Waste Discharge Requirements for Discharges of Groundwater from Construction and Project Dewatering to Surface Waters in Coastal Watersheds of Los Angeles and Ventura Counties (Order No. R4-2008-0032, National Pollutant Discharge Elimination System No. CAG994004) or subsequent permit. This will include submission of a Notice of Intent for coverage under the permit to the Los Angeles Regional Water Quality Control Board at least 45 days prior to the start of dewatering and compliance with all applicable provisions in the permit, including water sampling, analysis, and reporting of dewatering-related discharges.

Public Services

- **(Payment of School Development Fee):** Prior to issuance of a building permit, the General Manager of the City of Los Angeles, Department of Building and Safety, or designee, shall ensure that the Applicant has paid all applicable school facility development fees in accordance with California Government Code Section 65995.

- **(Increased Demand For Parks Or Recreational Facilities):** Pursuant to Ordinance 184,505, the applicant shall pay the park mitigation fees for construction of apartment buildings.

Public Utilities

- **(Green Building Code):** The Project shall implement all applicable mandatory measures within the LA Green Building Code that would have the effect of reducing the Project's water use.

- **(Landscape):** The Project shall comply with Ordinance No. 170,978 (Water Management Ordinance), which imposes numerous water conservation measures in landscape, installation, and maintenance (e.g., use drip irrigation and soak hoses in lieu of sprinklers to lower the amount of water lost to evaporation and overspray, set automatic sprinkler systems to irrigate during the early morning or evening hours to minimize water loss due to evaporation, and water less in the cooler months and during the rainy season).

- **(Construction Waste Recycling):** In accordance with LAMC Section 99.04.408, the Proposed Project would reduce construction waste by at least 50 percent. In compliance with the LAMC Section 66.32, the General Contractor shall utilize solid waste haulers, contractors, and recyclers who have obtained an Assembly Bill (AB) 939 Compliance Permit from the City of Los Angeles Bureau of Sanitation.

END

I. INTRODUCTION

PROJECT INFORMATION

Project Title: Avenue 34 Project

Project Location: 3401-3437 N. Pasadena Avenue and 123-167 W. Avenue 34
Los Angeles, CA 90031

Project Applicant: ED1125, LLC
141 W. Avenue 34
Los Angeles, CA 90031

Lead Agency: City of Los Angeles
Department of City Planning
200 N. Spring Street, Room 621
Los Angeles, CA 90012

PROJECT SUMMARY

The Project involves the demolition of an 86,712 square-foot warehouse building, a 4,033 square-foot metal building, and portions of a 24,018 square-foot building and 3,521 square-foot building (constructed circa 1977, 1948, 1967 and 1929, respectively), and the construction of a mixed-use development with 372 residential dwelling units and 40,000 square feet of commercial floor area (comprised of 30,000 square feet of creative office and 10,000 square feet of retail space). The Project would renovate a portion of the existing floor area for creative office space. The Project would also reserve 11% of its base density (approximately 31 dwelling units) as very low income housing and include a ministerial density bonus. The development would include five buildings spanning the property, with approximately 524,600 square feet of floor area and an FAR of 2.6:1, below the maximum FAR of 3:1. The proposed buildings would range in height from one to five stories, with a maximum building height of approximately 67 feet above grade (75 feet as measured by LAMC). The Project would provide a total of 467 on-site parking spaces within one level of subterranean parking and at grade, and a total of 428 on-site bicycle parking stalls. All 39 on-site trees will be removed (all non-protected species); a total of 241 trees are proposed, including roof areas and street trees. No fireplaces or wood stoves are proposed.

The Applicant is requesting the following discretionary approvals: (1) Zoning Administrator's Adjustment to allow a 0-foot southerly side yard in lieu of 8 feet to preserve an existing building with a non-conforming yard; (2) Site Plan Review to permit the construction, use, and maintenance of the Project with more than 50 dwelling units; and (3) Clarification of Q Conditions to clarify Condition A.1.c of Subarea 4 in Ordinance 179,280. The Applicant will also request approvals and permits from the

Department of Building and Safety (and other regulatory agencies) for project construction activities which may include, but are not limited to, the following: excavation, shoring, grading, foundation, haul route (for the export of approximately 98,000 cubic yards (cy) of soil), removal and replacement of street trees, and building and tenant improvements for the Project Site.

ORGANIZATION OF THE INITIAL STUDY

This expanded IS/MND is organized into six sections as follows:

Initial Study Checklist: This Section contains the completed IS Checklist showing the significance level under each environmental impact category.

Introduction: This Section provides introductory information such as the Proposed Project title, the Project Applicant, and the lead agency for the Proposed Project.

Project Description: This Section provides a detailed description of the Proposed Project including the environmental setting, project characteristics, related project information, and environmental clearance requirements.

Environmental Impact Analysis: This Section contains an assessment and discussion of impacts for each environmental issue identified in the Initial Study Checklist. Where the evaluation identifies potentially significant effects, mitigation measures are provided to reduce such impacts to less-than-significant levels.

Preparers of the Initial Study and Persons Consulted: This Section provides a list of consultant team members and governmental agencies that participated in the preparation of the IS.

References, Acronyms and Abbreviations: This Section includes various documents and information used and referenced during the preparation of the IS, along with a list of commonly used acronyms.

Technical Appendices: Technical appendices that have been referenced and summarized in the IS/MND are provided in a separate bound volume. The technical appendices include technical reports and calculation worksheets for the following issue areas: air quality, trees, geology/soils, greenhouse gas emissions, environmental hazards, drainage, noise, traffic, and utility will serve letters. A complete list of technical appendices is identified in the table of contents to the IS/MND.

II. PROJECT DESCRIPTION
A. PROJECT LOCATION

PROJECT LOCATION

The Project Site is located in the Northeast Los Angeles Community Plan area within the City of Los Angeles, approximately 2.5 miles north of Downtown Los Angeles. The location of the Project Site within the City of Los Angeles and the greater Los Angeles region is depicted in Figure II-1, Project Location Map. The Project Site includes approximately 219,320 square feet of lot area (5.03 acres). The Project Site's property addresses, Assessor's Parcel Numbers (APN), land use and lot area are summarized in Table II-1, Summary of the Project Site, below.

Table II-1
Summary of the Project Site

Address	APN	Existing Land Use	Approximate Lot Area (square feet)
3401 N. Pasadena Avenue 3407 N. Pasadena Avenue 3411 N. Pasadena Avenue 3413 N. Pasadena Avenue 3415 N. Pasadena Avenue 3417 N. Pasadena Avenue 3419 N. Pasadena Avenue	5205004003	One 24,018 square foot light manufacturing facility building and paved surface parking	28,793
153 W. Avenue 34	5205004005	One 3,521 square foot light manufacturing building and paved surface loading/parking area	4,800
3425 N. Pasadena Avenue 3431 N. Pasadena Avenue 3433 N. Pasadena Avenue 3437 N. Pasadena Avenue	5205004007	One 4,033 square foot light manufacturing facility building and paved surface parking	28,145
123 W. Avenue 34 131 W. Avenue 34 135 W. Avenue 34 141 W. Avenue 34 143 W. Avenue 34 145 W. Avenue 34 147 W. Avenue 34 149 W. Avenue 34 151 W. Avenue 34 161 W. Avenue 34	5205004011	One 86,712 square foot warehouse facility and paved surfacing loading/parking area	149,503
155 W. Avenue 34	5205004011	Paved surface loading/parking area	4,800
165 W. Avenue 34	5205004011	Paved surface loading/parking area	2,981
167 W. Avenue 34	5205004011	Paved surface loading/parking area	275
		TOTAL SITE AREA:	**219,320**[a]

[a] *The approximate lot area identified for each individual lot is based on the City's ZIMAS database. The total lot area is based on the Alta Survey, which was prepared for purposes of determining the total lot area of the Project Site.*

PARKER ENVIRONMENTAL CONSULTANTS

Figure II-1
Project Location Map

REGIONAL AND LOCAL ACCESS

Primary regional access to the Project Site is provided by the Arroyo Seco Parkway (SR-110) to the north and west and the Golden State Freeway (I-5) to the west. The Arroyo Seco Parkway and Golden State Freeway interchange is located to the west of the Project Site.

Local street access is provided by Pasadena Avenue and Avenue 34. Pasadena Avenue, which borders the Project Site to the east, is a two-way north and southbound street providing one travel lane in each direction in the vicinity of the Project Site. Pasadena Avenue is designated as an Avenue II roadway. Avenue 34, which borders the Project Site to the south, is a two-way east and westbound street providing one travel lane in each direction in the vicinity of the Project Site. Avenue 34 is designated as a modified local street.

The Los Angeles County Metropolitan Transportation Authority (MTA) provides an extensive system of bus lines in the Northeast Los Angeles Community Plan area. The Metro Gold Line Rail Station and a number of MTA bus routes are within reasonable walking distance from the Project Site (less than approximately one-quarter mile), providing access for residents, employees and patrons of the Project Site. Local MTA Rail service includes the Metro Gold Line that provides light rail service from Azusa to East Los Angeles via Downtown Los Angeles. MTA bus lines that provide service in the vicinity of the Project Site include MTA Line 83 (between Downtown Los Angeles and Eagle Rock area) and Line 251/252 (between Montecito Heights and Lynwood area). Given the transfer opportunities through the MTA Gold Line and bus services, the Project Site is easily accessible and highly connected with the City of Los Angeles and the greater Los Angeles area.

HIGH PRIORITY TRANSIT AREA

In 2013, the State of California enacted Senate Bill 743 (SB 743), which provides that "aesthetic and parking impacts of a residential, mixed-use residential, or employment center project on an infill site within a transit priority area shall not be considered significant impacts on the environment." Public Resources Code Section 21099 defines a "transit priority area" as an area within one-half mile of a major transit stop that is "existing or planned, if the planned stop is scheduled to be completed within the planning horizon included in a Transportation Improvement Program adopted pursuant to Section 450.216 or 450.322 of Title 23 of the Code of Federal Regulations." Public Resources Code Section 21064.3 defines "Major Transit Stop" as "a site containing an existing rail transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods." Public Resources Code Section 21061.3 defines an "Infill Site" as a lot located within an urban area that has been previously developed, or on a vacant site where at least 75 percent of the perimeter of the site adjoins, or is separated only by an improved public right-of-way from, parcels that are developed with qualified urban uses.

The Proposed Project is classified as a mixed-use residential project and is located on an infill site within a Transit Priority Area as defined by CEQA. The City of Los Angeles also identifies the Project Site as being within a transit priority area per the Department of City Planning's Zoning Information File ZI No. 2452, Transit Priority Areas (TPAs)/Exemptions to Aesthetics and Parking within TPAs Pursuant to CEQA.[1] As shown in Figure II-1, Project Vicinity Map the Project Site is approximately 600 feet (walking distance) south of the Heritage Square/Arroyo Metro rail transit station, which is a transit hub served by Metro Red Line and provides access to other parts of the City of Los Angeles and the metropolitan area. Public bus and rail transit services within the Project Site are currently provided by Los Angeles County Metropolitan Transit Authority (Metro), and LADOT DASH.

ZONING AND LAND USE DESIGNATIONS

Project Site

The Proposed Project is located within Subarea 4 of the Northeast Los Angeles Community Plan Ordinance Maps and is zoned [T][Q]CM-2D. Pursuant to Ordinance 179280, limitations imposed upon the use of property subject to the permanent "Q" Qualified Classification or "D" Development Limitation are imposed pursuant to Section 12.32K and 12.32G, respectively, of the Los Angeles Municipal Code. The "Q" Qualified Conditions are indicated by the symbol "[Q]" in brackets proceeding the proposed zoning designation (for example, [Q]C2). The "D" Development Limitations are indicated by a "D" following the height district designation (for example, C2-2D). The Proposed Project would be required to comply with the site-specific "D" Development Limitations and [Q] Conditions, which relate to site planning, pedestrian access, building design, architectural details, walls and fences, landscaping, and mechanical, security and trash equipment. The Project Site's [Q] Conditions also impose site-specific Environmental Conditions, which relate to the general aesthetic appearance, upkeep, and character of the Project Site. The Proposed project would be designed and operated in a manner that complies with all applicable [Q] Qualified Zoning and Environmental Conditions as identified in the Regulatory Compliance Measures section of this document.

Northeast Los Angeles Community Plan

The Project Site is located within Lincoln Heights neighborhood within the Northeast Los Angeles Community Plan ("Community Plan") area of the City of Los Angeles. The Community Plan area ("CPA") was greatly influenced by the development of the freeway system, suburbanization, and the decentralization of commercial and industrial land uses that followed WWII. This caused the arrangement of land uses within the CPA to change, and the relationship of the CPA with the rest of the expanding metropolis. The Northeast Los Angeles Community Plan aims to preserve and enhance the character of Northeast Los Angeles by strengthening the viability and identity of its neighborhoods and communities and improving the quality of life of all its residents. Lincoln Heights is located east of the Los Angeles

[1] *City of Los Angeles, Department of City Planning, Zoning Information File, ZI No. 2452, Transit Priority Areas (TPAs) / Exemptions to Aesthetics and Parking within TPAs Pursuant to CEQA, website: http://zimas.lacity.org/documents/zoneinfo/ZI2452.pdf, accessed March 7, 2016.*

River and south of the Arroyo Seco. The Project Site is designated as "Commercial Manufacturing." The Commercial Manufacturing land use designation corresponds to the CM and P zones. The Project is consistent with the existing General Plan Land Use and Zoning Designations.

The Project Site is also located within several identified or mapped planning policy areas that have been adopted for the purposes of incentivizing development and/or providing specific development standards that are appropriate for the Project area. Namely, these plans and policy areas include the following: the Cornfield Arroyo Seco Specific Plan Area, the East Los Angeles State Enterprise Zone, the Adaptive Reuse Incentive Area, and a Transit Oriented Development Site.

Cornfield Arroyo Seco Specific Plan

The Project Site was initially included within the proposed boundaries of the Cornfield Arroyo Seco Specific Plan (CASP) study area and was evaluated within the scope of the CASP EIR.[2] However, the Project Site was specifically omitted from the CASP prior to adoption and instead is uniquely regulated by a specific set of development standards and guidelines established by Ordinance 179,280 independent from the surrounding Specific Plan Area.[3] Therefore, the underlying provisions of the LAMC and the site-specific "[Q]" Conditions under Ordinance 179,280 prevail, and are the basis for all development standards and guidelines for the Project Site.

EXISTING CONDITIONS

Figure II-3, Aerial Photograph and Photograph Location Map, shows an aerial view of the Project Site and identifies the location points for the site photographs and surrounding land use photographs. Site photographs and photographs of surrounding land uses are shown in Figure II-4, Views of the Project Site, and Figure II-5, Views of the Surrounding Land Uses, respectively. The Project Site is currently developed with a an active warehouse facility that is comprised of four light manufacturing and warehouse buildings, paved surface parking, and loading areas, as seen in Figure II-4, below. The buildings include an 86,712 square-foot warehouse building, a 4,033 square-foot metal building, a 24,018 square-foot building, and a 3,521 square-foot building, constructed circa 1977, 1948, 1967 and 1929, respectively. The Los Angeles Historic Resources Inventory and Survey LA determined that none of the four buildings meet the eligibility standards for historic listing. The perimeter of the Project Site is lined with a fence. Six driveways off the north side of Avenue 34 and two driveways off the west side of Pasadena Avenue provide access to the Project Site. Sliding gates secure the driveways and access on-site.

---

2 *Final EIR for the Cornfield Arroyo Specific Plan (ENV-2009-599-EIR, CPC-2009-598-SP, State Clearinghouse No. 2009031002, dated August 2012.*

3 *Although several of the maps and exhibits in the printed version of the CASP still show the Project Site as being within the CASP boundaries, the map exhibits on pages 2-13 and 2-35 of the CASP properly exclude the Project Site.*

A total of 39 non-protected ornamental trees and shrubs exist throughout the Project Site. The trees are mainly located along Avenue 34 and along the large warehouse building and the two smaller buildings on Avenue 34. The trees species consist of Canary Pine, Raywood Ash, Olive, Fan Palm, Chinese Elm, and Silver Dollar Eucalyptus. Three street trees exist along Pasadena Avenue bordering the Project Site.

Utility posts and cables border the Project Site along the west side of Pasadena Avenue. Utility posts and cables line the south side of Avenue 34, not directly bordering the Project Site. Utility cables from the south side of Avenue 34 extend onto the Project Site and connect to utility posts on-site. Additionally there are four street lights along the north side of Avenue 34 and three street lights along the west side of Pasadena Avenue that border the Project Site.

SURROUNDING LAND USES

The properties surrounding the Project Site include commercial, multi-family residential, single-family residential, and vacant lot. Photographs of the land uses immediately surrounding the Project Site are provided in Figure II-5, Photographs of the Surrounding Land Uses. The Project Site is generally bound by a vacant undeveloped lot to the north, Pasadena Avenue to the east, Avenue 34 to the south, and rail right-of-way to the west. Pasadena Avenue is a Modified Avenue II with a designated half right-of-way of 38 feet and a current half right-of-way of 38 feet. Avenue 34 is a Modified Local Street (Standard) with a designated half right-of-way of 30 feet; the current half right-of-way is 25 feet.

North: To the north, the Project Site is bordered by a vacant undeveloped lot. The lot is secure with a fence along the perimeter. See Figure II-5, Views 7. The property to the north of the Project Site has a land use designation of Hybrid Industrial. Properties to the north of the Project Site on the west side of Pasadena Ave south of Arroyo Seco that connects with the Los Angeles River is zoned Urban Center within the Cornfield Arroyo Seco Specific Plan (CASP).

East: Properties to the east of the Project Site along the east side of Pasadena Avenue are zone [Q]RD2-1D, [Q]RD1.5-1D, [Q]PF-1D, and [T][Q]CM-2D and are developed with commercial, educational, and multi-family residential land uses. The properties to the east have a land use designation of Commercial Manufacturing, Public Facilities, and Low Medium II Residential. See Figure II-5, View 8 and View 9.

South: The properties along Avenue 34 to the south of the Project Site are zoned Urban Center within the CASP and are improved with commercial and single-family uses. The properties to the south of the Project Site have a land use designation of Hybrid Industrial and Low Medium Residential. See Figure II-5, View 10 and View 11.

West: A railroad right-of-way serving the light-rail Metro Gold Line borders the Project Site along the west side of the site. The property beyond the railroad right-of-way is zoned Urban Innovation within the CASP and is developed with industrial uses. This property has a land use designation of Hybrid Industrial. See Figure II-5, View 12.

1. PROPOSED DEVELOPMENT

The Proposed Project would is a transit-oriented mixed-use development that would include the construction of a mixed-use, transit-adjacent creative campus that would include 372 residential dwelling units and 40,000 square feet of commercial floor area (comprised of 30,000 square feet of creative office and 10,000 square feet of retail and restaurant space). The Proposed Project would reserve 11 percent of its base density (approximately 31 units) as very low income housing. The Proposed Project would renovate and reuse a portion of existing floor area. The Proposed Project would provide a total of 467 on-site parking spaces within one level of subterranean parking with some at grade surface parking. The development would include five buildings spanning the property, with approximately 524,600 square feet of floor area. The proposed buildings would range in height from one to five stories, with a maximum building height of approximately 67 feet above grade. A summary of the Proposed Project is provided in Table II-2, Proposed Development Program, below.

Table II-2
Proposed Development Program

Land Uses	Proposed Dwelling Units Mix	Proposed Floor Area (Square Feet)
Residential		
Building A		
Studio Units	29	--
1-Bedroom Units	4	--
2-Bedroom Units	34	--
Building B		
Studio Units	62	--
1-Bedroom Units	53	--
2-Bedroom Units	33	--
Building C		
Studio Units	76	--
1-Bedroom Units	53	--
2-Bedroom Units	28	--

Commercial		
Creative Office Space	--	30,000
Retail/Restaurant		10,000
Subtotal Commercial	--	**40,000**
TOTAL	**372**	**524,600**

Source: Killefer Flammang Architects, November 4, 2016.

The Proposed Project has been designed to comply with the site-specific "D" Development Limitations and [Q] Conditions, which relate to site planning, pedestrian access, building design, architectural details, walls and fences, landscaping, and mechanical, security and trash equipment. The plan layout of the Proposed Project is depicted in Figure II-6, Conceptual Site Diagram.

Residential Uses

As shown in Table II-2, the Project proposes a total of 372 residential units in three buildings. The Proposed Project would reserve eleven percent of its base density (approximately 31 dwelling units) as very low income units. As such, the Proposed Project would include a ministerial density bonus pursuant to LAMC Section 12.22 A.25 for a 35 percent increase in permitted density to allow for 372 dwelling units in lieu of the base density of 275 dwelling units. The Proposed Project would include a total of 167 studio lofts, 110 one-bedroom apartments, and 95 two-bedroom apartments. The units would vary in size and configuration; units would range between approximately 500 square feet studio to 1,040 square feet two-bedroom apartment. An existing industrial building (approximately 3,521 square feet) at the southwest corner of the Project Site would be rehabilitated into the leasing office for the residential buildings. Residential amenities would be located throughout the Project Site, and would include a community room, gym, and swimming pool, among other amenities. Refer to Figure II-7, through Figure II-11 for the floor plans.

Commercial Uses

The Project also proposes 40,000 square feet of commercial space, including 30,000 square feet of creative office space and 10,000 square feet of retail and restaurant space. The retail component will be located on the ground floor of Building A, along Pasadena Avenue. The creative office component would be located in two creative office buildings, located on the southeast corner of the Project Site. One creative office building would front Pasadena Avenue and Avenue 34. The second creative office building would be located just north of the aforementioned creative office building and would front Pasadena Avenue; this creative office building would be one story and include entirely rehabilitated floor area (approximately 7,963 square feet).

FLOOR AREA

The Project Site includes approximately 219,320 square feet (5.03 acres) of gross lot area and approximately 203,960 square feet of buildable area. Pursuant to the LAMC, the allowable FAR on-site is 3:1, which would allow a total floor area of approximately 611,880 square feet. The Project proposes a total of 524,600 square feet with a corresponding FAR of 2.6:1.

DENSITY

Pursuant to LAMC Section 12.17.1.A.1, residential land uses are permitted in a CM Zone with compliance with all the regulations of the R3 Zone, with the exception of any required front yard setbacks. As such, residential uses on the Project Site are limited to one dwelling unit per 800 square feet (or approximately 275 dwelling units for the Project Site based on a lot area of 219,320 square feet).

BUILDING HEIGHT

There is a 61'-0" height restriction for the portion of the Project Site within 199'-0" feet of the OS zone. The Project proposes a maximum height of approximately 67 feet (five stories) above grade and 75 feet as measured by the Los Angeles Municipal Code. The Project includes five buildings with varying elevations and step-backs. The Proposed Project's building elevations and building cross sections are depicted in Figures II-12 and II-13, and in Figure II-14, Building Sections, respectively.

ARCHITECTURAL FEATURES

The Proposed Project includes the development of a mixed-use creative campus with multi-family units, creative office space, and retail/restaurant space. The proposed development includes the rehabilitation of a portion of the existing buildings on-site. The Proposed Project consists of a total of five buildings with the maximum height of five stories and approximately 67 feet above grade. The building facades are dynamic to break up the building massing and scale. The proposed buildings are developed around the village center with pedestrian paths radiating outward to site amenities on the periphery and to public sidewalk and streets. The Proposed Project would provide the majority of parking for the Project within the one level of subterranean parking. Additional spaces would be provided at grade for access to the leasing office off of the north side of Avenue 34 and commercial and creative office uses on the east side of the property. Building elevations and sections depicting the scale and massing of the proposed structure are shown in Figures II-12 through II-14. Illustrations depicting the scale and massing of the proposed structure is depicted in Figure II-15, Illustrative Renderings.

OPEN SPACE AND LANDSCAPING

The residential open space requirements and amount of open space proposed for the Project are summarized in Table II-3, below. Pursuant to the LAMC 12.21.G, the Project would be required to provide 39,575 square feet of open space on site. The Project proposes 39,575 square feet of open space pursuant to the LAMC. The Proposed Project may include a variety of on-site amenities including, but not limited to, common open space, community gardens, a roof deck, pool deck, barbecue pits, and a gymnasium. Refer to Figure II-16, Residential Open Space Plan, for the location of the proposed residential open space areas.

Table II-3
Summary of Required and Proposed Residential Open Space Areas

Open Space Requirements	Dwelling Units	Open Space (square feet)
LAMC 12.21.G		
Less than 3 Habitable Rooms (100 sf/du) [a]	277	27,700
3 Habitable Rooms (125 sf/du) [b]	95	11,875
Total Common Open Space Required		**39,575**
Proposed Open Space	**Open Space (square feet)**	
Building A Common Open Space Courtyard	7,550	
Building B Common Open Space	15,625	
Building C Common Open Space	14,227	
Building C Common Open Space (Gym)	2,173	
Total Residential Open Space Provided	***39,575***	

Notes: du = dwelling unit; sq = square feet; PAOS = publically accessible open space.
[a] *Includes studio and one-bedroom apartments.*
[b] *Includes two-bedroom apartments.*
Source: Killefer Flammang Architects, November 4, 2016.

Pursuant to Ordinance No. 179,280, which establishes the [Q] on-site, the Project would be required to provide 30% of the Subarea as publically accessible open space (PAOS), which results in a requirement of 64,744 square feet. The Proposed Project would include a total of 64,744 square feet of publically accessible open space pursuant to Ordinance 179,280. Refer to Figure II-17, Publicly Accessible Open Space Plan, for the location of publicly accessible areas on the Project Site.

Existing street trees adjacent to the property along Pasadena Avenue would remain in place or be replaced in consultation with the City of Los Angeles Division of Urban Forestry and approved by the Department of Public Works. Refer to Figure II-18, Conceptual Landscape Plan, for the proposed landscaping and open space amenities throughout the Project Site.

PARKING AND ACCESS

Parking for the proposed creative office, retail and residential uses on-site will be provided in the one level of subterranean parking beneath the Project Site and at-grade. Vehicular access to the Project Site will be provided via two ingress/egress driveways on the north side of Avenue 34. Access to residential parking and commercial parking would be provided from the western driveway and eastern driveway, respectively. The Proposed Project meets all of the requisite criteria of a Transit Oriented Infill Project pursuant to SB 743. Under Public Resources Code Section 21099, aesthetic and parking impacts of a residential, mixed-use residential, or employment center project on an infill site within a transit priority area shall not be considered significant impacts on the environment.

As summarized in Table II-4, and discussed in further detail below, the Proposed Project would be consistent with the applicable parking requirements of the LAMC and the Bicycle Ordinance (No. 182,386). As proposed, the Proposed Project would require a total of 313 parking spaces, which includes: 233 residential spaces and 80 commercial spaces. Residential parking is determined based on California State Assembly Bill (AB) 744. AB 744 allows a ratio of 0.5 parking space per bedroom for a development that includes the maximum percentage of low- or very low income units and is located within ½ mile of a major transit stop and there is unobstructed access to the transit stop from the development. The Project would provide a total of 467 parking spaces, which includes: 384 residential spaces, 80 commercial spaces, and 3 residential guest parking spaces.

Table II-4
Summary of Required and Proposed Vehicle Parking Spaces

Description	Quantity	Parking per LAMC [a, b]		Parking Provided
		Rate	Spaces	
Residential				
Studios	167	0.5/du	83.5	--
1-Bedroom	110	0.5/du	55	
2-Bedroom	95	1.0/du	95	--
		Subtotal Residential	*233*	--
		Residential Parking	***233***	***384***
		Residential Guest Parking	*--*	***3***
Commercial				
Creative Office	30,000 sf	1 / 500 sf	60	--
Retail	10,000 sf	1 / 500 sf	20	--
		Subtotal Retail	*80*	--
		Commercial Parking	***80***	***80***
		TOTAL PARKING SPACES	**313**	**467**

[c] *Bicycle Parking Ordinance 182,386.*
Source: Killefer Flammang Architects, November 4, 2016.

The Proposed Project provides on-site bicycle parking in bicycle storage spaces as required by the City's Bicycle Ordinance. According to LAMC Section 12.21 A.16 (a)(2), the Proposed Project is required to provide on-site bicycle parking spaces. For residential uses, a project is required to provide 1 short-term bicycle parking space per every 10 dwelling units and 1 long-term bicycle parking space per every one dwelling unit. For creative office space, a project is required to provide 1 short-term bicycle parking for each 10,000 square feet and 1 long-term bicycle parking for each 5,000 square feet. For retail space, a project is required to provide 1 short-term bicycle parking space for each 2,000 square feet and 1 long-term parking space for each 2,000 square feet. As summarized in Table II-5, below, the Proposed Project would be consistent with the applicable bicycle parking requirements of the LAMC. The Project would be required to provide 428 bicycle parking spaces, which includes 45 short term spaces and 383 long term spaces. The Proposed Project would provide 428 bicycle parking spaces, which includes 409 residential bicycle spaces and 19 commercial bicycle spaces.

Table II-5
Summary of Required and Proposed Bicycle Parking Spaces

Description	Quantity	Parking Required [a]		Total Spaces Required	Total Spaces Provided
		Short Term	Long Term		
Residential					
		(1 per 10 DUs)	*(1 per DU)*		
Residential Units	372 du	37	372	409	409
Commercial					
		(1 per 10,000 sf)	*(1 per 5,000 sf)*		
Creative Office	30,000 sf	3	6	9	9
		(1 per 2,000 sf)	*(1 per 2,000 sf)*		
Retail	10,000 sf	5	5	10	10
	TOTAL	**45**	**383**	**428**	**428**

Source: Killefer Flammang Architects, November 4, 2016.

CONSTRUCTION

Construction Schedule/Phasing

For purposes of analyzing impacts associated with air quality, this analysis assumes a Project construction schedule of approximately 34 months, with final buildout occurring in 2020. Construction activities associated with the Project would be undertaken in four main steps: (1) demolition/site clearing, (2) excavation, grading and foundations, (3) building construction, and (4) architectural coating and finishing.

Unless stated otherwise, all construction activities would be performed in accordance with all applicable state and federal laws and City Codes and policies with respect to building construction and activities. "[Q]" Condition 10 specifies that construction and demolition shall be further restricted to the hours of 7:00 a.m. to 6:00 p.m. Monday through Friday, and 8:00 a.m. to 6:00 p.m. on Saturday. This condition is more restrictive than the permissible hours of construction pursuant to LAMC 41.40, which allow

construction activities until 9:00 p.m. Monday through Friday. No construction activities are permitted on Sundays. The Proposed Project would comply with these restrictions.

Demolition/Site Clearing Phase

This phase would include the demolition of the large warehouse building on-site, the one-story metal building located on the southeast corner of the Project Site, and portions of the 24,018 square foot building and a portion of the 3,521 square foot building, and the removal of supporting structures and materials, paved surfaces, and landscaping. In addition, this phase may include the removal of street trees, walls, fences, and associated debris. The demolition/site clearing would be completed in approximately two months.

Excavation, Grading and Foundation Phase

After the completion of demolition/site clearing, the excavation phase for the Proposed Project would occur for approximately three months and would involve the cut and fill of land to ensure the proper base and slope for the building foundations. The Proposed Project would require approximately 98,000 cy of soil to be hauled off-site in order to build the subterranean parking garage. Haul trips would occur outside of the peak hours and during the permissible hauling hours identified in the haul route to be approved by the Department of Building and Safety.

Building Construction Phase

The building construction phase consists of below grade and above grade structures and is expected to occur for approximately 24 months. Upon completion of the structures, architectural coating, finishing, and paving would occur.

Architectural Coating and Finishing

It is estimated that architectural coatings would occur over the final four months of the building construction phase, and paving would occur during the final month of construction.

Roadway Closures

Construction activities may necessitate temporary lane closures on streets adjacent to the Project Site on an intermittent basis for utility relocations/hook-ups, delivery of materials, and other construction activities as may be required. However, site deliveries and the staging of all equipment and materials would be organized in the most efficient manner possible on-site to mitigate any temporary impacts to the neighborhood and surrounding traffic. Construction equipment would be staged on-site for the duration of construction activities. Traffic lane and right-of-way closures, if required, will be properly permitted by City agencies and will conform to City standards.

Haul Route

All construction and demolition debris would be recycled to the maximum extent feasible. All construction and demolition debris would be hauled to the Waste Management Downtown Diversion facility, which sorts construction and demolition waste for recycling and diversion. It is located approximately 5 miles south of the Project Site (approx. 10 miles round trip). Demolition debris and soil materials from the Site that cannot be recycled or diverted would be hauled to the Sunshine Canyon or Chiquita Canyon landfills, which accept construction and demolition debris and inert waste from areas within the City of Los Angeles. The Sunshine Canyon Landfill is approximately 26 miles northwest of the Project Site (approx. 52 miles round trip). The Chiquita Canyon Landfill is approximately 43 miles to the northwest of the Project Site (approx. 86 miles round trip).

For purposes of analyzing the construction-related impacts, it is anticipated that the excavation and soil export would involve 18-wheel bottom-dump trucks with a 20 cubic yard hauling capacity (i.e., 30 tons maximum gross weight). All truck staging would either occur on-site or at designated off-site locations and radioed into the site to be filled. Pursuant to Ordinance No. 107,022, vehicles over 6,000 pounds are prohibited from using the Pasadena 110 Freeway between the 101 Freeway and Glenarm Street in Pasadena. Therefore, the local haul route from the Project Site to the 5 Freeway would be restricted to Pasadena Avenue southbound to W. Avenue 33, W. Avenue 33 from Pasadena Avenue to Lacy Street, Lacy Street from W. Avenue 33 to Avenue 26, and northbound on Avenue 26 to access the south bound I-5 Freeway on-ramp or to N. Figueroa Street to connect to the northbound I-5 on-ramp. Northbound returning trucks from the I-5 Freeway to the Project Site would exit the I-5 Freeway at the Lacy Street exit and would utilize Avenue 33 and Pasadena Avenue to access the Project Site. Southbound returning trucks from the I-5 Freeway would exit the I-5 Freeway at the 137A off-ramp and would take W. Avenue 26 eastbound to the I-5 northbound on-ramp exiting on Lacy Street and continuing on to W. Avenue 33 and Pasadena Avenue. The haul route may be modified in compliance with City policies, provided DOT and/or Street Services approves any such modification.

RELATED PROJECTS

In accordance with CEQA Guidelines Section 15064(h), this IS/MND includes an evaluation of the Project's cumulative impacts. The guidance provided under CEQA Guidelines Section 15064 (h) is as follows:

> *"(1) When assessing whether a cumulative effect requires an EIR, the lead agency shall consider whether the cumulative impact is significant and whether the effects of the project are cumulatively considerable. An EIR must be prepared if the cumulative impact may be significant and the project's incremental effect, though individually limited, is cumulatively considerable. "Cumulatively considerable" means that the incremental effects of an individual project are significant when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.*

(2) A lead agency may determine in an initial study that a project's contribution to a significant cumulative impact will be rendered less than cumulatively considerable and thus is not significant. When a project might contribute to a significant cumulative impact, but the contribution will be rendered less than cumulatively considerable through mitigation measures set forth in a mitigated negative declaration, the initial study shall briefly indicate and explain how the contribution has been rendered less than cumulatively considerable.

(3) A lead agency may determine that a project's incremental contribution to a cumulative effect is not cumulatively considerable if the project will comply with the requirements in a previously approved plan or mitigation program (including, but not limited to, water quality control plan, air quality attainment or maintenance plan, integrated waste management plan, habitat conservation plan, natural community conservation plan, plans or regulations for the reduction of greenhouse gas emissions) that provides specific requirements that will avoid or substantially lessen the cumulative problem within the geographic area in which the project is located. Such plans or programs must be specified in law or adopted by the public agency with jurisdiction over the affected resources through a public review process to implement, interpret, or make specific the law enforced or administered by the public agency. When relying on a plan, regulation or program, the lead agency should explain how implementing the particular requirements in the plan, regulation or program ensure that the project's incremental contribution to the cumulative effect is not cumulatively considerable. If there is substantial evidence that the possible effects of a particular project are still cumulatively considerable notwithstanding that the project complies with the specified plan or mitigation program addressing the cumulative problem, an EIR must be prepared for the project.

(4) The mere existence of significant cumulative impacts caused by other projects alone shall not constitute substantial evidence that the proposed project's incremental effects are cumulatively considerable."

In light of the guidance summarized above, an adequate discussion of a project's significant cumulative impact, in combination with other closely related projects, can be based on either: (1) a list of past, present, and probable future producing related impacts; or (2) a summary of projections contained in an adopted local, regional, statewide plan, or related planning document that describes conditions contributing to the cumulative effect. (CEQA Guidelines Section 15130(b)(1)(A)-(B)). The lead agency may also blend the "list" and "plan" approaches to analyze the severity of impacts and their likelihood of occurrence. Accordingly, all proposed, recently approved, under construction, or reasonably foreseeable projects that could produce a related or cumulative impact on the local environment, when considered in conjunction with the Project, were identified for evaluation.

The related projects identified are included in Table II-6, Related Projects List, below. A total of three related projects were identified within the affected Project area. For purposes of identifying the affected project area, the DOT generally considers a 2 mile radius around the Project Site for purposes of evaluating cumulative traffic impacts. An analysis of the cumulative impacts associated with these related

projects and the Project are provided under each individual environmental impact category in Section III of this IS/MND. The locations of the related projects are shown in Figure II-19, Related Projects Location Map.

Table II-6
Related Projects List

Project Number	Location/Address	Project Description	Number	Units
1	1555 N. San Fernando Road	Apartment	64	du
		Condominium	290	du
		Retail	25,000	sf

II. PROJECT DESCRIPTION
C. ENTITLEMENT REQUESTS

ED1125, LLC ("Owner" and "Applicant") is requesting approval of the following discretionary actions:

(1) **Zoning Administrator's Adjustment** pursuant to LAMC Section 12.28.A to permit the maintenance of a minimum 0-foot side yard in lieu of 8-feet, as required by LAMC 12.17.1.C, to preserve existing buildings on-site with non-conforming yards.

(2) **Site Plan Review** pursuant to LAMC Section 16.05 to permit the construction, use and maintenance of 372 residential units, 30,000 square feet of commercial office space, 10,000 square feet of retail space, and 467 on-site parking spaces.

(3) **Clarification of Q Conditions** pursuant to LAMC Section 12.32 H to clarify Condition A.1.c of Subarea 4 in Ordinance 179,280.

The Applicant will also request approvals and permits from the Department of Building and Safety (and other regulatory agencies) for project construction activities which may include, but are not limited to, the following: excavation, shoring, grading, foundation, haul route (for the export of approximately 98,000 cubic yards of soil), removal of street trees, and building and tenant improvements for the Project Site.

In addition to the discretionary actions that will be requested from the lead agency as identified above, certain responsible agencies with jurisdiction over certain aspects of the Project may be required to provide additional permits or have permitting authority over the Project. Such permits and/or approvals may include but are not limited to the following:

- Air Quality Management District (AQMD) (permitting authority over localized and regional air quality impacts and enforcement of any applicable air quality mitigation measures).
- Regional Water Quality Control Board (permitting authority over surface water runoff and water quality impacts with enforcement of any applicable mitigation measures).

III. ENVIRONMENTAL IMPACT ANALYSIS

INTRODUCTION

This section of the Initial Study contains an assessment and discussion of impacts associated with the environmental issues and subject areas identified in the Initial Study Checklist (Appendix G to the State CEQA Guidelines, C.C.R. Title 14, Chapter 3, 15000-15387). The analytical methodology and thresholds of significance are based on the *L.A. CEQA Thresholds Guide (2006)* unless otherwise noted.

ENVIRONMENTAL IMPACT ANALYSIS

I. AESTHETICS

Senate Bill 743 - Environmental Quality: Transit Oriented Infill Projects

In 2013, the State of California enacted Senate Bill 743 (SB 743),[1] which provides that "aesthetic and parking impacts of a residential, mixed-use residential, or employment center project on an infill site within a transit priority area shall not be considered significant impacts on the environment." Public Resources Code Section 21099 defines a "transit priority area" as an area within one-half mile of a major transit stop that is "existing or planned, if the planned stop is scheduled to be completed within the planning horizon included in a Transportation Improvement Program adopted pursuant to Section 450.216 or 450.322 of Title 23 of the Code of Federal Regulations." Public Resources Code Section 21064.3 defines "Major Transit Stop" as "a site containing an existing rail transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods." Public Resources Code Section 21061.3 defines an "Infill Site" as a lot located within an urban area that has been previously developed, or on a vacant site where at least 75 percent of the perimeter of the site adjoins, or is separated only by an improved public right-of-way from, parcels that are developed with qualified urban uses. This state law supersedes the aesthetic impact thresholds of significance that were previously adopted in the *L.A. CEQA Thresholds Guide* (2006).

The Proposed Project is classified as a mixed-use residential project and is located on an infill site within a Transit Priority Area as defined by CEQA. The City of Los Angeles also identifies the Project Site as being within a transit priority area per the Department of City Planning's Zoning Information File ZI No. 2452, Transit Priority Areas (TPAs)/Exemptions to Aesthetics and Parking within TPAs pursuant to CEQA.[2] The Project Site is located approximately ¼ mile from the Heritage Square Arroyo Transit Station, an existing rail transit station that serves the Metro Light-Rail Gold Line running between Downtown Los Angeles and Azusa. Accordingly, the Project's aesthetic impacts shall not be considered

---

[1] *SB 743 is codified as Public Resources Code Section 21099.*

[2] *City of Los Angeles, Department of City Planning, Zoning Information File, ZI No. 2452, Transit Priority Areas (TPAs) / Exemptions to Aesthetics and Parking within TPAs Pursuant to CEQA, website: http://zimas.lacity.org/documents/zoneinfo/ZI2452.pdf, accessed March 7, 2016.*

significant impacts on the environment pursuant to Public Resources Code Section 21099. While Section 21009 prohibits aesthetic impacts from being considered significant environmental impacts pursuant to CEQA, it does not affect the ability of the City of Los Angeles to implement design review through its ordinances or other discretionary powers.

a) Would the project have a substantial adverse effect on a scenic vista?

Less Than Significant Impact. As noted above, the Proposed Project is classified as a mixed-use residential project and is located on an infill site within a Transit Priority Area as defined by CEQA. The City of Los Angeles also identifies the Project Site as being within a transit priority area per the Department of City Planning's Zoning Information File ZI No. 2452, Transit Priority Areas (TPAs)/Exemptions to Aesthetics and Parking within TPAs pursuant to CEQA. The Project Site is located approximately ¼ mile from the Heritage Square Arroyo Transit Station, an existing rail transit station that serves the Metro Light-Rail Gold Line running between Downtown Los Angeles and Azusa. Accordingly, the Project's aesthetic impacts shall not be considered significant impacts on the environment pursuant to Public Resources Code Section 21099.

b) Would the project substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a city-designated scenic highway?

Less Than Significant Impact. As noted above, the Proposed Project is classified as a mixed-use residential project and is located on an infill site within a Transit Priority Area as defined by CEQA. The City of Los Angeles also identifies the Project Site as being within a transit priority area per the Department of City Planning's Zoning Information File ZI No. 2452, Transit Priority Areas (TPAs)/Exemptions to Aesthetics and Parking within TPAs pursuant to CEQA. The Project Site is located approximately ¼ mile from the Heritage Square Arroyo Transit Station, an existing rail transit station that serves the Metro Light-Rail Gold Line running between Downtown Los Angeles and Azusa. Accordingly, the Project's aesthetic impacts shall not be considered significant impacts on the environment pursuant to Public Resources Code Section 21099.

c) Would the project substantially degrade the existing visual character or quality of the site and its surroundings?

Less Than Significant Impact. As noted above, the Proposed Project is classified as a mixed-use residential project and is located on an infill site within a Transit Priority Area as defined by CEQA. The City of Los Angeles also identifies the Project Site as being within a transit priority area per the Department of City Planning's Zoning Information File ZI No. 2452, Transit Priority Areas (TPAs)/Exemptions to Aesthetics and Parking within TPAs pursuant to CEQA. The Project Site is located approximately ¼ mile from the Heritage Square Arroyo Transit Station, an existing rail transit station that serves the Metro Light-Rail Gold Line running between Downtown Los Angeles and Azusa. Accordingly, the Project's aesthetic impacts shall not be considered significant impacts on the environment pursuant to Public Resources Code Section 21099.

d) Would the project create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?

Less Than Significant Impact. As noted above, the Proposed Project is classified as a mixed-use residential project and is located on an infill site within a Transit Priority Area as defined by CEQA. The City of Los Angeles also identifies the Project Site as being within a transit priority area per the Department of City Planning's Zoning Information File ZI No. 2452, Transit Priority Areas (TPAs)/Exemptions to Aesthetics and Parking within TPAs pursuant to CEQA. The Project Site is located approximately ¼ mile from the Heritage Square Arroyo Transit Station, an existing rail transit station that serves the Metro Light-Rail Gold Line running between Downtown Los Angeles and Azusa. Accordingly, the Project's aesthetic impacts shall not be considered significant impacts on the environment pursuant to Public Resources Code Section 21099.

Cumulative Impacts

Less Than Significant Impact. The application of Public Resources Code Section 21099 provides that the aesthetic impacts of a mixed-use project, such as the Proposed Project, upon an infill site within a transit priority area shall not be considered significant impacts on the environment.

II. AGRICULTURE AND FORESTRY RESOURCES

a) Would the project convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

No Impact. The Project Site is located in a developed area within the City of Los Angeles. No farmland or agricultural activity exists on the Project Site, nor are there any farmland or agricultural activities in the vicinity of the Project Site. According to the "Los Angeles County Important Farmland 2014" map, which was prepared by the California Department of Conservation, Division of Land Resource Protection, the soils at the Project Site are not candidate for listing as Prime Farmland, Unique Farmland, or Farmland of Statewide Importance.[4] Therefore, under current analysis, no impact to agricultural lands would occur.

b) Would the project conflict with existing zoning for agricultural use, or a Williamson Act Contract?

No Impact. The Project Site is located within the jurisdiction of the City of Los Angeles and is, therefore, subject to the applicable land use and zoning requirements in the Los Angeles Municipal Code (LAMC). The Project Site is currently zoned [T][Q]CM-2D with the land use designation of Commercial Manufacturing and is not zoned for agricultural production, and no farmland activities exist on-site. In

---

4 *State of California Department of Conservation, Division of Land Resource Protection, Farmland Mapping and Monitoring Program, Los Angeles County Important Farmland 2014, Map. ftp://ftp.consrv.ca.gov/pub/dlrp/FMMP/pdf/2014/los14.pdf, accessed October 2016.*

addition, no Williamson Act Contracts are in effect for the Project Site.[5] Therefore, no impact would occur.

c) Would the project conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?

No Impact. The Project Site is zoned [T][Q]CM-2D, which has a land use designation of Commercial Manufacturing in the Northeast Los Angeles Community Plan. The Project Site is not zoned as forestland or timberland, and there is no timberland production at the Project Site. Therefore, no impact would occur.

d) Would the project result in the loss of forest land or conversion of forest land to non-forest use?

No Impact. The Project Site is fully developed and currently contains four light manufacturing and warehouse buildings and paved surface loading areas and parking. The Project Site is located in a developed area within the City of Los Angeles. There is no significant vegetation on-site. No forested lands or protected vegetation exist on or in the vicinity of the Project Site. Therefore, no impact would occur.

e) Would the project involve other changes in the existing environment, which due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?

No Impact. Neither the Project Site, nor nearby properties, are currently utilized for agricultural or forestry uses. As discussed above, the Project Site is not classified in any "Farmland" category designated by the State of California. According to the "Los Angeles County Important Farmland 2014" map, which was prepared by the California Department of Conservation, Division of Land Resource Protection, the soils at the Project Site is not candidates for listing as Prime Farmland, Unique Farmland, or Farmland of Statewide Importance.[6] Therefore, no impact would occur.

Cumulative Impacts

No Impact. Development of the Proposed Project in combination with the three related projects would not result in the conversion of State-designated agricultural land from agricultural use to a non-agricultural use, nor result in the loss of any forest land or conversion of forest land to non-forest use. The Los Angeles County Important Farmland 2014 Map maintained by the California Division of Land

Resource Protection indicates that the Project Site and the surrounding area are not included in the Important Farmland category.[7] The Project Site is located in an urbanized area in the Northeast Los Angeles Community Plan area within the City of Los Angeles and does not include any State-designated agricultural lands or forest uses. Therefore, no cumulative impact would occur.

III. AIR QUALITY

a) Would the project conflict with or obstruct implementation of the applicable air quality plan?

Less Than Significant Impact. A significant air quality impact could occur if the Proposed Project is not consistent with the applicable Air Quality Management Plan (AQMP) or would in some way represent a substantial hindrance to employing the policies or obtaining the goals of that plan. The most recent AQMP was adopted by the Governing Board of the South Coast Air Quality Management District (SCAQMD) on December 7, 2012 ("2012 AQMP"). The transportation strategy and transportation control measures (TCMs), included as part of the 2012 AQMP and SIP for the South Coast Air Basin, are based on SCAG's previously adopted 2008 Regional Comprehensive Plan (RCP) and 2011 Federal Transportation Improvement Program (FTIP). For purposes of assessing a project's consistency with the AQMP, projects that are consistent with the growth forecast projections of employment and population forecasts identified in the SCAG's recently adopted 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) are considered consistent with the AQMP, since the growth projections contained in the RTP/SCS form the basis of the land use and transportation control portions of the AQMP.

As discussed in Section XIII(a), Population and Housing, the Proposed Project is consistent with the regional growth projections for the Los Angeles Subregion and is consistent with the smart growth policies of the RTP/SCS to increase housing density within close proximity to High-Quality Transit Areas (HQTA). An HQTA is defined as a generally walkable transit village or corridor within one half-mile of a well-serviced transit stop or a transit corridor with 15-minute or less service frequency during peak commute hours. The Proposed Project would concentrate new development and jobs within a half of a mile (walking distance) from the Heritage Square Arroyo Gold Line Station and is served by several Metro bus lines. Thus the Project's location provides opportunities for employees, guests, visitors, and residents to use public transit to reduce vehicle trips. The Project Site is also located in a Transit Priority Area as defined by CEQA Sections 21099 and 21064.3. Studies by the California Department of Transportation, the U.S. Environmental Protection Agency and the Metropolitan Transportation Commission have found that focusing development in areas served by transit can result in local, regional and statewide benefits including reduced air pollution and energy consumption. The Proposed Project's mixed-use nature and close proximity to neighborhood-serving commercial/retail land uses and regional transit would result in fewer trips and a reduction to the Proposed Project's vehicle miles traveled (VMTs) as compared to the base trip rates for similar stand-alone land uses that are not located in close proximity to transit. Thus, because the Proposed Project would be consistent with the growth projections and

[7] *Ibid.*

regional land use planning policies of the RTP/SCS, the Proposed Project would not conflict with or obstruct implementation of the 2012 AQMP, and impacts would be less than significant.

b) Would the project violate any air quality standard or contribute substantially to an existing or projected air quality violation?

Less Than Significant Impact. Based on the *L.A. CEQA Thresholds Guide*, a project may have a significant impact where project-related emissions would exceed federal, State, or regional standards or thresholds, or where project-related emissions would substantially contribute to an existing or projected air quality violation.

Construction Emissions

For purposes of analyzing impacts associated with air quality, this analysis assumes a construction schedule of approximately 34 months with buildout anticipated in 2020. This assumption is conservative and yields the maximum daily impacts. Construction activities associated with the Proposed Project would be undertaken in three main steps: (1) demolition/site clearing, (2) excavation, grading and foundations, and (3) building construction. The building construction phase includes the construction of the proposed buildings, connection of utilities to the buildings, paving, architectural coatings, and landscaping the Project Site. Construction activities would temporarily create emissions of dusts, fumes, equipment exhaust, and other air contaminants. Construction activities involving foundation preparation would primarily generate $PM_{2.5}$ and PM_{10} emissions. Mobile sources (such as diesel-fueled equipment onsite and traveling to and from the Project Site) would primarily generate NO_x emissions. The application of architectural coatings would primarily result in the release of ROG emissions. The amount of emissions generated on a daily basis would vary, depending on the amount and types of construction activities occurring at the same time. As required by CEQA and Environmental [Q] Condition C.24, the Proposed Project's construction emissions were quantified utilizing the California Emissions Estimator Model (CalEEMod *Version 2016.3.1*) as recommended by the SCAQMD. Table III-1, Estimated Peak Daily Construction Emissions, identifies the maximum daily emissions that are estimated to occur on peak construction days for each phase of Project construction. These calculations assume that appropriate dust control measures would be implemented as part of the Proposed Project during each phase of development, as required and regulated by SCAQMD. AQMD Rule 403 (Fugitive Dust Suppression) is required by law and is further imposed by Environmental [Q] Condition C.10 (Erosion/Grading/Short-term Construction Impacts) (see Section II., Project Description and the Regulatory Compliance Measures appended to the IS/MND Checklist). The calculations also assume compliance with SCAQMD Rule 1113 (Architectural Coatings) as required by law, that no fireplaces or woodstoves are proposed, and a total of 202 net new trees on site. As shown in Table III-1, construction-related daily emissions associated with the Proposed Project would not exceed any regional SCAQMD significance thresholds for criteria pollutants during the construction phases. Therefore, construction impacts are considered to be less than significant.

Operational Emissions

Air pollutant emissions are currently generated at the Project Site by the existing manufacturing facilities. These uses generate air pollutant emissions from stationary sources, such as space and water heating, architectural coatings (paint), and mobile vehicle traffic traveling to and from the Project Site. The

existing warehouse uses also generate diesel exhaust and associated toxic air contaminants from trucking and hauling activities. The average daily emissions generated by the existing uses at the Project Site have been estimated utilizing the California Emissions Estimator Model (CalEEMod *Version 2016.3.1*) recommended by the SCAQMD. As shown in Table III-2, motor vehicles are the primary source of air pollutant emissions associated with existing uses at the Project Site.

Similar to existing conditions, operational emissions generated by both stationary and mobile sources would result from normal day-to-day activities of the Proposed Project. Area source emissions would be generated by the consumption of natural gas and landscape maintenance. Mobile emissions would be generated by the motor vehicles traveling to and from the Project Site.

The Proposed Project's regional operational emissions are presented in Table III-3, Proposed Project Estimated Daily Operational Emissions. The calculations reflect above-average transit accessibility, higher than average density, and below market-rate housing, as reflected in the Project description. As shown, the Proposed Project's net operational emissions would not exceed the regional thresholds of significance set by the SCAQMD. Therefore, impacts associated with regional operational emissions from the Proposed Project would be less than significant.

c) Would the project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions, which exceed quantitative threshold for ozone precursors)?

Less Than Significant Impact. Based on the *L.A. CEQA Thresholds Guide*, a significant impact may occur if a project adds a considerable cumulative contribution to federal or State non-attainment pollutants. As the Basin is currently in State non-attainment for ozone, PM_{10}, and $PM_{2.5}$, related projects could exceed an air quality standard or contribute to an existing or projected air quality exceedance. In regards to determining the significance of the Project contribution, the SCAQMD neither recommends quantified analyses of construction and/or operational emissions from multiple development projects nor provides methodologies or thresholds of significance to be used to assess the cumulative emissions generated by multiple cumulative projects. Instead, the SCAQMD recommends that a project's potential contribution to cumulative impacts should be assessed utilizing the same significance criteria as those for project specific impacts. Furthermore, SCAQMD states that if an individual development project generates less than significant construction or operational emissions, then the development project would not generate a cumulatively considerable increase in emissions for those pollutants for which the Basin is in non-attainment.

As discussed under Question III(b) above, the Proposed Project would not generate construction or operational emissions that exceed the SCAQMD's recommended regional thresholds of significance. Therefore, the Proposed Project would not generate a cumulatively considerable increase in emissions of the pollutants for which the Basin is in non-attainment, and impacts would be less than significant.

d) Would the project expose sensitive receptors to substantial pollutant concentrations?

Less Than Significant Impact. Based on the *L.A. CEQA Thresholds Guide*, a significant impact may occur if a project were to generate pollutant concentrations to a degree that would significantly affect sensitive receptors. Sensitive receptors are populations that are more susceptible to the effects of air pollution than are the population at large. The SCAQMD identifies the following as sensitive receptors: long-term health care facilities, rehabilitation centers, convalescent centers, retirement homes, residences, schools, playgrounds, child care centers, and athletic facilities.[8]

Localized Significance Thresholds

The SCAQMD has developed localized significance thresholds (LSTs) that are based on the amount of pounds of emissions per day that can be generated by a project that would cause or contribute to adverse localized air quality impacts. These localized thresholds, which are found in the mass rate look-up tables

[8] *South Coast Air Quality Management District, CEQA Air Quality Handbook, 1993, page 5-1.*

in the "Final Localized Significance Threshold Methodology" document prepared by the SCAQMD,[9] apply to projects that are less than or equal to five acres in size and are only applicable to the following criteria pollutants: NO_x, CO, PM_{10}, and $PM_{2.5}$. LSTs represent the maximum emissions from a project that are not expected to cause or contribute to an exceedance of the most stringent applicable federal or State ambient air quality standards, and are developed based on the ambient concentrations of that pollutant for each SRA. For PM_{10}, the LSTs were derived based on requirements in SCAQMD Rule 403 — Fugitive Dust. For $PM_{2.5}$, the LSTs were derived based on a general ratio of $PM_{2.5}$ to PM_{10} for both fugitive dust and combustion emissions.

LSTs are provided for each of SCAQMD's 38 source receptor areas (SRA) at various distances from the source of emissions. The Project Site is located within SRA 1, which covers the Central Los Angeles County area. The nearest sensitive receptors that could potentially be subject to localized air quality impacts associated with construction of the Proposed Project include multi-family residences, single-family residences, and schools. Given the proximity of these sensitive receptors to the Project Site, the LSTs with receptors located within 25 meters (82.02 feet) are used to address the potential localized air quality impacts associated with the construction-related NO_x, CO, PM_{10}, and $PM_{2.5}$ emissions for each construction phase.

Localized Construction Emissions

Emissions from construction activities have the potential to generate localized emissions that may expose sensitive receptors to harmful pollutant concentrations, especially during the demolition and grading phases. The Project Site's lot area is approximately 5.03 acres. However, the Project proposes to demolish only portions of the Project Site and excavate at most up to 4 acres of the Project Site. Because the SCAQMD sets thresholds for 1-, 2-, and 5-acre sites, the localized thresholds for the Project Site were estimated using linear regression, which is suggested in the SCAQMD Final LST Document for project sites that are between 2 and 5 acres. As shown in Table III-4, Localized On-Site Peak Daily Construction Emissions, peak daily emissions generated within the Project Site during construction activities for each phase would not exceed the applicable construction LSTs for an approximate 4-acre site in SRA 1. These calculations assume that appropriate dust control measures would be implemented as part of the Proposed Project during each phase of development, as required by SCAQMD Rule 403 - Fugitive Dust and Environmental [Q] Conditions C.8 and C.10(a). Specific Rule 403 control requirements include, but are not limited to, applying water in sufficient quantities to prevent the generation of visible dust plumes, applying soil binders to uncovered areas, reestablishing ground cover as quickly as possible, utilizing a wheel washing system to remove bulk material from tires and vehicle undercarriages before vehicles exit the Project Site, and maintaining effective cover over exposed areas. Therefore, with implementation of the regulatory code compliance measures identified above, localized air quality impacts from construction activities to the off-site sensitive receptors would be less than significant.

---

[9] *South Coast Air Quality Management District, Final Localized Significance Threshold Methodology, June 2003, Revised July 2008.*

Table III-4
Localized On-Site Peak Daily Construction Emissions

Construction Phase	Total On-site Emissions (Pounds per Day)			
	NO_x [b]	CO	PM_{10}	$PM_{2.5}$
Demolition	42.75	23.01	4.48	2.39
Grading	51.31	28.11	5.69	4.19
Building Construction	71.49	43.06	4.15	3.89
Paving	15.24	14.66	0.82	0.76
Architectural Coatings	47.41	23.90	2.52	2.33
SCAQMD Localized Thresholds [a]	**143**	**1,590**	**13**	**7**
Potentially Significant Impact?	*No*	*No*	*No*	*No*

Notes:
[a] *The localized thresholds for all phases are based on a receptor within a distance of 82 feet (25 meters) in SCAQMD's SRA 1 for a Project Site of 4 acres. Thresholds for a 4-acre site were estimated using linear regression.*
[b] *The localized thresholds listed for NO_x takes into consideration the gradual conversion of NO_x to NO_2, and are provided in the mass rate look-up tables in the SCAQMD's "Final Localized Significance Threshold Methodology" guidance document. The analysis of localized air quality impacts associated with NO_x emissions is focused on NO_2 levels as they are associated with adverse health effects.*
Sources: SCAQMD, Final LST Methodology Document, Appendix C – Mass Rate LST Look-Up Tables, October 21, 2009; Sample Construction Scenarios for Projects Less than Five Acres in Size, Appendix K; and CalEEMod 2016.3.1, Calculation worksheets are included in the case file.

Localized Operational Emissions

With regard to localized emissions from motor vehicle travel, traffic congested roadways and intersections have the potential to generate localized high levels of carbon monoxide (CO). Historically, the SCAQMD has suggested conducting a CO hotspot analysis for any intersection where a project would worsen the Level of Service (LOS) to any level below C, and for any intersection rated D or worse where the project would increase the V/C ratio by two percent or more. Based on a review of the Project's Traffic Study, only one of the study intersections would meet these criteria; Pasadena Avenue / Avenue 26 & Daly Street. However, the Basin is currently in attainment for CO emissions and, based on existing ambient CO levels within the basin, the Proposed Project's mobile source emissions at this intersection would not exceed the 1-hour or 8-hour CO hotspot concentration threshold for creating a significant impact. This finding is consistent with the AQMD's 2003 AQMP, which modeled localized CO emissions at the four highest traffic volume intersections within the Basin and found the localized emissions to be well below the thresholds of significance for both the 1-hour and 8-hour thresholds. Thus since the total volume at the Pasadena Avenue / Avenue 26 & Daly Street intersection would not exceed the traffic volumes modeled at the four highest traveled intersections in the Basin, it can be concluded that the Proposed Project would not result in a significant localized CO Hotspot impact. Therefore, no further analysis for CO hotspots is warranted and localized operational emissions would be less than significant.

Toxic Air Contaminants (TAC)

Construction Emissions

The Proposed Project's construction activities would generate toxic air contaminants in the form of diesel particulate emissions associated with the use of heavy trucks and construction equipment. The SCAQMD has not published guidance directly related to quantitatively assessing health risk impacts associated with construction activities. The dose to which receptors are exposed is the primary factor used to determine health risk (i.e., potential exposure to TAC emission levels that exceed applicable standards). Dose is a function of the concentration of a substance or substances in the environment and the duration of exposure to the substances. Dose is positively correlated with time, meaning that a longer exposure period would result in a higher exposure level for the maximally exposed individual. Thus, the risks estimated for a maximally exposed individual are higher is a fixed exposure occurs over a long duration. For example, according to the Office of Environmental Health Hazard Assessment, estimating the cancer risk from toxic air contaminants should be based on a lifetime (i.e., 70-year) exposure period. The construction period would occur over an approximate 34-month period. Therefore, it is not meaningful to evaluate long-term cancer impacts from construction activities that occur over a relatively short duration. The Proposed Project would be required to comply with the CARB Air Toxics Control Measure that limits diesel powered equipment and vehicle idling to no more than 5 minutes at a location. In addition, as discussed above, the Proposed Project would not result in a localized significant impact. Therefore, the Proposed Project would result in a less than significant impact related to construction TACs.

Operational Emissions

The Proposed Project consists of a mixed-use development containing residential units, creative offices, and retail uses and would not support any land uses or activities that would involve the use, storage, or processing of carcinogenic or non-carcinogenic toxic air contaminants. As part of the Project, the existing warehouse uses, which are estimated to generate up to 400 trips per day, mostly consisting of large diesel-engine trucks, would be removed from service. As such no significant toxic airborne emissions would result from Proposed Project implementation. In addition, construction activities would be subject to the regulations and laws relating to toxic air pollutants at the regional, State, and federal level that would protect sensitive receptors from substantial concentrations of these emissions. Therefore, impacts associated with the release of toxic air contaminants would be less than significant.

e) Would the project create objectionable odors affecting a substantial number of people?

Less Than Significant Impact. A significant impact may occur if objectionable odors occur which would adversely impact sensitive receptors. Odors are typically associated with industrial projects involving the use of chemicals, solvents, petroleum products, and other strong-smelling elements used in manufacturing processes, as well as sewage treatment facilities and landfills. As the Proposed Project involves no elements related to these types of activities, no odors from these types of uses are anticipated. Garbage collection areas for the Project Site would have the potential to generate foul odors if the areas are located in close proximity to habitable areas. Objectionable odors from trash receptacles are addressed under Environmental [Q] Condition C.8, which requires trash receptacles be relocated at least 50-feet away from the property line of adjacent residential properties or within the walls of a covered concrete

block enclosure. Good housekeeping practices would be sufficient to prevent nuisance odors. In addition, SCAQMD Rule 402 (Nuisance), and SCAQMD Best Available Control Technology Guidelines would limit potential objectionable odor impacts during the Proposed Project's long-term operations phase. The proposed restaurant land uses would also be required to install odor-reducing equipment in accordance with SCAQMD Rule 1138.

Compliance with SCAQMD Rules 402 and 1138 and Environmental Condition C.8, described above, would ensure any potential objectionable odor impacts are less than significant.

Cumulative Impacts

Less Than Significant Impact. Development of the Proposed Project in conjunction with the related projects in the Project Site vicinity would result in an increase in construction and operational emissions in the already urbanized area of the City of Los Angeles.

Cumulative development can affect implementation of the 2012 AQMP. The 2012 AQMP was prepared to accommodate growth, reduce pollutants within the areas under SCAQMD jurisdiction, improve the overall air quality of the region, and minimize the impact on the economy. Growth considered to be consistent with the 2012 AQMP would not interfere with attainment because this growth is included in the projections utilized in the formulation of the AQMP. Consequently, as long as growth in the Basin is within the projections for growth identified by SCAG, implementation of the 2012 AQMP would not be obstructed by such growth and cumulative impacts would be less than significant. Since the Proposed Project is consistent with SCAG's growth projections, it would not have a cumulatively considerable contribution to an impact regarding a potential conflict with or obstruction of the implementation of the applicable air quality plan. Thus, cumulative impacts related to conformance with the 2012 AQMP would be less than significant.

Cumulative air quality impacts from construction and operation of the Proposed Project, based on SCAQMD guidelines, are analyzed in a manner similar to Project-specific air quality impacts. The SCAQMD recommends that a project's potential contribution to cumulative impacts should be assessed utilizing the same significance criteria as those for project specific impacts. Therefore, according to the SCAQMD, individual development projects that generate construction or operational emissions that exceed the SCAQMD recommended daily thresholds for project-specific impacts would also cause a cumulatively considerable increase in emissions for those pollutants for which the Basin is in non-attainment. Thus, as discussed in Question III(c) above, because the construction-related and operational daily emissions associated with Proposed Project would not exceed the SCAQMD's recommended thresholds, these emissions associated with the Proposed Project would not be cumulatively considerable. Therefore, cumulative air quality impacts would be less than significant.

With respect to cumulative odor impacts, potential sources that may emit odors during construction activities at each related project include the use of architectural coatings, solvents, and asphalt paving. SCAQMD Rule 1108 and 1113 limits the amount of volatile organic compounds from cutback asphalt and architectural coatings and solvents, respectively. Based on mandatory compliance with SCAQMD Rules, construction activities and materials used in the construction of the Proposed Project and related projects would not combine to create objectionable construction odors. With respect to operations,

SCAQMD Rules 402 (Nuisance) and Rule 1138 (Odor Reducing Equipment) would regulate any objectionable odor impacts from the related projects and the Proposed Project's long-term operations phase. Thus, cumulative odor impacts would be less than significant.

IV. BIOLOGICAL RESOURCES

a) Would the project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulation, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

Potentially Significant Unless Mitigation Incorporated. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a project would normally have a significant impact on biological resources if it could result in: (a) the loss of individuals, or the reduction of existing habitat, of a state or federal listed endangered, threatened, rare, protected, candidate, or sensitive species or a Species of Special Concern; (b) the loss of individuals or the reduction of existing habitat of a locally designated species or a reduction in a locally designated natural habitat or plant community; or (c) interference with habitat such that normal species behaviors are disturbed (e.g., from the introduction of noise or light) to a degree that may diminish the chances for long-term survival of a sensitive species. The Project Site is improved with four light manufacturing and warehouse buildings, paved loading areas, and surface parking.

Based on the information presented in the Protected Tree Report, there are thirty-nine trees on site that are eight inches or greater in diameter at breast height (significant trees). All of the trees on-site are non-native and are non-protected tree species under the Native Protected Tree Ordinance. The trees identified on site include twenty-six Canary Island Pine trees, four Olive trees, three Silver Dollar Eucalyptus trees, three Fan Palm trees, two Evergreen Ash trees, and one Chinese Elm tree. Development of the Project would require the removal of all existing trees and potentially up to three street trees. With the compliance with Mitigation Measure MM-BIO-1, below, the Project would be required to plant replacement trees at a ratio of 1 to 1 (this replacement ratio may be increased at the discretion of the City's Urban Forestry Division). Further, the Proposed Project would be required to comply with the Federal Migratory Bird Treaty Act (MBTA) of 1918 (50 C.F.R Section 10.13). Sections 3503, 3503.5 and 3513 of the California Fish and Game Code prohibit take of all birds and their active nests including raptors and other migratory non-game birds (as listed under the Federal MBTA).

The Project Site does not contain any critical habitat or support any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service. No protected tree species exist on site. However, nesting birds may reside in the thirty-nine tress on-site; for this reason, the Proposed Project would incorporate Mitigation Measure MM-BIO-2, below.

The Proposed Project would incorporate Mitigation Measures MM-BIO-1 and MM-BIO-2, below to ensure that the removal of the thirty-nine non-protected trees on site would result in less than significant impact. With compliance with the following mitigation measures, the Proposed Project would result in a less than significant impact.

Mitigation Measures:

MM-BIO-1 (Tree Removal (Non-Protected Trees)):

- Prior to the issuance of any permit, a plot plan shall be prepared indicating the location, size, type, and general condition of all existing trees on the site and within the adjacent public right(s)-of-way.
- All significant (8-inch or greater trunk diameter, or cumulative trunk diameter if multi-trunked, as measured 54 inches above the ground) non-protected trees on the site proposed for removal shall be replaced at a 1:1 ratio with a minimum 24-inch box tree. Net, new trees, located within the parkway of the adjacent public right(s)-of-way, may be counted toward replacement tree requirements.
- Removal or planting of any tree in the public right-of-way requires approval of the Board of Public Works. Contact Urban Forestry Division at: 213-847-3077. All trees in the public right-of-way shall be provided per the current standards of the Urban Forestry Division the Department of Public Works, Bureau of Street Services.

