SIGNATURE AND ENVIRONMENTAL PROFESSIONAL STATEMENT

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

1. SUMMARY OF CONCLUSIONS

Ramboll US Corporation (Ramboll) was retained by Hines ("client") to perform a Phase I Environmental Site Assessment (ESA) of the properties located at 2020 East 7th Place, 2040 East 7th Place and 2045 Violet Street, Los Angeles, California, (collectively herein referred to as the "facility," "property," or the "site"). Ramboll's assessment was conducted in connection with a potential purchase of the property. The objective of the Phase I ESA, which was conducted in conformance with the scope and limitations of ASTM International's *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* E1527-13 (the "ASTM Standard"), was to identify Recognized Environmental Conditions (RECs), as defined in the ASTM Standard (see Section 2.1).

1.1 Site Summary

The site currently includes three parcels owned by A.I. Violet LLC located within the city of Los Angeles, California as summarized below:

2020 East 7th Place

The one-acre parcel contains an approximately 32,540 square-foot two-story warehouse building previously occupied by Better Life Organics for packaging and shipping of agricultural produce. The building was unoccupied during the site visit. The parcel was undeveloped land prior to the 1900s. By 1900, the northern portion of the site was occupied by residences. The parcel was developed with a gymnasium and dressing room in 1906 associated with the adjoining city playground. The parcel was converted to commercial use in the early 1920s. From 1950 until 2002, the parcel was an auto/truck repair shop and truck storage. Following building reconstruction in 2002, the parcel has been used for warehousing and shipping of agricultural produce; no manufacturing is conducted on-site. Two underground storage tanks (USTs) with an associated fuel pump and dispenser are currently present at the site.

2040 East 7th Place

The approximately 0.35-acre parcel is currently a parking lot. The parcel remained vacant undeveloped land prior to 1906, was a city playground from 1906 to the 1940s, was developed into a motor freight depot and loading dock from 1950 until the 1980s with an on-site gasoline tank, and was converted into a produce warehouse for Green Acres Produce from the 1980s to approximately 2005. City building department records indicated the parcel (erroneously listed as 2020 East 7th Place) was used as an impound yard in 1995. From 2008 to 2014, the site was used as a storage yard and parking lot. From 2018 to the present, the site has remained a parking lot.

2045 Violet Street

The estimated 0.5-acre parcel is improved with one approximately 9,900 square-foot building which currently houses Splits59, an athletic apparel company. The parcel remained undeveloped land prior to 1906, was a city playground from approximately 1906 to 1923, and residential until approximately 1929, when the site was redeveloped for commercial use. Early commercial use included a grocery and liquor store. Based on city directories, the site has been used for various commercial purposes including a fleet maintenance and truck rental company in 1951 and a manufacturer of plastics from 1958 to 1962. Prior to the current tenant, operations included commercial businesses, a freight line facility, box manufacturer, market, and produce company.

1.2 Recognized Environmental Conditions

Ramboll performed a Phase I ESA of the site at the properties located at 2020 East 7th Place, 2040 East 7th Place, and 2045 Violet Street, Los Angeles, California in conformance with the scope and limitations of the ASTM Standard. Any exceptions to, or deletions from, this practice are described in Section 6.2 of this report. This assessment has revealed no RECs in connection with the site.

1.3 Notable Other Findings

Although not considered a REC, Ramboll identified the following notable other findings. The term "other finding" is not defined by ASTM; rather, Ramboll uses the term to connote areas of contingent risk that are not clearly defined by the ASTM Standard.

- **Former USTs**. Ramboll's review of database listings and historical documents for the site identified as many as 13 USTs formerly located onsite, including a possible UST investigated by AEI Consultants (AEI) described below. The USTs were installed for the storage of vehicle fuel and diesel associated with shipping and warehousing activities. According to available documentation, these USTs appear to have been removed between the 1950s and 1980s; however, removal and closure documentation was not available for six of the USTs. The site is not listed on the Leaking Underground Storage Tank (LUST) database. Previous soil sampling conducted at the site, primarily during UST removals, indicates low levels of total petroleum hydrocarbons (TPH) and select fuel-related volatile organic compounds (VOCs) were left in place. Further, a geophysical survey and limited subsurface investigation were conducted by AEI in 2018 to attempt to locate one of the USTs and evaluate potential subsurface impacts. A geophysical anomaly resembling the footprint of a UST was identified during the survey. Two soil samples were subsequently collected and did not contain detectable concentrations of total TPH or VOCs.

  Although these UST matters are not considered a REC, absent further closure or sampling documentation, Ramboll cannot rule out that unknown USTs are present or that the subsurface was impacted from the former USTs. The risk of widespread contamination is mitigated by the fact that groundwater beneath the site is relatively deep (over 90 feet below ground surface), and facility personnel are not aware of any major spills or releases at the site. The residual contamination identified above doesn't represent a significant environmental concern, however, additional handling and/or disposal considerations may need to be made for impacted soil during property redevelopment. It would therefore be prudent to perform a soil characterization prior to conducting any earthwork activities. Further, Ramboll recommends that a soil management plan (SMP) be prepared and followed during earthwork activities.

- **Current USTs**. In addition to the older USTs summarized above, there are two USTs currently present at the site: one 10,000-gallon gasoline UST and one 10,000-gallon diesel UST. The two USTs were installed in 1998 at the 2020 East 7th Place parcel and have been used to fuel vehicles associated with produce storage and transport operation located onsite. As of June 2019, the USTs were permitted and in full compliance with Los Angeles Fire Department (LAFD) requirements, including passing a tightness test. To Ramboll's knowledge, sampling has not been conducted in the vicinity of these two USTs. Given the age and compliance of these USTs, it is unlikely any significant release occurred; however, due to the lack of sample data, Ramboll cannot rule out the possibility that small release(s) of petroleum products could have occurred in the past. Upon removal of the USTs, impacted soil, if encountered, can be addressed as part of site-wide mass excavation activities.

- **Historical Operations at Adjacent Property.** The former Ford Factory property, located adjacent to the east of the site, has had a long history of industrial use from approximately 1914 to 1985. Former operations at the Ford Factory property that could have contributed to subsurface impacts include but are not limited to: metal plating, chemical warehousing, vehicle manufacturing and repair, printing, and machining operations. The Ford Factory property recently underwent a $50-million renovation in the mid to late 2010s; however, there is no publicly available documentation for the property on the Geotracker or EnviroStor agency databases, and it is unclear whether property redevelopment included soil excavation. In addition, a Phase I ESA prepared for the Ford Factory property by Partner in 2017 recommended a subsurface investigation be performed to evaluate potential impacts from former operations at the Ford Factory building. To Ramboll's knowledge, the subsurface investigation has not been performed.

  To address this issue, Ramboll conducted a soil vapor survey in February 2020 in the alley between the site and the former Ford Factory, and along East 7th Place. Ramboll summarized the findings in a Peer Review of Environmental Documents and Results of Soil Vapor Survey letter report in February 2020. VOCs were not reported above respective laboratory reporting limits in any of the soil samples collected, and low levels of tetrachloroethene (PCE) and Freon 11 were reported in the soil vapor samples. Based on the results of the soil vapor survey, Ramboll concluded that it does not appear that VOC release(s), if any, from the adjacent Ford Factory property have migrated toward the site in a manner that would result in an adverse soil vapor condition at the site. Further, the VOC concentrations reported in soil vapor would be considered to fall within the low end of the regulatory agency-acceptable risk management range for commercial/industrial land uses.

1.4 Non-Scope Considerations

Ramboll identified the following findings that relate to non-scope considerations (as discussed in Section 2.2), as detailed below:

- **Radon.** Based on information included in the environmental database report, the site is located in an area categorized as Zone 2, which has average indoor basement radon levels between 2 and 4 picoCuries per liter (pCi/L). The United States Environmental Protection Agency's (USEPA's) continuous exposure limit, which is the limit at which further testing or remedial action is suggested, is 4.0 pCi/L. This USEPA continuous exposure limit applies to residential, not commercial, properties. According to the California Radon database, two tests conducted in the same zip code as the site indicated that none exceeded a Radon value of greater than 4 pCi/L. A USEPA survey conducted in the same zip code as the site found that the average radon level of a first-floor room at sixty-three properties was 0.711 pCi/L.
- **Asbestos-containing materials (ACM), lead-based paint (LBP), and water intrusion/mold**. Ramboll's scope of work also included a limited visual evaluation of potential ACM, water intrusion/mold, and LBP. Given that a formal asbestos survey has not been conducted, the possibility that some asbestos is present in the building materials cannot be ruled out; however, because the buildings were either constructed or renovated in 2002 and 2015 (after asbestos was generally phased out of use in most building materials), it is unlikely that significant amounts of ACMs are present. In addition, due the dates of construction and renovation, it is unlikely that significant amounts of lead-based paint are present in the building materials. Facility personnel indicated that water intrusion was not a problem in the onsite buildings.

2. INTRODUCTION

2.1 Purpose

Ramboll was retained by Hines ("client") to conduct a Phase I ESA of the properties located at 2020 East 7th Place, 2040 East 7th Place and 2045 Violet Street, Los Angeles, California. Ramboll's assessment was conducted in connection with a potential purchase of the property. The purpose of the assessment was to identify RECs, which are defined in the ASTM Standard as:

> "The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. *De minimis* conditions are not recognized environmental conditions."

2.2 Scope of the Assessment

Ramboll relied upon the references noted below and performed the following tasks, in completion of the Phase I ESA of the property:

- A visit to the site by Stephanie Eckelman of Ramboll on March 3, 2020 to observe the exterior and interior features of the site and to identify the uses and conditions specified in the ASTM Standard. In addition, Ramboll observed the adjoining properties from the site or adjacent public thoroughfares. Photographs taken during the site visit are presented in Appendix A.
- An interview during the site visit with the following individual (year of initial hire at the site indicated in parentheses): Taylor Ferguson-Assistant Real Estate Manager with CBRE (2019). The aforementioned individual is referred to herein as "facility personnel". The facility personnel interviewed by Ramboll were identified by the client as having good knowledge of the uses and physical characteristics of the site.
- A review of information contained in federal and state environmental databases, as obtained from the sources noted below:
  - A radius report prepared by Environmental Data Resources, Inc. (EDR, see Appendix B), which presents the results of searches of federal and state databases for the subject site, as well as properties near the subject site. The radius searched for each database, as well as the databases themselves, was selected in accordance with the ASTM Standard.
  - USEPA's Envirofacts database, which provides site information contained in multiple USEPA regulatory databases.
  - A review of the California Water Resources Control Board's GeoTracker website (GeoTracker), which provides information with respect to releases to soil and groundwater in the site vicinity.
  - A review of the California Department of Toxic Substances Control's (DTSC's) EnviroStor (EnviroStor) website, which provides information with respect to property cleanups in the site vicinity.

  - A review of the California Geologic Energy Management Division (CalGEM) website, which provides information regarding the locations of oil and gas wells on and in the vicinity of the site.

- A review of standard historical sources (included as Appendix C) and local agency inquiries, as defined in the ASTM Standard. The following resources were reviewed:
  - Readily available historical sources (as identified in Section 4.2 of this report and included as Appendix C) to develop a history of the previous uses of the site and surrounding area.
  - Local building permit information, as obtained via EDR's Lightbox application.
  - Historical and site-specific information obtained from the following local agencies: City of Los Angeles Tax Assessor's website (Assessor), Los Angeles County Fire Department-Health Hazards Materials Division (County Fire Department), City of Los Angeles Fire Department Haz Mat and Plan Check/UG Tank Divisions (City Fire Department), Los Angeles County Department of Public Health: Division of Environmental Health Services (Public Health), the City of Los Angeles Department of Public Works-Sanitation District, and City of Los Angeles Building Department (Building Department).
- A review of documents provided to Ramboll by facility personnel, including tenant lists, underground storage tank permits, and safety data sheets. In addition, Ramboll was provided with the following previous environmental assessment reports, which are included as Appendix D:
  - Peer Review of Environmental Documents and Results of Soil Vapor Survey, 2020 and 2040 East 7th Place, and 2045 Violet Street, Los Angeles, California, prepared by Ramboll, dated February 28, 2020 (the "Peer Review report");
  - Phase I Environmental Site Assessment, 2040 East 7th Place, Los Angeles, California, prepared by AEI Consultants, dated April 2, 2019 (the "2040 7th Place Phase I ESA");
  - Phase I Environmental Site Assessment, 2020 East 7th Place, Los Angeles, California, prepared by AEI Consultants, dated September 17, 2018 (the "2020 7th Place Phase I ESA");
  - Phase I Environmental Site Assessment, 2045 Violet Street, Los Angeles, California, prepared by AEI Consultants, dated September 17, 2018 (the "Violet Street Phase I ESA");
  - Geophysical Survey, 2045 Violet Street, Los Angeles, California, prepared by AEI Consultants, dated October 26, 2018 (the "October 2018 Geophysical Survey");
  - Limited Subsurface Investigation, 2045 Violet Street, Los Angeles, California, prepared by AEI Consultants, dated November 12, 2018 (the "November 2018 Limited Subsurface Investigation"); and
  - Phase I Environmental Site Assessment Report, Ford Factory, 777 and 821 South Santa Fe Avenue; 2060 East 7th Street; 2030 and 2040 East 7th Place, Los Angeles, California, 90021, prepared by Partner Assessment Corporation (Partner), dated June 14, 2017 (the "Partner Phase I ESA").

- A review of physical setting sources, as defined in the ASTM Standard, including:
  - The current United States Geological Survey (USGS) 7.5-minute topographic map that shows the area on which the site is located.
  - Geologic, hydrogeologic, or hydrologic sources as provided in the environmental database report.

A review of any information provided by the user of this assessment, including information consistent with Appendix X3 of the ASTM Standard. Pertinent information, if any, is discussed in the appropriate sections of this report

This assessment was conducted in accordance with the methodology specified in ASTM Standard E1527-13, as agreed upon by Ramboll and Hines in February 2020. The standard ASTM scope was expanded to include a limited review of the potential presence of asbestos-containing materials, lead-based paint, mold, and radon based solely on: (i) the ages of the buildings (and prior reports, if any) for the potential presence of asbestos and lead-based paint; (ii) information and answers provided on a water intrusion questionnaire completed during the site walk with site representatives for the potential presence of mold; and (iii) information provided in the EDR report for the potential presence of radon.

2.3 Significant Assumptions

In conducting this review, no significant assumptions were made, except for the following:

- Site-specific field measurements or other detailed hydrogeological information was not publicly available or reasonably ascertainable. In the absence of such data, Ramboll has assumed that the flow direction of shallow groundwater beneath the site and in the local vicinity generally mimics surface topography. Therefore, in evaluating potential on-site impacts from off-site sources, those off-site facilities not located adjacent to or within one-quarter mile upgradient of the subject site are not considered to represent a significant concern to the subject site. This interpretation is based on the assumption that a hazardous material released to the subsurface generally does not migrate laterally within the unsaturated soil for a significant distance, although a hazardous material can migrate in the groundwater in a generally downgradient direction. There are, however, limits to this interpretation.

2.4 Reliance and General Limitations

This report has been prepared for the exclusive use of Hines and may not be relied upon by any other person or entity without Ramboll's prior express written permission.

This report is considered current only for a period of 180 days from the site inspection. The conclusions presented in this report represent Ramboll's best professional judgment based upon the information available and conditions existing as of the date of this report. In performing its assignment, Ramboll must rely upon publicly available information, information provided by the client, and information provided by third parties. Accordingly, the conclusions in this report are valid only to the extent that the information provided to Ramboll was accurate and complete. This review is not intended as legal advice, nor is it an exhaustive review of site conditions or facility compliance. Ramboll makes no representations or warranties, expressed or implied, about the conditions of the site.

Ramboll's scope of work for this assignment did not include collecting samples of any environmental media. As such, this review cannot rule out the existence of latent conditions including contamination not identified and defined by the data and information available for Ramboll's review; however, this report is intended, consistent with normal standards of practice and care, to assist the client in identifying the risks of such latent conditions.

The scope of work for this assessment did not include an asbestos survey or inspection. According to federal OSHA regulations (29 CFR §1910.1001) and the Model Accreditation Plan (MAP; 40 CFR Part 763, Subpart E, Appendix C), the inspection, testing, evaluation, and/or sampling of suspect asbestos-containing materials must be conducted by an accredited inspector; these activities were not performed as part of this environmental review. Comments in this report regarding the condition of building materials at the site, including presumed or suspect ACM, represent only Ramboll's observations at the time of the site visit and are not intended to be consistent with definitions regarding ACM condition in the Asbestos Hazard Emergency Response Act (AHERA) or in other federal or state asbestos regulations or industry standards.

Other issues considered outside the scope of the ASTM Standard and this review include radon, lead-based paint, lead in drinking water, wetlands, PCBs in building materials, cultural and historic resources, ecological resources, endangered species, and high voltage power lines.

3. SITE DESCRIPTION

3.1 Site Setting

A.I. Violet LLC owns the site consisting of 2020 East 7th Place, 2040 East 7th Place, and 2045 Violet Street. Onsite activity is limited to parking lot use at 2040 East 7th Place, and an athletic apparel administrative office located at 2045 Violet Street. The warehouse and office building located at 2020 East 7th Place is unoccupied. The site is estimated at 2.1-acres and is located approximately three miles southeast of downtown Los Angeles (Figure 1).

The site is developed with two buildings and a parking lot. A summary of the three parcels is as follows:

2020 East 7th Place is improved with a 32,540 square-foot building, located in the western portion of the parcel. The two-story warehouse building with mezzanine was previous used to store and ship agricultural produce; no manufacturing was conducted on-site. Fourteen loading docks are located along the eastern edge of the building within the parking lot area. Three additional loading docks are located along Violet Street in the southwest corner of the parcel. Other onsite features include two USTs with fuel pump and dispenser along the eastern edge of the parking lot, one Clean Air Separator (CAS) AST adjacent to the fuel pump, and one out-of-service emergency generator located on a concrete pad within a landscaped area south of the building. The primary site access to the building is from East 7th Place to the north. A second gated entrance is located along Violet Street to the south. A small landscaped area containing the out-of-service generator and a city transformer is in the southern portion of the site. There are no on-site surface water bodies.

2040 East 7th Place is currently a gated asphalt paved parking lot of with no onsite structures, surface water bodies, or landscaping. Access to the parking lot is obtained from East 7th Place.

2045 Violet Street is improved with a 9,900 square-foot single-story building located in the southeastern portion of the site, and currently houses a workout and an athletic apparel company. A small mezzanine is located in the northeast portion of the building and is accessed from an outside stairwell. The primary site access to the building is off Violet Street to the south or from an alleyway to the east of the site. The brick paver parking lot is along the western and northern edges of the building within a gated enclosure. Landscaped areas are along the southeast corner of the building near the main entrance, along the western wall of the building beneath an overhang and within the northern parking lot boundary. There are no on-site surface water bodies.

Table 1 provides an overview of physical setting and utility information for the site.

Table 1: Physical Setting and Utility Information

Conditions	Source	Description
Topography		
Elevation (above mean sea level)	USGS topographic map; Google Earth	Ranges from approximately 237 feet near the southern property boundary to 240 feet near the northern property boundary.

Table 1: Physical Setting and Utility Information

Conditions	Source	Description
Topographic Gradient	USGS topographic map; visual observations	Relatively flat on-site, with a gentle downward slope to the south. Regional topography slopes gently downward to the southeast toward the Los Angeles River which is approximately 0.2 miles east of the site.
Hydrology		
Storm Water Runoff	Visual observations	Percolates into the ground surface at planter areas or enters catch basins that discharge to the municipal storm sewer system along Violet Street or East 7th Place.
Nearest Surface Water Body to the Site	USGS topographic map; Visual observations	The nearest body of water, the Los Angeles River, is approximately 1,150 feet (0.2 miles) east of the site. The portion of the Los Angeles River east of the site was channelized in the 1960s.
Flood Plain	FEMA*; Facility personnel	Facility personnel reported no known occurrences of flooding at the site. The site is not located within a 500-year flood zone and has less than a 0.2% change of experiencing a flood.
Wetlands	NWI*; Visual observations	There are no federally-designated wetlands on-site. Ramboll did not identify any obvious suspected wetlands at the site during the site visit.
Geology and Hydrogeology		
Presumed Direction of Shallow Groundwater Flow	USGS topographic map	Based on the topographic gradient and the southerly flow direction of the Los Angeles River, shallow groundwater likely flows to the south-southeast.
Depth to Groundwater	GeoTracker	Specific information regarding depth to shallow groundwater was not readily available. However, GeoTracker website based information estimates the depth to groundwater in the vicinity at approximately 95 feet bgs.
On-site Wells	Facility personnel; Visual observations; CalGEM GIS website	There are no production, monitoring or injection wells on-site. There are three dry and plugged oil and gas wells located between one-quarter and one-half mile of the site.
Nearest Groundwater Supply Wells	Database report; LA County DPW website.	There are no federal, private or municipal supply water wells located within one-half mile of the site. Eight inactive water wells are located within one-mile of the site.

Table 1: Physical Setting and Utility Information

Conditions	Source	Description
Geologic Conditions	AEI 2018 Limited Subsurface Investigation	According to the 2018 Limited Subsurface Investigation, the soils beneath the 2045 Violet Street parcel consist of moderately dense silty sand to a depth of approximately 8 feet bgs, where the soil coarsens to a fine to medium grained sand.
Site Utility Information		
Heating and Cooling Equipment	Facility personnel	Packaged air conditioning and heating units supply building heat and cooling for both the 2045 Violet Street and 2020 East 7th Place buildings. Freon types used in the HVAC units are either Forane 427A or R-22.
Natural Gas Service	Facility personnel	The site is provided with natural gas service by the Gas Company.
Use of Fuel Oil for Building Heat	Facility personnel	No current or former use of fuel oil reported.
Water Supply	Facility personnel; City website	The facility receives drinking water from the Los Angeles Department of Water and Power (LA DWP) water system.
Sanitary Sewer	Facility personnel	The facility discharges wastewater to the municipal sanitary sewer system.
Septic Systems	Facility personnel	No identified current or former septic systems.

Notes:
FEMA = Federal Emergency Management Agency; NWI = National Wetlands Inventory
* - Source was provided in the environmental database report.

3.2 Current Use of Property

3.2.1 Current Operations

Onsite operations are limited to the 2045 Violet Street building. Splits59 athletic apparel first occupied the site in 2015. The company currently employs approximately 10 personnel. Operations onsite include clothing design, packaging and shipping, and associated administrative activities which are conducted five days a week in one shift. No manufacturing is conducted onsite. Minor clothing alteration is conducted on an as-needed basis.

Split59 operations include the following:

- *Receiving* – Bolts of fabric are purchased from vendors and shipped via commercial trucks to the building.
- *Main Processing* – Graphic artists create apparel designs and transmit them to an off-site manufacturing company. The fabric bolts are sent to the manufacturing facility for cutting and

assembly. Extra fabric bolts are stored in the second floor office area near the northeast corner of the building. Finished athletic apparel is shipped back to the site.

- *Finishing* – The finished apparel is sorted, packaged and stored in a storeroom along the eastern portion of the building until requested by clients.
- *Ancillary Operations* – Split59 performs packaging, shipping and administrative operations, none of which involve the use of significant quantities of chemicals. The transfer of fabric bolts and finished products is by a hand powered forklift. The unit is serviced on-site by outside contractors. Chemical use is limited to onsite janitorial cleaning supplies.

Better Food Organics occupied the 2020 East 7th Place parcel until September 2019. According to facility personnel, activities conducted at the parcel included the import and export of fresh produce. Product shipped from local farms was off-loaded from tractor trailers through one of 17 truck dock openings. Battery powered forklifts transferred the product via pallets to one of seven cooling rooms within the facility. The product was then sorted, cleaned and packaged for shipping to local vendors and clients. Chemical use onsite was limited to produce washing detergents, surface cleaning detergents and HVAC chemicals.

According to facility personnel both Split59's and Better Life Organics operations have remained generally consistent during their period of occupancy. Facility personnel reported that chlorinated solvents were not currently used at the facility; however, Split59 has only occupied the site since 2013, and Better Life Organic occupied the site from at least 2015 through 2019, and chemical use prior to that time is unknown.

3.2.2 Waste Management

Hazardous wastes are not routinely generated at the site, other than the generation of limited amounts of universal wastes (e.g., fluorescent light bulbs, batteries) at the 2045 Violet Street parcel.

Nonhazardous waste generated at the 2045 Violet Street parcel consists of general office trash which is collected in an on-site uncovered dumpster for removal by DC Environmental. The dumpster is located along the northern edge of the building beneath an exterior stairwell leading to the second floor.

Waste is not generated at the unoccupied building on the 2020 East 7th Place parcel. Onsite maps within the building indicate a trash enclosure with a former trash compactor located along the eastern wall of the building.

3.2.3 Wastewater and Storm Water

Sanitary wastewater including wastewater from bathroom, mop sink and kitchen areas, is discharged to the municipal sanitary sewer system.

The facility does not generate process wastewater. Air compressor condensate from the HVAC systems is routed to the sanitary sewer system. Facility personnel were unaware if the oil/water separator is in use at the site.

Storm water at the site infiltrates into small landscaped areas or flows to the drainage system along East 7th Place and Violet Street. A concrete swale is located within the alley east of the site which directs storm water sheet flow to Violet Street. The storm drains discharge the storm water to the municipal storm sewer system located on Violet Street and East 7th Place.

3.2.4 Air Emissions

There are no air pollution control devices at the site.

3.3 Current Uses of Adjoining Properties

The property is located in a mixed residential, light industrial and commercial land use area. The nearest residential area, 2121 Lofts, is located approximately 430 feet northeast of the site. Based on discussions with facility personnel, Ramboll's visual observations from the property boundary and public rights-of-way, and a limited review of publicly available information, a general determination of the current use of adjacent properties was developed, as described Table 2.