MM-BIO-2 (Habitat Modification (Nesting Native Birds)):

- Proposed project activities (including disturbances to native and non-native vegetation, structures and substrates) should take place outside of the breeding bird season which generally runs from March 1- August 31 (as early as February 1 for raptors) to avoid take (including disturbances which would cause abandonment of active nests containing eggs and/or young). Take means to hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture of kill (Fish and Game Code Section 86).
- If project activities cannot feasibly avoid the breeding bird season, beginning thirty days prior to the disturbance of suitable nesting habitat, the applicant shall:
    - Arrange for weekly bird surveys to detect any protected native birds in the habitat to be removed and any other such habitat within 300 feet of the construction work area (within 500 feet for raptors) as access to adjacent areas allows. The surveys shall be conducted by a Qualified Biologist with experience in conducting breeding bird surveys. The surveys shall continue on a weekly basis with the last survey being conducted no more than 3 days prior to the initiation of clearance/construction work.
    - If a protected native bird is found, the applicant shall delay all clearance/construction disturbance activities within 300 feet of suitable nesting habitat for the observed protected bird species (within 500 feet for suitable raptor nesting habitat) until August 31.
    - Alternatively, the Qualified Biologist could continue the surveys in order to locate any nests. If an active nest is located, clearing and construction within 300 feet of the nest (within 500 feet for raptor nests) or as determined by a qualified biological monitor, shall be postponed until the nest is vacated and juveniles have fledged and when there is no evidence of a second attempt at nesting. The buffer zone from the nest shall be established in the field with flagging and stakes. Construction personnel shall be instructed on the sensitivity of the area.
    - The applicant shall record the results of the recommended protective measures described above to document compliance with applicable State and Federal laws pertaining to the

protection of native birds. Such record shall be submitted and received into the case file for the associated discretionary action permitting the project.

b) Would the project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, and regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

No Impact. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a project would normally have a significant impact on biological resources if it could result in: (a) the loss of individuals, or the reduction of existing habitat, of a state or federal listed endangered, threatened, rare, protected, candidate, or sensitive species or a Species of Special Concern; (b) the loss of individuals or the reduction of existing habitat of a locally designated species or a reduction in a locally designated natural habitat or plant community; (c) the alternation of an existing wetland habitat; or (d) interference with habitat such that normal species behaviors are disturbed (e.g., from the introduction of noise, light) to a degree that may diminish the chances for long-term survival of a sensitive species. The Project Site is occupied by four light manufacturing and warehouse buildings and contains paved loading areas and surface parking. The Drainage Report (February 2, 2016, Forma Engineering, Inc.; available in the case file for review) determines that the Project Site is nearly one-hundred percent impervious and no natural waterways exist on site. The Protected Tree Report (January 11, 2016, The Tree Resource) determined that all significant trees located on site are non-protected, non-native tree species. No riparian or other sensitive natural vegetation communities are located on or adjacent to the Project Site. Therefore, implementation of the Proposed Project would not result in any adverse impacts to riparian habitat or other sensitive natural communities, and no impact would occur.

c) Would the project have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

No Impact. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a project would normally have a significant impact on biological resources if it could result in the alteration of an existing wetland habitat. As discussed above, the Project Site is entirely developed with impermeable surfaces and does not contain any wetlands or natural drainage channels. Therefore, the Project Site does not support any riparian or wetland habitat, as defined by Section 404 of the Clean Water Act (see Section 4(b), above), and no impacts to riparian or wetland habitats would occur with implementation of the Proposed Project.

d) Would the project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

No Impact. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a project would normally result in a significant impact on biological resources if it results in the interference with wildlife movement/migration corridors that may diminish the chances for long-term survival of a sensitive species. The Project Site is located in an urbanized area of the City of Los Angeles. Due to the urbanized surroundings, there are no wildlife corridors or native wildlife nursery sites in the Project vicinity. Thus,

the Proposed Project would not interfere with the movement of any residents or migratory fish or wildlife. Therefore, no impact would occur.

e) Would the project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance (e.g., oak trees or California walnut woodlands)?

Potentially Significant Unless Mitigation Incorporated. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a project-related significant adverse effect could occur if a project were to cause an impact that is inconsistent with local regulations pertaining to biological resources, such as the City of Los Angeles Protected Tree Ordinance, 177,404. The Project Site is improved with four light manufacturing and warehouse buildings, paved loading areas, and parking areas. There are no protected tree species located on the Project Site. Therefore, the Proposed Project would not have the potential to conflict with the City of Los Angeles Protected Tree Ordinance. However, it is anticipated that all 39 trees on-site would be removed during the construction of the Proposed Project. Further, the Proposed Project may require the removal of three street trees along Pasadena Avenue. In the event that the construction of the Proposed Project would require the removal of street trees, the removal of street trees is subject to the approval and tree replacement conditions set forth by the Board of Public Works, Urban Forestry Division. Further, the Project would be required to comply with the Federal Migratory Bird Treaty Act and Sections 3503, 3503.5, and 3513 of the California Fish and Game Code, which prohibits take of all birds and their active nests including raptors and other migratory non-game birds. Compliance with MM-BIO-1 and MM-BIO-2, above, would ensure that impacts upon the loss of on-site trees and street trees would be less than significant.

f) Would the project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

No Impact. A significant impact would occur if the Proposed Project would be inconsistent with maps or policies in any conservation plans of the types cited. The Project Site and its vicinity are not part of any draft or adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional or state habitat conservation plan. Therefore, no impact would occur with implementation of the Proposed Project.

Cumulative Impacts

Less Than Significant Impact. The Proposed Project would have a less than significant impact upon biological resources with mitigation. Development of the Proposed Project in combination with the three related projects would not significantly impact wildlife corridors or habitat for any candidate, sensitive, or special status species identified in local plans, policies, or regulations, or by the CDFG or the USFWS. No such habitat occurs in the vicinity of the Project Site or related projects due to the existing urban development. Development of any of the related projects would be subject to the City of Los Angeles Protected Tree Ordinance, Federal Migratory Bird Treaty Act, and Sections 3503, 3503.5, and 3513 of the California Fish and Game Code. Thus, cumulative impacts to biological resources would be considered less than significant.

V. CULTURAL RESOURCES

a) Would the project cause a substantial adverse change in the significance of an historic resource pursuant to CEQA § 15064.5?

Less Than Significant Impact. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a significant impact may occur if the Proposed Project results in a substantial adverse change in the significance of a historic resource. Section 15064.5 of the State CEQA Guidelines defines a historical resource as: (1) a resource listed in or determined to be eligible by the State Historical Resources Commission for listing in the California Register of Historical Resources; (2) a resource listed in a local register of historical resources or identified as significant in an historical resource survey meeting certain State guidelines; or (3) an object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California, provided that the lead agency's determination is supported by substantial evidence in light of the whole record. A substantial adverse change in the significance of a historic resource means demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of a historical resource would be materially impaired.[10]

The Project Site is currently developed with four light manufacturing and warehouse buildings and paved loading areas and surface parking. These four buildings include:

1. One 24,018 square foot light manufacturing facility building, which fronts the west side of Pasadena Avenue, constructed circa 1967;
2. One 3,521 square foot light manufacturing facility building, located on the southwest corner of the Project Site, constructed circa 1929;
3. One 4,033 square foot light manufacturing facility building, located on the southeast corner of the Project Site, constructed circa 1948; and
4. One 86,712 square foot warehouse facility building, which fronts the north side of Avenue 34, constructed circa 1977.

The City of Los Angeles Department of City Planning, Los Angeles Historic Resources Inventory and Survey LA, had reviewed the buildings on-site and identified the 3,521 square foot light manufacturing building located at 153 W. Avenue 34 for further review. The Los Angeles Historic Resources Inventory and Survey LA determined that, upon further review, this building does not meet the eligibility standards for historic listing, due to alterations to the façade windows and entrance.[11] Nevertheless, as part of the Proposed Project, the Project includes the rehabilitation and adaptive reuse of a portion the

[11] *City of Los Angeles Department of City Planning, Los Angeles Historic Resources Inventory, 153 W. Avenue 34 Historic Resource Report, website: http://www.historicplacesla.org/reports/aeef3669-d0cc-4703-9e2b-c9e78de172a3, accessed: February 2016.*

aforementioned building (No. 2 listed above) and 7,963 square feet of the building that fronts Pasadena Avenue (No. 1 listed above).

As the Project Site does not contain any historic or potentially historic resources, the Proposed Project would result in a less than significant impact to historic resources.

b) Would the project cause a substantial adverse change in the significance of an archaeological resource pursuant to CEQA § 15064.5?

Less Than Significant Impact. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a significant impact may occur if grading or excavation activities associated with the Proposed Project would disturb archaeological resources. No known archaeological sites are identified on the Project Site. There is no evidence that suggests any archaeological sites or archaeological resources exist on the Project Site. The Project Site has been previously developed and is located in an urbanized area within the City of Los Angeles. The Proposed Project would include excavation to a depth of approximately 15 feet below grade to construct a one level subterranean parking garage. Thus, the potential exists for the accidental discovery of unknown and unrecorded archaeological materials. In the unlikely event any archaeological resources are encountered during the construction phase, the discovery of such materials would be mitigated to less than significant levels through compliance with the following applicable regulatory compliance measure:

- **(Archaeological):** If archaeological resources are discovered during excavation, grading, or construction activities, work shall cease in the area of the find until a qualified archaeologist has evaluated the find in accordance with federal, State, and local guidelines, including those set forth in California Public Resources Code Section 21083.2. Personnel of the proposed Modified Project shall not collect or move any archaeological materials and associated materials. Construction activity may continue unimpeded on other portions of the Project site. The found deposits would be treated in accordance with federal, State, and local guidelines, including those set forth in California Public Resources Code Section 21083.2.

Due to the absence of any known archeological resources, no mitigation measures are warranted. Because the presence or absence of such materials cannot be determined until the Project Site is excavated, compliance with the regulatory compliance measure above would ensure that if any archaeological resources are encountered during construction, impacts to such resources would be mitigated to a less than significant level.

c) Would the project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Less Than Significant Impact. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a significant impact may occur if grading or excavation activities associated with the Proposed Project were to disturb paleontological resources or geologic features which presently exist within the Project Site. As discussed above, the Project Site has been developed since the early 1900s. In the late 1970s, the

Project Site was developed into its current layout. The Project Site and immediate surrounding areas do not contain any known vertebrate paleontological resources.[12] Although no paleontological resources are known to exist on-site, there is a potential for paleontological resources to exist at sub-surface levels on the Project Site, which may be uncovered during excavation of the proposed parking garage. Implementation of the regulatory compliance measure, identified below, would ensure that if any such resources are found during construction of the Proposed Project, they would be handled according to the proper regulations and any potential impacts would be reduced to less than significant levels.

Regulatory Compliance Measure:

- **(Paleontological)**: If paleontological resources are discovered during excavation, grading, or construction, the City of Los Angeles Department of Building and Safety shall be notified immediately, and all work shall cease in the area of the find until a qualified paleontologist evaluates the find. Construction activity may continue unimpeded on other portions of the Project site. The paleontologist shall determine the location, the time frame, and the extent to which any monitoring of earthmoving activities shall be required. The found deposits would be treated in accordance with federal, State, and local guidelines, including those set forth in California Public Resources Code Section 21083.2.

d) Would the project disturb any human remains, including those interred outside of formal cemeteries?

Less Than Significant Impact. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a project-related significant adverse effect could occur if grading or excavation activities associated with the proposed project would disturb previously interred human remains. No known human burials have been identified on the Project Site or its vicinity. However, it is possible that unknown human remains could occur on the Project Site, and if proper care is not taken during construction, damage to or destruction of these unknown remains could occur. The following regulatory compliance measure would ensure potential impacts related to the disturbance of unknown human remains are less than significant.

Regulatory Compliance Measure:

- **(Human Remains):** If human remains are encountered unexpectedly during construction demolition and/or grading activities, State Health and Safety Code Section 7050.5 requires that no further disturbance shall occur until the County Coroner has made the necessary findings as to origin and disposition pursuant to California Public Resources Code (PRC) Section 5097.98. In the event that human remains are discovered during excavation activities, the following procedure shall be observed:
    - Stop immediately and contact the County Coroner:

[12] *City of Los Angeles Department of City Planning, Environmental and Public Facilities Maps: Vertebrate Paleontological Resources in the City of Los Angeles, September 1996.*

1104 N. Mission Road
Los Angeles, CA 90033
323-343-0512 (8 a.m. to 5 p.m. Monday through Friday) or
323-343-0714 (After Hours, Saturday, Sunday, and Holidays)

- If the remains are determined to be of Native American descent, the Coroner has 24 hours to notify the Native American Heritage Commission (NAHC).
- The NAHC will immediately notify the person it believes to be the most likely descendent of the deceased Native American.
- The most likely descendent has 48 hours to make recommendations to the owner, or representative, for the treatment or disposition, with proper dignity, of the human remains and grave goods.
- If the owner does not accept the descendant's recommendations, the owner or the descendent may request mediation by the NAHC.

e) Cause a substantial adverse change in the significance of a site, feature, place, cultural landscape, sacred place, or object with cultural value to a California Native American Tribe that is listed or determined eligible for listing on the California register of historical resources, listed on a local historical register, or otherwise determined by the lead agency to be a tribal cultural resource?

Less Than Significant Impact. Pursuant to AB 52, the Department of City Planning sent pre-consultation request letters on May 25, 2016 to the recognized Native American Tribal Representatives within the Los Angeles region. The City of Los Angeles did not receive any responses. Therefore, because the Project Site has been subject to ground disturbance activities in the past and is not known to be associated with any cultural or sacred sites, and no Native American Tribal Representatives have requested consultation, the probability for the discovery of a known site, feature, place, cultural landscape, sacred place, or object with cultural value to a California Native American Tribe is considered low. Thus, in the absence of any known cultural resources, adherence to the regulatory compliance measures relating to archeological, paleontological, and human remains (referenced above), would ensure impacts associated with the accidental discovery of any archaeological resources or human remains, including Native American resources would be avoided or reduced to less than significant levels.

Cumulative Impacts

Less Than Significant Impact. Development of the Proposed Project, in combination with the other three related projects in the Project Site vicinity, would result in the continued redevelopment and revitalization of the surrounding area. Impacts to cultural resources tend to be site-specific and are assessed on a site-by-site basis. The analysis of the Proposed Project's impacts to cultural resources concluded that the Proposed Project would have no significant impacts with respect to cultural resources following appropriate regulatory compliance measures. Therefore, the Proposed Project's incremental contribution to a cumulative impact would not be considerable, and cumulative impacts to cultural resources would be less than significant.

VI. GEOLOGY AND SOILS

The following section summarizes and incorporates the reference information from the Geotechnical Investigation prepared by Geocon West, Inc.: Geotechnical Investigation: Proposed Mixed-Use Residential Development, 141 West Avenue 34, Los Angeles, California, dated July 23, 2015 ("Geotechnical Investigation") and the City of Los Angeles Department of Building and Safety's Soils Report Approval Letter, dated January 26, 2016 ("Soils Approval Letter"). The Project Geotechnical Investigation and Soils Approval Letter are included in the case file.

a) Would the project expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.

Less Than Significant Impact. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a significant impact may occur if a project site is located within a State-designated Alquist-Priolo Zone or other designated fault zone.

The Project Site is located within the former Arroyo Seco streambed and within the central portion of the Los Angeles Basin. The Los Angeles Basin, located in the northern portion of the Peninsular Ranges geomorphic province, is northwest-trending alleviated lowland plain, sometimes called the Coastal Plain of Los Angeles. The prominent structural features within the Los Angeles Basin include the central lowland plain, the uplifted Palos Verdes Hills, the northwest-trending line of low hills and mesas within the Newhall-Inglewood Fault Zone.

Geocon performed six borings (identified as B1-B6) as part of their field investigation. Based on the information contained in the Geotechnical Investigation by Geocon West, Inc., the Project Site is underlain by artificial fill and Holocene age alluvial fan deposits consisting of varying amounts of unconsolidated gravel, sand and silt. The artificial fill was encountered to a maximum depth of two feet below the ground surface, except in Boring B3. Artificial fill was locally encountered in Boring B3 to a maximum depth of 30 feet below the ground surface. The artificial fill generally consists of light brown to dark brown, fine- to coarse-grained silty sand and sandy clay. The artificial fill is characterized as slightly moist to moist and medium dense to dense or firm. The alluvial fan deposits underlays the artificial fill. The alluvial deposits consistent of primarily light brown to brown poorly graded sand with varying amounts of gravel and cobbles. The gravel and cobbles were observed to vary both laterally and vertically within the alluvial deposits. The alluvial soils are primarily slightly moist and medium dense to very dense and generally become denser with increase in depth. A detailed description of the soil conditions may be obtained from the individual logs of the subsurface excavations in the Geotechnical Investigation.

The closest active fault to the Project Site is the Raymond Fault located 1.8 miles north of the Project Site. Other nearby active faults are the Hollywood Fault, the Verdugo Fault, the Sierra Madre Fault, and the Newport-Inglewood Fault Zone located 3.2 miles north northwest, 3.9 miles north, 8.8 miles north, and 10.5 miles southwest of the Project Site, respectively. The active San Andreas Fault Zone is located approximately 30 miles northeast of the Project Site. The closest potentially active faults to the Project

Site are the Coyote Pass Fault and Macarthur Park Fault located approximately 3.4 miles to the south and 3.6 miles southwest of the Project Site, respectively.

Several buried thrust faults, commonly referred to as blind thrusts, underlie the Los Angeles Basin at depth. These faults are not exposed at the ground surface and are typically identified at depths greater than 3.0 kilometers. The October 1, 1987 Whittier Narrows earthquake and the January 17, 1994 Northridge earthquake were a result of movement on the Puente Hills Blind Thrust and the Northridge Thrust, respectively. The Project Site is within the vertical projection of both the Los Angeles Segment of the Puente Hills Blind Thrust and the Upper Elysian Park Blind Thrust. These thrust faults are not exposed at the surface and do not present a potential surface fault rupture hazard; however, these are active features capable of generating future earthquakes that would result in strong ground shaking at the Project Site.

The Project Site is not within a currently established Alquist-Priolo Earthquake Fault Zone for surface fault rupture hazards. No active or potentially active faults with the potential for surface fault rupture are known to pass directly beneath the Project Site. Therefore, the potential for surface rupture due to faulting occurring beneath the Project Site during the design life of the proposed development is considered low. However, the Project Site is located in the seismically active Southern California region, and could be subjected to moderate to strong ground shaking in the event of an earthquake on one of the many active Southern California faults.

Based on the conclusions of the Geotechnical Investigation, the potential for surface ground rupture at the Project Site is considered remote, and the potential for impacts associated with surface fault rupture would be considered less than significant. As required by law and Environmental [Q] Condition C.9, the Project would adhere to current engineering standards, the seismic safety requirements set forth in the City of Los Angeles Building Code (LABC) and the Los Angeles Municipal Code (LAMC), and design recommendations set forth in the Geotechnical Investigation so that the proposed structures may withstand typical seismic ground shaking. In addition, geologic and geotechnical evaluations of the proposed Project would follow the guidelines presented in CGS *Special Publication 117, Guidelines for Evaluating and Mitigating Seismic Hazards in California,* which provides guidance for evaluation and mitigation of earthquake-related hazards (other than fault rupture). Thus, impacts related to strong seismic shaking would be reduced to less than significant levels. Potential impacts associated with seismic safety would be further reduced to less than significant levels with incorporation of the following regulatory compliance measure:

- **(Seismic and Geotechnical Safety):** The project shall comply with the conditions contained within the Department of Building and Safety's Geology and Soils Report Approval Letter (dated January 26, 2016) and Project's Geotechnical Investigation prepared by Geocon West, Inc. (dated July 23, 2015), and as it may be subsequently amended or modified.

b) Would the project expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving strong seismic ground shaking?

Less Than Significant Impact. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a significant impact may occur if a project represents an increased risk to public safety or destruction of property by exposing people, property, or infrastructure to seismically induced ground shaking hazards

that are greater than the average risk associated with other locations in Southern California. The Project Site is located in the seismically active Southern California region, and could be subjected to moderate to strong ground shaking in the event of an earthquake on one of the many active Southern California faults. The intensity of ground shaking depends upon the earthquake magnitude, the distance from the source, and the site response characteristics. The primary seismic hazard for the Proposed Project is the potential for strong ground motion from future earthquakes within the Los Angeles Basin. However, this hazard and the effects of ground shaking are common in Southern California. Conformance with current building codes and engineering practices during the Project's design and construction would mitigate the potential effects of ground shaking. Accordingly, the Geotechnical Investigation establishes seismic design criteria.

Seismically induced settlement is often caused when loose to medium-dense granular soils are densified during ground shaking. Settlement of the foundation system is expected to occur on initial application of loading. Differential settlement is not expected to exceed one half inch over a distance of 20 feet. Seismically induced settlement is considered to be less than significant impact. The Project Site is considered suitable for the construction of the Proposed Project provided that the recommendations specified in the Geotechnical Investigation are included in the design and construction of the Proposed Project to the satisfaction of the Department of Building and Safety. Accordingly, compliance with Environmental [Q] Condition C.9 and the regulatory compliance measure pertaining to seismic and geotechnical safety, above, would ensure impacts associated with seismic hazards are reduced to a less than significant level.

c) Would the project expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving seismic-related ground failure, including liquefaction?

Less Than Significant Impact. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a significant impact may occur if a Project Site is located within a liquefaction zone. Liquefaction is a phenomenon in which loose, saturated, relatively cohesionless soil deposits lose shear strength during strong ground motions. Primary factors controlling liquefaction include intensity and duration of ground motion, gradation characteristics of the subsurface soils, in-situ stress conditions, and the depth to groundwater. Liquefaction is typified by a loss of shear strength in the liquefied layers due to rapid increases in pore water pressure generated by earthquake accelerations. Liquefaction typically occurs in areas where the soils below the water table are composed of poorly consolidated, fine to medium-grained, primarily sandy soil.

Based on the State of California Seismic Hazards Map for the Los Angeles 7½-Minute Quadrangle and the City of Los Angeles General Plan Safety Element, the Project Site is located in an area designated as "liquefiable." Pursuant to Environmental [Q] Condition C.11, Geocon performed a liquefaction analysis of the soil underlying the Project Site to assess potential consequences of any liquefaction and soil strength loss, estimation of settlement, lateral movement or reduction in foundation soil-bearing capacity. A liquefaction analysis was performed for a design level earthquake by using a historic high groundwater table of 20 feet below the ground surface, a magnitude of 6.63 earthquake, and a peak horizontal acceleration of 0.698g. A liquefaction analysis was also performed for a maximum considered earthquake by using a historic high groundwater table of 20 feet below the ground surface, a magnitude 6.62 earthquake, and a peak horizontal acceleration of 1.047g. Geocon concluded that the alluvial soils below

the historic high groundwater level would not be susceptible to liquefaction settlement during a design level earthquake ground motion and a maximum considered earthquake.

In compliance with Environmental [Q] Condition C.11, the Proposed Project would adhere to current engineering standards, the seismic safety requirements set forth in the City of Los Angeles Building Code (LABC) and the Los Angeles Municipal Code (LAMC), and design recommendations set forth in the Geotechnical Investigation. Therefore, potential impacts related to liquefaction would be less than significant.

d) Would the project expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving landslides?

No Impact. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a project would normally have a significant geologic hazard impact if it would cause or accelerate geologic hazards which would result in substantial damage to structures or infrastructure, or expose people to substantial risk of injury. A project-related significant adverse effect may occur if a project is located in a hillside area with soil conditions that would suggest a high potential for sliding. According to the Geotechnical Investigation, the Project Site is not located within a City of Los Angeles Hillside Grading Area or Hillside Ordinance Area. The City of Los Angeles General Plan Safety Element further indicates that the Project Site is not located in an area susceptible to landslides.[13] The Project Site is not within an area identified as having a potential for seismic slope instability. There are no known landslides near the Project Site, nor is the Project Site in the path of any known or potential landslides. Therefore, the potential for slope stability hazards to adversely affect the proposed development is considered low. Therefore, no impact would occur.

e) Would the project result in substantial soil erosion or the loss of topsoil?

Less Than Significant Impact. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a project would normally have significant sedimentation or erosion impact if it would: (a) constitute a geologic hazard to other properties by causing or accelerating instability from erosion; or (b) accelerate natural processes of wind and water erosion and sedimentation, resulting in sediment runoff or deposition which would not be contained or controlled on-site. Although development of the Proposed Project has the potential to result in the erosion of soils during site preparation and construction activities, erosion would be reduced by implementation of stringent erosion controls imposed by the City of Los Angeles through grading and building permit regulations. Minor amounts of erosion and siltation could occur during grading. The potential for soil erosion during the ongoing operation of the Proposed Project is extremely low due to the generally level topography of the Project Site, and the fact that the Project Site would be mostly paved-over or built upon so little soil would be exposed. All grading activities require grading permits from the Department of Building and Safety, which include requirements and standards designed to limit potential impacts to acceptable levels. In addition, all on-site grading and site preparation would comply with applicable provisions of Chapter IX, Division 70 of the LAMC, which

[13] *City of Los Angeles Department of City Planning, Safety Element of the Los Angeles City General Plan, Exhibit C: Landslide Inventory & Hillside Areas In the City of Los Angeles, June 1994.*

addresses grading, excavations, and fills. Additionally, implementation of the regulatory compliance measure, below, would further ensure a less-than-significant impact would occur with respect to erosion or loss of topsoil.

Regulatory Compliance Measure:

- **(Erosion/Grading/Short-Term Construction Impacts):** Chapter IX, Division 70 of the Los Angeles Municipal Code addresses grading, excavations, and fills. All grading activities require grading permits from the Department of Building and Safety. Additional provisions are required for grading activities within Hillside areas. The application of BMPs includes but is not limited to the following mitigation measures:
  - Excavation and grading activities should be scheduled during dry weather periods. If grading occurs during the rainy season (October 15 through April 1), diversion dikes shall be constructed to channel runoff around the site. Channels shall be lined with grass or roughened pavement to reduce runoff velocity.
  - Stockpiles, excavated, and exposed soil shall be covered with secured tarps, plastic sheeting, erosion control fabrics, or treated with a bio-degradable soil stabilizer.

f) Would the project be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?

Less Than Significant Impact. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a project would normally have a significant geologic hazard impact if it could cause or accelerate geologic hazards causing substantial damage to structures or infrastructure, or expose people to substantial risk of injury. A significant impact may occur if the Proposed Project is built in an unstable area without proper site preparation or design features to provide adequate foundations for buildings, thus posing a hazard to life and property. The Geotechnical Investigation concluded that the potential for seismically induced settlement at the Project Site is considered small, and the geotechnical conditions are favorable for the Proposed Project provided that the recommendations specified in the Geotechnical Investigation are included in the design and construction of the Proposed Project to the satisfaction of the Department of Building and Safety. The Geotechnical Investigation finds that the Project Site is not located within an area that is susceptible to landslides and subsidence. Further, the Geotechnical Investigation finds that although the Project Site is located within an area identified as "liquefiable," the soils on the Project Site would not be susceptible to liquefaction settlement during a design level earthquake ground motion and a maximum considered earthquake. The Proposed Project would comply with the Los Angeles Building Code as entitled and in accordance with the conditions contained within the Department of Building and Safety's Geology and Soils Report Approval Letter for the Proposed Project.

The Proposed Project includes the development of a creative campus with multi-family residential units, creative office space, and retail/restaurant space. No large-scale extraction of groundwater, gas, oil, or geothermal energy is occurring or is planned to occur with the development of the Proposed Project or in the general Project Site vicinity. The Proposed Project would not create unstable geologic conditions on or off site, and the Project impacts would be less than significant.

g) Would the project be located on expansive soil, as identified in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?

No Impact. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a project would normally have a significant geologic hazard impact if it would cause or accelerate geologic hazards, which would result in substantial damage to structures or infrastructure, or expose people to substantial risk of injury. A significant impact may occur if the Proposed Project is built on expansive soils without proper site preparation or design features to provide adequate foundations for buildings, thus posing a hazard to life and property. Based on the results of the Geotechnical Investigation, the soils at the Project Site are considered to have a "very low" expansive potential and are classified as "non-expansive" in accordance with the 2013 California Building Code Section 1803.5.3. Therefore, no impact would occur with respect to expansive soils.

h) Would the project have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?

No Impact. This question would apply to the Proposed Project only if it was located in an area not served by an existing sewer system. The Project Site is located in a developed area within the City of Los Angeles, which is served by a wastewater collection, conveyance and treatment system operated by the City of Los Angeles. No septic tanks or alternative disposal systems neither are necessary, nor are they proposed. Thus, no impact would occur.

Cumulative Impacts

Less Than Significant Impact. Geotechnical hazards are site-specific and there is little, if any, cumulative geological relationship between the Proposed Project and any of the three related projects. Similar to the Proposed Project, potential impacts related to geology and soils would be assessed on a case-by-case basis and, if necessary, the applicants of the related projects would be required to implement the appropriate mitigation measures. Furthermore, the analysis of the Proposed Project's geology and soils impacts concluded that, through adherence with the regulatory compliance measures listed above, Proposed Project impacts would be reduced to less than significant levels. Therefore, the Proposed Project would not make a cumulatively considerable contribution to any potential cumulative impacts, and cumulative geology and soil impacts would be less than significant.

VII. GREENHOUSE GAS EMISSIONS

Greenhouse gas (GHG) emissions refer to a group of emissions that have the potential to trap heat in the atmosphere and consequently affect global climate conditions. Scientific studies have concluded that there is a direct link between increased emission of GHGs and long-term global temperature. The principal GHGs are carbon dioxide (CO_2), methane (CH_4), nitrous oxide (N_2O), sulfur hexafluoride (SF_6), perfluorocarbons (PFCs), hydrofluorocarbons (HFCs), and water vapor (H_2O). CO_2 is the reference gas for climate change because it is the predominant greenhouse gas emitted. To account for the varying warming potential of different GHGs, GHG emissions are often quantified and reported as CO_2 equivalents (CO_2e).

California Global Warming Solutions Act of 2006

The California Global Warming Solutions Act of 2006, widely known as AB 32, set a mandate for the California Air Resources Board (CARB) to develop and enforce regulations for the reporting and verification of statewide GHG emissions. The heart of the bill is the requirement that statewide GHG emissions be reduced to 1990 levels by 2020. In its Climate Change Scoping Plan (2008), ARB developed a California statewide GHG emission inventory for years 1990–2004 to support the effort of determining the 1990 level and 2020 near-term emissions limit. To determine the amount of GHG emission reductions needed to reduce to 1990 emissions, ARB then developed a forecast of 2020 emissions in a business-as-usual scenario (2020 BAU), which is an estimate of the emissions expected to occur in the year 2020 if none of the foreseeable measures included in the Scoping Plan were implemented.

In May 2014, CARB published the First Update to the Climate Change Scoping Plan, where it revised the previously adopted 1990 GHG emissions level from 427 $MMTCO_2e$ to 431 $MMTCO_2e$ based on the scientifically updated global warming potential (GWP) values in the Intergovernmental Panel on Climate Change's (IPCC's) Fourth Assessment Report.[14] The total future emissions forecasted in the 2020 BAU scenario were also updated from the previously adopted estimate of 596 $MMTCO_2e$ to 509 $MMTCO_2e$. The updated 2020 BAU scenario includes reductions anticipated from the implementation of several policies aimed at reducing the statewide greenhouse gas emissions inventory which are now adopted into law (i.e., California's Low Carbon Fuel Standard, Pavley I and the Renewable Electricity Standard). As shown in Table III-5, below, the State anticipates it will meet its 2020 GHG emissions limit of 431 $MMTCO_2e$ through reductions in energy, transportation, waste and high-GWP sectors. The Cap-and-Trade Regulation provides a firm cap, ensuring that the 2020 statewide emission limit will not be exceeded. Thus, the estimated emission reductions attributed to the Cap-and-Trade Program depend on the emissions forecast. For example, if the emissions forecast increases, the reductions associated with the Cap-and- Trade Program will increase.

Table III-5
Climate Change Scoping Plan 2020 Emissions Target

Category	2020 CO_2e Emissions ($MMTOC_2e$) [a]
AB 32 Baseline 2020 Forecast Emissions (2020 BAU)	509
Expected Reductions from Sector-Based Measures	
Energy	-25
Transportation	-23
High-GWP	-5
Waste	-2

[14] *The IPCC is the leading international body for the scientific assessment of climate change established in 1988 under the auspices of the United Nations.*

Cap and Trade Reductions	-23 [b]
2020 Limit	=431

[a] Based on AR4 GWP values.
[b] Cap and Trade emissions reductions depend on the emission forecast.
Source: CARB, First Update to the Climate Change Scoping Plan, May 2014.

While the Scoping Plan does not provide any specific mandates or policies that directly applies to CEQA Projects, statewide reductions in GHG emissions from construction is being accomplished through continuous updates to the California Green Building Standards (CALGreen) Code and other State-mandated laws and regulations. Originally adopted in 2008, the CALGreen Code included all voluntary standards that went beyond the basic building code requirements and introduced new standards for reducing water use, provisions for reducing and recycling construction and demolition waste, criteria for site development to locate buildings near public transit, and measures for improving indoor air quality to protect the health of building occupants. In 2010, the CALGreen Code became mandatory on a statewide basis. Effective January 2014, the scope of the CALGreen Code was expanded to all residential buildings, including high-rise residential, as well as to additions or alterations with increases in conditioned space.

LA Green Plan

The City of Los Angeles has addressed the issue of global climate change through implementation of the *Green L.A., An Action Plan to Lead the Nation in Fighting Global Warming (L.A. Green Plan)* and has updated its zoning Code to mandate increased energy efficiency measures in new construction. The *L.A. Green Plan* outlines the goals and actions that the City has established to reduce the generation and emission of GHGs from both public and private activities. According to the *L.A. Green Plan*, Los Angeles is committed to the goal of reducing emissions of CO_2 to 35 percent below 1990 levels. To achieve this, the City is increasing the generation of renewable energy, improving energy conservation and efficiency, and changing transportation and land use patterns to reduce dependence on automobiles.

LA Green Building Code

The City of Los Angeles *L.A. Green Building Code* (Ordinance No. 181480), which incorporates applicable provisions of the CALGreen Code, and in many cases outlines more stringent GHG reduction measures available to development projects in the City of Los Angeles is consistent with statewide goals and policies in place for the reduction of greenhouse gas emissions, including AB 32 and the corresponding Scoping Plan. Among the many GHG reduction measures outlined later in this Section, the *L.A. Green Building Code* requires new development projects to achieve a 20 percent reduction in potable water use and wastewater generation, meet and exceed Title 24 Standards adopted by the California Energy Commission on December 17, 2008, and meet 50 percent construction waste recycling levels. New development projects are required to comply with the *L.A. Green Building Code,* and therefore are generally considered consistent with statewide GHG-reduction goals and policies, including AB 32.

2016-2040 RTP/SCS

On April 7, 2016, SCAG adopted the 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy: Towards a Sustainable Future (RTP/SCS). Within the RTP/SCS, the SCS demonstrates the region's ability to attain and exceed the GHG emission-reduction targets set forth by CARB. The SCS sets forth a regional plan for integrating the transportation network and related strategies with an overall land use pattern that responds to projected growth, housing needs, changing demographics, and transportation demands. The regional vision of the SCS maximizes current voluntary local efforts that support the goals of SB 375, as evidenced by several Compass Blueprint Demonstration Projects and various county transportation improvements. The SCS focuses the majority of new housing and job growth in high-quality transit areas and other opportunity areas in existing main streets, downtowns, and commercial corridors, resulting in an improved jobs-housing balance and more opportunity for transit-oriented development. This overall land use development pattern supports and complements the proposed transportation network that emphasizes system preservation, active transportation, and transportation demand management measures. By analyzing the performance of land use changes and transportation strategies related to GHG emissions reductions, the 2016-2040 RTP/SCS concluded that GHG emissions per capita relative to 2005 emissions would be reduced by 8% in 2020, 18% in 2035, and 21% in 2040 in the SCAG region, which would exceed CARB's required reduction targets. These future GHG goals and conditions would be met in 2040 if investments and strategies detailed in the 2016-2040 RTP/SCS are fully realized.

Sustainable Communities and Climate Protection Act (SB 375)

California's Sustainable Communities and Climate Protection Act, also referred to as Senate Bill 375 (SB 375) became effective January 1, 2009. The goal of SB 375 is to help achieve AB 32's GHG emissions reduction goals by aligning the planning processes for regional transportation, housing, and land use. SB 375 requires CARB to develop regional reduction targets for GHGs, and prompts the creation of regional plans to reduce emissions from vehicle use throughout the state. California's 18 Metropolitan Planning Organizations (MPOs) have been tasked with creating "Sustainable Community Strategies" (SCS) in an effort to reduce the region's vehicle miles traveled (VMT) in order to help meet AB 32 targets through integrated transportation, land use, housing and environmental planning. Pursuant to SB 375, CARB set per-capita GHG emissions reduction targets from passenger vehicles for each of the State's 18 MPOs. For the SCAG region, the targets are set at eight percent below 2005 per capita emissions levels by 2020 and 13 percent below 2005 per capita emissions levels by 2035.

SCAQMD

SCAQMD has released draft guidance regarding interim CEQA GHG significance thresholds. In October 2008, SCAQMD proposed the use of a percent emission reduction target to determine significance for commercial/residential projects that emit greater than 3,000 metric tons of CO2e per year. On December 5, 2008, the SCAQMD Governing Board adopted the staff proposal for an interim GHG significance threshold for stationary source/industrial projects where SCAQMD is lead agency. However, SCAQMD has yet to formally adopt a GHG significance threshold for land use development projects (e.g.,

residential/commercial projects) and has formed a GHG Significance Threshold Working Group to further evaluate potential GHG significance thresholds.

a) Would the project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Less Than Significant Impact. Notwithstanding the regulatory plans and building code updates discussed above, there are no federal, state or local adopted thresholds of significance for addressing a residential project's GHG emissions pursuant to CEQA. Section 15064.4 of the CEQA Guidelines provides direction to lead agencies in determining the significance of the impacts of GHGs, however, it does not establish a specific threshold of significant. Since neither the SCAQMD nor the City of Los Angeles have adopted quantitative thresholds of significance for a residential project's generation of greenhouse gas emissions, the following analysis is based on a combination of the requirements outlined in the CEQA Guidelines. As required in Section 15064.4 of the CEQA Guidelines, this analysis includes an impact determination based on the following: (1) The extent to which the project may increase or reduce greenhouse gas emissions as compared to the existing environmental setting; (2) Whether the project emissions exceed a threshold of significance that the lead agency determines applies to the project; (3) The extent to which the project complies with regulations or requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of greenhouse gas emissions. The Guidelines do not mandate the use of absolute numerical thresholds to measure the significance of greenhouse gas emissions.

For purposes of this analysis, a significant impact would occur if the Proposed Project's design features are not substantially consistent with the applicable policies and/or regulations outlined in the Scoping Plan, SB 375, SCAG's RTP/SCS, and the LA Green Building Code.

Construction

Construction of the Proposed Project would emit GHG emissions through the combustion of fossil fuels by heavy-duty construction equipment and through vehicle trips generated by construction workers traveling to and from the Project Site. These impacts would vary day to day over the approximate 34-month duration of construction activities.

Emissions of GHGs were calculated using CalEEMod *Version 2016.3.1* for the construction duration of the Proposed Project and the results of this analysis are presented in Table III-6, Project Construction-Related Greenhouse Gas Emissions. As shown in Table III-6, the total GHG emissions from construction activities related to the Proposed Project would be approximately 2,491.42 metric tons with the greatest annual emissions of 926.71 metric tons occurring in year 2018.

Table III-6
Proposed Project Construction-Related Greenhouse Gas Emissions

Year	CO_2e Emissions (Metric Tons per Year) [a]
2017	609.62
2018	926.71
2019	827.66
2020	127.43
Total Construction GHG Emissions	**2,491.42**

[a] Construction CO_2 values were derived using CalEEMod Version 2016.3.1 Calculation data and results are provided in Greenhouse Gas Emissions Calculations Worksheets in the case file..

Operation

The average daily GHG emissions generated by the existing Project Site have been estimated utilizing CalEEMod as recommended by the SCAQMD. Table III-7, Existing Project Site Greenhouse Gas Emissions, presents the GHG emissions associated with existing operations at the Project Site. As shown in Table III-7, the existing industrial operations on the Project Site generate approximately 2,254.11 CO_2e $MTYCO_2e$.

Table III-7
Existing Project Site Greenhouse Gas Emissions

Emissions Source	CO_2e Emissions (Metric Tons per Year)
Area	<0.01
Energy	861.93
Mobile	1,082.42
Waste	73.76
Water	236.00
Total	**2,254.11**

Calculation data and results provided in Greenhouse Gas Emissions Calculations Worksheets in the case file.

Proposed Project GHG Emissions

The GHG emissions resulting from operation of the Proposed Project, which involves the usage of on-road mobile vehicles, electricity, natural gas, water, landscape equipment and generation of solid waste and wastewater, were calculated under two separate scenarios in order to illustrate the effectiveness of the Project's compliance with AB 32, the *L.A. Green Building Code, SCAG's 2016-2040 RTP/SCS, SB 375,* and other mitigating features that would be effective in reducing GHG emissions, such as the Project Site being an infill lot, its proximity to transit. For purposes of demonstrating the Proposed Project's consistency with AB32 and the State's goals for reducing GHG emissions to 1990 levels by 2020, the Proposed Project's greenhouse gas emissions were quantified to reflect the Project's design features such as being an infill development with applicable trip credits for increased density, walkability, transit

accessibility, proposing Energy Star-rated appliances, and as otherwise being built in compliance with all applicable Green Building Code requirements and applicable regulatory measures (i.e., compliance with Rule 403 (dust suppression), low VOC coatings, increasing energy conservation beyond Title 24, implementing on-site solid waste recycling program).

As shown in Table III-8, below, the Proposed Project's annual generation of GHG emissions is estimated to be 5,101.48 CO_2e MTY, representing an approximate 2,847.37 CO_2e MTY increase as compared to the existing emissions generated on-site under current conditions. Because the Proposed Project would be replacing existing uses, the annual net increase in GHG emissions is estimated to be 2,847.37 CO_2e MTY.

For comparative purposes, the GHG emissions from a similar project of the same size and proposed land uses, but without the GHG-reducing design features described above for the Proposed Project was quantified. This comparative analysis demonstrates the effect the Proposed Project's compliance with SB 375's siting criteria on an infill lot in a High Priority Transit Area, the Project's re-use of existing buildings, and the structural and operational design features such as installing energy efficient lighting, low flow plumbing fixtures, Energy Star-rated appliances, and implementing a construction and operational recycling program during the life of the Proposed Project would have with respect to reducing GHG emissions. As shown in Table III-8, the Proposed Project's consistency with applicable plans, policies and code requirements imposed through the City of Los Angeles Green Building Ordinance for purposes of conserving resources and reducing GHG emissions, yields an approximate 61 percent reduction as compared to a base project without such design features and compliance measures.

Table III-8
Proposed Project Operational Greenhouse Gas Emissions

Emissions Source	Estimated Project Generated CO_2e Emissions (Metric Tons per Year)		
	Base Project Without GHG Reduction Features	Proposed Project	Percent Reduction
Area	6.43	6.43	0%
Energy	2,179.03	1,905.56	13%
Mobile (Motor Vehicles)	4,469.16	2,750.29	38%
Waste	105.37	52.68	50%
Water	379.34	303.47	20%
Construction Emissions [a]	83.05	83.05	--
Project Total	**7,222.38**	**5,101.48**	**29%**
Less Existing Project Site	-- [b]	*-2,254.11*	--
Project NET TOTAL	**7,222.38**	**2,847.37**	**61%**

[a] *The total construction GHG emissions were amortized over 30 years and added to the operation of the Project.*
[b] *The existing uses were not deducted from the Project Without GHG Reduction Measures to demonstrate the benefit of developing on an infill lot with an active commercial land use. The Project will displace an estimated 440 existing vehicle trips daily (see Traffic Study Table 5) by displacing the existing warehouse land uses. If an alternative project site were selected, it is reasonable to assume the existing warehouse uses would continue to generate GHG emissions in addition to the Project's emissions.*
Calculation data and results provided in Greenhouse Gas Emissions Calculations Worksheets, included in the case file.

Through required implementation of the L.A. Green Building Code, the Project's mixed-use design, and the Project Site's location on an infill site, the Proposed Project would be consistent with local and statewide goals and policies aimed at reducing the generation of GHGs, including CARB's AB 32 Scoping Plan aimed at achieving 1990 GHG emission levels by 2020. The following describes the benefits and applicability of the Proposed Project's compliance measures and design features that serve to reduce the carbon footprint of the development:

1. **Infill Development.** The Proposed Project is located on an infill site that is currently developed with light industrial land uses and that is located within a transit priority area. The Project Site is also located in an area that is adequately served by existing infrastructure and would not require the extension of utilities or roads to accommodate the proposed development.

2. **Transit Priority Area.** The Proposed Project is also located in a Transit Priority Area as defined by CEQA Sections 21099 and 21064.3. Studies by the California Department of Transportation, the U.S. Environmental Protection Agency and the Metropolitan Transportation Commission have found that focusing development in areas served by transit can result in local, regional and statewide benefits including reduced air pollution and energy consumption. The Proposed Project's mixed-use nature and close proximity to regional transit would result in fewer trips and a reduction to the Proposed Project's vehicle miles traveled (VMTs) as compared to the base trip rates for similar uses that are not located in close proximity to transit.

3. **Energy Conservation**. As mandated by the L.A. Green Building Code, the Proposed Project would be required to exceed Title 24 standards and include ENERGY STAR appliances.

4. **Solid Waste Reduction Efforts**. The Proposed Project would be subject to construction waste reduction of at least 50 percent. In addition, operation of the Project is subject to AB 939 requirements to divert 50 percent of solid waste to landfills through source reduction, recycling, and composting. As required by the California Solid Waste Reuse and Recycling Access Act of 1991, the Proposed Project would provide adequate storage areas for collection and storage of recyclable waste materials.

5. **Water Conservation**. The Project would be required to provide a schedule of plumbing fixtures and fixture fittings that reduce potable water use within the development by at least 20 percent. It must also provide irrigation design and controllers that are weather- or soil moisture-based and automatically adjust in response to weather conditions and plants' needs. Therefore, the Project's generation of GHG emissions would not make a project-specific or cumulatively considerable contribution to GHG emissions, and impacts would be less than significant.

Consistency with AB 32

The California Air Resources Board's (CARB's) AB 32 Scoping Plan (2008) and First Update (2014) identify the state programs necessary to meet the 2020 target. The Scoping Plan is a plan for reducing greenhouse gas emissions statewide, but does not itself establish the regulations by which it is to be implemented; rather, it sets out how existing regulations, and new ones yet to be adopted at the time of the Scoping Plan, will be used to reach AB 32's emission reduction goal. Neither AB 32 nor the Scoping Plan establishes regulations for specific development projects evaluated under CEQA. Thus, for purposes

of this analysis, the extent to which the Proposed Project complies with AB 32 is based on the following qualitative discussion on consistency with the Scoping Plan measures that are generally relevant to land use development. As discussed below, the Proposed Project would be substantially consistent with the measures associated with maximizing energy efficiency, employing green building strategies, recycling waste, and conserving water.

Consistency with Applicable AB 32 Scoping Plan Measures

Energy Efficiency. Maximize energy efficiency building and appliance standards and pursue additional efficiency efforts including new technologies, and new policy and mechanisms. Pursue comparable investment in energy efficiency from all retail providers of electricity in California.	**Consistent**. The Proposed Project would be designed and constructed to meet LA Green Building Code standards by including several measures designed to reduce energy consumption.
Renewables Portfolio Standard. Achieve 33 percent renewable energy mix statewide.	**Consistent**. The Proposed Project would use energy from the Los Angeles Department of Water and Power (LADWP), which has goals to diversify its portfolio of energy sources to increase the use of renewable energy.
Green Building Strategy. Expand the use of green building practices to reduce the carbon footprint of California's new and existing inventory of buildings.	**Consistent**. The Proposed Project would be designed and constructed to meet Cal Green building standards and will include several measures designed to reduce energy consumption.
Recycling and Waste. Reduce methane emissions at landfills. Increase waste diversion, composting and other beneficial uses of organic materials and mandate commercial recycling. Move toward zero waste.	**Consistent**. The Proposed Project would result in a less than significant impact on landfill capacity. (see response to Checklist Question 17(f), below)
Water. Continue efficiency programs and use cleaner energy sources to move and treat water.	**Consistent**. The Proposed Project would use water-efficient landscaping including point-to-point irrigation and a smart controller drip system to reduce water use.
Measures not listed are not applicable to this Proposed Project. *Source: Parker Environmental Consultants, 2016.*	

Consistency with SB 375

As discussed above, SB 375 requires integration of planning processes for transportation, land-use and housing. Under the bill, each Metropolitan Planning Organization would be required to adopt a Sustainable Community Strategy to encourage compact development that reduces passenger vehicle miles traveled and trips so that the region will meet the target provided in the Scoping Plan, created by CARB, for reducing GHG emissions. SB 375 requires SCAG to direct the development of the RTP/SCS for the region. A discussion of the Project's consistency with the 2016-2040 RTP/SCS is provided further below.

Consistency with the 2016-2040 RTP/SCS

The Proposed Project would be consistent with the following key GHG reduction strategies in SCAG's 2016-2040 RTP/SCS which are based on changing the region's land use and travel patterns:

- Compact growth in areas accessible to transit;
- More multi-family housing;
- Jobs and housing closer to transit;
- New housing and job growth focused in High Quality Transit Areas (HQTA); and
- Biking and walking infrastructure to improve active transportation options, transit access.

The Proposed Project represents an infill development within an existing urbanized area that would concentrate new residential and neighborhood serving commercial uses within a High Priority Transit Area. In addition, the Proposed Project would also provide bicycle storage areas for Project residents and guests. The Proposed Project would provide residents and visitors with convenient access to public transit and opportunities for walking and biking, which would facilitate a reduction in vehicle miles traveled and related vehicular GHG emissions. These and other measures would further promote a reduction in vehicle miles traveled and subsequent reduction in GHG emissions, which would be consistent with the goals of SCAG's 2016–2040 RTP/SCS.

Consistency with L.A. Green Building Code

The Los Angeles Green Building Ordinance requires that all projects filed on or after January 1, 2014, must comply with the L.A. Green Building Code. Mandatory measures under the L.A. Green Building Code that would help reduce GHG emissions include short- and long-term bicycle parking measures; designated parking measure; and electric vehicle supply wiring. The Proposed Project would comply with these mandatory measures as the Proposed Project would provide 46 short-term bicycle parking spaces and 383 long-term bicycle parking spaces; and would include a minimum number of equal to five percent of the total number of parking spaces with Electric Vehicle (EV) Charging Stations, pursuant to the L.A. Green Building Code. Furthermore, the L.A. Green Building Code includes energy and conservation measures that would further increase energy efficiency of the Project, such as, but not limited to, installing Energy Star rated appliances, installation of a submeter, and installation of water-conserving fixtures. Therefore, the Project would be consistent with the L.A. Green Building Code.

As demonstrated above, the Proposed Project's design features and compliance with regulatory measures would be consistent with local and statewide goals and policies aimed at reducing the generation of GHGs, including CARB's AB 32 Scoping Plan aimed at achieving 1990 GHG emission levels by 2020. The Proposed Project would adhere to the following regulatory compliance measures that would further reduce its GHG emissions. Therefore, the Project's generation of GHG emissions would not make a project-specific or cumulatively considerable contribution to conflicting with an applicable plan, policy or regulation for the purposes of reducing the emissions of greenhouse gases and, the Proposed Project's impact would be less than significant.

Regulatory Compliance Measures:

- The Proposed Project shall comply with the low- and non-VOC requirements established by the AQMD for architectural coatings (AQMD Rule 1113).

- To encourage carpooling and the use of electric vehicles by Project residents and visitors, pursuant to LAMC Section 99.04.106.4.1, at least five (5)% of the total code-required parking spaces provided for all types of parking facilities, but in no case less than one location, shall be capable of supporting future electric vehicle supply equipment (EVSE). Plans shall indicate the proposed type and location(s) of EVSE and also include raceway method(s), wiring schematics and electrical calculations to verify that the electrical system has sufficient capacity to simultaneously charge all electric vehicles at all designated EV charging locations at their full

rated amperage. Plan design shall be based upon Level 2 or greater EVSE at its maximum operating ampacity. Only raceways and related components are required to be installed at the time of construction. When the application of the 5% results in a fractional space, round up to the next whole number. A label stating "EVCAPABLE" shall be posted in a conspicuous place at the service panel or subpanel and next to the raceway termination point.

b) Would the project conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Less Than Significant Impact. As described above and in Question VII(a), the Proposed Project would be consistent with local and statewide goals and policies aimed at reducing the generation of GHGs, including CARB's AB 32 Scoping Plan aimed at achieving 1990 GHG emission levels by 2020. Therefore, the Proposed Project's generation of GHG emissions in excess of existing baseline would not make a project-specific or cumulatively considerable contribution to conflicting with an applicable plan, policy or regulation for the purposes of reducing the emissions of greenhouse gases and, the Proposed Project's impact would be less than significant.

Cumulative Impacts

The GHG emissions from a mixed-use development with residential, office, and commercial uses is relatively very small in comparison to state or global GHG emissions and, consequently, they would, in isolation, have no significant direct impact on climate change. Rather, it is the increased accumulation of GHG from more than one project and many sources in the atmosphere that may result in global climate change, which can cause the adverse environmental effects previously discussed. Accordingly, the threshold of significance for GHG emissions determines whether a project's contribution to global climate change is "cumulatively considerable." Many regulatory agencies, including the SCAQMD, concur that GHG and climate change should be evaluated as a potentially significant cumulative impact, rather than a project direct impact. Accordingly, the GHG analysis presented above analyzes whether the Proposed Project's impact would be cumulatively considerable using a plan-based approach (and quantitative and qualitative analysis) to determine the Proposed Project's contributing effect on global warming. As concluded above, the Proposed Project's generation of GHG emissions would represent a 61% reduction in GHG emissions with GHG reduction measures in place as compared to the Proposed Project's emissions in the absence of all of the GHG reducing measures and project design features. Furthermore, the Proposed Project would be consistent with all applicable local ordinances, regulations and policies that have been adopted in furtherance of the state and City's goals of reducing GHG emissions. Thus, the Proposed Project would not make a cumulatively considerable contribution to GHG emissions and impacts would be less than significant.

VIII. HAZARDS AND HAZARDOUS MATERIALS

The following section summarizes and incorporates the reference information from the following report, Phase I Environmental Site Assessment Update Report, Multi-Tenant Commercial Property 135, 141, & 153 West Avenue 34 and 3401 & 3433 Pasadena Avenue, Los Angeles California 90031, prepared by Orswell & Kasman, Inc. ("OKI"), dated April 28, 2015 ("Phase I ESA").

a) Would the project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

Less Than Significant Impact. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a significant impact may occur if a project would involve the use or disposal of hazardous materials as part of its routine operations, or would have the potential to generate toxic or otherwise hazardous emissions that could adversely affect sensitive receptors. The Proposed Project includes the construction of a mixed-use project with up to 372 residential units, 30,000 square feet of creative office space, and 10,000 square feet of neighborhood-serving retail. During the operation of the Proposed Project, no hazardous materials other than modest amounts of typical cleaning supplies and solvents used for housekeeping and janitorial purposes would routinely be transported to the Project Site. The use of these substances would comply with State Health Codes and Regulations.

Construction could involve the use of potentially hazardous materials, including vehicle fuels, oils, and transmission fluids. However, all potentially hazardous materials would be contained, stored, and used in accordance with manufacturers' instructions and handled in compliance with applicable standards and regulations, which include requirements for disposal of hazardous materials at a facility licensed to accept such waste based on its waste classification and the waste acceptance criteria of the permitted disposal facilities. Therefore, the Proposed Project would not create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials and impacts would be less than significant.

b) Would the project create significant hazard to the public or the environment through reasonably foreseeable upset and accidental conditions involving the release of hazardous materials into the environment?

Potentially Significant Impact Unless Mitigation Incorporated. A significant impact may occur if a project utilizes quantities of hazardous materials as part of its routine operations and could potentially pose a hazard to nearby sensitive receptors under accident or upset conditions.

A review of the Sanborn Fire Insurance Map collections show that the Project Site was occupied by six residences, a barn, and three sheds in 1906. In 1920, the Project Site was occupied by 21 residences, nine sheds, seven garages, a bakery, oil houses, grease houses, a tool house, an office, and an auto repair canopy. By 1951, the Project Site was occupied by 22 residences, eight garages, a bakery, and 10 commercial buildings used for office, warehousing, storage, and workshops. The Project Site has experienced many construction and demolitions of numerous buildings that were used for a variety of land uses, including residential, office, commercial, and industrial. A complete historical record of the building activities and owners of the buildings on the Project Site are listed in the Phase I ESA. The Project Site is currently occupied by light manufacturing facilities.

Site Reconnaissance / Database Search

On April 17, 2015, an ASTM Environmental Professional conducted a site inspection of the Project Site. The purpose of the Phase I ESA was to identify business risks related to the Project Site associated with environmental conditions. No signs were observed on the ground-mounted or pole-mounted electrical

transformers on-site indicating the presence of polychlorinated biphenyls (PCBs). No signs of illegal dumping or distressed vegetation were observed on the Project Site. There was no evidence of underground storage tanks (USTs), septic tanks or wells on the Project Site, and there was no indication of obvious contamination on the Project Site.

Database research determined two adjacent properties, Metro Rail Pasadena Blue Line (between Avenue 33 and French Avenue) and the former Welch's Uniform Rental Facility site (3505 Pasadena Avenue), are recorded as hazardous waste sites. The soils underneath these properties are contaminated with lead, polychlorinated biphenyls (PCBs), tetrachloroethane (PCE), and trichloroethylene (TCE). However, there is no indication from a review of regulatory records and a Project Site inspection that the Project Site has had any problems concerning the storage, usage or disposal of hazardous materials in relation to these properties. No areas of significant environmental concern were observed during the Project Site reconnaissance. The Phase I ESA revealed no evidence of Recognized Environmental Conditions (RECs), Historical RECs (HRECs), or Controlled RECs (CRECs) in connection with the property. Pursuant to [Q] Condition A.1(e), the Applicant would be required to satisfy any requirements from the State Department of Toxic Substances Control (DTSC) in relation to potential contamination on the Project Site. Prior to the issuance of any clearances by the Department of City Planning (DCP), property owners are required to provide to DCP a letter from DTSC that establishes DTSC's satisfaction that the Project Site currently meets DTSC requirements for the proposed use or, alternatively, that establishes DTSC's satisfaction with the property owner's contamination testing plan for the proposed use. Thus, with compliance with this measure hazards associated with potential risk of upset would be less than significant.

Asbestos-Containing Materials (ACMs)

Commercial use of asbestos containing materials (ACM) as a building material was banned by the federal government in 1989. Since the on-site buildings were built prior to 1989, asbestos-containing materials may be present. No asbestos testing was conducted by OKI. Exposure to ACMs during demolition activities would be harmful to construction workers. As required under Environmental [Q] Condition C.12, a complete asbestos survey would be conducted prior to the demolition activities to identify all sources of asbestos, as required by the U.S. EPA National Emission Standard for Hazardous Air Pollutants (NESHAP) regulation and the South Coast Air Quality Management District's (SCAQMD's) Rule 1403. Bulk samples of all materials that are suspected of containing asbestos would be collected and analyzed for asbestos content. Asbestos removal is stringently controlled by Federal Regulations and SCAQMD Rule 1403. Removal of asbestos in a building is not unusual and can be readily accomplished. In accordance with the EPA's NESHAP regulation and SCAQMD's Rule 1403, all materials that are identified as ACMs would be removed by a trained and licensed asbestos abatement contractor. The asbestos removal operations would be conducted in accordance with CAL-OSHA Asbestos for the Construction Industry Standard, SCAQMD and EPA rules and regulations and industry standards. The contractor selected for the removal process would be chosen based on experience, reputation, and relationship with local agencies such as SCAQMD and OSHA regional offices. Generally, asbestos removal operations are low risk. When following asbestos-related regulations, the possibility of exposure to airborne asbestos fibers from asbestos removal projects is limited. The SCAQMD has very specific regulations for asbestos emissions. Provided the identification, removal and disposal of ACMs from the Project Site is conducted in compliance with Environmental [Q] Condition C.12 and such activities

follow the various guidelines required by SCAQMD Rule 1403, as well as all other applicable state and federal rules and regulations, hazardous materials impacts relative to exposure to asbestos would be less than significant.

Lead-Based Paint (LBPs)

The federal government also banned the use of lead in household paints in 1978. Based on the age of the on-site buildings, there is a potential for lead-based paint at the Project Site. Exposure of workers to lead-based paint during demolition of the existing structures would be a hazardous to the health of the construction workers. A qualified lead-paint abatement consultant would be required to comply with applicable state and federal rules and regulations governing lead paint abatement. Compliance with mandatory state and federal regulations would ensure that the potential lead-based paint on-site would be handled properly and impacts associated with the exposure to lead-based paint would be less than significant. Further, the Proposed Project would implement Mitigation Measure MM-HAZ-1 (below) that would require a lead-based paint survey prior to the issuance of a demolition permit. Incorporation of Mitigation Measure MM-HAZ-1 would further ensure that impacts relating to lead-based paint would be less than significant.

With the Proposed Project's compliance with [Q] Condition A.1(e), mandatory state and federal regulatory compliance measures, and Mitigation Measure MM-HAZ-1 (below) potential impacts associated with the release of a hazardous material would be less than significant.

Mitigation Measure:

MM-HAZ-1 (Existing Toxic/Hazardous Construction Materials):

- (Lead Paint) Prior to the issuance of any permit for demolition or alteration of the existing structure(s), a lead-based paint survey shall be performed to the written satisfaction of the Department of Building and Safety. Should lead-based paint materials be identified, standard handling and disposal practices shall be implemented pursuant to OSHA regulations.

c) Would the project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

Potentially Significant Unless Mitigation Incorporated. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a project would normally have a significant impact to hazards and hazardous materials if: (a) the project involved a risk of accidental explosion or release of hazardous substances (including, but not limited to oil, pesticides, chemicals or radiation); or (b) the project involved the creation of any health hazard or potential health hazard. The determination of significance shall be made on a case-by-case basis considering the following factors: (a) the regulatory framework for the health hazard; (b) the probable frequency and severity of consequences to people or property as a result of a potential accidental release or explosion of a hazardous substance; (c) the degree to which project design will reduce the frequency or severity of a potential accidental release or explosion of a hazardous substance; (d) the probable frequency and severity of consequences to people from exposure to the health

hazard; and (e) the degree to which project design would reduce the frequency of exposure or severity of consequences of exposure to the health hazard.

There are three Los Angeles Unified School District (LAUSD) schools that are approximately within one-quarter mile from the Project Site:

- Hillside Elementary School, located at 120 E. Avenue 35 (over 100 feet east of the Project Site);
- Loreta Street Elementary School, located at 3408 Arroyo Seco Avenue (over 400 feet northwest of the Project Site); and
- Los Angeles Leadership Academy Charter School, located at 234 E. Avenue 33 (over 900 feet east of the Project Site).

The Proposed Project has the potential to expose students and staff of the identified schools to potentially hazardous materials, substances, or waste during the construction period. Localized construction impacts associated with noise, dust and localized air quality emissions, and construction traffic/hauling activities generally occur within an area of 500 feet or less of the Project Site. The school that would most likely experience the highest construction impacts is Hillside Elementary School. The Proposed Project would provide appropriate construction measures to reduce the Project's impacts upon the nearby school facility. Further, the Project's proposed haul route would be designed to minimize, to the greatest degree possible, hauling impacts on Hillside Elementary School. The proposed haul route traveling to and from the I-5 Freeway would utilize Avenue 34, Pasadena Avenue, Avenue 33, Lacy Street, and Avenue 26. Hauling activity utilizing Pasadena Avenue will pass the rear side of Hillside Elementary School, which is improved with landscaping, trees and the façade of school structures. The active playground areas for Hillside Elementary are located towards the east of the campus fronting on Griffin Avenue and Avenue 35, which would not be utilized by hauling trucks. Implementation of Mitigation Measures MM-HAZ-2 and MM-HAZ-3, below, would reduce any construction impacts related to nearby schools to less than significant levels.

Mitigation Measures:

MM-HAZ-2 Construction Activity Near Schools

- The Applicant and contractors shall maintain ongoing contact with the administrators of Hillside Elementary School, Loreta Street Elementary School, and Los Angeles Leadership Academy Charter School. The administrative offices shall be contacted when demolition, grading and construction activity begin on the project site so that students and their parents will know when such activities are to occur. The developer shall obtain school walk and bus routes to the schools from either the administrators or from the LAUSD's Transportation Branch (323)342-1400 and guarantee that safe and convenient pedestrian and bus routes to the school be maintained.
- The Applicant shall install appropriate traffic signs around the site to ensure pedestrian and vehicle safety.
- There shall be no staging or parking of construction vehicles, including vehicles to transport workers on Pasadena Avenue, adjacent to the school.

- Due to noise impacts on the schools, no construction vehicles or haul trucks shall be staged or idled on Pasadena Avenue, adjacent to the school, during school hours.

MM-HAZ-3 Schools Affected by Haul Route

- Haul route scheduling shall be sequenced to minimize conflicts with pedestrians, school buses and cars at the arrival and dismissal times of the school day. Haul route trucks shall not be routed past the school during periods when school is in session especially when students are arriving or departing from the campus.

Furthermore, no hazardous materials other than modest amounts of typical cleaning supplies and solvents used for housekeeping and janitorial purposes would be typically associated with the operation and activities of the proposed land uses, and the use of these substances would comply with State Health Codes and Regulations. The Proposed Project's operational impacts would have a less than significant impact.

d) Would the project be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

Less Than Significant Impact. California Government Code Section 65962.5 requires various state agencies to compile lists of hazardous waste disposal facilities, unauthorized releases from underground storage tanks, contaminated drinking water wells, and solid waste facilities from which there is known migration of hazardous waste, and submit such information to the Secretary for Environmental Protection on at least an annual basis. A significant impact may occur if the Project Site is included on any of the above lists and poses an environmental hazard to surrounding sensitive uses.

Environmental records were reviewed to determine if there are any on- or off-site sources of documented environmental concerns. The Project Site was listed on the Resource Conservation and Recovery Act – Hazardous Waste Generator with no reported violations. The following are database records of hazardous sites within a ½-mile of the Project Site: three Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) sites, a RCRA – large quantity hazardous waste generator site (Former Welch's Uniform Site), a RCRA - small quantity waste generator site (Hillside Elementary School), five CAL-EPA sites, and three active non-LUST RWQCB Cleanup sites. However, OKI has determined that it is unlikely that any contaminants from these sites would have a significant impact on the Project Site.

Based on the absence of any outstanding violations or reported releases, as well as the results from a previous on-site assessments, the Project Site poses no significant environmental concerns, and there is no evidence of RECs in connection with the Project Site. With the Proposed Project's compliance with mandatory state and federal regulatory compliance measures, potential impacts associated with the release of a hazardous material would be less than significant.

e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?

No Impact. A significant project-related impact may occur if the Proposed Project were placed within a public airport land use plan area, or within two miles of a public airport, and subject to a safety hazard. The Project Site is not located within two miles of a public airport. Furthermore, the Project Site is not in an airport hazard area. Therefore, no impact would occur.

f) For a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area?

No Impact. This question would apply to the Proposed Project only if it were in the vicinity of a private airstrip and would subject area residents and workers to a safety hazard. The Project Site is not within the vicinity of a private airstrip. Therefore, no impact would occur.

g) Would the project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

No Impact. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a project would normally have a significant impact to hazards and hazardous materials if: (a) the project involved possible interference with an emergency response plan or emergency evacuation plan. According to the *L.A. CEQA Thresholds Guide*, the determination of significance shall be made on a case-by-case basis considering the degree to which the project may require a new, or interfere with an existing emergency response or evacuation plan, and the severity of the consequences. The Project Site is not located on an identified disaster route or an adopted emergency response or evacuation plan.[15,16] Development of the Project Site may require temporary and/or partial street closures due to construction activities. Nonetheless, while such closures may cause temporary inconvenience, they would not be expected to substantially interfere with emergency response or evacuation plans. The Proposed Project would not cause permanent alterations to vehicular circulation routes and patterns, impede public access, or travel upon public rights-of-way. Therefore, the Proposed Project would not be expected to interfere with any adopted emergency response plan or emergency evacuation plan, and no impact would occur.

h) Would the project expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?

No Impact. The Project Site is located in a highly urbanized area of the City of Los Angeles and does not include wildlands or high fire hazard terrain or vegetation. The Project Site is not located in a Very High

---

[15] *Los Angeles County Department of Public Works, City of Los Angeles Central Area Disaster Route Map, August 13, 2008.*

[16] *City of Los Angeles, Safety Element Exhibit H, Critical Facilities and Lifeline Systems in the City of Los Angeles, April 1995.*

Fire Hazard Severity Zone (VHFHSZ).[17] Therefore, no impacts from wildland fires are expected to occur.

Cumulative Impacts

Less Than Significant Impact. Development of the Proposed Project in combination with the three related projects has the potential to increase to some degree the risks associated with the use and potential accidental release of hazardous materials in the City of Los Angeles. However, the potential impact associated with the Proposed Project would be less than significant and, therefore, not cumulatively considerable. With respect to the related projects, the potential presence of hazardous substances would require evaluation on a case-by-case basis, in conjunction with the development proposals for each of those properties. Further, local municipalities are required to follow local, state, and federal laws regarding hazardous materials, which would further reduce impacts associated with the related projects. Therefore, with compliance with local, state, and federal laws pertaining to hazardous materials, the Proposed Project in conjunction with related projects would be expected to result in less-than-significant cumulative impacts with respect to hazardous materials.

IX. HYDROLOGY AND WATER QUALITY

a) Would the project violate any water quality standards or waste discharge requirements?

Less Than Significant Impact. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a project would normally have a significant impact on surface water quality if discharges associated with the project would create pollution, contamination, or nuisance as defined in Section 13050 of the California Water Code or that cause regulatory standards to be violated, as defined in the applicable National Pollution Discharge Elimination System (NPDES) stormwater permit or Water Quality Control Plan for the receiving body of water. A significant impact may occur if a project would discharge water which does not meet the quality standards of agencies which regulate surface water quality and water discharge into stormwater drainage systems. Significant impacts would also occur if a project does not comply with all applicable regulations with regard to surface water quality as governed by the State Water Resources Control Board (SWRCB) through its nine Regional Boards. The Project Site lies within the Los Angeles Regional Water Quality Control Board (RWQCB). Applicable regulations include compliance with NPDES permitting system, LAMC Article 4.4, and the low impact development requirements, which reduces potential water quality impacts during the construction and operation of a project.

Construction

Three general sources of potential short-term, construction-related stormwater pollution associated with the Proposed Project include: (1) the handling, storage, and disposal of construction materials containing pollutants; (2) the maintenance and operation of construction equipment; and (3) earth moving activities which, when not controlled, may generate soil erosion via storm runoff or mechanical equipment.

---

[17] *City of Los Angeles, Department of City Planning, City of Los Angeles Zoning Information and Map Access System (ZIMAS), website: www.zimas.lacity.org, accessed February 2016.*

Prior to issuance of a grading permit, the Applicant shall obtain coverage under the State Water Resources Control Board NPDES Construction General Permit. The Applicant shall provide the Waste Discharge Identification Number to the City of Los Angeles to demonstrate proof of coverage under the Construction General Permit. A Storm Water Pollution Prevention Plan (SWPPP) would be prepared and implemented for the Proposed Project in compliance with the requirements of the Construction General Permit. The SWPPP shall identify construction Best Management Practices (BMPs) to be implemented to ensure that the potential for soil erosion and sedimentation is minimized and to control the discharge of pollutants in stormwater runoff as a result of construction activities.

The SWPPP would incorporate the required implementation of Best Management Practices (BMPs) for erosion control and other measures to meet the NPDES requirements for stormwater quality. Implementation of the BMPs identified in the SWPPP and compliance with the NPDES and City discharge requirements would ensure that the construction of the Proposed Project would not violate any water quality standards or discharge requirements, or otherwise substantially degrade water quality. Additionally, City of Los Angeles Ordinance No. 173,494 further sets procedures for stormwater pollution control for the planning and construction of development and redevelopment projects. As such, the implementation of the code-required SWPPP and compliance with Ordinance No. 173,494 would ensure that the Proposed Project's construction-related water quality impacts would be less than significant.