Table 2: Current Use of Adjacent Properties

Direction	Property/Land Use	Ramboll's Observations
North	East 7th Place followed by a parking garage associated with Warner Music Group, and ED Produce to the northwest.	No apparent exterior manufacturing or chemical storage operations were observed. No concerns were noted.
East	An alley, followed by Warner Music Group.	
South	Violet Street, followed by LA Vegetable Inc, Fresh Quality Product, Inc, wholesale grocery and Tacos al Carbon, a restaurant.	
West	Perfect Parking, Seventh/Place event venue, The Hung Vintage home furnishing, Diesel Coach and Truck Services, and GBY Ultralight fashion accessories store. Mateo Street is beyond.	No apparent exterior manufacturing or chemical storage operations were observed. Minor vehicle repair activities historically were conducted at the Diesel Coach and Truck Services building. Currently the property is utilized as parking. No concerns were noted.

Notes:

During the site visit, Ramboll walked or drove by the borders of these properties that are adjacent to the subject site. Ramboll did not enter the neighboring properties.

4. REVIEW OF PUBLIC RECORDS AND OTHER INFORMATION SOURCES

4.1 Environmental Regulatory Database Review

Ramboll contracted with EDR in February 2020 to prepare a summary of listings in federal and state agency databases for the site and facilities within applicable radii of the property, as specified by the ASTM standard.[1] A copy of the environmental database search report is presented in Appendix B.

4.1.1 Database Review for Site

Ramboll reviewed the results of the state and federal environmental database searches performed by the third-party database provider (see Appendix B) and also reviewed information available in the California GeoTracker and EnviroStor databases. The site is listed on several environmental databases, as discussed in Table 3.

Table 3: Summary of Environmental Database Listings for the Site

Summary of Information Contained in Database	Ramboll's Comments
Better Life Organics located at 2020 East 7th Place is listed on the Underground Storage Tank (UST) and CERS TANKS, databases. The listings relate to onsite USTs.	The UST, and TANKS listings relate to two inactive and one active onsite UST. The tanks are currently permitted through the City Fire Department. Violations associated with the listing include largely administrative and financial responsibility violations which have since been corrected. An additional violation was noted in June 2019 for failure to meet one or more of the requirements to test the overfill protection. The violation has since been corrected. The site is not listed on databases indicative of environmental concern. These listings do not suggest a contamination concern to the site. Additional information regarding the USTs is provided in Section 5.2.
West Central Produce located at 2045 Violet Street/2045 E Violet Street is listed on the UST, SWEEPS UST, and CA FID UST databases.	According to historical documentation, as many as four USTs were previously listed at the parcel. At least two of the four USTs have been removed. USTs are further discussed in Section 5.2 and 6.1.

[1] EDR uses the term "radii" to refer to the ASTM terminology "approximate minimum search distance" in the environmental database report.

Table 3: Summary of Environmental Database Listings for the Site

Summary of Information Contained in Database	Ramboll's Comments
Green Acres, Incorporated and Fred Kort located at 2040 East 7th Place is listed on the CA FID UST and SWEEPS UST databases. The listing for the tank is inactive. The number of tanks is listed as 0. Green Acres Product occupied the site from 1981 through at least 1990.	This listing likely relates to the 6,500-gallon gasoline/diesel tank that was installed at the parcel in 1950 and removed in 1994. Soil sampling did not indicate significant impacts to the subsurface. USTs are further discussed in Section 5.2

Notes:

* The site is also listed on the following databases related to regulatory compliance: Hazardous Waste Tracking System (HWTS), California Environmental Reporting System (CERS), Hazardous Waste Tracking System (HAZNET) and Facility Index System/Facility Registration System (FINDS). Listings on these databases, by themselves, are not necessarily indicative of contamination.

GeoTracker's website indicates Better Life Organics maintains an active permit for an UST onsite (FA0012453). No other information is provided regarding the UST, and no releases have been reported with the UST. This listing likely relates to the two permitted 10,000-gallon USTs onsite. USTs are further discussed in Section 5.2.

Ramboll reviewed the City of Los Angeles Building Department Los Angeles Methane Zone Map. The map identifies various areas of hazardous subsurface methane gas, within Los Angeles city limits, usually a result of naturally surfacing tar and crude oil, or shallow soil contamination by old oil drilling wells. Additionally, landfill sites are known to produce methane soil gas. As a result, the Los Angeles Methane Zone Map categorizes two types of zones; methane buffer zones and methane zones. Each zone is based on proximity to a methane soil gas source. Consequently, according to the City of Los Angeles, most development projects within these zones require a methane mitigation system. Ramboll's review indicated the site is not located within a methane or methane buffer zone. The City of Los Angeles Building Department website indicated the site was not a Methane Hazard Site.[2]

4.1.2 Database Review for Adjoining Properties

According to the environmental database search report, no adjoining sites are listed on databases that are indicative of a potential contamination concern.

4.1.3 Database Review for Other Surrounding Properties

Ramboll has identified two non-adjoining site(s) that represent a potential contamination concern to the subject site due to past releases on these sites and possible migration onto the subject site, as detailed in Table 4.[3]

[2] http://lacitydbs.org/buildinginfo.

[3] In its evaluation, Ramboll considered only non-adjoining sites listed on databases indicative of contamination, with open status, located potentially upgradient of the site, to represent a potential risk to the site.

Table 4: Summary of Environmental Database Listings for Surrounding Sites that Represent a Potential Contamination Concern

Listing Name or Address and Location Relative to the Subject Site	Summary of Information Contained in Database	Ramboll's Comments
Bailey and Schmitz C, 2101 E 7th Street (approximately 40 feet northeast)	This property is listed on the SEMS Archive site, however not on the NPL. The action listed with the site is Discovery and was started and completed on November 11, 1987. The property formerly conducted vehicle maintenance and agency personnel indicated waste oil and mixed oil onsite in addition to other containers of approximately 30 gallons or more, potentially impacting the soil and soil vapor.	This property is not on the NPL. The database report indicated a drive by investigation indicated multiple drums of oil on the property. Based on the finished date of the investigation and the archived status of the property, it is unlikely that this property has adversely impacted the site.
Dean and Associates 700 South Santa Fe Avenue (approximately 396 feet northeast)	The property formerly scrapped electrical transformers, and is listed on the DTSC Response and EnviroStor database for potential soil contamination by polychlorinated biphenyls (PCBs).	According to the database, approximately 5,000-gallons of liquid was treated and discharged at the property. In addition, 570-cubic yards of hazardous solids was removed from the property in 1987. The DTSC indicated the property was certified as having been satisfactorily remediated. The property is on the 1989 Bond expenditure plan for cost recovery. DTSC used Bond funds to complete the remedial action. Due to the completion of remedial action including the removal and off-site disposal of soil impacted with PCBs, the DTSC reported that there is no threat to the public health or the environment. Therefore, this property is unlikely to have adversely impacted the site.

The database report indicates that poor or inadequate address information was available for several sites located in the vicinity of the subject site; therefore, these sites could not be readily mapped by the third-party provider. Because the location of these sites with respect to the subject site could not be evaluated, Ramboll is limited in its ability to express an opinion regarding the potential for impact to the subject site from these sites. It was beyond the scope of this review to accurately locate each of the unmapped sites identified by the third-party provider; however, Ramboll reviewed the list of unmapped sites and verified that none appeared to be adjacent to the subject site.

4.2 Historical Uses of the Site and Adjacent Sites

4.2.1 Past Uses of the Site

The site was either undeveloped land or residential in the early 1900s. An alley labeled 1953, bisected the site from east to west in the early 1900s. Present day East 7th Place was formerly named Atlantic Road. From 1906 to at least the late 1930s a city playground was constructed onsite with associated gymnasium along the western portion of the site, while the former alley was removed.

By the late 1940s, the 2020 East 7th Place parcel along the western portion of the site was utilized as an auto/truck repair shop and truck parking. The former western buildings were demolished in 2002 and the current warehouse was constructed for the packaging and shipping of agricultural produce.

The 2040 East 7th Place parcel in the northeast corner of the site appeared vacant prior to 1906, was connected with the city playground from 1923 until 1948, and was developed into a motor freight depot, truck storage and loading dock from 1950 until approximately 1978 with at least one associated gasoline UST. At that time, the former building was renovated and the use changed to produce distribution. Green Acres Produce company is listed at the parcel until at least 1990. City building department records indicated the parcel (erroneously listed as 2020 East 7th Place) was used as an impound yard in 1995. From 2008 to 2014, the site was used as a storage yard and parking lot. From 2018 to the present, the site has remained a parking lot.

The southeastern portion of the site, the 2045 Violet Street parcel, was undeveloped land prior to 1906 when it was converted into a city playground with a playground field house. It remained a city playground from 1906 to approximately 1929. Following 1929, the site was redeveloped for commercial use. Early commercial use included a grocery and liquor store. Based on city directories, the site has been used for various commercial purposes including a fleet maintenance and truck rental company in 1951 and a manufacturer of plastics from 1958 to 1962. City directories indicate butane tank foundations were installed in the 1950s approximately 600 feet west of the warehouse near an existing UST. Operations from the 1960s through the early 2000s include commercial businesses, a freight line facility, box manufacturer, market, and produce company. Currently the parcel is occupied by Split59, an athletic apparel company.

AI Violet LLC purchased all three parcels from D.C.M. LLC in 2019.

A summary of Ramboll's key observations from the available historical sources is presented in Table 5.

Table 5: Summary of Key Observations from Historical Sources for the Subject Site

Historical Source	Key Observations Regarding Site History
Sanborn Maps (1894, 1900, 1906, 1950, 1953, 1954, 1959, 1960, 1967, and 1970)	The 1894 map does not depict the site. The 1900 map depicts the site with residential structures along the northern and western portions of the site. By 1906 the site largely consists of a city playground with a gymnasium along the western edge of the site and support buildings. The 1950 and 1953 maps depict the site with parking in the southwest corner, an auto repair and oil and gas yard in the northwest corner, a motor freight depot and loading dock in the northeast corner and a motor freight depot with office in the southeast corner of the site. A gasoline UST is noted in the northeast corner of the site. By 1954, an additional motor freight depot has been constructed in the southeast corner of the site. Box manufacturing and packaging goods for export activities are listed at the southeast corner of the site at 2045 Violet Street. In 1959 and 1960, the 2045 Violet Street operations are listed as wholesale produce in addition to box manufacturing. By 1967, the former truck repair building appears demolished and a new rectangular building appears along the northwest corner running north to south and providing truck repair. The 1970 Sanborn map remains similar to the 1967 map.

Table 5: Summary of Key Observations from Historical Sources for the Subject Site

Historical Source	Key Observations Regarding Site History
Aerial Photographs (1923, 1928, 1938, 1948, 1952, 1964, 1970, 1977, 1989, 1994, 2002, 2005, 2009, 2012, and 2016) Satellite Imagery [1] (1994 to 2018)	The site appears as a city playground in the northern portion and support field building in the southwest and southeast portions on all photographs until 1952. The northwest portion of the site appears developed with commercial and trucking buildings from the 1950s through the early 2000s. The northeast corner of the site appears as vacant land in the early 1900s. The parcel becomes part of the city playground until the 1950s when it is converted into freight associated buildings. By 2009 the parcel appears demoed and converted into a parking lot. The southeast portion of the site appears as a city playground from the early 1900s with associated field offices in the 1920s. The southeast parcel appears as a commercial building from the 1920s through the 1940s. Subsequent photographs from 2009 to 2016 show the site in its present configuration, with two onsite buildings appear in the southeast and the western portion of the site.
Topographic Maps (1894 to 2012)	The 1894 map depicts one building along the western portion of the site. A second building appears onsite in the 1896 and 1900 maps. One rectangular building appears along the southeast corner of the site at the 2045 Violet Street address in 1928. The 1953 through 2012 map depicts the site within a developed area. A red survey dashed line appears through the southern portion of the site from east to west from 1953 to the present.
City Directory Abstracts (1924, 1929, 1933, 1937, 1942, 1951, 1957, 1958, 1960, 1962, 1965, 1966, 1967, 1970, 1971, 1975, 1976, 1980, 1981, 1985, 1986, 1990, 1991, 1995, 2000, 2006, 2010, and 2014)	The occupants of the site are listed as follows: 2020 East 7th Place: East 7th Place Westway Fleet Maintenance (1951), West Central Produce Company Inc (2010), West Coast Central Produce/Pacific Coast Produce Distribution (2014) 2040 East 7th Place: East 7th Place S & M Transfer Company (1951), S&M Freight Lines (1958-1962), Earnest Ford Trucking (1971). Green Acres Produce Company (1981-1990), M Co Produce Inc (2006-2010). 2045 Violet Street: Southwestern Freight Lines G M Somlyo genl mgr (1942) Violet Dalby Arno R Southwestern Freight Lines/Violet Inter City Motor Express Inc (1951), APEX Wholesale Produce CG/Goulds Citrus Distrs (1958-1967), Teddy Bear Fruit Co/West Central Produce Co/ Inc/Ziggy Mushroom & Lime Inc (1967-2000), DCM LLC (2010).
Tax assessor website	Tax assessor records available online indicate that the building at 2020 East 7th Place was constructed in 2002 as a 25,798 square-foot building and was last sold in 2019. The 2040 East 7th Place parcel is zoned as commercial/industrial and was last sold in 2019. The 2045 Violet Street parcel building was built in 1941, renovated in 1961, and is 9,940-square feet. The parcel was last sold in 2019. The assessor parcel numbers (APNs) for the site are as follows: 2020 East 7th Place's APN is 5166014012 (former APNs associated with the parcel are 5166-014-002 and-004), 2040 East 7th Place's APN is 5166014001, and 2045 Violet Street's APN is 5166014003.