Operation

The Project Site is currently developed with four light manufacturing and warehouse buildings and paved loading areas and surface parking. Aside from small landscaped areas, the Project Site is completely covered with impervious surfaces. Thus, nearly 100 percent of the surface water runoff from the Project Site is directed to adjacent storm drains and does not percolate into the groundwater table beneath the Project Site. Forma Engineering Inc. prepared a Drainage Report for the Project Site, dated February 2, 2016. As discussed in the Drainage Report, the Project Site currently drains from north to south, and rainfall is conveyed via surface flow to multiple drainage paths before being discharged to various points on Avenue 34. In the Project Site's current layout, nearly 100 percent of rainfall runoff from the Project Site is conveyed to Avenue 34.

The Proposed Project would maintain the Project Site at nearly 100 percent impervious area and would continue to generate surface water runoff. The Proposed Project would not be expected to increase surface water runoff compared to existing conditions, because the Proposed Project would be required to comply with low impact development (LID) requirements, further discussed below.

In November 2012, the Los Angeles adopted Order No. R4-2012-0175 the NPDES Stormwater Permit for the County of Los Angeles and cities within (NPDES No. CASOO4001). The primary objectives of the stormwater program requirements are to: (1) effectively prohibit non-stormwater discharge and (2) reduce the discharge of pollutants from stormwater conveyance systems to the maximum extent practicable statutory standard.

The Proposed Project would be required to comply with the City of Los Angeles Stormwater and Urban Runoff Pollution Control Ordinance (Ordinance No. 172,176, effectuated October 1998), which established LAMC Sections 64.70 through 64.70.13 and set the foundation for stormwater management in the City of Los Angeles. Since the adoption of the Stormwater and Urban Runoff Pollution Control Ordinance, many additional ordinances have passed to keep LAMC Article 4.4, Stormwater and Urban Runoff Pollution Control, up to date. Approved in October 2011, the LID Ordinance (Ordinance No. 181,899) expanded LAMC Article 4.4 and expanded the applicability of the existing Standard Urban Stormwater Mitigation Plan (SUSMP) requirements by imposing rainwater low impact development strategies on projects that require building permits. LAMC Article 4.4, including LID requirements, was recently amended in August 2015 with the approval of Ordinance No. 183,833, which incorporates the requirements of the Municipal Separate Storm Sewer (MS4) Permit. The Proposed Project would be required to prepare a LID Plan and demonstrate compliance with the LID requirements and standards and retain or treat the first ¾-inch of rainfall in a 24-hour period or the rainfall from an 85th percentile 24-hour runoff event, whichever is greater.[18]

The Proposed Project falls within the second tier of the LID requirements, which state that development projects that involve five or more units intended for residential use and result in an alteration of at least 50 percent or more of the impervious surfaces on an existing developed site, the entire site must comply with the standards and requirements of Article 4.4 of Chapter VI of the LAMC and with the Development Best Management Practices Handbook. The Project Site shall be designed to manage and capture stormwater runoff to the maximum extent practicable utilizing various LID techniques, including but not limited to infiltration, evapotranspiration, capture for use, and treated through high removal efficiency bio-filtration / bio-treatment systems of all runoff on-site (listed in priority order). On-site stormwater management techniques must be designed so that no stormwater runoff leaving the Project Site for at least the volume of water produced by the Stormwater Quality Design Volume (SWQDv). Development and redevelopment projects are required to prepare a LID Plan, which comply with the provisions of the Development Best Management Practices Handbook. If partial or complete on-site compliance of any type is technically infeasible, the Project Site and LID Plan shall be required to manage the flow from the SWQDv on-site in order to maximize on-site compliance. For the remaining runoff that cannot feasibly be managed on-site, the Proposed Project would be required to implement off-site mitigation on public and/or private land within the same sub-watershed as defined by the MS4 Permit.[19] Compliance with the LID requirements would reduce the amount of surface water runoff leaving the Project Site as compared to existing conditions.[20]

In compliance with the LID Plan, prior to issuance of grading permits, the Applicant shall submit a LID Plan and design plans to the City of Los Angeles Department of Building and Safety and the Bureau of Sanitation Watershed Protection Division for review and approval. The Low Impact Development Plan shall be prepared consistent with the requirements of the Development Best Management Practices

---

[18] *City of Los Angeles, Planning and Land Development Handbook for Low Impact Development (LID), Part B Planning Activities, 5th Edition, May 9, 2016.*

[19] *City of Los Angeles Ordinance No. 183,833, 2015.*

[20] *Ibid.*

Handbook. The BMPs shall be designed to retain or treat the runoff from a storm event producing ¾-inch of rainfall in a 24-hour period or the rainfall from an 85th percentile 24-hour runoff event (whichever is greater), in accordance with the Planning and Land Development Handbook for Low Impact Development, Part B Planning Activities. A signed certificate from a licensed civil engineer or licensed architect confirming that the proposed BMPs meet the numerical threshold standard shall be provided.

To ensure that all stormwater related BMPs are constructed and / or installed in accordance with the approved LID Plan, the City of Los Angeles requires a Stormwater Observation Report to be submitted to the City prior to the issuance of the Certificate of Occupancy. All projects reviewed and approved would require a Stormwater Observation Report and would be prepared, signed, and stamped by the engineer of record responsible for the approved LID Plan. With approval and issuance of a Certificate of Occupancy from LADBS, the Proposed Project would be determined to be in compliance with all applicable codes, ordinances, and other laws.[21]

Additionally, full compliance with the site-specific Environmental [Q] Conditions C.13 through C.17, listed below, would ensure that the operation of the Proposed Project would not violate any water quality standards or discharge requirements or otherwise substantially degrade water quality.

Environmental [Q] Conditions 13 - 17.

13. All Runoff (All Subareas)

a. Project applicants are required to implement stormwater BMPs to retain or treat the runoff from a storm event producing 3/4 inch of rainfall in a 24 hour period. The design of structural BMPs shall be in accordance with the Development Best Management Practices Handbook Part B Planning Activities. A signed certificate from a California licensed civil engineer or licensed architect that the proposed BMPs meet this numerical threshold standard is required.

b. Post development peak stormwater runoff discharge rates shall not exceed the estimated pre-development rate for developments where the increase peak stormwater discharge rate will result in increased potential for downstream erosion.

c. Maximize trees and other vegetation at each site by planting additional vegetation, clustering tree areas, and promoting the use of native and/or drought tolerant plants.

d. Any connection to the sanitary sewer must have authorization from the Bureau of Sanitation.

e. Reduce impervious surface area by using permeable pavement materials where appropriate, including: pervious concrete/asphalt; unit pavers, i.e. turf block; and granular materials, i.e. crushed aggregates, cobbles.

f. Paint messages that prohibits the dumping of improper materials into the storm drain system

[21] *City of Los Angeles, Planning and Land Development Handbook for Low Impact Development (LID), Part B Planning Activities, 5th Edition, May 9, 2016.*

adjacent to storm drain inlets (such as NO DUMPINGDRAINS TO OCEAN) and/or graphical icons. Prefabricated stencils can be obtained from the Department of Public Works, Stormwater Management Division.

g. Legibility of stencils and signs must be maintained.

h. Promote natural vegetation by using parking islands and other landscaped areas.

i. Materials with the potential to contaminate stormwater must be: (1) placed in an enclosure such as, but not limited to, a cabinet, shed, or similar stormwater conveyance system; or (2) protected by secondary containment structures such as berms, dikes, or curbs.

j. The storage area must be paved and sufficiently impervious to contain leaks and spills.

k. The storage area must have a roof or awning to minimize collection of stormwater within the secondary containment area.

I. The owner(s) of the property will prepare and execute a covenant and agreement (Planning Department General form CP-6770) satisfactory to the Planning Department binding the owners to post construction maintenance on the structural BMPs in accordance with the Standard Urban Stormwater Mitigation Plan and/or per manufacturer's instructions.

14. Stormwater Runoff 10+ Home Subdivision/Multi Family

a. Install Roof runoff systems where site is suitable for installation.

b. Surface parking lots constitute a significant portion of the impervious land coverage. To reduce the quantity of runoff, surface parking lots can be designed one of two ways;

(i) Hybrid Lot - parking stalls utilize permeable materials, such as crushed aggregate, aisles are constructed of conventional materials such as asphalt.

(ii) Parking Grove - is a variation on the permeable stall design, a grid of trees and bollards are added to delineate parking stalls. This design presents an attractive open space when cars are absent, and shade when cars are present.

c. Design an efficient irrigation system to m1mm1ze runoff including: drip irrigation for shrubs to limit excessive spray; shutoff devices to prevent irrigation after significant precipitation; and flow reducers.

15. Stormwater Runoff Commercial and Industrial Development (Lot Size 100,000 sf)

a. Cover loading dock areas or design drainage to minimize run-on and run-off stormwater.

b. Direct connections to storm drains from depressed loading docks (truck wells) are prohibited.

c. Repair/maintenance bays must be indoors or designed in such a way that doesn't allow stormwater

run-on or contact with stormwater runoff.

d. Design repair/maintenance bay drainage system to capture all washwater, leaks and spills. Connect drains to a standard sump for collection and disposal. Direct connection of the repair/maintenance bays to the storm drain system is prohibited. If required, obtain an Industrial Waste Discharge Permit.

e. Vehicle/equipment wash areas must be self-contained and/or covered, equipped with a clarifier, or other pretreatment facility, and property connected to the sanitary sewer.

f. The following activities are to be conducted under proper cover with drain routed to the sanitary sewer:

(i) Storage of industrial wastes.

(ii) Handling or storage of hazardous wastes.

(iii) Metal fabrication or Pre-cast concrete fabrication.

(iv) Welding, Cutting or Assembly.

(v) Painting, Coating or Finishing.

g. Store above ground liquid storage tanks (drums and dumpsters) in areas with impervious surfaces in order to contain leaks and spills. Install a secondary containment system such as berms, dikes, liners, vaults, and double-wall tanks. Where used oil or dangerous waste is stored, a dead- end sump should be installed in the drain.

h. Toxic wastes must be discarded at a licensed regulated disposal site. Store trash dumpsters either under cover and with drains routed to the sanitary sewer or use non-leaking and water-tight dumpsters with lids. Use drip pans or absorbent materials whenever grease containers are emptied. Wash containers in an area with properly connected sanitary sewer.

i. Reduce and recycle wastes, including: paper; glass; aluminum; oil; and grease.

j. Reduce the use of hazardous materials and wastes by: using detergent based or water-based cleaning systems; and avoid chlorinated compounds, petroleum distillates, phenols, and formaldehyde.

k. Control or reduce or eliminate flow to natural drainage systems to the maximum extent practicable.

I. Cleaning of vehicles and equipment to be performed within designated covered or bermed wash area paved with Portland concrete, sloped for wash water collection, and with a pretreatment facility for wash water before discharging to properly connected sanitary sewer with a CPI type oil/water separator. The separator unit must be: designed to handle the quantity of flows; removed for cleaning on a regular basis (at least twice a year) to remove any solids; and the oil absorbent

pads must be replaced regularly, once in fall just before the wet season, and in accordance with manufacturer's specifications.

16. Stormwater Runoff Food Service Industry (Restaurants, Bakeries, Food Processors)

a. Cleaning of oily vents and equipment to be performed within designated covered area, sloped for wash water collection, and with a pretreatment facility for wash water before discharging to properly connected sanitary sewer with a CPI type oil/water separator. The separator unit must be: designed to handle the quantity of flows; removed for cleaning on a regular basis to remove any solids; and the oil absorbent pads must be replaced regularly according to manufacturer's specifications.

b. Store trash dumpsters either under cover and with drains routed to the sanitary sewer or use non-leaking and water tight dumpsters with lids. Wash containers in an area with properly connected sanitary sewer.

c. Reduce and recycle wastes, including oil and grease.

d. Store liquid storage tanks (drums and dumpsters) in designated paved areas with impervious surfaces in order to contain leaks and spills. Install a secondary containment system such as berms, curbs, or dikes. Use drip pans or absorbent materials whenever grease containers are emptied.

e. Infiltrate runoff before it reaches the storm drain system.

f. Runoff must be treated prior to release into the storm drain. Three types of treatments are available, (1) dynamic flow separator; (2) a filtration or (3) infiltration. Dynamic flow separator uses hydrodynamic force to remove debris, and oil and grease, and are located underground. Filtration involves catch basins with filter inserts. Filter inserts must be inspected every six months and after major storms, cleaned at least twice a year. Infiltration methods are typically constructed on-site and are determined by various factors such as soil types and groundwater table.

17. Stormwater Runoff Surface Parking Lots with 25 or More Spaces or 5,000 Square-feet of Lot Area (Residential, Commercial, Industrial, Public Facility)

a. Trash container areas must have drainage from adjoining roofs and pavement diverted around the area(s).

b. Trash container areas must be screened or walled to prevent off-site transport of trash.

c. Reduce impervious land coverage of parking lot areas.

d. Infiltrate runoff before it reaches the storm drain system.

e. Runoff must be treated prior to release into the storm drain. Three types of treatments are

available, (1) dynamic flow separator; (2) filtration or (3) infiltration. Dynamic flow separator uses hydrodynamic force to remove debris, and oil and grease, and are located underground. Filtration involves catch basins with filter inserts. Filter inserts must be inspected every six months and after major storms, and cleaned at least twice a year. Infiltration methods are typically constructed on-site and are determined by various factors such as soil type and groundwater table.

Implementation of the LID Ordinance would reduce the amount of stormwater leaving the Project Site as runoff compared to existing conditions. Therefore, with the implementation of LID requirements and Environmental [Q] Conditions C.13 through C.17, the Proposed Project's operational water quality impacts would be less than significant.

b) Would the project substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?

Less Than Significant Impact. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a project would normally have a significant impact on groundwater level if it would change potable water levels sufficiently to: (a) reduce the ability of a water utility to use the groundwater basin for public water supplies, conjunctive use purposes, storage of imported water, summer/winter peaking, or respond to emergencies and drought; (b) reduce yields of adjacent wells or well fields (public or private); (c) adversely change the rate or direction of flow of groundwater; or (d) result in demonstrable and sustained reduction in groundwater recharge capacity.

The Los Angeles County Department of Public Works (LACDPW) has maintained various groundwater monitoring wells in the vicinity of the Project Site over the past 50 years. The closest LACDPW monitoring well to the Project Site is Well ID No. 2772E (State No. 1S13W15R02), located approximately 0.6 mile to the southwest (LACDPW, 2015a). Review of the available monitoring data for this well for the monitoring period between 1958 and 2010 indicate that the depth to groundwater has fluctuated between 25 and 53 feet below the existing ground surface (LACDPW, 2015a). The most recent groundwater level measurement for Well No. 2772E was measured in January, 2010 at a depth of 33 feet below the existing ground surface (LACDPW, 2015a).

As discussed in Section 9(a) the Project Site is nearly 100 percent impervious. As such, nearly 100 percent of the surface water runoff from the Project Site is directed to adjacent storm drains and does not percolate into the groundwater table beneath the Project Site. According to the Geotechnical Investigation, groundwater was encountered at a depth of 40.75 feet below the ground surface. The historically highest groundwater in the Project Site area is 20 feet below the ground surface. A review of available monitoring data for the past 50 years indicate that the depth of groundwater in the Project area fluctuates between 25 and 53 feet below the existing ground surface. The Proposed Project would excavate soils beneath the Project Site to allow for one level of subterranean parking. The subterranean parking structure will extend to a depth of approximately 15 feet below grade and would generally not impact the groundwater table. Based on the historic high groundwater level in the site vicinity, the depth

of groundwater in on-site borings (drilled to a maximum depth of 50 feet beneath the existing ground surface), and the depth of proposed construction, Geocon concluded that groundwater is neither expected to be encountered during construction, nor have a detrimental effect on the Proposed Project. However, the Geotechnical Investigation states that it is not uncommon for groundwater levels to vary seasonally or for groundwater seepage conditions to develop where none previously existed, especially in impermeable fine-grained soils which are heavily irrigated or after seasonal rainfall. In addition, recent requirements for stormwater infiltration could result in shallower seepage conditions in the immediate site vicinity. In the unlikely event groundwater is encountered during the construction process, the Proposed Project would be required to comply with the requirements of the waste discharge requirements for discharges of groundwater from construction (Order No. R4-2008-0032, National Pollution Discharge Elimination System No. CAG994004). Proper surface drainage of irrigation and precipitation will be critical for future performance of the project. Recommendations for drainage are provided in the Surface Drainage section of this report (see Section 7.17 of the Site Geotechnical Investigation). As discussed in Checklist Question VI (a), the Proposed Project would be required to comply with the Geotechnical Investigation and LADBS's geology and soils report approval letter, which provides recommendations for surface drainage. The Proposed Project would further comply with the regulatory compliance measure, below, regarding dewatering.

Regulatory Compliance Measure:

- **(Dewatering):** If required, any dewatering activities during construction shall comply with the requirements of the Waste Discharge Requirements for Discharges of Groundwater from Construction and Project Dewatering to Surface Waters in Coastal Watersheds of Los Angeles and Ventura Counties (Order No. R4-2008-0032, National Pollutant Discharge Elimination System No. CAG994004) or subsequent permit. This will include submission of a Notice of Intent for coverage under the permit to the Los Angeles Regional Water Quality Control Board at least 45 days prior to the start of dewatering and compliance with all applicable provisions in the permit, including water sampling, analysis, and reporting of dewatering-related discharges.

The Proposed Project would continue to be supplied with potable water by the LADWP. Further, the Proposed Project would comply with LAMC Section 64.70, Stormwater Runoff and Urban Pollution Control. With compliance with the regulatory compliance measure relating to dewatering, listed above, the Proposed Project would not cause the depletion of the groundwater supplies or the interference of groundwater recharge. Therefore, a less than significant impact would occur.

c) Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner, which would result in substantial erosion or siltation on- or off-site?

Less Than Significant Impact. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a project would normally have a significant impact on surface water hydrology if it would result in a permanent, adverse change to the movement of surface water sufficient to produce a substantial change in the current or direction of water flow. As discussed in the Drainage Report, the Project Site is currently nearly 100 impervious and rainfall runoff is conveyed via surface flow (from north to south) to multiple drainage paths on the Project Site before discharging to various points onto Avenue 34. The Project Site

is located in an urbanized area within the City of Los Angeles, and no streams or river courses are located on-site. The Proposed Project would maintain the Project Site's nearly 100 percent imperviousness. However, the Project would comply with the LID Ordinance and retain or treat the first ¾-inch of rainfall in a 24-hour period or the rainfall from an 85th percentile 24-hour runoff event, whichever is greater.. As such, the Project would reduce the amount of runoff leaving the Project Site, as compared to existing conditions. Implementation of the Proposed Project would not increase site runoff or result in any changes in the local drainage patterns. Impacts associated with localized drainage and surface water runoff would therefore be considered less than significant.

d) Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?

Less Than Significant Impact. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a project would normally have a significant impact on surface water hydrology if it would result in a permanent, adverse change to the movement of surface water sufficient to produce a substantial change in the current or direction of water flow. The Proposed Project would not result in a significant increase in site runoff, or any changes in the local drainage patterns. Therefore, as the Proposed Project would not substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site. In addition, the Proposed Project would comply with the LID Ordinance, and impacts would be less than significant.

e) Would the project create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?

Less Than Significant Impact. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a project would normally have a significant impact on surface water quality if discharges associated with the project would create pollution, contamination, or nuisance as defined in Section 13050 of the California Water Code (CWC) or that cause regulatory standards to be violated, as defined in the applicable National Pollution Discharge Elimination System (NPDES) stormwater permit or Water Quality Control Plan for the receiving water body. A significant impact may occur if the volume of stormwater runoff from the Project Site were to increase to a level which exceeds the capacity of the storm drain system serving the Project Site. A significant adverse effect would also occur if a project substantially increases the probability that polluted runoff would reach the storm drain system.

Currently, the Project Site is completely developed with impervious surfaces and nearly 100 percent of surface water runoff is directed to adjacent street storm drains. As discussed in the Drainage Report, rainfall runoff on the Project Site flows from north to south via surface flow to multiple drainage paths on the Project Site before discharging at various points onto Avenue 34. The Proposed Project would not result in a significant increase in site runoff, or any changes in the local drainage pattern. Runoff from the Project Site would to be collected on the Project Site and directed towards existing storm drains in the Project vicinity that have adequate capacity. Pursuant to local practice and City policy, stormwater retention will be required as part of the Low Impact Development (LID) Ordinance / SUSMP implementation features (despite no increase in imperviousness of the site). Any contaminants gathered

during routine cleaning of construction equipment would be disposed of in compliance with applicable stormwater pollution prevention permits. Further any pollutants from the parking areas would be subject to the requirements and regulations of the NPDES and applicable LID Ordinance standards and retain or treat the first ¾ –inch of rainfall in a 24-hour period or the rainfall from an 85th percentile 24-hour runoff event, whichever is greater, which would reduce the Proposed Project's impact to the stormwater infrastructure. Therefore, the Proposed Project would not create or contribute to runoff water which would exceed capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff. Potential impacts to surface water quality would be less than significant. Further, the Proposed Project would comply with LAMC Section 64.70, Stormwater Runoff and Urban Pollution Control, and all applicable laws and regulations pertaining to stormwater runoff and water quality would ensure impacts are reduced to a less than significant level.

f) Would the project otherwise substantially degrade water quality?

No Impact. A significant impact may occur if a project includes potential sources of water pollutants that would have the potential to substantially degrade water quality. The Proposed Project does not include potential sources of contaminants, which could potentially degrade water quality and would comply with all federal, state and local regulations governing stormwater discharge. Therefore, no impact would occur.

g) Would the project place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?

No Impact. A significant impact would occur if the Project were to place housing within a 100-year flood hazard area. A 100-year flood is defined as a flood which results from a severe rainstorm with a probability of occurring approximately once every 100 years. According to the Federal Emergency Management Agency (FEMA), the Project Site is not located in an area designated as a 100-year flood hazard area. The Project Site in a zone designated as Zone X, which signifies that the area is outside the 0.2% annual chance floodplain.[24] Therefore, the Proposed Project would not place housing within a 100-year flood hazard area, and no impact would occur.

h) Would the project place within a 100-year flood hazard area structures which would impede or redirect flood flows?

No Impact. A significant impact may occur if the Project was located within a 100-year flood zone, which would impede or redirect flood flows. The Project Site is not in an area designated as a 100-year flood hazard area as mapped by the FEMA's Flood Insurance Rate Map. The Project Site is in a zone designated as Zone X, which signifies that the area is outside the 0.2% annual chance floodplain.[25] The Project Site is located in an urbanized area. As no changes to the local drainage pattern would occur with implementation of the Proposed Project, the Proposed Project would not have the potential to impede or redirect floodwater flows. Therefore, no impact would occur.

---

[24] *Federal Emergency Management Agency (FEMA), Flood Insurance Rate Map, Los Angeles County, California and Incorporated Areas, Map number 06037C1629F, September 26, 2008.*

[25] *Ibid.*

i) Would the project expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?

Less Than Significant Impact. A significant impact may occur if the Proposed Project exposes people or structures to a significant risk of loss or death caused by the failure of a levee or dam, including but not limited to a seismically-induced inundation. A review of the City of Los Angeles General Plan Safety Element, the Proposed Project lies within a potential inundation area for an earthquake-induced dam failure from the Devil's Gate Dam.[26] [27] However, this reservoir, as well as others in California, are continually monitored by various governmental agencies (such as the State of California Division of Safety of Dams and the U.S. Army Corps of Engineers) to guard against the threat of dam failure. Current design and construction of practices and ongoing programs of review, modification, or total reconstruction of existing dams are intended to ensure that all dams are capable of withstanding the maximum considered earthquake. Therefore, the potential for inundation at the Project Site as a result of an earthquake-induced dam failure is considered low. Therefore, a less than significant impact would occur.

j) Would the project expose people or structures to a significant risk of loss, injury or death involving inundation by seiche, tsunami, or mudflow?

No Impact. A significant impact would occur if the Project Site is sufficiently close to the ocean or other water body to be potentially at risk of the effects of seismically-induced tidal phenomena (i.e., seiche and tsunami), or if the Project Site is located adjacent to a hillside area with soil characteristics that would indicate potential susceptibility to mudslides or mudflows. Seiches are large waves generated in very large enclosed bodies of water or partially enclosed arms of the sea in response to ground shaking.

The Geotechnical Investigation finds that the Project Site is not located within a coastal area. Therefore, tsunamis, seismic sea waves, are not considered a significant hazard at the Project Site. Additionally, no major water-retaining structures are located immediately up gradient from the Project Site. Flooding from seismically-induced seiche is considered low.

The Project Site and the surrounding area are urbanized and relatively flat. The Project's Geotechnical Investigation finds that the Project Site is not located within a landslide area. Additionally, the Project Site is not within an area identified as having a potential for seismic slope instability.[28] Thus, the occurrence of mudflows on the Site is considered remote. Therefore, the Project Site is not subject to slope instability, tsunamis, and seiches. Therefore, no impact would occur.

[28] *Ibid.*

Cumulative Impacts

Less Than Significant Impact. Development of the Proposed Project in combination with the three related projects would result in the further infilling of uses in a developed area within the City of Los Angeles. As discussed above, the Project Site and the surrounding areas are served by the existing storm drain systems. Runoff from the Project Site and adjacent urban uses is typically directed into the adjacent streets, where it flows to the nearest drainage improvements. It is likely that most, if not all, of the related projects would also drain to the surrounding street system. However, little if any additional cumulative runoff is expected from the Proposed Project and the related project sites. Under the requirements of the LID Ordinance, each related project would be required to implement stormwater BMPs to retain or treat the runoff from a storm event producing ¾-inch of rainfall in a 24-hour period or the rainfall from an 85th percentile 24-hour runoff event, whichever is greater. Mandatory structural BMPs in accordance with the NPDES water quality program will therefore result in a cumulative reduction to surface water runoff, as the development in the surrounding area is limited to infill developments and redevelopment of existing urbanized areas. Therefore, the Proposed Project would not make a cumulatively considerable contribution to impacting the volume or quality of surface water runoff, and cumulative impacts to the existing or planned stormwater drainage systems would be less than significant. Therefore, cumulative water quality impacts would be less than significant.

X. LAND USE AND PLANNING

a) Would the project physically divide an established community?

No Impact. A significant impact may occur if the project would be sufficiently large enough or otherwise configured in such a way as to create a physical barrier within an established community. According to the *L.A. CEQA Thresholds Guide*, the determination of significance shall be made on a case-by-case basis considering the following factors: (a) the extent of the area that would be impacted, the nature and degree of impacts, and the types of land uses within that area; (b) the extent to which existing neighborhoods, communities, or land uses would be disrupted, divided or isolated, and the duration of the disruptions; and (c) the number, degree, and type of secondary impacts to surrounding land uses that could result from implementation of the Proposed Project.

The Project Site is located in an urbanized area within the Northeast Los Angeles community and is consistent with the existing physical arrangement of the properties within the vicinity of the Project Site. No separations of uses or disruption of access between land use types would occur as a result of the Proposed Project. The Proposed Project would improve the Project Site with the development of a creative campus that includes many public pathways and open space areas that would engage the surrounding community. Further, the Proposed Project would incorporate pedestrian scale commercial and creative office uses along Pasadena Avenue, which promotes pedestrian activity along Pasadena Avenue. The Project's design, open spaces, and layout promotes a community environment, as compared to the existing development on-site that is currently fenced off and is developed with light industrial and warehouse uses. Accordingly, implementation of the Proposed Project would not disrupt or divide the physical arrangement of the established community, and development of the Project would create an engaging environment and add public amenities to the area. Therefore, no impact would occur.

b) Would the project conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?

Less Than Significant Impact. A significant impact may occur if a project is inconsistent with the General Plan or zoning designations applicable to the Project Site, and would cause adverse environmental effects, which the General Plan and zoning designations are created to avoid or mitigate.

The Proposed Project would include the development of a creative campus that would include 372 residential units, 30,000 square feet of creative offices, and 10,000 square feet of new retail and restaurant space. As part of the Proposed Project, the large warehouse building (86,712 square feet), the 4,033 square foot building on the southeast, a portion of the 3,521 square foot building on the southwest side of the Project Site, and 16,055 square feet of the 24,018 square foot building that fronts Pasadena Avenue would be demolished. The remaining 7,963 square feet of the aforementioned 24,018 square foot building and the remaining portion of the small building located on the southwest corner of the Project Site would be rehabilitated as part of the Proposed Project.

The Project Site is zoned [T][Q]CM-2D with a land use designation of Commercial Manufacturing. The CM designation indicates that the Project Site has no guidelines for height; required yards shall comply with R4 requirements for residential portions of the Project Site, and the minimum lot area shall comply with R3 requirements for residential uses. Allowable uses within a CM zone include wholesale, storage, clinics, limited manufacturing, limited C2 uses, and R3 uses. The Project Site is located within Height District 2, which imposes no height limitations for the Project Site. There are three conditions on the Project Site, which are put in place by Ordinance No. 179,280, these include: a permanent tentative zone classification ([T]), a qualified classification ([Q]), and a development limitation (D). The "D" Development Limitation designation limits the FAR on-site to 3:1. The [Q] Qualified Classification imposes general conditions to on-site uses, parking, and design conditions (site planning, pedestrian access, building design architectural details, walls and fences, landscaping, and mechanical, security, and trash equipment). The complete list of [Q] Conditions are identified in Section II, Project Description. The following highlights relevant provisions of the [Q] condition as it pertains to new development at the Project Site:

- **Use:** There shall be no 100% Commercial projects allowed. There shall be no 100% Residential projects allowed.
- **Parking:** Surface Parking cannot exceed 20% of the total lot area; No parking areas shall face Pasadena Avenue; All Residential parking must be below grade; and Residential and mixed-use projects shall share parking required by the LAMC during off-hours.
- **Yards:** Pasadena Avenue must be designated as a Front Yard. Ground floor commercial uses shall be built to the property line, except where outdoor dining and public areas are provided.
    - Side and rear yards per the underlying CM Zone, which require yards in accordance with the R4 Zone:
        - Side: 5 feet, plus 1 foot for each story over 2nd floor.
        - Rear: 15 feet, plus 1 foot for each story over 3rd floor.

- **Other:**
  - Pasadena Avenue shall have commercial-facing uses.
  - 30% of the Subarea shall be open space and/or paseos
  - Building Breaks shall be provided at various locations within the site.
  - 1 tree provided per each 1,000 sf. of Land Area; 50% of common open space shall be landscaped.

The Project Site is located within the East Los Angeles State Enterprise Zone, an Adaptive Reuse Incentive Area, and a Transit Priority Area per the Department of City Planning's Zoning Information File ZI No. 2452. Although the Project Site was initially mapped within the boundaries of the proposed Cornfield Arroyo Specific Plan (CASP), the Project Site was subsequently omitted from the CASP boundaries when it was adopted. The Project Site is uniquely located in Subarea 4 of Ordinance 179,280. The intent of Ordinance No. 179,280 is to change the zones and height districts of identified properties in order to promote mixed-use development in close proximity to a transit station. The applicable [Q] Conditions and D Limitations established in the Ordinance are identified in Section II, Project Description.

As part of the requested entitlements, the Applicant is requesting the clarification of "Q" Condition A.1.c of Ordinance No. 179,280 which reads as follows: "A minimum of 50% of the non-residential floor area shall be limited to Neighborhood Retail and Neighborhood Services as permitted by LAMC 13.07C." Those uses as defined in LAMC 13.07C are as follows:

> **"Neighborhood Retail"** Neighborhood retail uses shall be limited to retail sale of goods needed by residents and patrons of a Pedestrian Oriented District, including: Art galleries, Art supplies, Athletic/sporting goods, Bakeries, Books or cards, Bicycle sales and repairs, Clock or watch sales and/or repair, Clothing, Computer sales and repair, Drug stores, Fabrics or dry goods, Florists, Food/grocery stores, including supermarkets, produce, cheese and meat markets and delicatessens, Hardware, Household goods and small appliances, Newsstands, Photographic equipment and repair, Sit Down Restaurants, excluding drive-through service, Stationery, Toys; and Other similar retail goods as determined by the Zoning Administrator.
>
> **"Neighborhood Services"** Neighborhood services are those services used by residents and patrons on a regular basis, including: Barber shop or beauty parlor, Blueprinting, Child care facility, Club or lodge, bridge club, fraternal or religious associations, Copying services, Custom dressmaking, Dry cleaner, Financial services, Laundry or self-service Laundromat, Locksmith, Optician, Photographer, Shoe repair, Tailor, and other similar services as determined by the Zoning Administrator.

The Project proposes 30,000 square feet of creative office space and 10,000 square feet of more traditional retail space. However, the world of "creative office" has expanded significantly to expressly accommodate new smaller entrepreneurial businesses and neighborhood incubator uses. Furthermore, of the above list, as highlighted above, more than 50% of the express uses specified as neighborhood-serving uses may be conducted in either a traditional retail storefront, or within a less conventional creative office complex, in which flexible space and flexible work-space is the national trend to promote the long-term utilization of spaces.

The Applicant is requesting the clarification of "non-residential" to be interpreted to permit a variety of neighborhood-serving commercial support services, which may include both offices/businesses, and other commercial retail services. The design of the Proposed Project would more than achieve the intent of this "Q" Clarification by also providing the availability for goods and services sale and production in *residential* portions of the building through the provision of residential units throughout the Project Site. However, the "Q" Clarification as currently interpreted will limit the feasibility of the Project by shrinking the floor area available for creative office on-site to only accommodate "business" in the traditional sense of a Class "A" office space.

With respect to the applicable yard requirements, the Applicant is seeking approval of a Zoning Administrator's Adjustment pursuant to LAMC Section 12.28.A to permit the maintenance of a minimum 0-foot side yard in lieu of 8-feet, as required by LAMC 12.17.1.C, to preserve existing buildings on-site with non-conforming yards. These adjustments are necessary as they apply to existing buildings that are non-conforming to the yard requirements and are proposed to be retained and re-used as part of the Project.

The proposed mixed-use Project is permitted by the underlying CM zoning, as well as the Commercial Manufacturing classification by the Northeast Los Angeles Community Plan.

Regional Plans

SCAQMD Air Quality Management Plan. The Proposed Project is located within the South Coast Air Basin (Basin) and, therefore, falls under the jurisdiction of the SCAQMD. In conjunction with SCAG, the SCAQMD is responsible for formulating and implementing air pollution control strategies. The SCAQMD's Air Quality Management Plan (AQMP) was recently updated in 2003 to establish a comprehensive air pollution control program leading to the attainment of State and federal air quality standards in the Basin, which is a non-attainment area. The most recent AQMP was adopted on December 7, 2012. The Proposed Project conforms to the zoning and land use designations for the Project Site as identified in the General Plan, and, as such, would not add emissions to the Basin that were not already accounted for in the approved AQMP. Furthermore, as noted in Section 3, Air Quality, the Proposed Project would not exceed the daily emission thresholds during the construction or operational phases of the Proposed Project. Therefore, the Proposed Project would be consistent with the AQMP.

SCAG Regional Comprehensive Plan. The Project Site is located within the six-county region that comprises the SCAG planning area. The SCAG Regional Comprehensive Plan (RCP) includes growth management policies that strive to improve the standard of living, maintain the regional quality of life, and provide social, political, and cultural equity. The Proposed Project would be consistent with policies set forth in the RCP, as the Project is an infill development and would develop a fully developed, underutilized lot with a transit adjacent mixed-use creative campus, which is consistent with both local and regional plans for growth and development. Thus, as the Proposed Project would generate approximately 1,216 new residents in a high priority transit area and would not exceed regional growth projections, the Proposed Project would be consistent with SCAG growth projections (see Checklist Question VIII, Population and Housing).

Local Plans

City of Los Angeles General Plan

The General Plan is a comprehensive, long-range declaration of purposes, policies and programs for the development of the City. The General Plan is a dynamic document consisting of 11 elements, which include a Framework Element, Air Quality Element, Conservation Element, Housing Element, Noise Element, Open Space Element, Service Systems Element / Public Recreation Plan, Safety Element, Mobility Element, a Plan for a Healthy Los Angeles, and the Land Use Element. The Land Use Element is comprised of 35 community plans.[29]

Those elements that would be most applicable to the Proposed Project are the Framework Element and the Housing Element. The Framework Element provides citywide guidelines and a foundation in which Community Plans and other General Plan Elements can base their more specific goals, objectives, and policies on. The Project would promote the Framework Land Use Chapter's objectives and policies for multi-family development. These objectives and policies include: provide for the stability and enhancement of multi-family residential neighborhoods and allowing for growth in areas where there is sufficient public infrastructure and services and the residents' quality of life can be maintained or improved; accommodate the development of multi-family residential units in areas designated in the community plans in accordance with the zoning densities; and improve the quality of new multi-family dwelling units based on the urban form and neighborhood design standards.

The Proposed Project would conform to the General Plan Framework Housing Chapter and the Housing Element goals by enhancing housing supply in the City. The Project provides the area with greater diversity in type and cost of housing that increases housing opportunities for a larger range of income levels. The Project's 372 dwelling units would also be accessible to all persons without discrimination. Additionally, the Proposed Project would reserve 11 percent of its base density residential units (approximately 31 dwelling units) for very low income tenants. The development would generate new residents that are within close proximity to bus and rail lines, Arroyo Seco Parkway (SR-110), and commercial and industrial areas that provide services and job opportunities. Additionally, the Proposed Project would enhance the surrounding community by developing an infill site, which currently contains industrial and warehouse land use, with a pedestrian friendly development.

Los Angeles Municipal Code

The Proposed Project would not conflict with the goals, objectives, and allowable land uses in the Northeast Los Angeles Community Plan and the LAMC. The General Plan land use designation for the Project Site is Commercial Manufacturing and the zoning designation is [T][Q]CM-2D, which allows for residential, commercial retail/restaurant, and office land uses. The Proposed Project would be comprised of multi-family residential uses, creative office, and retail/restaurant uses. Residential uses are permitted

---

[29] *City of Los Angeles Department of City Planning, General Plan Elements, website: http://cityplanning.lacity.org/, accessed August 2016.*

on lots zoned for CM uses that are located within the Northeast Los Angeles CPA. Therefore, the Proposed Project would conform to the allowable land uses pursuant to the LAMC.

The Project Site's total lot area consists of approximately 219,320 square feet (5.03 acres) and 203,960 square feet of buildable area. The Project Site is currently improved with four light industrial and warehouse buildings and paved surface loading and parking areas. The Proposed Project includes the construction of a creative campus that would include five buildings. The Proposed Project would include a total of 372 residential dwelling units, 30,000 square feet creative office space, and 10,000 square feet of retail/restaurant space.

Floor Area

The Project Site is zoned [T][Q]CM-2D with the land use designation of Commercial Manufacturing. The corresponding zones for Commercial Manufacturing are the CM and P Zones. Height District No. 2 does not specify a building height limit; although the 'D' designation limits floor area ratio on-site to FAR 3:1. The Project Site is approximately 219,320 gross square feet and has a buildable area of 203,960 square feet. As such, allowable FAR on-site is 611,880 square feet. The Proposed Project would provide approximately 524,600 square feet of floor area for an approximate 2.6:1 FAR. Therefore, development of the Proposed Project is within the allowable floor area ratio for the Project Site, and a less than significant impact would occur.

Density

Pursuant to LAMC Section 12.17.1.A.1, residential land uses are permitted in a CM Zone with compliance with all the regulations of the R3 Zone, with the exception of any required front yard setbacks. As such, residential uses on the Project Site are limited to one dwelling unit per 800 square feet (or approximately 275 dwelling units for the Project Site based on a lot area of 219,320 square feet). The Proposed Project would reserve eleven percent of its base density (approximately 31 dwelling units) as very low income units. As such, the Proposed Project would include a ministerial density bonus pursuant to LAMC Section 12.22 A.25 for a 35 percent increase in permitted density to allow for 372 dwelling units in lieu of the base density of 275 dwelling units. Therefore, the Proposed Project would be consistent the permitted density for the Project Site. Therefore, a less than significant impact would occur.

Open Space

Open space is provided in accordance with Ordinance 179,280 and LAMC 12.21.G. Pursuant to LAMC 12.21.G, the Project Site is required to provide 39,575 square feet of usable open space for Project residents. In addition to the LAMC requirement for common open space, Ordinance 179,280 further establishes a [Q] Condition (See [Q] Condition B.1.e) which requires a minimum of 30% of the Subarea shall be devoted to publicly accessible open space and pedestrian paths that shall be accessible beginning at dawn and ending at dusk or close of on-site businesses, whichever occurs later. This condition would require 64,744 square feet of publicly available open space. The Proposed Project is providing 64,744 square feet of publicly accessible open space on-site in accordance with the [Q] condition and 39,575 square feet of open space on-site exclusively for residents and their guests. Refer to Table II-3, located in the Project Description, for proposed open space on site. Thus, the Proposed Project would be consistent

with the open space requirements for the Project Site. Therefore, a less than significant impact would occur.

The Proposed Project contains a complex network of public and common open space in a network of connecting paseos, plazas, and gardens. Two indoor community rooms would be provided in Building B. An outdoor pool would be available for residents at the southwest corner of the Project Site, as well as an on-site fitness facility.

In accordance with LAMC Section 12.21 G.2(a)(3), a minimum of 25 percent would be landscaped with a variety of drought-tolerant plant species. The proposed landscaping plan provides a mix of ground cover and trees to compliment the architecture. The Applicant envisions a landscape palette that evokes relationship with the nearby river and Arroyo, using species and materials that mirror the Arroyo ecology. The plant material would be selected for temperature hardiness and low water use.

Parking

As discussed previously in this Section, the Proposed Project meets all of the requisite criteria of a Transit Oriented Infill Project pursuant to SB 743. SB 743, now codified as law under Public Resources Code 21099 provides that "aesthetic and parking impacts of a residential, mixed-use residential, or employment center project on an infill site within a transit priority area shall not be considered significant impacts on the environment." Accordingly, the Proposed Project's parking impacts shall not be considered significant impacts on the environment as a matter of law under Public Resources Code Section 21099. The following impact discussion is provided for informational purposes only.

The Proposed Project would provide 467 total on-site parking spaces provide in one level of subterranean parking beneath the Project Site and at grade. The subterranean levels serve as a basement with vehicle parking and storage and is accessed by two ramps accessed off of Avenue 34. Residential parking is provided in accordance with AB 744, which allows a parking ratio of 0.5 parking spaces per bedroom for a development that includes the maximum percentage of low- or very low-income units and is located within ½ mile of a major transit stop and there is unobstructed access to the transit stop from the development. The Proposed Project requires 233 residential parking spaces, and is proposing to provide 384 residential parking spaces and 3 residential guest parking spaces, which complies with the LAMC code requirement.

For the creative office and retail/restaurant element, the Proposed Project would be required to provide one space for every 500 square feet of office per LAMC 12.21 A.4(x)(3)6, which governs parking requirements in Enterprise Zones for "combined gross floor area of commercial office, business, retail, restaurant, bar, and related uses..." As such, the Project requires 80 non-residential parking spaces, and is providing 80 spaces, which is in compliance with LAMC code requirements.

The Proposed Project is also required to provide a minimum of one long-term bike parking space per unit and one short-term parking space for every 10 units for a total of 409 residential bike parking spaces: 372 long-term and 37 short term. The Proposed Project would provide a total of 409 residential bike parking spaces. The retail/restaurant portion of the Project requires one short-term and one long-term space per 2,000 square feet for a total of 5 short-term and 5 long-term spaces. The creative office portion of the Project requires one short-term space per 10,000 square feet and one long-term space per 5,000 square

feet for a total of 3 short-term spaces and 6 long-term spaces. Thus, the Proposed Project would be required to provide a total of 428 bicycle parking spaces. The Proposed Project would comply with the LAMC and provide 428 bicycle parking spaces.

Exposure to Poor Ambient Air Quality

The Project Site is located within 1,000 feet of the Arroyo Seco Parkway (SR-110), which is located to the north and west of the Project Site. The future occupants of the Proposed Project would be exposed to poor air quality emissions from vehicles traveling on these roadways. While recent court rulings[30] have found that CEQA does not require an analysis of the impacts of the environment on a project, the AQMD and the City Planning Commission continue to recommend that, prior to the approval of a project, the impacts of air pollutants on people who would live in a new project are addressed and appropriately mitigated to the extent feasible. Pursuant to the City Planning Commission's Freeway Adjacent Advisory Notice for Sensitive Uses (ZI-2427)[31], a detailed Health Risk Assessment was conducted for the Proposed Project to determine the carcinogenic risks associated with developing residential land uses within proximity to the freeway.[32] The Project Site is located approximately 210 feet from the 110 Freeway at the closest point and is located adjacent to the Metro Gold Line light railway. As such, the Proposed Project's future residents, employees, and visitors would be exposed to exhaust emissions from the nearby freeway.

As concluded in the HRA, the Project Site's worst-case ground level location would be exposed to cancer risks below 10 per one million for the 9-year and 30-year residential scenarios, and the 25-year worker scenario. While cancer risks would exceed 10 per one million under the 70-year residential scenario, the following disclosure from OEHHA (2015) should be considered. The 9 and 30-year durations correspond to the average and high-end of residency time recommended by U.S. EPA (1997). The California data presented in Appendix L of the Exposure TSD (OEHHA, 2012) are generally supportive of the nationwide data. The 9 and 70-year exposure durations present potential impacts over the range of residency periods, while the 30-year exposure duration is recommended for use as the basis for estimating cancer risk at the maximally exposed individual resident (MEIR) in all HRAs. The Project Site's worst-case ground level location would be exposed to cancer risks below 10 per one million for the 30-year residential scenario. The Freeway Adjacent HRA also concluded all acute and chronic health hazard indices would also be under the SCAQMD recommended threshold of 1.0 (1.0 E-6). In addition, the Proposed Project would not have significant adverse land use consistency issues associated with heavy rail, distribution centers/heavy trucking, industrial facilities, dry cleaners, or gas dispensing facilities. In conclusion, with the installation of MERV 13 filtration, as required by Ordinance No. 184,245 (Clean Up Green Up) for all mechanically ventilated buildings within 1,000 feet of a freeway, and the consideration of the additional strategies aimed at improving future occupants' exposure to ambient air quality

---

[30] *California Building Industry Association v Bay Area Air Quality Management District (S213478, December 17, 2015).*

[31] *ZI NO. 2427: Freeway Adjacent Advisory Notice For Sensitive Uses; following link accessed February 2016: http://zimas.lacity.org/documents/zoneinfo/ZI2427.pdf*

[32] *Pomeroy Environmental Services, Health Risk Assessment Avenue 34 Project 123-167 W. Avenue 34; 3401-3437 N. Pasadena Avenue, Los Angeles, California 90031, October 2016.*

conditions, the Proposed Project would be consistent with the requirements of City of Los Angeles Planning Commission ZI No. 2427. As such, impacts associated with the future occupant's exposure to ambient air quality would be less than significant.

East Los Angeles State Enterprise Zone

The Project Site is located in the East Los Angeles State Enterprise Zone, which "provide[s] economic incentives to stimulate local investment and employment through tax and regulation relief and improvement of public services." Projects located within a State Enterprise Zone are afforded certain incentives for development related to reduced parking for commercial/retail uses, and a waiver of Site Plan Review entitlement fees. The Project proposes approximately 372 dwelling units and 40,000 square feet of commercial space and is thereby eligible for the Site Plan Review fee waiver and reduced required commercial parking ratio of two parking spaces for every one thousand square feet.

Adaptive Reuse Incentive Area

The Project Site is also within an Adaptive Reuse Incentive Area (Ordinance No. 175,038). Adaptive reuse is defined as any change of an existing non-residential use to new dwelling units, guest rooms, or joint living and working quarters in all or in any portion an eligible building. The Proposed Project includes the rehabilitation of approximately 7,963 square feet of the 24,018 square foot building on-site, and a portion of the 3,521 square foot building on the southwest corner of the Project Site. The existing floor area is currently used as light manufacturing and commercial uses, and the Proposed Project intends to rehabilitate and use the existing floor area as commercial and office uses. As such, the Proposed Project would not be providing dwelling units, guest rooms, or live-work units within the rehabilitated buildings. The Proposed Project does not anticipate any adaptive reuse of the existing buildings. Thus, the permissions of the Adaptive Reuse Ordinance are not applicable to the Proposed Project.

Transit Priority Area (Zoning Information 2452)

On September 2013, the Senate Bill (SB) 743 was signed into law, which instituted changes to the California Environmental Quality Act (CEQA) when evaluating environmental impacts to projects located in areas served by transit. SB 743 states that project's aesthetics and parking impacts shall not be considered a significant impact on the environment if: (1) the Project is a residential, mixed-use residential, or employment center project, and (2) the project is located on an infill site within a transit priority area. SB 743 is further discussed in Section 1, Aesthetics, and in this Section. The Project Site is designated as a Transit Priority Area and is within ¼ mile of the Heritage Square Station of the Metro Gold Line. As such, the Proposed Project is eligible for parking reductions and other incentives offered for transit oriented district projects.

Public Resources Code 21099 provides that "aesthetic and parking impacts of a residential, mixed-use residential, or employment center project on an infill site within a transit priority area shall not be considered significant impacts on the environment." Accordingly, the Proposed Project's aesthetic and parking impacts shall not be considered significant impacts on the environment as a matter of law under Public Resources Code Section 21099.

Cornfield Arroyo Specific Plan

The Project Site is located within the boundaries of the Cornfield Arroyo Specific Plan Study Area but is excluded from the provisions of the Specific Plan. The Project Site was specifically exempted from rezoning and or land use classification modification under the Specific Plan.[33] Instead, the Project Site is uniquely regulated by a specific set of development standards and guidelines established by Ordinance 179,280 independent from the surrounding Specific Plan Area. Therefore, the underlying provisions of the LAMC and Ordinance 179,280 prevail and are the basis for all development standards and guidelines for the Project Site.

Northeast Los Angeles Community Plan

The Project Site is located within the Lincoln Heights neighborhood within the Northeast Los Angeles Community Plan area (CPA). All development activity on the Project Site is subject to the land use regulations of the Community Plan. A detailed analysis of the Proposed Project's consistency with the applicable provisions of the Northeast Los Angeles Community Plan is presented in Table III-9, below. As discussed in Table III-9, the Project would be in substantial compliance with the applicable provisions of the Northeast Los Angeles Community Plan.

[33] *City of Los Angeles Department of City Planning, Cornfield Arroyo Seco Specific Plan, page 1-18.*

Table III-9
Project Consistency Analysis with Applicable Provisions
in the Northeast Los Angeles Community Plan

Goal/Objective/Policy	Comments
Residential	
Goal 1: A safe, secure, and attractive residential environment for all economic, age, and ethnic segments of the community.	The Los Angeles Police Department (LAPD) would be consulted during the design and construction of the Proposed Project to ensure on-site security and reduce dead zones and attractive nuisances. The Proposed Project would implement principles of the City of Los Angeles Crime Prevention through Environmental Design (CPTED) Guidelines to enhance on-site security. The Proposed Project would be attractively designed and landscaped to encourage pedestrian activity on-site and in the vicinity. The 372 proposed dwelling units would be available to all persons without discrimination. Additionally, the Proposed Project would reserve approximately 31 dwelling units for very low income tenants. As such, the Proposed Project would be consistent with this Goal.
Policy 1-1.1: Protect existing stable single-family and other lower density residential neighborhoods from encroachment by higher density residential and other uses that are incompatible as to scale and character or would otherwise diminish the quality of life.	The Proposed Project would introduce the development of a creative campus that would provide 372 multi-family dwelling units. Low Medium II Residential land uses are located to the southeast of the Project Site, along Pasadena Avenue. Low Medium Residential and Low/ Low I Residential neighborhoods are located further south and east from the Project Site, respectively. The Project Site is zoned [T][Q]CM-2D and has a corresponding General Plan land use designation of Commercial Manufacturing. Land uses to the immediate north and south are designated as hybrid industrial; land uses to the west are designated as public facilities (railroad right-of-way) and hybrid industrial; land uses to the east are designated as public facilities (elementary school) and low medium II residential (multi-family development). General Plan Land Use designation of Low / Low I Residential (single-family development) exists northeast of the Project Site along the north side of Avenue 35 and east of the Project Site, east of Griffin Avenue. Low-density residential neighborhoods do not immediately abut the Project Site. The Proposed Project would not encroach on the single-family neighborhoods. The design of the Proposed Project would ensure that the Project is visually consistent with the scale and massing of the surrounding community. The Proposed Project would not diminish the quality of life in the neighborhood. Thus, the Proposed Project would be consistent with this Policy.
Objective 1-2: To allocate land for new housing to accommodate a growth of population that is consistent with and promotes the health, safety, welfare, convenience, and pleasant environment of those who live and work in the community based on adequate infrastructure and government services, especially schools.	The Proposed Project would be inconsistent with this Objective if the population generated by the project would exceed SCAG's or the Community Plan's population growth forecasts, or if the Project would cause public services or utilities to operate beyond capacity. As discussed in Section XIII, Population and Housing, the Proposed Project's generation of 1,216 permanent residents is within the population growth forecasts for the CPA. The CPA forecasted a housing total of approximately 76,551 dwelling units for 2010, and the 2010 Census shows a housing stock total of approximately 77,817 dwelling units. Therefore, there are 1,266 existing units beyond what was projected for the CPA in

	2010. As such, the Project would be contributing to the increase of dwelling units within the CPA. However, it is worth noting that the projections in the Community Plan are outdated and do not reflect the updated Citywide projections as reported to SCAG for purposes of the RTP/SCS and the updated demographic data as presented in the adopted Regional Housing Needs Assessment. Nevertheless, as discussed in Section XIV. Public Services, and Section XVII. Utilities and Service Systems, the Proposed Project would not create a significant impact that cannot be mitigated to a less than significant level for all public services, utilities, and service systems, including schools. Therefore, the Proposed Project is consistent with this Objective and promotes the health, safety, welfare, convenience, and pleasant environment of the Northeast Los Angeles CPA.
Policy 1-2.1: Designate specific areas to provide for adequate residential development to accommodate anticipated increases in population while maintaining a balance between single-family and multiple-family uses.	The Project Site is currently used for light industrial and warehouse uses. As such, development of the Project Site would not displace any single-family or multiple-family housing. As discussed above, the Project proposes the development of 372 dwelling units on a site that allows for such development. As discussed above, multi-family land uses exist along Pasadena Avenue south of the Project Site. Single-family land uses exist further northeast and east from the Project Site. Development of the Project is consistent with the zoning and land use designation for the Project Site and would be consistent with land uses in the area. The Project would not encroach onto single-family neighborhoods. Additionally, the Project's expected 1,216 new permanent residents are within the CPA's projected population for 2010. Therefore, the Proposed Project is consistent with this Policy.
Policy 1-2.2: Locate higher residential densities near commercial and institutional centers, light rail transit stations, and major bus routes to encourage pedestrian activity and use of public transportation, providing that infrastructure, public service facilities, utilities, and topography will fully accommodate this development.	Pursuant to SB 743, the Project qualifies as a transit infill project (discussed in Section 1, Aesthetics). The Proposed Project would be placing higher density residential development within approximately ¼ mile from the Heritage Square Arroyo Transit Station. The Heritage Square Arroyo Station is an existing rail transit station that serves the Metro Light-Rail Gold Line running between Downtown Los Angeles and the City of Pasadena. Further, the Proposed Project includes the development of 30,000 square feet of creative offices and 10,000 of retail/restaurant uses that would supplement existing commercial and institutional land uses in the vicinity of the Project Site. As such, the Proposed Project would be placing higher density residential near commercial, institutional, and transit opportunities. Pursuant to Ordinance No. 179,280, the Proposed Project reserves 30 percent (approximately 64,744 square feet) of the Project Site as publicly accessible open space. The Proposed Project includes public open space, paths, and landscaped areas throughout the Project Site. The Proposed Project's community-oriented design, public accessibility, location near public transportation and job opportunities encourages pedestrian activity in the Project Site area. As further discussed in Section XIV, Public Services, and Section XVII, Utilities and Service Systems, the Project would

	be adequately served by existing public services and utilities. As such, the Proposed Project would be consistent with this policy.
Policy 1-2.3: Encourage mixed-use development in selected commercially-zoned areas.	The Project Site is zoned for commercial development. The Project Site is also located within a Transit Priority area that encourages mixed-use, infill development near major transit centers. The Proposed Project includes the development of a creative campus that utilizes mixed-use development and integrates residential and commercial uses on-site. As such, the Proposed Project is consistent with this Policy.
Objective 1-3: To preserve and enhance the residential character and scale of existing single- and multi-family neighborhoods.	As discussed above, the Project Site is not located within a single-family or multi-family residential neighborhood. Although, multi-family residential development is located along Pasadena Avenue, southeast of the Project Site. The Proposed Project would add multi-family residential development and commercial development to the community in a manner that would be consistent with the existing neighborhood and allowed land uses on-site. The Proposed Project's commercial component and publicly accessible open space would promote pedestrian activity along abutting thoroughfares and within the Project Site, which would enhance and promote a community environment.
Policy 1-3.1: Protect the quality and scale of the residential environment through attention to the appearance of new construction including site planning and compatible building design.	The Proposed Project would develop an underutilized site with a creative campus that would include 372 dwelling units and 40,000 square feet of retail and office space within five buildings. The Proposed Project would be designed, including building siting, architectural design, architectural materials, and landscaped to be visually consistent with the surrounding neighborhood and promote pedestrian activity on-site and along abutting thoroughfares. Additionally, the Proposed Project would require a Site Plan Review from the City of Los Angeles. Thus, all design and construction plans would be approved by the City of Los Angeles. The Proposed Project would be consistent with this Policy.
Policy 1-3.2: Consider factors, such as neighborhood character and aesthetics, identity; compatibility of land uses; impacts on livability, services, public facilities, and traffic levels, when changes in residential densities are proposed.	The Proposed Project would reserve eleven percent of its base density (approximately 31 dwelling units) as very low income units. As such, the Proposed Project would include a ministerial density bonus pursuant to LAMC Section 12.22 A.25 for a 35 percent increase in permitted density to allow for 372 dwelling units in lieu of the base density of 275 dwelling units. The density bonus would allow a higher residential density than the baseline density. The Project Site is a in a Transit Priority Area and within close proximity to job opportunities and public services. With the compliance to regulatory compliance measures and implementation of identified mitigation measures, the Proposed Project would result in no impact or a less than significant impact to aesthetics, public services, recreation, utilities, and transportation and traffic. Further, development of the Proposed Project would promote a community environment and pedestrian activity on the Project Site and along Pasadena Avenue and Avenue 34, which currently does not exist. Therefore, the Proposed Project would improve livability and services in the area. As such, the Proposed Project would be consistent with this Policy.
Objective 1-6: To promote and ensure the	The Proposed Project's 372 dwelling units would be available

provision of fair and equal housing opportunities for all persons regardless of income and age groups or ethnic, religious, or racial background.	to all persons without discrimination. Thus, the Proposed Project would be consistent with this Objective.
Policy 1-6.1: Promote individual choice in type, quality, price, and location of housing.	The Proposed Project increases the diversity of the housing stock within the CPA; thus, increasing individual choice in type, quality, price, and location of housing. The Proposed Project would support this Policy.
Policy 1-6.2: Promote mixed use in all multiple-family residential projects in commercial zones.	The Project Site is zoned [T][Q]CM-2D and has a corresponding land use designation of Commercial Manufacturing. The Project proposes a creative campus that would include mixed-use development and integration of residential and commercial uses on-site. As such, the Proposed Project would be consistent with the Policy.
Policy 1-6.3: Ensure that redevelopment activity minimizes displacement of residents.	The Project Site is currently developed with warehouse and light industrial land uses. As such, there are no current residents on-site, and the Proposed Project would not displace any residents. Therefore, the Proposed Project would be consistent with this Policy.
Commercial	
Goal 2: Strong and competitive commercial areas that suitably serve the needs of the community and attracts customers from outside the plan area by satisfying marker demand and maximizing convenience and accessibility while preserving unique historic and cultural identities of each commercial area.	Although the Proposed Project would displace approximately 118,284 square feet of warehouse and light industrial uses, the Project would supplement the Project area with 372 residential live work units and 40,000 square feet of commercial uses. Job opportunities would be generated by approximately 30,000 square feet of creative office and 10,000 square feet of retail/restaurant space. Further, the Project Site is located within a Transit Priority Area and qualifies as a Transit-Oriented Infill Project. The Project's commercial component, publicly accessible open space, and location near transit opportunities increases its convenience and accessibility to customers from outside the plan area and supports the needs of the community. Further, as discussed in Section V, Cultural Resources, the Proposed Project would not interfere with any unique historic and cultural resources. The Proposed Project would further rehabilitate a portion of the existing commercial floor area on-site into the Project design, which helps preserve the character of the commercial area. As such, the Proposed Project is consistent with this Goal.
Objective 2-1: To conserve and strengthen potentially viable commercial areas in order to stimulate and revitalize existing businesses and create opportunities for appropriate new commercial development.	The Project Site is located within a Transit Priority Area and qualifies as a Transit-Oriented Infill Project. Development of the Proposed Project would strengthen and revitalize the existing commercial, industrial, and public facilities within the area by providing new residential and commercial space. The Proposed Project would foster new business and employment opportunities for potential customers and residents. Therefore, the Proposed Project supports this Objective.
Policy 2-1.2: Protect commercially planned/zoned areas, from residential-only development.	The Proposed Project includes the development of a creative campus that includes 372 residential units, 30,000 square feet of creative office, and 10,000 square feet of retail/restaurant. The Proposed Project is not a residential-only development. As such, the Proposed Project is consistent with this Policy.
Policy 2-2.2: Require that projects in commercial areas be designed and developed to achieve a high level of quality, distinctive character, and compatibility with appropriate existing uses and development.	The Project Site is zoned for commercial development. The Project is consistent with the allowable uses on-site pursuant to the Los Angeles General Plan and LAMC. The Project would provide a well-designed and landscaped creative campus that would promote pedestrian activity in the area and provide

	commercial opportunities. The Project is consistent with the requirements of Ordinance No. 179,280, which establishes the [T], [Q], and D conditions for the Project Site. As such, the Project is consistent with this Policy.
Objective 2-3: To minimize conflicts between auto-related and pedestrian-oriented activities and encourage use of public transportation in commercial areas.	The Project is a Transit-Oriented Infill Project in accordance with SB 743. The Project would encourage the use of public transportation and pedestrian activity along Pasadena Avenue and Avenue 34 and on site. The Proposed Project would place residential units and ground-floor commercial space in a transit-rich and pedestrian-oriented area. The Project Site's location near mass transit and in walking distance to services, retail stores, and employment opportunities promotes a pedestrian-friendly environment. As such, the Project is consistent with this Objective.
Policy 2-3.2: Encourage the formation of pedestrian-friendly shopping environments.	The Proposed Project encourages a pedestrian-friendly shopping environment with creative design, site amenities, and transit plaza connection with shops and open space. The Proposed Project would provide an enriched streetscape design, publicly accessible sidewalks and paths throughout the Project Site. The Proposed Project would further provide outdoor dining, seating, and other structures to support the retail element. As such, the Proposed Project is consistent with this Policy.
Open Space	
Goal 4: Sufficient open space, in balance with development, to serve the recreational, environmental, and health needs of the community and to protect environmental and aesthetic resources.	Pursuant to LAMC 12.21.G, the Project would provide 39,575 square feet of open space and amenities on-site exclusively for future residents and their guests. Further, pursuant to Ordinance No. 179,280, the Proposed Project would provide 64,744 square feet of publicly accessible open space on-site. Residential amenities include a gym, a pool, community rooms, and rooftop open space. Publicly accessible open space includes open space, paths, and landscaped areas throughout the Project Site. As such, the Proposed Project is consistent with this Goal.
Recreation and Park Facilities	
Goal 5: Adequate recreation and park facilities to meet the needs of the residents in the plan area.	As discussed in Section XIV, Public Services, there are currently approximately 1,210.3 acres of parkland and recreational facilities within two miles of the Project Site. As discussed above, the Proposed Project would provide open space and amenities on-site. The Proposed Project would comply with LAMC requirements and Ordinance 179,280 requirements for residential open space and publicly accessible open space. The Proposed Project's future 1,216 residents would be adequately served by existing park and recreation facilities and proposed on-site open space and amenities. As such, the Proposed Project is consistent with this Goal.
Schools	
Goal 6: Appropriate locations and adequate facilities for schools to serve the needs of existing and future populations.	This Goal is directed toward general City goals and does not specifically pertain to an individual development project. Although, as discussed in Section XIV, Public Services, there is one elementary school, one middle school, and two high schools that currently serve the Project Site. The Applicant would be required to pay all applicable school facility development fees in accordance with California Government Code Section 65995. Payment of Development fees would ensure that the Proposed Project would result in a less than significant impact to local schools. As such, the Proposed

	Project would not hinder this Goal.
Libraries	
Goal 7: Adequate library facilities and services for the area's residents.	As discussed in Section XIV, Public Services, the Project Site is adequately served by existing library facilities within two miles of the Project Site. As such, the Proposed Project is consistent with this Goal.
Police Protection	
Goal 8: Adequate police facilities and services to provide for the public safety needs of the community.	As discussed in Section XIV, Public Services, the Project Site is currently served by Hollenbeck Community Police Station, located at 2111 E. 1st Street, which is approximately 3.6 miles south of the Project Site. Development of the Proposed Project would not require the expansion of current police facilities, and there are no current plans for the expansion of police facilities in the area. As such, the Hollenbeck Community Police Station would adequately serve the Project Site. The Proposed Project would be consistent with this Goal.
Policy 8-1.3: Encourage design of building and facilities in accordance with principles that minimize opportunities for crime and enhance personal safety.	The Proposed Project would implement the principles of the City of Los Angeles Crime Prevention through Environmental Design (CPTED) Guidelines. Additionally, the Proposed Project would be designed and constructed with the recommendations of the LAPD. As such, the Proposed Project's demand in police services is expected to be relatively low. The Proposed Project would be consistent with this Policy.
Fire Protection	
Objective 9-1: Ensure that fire facilities and protective services are sufficient for the existing and future population and land uses.	The Project Site is served by LAFD Station No. 1, located at 2230 Pasadena Avenue, which is approximately 0.7 mile south of the Project Site. Based on the response distance criteria specified in LAMC 57.09.07A and the relatively short distance from Fire Station No. 1 to the Project Site, fire protection response would be considered adequate. The Proposed Project is not expected to necessitate the construction of a new fire station. As such, the Proposed Project would be consistent with this Objective.
Circulation	
Objective 10-1: To comply with Citywide performance standards for acceptable levels of service and ensure that necessary road access and street improvements are provided to accommodate traffic generated by all new development.	The Proposed Project would be designed with the guidance of the Los Angeles Department of Transportation and the Los Angeles Fire Department to ensure adequate site access that ensure that design of the Project would not conflict with vehicle or pedestrian movement. The Proposed Project would comply with Citywide performance standards for acceptable levels of service. With the implementation of the proposed Transportation Demand Management Plan and Trip Monitory Program discussed in the LADOT Traffic Impact Assessment letter, dated January 26, 2016, the Proposed Project would result in a less than significant impact to transportation and traffic (Mitigation Measure MM-T-1).
Policy 10-1.1: Maintain Levels of Service for streets and highways not to exceed LOS "D" for secondary arterials, collector streets, and local streets; not to exceed LOS "E" on Major Highways of in the community's major business districts.	This Policy is directed towards the City and does not specifically pertain to a single project. With the implementation of the Transportation Demand Management Plan and Trip Monitory Program (Mitigation Measure MM-T-1 to T-3) the Project's transportation and traffic impacts would be mitigated to less than significant levels.
Policy 10-1.2: Design new development projects to minimize disturbance to existing traffic flow with proper ingress and egress to parking.	The Proposed Project would be designed with the guidance of the Los Angeles Department of Transportation and the Los Angeles Fire Department to ensure adequate site access to on-site parking facilities would not conflict with vehicle or

	pedestrian movement. Additionally, the proposed driveways to the Project Site would provide properly signalized ingress and egress to the Proposed Project's parking lot to minimize disturbance to existing traffic flow. As such, the Proposed Project would be consistent with this Policy.
Policy 10-1.3: Discourage non-residential traffic flow for streets designed to serve only residential areas by the use of traffic control measures.	Although residential neighborhoods exist to the east and southeast of the Project Site, the Project Site is located in a primarily commercial, public facilities, and industrial area. As such, the Proposed Project's non-residential traffic would not interfere with streets designed to serve only residential areas. As such, the Proposed Project would be consistent with this Policy.
Public Transportation	
Goal 12: A coordinated, integration of development around transit stations in order to improve services, access, and economic vitality of the community.	Pursuant to SB 743, the Project Site qualifies as a Transit Oriented Infill Development and is located within a Transit Priority Area. The Proposed Project would provide residential, creative office, and commercial uses that would increase services near transit and promote accessibility and economic vitality of the existing community. As such, the Proposed Project is consistent with this Goal.
Historic and Cultural Amenities	
Objective 14-2: To protect and enhance historic and architectural resources in commercial areas in a manner that will encourage revitalization and investment in these areas.	The Project Site is currently developed with light industrial and warehouse uses and paved surface loading and parking areas. As discussed in Section V, Cultural Resources, no identified significant cultural or historical resources are present on-site. As such, the Proposed Project would not conflict with this Objective.
Policy 14-2.1: Encourage the preservation, maintenance, enhancement and adaptive reuse of existing buildings in commercial areas through the restoration of original facades and the design of new construction which complements the old in a harmonious fashion, enhancing the historic pattern.	As discussed in Section V, Cultural Resources, no cultural or historic resources are identified on-site. Nonetheless, the Proposed Project includes the rehabilitation of a portion of the existing floor area on site, which includes a portion of the 3,521 square foot building located on the southwest corner of the Project Site and approximately 7,963 square feet the light industrial building that fronts Pasadena Avenue. The Proposed Project integrates these existing building into the design in a harmonious fashion. As such, the Proposed Project would be consistent with this Policy.
Economic Development	
Goal 15: The revitalization of a physical environment conducive to increasing and improving economic activity.	The development of the Proposed Project would revitalize the Project Site with new job and retail/restaurant opportunities within a transit priority area. The Proposed Project would further improve the visual character and promote economic and pedestrian activity in the area. The Proposed Project would foster new business and employment opportunities for potential customers and residents, which would help to improve the economy of the surrounding area. As such, the Proposed Project is consistent with this Goal.
Objective 15-1: To improve the visual environment of existing commercial and industrial areas.	The Proposed Project includes the development and rehabilitation of an underutilized industrial/commercial site. The Proposed Project would provide new job and retail/restaurant opportunities with a well-designed, pedestrian-oriented creative campus. As such, the Project is consistent with this Objective.
Source: City of Los Angeles, Department of City Planning, Northeast Los Angeles Community Plan; and Parker Environmental Consultants, February 2016.	

The Northeast Los Angeles Community Plan addresses planning and land use issues and opportunities in various sectors, such as residential, industrial, commercial, transportation, among others. Northeast Los Angeles Community Plan projected a population of 267,973 persons and 76,551 dwelling units by 2010 within the Community Plan area.[34] The 2010 United States Census shows that the Northeast Los Angeles Community Plan area had a population of 237,483 persons and 77,817 dwelling units.[35] The 2010 Census data shows that the actual population within the CPA is lower than anticipated for 2010 and that housing units are above the anticipated capacity for 2010. Nevertheless, as discussed in Section XIII, Population and Housing, the Proposed Project is consistent with SCAG's population and housing growth projections in the 2016-2040 RTP/SCS. Further, the Proposed Project would help promote the City's goal of diversifying the housing stock and adding multi-family housing near alternative transit opportunities and job opportunities.