Table 5: Summary of Key Observations from Historical Sources for the Subject Site

Historical Source	Key Observations Regarding Site History
City of Los Angeles Fire Department	Fire department records for the three parcels is as follows: Files for the 2020 East 7th Place included an August 2017 Better Life Organics permit for two USTs. West central Produce installed two 10,000-gallon USTs in May 1998. In October 1993, West Central Produce removed one 10,000-gallon and two 1,000-gallon gasoline tanks from the central portion of the parcel, in addition to two 1,000-gallon waste oil USTs formerly located in the northern portion of the parcel. The tanks were reportedly installed in the 1960s when onsite activities included truck maintenance and storage. The address listed on the documents was 2017 Violet, however addition research indicated the 2017 Violet listing was the main address for the southern portion of the 2040 East 7th Place parcel. Fire Department files for the 2045 East 7th Place parcel included a July 1998 UST removal documentation report prepared by West Central Produce for a 7,500-gallon and a 6,000-gallon diesel UST. The tanks were located on the north side of the building and were removed in July 1998. installation date was unknown, however likely from the 1950s or 1960s. The LAFD inspected the removal and reported the steel tanks to be in good condition. Soil sampling did not identify impacts of concern. In December 1979, Ziggy's Mushroom Company installed a 6,000-gallon propane tank on the western portion of the parcel used for heating purposes. In October 1960, Apex Wholesale Produce abandoned a UST onsite. An UST of unknown size and contents was reportedly abandoned by filling with sand. The tank was reportedly located "20 feet from the south side of the building line, and 15 feet from the west side of the building line". In February 1950, Southwestern Freight Lines installed a butane-propane AST. The 3,750-gallon AST was installed in an undetermined location at the parcel. Fire Department files for the 2040 East 7th Place parcel included a 1950 permit issued to S&M Transfer to install a 6,500-gallon UST near an existing 1,000-gallon UST. In 1962 S&M Transfer and Storage received a permit to install industrial processing equipment which included new piping associated with an existing pump island. Reportedly one 10,000-gallon UST and two 1,000-gallon USTs were located approximately 100 feet west of the parcel boundary. In 1994, Mr. Fred Kort reportedly disposed of 200-gallons of non-RCRA hazardous waste liquid from two onsite USTs, likely associated with the abandonment of two USTs from the site.

Table 5: Summary of Key Observations from Historical Sources for the Subject Site

Historical Source	Key Observations Regarding Site History
City of Los Angeles Building Department	After a review of Building Department files, it appears that the site has had multiple addresses associated with the buildings. The current 2020 East 7th Place building was formerly listed at 2017 and 2045 Violet Street until 2000. Additional addresses listed for the current 2020 East 7th Place building are 2034 and 2035 Violet Street and East Violet Street. Building Department files for the 2040 East 7th Place parcel include permits to construct a loading dock in 1951, fire damage repair permits in 1962 and 1970 and an occupancy change from trucking terminal to produce distribution in 1978 by Thomas Fischer. Building Department files for the 2045 Violet Street parcel include permits in 1941 for the construction of a new freight dock, new building permits in 1950, addition in 1976, a new 2,000-gallon grease interceptor in 2014 and a tenant improvement and change of use to convert a space to a warehouse in 2017 by DCM LLC. EDR Lightbox Building Records indicated an October 2014 permit was issued to Cezena Custom Woodworks to add a grease trap to the 2035 E Violet Street property. The 2020 East 7th Place Building Department files included two onsite permits issued to CEG Construction in 2002 to building a new warehouse/office and to revise the existing plan due to the location of an onsite UST. The EDR Lightbox Building Records indicated a permit to demo the 1-story metal warehouse and replace it with a 31,711 square-foot building at the 2020 East 7th Place site in 2000. In February 2001, the plan was altered due to location of a UST. The address was changed from 2045 E Violet Street to 2020 East 7th Place. June 2000 permit was issued to 2045 Violet Street to move the pump island. As noted previously the current 2020 East 7th Place building was connected with the 2045 Violet Street address until 2000.

Notes:

[1] In addition to aerial photographs provided by the third-party provider, Ramboll viewed historical satellite imagery provided via Google Earth. Printed copies were not obtained, and imagery dates were not independently verified.

4.2.2 Past Uses of Adjacent Sites

The properties in the vicinity of the site have been used for industrial purposes, since as early as the 1950s. Notable operations on surrounding properties include a machine shop and welding building, metal parts warehouse and repair, gasoline and oil properties (west), printing (northwest), a chemical warehouse (north), and metal plating, chemical warehousing, vehicle manufacturing and repair, printing and machining operations (east).

The former Ford Factory adjacent to the east of the site operated from at least 1914 through 1930. The Ford Factory property included various addresses that included the 2040 East 7th Place Site: 777 and 821 South Santa Fe Avenue, 2060 East 7th Street, and 2030 and 2040 East 7th Place, Los Angeles, California. The building was constructed in 1912 to produce Ford's Model-T cars. The automobile plant expanded in 1923, creating an adjacent two-story building which added 90,000-square feet of space. The factory, which employed over 1,000 workers, constructed Model-T cars until the late 1920s when production shifted to Model-As and the company transferred production to Long Beach. According to the Partner Phase I ESA, a printers, plating, and manufacturing facility occupied the property for the next 20 years. The metal plating operations were limited to the southwest corner

of the building, across the alley from the 2045 Violet Street parcel, and the chemical warehousing operations that occurred in the northwest portion of the property, across East 7th Place from the 2040 East 7th Place parcel. After World War II, Bullocks Department Store purchased the property in the 1940s for approximately 20 years until Imperial Toy Corporation purchased the property. Industrial use identified at the Bullcocks building, possibly rented out space, included metal plating, machine shops, plastics manufacturing, a chemical warehouse, automobile repair, and printing. According to the Partner Phase I ESA, the 2040 East 7th Place parcel was used as a parking lot for truck and freight tenants from approximately 1958 to 1971. The United States Rubber Company briefly owned the property before selling it to American Apparel in 2008 for the storage of vintage mannequins.

According to the Partner Phase I, a geophysical survey was performed by AMEC in 2014 at the 2040 East 7th Place parcel in connection with the Ford Factory property, and the presence of USTs was not identified. Additionally, a subsurface investigation was performed by AMEC in 2015 at the Ford Factory property to evaluate impacts from historical industrial site uses. Six soil samples were collected at unknown depths from borings advanced to 15 feet bgs: three samples were reportedly collected on the 2040 East 7th Place parcel on the northeast corner of the site, and three samples were collected on the adjacent property to the north. The soil samples were analyzed for TPH-cc, metals, VOCs, and semi-volatile organic compounds (SVOCs). None of the samples contained detectable concentrations of the constituents of concern with the exception of typical background concentrations of metals. AMEC concluded that no further investigation would be warranted for the Ford Factory property.

Partner concluded in their Phase I ESA that, "*Based on the duration of use and likely storage and generation of large quantities of hazardous materials, the historical use of the subject property represents a recognized environmental condition and vapor encroachment cannot be ruled out at this time*." Partner recommended further assessment be performed at the Ford Factory property to evaluate subsurface impacts from constituents of concern including TPH, VOCs, and heavy metals. To Ramboll's knowledge, this subsurface assessment has not been performed.

4.3 Review of Local and State Agency Information

Ramboll visited or otherwise contacted local governmental agencies and regulatory bodies for information relating to the site. An overview of the findings of this review is presented in Table 6.

Table 6: Local Agency Information for the Site

Agency Contacted / Document Reviewed	Information Obtained
Title Search Report	According to a title search provided by the client, the site was owned by DCM LLC prior to the purchase of the site by AI Violet LLC in 2019.
Lien search report	Lien searches conducted by AEI for the site reported in the 2018 Phase I ESA for the 2045 Violet Street parcel and the 2020 East 7th Place parcel indicated no liens or activity and use limitations (AULs) are associated with the site. No liens or AUL's were reported for the site reviewed within the chain of title provided by the client.
City of Los Angeles Department of Public Works-Sanitation District	Ramboll contacted the City of Los Angeles Department of Public Works (DPW) requesting information pertaining to the oil/grease interceptor located at the Violet Street parcel. Files received from the DPW did not contain additional information about the grease interceptor.

Table 6: Local Agency Information for the Site

Agency Contacted / Document Reviewed	Information Obtained
Los Angeles County Public Health Inspector (Environmental Health Department)	As of July 1, 2017, all records for Hazardous Materials Business Plans/Inventory, Hazardous Waste Generator License, California Accidental Release Prevention (Cal/ARP) Program information as well as, spills and site remediation information are obtained through the Los Angeles County Fire Department – Health Hazardous Materials Division.

4.4 Previous Environmental Assessments and Activities

Based on a review of historical site documents and interviews with facility personnel, prior environmental assessment and sampling activities have been conducted at the site, as summarized below. Pertinent historical and site-related information contained in the prior reports has been incorporated into other sections of this report.

2019 Phase I Environmental Site Assessment. A Phase I ESA was conducted at the 2040 East 7th Place parcel by AEI in 2019, in association with due diligence activities. The 2019 Phase I report did not identify any concerns with respect to soil and groundwater conditions. The Phase I ESA was expanded to include a review of a Phase I ESA for an adjacent property. As noted above, long term industrial use identified at the adjacent Ford Factory included vehicle manufacturing and repair, printing, metal plating, chemical warehousing, machining operations, and parking for truck and freight operations. A geophysical survey did not locate potential unidentified USTs, and soil sampling did not return with detectable concentrations of the constituents of concern with the exception of typical background concentrations of metals. AMEC concluded that no further investigation would be warranted for the Ford Factory property. AEI did however report the following Other Environmental Consideration (OEC):

- According to AEI, the property was developed with a motor freight depot from 1950 until approximately 1970. Review of UST records with the LAFD indicated two petroleum hydrocarbon USTs, one 6,500-gallon UST and one 1,000-gallon UST, were abandoned and removed from the property in 1994. Contaminated soil and groundwater were not reported during the UST removal activities. Subsequent environmental investigations in 2015 did not detect petroleum or related constituents at the site. Various USTs were located on the adjacent properties to the east and south, and active petroleum USTs are located on the adjacent property to the west. AEI concluded that low levels of petroleum constituents could be present at the property from the historical and current USTs in the vicinity, but according to AEI, this issue is not considered to represent a REC.

2018 Phase I Environmental Site Assessment. A Phase I ESA was conducted at the 2020 East 7th Place parcel by AEI in 2018, in association with due diligence activities. The 2018 Phase I report did not identify any concerns with respect to soil and groundwater conditions. AEI did however report the following OECs:

- The 2020 East 7th Place parcel houses a 10,000-gallon diesel UST and a 10,000-gallon gasoline UST for truck fueling. The tanks were installed in 1998, prior to redevelopment of the site with the current building in 2002. The tanks are currently permitted. The LAFD conducted an inspection and provided integrity tightness test results from June 2019, which indicated the

USTs and fueling lines were in full compliance. AEI recommended the tanks be properly maintained and monitored for integrity.

- LAFD records indicated five petroleum USTs were historically located on-site and were originally installed in the 1960s (one 10,000-gallon and two 1,000-gallon gasoline USTs, and two 1,000-gallon waste oil USTs). The USTs were removed in 1993 under LAFD oversight. Based on results of soil sampling conducted at the time of UST removal, the former USTs were not considered a REC. All soil samples reported non-detect concentrations of total petroleum hydrocarbons as gasoline (TPHg), TPH as diesel (TPHd), benzene, toluene, ethylbenzene, xylenes (BTEX), and lead. AEI recommended no further investigation but advised if future construction at the site was conducted, impacted soils may be encountered and should be properly managed.
- AEI observed possible asbestos containing material on-site during the site visit in September 2018, but in good condition. AEI stated the likelihood that certain building materials may contain asbestos material should not be discarded. AEI recommended an asbestos survey be conducted prior to demolition or building upgrades.

2018 Phase I Environmental Site Assessment. A Phase I ESA was conducted at the 2045 Violet Place parcel by AEI in 2018, in association with due diligence activities. AEI identified one REC in connection with the parcel. During the Phase I review, records from the City of Los Angeles Fire Department indicated various USTs and ASTs were installed historically at the parcel. A review of the July 1998 UST Removal Report, included as an appendix to the Violet Street September 2018 Phase I ESA, provided additional details with respect to removal of the 6,000-gallon and 7,500-gallon diesel USTs in 1998 mentioned above. The USTs were reportedly in good condition at the time of removal. Under the direction of the LAFD, two samples were collected from the bottom of each excavation at approximately 3 feet below each UST (approximately 12-15 feet bgs) and analyzed for metals, TPHg, TPHd, BTEX, and methyl tert-butyl ether (MTBE). Lead concentrations ranged from 0.89 to 28 milligrams per kilogram (mg/kg) and TPHd concentrations ranged from non-detect to 63 mg/kg. TPHg, BTEX, and MTBE were not reported in the soil samples. No additional investigation was recommended by Targhee.

Additional LAFD records reported a single UST that was abandoned in place in 1960 and filled with sand (size is unknown). According to records, "*the tank was reportedly 20 feet from the southside of the building, and 15 feet from the west side of the building.*" Potential releases of the UST were unknown and therefore, AEI recommended additional investigation.

The DTSC hazardous waste database listed oil/water separation sludge generation at the site in 1998 and 2005. A new clarifier was reportedly installed in 2014, possibly replacing an older clarifier used in the 1990s and 2000s. During the site visit conducted by AEI in 2018 for the Phase I ESA, the clarifier was not in use, and no staining was observed. According to AEI, a permit for the clarifier was cleared by Public Works for discharge into the public sewer system; however, there is not a record for a permit to operate issued by the Los Angeles Building and Safety Department. AEI did not consider the clarifier to represent an environmental concern. Ramboll obtained a copy of the permit to install a 2,000-gallon grease interceptor at the 2045 Violet Street parcel in October 2014.

Based on a review of LAFD records, it was discovered that a UST was abandoned in place in 1960. AEI recommended a geophysical survey and subsurface investigation to evaluate the presence of the UST.

AEI listed the following as OECs:

- Records from LAFD indicated several ASTs and USTs were previously located on the property. Two ASTs contained propane, and USTs on the north side of the building contained diesel fuel and were removed in 1998 under LAFD oversight. Based on results of soil sampling conducted during UST removal, the two diesel USTs were not considered a REC according to AEI. AEI advised if future construction on the property was conducted, impacted soils may be encountered and should be properly managed.
- Although there were renovations on-site in 2014, there may be potential for lead and asbestos materials due to the age of the property.

2018 Geophysical Survey. To address the REC identified in the Violet Street Phase I ESA, AEI conducted a geophysical survey at the Violet Street Site in October 2018. The objective of the geophysical survey was to identify the presence of a UST, which may have been abandoned in place circa 1960 following possible use in the by former site occupants Southwestern Freight Lines and/or Apex Wholesale Produce.

A geophysical survey was conducted by AEI on October 19, 2018 on southwestern portion of the site, where the UST could have been located according to LAFD records. An anomaly was discovered on the "*southeastern edge of the parking lot, adjacent to a landscape area in the building*", according to the report, and although the anomaly did not confirm if in fact it was an abandoned UST, the size and shape of the anomaly resembled footprints of an abandoned UST. AEI recommended a Phase II subsurface investigation to evaluate any subsurface impacts in the area of the potential UST.

November 2018 Limited Subsurface Investigation Based on the results of the geophysical survey described above, a limited subsurface investigation was conducted on the 2045 Violet Street parcel by AEI on November 5, 2018, to evaluate possible TPH or VOC impacts associated with the potential UST.

The investigation consisted of advancing two soil borings to 10 feet bgs, one along the southwestern corner of the geophysical anomaly and the other along the northwestern corner of the anomaly. Soil samples were collected at 5 and 10 feet bgs. Soil samples at 5 feet were placed on hold, while the 10-foot samples were analyzed for TPHd, TPHd, and TPH as oil (TPHo), collectively TPH-full carbon chain (TPH-cc), and VOCs. TPH-cc and VOCs were not reported in the soil samples collected at 10 feet bgs, and the five-foot soil samples were therefore not analyzed. Based on the results of the investigation, no further action was recommended by AEI. AEI advised that, while further evaluation of the anomaly is not mandatory at this time, the UST, if present, would need to be addressed prior to any site redevelopment, which would include engaging the LAFD.

February 2020 Peer Review and Soil Vapor Survey. Based on its peer review performed in February 2020, Ramboll considered the proximity of the site to the Ford Factory property, which had a long history of industrial use from approximately 1924 to 1985, to represent a potential environmental concern. Former operations at the Ford Factory property that could have contributed to subsurface impacts include but are not limited to metal plating, chemical warehousing, vehicle manufacturing and repair, printing, and machining operations.

A soil vapor survey was performed by Ramboll on February 21 and 24, 2020 in the alley immediately east of the site and along East 7th Place immediately north of the site. The objective of the soil vapor survey was to evaluate the potential for VOC vapor migration from the Ford Factory property to the site. VOCs were not reported above respective laboratory reporting limits (RL) in any of the nine soil samples collected. In soil vapor samples, PCE and Freon 11 were the only two compounds reported above their respective laboratory RLs. Concentrations reported in soil vapor samples were compared to DTSC and USEPA screening levels for indoor air at commercial/industrial properties along with a DTSC-recommended default attenuation factor of 0.001 (for existing commercial buildings). An AF of

0.03 was also used to calculate screening levels as a conservative measure. The 0.03 AF is a default USEPA standard that California regulatory agencies are in the process of adopting (currently a draft guidance open for public comment). The maximum reported concentration of PCE in soil vapor was slightly above the USEPA/DTSC commercial screening level using an AF of 0.03, but below the screening level using an AF of 0.001. Other detections of PCE were below screening levels calculated under both AFs (0.001 and 0.03). Freon 11 was reported well below the USEPA/DTSC commercial screening levels using an AF of 0.03 or 0.001.

Based on the results of the soil vapor survey, as described above, Ramboll indicated that it does not appear that VOC releases, if any, from the adjacent Ford Factory property have migrated toward the site in a manner that would result in an adverse soil vapor condition at the site. Further, the VOC concentrations reported in soil vapor would be considered to fall within the low end of the regulatory agency-acceptable risk management range for commercial/industrial land uses. Ramboll's Peer Review of Environmental Documents and Results of Soil Vapor Survey report is included in Appendix D.

Other findings of Ramboll's peer review were as follows:

- AEI did not identify any RECs in connection with the 2020 and 2040 East 7th Place parcel but identified the possible abandoned UST at the Violet Street parcel as a REC. A geophysical survey and limited subsurface investigation were subsequently conducted to evaluate subsurface impacts related to the potential UST. TPH-cc and VOCs were not reported in the two soil samples analyzed during the investigation. Based on results, no further investigation was recommended by AEI. Based on the review of documents provided, Ramboll agreed with AEI's conclusions that there are no RECs identified for the 2020 and 2040 East 7th Place Sites. Given the results of the geophysical survey and subsurface investigation conducted at the Violet Street Site, Ramboll also did not identify any significant issues of environmental concern on that portion of the site.
- Several USTs and ASTs were formerly present at various locations across the site, resulting in residual soil impacts. While the concentrations reported in soil samples collected to date were low and do not represent a significant environmental concern, Ramboll stated it would be prudent to perform a soil characterization prior to conducting any earthwork activities, as it's possible some of the excavated soil would require additional handling/disposal considerations. Further, Ramboll recommended that a soil management plan (SMP) be prepared and followed during earthwork activities.
- The UST on the Violet Street Site, if present, would require removal and appropriate permitting. If the clarifier at the Violet Street Site is in use, any discharges should be permitted and reported to the appropriate regulatory agency. If features such as USTs and clarifiers are discovered during earthwork activities, they can be addressed as part of implementation of the SMP.

4.5 User-Provided Information

Ramboll provided Hines with a User Questionnaire (consistent with Appendix X3 of the ASTM Standard) that requested information relating to environmental liens, activity use limitations (AULs), specialized knowledge of the property, property value diminution, chain-of-title, or any other commonly known or obvious indications of site contamination, that was not otherwise provided to Ramboll. The user did not provide any information that was not otherwise obtained and reviewed by Ramboll. The User Questionnaire is included as Appendix E.

5. SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

Ramboll conducted a visit to the site on March 3, 2020. During the site visit, observations of both the interior of the buildings and exterior portions of the site were made to evaluate if any RECs, as defined in Chapter 2, are present.

5.2 General Site Setting and Observations

Ramboll made observations concerning all of the interior and exterior issues specified in Sections 9.4.2 through 9.4.4 of the ASTM E1527-13 Standard. The presence or absence of each issue of environmental interest or concern is noted in Table 7. Additional information regarding observed and historical items is provided in the sections following the table.

Table 7 Summary of Site Reconnaissance Observations

ASTM Section	Issue	Observation
Interior and Exterior Issues		
9.4.2.1	Current use(s) of the property	See Section 3.2
9.4.2.2	Past use(s) of the property	See Section 4.2
9.4.2.3	Hazardous substances and petroleum products used, treated, stored, disposed of, or generated on the property in connection with identified present or past uses	**Present** (see Section 5.2.1)
9.4.2.4	Storage tanks: Underground storage tanks (fill ports, vent pipes, manholes) Aboveground storage tanks	(see Section(s) 5.2.2 and 5.2.3) **Present** **Present**
9.4.2.5	Odors (strong, pungent or noxious)	Absent
9.4.2.6	Pools of liquid, standing surface water or sumps	Absent
9.4.2.7	Drums of hazardous substances or petroleum products (five-gallon, 55-gallon or totes)	**Present** (see Section 5.2.1)
9.4.2.8	Hazardous substance and petroleum product containers (not necessarily in connection with identified uses)	**Present** (see Section 5.2.1)
9.4.2.9	Unidentified substance containers suspected of containing hazardous substances or petroleum products	**Present** (see Section 5.2.1)

Table 7 Summary of Site Reconnaissance Observations

ASTM Section	Issue	Observation
9.4.2.10	Polychlorinated biphenyls (PCBs) Electrical equipment on-site (e.g., transformers, capacitors) Electrical equipment known or likely to contain PCBs Hydraulic equipment on-site (e.g., elevators, truck dock lifts) Hydraulic equipment known or likely to contain PCBs	 **Present** (see Section 5.2.3) Possible Absent Absent
Interior Issues		
9.4.3.1	Heating/cooling systems	**Present** (see Table 1)
9.4.3.2	Stains or corrosion on interior floors, walls or ceilings (except for staining from water)	Absent
9.4.3.3	Floor drains and interior sumps	**Present** (see Section 3.2.3)
Exterior Issues		
9.4.4.1	Pits, ponds or lagoons on property or adjacent sites	Absent
9.4.4.2	Stained soil or pavement	**Present** (see Section 5.2.4)
9.4.4.3	Stressed vegetation (from other than insufficient water)	Absent
9.4.4.4	On-site solid waste disposal; areas apparently filled or graded by non-natural causes; or mounds or depressions suggesting solid waste disposal	Absent
9.4.4.5	Wastewater or other liquid (including storm water) or any discharge into a drain, ditch, underground injection system or stream on or adjacent to the property	**Present** (see Section 3.2.3)
9.4.4.6	Wells (including dry wells, irrigation wells, injection wells, abandoned wells, or other wells)	**Present** (see Section 4.4)
9.4.4.7	Septic systems or cesspools	Absent
Non-Scope Considerations		
N/A	Asbestos Containing Materials	**Present** (see Section 5.2.5)
N/A	Lead-Based Paint	**Present** (see Section 5.2.6)
N/A	Water Intrusion	**Present** (see Section 5.2.7)
N/A	Radon	**Present** (see Section 5.2.8)

Table 7 Summary of Site Reconnaissance Observations

ASTM Section	Issue	Observation

Notes:

Observations noted in this table and discussed further below are based on information obtained during the site visit and from a review of the sources summarized in Section 4.

See the ASTM Standard for a detailed description of the issues included in each referenced ASTM section.

Per the ASTM Standard, fluorescent light ballasts likely to contain PCBs are not considered.

N/A – Not applicable.

5.2.1 Hazardous Substances and Petroleum Products

Chemical storage at the 2045 Violet Street parcel is limited to janitorial and maintenance chemicals including 5-gallon containers of latex paint (stored in a janitorial closet). Wastes are collected in onsite dumpsters, which are positioned on pavement north of the building beneath an exterior stairway. No evidence of release was observed in these areas. Chemicals are not stored in exterior areas of the site.

Chemical storage observed at the 2020 East 7th Place parcel included two USTs, a CAS AST used to regulate gasoline and diesel USTs, one rusty 55-gallon metal drum of unknown contents and an onsite generator with unknown contents. The drum and AST were located on the asphalt within the parking lot. The generator was located on a concrete pad surrounded by vegetation along the southern edge of the parcel. Five green cylinders of Forane 427A HVAC system refrigerant and five one-gallon sized containers of compressor oil were observed on the roof of the 2020 East 7th Place parcel. Additional unlabeled containers of fluids and one suction line accumulator associated with HVAC units were observed on the roof. Small quantities of latex paints in 5-gallon containers or smaller, and two one-gallon Zerol-150 refrigerant oil were located on a pallet within the warehouse building. One 5-gallon container of lubricating oil and one small quart sized container of general purpose paint thinner was observed in the office area.

A site map for the former tenant included a location of a former chemical storage area and a former cardboard trash compactor. No major staining was observed in either area.

Facility personnel were not aware of any significant spills or releases of materials at drum and UST storage areas. While dedicated secondary containment was not provided for the drum, Ramboll did not observe evidence of spills or uncontrolled releases from this storage areas, other than minor staining in paved (i.e., eastern parking lot) areas. Staining did not appear to extend to storm water drains or unpaved surfaces.