The Proposed Project would be consistent with the goals, objectives, and policies set forth in the Northeast Los Angeles Community Plan. Therefore, the Proposed Project is consist with the applicable land use and planning policies in the Northeast Los Angeles Community Plan.

As discussed in the preceding paragraphs, the Proposed Project would not conflict with local and regional plans applicable to the Project Site, and any impacts would be mitigated to less than significant levels.

c) Would the project conflict with any applicable habitat conservation plan or natural community conservation plan?

No Impact. A project-related significant adverse impact could occur if the Project Site were located within an area governed by a habitat conservation plan or natural community conservation plan. As discussed in Section 4(f) above, no such plans presently exist which govern any portion of the Project Site. Further, the Project Site is located in a highly urbanized area, and the Project Site is currently fully developed with light manufacturing land uses and paved surface loading and parking areas. Therefore, the Proposed Project would not have the potential to cause such effects.

Cumulative Impacts

No Impact. Development of the three related project's identified in Section II, Project Description, and any new development within the neighboring CASP study is expected to occur in accordance with adopted plans and regulations applicable to each parcel. It should be noted that of the three related project

[35] *The Northeast Los Angeles Community Plan Area contains the following tracts: 1810, 1813, 1814, 1815, 1816, 1831.01, 1831.03, 1831.04, 1832.2, 1832.21, 1832.22, 1833, 1834.01, 1834.02, 1835.1, 1835.2, 1836.1, 1836.2, 1837.01, 1837.02, 1838.1, 1838.2, 1851, 1852.02, 1852.03, 1852.04, 1853.1, 1853.2, 1861, 1862.01, 1862.02, 1862.03, 1863.01, 1863.02, 1864.01, 1864.03, 1864.04, 1871.01, 1871.02, 1881, 1883, 1990, 1991.1, 1991.2, 1992.01, 1992.02, 1993, 1994, 1997, 1998, 1999, 2011.1, 2.1102, 2012, 2013.01, 2013.02, 2014.01, 2014.02, 2015.01, 2015.03, 2015.04, 2016.01, 2016.02, 2017, 2031, 2033. The population and dwelling units were calculated by summing the individual tracts together. Source: United States Census Bureau, 2010 Census Interactive Population Map, website: http://www.census.gov/2010census/popmap/, accessed September 2014.*

identified, only Related Project No. 3 (located at 211 S Avenue 20) is located within the CASP. Related Project No. 3 consists of an educational campus with a design capacity of 263 high school students and 74 middle school students. It is expected that most of the related projects would be compatible with the zoning and land use designations of each related project site and its existing surrounding uses. The development of the Proposed Project, including the requested entitlement requests would not result in any cumulative land use or zoning impacts. The Proposed Project's land use impacts would not be cumulatively considerable since the Proposed Project would not conflict with applicable local or regional plans. The Proposed Project's land uses are consistent with the existing zoning and General Plan land use designations and would not create any significant land use compatibility conflicts. Therefore, the Proposed Project's land use impacts would be less than cumulatively considerable and would therefore be considered less than significant on a cumulative basis.

XI. MINERAL RESOURCES

a) Would the project result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

No Impact. A significant impact may occur if a project site is located in an area used or available for extraction of a regionally-important mineral resource, or if the project development would convert an existing or future regionally-important mineral extraction use to another use, or if the project development would affect access to a site used or potentially available for regionally-important mineral resource extraction. According to the *L.A. CEQA Thresholds Guide*, the determination of significance shall be made on a case-by-case basis considering: (a) whether, or the degree to which, the project might result in the permanent loss of, or loss of access to, a mineral resource that is located in a State Mining and Geology Board Mineral Resource Zone MRZ-2 zone or other known or potential mineral resource area, and (b) whether the mineral resource is of regional or statewide significance, or is noted in the Conservation Element as being of local importance. The Project Site is not located within the Los Angeles Downtown Oil Field and Oil Drilling/Surface Mining Supplemental Use District, or an Oil Field/Drilling Area. The Project Site is currently developed with four light manufacturing and warehouse buildings with paved surface loading areas and parking. The Project Site is not currently used for the extraction of mineral resources, and there is no evidence to suggest that the Project Site has been historically used for the extraction of mineral resources.[36] Development of the Project Site would not block or hinder access or availability of mineral resources. Therefore, the development of the Proposed Project would not result in the loss of availability of a known mineral resource, and no impact would occur.

b) Would the project result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?

No Impact. A significant impact may occur if the Project Site is located in an area used or available for extraction of a regionally-important mineral resource, or if the development would convert an existing or future regionally-important mineral extraction use to another use, or if the development would affect access to a site used or potentially available for regionally-important mineral resource extraction. The Project Site is not currently used for the extraction of mineral resources, and there is no evidence to suggest that the Project Site has historically been used for the extraction of mineral resources. Development of the Project Site would not block or hinder access or availability of locally important mineral resources. Therefore, no impact to locally important mineral resources would occur.

XII. NOISE

Fundamentals of Noise

Sound is technically described in terms of amplitude (loudness) and frequency (pitch). The standard unit of sound amplitude measurement is the decibel (dB). The decibel scale is a logarithmic scale that describes the physical intensity of the pressure vibrations that make up any sound. The pitch of the sound is related to the frequency of the pressure vibration. Since the human ear is not equally sensitive to a given sound level at all frequencies, a special frequency-dependent rating scale has been devised to relate noise to human sensitivity. The A-weighted decibel scale (dBA) provides this compensation by discriminating against frequencies in a manner approximating the sensitivity of the human ear.

Noise, on the other hand, is typically defined as unwanted sound. A typical noise environment consists of a base of steady "background" noise that is the sum of many distant and indistinguishable noise sources. Superimposed on this background noise is the sound from individual local sources. These can vary from an occasional aircraft or train passing by to virtually continuous noise from, for example, traffic on a major highway.

Several rating scales have been developed to analyze the adverse effect of community noise on people. Since environmental noise fluctuates over time, these scales consider that the effect of noise upon people is largely dependent upon the total acoustical energy content of the noise, as well as the time of day when the noise occurs. Those that are applicable to this analysis are as follows:

- L_{eq} – An L_{eq}, or equivalent energy noise level, is the average acoustic energy content of noise for a stated period of time. Thus, the L_{eq} of a time-varying noise and that of a steady noise are the same if they deliver the same acoustic energy to the ear during exposure. For evaluating community impacts, this rating scale does not vary, regardless of whether the noise occurs during the day or the night.
- L_{max} – The maximum instantaneous noise level experienced during a given period of time.
- L_{min} – The minimum instantaneous noise level experienced during a given period of time.
- CNEL – The Community Noise Equivalent Level is a 24-hour average L_{eq} with a 5 dBA "weighting" during the hours of 7:00 P.M. to 10:00 P.M. and a 10 dBA "weighting" added to noise during the hours of 10:00 P.M. to 7:00 A.M. to account for noise sensitivity in the evening and nighttime, respectively. The logarithmic effect of these additions is that a 60 dBA 24 hour L_{eq} would result in a measurement of 66.7 dBA CNEL.

Noise environments and consequences of human activities are usually well represented by median noise levels during the day, night, or over a 24-hour period. For residential uses, environmental noise levels are generally considered low when the CNEL is below 60 dBA, moderate in the 60–70 dBA range, and high above 70 dBA. Noise levels greater than 85 dBA can cause temporary or permanent hearing loss. Examples of low daytime levels are isolated, natural settings with noise levels as low as 20 dBA and quiet suburban residential streets with noise levels around 40 dBA. Noise levels above 45 dBA at night can disrupt sleep. Examples of moderate level noise environments are urban residential or semi-commercial

areas (typically 55–60 dBA) and commercial locations (typically 60 dBA). People may consider louder environments adverse, but most will accept the higher levels associated with more noisy urban residential or residential-commercial areas (60–75 dBA) or dense urban or industrial areas (65–80 dBA).

It is widely accepted that in the community noise environment the average healthy ear can barely perceive CNEL noise level changes of 3 dBA. CNEL changes from 3 to 5 dBA may be noticed by some individuals who are extremely sensitive to changes in noise. A 5 dBA CNEL increase is readily noticeable, while the human ear perceives a 10 dBA CNEL increase as a doubling of sound.

Noise levels from a particular source generally decline as distance to the receptor increases. Other factors, such as the weather and reflecting or barriers, also help intensify or reduce the noise level at any given location. A commonly used rule of thumb for roadway noise is that for every doubling of distance from the source, the noise level is reduced by about 3 dBA at acoustically "hard" locations (i.e., the area between the noise source and the receptor is nearly complete asphalt, concrete, hard-packed soil, or other solid materials) and 4.5 dBA at acoustically "soft" locations (i.e., the area between the source and receptor is normal earth or has vegetation, including grass). Noise from stationary or point sources is reduced by about 6 to 7.5 dBA for every doubling of distance at acoustically hard and soft locations, respectively. In addition, noise levels are also generally reduced by 1 dBA for each 1,000 feet of distance due to air absorption. Noise levels may also be reduced by intervening structures – generally, a single row of buildings between the receptor and the noise source reduces the noise level by about 5 dBA, while a solid wall or berm reduces noise levels by 5 to 10 dBA. The normal noise attenuation within residential structures with open windows is about 17 dBA, while the noise attenuation with closed windows is about 25 dBA.[37]

Ambient Noise Levels

To assess the existing ambient noise conditions in the area, ambient noise measurements were taken with a Larson Davis 831 sound level meter, which conforms to industry standards set forth in ANSI S1.4-1983 (R2001) - American National Standard Specification for Sound Level Meters. Figure III-1, Noise Monitoring and Sensitive Receptor Location Map, depicts the noise measurement locations fronting the adjacent residential uses as the most likely sensitive receptors to experience noise level increases during construction. The detailed noise monitoring data are presented in the Noise Monitoring Data, included in the case file, and are summarized below in Table III-10, Existing Ambient Daytime Noise Levels in Project Site Vicinity. As shown in Table III-10, the ambient noise in the vicinity of the Project Site ranges from 59.0 to 67.8 L_{eq}. The maximum noise level during the three 15-minute recordings was 83.4 dB L_{max} along Pasadena Avenue, where there was more vehicle activity. The primary noise source at Location 1 contributing to the ambient noise levels was the Metro Gold Line and the railroad crossing alarms associated with the Metrorail. The primary noise sources at Location 2 and 3 were observed to be vehicle traffic during the daytime hours, including delivery trucks and buses. The Project Site is currently

[37] *National Cooperative Highway Research Program Report 117, Highway Noise: A Design Guide for Highway Engineers, 1971.*

operating with light manufacturing facilities, which contributed to some ambient noise during the noise measurements.

Table III-10
Existing Ambient Daytime Noise Levels in Project Site Vicinity

No.	Location	Primary Noise Sources	Noise Level Statistics[a]		
			L_{eq}	L_{min}	L_{max}
1	On the southwest corner of the Project Site, adjacent to the Metro Gold Line railroad	Metro Gold Line, railroad crossing alarms, light vehicle activity, industrial activity	59.0	44.0	80.4
2	On the northwest corner of Pasadena Avenue and W. Avenue 34; the southeast corner of the Project Site	Light vehicle traffic, pedestrian activity, birds in street trees, delivery trucks, fire trucks, garbage truck	65.9	49.0	80.3
3	On the northwest corner of the Project Site along the west side of Pasadena Avenue	Vehicle traffic, buses, pedestrian activity	67.8	49.6	83.4

[a] *Noise measurements were taken on Tuesday, January 12, 2016 at each location for a duration of 15 minutes. See case file for noise monitoring data sheets.*

Sensitive Receptors

Several noise sensitive land uses are located adjacent to and in the vicinity of the Proposed Project. For purposes of assessing noise impacts on sensitive populations, the following sensitive receptors in close proximity to the Project Site were identified:

1) Single- and multi-family residences along Avenue 34, located south of the Project Site;
2) Single- and multi-family residences along Pasadena Avenue, located east of the Project Site; and
3) Hillside Elementary School, located at 120 E. Avenue 35, east of the Project Site.

The locations of these land uses relative to the Project Site are depicted in Figure III-1, Noise Monitoring and Sensitive Receptor Location Map. For purposes of assessing construction-generated vibration impacts on building damage, there are no buildings abutting the Project Site or within a close enough proximity to the Project Site to be susceptible to building damage from groundborne vibration during construction.

PARKER ENVIRONMENTAL CONSULTANTS

Figure III-1
Noise Monitoring and Sensitive Receptor Location Map

a) Would the project result in exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Potentially Significant Unless Mitigation Incorporated. A significant impact may occur if the Proposed Project would generate excess noise that would cause the ambient noise environment at the Project Site to exceed noise level standards set forth in the City of Los Angeles General Plan Noise Element (Noise Element) and the City of Los Angeles Noise Ordinance (Noise Ordinance). Implementation of the Proposed Project would result in an increase in ambient noise levels during both construction and operation, as discussed in further detail below.

Construction Noise

Construction-related noise impacts upon adjacent land uses would be significant if, as indicated in LAMC Section 112.05, noise from construction equipment within 500 feet of a residential zone exceeds 75 dBA at a distance of 50 feet from the noise source. However, the above noise limitation does not apply where compliance is technically infeasible. Technically infeasible means that the above noise limitation cannot be complied with despite the use of mufflers, shields, sound barriers and/or any other noise reduction device or techniques during the operation of the equipment. Additionally, as defined in the *L.A. CEQA Thresholds Guide* for construction noise impacts, a significant impact would occur if construction activities lasting more than one day would increase the ambient noise levels by 10 dBA or more at any off-site noise-sensitive location. Furthermore, the *L.A. CEQA Thresholds Guide* also states that construction activities lasting more than ten days in a three-month period, which would increase ambient exterior noise levels by 5 dBA or more at a noise sensitive use, would also normally result in a significant impact.

Construction of the Proposed Project would require the use of heavy equipment for demolition/site clearing, grading and site preparation, the installation of utilities, paving, and building construction. During each construction phase there would be a different mix of equipment operating and noise levels would vary based on the amount of equipment in operation and the location of each activity. The U.S. Environmental Protection Agency (EPA) has compiled data regarding the noise generating characteristics of specific types of construction equipment and typical construction activities. The data pertaining to the types of construction equipment and activities that would occur at the Project Site are presented in Table III-11, Typical Outdoor Construction Noise Levels, at a distance of 50 feet from the noise source (i.e., reference distance).

The noise levels shown in Table III-11 represent composite noise levels with sound attenuating mufflers associated with typical construction activities, which take into account both the number of pieces and spacing of heavy construction equipment that are typically used during each phase of construction. Construction noise during the heavier initial periods of construction could be expected to be 86 dBA L_{eq}

when measured at a reference distance of 50 feet from the center of construction activity.[38] These noise levels would diminish rapidly with distance from the construction site at a rate of approximately 6 dBA per doubling of distance. For example, a noise level of 84 dBA L_{eq} measured at 50 feet from the noise source to the receptor would reduce to 78 dBA L_{eq} at 100 feet from the source to the receptor, and reduce by another 6 dBA L_{eq} to 72 dBA L_{eq} at 200 feet from the source to the receptor. Construction activities associated with the Proposed Project would be expected to generate similar noise levels to those shown in Table III-11, below during the approximate 34-month construction period.

Table III-11
Typical Outdoor Construction Noise Levels

Construction Phase	Noise Levels at 50 Feet with Mufflers (dBA L_{eq})	Noise Levels at 60 Feet with Mufflers (dBA L_{eq})	Noise Levels at 100 Feet with Mufflers (dBA L_{eq})	Noise Levels at 200 Feet with Mufflers (dBA L_{eq})
Ground Clearing	82	80	76	70
Excavation, Grading	86	84	80	74
Foundations	77	75	71	65
Structural	83	81	77	71
Finishing	86	84	80	74

Source: United States Environmental Protection Agency, Noise from Construction Equipment and Operations, Building Equipment and Home Appliances, PB 206717, 1971.

As set forth in the *L.A. CEQA Thresholds Guide*, a significant construction noise impact would occur if construction activities lasting more than one day would increase the ambient noise levels by 10 dBA or more at any off-site noise-sensitive location. Construction activities lasting more than ten days in a three-month period, which would increase ambient exterior noise levels by 5 dBA or more at a noise sensitive use, would also normally result in a significant impact. Since construction activities associated with the proposed development at the Project Site would last for more than ten days in a three-month period, is possible that the Proposed Project could exceed these threshold levels on a temporary and intermittent basis during the construction period. Thus, based on criteria established in the *L.A. CEQA Threshold Guide*, a substantial temporary or periodic increase in ambient noise levels could occur at the identified off-site sensitive receptors.

The City of Los Angeles Building Regulations Ordinance No. 178048 requires a construction site notice to be provided that includes the following information: job site address, permit number, name and phone number of the contractor and owner or owner's agent, hours of construction allowed by code or any discretionary approval for the site, and City telephone numbers where violations can be reported. The notice is required to be posted and maintained at the construction site prior to the start of construction and displayed in a location that is readily visible to the public. Pursuant to LAMC Section 41.40, exterior demolition and construction activities that generate noise are prohibited between the hours of 9:00 P.M. and 7:00 A.M. Monday through Friday, and between 6:00 P.M. and 8:00 A.M. on Saturday. Demolition

[38] *Although the peak noise levels generated by certain construction equipment may be greater than 86 dBA at a distance of 50 feet, the equivalent noise level would be approximately 86 dBA L_{eq} (i.e., the equipment does not operate at the peak noise level over the entire duration).*

and construction are prohibited on Sundays and all federal holidays. The construction activities associated with the Proposed Project would comply with these LAMC requirements. Additionally, Environmental [Q] Condition 10 (Noise) requires additional compliance actions for the purposes of reducing construction noise impacts. Specifically, [Q] Condition 10. (Noise a) requires compliance with Ordinances 144,331 and 161,574 which prohibit the emission or creation of noise beyond certain levels at adjacent uses unless technically unfeasible. Environmental [Q] Condition 10 (Noise b) would further restrict the permissible hours of construction to the hours of 7:00 am to 6:00 pm Monday through Friday, and 8:00 am to 6:00 pm on Saturday. Environmental [Q] Condition 10 (Noise (c) and (d) specify that construction and demolition activities shall be scheduled so as to avoid operating several pieces of equipment simultaneously and require the use of power construction equipment with state-of the art noise shielding and muffling devices. In accordance with LAMC Section 112.05, construction noise levels are considered exempt from the 75 dBA noise threshold if all technically feasible noise attenuation measures are implemented.

Table III-12, below, shows the estimated exterior construction noise for the identified sensitive receptors (See calculations in the case file). Although the estimated construction-related noise levels associated with the Proposed Project would exceed the numerical noise threshold of 75 dBA at 50 feet from the noise source as outlined in the City Noise Ordinance, and the typical construction noise levels associated with the Proposed Project would exceed the existing ambient noise levels at all of the identified off-site sensitive receptors by more than the 5 dBA threshold established by the *L.A. CEQA Thresholds Guide* during all construction phases, implementation of the following mitigation measure would reduce the noise levels associated with construction of the Proposed Project. Implementation of noise control measures such as temporary noise barriers or sound blankets around the noise generating equipment would be capable of attenuating the noise level by approximately 10 dBA. Thus, based on the provisions set forth in LAMC 112.05, implementation of Environmental [Q] Condition 10, and Mitigation Measures MM-N-1 would ensure impacts associated with construction-related noise levels are mitigated to the maximum extent feasible, and temporary construction-related noise impacts would be considered less than significant in accordance with City requirements and standards.

Table III-12
Estimated Exterior Construction Noise at Nearest Sensitive Receptors (Unmitigated)

Receptor	Sensitive Land Use	Distance to Project Site (feet)	Existing Monitored Daytime Ambient Noise Levels (dBA L_{eq})	Estimated Peak Construction Noise Levels (dBA L_{eq})	Noise Level Increase
1	Single- and Multi-Family Residential south of Project Site	80	65.9	81.9	16.0
2	Single- and Multi-Family Residential east of Project Site	85	67.8	81.4	13.6
3	Hillside Elementary School	110	67.8	79.2	11.4

See Figure III-1, Noise Monitoring and Sensitive Receptor Location Map.
Source: Calculations based on Federal Transit Administration, Transit Noise and Vibration Impact Assessment, Final Report, May 2006. It should be noted that the peak noise level increase at the nearby sensitive receptors during project construction represents the highest composite noise level that would be generated periodically during a worst-case construction activity and does not represent continuous noise levels occurring throughout the construction day or period.

Localized construction impacts associated with on-site construction noise and off-site construction-related traffic/hauling activities would have the potential to impact students at Hillside Elementary School. The Proposed Project would provide appropriate construction measures to reduce the Project's impacts upon the nearby school facility. A temporary construction noise barrier with a minimum ¾-inch thick plywood or other sound absorbing material capable of achieving a 10 dBA reduction in sound level will be erected around the Project Site's perimeter, which will reduce noise impacts on the adjacent school. Further, the Project's proposed haul route would be designed to minimize, to the greatest degree possible, hauling impacts adjacent to Hillside Elementary School. The proposed haul route traveling to and from the I-5 Freeway would utilize Pasadena Avenue, Avenue 33, Lacy Street, and Avenue 26. Hauling activity utilizing Pasadena Avenue is closest to the rear side of Hillside Elementary School, which is improved with landscaping, trees and the façade of school structures. The active playground areas for Hillside Elementary are located towards the east of the campus fronting on Griffin Avenue and Avenue 35, which will not be utilized by hauling trucks. Implementation of Mitigation Measure MM-N-1 and Mitigation Measures MM-HAZ-2 and MM-HAZ-3 (See response to Checklist Question VIII(c), above) would reduce construction impacts related to nearby schools to less than significant levels.

Mitigation Measure:

MM-N-1 Increased Noise Levels (Demolition, Grading, and Construction Activities)

- In addition to satisfying the noise-related conditions identified in [Q] Condition 10 of Ordinance No. 179,280, the project contractor shall erect a temporary noise-attenuating sound barrier along the perimeter of the Project Site's southerly and easterly property line to noise construction noise levels at off site properties. The sound wall shall be a minimum of 8 feet in height to block the line of site of construction equipment and off site receptors at the ground level. The sound barrier shall include ¾ inch plywood or other sound absorbing material capable of achieving a 10 dBA reduction in sound level.

Operational Noise

HVAC Equipment Noise

Upon completion and operation of the Proposed Project, on-site operational noise would be generated by heating, ventilation, and air conditioning (HVAC) equipment installed on the new structures. However, the noise levels generated by these equipment types are not anticipated to be substantially greater than those generated by the current HVAC equipment serving the existing buildings on the Project Site and in the Project vicinity. As such, the HVAC equipment associated with the Proposed Project would not represent a new source of noise in the Project Site vicinity. In addition, the operation of this and any other on-site stationary sources of noise would be required to comply with the LAMC Section 112.02, which prohibits noise from air conditioning, refrigeration, heating, pumping, and filtering equipment from exceeding the ambient noise level on the premises of other occupied properties by more than five decibels.

Noise from Mixed Use Commercial and Residential Land Uses

Due to the mixed-use nature of the Proposed Project, noise generated from the operation of proposed office and retail uses have the potential to impact the proposed residential uses. In order to ensure that on-site residences would not be adversely impacted by ambient urban noise levels, Environmental [Q] Condition C.20 shall be implemented to ensure that dwelling units associated with the Proposed Project would be constructed with double-pane glass and use exterior wall construction which provides a Sound Transmission Class of 50 or greater as defined in UBC No. 35-1, 1979 edition or any amendment thereto. With implementation of Environmental [Q] Condition C.20, impacts associated with interior noise levels at the proposed residences would be less than significant.

Environmental [Q] Condition C.20:

> 20. Severe Noise Levels (Residential Only)
>
> All exterior windows having a line of sight to the MTA Gold Line, Figueroa Street, Pasadena Avenue, and the 1-110 (Pasadena) Freeway shall be constructed with double-pane glass and use exterior wall construction which provides a Sound Transmission Class of 50 or greater as defined in UBC No. 35-1, 1979 edition or any amendment thereto. The applicant, as an alternative, may retain an acoustical engineer to submit evidence, along with the application for a building permit, any alternative means of sound insulation sufficient to mitigate interior noise levels below a CNEL of 45 dBA in any habitable room.

b) Would the project result in exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?

Potentially Significant Unless Mitigation Incorporated. Vibration is sound radiated through the ground. Vibration can result from a source (e.g., subway operations, vehicles, machinery equipment, etc.) causing the adjacent ground to move, thereby creating vibration waves that propagate through the soil to the foundations of nearby buildings. This effect is referred to as groundborne vibration. The peak

particle velocity (PPV) or the root mean square (RMS) velocity is usually used to describe vibration levels. PPV is defined as the maximum instantaneous peak of the vibration level and is typically used for evaluating potential building damage. RMS is defined as the square root of the average of the squared amplitude of the level. RMS velocity in decibels (VdB) is typically more suitable for evaluating human response.

The background vibration velocity level in residential areas is usually around 50 VdB. The vibration velocity level threshold of perception for humans is approximately 65 VdB. A vibration velocity level of 75 VdB is the approximate dividing line between barely perceptible and distinctly perceptible levels for most people. Most perceptible indoor vibration is caused by sources within buildings such as operation of mechanical equipment, movement of people, or the slamming of doors. Typical outdoor sources of perceptible groundborne vibration are construction equipment, steel-wheeled trains, and traffic on rough roads. If a roadway is smooth, the groundborne vibration from traffic is rarely perceptible. The range of interest is from approximately 50 VdB, which is the typical background vibration velocity level, to 100 VdB, which is the general threshold where minor damage can occur in fragile buildings.

Construction

Excavation and earthwork activities for the Proposed Project have the potential to generate low levels of groundborne vibration. The operation of construction equipment generates vibrations that propagate through the ground and diminishes in intensity with distance from the source. Vibration impacts can range from no perceptible effects at the lowest vibration levels, to low rumbling sounds and perceptible vibration at moderate levels, to slight damage of buildings at the highest levels. Thus, construction activities associated with the Proposed Project could have an adverse impact on both sensitive structures (i.e., building damage) and populations (i.e., annoyance).

Table III-13, Vibration Source Levels for Construction Equipment, identifies various PPV and RMS velocity (in VdB) levels for the types of construction equipment that would operate at the Project Site during construction. As shown in Table III-13, vibration velocities could range from 0.003 to 0.089 inch/sec PPV at 25 feet from the source activity, with corresponding vibration levels ranging from 58 VdB to 87 VdB at 25 feet from the source activity, depending on the type of construction equipment in use.

Table III-13
Vibration Source Levels for Construction Equipment

Equipment	Approximate PPV (in/sec)					Approximate RMS (VdB)				
	25 Feet	50 Feet	60 Feet	75 Feet	100 Feet	25 Feet	50 Feet	60 Feet	75 Feet	100 Feet
Large Bulldozer	0.089	0.031	0.024	0.017	0.011	87	78	76	73	69
Caisson Drilling	0.089	0.031	0.024	0.017	0.011	87	78	76	73	69
Loaded Trucks	0.076	0.027	0.020	0.015	0.010	86	77	75	72	68
Jackhammer	0.035	0.012	0.009	0.007	0.004	79	70	68	65	61
Small Bulldozer	0.003	0.001	0.0008	0.0006	0.0004	58	49	47	44	40

Source: Federal Transit Administration, Transit Noise and Vibration Impact Assessment, Final Report, 2006.

Based on the distances of surrounding buildings within the Project vicinity, no buildings are directly abutting the Project Site. The closest buildings are located across Pasadena Avenue and Avenue 34. Therefore, no buildings are susceptible to building damage from construction groundborne vibration. Thus, construction impacts relative to structural damage from groundborne vibration would be considered less than significant.

For purposes of addressing vibration impacts relative to human annoyance, the following analysis relies on the FTA's vibration impact thresholds, which are 80 VdB and above at residences and buildings where people normally sleep (e.g., nearby residences) and 83 VdB and above at institutional buildings, which includes schools and churches. No thresholds have been adopted or recommended for commercial and office uses.

Residents in the three sensitive receptors previously identified in this section could be exposed to increased vibration levels on a temporary and intermittent basis during the construction period. As shown in Table III-14, Estimated Vibration Levels at Nearest Sensitive Receptors, none of the sensitive receptors would experience vibration levels above the thresholds adopted from the FTA. Furthermore, implementation of the measures identified under Mitigation Measure MM-N-1 would serve to ensure construction related vibration levels to the maximum extent feasible, and thus would further ensure the annoyance factor to an acceptable level. Additionally, in accordance with Environmental [Q] Condition C.10(b), all construction activity would be restricted to the hours of 7:00 A.M. to 6:00 P.M. Monday through Friday, and 8:00 A.M. to 6:00 P.M. on Saturday. Because any vibration level increases experienced at the residential uses in close proximity to the Project Site would occur during the acceptable time periods for construction activities, and would only occur on a temporary and intermittent basis during the construction period, impacts associated with groundborne vibration would be less than significant level.

Table III-14
Estimated Vibration Levels at Nearest Sensitive Receptors (Unmitigated)

Receptor	Sensitive Land Use	Distance to Project Site (feet)	Estimated Vibration Levels (VdB)	Vibration Threshold (VdB)	Significant Impact?
1	Single- and Multi-Family Residential south of Project Site	80	71.9	80	No
2	Single- and Multi-Family Residential east of Project Site	85	71.1	80	No
3	Hillside Elementary School	110	67.7	83	No

See Figure 1, Noise Measurement and Sensitive Receptor Location Map.
Notes: It should be noted that the peak noise level increase at the nearby sensitive receptors during project construction represents the highest composite noise level that would be generated periodically during a worst-case construction activity and does not represent continuous noise levels occurring throughout the construction day or period.
Source: Calculations based on Federal Transit Administration, Transit Noise and Vibration Impact Assessment, Final Report, May 2006.

With respect to temporary hauling activities during construction, the Project Site is located in a Commercial Manufacturing zone which experiences heavy truck traffic on a daily basis. As noted in the Traffic Study, the existing warehouse and light industrial land uses generate approximately 440 trips per day, which are mostly heavy trucks. The hauling activities with soil export and demolition and construction debris removal would thus not generate a significant change in the heavy vehicle traffic that already occurs in the immediate project vicinity on a daily basis. Thus vibration impacts from hauling and construction traffic would be less than significant.

Operation

The Proposed Project is a mixed-use development and would not involve the use of stationary equipment that would result in high vibration levels. Although groundborne vibration at the Project Site and immediate vicinity may currently result from heavy-duty vehicular travel (e.g., refuse trucks and transit buses) on W. Avenue 34 and Pasadena Avenue, the proposed land uses would not result in a substantial increased in the use of these heavy-duty vehicles on the public roadways. While refuse trucks would be used for the removal of solid waste at the Project Site, these trips would typically only occur once a week and would not be any different than those presently occurring in the vicinity of the Project Site. As such, vibration impacts associated with operation of the Proposed Project would be less than significant.

c) Would the project result in a substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?

Potentially Significant Unless Mitigation Incorporated. A significant impact may occur if the Proposed Project were to result in a substantial permanent increase in ambient noise levels above existing ambient noise levels without the Proposed Project. As defined in the *L.A. CEQA Thresholds Guide* for operational noise impacts, a project would normally have a significant impact on noise levels from Proposed Project operations if the Proposed Project causes the ambient noise level measured at the property line of affected uses that are shown in Table III-15, Community Noise Exposure (CNEL), to increase by 3 dBA in CNEL to or within the "normally unacceptable" or "clearly unacceptable" category, or any 5 dBA or greater noise increase. Thus, a significant impact would occur if noise levels associated with operation of the Proposed Project would increase the ambient noise levels by 3 dBA CNEL at homes where the resulting noise level would be at least 70 dBA CNEL. In addition, any long-term increase of 5 dBA CNEL or more is considered to cause a significant impact. Generally, in order to achieve a 3 dBA CNEL increase in ambient noise from traffic, the volume on any given roadway would need to double. In addition to analyzing potential impacts in terms of CNEL, the analysis also addresses increases in on-site noise sources per the provisions of the LAMC, which establishes a L_{eq} standard of 5 dBA over ambient conditions as constituting a LAMC violation.

Table III-15
Community Noise Exposure (CNEL)

Land Use	Normally Acceptable[a]	Conditionally Acceptable[b]	Normally Unacceptable[c]	Clearly Unacceptable[d]
Single-family, Duplex, Mobile Homes	50 - 60	55 - 70	70 - 75	above 75
Multi-Family Homes	50 - 65	60 - 70	70 - 75	above 75
Schools, Libraries, Churches,	50 - 70	60 - 70	70 - 80	above 80

Hospitals, Nursing Homes				
Transient Lodging – Motels, Hotels	50 - 65	60 - 70	70 - 80	above 75
Auditoriums, Concert Halls, Amphitheaters	---	50 - 70	---	above 70
Sports Arena, Outdoor Spectator Sports	---	50 - 75	---	above 75
Playgrounds, Neighborhood Parks	50 - 70	---	67 - 75	above 75
Golf Courses, Riding Stables, Water Recreation, Cemeteries	50 - 75	---	70 - 80	above 80
Office Buildings, Business and Professional Commercial	50 - 70	67 - 77	above 75	---
Industrial, Manufacturing, Utilities, Agriculture	50 - 75	70 - 80	above 75	---

[a] *Normally Acceptable: Specified land use is satisfactory, based upon the assumption that any buildings involved are of normal conventional construction without any special noise insulation requirements.*

[b] *Conditionally Acceptable: New construction or development should be undertaken only after a detailed analysis of the noise reduction requirements is made and needed noise insulation features included in the design. Conventional construction, but with closed windows and fresh air supply systems or air conditioning will normally suffice.*

[c] *Normally Unacceptable: New construction or development should generally be discouraged. If new construction or development does proceed, a detailed analysis of the noise reduction requirements must be made and needed noise insulation features included in the design.*

[d] *Clearly Unacceptable: New construction or development should generally not be undertaken.*

Source: Office of Planning and Research, State of California General Plan Guidelines, October 2003 (in coordination with the California Department of Health Services); City of Los Angeles, General Plan Noise Element, adopted February 1999.

Operational Noise

Traffic Noise

In order for a new noise source to be audible, there would need to be a 3 dBA or greater CNEL noise increase. According to the *L.A. CEQA Thresholds Guide*, if a project would result in traffic that is less than double the existing traffic, then the Proposed Project's mobile noise impacts can be assumed to be less than significant. The existing traffic volumes would need to double with the development of a project in order for traffic noise to increase by 3 dBA CNEL. The Proposed Project would increase traffic volumes on the surrounding roadways, which in turn has the potential to increase roadway noise. According to the Traffic Study, prepared by Crain & Associates, the proposed development would result in a higher vehicle trips compared to the existing trips generated from the Project Site. The proposed development would result in 2,128 daily vehicle trips, including 161 AM peak hour trips and 199 PM peak hour trips. The Proposed Project would not have the potential to double the traffic volumes on any of the surrounding intersections within the Project vicinity. As such, the Proposed Project would not have the potential to double the existing traffic volumes or increase roadway noise levels by 3 dBA, and thus traffic generated noise impacts would be considered less than significant. Moreover, as discussed in Section XVI, Transportation and Traffic, the Traffic Study analyzed a larger project than what is currently proposed as part of the Proposed Project, and as such, the traffic trips are conservative. For this reason, traffic noise generated by the Proposed Project is also conservative.

Furthermore, to quantify the Proposed Project's mobile noise impacts, traffic noise was modeled using the California Department of Transportation, Technical Noise Supplement (2009). Traffic noise was modeled under the Existing (2015) "No Project" scenario and "Existing (2015) with Project" scenarios to determine the environmental baseline and Project impact, respectively. The changes in future noise levels associated with the Proposed Project are estimated using the traffic volumes in the studied intersections in the Project vicinity. The estimated noise levels from increased traffic is based on a worst-case scenario and uses the traffic volumes prior to the implementation of the Traffic Demand Management Plan, which would reduce vehicle trips in the Project area. Table III-16, displays the estimated noise levels from increase traffic volumes in the surrounding intersections due to the Proposed Project. As shown, the Proposed Project would increase local noise levels by a maximum of 0.29 dBA CNEL at the intersection of Pasadena Avenue and Avenue 28 during the PM peak hour, which would be inaudible/imperceptible to most people and would not exceed the thresholds of significance. The remaining street intersections analyzed would all experience a 0.23 dBA CNEL increase or less. Thus, the Proposed Project's mobile noise impacts would not exceed the 3 dBA CNEL threshold, set forth in the *L.A. CEQA Thresholds Guide*, and the Proposed Project's mobile source noise impact would be less than significant.

Table III-16
Projected Intersection Noise Impacts

Street Intersection	Peak Hour	Noise Levels in dBA CNEL			
		Existing (2015) Without Project Traffic Volumes	Existing (2015) with Project Traffic Volumes	Increase	Significant Impact?
1. Figueroa St. and Pasadena Ave. / Marmion Way	AM	67.80	67.83	0.03	No
	PM	67.80	67.84	0.04	No
2. Figueroa St. and Avenue 26	AM	67.80	67.86	0.06	No
	PM	67.80	67.88	0.08	No
3. Figueroa St. and SR-110 Fwy. NB Off-Ramp/ SB On-Ramp	AM	67.80	67.87	0.07	No
	PM	67.80	67.91	0.11	No
4. I-5 Fwy. NB Off-Ramp / Lacy St. and Avenue 26	AM	67.80	67.98	0.18	No
	PM	67.80	68.01	0.21	No
5. Pasadena Ave. and Avenue 35	AM	67.80	67.93	0.13	No
	PM	67.80	67.95	0.15	No
6. Pasadena Ave. and Avenue 33	AM	67.80	67.94	0.14	No
	PM	67.80	68.03	0.23	No

	PM	67.80	68.09	0.29	No
8. Pasadena Ave./ Avenue 26 and Daly St.	AM	67.80	67.89	0.09	No
	PM	67.80	67.89	0.09	No
9. Pasadena Ave. and I-5 Fwy. NB On/Off Ramp	AM	67.80	67.87	0.07	No
	PM	67.80	67.87	0.07	No
10. Pasadena Ave. and I-5 Fwy. SB On/Off Ramp	AM	67.80	67.85	0.05	No
	PM	67.80	67.86	0.06	No

Source: Calculations based on the California Department of Transportation (Caltrans), Technical Noise Supplement (Nov. 2009) formula for adding and subtracting equal sound pressure levels. Traffic volumes are based on the Project Traffic Study prepared by Crain & Associates, dated December 2015.

Stationary Noise Sources

New stationary sources of noise, such as mechanical HVAC equipment would be installed for the proposed residences at the Project Site. As discussed in Question XI(a) above, the design of this equipment would be required to comply with LAMC Section 112.02, which prohibits noise from air conditioning, refrigeration, heating, pumping, and filtering equipment from exceeding the ambient noise level on the premises of other occupied properties by more than five decibels. Thus, because the noise levels generated by the HVAC equipment serving the Proposed Project would not be allowed to exceed the ambient noise level by five decibels on the premises of the adjacent properties, a substantial permanent increase in noise levels would not occur at the nearby sensitive receptors. This impact would be less than significant.

Parking Noise

Activities within the designated subterranean parking structure areas associated with the Proposed Project would have the potential to increase ambient noise levels in the area. Sources of noise within the parking areas would include engines accelerating, doors slamming, car alarms, and people talking. Noise levels within the parking areas would fluctuate with the amount of automobile and human activity. Noise levels would be highest in the early morning and evening when the largest number of people would enter and exit the Project Site. However, any parking noise that may be audible from outside of the parking areas would be substantially similar to the existing noise generated at the surface parking areas on the Project Site. In addition, operational-related noise generated by motor driven vehicles within the Project Site is regulated under the LAMC. Specifically, with regard to motor driven vehicles, LAMC Section 114.02 prohibits the operation of any motor driven vehicles upon any property within the City such that the created noise would cause the noise level on the premises of any occupied residential property to exceed the ambient noise level by more than 5 dBA. Implementation of Mitigation Measure N-2, which pertains to the design of parking structure ramps, would further reduce the noise associated with the enclosed subterranean parking garage to less than significant levels.

Mitigation Measure:

MM-N-2 Increased Noise Levels (Parking Structure Ramps)

- Concrete, not metal, shall be used for construction of parking ramps.
- The interior ramps shall be textured to prevent tire squeal at turning areas.

d) Would the project result in a substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?

Potentially Significant Unless Mitigation Incorporated. A significant impact may occur if the Proposed Project were to result in a substantial temporary or periodic increase in ambient noise levels above existing ambient noise levels without the Proposed Project. As defined in the *L.A. CEQA Thresholds Guide* threshold for construction noise impacts, a significant impact would occur if construction activities lasting more than one day would increase the ambient noise levels by 10 dBA or more at any off-site noise-sensitive location. In addition, the *L.A. CEQA Thresholds Guide* also states that construction activities lasting more than ten days in a three-month period, which would increase ambient exterior noise levels by 5 dBA or more at a noise sensitive use, would also normally result in a significant impact.

As discussed above, impacts are expected to be reduced to less than significant levels for construction noise and vibration, and operational noise and vibration. Implementation of Mitigation Measure MM-N-1 and Environmental [Q] Conditions 10, Noise (a) through (e), would ensure the Proposed Project would ensure all reasonably prudent and feasible measures are taken to reduce the Project's temporary or periodic construction noise impacts. As such, the Proposed Project would be consistent with the LAMC and Noise Element of the General Plan, and as such, construction noise impacts would be less than significant.

e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

No Impact. A significant impact may occur if the Proposed Project were located within an airport land use plan and would introduce substantial new sources of noise or substantially add to existing sources of noise within or in the vicinity of the Project Site. There are no airports within a two-mile radius of the Project Site, and the Project Site is not within any airport land use plan or airport hazard zone. The Proposed Project would not expose people to excessive noise levels associated with airport uses. No impact would occur.

f) For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?

No Impact. This question would apply to a project only if it were in the vicinity of a private airstrip and would subject area residents and workers to a safety hazard. The Project Site is not located in the vicinity of a private airstrip. As no such facilities are located in the vicinity of the Project Site, no impact would occur.

Cumulative Impacts

Less Than Significant Impact. Development of the Proposed Project in conjunction with the three related projects identified in Section II, Project Description, would result in an increase in construction-related and traffic-related noise as well as on-site stationary noise sources in the already urbanized area of the City of Los Angeles. The Project Applicant has no control over the timing or sequencing of the related projects that have been identified within the Proposed Project study area. Therefore, any quantitative analysis that assumes multiple, concurrent construction projects would be speculative. Construction-period noise for the Proposed Project and each related project (that has not yet been built) would be localized. In addition, each of the related projects would be required to comply with the City's noise ordinance, as well as mitigation measures that may be prescribed pursuant to CEQA provisions that require potentially significant impacts to be reduced to the extent feasible.

With respect to cumulative traffic noise impacts, it should be noted that the Proposed Project's mobile source vehicular noise impacts are based on the predicted traffic volumes as presented in the Project Traffic Study. Thus, the future predicted noise levels include the traffic volumes from the Proposed Project and future traffic levels associated with ambient growth and the related projects, as shown in Table III-17, Cumulative Intersection Noise Impacts. The highest increase in local noise levels shows a maximum of 0.53 dBA CNEL at the intersection of Pasadena Avenue and Avenue 28 during the PM peak hour which would be inaudible to most people. This maximum noise increase would not exceed the 3 dBA CNEL threshold of significance. As such, the Proposed Project's noise volumes would not be cumulatively considerable. Thus, the cumulative impact associated with construction noise would be less than significant.

Table III-17
Cumulative Intersection Noise Impacts

Street Intersection	Peak Hour	Noise Levels in dBA CNEL			
		Existing (2015) Without Project Traffic Volumes	Future (2020) with Project Traffic Volumes	Increase	Significant Impact?

XIII. POPULATION AND HOUSING

a) Would the project induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

Less Than Significant Impact. A significant impact may occur if the proposed project would locate new development such as homes, businesses, or infrastructure, with the effect of substantially inducing growth in the proposed area that would otherwise not have occurred as rapidly or in as great a magnitude. Based on the *L.A. CEQA Thresholds Guide*, the determination of whether the project results in a significant impact on population and housing growth shall be made considering: (a) the degree to which a project would cause growth (i.e., new housing or employment generators) or accelerate development in an undeveloped area that exceeds projected/planned levels for the year of project occupancy/buildout, and that would result in an adverse physical change in the environment; (b) whether the project would

introduce unplanned infrastructure that was not previously evaluated in the adopted Community Plan or General Plan; and (c) the extent to which growth would occur without implementation of the project.

In October 2008, SCAG approved and adopted the "2008 Regional Comprehensive Plan for the SCAG Region – Helping Communities Achieve A Sustainable Future" (2008 RCP). The 2008 RCP is a long-term comprehensive plan that provides a strategic vision for handling the region's land use, housing, economic, transportation, environmental, and overall quality of life needs. The 2008 RCP is intended to serve as an advisory document for local agencies in the SCAG region. The following vision statement and guiding principles are based on the region's adopted Compass Growth Vision Principles for Sustaining a Livable Region. These statements further articulate how the RCP can promote and sustain the region's mobility, livability, and prosperity for future generations.

RCP Vision

To foster a Southern California region that addresses future needs while recognizing the interrelationship between economic prosperity, natural resource sustainability, and quality of life. Through measured performance and tangible outcomes, the RCP serves as both a voluntary action plan with short-term guidance and strategic, long-term initiatives that are guided by the following Guiding Principles for sustaining a livable region.

RCP Guiding Principles

- *Improve mobility for all residents.* Improve the efficiency of the transportation system by strategically adding new travel choices to enhance system connectivity in concert with land use decisions and environmental objectives.

- *Foster livability in all communities.* Foster safe, healthy, walkable communities with diverse services, strong civic participation, affordable housing and equal distribution of environmental benefits.

- *Enable prosperity for all people.* Promote economic vitality and new economies by providing housing, education, and job training opportunities for all people.

- *Promote sustainability for future generations.* Promote a region where quality of life and economic prosperity for future generations are supported by the sustainable use of natural resources.

SCAG's Compass Growth Vision Strategy

SCAG's Compass Growth Vision, adopted in 2004, and incorporated into the 2008 RCP, encourages better relationships between housing, transportation, and employment. The Growth Vision is driven by four key principles: (1) Mobility – Getting where we want to go, (2) Livability – Creating positive communities, (3) Prosperity – Long-term health for the region, and (4) Sustainability – Preserving natural surroundings. Additionally, the Compass Growth Vision incorporates a 2% Growth Strategy that will increase the region's mobility by:

- Putting new employment centers and new neighborhoods near major transit systems so that people can have transportation choices other than their cars.
- Designing safe, attractive transit centers and plazas that people enjoy using.
- Creating mini-communities around transit stations, with small businesses, urban housing and restaurants all within an easy walk.

Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS)

On April 2016, SCAG's Regional Council adopted the 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS): A Plan for Mobility, Accessibility, Sustainability, and a High Quality of Life. The RTP/SCS is the culmination of a multi-year effort involving stakeholders from across the SCAG Region. The 2016-2040 RTP/SCS balances the Southern California region's future mobility and housing needs with economic, environmental, and public health goals.

Based on the regional growth projections in the 2016-2040 RTP/SCS, in 2012, the City of Los Angeles had an estimated permanent population of approximately 3,845,500 persons, approximately 1,325,500 residences, and 1,696,400 jobs. By the year 2040, SCAG forecasts the City of Los Angeles will increase to 4,609,400 persons (or a 20 percent increase from the year 2012) with approximately 1,690,300 residences (or an 28 percent increase from the year 2012) and approximately 2,169,100 jobs (or an approximate 28 percent increase from year 2012). SCAG's population, housing and employment projections for the City of Los Angeles, Los Angeles County, and the SCAG region as a whole for 2012 and 2040 are further summarized in Table III-18, below.

Table III-18
SCAG Population and Housing Projections for the City of Los Angeles, Los Angeles County and the SCAG Region

Population			
	2012	2040	%Growth (2012-2040)
Los Angeles City [a]	3,845,500	4,609,400	20%
Los Angeles County [b]	9,923,000	11,514,000	16%
SCAG Region [b]	18,322,000	22,138,000	21%
Households			
	2012	2040	%Growth (2012-2040)
Los Angeles City [a]	1,325,500	1,690,300	28%
Los Angeles County [b]	3,257,000	3,946,000	21%
SCAG Region [b]	5,885,000	7,412,000	26%
Employment			
	2012	2040	%Growth (2012-2040)
Los Angeles City [a]	1,696,400	2,169,100	28%
Los Angeles County [b]	4,246,000	5,226,000	23%
SCAG Region [b]	7,440,000	9,872,000	33%

Notes:
[a] *SCAG, 2016-2040 RTP/SCS Growth Forecast, Demographics and Growth Forecast Appendix, adopted April 2016.*
[b] *SCAG, 2016-2040 RTP/SCS Growth Forecast, adopted April 2016.*

On a policy level, the Proposed Project is consistent with the goals and strategies of the RCP and the Compass Growth Vision Strategy discussed above, as the Proposed Project would revitalize an underutilized, fully developed property in an existing industrial and commercial area. The Proposed Project is an infill development Project within the Northeast Los Angeles Community Plan Area within the City of Los Angeles. Further, the Project Site is located within a Transit Priority Area. With respect to regional growth forecasts, SCAG forecasts the City of Los Angeles Subregion will experience a population increase to 4.6 million persons by 2040. The U.S. Census Bureau reported the City of Los Angeles as having a population of 3,792,621 persons and 1,413,995 housing units in 2010.[39] As shown in Table III-18, SCAG Population and Housing Projections for the City of Los Angeles, Los Angeles County and the SCAG Region, the forecast from 2012 through 2040 envisions growth of 763,900 additional persons, yielding an approximate 20% growth rate. The number of households is anticipated to increase by 364,800 households, or approximately 28% between 2012 and 2040. The number of employment opportunities is anticipated to increase by 472,700 jobs, or approximately 28% between 2012 and 2040.

Based on the community's current household demographics (e.g., an average of 3.27 persons per multi-family household for the Northeast Los Angeles area), the construction of up to 372 multi-family dwelling units would result in an increase of approximately 1,216 net permanent residents in the City of

[39] *U.S. Census Bureau: State and County QuickFacts. Data derived from Population Estimates, American Community Survey, Census of Population and Housing, County Business Patterns, Economic Census, Survey of Business Owners, Building Permits, Census of Governments, Last Revised: Wednesday, 2-Dec-2015.*

Los Angeles.[40] Further, the Project includes approximately 30,000 square feet of creative office space and 10,000 square feet of retail space. The Proposed Project would generate the need of approximately 149 employees.[41] The employees generated by the Proposed Project would be consistent with the anticipated increase of jobs within the City of Los Angeles between 2012 and 2040.

According to the Department of City Planning, Northeast Los Angeles Community Plan anticipated a 2010 population capacity of 267,973 persons and 76,551 housing units within the CPA.[42] According to the 2010 United States Census data, the actual population and housing units within the CPA were approximately 237,483 persons and 77,817 housing units.[43] The comparison of the Community Plan's projected housing and population numbers and the Census' actual housing and population numbers, show that the CPA has a remaining growth capacity of approximately 30,490 persons to meet 2010 forecasts. Additionally, the data shows that the CPA currently has more housing units than projected by the Community Plan. The population generated by the Proposed Project would be within the planned capacity for the CPA, and the Project's housing units would add to the area's housing units that are currently over the planned capacity. Nevertheless, the proposed increase in housing units and population would be consistent with the SCAG forecast of 364,800 additional households and approximately 763,900 persons in the City of Los Angeles between 2012 and 2040. Additionally, the Project's 372 housing units would support the City's goal of addressing the housing crisis and diversifying the housing mix within the City. The Proposed Project would reserve 31 dwelling units as very low income units. As such, the Proposed Project would not cause growth (i.e., new housing or employment generators) or accelerate development in an undeveloped area that exceeds projected/planned levels for the year of Proposed Project occupancy/buildout or that would result in an adverse physical change in the environment. The Project would not introduce unplanned infrastructure that was not previously evaluated in the adopted Community Plan or General Plan.

b) Would the project displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?

No Impact. A significant impact may occur if the Proposed Project would result in the displacement of existing housing units, necessitating the construction of replacement housing elsewhere. The Proposed Project would consist of the development of new housing and commercial land uses on a site that is currently occupied by four light manufacturing buildings and paved surface loading and parking areas. As such, the Proposed Project would not displace any existing housing. The proposed residential, creative office, and retail/restaurant land uses are consistent with the allowable uses as permitted by the zoning and General Plan land use designations. Therefore, no impact would occur.

c) Would the project displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?

No Impact. The Proposed Project would consist of the development of a new housing and commercial land uses on a site that is currently occupied by four light manufacturing buildings and paved surface loading and parking areas. No displacement of existing housing would occur with the development of the Proposed Project. Therefore, no impact would occur.

Cumulative Impacts

Less Than Significant Impact. The related projects would introduce additional residential, medical office, retail, and educational uses to the City of Los Angeles. Any residential related projects would result in direct population growth in the City of Los Angeles, and related project including commercial or educational uses can result in indirect population growth. As shown in Table III-19, the Proposed Project and related projects that involve residential developments would cumulatively contribute 826 new residential dwelling units to the Northeast Los Angeles Community Plan area, generating approximately 2,701 new residents. The cumulative growth generated by the Proposed Project and related projects would be within SCAG's RTP/SCS growth projections for the City of Los Angeles and SCAG region.

As discussed in Question XIII(a), the Proposed Project would not exceed the growth projections of SCAG's RTP/SCS for the City of Los Angeles subregion. Furthermore, the Proposed Project is the type of project encouraged by SCAG and City policies, as the Project would promote and help accommodate growth in urban centers that are close to existing employment opportunities. Because the Proposed Project would not displace any residents, and population growth potentially associated with the Proposed Project has already been anticipated per SCAG projections, the Proposed Project's population growth would not be cumulatively considerable. Therefore, the Proposed Project's cumulative impacts to population and housing would be less than significant.

Table III-19
Projected Cumulative Housing Units

Related Projects (By Housing Type)	Total Housing Units	Total Residents [a]
Apartments/Condominiums [b]	454	1,485

XIV. PUBLIC SERVICES

a) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered government facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objective for any of the following public services:

(i) Fire protection?

Less Than Significant Impact.

Construction

Construction of the Proposed Project would increase the potential for accidental on-site fires from the operation of construction equipment and the use of flammable construction materials. The implementation of best management practices (BMPs) for the operation of mechanical equipment and the use of flammable construction materials by construction contractors and work crews would minimize fire hazards associated with the construction of the Proposed Project. The BMPs that would be implemented during construction of the Project would include: keeping mechanical equipment in good operating condition, and as required by law, carefully storing flammable materials in appropriate containers, and the immediate and complete cleanup of spills of flammable materials when they occur.

Construction activities also have the potential to affect fire protection services, such as emergency vehicle response times, by adding construction traffic to the street network and potentially requiring partial lane closures during street improvements and utility installations. Thus, construction could have the potential to adversely affect fire access. However, these impacts are considered to be less than significant because emergency access would be maintained to the Project Site during construction through marked emergency access points approved by the LAFD, construction impacts are temporary in nature and do not cause

lasting effects, and no complete lane closures are anticipated. Additionally, if any partial street closures are required, flagmen would be used to facilitate the traffic flow until construction is complete.

Operation

Based on the *L.A. CEQA Thresholds Guide*, a project would normally have a significant impact on fire protection if it requires the addition of a new fire station or the expansion, consolidation or relocation of an existing facility to maintain service. Section 15382 of the CEQA guidelines defines "significant effect on the environment" as "a substantial, or potentially substantial, adverse change in any of the physical conditions within the area affected by the project including land, air, water, minerals, flora, fauna, ambient noise, and objects of historic or aesthetic significance. An economic or social change by itself shall not be considered a significant effect on the environment. A social or economic change related to a physical change may be considered in determining whether the physical change is significant." Thus, the addition of a new fire station or the expansion, consolidation or relocation of an existing facility to maintain service would only be considered significant if such activities result in a physical adverse impact upon the environment.

The City of Los Angeles Fire Department (LAFD) considers fire protection services for a project adequate if a project is within the maximum response distance for the land use proposed. Pursuant to Section 57.09.07A of the LAMC, the maximum response distance between residential land uses and a LAFD fire station that houses an engine or truck company is 1.5 miles. If the distance is exceeded, all structures located in the applicable residential or commercial area would be required to install automatic fire sprinkler systems. With such systems installed, fire protection would be considered adequate even if the Proposed Project is located beyond the maximum response distance.

The Proposed Project would include up to 372 dwelling units, 30,000 square feet of office space, and up to 10,000 square feet of retail/restaurant uses. The proposed land uses would generate approximately 1,216 new residents and 149 employees.[44] The Proposed Project would increase the utilization of the Project Site, which is currently used as manufacturing warehouses, and would potentially increase the demand for LAFD services. The Project Site is served by LAFD Station No. 1, located at 2230 Pasadena Avenue, which is approximately 0.7 mile south of the Project Site. Based on the response distance criteria specified in LAMC 57.09.07A and the relatively short distance from Fire Station No. 1 to the Project Site, fire protection response would be considered adequate. Compliance with Environmental [Q] Condition C.21, Public Services (Fire), would ensure impacts upon fire services are reduced to less than significant levels.

Cumulative Impacts

Less Than Significant Impact. The Proposed Project, in combination with the three related projects, could increase the demand for fire protection services in the Project area. Specifically, there could be increased demands for additional LAFD staffing, equipment, and facilities over time. This need would be

[44] *A residential generation rate of 3.27 used. Employee rate of 228 square feet per office employee and 588 square feet per neighborhood retail employee used.*

funded via existing mechanisms (e.g., property taxes, government funding, and developer fees) to which the Proposed Project and related projects would contribute. Similar to the Proposed Project, each of the related projects would be individually subject to LAFD review and would be required to comply with all applicable fire safety requirements of the LAFD in order to adequately mitigate fire protection impacts. Specifically, any related project that exceeded the applicable response distance standards described above would be required to install automatic fire sprinkler systems in order to mitigate the additional response distance. To the extent cumulative development causes the need for additional fire stations to be built throughout the City, the development of such stations would be on small infill lots within existing developed areas and would not likely cause a significant impact upon the environment. Nevertheless, the siting and development of any new fire stations would be subject to further CEQA review and evaluated on a case-by-case basis. However, as the LAFD does not currently have any plans for new fire stations to be developed in proximity to the Project Site, no impacts are currently anticipated to occur. On this basis, the Proposed Project would not make a cumulatively considerable impact to fire protection services, and, as such cumulative impacts on fire protection would be less than significant.

(ii) Police Protection?

Potentially Significant Unless Mitigation Incorporated. A significant impact may occur if the City of Los Angeles Police Department (LAPD) could not adequately serve a project, necessitating a new or physically altered station. Section 15382 of the CEQA guidelines defines "significant effect on the environment" as "a substantial, or potentially substantial, adverse change in any of the physical conditions within the area affected by the project including land, air, water, minerals, flora, fauna, ambient noise, and objects of historic or aesthetic significance. An economic or social change by itself shall not be considered a significant effect on the environment. A social or economic change related to a physical change may be considered in determining whether the physical change is significant." Thus, the addition of a new police station or police substation, if warranted, would only be considered significant if the construction or operation of a new facility results in a physical adverse impact upon the environment. Based on the *L.A. CEQA Thresholds Guide*, the determination of whether the project results in a significant impact on police protection shall be made considering the following factors: (a) the population increase resulting from the Proposed Project, based on the net increase of residential units or square footage of non-residential floor area; (b) the demand for police services anticipated at the time of project buildout compared to the expected level of service available. Consider, as applicable, scheduled improvements to LAPD services (facilities, equipment, and officers) and the project's proportional contribution to the demand; and (c) whether the project includes security and/or design features that would reduce the demand for police services.

The Proposed Project would include up to 372 dwelling units, 30,000 square feet of office space, and up to 10,000 square feet of retail/restaurant uses. The proposed land uses would generate approximately 1,216 new residents and 149 employees. The Proposed Project would increase the utilization of the Project Site, which is currently used as warehouse distributors. These land uses would potentially increase the demand for LAPD services. The Project Site is located in the Hollenbeck area division of the LAPD's Central Bureau. The Hollenbeck Community consists of Aliso Village, Boyle Heights, El Sereno, Estrada Court, Hermon, Hillside Village, Lincoln Heights, Montecito Heights, Monterey Hills, Pico Gardens, Ramona Gardens, Rose Hills Courts, and University Hills. The Project Site is served by the Hollenbeck

Community Police Station, located at 2111 E. 1st Street, which is approximately 3.6 miles south of the Project Site. Table III-20, Hollenbeck Area Crime Statistics, provides crime statistics for the Project area in the City of Los Angeles.

Table III-20
Hollenbeck Area Police Station Crime Statistics

Crimes	2016 (Year to Date)[a]	2015 (Year to Date)	2014 (Year to Date)
Violent Crimes			
Homicide	1	0	2
Rape	3	5	2
Robbery	28	25	20
Aggravated Assault	68	52	45
Total Violent Crimes	**100**	**82**	**69**
Property Crimes			
Burglary	36	45	20
Motor Vehicle Theft	146	105	117
BTFV	138	111	71
Personal / Other Theft	81	75	74
Total Property Crimes	**401**	**336**	**282**
Total Part 1 Crimes	**501**	**418**	**351**
Child / Spousal Abuse (Part I & II)[b]	81	61	23
Shots Fired	32	14	31
Shooting Victims	11	3	14

Source: LAPD, COMPSTAT Unit, Hollenbeck Area Profile, accessed February 2016.

Construction sites, if left unsecured, have the potential to attract trespassers and/or vandals that would potentially result in graffiti, excess trash, and potentially unsafe conditions for the public. Such occurrences would adversely affect the aesthetic character of the Project Site and surrounding area and could potentially cause public health and safety concerns. With compliance to Mitigation Measure MM-PS-1, below, Project impacts would be less than significant during the construction period.

Implementation of the Proposed Project would result in an increase of site visitors, residents, and employees to the Project Site, thereby generating a potential increase in the number of service calls from the Project Site. Responses to thefts, vehicle burglaries, vehicle damage, traffic-related incidents, and crimes against persons would be anticipated to escalate as a result of the increased on-site activity and increased traffic on adjacent streets and arterials. The Proposed Project would include adequate and strategically positioned functional and thematic lighting to enhance public safety. Visually obstructed and infrequently accessed "dead zones" would be limited and, where possible, security controlled to limit public access. The building and layout design of the Proposed Project would also include crime prevention features, such as nighttime security lighting and secure parking facilities. In addition, the

continuous visible and non-visible presence of residents at all times of the day would provide a sense of security during evening and early morning hours. As such, the Project residents would be able to monitor suspicious activity at the building entry points. These preventative and proactive security measures would decrease the amount of service calls to the LAPD. With adherence to Mitigation Measure MM-PS-1, identified below, the Proposed Project's potential impact upon LAPD services is less than significant.

Mitigation Measure:

MM-PS-1 (Police):

- The plans shall incorporate the Design Guidelines (defined in the following sentence) relative to security, semi-public and private spaces, which may include but not be limited to access control to building, secured parking facilities, walls/fences with key systems, well-illuminated public and semi-public space designed with a minimum of dead space to eliminate areas of concealment, location of toilet facilities or building entrances in high-foot traffic areas, and provision of security guard patrol throughout the project site if needed. Please refer to "Design Out Crime Guidelines: Crime Prevention Through Environmental Design," published by the Los Angeles Police Department. Contact the Community Relations Division, located at 100 W. 1st Street, #250, Los Angeles, CA 90012; (213) 486-6000. These measures shall be approved by the Police Department prior to the issuance of building permits.

Cumulative Impacts

Less Than Significant Impact. The Proposed Project, in combination with the three related projects, would increase the demand for police protection services in the Project area. Specifically, there would be an increased demand for additional LAPD staffing, equipment, and facilities over time. This need would be funded via existing mechanisms (e.g., sales taxes, government funding, and developer fees), to which the Proposed Project and related projects would contribute. In addition, each of the related projects would be individually subject to LAPD review and would be required to comply with all applicable safety requirements of the LAPD and the City of Los Angeles in order to adequately address police protection service demands. Furthermore, each of the related projects would likely install and/or incorporate adequate crime prevention design features in consultation with the LAPD, as necessary, to further decrease the demand for police protection services. To the extent cumulative development causes the need for additional police stations to be built throughout the City, the development of such stations would be on small infill lots within existing developed areas and would not likely cause a significant impact upon the environment. Nevertheless, the siting and development of any new police stations would be subject to further CEQA review and evaluated on a case-by-case basis. However, as the LAPD does not currently have any plans for new police stations to be developed in proximity to the Project Site. No impacts are currently anticipated to occur. On this basis, the Proposed Project would not make a cumulatively considerable impact to police protection services, and cumulative impacts on police protection would be less than significant.

(iii) Schools?

Less Than Significant Impact. A significant impact may occur if a project includes substantial employment or population growth, which could generate a demand for school facilities that would exceed the capacity of the Los Angeles Unified School District (LAUSD). The Project Site is located in LAUSD Board District 2 and 5. The Project Site is currently served by one elementary school, one middle school, and two high schools. Table III-21, Resident Schools Serving the Project Site, details the names, grades served, and location of each school.

Table III-21
Resident Schools Serving the Project Site

School Name	Grades	Address
Hillside Elementary	K-5	120 E. Avenue 35
Florence Nightingale Middle School	6-8	3311 N. Figueroa Street
Woodrow Wilson Senior High	9-12	4500 Multnomah Street
Abraham Lincoln Senior High (includes Lincoln High School Leadership in Entertainment & Media Arts)	9-12	3501 N. Broadway

Notes: Some schools are charter schools and require an application process prior to student enrollment.
Source: Los Angeles Unified School District, Resident School Identifier, website: http://rsi.lausd.net/ResidentSchoolIdentifier/, accessed February 2016.

As shown in Table III-22, Proposed Project Estimated Student Generation, the Proposed Project would generate approximately 60 elementary students, 16 middle school students and 34 high school students, for a total of up to 110 students. This would create an increased demand on local school districts. As shown in the Related Projects List (Table II-6 of Section II. Project Description), Related Project No. 3 includes the development of a middle school with a capacity of 74 students and a high school with a capacity of 263 students. The construction of this related project would further lessen the school demands in the area. Furthermore, the Project Applicant would be required to pay all applicable developer fees to the LAUSD to offset the Proposed Project's demands upon local schools. Pursuant to Government Code Section 65995, the development fees authorized by SB 50 are deemed to be "full and complete school facilities mitigation." Thus, the Proposed Project's potential impact upon public school services would be less than significant by the following regulatory compliance measure:

- **(Payment of School Development Fee)**: Prior to issuance of a building permit, the General Manager of the City of Los Angeles, Department of Building and Safety, or designee, shall ensure that the Applicant has paid all applicable school facility development fees in accordance with California Government Code Section 65995.

Table III-22
Proposed Project Estimated Student Generation

Land Use	Size	Elementary School Students	Middle School Students	High School Students	Total Students
Existing Uses					
Industrial [a]	118,284 sf	2	1	1	4
Total Existing Students:		**2**	**1**	**1**	**4**

Proposed Project					
Multi-Family [b]	372 du	61	17	35	113
Office [c]	30,000 sf	1	0	0	1
Commercial [d]	10,000 sf	0	0	0	0
Total Project Student Generation:		**62**	**17**	**35**	**114**
Less Existing Students:		*-2*	*-1*	*-1*	*-4*
NET Student Generation:		**60**	**16**	**34**	**110**

Notes:
sf = square feet; du = dwelling units
[a] *Student generation rates are as follows for industrial uses: .018 elementary, .0083 middle and .008 high school students per 1,000 square feet.*
[b] *Student generation rates are as follows for multi-family residential uses: .1649 elementary, .0450 middle and .0943 high school students per unit.*
[c] *Student generation rates are as follows for office uses: .0233 elementary, .0108 middle and .0104 high school students per 1,000 square feet.*
[d] *Student generation rates are as follows for retail/commercial uses: .0149 elementary, .0069 middle and .0067 high school students per 1,000 square feet.*

-For bullet points (a), (c) and (d) above: Los Angeles Unified School District, School Fee Justification Study, September 2002.

Cumulative Impacts

Less Than Significant Impact. The Proposed Project, in combination with the three related projects is expected to result in a cumulative increase in the demand for school services. Development of the related projects would likely generate additional demands upon school services. These related projects would have the potential to generate students that would attend the same schools as the Proposed Project. As shown in Table III-23, Projected Cumulative Student Generation, the Proposed Project and related projects would cumulatively contribute approximately 105 elementary school students, 28 middle school students and 60 high school students, for a total of up to 193 students. This would create an increased cumulative demand on local school districts. As noted in Table II-6 in Section II. Project Description, Related Project No. 3 proposes the development of a middle school and high school, which would further lessen the overall demand on schools in the Project area. Additionally, each of the new housing units would be responsible for paying mandatory school fees to mitigate the increased demand for school services. Cumulative impacts on schools would be less than significant.

Table III-23
Projected Cumulative Student Generation

Land Use	Size	Elementary School Students	Middle School Students	High School Students	Total Students
Single-Family Attached [a]	290 du	15	4	9	28
Multi-Family Residences [b]	164 du	27	7	16	50
Office [c]	72,740 sf	2	1	1	4
Retail [d]	40,000 sf	1	0	0	1
Related Projects Total:		**45**	**12**	**26**	**83**
Proposed Project Net Total:		60	16	34	110

Cumulative Total:	**105**	**28**	**60**	**193**

Notes:
sf = square feet; du = dwelling units
Uses not listed are estimated by the closest type of use available in the table.
[a] *Student generation rates are as follows for single-family attached residential uses: .053 elementary, .0145 middle and .0303 high school students per unit.*
[b] *Student generation rates are as follows for multi-family residential uses: .1649 elementary, .0450 middle and .0943 high school students per unit.*
[c] *Student generation rates are as follows for office uses: .0233 elementary, .0108 middle and .0104 high school students per 1,000 square feet.*
[d] *Student generation rates are as follows for retail/commercial uses: .0149 elementary, .0069 middle and .0067 high school students per 1,000 square feet.*

-For bullet points (c) and (d) above: Los Angeles Unified School District, School Fee Justification Study, September 2002.
-Conversions of square feet per occupant are based on California Building Code (2013), Ch.10, Table 1004.1.2.

(iv) Parks?

Less Than Significant Impact. A significant impact would occur if the recreation and park services available could not accommodate the projected population increase resulting from implementation of a project or if the proposed project resulted in the construction of new recreation and park facilities that create significant direct or indirect impacts to the environment. Based on the *L.A. CEQA Thresholds Guide*, the determination of whether the project results in a significant impact on recreation and parks shall be made considering the following factors: (a) the net population increase resulting from the Proposed Project; (b) the demand for recreation and park services anticipated at the time of project buildout compared to the expected level of service available. Consider, as applicable, scheduled improvements to recreation and park services (renovation, expansion, or addition) and the project's proportional contribution to the demand; and (c) whether the project includes features that would reduce the demand for park services (e.g., on-site recreation facilities, land dedication, or direct financial support to the Department of Recreation and Parks).