5.2.2 Underground Storage Tanks

A total of two active USTs are currently located at the site. Pertinent information regarding the USTs is provided in Table 8. The USTs are registered with City of Los Angeles Fire Department, as indicated by the UST notification form dated July 21, 2019.

Additionally, as many as thirteen additional USTs were formerly located at the site and were likely removed between 1960 and 1990. All but four of the tanks were removed under City Fire Department

oversight, with soil sampling confirming no significant impacts to the subsurface. One of the USTs is listed as abandoned onsite. Six of the former tanks were likely removed or abandoned prior to the enactment of specific tank closure requirements. As a result, no confirmatory soil samples were collected during the removal or abandonment of these tanks. Information related to the closure activities is below. The site is not listed on the Leaking Underground Storage Tank (LUST) database.

Table 8: Underground Storage Tanks

Number and Size (gal.)	Contents	Location	Key Dates	Regulatory Closure Granted?	Notes
In Use					
1x10,000-gallon	Unleaded gasoline	2020 East 7th Place parcel	Installed 1998; permitted in 2019	No	Double walled; Veeder Root monitoring system, Permitted, fiberglass construction equipment with automatic monitoring system. Tanks were in full compliance in June 2019 as per the LAFD.
1x10,000-gallon	Diesel fuel	2020 East 7th Place parcel	Installed 1998; permitted in June 2019	No	Double walled; Veeder Root monitoring system, Permitted, fiberglass construction equipment with automatic monitoring system. Tanks were in full compliance in June 2019 as per the LAFD.
Closed-in-Place/Removed					
1,000-gallons	Gasoline	2045 Violet Street parcel	Installed 1941	No	28ft east of west property line and 18 feet north of south property line on a vacant lot. For Southwestern Freight Lines

Table 8: Underground Storage Tanks

Number and Size (gal.)	Contents	Location	Key Dates	Regulatory Closure Granted?	Notes
2x1,000-gallon	Gasoline	2020 2020 East 7th Place parcel, dispenser 50 feet from the property line. Waste oil in drum.	Installed in 1951	Unknown	For Westway Truck Rentals.
1,000-gallon	Unknown	20 feet from south side of the 2045 Violet Street parcel building line and 15 feet from the west side of the building line.	Abandoned in 1960	Unknown	Abandoned by 8 tons of wet sand, by Apex Wholesale Produce Co. on 5/15/1960
Unknown 1 UST	Unknown	2017 Violet Street parcel	Installed in 1960	Unknow	For Associated Freight Lines
7,500-gallon	Gasoline	2045 Violet Street parcel	Installed in 1979; removed in 1998	Yes, LAFD	Ziggy's Mushroom, approximately 10 feet from the southern property line. LAFD records inspection the removal and reported the steel tanks to be in good condition. Sampling of soil did not indicate impacts. Name on the permit for installation was Southwestern Freight Liners
2-tanks	Unknown	2017 Violet Street parcel	Onsite tanks in 1990 discovered by Underground Tank Enforcement Unit	Unknown	Two tanks in the system, unpermitted for Hollywood Delivery Service, "not been utilized for years".

Table 8: Underground Storage Tanks

Number and Size (gal.)	Contents	Location	Key Dates	Regulatory Closure Granted?	Notes
10,000-gallon	Gasoline	2017 Violet Street parcel	Abandoned in 1993	Yes LAFD oversight	Approved LAFD 1993; soil samples for 8020, 8015, 7420; UST intact; no UST left onsite; one soil stockpile sample had 284 ppm TPH, clean according to LAFD action levels.
2x1,000-gallon [erroneously listed as 550-gallon]	Waste Oil Tanks	Northern side of the 2017 Violet Street address.	Installed in 1963; removed in 1993	Yes LAFD oversight	Approved LAFD 1993; soil samples for 8020, 8015, 7420; USTs in good condition except holes in the side of one of the 550-gallon waste oil tanks; no USTs left onsite. The tanks were removed at the same time as the above 10,000-gallon gasoline UST. Soil sampling was conducted from one combined soil stockpile. As noted above, one sample collected from the stockpile had 284 ppm of TPH, clean according to LAFD action levels.
2x1,000-gallon	Gasoline/diesel	Northern side of the 2017 Violet Street address.	Installed in 1963; removed in 1993	LAFD Permit approved 1998	Soil sampling did not indicate significant impacts.

5.2.3 Aboveground Storage Tanks

A 400-gallon steel Haley system CAS is located in the parking lot adjacent to the UST pump island on the eastern portion of the 2020 East 7th Place parcel. The CAS prevents excess emissions and product loss by controlling gasoline and diesel fuel storage tank pressure. An onsite emergency generator was

observed within a vegetated area along the southern portion of the 2020 East 7th Place parcel. Facility personnel were unaware of the history or contents of the generator belly tank however it was reported out-of-service. No external secondary containment was provided. No evidence of spills or releases observed.

In addition, Ziggy's Mushroom Company installed a 6,000-gallon propane tank on the western portion of the parcel used for heating purposes. In February 1950, Southwestern Freight Lines installed a butane-propane AST. The 3,750-gallon AST was installed in an undetermined location at the parcel.

These tanks are not viewed as a potential source of environmental contamination given the physical properties of the materials stored in the AST (compressed gases/liquids that exist as gases under typical atmospheric conditions).

5.2.4 Polychlorinated Biphenyls (PCBs)

Facility personnel were not aware of on-site equipment that is known to contain polychlorinated biphenyls (PCBs). Three pole-mounted transformers and one pad-mounted transformer are present on the property and are owned by the City of Los Angeles Department of Public Works. The units are not labeled as to their PCB content. Ramboll saw no indication of leaks or releases from electrical equipment observed during the site visit.

Because the installation date of the units is unknown and may predate the 1979 federal ban on the manufacture of PCBs, it is possible that the transformer oils contain PCBs.

Because the buildings were either constructed or renovated after the 1979 federal ban on the manufacture of PCBs, it is unlikely possible that hydraulic oils or other types of electrical equipment, such as capacitors or light ballasts, contain PCBs.

Ramboll observed no indication of leaks or releases from electrical equipment during the site visit.

5.2.5 Stained Soil or Pavement

Ramboll observed evidence of minor pavement staining in the loading dock area located east of the 2020 East 7th Place building; facility personnel believe the staining likely resulted from minor drips from employee vehicles and semi-trucks parked in these areas. In addition, Ramboll observed minor pavement staining in the paved parking area along the northern perimeter of the site, also associated with employee vehicles. Pavement in the vicinity of the observed staining appeared to be in good condition, with no evidence of cracking.

5.2.6 Asbestos Containing Materials (ACMs)

Although an asbestos inspection and sampling of suspect building materials in conformance with established protocols (as outlined in 40 CFR §763), applicable state or local regulations, or industry standards, were beyond our scope of work, Ramboll reviewed documents pertaining to the buildings. The buildings onsite were either constructed or renovated after asbestos was generally phased out of use in most building material applications in the 1980s. A formal asbestos survey has not been conducted at the facility. It is unlikely that large quantities of materials that may contain asbestos (e.g. ceiling tiles, roofing materials) are located onsite

Since the buildings were either constructed or renovated after 1981; none of the building materials at the site are considered PACM. Asbestos has continued to be used in some building materials since that time, although it was phased out of use in many building materials during the 1980s. Facility

personnel were not aware of any ACM within the buildings and a comprehensive asbestos survey has not been conducted. During the site visit, Ramboll observed suspect ACM [i.e., floor tile, ceiling tile, roofing materials]. The term suspect ACM is not defined by OSHA but can include numerous building materials manufactured using asbestos currently or in the past (e.g., ceiling tiles, roofing materials, joint compound), as well as TSI, surfacing materials, and flooring materials installed after 1981. Although the possibility that asbestos is present in the building materials cannot be ruled out, the facility is unlikely to have significant quantities of ACM.

There are no regulatory requirements to remove ACM or evaluate whether building materials contain asbestos, unless the materials are damaged and have the potential to release fibers or the materials have the potential to be disturbed during renovation or demolition activities. Ramboll did not observe any obviously damaged building materials.

5.2.7 Lead-Based Paint

Lead was a major ingredient in paint pigment prior to and through the 1940s. While other pigments were used in the 1950s, the use of lead in paint continued until the early 1970s. In 1978, the Consumer Products Safety Commission banned paint and other surfacing coating materials that are "lead-containing paint." Based on the construction date and renovations of the two onsite buildings in 2002 and 2015, it is unlikely that lead-based paint was used historically on facility structures. Facility personnel were not aware of the presence of any lead-based paint on structures at the facility. Ramboll observed the paint to be in good condition.

5.2.8 Water Intrusion

Ramboll did not perform a mold survey at the site; however, facility personnel provided information regarding past water intrusion events. Facility personnel indicated that water intrusion was not a problem in the onsite buildings.

5.2.9 Radon

Based on information included in the environmental database report, the site is located in an area categorized as Zone 2, which has average indoor basement radon levels between 2 and 4 picoCuries per liter (pCi/L). The USEPA's continuous exposure limit, which is the limit at which further testing or remedial action is suggested, is 4.0 pCi/L. This USEPA continuous exposure limit applies to residential, not commercial, properties. According to the California Radon database, two tests conducted in the same zip code as the site indicated that none exceeded a Radon value of greater than 4 pCi/L. A USEPA survey conducted in the same zip code as the site found that the average radon level of a first-floor room at sixty-three properties was 0.711 pCi/L.

6. FINDINGS, OPINION, AND CONCLUSIONS

Ramboll performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of the located at 2020 East 7th Place, 2040 East 7th Place and 2045 Violet Street, Los Angeles, California in March 2020. The objective of the ESA was to identify RECs, as defined in the ASTM Standard. A list of key definitions presented in the ASTM Standard is provided in Chapter 7 at the end of this report. Any exceptions to, or deletions from, this practice are described in Section 6.2.

6.1 Findings, Opinions, and Conclusions

6.1.1 Recognized Environmental Conditions

Ramboll performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527-13 of the property located at located at 2020 East 7th Place, 2040 East 7th Place, and 2045 Violet Street, Los Angeles. Any exceptions to, or deletions from, this practice are described in Section 6.2 of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the site.

6.2 Notable Other Findings

Although not considered a REC, Ramboll identified the following notable other findings. The term "other finding" is not defined by ASTM; rather, Ramboll uses the term to connote areas of contingent risk that are not clearly defined by the ASTM Standard.

- **Former USTs**. Ramboll's review of database listings and historical documents for the site identified as many as 13 USTs formerly located onsite, including a possible UST investigated by AEI Consultants (AEI) described below. The USTs were installed for the storage of vehicle fuel and diesel associated with shipping and warehousing activities. According to available documentation, these USTs appear to have been removed between the 1950s and 1980s; however, removal and closure documentation was not available for six of the USTs. The site is not listed on the Leaking Underground Storage Tank (LUST) database. Previous soil sampling conducted at the site, primarily during UST removals, indicates low levels of total petroleum hydrocarbons (TPH) and select fuel-related volatile organic compounds (VOCs) were left in place. Further, a geophysical survey and limited subsurface investigation were conducted by AEI in 2018 to attempt to locate one of the USTs and evaluate potential subsurface impacts. A geophysical anomaly resembling the footprint of a UST was identified during the survey. Two soil samples were subsequently collected and did not contain detectable concentrations of total TPH or VOCs.

  Although these UST matters are not considered a REC, absent further closure or sampling documentation, Ramboll cannot rule out that unknown USTs are present or that the subsurface was impacted from the former USTs. The risk of widespread contamination is mitigated by the fact that groundwater beneath the site is relatively deep (over 90 feet below ground surface), and facility personnel are not aware of any major spills or releases at the site. The residual contamination identified above doesn't represent a significant environmental concern, however, additional handling and/or disposal considerations may need to be made for impacted soil during property redevelopment. It would therefore be prudent to perform a soil characterization prior to conducting any earthwork activities. Further, Ramboll recommends that a soil management plan (SMP) be prepared and followed during earthwork activities.

- **Current USTs**. In addition to the older USTs summarized above, there are two USTs currently present at the site: one 10,000-gallon gasoline UST and one 10,000-gallon diesel UST. The two USTs were installed in 1998 at the 2020 East 7th Place parcel and have been used to fuel vehicles associated with produce storage and transport operation located onsite. As of June 2019, the USTs were permitted and in full compliance with Los Angeles Fire Department (LAFD) requirements, including passing a tightness test. To Ramboll's knowledge, sampling has not been conducted in the vicinity of these two USTs. Given the age and compliance of these USTs, it is unlikely any significant release occurred; however, due to the lack of sample data, Ramboll cannot rule out the possibility that small release(s) of petroleum products could have occurred in the past. Upon removal of the USTs, impacted soil, if encountered, can be addressed as part of site-wide mass excavation activities.
- **Historical Operations at Adjacent Property.** The former Ford Factory property, located adjacent to the east of the site, has had a long history of industrial use from approximately 1914 to 1985. Former operations at the Ford Factory property that could have contributed to subsurface impacts include but are not limited to: metal plating, chemical warehousing, vehicle manufacturing and repair, printing, and machining operations. The Ford Factory property recently underwent a $50-million renovation in the mid to late 2010s; however, there is no publicly available documentation for the property on the Geotracker or EnviroStor agency databases, and it is unclear whether property redevelopment included soil excavation. In addition, a Phase I ESA prepared for the Ford Factory property by Partner in 2017 recommended a subsurface investigation be performed to evaluate potential impacts from former operations at the Ford Factory building. To Ramboll's knowledge, the subsurface investigation has not been performed.

  To address this issue, Ramboll conducted a soil vapor survey in February 2020 in the alley between the site and the former Ford Factory, and along East 7th Place. Ramboll summarized the findings in a Peer Review of Environmental Documents and Results of Soil Vapor Survey letter report in February 2020. VOCs were not reported above respective laboratory reporting limits in any of the soil samples collected, and low levels of tetrachloroethene (PCE) and Freon 11 were reported in the soil vapor samples. Based on the results of the soil vapor survey, Ramboll concluded that it does not appear that VOC release(s), if any, from the adjacent Ford Factory property have migrated toward the site in a manner that would result in an adverse soil vapor condition at the site. Further, the VOC concentrations reported in soil vapor would be considered to fall within the low end of the regulatory agency-acceptable risk management range for commercial/industrial land uses.

6.2.1 *De Minimis* Conditions

De minimis conditions are those that do not represent a material risk of harm to public health or the environment and that generally would not be the subject of enforcement action if brought to the attention of appropriate governmental agencies. Ramboll identified the following *de minimis* conditions related to the site:

- **Unlabeled 55-gallon rusty drum**. One full 55-gallon drum labeled as hazardous waste was observed adjacent to the USTs on the 2020 East 7th Place parcel. Facility personnel were unaware of the contents of the drum. Minor staining was observed beneath the drum, however the staining was limited in size and did not appear to reach storm drains. As such, Ramboll considers this matter to represent a *de minimis* condition.
- **Out-of-Service Emergency Generator.** Ramboll observed an emergency generator on the 2020 East 7th Place parcel. Facility personnel were unaware of the contents of the generator or the last

use of the generator. No staining was observed around the concrete pad of the generator, and no oil, fuel or coolant leaks appears around the base of the generator. As such, Ramboll considers this matter to represent a *de minimis* condition.

- **Pavement Staining.** Ramboll observed multiple areas of exterior pavement where oil stains were apparent. The stains were limited in areal extent (up to 6 square feet in diameter), the underlying pavement appeared to be intact, and no stains appeared to reach storm water drains. As such, Ramboll considers this matter to represent a *de minimis* condition.

6.2.2 Non-Scope Considerations

Ramboll identified the following findings that relate to non-scope considerations (as discussed in Section 2.2), as detailed below:

- **Asbestos-Containing Materials.** The buildings onsite were either constructed or renovated after asbestos was generally phased out of use in most building material applications in the 1980s. A formal asbestos survey has not been conducted at the facility. It is unlikely that large quantities of materials that may contain asbestos (e.g. ceiling tiles, roofing materials) are located onsite.
- **Water Intrusion/Mold.** Ramboll did not perform a mold survey at the site; however, facility personnel indicated that water intrusion was not a problem in the onsite buildings.
- **Lead-Based Paint.** Lead was a major ingredient in paint pigment prior to and through the 1940s. While other pigments were used in the 1950s, the use of lead in paint continued until the early 1970s. In 1978, the Consumer Products Safety Commission banned paint and other surfacing coating materials that are "lead-containing paint." Based on the construction date and renovations of the two onsite buildings in 2002 and 2015, it is unlikely that lead-based paint was used historically on facility structures. Facility personnel were not aware of the presence of any lead-based paint on structures at the facility. Ramboll observed the paint to be in good condition.
- **Radon.** Based on information included in the environmental database report, the site is located in an area categorized as Zone 2, which has average indoor basement radon levels between 2 and 4 picoCuries per liter (pCi/L). The USEPA's continuous exposure limit, which is the limit at which further testing or remedial action is suggested, is 4.0 pCi/L. This USEPA continuous exposure limit applies to residential, not commercial, properties. According to the California Radon database, two tests conducted in the same zip code as the site indicated that none exceeded a Radon value of greater than 4 pCi/L. A USEPA survey conducted in the same zip code as the site found that the average radon level of a first-floor room at sixty-three properties was 0.711 pCi/L.

6.3 Analysis of Data Gaps

The ASTM Standard defines a data gap as "a lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information." A data gap is only significant if other information obtained during the ESA, or professional experience, raises reasonable concerns and affects the ability of the environmental professional to identify whether a given issue is a REC. The ASTM Standard requires that the ESA report identify and comment on significant data gaps.

Limiting conditions and deviations to the ASTM Standard for the assessment are discussed below.

- Facility personnel did not have current contact information for representatives of former site owners/occupants. Ramboll made reasonable attempts to obtain such information, but it was not otherwise readily available. Thus, Ramboll was unable to interview former owners/occupants about

historical operations and site conditions. However, Ramboll conducted interviews with representatives of CBRE Property Management with tenure at the site dating back to 2019 and reviewed other historical sources regarding former uses of the property.

None of the exceptions, deletions, deviations, or site reconnaissance limitations noted above are considered to represent significant data gaps.

7. ASTM DEFINITIONS

The following definitions are presented in the ASTM Standard:

REC - Recognized Environmental Condition:

The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: 1) due to release to the environment; 2) under conditions indicative of a release to the environment; or 3) under conditions that pose a material threat of a future release to the environment.

CREC - Controlled Recognized Environmental Condition:

A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

HREC - Historical Recognized Environmental Condition:

A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

***De minimis* Condition:**

A condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

Data Gap / Significant Data Gap:

A lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information. A data gap is significant if other information and/or professional experience raises concerns involving the data gap.

Please note that the term "other finding" is not defined by ASTM; rather, Ramboll uses the term to connote areas of contingent risk that are not clearly defined by the ASTM Standard.

APPENDIX B
ENVIRONMENTAL DATABASE REPORT

NOTES ON ENVIRONMENTAL DATABASE REPORT

The third-party provider conducted its searches for the standard environmental record sources and the minimum search distances, as specified by the ASTM Standard. The ASTM Standard uses the terminology "approximate minimum search distance" to refer to the radii searched in the environmental database report.

The third-party provider conducted the search of environmental databases in March 2020. Because the environmental databases themselves are sometimes not updated by the specific regulatory agencies for periods of up to one year or more (depending on the database and the state), the database search conducted herein will not necessarily list any facility or site for which an environmental investigation/listing has been initiated subsequent to the last update.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for

listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 01/30/2020 has revealed that there are 4 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/16/2019 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 12/16/2019 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/16/2019 has revealed that there are 15 RCRA-SQG sites within approximately 0.25 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/28/2019 has revealed that there are

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, has revealed that there are 5 SWF/LF sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

State and tribal leaking storage tank lists

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 11 LUST sites within approximately 0.5 miles of the target property.

CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CPS-SLIC list, as provided by EDR, has revealed that there are 2 CPS-SLIC sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 40 UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/16/2019 has revealed that there are 25 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 08/12/2019 has revealed that there is 1 FINDS site within approximately 0.001 miles of the target property.

EXECUTIVE SUMMARY

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the HAZNET list, as provided by EDR, and dated 12/31/2017 has revealed that there is 1 HAZNET site within approximately 0.001 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 2 EDR MGP sites within approximately 1 mile of the target property.

SO CAL GAS/OLYMPIC B	2424 E OLYMPIC BLVD	SSE 1/4 - 1/2 (0.494 mi.)	AO424	937

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 15 EDR Hist Auto sites within approximately 0.25 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 5 EDR Hist Cleaner sites within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page

Violation Description:	Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1,- 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October- 1,- 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes:	Returned to compliance on 06/21/2019. OBSERVATION: Owner/Operator failed to meet one or more of the requirements applicable to overfill prevention equipment. Facility did not test overfill protection before the October 1st 2018 deadline. CORRECTED ON SITE: Overfill protection was tested on 6/21/2019 during monitor cert by John Kneisel with PTT.

Violation Date:	06-21-2019
Citation:	23 CCR 16 2716(a) through (e) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(a) through (e)
Violation Description:	For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.
Violation Notes:	Returned to compliance on 09/06/2019. OBSERVATION: Facility did not comply with one or more of the following DO monthly inspection requirements: Signature by tank owner/operator in Section VI is missing on 5/2019-3/2019, 1/2019-12/2018 & 10/2018 DO inspection reports. Section VII was incorrectly marked YES by DO on 5/2019, 4/2019, 2/2019, & 11/2018 DO Inspection reports. Late Overfill was noted in Section X on 2/2019 & 11/2018 DO report but not noted in Section III by DO and was not able to followed up on in Section V by tank owner/operator. 2/2019 DO report Section VII and VIII are not filled out. DO failed to sign Section IV on 10/2018 DO report. CORRECTIVE ACTION: Tank owner/operator signed in Section VI on DO reports where there was no signature on site. Section VII for previously mentioned DO reports from 5/2019, 4/2019, 2/2019, & 11/2018 should be marked as NO since overfill was not completed and was noted in Section III on previous DO inspection report. Have DO note late overfill in Section III on & [Truncated]

FINDS:

Registry ID: 110002758766

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Submit a Hazardous Materials Inventory into CERS. Included in this inventory should be all hazardous materials stored in a capacity greater than 55 gallons of liquid, 200 cubic feet of compressed gas or 500 pounds in weight of a solid. The following reportable hazardous materials were noted onsite during the inspection: correct CO2 inventory to 120 gallons.

Citation: 22 CCR 12 66262.40(c) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(c)
Violation Description: Failure to keep records of any test results, waste analyses, or other determinations made in accordance with section 66262.11 for at least three years from the date that the waste was last sent to on-site or off-site treatment, storage, or disposal.
Violation Notes: Returned to compliance on 12/03/2018. Observation: The hazardous waste determination documentation for "Used White Molding Sand" was not available at the time of inspection for the previous 3 years from the date the waste stream was last managed on site or sent off site for treatment. Provide CAM-17 Metal Test to the used white molding sand and maintain the test record on site. ORRECTIVE ACTION: Submit documentation to the CUPA demonstrating that the "Used White Molding Sand" has been properly characterized to determine if it is a hazardous waste. If determined to be hazardous submit a manifest/receipt documenting proper disposal and a statement demonstrating how you will manage it in the future.

FINDS:

Registry ID: 110002668809

Environmental Interest/Information System
AIR EMISSIONS CLASSIFICATION UNKNOWN
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

CA BOND EXP. PLAN:

Reponsible Party:	COST RECOVERY/OPERATION AND MAINTENANCE SITE
Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	DHS has utilized Bond funds to complete the remedial action. DHS is currently undertaking appropriate cost recovery actions.
Site Description:	This site was previously used to scrap electrical transformers.

DEAN AND ASSOCIATES (Continued) **S100833562**

Hazardous Waste Desc: Polychlorinated biphenyls (PCBs) were detected in the soil.
Threat To Public Health & Env: The remedial action has been completed. Soil contaminated with PCBs was excavated and redisposed of in a licensed landfill. There is no threat to public health and the environment.
Site Activity Status: In August, 1985, the RP, Mr. Rodney Dean, pled no contest to three felony counts of illegal storage, transportation and disposal of hazardous wastes. Mr. Dean's probation required that the cleanup of the site be completed and reported to the court. The RP retained a contractor for the cleanup and began the remedial actions. The contractors removed much of the contaminated soil. DHS completed the cleanup after the RP exhausted his financial resources. DHS is currently in the cost recovery stage.

Site ID:	87500
Site Name:	7 BAY TRUCK STATION
Violation Date:	12-18-2018
Citation:	23 CCR 16 2715(f) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2715(f)
Violation Description:	Failure to have a properly qualified service technician test leak detection equipment as required every 12 months (vapor, pressure, hydrostatic (VPH) system, sensors, line-leak detectors (LLD), automatic tank gauge (ATG), etc.).
Violation Notes:	Returned to compliance on 12/18/2018. OBSERVATION: Facility's is late for testing their monitor certification testing. It was last completed on 11/5/2017. 1 month late. The monitor certification testing for 2017 and 2016 were 1 month late compared to the 2015 test. These tests are required to be completed every 12 months. CORRECTED ON SITE: Inspector Young spoke with Owner Aris Manukian to let let him know that the facility's monitor certification testing must return to the October anniversary date and that any future late testing will lead to being sent to the legal unit for a potential penalty assessment.

Citation:	23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description:	Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1,- 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October- 1,- 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

7 BAY TRUCK STATION (Continued) **S113119090**

Violation Notes:	Returned to compliance on 12/18/2018. OBSERVATION: Owner/Operator failed to meet one or more of the requirements applicable to overfill prevention equipment. Facility did not test overfill protection before the October 13th 2018 deadline. CORRECTED ON SITE: Overfill protection was tested on site today 12/18/2018 during monitor cert by Ricardo Martinez with Del Real Testing.