The Public Recreation Plan (PRP), a portion of the Service Systems Element of the City of Los Angeles General Plan, provides standards for the provision of recreational facilities throughout the City and includes Local Recreation Standards. The desired long-range standard for local parks is based on two acres per 1,000 persons for neighborhood parks and two acres per 1,000 persons for community parks or four acres per 1,000 persons of combined neighborhood and community parks. However, the PRP also notes that these long-range standards may not be reached during the life of the plan, and, therefore, includes more attainable short- and intermediate-range standards of one (1) acre per 1,000 persons for neighborhood parks and one (1) acre per 1,000 persons for community parks, or two (2) acres per 1,000 people of combined neighborhood and community parks. These standards are Citywide goals and are not intended to be requirements for individual development projects. The Public Recreation Element of the City's General Plan also recognizes that the achievement of such goals is not the responsibility of individual development projects and that such goals will be met by "seek[ing] federal, state and private funds to implement acquisition and development of parks and recreational facilities."

The Proposed Project is located within a highly urbanized area within the Northeast Los Angeles Community Plan Area. As shown in Table III-24, there is over 1,210 acres of parkland and public

recreation facilities within a 2-mile radius of the Project Site. These facilities range from 0.46-acres (East Los Angeles Park) to 600 acres (Elysian Park). The Project Site is surrounded by relatively big parks (over 50 acres) such as Elysian Park, Ascot Hills Park, Ernest E. Debs Regional Park, and Arroyo Seco Park. Due to the large sizes, only portions of Arroyo Seco Park and Elysian Park are within the 2-mile radius of the Project Site. As discussed in Checklist Question XII (a), it is estimated that the development of the Proposed Project would result in an increase of 1,216 new residents to the area. Based on the standard parkland ratio goal of 4 acres per 1,000 residents, the Proposed Project would generate a Citywide goal of serving such residents with approximately 4.86 acres of additional public parkland. The Proposed Project would contribute towards the achievement of such goal through a combination of (1) on-site open space proposed within the Project, (2) payment of applicable taxes in accordance with LAMC Section 21.10.3(a)(1), and (3) the availability of existing park and recreation facilities within the area. The Proposed Project would provide approximately 39,575 square feet of total common open space and amenities on-site available to serve Project residents and their guests. The Proposed Project may include a variety of on-site amenities including, but not limited to, common open space, community gardens, a roof deck, pool deck, barbecue pits, and a gymnasium. Pursuant to Ordinance No. 179,280 the Proposed Project is required to provide a minimum of 64,744 square feet of publicly accessible public open space throughout the Project Site in the form of open space, paseos, and paths. The Project proposes to provide 64,744 square feet of publicly accessible open space, thereby achieving the required square feet of open space required by the LAMC and Ordinance No. 179,280.

In addition to the on-site open space provided within the Proposed Project, the Proposed Project is subject to Ordinance 184,505, which requires the payment of park mitigation fees for residential, non-subdivision projects. In accordance with Ordinance 184,505, these fees may be offset or reduced based on the amount of on-site open space and recreational amenities provided on-site. Therefore, under the City's mandatory park mitigation fee, which is collected prior to a certificate of occupancy for residential land uses (see regulatory compliance measure, below), the Proposed Project's impact upon parks and recreational facilities would be reduced to a less-than-significant level.

Regulatory Compliance Measure:

- **(Increased Demand For Parks Or Recreational Facilities):** Pursuant to Ordinance 184,505, the applicant shall pay the park mitigation fees for construction of apartment buildings.

Table III-24
Recreation and Park Facilities within the Project Area

Park Name	Park Size (acres)	Park Amenities	Approx. Distance to Project Site (miles)
1. Lacy Street Neighborhood Park	0.55	Picnic tables, parking lot	0.30
2. Graeyor Oak Mini Park	0.65	Pocket Park	0.37
3. East Los Angeles Park	0.46	Children's play area, picnic tables	0.62
4. Cypress Park and Recreation Center	3.15	Auditorium, barbecue pits, children's play area, indoor gym with weights, picnic tables	0.63
5. Lincoln Heights Recreation Center	1.24	Indoor gym (without weights), auditorium, basketball courts (lighted/indoor), basketball courts (lighted/outdoor),	0.77

Park Name	Park Size (acres)	Park Amenities	Approx. Distance to Project Site (miles)
		children's play area	
6. L.A. Youth Athletic Club	4.80	Indoor gym (with weights), boxing facility, karate/kickboxing room, television area	0.78
7. Elysian Park	600.0	Golf course, arboretum, hiking trails, horseshoe pits, jogging paths, picnic area, children's play area, indoor gym, basketball courts, barbecue pits	0.79
8. Montecito Heights Recreation Center	4.50	Auditorium, basketball courts (lighted/indoor), basketball courts (unlighted/outdoor), children's play area, indoor gym (with weights), picnic tables, tennis courts (unlighted), volleyball courts (unlighted), weight room	0.90
9. Carlin G. Smith Recreation Center	2.70	Auditorium, basketball court (lighted/outdoor), children's play area, picnic area	0.96
10. Downey Pool and Recreation Center	5.96	Pool, auditorium, baseball diamond (lighted), children's play area, outdoor basketball court, picnic tables	1.04
11. Ernest E. Debs Regional Park	282.0	Barbecue pits, picnic tables, recreation center	1.11
12. Sycamore Grove Park	19.10	Barbecue pits, children's play area, picnic tables, tennis courts (lighted), bandshell, concession stand	1.29
13. Rose Hill Park and Recreation Center	2.18	Barbecue pits, baseball diamond (lighted/unlighted), children's play area, picnic tables, community garden	1.33
14. Lincoln Park and Recreation Center	43.80	Auditorium, barbecue pits, baseball diamond (lighted), basketball courts (lighted/indoor), children's play area, indoor gym (with weights), picnic tables, soccer field (unlighted), tennis courts (unlighted), pool, picnic tables	1.34
15. Rio De Los Angeles State Park	21.40	Community room, picnic area, tennis courts (lighted), basketball courts (lighted/outdoor), baseball field (lighted0, softball field (lighted), two soccer fields (lighted), junior soccer fields (unlighted), junior synthetic soccer field (unlighted), walking trail	1.36
16. Ascot Hills Park	94.00	Hiking trails	1.43
17. Moon Canyon Park	4.50	Hike trails, dog park	1.53
18. Hazard Park and Recreation Center	30.60	Auditorium, barbecue pits, basketball courts (lighted/indoor), children's play area, community room, handball courts (unlighted), indoor gym (without weights), picnic tables, tennis courts (lighted), skate park,	1.76
19. El Sereno Recreation Center	12.10	Auditorium, barbecue pits, baseball diamond (lighted), basketball courts (lighted/indoor/outdoor), children's play area, community room, indoor/outdoor gym (without weights), picnic tables, tennis courts (lighted), skate park	1.87
20. Cleland Avenue Bicentennial Park	0.93	Children's play area	1.93
21. Arroyo Seco Park	73.90	Barbecue pits, children's play area, picnic tables, tennis courts (lighted)	2.00
22. Bud Weiner Park	0.65	Pocket park, benches	2.00
23. Elysian Valley Recreation Center	1.13	Auditorium, baseball diamond (lighted), one basketball court (indoor), children's play area, two community rooms, handball court (unlighted)	2.00
Total Parkland (Approximate):	**1,210.3**		

Sources: Park distances, size, and amenities were determined using:

(2) Navigate LA, http://navigatela.lacity.org/navigatela/; and
(3) Google Earth (when necessary), accessed February 2016.

Cumulative Impacts

Less Than Significant Impact. Development of the Proposed Project in conjunction with the three related projects could result in an increase in permanent residents residing in the greater Project area. Additional cumulative development would contribute to lowering the City's existing parkland to population ratio, which is currently below the preferred standard. However, each of the residential related projects are required to comply with payment of Quimby Fees (for subdivision projects with greater than 50 units) and/or park mitigation fees (for all other residential projects). Each residential related project would also be required to comply with the on-site open space requirements of the LAMC. Therefore, with payment of the applicable recreation fees on a project-by-project basis, the Proposed Project would not make a cumulatively considerable impact to parks and recreational facilities, and cumulative impacts would be less than significant.

(v) Other Public Facilities?

Less Than Significant Impact. A significant impact may occur if a project includes substantial employment or population growth that could generate a demand for other public facilities (such as libraries), which would exceed the capacity available to serve the Project Site. Based on the *L.A. CEQA Thresholds Guide*, the determination of whether the project results in a significant impact on libraries shall be made considering the following factors: (a) the net population increase resulting from the Project; (b) the demand for library services anticipated at the time of project buildout compared to the expected level of service available. Consider, as applicable, scheduled improvements to library services (renovation, expansion, addition or relocation) and the project's proportional contribution to the demand; and (c) whether the project includes features that would reduce the demand for library services (e.g., on-site library facilities or direct financial support to the Los Angeles Public Library).

Within the City of Los Angeles, the Los Angeles Public Library (LAPL) provides library services at the Central Library and 72 regional branch libraries. Approximately 6.5 million books and other materials comprise the LAPL collection. Approximately 6.5 million books and other materials comprise the LAPL collection. The LAPL branches currently serving the Project Site include:

- Lincoln Heights Branch Library, located at 2530 Workman Street, approximately 0.5 mile south of the Project Site; and
- Cypress Park Branch Library, located at 1150 Cypress Avenue, approximately 1.0 mile northwest of the Project Site.[45]

It is anticipated that the existing libraries within the Project area would be able to meet the Proposed Project's demand for library services. Therefore, the Proposed Project's impacts upon library services would be considered less than significant.

---

[45] *City of Los Angeles Public Library, Hours and Locations, website: http://www.lapl.org/branches, accessed February 2016.*

Cumulative Impacts

Less Than Significant Impact. Development of the related projects is projected to generate additional housing and residents within the study area, which would likely generate additional demands upon library services. This increase in resident population, combined with the 1,216 additional residents generated by the Proposed Project, would result in a cumulative increase in demands upon public library services. To meet the increased demands upon the City's Public Library system, Los Angeles voters passed a Library Bond Issue for $178.3 million to improve, renovate, expand, and construct 32 branch libraries. Since the Program's inception in 1998, the Library Department and the Department of Public Works, Bureau of Engineering have made considerable progress in the design and construction of the branch library facilities. Based on the growth forecasts utilized in the 2015-2020 Strategic Plan, much of this growth has already been accounted for in planning new and expanded library facilities. Thus, the 2,701 additional residents generated by the Proposed Project and the related projects would not make a cumulatively considerable impact upon the City's library system. Therefore, the cumulative impacts related to library facilities would be reduced to a less than significant level.

XV. RECREATION

a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

Less Than Significant Impact. For the purpose of this MND, a significant impact may occur if the project would include substantial employment or population growth, which would increase the use of existing neighborhood and regional parks or other recreational facilities, such that substantial physical deterioration of the facility would occur or be accelerated. Based on the *L.A. CEQA Thresholds Guide*, the determination of whether the project results in a significant impact on recreation and parks shall be made considering the following factors: (a) the net population increase resulting from the proposed project; (b) the demand for recreation and park services anticipated at the time of project buildout compared to the expected level of service available. Consider, as applicable, scheduled improvements to recreation and park services (renovation, expansion, or addition) and the project's proportional contribution to the demand; and (c) whether the project includes features that would reduce the demand for park services (e.g., on-site recreation facilities, land dedication, or direct financial support to the Department of Recreation and Parks).

It is reasonable to assume that the future occupants of the Proposed Project would utilize recreation and park facilities in the surrounding area. As noted in Table III-24, above, there are 23 existing new and recently improved parks within the Project area totaling more than 1,210 acres that are available to serve the future residents and retail visitors to the Project Site. The Project Site is surrounded by relatively big parks (over 50 acres) such as Elysian Park, Ascot Hills Park, Ernest E. Debs Regional Park, and Arroyo Seco Park. In addition, the Proposed Project would provide approximately 39,575 square feet of total common open space and amenities on-site available to Project residents and their guests. For the Project's residents and their guests, the Proposed Project may include a variety of on-site amenities including, but not limited to, common open space, community gardens, a roof deck, pool deck, barbecue pits, and a gymnasium. Additionally, pursuant to Ordinance No. 179,280, the Proposed Project would provide

64,744 square feet of publicly accessible public open space throughout the Proposed Project in the form of open space, paseos, and paths. The availability of these on-site recreation amenities and opportunities would serve to reduce the demand for off-site park services, and accordingly the Proposed Project would not substantially increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated. In addition, the Project Applicant would pay the City's mandatory park mitigation fees, which is collected prior to a certificate of occupancy for residential land uses, and comply with regulatory compliance measure relating to parks (discussed above). Accordingly, the Proposed Project's impact upon parks and recreational facilities would be less than significant.

b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?

Less Than Significant Impact. A significant impact may occur if a project includes or requires the construction or expansion of park facilities and such construction would have a significant adverse effect on the environment. As noted above, there are 23 existing, new, or recently improved parks within the Project Area totaling more than 1,210 acres that are available to serve the future residents and retail visitors to the Project Site. As required by [Q] Condition B.1(e) and B.6(a), the Proposed Project would also provide approximately 39,575 square feet of residential open space and recreational facilities and 64,744 square feet of publicly accessible open space on-site. As discussed in Section XIV (iv) above, Citywide park standards are Citywide goals and are not intended to be requirements for individual development projects. The Public Recreation Element of the City's General Plan also recognizes that the achievement of such goals is not the responsibility of individual development projects and that such goals will be met by "seek[ing] federal, state and private funds to implement acquisition and development of parks and recreational facilities." The Proposed Project itself does not include the expansion of park facilities and does not require the construction or expansion of recreational facilities that might have an adverse impact on the environment. Therefore, a less than significant impact would occur.

Cumulative Impacts

Less Than Significant Impact. Section 15355 of the State CEQA Guidelines defines cumulative impacts as "two or more individual effects which, when considered together, are considerable or which compound or increase other environmental impacts." As discussed above, the Proposed Project would have a less than significant impact on recreational resources. The Proposed Project in combination with the three related projects would be expected to increase the cumulative demand for parks and recreational facilities in the City of Los Angeles. A number of new parks and recently renovated park improvements have been made in the downtown area and along San Fernando Road to accommodate cumulative demands created by increased residential development. Similar to the Proposed Project's requirement to pay park mitigation fees to improve recreation and park facilities, the related projects that include residential units would be required to pay similar recreation taxes and/or applicable Quimby fees to mitigate impacts upon park and recreational facilities and to provide additional funds to meet Citywide park goals. Additionally, each related project would be subject to the provisions of the LAMC for providing on-site open space, which is proportionately based on the amount of new development. Because the Proposed Project would have a less than significant incremental contribution to the potential cumulative impact on recreational resources, the Proposed Project would have a less than significant

cumulative impact on such resources.

XVI. TRANSPORTATION AND TRAFFIC

The following section summarizes and incorporates by reference the information:

- Traffic Impact Report for Proposed Avenue 34 & Pasadena Mixed-Use Project, prepared by Crain & Associates, dated December 2015.
- City of Los Angeles Department of Transportation's approval letter, Traffic Impact Assessment for the Proposed Development Project at 167 West Avenue 34 / 3401-3437 North Pasadena Avenue, dated January 28, 2016.

The Traffic Study and related correspondence from the Los Angeles Department of Transportation (LADOT) are attached. The Traffic Study and the discussion below evaluate a larger project that includes 410 dwelling units, 30,000 square feet of creative office, and 10,000 square feet of retail. The Traffic Study was reviewed and approved by DOT in January 2016. The Proposed Project has since been revised to include 372 dwelling units, 30,000 square feet of creative office, and 10,000 square feet of retail. Because the Traffic Study evaluated a larger project than what is currently proposed, the Traffic Study and the analysis below present a conservative analysis of the Project's impacts.

a) Would the project conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit?

Potentially Significant Unless Mitigation Incorporated. The Transportation Research Board Circular 212 Critical Movement Analysis (CMA) Planning Method was used to analyze traffic operating conditions at study intersections. CMA methodology compares the amount of traffic an intersection is able to process (capacity) to the level of traffic during peak hours (volume). The resulting volume-to-capacity ratio (v/c) is expressed in terms of level of service (LOS). LOS A represents free-flow activity and LOS F represents overcapacity operation. LOS is a qualitative assessment of the quantitative effects of such factors as traffic volume, roadway geometrics, speed, delay, and maneuverability on roadway and intersection operations.

The City of Los Angeles determines whether a transportation impact at a signalized intersection is significant according to a sliding scale. At an intersection with a final LOS C, a project impact would occur if the project contributes 0.040 or greater to the intersection v/c. At an intersection with a final LOS D, a project impact would occur if the project contributes 0.020 or greater to the intersection v/c. At an intersection with a final LOS E or F, a project impact would occur if the project contributes 0.010 or greater to the intersection v/c. Refer to Table III-25, Definition of Significant Impact at Intersection, below.

Table III-25
Definition of Significant Impact at Intersection

Level of Service	Volume-to-Capacity (V/C)	Project-related Increase in Volume-to-Capacity (V/C) Ratio
C	0.701–0.800	Equal to or greater than 0.04
D	0.801–0.900	Equal to or greater than 0.02
E, F	> 0.900	Equal to or greater than 0.01

Study Intersections

A total of ten intersections were identified, in conjunction with LADOT staff, for inclusion in the traffic analysis. The analyzed locations are shown in Figure 1 of the Traffic Study. None of these intersections are Los Angeles County Congestion Management Plan (CMP) monitoring locations. In addition, a CMP analysis is not required because the Proposed Project would not add 50 or more peak-hour trips to any CMP arterial monitoring intersections, including freeway on- and off-ramps as discussed below. Furthermore, the Project would not add 150 or more peak-hour trips to freeway mainline monitoring locations. The following intersections were determined in consultation with LADOT:

1. Figueroa Street and Pasadena Avenue/ Marmion Way
2. Figueroa Street and Avenue 26
3. Figueroa Street and SR-110 Freeway Northbound On/Off Ramps
4. I-5 Freeway Northbound Off-Ramp /Lacy Street and Avenue 26
5. Pasadena Avenue and Avenue 35
6. Pasadena Avenue and Avenue 33
7. Pasadena Avenue and Avenue 28
8. Pasadena Avenue/Avenue 26 and Daly Street
9. Pasadena Avenue and I-5 Freeway Northbound On/Off Ramps
10. Pasadena Avenue and I-5 Freeway Southbound On/Off Ramps

Existing Transit Options

The Los Angeles County Metropolitan Transportation Authority (MTA) provides an extensive system of bus lines in the Northeast Los Angeles Community Plan area. Metro Gold Line Rail Station and a number of MTA bus routes are within reasonable walking distance from the Project Site (less than approximately one-quarter mile), providing access for residents, employees and patrons of the Project. The public transit routes serving the Project are described in detail below, and transit routes within the walking distance are shown in Figure 4 of the Traffic Study.

Metro Gold Line is a light rail line running from Azusa to East Los Angeles via Downtown Los Angeles serving several attractions, including Little Tokyo, Union Station, the Southwest Museum, Chinatown, and the shops of Old Town Pasadena. The Metro Gold line is one of six in the Metro Rail system, serving 21 stations (including two subway stations). At Union Station, riders can connect with the Metro Red and Metro Purple Lines, the Metro Silver Line bus rapid transit line as well as the Metrolink regional system. Extension of the Gold Line further eastward extension to Montclair is also planned. The Heritage

Square/Arroyo Station of the Metro Gold Line is within one-quarter mile walking distance from the Project Site. Currently, Metro Gold Line trains run between approximately 4:30 a.m. and 12:45 a.m. daily. Service on Friday and Saturday nights continues until approximately 2:00 a.m. Trains on the Gold Line operate every six minutes during peak hours Monday through Friday. Middays consist of 12-minute headways, while weekends all day have a frequency of seven to eight minutes. Nighttime service operates every 15 minutes, with 20-minute headways during late night weekend service.

Line 83 is a north-south oriented route which operates between the Downtown Los Angeles and Eagle Rock area. Route 83 travels through the communities of Eagle Rock, Highland Park, Cypress and Downtown Los Angeles. Near the Project Site, Line 83 runs north-south along Pasadena Avenue. Line 83 provides stops in the Project vicinity on Pasadena Avenue at Avenue 31, Avenue 33 and Avenue 35. Line 83 operates daily with headways of approximately 20 to 40 minutes during the weekday AM and PM peak hours. Saturday, Sunday and holiday service is provided with longer headways.

Lines 251/252 are north-south oriented routes which operate between the Montecito Heights and Lynwood area. Route 251/252 travel through the communities of Montecito Heights, Cypress Park, Lincoln Heights, Boyle Heights, Vernon, Huntington Park, South Gate and Lynwood. Near the Project Site, only Line 252 runs north-south along Griffin Avenue. Line 252 provides stops in the Project vicinity on Griffin Avenue at Avenue 31, Avenue 33 and Avenue 35. Line 252 operates daily with headways of approximately 20 to 30 minutes during the weekday AM and PM peak hours. Saturday, Sunday and holiday service is provided with longer headways.

As discussed in Question III(a), the Proposed Project is within a High-Quality Transit Areas (HQTA). An HQTA is defined as a generally walkable transit village or corridor within one half-mile of a well-serviced transit stop or a transit corridor with 15-minute or less service frequency during peak commute hours. The Proposed Project would concentrate new development and jobs within a half of a mile (walking distance) from the Heritage Square Gold Line Station and is served by several Metro bus lines. Thus, the Project Site's location provides opportunities for employees, guests, visitors, and residents to use public transit to reduce vehicle trips. The Project Site is also located in a Transit Priority Area as defined by CEQA Sections 21099 and 21064.3. The Proposed Project's mixed-use nature and close proximity to neighborhood-serving commercial/retail land uses and regional transit would result in fewer trips and a reduction to the Proposed Project's vehicle miles traveled (VMTs) as compared to the base trip rates for similar stand-alone land uses that are not located in close proximity to transit. Thus, it is expected that some of the person trips generated by the Proposed Project would utilize public transportation as their primary travel mode instead of private vehicles.

Existing (2015) Traffic Volumes

Traffic volumes for existing conditions at the study intersections were obtained from manual traffic counts conducted in May 2015. In accordance with LADOT Traffic Study Policies and Procedures, the traffic counts conducted for the Traffic Study cover the weekday morning and afternoon peak commute periods.

An analysis of existing weekday AM and PM peak-hour traffic conditions was performed at the 10 study intersections listed above. These intersections were determined in consultation with LADOT. As shown in Table III-27 and Table III-28, below, all ten intersections operate at acceptable levels of service (LOS A through D).

Project Impact

Project Parking and Vehicular Access

Parking for the Proposed Project's uses would be provided underneath the Project buildings, with loading docks and short-term retail parking provided on the surface level. The proposed parking supply is expected to meet the requirements of the City of Los Angeles Municipal Code and site-specific requirements as identified in [Q] Conditions A.2 (Parking) and B.2 (Pedestrian Access). In addition, the Proposed Project would comply with the LAMC bicycle parking requirement by providing enough long-term and short-term bicycle stalls. Vehicular access for the Project parking would be provided via two driveways along Avenue 34 – a residential driveway on the southwest corner of the Project Site opposite Artesian Street and a mixed commercial and residential driveway at the dividing line between the commercial and residential portions of the Project Site. Additionally, a driveway serving the commercial loading dock and short-term retail parking would be located along Pasadena Avenue.

Estimated Trip Generation

The Proposed Project analyzed in the Traffic Study includes the development of up to 410 apartment units, 30,000 square feet of office space, and 10,000 square feet of retail use. The daily and peak-hour trips for the Project were generated using trip rates from the Institute of Transportation Engineers (ITE) *Trip Generation* Manual (9th Edition, 2012). In accordance with the LADOT, vehicle trip generation is reduced by 15 percent for the transit credit, 10 percent for internal trips, and 50 percent for commercial pass-by trips. Project trip generation is presented in Table III-26. As shown in Table III-26, the analysis estimates that the Proposed Project would generate a total of 2,128 daily vehicle trips, 161 AM peak hour vehicle trips and 199 PM peak hour vehicle trips.

Table III-26
Project Trip Generation Estimates

Land Use (Land Use Code)	Size	Unit	ADT [a]	AM Peak			PM Peak		
				In	Out	Total	In	Out	Total
Proposed Project [b]									
Apartments (250)	410	du	2,608	41	164	205	158	85	243

ADT = average daily traffic; du =dwelling units; sf = square feet

[a] *Trip rates based on the Institute of Transportation Engineers (ITE) Trip Generation Manual, 9th Edition (2012).*

[b] *As discussed above, the Project metrics analyzed in the Traffic Study and in this table are higher than the actual Proposed Project, and thus, the trip generation amounts are conservative.*

[c] *Internal, transit credit and pass-by trips based on City of Los Angeles Department of Transportation (LADOT) Traffic Study Policies and Procedures (2014).*

Source: Crain & Associates, Traffic Impact Report for Proposed Avenue 34 & Pasadena Mixed-Use Project, dated December 2015.

Existing (2015) With Project Conditions

Table III-27, below, summarizes the results of the Existing (2015) and Existing with Project (2015) AM peak-hour LOS analysis for the ten study area intersections. Figure III-2 and Figure III-3 illustrate the existing traffic volumes of the ten study intersections for the AM and PM peak hours, respectively. Figure III-4 and Figure III-5 illustrate the traffic volumes at the studied intersections with the addition of the Proposed Project during the AM and PM peak hours, respectively. As discussed above, the LOS were determined using the LADOT spreadsheet for calculating CMA methodology. As shown in Table III-27, nine of the ten intersections would continue to operate at acceptable levels of service (LOS A through D) during the AM peak hour. A significant impact would occur at one intersection (Pasadena Avenue/ Avenue 26 and Daly Street) during the AM peak hour with the addition of Project traffic.

Table III-28, below, summarizes the results of the Existing (2015) and Existing with Project (2015) PM peak-hour LOS analysis for the ten study area intersections. All study intersections are not anticipated to have any significant impacts with the addition of Project traffic during the PM peak hour.

As approved by LADOT, the Proposed Project would comply with the Transportation Demand Management (TDM) Ordinance (No. 167,700) by implementing a TDM Plan and Trip Monitoring Program to offset the increased traffic from the Proposed Project (Mitigation Measures MM-T-1 through MM-T-3). Table III-29 shows that there would be a decrease in v/c ratio from incorporating a TDM Plan. Refer to Figure III-6 and Figure III-7 for the Existing (2015) traffic volumes with the implementation of the TDM Plan. Therefore, with implementation of mitigation measures below, the significant impact identified at the Pasadena Avenue/ Avenue 26 and Daly Street intersection during the AM peak hour would be reduced to a less than significant level.

Mitigation Measures:

MM-T-1 Transportation and Traffic

In addition to the TDM measures, implementing measure(s) detailed in DOT's communication to the Planning Department (DOT Case No. CEN 15-43306 dated January 28, 2016, attached) shall be complied with.

MM-T-2 Transportation Demand Management (TDM) Program

- The purpose of a TDM plan is to reduce the use of single occupant vehicles (SOV) by increasing the number of trips by walking, bicycle, carpool, vanpool and transit. A TDM plan should include design features, transportation services, education, and incentives intended to reduce the amount of SOV during commute hours. Through strategic building design and orientation, this project can facilitate access to transit, can provide a pedestrian-

friendly environment, can promote non-automobile travel and can support the goals of a trip-reduction program.

- A preliminary TDM program shall be prepared and provided for DOT review prior to the issuance of the first building permit for this project and a final TDM program approved by DOT is required prior to the issuance of the first certificate of occupancy for the project. The TDM program should include, but not be limited to, the following strategies:
    - Provide an internal Transportation Management Coordination Program with an on-site transportation coordinator;
    - Design the project to ensure a bicycle, transit, and pedestrian friendly environment;
    - Provide unbundled parking that separates the cost of obtaining assigned parking spaces from the cost of purchasing or renting residential units;
    - Accommodate flexible/alternative work schedules and telecommuting programs;
    - A provision requiring compliance with the State Parking Cash-out Law in all leases;
    - Coordinate with DOT to determine if the project location is eligible for future Integrated Mobility Hub (which can include space for a bike share kiosk, and/or parking spaces on-site for car-share vehicles;
    - Provide on-site transit routing and schedule information;
    - Provide a program to discount transit passes for residents/employees possibly through negotiated bulk purchasing passes with transit providers;
    - Provide rideshare matching services;
    - Preferential rideshare loading/unloading or parking location;
    - Contribute to a one-time fixed fee contribution of $75,000 to be deposited into the City's Bicycle Plan Trust Fund to implement bicycle improvements in the vicinity of the project.

  In addition to these TDM measures, DOT also recommends that the Applicant explore the implementation of an on-demand van, shuttle or tram service that connects the project employees to off-site transit stops based on the transportation needs of the project employees. Such a service can be included as an additional measure in the TDM program if it is deemed feasible and effective by the applicant.
- The Applicant shall implement a TDM/TMP to reduce the project trip generation by 15 percent. Specifically, the project shall not exceed a driveway trip volume count of 179 trips during the a.m. peak hour and 222 trips during the pm peak hour, at full occupancy. To achieve this peak hour driveway trip volume requirement through implementation of an on-site Transportation Demand Management (TDM) Plan the project shall implement a Trip Monitoring Program (TMP).
- The Applicant shall record a covenant and agreement to annually monitor and submit reports on the progress of the driveway trip reduction plan to DOT. Annual reports shall include a report on the observed trip generation and on the project's mode share. The detailed goals, objectives, terms and strategies of the TDM plan and reporting requirements shall be determined during the preparation of the final. The TDM plan is due prior to the issuance of any temporary or final certificate of occupancy permit for the project. The plan should also identify any appropriate penalties, should the project not achieve compliance with the targeted number of driveway trips within a year of exceeding the limits. The TMP shall continue until such time that the project has

shown, for five (5) consecutive years, at a minimum of 85% occupancy, accomplishment of the peak hour driveway trip volume requirement as listed.

MM-T-3 Transportation Systems Management (TSM) Improvements

- The Applicant shall implement the upgrades, detailed below by LADOT's ATSAC Section, through the B-Permit process. LADOT's ATSAC Section has identified the need to update the existing traffic signal system. Specifically, install one CCTV camera, a new type 2070 controller, and the necessary infrastructure (including, but not limited to, fiber optic and interconnect) to activate the new installation, at the Pasadena Avenue / Avenue 26 and Daly Street intersection. The video fiber / fiber optic improvements must be guaranteed prior to the issuance of any building permit and complete prior to the issuance of any certificate of occupancy. Temporary certificates of occupancy may be granted in the events of any delay through no fault of the applicant, provided that, in each case, the applicant has demonstrated reasonable efforts and due diligence to the satisfaction of DOT.

Future (2020) Without and With Project Conditions

Future (2020) baseline traffic volumes for the "Without Project" condition were determined by combining area ambient traffic growth with the total related projects traffic volumes. Net Project volumes were then combined with the Future (2020) Without Project traffic volumes to develop the Future (2020) with Project volumes, which were used to determine traffic impacts directly attributable to the Proposed Project. Figure III-8 and Figure III-9 illustrate the Future (2020) traffic volumes at the ten intersections without the Proposed Project during the AM and PM peak hours, respectively. Figure III-10 and Figure III-11 illustrate the traffic volumes for the studied intersections with the addition of the Proposed Project for the AM and PM peak hours, respectively. Tables III-30 and III-31 summarize the level of service for the Future (2020) with Project conditions at the analyzed intersections for the AM and PM peak hours, respectively.

Table III-30 and Table III-31 below show future traffic conditions with and without Project conditions during the AM and PM peak hours, respectively. For the Future (2020) With Project condition, it is estimated that 8 of the study intersections would continue to have acceptable levels of service (LOS A through LOS D) during both peak hours. The remaining two study intersections (Figueroa Street & Avenue 26 and Pasadena Avenue/Avenue 26 & Daly Street) are expected to operate at LOS E during the AM peak hours without the addition of Project traffic. The addition of Project traffic would create a significant impact at Figueroa Street & Avenue 26 intersection and Pasadena Avenue/Avenue 26 & Daly Street intersection during the AM peak hour.

As mentioned above, the Proposed Project would implement a Transportation Demand Management Plan to promote other modes of travel and reduce single occupant vehicles. Table III-32 shows the decrease in the v/c values for the intersections that would be significantly impacted from the Proposed Project. Figure III-12 and Figure III-13 illustrate the traffic volumes at the ten intersections with the TDM Plan. As shown in Table III-32, the impacts would be reduced to less than significant level with implementation of a TDM Plan and Transportation Monitoring Program.

Construction Traffic

The Proposed Project would require the use of haul trucks during site clearing and excavation, and the use of a variety of other construction vehicles throughout the construction of the Proposed Project. The Proposed Project would require approximately 98,000 cy of excavated soil to be exported off site. As noted in the CalEEMod worksheets provided in the Air Quality Study, it is conservatively estimated that the earthwork and grading phase would generate up to 12,250 haul trips over an approximate 3-month period (average of 186 trips per day based on approximately 8 cy per truck[46]). The local haul route traveling to and from the I-5 Freeway would utilize Avenue 34, Pasadena Avenue, Avenue 33, Lacy Street, and Avenue 26. The haul trips would occur outside of the peak hours and during the permissible hauling hours identified in the haul route to be approved by the Department of Building and Safety. The addition of these vehicles onto the street system would contribute to increased traffic in the Project vicinity. However, the Proposed Project's construction trip traffic would be a fraction of the operational traffic that would not cause any significant impacts at the studied intersections. Therefore, it is not anticipated that they would contribute to a significant increase in the overall congestion in the Project vicinity. In addition, any truck trips would be limited to the length of time required for the Project's construction. Due to the temporary nature of the traffic, construction impacts would be less than significant with the incorporation of Mitigation Measures MM-T-4 to MM-T-6, below.

Mitigation Measures:

MM-T-4 Construction Management Plan

- A Construction work site traffic control plan shall be submitted to DOT for review and approval prior to the start of any construction work. The plans shall show the location of any roadway or sidewalk closures, traffic detours, haul routes, hours of operation, protective devices, warning signs and access to abutting properties. All construction related traffic shall be restricted to off-

[46] *The use of double belly haul trucks would increase the hauling capacity to 20 cy reducing the total haul trips to 4,900 trips, or approximately 75 trips per day.*

peak hours.

- All delivery truck loading and unloading shall take place on site or within the boundaries of an approved traffic control plan.

MM-T-5 Transportation and Traffic (Construction)

- The developer shall install appropriate traffic signs around the site to ensure pedestrian and vehicle safety at all times during the construction period.

MM-T-6 Pedestrian Safety During Construction

- The Applicant shall plan construction and construction staging as to maintain pedestrian access on adjacent sidewalks throughout all construction phases. This requires the applicant to maintain adequate and safe pedestrian protection, including physical separation (including utilization of barriers such as K-Rails or scaffolding, etc.) from work space and vehicular traffic, and overhead protection, due to sidewalk closure or blockage, at all times.
- Should permanent pedestrian routes be unavailable due to construction, safe and accessible temporary pedestrian routes shall be provided adjacent to the project site.
- Covered walkways should be provided where pedestrians are exposed to potential injury from falling objects.
- The Applicant shall keep sidewalk open during construction until only when it is absolutely required to close or block sidewalk for construction and/or construction staging. Sidewalk shall be reopened as soon as reasonably feasible taking construction and construction staging into account.

b) Would the project conflict with an applicable congestion management program, including, but not limited to level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways?

Less Than Significant Impact. A significant impact would occur if the project conflicts with an applicable congestion management program, including, but not limited to level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways. The local CMP requires that all CMP monitoring intersections be analyzed where a project would likely add 50 or more trips during the peak hours. In addition, any CMP freeway monitoring segment where a project is expected to add 150 or more trips in any direction during the peak hours is to be analyzed. The study area analyzed in the Traffic Impact Study includes the 10 intersections listed above. None of these intersections are Los Angeles County Congestion Management Plan (CMP) monitoring locations. The nearest such intersection is Sunset Boulevard/Alvarado Street (three miles southwest of the Project Site). A review of the Project trip distribution and net Project traffic additions to the study vicinity shows that Proposed Project would not add 50 or more trips to this CMP intersections. It is estimated that the Proposed Project would generate at most 6 trips during the AM peak hour and 8 trips during the PM peak hour at the intersection of Sunset Boulevard/Alvarado Street. As these volumes are below the threshold of 50 trips, no further CMP intersection analysis is warranted.

Furthermore, the nearest CMP freeway monitoring segments are the Golden State Freeway (US-101) at Stadium Way and the Arroyo Seco Parkway (SR-110) at Pasadena Avenue. Based on the Project trip generation described above, the Proposed Project is expected to add approximately 161 trips during the AM peak hour (29 inbound, 132 outbound) and 199 trips during the PM peak hour (133 inbound, 66 outbound) to the adjacent street system. These direction amounts are less than the freeway threshold of 150 directional trips. Therefore, no significant impact to any CMP freeway monitoring location is forecast and no additional freeway analysis is necessary. As such, the Proposed Project would not conflict with the adopted CMP and Project impacts would be less than significant.

c) Would the project result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks?

No Impact. This question would apply to the Proposed Project only if it involved an aviation-related use or would influence changes to existing flight paths. The Proposed Project does not include any aviation-related uses and would have no airport impact. It would also not require any modification of flight paths for the existing airports in Los Angeles. Therefore, no impact would occur.

d) Would the project substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Potentially Significant Unless Mitigation Incorporated. A significant impact may occur if the Proposed Project includes new roadway design or introduces a new land use or features into an area with specific transportation requirements and characteristics that have not been previously experienced in that area, or if Project Site access or other features were designed in such a way as to create hazard conditions. Current vehicular access to the Project Site is provided by six driveways off the north side of Avenue 34 and two driveways off the west side of Pasadena Avenue. Sliding gates secure the driveways and access on-site. Vehicular access for the Project parking would be provided via two driveways along Avenue 34 for residential and mixed commercial and residential purposes. An additional driveway serving the commercial loading dock and short-term retail parking would be located along Pasadena Avenue.

The proposed site plan for the Project is acceptable to the Department of Transportation. However, the review does not constitute approval of the driveway dimensions and circulation schemes. All new driveways should be Case 2 driveways and 30 feet wide for two-way operations. Any security gates should be minimum of 20 feet from the property line or to the satisfaction of LADOT. The Applicant will consult with LADOT for the applicable driveway width standards, internal circulation and truck loading requirements so that such traffic flow considerations are designed and incorporated early into the building and parking layout plans. As stated in Mitigation Measure MM-T-1, above, the Proposed Project shall comply with the requirements stated in the LADOT Assessment Letter. As such, the Proposed Project would include new vehicular access driveways that would not conflict with pedestrian circulation and traffic. These Site access and circulation schemes would be further reviewed and approved by LADOT. Therefore, the Project's potential increase hazards due to design features or incompatible uses would be mitigated to a less than significant level.

e) Would the project result in inadequate emergency access?

Less Than Significant Impact. A significant impact may occur if the Project design would not provide emergency access meeting the requirements of the LAFD, or in any other way threatened the ability of emergency vehicles to access and serve the Project Site or adjacent uses.

As previously discussed in Section VIII(g), the Proposed Project is not located on or near an adopted emergency response or evacuation plan. Development of the Project Site may require temporary and/or partial street closures due to construction activities. However, any such closures would be temporary in nature and would be coordinated with the Departments of Transportation, Building and Safety, and Public Works. Nonetheless, while such closures may cause temporary inconvenience, they would not be expected to substantially interfere with emergency response or evacuation plans. Therefore, the impacts would be less than significant.

As described in Section XIV(a), the Proposed Project would satisfy the emergency response requirements of the LAFD. There are no hazardous design features included in the access design or site plan for the Proposed Project that could impede emergency access. Furthermore, the Proposed Project would be subject to the site plan review requirements of the LAFD and the LAPD to ensure that all access roads, driveways and parking areas would remain accessible to emergency service vehicles. Therefore, the Proposed Project would not be expected to result in inadequate emergency access, and the impact would be less than significant.

f) Would the project conflict with adopted policies, plans, or programs regarding public transit, bicycles, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities?

Less Than Significant Impact. A significant impact may occur if the Proposed Project would conflict with adopted policies or involve modification of existing alternative transportation facilities located on- or off-site. Development of the Proposed Project would not result in the disruption of public transportation services or the substantial alteration of public transportation routes. Consistent with the City's Bicycle Ordinance, the Proposed Project would provide 383 long-term bicycle stalls and 46 short-term bicycle parking stalls. Furthermore, the Proposed Project would not permanently interfere with any class I or class II bikeway systems or pedestrian facilities; although, the Project would result in temporary construction disturbances to pedestrian and bike lane facilities due to construction vehicles entering and exiting the Project Site and temporary sidewalk closures. Throughout the duration of the Project's construction phase, safe pedestrian access would be maintained along the east side of Pasadena Avenue. Pedestrian access on the west side of Pasadena Avenue may close temporarily during the duration of the Project's construction phase. As such, safe pedestrian access along Pasadena Avenue would be maintained at all times throughout the construction of the Proposed Project. During the construction, Mitigation Measure MM-T-6, above, would ensure pedestrian safety and access along the portions that border the Project Site. Since the Proposed Project would not modify or conflict with any alternative transportation policies, plans or programs, the Proposed Project would have a less than significant impact on such programs.

Cumulative Impacts

Potentially Significant Unless Mitigation Incorporated. Development of the Proposed Project in conjunction with the three related projects would result in an increase in average daily vehicle trips and peak hour vehicle trips in the Northern Los Angeles Community Plan Area. As noted in Table III-30 and III-31, above, two of the ten study intersections would be significantly impacted by Project traffic under Future (2020) conditions. As shown in Table III-32, Mitigation Measures MM-T-1 through MM-T-3 would off set the increased traffic and reduce trips from single occupant vehicles by implementing a Transportation Demand Management Plan. Therefore, the Proposed Project's cumulative impacts would be mitigated to a less than significant level.

XVII. UTILITIES AND SERVICE SYSTEMS

a) Would the project exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?

Less Than Significant Impact. A significant impact would occur if a project exceeds wastewater treatment requirements of the applicable Regional Water Quality Control Board. Section 13260 of the California Water Code states that persons discharging or proposing to discharge waste that could affect the quality of the waters of the State, other than into a community sewer system, shall file a Report of Waste Discharge (ROWD) containing information which may be required by the appropriate Regional Water Quality Control Board (RWQCB). The RWQCB then authorizes an NPDES permit that ensures compliance with wastewater treatment and discharge requirements. The Los Angeles RWQCB (LARWQCB) enforces wastewater treatment and discharge requirements for properties in the Project area.

Wastewater from the Project Site is conveyed via municipal sewage infrastructure maintained by the Los Angeles Bureau of Sanitation to the Hyperion Water Reclamation Plant (HWRP). The HWRP is a public facility and is subject to the State's wastewater treatment requirements. Wastewater from the Project Site is and would continue to be treated according to the wastewater treatment requirements enforced by the LARWQCB. Therefore, impacts associated with wastewater treatment requirements would be less than significant.

b) Would the project require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?

Less Than Significant Impact. A significant impact may occur if a project would increase water consumption or wastewater generation to such a degree that the capacity of facilities currently serving the Project Site would be exceeded. Based on the *L.A. CEQA Thresholds Guide*, the determination of whether a project results in a significant impact on water shall be made considering the following factors: (a) the total estimated water demand for the project; (b) whether sufficient capacity exists in the water infrastructure that would serve the project, taking into account the anticipated conditions at project buildout; (c) the amount by which the project would cause the projected growth in population, housing or employment for the Community Plan area to be exceeded in the year of the project completion; and (d)

the degree to which scheduled water infrastructure improvements or project design features would reduce or offset service impacts.

Water Treatment Facilities and Existing Infrastructure

The Los Angeles Department of Water and Power (LADWP) ensures the reliability and quality of water supply through an extensive distribution system that includes more than 7,200 miles of pipes, more than 100 storage tanks and reservoirs within the City, and eight storage reservoirs along the Los Angeles Aqueducts. Much of the water flows north to south, entering Los Angeles at the Los Angeles Aqueduct Filtration Plant (LAAFP) in Sylmar, which is owned and operated by LADWP. Water entering the LAAFP undergoes treatment and disinfection before being distributed throughout the LADWP's Water Service Area. The LAAFP has the capacity to treat approximately 600 million gallons per day (mgd).[47] The average plant flow is approximately 450 mgd during the non-summer months and 550 mgd during the summer months, and operates at between 75 and 90 percent capacity. Therefore, the LAAFP has a remaining capacity of treating approximately 50 to 150 mgd, depending on the season.[48]

As shown in Table III-33 below, the Proposed Project would generate a net increase in water demand of approximately 53,633 gallons per day (gpd) of water, significantly below available capacity. Because the Proposed Project is consistent with the zoning and General Plan land use designations, and the Project's population growth is within SCAG's forecast, the Project's increased water demand would not measurably reduce the LAAFP's treatment capacity; therefore, no new or expanded water treatment facilities would be required. With respect to water treatment facilities, the Proposed Project would have a less-than-significant impact.

[a] *L.A. CEQA Thresholds Guide (2006), Exhibit M.2-12. Consumption Rates based on 120% of the City of Los Angeles Department of Public Works, Bureau of Sanitation Sewer Generation Rates table, March 20, 2002.*
Parker Environmental Consultants, 2016.

Although no system upgrades are anticipated at this time, the water system would be verified again at the time of construction. In the event that water main and/or other infrastructure upgrades are required for the proposed development, such infrastructure improvements would be conducted within the right-of-way easements serving the Project area, and would not create a significant impact to the physical environment. This is largely due to the fact that (a) any disruption of service would be short-term, (b) the replacement of the water mains would be within public rights-of-way, and (c) any foreseeable infrastructure improvements would be limited to the immediate Project vicinity. Therefore, potential impacts resulting from water infrastructure improvements would be less than significant.

Wastewater Treatment Facilities and Existing Infrastructure

Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a project would normally have a significant wastewater impact if: (a) the project would cause a measurable increase in wastewater flows to a point where, and a time when, a sewer's capacity is already constrained or that would cause a sewer's capacity to become constrained; or (b) the project's additional wastewater flows would substantially or incrementally exceed the future scheduled capacity of any one treatment plant by generating flows greater than those anticipated in the Wastewater Facilities Plan or General Plan and its elements.

The Los Angeles Bureau of Sanitation provides sewer service to the Proposed Project area. Sewage from the Project Site is conveyed via sewer infrastructure to the Hyperion Water Reclamation Plant (HWRP). The Hyperion Water Reclamation Plant treats an average daily flow of 275 million gallons per day (mgd) on a dry weather day. Because the amount of wastewater entering the HWRP can double on rainy days, the plant was designed to accommodate both dry and wet weather days with a maximum daily flow of

450 mgd and a peak wet weather flow of 800 mgd.[49] This equals a remaining capacity of 175 mgd of wastewater able to be treated at the HWRP. As shown in Table III-34, the Proposed Project would generate a net increase of approximately 44,694 gpd of wastewater, representing a fraction of one percent of the available capacity. The Project Site is served by an existing 8-inch sewer pipe located south of the Project Site along the middle of W. Avenue 34. and a 15-inch pipe along Pasadena Avenue.[50] In accordance with the *L.A. CEQA Thresholds Guide*, the estimated sewer flows were based on the sewerage generation factors for residential and commercial categories (City of Los Angeles, Bureau of Sanitation, 1996). The HWRP has a remaining capacity of 175 additional mgd, and as such would have adequate capacity to serve the Project Site. Therefore, impacts to sewer capacity and infrastructure would be less than significant.

Parker Environmental Consultants, 2016.

Based on communication from the Bureau of Sanitation, adequate capacity is available to handle the anticipated discharge from the Proposed Project as indicated in the Sewer Capacity Availability request (SCAR). The Project Site currently served by 8-inch diameter sewer pipes running along Avenue 34 and a 15-inch sewer pipe along Pasadena Avenue. Based on the estimated sewer flows indicated in Table III-34 above, Bureau of Engineering has approved the SCAR request. Through the rules and regulations

---

[49] *City of Los Angeles Department of Public Works, Bureau of Sanitation, Hyperion Water Reclamation Plant, website: http://lasewers.org/treatment_plants/hyperion/tour/index.htm, accessed* October *2016.*

[50] *City of Los Angeles Bureau of Engineering, Sewer Capacity Availability Request (SCAR) Letter, 141 W. Avenue 34, February 1, 2016.*

established in the City of Los Angeles Sewer Allocation Ordinance (Ord. 166,060), the Bureau of Sanitation will verify the gauging of the sewer lines and make the appropriate decisions on how best to connect to the local sewer lines at the time of construction. If it is later determined that the local sewer system has insufficient capacity to serve the Proposed Project, the Applicant would be required to replace or build new sewer lines to a point in the sewer system with sufficient capacity to accommodate the Proposed Project's increased flows. Any infrastructure improvements to update or expand the sewer lines in the Project vicinity, if necessary, would be limited to trenching, excavating and backfilling the sewer lines beneath the public right-of way. Such construction activities would be localized in nature and would generally involve partial lane closures for a relatively short duration of time typically lasting a few days to a few weeks. Impacts to sewer capacity and infrastructure would be less than significant.

c) Would the project require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?

Less Than Significant Impact. A significant impact may occur if the volume of stormwater runoff would increase to a level exceeding the capacity of the storm drain system serving a project site, resulting in the construction of new stormwater drainage facilities. As described in Question IX(c) the Proposed Project would not result in a significant increase in site runoff, or any changes in the local drainage patterns. The Proposed Project would be required to demonstrate compliance with Low Impact Development Ordinance standards and retain or treat the first ¾-inch of rainfall in a 24-hour period. The Proposed Project Site is currently developed with manufacturing facilities and surface loading/parking areas. Runoff from the Project Site currently is and would continue to be directed towards existing storm drains in the Project vicinity. As stated previously in Section IX, the Project shall comply with the LID Plan, Standard Urban Stormwater Mitigation Plan (SUSMP), Environmental [Q] Conditions 13 - 17, and/or the site-specific mitigation plan to mitigate stormwater pollution as required by Ordinance Nos. 172,176 and 173,494. The appropriate design and application of Best Management Practices (BMP) devices and facilities shall be determined by the Watershed Protection Division of the Bureau of Sanitation, Department of Public Works. Thus, development of the Proposed Project would not create or contribute to runoff water, which may exceed the capacity of existing or planned stormwater drainage systems. Therefore, Project impacts would be considered less than significant.

d) Would the project have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed?

Less Than Significant Impact. A significant impact may occur if a project would increase water consumption to such a degree that new water sources would need to be identified. Based on the *L.A. CEQA Thresholds Guide*, the determination of whether the project results in a significant impact on water shall be made considering the following factors: (a) the total estimated water demand for the project; (b) whether sufficient capacity exists in the water infrastructure that would serve the project, taking into account the anticipated conditions at project buildout; (c) the amount by which the project would cause the projected growth in population, housing or employment for the Community Plan area to be exceeded in the year of the project completion; and (d) the degree to which scheduled water infrastructure improvements or project design features would reduce or offset service impacts.

The City's water supply comes from local groundwater sources, the Los Angeles-Owens River Aqueduct, State Water Project, and from the Metropolitan Water District (MWD) of Southern California, which is obtained from the Colorado River Aqueduct. The MWD utilizes a land-use based planning tool that allocates projected demographic data from the SCAG into water service areas for each of MWD's member agencies. The 2015 Urban Water Management Plan (UWMP), which estimates future demand based on population and growth estimated reported in SCAG's RTP/SCS, projects a total water demand and supply of 675,685 AFY in 2040. With its current water supplies, planned future water conservation, and planned future water supplies, LADWP will be able to reliably provide water to its customers through the 25-year planning period covered by the 2015 UWMP. Through various conservation strategies, the LADWP will be able to reduce the City's water demand during dry years to respond to any reductions to water supplies during multiple dry years.

As shown in Table III-33, the Proposed Project's net increase in water demand would be 53,633 gallons per day. The Proposed Project would be consistent with the allowable land uses and density that are planned for the Project Site and is therefore within the growth projections of SCAG's RTP/SCS. Accordingly, the Project's anticipated water demand has been accounted for and would not exceed the water demand estimates of the City's 2015 UWMP. Thus, the Proposed Project would have a less-than-significant impact on water demand. In addition, pursuant to LAMC Section 122.03(a), the Proposed Project is required to utilize water saving devices including, but not limited to, urinals equipped with flush-o-meter valves, which flush with a maximum of 1.28 gallons, which would further reduce impacts associated with this issue to a level that is less than significant. Environmental impacts would further be reduced by implementation of the following regulatory compliance measures:

- **(Green Building Code):** The Project shall implement all applicable mandatory measures within the LA Green Building Code that would have the effect of reducing the Project's water use.

- **(Landscape):** The Project shall comply with Ordinance No. 170,978 (Water Management Ordinance), which imposes numerous water conservation measures in landscape, installation, and maintenance (e.g., use drip irrigation and soak hoses in lieu of sprinklers to lower the amount of water lost to evaporation and overspray, set automatic sprinkler systems to irrigate during the early morning or evening hours to minimize water loss due to evaporation, and water less in the cooler months and during the rainy season).

Compliance with the regulatory compliance measures identified above would reduce the Proposed Project's demands for potable water resources to a less than significant level.

Cumulative Impacts

Less Than Significant Impact. Development of the Proposed Project, related projects and the cumulative growth throughout the City of Los Angeles, would further increase the demand for potable water within the City. Through the 2015 Urban Water Management Plan, the LADWP has demonstrated that it can provide adequate water supplies for the City through the year 2040. This estimate is based in part on demographic projections obtained for the LADWP service area from the Metropolitan Water District (MWD). The MWD utilizes a land-use based planning tool that allocates projected demographic

data from the Southern California Association of Governments (SCAG) into water service areas for each of MWD's member agencies. MWD's demographic projections use data reported in SCAG's 2008 Regional Transportation Plan (RTP). As discussed previously in this section under the Population and Housing subheading, the Proposed Project's growth is consistent with SCAG's growth projections for the City of Los Angeles subregion. The Proposed Project is consistent with the underlying allowable uses per the LAMC and would not exceed the allowable density for the Project Site. As such, the additional water demands generated by the Proposed Project are accounted for in the 2015 Urban Water Management Plan.

Development of the Proposed Project in conjunction with the three related projects would further increase regional demands on LAAFP's capacity. The impact of the continued growth of the region would likely have the effect of diminishing the daily excess capacity of the LAAFP's service to the City of Los Angeles. The Proposed Project and related projects cumulative water demand can be seen in Table III-35, below. As shown in Table III-35, the net water demand of the three related projects and the Proposed Project totals approximately 164,139 gpd or 0.17 mgd. Of the 50 to 150 mgd available water treatment capacity in LAAFP, the cumulative demand of 0.17 mgd would not significantly reduce its capacity. As such, cumulative impacts with respect to water demand would be less than significant.

Table III-35
Estimated Cumulative Water Demand

Type of Use	Size	Water Demand Rate (gpd/unit) [a]	Total Water Demand (gpd)
Related Projects			
Dwelling Units [b]	354 du	192 gpd/du	67,968

		Total Related Projects Water Demand:	**110,506**
		Total Project Water Demand:	53,633
		TOTAL CUMULATIVE:	**164,139**
		Project % of Cumulative	**33%**

Notes: sf =square feet; du = dwelling units, gpd = gallons per day, stu = student
[a] *L.A. CEQA Thresholds Guide (2006), Exhibit M.2-12. Consumption Rates based on 120% of the City of Los Angeles Department of Public Works, Bureau of Sanitation Sewer Generation Rates table, March 20, 2002.*
[b] *Dwelling units include condominiums and multi-family residential units. Consumption rate was based on two bedrooms per unit as a conservative estimate.*
[c] *Senior Apartments assume one bedroom per dwelling unit.*
Parker Environmental Consultants, 2016.

e) Would the project result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

Less Than Significant Impact. Based upon the criteria established in the *L.A. CEQA Thresholds Guide*, a project would normally have a significant wastewater impact if: (a) the project would cause a measurable increase in wastewater flows to a point where, and a time when, a sewer's capacity is already constrained or that would cause a sewer's capacity to become constrained; or (b) the project's additional wastewater flows would substantially or incrementally exceed the future scheduled capacity of any one treatment plant by generating flows greater than those anticipated in the Wastewater Facilities Plan or General Plan and its elements. As stated in Checklist Question XVII(b), above, the sewage flow would ultimately be conveyed to the Hyperion Water Reclamation Plant, which has sufficient capacity for the Proposed Project.[51] Therefore, impacts would be less than significant.

Cumulative Impacts

Less Than Significant Impact. Development of the Proposed Project in conjunction with the three related projects would further increase regional demands on the HWRP's capacity. The impact of the continued growth of the region would likely have the effect of diminishing the daily excess capacity of the HWRP's service to the City of Los Angeles. The related projects cumulative wastewater demand can be seen in Table III-36, Projected Cumulative Wastewater Generation. As shown in Table III-36, the net wastewater demand of the three related projects and the Proposed Project totals approximately 136,782 gpd or 0.14 mgd. Of the 175 mgd available in HWRP, the cumulative demand of 0.14 mgd accounts for a small fraction of one percent of the available capacity and would not significantly reduce its capacity. As such, cumulative impacts with respect to wastewater demand would be less than significant.

Parker Environmental Consultants, 2016.

f) Would the project be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?

Less Than Significant Impact. A significant impact may occur if a project were to increase solid waste generation to a degree such that the existing and projected landfill capacity would be insufficient to accommodate the additional solid waste. Based on the *L.A. CEQA Thresholds Guide*, the determination of whether a project results in a significant impact on solid waste shall be made considering the following factors: (a) amount of projected waste generation, diversion, and disposal during demolition, construction, and operation of the project, considering proposed design and operational features that could reduce typical waste generation rates; (b) need for additional solid waste collection route, or recycling or disposal facility to adequately handle project-generated waste; and (c) whether the project conflicts with solid waste policies and objectives in the Source Reduction and Recycling Element (SRRE) or its updates, the Solid Waste Management Policy Plan (SWMPP), Framework Element of the Curbside Recycling Program, including consideration of the land use-specific waste diversion goals contained in Volume 4 of the SRRE.

Solid waste generated within the City is disposed of at privately owned landfill facilities throughout Los Angeles County. While the Bureau of Sanitation provides waste collection services to single-family and some small multi-family developments, private haulers provide waste collection services for most multi-family residential and commercial developments within the City. Solid waste transported by both public and private haulers is either recycled, reused, transformed at a waste-to-energy facility, or disposed of at a

landfill. Under the City's RENEW LA Plan, the City committed to reaching Zero Waste by diverting 70% of the solid waste generated in the City by 2013, diverting 90% by 2025, and becoming a zero waste city by 2030. State law currently requires at least 50% solid waste diversion and establishes a state-wide goal of 75% diversion by 2020. Moreover, state law requires mandatory commercial recycling in all businesses and multi-family complexes and imposes additional reporting requirements on local agencies, including the City of Los Angeles. In order to meet these requirements and goals, the City has established an exclusive, competitive franchise system for the collection, transportation and processing of commercial and multi-family solid waste that will aid the City in meeting its diversion goals by, among other things: (i) requiring franchisees to meet diversion targets; (ii) increasing the capacity for partnership between the City and solid waste haulers; (iii) allowing the City to establish consistent methods for diversion of recyclables and organics; (iv) increasing the City's ability to track diversion, which will enable required reporting and monitoring of state mandated commercial and multi-family recycling; (v) increasing the City's ability to ensure diversion quality in the processing facilities handling its waste and recyclables; and (vi) increasing the City's capacity to enforce compliance with federal, state, county, and local standards. Pursuant to Section 66.32 of the LAMC, the Project's solid waste contractor must obtain, in addition to all other required permits, an AB 939 Compliance Permit from the Bureau of Sanitation.

Within the City of Los Angeles, the Sunshine Canyon Landfill and the Chiquita Canyon Landfill serve existing land uses within the City. Both landfills accept residential, commercial, and construction waste. The Sunshine Canyon Landfill is jointly operated by the City and the County, has a remaining capacity of 64.68 million tons. The Sunshine Canyon Landfill has an estimated remaining life of 23 years.[52] Currently, Chiquita Canyon Landfill is in the process of an Environmental Impact Report (EIR) and new Conditional Use Permit (CUP) application with the County of Los Angeles. During that period, the Chiquita Canyon Landfill reached the permitted disposal limit of 23 millions tons that was approved in 1997. The Director of Regional Planning granted Chiquita Landfill a limited waiver to continue operation of the landfill until necessary public hearings for the EIR and new CUP are completed. If the new CUP is not approved, then the landfill will close.[53] Until the Chiquita Landfill is forced to close, the Proposed Project would be allowed to dispose solid waste to this landfill. An expansion of the Chiquita Canyon Landfill is currently proposed and would add a capacity of 48,114,000 tons (a 43-year life expectancy based on 2014 average daily disposal of 3,558 tons per day or 15 years based on the maximum permitted rate of disposal of 10,000 tons per day).[54]

The Proposed Project would follow all applicable solid waste policies and objectives that are required by law, statute, or regulation. Environmental [Q] Condition C.10 (General Construction (a)), provides general requirements for recycling efforts and the proper disposal of solid waste. In addition, [Q]

[54] *County of Los Angeles Department of Public Works, 2014 Annual Report, Los Angeles Countywide Integrated Waste Management Plan, page 60, December 2015.*

Condition C.23 requires recycling bins be provided at appropriate locations to promote recycling of paper, metal, glass, and other recyclable material. As shown in Table III-37 below, with the development of 524,600 square feet of floor area (including residential floor area, office/retail area, and the subterranean parking structure), it is estimated that the construction of the Proposed Project would generate approximately 9,726 tons of debris during the demolition and construction process. Under the requirements of the hauler's AB 939 Compliance Permit from the Bureau of Sanitation, all construction and demolition debris would be delivered to a Certified Construction and Demolition Waste Processing Facility.

As shown in Table III-38, Estimated Operational Solid Waste Generation, the Proposed Project's net generation during operation of the Proposed Project would be approximately 2,936 pounds per day. This estimate is conservative, as it does not factor in any recycling or waste diversion programs. The Proposed Project's solid waste would be handled by private waste collection services. The amount of solid waste generated by the Proposed Project is within the available capacities at area landfills, and the Project impacts to regional landfill capacity would be less than significant. Implementation of Environmental [Q] Condition C.10 (General Construction (a)) and C.23, and the following code compliance measure listed below would further reduce the Proposed Project's impacts on solid waste generation.

Table III-37
Estimated Construction and Demolition Debris

Construction Activity	Size	Rate [a] (lbs./sf)	Generated Waste (tons)
Demolition (Approximate)			
Manufacturing Facility	106,800 sf	155 lbs/sf	8,277
Total Project Demolition Debris Generation:			**8,277**
Construction [b]			
Multi-Family Residential	484,600 sf	4.38 lbs/sf	1,061
Office / Retail Spaces	40,000 sf	3.89 lbs/sf	78
Parking Structure	175,000 sf	3.89 lbs/sf	340
Total Project Construction Debris Generation:			**1,449**
Proposed Project NET TOTAL:			**9,726**

Notes:
sf = square feet; lbs = pounds
[a] *USEPA Report No EPA530-98-010, Characterization of Building Related Construction and Demolition Debris in the United States, July 1998.*
[b] *For a conservative analysis, the entirety of the Proposed Project's square footage was used to calculate construction debris. The calculations do not take into account the existing square footage that would be rehabilitated as part of the Project.*

Table III-38
Estimated Operational Solid Waste Generation

Type of Use	Size	Solid Waste Generation Rate [a] (lbs/unit/day)	Total Solid Waste Generated (lbs/day)
Existing Uses			
Industrial (118,284 sf)	221 emp [b]	8.93 lbs/employee/day	1,973
Proposed Project			
Multi-Family Residential	372 du	12.23 lbs/du/day	4,550
Creative Office	30,000 sf	0.006 lbs/sf/day	180
Retail (10,000 sf)	17 emp [b]	10.53 lbs/employee/day	179
Total Project Solid Waste Generation:			**4,909**
Less Existing Uses:			*-1,973*
NET TOTAL Solid Waste Generation:			**2,936**

Notes:
sf =square feet; du = dwelling units, emp = employee
[a] *L.A. CEQA Thresholds Guide, page M.3-2. Waste generation includes all materials discarded, whether or not they are later recycled or disposed of in a landfill.*
[b] *Employees were projected based on 1 employee per 535 square feet of manufacturing business and 1 employee per 588 square feet of neighborhood retail/commercial space.*
Source: Parker Environmental Consultants, 2016.

Regulatory Compliance Measure:

- **(Construction Waste Recycling):** In accordance with LAMC Section 99.04.408, the Proposed Project would reduce construction waste by at least 50 percent. In compliance with the LAMC Section 66.32, the General Contractor shall utilize solid waste haulers, contractors, and recyclers who have obtained an Assembly Bill (AB) 939 Compliance Permit from the City of Los Angeles Bureau of Sanitation.

g) Would the project comply with federal, state, and local statutes and regulations related to solid waste?

Less Than Significant Impact. A significant impact may occur if a project would generate solid waste that was not disposed of in accordance with applicable regulations. The Proposed Project would generate solid waste that is typical of a residential mixed-use building with ground-floor retail and would comply with all federal, state, and local statutes and regulations regarding proper disposal. Therefore, the Project's solid waste impacts would be less than significant.

Cumulative Impacts

Less Than Significant Impact. Development of the Proposed Project in conjunction with the three related projects would further increase regional demands on landfill capacity. The impact of the continued growth of the region would likely have the effect of diminishing the daily excess capacity of the existing landfills serving the City of Los Angeles. Although there are several proposals for new landfills in the region, there are currently few viable options for City of Los Angeles waste past 2029. Table III-39 shows the cumulative solid waste generation in pounds per day. The cumulative operational solid waste generation of the related projects and Proposed Project would contribute approximately 10,086 pounds of solid waste per day (1,841 tons of solid waste per year), which represents a fraction of one percent of the current remaining capacity of the Sunshine Canyon Landfill and the Chiquita Canyon Landfill, which combined have a remaining permitted capacity of approximately 66.51 million tons.

While in the short-term adequate landfill capacity exists to accommodate solid waste generated by the Proposed Project, in the future there would be a need to develop additional landfills and other waste disposal options to accommodate future growth. These options include diversion or transformation as the preferred methods for addressing solid waste and specific and practical applications (i.e., market development, public education and public policy initiatives) within the City.

The City of Los Angeles Solid Waste Management Plan (AB 939) sets forth strategies that would provide adequate landfill capacity through 2037 to accommodate anticipated growth. The Bureau of Sanitation has projected the need for waste disposal capacity based on SCAG's regional population growth projections. The growth associated with Proposed Project is within those projections. Furthermore, projects within the City of Los Angeles must comply with the City's SRRE.

Table III-39
Cumulative Operational Solid Waste Generation

Type of Use	Size	Solid Waste Generation Rate [a] (lbs/unit/day)	Total Solid Waste Generated (lbs/day)
Related Projects			
Dwelling Units [b]	354 du	12.23 lbs/du/day	4,329
Senior Apartment	100 du	12.23 lbs/du/day	1,223
Retail / Commercial (40,000 sf) [c]	104 emp	10.53 lbs/employee/day	1,095
Medical Office	66,000 sf	0.007 lbs/sf/day	462
Schools	6,740 sf	0.006 lbs/sf/day	40
		Related Projects Total:	**7,150**
		Proposed Project Net Total:	2,936
		CUMULATIVE TOTAL:	**10,086**
		Project % of Cumulative:	**29%**

Notes:
sf =square feet; du = dwelling units; emp = employee
Uses not listed are estimated by the closest type of use available in the table.
[a] *L.A. CEQA Thresholds Guide, page M.3-2. Waste generation includes all materials discarded, whether or not they are later recycled or disposed of in a landfill.*
[b] *Dwelling units include condominiums and multi-family residential units.*
[c] *Generation rates are based on 1 employee per 383 square feet of retail/commercial for a conservative estimate.*
Conversions of floor area per occupant based on California Building Code (2013), Ch.10, Table 1004.1.2.
Parker Environmental Consultants, 2016.

As reported by the Bureau of Sanitation in 2009, the City had achieved a waste diversion rate of 65 percent. The City is exceeding the state-mandated diversion goal of 50 percent by 2000 set by the California Integrated Waste Management Act (CIWMA) of 1989.[55] Waste diversion rates are required to increase to 75 percent by 2025 and through on-going development of waste management infrastructure over the last decade and innovative source reduction, reuse, recycling and composting programs have been implemented. These programs include Green Mulching and Composting workshops, black yard trimming recycling cans, the City-owned Central Los Angeles Refuse Transfer Station (CLARTS) and Residential Special Material and Electronics Recycling or S.A.F.E. Centers. New programs are being implemented to increase the amount of waste diverted by the City, including: multi-family recycling, food waste recycling, commercial recycling and technical assistance and support for City departments to help meet their waste reduction and recycling goals. The City is also developing programs to ultimately meet a goal of zero waste by 2030. Thus, the Proposed Project's contribution to cumulative impacts would continue to decrease as it increases waste diversion rates in accordance with City goals. Therefore, the Project's contribution to cumulative solid waste impacts would be less than cumulatively considerable, and cumulative impacts with respect to solid waste would be less than significant.

[55] *City of Los Angeles Department of Public Works Bureau of Sanitation, Overview of Services for FY 2005/06, updated June 14 2005.*

XVIII. MANDATORY FINDINGS OF SIGNIFICANCE

a) Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?

No Impact. A significant impact may occur only if the Proposed Project would have an identified potentially significant impact for any of the above issues. The Proposed Project is located in a densely populated urban area and would have a less than significant impact to biological resources and cultural resources with adherence to regulatory compliance measures discussed above. The Proposed Project would not degrade the quality of the environment, reduce or threaten any fish or wildlife species (endangered or otherwise), or eliminate important examples of the major periods of California history or pre-history. Therefore, no impact would occur.

b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?

Less Than Significant Impact. A significant impact may occur if the Proposed Project, in conjunction with other three related projects in the area of the Project Site, would result in impacts that would be less than significant when viewed separately, but would be significant when viewed together. As concluded in this analysis, the Proposed Project's incremental contribution to cumulative impacts related to aesthetics, agriculture and forestry resources, air quality, biological resources, cultural quality, hazards and hazardous materials, hydrology and water quality, land use and planning, mineral resources, noise, population and housing, public services, recreation, transportation/traffic, and utilities would be less than significant. As such, the Proposed Project's contribution to cumulative impacts would be less than significant.

c) Does the project have environmental effects, which would cause substantial adverse effects on human beings, either directly or indirectly?

Potentially Significant Unless Mitigation Incorporated. A significant impact may occur if the Proposed Project has the potential to result in significant impacts, as discussed in the preceding sections. Based on the preceding environmental analysis, the Proposed Project would not have significant environmental effects on human beings, either directly or indirectly. As discussed above, the project would not result in any significant impacts upon air quality, either on a regional or localized basis. A Freeway Adjacent health risk assessment concluded acute and chronic health hazard indices would also be under the SCAQMD recommended threshold of 1.0. In addition, with the installation of MERV 13 filtration, as required by Ordinance No. 184,245 (Clean Up Green Up) for all mechanically ventilated buildings within 1,000 feet of a freeway, and the consideration of the additional strategies aimed at improving future occupants' exposure to ambient air quality conditions, the Project would be consistent with the City of Los Angeles Planning Commission ZI No. 2427. With implementation of the applicable

Environmental [Q] Condition No. 7, impacts associated with the future occupant's exposure to ambient air quality would be less than significant. As discussed in the analyses above, potentially significant impacts upon human beings, such as noise, vibration, aesthetics, geotechnical safety, exposure to hazardous conditions and risk of upset, and access to adequate public services would be reduced to less-than-significant levels through the implementation of the applicable mitigation measures identified within this expanded Initial Study analysis.

APPENDIX B
Modified Project CalEEMod Output

Avenue 34 Mixed-Use Modified Project

South Coast AQMD Air District, Winter

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Enclosed Parking with Elevator	401.00	Space	0.00	160,400.00	0
Apartments Mid Rise	468.00	Dwelling Unit	5.03	503,434.00	1338
Strip Mall	16.44	1000sqft	0.00	16,395.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	31
Climate Zone	12			**Operational Year**	2022
Utility Company	Los Angeles Department of Water & Power				
CO2 Intensity (lb/MWhr)	1227.89	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Avenue 34 Mixed-Use Modified Project - South Coast AQMD Air District, Winter

Project Characteristics -

Land Use - 5.03 ac. lot. 468 apartments 503,434 sf. 16,395 sf retail. 401 parking spaes

Construction Phase - demo 45, grading 70, building 525, paving 20, coating 85

Off-road Equipment - 2 compressors

Off-road Equipment -

Off-road Equipment -

Off-road Equipment - 2 excavators, 2 dozers, 5 backhoes

Off-road Equipment -

Demolition - 6,000 tons demo debris

Grading - 91,000 cy export. 5.03 ac

Vehicle Trips - Trip generation per traffic letter 6/13/2019

Woodstoves - No hearths

Construction Off-road Equipment Mitigation -

Mobile Land Use Mitigation -

Area Mitigation -

Energy Mitigation -

Water Mitigation -

Waste Mitigation -

Avenue 34 Mixed-Use Modified Project - South Coast AQMD Air District, Summer

Project Characteristics -

Land Use - 5.03 ac. lot. 468 apartments 503,434 sf. 16,395 sf retail. 401 parking spaes

Construction Phase - demo 45, grading 70, building 525, paving 20, coating 85

Off-road Equipment - 2 compressors

Off-road Equipment -

Off-road Equipment -

Off-road Equipment - 2 excavators, 2 dozers, 5 backhoes

Off-road Equipment -

Demolition - 6,000 tons demo debris

Grading - 91,000 cy export. 5.03 ac

Vehicle Trips - Trip generation per traffic letter 6/13/2019

Woodstoves - No hearths

Construction Off-road Equipment Mitigation -

Mobile Land Use Mitigation -

Area Mitigation -

Energy Mitigation -

Water Mitigation -

Waste Mitigation -

APPENDIX C
Cultural Resource Assessment Letter

September 25, 2019

DLA Piper LLP (US)
550 S. Hope Street, Suite 2400
Los Angeles, CA 90071

Attn: Mr. Andrew Brady

Subj: Cultural Resources Phase I Assessment for Avenue 34 Project
(Envicom Project #19-082-101)

Dear Mr. Brady,

Envicom Corporation (Envicom) requested a cultural resource record search from the South Central Coastal Information Center (SCCIC) and a Native American cultural resource record search conducted by the California Native American Heritage Commission (NAHC) for the Avenue 34 Project (Project) in Los Angeles County (**Figure 1**). Both record searches examined the Project site plus a 0.25-mile area ("study area") around the Project. The proposed Project site consists of an approximately 5.03-acre infill property located at 141 West Avenue 34 in the Northeast Los Angeles Community Plan area (**Figure 2**). A record search request was also made with the Natural History Museum of Los Angeles (NHM) to determine if known paleontological resources have been recorded in the project site vicinity. All record search request letters are provided in **Appendix A** of this report. All response letters, except for the SCCIC, the contents of which are restricted by law, are provided in **Appendix B** of this report.

The Project proposes to remove existing light industrial and warehouse structures and parking lots from the site, and construct a mixed-use development with 468 multi-family residential units and 16,395 square feet of commercial retail space. The proposed uses would be provided within three structures that would include two four-story buildings and one five-story building, and would include two levels of subterranean parking within the western portion (approximately one-half) of the Project site. Additional construction activities would include connections to existing offsite utilities infrastructure within adjacent streets and landscaping.

A previously proposed mixed-use development of 372 multi-family residential units, and 40,000 square feet of commercial (office and retail) space within five buildings ranging from one to five stories, with a one-level underground parking garage beneath the majority of the site was conditionally approved for the subject property in 2017.

The purpose of the record searches is to identify any known cultural resources previously recorded within or immediately adjacent to the proposed Project area that would represent new information that was not known at the time of the evaluation of the previously approved project, or a change in the overall cultural resource sensitivity of the Project region. A cultural resource is often defined as any building, structure, object, or archaeological site older than 50-years in age, and can include historic or prehistoric locations of human habitation.

Envicom compared the findings of the updated records searches with the findings of the original planning documents to determine if any conditions had changed that would result in a new significant impact to cultural, paleontological, or Native American resources.

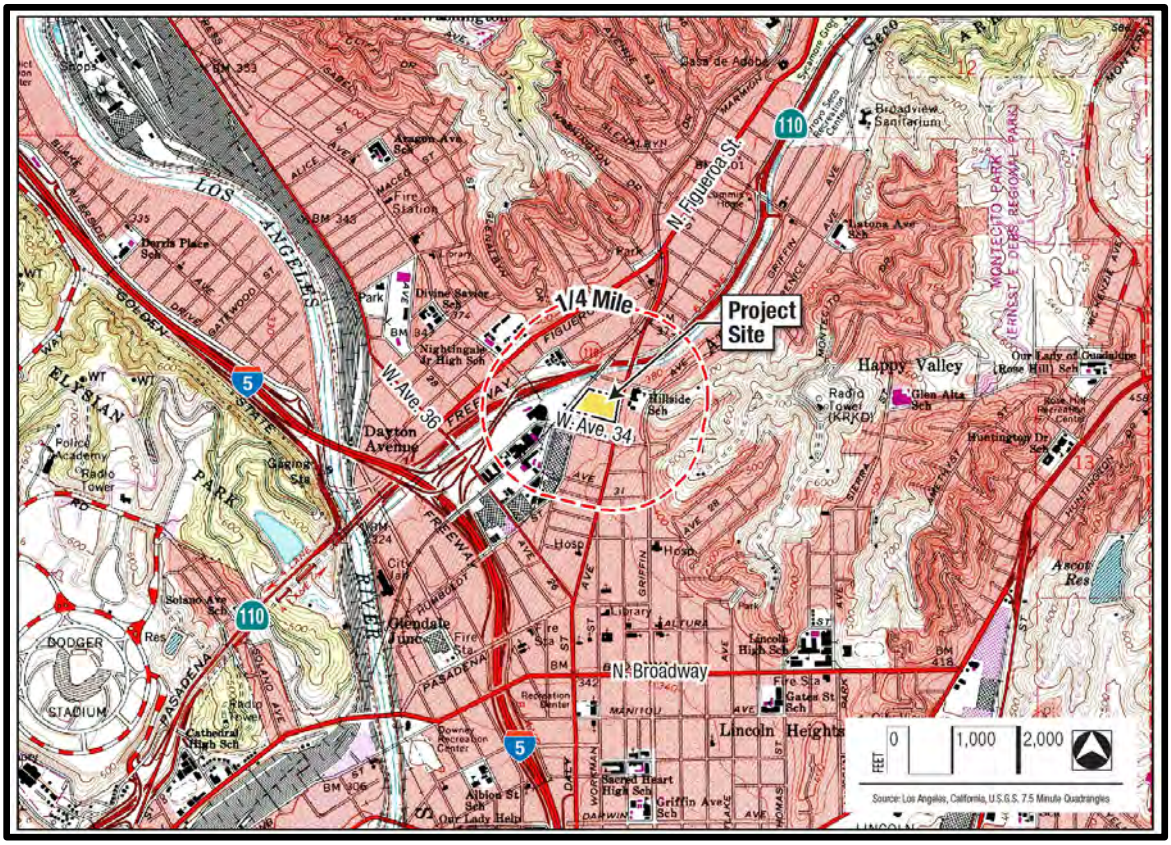

Figure 1: Project location in Los Angeles County, California, with the 0.25-mile study area shown (Los Angeles Quadrangle Topographic Map).

Figure 2: The Project property, showing the current conditions (2019 Google Earth Image).

RECORD SEARCH RESULTS

SCCIC and NAHC Record Searches

On August 8, 2019, Envicom contacted the SCCIC with a request to search their database for cultural resources located within the study area (defined earlier as the Project property, plus a 0.25-mile area) for regional cultural resource context (see Figure 1). The record search included a request for all complete site records for cultural resources as well as copies of any cultural resource technical reports that intersected with the study area. Envicom also contacted the NAHC on August 8, 2019, with a similar record search request.

Envicom received the cultural resource records search results from the SCCIC on August 20, 2019. The SCCIC record search found no previously identified cultural resources located within the Project property, nor adjacent to the project property. The results from the 2019 NAHC record search were received on September 3, 2019, with negative findings.

Envicom also examined fourteen historic USGS maps, dating between 1894 and 1981, as well as historic aerial photographs from the UCSB Library historic aerial photography database to observe previous patterns of development that occurred on the site and in the region. Finally, historic

Google Earth satellite images were reviewed, as was the SurveyLA database. No findings were identified that conflicted with the recommendations of the original cultural resource report.

Field Survey Results

Envicom staff visited the Project property on August 14, 2019. The Project property is fully developed with light industrial buildings, a warehouse facility, and parking lots. One of the onsite buildings incorporates a late 1920s brick building façade. However, as reported by the City's Office of Historic Resources Historic Places LA and Survey LA data, the individual property was assessed for significance in accordance with SurveyLA but does not meet eligibility standards for designation as a historic resource. No intact built environment or archaeological resources were identified during the site visit. The findings were, therefore, negative for cultural resources within the Project property.

Paleontological Record Search Results

The NHM record search findings were received on August 22nd. No known paleontological resources were noted by NHM to have been recorded on or adjacent to the subject property or nearby vicinity, and the nearest known vertebrate fossils to the project site were found approximately 1.5 miles distant from the site. As no data was presented by NHM to indicate any known paleontological resources were located within the subject property, the baseline conditions regarding the absence of known paleontological resources within the site or surroundings remains unchanged from the previously approved project.

The NHM notes that the entire site consists of younger Quaternary Alluvium surface deposits, derived from the Arroyo Seco drainage, which typically do not contain significant vertebrate fossils. However, as the NHM states that the younger alluvium soils on the project site are underlain by older alluvium material (at an unspecified depth), the NHM recommended monitoring of deeper excavations that extend into older sedimentary deposits below the upper levels.

The NHM did not indicate a monitor would be required to reduce a potentially significant impact; however, the project will incorporate the recommendation for a monitor as a condition of approval. The prior regulatory compliance measure remains sufficient to reduce any potentially significant impacts to a less than significant level.

Sincerely,

Wayne Bischoff
Envicom Director of Cultural Resources

Attn: Stacy St. James, Coordinator

Subj: Cultural Resources Phase I Assessment for Avenue 34 Project
(Envicom Project #19-082-101)

Dear Ms. St. James:

Envicom Corporation (Envicom) is requesting an **EXPEDITED** record search of the South Central Coastal Information Center (SCCIC) database of cultural resources within the attached Project site, plus a **0.5-mile study area**. The Project site is located at:

United States Geological Survey 7.5' Quadrangles: Los Angeles, CA Township: 1 South Range: 19 West Section: 9 Latitude: 34° 5'5.14"North Longitude: 118°12'52.33"West

We are requesting the following: Resource Database Printout (list), Resource Database Printout (details), Resource Digital Database (spreadsheet), Report Database Printout (list), Report Database Printout (details), Report Digital Database (Spreadsheet), Resource Record Copies, Report Copies Office of Historic Preservation Historic Properties Directory, Archaeological Determinations of Eligibility, Los Angeles Cultural Monuments, and Historic Maps.

We also request the complete reports and/or site records for any cultural resources found within the Project site only, not the 0.25-mile study area. Envicom appreciates the SCCIC's help with this request. For correspondence or questions regarding this Project, please contact Wayne Bischoff at 818-879-4700 or (wbischoff@envicomcorporation.com).

Sincerely,

Dr. Wayne Bischoff
Director of Cultural Resources

RE: Avenue 34 Project, Los Angeles County

Dear Mr. Bischoff:

A record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed for the information you have submitted for the above referenced project. The results were negative. However, the absence of specific site information in the SLF does not indicate the absence of cultural resources in any project area. Other sources of cultural resources should also be contacted for information regarding known and recorded sites.

Attached is a list of Native American tribes who may also have knowledge of cultural resources in the project area. This list should provide a starting place in locating areas of potential adverse impact within the proposed project area. I suggest you contact all of those indicated; if they cannot supply information, they might recommend others with specific knowledge. By contacting all those listed, your organization will be better able to respond to claims of failure to consult with the appropriate tribe. If a response has not been received within two weeks of notification, the Commission requests that you follow-up with a telephone call or email to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from tribes, please notify the NAHC. With your assistance, we can assure that our lists contain current information. If you have any questions or need additional information, please contact me at my email address: steven.quinn@nahc.ca.gov.

Sincerely,

Steven Quinn
Associate Governmental Program Analyst

Attn: Wayne Bischoff, Ph.D., Director of Cultural Resources

re: Paleontological resources for the proposed Avenue 34 Project, Envicom Project # 19-082-101, in the City of Los Angeles, Los Angeles County, project area

Dear Wayne:

I have conducted a thorough check of our paleontology collection records for the locality and specimen data for the proposed Avenue 34 Project, Envicom Project # 19-082-101, in the City of Los Angeles, Los Angeles County, project area as outlined on the portion of the Los Angeles USGS topographic quadrangle map that Samantha Whittington sent to me via e-mail on 8 August 2019. We do not have any vertebrate fossil localities that lie directly within the proposed project area boundaries, but we do have vertebrate fossil localities nearby from sedimentary deposits similar to those that occur at depth in the proposed project area.

Surface deposits in the entire proposed project area consist of younger Quaternary Alluvium, derived primarily as alluvial deposits from the Arroyo Seco drainage immediately to the north. These deposits typically do not contain significant vertebrate fossils in the very uppermost layers, but they are underlain by older Quaternary deposits that do contain significant vertebrate fossils. Our closest vertebrate fossil locality from older Quaternary deposits beneath the younger Quaternary Alluvium is LACM 1023, due south of the eastern border of the proposed project area east of the Golden State Freeway (I-5) near the intersection of Workman Street and Alhambra Avenue, where excavations for a storm drain recovered fossil specimens of turkey, *Meleagris californicus,* sabre-toothed cat, *Smilodon fatalis*, horse, *Equus*, and deer, *Odocoileus*, at unstated depth. A specimen of the turkey, *Meleagris*, from this locality was

published in the scientific literatus by D. W. Steadman (1980. A Review of the Osteology and Paleontology of Turkeys (Aves: Meleagridinae). Contributions in Science, Natural History Museum of Los Angeles County, 330:131-207). A little further south, also east of the Golden State Freeway (I-5) near the intersection of Mission Road and Daly Street, we have another locality, LACM 2032, also from older Quaternary deposits beneath the younger Quaternary Alluvium, that produced fossil specimens of pond turtle, *Clemmys mamorata*, ground sloth, *Paramylodon harlani*, mastodon, *Mammut americanum*, mammoth, *Mammuthus imperator*, horse, *Equus*, and camel, *Camelops*, at a depth of 20-35 feet below the surface. The pond turtle specimens from locality LACM 2032 were figured in the scientific literature by B.H. Brattstrom and A. Sturn (1959. A new species of fossil turtle from the Pliocene of Oregon, with notes on other fossil *Clemmys* from western North America. Bulletin of the Southern California Academy of Sciences, 58(2):65-71).

Surface grading or very shallow excavations in the uppermost few feet of the younger Quaternary Alluvium in the proposed project site area are unlikely to uncover significant fossil vertebrate remains. Deeper excavations in the proposed project area that extend down into older sedimentary deposits, however, may well encounter significant vertebrate fossils. Any substantial excavations in the proposed project area below the uppermost layers, therefore, should be closely monitored to quickly and professionally collect any specimens without impeding development. Also, sediment samples should be collected and processed to determine the small fossil potential in the proposed project area. Any fossils recovered during mitigation should be deposited in an accredited and permanent scientific institution for the benefit of current and future generations.

This records search covers only the vertebrate paleontology records of the Natural History Museum of Los Angeles County. It is not intended to be a thorough paleontological survey of the proposed project area covering other institutional records, a literature survey, or any potential on-site survey.

Sincerely,

Samuel A. McLeod

APPENDIX C
Resume of Dr. Wayne Bischoff (author)

Wayne Bischoff, Ph.D.

Envicom Director of Cultural Resources

Dr. Bischoff has over 20 years' experience managing cultural resource projects and ensuring compliance with California Environmental Quality Act (CEQA), Section 106 of the National Historic Preservation Act (NHPA), the National Environmental Protection Act (NEPA), and state, county, city, and local government cultural laws, guidelines, and procedures. He has managed cultural, paleontological, ethnographic, and built environment projects throughout Southern California, including the Counties of Ventura, Los Angeles, Kern, Imperial, San Diego, Orange, Santa Barbara, Riverside, and San Bernardino. Dr. Bischoff has authored cultural resource section of Environmental Impact Reports (EIR), Mitigated Negative Declarations (MND), Environmental Impact Statements (EIS), Environmental Assessments (EA), Programmatic Agreements (PA), Memorandum of Agreements (MOA), and Memorandum of Understanding (MOU).

Dr. Bischoff has been the principal or project manager for hundreds of cultural resource projects in Southern California, including record searches, surveys, evaluations, and data recoveries, built environment and historic architectural inventories, HABS projects, paleontological surveys, ethnographic reports and Native American consultation, and historic structure evaluations. He has also has worked with most of the Tribal Groups of Southern California, including the Chumash, Tongva, Washo, Yokut, Piute, Quechan, Cahuilla, Tataviam, San Manuel, Morongo, Luiseno. He has also provided Native American consultation for the City of Los Angeles and for many other municipalities throughout the region.

Recent Professional Projects

- **Simi BMX Course Phase I Survey, Simi Valley, CA.** Principal and Project Manager for the completion of a record search, NAHC record search request, and a site survey. (July 2018 – Current)
- **Phase I Survey for the Massilia Spa Project, Los Angeles County, CA.** Principal and Project Manager for the completion of a record search, NAHC record search request, and a site survey. Project also includes an inventory and initial assessment of over a dozen 1930 through 1990 structures on the property (June 2018 – Current)
- **Los Angeles Community College District (LAUSD) Environmental On-Call (including cultural resources), Los Angeles County, CA.** Principal, Project Manager, and cultural resource consultant as needed. (February 2018 – Current)
- **Los Angeles Unified Schools Department (LAUSD) Environmental On-Call (including cultural resources), City of Los Angeles, Los Angeles County, CA.** Principal, Project Manager, and cultural resource consultant as needed. Envicom was one of 15 companies to be awarded this large on-call contract. (February 2017 – Current)
- **Phase I Survey of the Butler Ranch, in Ventura County near west Simi Valley, California.** Principal and Project Manager for the completion of a Phase I record search, NAHC record search request, and a site survey of this 332-acre low density residential development project. (May 2018 – Current)

- **Phase I Survey for the 17-acre Olivas Park Extension commercail development project in Ventura, Ventura County, CA.** Principal and Project Manager for the completion of a record search, NAHC record search request, and a site survey, followed by limited monitoring. (January 2018 – Current)
- **Review of Technical Documents and EIR Cultural Section Writing for "The Agroua Villege Expansion" project, Agoura Hills, Los Angeles County, CA.** Professional review of project cultural resource documents and authoring of cultural resource section of MND for this large mixed use project. The primary challenge is that the development is located on a significant prehistoric Native American cultural resource. Native American consultation took place in July with the Chumash and Tataviam Tribal Groups (January 2018 – Current)
- **CA-LAN-321 Phased Evaluation Project, Agoura Hills, Los Angeles County, CA.** Principal and Project Manager for the phased evaluation (Phase II) of CA-LAN-321 in response to potential impacts from the construction of the Conrad N. Hilton Foundation Phase 2 Campus Building. The site is a prehistoric Chumash residential and ceremonial center of over 80-acres in size and that was used by prehistoric Native Americans from 400 A.D. to the late 1700s. Dozens of test units, hundreds of shovel test pits, surface collection, and surface feature mapping have been completed to date planned. Native American consultation took place in July with the Chumash and Tataviam Tribal Groups (August 2015 – Current)
- **City of Thousand Oaks Environmental On-Call (Including Cultural Resources), Los Angeles County, CA.** Envicom was selected as one of a limited number of on-call environmental firms for the City. (June 2015 – Current)
- **Phase I(b) Survey of the proposed Forrest Club 50-acre private club development, Los Angeles County, CA (with Samantha Whittington and Charlie Fazzone).** Principal and Project Manager for the completion of a record search, NAHC record search request, and a site survey. In addition, 24 shovel test pits were excavated across the locations of two 1920s historic cabins. No further work was required. (April 2018 – June 2018)
- **Phase I Survey for the Ascension Lutheran Church Master Plan and MND, Thousand Oaks, California, Los Angeles County, CA.** Principal and Project Manager for the completion of a record search, NAHC record search request, and a site survey. (May 2018 – June 2018)
- **Phase I Survey for the Mulholland Senior Living Project, Los Angeles County, CA.** Principal and Project Manager for the completion of a record search, NAHC record search request, and a site survey. (May 2018 – May 2018)
- **Phase I Survey of the proposed Tapo at Alamo EIR for a mixed-use development project, Simi Valley, Ventura County, CA (with Samantha Whittington and Debbie Balam).** Principal and Project Manager for the completion of a record search, NAHC record search request, and a site survey. (March 2018 – May 2018)
- **Cultural, Paleo, and Native American Monitoring for the Agoura Hills Marriott Development Project.** Principal and Project Manager for this monitoring project. During monitoring, a prehistoric Chumash cultural resource was discovered, which led to artifact collection, analysis, and a final report of findings (January 2018 – May 2018)

- **Phase I Survey of the proposed 113-133 West Plymouth Street multiple unit residential development, Inglewood, Los Angeles County, CA (with Samantha Whittington, Debbie Balam, and Charlie Fazzone).** Principal and Project Manager for the completion of a record search, paleontological record search, NAHC record search request, and a site survey. (April 2018 – April 2018)
- **Phase I Survey of the Upper Bailey Road tract, Sylmar, Los Angeles County, CA (with Samantha Whittington and Debbie Balam).** Principal and Project Manager for the completion of a record search, NAHC record search request, and a site survey. (December 2017 – April 2018)
- **Phase I Survey of the Lower Bailey Road tract, Sylmar, Los Angeles County, CA (with Samantha Whittington and Debbie Balam).** Principal and Project Manager for the completion of a record search, NAHC record search request, and a site survey. (December 2017 – April 2018)
- **Historic Structure Evaluation of Blythe Elementary School for LAUSD.** Project Manager for this project, with Chattel, Inc., being the historic preservation consultant. (February 2018 – April 2018)
- **Historic Structure Evaluation of Robert Hill Lane Elementary School for LAUSD.** Project Manager for this project, with Chattel, Inc., being the historic preservation consultant. (February 2018 – April 2018)
- **Historic Structure Evaluation of James Madison Middle School for LAUSD.** Project Manager for this project, with Chattel, Inc., being the historic preservation consultant. School was found eligible for the CRHR. (February 2018 – April 2018)
- **Historic Structure Evaluation of 54th Street Elementary School for LAUSD.** Project Manager for this project, with Chattel, Inc., being the historic preservation consultant. School was found eligible for the CRHR. (February 2018 – April 2018)
- **Historic Structure Evaluation of Chapman Elementary School for LAUSD.** Project Manager for this project, with Chattel, Inc., being the historic preservation consultant. (February 2018 – April 2018)
- **Historic Structure Evaluation of Dena Street Elementary School for LAUSD.** Project Manager for this project, with Chattel, Inc., being the historic preservation consultant. (February 2018 – April 2018)
- **Historic Structure Evaluation of Patrick Henry Middle School for LAUSD.** Project Manager for this project, with Chattel, Inc., being the historic preservation consultant. School was found eligible for the CRHR. (February 2018 – April 2018)
- **Historic Structure Evaluation of Richland Avenue Elementary School for LAUSD.** Project Manager for this project, with Chattel, Inc., being the historic preservation consultant. (February 2018 – April 2018)
- **Marinette Road Residential Development, Pacific Palisades, Los Angeles County, CA.** Principal and project manager for this development project, which included a record search, site survey, Tribal Group scoping letters, and agency consultation. The major challenge was that the project property was within the Will Rogers State Monument and National Register site boundary. An update for this project was conducted in 2018 to include AB-52 compliance. (February 2015 – May 2015; January 2018 – April 2018)

- **Phase I Survey for 6956 Dume Drive, Malibu, California, Los Angeles County, CA (with Samantha Whittington).** Principal and Project Manager for the completion of an SCCIC and NAHC record search, and a site survey. (February 2018 – March 2018)
- **Phase I Survey of roughly 50-acres for Improvements on the Saddlerock Ranch/Malibu Wines Property in the Santa Monica Mountains, Los Angeles County, CA.** Principal and Project Manager for the completion of a record search, NAHC scoping, and a site survey. This project involves upgrades to the winery existing structures and public buildings, as well as road and parking improvements. Part of this project is located near a National Register Chumash rock art site as well as other prehistoric resources (November 2016 – March 2018)
- **Phase I Survey for 28730 Grayfox, Malibu, California, Los Angeles County, CA (with Samantha Whittington).** Principal and Project Manager for the completion of an SCCIC and NAHC record search, and a site survey. (January 2018 – February 2018)
- **Phase I Survey for 11681 Foothill Boulevard, a multiple-unit residential project in Sylmar, California, Los Angeles County, CA.** Principal and Project Manager for the completion of a record search, NAHC record search request, and a site survey. (November 2017 – February 2018)
- **Phase I Survey for a single family property development along Yerba Buena Road, Ventura County, CA.** Principal and Project Manager for the completion of an SCCIC and NAHC record search, and a site survey. (December 2017 – January 2018)
- **Phase I Survey for 34134 Mulholland Highway, Los Angeles County, CA.** Principal and Project Manager for the completion of a record search, NAHC record search request, and a site survey. (December 2017 – January 2018)
- **Faunal, Osteological, Archaeological, and Fossil Consultation for Citadel Environmental and Turner-Hunt for the Hollywood Park Development Project (new Rams NFL Stadium).** Osteological and paleontological consultant for Kiewit, Turner, and Citadel for the construction of the new Rams NFL stadium in Ingelwood. Project included discovery and recordation of modern and fossil mammal bones. (December 2016 – January 2018)
- **Phase I Survey for 24600 Thousand Peaks Road, Calabassas, California, Los Angeles County, CA.** Principal and Project Manager for the completion of a record search, NAHC record search request, and a site survey. (November 2017 – January 2018)
- **Phase I Survey for 28929 Grayfox, Malibu, California, Los Angeles County, CA.** Principal and Project Manager for the completion of an SCCIC and NAHC record search, and a site survey. (November 2017 – January 2018)
- **Manzanita School Phase Ia Survey for a 20.27-acre private school development in Topanga Canyon, California, Los Angeles County, CA.** Principal and Project Manager for the completion of an SCCIC and NAHC record search, and a site survey. (May 2017 – January 2018)
- **Phase I Survey for the 181 to 187 Monterrey Road Condominium Project, a small residential development near South Pasedena, California, Los Angeles County, CA.** P Principal and Project Manager for the completion of an SCCIC and NAHC record search, and a site survey. (July 2017 – January 2018)

- **Phase I Survey for for the Agoura Village project, a 7.37-acre Commercial Subdivision in the City of Agoura Hills, Los Angeles County, CA.** Principal and Project Manager for the completion of a record search, NAHC scoping, and a Phase Ia site survey. The Phase Ia survey was followed by a Phase Ib subsurface survey and an updated site form for a previously known prehistoric cultural resource that includes the entire project area. (October 2016 – December 2017)
- **Phase I survey for 22866 Beckledge Terrace, Malibu, California.** Principal and Project Manager for the completion of a record search, NAHC record search request, and a site survey. (September 2017 – November 2017)
- **Lynn Road Residentitial Development Project, Construction Monitoring, Newbury Park, CA.** Principal and Project Manager for the surface collection and construction monitoring for this 10-acre residential construction project. (October 2017 – November 2017)
- **Phase II Evaluation of two cultural resources located on the Oakmont project property, City of Agoura Hills, Los Angeles County, CA.** Principal and Project Manager for the evaluation of a prehistoric cultural resource and a 1920s-1980s historic homestead cultural resource. Evaluation tasks included shovel test pits, and a test unit for the prehistoric cultural resource, and detailed mapping and documents research for the historic cultural resource. A combined report for both Oakmont projects was produced for the City. (August 2017 – October 2017)
- **City of Pomona Environmental On-Call (Including Cultural Resources), Los Angeles County, CA.** Envicom successful won inclusion as one of six on-call environmental firms for the City. (October 2014 – October 2017)
- **Phase I Survey for for the Oakmont commercial project, a 5.75-acre development in the City of Agoura Hills, Los Angeles County, CA.** Principal and Project Manager for the completion of NAHC record search, and a Phase Ia site survey. The Phase Ia survey identified two cultural resources; a 1920s historic homestead foundation, and a large prehistoric archaeological site. (August 2017 – October 2017)
- **Phase I Assessment of the West Hills Crest 37-acre Residential Subdivision in West Hills, City of Los Angeles.** Principal and Project Manager for the completion of a record search and project area site survey. A key issue for this project was the record search being positive for a prehistoric cultural resource within the development area. This resource, CA-LAN-1223, was further investigated with 22 shovel test pits, and evaluated as not being a significant cultural resource. (February 2017 – October 2017)
- **Phase I Survey for 15498 LaPeyre Court, a residential development in Moorpark, Ventura County, CA.** Principal and Project Manager for the completion of a record search, NAHC record search request, and a site survey. Project also included coordination with numerous biology tasks. (August 2017 – September 2017)
- **San Bernardino County Cultural, Historic Architecture, and Paleontology On-Call, San Bernardino, CA.** Envicom successful won inclusion in the limited on-call pool. (October 2014 – Current)
- **Pepperdine University Campus Life Project: Updated Cultural Resources Record Search.** Principal and Project Manager for an updated record search and letter report for the Pepperdine Campus Life housing, facilities, and trail development project. This update was part of an ammended campus-wide EIR (December 2017 – June 2017)

- **Fourth and Hewitt, City of Los Angeles, Los Angeles County, CA.** Principal and Project Manager for a cultural resource record search for the development of a new office building within a commercial urban environment. Project also included a paleontological assessment of the property due to an extensively deep planned parking garage and Native American concerns. Also completed with an Ethnographic Report to meet AB-52 criteria. Another key issue was determining whether a historic built environement assessment was needed. (February 2017 – January 2017)
- **Pepperdine University Campus Life Project: Phase I survey of new Baseball Field development.** Principal and Project Manager for the addition of the campus baseball field as part of the larger Pepperdine Campus Life housing, facilities, and trail development project. (February 2017 – June 2017)
- **Phase I Survey for the Copper Canyon Project, a 5-acre residential development near Santa Clarita, California, Los Angeles County, CA.** Principal and Project Manager for the completion of a record search, NAHC record search request, and a site survey. Also part of the project was the resurvey of two previously recorded cultural resources within the project boundary. (May 2017 – July 2017)
- **Phase Ia Survey for the Oneonta Hillside Drive, a residential development in South Pasadena, Los Angeles County, CA.** Principal and Project Manager for the completion of an SCCIC and NAHC record search, and a site survey. (May 2017 – July 2017)
- **North Canyon Ranch 170-acre Residential Subdivision in Simi Valley, Ventura County, CA.** Principal and Project Manager for the completion of a record search and project area site survey. A key issue for this project was a previously disturbed cultural resource within the project area, the destruction of which needed to be addressed in the final report. (May 2017 – August 2017)
- **Construction Monitoring for Parcel 2058-003-010, Lobo Canyon, Los Angeles County.** Principal and Project Manager for the surface collection and construction monitoring for this single family residential construction project. (July 2015 – August 2016)**.**
- **Phase I Survey for the 12300 Valley Boulevard Hotel, a commercial development in El Monte, Los Angeles, CA.** Principal and Project Manager for the completion of a record search, NAHC record search request, and a site survey for this small residential development. (June 2017 – August 2017)
- **Phase Ia Survey for the Holiday Inn Express Hotel, a commercial development in El Monte, Los Angeles, CA.** Principal and Project Manager for the completion of a record search, NAHC record search request, and a site survey for this small residential development. (July 2017 – August 2017)
- **Arcadia Town Homes MND Phase I Cultural Assessment for a multi-unit residential development in Arcadia, Los Angeles, CA.** Principal and Project Manager for the completion of a record search, NAHC record search request, and a site survey for this multi-unit residential development. (May 2017 – August 2017)
- **Phase I Survey for the 6625 Bradley Road, a residential development in Somis, Ventura County, CA.** Principal and Project Manager for the completion of a record search, NAHC record search request, and a site survey for this small residential development. (June 2017 – July 2017)

- **Phase I Survey for 3800 Figueroa, an apartment complex development in Los Angeles, Los Angeles County, CA.** Principal and Project Manager for the completion of a record search, NAHC record search request, and a site survey for apartment complex development. (June 2017 – August 2017)
- **11172 Santa Paula Road Phase Ia Survey for a 5.5-acre Agricultural property in Ojai, California, Ventura County, CA.** Principal and Project Manager for the completion of a record search, NAHC record search request, and a site survey. (May 2017 – June 2017)
- **6658 Reseda Boulevard, City of Reseda, Los Angeles County, CA.** Principal and Project Manager for a Phase 1 record search for this urban mixed use project. (March 2017 – May 2017)
- **Paradise Valley Development Project Environmental Impact Report and Impact Statement, Riverside County, CA.** Author of the cultural section for this EIR for a housing and mixed use development of over 2200-acres east of Indio, California. Also reviewed original techical documents, and incorporated legal and agency comments. Mitigation measures included the management and monitoring of dozens of cultural resources, sensitive soils, and paleontological resources. (October 2014 – March 2017)
- **Phase I Cultural Resources Survey for Parcel 2058-003-010, Lobo Canyon, Los Angeles County, CA.** Principal and Project Manager for completion of a Phase Ia and NEPA permit for the project (USACOE, Los Angeles District). Extensive communications and consultation with the COE and SHPO. Project also involved the mitigation monitoring of a prehistoric cultural resource located on the property. (July 2016 – March 2017)
- **Phase I Survey for a 1.33-acre Mixed-Use development in the City of Northridge at the corner of Nordoff and Darby Streets, Los Angeles County, CA.** Principal and Project Manager for the completion of a record search, NAHC scoping, and a site survey. This project included a built-environment assessment of existing historic structures (October 2016 – February 2017)
- **Phase I Survey for a 0.5-acre Residential Subdivision in the City of Los Angeles at the end of Crisler Way, Los Angeles County, CA.** Principal and Project Manager for the completion of a record search, NAHC record search request, and a site survey. (October 2016 – February 2017)
- **Deer Lake Residential Development Cultural Monitoring, Porter Ranch, Los Angeles, CA.** Principal and Project Manager for the cultural monitoring of eight cultural resources within the project development boundary. This project includes the writing of a final Monitoring Report. (May 2016 – February 2017)
- **Phase I Survey for a 0.5-acre Mixed Use Development Project on Camarillo Avenue in North Hollywood, Los Angeles County, CA.** Principal and Cultural Project Manager for the completion of a record search, NAHC scoping, and a site survey. This project also included a historic built environment assessment (November 2016 – January 2017)
- **Phase I Survey for a 14-acre Residential Subdivision in Woodland Hills, CA.** Principal and Project Manager for the completion of a record search, NAHC scoping, and a site survey. This project involved consultation with the City of Los Angeles on AB-52 (July 2016 – January 2017)

- **Lynn Road Residentitial Development Project, Newbury Park, CA.** Principal and Project Manager for the Phase Ia and Phase Ib survey of this 10-acre parcel. A large prehistoric Middle-Period seasonal settlement was discovered, which required subsurface testing and extensive mapping of surface hearths, yucca roasters, and dwelling features. Project included public testimony before the Thousand Oaks Planning Commission. (September 2015 – December 2016)
- **Pepperdine University Campus Life Project: Debris Basin Excavation Cultural and Paleontolgoical Resource Monitoring, Los Angeles, CA.** Principal and Project Manager for cultural resource monitoring of Phase I of the Pepperdine Campus Life housing, facilities, and trail development project. (August – October 2016)
- **Trail Construction Monitoring, Conrad N. Hilton Foundation.** Principal and Project Manager for the development of a pedestrian foot trail loop between the Foundation and the nearby "Ridge" professional building, including the excavation of dozens of shovel test pits and a major surface collection of prehistoric artifacts, including trail construction monitoring. (August – September 2016)
- **32640 PCH Phase I Cultural Resource Survey, Santa Monica, CA.** Principal and Project Manager for the Phase I cultural resource assessment of a ravine rehabilitation project between the Pacific Coast Highway and the Pacific Ocean. Included a record search, site survey, and technical report. (May 2015 – June 2016)
- **Conrad N. Hilton Foundation Trail Project Cultural Assessment, Agoura Hills, Los Angeles County, CA.** Project Manager for the Phase 1b survey of a new pedestrian access trail linking off-site office space with the Foundation campus buildings. Project included the excavation of over 30 shovel test pits and the recording of numerous prehistoric features. (May – August 2016)
- **CA-LAN-321 Project Compliance Plans, and Native American and Lead Agency Consultation, Agoura Hills, Los Angeles County, CA.** Tasks included the authoring of a cultural resource Treatment and Data Recovery Plan, a cultural resource Management Plan, and a Curation Plan for all artifacts, as well as the organization of meetings with the Chumash Tribal Groups and the Lead Agency. (April 2015 – June 2016)
- **Canyon Park Homes, Sylmar, Los Angeles County, CA.** Native American Tribal Group consultation and pre-construction monitoring for this 80-acre residential property development, as well as EIR section writing. (February 2015 – March 2016)
- **Oakwood Schools Built Enviroment and Archaeological Assessment, North Hollywood, Los Angeles County, CA.** Principal and Project Manager for the Phase I cultural resource assessment of the project property prior to the construction of a new middle and high school campus within the North Hollywood area. Challenging tasks included Native American ghost writing for the lead agency (City of Los Angeles) and addressing a modern human cremation garden in the report (November 2015 – February 2016)
- **Floral Canyon Residential Development Cultural Resource Survey, North Hollywood, CA.** Principal and Project Manager for this Phase Ia cultural resource survey of an 8-acrea property. The cultural resource parts of the CEQA checklist were also completed. (September – December 2015).

- **Hilton Property Phase 3 Construction Site Phase Ib Cultural Resources Survey, Agoura Hills, Los Angeles County, CA.** Principal and Project manager for this extensive preliminary survey project, including excavation of over 200 shovel test pits and 4 test units to define the boundaries of a prehistoric ceremonial site of over 80-acres in size, used by Chumash Native Americans from 400 A.D. to the late 1700s. Recordation of over 190-features and 11,500 artifacts. Second phase will include data recovery tasks and an ammended Environmental Impact Report. (February 2014 – March 2015)
- **Blessed Theresa Church Construction, City of Winchester, Riverside County, CA.** Cultural consultation including cultural/paleo monitoring issues. (April 2014 – July 2014)
- **Village at Los Carneros, City of Goleta, Santa Barbara County, CA.** Reviewed all previous technical studies and wrote part of the cultural sections of the Environmental Impact Report for this residential house development project. (March 2014 – April 2014)
- **3121 Old Topanga Canyon Road Phase I Survey and Literature Search, City of Calabasas, Los Angles County, CA.** Principal and Project manager for this residential development project, including NAHC letters, literature review, site survey, paleontolgoical survey and literature search, final technical report, and the writing of the cultural resources section of the Environmental Impact Report. (March 2014 – April 2014)
- **Beacon Solar, Hecate Energy and LADWP, Kern County, CA.** Business Developer for the archaeology and biological monitoring, pre-construction surveys, and desert totoise fence monitoring for this large, 2000-acre solar project for the Los Angeles Department of Water and Power. (July – October 2013).
- **Q-Cells Solar Survey, Palm Springs, Riverside County, CA.** Principal and Project Manager for a cultural survey and record search of 36-acres north of Palm Springs for solar development. (October 2013 – October 2013)
- **Pacific Gas and Electric NERC Support Monitoring, sub to URS, Northern and Central California.** Principal and Project Manager for this 4-year project in support of the national NERC power pole reliablity project for PG&E. Involves cultural, biological, and paleontological monitoring and field surveys. (October 2013 – October 2013)
- **Gold Bar Transmission Line Survey, McEwen Mining, Eureka County, NV.** Principal and Project Manager for this 2,577-acre cultural survey for the develelopment of a 33-mile transmisstion line to service the Gold Bar Mine in Nevada. Bureau of Land Management was the principal Federal agency. (April 2013 – October 2013).
- **East Kern Wind Resource Area (EKWRA) Power Pole Replacement Project, Environmental Intelligence / Southern California Edison, Kern County, CA.** Principal and Project Manager. This two-year project included cultural resource surveys, the evaluation of numerous cultural sites, and cultural and paleontological monitoring for the construction of over 130-miles of new power poles and fiber optics lines to service Tehachapi Moutain wind farms. (January 2013 – October 2013)
- **Pure Source Power, Victorville, San Bernardino, CA.** Principal and Project Manager for a cultural survey and record search of 140-acres north of Palm Springs for solar development. (September 2013 – October 2013)

- **Dry Ranch Solar Project, Silverado Power, Los Angeles County, CA.** Principal. Dr. Bischoff managed this 64-acre solar project near Lancaster, which included a record search, field survey, and cultural report to meet CEQA compliance. This project included coordination with Southern California Edison for a gen-tie line and telecom attachments. (March - April 2013)
- **Plainview Solar Project, Silverado Power, Los Angeles County, CA.** Principal. Dr. Bischoff managed this 114-acre solar project near Lancaster, which included a record search, field survey, and cultural report to meet CEQA compliance. (April - May 2013)
- **Silverleaf Solar Project, Cultural and Paleontolgoical Survey, Agile Engergy, Imperial County, CA.** Principal and Project Manager. Dr. Bischoff provided general review and quality control for a large solar project south of San Diego. This project involved an over 2,000-acre survey of proposed solar fields and 5-miles of electrical transmission gen-tie lines. The bureau of Land Management was the principal Federal agency. (November 2011 - July 2012)
- **Desert Harvest Solar Project, Build Environment Survey, eneXco Energy, Riverside County, CA.** Project Manager. Dr. Bischoff was the project manager for the built environment survey of 1,600-acre solar field and 12-miles of electrical transmission gen-tie lines. This included the production of a separate technical report for the Bureau of Land Management that included a historic structure inventory, assessment of signficance, and an indirect effects analysis. (November 2011 - June 2012)
- **Silverleaf Solar Project, Built Environment Survey, Agile Engergy, Imperial County, CA.** Project Manager. Project Manager. Dr. Bischoff was the project manager for the built environment survey of 2,000-acre solar field and 5-miles of electrical transmission gen-tie lines. This included the production of a separate technical report for the Bureau of Land Management that included a historic structure inventory, assessment of signficance, and an indirect effects analysis. (November 2011 - July 2012)
- **IVSC2 Solar Project, County of Imperial, Imperial County, CA.** Principal and Project Manager. Dr. Bischoff provided oversight of the 140-acre solar project east of the Salton Sea. This project was notable for the quick response time required to field a survey crew and complete a draft report for the County (Sept-Oct 2012)
- **Desert Harvest Solar Project, Cultural and Paleontological Resource Survey, eneXco Energy, Riverside County, CA.** Principal and Project Manager. Dr. Bischoff provided general review and quality control for a large solar project northeast of Blythe, CA. This project involved an over 1,600-acre survey of proposed solar fields and 12-miles of electrical transmission gen-tie lines. Bureau of Land Management was the principal Federal agency. (November 2011 - July 2012)
- **Desert Harvest Solar Project, Build Environment Survey, eneXco Energy, Riverside County, CA.** Project Manager. Dr. Bischoff was the project manager for the built environment survey of 1,600-acre solar field and 12-miles of electrical transmission gen-tie lines. This included the production of a separate technical report for the Bureau of Land Management that included a historic structure inventory, assessment of signficance, and an indirect effects analysis. (November 2011 - June 2012)

- **AT&T Fiber-optics Renewal Project, Evaluations, Mitigations, and Monitoring, AT&T, San Bernardino County, CA.** Cultural Principal and Project Manager. Dr. Bischoff will provide project management, technical writing, and quality control for the cultural and paleontological evaluations, data recoveries, and monitoring efforts for the AT&T fiber renewal project. This project involved the survey of over 90 miles of proposed new fiber-optic line between Barstow and Las Vegas, NV, and the management of over 100-cultural sites. Bureau of Land Management and Mojave National Preserve were the principal Federal agencies. (July 2013 – October)
- **Fiber Node Evaluations, Freedom Communications, Orange County, CA.** Cultural Principal. Dr. Bischoff provided general project management and quality control for the cultural background record searches and surveys for dozens of telecommunication sites throughout the City of Irvine as part of the Freedom Communications site development project. Dozens more sites are expected to be tested in the coming year. (April 2012 – October 2013)
- **San Diego Churches and Public Building Historic Structure Evaluations, DePratti Inc., City of San Diego, CA.** Principal Investigator. Dr. Bischoff acted as Principal and QA/QC manager for this project, which involved the evaluation of dozens of historic structures as part of the DePratti Communication telecommunication attachment project in the City of San Diego. (November 2011 – October 2013)
- **The Plunge Evaluation, DePratti Inc., City of San Diego, San Diego County, CA.** Principal for this historic architecture project involving the structural evaluation and National Register documentation for The Plunge historic salt-water bath house in San Diego. (September 2013 – September 2013)
- **AT&T Fiber-optics Renewal Project, Surveys, Literature Searches, and Technical Studies, AT&T, San Bernardino County, CA.** Cultural Principal and Project Manager. Dr. Bischoff provided general project management and quality control for the cultural, paleontological, and ethnographic surveys, literature searches, and technical studies. This project involved the survey of over 90 miles of proposed new fiber-optic line between Barstow and Las Vegas, NV, and the management of over 100-cultural sites. Bureau of Land Management and Mojave National Preserve were the principal Federal agencies. (April 2012 – July 2013)
- **Digital West Fiber Line Feasibility Study, San Luis Obispo to Los Angeles, Counties of San Luis Obispo, Sanata Barbara, Ventura, and Los Angeles, CA.** Project Manager for this large feasibility study for placing a new fiber line down the US 101 freeway cooridor. Biological, cultural, paleontological, and permitting constraints were all examined. (April 2012 – July 2013)
- **Digital 395 Broadband Stimulus Project, Praxis and California Broadband Corporation, California and Nevada.** Cultural Director. Dr. Bischoff acted as the California report manager of the cultural division, directed fieldwork, and authored management documents and reports. This project involved the new installation of over 650 miles of fiber-optic line across California and Nevada. The programmatic agreement of this complex project included 10 federal, state, and tribal agencies, with another seven acting as interested parties, and the management, evaluation, and monitoring of over 170 cultural sites. NTIAA was the Principal Federal Agency, but also involved twelve other California and Nevada State and Federal agencies and Tribal Groups (November 2011 – April 2012)

- **Fort Irwin Cell Tower Geotech Boring Monitoring, Northrop-Grumman and Fort Irwin Army Post, San Bernardino County, CA.** Principal. This project involves the cultural and paleo monitoring of sensitive areas as part of the construction of over 24 new cell tower locations. (October 2013 – October 2013)
- **Edwards Airforce Base Telecommunication Cultural Monitoring, Team Fischel Company, Edwards AFB, Kern County, CA.** Project Manager and Principal for the cultural monitoring of 40-miles of telecommunication trenching on Edwards AFB, including pre-construction meetings and a final monitoring report. (May 2013 – Sept. 2013)
- **Fort Irwin Cell Tower Surveys and Monitoring, Northrop-Grumman and Fort Irwin Army Post, San Bernardino County, CA.** Principal. This project involves the cultural and paleo survey of over 24 new cell tower locations and associated access roads on Fort Irwin, as well as construction phase monitoring. (April 2013 – October 2013)
- **Marine Corps Base, Camp Pendleton, Cultural Resources Consultation, Marine Corps Base, Pendleton, San Diego County, CA.** On-Call Senior Cultural Resources Consultant. Dr. Bischoff provided senior-level cultural resource consultation related to Camp Pendleton's Basewide Utilities Infrastructure Improvements project. He provided consulting on cultural resource management for several waste treatment and utility line systems as part of the Camp's "Grow the Force" initiative. (2011 – October 2013)
- **Pacoima Spreading Grounds Improvement Project, LACDPW, Los Angeles County, CA.** Cultural Principal. Dr. Bischoff managed the cultural resources record search and CEQA cultural section mitigation measures of an EIR for the improvement of the Pacoima spreading grounds and related canal resources. (April 2013 – October 2013)
- **Devil's Gate Reservoir Sediment Removal and Management Project, LACDPW, Los Angeles County, CA.** Principal of Cultural Resources. This project involved removal of sediment within the Devil's Gate Reservoir area, which required a preliminary cultural survey and record search under CEQA, as well as an EIR. Dr. Bischoff served as the cultural principal for the project and provided a recommended plan for dealing with sedimentary soils vs. native soils, monitoring criteria, and potential discovery situations. Dr. Bischoff helped write Environmental Impact Report sections, and worked with the Gabrieleno Tribal Group in the protection of archaeological and tribal cultural resources. (2011 – October 2013)
- **Peck Road Spreading Basin Improvement Project, LACDPW, Los Angeles County, CA.** Cultural Principal. Dr. Bischoff managed the cultural resources record searches, field survey, paleontological survey, and CEQA cultural section mitigation measures of an MND for the improvement of the Peck Road Spreading Basin, including a related new water discharge pipe. (June 2013 – September 2013)
- **Marina Del Rey Waterline Replacement Project Cultural Monitoring, LACDPW, Los Angeles County, CA.** Cultural Principal. This project with the Los Angeles Department of Public Works involved the cultural monitoring for the Marina Del Rey 18-inch Waterline Replacement. Chambers Group also provided a qualified archaeological monitor at the project site during excavation activities during construction. (March - May 2013)
- **Dieguto Wetlands Restoration Monitoring, Southern California Edison, Del Mar, San Diego County, CA.** Principal Investigator and Project Manager. This project involved the extensive rehabilitation of Southern California Edison property as part of the Dieguto Wetlands Restoration project. (April 2012 - January 2013)

- **Live Oaks Spreading Grounds Project, LACDPW, Los Angeles County, CA.** Cultural Principal. Dr. Bischoff managed the cultural resources record search and site visit for this public works project. (April 2013 – October 2013)
- **Los Penasquitos Wetlands Monitoring, AMEC, Del Mar, San Diego County, CA.** Principal Investigator. Dr. Bischoff managed the monitoring tasks, budgets, and professional standards for this project near the City of Del Mar as part of the Torrey Pines State Nature Reserve restoration. (October - December 2012)
- **San Gorgonio Creek Water Recharge Basin Construction Monitoring, Beaumont Cherry Valley Water District, Cherry Valley, Riverside County, CA.** Principal and Project Manager. This project involved paleontological and archaeological construction monitoring during construction, including emergency evaluation and monitoring when early 19Th Century structures and materials were unexpectedly encountered during earth moving. (February 2012 – April 2012)
- **Penmar Golf Course Water Quality Improvement Project, Pacific Hydrotech and City of Santa Monica, Santa Monica, CA.** Principal Investigator. Dr. Bischoff managed QA/QC review, budgets, and professional standards for the project in the City of Venice. Penmar was a multi-year waterline and tank improvement project in which evidence of ethnic Japanese barrios and fossil Pleistocene animal bones were discovered. (November 2011 - November 2012)
- **Oxford Retention Basin Flood Protection Project, LACDPW, Los Angeles County, CA.** Principal and Project Manager. The Oxford Basin in Marina Del Rey was receiving enhancement, and Dr. Bischoff managed the completion of the cultural survey, literature review, and construction monitoring for the project. (2011 - 2012)
- **Veterans Administration, VISN 21 On-Call, Western States, Teamed with KAL Architectes.** This project will provide cultural and biological technical services for Veterans Administration projects from October 2013 to October 2018. (October 2013 – October 2013)
- **Historic Structure Evaluations for Statewide Weatherization Efforts, sub to ICF for the State of California, All Counties, CA.** Project Manager and Principal. This project involves meeting NEPA compliance for low-income subsidized weatherization efforts throughout the State of California. Hundreds of structures will be evaluated as part of this project by a Chambers Architectural Historian using a abbreviated format. (November 2011 to October 2013)
- **CEQA Services for Improvements to Polytechnic and Wilson High Schools, LBUSD, City of Long Beach, CA.** Cultural Principal. Dr. Bischoff provided oversight and incorporation of the historic architecture technical reports into the project CEQA documents. (June 2013 – August 2013)
- **Mill Creek Crew Room Cultural Monitoring, Angeles National Forest (ANF), Los Angeles County, CA.** The County of Los Angeles Department of Public Works proposed to replace the crew room building within the Angeles Forest Mill Creek Summit Maintenance Yard facility. This CEQA/NHPA project involved the preparation of a treatment and discovery plan document, ARPA permitting, constant consultation with the ANF, construction monitoring, and a final monitoring report. (April – July 2013)

- **Review of Technical Report and CEQA Documents Relating to the Proposed Demolition of Santa Ana Public Building #16, City of Santa Ana, Santa Ana, CA.** Principal. This project involved the review of technical documents, mitigation measures, and CEQA documents relating to the demolition of a 1950s public building in the City of Santa Ana. (May 2013 – July 2013)
- **Roosevelt School, LBUSD, City of Long Beach, CA.** Cultural Principal. Dr. Bischoff provided oversight, authorship, and counsel on the EIR for the demolition of the Roosevelt Elementary School in Long Beach. This proved to be a complex project, involving an historic built environment resource evaluation and mitigation plan, legal investigation, and extensive responses to public comments. This process resulted in a HABS/HAER mitigation project. (November 2011 - June 2012)
- **Foothill Toll Road Cultural and Paleontological Monitoring, Ghiradelli and Associates, Orange County, CA.** Principal and Project Manager for cultural monitoring related to the upgrade of all tollroad payment stations in Orange County. (October 2013 – October 2013)
- **9th Street Extension Historic Structure Inventory and Evaluation, City of Holtville, Imperial County, CA.** Principal and Project Manager. Dr. Bischoff managed and provided QA/QC for this project involving a Caltrans inventory of project APE historic built environment resources, and the historic evaluation of a canal feature. Final deliverables included a Historic Resources Evaluation Report and a Historic Property Survey Report to CALTRANS standards. (June 2013 – August 2013)
- **Francisquito Bridges Replacement (3-Total), LADWP/CALTRANS, Los Angeles County, CA.** Principal. Dr. Bischoff managed and oversaw the completion of this project in the Angeles Forest. This project involved the replacement of three existing bridges on San Francisquito Canyon Road over San Francisquito Canyon Creek. The proposed improvement project involved widening the two lane bridges, improvement of approachment roadway, and the placement and installation of retaining walls, concrete barriers with tubular-steel handrails, and metal beam guardrails. (2011 – September 2013)
- **Murrieta Whitewood Road Extension, City of Murrieta, Riverside County, CA.** Principal and Project Manager. This road extension project involved a cultural resource survey and records search, a paleontolgoical field study, and native american Consultation due to the historic use of the nearby Murrieta Hot Springs by local Native Americans. (April – June 2012)
- **Nuevo Road/ I-215 Interchange Improvement in the City of Perris, CALTRANS, Riverside County, CA.** Principal. Dr. Bischoff managed and provided QA/QC for this project involving street widening and additional improvements at the Nuevo Road/ I-215 interchange. Final deliverables included a record search and a survey report to CALTRANS standards. (2011 – 2012)
- **Soledad Canyon Road Bridge Replacement Project, LACDPW, Los Angeles County, CA.** Principal. LADPW intends to replace a bridge on Soledad Canyon Road. Chambers Group completed a record search and NAHC records review for potential archaeological resources. This project is on-going and may in the future involve further work, including cultural and historic structure surveys and evaluation. (2011 – 2012)

- **Grove Lumber Facility Cultural and Paleontological Technical Studies, Thatcher Engineering, City of Perris, Riverside County, CA.** Principal for the cultural technical studies for this development project, including cultural and paleontological record searches, NAHC letters, and a cultural study (October 2013 – October 2013)
- **Newport Beach Yacht Club Evaluation, Community Development Department, City of Newport Beach, Orange County, CA.** Principal for this historic architecture project involving the built environment evaluation of the Newport Beach Yacht House. (October 2013 – October 2013)
- **Blossom Plaza Historic Structure Evaluation, China Town, City of Los Angeles, CA.** Principal for this historic architecture project involving the updating of technical reports and a standing structure evaluation. (July 2013 – September 2013)
- **Moreno Valley Residential Building Evaluation, City of Moreno Valley, Riverside, CA.** Principal for the architectural assessment of the J. Langdon Ranch located at 11761 Davis Street, in the city of Moreno Valley, Riverside County, California. (April 2013)
- **Indian Wells Tennis Court Development Project, Indian Wells, Riverside County, CA.** Principal Provided technical review of the planning documents cultural section, as well as oversaw Native American Heritage Commission communication for this project to enhance the Indian Wells Tennis Garden complex. (December 2012 – April 2013)
- **Scripps Hospital Paleontological and Archaeological Monitoring, Worley-Parsons, City of Encinitas, CA.** Principal Investigator. Dr. Bischoff managed QA/QC review, budgets, and professional standards for the cultural and paleontological monitoring of this large development project. (2011 - 2013)
- **Tehachapi Renewable Transmission Project (TRTP), Southern California Edison, Kern, Los Angeles, and San Bernardino Counties, CA.** Principal and Project Manager. Dr. Bischoff was responsible for all office and field operations that ensured the successful inventory and management of cultural resources related to this 300-mile transmission line project, including the management of standing historical structures and paleontological resources. He managed an annual budget in excess of $4 million, a staff of up to 40 persons, wrote compliance documents (Programmatic Agreement Appendices, ARPA permits, Project Agency Yearly Reports, and Management Plans), and managed hazmat situations. Dr. Bischoff completed over 150 individual projects in southern California including survey, evaluation, mitigation, and resource monitoring. He wrote individual budgets for project-specific tasks, as well as construction-related administrative tasks, each with different scopes of work and budget amounts. He reconciled all budgets on a monthly basis and coordinated them with the master construction schedule. Dr. Bischoff managed field compliance with NEPA, with TRTP-specific environmental agency agreements, and with the cultural section of the project EIR/EIS and Programmatic Agreement. He also met legal and agency guidelines for Section 106 of NHPA, CEQA, NAGPRA, and TRTP Cultural Resource Management Plan. The Angeles National Forest was the lead Federal Agency, but the CPUC and other Federal and California State Agencies were also involved. (November 2009 - June 2011)

- **East Kern Wind Resource Area (EKWRA) Power Pole Replacement Project, Southern California Edison, Kern County, CA.** Principal and Project Manager. Dr. Bischoff managed original technical studies for a project designed to replace hundreds of power poles in the Tehachapi Mountains area in support of new wind farm construction. He conducted large area surveys, some on BLM properties, and developed a management plan for dozens of archaeological sites. Bureau of Land Management was the principal Federal agency. (February 2010 - June 2011)
- **San Jose Salt Barge HAER Documentation Project, USACE and Santa Clara Valley Water District, City of San Jose, CA.** Principal. Dr. Bischoff consulted on the excavation and evaluation of a shallow-water shipwreck discovered during a wetlands rehabilitation project. This project involved USACE, San Francisco District as lead agency and the Water District as client. (January – February 2011)
- **Operations and Maintenance Contract, Southern California Edison. Southern California.** I acted as the Principal for all work orders issued to our office under the O/M contract. A major task under this contract was the response to the Crown Fire in 2010. I worked directly with SCE during and immediately after the fire to evaluate and protect cultural resources. (Jan 2010 - June 2011)
- **Crown Fire Survey and Cultural Site Update, Southern California Edison, Los Angeles County, CA.** Project Manager. Dr. Bischoff led the cultural response to the Crown Fire, which included surveying and updating known cultural sites as part of the SCE post-fire power pole and access road inspection. (August – Sept. 2010)

APPENDIX D
Phase I Environmental Site Assessment

PHASE I ENVIRONMENTAL SITE ASSESSMENT

135, 141 &153 West Avenue 34, and 3401 & 3433 Pasadena Avenue
Los Angeles, California 90031

Prepared for
MR Real Estate, LLC

Report Date
July 19, 2019

Project Number
201906-5738

Fulcrum Resources Environmental

517 South Ivy Avenue
Monrovia, California 91016
1-800-385-7105
www.frenviro.net

Fulcrum Resources Environmental (Fulcrum) has performed a Phase I Environmental Site Assessment of the property located at 135, 141 &153 West Avenue 34, and 3401 & 3433 Pasadena Avenue, Los Angeles County, Los Angeles, California 90031 in general conformance with the scope and limitations of the protocol and the limitations stated earlier in this report. Exceptions to or deletions from this protocol are discussed in this report.

Fulcrum declares that, to the best of our professional knowledge and belief, the undersigned meet the definition of *Environmental Professionals* as defined in §312.10 of this part [40 CFR Part 312], and have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. Fulcrum has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

· EXECUTIVE SUMMARY ·

Fulcrum Resources Environmental (FR) has conducted a Phase I Environmental Site Assessment in accordance with the American Society for Testing and Materials (**ASTM**) Standard Practice E1527-13 and U.S. Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the subject property addressed at **135, 141 &153 West Avenue 34, and 3401 & 3433 Pasadena Avenue, Los Angeles County, Los Angeles, California 90031** (subject property) per the request of MR Real Estate, LLC (Client). The work was authorized by written contract dated June 19, 2019.

Additional Addresses

The subject property was historically associated with the following addresses:

1906
On West Avenue 34: 119, 139, 141, 143, 145, 147, 149, 153, 157
On Pasadena Avenue: 3403, 3407, 3417, 3419, 3423, 3429, 3431, 3437

1920
On West Avenue 34: 119, 139, 141, 143, 145, 147, 149, 153, 157
On Pasadena Avenue: 3401, 3403, 3407, 3411, 3417, 3419, 3423, 3425, 3429, 3431, 3437, 3439, 3441

1951
On West Avenue 34: 119, 123, 129, 133, 139, 141, 145, 149, 153, 155, 169
On Pasadena Avenue: 3401, 3407, 3415, 3417, 3419, 3421, 3423, 3425, 3429, 3431, 3437

1970
On West Avenue 34: 141, 153, 155, 169
On Pasadena Avenue: 3401, 3415, 3417, 3419, 3433, 3437

The additional addresses were researched as part of the subject property address range for the purposes of this Phase I Environmental Site Assessment.

Summary of Property Description

The subject property, 135, 141 &153 West Avenue 34, and 3401 & 3433 Pasadena Avenue, Los Angeles County, Los Angeles, California 90031, is located on the north side of West Avenue 34 and the west side of Pasadena Avenue, between North Artesian Street (to the west), within a highly-developed light industrial/commercial area. According to the Los Angeles County Tax Assessor's Office, the subject property is assigned the following Assessor's Parcel Numbers (APNs):

Address	APN	Land, sq feet	Building(s), sq feet
135 and 141 West Avenue 34	5205-004-011	157,560	87,980
153 West Avenue 34	5205-004-005	4,800	3,520
3401 Pasadena Avenue	5205-004-003	28,794	4,040 and 9,600
3433 Pasadena Avenue	5205-004-007	28,145	14,315

The subject property consists of four lots as described in Section 2.1 comprising a total of approximately 219,299 square-foot commercial lot. The parcels are described below based on publicly available information from the Los Angeles County Assessor Portal and site observations.

135 and 141 West Avenue 34

The property at 135 and 141 West Avenue 34 is currently improved with an industrial-commercial building of concrete construction, built in 1977. The building is comprised of two units, each of which includes office and warehouse space. The units are currently occupied by Ortiz Bros. Moving and Storage and Atlas Van Lines, a moving company; Phil's Transfer & Storage, Inc. for storage space; and Studio 34, Inc. for art studio space. Separate entrances and loading bays for the building are located near the southwest corner of the structure, and customer entry is achieved near the southeast corner of the building. Stacked corrugated steel shipping containers are located outside of the building in the parking areas in the south and central areas of the lot. The property features perimeter fencing of variable design, and motorized gate entry to the south along West Avenue 34.

153 West Avenue 34

The property at 153 West Avenue 34 is currently improved with an industrial-commercial building of brick and corrugated steel construction, built in 1929. The building is currently occupied by Ortiz Bros. Moving and Storage. The structure features a front entrance with a garage door for vehicular access along the southern boundary of the site. All other areas are asphalt paved with landscaped areas near the front entrance. Stacked corrugated steel shipping containers are located outside of the building in the parking areas to the north and northwest of the building. The property shares perimeter fencing with 145 and 141 West Avenue 34.

3401 Pasadena Avenue

The property at 3401 Pasadena Avenue is currently improved with an industrial-commercial building of wood-frame, cinderblock, and brick-façade construction on the east side of the parcel, built in 1925. That building is currently occupied by LootCrate, a merchandise wholesaler of apparel, games, accessories, and other various novelty items and collectables; and Call Time Quenchers, a beverage distribution company. Operational areas within the structure are primarily unfinished warehouse space with concrete flooring, utilized for storage of products, finished office/administrative areas with tile flooring and suspended drop-grid ceilings. The office portion of the structure features a split-level design with the second-story utilized for storage.

In the southeast corner of the site is a second industrial-commercial building of corrugated steel construction, built in 1948. The building is currently utilized as a warehouse for dry-goods storage. The

exterior of the property is asphalt paved with employee parking. An entrance is located near the southeast corner of the structure. The property also features perimeter chain link fencing with barbed wire and a manual gate for vehicular access along Pasadena Avenue.

3433 Pasadena Avenue

The property at 3433 Pasadena Avenue is currently improved with an industrial-commercial building of wood-frame and cinderblock construction with reinforced steel support beams and a brick façade, built in 1967. The building is also occupied by LootCrate. The building is comprised of office and work area space. The work area is partially finished with concrete and carpet flooring, and the office areas feature tile floors with drop-grid ceilings. The property shares parking areas and perimeter chain link fence with the 3401 Pasadena Avenue property.

All four parcels are together enclosed with fencing of variable design. A railroad corridor with a northeast/southwest alignment is present, parallel and adjacent to the western boundary of the subject property.

The subject property is occupied by the following tenants:

Property Address	Business Name	Business Operation
135 and 141 West Avenue 34	Ortiz Bros. Moving and Storage and Atlas Van Lines Phil's Transfer & Storage, Inc	Moving Company and Commercial Storage Moving Company and Commercial Storage
153 West Avenue 34	Ortiz Bros. Moving and Storage and Atlas Van Lines	Moving Company and Commercial Storage
3401 Pasadena Avenue	LootCrate Quick Time Quenchers	Merchandise Wholesaler Beverage Distributor
3433 Pasadena Avenue	LootCrate	Merchandise Wholesaler

The subject property has been owned by Mr. Eric Ortiz of Ortiz Bros. Moving and Storage since 2000, and has occupied the property since 1993.

Summary of Property History

Based on a review of available historical records, the north, west, and central areas of the subject property were vacant, and the east and west areas were developed with private residential structures by as early as 1894. Most of these residential properties persisted until 1964 with few exceptions, including the subject property warehouse building addressed 153 West Avenue 34 (constructed in 1929) along the southern boundary of the site, and the subject property warehouse buildings addressed 3401 Pasadena Avenue (constructed in 1925) and 3433 Pasadena Avenue (constructed in 1967) along the eastern boundary of the site. A railroad corridor has been historically present along the western boundary since at least 1894, and is still currently in use. A bakery occupied the southeast corner of the property (original occupant of the 3401 Pasadena Avenue building) from 1919 until at least 1951, and was redeveloped as a machine and woodworking shop in 1970.

The historic industrial areas of the subject property have a more complicated history, and are discussed here as the "historic industrial areas". These areas include the north, west, and central parts of the site. The historic industrial areas were vacant and undeveloped in 1894 until at least 1906. By 1920, these areas were developed and occupied by the Los Angeles Sand & Gravel Company, which occupied the property until at least 1928, and terminated by 1938, at which time the historic industrial areas of the subject property consisted of vacant land. By 1948, these areas were redeveloped with six industrial structures, occupied by Steel Framing & Building Corporation in 1951, and ITT Cannon Electronics Inc. from at least 1964-1970. The historic industrial areas were demolished and consisted of vacant and graded land in the 1977 aerial photograph, and the subject property buildings addressed 135 and 141 West Avenue 34 were constructed in 1977 according to building department files and tax assessor records, and was occupied by American Caster Corp from 1977 until the property was purchased by the current owner, Mr. Eric Ortiz, in 1999. The subject property has been primarily occupied by Ortiz Brothers Moving & Storage, with a variety of tenants between 1999 and present. Refer to Section 4.1.

Summary of Regulatory Database Concerns

The subject property was not identified on any of the federal, state, or local regulatory records databases in the Environmental Data Resources, Inc. (EDR) Radius report.

Vapor Encroachment Condition (VEC)

A total of 8 sites were identified in the Radius Map Report and historical research within the "Area of Concern" that were considered to pose a potential VEC at the subject property based on the Tier 1 Evaluation. Tier 1 sites are:

- **3505 Pasadena Avenue** (Map ID B41-47) – this site was identified under the operator name Former Welch's Uniform Services and is located adjacent to and north of the subject property. The site is listed in the following databases from the report: UST (2), RCRA-LQG, ENVIROSTOR, LUST, CPS-SLIC (2), VCP, SWEEPS UST, HIST UST, CA FID UST, FINDS, ECHO, EMI, HIST CORTESE, CERS, DRYCLEANERS, HAZMAT, and EDR Hist Cleaner. Based on regulatory oversight and on-going SVE remediation with semi-annual groundwater monitoring, and the most recent (2016) analytical data available, this site does not represent a VEC to the subject property.

- **3500 Pasadena Avenue** (Map ID F61, 62) – this site was identified under the operator names Smith W P and Chuy Carburetors, and is located approximately 250 feet northeast of the subject property. The site is listed in the EDR Hist Cleaner and HAZMAT databases. Based on the available information, this site does not represent a VEC to the subject property.

- **3225 Lacy Street** (Map ID H67-73) – this site was identified under the operator names Heath & Co, and Maintenance and Operations New Maintenance Company for the Los Angeles Unified School District. The site is located approximately 350 feet southwest of the subject property, and is listed in the following databases from the report: HIST UST, UST, SWEEPS UST, CA FID UST,

RCRA-LQG, HAZMAT, LUST, FINDS, ECHO, HIST CORTESE, and CERS. Based on separation distance and site closure status, this site does not represent a VEC to the subject property.

- **3209 East Humboldt Street (**Map ID I74-78) – this property is located approximately 600 feet south of the subject property, and was identified under the operator ITT Cannon / Kennington. The site is listed in the following databases from the report: HAZMAT, UST, RCRA-SQG, FINDS, SEMS, ENVIROSTOR, VCP, SWEEPS UST, CA FID UST, DEED, HIST CORTESE, CPS-SLIC, LA Co. Mitigation, and CERS. Based on separation distance and regulatory oversight of cleanup activities with active groundwater monitoring, this site does not represent a VEC to the subject property.

- **3580 Pasadena Avenue** (Map ID J94-97) – this site was identified under the operator name Flavor Food Inc. and is located approximately 700 feet northeast of the subject property. The site is listed in the following databases from the report: SWEEPS UST, CA FID UST, LUST, HIST UST, HIST CORTESE, CERS, and UST. Based on separation distance and site closure status, this site does not represent a VEC to the subject property.

- **3101 Artesian Street** (Map ID N98-104) – this site was identified under the operator names Lincoln Heights District and P D D Construction MTNC. The site is located approximately 730 feet southwest of the subject property, and is listed in the following databases from the report: SWEEPS UST, CA FID UST, UST (2), LUST (2), RCRA-SQG, FINDS, ECHO, HAZMAT, CERS HAZ WASTE, HIST UST (2), CERS TANKS, HIST CORTESE, and CERS. Based on separation distance from the subject property, this site does not represent a VEC to the subject property.

- **301 West Avenue 26** (Map ID S127-128) – this property is located approximately 1,700 feet southwest of the subject property and was identified under the operator names Jaybee and Ajax Manufacturing. The site is listed in the ENVIROSTOR, VCP, EMI, and SEMS databases. Based on separation distance and regulatory oversight of cleanup activities with active groundwater monitoring, this site does not represent a VEC to the subject property.

- **400 West Avenue 26** (Map ID T129, 130, 133) – this site was identified under the operator name Lacy's Street Dump and is located approximately 1,700 feet southwest of the subject property. The site is listed in the WMUDS/SWAT, LDS, CERS (2), and SWF/LF (2) databases. Based on separation distance and regulatory closure status, this site does not represent a VEC to the subject property.

In our opinion, none of the other sites listed pose a significant threat to the subject property as there is no indication of a release at the respective sites, a release has occurred but the medium affected was the soil only and the site is beyond the critical distance of 100 feet, or the site location and/or plume of contamination is in excess of the critical distance of 100 feet from the subject property. Thus, a VEC can be ruled out because a VEC does not or is not likely to exist at the subject property.

Data Gaps

No significant data gaps were identified.

Refer to Section 1.4 for a discussion of the limitations, data failures, and/or data gaps encountered during this assessment.

· FINDINGS ·

Recognized Environmental Conditions (RECs)

In defining a standard of good commercial and customary practice for conducting an environmental site assessment of a parcel of property, the goal of the processes established by this practice is to identify recognized environmental conditions (RECs). The term recognized environmental conditions means the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the subject property or into the ground, ground water, or surface water of the subject property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are not recognized environmental conditions.

This assessment has revealed no evidence of RECs in connection with the subject property.

Historical Recognized Environmental Condition (HREC)

A Historical Recognized Environmental Condition (HREC) is a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by regulatory authority, without subjecting the property to any required controls (e.g. property use restrictions, AULs, institutional controls, or engineering controls).

This assessment has revealed no evidence of HRECs in connection with the property.

Controlled Recognized Environmental Condition (CREC)

A Controlled Recognized Environmental Condition (CREC) is a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (as evidenced by the issuance of a NFA letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (property use restrictions, AULs, institutional controls, or engineering controls).

This assessment has revealed no evidence of CRECs in connection with the subject property.

· CONCLUSIONS & RECOMMENDATIONS ·

FR has conducted a Phase I Environmental Site Assessment in accordance with the American Society for Testing and Materials (**ASTM**) Standard Practice E1527-13 and Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the subject property addressed at **135, 141 &153 West Avenue 34, and 3401 & 3433 Pasadena Avenue, Los Angeles County, Los Angeles, California 90031**. This assessment has revealed no evidence of Recognized Environmental Conditions (RECs) during the course of this assessment with the property.

FR recommends no further investigations for the subject property at this time.

· 1.0 INTRODUCTION ·

FR has conducted a Phase I Environmental Site Assessment in accordance with the American Society for Testing and Materials (**ASTM**) Standard Practice E1527-13 and Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the subject property addressed 135, 141 &153 West Avenue 34, and 3401 & 3433 Pasadena Avenue, Los Angeles County, Los Angeles, California 90031 (subject property) per the request of MR Real Estate, LLC. The work was authorized by written contract dated June 19, 2019.

1.1 Purpose

The purpose of a Phase I Environmental Site Assessment is to identify potential issues that may impact the subject property. The purpose of this practice is to define good commercial and customary practice in the United States of America for conducting an environmental site assessment of a parcel of commercial real estate with respect to the range of contaminants within the scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. 9601) and petroleum products. The investigation was conducted in accordance with the *Client's* Environmental Site Assessment scope of work for the use and benefit of the *Client* and the U.S. Small Business Administration (U.S. SBA) if financing is to be authorized by U.S. SBA. As such, this practice is intended to permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability (hereinafter, the "landowner liability protections," or "LLPs"): that is, the practice that constitutes "all appropriate inquiry into the previous ownership and uses of the subject property consistent with good commercial or customary practice" as defined at 42 U.S.C. 9601(35)(B).

Controlled substances are not included within the scope of this standard. Persons conducting an environmental site assessment as part of an EPA Brownfields Assessment and Characterization Grant awarded under CERCLA 42 U.S.C. 9604(k)(2)(B) must include controlled substances as defined in the Controlled Substances Act (21 U.S.C. 802) within the scope of the assessment investigations to the extent directed in the terms and conditions of the specific grant or cooperative agreement. Additionally, an evaluation of business environmental risk associated with a parcel of commercial real estate may necessitate investigation beyond that identified in this practice.

The purpose of this report is not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. This report is also not intended to serve as a compliance assessment of the subject property.

The ASTM E1527-13 practice DOES NOT address requirements of any state or local laws or of any federal laws other than the all appropriate inquiry provision of the LLPs. Per the ASTM Standard, Users are cautioned that federal, state, and local laws may impose environmental assessment obligations that are beyond the scope of this practice. Users should also be aware that there are likely to be other legal

obligations with regard to hazardous substances or petroleum products discovered on the subject property that are not addressed in the ASTM practice and that may pose risks of civil and/or criminal sanctions for non-compliance.

1.2 Scope of Work

This report has been prepared per the conditions presented in the agreed contract signed by the client. In accordance with ASTM guidelines, FR's scope of work included:

1. Requested user or one deemed most historically familiar with subject property to complete FR's environmental questionnaire.

2. Conducted visual reconnaissance of the subject property and adjoining properties, including site interviews with past or present owners, occupants, tenants, and/or operators if applicable.

3. Requested and researched historical documentation including but not limited to aerial photographs, city directories, topographic maps, interviews, public agency records, and fire insurance maps. Chain-of-title and environmental liens were reviewed if requested or provided by the client/user.

4. Reviewed federal, state, and local regulatory agency database information for the subject property and neighboring properties to identify potential concerns that could adversely affect the environmental condition of the subject property.

5. Prepared a technical Phase I Environmental Assessment report to document the findings regarding the current environmental condition of the subject property. If warranted, the report contains recommendations for further action. In addition to ASTM scope items, the following ASTM non-scope items were discussed and included in the report based upon a limited review: asbestos containing materials, radon, lead-based paint, lead in drinking water, potential wetlands, air emissions, and mold/water intrusion.

ASTM E1527-13 does not encompass analytical testing to evaluate Asbestos Containing Materials (ACM), radon, lead-based paint (LBP), drinking water quality, lead in drinking water, wetlands, regulatory compliance, cultural and historical resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, biological agents, mold, stored chemicals, debris, fill materials, surface water, or subsurface samples (soil and groundwater) as part of a Phase I ESA. Such additional information regarding non-ASTM E1527-13 issues may be provided merely for the *User's* convenience and cannot be used to bind this report as a whole to the compliance and conformance with ASTM guidelines. No disassembly of systems or building components or physical or invasive testing is to be performed unless Contract Engagement specifically calls for such testing as an additional scope of work. FR Environmental has performed this *Phase I Environmental Site Assessment* in conformance with the scope and limitations of ASTM Practice E1527-13. This *Report* may not include all environmental conditions which can materially impact the Subject Property other than those defined as RECs, HRECs, and CRECs in ASTM E1527-13.

1.3 Significant Assumptions

The following assumptions are made by FR Environmental in this report. FR relied on information derived from secondary sources. FR Environmental has made no independent investigation as to the accuracy and completeness of the information derived from secondary sources including government agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, or personal interviews and has assumed that such information is accurate and complete. FR Environmental assumes information provided by or obtained from governmental agencies including information obtained from government websites is accurate and complete.

Groundwater flow and depth to groundwater, unless otherwise specified by on-site well data, or well data from adjacent sites are assumed based on contours depicted on the United States Geological Survey topographic maps. FR Environmental assumes the subject property has been correctly and accurately identified by the client, designated representative of the client, property contact, property owner, and property owner's representatives.

FR Environmental assumes that the Client, Client representatives, Client Legal Counsel, designated representatives of the Client, property contact, property owner, property owner representatives, and property brokers, used good faith in answering questions and in obtaining information for the subject property as defined in 10.8 of the ASTM E1527-13 practice. This would also include obtaining those helpful documents from previous owners, operators, tenants, brokers, financial institutions etc. FR Environmental also assumes the Client will designate appropriate and knowledgeable people for performance of the Phase I Environmental Assessment.

1.4 Limitations, Data Failures, and Data Gaps

It is important to note that property conditions, as well as federal, state, and local/tribal regulations can change over time. Therefore, the conclusions and information presented in this report apply strictly to regulations and property conditions existing at the time the report was completed. FR Environmental assumes that information provided by local agencies is true. FR Environmental cannot guarantee or warranty that information provided second-hand is accurate to its fullest extent. FR Environmental is not responsible for conditions found at or beneath the subject property or adjacent properties. Accordingly, portions of this report may be invalidated wholly or partially by the changes beyond our control.

The findings, conclusions, and recommendations presented herein are based solely on the scope of work previously described and information gathered. Incomplete or outstanding information identified throughout the body of this report including data gaps is considered a limitation to the assessment. Limitations to the assessment also include weather conditions, vegetation cover, parked cars, trucks, dumpsters, and anything limiting visual observation of or physical access to the subject property and neighboring properties. Vapor intrusion is not included in this scope of services and is considered an

ASTM Non-scope consideration. FR was not contracted to disassemble or perform testing of machinery on-site. This report and scope is not an environmental compliance audit.

Certain policies can differ from lenders or users. For CERCLA landowner liability protection, Phase I ESA reports are valid for 180 days, per ASTM E1527-13.

1.4.1 Limiting Conditions/Deviations

There were no limiting conditions or deviations in the performance of this Phase I ESA.

1.4.2 Data Failures

Data failure is one type of data gap. According to ASTM E1527-13, data failure occurs when all of the standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met. Pursuant to ASTM E1527-13, historical sources are required to document property use back to the property's first developed use or back to 1940, whichever is earlier, or periods of five years or greater.

No data failures were identified during this assessment.

1.4.3 Data Gaps

According to ASTM E1527-13, data gaps occur when the Environmental Professional is unable to obtain information required by the Standard, despite good faith efforts to gather such information. Pursuant to ASTM E1527-13, only significant data gaps, defined as those that affect the ability of the Environmental Professional to identify RECs, need to be documented.

No significant data gaps were identified.

1.5 Qualification Statement of Professional

Our investigation was performed using the degree of care and skill ordinarily exercised, under similar circumstances, by or under direct oversight of an environmental professional as defined by the ASTM. FR Environmental's environmental professional who prepared this assessment possesses the specific qualifications based upon education, training and experience to assess a property of the nature, history, and setting of the subject property. Neither FR Environmental, nor any staff member assigned to this investigation has any interest or contemplated interest, financial or otherwise, in the subject or surrounding properties, or in any entity which owns, leases, or occupies the subject or surrounding properties or which may be responsible for environmental issues identified during the course of this investigation, and has no personal bias with respect to the parties involved. FR Environmental has developed and performed the "*All Appropriate Inquiries*" in accordance with the standards and practices as defined in 40 CFR Part 312.

1.6 User Reliance

This investigation was conducted in accordance with the Client's Environmental Site Assessment scope of work for the use and benefit of the Client and assignees. It is based, in part, upon documents, writings, and information owned, possessed, or secured by the Client. Neither this Report, nor any information contained herein, shall be used or relied upon for any purpose by any other person or entity without the express written permission of the Client.

All reports (whether in paper, digital, electronic, or any other formats) are for the sole use and benefit of the Client. Either verbally or in writing, third parties may come into possession of this Report, whether all or part of the information generated. In the absence of a written agreement with Fulcrum granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against Fulcrum. Unauthorized use of this Report shall constitute acceptance of and commitment to protect, hold and indemnify Fulcrum harmless from any and all claims, damages, losses, liabilities, and expenses (including reasonable attorney's fees) responsibilities, which shall be irrevocable and shall apply regardless of the cause of action or legal theory pled or asserted. Additional legal penalties may apply.

· 2.0 SITE DESCRIPTION ·

2.1 Location and legal description

The subject property, 135, 141 &153 West Avenue 34, and 3401 & 3433 Pasadena Avenue, Los Angeles County, Los Angeles, California 90031, is located on the north side of West Avenue 34 and the west side of Pasadena Avenue, between North Artesian Street (to the west), within a highly-developed light industrial/commercial area. According to the Los Angeles County Tax Assessor's Office, the subject property is assigned the following Assessor's Parcel Numbers (APNs):

Address	APN	Land, sq feet	Building(s), sq feet
135 and 141 West Avenue 34	5205-004-011	157,560	87,980
153 West Avenue 34	5205-004-005	4,800	3,520
3401 Pasadena Avenue	5205-004-003	28,794	4,040 and 9,600
3433 Pasadena Avenue	5205-004-007	28,145	14,315

2.2 General characteristic

The subject property consists of four lots as described in Section 2.1 comprising a total of approximately 219,299 square-foot commercial lot. The parcels are described below based on publicly available information from the Los Angeles County Assessor Portal and site observations.

135 and 141 West Avenue 34

The property at 135 and 141 West Avenue 34 is currently improved with an industrial-commercial building of concrete construction, built in 1977. The building is comprised of two units, each of which includes office and warehouse space. The units are currently occupied by Ortiz Bros. Moving and Storage and Atlas Van Lines, a moving company; Phil's Transfer & Storage, Inc. for storage space; and Studio 34, Inc. for art studio space. Separate entrances and loading bays for the building are located near the southwest corner of the structure, and customer entry is achieved near the southeast corner of the building. Stacked corrugated steel shipping containers are located outside of the building in the parking areas in the south and central areas of the lot. The property features perimeter fencing of variable design, and motorized gate entry to the south along West Avenue 34.

153 West Avenue 34

The property at 153 West Avenue 34 is currently improved with an industrial-commercial building of brick and corrugated steel construction, built in 1929. The building is currently occupied by Ortiz Bros. Moving and Storage. The structure features a front entrance with a garage door for vehicular access along the southern boundary of the site. All other areas are asphalt paved with landscaped areas near the front entrance. Stacked corrugated steel shipping containers are located outside of the building in the parking areas to the north and northwest of the building. The property shares perimeter fencing with 145 and 141 West Avenue 34.

3401 Pasadena Avenue

The property at 3401 Pasadena Avenue is currently improved with an industrial-commercial building of wood-frame, cinderblock, and brick-façade construction on the east side of the parcel, built in 1925. That building is currently occupied by LootCrate, a merchandise wholesaler of apparel, games, accessories, and other various novelty items and collectables; and Call Time Quenchers, a beverage distribution company. Operational areas within the structure are primarily unfinished warehouse space with concrete flooring, utilized for storage of products, finished office/administrative areas with tile flooring and suspended drop-grid ceilings. The office portion of the structure features a split-level design with the second-story utilized for storage.

In the southeast corner of the site is a second industrial-commercial building of corrugated steel construction, built in 1948. The building is currently utilized as a warehouse for dry-goods storage. The exterior of the property is asphalt paved with employee parking. An entrance is located near the southeast corner of the structure. The property also features perimeter chain link fencing with barbed wire and a manual gate for vehicular access along Pasadena Avenue.

3433 Pasadena Avenue

The property at 3433 Pasadena Avenue is currently improved with an industrial-commercial building of wood-frame and cinderblock construction with reinforced steel support beams and a brick façade, built in 1967. The building is also occupied by LootCrate. The building is comprised of office and work area space. The work area is partially finished with concrete and carpet flooring, and the office areas feature tile floors with drop-grid ceilings. The property shares parking areas and perimeter chain link fence with the 3401 Pasadena Avenue property.

All four parcels are together enclosed with fencing of variable design. A railroad corridor with a northeast/southwest alignment is present, parallel and adjacent to the western boundary of the subject property.

2.3 Current property use

The subject property is occupied by the following tenants:

Property Address	Business Name	Business Operation
135 and 141 West Avenue 34	Ortiz Bros. Moving and Storage and Atlas Van Lines Phil's Transfer & Storage, Inc	Moving Company and Commercial Storage Moving Company and Commercial Storage
153 West Avenue 34	Ortiz Bros. Moving and Storage and Atlas Van Lines	Moving Company and Commercial Storage
3401 Pasadena Avenue	LootCrate Quick Time Quenchers	Merchandise Wholesaler Beverage Distributor
3433 Pasadena Avenue	LootCrate	Merchandise Wholesaler

The subject property has been owned by Mr. Eric Ortiz of Ortiz Bros. Moving and Storage since 2000, and has occupied the property since 1993.

2.4 Current adjoining properties description

The subject property is located in a highly-developed, industrial-commercial area of Los Angeles, California. The following land use was observed in the immediate vicinity of the property:

Direction	Property Address	Business Name	Business Operation
North	3505 Pasadena Avenue***	Vacant land, formerly Welch's Uniform Facility	N/A – Vacant Land
East	120 East Avenue 35*** 3412 Pasadena Avenue 3403 Smith Street	Hillside Elementary School N/A - Private Residences N/A – Private Residences	Los Angeles Public Schools N/A - Private Residences N/A - Private Residences
South	170 West Avenue 34 164-166 West Avenue 34 140 West Avenue 34 138 West Avenue 34 134 West Avenue 34 130 West Avenue 34 120 West Avenue 34 118 West Avenue 34 116 West Avenue 34 3305 Pasadena Avenue	N/A – Vacant Fabco Art Services N/A – Private Residence South Bay Catering ACW Apparel N/A – Private Residences Screen Printing & Embroidery N/A – Private Residences N/A – Private Residence Arpine Media Group	Vacant Warehouse Custom Design Company N/A – Private Residence Catering Company Clothing Warehouse N/A – Private Residences Commercial Printing N/A – Private Residences N/A – Private Residence Commercial Printing
West	403 West Avenue 33***	Viertel's Central Division, Los Angeles Police Department	Impoundent Lot & Police Garage

*** Address listed in the Regulatory Records Database (Refer to Section 6.0)

2.5 Municipal Services and Utilities

The provider of municipal services and utilities to the subject property is not known; however, the property was noted to be connected to public water and sewer services.

2.6 Physical Settings

2.6.1 Topography

The United States Geological Survey (USGS), [Los Angeles, California] 7.5 Minute Topographic Quadrangle map of the subject property and surrounding vicinity was reviewed. The elevation of the property is approximately 370 feet above mean sea level (MSL). Topography at the subject property is relatively flat and declines gently to the west towards the nearby Arroyo Seco, a seasonal and generally dry river.

A copy of the USGS 7.5 Minute Topographic Quadrangle Map of Los Angeles, California, is included in the appendices of the report.

2.6.2 Geology/Soil Conditions

The site is located in the Los Angeles basin, within the Downey Plain near the Arroyo Seco, which seasonally drains into the Los Angeles River to the southeast. Surface materials consist of alluvium and channel deposits with poorly graded sand, gravel, and cobbles to depths of to 75 feet below grade.

Based on a site assessment report prepared for Welch's Uniform Service at 3505 Pasadena Avenue, adjacent to and north of the subject property, the site is underlain by sand with trace gravel to 25 feet bgs, below which are sand and gravel mixtures to 55 feet below grade, which transitions to sand from around 55 feet below grade to 80 feet below grade. At approximately 80 feet below grade, the lithology changes to saturated gravel feet to 85 feet, below which is silt to approximately 96 feet below grade, the maximum depth explored (AmeriPride Service, November 2005).

2.6.3 Hydrogeology

The subject property is located within the Los Angeles Coastal Plain; approximately 175 feet west of the Arroyo Seco, and approximately 0.7 miles east of the Los Angeles River, which is a concrete lined storm channel that prevents infiltration of surface water and empties to the Pacific Ocean. Based on the groundwater report monitoring report prepared for the north adjacent property at 3505 Pasadena Avenue in 2005, depth to groundwater is 38-40 feet below grade (AmeriPride Service, November 2005).

Note that groundwater flow direction can be influenced locally and regionally by the presence of local wetland features, surface topography, recharge and discharge areas, horizontal and vertical inconsistencies in the types and location of subsurface soils, and proximity to water pumping wells. Depth and gradient of the water table can change seasonally in response to variation in precipitation and recharge, and over time, in response to urban development such as storm water controls, impervious surfaces, pumping wells, cleanup activities, dewatering, seawater intrusion barrier projects near the coast, and other factors.

· 3.0 PROPERTY RECONNAISANCE ·

3.1 Property Condition Observations

Mr. Eric Ortiz, the subject property Owner, provided full property access to the FR assessor, Mr. Steven Wong, on June 27, 2019. There were no limited property access conditions. The weather conditions were sunny at 72 degrees Fahrenheit. No weather conditions were limiting property observations.

Site characteristics observed by the FR site assessor are described in above Section 2.2.

Please refer to the table below for information on petroleum products, hazardous substances, and/or hazardous wastes observed on the subject property at the time of FR's site visit.

Hazardous Substances/Wastes Observed	Quantity	Location	Spills/Leaks Observed
Propane	8 x 33.5-lb tanks 4 x 20-lb tanks	Under outdoor canopy	No
Gasoline	3 x ~5-gallon jugs	Under outdoor canopy	No

No significant amounts of hazardous substances or processes that generate or handle hazardous wastes were observed on the subject property during FR's site reconnaissance. No Recognized Environmental Conditions (RECs) were observed during the site reconnaissance.

3.2 ASTM Reconnaissance Findings

Recognized Environmental Conditions (RECs) - In defining a standard of good commercial and customary practice for conducting an environmental site assessment of a parcel of property, the goal of the processes established by this practice is to identify recognized environmental conditions. The term recognized environmental conditions means the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the subject property or into the ground, ground water, or surface water of the subject property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are not recognized environmental conditions.

FR conducted a visual review and observation of the subject property and adjoining properties per ASTM Scope Considerations listed below.

Item	Identified
Hazardous Substances and Petroleum Products in Connection with Identified Uses	4 x 20-lb propane tanks; 8 x 33.5-lb propane tanks for forklift operation; and small amounts of gasoline for automotive operation. No leaks, spills, or staining were observed in relation to the petroleum products present on the subject property. No significant amounts of hazardous substances or petroleum products were observed to be used in connection with current business operations.
Aboveground & Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs / USTs)	None identified
Fueling systems	None identified
Pungent or Noxious Odors	None identified
Pools of Liquid	None identified
Drums or Other Containers of Hazardous Substances or Petroleum Products	None identified
Unidentified hazardous substances or petroleum products not in connection with property use	None identified
Unidentified substance containers	None identified
Machinery or equipment likely containing PCBs	None identified
Significant surface staining on interior or exterior portion of property	None identified
Heating/Cooling Equipment with Observed Fuel Sources	None identified
Drains and Sumps	Several floor drains were observed in the bathrooms of the subject property buildings in addition to one floor drain in the warehouse associated with the address 3401 Pasadena Avenue. Due to locality and lack of observed business operations and/or processes that generate or handle hazardous wastes or materials, the observed floor drains are not expected to represent significant point source features for groundwater contamination.

Item	Identified
Regulated or Unregulated Waste Water Discharge	A three-stage clarifier was observed in the southwest portion of the main subject building behind the canopy. According to Mr. Eric Ortiz, subject property Owner, the clarifier has been present on the property since purchase and has not been in use by current business operations. The clarifier appears to be dry and unused. Two former groundwater (GW) monitoring wells were recently closed that are located to the south of the southwest portion of the property on Avenue 34. Due to the lack of reported releases and/or observed business operations that generate or handle hazardous wastes or materials, the clarifier is not expected to represent a significant environmental concern. FR suggests that if there's no planned future uses of the clarifier; it should be properly removed from the subject property.
Pits, Ponds, or Lagoons	None identified
Stockpiled Soils with Visual Evidence of Contamination	None identified
Questionable Fill Material (unknown origin) or Visual Evidence of Buried Wastes	None identified
Septic Systems	None identified
Wells	None identified
Stressed Vegetation	None identified
Surficial Disturbance	None identified
Biohazardous Wastes	None identified
Herbicide or Pesticide Use	None identified
Dry-cleaning Operation	None identified
Other	None identified

3.3 ASTM Non-Scope Considerations

Unless authorized per the user's request, FR did not engage in conducting sampling or an assessment beyond a visual review of the ASTM Non-Scope Considerations. FR conducted a visual review of the following ASTM Non-Scope Considerations included in this assessment:

ASTM Non-Scope Item	Identified
Asbestos-Containing-Materials (ACMs)	Based on the construction date (1929-1977), asbestos-containing building materials could be present. An ACM survey was not included in the current scope of services.
Lead-based paint (LBP)	Based on the construction date (1929-1977), lead-based paints could be present. A LBP survey was not included in the current scope of services.
Radon	A review of the EPA's Map of Radon Zones indicates that Los Angeles County falls within Zone 2, a zone of moderate radon potential. Counties located within Zone 2 have a predicted average indoor radon screening level of between 2 and 4 picocuries per liter (pCi/L), equal to or below the EPA's radon action level of 4 pCi/L for residential structures. A radon survey was not included in the current scope of services.
PCB-oil in hydraulic equipment, ballasts, switcher, transformers, etc.	A caged pad-mounted transformer was observed in the southwest portion the subject property. There were no signs of oil leaks or staining at the base of this pad-mounted transformer that would present an immediate adverse impact to the environmental integrity of the subject site. Several pole-mounted transformers were observed on the subject property. Any transformers related to the power-pole are operated by the Southern California Edison. In the event of a release of dielectric fluid from one of its transformers, the utility company typically performs the cleanup. A PCB survey was not included in the current scope of services.
Lead in Drinking Water	A lead in drinking water survey was not included in the current scope of services.
Flood Zone	Based on a review of a flood zone map contained in the EDR Radius Map Report, the subject property is located within a 500-year flood zone.
Mold and Indoor Air Quality Issues	No obvious indications of water damage or mold growth were observed during FR's visual inspection.

Asbestos Containing Material

Asbestos-containing material (ACM) represents a concern when it is subject to damage that results in the release of fibers. Friable ACM, which can be crumbled by hand pressure and is therefore more susceptible to damage, is of particular concern. Non-friable ACM is a potential concern if it is damaged by maintenance work, demolition or other activities.

For buildings constructed prior to 1981, the Code of Federal Regulations (29 CFR 1926.1101 and 29 CFR 1910.1001) define presumed asbestos-containing material (PACM) as 1. Thermal System Insulation (TSI), e.g., boiler insulation, pipe lagging, fireproofing; and 2. Surfacing Materials, e.g., acoustical ceilings. Building owners/employers are responsible for locating the presence and quantity of PACM. Building Owners/employers can rebut installed material as PACM by either having an inspection in accordance with Asbestos Hazard Emergency Response Act (AHERA) (40 CFR Part 763, Subpart E) or hiring an accredited inspector to take bulk samples of the suspect material.

Typical materials not covered by the presumptive rule include but are not limited to: floor tiles and adhesives, wallboard systems, siding and roofing. Building materials such as wallboard systems may contain asbestos but unless a building owner/employer has specific knowledge or should have known through the exercise of due diligence that these other materials contain asbestos, the standard does not compel the building owner to sample these materials.

The information below is for general informational purposes only and does not constitute an asbestos survey. In addition, the information is not intended to comply with federal, state or local regulations pertaining to ACMs.

Due to the age of the subject buildings (1929-1977), there is a potential that presumed ACMs are present within the subject building. The table below describes the type of material, location, friability, and condition of the suspect ACMs found within the subject building. The table below is not comprehensive as to each and every building material but is intended to provide a general summary based on the limited site reconnaissance.

Material	Location	Friable	Condition
Drywall systems	3433 Pasadena Avenue 135/141 West Avenue 34	No	Good
Roofing Systems	Roof	No	Not inspected

An asbestos building materials inspection was not included in the scope of service agreement with FR. Accordingly; no samples of the suspect materials were taken. At the time of the inspection, all of the materials appeared to be intact and undisturbed (that is, they appeared to be in a non-friable and/or good condition) and, thus, do not pose an immediate environmental concern. Still, these materials may become hazardous if they in fact contain asbestos and are subsequently damaged or disturbed, as, for example, in the course of remodeling. Asbestos-containing materials are considered to be hazardous materials, and their eventual disposal and handling are subject to federal and state regulatory guidelines.

Currently, there are no regulations requiring the removal of ACM unless it will be disturbed during renovation, repairs, or demolition. The USEPA recommends that as long as the ACM does not pose an imminent health threat, the materials can be managed under an Operations and Maintenance (O&M) Plan.

4.1 Historical Aerial Photographs Review

FR reviewed historical aerial photographs supplied by EDR and dated 1923 through 2016. A summary of historical aerial photographs researched is listed below.

Dates	Description
1923	The north, west, and central portions of the site are developed with industrial structures and access roads. The eastern and southern portions of the property are developed with approximately 20 smaller structures on lots which appear residential. Beyond the subject property lies vacant land to the east, vacant land, and the Arroyo Seco, which has the geomorphology of a braided stream feature. Pasadena Avenue and private residences are present to the east and southeast. West Avenue 34 and private residences are present to the south. Adjacent to and west of the subject property is a railroad corridor, which runs parallel to the western boundary of the subject property with a northeast / southwest alignment. The northern adjacent property appears industrial with several large structures. The surrounding area is primarily residential, with industrial-commercial properties to the southeast and northwest.

Dates	Description
1928	The central portion of the subject property is cleared and vacant, with one remaining industrial structure within the west-central area of the site. Aside from a mid-sized industrial structure in the southwest area of the property, he west and south areas remain residential in use and generally unchanged from 1923. Beyond the subject property, the north and west adjacent properties appear further developed with large industrial structures, and the south and east adjacent properties appear residential in use and generally unchanged from 1923.
1938	The industrial structure the west-central area of the site is no longer present in 1938, and the north and west-central areas appear cleared and vacant. The south and east areas of the subject property remain residential, with the exception of an industrial structure near the southeast corner of the property. Beyond the subject property, there are further developments to the north and west adjacent property. Aside from the development of Hillside Elementary School to the east, the adjacent properties to the east and south remain residential and generally unchanged from 1923. Further to the north and west is the Arroyo Seco, which is a constructed canal in 1938, a stark contract to the natural braided stream geomorphological feature depicted in 1928.
1948, 1952	There are six additional industrial structures on the subject property in 1948 compared to 1938. The structures include five towards the north and central areas of the property, and one in the southeast corner. Beyond the subject property are new industrial structures to the north, and outdoor storage yards to the east. The remaining areas to the south and east, and vicinity of the subject property appear generally unchanged from 1923. Arroyo Seco
1964, 1970	The site is completely industrial-commercial in use in the 1964 aerial photograph with approximately 10 industrial structures. All residential structures previously described at the subject property are no longer present, and the remainder of the property appears paved with parking and exterior storage areas. Beyond the subject property, conditions in the surrounding areas appear generally consistent with conditions with those described in 1952.
1977	Most of the site appears vacant and graded in 1977 compared to the 1970 aerial photograph. The only remaining structures from those previously described include the structures along Pasadena Avenue in the western portion of the site (present-day 3401 & 3433 Pasadena Avenue), and a single industrial structure in the southwest corner of the site (present-day 153 West Avenue 34). The remaining areas are graded and vacant land, and the present-day structure addressed 135 and 141 West Avenue 34 is not present. Additional changes in areas beyond the subject property include industrial structures to the southwest and southeast; and the east adjacent property appears vacant graded land. There are no significant changes to adjacent properties north and west of the subject property.

Dates	Description
1983, 1989, 1994, 2002, 2005, 2009, 2012, 2016	The subject property is developed with its present-day structures and general configuration in 1983. There are few changes in the subsequent aerial photographs from 1989 through 2016 to the subject property, or to the properties to the east, and south. The north adjoining property is developed with large industrial structures in 1983 and 1989, which is no longer present in the 1994 aerial photograph. The west adjoining property appears to be a parking lot with no discernable structure until 2012 with the appearance of an industrial structure near the center and western portion of the property.

No environmental concerns were noted on the subject property or adjoining properties.

4.2 Historical Sanborn Map Coverage Review

Sanborn Map Company maps were created for insurance underwriters from 1867 to 1970, and often contain information regarding the uses of individual structures, and the locations of fuel and/or chemical storage tanks that may have been on a particular property. FR subcontracted with EDR to provide copies of Sanborn Map Company maps.

A summary of historical Sanborn map coverage researched is listed below.

Subject Property addresses include the following: On West Avenue 34: 119, 139, 141, 143, 145, 147, 149, 153, and 157 On Pasadena Avenue: 3403, 3407, 3417, 3419, 3423, 3429, 3431, and 3437		
Date	**Description**	
1906	**Subject Property**	The subject property is depicted with primarily residential properties along the eastern and southern boundaries of the property. The structures appear residential with the exception of a shop located at 3419 Pasadena Avenue. The remainder of the subject property appears vacant and undeveloped.
	Adjoining Properties	The parcels north of the subject property are primarily vacant, with one residence addressed 3441 Pasadena Avenue to the north of the subject property. The railroad spur along the western boundary of the subject property is developed and labeled Atchison Topeka & Santa Fe R.R. Main Line and San Pedro Los Angeles & Salt Lake City R.R. Main Line, beyond which is vacant land andthe Arroyo Seco. The adjoining properties south and east are depicted as developed with primarily residential structures, with the exception of a store located just south of the subject property at the corner of West Avenue 34 and Pasadena Avenue and addressed 3019 and 3021 Pasadena Avenue.

Subject Property addresses include the following: On West Avenue 34: 119, 139, 141, 143, 145, 147, 149, 153, and 157 On Pasadena Avenue: 3401 (3403), 3407, 3411, 3417, 3419, 3423, 3425, 3429, 3431, 3437, 3439, and 3441		
Date	**Description**	
1920	**Subject Property**	The subject property is depicted with primarily residential properties along the eastern and southern boundaries of the property, as described in 1912. The structures appear residential with the exception of a bakery located at 3419 Pasadena Avenue. Many of the residences have auto garages. The formerly vacant areas from 1912 are developed in 1920 with structures associated with Los Angeles Rock & Gravel Co at the address 3441 Pasadena Avenue, which extends north beyond the subject property boundaries to West Avenue 35. The structures include: an outhouse; an office addressed 3439 Pasadena Avenue; an auto garage with truck and loading ramp labeled "Tunnel Under Rock Pile; a large auto garage with an oil and grease house, tool shed, and a small unlabeled structure near the center of the subject property. There is an alley traversing the property between the industrial operations at the Los Angeles Rock & Gravel occupied area from the residential properties along Pasadena Avenue. The alley connects West Avenue 45 to West Avenue 34, and extends beyond the subject property between West Avenue 34 and West Avenue 33.
	Adjoining Properties	The north adjoining property is occupied by Los Angeles Rock & Gravel Co structures at the address 3441 Pasadena Avenue, which extend south into the subject property. The structures in the north adjoining property include a mixing house with rock storage; a rock crusher; an electrical utility shed; a chute for loading trucks; a well pumphouse; and additional rock crusher and chute with an electric utility shed. There are residential structures on the remaining adjoining parcels to the north along Pasadena Avenue and West Avenue 35. There are no significant changes to the south, east, and west adjoining property in 1920.

Subject Property addresses include the following: On West Avenue 34: 119, 123, 129, 133, 139, 141, 145, 149, 153, 155, and 169 On Pasadena Avenue: 3401, 3407, 3415, 3417, 3419, 3421, 3423, 3425, 3429, 3431, 3437		
Date	**Description**	
1951	**Subject Property**	The subject property is depicted with primarily residential properties along the eastern and southern boundaries of the property, as described in 1912 and 1920, with the following exceptions: there is a metal working & spinning shop at 153 West Avenue 34 (the present-day structure); the southwest corner of the subject property has been redeveloped from residential plots to an expansion of the bakery, which is comprised of 101 and 111 West Avenue 34, as well as 3401 (present-day structure), 3407, 3415, 3417, and 3419 Pasadena Avenue; and there is an office at the 3421 Pasadena Avenue address. The north, west, and central areas of the property which were occupied by Los Angeles Rock & Gravel Co. in 1920 are redeveloped with six structures different from those previously described, and are occupied by Steel Framing & Building Corporation in 1951 at the address 169 West Avenue 34. The structures include: four office buildings; a shop and warehouse; a steel storage yard; and a large workshop. In addition, a portion of one of the buildings associated with Welch's Overall & Uniform Cleaning extends into the subject property boundaries. The
	Adjoining Properties	The north adjoining property is redeveloped from the previous 1920 Sanborn Map and is occupied by Welch's Overall & Uniform Cleaning in 1951. The west adjoining property is developed with four structures labeled Alliance Lumber & Investment Co. The south and east adjoining properties are generally unchanged from 1920, with the exception of the development of Hillside School to the east of the subject property.

Subject Property addresses include the following: On West Avenue 34: 141, 153, 155, and 169 On Pasadena Avenue: 3401, 3415, 3417, 3419, 3433, 3437		
Date	**Description**	
1970	**Subject Property**	The subject property is redeveloped in 1970, with only one remaining residential structure at 155 West Avenue 34. The present-day structure at 153 West Avenue 34 is labeled General Manufacturing. There is a parking lot at 141 West Avenue 34. The present-day structure at 3401 Pasadena Avenue is labeled Sheet metal shop and woodworking (iron). The addresses 3415, 3417, and 3419 Pasadena Avenue are occupied by a structure comprised of a workshop, storage area, and machine shop. The present-day structure at 3433 Pasadena Avenue is depicted and labeled Metal Stamping. The 3437 Pasadena Avenue address is occupied by a parking lot. The six structures within the north, west, and central areas of the property addressed 169 West Avenue 34 are generally unchanged from 1951, but occupied by ITT Cannon Electronics Inc. in 1970, and the buildings are used for offices, electronics manufacturing, and manufacturing assembly plating & shipping. There remaining areas of the property are occupied by parking lots accessible by West Avenue 34 to the south, and the previously described alley traversing the property from north to south.
	Adjoining Properties	The north adjoining property is occupied by Welch's Overall & Uniform Cleaning in 1970, and has expanded to include the previously residential structures to the east along Pasadena Avenue. The west adjoining property is generally vacant in 1970, with two small structures labeled storage and vac. The south adjoining properties are partially redeveloped to accommodate a parking lot addressed 152 West Avenue 34. The other properties south of the subject property appear generally unchanged from 1951. The east adjoining properties are generally unchanged from 1951, with the exception of the expansion of Hillside School to the east of the subject property, which includes additional areas for classroom space south and west of the original building in 1970.

The north adjoining property addressed 3505 Pasadena Avenue was listed under Welch's Industrial Uniforms, a laundering business, for the years 1924 through 2010, and is further discussed in Section 6.0 of this report.

No other environmental concerns were noted on the subject property or surrounding sites.

4.3 Property Tax File

Based on a review of the Los Angeles County Tax Assessor's parcel information system, the subject property APNs and legal descriptions are summarized as follows:

Address	APN	No. of Buildings	Legal Description
135 and 141 West Avenue 34	5205-004-011	1	LOT COM AT MOST N COR OF LOT 2 TR NO 23801 TH SE ON NE LINE OF SD LOT 326.55 FT TH S 14¢21'15" W 140.01 FT TH S 9¢ 45'05" W 48.51 FT TH S AND FOLLOWING BDRY LINE OF SD LOT TO W LINE OF LOT 61 WHITTAKER RICHARDSON AND ERNEST SUB OF LOTS 2 AND 3 GRIFFIN TR TH S ON SD W LINE TO NE LINE OF AVE 34 TH NW THEREON TO SE LINE OF L A AND S L R R R/W TH NE THEREON TO BEG LOT 62 AND POR OF LOTS 64 AND 65 WHITTAKER RICHARD- SON AND ERNEST SUB OF LOTS 2 AND 3 GRIFFIN TR AND *POR OF LOT 2 TR NO 23801

The property is classified as *industrial* in nature.

4.4 Recorded Land Title Records

Title records were not provided to FR for review.

4.5 USGS 7.5 Minute Topographic Maps

FR reviewed historical USGS 7.5 Minute Topographic Maps supplied by EDR. A summary of historical USGS 7.5 Minute Topographic Maps researched is listed below.

Property Topographic Quadrangle: Los Angeles, California

Dates	Description
1894, 1896, 1900	The subject property is depicted as partially developed with small residential structures along the eastern and southern portions of the property. The central, north, and west areas of the subject property are undeveloped, and there is a small depression near the northeast boundary of the subject property. The present-day railroad corridor is depicted along the western boundary of the subject property, and is within the Arroyo Seco according to the map. Pasadena Avenue and West Avenue 34 are present, and the adjoining properties to the south and east are developed. Areas north of the subject property are undeveloped and labeled Arroyo Seco. The region is identified as East Los Angeles.
1926, 1928	There are new industrial structures depicted on the subject property, and a small closed depression is also depicted near the northeast boundary of the subject property, likely related to the sand and gravel company operations identified in the 1920 Sanborn Map. The east and south portions of the subject property appear developed with a mixture of residential and industrial/commercial structures. Beyond the subject property are new industrial structures to the north, and additional residential developments to the south, and the surrounding area appears further developed in 1926.
1953,1966, 1972, 1981, 1994, 2012	The subject property and adjoining properties are within red shaded areas indicating urban developed areas of Los Angeles. The Arroyo Seco is depicted as an engineered canal, and Pasadena Freeway (Route 66) is present further to the north/west of the subject property.

No environmental concerns were noted on the subject property or surrounding sites.

4.6 Historical City Directory Listings

FR reviewed historical city directory listings provided by EDR for the years 1920 to 2014 for the subject property.

Date Range	**Description**
1990	COVA IGNACIO AUTO REPRNG
2000	XXXX

The north adjoining property addressed 3505 Pasadena Avenue was listed under Welch's Industrial Uniforms, a laundering business, for the years 1924 through 2010, and is further discussed in Section 6.0 of this report.

No other environmental concerns were noted on the subject property or adjoining properties.

4.7 Building Department Records

FR visited the City of Los Angeles Building and Safety Department on June 27, 2019 and researched historical building records for the subject property. A summary of historical building department records is provided in the table below.

Subject Property Building Records, Pasadena Avenue Addresses		
Years	**Address**	**Description**
1905	3433 Pasadena Avenue APN 5205-004-007	Building Permit
1906	135 and 141 West Avenue 34 APN 5205-004-011	Building Permit – Bldg New (4)
1906	3433 Pasadena Avenue APN 5205-004-007	Building Permit – Bldg New
1910	3411 Pasadena Avenue	Application for Erection of Frame Building
1911	3433 Pasadena Avenue APN 5205-004-007	Building Permit – Bldg – Alter / Repair
1912	3433 Pasadena Avenue APN 5205-004-007	Building Permit – Bldg – Alter / Repair
1914	135 and 141 West Avenue 34 APN 5205-004-011	Building Permit – Bldg – Alter / Repair

Subject Property Building Records, Pasadena Avenue Addresses		
Years	**Address**	**Description**
1916	135 and 141 West Avenue 34 APN 5205-004-011	Building Permit – Bldg – Alter / Repair
1916	135 and 141 West Avenue 34 APN 5205-004-011	Building Permit – Bldg New
1925	135 and 141 West Avenue 34 APN 5205-004-011	Building Permit – Bldg New
1928	135 and 141 West Avenue 34 APN 5205-004-011	Building Permit
1929	135 and 141 West Avenue 34 APN 5205-004-011	Building Permit
1931	3419 Pasadena Avenue	Disclosure of Ownership of property since 1919 by Sophia Cubbison
1937	3433 Pasadena Avenue APN 5205-004-007	Building Permit – Bldg New
1951	3433 Pasadena Avenue APN 5205-004-007	Building Permit – Bldg – Alter / Repair
1953	135 and 141 West Avenue 34 APN 5205-004-011	Building Permit – Bldg – Alter / Repair
1953	135 and 141 West Avenue 34 APN 5205-004-011	Building Permit – Bldg New
1955	3411 Pasadena Avenue	Certificate of Occupancy, Cubbisons Bakery
1955	135 and 141 West Avenue 34 APN 5205-004-011	Building Permit – Bldg – Alter / Repair (2)
1956	3433 Pasadena Avenue APN 5205-004-007	Building Permit – Bldg – Alter / Repair
1956	135 and 141 West Avenue 34 APN 5205-004-011	Building Permit – Bldg – Alter / Repair (5)
1956	135 and 141 West Avenue 34 APN 5205-004-011	Building Permit – Bldg New
1957	135 and 141 West Avenue 34 APN 5205-004-011	Building Permit – Bldg – Alter / Repair
1961	135 and 141 West Avenue 34 APN 5205-004-011	Building Permit – Bldg – Alter / Repair
1967	3433 Pasadena Avenue APN 5205-004-007	Building Permit - Grading
1967	3433 Pasadena Avenue APN 5205-004-007	Building Permit – Grading – Bldg Addition
1967	3433 Pasadena Avenue APN 5205-004-007	Building Permit – New Construction
1967	3419 Pasadena Avenue	Termination of Covenant and Agreement because building code no longer requires an Exit Court Agreement
1967	3419 Pasadena Avenue	Termination of Covenant and Agreement because the property has been rezoned from C-3 to M-1 and loading space is not required

Subject Property Building Records, Pasadena Avenue Addresses		
Years	**Address**	**Description**
1967	3433 Pasadena Avenue APN 5205-004-007	Grading – Department Letter
1967	3433 Pasadena Avenue APN 5205-004-007	Grading – Compaction File (4)
1968	3433 Pasadena Avenue APN 5205-004-007	Certificate of Occupancy
1974	3433 Pasadena Avenue APN 5205-004-007	Building Permit – Bldg Addition
1974	3433 Pasadena Avenue APN 5205-004-007	Commission – BAAB Board File
1974	135 and 141 West Avenue 34 APN 5205-004-011	Affidavit – Oversized Building (3)
1974	135 and 141 West Avenue 34 APN 5205-004-011	Building Permit – Bldg Demolition (6)
1977	135 and 141 West Avenue 34 APN 5205-004-011	Building Permit – Grading (2)
1977	135 and 141 West Avenue 34 APN 5205-004-011	Building Permit – Bldg Demolition
1977	135 and 141 West Avenue 34 APN 5205-004-011	Building Permit – New Construction (2)
1977	135 and 141 West Avenue 34 APN 5205-004-011	Affidavit – Oversized Building (2)
1977	135 and 141 West Avenue 34 APN 5205-004-011	Plan Maintenance
1978	135 and 141 West Avenue 34 APN 5205-004-011	Certificate of Occupancy (2)
1978	135 and 141 West Avenue 34 APN 5205-004-011	Certificate of Occupancy - Temp
1978	135 and 141 West Avenue 34 APN 5205-004-011	Affidavit – Oversized Building
1979	135 and 141 West Avenue 34 APN 5205-004-011	Grading – Grading Certificate
1997	135 and 141 West Avenue 34 APN 5205-004-011	Building Permit – Alteration
1997	135 and 141 West Avenue 34 APN 5205-004-011	Building Permit – Bldg – Alter / Repair
2002	3433 Pasadena Avenue APN 5205-004-007	Range File – Miscellaneous
2003	3433 Pasadena Avenue APN 5205-004-007	Range File – Miscellaneous
2012	135 and 141 West Avenue 34 APN 5205-004-011	Building Permit – Bldg – Alter / Repair
2012	135 and 141 West Avenue 34 APN 5205-004-011	Mechanical Permit - HVAC

4.8 Zoning/Land Use Records

FR visited the City of Los Angeles Department of City Planning and researched additional zoning/land use records for the subject property addresses. Based on a review of the zoning map, the subject property is zoned for *commercial manufacturing* use.

4.9 Previous Reports

FR was provided with previous reports pertaining to the subject property (135, 141, and 153 West Avenue 34 and 3401 and 3433 Pasadena Avenue in Los Angeles, CA). The previous reports are summarized below:

Phase I Environmental Site Assessment – 135, 141 and 153 West Avenue 34 and 3401 and 3433 Pasadena Avenue, Los Angeles, California 90031, prepared by Orswell & Kasman, Inc, September 28, 2012.

A Phase I ESA was conducted at the subject property by Orswell & Kasman, Inc (OKI) at the request of Mr. Robert Gonzales in September 2012. The Phase I ESA consisted of public records and historical document review, regulatory agency research, site reconnaissance, and interviews. The report identified the following remarks:

1) *The subject property is occupied by multiple tenants. The 3433 Pasadena Avenue building is currently occupied by Warner Brothers Studios, a prop and set design business. The business stores and uses large quantities of water-based paint, and waste paint is generated by the*

business activities. The hazardous materials and hazardous wastes appear to be properly stored and managed and no significant spills or leaks were observed on the premises; and

2) *Eleven offsite locations have been identified as potential risks or threats to the subject property. According to the data, ten of the sites are not located in the near vicinity, and there is no indication that contaminants from these sites have migrated onto the subject property.*

   The former Welch's Uniform Facility site (#5 on map), 3505 Pasadena Avenue, is located on the adjacent property to the north, and the business is identified by State of California Environmental Protection Agency (CAL-EPA) Department of Toxic Substances Control (DTSC) as an active hazardous waste site. According to the DTSC CalSite database records, the site was previously occupied by Welch's Uniform and the property was used as a laundry and uniform rental facility over a 70 year period. Environmental studies indicate the soil and groundwater beneath the facility is contaminated with volatile organic compounds including trichloroethene (TCE). In addition, the former Welch's Uniform Rental site is identified by the State of California Regional Water Quality Control Board (RWQCB) as having two open RWQCB Cleanup Program sites. The first case was first opened in December 1987. According to the RWQCB records, the groundwater was contaminated with non-petroleum hydrocarbons, and the site is undergoing verification monitoring. The second case was opened in December 1998 and the site is undergoing an assessment.

   A review of the City of Los Angeles Fire Department (LAFD) records revealed Welch's Uniform applied for a permit to remove a 2,000-gallon underground diesel fuel tank in 1987. Soil sampling beneath the tank revealed significant Total Petroleum Hydrocarbon as gasoline (TPH-g) contamination (8,600 ppm). The groundwater beneath the site was determined to be about 35 feet below the ground surface, and the groundwater flows away from the subject property in a west-northwest direction. In February 1988, Welch's Uniform applied for a permit to abandon five underground ·storage tanks in-place, and in December 1988, Welch's Uniform applied for a permit to remove five additional underground storage tanks. In May 2004, Welch's Uniform applied for a permit to remove one additional 1,000-gallon underground storage tank. Soil sampling beneath the tank did not detect any contamination problems, and on October 26, 2004, the DPW/UGT issued a no further action letter for the closure of the 1,000-gallon underground tank. An inspection of the property revealed the site is currently a vacant lot, and remedial activities were being conducted on the site.

   Should it be determined the groundwater beneath the subject property has in fact been impacted by the Former Welch's Uniform Rental site, it is the policy of the State of California and the United States Environmental Protection Agency not to hold property owners responsible for costs to clean up contaminated groundwater beneath their property, unless the owners contributed to the problem. There is no indication from a review of the regulatory records and a site inspection that the subject property has had any problems concerning the storage, usage or disposal of hazardous materials, and it appears the former Welch's Uniform Rental site is in the process of addressing the contamination problem.

Our review of regulatory and historical records, a visual inspection of the site and surrounding area, and interviews with the property owner and the safety manager for Warner Brothers Studios has found no evidence of other recognized environmental conditions or historical recognized environmental conditions which are likely to impact the subject property. Although data failure occurred in the historical uses of the Property prior to 1906, it is unlikely the data failure will impact the ability to identify recognized environmental conditions. Based on the results of this assessment, no further environmental studies are recommended for the site.

Phase I Environmental Site Assessment – 135, 141 and 153 West Avenue 34 and 3401 and 3433 Pasadena Avenue, Los Angeles, California 90031, prepared by Orswell & Kasman, Inc, April 28, 2015.

A Phase I ESA Update Report was conducted at the subject property by OKI at the request of Mr. Andy Meyers in April 2015. The Phase I ESA consisted of S site reconnaissance, interviews, government records review, public records and historic document review, and summary of previous environmental report. The update report concludes that, *based on the results of this assessment, no further environmental studies are recommended for the site.*

4.10 Other Historical Records

No additional historical records were obtainable for the subject property.

4.11 Historical Summary

Based on a review of available historical records, the north, west, and central areas of the subject property were vacant, and the east and west areas were developed with private residential structures by as early as 1894. Most of these residential properties persisted until 1964 with few exceptions, including the subject property warehouse building addressed 153 West Avenue 34 (constructed in 1929) along the southern boundary of the site, and the subject property warehouse buildings addressed 3401 Pasadena Avenue (constructed in 1925) and 3433 Pasadena Avenue (constructed in 1967) along the eastern boundary of the site. A railroad corridor has been historically present along the western boundary since at least 1894, and is still currently in use. A bakery occupied the southeast corner of the property (original occupant of the 3401 Pasadena Avenue building) from 1919 until at least 1951, and was redeveloped as a machine and woodworking shop in 1970.

The historic industrial areas of the subject property have a more complicated history, and are discussed here as the “historic industrial areas”. These areas include the north, west, and central parts of the site. The historic industrial areas were vacant and undeveloped in 1894 until at least 1906. By 1920, these areas were developed and occupied by the Los Angeles Sand & Gravel Company, which occupied the property until at least 1928, and terminated by 1938, at which time the historic industrial areas of the subject property consisted of vacant land. By 1948, these areas were redeveloped with six industrial structures, occupied by Steel Framing & Building Corporation in 1951, and ITT Cannon Electronics Inc. from at 1964-1970. The historic industrial areas were demolished and consisted of vacant and graded land in the 1977 aerial photograph, and the subject property buildings addressed 135 and 141 West

Avenue 34 were constructed in 1977 according to building department files and tax assessor records, and was occupied by American Caster Corp from 1977 until the property was purchased by the current owner, Mr. Eric Ortiz, in 1999. Historic site operations by ITT Cannon Electronics are not considered an environmental concern due to the relatively short time-period of occupancy (6 years), and because the site was graded and reworked in association with the current on-site development, which would have dissipated potential concentrations of constituents of concern in soil potentially associated with the former site operations. The subject property has been primarily occupied by Ortiz Brothers Moving & Storage, with a variety of tenants between 1999 and present.

· 5.0 INTERVIEWS/USER INFORMATION ·

5.1 Interviews

Interviews were conducted and attempted with the following personnel listed below.

Personnel Interviewed	Brief Summary
User	Not interviewed
Property Owner	Mr. Eric Ortiz
Previous Owner	Not interviewed
Tenant/Occupant	Not interviewed
Manager	Not Interviewed
Buyer	Not interviewed
Adjoining Property Owner	Not interviewed
Broker	Not interviewed
Government Officials	Not interviewed

Mr. Eric Ortiz, the subject property owner, stated that he had no information pertaining to any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property; any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the subject property; or any notices from a governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

5.2 User Information

5.2.1 Environmental liens and/or Activity and Use Limitations (AULs)

AULs include both legal (institutional) and physical (engineering) controls. Agencies, organizations, and jurisdictions may define or utilize these terms differently.

No AULs were identified during this investigation.

No environmental liens were identified during this investigation.

5.2.2 Specialized Knowledge

No knowledge of recognized environmental conditions or historical recognized environmental concerns was provided by the user.

5.2.3 Valuation Reduction for Environmental Issues

No information was provided by the user that indicated the subject property was being sold or valued lower due to outstanding environmental issues.

5.2.4 Commonly Known or *Reasonably Ascertainable* Information

The user has not provided or is unaware of any commonly known or reasonably ascertainable information for the subject property.

5.2.5 Other User Provided Information

No other user provided information was obtainable or provided.

· 6.0 GOVERNMENT DATABASE SECTION ·

6.1 Environmental Database Summary

As part of the Phase I Environmental Assessment, FR utilized Environmental Data Resources, Inc. (EDR) of Shelton, Connecticut, as an information source for regulatory agency environmental database records. The environmental database report was dated June 24, 2019.

An attempt to locate listed Orphan Sites (facilities that could not be mapped or geocoded due to inadequate address information) within an area or radii of concern to the subject property was attempted by FR. These attempts consisted of a street review, a drive-by view of orphan site, and/or evaluating site type given information provided by government agencies.

A copy of the radius report is included in the appendices.

Proprietary Database Listings (Subject & Adjoining Properties)	
	Subject/Adjoining Properties
EDR Historical Auto Stations	Not listed
EDR Historical Cleaners	**1 Record**

The subject property addresses were identified in the EDR database report, summarized as follows:

- **135 West Avenue 34** (Map ID A5, 7, 10, 11, 13, 18, 19, 22, 23, 25, 27, 28, 31, 35) – this subject property address was identified in the HAZNET (12), RCRA NonGen/NLR, FINDS, and ECHO databases under the following operator names: Jardinero Productions, Birddog, Warner Bros., All About Steve Movie, Soul Productions LLC Ortiz Brothers Moving, Step Up 3D, Love & Basketball, Nurse Betty Productions, 20th Century Fox, and Olivers Arrow Movie.

  Ten of the HAZNET listings are associated with the disposal of wastes generated during film production, including very small quantities of various paints, latex gloves, fuel blends, and other organic solids (1999-2016); the remaining two HAZNET listings are associated with Ortiz Brothers Moving, including the disposal of waste oil and hydrocarbons (1997-1998).

The RCRA NonGen/NLR listing, FINDS, and ECHO listings refer to the All About Steve Movie Site (2007), a former generator of hazardous ignitable waste from photographic film. There are no reported spills, releases, or violations associated with the 135 West Avenue 34 address. Based on the available information, the listings do not represent a significant environmental concern.

- **141 West Avenue 34** (Map ID A2, 4, 6, 15, 24, 26, 29, 32, 36, 38) – this subject property address was identified in the HAZNET (8), RCRA-SQG, FINDS, ECHO, EMI, HAZMAT, and CERS databases. The listings are associate with the following operator names: Touchstone Pictures, American Caster Corp, Tomcats, Five Continent Imports LLC, Lie To Me, ABC Signatures Studio, Battle of the Sexes, and Dreamworks Productions.

  Seven of the HAZNET listings are associated with the disposal of wastes generated during film production, including very small quantities of various paints, latex gloves, fuel blends, and other organic solids (1997-2017); and the other HAZNET listing is associated with American Caster Corp for the disposal of other organic solids, hydrocarbons, oil-containing waste, and paint sludge (1987-1996).

  The RCRA-SQG refers to American Caster Corp operations on the property in 1987 (specific type of waste not specified). American Caster Corp was also identified under a historic address, 157 West Avenue 34, in the HAZMAT database.

  The ECHO, EMI, and CERS listings refer to regulated air emissions at American Caster Corp, and indicate that the property was classified as a hazardous air pollutant (major). The listed site operations include hardware manufacturing, other metal valve and pipe fitting manufacturing, and ball and roller bearing manufacturing. There are no reported spills, releases, or violations associated with the 141 West Avenue 34 address. Based on the available information, the listings do not represent a significant environmental concern.

- **153 West Avenue 34** (Map ID A1) – this subject property address was identified under the operator name William Pile Enterprises and was identified in the HAZMAT database with a listing dated January 2019. The HAZMAT database is a list of facility and manifest data compiled by DTSC. No further information was provided by the listing. There are no reported spills or violations associated with the 153 West Avenue 34 address. Based on the available information, the listings do not represent a significant environmental concern.

- **3401 Pasadena Avenue** (Map ID A3, 14, 21, 30) – this subject property address was identified in the HAZNET (3) and EMI databases under the operator names 20th Century Fox, E D 1125 Inc, Elastic Coatings Org, and Bob Baker Production.

  Two of the HAZNET listings are associated with the disposal of wastes generated during film production, including very small quantities of various paints, latex gloves, fuel blends, waste oil, and other organic solids (2006-2007); and the other HAZNET listing is related to Elastic Coatings Organization for the disposal of unspecified solvent mixtures, pesticides, and alkaline solution without metals pH > 12.5 (1993).

The EMI listing refers to air emissions (total organic hydrocarbons and reactive organic gases) associated with Bob Baker Productions, a film production company (1990). There are no reported spills, releases, or violations associated with the 3401 Pasadena Avenue address. Based on the available information, the listings do not represent a significant environmental concern.

- **3433 Pasadena Avenue** (Map ID A8, 9, 12, 16, 17, 20, 33, 34, 37) – this subject property address was identified in the HAZNET (8), FINDS, ECHO, and RCRA NonGen/NLR databases under the operator names Gone Girl, Moneyball, Informant Productions, End of Watch LLC, Warner Bros. Hangover 3, Hotel for Dogs, and Fox Gone Girl.

  All of the HAZNET listings are associated with the disposal of wastes generated during film production, including very small quantities of various paints, latex gloves, fuel blends, and other organic solids (2008-2014). The RCRA NonGen/NLR, FINDS, and ECHO listings refer to operations associated with filming the Warner Bros Hangover 3 movie (2010-2012), a former generator of the following hazardous waste: ignitable waste; methyl ethyl ketone; and non-halogenated solvents. There are no reported spills, releases, or violations associated with the 135 West Avenue 34 address. Based on the available information, the listings do not represent a significant environmental concern.

· SUMMARY OF LISTINGS ·

National Priorities List (NPL) Facilities

The NPL, also known as the Superfund List, is an EPA listing of the nation's worst uncontrolled or abandoned hazardous waste facilities. Designation as a Superfund Site is primarily based on a score that the facility receives from the EPA's Hazard Ranking System. These facilities are targeted for possible long-term remedial action. Such prioritized sites with significant risk to human health and the environment receive remedial funding under the Comprehensive Environmental Response Conservation and Liability Act (CERCLA). The NPL is compiled by EPA pursuant to CERCLA, 42 U.S.C.§9605(a)(8)(B). (*http://www.epa.gov/superfund/sites/npl/npl.htm*).

No NPL sites were identified within the specified radius from the subject property.

Federal Delisted NPL List

Federal Delisted NPL List consists of sites that no longer require further response actions as determined by the EPA.

No Federal Delisted NPL List sites were identified within the specified radius from the subject property.

SEMS (Superfund Enterprise Management System) List

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Two SEMS List sites were identified within the specified radius from the subject property.

- **3209 East Humboldt Street (**Map ID I74-78) – this property is located approximately 600 feet south of the subject property, and was identified under the operator ITT Cannon / Kennington. The site is listed in the following databases from the report: HAZMAT, UST, RCRA-SQG, FINDS, SEMS, ENVIROSTOR, VCP, SWEEPS UST, CA FID UST, DEED, HIST CORTESE, CPS-SLIC, LA Co. Mitigation, and CERS.

  The SEMS, ENVIROSTOR, VCP, HIST CORTESE, FINDS, CPS-SLIC, and LA Co. Mitigation listings indicate that the property is a Superfund site with environmental investigations dating back to 1990, due to battery and electronics manufacturing on the property, including lead, PCBs, tetrachloroethene (PCE), and trichloroethene (TCE). The site was enrolled in the Voluntary Cleanup Program (VCP) in 1993, and remedial activities to date have included the excavation of soil approximately 46 feet below ground surface with off-site disposal of 18,000 cubic yards of contaminated soil. The site is still being actively monitored by the DTSC Site Cleanup Program. The DEED listing refers to land-use restrictions imposed on the site as part of the VCP agreement.

  The RCRA-SQG and HAZMAT listings indicate the property is a small quantity generator of hazardous waste, including polychlorinated biphenyls (PCBs) and lead (1998-2006). Based on separation distance and regulatory oversight of cleanup activities with active groundwater monitoring, this site does not represent a significant environmental concern to the subject property.

- **301 West Avenue 26** (Map ID S127-128) – this property is located approximately 1,700 feet southwest of the subject property and was identified under the operator names Jaybee and Ajax Manufacturing. The site is listed in the ENVIROSTOR, VCP, EMI, and SEMS databases. The listings indicate the property was discovered as contaminated in 1994, with a discovery date of 2000. The site was listed as a Superfund site in 2002. The contaminants of concern include lead, PAHs, PCE, diesel fuel, TCE, and other volatile organic compounds associated with former manufacturing operations at the site, and the site is currently active in the VCP. Based on separation distance and regulatory oversight of cleanup activities with active groundwater monitoring, this site does not represent a significant environmental concern to the subject property.

SEMS-ARCHIVE List

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Two SEMS-ARCHIVE List sites were identified within the specified radius from the subject property.

- **3011 Humboldt Street** (Map ID N119) – this site was identified under the operator name NI West Incorporated and is located approximately 1,125 feet south of the subject property. The site is listed in the SEMS-ARCHIVE database. The listing indicates that the site was discovered in 1993 and investigated in 2003. The site was determined to not be included in the NPL with an archived date of 2005. Based on separation distance and the available information, this site does not represent a significant environmental concern to the subject property.

- **241 Avenue 26** (Map ID 136, 145) – this site was identified under the operator name Baron Manufacturing and is located approximately 1,800 feet southwest of the subject property. The site is listed in the ENVIROSTOR and SEMS ARCHIVE databases. The listings indicate the site was discovered in 1983 and investigated in 1984 and 1994 due to steel and sheet metal fabrication. The contaminants of concern include unspecified solvent mixtures. No further information was provided by the listings. Based on separation distance and regulatory oversight of cleanup activities with active groundwater monitoring, this site does not represent a significant environmental concern to the subject property. Based on separation distance and regulatory oversight, this site not represent a significant environmental concern to the subject property.

RCRA CORRACTS List

RCRA CORRACTS List is an EPA-maintained database of Resource Conservation and Recovery Act (RCRA) facilities undergoing "corrective action". A "corrective action order" is issued when there has been a release of hazardous waste or constituents into the environment from a RCRA facility. Corrective actions may be required beyond the facility's boundary and can be required regardless of when the release occurred, even if it predates RCRA.

No RCRA CORRACTS List sites were identified within the specified radius from the subject property. .

RCRA TSDF List

RCRA TSDF List are sites that generate, transport, store, treat, and/or dispose of hazardous waste and are required to register their hazardous waste activity under the Resource Conservation and Recovery Act (RCRA). The list includes small- and large-quantity operators and handler violations.

No RCRA TSDF List sites were identified within the specified radius from the subject property.

RCRA Generators List (Small Quantity and Large Quantity)

RCRA hazardous waste generators are identified as Large Quantity Generators (LQGs), Small Quantity Generators (SQGs), or Conditionally Exempt Small Quantity Generators (CESQGs). RCRA LQGs are identified as those facilities, which generate at least 1,000 kilograms (2,200 pounds) of non-acutely hazardous waste (or 1 kilogram of acutely hazardous waste) in any calendar month. RCRA SQGs are identified as those facilities that generate less than 1,000 kilograms of non-acutely hazardous waste in any calendar month.

The subject property address, 141 West Avenue 34, was identified on the RCRA Generator database

- **141 West Avenue 34** (Map ID A2, 4, 6, 15, 24, 26, 29, 32, 36, 38) – this subject property address was identified in the HAZNET (8), RCRA-SQG, FINDS, ECHO, EMI, HAZMAT, and CERS databases. The listings are associate with the following operator names: Touchstone Pictures, American Caster Corp, Tomcats, Five Continent Imports LLC, Lie To Me, ABC Signatures Studio, Battle of the Sexes, and Dreamworks Productions.

  Seven of the HAZNET listings are associated with the disposal of wastes generated during film production, including very small quantities of various paints, latex gloves, fuel blends, and other organic solids (1997-2017); and the other HAZNET listing is associated with American Caster Corp for the disposal of other organic solids, hydrocarbons, oil-containing waste, and paint sludge (1987-1996).

  The RCRA-SQG refers to American Caster Corp operations on the property in 1987 (specific type of waste not specified). American Caster Corp was also identified under a historic address, 157 West Avenue 34, in the HAZMAT database.

  The ECHO, EMI, and CERS listings refer to regulated air emissions at American Caster Corp, and indicate that the property was classified as a hazardous air pollutant (major). The listed site operations include hardware manufacturing, other metal valve and pipe fitting manufacturing, and ball and roller bearing manufacturing. There are no reported spills, releases, or violations associated with the 141 West Avenue 34 address. Based on the available information, the listings do not represent a significant environmental concern to the subject property.

Two of the neighboring or adjoining properties were identified on the RCRA Generator database.

- **3505 Pasadena Avenue** (Map ID B41-47) – this site was identified under the operator name Former Welch's Uniform Services and is located adjacent to and north of the subject property. The site is listed in the following databases from the report: UST (2), RCRA-LQG, ENVIROSTOR, LUST, CPS-SLIC (2), VCP, SWEEPS UST, HIST UST, CA FID UST, FINDS, ECHO, EMI, HIST CORTESE, CERS, DRYCLEANERS, HAZMAT, and EDR Hist Cleaner.

  The ENVIROSTOR, VCP, and CPS-SLIC (2) listings indicate the site was enrolled in the VCP in 2007 after being transferred to DTSC in 2006. Groundwater beneath the property is being actively monitored, and, according to a 2016 groundwater monitoring report, groundwater concentrations of the contaminants of concern are highest near the center of the site, and the plume appears to be migrating west and then south along the railroad corridor ROW along the western boundary of the subject property. The site is being actively remediated via soil vapor extraction and under the supervision of DTSC. The most recent (2016) groundwater monitoring report indicates that groundwater concentrations have approached cleanup levels at the subject property boundary. It is expected that the concentrations have continued to decline in the last 3 years since the most recent report as remedial activities continue.

  The UST (2), HIST UST, CA FID UST, SWEEPS UST, CERS, and LUST listings indicate that there were former historic USTs containing diesel fuel, gasoline, waste oil, and "product unknown on the site, but none are currently active. The LUST listing refers to a release reported in 1987 (product not specified). The EMI listing refers to South coast Air Quality Management District (SCAQMD) air emissions regulation at the property, including total organic hydrocarbon gases and reactive organic gases. The RCRA-LQG, HAZMAT, and EDR Hist Cleaners listings indicate that the facility was a drycleaner and a historical large-quantity generator of hazardous waste, specifically chlorinate solvents (1924-1987).

  Based on regulatory oversight and on-going SVE remediation with semi-annual groundwater monitoring, and the most recent (2016) analytical data available, this site does not represent a significant environmental concern to the subject property.

- **120 East Avenue 35** (Map ID F65-66) – this site was identified under the operator name Hillside Elementary and is located adjacent to and east of the subject property. The site is listed in the HAZMAT, RCRA-SQG, FINDS, and ECHO databases. The listings indicate that the property is a small-quantity generator of hazardous waste. There are no reported spills, releases, or violations associated with the property. No further information is provided by the listings. Based on the available information, this site does not represent a significant concern to the subject property.

US Engineering Controls

This is a listing of sites with engineering controls in place to control on-site contamination. Engineering controls may include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

The subject property was not identified on the US Engineering Control sites database.

US Institutional Controls

This is a listing of sites with institutional controls in place to control on-site contamination. Institutional controls may include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

The subject property was not identified on the US Institutional Control sites database.

Emergency Response Notification System (ERNS)

ERNS is a national database used to collect information on reported releases of petroleum products or hazardous substances. The database contains information from spill reports made to federal authorities including the EPA, the U.S. Coast Guard, the National Response Center and the U.S. Department of Transportation. The program is a cooperative effort of the EPA, the Department of Transportation Research and Special Program Administration's National Transportation System Center, and the National Response Center. There are five primary Federal statutes that require release reporting: CERCLA Section 103; the Superfund Amendments and Reauthorization Act (SARA) Title III Section 304; the Clean Water Act of 1972 (CWA) Section 311(b) (3); and the Hazardous Material Transportation Act of 1974 (HMTA) Section 1808 (b).

The subject property was not identified on the ERNS database.

State/Tribal NPL (Response)

Response sites identify confirmed release sites where the California Department of Toxic Substances Control (DTSC) is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

No State/Tribal NPL sites were identified within the specified radius from the subject property.

State/Tribal CERCLIS (Envirostor and Historical Cal-Sites)

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) Envirostor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response (RESPONSE), including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. Envirostor provides similar information to the information that was available in Cal-Sites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land

uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Ten-Nine State/Tribal CERCLIS sites were identified within the specified radius from the subject property. Due to the volume of sites, only the three sites within 1,000 feet of the subject property are further discussed.

- **3505 Pasadena Avenue** (Map ID B41-47) – this site was identified under the operator name Former Welch's Uniform Services and is located adjacent to and north of the subject property. The site is listed in the following databases from the report: UST (2), RCRA-LQG, ENVIROSTOR, LUST, CPS-SLIC (2), VCP, SWEEPS UST, HIST UST, CA FID UST, FINDS, ECHO, EMI, HIST CORTESE, CERS, DRYCLEANERS, HAZMAT, and EDR Hist Cleaner. The site was previously described in the RCRA generators sub-section above. Based on regulatory oversight and on-going SVE remediation with semi-annual groundwater monitoring, and the most recent (2016) analytical data available, this site does not represent a significant concern to the subject property.

- **3408 Arroyo Seco Avenue** (Map ID K83-86) – this site was identified under the operator name Los Angeles USD Loreto Elem School and is located approximately 415 feet northwest of the subject property. The site is listed in the RCRA-SQG, FINDS, ECHO, ENVIROSTOR, SCH, UST, and HAZMAT databases. The listings indicate the facility was a small-quantity generator of hazardous waste. The ENVIROSTOR listing refers to an investigation conducted in 2006 and the status is listed as closed and withdrawn with no contaminants found. There are no reported spills, releases, or violations associated with the property. No further information is provided by the listings. Based on the available information, this site does not represent a significant concern to the subject property.

- **3209 East Humboldt Street (**Map ID I74-78) – this property is located approximately 600 feet south of the subject property, and was identified under the operator ITT Cannon / Kennington. The site is listed in the following databases from the report: HAZMAT, UST, RCRA-SQG, FINDS, SEMS, ENVIROSTOR, VCP, SWEEPS UST, CA FID UST, DEED, HIST CORTESE, CPS-SLIC, LA Co. Mitigation, and CERS. The site was previously discussed in the SEMS database review section. Based on separation distance and regulatory oversight of cleanup activities with active groundwater monitoring, this site does not represent a significant environmental concern to the subject property.

Based on the relative distance from the subject property, down-gradient to cross-gradient hydraulic position, continued regulatory oversight, soil-only media impacted, lack of reported violations or releases, and/or current case-closed/NFA status, none of the listed sites are anticipated to represent a significant environmental concern to the subject property.

State/Tribal SWF/LF

State/Tribal Solid Waste Landfills (SWLF) typically contains an inventory of solid waste disposal facilities or landfills in a particular State. Depending on the State, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

One State/Tribal SWF/LF site with two listings was identified within the specified radius from the subject property.

- **400 West Avenue 26** (Map ID T129, 130, 133) – this site was identified under the operator name Lacy's Street Dump and is located approximately 1,700 feet southwest of the subject property. The site is listed in the WMUDS/SWAT, LDS, CERS (2), and SWF/LF (2) databases. The listings indicate that the property operated as a landfill in 1975 and is listed as currently closed. The site achieved regulatory closure status with DTSC in 2016. Based on separation distance and regulatory closure status, this site does not represent a significant environmental concern to the subject property.

State/Tribal LUST and CPS-SLIC

LUST Sites

Leaking Underground Storage Tanks (LUST) sites are a database of sites with confirmed or unconfirmed leaking underground storage tanks.

Seven LUST sites comprised of thirteen listings were identified within the specified radius from the subject property. Due to the volume of listings, only the four sites within 1,000 feet of the subject property are further discussed.

3505 Pasadena Avenue (Map ID B41-47) – this site was identified under the operator name Former Welch's Uniform Services and is located adjacent to and north of the subject property. The site is listed in the following databases from the report: UST (2), RCRA-LQG, ENVIROSTOR, LUST, CPS-SLIC (2), VCP, SWEEPS UST, HIST UST, CA FID UST, FINDS, ECHO, EMI, HIST CORTESE, CERS, DRYCLEANERS, HAZMAT, and EDR Hist Cleaner. The site was previously described in the RCRA generators sub-section above. Based on regulatory oversight and on-going SVE remediation with semi-annual groundwater monitoring, and the most recent (2016) analytical data available, this site does not represent a significant environmental concern to the subject property.

- **3225 Lacy Street** (Map ID H67-73) – this site was identified under the operator names Heath & Co, and Maintenance and Operations New Maintenance Company for the Los Angeles Unified School District. The site is located approximately 350 feet southwest of the subject property, and is listed in the following databases from the report: HIST UST, UST, SWEEPS UST, CA FID UST, RCRA-LQG, HAZMAT, LUST, FINDS, ECHO, HIST CORTESE, and CERS.

The UST, SWEEPS UST, CA FID UST, and LUST listings refer to a 7,500-gallon diesel fuel UST installed in 1964, and a 12,000-gallon gasoline UST installed in 1973. The tanks are listed as active in a 1993 SWEEPS UST listing. The LUST listing refers to a gasoline release reported in July 1995 during tank removal. The site achieved regulatory closure status in November 1995.

The RCRA-LQG, HAZMAT, FINDS, ECHO, HIST CORTESE, and CERS listings indicate the facility is a large-quantity generator of the following hazardous wastes: ignitable waste, corrosive waste, lead, and mercury. There are no reported violations associated with the property. Based on separation distance and site closure status, this site does not represent a significant environmental concern to the subject property.

- **3580 Pasadena Avenue** (Map ID J94-97) – this site was identified under the operator name Flavor Food Inc. and is located approximately 700 feet northeast of the subject property. The site is listed in the following databases from the report: SWEEPS UST, CA FID UST, LUST, HIST UST, HIST CORTESE, CERS, and UST.

  The UST listings refer to three 9,000-gallon gasoline USTs installed in and removed in 1986. The LUST listing refers to a gasoline release reported in October1986 during tank removal with regulatory closure status in November 1986. There are no reported violations associated with the property. Based on separation distance and site closure status, this site does not represent a significant environmental concern to the subject property.

- **3101 Artesian Street** (Map ID N98-104) – this site was identified under the operator names Lincoln Heights District and P D D Construction MTNC. The site is located approximately 730 feet southwest of the subject property, and is listed in the following databases from the report: SWEEPS UST, CA FID UST, UST (2), LUST (2), RCRA-SQG, FINDS, ECHO, HAZMAT, CERS HAZ WASTE, HIST UST (2), CERS TANKS, HIST CORTESE, and CERS.

  The UST listings refer to four active 5,000-gallon diesel fuel USTs on the property. The LUST listings refer to petroleum releases reported in 1991 with regulatory closure status in 1997.

  The CERS HAZWASTE and ECHO listings refer to the following violations: violations reported in 2016 due to failure to comply with one or more of the following, failure to property label hazardous waste accumulation containers, and a violation for failure to maintain uniform hazardous waste manifests for three years; : failure to install a spill bucket, have a functional drain valve or other method for the removal of liquid from the spill bucket/spill container, and/or be resistant to galvanic corrosion; violations reported in 2018 due to failure to submit a complete and accurate application for a permit to operate a UST, or for renewal of the permit, and a violation for failure to submit or maintain a current facility plot plan; a violation reported in 2017 due to the failure to maintain records of repairs, lining, and upgrades on site; and a violation in 2013 for failure to obtain and/or maintain an active hazardous waste generator permit. Refer to the database report for more information.

The RCRA-SQG, FINDS, HAZMAT, and CERS listings indicate the facility is a small-quantity generator of hazardous waste (1996). Based on separation distance from the subject property, this site does not represent a significant environmental concern to the subject property.

Based on the relative distance from the subject property, down-gradient to cross-gradient hydraulic position, continued regulatory oversight, soil-only media impacted, lack of reported violations or releases, and/or current case-closed/NFA status, none of the listed sites are anticipated to represent a significant environmental concern to the subject property.

CPS-SLIC Sites

Three CPS-SLIC sites comprised of four listings were identified within the specified radius from the subject property.

- **3505 Pasadena Avenue** (Map ID B41-47) – this site was identified under the operator name Former Welch's Uniform Services and is located adjacent to and north of the subject property. The site is listed in the following databases from the report: UST (2), RCRA-LQG, ENVIROSTOR, LUST, CPS-SLIC (2), VCP, SWEEPS UST, HIST UST, CA FID UST, FINDS, ECHO, EMI, HIST CORTESE, CERS, DRYCLEANERS, HAZMAT, and EDR Hist Cleaner. The site was previously described in the RCRA generators sub-section above. Based on regulatory oversight and on-going SVE remediation with semi-annual groundwater monitoring, and the most recent (2016) analytical data available, this site not represent a significant environmental concern to the subject property.

- **3209 East Humboldt Street (**Map ID I74-78) – this property is located approximately 600 feet south of the subject property, and was identified under the operator ITT Cannon / Kennington. The site is listed in the following databases from the report: HAZMAT, UST, RCRA-SQG, FINDS, SEMS, ENVIROSTOR, VCP, SWEEPS UST, CA FID UST, DEED, HIST CORTESE, CPS-SLIC, LA Co. Mitigation, and CERS. The site was previously discussed in the SEMS database review section. Based on separation distance and regulatory oversight of cleanup activities with active groundwater monitoring, this site does not represent a significant environmental concern to the subject property.

- **306-360 Avenue 26** (Map ID W137) – this property is located approximately 1,775 feet southwest of the subject property and was identified under the operator name The E B Malone Corp. The site is listed in the CPS-SLIC and CERS databases. There is also an orphan listing for the site in the CPS-SLIC database. The listings indicate that the site was enrolled in the DTSC Cleanup Program and was investigated for VOCs and chromium, and has achieved regulatory closure status as of April 2006. Based on the available information and separation distance, this site does not represent a significant environmental concern to the subject property.

Based on the relative distance from the subject property, down-gradient to cross-gradient hydraulic position, continued regulatory oversight, soil-only media impacted, lack of reported violations or

releases, and/or current case-closed/NFA status, none of the listed sites are anticipated to represent a significant environmental concern to the subject property.

State/Tribal UST (also AST, HIST UST, SWEEPS UST, and CA FID UST list)

State/Tribal Underground Storage Tanks (UST): This is a list of state registered underground storage tanks for the site area. Sites appearing on the UST list have not necessarily released hazardous substances into the environment nor do they necessarily pose environmental threat to surrounding properties. Since Federal and State UST regulations require periodic monitoring for UST leakage and immediate reporting of evidence of UST leakage, only those sites appearing on the Leaking Underground Storage Tanks (LUST) list are considered to have significant potential of environmental impact for the purposes of this Phase I.

The subject property was not identified on the Registered UST/AST database.

One of the adjoining properties was identified on the Registered UST/AST database.

- **3505 Pasadena Avenue** (Map ID B41-47) – this site was identified under the operator name Former Welch's Uniform Services and is located adjacent to and north of the subject property. The site is listed in the following databases from the report: UST (2), RCRA-LQG, ENVIROSTOR, LUST, CPS-SLIC (2), VCP, SWEEPS UST, HIST UST, CA FID UST, FINDS, ECHO, EMI, HIST CORTESE, CERS, DRYCLEANERS, HAZMAT, and EDR Hist Cleaner. The site was previously described in the RCRA generators sub-section above. Based on regulatory oversight and on-going SVE remediation with semi-annual groundwater monitoring, and the most recent (2016) analytical data available, this site does not represent a significant concern to the subject property.

SWEEPS UST: Statewide Environmental Evaluation and Planning System: This is an inactive underground storage tank database. It identifies underground storage tanks and was maintained by a contractor for the State Water Resources Control Board in the early 1980s. The listing is no longer updated or maintained.

The subject property was not identified on the SWEEPS UST database.

One of the adjoining properties was identified on the SWEEPS UST database.

- **3505 Pasadena Avenue** (Map ID B41-47) – this site was identified under the operator name Former Welch's Uniform Services and is located adjacent to and north of the subject property. The site is listed in the following databases from the report: UST (2), RCRA-LQG, ENVIROSTOR, LUST, CPS-SLIC (2), VCP, SWEEPS UST, HIST UST, CA FID UST, FINDS, ECHO, EMI, HIST CORTESE, CERS, DRYCLEANERS, HAZMAT, and EDR Hist Cleaner. The site was previously described in the RCRA generators sub-section above. Based on regulatory oversight and on-going SVE remediation with semi-annual groundwater monitoring, and the most recent (2016) analytical data available, this site does not represent a significant environmental concern to the subject property.

HIST UST: Historical Underground Storage Tank Registered Database: This is a listing of underground storage tanks that have been registered but have been removed or are no longer in service. Data on the HIST UST list was supplied by the State Water Resources Control Board.

The subject property was not identified on the Historical UST database.

One of the adjoining properties was identified on the Historical UST database.

- **3505 Pasadena Avenue** (Map ID B41-47) – this site was identified under the operator name Former Welch's Uniform Services and is located adjacent to and north of the subject property. The site is listed in the following databases from the report: UST (2), RCRA-LQG, ENVIROSTOR, LUST, CPS-SLIC (2), VCP, SWEEPS UST, HIST UST, CA FID UST, FINDS, ECHO, EMI, HIST CORTESE, CERS, DRYCLEANERS, HAZMAT, and EDR Hist Cleaner. The site was previously described in the RCRA generators sub-section above. Based on regulatory oversight and on-going SVE remediation with semi-annual groundwater monitoring, and the most recent (2016) analytical data available, this site does not represent a significant environmental concern to the subject property.

CA Facility Inventory Database (CA FID): This is a list of active and inactive underground storage tank sites. The database is maintained by the California Water Resources Control Board.

The subject property was not identified on the CA FID UST database.

One of the adjoining properties was identified on the CA FID UST database.

- **3505 Pasadena Avenue** (Map ID B41-47) – this site was identified under the operator name Former Welch's Uniform Services and is located adjacent to and north of the subject property. The site is listed in the following databases from the report: UST (2), RCRA-LQG, ENVIROSTOR, LUST, CPS-SLIC (2), VCP, SWEEPS UST, HIST UST, CA FID UST, FINDS, ECHO, EMI, HIST CORTESE, CERS, DRYCLEANERS, HAZMAT, and EDR Hist Cleaner. The site was previously described in the RCRA generators sub-section above. Based on regulatory oversight and on-going SVE remediation with semi-annual groundwater monitoring, and the most recent (2016) analytical data available, this site does not represent a significant environmental concern to the subject property.

State/Tribal VCP

The State Voluntary Cleanup Program list addresses the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

Three State/Tribal VCP sites were identified within the specified radius from the subject property.

- **3505 Pasadena Avenue** (Map ID B41-47) – this site was identified under the operator name Former Welch's Uniform Services and is located adjacent to and north of the subject property. The site is listed in the following databases from the report: UST (2), RCRA-LQG, ENVIROSTOR, LUST, CPS-SLIC (2), VCP, SWEEPS UST, HIST UST, CA FID UST, FINDS, ECHO, EMI, HIST CORTESE, CERS, DRYCLEANERS, HAZMAT, and EDR Hist Cleaner. The site was previously described in the RCRA generators sub-section above. Based on regulatory oversight and on-going SVE remediation with semi-annual groundwater monitoring, and the most recent (2016) analytical data available, this site does not represent a significant environmental concern to the subject property.

- **3209 East Humboldt Street (**Map ID I74-78) – this property is located approximately 600 feet south of the subject property, and was identified under the operator ITT Cannon / Kennington. The site is listed in the following databases from the report: HAZMAT, UST, RCRA-SQG, FINDS, SEMS, ENVIROSTOR, VCP, SWEEPS UST, CA FID UST, DEED, HIST CORTESE, CPS-SLIC, LA Co. Mitigation, and CERS. The site was previously discussed in the SEMS database review section. Based on separation distance and regulatory oversight of cleanup activities with active groundwater monitoring, this site does not represent a significant environmental concern to the subject property.

- **301 West Avenue 26** (Map ID S127-128) – this property is located approximately 1,700 feet southwest of the subject property and was identified under the operator names Jaybee and Ajax Manufacturing. The site is listed in the ENVIROSTOR, VCP, EMI, and SEMS databases. The listings indicate the property was discovered as contaminated in 1994, with a discovery date of 2000. The site was listed as a Superfund site in 2002. The contaminants of concern include lead, PAHs, PCE, diesel fuel, TCE, and other volatile organic compounds associated with former manufacturing operations at the site, and the site is currently active in the VCP. Based on separation distance and regulatory oversight of cleanup activities with active groundwater monitoring, this site does not represent a significant environmental concern to the subject property.

State/Tribal Brownfield Sites

No State/Tribal Brownfield Sites were identified within the specified radius from the subject property.

State/Tribal Institutional Control and Engineering Control

The State/Tribal Institutional Control and Engineering Control list consists of deed-restricted sites with environmental remediation associated with engineering or institutional controls.

The subject property was not listed on the State/Tribal Institutional Control and Engineering Control sites database.

Local Ascertainable Records in Database

The subject property addresses were identified in several of the local ascertainable records databases, summarized as follows:

- **135 West Avenue 34** (Map ID A5, 7, 10, 11, 13, 18, 19, 22, 23, 25, 27, 28, 31, 35) – this subject property address was identified in the HAZNET (12), RCRA NonGen/NLR, FINDS, and ECHO databases under the following operator names: Jardinero Productions, Birddog, Warner Bros., All About Steve Movie, Soul Productions LLC Ortiz Brothers Moving, Step Up 3D, Love & Basketball, Nurse Betty Productions, 20th Century Fox, and Olivers Arrow Movie.

  Ten of the HAZNET listings are associated with the disposal of wastes generated during film production, including very small quantities of various paints, latex gloves, fuel blends, and other organic solids (1999-2016); the remaining two HAZNET listings are associated with Ortiz Brothers Moving, including the disposal of waste oil and hydrocarbons (1997-1998).

  The RCRA NonGen/NLR listing, FINDS, and ECHO listings refer to the All About Steve Movie Site (2007), a former generator of hazardous ignitable waste from photographic film. There are no reported spills, releases, or violations associated with the 135 West Avenue 34 address. Based on the available information, the listings do not represent a significant environmental concern.

- **141 West Avenue 34** (Map ID A2, 4, 6, 15, 24, 26, 29, 32, 36, 38) – this subject property address was identified in the HAZNET (8), RCRA-SQG, FINDS, ECHO, EMI, HAZMAT, and CERS databases. The listings are associate with the following operator names: Touchstone Pictures, American Caster Corp, Tomcats, Five Continent Imports LLC, Lie To Me, ABC Signatures Studio, Battle of the Sexes, and Dreamworks Productions.

  Seven of the HAZNET listings are associated with the disposal of wastes generated during film production, including very small quantities of various paints, latex gloves, fuel blends, and other organic solids (1997-2017); and the other HAZNET listing is associated with American Caster Corp for the disposal of other organic solids, hydrocarbons, oil-containing waste, and paint sludge (1987-1996).

  The RCRA-SQG refers to American Caster Corp operations on the property in 1987 (specific type of waste not specified). American Caster Corp was also identified under a historic address, 157 West Avenue 34, in the HAZMAT database.

  The ECHO, EMI, and CERS listings refer to regulated air emissions at American Caster Corp, and indicate that the property was classified as a hazardous air pollutant (major). The listed site operations include hardware manufacturing, other metal valve and pipe fitting manufacturing, and ball and roller bearing manufacturing. There are no reported spills, releases, or violations associated with the 141 West Avenue 34 address. Based on the available information, the listings do not represent a significant environmental concern.

- **153 West Avenue 34** (Map ID A1) – this subject property address was identified under the operator name William Pile Enterprises and was identified in the HAZMAT database with a listing dated January 2019. The HAZMAT database is a list of facility and manifest data compiled by DTSC. No further information was provided by the listing. There are no reported spills or violations associated with the 153 West Avenue 34 address. Based on the available information, the listings do not represent a significant environmental concern.

- **3401 Pasadena Avenue** (Map ID A3, 14, 21, 30) – this subject property address was identified in the HAZNET (3) and EMI databases under the operator names 20th Century Fox, E D 1125 Inc, Elastic Coatings Org, and Bob Baker Production.

  Two of the HAZNET listings are associated with the disposal of wastes generated during film production, including very small quantities of various paints, latex gloves, fuel blends, waste oil, and other organic solids (2006-2007); and the other HAZNET listing is related to Elastic Coatings Organization for the disposal of unspecified solvent mixtures, pesticides, and alkaline solution without metals pH > 12.5 (1993).

  The EMI listing refers to air emissions (total organic hydrocarbons and reactive organic gases) associated with Bob Baker Productions, a film production company (1990). There are no reported spills, releases, or violations associated with the 3401 Pasadena Avenue address. Based on the available information, the listings do not represent a significant environmental concern.

- **3433 Pasadena Avenue** (Map ID A8, 9, 12, 16, 17, 20, 33, 34, 37) – this subject property address was identified in the HAZNET (8), FINDS, ECHO, and RCRA NonGen/NLR databases under the operator names Gone Girl, Moneyball, Informant Productions, End of Watch LLC, Warner Bros. Hangover 3, Hotel for Dogs, and Fox Gone Girl.

  All of the HAZNET listings are associated with the disposal of wastes generated during film production, including very small quantities of various paints, latex gloves, fuel blends, and other organic solids (2008-2014). The RCRA NonGen/NLR, FINDS, and ECHO listings refer to operations associated with filming the Warner Bros Hangover 3 movie (2010-2012), a former generator of the following hazardous waste: ignitable waste; methyl ethyl ketone; and non-halogenated solvents. There are no reported spills, releases, or violations associated with the 135 West Avenue 34 address. Based on the available information, the listings do not represent a significant environmental concern.

Orphan Listings

Orphan listing consists of sites that are provided in the regulatory database; however, due to poor or inadequate address information were not mapped.

The subject property or other sites in immediate vicinity were not listed in orphan summary. Therefore, the listed sites are not expected to represent a significant environmental concern.

6.2 Proprietary Database Listings

The subject property was not identified on the EDR proprietary records databases.

6.3 Vapor Encroachment Condition

ASTM E2600-10 Standard Guide for Vapor Encroachment Screening (VES) on Property Involved in Real Estate Transactions was used as guidance for conducting a VES for the subject property. The purpose of the screening is to determine whether a Vapor Encroachment Condition (VEC) exists from chemicals of concern (COC*)* that may migrate as vapors onto a property as a result of contaminated soil and groundwater on or near the subject property. Current or past uses such as gas stations (using petroleum hydrocarbons), dry cleaning establishments (using chlorinated volatile organic compounds), former manufactured gas plant sites (using volatile and semi-volatile organic compounds), and former industrial sites such as those that had vapor degreasing or other parts-cleaning operations (using chlorinated volatile organic compounds) are of particular concern. COC vapors are capable of migrating great distances omni-directionally along subsurface conduits such as utility lines, pipelines, sewer and storm water lines, and building fountains which may represent a potential VEC in connection with the subject property. There are two levels of screening for VECs:

<u>Tier 1 Vapor Encroachment Screen</u>
Tier 1 screening is an investigation of known or suspected contaminated properties within a given radius, government records, investigation, historical research, etc. The research radius varies based on the COC at the contaminated site due to chemicals having different migration properties. For sites with petroleum hydrocarbon COC, the search distance is 528 feet (1/10 mile). For contaminated sites with non-petroleum hydrocarbon (other volatile compounds) COC, the search radius is 1,760 feet (1/3 mile) from the contaminated site to the boundary of the subject property.

A total of eight sites were identified in the Radius Map Report and historical research within the "Area of Concern" that were considered to pose a potential VEC at the subject property based on the Tier 1 Evaluation. Tier 1 sites are:

- **3505 Pasadena Avenue** (Map ID B41-47) – this site was identified under the operator name Former Welch's Uniform Services and is located adjacent to and north of the subject property. The site is listed in the following databases from the report: UST (2), RCRA-LQG, ENVIROSTOR, LUST, CPS-SLIC (2), VCP, SWEEPS UST, HIST UST, CA FID UST, FINDS, ECHO, EMI, HIST CORTESE, CERS, DRYCLEANERS, HAZMAT, and EDR Hist Cleaner. The site was previously described in the RCRA generators sub-section above. Based on regulatory oversight and on-going SVE remediation with semi-annual groundwater monitoring, and the most recent (2016) analytical data available, this site does not represent a VEC to the subject property.

- **3500 Pasadena Avenue** (Map ID F61, 62) – this site was identified under the operator names Smith W P and Chuy Carburetors, and is located approximately 250 feet northeast of the subject property. The site is listed in the EDR Hist Cleaner and HAZMAT databases. The EDR Hist Cleaner

database is dated 1924, and the HAZMAT listing is currently active. There are no reported spills, releases, or violations associated with the site. Based on the available information, this site does not represent a VEC to the subject property.

- **3225 Lacy Street** (Map ID H67-73) – this site was identified under the operator names Heath & Co, and Maintenance and Operations New Maintenance Company for the Los Angeles Unified School District. The site is located approximately 350 feet southwest of the subject property, and is listed in the following databases from the report: HIST UST, UST, SWEEPS UST, CA FID UST, RCRA-LQG, HAZMAT, LUST, FINDS, ECHO, HIST CORTESE, and CERS.

  The RCRA-LQG, HAZMAT, FINDS, ECHO, HIST CORTESE, and CERS listings indicate the facility is a large-quantity generator of the following hazardous wastes: ignitable waste, corrosive waste, lead, and mercury. There are no reported violations associated with the property. Based on separation distance and site closure status, this site does not represent a VEC to the subject property.

- **3209 East Humboldt Street (**Map ID I74-78) – this property is located approximately 600 feet south of the subject property, and was identified under the operator ITT Cannon / Kennington. The site is listed in the following databases from the report: HAZMAT, UST, RCRA-SQG, FINDS, SEMS, ENVIROSTOR, VCP, SWEEPS UST, CA FID UST, DEED, HIST CORTESE, CPS-SLIC, LA Co. Mitigation, and CERS.

  The SEMS, ENVIROSTOR, VCP, HIST CORTESE, FINDS, CPS-SLIC, and LA Co. Mitigation listings indicate that the property is a Superfund site with environmental investigations dating back to 1990, due to battery and electronics manufacturing on the property, including lead, PCBs, tetrachloroethene (PCE), and trichloroethene (TCE). The site was enrolled in the Voluntary Cleanup Program (VCP) in 1993, and remedial activities to date have included the excavation of soil approximately 46 feet below ground surface with off-site disposal of 18,000 cubic yards of contaminated soil. The site is still being actively monitored by the DTSC Site Cleanup Program. The DEED listing refers to land-use restrictions imposed on the site as part of the VCP agreement.

  The RCRA-SQG and HAZMAT listings indicate the property is a small quantity generator of hazardous waste, including polychlorinated biphenyls (PCBs) and lead (1998-2006). Based on separation distance and regulatory oversight of cleanup activities with active groundwater monitoring, this site does not represent a VEC to the subject property.

- **3580 Pasadena Avenue** (Map ID J94-97) – this site was identified under the operator name Flavor Food Inc. and is located approximately 700 feet northeast of the subject property. The site is listed in the following databases from the report: SWEEPS UST, CA FID UST, LUST, HIST UST, HIST CORTESE, CERS, and UST.

  The UST listings refer to three 9,000-gallon gasoline USTs installed in and removed in 1986. The LUST listing refers to a gasoline release reported in October1986 during tank removal with

regulatory closure status in November 1986. There are no reported violations associated with the property. Based on separation distance and site closure status, this site does not represent a VEC to the subject property.

- **3101 Artesian Street** (Map ID N98-104) – this site was identified under the operator names Lincoln Heights District and P D D Construction MTNC. The site is located approximately 730 feet southwest of the subject property, and is listed in the following databases from the report: SWEEPS UST, CA FID UST, UST (2), LUST (2), RCRA-SQG, FINDS, ECHO, HAZMAT, CERS HAZ WASTE, HIST UST (2), CERS TANKS, HIST CORTESE, and CERS.

  The UST listings refer to four active 5,000-gallon diesel fuel USTs on the property. The LUST listings refer to petroleum releases reported in 1991 with regulatory closure status in 1997.

  The CERS HAZWASTE and ECHO listings refer to the following violations: violations reported in 2016 due to failure to comply with one or more of the following, failure to property label hazardous waste accumulation containers, and a violation for failure to maintain uniform hazardous waste manifests for three years; : failure to install a spill bucket, have a functional drain valve or other method for the removal of liquid from the spill bucket/spill container, and/or be resistant to galvanic corrosion; violations reported in 2018 due to failure to submit a complete and accurate application for a permit to operate a UST, or for renewal of the permit, and a violation for failure to submit or maintain a current facility plot plan; a violation reported in 2017 due to the failure to maintain records of repairs, lining, and upgrades on site; and a violation in 2013 for failure to obtain and/or maintain an active hazardous waste generator permit. Refer to the database report for more information.

  The RCRA-SQG, FINDS, HAZMAT, and CERS listings indicate the facility is a small-quantity generator of hazardous waste (1996). Based on separation distance from the subject property, this site does not represent a VEC to the subject property.

- **301 West Avenue 26** (Map ID S127-128) – this property is located approximately 1,700 feet southwest of the subject property and was identified under the operator names Jaybee and Ajax Manufacturing. The site is listed in the ENVIROSTOR, VCP, EMI, and SEMS databases. The listings indicate the property was discovered as contaminated in 1994, with a discovery date of 2000. The site was listed as a Superfund site in 2002. The contaminants of concern include lead, PAHs, PCE, diesel fuel, TCE, and other volatile organic compounds associated with former manufacturing operations at the site, and the site is currently active in the VCP. Based on separation distance and regulatory oversight of cleanup activities with active groundwater monitoring, this site does not represent a VEC to the subject property.

- **400 West Avenue 26** (Map ID T129, 130, 133) – this site was identified under the operator name Lacy's Street Dump and is located approximately 1,700 feet southwest of the subject property. The site is listed in the WMUDS/SWAT, LDS, CERS (2), and SWF/LF (2) databases. The listings indicate that the property operated as a landfill in 1975 and is listed as currently closed. The site

achieved regulatory closure status with DTSC in 2016. Based on separation distance and regulatory closure status, this site does not represent a VEC to the subject property.

In our opinion, none of the other sites listed pose a significant threat to the subject property as there is no indication of a release at the respective sites, a release has occurred but the medium affected was the soil only and the site is beyond the critical distance of 100 feet, or the site location and/or plume of contamination is in excess of the critical distance of 100 feet from the subject property. Thus, a VEC can be ruled out because a VEC does not or is not likely to exist at the subject property.

6.4 Agency Records

The following state and local agencies were contacted in reference to the subject property:

- Los Angeles County Fire Department (LACoFD)
- Los Angeles County Department of Public Works (LADPW)
- Department of Toxic Substances Control/ Envirostor (DTSC)
- State Water Resources Control Board (SWRCB)
- South Coast Air Quality Management District (SCAQMD)
- California Department of Conservation – Department of Oil and Geothermal Gas (CA-DOGG)

No records were found for the subject property from the above agencies.

· 7.0 CONCLUSIONS & RECOMMENDATIONS ·

FR has conducted a Phase I Environmental Site Assessment in accordance with the American Society for Testing and Materials (**ASTM**) Standard Practice E1527-13 and Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the subject property addressed at **135, 141 & 153 West Avenue 34, and 3401 & 3433 Pasadena Avenue, Los Angeles, Los Angeles County, California 90031**. This assessment has revealed no evidence of Recognized Environmental Conditions (RECs) during the course of this assessment with the property except for those previously identified in the *Findings* section.

FR recommends no further investigations for the subject property at this time.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Fulcrum Resources Environmental were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Correspondence / Agency Records

ASTM E1527-13 USER QUESTIONNAIRE

When the "User" (the party for whom the assessment is being prepared) of the Phase I is required to help the environmental professional identify recognized environmental conditions at the property, a "User Questionnaire" is completed by the user to help gather information that may identify recognized environmental conditions at the property.

We ask that you answer the six questions below to the best of your knowledge. We understand that, in some circumstances, you may have little or no information. Still, we encourage you to complete and return the questionnaire as soon as possible. This will allow us to reflect the fact that the Questionnaire was completed when we issue our report as is required. Completion of the assessment to the new standard, when conducted in connection with the asset purchase of a real property, may entitle the user to certain federal liability protections that result from conducting "All Appropriate Inquiries" into the previous ownership and uses of a property.

On the second page of this form is a list of documentation. The E1527-13 Standard requires that the User will ensure that the consultant is made aware that any of these materials exist for a site, and if so, that these documents be provided for the consultant's review. Please indicate whether any of these documents are available, and ensure that Fulcrum Resources Environmental will either receive copies or be provided an opportunity to review the relevant materials.

We appreciate your assistance. If you have any questions, feel free to contact us.

1. Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?

   No

2. Are you aware of any Activity and Use Limitations (AULs), such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?

   No

3. As the user of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

   No

4. Does the purchase price/loan amount for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?

   Yes, the purchase price reasonably reflects fair market value of the property.

5. Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user, (a.) Do you know the past uses of the property? (b.) Do you know of specific chemicals that are present or once were present at the property? (c.) Do you know of spills or other chemical releases that have taken place at the property? (d.) Do you know of any environmental cleanups that have taken place at the property?

   Prior uses of buildings on the property include office, storage, metal stamping, moving and storage. More information on prior uses are contained in the 2015 Phase 1 report, provided.

6. As the user of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property?

   No

ASTM E1527-13 USER QUESTIONNAIRE

SUBJECT PROPERTY ADDRESS:135, 141 & 153 W. Ave 34 and 3401 & 3433 Pasadena Ave., Los Angeles, CA 90031

As part of this study, which of the following are you providing?

1. Previous environmental site assessment reports (●) Yes ( ) No
2. Environmental compliance audit reports ( ) Yes (●) No
3. Environmental permits (including but not limited to solid waste disposal permits, hazardous waste disposal permits, wastewater permits, NPDES permits, underground injection permits) ( ) Yes (●) No
4. Registrations for underground and aboveground storage tanks ( ) Yes (●) No
5. Registrations for underground injection systems ( ) Yes (●) No
6. Material safety data sheets ( ) Yes (●) No
7. Community Right-to-Know plan ( ) Yes (●) No
8. Safety plans; preparedness and prevention plans; spill prevention, countermeasure, and control plans; etc. ( ) Yes (●) No
9. Reports regarding hydrogeologic conditions on the property or surrounding area ( ) Yes (●) No
10. Notices or other correspondence from any government agency relating to past or current violations of environmental laws with respect to the property or relating to environmental liens encumbering the property ( ) Yes (●) No
11. Hazardous waste generator notices or reports ( ) Yes (●) No
12. Geotechnical studies (●) Yes ( ) No
13. Risk assessments ( ) Yes (●) No
14. Recorded Activity and Use Limitations (AULs). ( ) Yes (●) No

Please contact us if you have any questions regarding these ASTM requirements.

FORMER WELCH'S UNIFORM FACILITY, 3505 NORTH PASADENA AVENUE,
LOS ANGELES, CALIFORNIA 90031

Dear Mr. Thuma:

The Department of Toxic Substances (DTSC) has reviewed "Request for NFA of the SVE System and Site Closure" (Report) dated April 20, 2016 for the Former Welch's Uniform Facility (Site). The Report requests Site closure for on-site soil and soil vapor because the clean up objectives were met for the identified chemicals of concern (COCs). DTSC also reviewed the Calculation of Site Specific Soil Gas Cleanup Goals dated February 26, 2015 and the Soil Vapor Extraction (SVE) Rebound Testing Workplan dated September 23, 2015. The SVE system operated from December 2013 to July 2016 during which time 254 pounds of volatile organic compounds (195 pounds of perchloroethylene) were removed.

The Site was evaluated for an industrial/commercial with land use covenant (LUC) in place scenario. The Site met an accepted cumulative cancer risk is less than or equal to $1x10^{-5}$ and non-cancer risk is less than or equal to 1. DTSC approves the Site soil closure upon submittal of your response to DTSCs toxicologist comments.

DTSC understands that the groundwater monitoring program will remain in place and has agreed to a decrease in frequency (annual) and scope (TBD). Additionally, DTSC will work with you to develop the Operations and Maintenance (O and M) Plan and the LUC.

Sincerely,

Juli Propes
Unit Chief

1.0 INTRODUCTION

1.1 PURPOSE

Burns & McDonnell Engineering Company, Inc. (Burns & McDonnell), on behalf of AmeriPride Services Inc. (AmeriPride), has prepared this *First Semi-Annual 2016 Groundwater and Soil Vapor Monitoring Report* (Report). This Report summarizes the groundwater and soil vapor monitoring activities conducted in association with the Former Welch's Uniform Facility located at 3505 Pasadena Avenue, Los Angeles, California (Site). The Site is associated with the Department of Toxic Substances Control (DTSC) CalStars Site Code 301314.

The soil vapor extraction (SVE) system at the Site was installed as part of the implementation of the Removal Action Work Plan (RAW) approved in correspondence by the California DTSC on October 18, 2012. The RAW was prepared in accordance with a Voluntary Cleanup Agreement executed between the DTSC and AmeriPride on June 17, 2007 (Docket No. HSA-VCA 06/07-204). The SVE system, which extracted contaminant vapors from eleven SVE wells at the Site, was in operation from December 6, 2013, until July 17, 2015. The extracted vapors were treated and discharged to the atmosphere under South Coast Air Quality Management District (SCAQMD) Permit No. G27490 dated October 1, 2013.

1.2 REPORT STRUCTURE

This Report includes a discussion of 2016 semi-annual groundwater and soil vapor sampling activities. Specific components include:

- **Section 1.0 Introduction** provides an overview and description of the purpose and scope of the Report.
- **Section 2.0 Background** includes a brief Site description and a presentation of physical characteristics of the Site.
- **Section 3.0 Summary of Field Activities** includes a discussion of sampling activities and summarizes the SVE system operation history.
- **Section 4.0 Monitoring Results** presents analytical results from the semi-annual groundwater monitoring and vapor sampling.
- **Section 5.0 Natural Attenuation** includes a discussion of the analytical results and evaluation of natural attenuation.
- **Section 6.0 Recommendations and Conclusions** presents recommendations for future actions and a summary of key actions for the Site.

2.0 BACKGROUND

2.1 SITE DESCRIPTION

The Site is located at 3505 Pasadena Avenue, Los Angeles, California at latitude and longitude coordinates 34º5'9" North and 118º12'48" West, respectively (**Figure 1**).

The Site consists of an approximate 2.6-acre vacant parcel located in a mixed residential and industrial area of Los Angeles, California. The Site is bordered on the north by the Arroyo Seco Channel and the Pasadena Freeway (Interstate-110); on the west by a railroad right-of-way; on the east by Pasadena Avenue; and on the south by commercial properties. The Site is surrounded by a chain-link fence around the perimeter, with a retaining wall in the northeast corner of the Site boundary. Four pole-mounted electrical transformers are located in the center of the Site. Gas and water metering equipment are located near the east gate, and a 6,000 square foot area of asphalt pavement is located in the southeast portion of the Site. The SVE system and associated equipment are located within a 1,400 square foot fenced area in the northeast portion of the Site. The Site contains eleven SVE wells, fourteen operable groundwater monitoring wells, and eight soil vapor monitoring points (SVP) (each nested with sampling points at four discreet depths). Additionally, there are four operable groundwater monitoring wells located off-site. Site features, including the SVE system and well locations, are depicted on **Figure 2**.

There are four designated Areas-of-Concern (AOC) at the Site which relate to former site building locations and facility operations, described as follows:

- **AOC#1**: AOC#1 is a former motor vehicle fueling area, located in the east-central portion of the Site.
- **AOC#2**: AOC#2 is a former dry cleaning area and cleaning solvent storage area located on the northeast portion of the Site.
- **AOC#3**: AOC#3 is a former driveway area located on the northwest portion of the Site and west of AOC#2.
- **AOC#4**: AOC#4 is located in the southwest corner of the Site.

The AOCs at the Site are shown on **Figures 2, 3, 4, 6 and 7**. As discussed in the *Removal Action Work Plan* dated October 8, 2012, active remediation was necessary only in AOC#2.

2.2 GEOLOGY AND HYDROGEOLOGY

The elevation of the Site is approximately 366 feet above mean sea level. Topography of the site is relatively level with a slight slope to the west.

The Site is located at the west end of the Repetto Hills near the confluence of the Arroyo Seco Channel and the Los Angeles River. The sediments that underlie the Site have been identified at Quaternary alluvial stream channel deposits consisting of unconsolidated silts, sands, and gravels. Soils encountered in borings and excavations associated with the Site consist of gravels and fine to coarse-grained sand. Coarse gravel and cobbles have been encountered during excavation in the upper two feet of soils in the northeast portion of the Site. The sedimentary bedrock that underlies the Site is Puente Formation sandstone and is present at approximately 83 feet below ground surface (bgs).

Previous subsurface investigations at the Site indicate that the water table is present at approximately 35 feet bgs. The local groundwater gradient at the Site has consistently been to the southwest as depicted on **Figure 3**.

* * * * *

3.0 SUMMARY OF FIELD ACTIVITIES

3.1 GROUNDWATER SAMPLING

There are eighteen groundwater monitoring wells associated with the Site (**Table 1A**). The groundwater monitoring wells are generally completed at two horizons. The groundwater monitoring wells screened in the shallow horizon are completed at depths ranging from 45 to 70 feet bgs. The groundwater monitoring wells screened in the deep groundwater horizon are completed at depths ranging from 89 to 93 feet bgs.

The First Semi-Annual 2016 groundwater sampling activities were completed on March 15 and 16, 2016. Groundwater elevations (**Table 2**) were measured in 17 monitoring wells and groundwater samples (**Table 3**) were collected from 15 monitoring wells. The groundwater elevation was unable to be measured at MW-8A due to the well being covered by asphalt. The monitoring wells were purged using a 2-inch submersible Grundfos pump using dedicated tubing. Groundwater samples were collected after water quality parameters stabilized and a minimum of three well volumes were purged. Field parameters are summarized in **Table 4**. After purging, groundwater samples were collected with new disposable bailers and transferred to laboratory-supplied sampling vessels. All groundwater samples were analyzed for volatile organic compounds (VOCs) by United States Environmental Protection Agency (US EPA) Method 8260B by Eurofins Calscience, Inc. (Eurofins), a California State Certified laboratory. Groundwater analytical results are summarized in **Table 5** and historical Natural Attenuation parameters are summarized in **Table 6**. Analytical Reports and are provided in **Appendix A**. Groundwater field logs are provided in **Appendix B.**

Purge water from groundwater monitoring wells and decontamination fluids were temporarily stored in two polyethylene tanks located in the secured parking area of the Site; pending off-site disposal at Inviro-Tech Disposal located in Lincoln, California (**Appendix C**).

3.2 SOIL VAPOR POINT SAMPLING

There are eight SVP clusters at the Site, with screens set at depths of 5, 10, 20, and 30 feet bgs at each point (**Table 1B**). Five of the soil vapor monitoring points are associated with the SVE system's rebound testing: VP-1, VP-3, VP-4R, VP-5 and VP-6. These five SVP's were sampled on January 18 and 19, 2016, as part of the six month after SVE shutdown rebound testing at the Site. Refer to **Sections 3.4, 4.2, and 6.0** for additional information regarding the SVE rebound testing events. The SVP clusters were purged, sampled, and analyzed on-Site for VOCs by US EPA Method TO-15. Soil vapor analytical results are listed in **Table 7**. The SVPs were purged at least five volumes of the SVP tubing prior to sample collection. Analytical Reports are provided in **Appendix A**. Soil vapor results in the analytical

reports are documented in micrograms per Liter (µg/L) while this report discusses soil vapor results in micrograms per cubic meter (µg/m^3).

3.3 SOIL VAPOR EXTRACTION WELL SAMPLING

There are eleven SVE wells at the Site. Each SVE well contains a 10-foot screen set between approximately 20 and 30 feet bgs (**Table 1B**). The eleven SVE wells are connected to the SVE system via underground polyvinylchloride (PVC) piping, and SVE well sampling is conducted at the SVE system's manifold using ¼ -inch Teflon tubing, Swagelok fittings and vacuum canisters. Sampling of the SVE wells (SVE-1 through SVE-11) was not conducted during the First Semi-Annual 2016 sampling event due to the SVE system being shut down since July 2015 for rebound testing. Additional details regarding the shutdown and rebound testing are included in **Sections 3.4, 4.2, and 6.0**. Historical soil vapor analytical results are presented in **Table 7**.

3.4 SVE SYSTEM OPERATIONS AND SAMPLING

The SVE system was installed during November and December 2013 and began continuous operation on December 6, 2013. The SVE system extracts contaminant vapors from eleven SVE wells at the Site using a 20-horsepower positive displacement blower. The eleven wells are connected to the system via 3-inch PVC piping. The extracted vapors from each point are combined at the system's intake manifold prior to passing through a vapor liquid separator to recover condensate entrained in the vapor stream. SVE emissions are treated using two 3,000 pound vapor-phase granular activated carbon (GAC) adsorbers, operated in series, prior to discharge to the atmosphere via a 15-foot exhaust stack. The vapor extracted from the SVE system is treated and discharged to the atmosphere under SCAQMD Permit to Construct/Operate No. G27490, dated October 1, 2013. A process and instrumentation diagram of the SVE system is included as **Figure 5**.

Due to the significant decrease in SVE mass removal rates and soil gas concentrations at the Site, the SVE system was shut down to conduct rebound testing. The testing is being conducted to assess soil gas concentrations in the soil vapor monitoring points without the SVE system operating in order to monitor potential rebound and evaluate the SVE system for permanent shutdown. As outlined in the *Calculation of Site-Specific Soil Gas Cleanup Goals* letter, and per phone conversation with the DTSC on July 16, 2015, the SVE system was shut down for rebound testing on July 17, 2015. Additional details regarding the shutdown and rebound testing are discussed in **Sections 4.2 and 6.0**.

While the system was in operation, photoionization detector (PID) readings were taken from each of the eleven extraction points in order to provide an indication of the relative concentration of contaminants in the vapor being extracted from each point. The flow rates at the eleven extraction points were set to maximize air flow from the SVE wells with the highest concentrations in order to maximize mass removal. Historical operational data collected from the SVE system, including vacuum readings at the manifold and wellheads, PID readings, temperatures, and flow rates, is summarized in **Table 8**. **Table 9** summarizes the operational history of the SVE system.

Prior to the SVE system shut down on July 17, 2015 for rebound testing, soil vapor samples were collected from three locations within the SVE system in order to obtain emissions data to calculate contaminant mass removal and to maintain compliance with the SCAQMD Permit to Construct/Operate. While in operation, soil vapor samples were collected on a monthly basis from the SVE system's combined influent, between the GAC adsorbers, and at the SVE system's stack effluent (**Figure 5**). Historical analytical data from these three sample locations are shown on **Table 10, Table 11, and Table 12,** respectively.

*** * * * ***

4.0 MONITORING RESULTS

4.1 GROUNDWATER SAMPLING RESULTS

As described previously in **Section 2.2**, there are four designated AOCs at the Site (**Figure 2**) which relate to former site building locations and facility operations. The AOCs are defined as follows: AOC#1 – Former Motor Vehicle Fueling Area; AOC#2 – Former Dry Cleaning Area; AOC#3 – Former Driveway Area: and AOC#4 – Southwest Corner of Site. The sections below discuss detections in groundwater by AOC.

Groundwater elevations, water quality parameters, and analytical results are summarized in **Tables 2, 4, and 5**, respectively. March 2016 groundwater contours are depicted on **Figure 3**, and VOC concentrations from the March 2016 sampling event are shown on **Figure 4.** Groundwater concentration trend graphs/hydrographs are provided in **Appendix D**. A summary of the March 2016 groundwater elevations and groundwater analytical results is provided below:

Summary of Groundwater Elevations and Analytical Results

Groundwater depths ranged from:	36.27 ft. (MW-16C) to 42.91 ft. (MW-13B) below top of well casing
Groundwater elevations ranged from:	329.12 ft. (MW-3) to 314.34 ft. (MW-15) above mean sea level
Groundwater Direction and Gradient	Southwest, 0.01
Highest PCE concentration (observed in):	12 micrograms per liter (µg/L) (MW-16A)
Highest TCE concentration (observed in):	4.3 µg/L (MW-16A)
Highest cis-1,2-DCE concentration (observed in):	13 µg/L (MW-10A)
Highest trans-1,2-DCE concentration (observed in):	All samples below the laboratory detection limits

PCE = tetrachloroethene

TCE = trichloroethene

cis-1,2-DCE = cis-1,2-dichloroethene

trans-1,2-DCE = trans-1,2-dichloroethene

4.1.1 Groundwater Sampling Results in AOC#1

The one groundwater well located within AOC#1 (K-1) was sampled in March 2016. K-1 is screened in the shallow groundwater horizon. In March 2016, no VOCs were detected above the laboratory method detection limits (MDLs) at K-1 with the exception of PCE with a concentration of 1.1 µg/L. The PCE

concentration has generally decreased in monitoring well K-1; from 187 µg/L in 1998 to below the California EPA maximum contaminant level (MCL) of <5.0 µg/L since March 2013.

4.1.2 Groundwater Sampling Results in AOC#2

The one groundwater well located within AOC#2 (MW-3) was sampled in March 2016. MW-3 is screened in the shallow groundwater horizon. At MW-3, PCE was detected at 7.4 µg/L in March 2016. The PCE concentration at MW-3 has decreased from a historical high of 5,100 µg/L in 2005. TCE, which had a historical high concentration of 180 µg/L in 2001, has been below the MDL of <1.0 µg/L for the past five consecutive sampling events. The cis-1,2-DCE and trans-1,2-DCE concentrations at MW-3 have also been below the MDL of <1.0 µg/L for the past five consecutive sampling events.

4.1.3 Groundwater Sampling Results in AOC#3

The four groundwater wells located within AOC#3 (MW-11, MW-16A, MW-16B, and MW-16C) were sampled in March 2016. In addition, MW-12, located approximately 30 feet west of AOC#3, was sampled in March 2016. Wells MW-11, MW-16A, MW-16B and MW-12 are screened in the shallow groundwater horizon, while MW-16C is screened in the deeper groundwater horizon.

Overall VOC concentrations in the wells of AOC#3 are trending downward. At MW-11, the PCE concentration was 9.3 µg/L in March 2016. The maximum historical PCE concentration at MW-11 was 130 µg/L in 2001. TCE, cis-1,2-DCE, and trans-1,2-DCE concentrations have been below the MDL of <1.0 µg/L at MW-11 since March 2014.

At MW-16A, the PCE concentration was 12 µg/L during both the March 2015 and March 2016 sampling events. The TCE and cis-1,2-DCE concentrations at MW-16A in March 2016 decreased compared to the March 2015 concentrations. At MW-16B, PCE was detected with a concentration of 2.5 µg/L and TCE was detected with a concentrations of 1.5 µg/L, which were both below the California EPA MCLs of 5.0 µg/L. The cis-1,2-DCE concentration at MW-16B has been below the MDL of <1.0 µg/L for the past two sampling events. No VOCs were detected at MW-16C in March 2016. VOCs have been below the MDL of <1.0 µg/L since March 2013.

At MW-12, the PCE and TCE concentrations in March 2016 were 7.8 µg/L and 4.2 µg/L, respectively, which is an overall decrease compared to a historical high PCE concentration of 610 µg/L and a TCE concentration of 1,900 µg/L in 2005. The cis-1,2-DCE concentration at MW-12 in March 2016 was 2.0

µg/L, which is the lowest detection at that well to date. The trans-1,2-DCE concentration at MW-12 was below the MDL of <1.0 µg/L for the fourth consecutive sampling event.

4.1.4 Groundwater Sampling Results in AOC#4

AOC#4 is located in the southwest corner of the property and is down-gradient of the source area. The source area is the location of the former underground storage tanks in the vicinity of AOC#1, AOC#2 and AOC#3. Groundwater wells MW-10A and MW-10B are located to the east of AOC#4, and were sampled in March 2016. MW-10A is screened in the shallow groundwater horizon, and MW-10B is screened in the deeper groundwater horizon.

PCE has decreased in MW-10A from 306 µg/L in 1998 to 3.5 µg/L in the March 2016 sampling event. The PCE concentration at MW-10A has been below the California EPA MCLs of 5.0 µg/L for the past four consecutive sampling events. TCE has decreased in MW-10A from 463 µg/L in 1998 to 2.9 µg/L in March 2016. Cis-1,2-DCE has decreased in MW-10A from 1,680 µg/L in 1998 to 13 µg/L in March 2016. PCE has decreased in MW-10B from 70 µg/L in 1998 to below the MDL of <1.0 µg/L in March 2016. The PCE concentration has been below the MDL of <1.0 µg/L at MW-10B since November 2013. TCE has decreased from 47 µg/L in 1999 to below the MDL of <1.0 µg/L in March 2016, which is the lowest detection of TCE in MW-10B to date.

4.2 SOIL VAPOR POINT SAMPLING RESULTS

In March 2015, the *Calculation of Site-Specific Soil Gas Cleanup Goals* letter was submitted to the DTSC. In the letter, soil gas cleanup goals for the SVE system were proposed that would result in concentrations with no unacceptable risk from long term exposure. The site-specific cleanup goals were calculated in general accordance with the DTSC's *Final Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air,* dated October 2011, and the DTSC's March 2014 *Screening-Level Model for Soil Gas Contamination.* The site-specific soil gas cleanup goals for PCE, TCE, cis-1,2-DCE, and vinyl chloride were calculated for each of the monitoring depths of 5, 10, 20, and 30 feet bgs, and are presented as follows:

Summary of Acceptable Risk-Based Soil Gas Concentrations

	5 feet bgs	10 feet bgs	20 feet bgs	30 feet bgs
PCE	42,000 µg/m³	70,000 µg/m³	125,000 µg/m³	180,000 µg/m³
TCE	15,000 µg/m³	23,000 µg/m³	40,000 µg/m³	57,000 µg/m³

Cis-1,2-DCE	47,000 µg/m³	70,000 µg/m³	116,000 µg/m³	163,000 µg/m³
Vinyl Chloride	2,200 µg/m³	3,200 µg/m³	5,100 µg/m³	7,100 µg/m³

The soil gas cleanup goal concentrations were conservatively calculated using California-specific toxicity values, as well as conservative default model parameters for soil type, building dimensions, and exposure scenarios. Prior to operation of the SVE system, PCE was detected at concentrations ranging up to 3,000,000 µg/m^3 in VP-1-30 in 2011. However, since operation of the SVE began in December 2013, VOC concentrations have remained below the proposed risk-based soil gas concentrations presented above. The historical soil vapor analytical data for the Site compared to the proposed soil gas cleanup goals are presented in **Table 7**.

As outlined in the *Calculation of Site-Specific Soil Gas Cleanup Goals* letter, and per phone conversation with the DTSC on July 16, 2015, the SVE system was shut down for rebound testing on July 17, 2015. In September 2015, the *SVE System Rebound Testing Work Plan* letter was submitted to the DTSC in order to provide additional details regarding the soil vapor rebound testing at the Site. Shutting down the system for rebound testing is intended to assess soil gas concentrations in the soil vapor monitoring points without the SVE system operating in order to monitor potential rebound and evaluate the SVE system for permanent shutdown. The five soil vapor monitoring points associated with the SVE system's rebound testing are VP-1, VP-3, VP-4R, VP-5, and VP-6.

The first soil gas rebound test occurred in October 2015 (three months after the SVE system's shutdown) to coincide with the Site's Second Semi-Annual 2015 sampling event, and the second soil gas rebound test occurred on January 18 and 19, 2016, six months after the SVE system was shut down. All soil gas concentrations observed during the rebound testing period were below the soil gas cleanup goals, with little to no rebound in concentration. Therefore, since the proposed target cleanup goals were still being met six months after shutdown, the remaining cumulative cancer risk and hazard index risk for the chemicals of potential concern (COPCs) were evaluated and determined to be below the target cancer risk and noncancer hazard limits. For additional information regarding this evaluation and request for SVE decommissioning and Site closure, refer to the *Request for NFA of the SVE System and Site Closure*, dated April 20, 2016.

The sections below discuss detections in soil vapor by AOC (which are described in **Section 2.2**) for the six month after shutdown rebound testing event that occurred in January 2016 at VP-1, VP-3, VP-4R, VP-5, and VP-6. The analytical results for VOCs in soil vapor at 5 feet, 10 feet, 20 feet and 30 feet are

summarized in **Table 7** and **Figure 6**. Soil vapor concentration trend graphs are provided in **Appendix E**. A summary of the January 2016 soil vapor analytical results is provided below:

Summary of Soil Vapor Sampling Results

Highest PCE concentration (observed in):	47,000 µg/m^3 (VP-1-30)
Highest TCE concentration (observed in):	6,200 µg/m^3 (VP-3-30)
Highest cis-1,2-DCE concentration (observed in):	70,000 µg/m^3 (VP-3-30)
Highest trans-1,2-DCE concentration (observed in):	All samples below the laboratory detection limits

Note: The Vapor Point naming convention includes the depth in feet. Example: "VP-1-30 (Vapor Point One at Thirty Feet)"

4.2.1 Soil Vapor Point Sampling Results in AOC#1

There is one SVP well cluster (VP-6) located within AOC#1 with wells screened at 5, 10, 20, and 30 feet bgs. In January 2016, PCE was detected at all depths in VP-6 with concentrations ranging from 270 µg/m^3 in VP-6-5 to 2,200 µg/m^3 in VP-6-20. PCE concentrations decreased at the 5, 10, and 30 foot depths compared to the October 2015 sampling event when concentrations at VP-6 ranged from 510 µg/m^3 at VP-6-5 to 2,200 µg/m^3 at VP-6-30. Prior to the operation of the SVE system, the highest historical detection of PCE in VP-6 was 91,000 µg/m^3 in VP-6-30 in 2008. The highest historical detection of TCE at VP-6 was 9,200 µg/m^3 in VP-6-30 in 2008. In January 2016, TCE was detected at the 20 and 30 foot depths with concentrations of 150 µg/m^3 and 160 µg/m^3, respectively. The TCE concentration at VP-6-5 was below the MDL of <80 µg/m^3 for the fifth consecutive sampling event.

4.2.2 Soil Vapor Point Sampling Results in AOC#2

SVP well clusters VP-1, VP-3, VP-4R are located in AOC#2, with wells screened at 5, 10, 20, and 30 feet bgs at each point. Historically, the highest PCE soil vapor concentrations at the Site have been observed at VP-1. Prior to operation of the SVE system, the highest historical detection of PCE in VP-1 was 3,000,000 µg/m^3 in VP-1-30 in 2011. In January 2016, PCE was detected at all depths in VP-1 with concentrations ranging from 5,300 µg/m^3 in VP-1-5 to 47,000 µg/m^3 in VP-1-30. Although PCE concentrations increased slightly at the 5, 10, and 30 foot depths in January 2016 compared to the October 2015 sampling event, the concentrations at VP-1 were still well below the soil gas cleanup goals. In January 2016, TCE was detected at all depths in VP-1 with concentrations ranging from 80 µg/m^3 in VP-1-5 to 410 µg/m^3 in VP-1-30. The highest historical detection of TCE in VP-1 was 110,000 µg/m^3 in VP-1-30 in 2008.

In January 2016, PCE was detected at all depths in VP-3 with concentrations ranging from 280 µg/m^3 at VP-3-5 to 16,000 µg/m^3 at VP-3-30. Although PCE concentrations increased slightly at each depth in January 2016 compared to the October 2015 sampling event, the concentrations at VP-3 were still well below the soil gas cleanup goals. Prior to the operation of the SVE system, the highest historical detection of PCE in VP-3 was 170,000 µg/m^3 in VP-3-20 in 2011. In January 2016, TCE was detected at the 10, 20, and 30 foot depths with concentrations of 160 µg/m^3, 1,800 µg/m^3, and 6,200 µg/m^3, respectively. The highest historical detection of TCE in VP-3 was 60,000 µg/m^3 in VP-3-30 in 2011. Cis-1,2-DCE was detected at VP-3-20 with a concentration of 670 µg/m^3, and also at VP-3-30 with a concentration of 70,000 µg/m^3, which was the highest cis-1,2-DCE concentration detected during the January 2016 sampling event (although still well below the soil gas cleanup goal).

When VP-4R was installed in October 2013, PCE concentrations ranged from 41,000 µg/m^3 in VP-4R-5 to 280,000 µg/m^3 in VP-4R-30, and TCE concentrations ranged from 1,400 µg/m^3 in VP-4R-5 to 38,000 µg/m^3 in VP-4R-30. In January 2016, PCE concentrations ranged from 490 µg/m^3 in VP-4R-5 to 7,100 µg/m^3 in VP-4R-30. TCE concentrations were observed at VP-4R-20 and VP-4R-30 in January 2016 with concentrations of 190 µg/m^3 and 170 µg/m^3, respectively.

4.2.3 Soil Vapor Point Sampling Results in AOC#3

SVP well clusters VP-2 and VP-5 are located in AOC#3 with wells intervals at 5, 10, 20, and 30 feet bgs. VP-5 was sampled in January 2016 as part of the soil gas rebound testing event. PCE was detected at all depths in VP-5 with concentrations ranging from 320 µg/m^3 in VP-5-5 to 1,500 µg/m^3 in VP-5-30. PCE concentrations decreased at the 5 and 20 foot depths compared to the October 2015 sampling event when concentrations ranged from 400 µg/m^3 in VP-5-5 to 1,300 µg/m^3 in VP-5-20. Prior to the operation of the SVE system, the highest historical detection of PCE at VP-5 was 36,000 µg/m^3 in VP-5-20 in 2011. In January 2016, TCE was detected at the 20 and 30 foot depths with concentrations of 250 µg/m^3 and 290 µg/m^3, respectively. Prior to operation of the SVE system, the highest historical detection of TCE in VP-5 was 35,000 µg/m^3 in VP-5-20 in 2011.

4.2.4 Soil Vapor Point Sampling Results in AOC#4

SVP well cluster VP-7, the only SVP within AOC#4, has wells screened at 5, 10, 20, and 30 feet bgs. VP-7 was not sampled in January 2016 as part of the soil gas rebound testing event. In October 2015, PCE concentrations at VP-7 ranged from 2,600 µg/m^3 in VP-7-10 to 3,400 µg/m^3 in VP-7-30.

4.3 SOIL VAPOR EXTRACTION WELL SAMPLING RESULTS

SVE-1 through SVE-11 were installed in October 2013 as part of the SVE system installation. Each extraction well contains 10-foot screens set between approximately 20 and 30 feet bgs. SVE-1 through SVE-7 are located within the general area of AOC#2, SVE-8 and SVE-10 are located within the general area of AOC#1, and SVE-9 and SVE-11 are located within the general area of AOC#3. As discussed previously in **Section 3.3**, the eleven SVE wells were not sampled due to the SVE system being shut down since July 2015 for rebound testing. Historical analytical results for VOCs in soil vapor are summarized in **Table 7**.

4.4 SVE SYSTEM OPERATIONAL AND SAMPLING RESULTS

Since startup of the SVE system in December 2013, concentrations observed at several of the SVE wells have decreased significantly. While the SVE system was operating, the flow rates at the extraction points were set to maximize air flow from the SVE points with the highest concentrations in order to maximize mass removal. Prior to shut down for rebound testing on July 17, 2015, the SVE system had been operating by monthly cycling of the SVE points between two separate sets of SVE points since November 2014 in order to further optimize the system's operations and mass removal. Historical operational data from the SVE system is summarized in **Table 8**. **Table 9** summarizes the operational history of the SVE system from startup through the system's shutdown in July 2015.

Prior to shutting down the system for rebound testing, soil vapor samples were collected from the SVE system's combined influent, between the GAC adsorbers, and the SVE systems' stack effluent. Historical analytical data from the SVE system's combined influent, between the two GAC treatment vessels, and the SVE system's stack effluent are summarized in **Tables 10, 11, and 12**, respectively.

The mass of VOCs removed from the subsurface were calculated using the combined influent concentrations, average flow rate, and hours of operation. When the SVE system was initially started for equipment testing procedures in December 2013, the PCE mass removal was approximately 9 to 13 pounds of PCE per day. Prior to shutting down the system for rebound testing, the PCE mass removal rate ranged from approximately 0.16 to 0.23 pounds of PCE per day (**Table 10** and **Figure 8**). Through July 17, 2015, the SVE system removed approximately 195 pounds of PCE and approximately 254 pounds of total VOCs from the subsurface (**Table 10** and **Figure 9**).

*** * * * ***

5.0 NATURAL ATTENUATION

5.1 GROUNDWATER

The water quality parameters, including oxygen reduction potential (ORP) and dissolved oxygen (DO), are summarized in **Table 4**. The historical natural attenuation parameters nitrate, sulfate, ferrous iron and methane are presented in **Table 6**.

The groundwater concentration trend graphs presented in **Appendix D** show a decreasing trend of PCE, TCE, and cis-1,2-DCE concentrations over time in all the monitoring wells with detectable VOC concentrations. This indicates the residual VOC plume in attenuating over time. Biodegradation of PCE can occur under anaerobic conditions via reductive dechlorination sequentially to TCE, cis-1,2-DCE, trans-1,2-DCE, vinyl chloride and finally ethene. Water quality parameters, the concentrations of daughter products, and the ratio of the sum of daughter product concentrations to the concentrations of PCE were used to evaluate biodegradation in the groundwater plume. The DO concentrations measured at onsite wells near the source area, located in the northeast portion of the Site, were generally above 1 mg/L and might indicate that conditions are aerobic and not conducive to reductive dechlorination. However, indications of reductive dechlorination of the PCE plume have been observed down gradient of the source area including low DO concentrations, low or negative ORP readings and elevated daughter product to parent ratios. Historically, MW-9A has exhibited the strongest indications of reductive dechlorination with a DO concentration of 0.77 mg/L and a daughter product to parent ratio of 7.63 when last sampled in March 2016. At MW-9A, the ORP measurement was 33 millivolts (mV) in March 2016, but the historical ORP measurements have been negative. In addition, elevated daughter product to parent ratios have been observed at wells MW-7, MW-10A, MW-12, and MW-16A.

* * * * *

6.0 RECOMMENDATIONS AND CONCLUSIONS

Based on the performance of the soil vapor extraction system and the sampling results to date, the following is recommended or has occurred at the Site:

- As presented in the *Request for NFA of the SVE system and Site Closure* letter dated April 20, 2016, the cumulative COPC cancer risk for all depths was below the target cancer risk of less than or equal to 1 x 10^{-5}, and the cumulative COPC noncancer hazard (hazard index) for all sampling depths is below the target noncancer hazard (hazard index) of less than or equal to 1.0. Therefore, since the remedial action has been met, permanent shutdown and no further action (NFA) of the SVE system was requested, in addition to well decommissioning and Site closure. On June 21, 2016, Burns & McDonnell met with DTSC personnel regarding the NFA and Site Closure request. During the meeting, it was agreed upon that the remedial objective presented in the RAW had been met for commercial/industrial land use and that no further active remediation was needed. It was also agreed that the SVE system could be decommissioned as long as a land use covenant (LUC) is prepared, limiting Site land use to commercial/industrial. The DTSC indicated that they will prepare a letter stating that the SVE system can be decommissioned, provide Burns & McDonnell an example LUC letter, and provide suggestions for future groundwater monitoring at the Site that could be incorporated into a future agreement.
- As discussed above, the DTSC indicated that they are currently preparing a letter stating NFA for the SVE system and that the SVE system can be decommissioned. It is anticipated that the SVE system will be decommissioned and removed from the Site and the soil vapor points abandoned by the end of 2016.
- As stated in previous monitoring reports, it was recommended to abandon and seal MW-2, MW-8A, and MW-9B based on VOC concentrations below the California EPA MCLs for several years. The wells have been removed from the annual monitoring plan, and upon DTSC approval, we will schedule the abandonment. Additional monitoring wells to be abandoned will be discussed depending on the DTSC suggestions regarding the future groundwater monitoring schedule at the Site, and will likely be abandoned during the SVE decommissioning event by the end of 2016. The Second Semi-Annual 2016 groundwater monitoring event is tentatively scheduled for September 2016; however, groundwater monitoring may be changed to an annual basis only, and therefore would not occur until March 2017. The sampling schedule will depend upon the DTSC suggestions regarding the continued groundwater monitoring at the Site.

Notes:

ft msl Feet as referenced to mean sea level

ft bgs Feet below ground surface

Damaged = MW-4 has been lost/destroyed; attempts to relocate the well in 7/08 were unsuccessful.

?? Data Unavailable = K-1 through K-3 were installed by Kleinfelder in 1987 as wells MW-1 through MW-3. A partial report was available for review.

Notes:
E_h = standard reduction potential (calculated from ORP using method recommended by instrument manufacturer)
mV = millivolts
mg/L = milligrams per liter
NTU = nephelometric turbidity units
NM = Not Monitored
NR = No Purge Record
ORP = field measured oxidation-reduction potential (various reference electrodes)
S/M = siemens per meter
ug/cm = Beginning March 2011
Water quality parameters taken inside well with a Horiba U-22 except MW-13A, MW-13B, MW-14, MW-15, K-1 and K-2
* = Dissolved oxygen likely elevated because of air lift techniques
† = Specific conductivity instrument showing an error message
**=Turbidity meter not functioning properly

ABBREVIATIONS / LEGEND:

B: Potential bias error, analyte detected in quality control blank
EPA: Environmental Protection Agency
J: Estimated value
µg/L: Micrograms per liter
MCL: California EPA Maximum Contaminant Level for drinking water August 2015
---: Not analyzed, not available, well lost, destroyed, or abandoned
U: Non-detect at or above method detection limit
VOCs: Volatile organic compounds
BOLD Indicates concentrations at or above listed screening levels
[1]: A Compilation of Water Quality Goals (August 2003 and updates), CalEPA RWQCB - Central Valley
[2]: California Office of Environmental Health Hazard Assessment Public Health Goal
[3]: Well K-3 not purged on 6/29/00 due to low walter level.
[4]: Chloroform, 2013 Tier 1 ESL = 80 ug/L

CF Chloroform
1,1-DCE: 1,1-dichloroethene
c-DCE: cis-1,2-dichloroethene
t-DCE: trans-1,2-dichloroethene
MTBE: Methyl tertiary butyl ether
1,1,1,2-PCA: 1,1,1,2-tetrachloroethane
1,1,2,2-PCA: 1,1,2,2-tetrachloroethane
PCE: Tetrachloroethene
TCE: Trichloroethene
TEPH: Total extractable petroleum hydrocarbons expressed as diesel

Screening Levels for Other VOCs (µg/L)

Methylene chloride = 5 ug/L (MCL)
Vinyl Chloride = 0.5 ug/L (MCL)
1,2-Dichlorobenzene = 600 ug/L (MCL)
1,2,4-Trichlorobenzene = 5 ug/L (MCL)
1,1,1,2-tetrachloroethane = 1.0 ug/L (MCL)

Notes:
DO = Dissolved oxygen
mg/L = milligrams per liter
ORP = Oxidation-reduction potential in millivolts
NA = Not applicable
U = Not detected at or above method detection limit
--- = Not sampled
NR = No Purge Record
Daughter to Parent Ratio = (CF+VC+cisDCE+trans-1,2-DCE+TCE)/(PCE)

1. Nitrate, reported as nitrogen
2. Nitrite, reported as nitrogen
3. ORP and DO were measured in field after purging wells using down hole instrumentation or flow cell