Eval Notes: Per Captain dG Lisa DaviesG orders in email sent Thu, Mar 12, 2015 at

7 BAY TRUCK STATION (Continued) **S113119090**

4:00PM: G Criteria for worksheet: Check to see if inspection date against daily time and activity to verify if the last inspection date. If an inspection is found to be more current, please clean up that data as shown by Insp. Morel. Separate all activities done: MC, SB SB-989, install, removalG If you encounter scanned files, you must search all the attachments for test results, tank info, etc. If a tank pull is encountered, record the date of the removal - to be updated in EnvisionCONNECT. If an inspection is due, research to see if it is HazMat or UST. If a city facility, give Sean Sullivan a call, he may be able to provide documentation - handles tanks. Check against the CERS submittals, info may have been submitted.G

Eval Notes: 930 S Santa Fe Ave Inspector Young onsite to talked to Owner Aris about late Monitor certification testing. Facility is on overdue list and normally has their monitor certification done in November. Inspector Young talked to owner Aris and he had thought the test was already scheduled. Inspector Young spoke with Terry on the phone. He said he would contact Ricardo Martinez with Del Real Testing to see why he hasn't submitted a test request for the facility. Tester sent in test request for next week.

FINDS:

Registry ID: 110002801549

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Name: MV TRANSPORTATION
Address: 2016 BAY ST
City,State,Zip: LOS ANGELES, CA 90021
Site ID: 50742
CERS ID: 10262566
CERS Description: Chemical Storage Facilities

Violations:
Site ID: 50742
Site Name: MV TRANSPORTATION
Violation Date: 10-01-2018
Citation: 40 CFR 1 265.31 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.31
Violation Description: Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.
Violation Notes: Returned to compliance on 01/07/2019. Observation: Owner/operator failed to maintain the facility to prevent release of hazardous wastes. Observed accumulation of waste liquids in the secondary containment under the waste antifreeze tank and under the drums of motor oil. Corrective Action: Remove accumulation of waste liquids in the secondary containment under the waste antifreeze tank and under the drums of motor oil.
Violation Division: Los Angeles County Fire Department
Violation Program: HW
Violation Source: CERS

Site ID: 50742
Site Name: MV TRANSPORTATION
Violation Date: 05-03-2016
Citation: HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Description: Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.
Violation Notes: Returned to compliance on 03/18/2019.
Violation Division: Los Angeles City Fire Department

Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Consent to enter, inspect and take photographs was given by: Myron Broadnax The Business Activities, Owner/Operator Identification, Hazardous Materials Inventory, Site Map, Emergency Response/Contingency Plan and Employee Training Plan sections were reviewed in CERS and field verified. Review and correct any violations indicated previously in this report, on or before the COMPLY BY date associated with each violation. NOTE: The LAMC, Sections (L.A.M.C. SECTION 57.105.1.4; 57.120.3; 57.121.2 and 57.121.2.1.) requires businesses that store, use or handle hazardous materials in the City of Los Angeles to obtain a Consolidated Permit from the Los Angeles Fire Department CUPA **** Annual submission of a Hazardous Materials Business Plan into CERS is required between January 1 and March 1 of every year. Please remember that any change in inventory of greater than 100 percent will require new submission within 30 days of that change. As a reminder, you must complete [Truncated]

MV TRANSPORTATION (Continued) **S113144423**

Eval Date:	05-03-2016
Violations Found:	Yes
Eval Type:	Routine done by local agency
Eval Notes:	On site for routine hazardous materials and business emergency plan inspection. Consent to enter and inspect was given by DEAN MARIANI - SHOP MANAGER. CONTACT INFORMATION: DEANMARIANI@MVTANSIT.COM Observed the facility and inspected hazardous materials storage. Annual employee safety training records were not maintained. Facility has also not electronically disclosed the onsite hazardous materials inventory or submitted a business emergency plan in California Environmental Reporting System (CERS). Please go to https://cersbusiness2.calepa.ca.gov to complete a chemical inventory disclosure and business emergency plan. The facility is responsible for identifying all hazardous materials, to include hazardous wastes, which are above disclosure thresholds. If there is a change in the type or amount of chemicals that are maintained on site, please submit revised documents (electronically)within 30 days of the change.

FINDS:

Registry ID: 110002634533

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

FINDS:

Registry ID: 110002615402

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

FINDS:

Registry ID: 110002640517

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Violation Status: No violations found

FINDS:

Registry ID: 110002818684

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERS HAZ WASTE:
Name: MORTON SCRAP METAL
Address: 2020 E SACRAMENTO ST
City,State,Zip: LOS ANGELES, CA 90021
Site ID: 136420
CERS ID: 10259494
CERS Description: Hazardous Waste Generator

Violations:
Site ID: 136420
Site Name: MORTON SCRAP METAL
Violation Date: 08-08-2018
Citation: 40 CFR 1 265.174 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.174
Violation Description: Failure to inspect hazardous waste storage areas at least weekly and look for leaking and deteriorating containers.
Violation Notes: Returned to compliance on 09/25/2019. OBSERVATION: 5 x 55-gallon drums of used oil located in the hazardous waste storage area were observed

MORTON SCRAP METAL (Continued) **S123536938**

without hazardous waste labels, accumulation start dates and with used oil filters sitting on top of the drums. CORRECTIVE ACTION: Submit a copy of the inspection log to the CUPA demonstrating that the hazardous waste storage area is being inspected weekly.

Violation Division: Los Angeles County Fire Department
Violation Program: HW
Violation Source: CERS

Site ID: 136420
Site Name: MORTON SCRAP METAL
Violation Date: 05-08-2014
Citation: 22 CCR 12 66262.12 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.12
Violation Description: Failure to obtain and/or maintain an Active EPA ID.
Violation Notes: Returned to compliance on 08/28/2014. OBSERVATION: This facilityG s EPA ID number is inactive. A hazardous waste generator shall not treat, store, dispose of, transport or offer for transportation, hazardous waste without an EPA ID number. CORRECTIVE ACTION: Immediately contact DTSC and reactivate your EPA ID number and submit evidence to the CUPA by within 30 days.
Violation Division: Los Angeles County Fire Department
Violation Program: HW
Violation Source: CERS

Site ID: 136420
Site Name: MORTON SCRAP METAL
Violation Date: 05-08-2014
Citation: 40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Description: Failure to properly close hazardous waste containers when not in active use.
Violation Notes: Returned to compliance on 08/28/2014. OBSERVATION: open top 55 gallon containers with oil water mix and absorbent waste. All hazardous waste containers shall be closed at all times except when adding or removing waste. CORRECTIVE ACTION: Immediately close these containers and ensure all hazardous waste containers are closed when not adding or removing waste.
Violation Division: Los Angeles County Fire Department
Violation Program: HW
Violation Source: CERS

Site ID: 136420
Site Name: MORTON SCRAP METAL
Violation Date: 08-08-2018
Citation: 22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description: Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
Violation Notes: Returned to compliance on 09/25/2019. OBSERVATION: Uniform Hazardous Waste Manifests/Invoices for hazardous waste disposed of in the last three years were not available at the time of inspection. CORRECTIVE ACTION: Locate a copy of all manifests/invoices for hazardous waste from the last three years and submit copies to the CUPA.
Violation Division: Los Angeles County Fire Department

FINDS:

Registry ID: 110002628906

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110002617106

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Violation Date:	03-06-2018
Citation:	HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description:	Failure to complete and electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.
Violation Notes:	Please add all materials in excess of reporting requirements.
Violation Division:	Los Angeles City Fire Department
Violation Program:	HMRRP
Violation Source:	CERS

Evaluation:

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	03-06-2018
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	Inspected facility with Jeremy Corselli, Engineering Manager, who provided consent to perform an inspection and take pictures as necessary. Reviewed RMP which was last completed November 2013. Please ensure a revalidated submission is completed and submitted to this Department prior to December 2018. copy to: jeremynh3@aol.com; adittrick@scsengineers.com

Eval Type:	Routine done by local agency
Eval Notes:	Inspection Report Consent to enter, inspect and take photographs was given by: Francis Martinez Documents uploaded to CERS were reviewed and field verified. The following is a list items that need to be corrected: 1. Update your facility information annually through CERS to include a site map and contingency plan. Attachments have been provided to assist you. 2. Update your hazardous materials inventory per the Cal EPA reporting requirements. Instructions have been provided with this report. NOTE: The LAMC, Sections (L.A.M.C. SECTIONS 57.105.1.4; 57.120.3; 57.121.2 and 57.121.2.1.) requires business that store, uses or handle hazardous materials in the City of Los Angeles to obtain a Consolidated Permit from the Los Angeles Fire Department CUPA. To receive a Consolidated Permit you must satisfy the following requirement: **** Annual submission of a hazardous materials business plan to CERS by March 1 of every year. Please remember that any change in inventory [Truncated]

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Info:
Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 09/04/1996
Comments: DTSC reviewed a Preliminary Endangerment Assessment for the site under a Voluntary Cleanup Agreement. Based on the information and data presented, DTSC determined that the hazardous constituents remaining at the site do not constitute a threat to human health or the environment.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 09/13/1995
Comments: The Department received a Non-Emergency Hazardous Substance Release Report dated January 31, 1995. Review of the document indicates that the site is contaminated with elevated levels of heavy metals such as lead, copper and zinc. Foundry operations existed at the site from at least 1906 until 1990, operated by W.G. Grant & Co. Santa Fe Railway is the current owner of the site. RP removed USTs from the site without any regulatory agency oversight. Due to evidence of a release, DTSC is recommending that a PEA be conducted to evaluate the site. On September 13, 1995, DTSC notified the RP thereof.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 12/31/2002
Comments: DTSC approved site characterization activities in December 2002. Contaminants of concern included PAH's & BTEX. A RAW involving excavation will be implemented for the Site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 05/20/1993
Comments: The Department completed review of the PEA. A Manufactured Gas Plant (MGP) was operated at the site in the late 1800s and early 1900s. Gas was produced from crude oil for distribution in the site area. Several companies operated at the site. In 1909, the site was owned by the Los Angeles Gas and Electric Corp., which merged with the Southern Calfornia Gas Company in 1937. SoCalGas owned the property until 1976, and sold to the current owners. The MGP was dismantled sometime before 1906. The byproducts from the manufactured gas operation were tars, oils, sludges, and lampblack. Elevated levels of polycyclic aromatic hydro- carbons (PAH), heavy metals such as lead and arsenic and cyanides were found at the site. The PEA concluded that there was contamination at the site above screening values. Therefore, the Department recommended that further investigation or assessment at the site was necessary.

Comments:	Not reported

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	CEQA - Initial Study/ Neg. Declaration
Completed Date:	03/18/2003
Comments:	Special Initial Study, Negative Declaration, and De Minimis Impact Finding were prepared and made available for public review. No verbal or written comments were received. DTSC approved the CEQA documents on 3/18/2003. DTSC approved RAW on 3/18/03. Proposed removal activities consists of removing approximately 615 cubic yards of contaminated soil. Chemicals of potential concern previously identified in the soil include the following: Lampslack, PAH's, and BTEX. Removal Activities are anticipated to last approximately 30 days.

Manufactured Gas Plants:

Site located at 725 Chemming Street, Los Angeles, California, approximately 2.5 acres. From 1887 util 1906 an oil gas plant was operated at site. MGP may have been converted to a natural gas storage site in approximately 1906. Records indicate that MMGP equipment may have been removed by 1930. Site is currently used as a Greyhound Bus parking lot.

Background Info:	The site is located at 590 South Santa Fe Avenue, Los Angeles, California. The site consists of two land parcels totaling approximately 2.68 actes of land and is located witin an indus-industrial portion of the City of Los Angeles. Historically the site has been used for chemeical or paint manufacturing. Not reported The site was formerly under the oversight of the California Regional Water Quality Control Board (CRWQCB). (CRWQCB) has overseen the site investiation and remediation since approximately 1986. Not reported Previous sampling activities have confirmed both soil and groundwater contamination. Contaminants of concern identified in the groundwater and soil include benzene, ethyl benzene, 1,1-dichlorethane, 1,1-dichloroethene, 4-methyl-2-pentanone (MIBK), toluene, and total xylene. The toluene, and xylene appear to be primarily located within the groundwater beneath the northern portion of the site whereas MIBK has been identified in the groundwater along the southwest corner of the site and may extend beyond the site boundary.

Completed Info:

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Pilot/Treatability Study Report
Completed Date: 02/27/2006
Comments: DTSC sent letter in reponse to Soil Vapor Extraction (SVE) Report.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 03/30/2005
Comments: Meeting scheduled to discuss the cost for the additional assessment.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 02/27/2006
Comments: Letter and comments sent to RP.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 06/26/2008
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 08/01/2008
Comments: OK

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 12/02/2013
Comments: Workplan approved to conduct sampling for data gaps.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 06/30/2014
Comments: Based on the elevated concentrations in the groundwater, DTSC requires submittal of a pilot study workplan that would evaluate potential remedies.

Completed Area Name: Shallow Soil
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 03/22/2016
Comments: The Completion Report summarizes the removal of underground storage tanks and shallow soil excavation. DTSC approved Report. Soil contamination at greater depth and groundwater contamination needs to be completed.

METRO LOCATION 61 SOUTH (Continued) **S101617157**

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Fieldwork
Completed Date:	11/17/2013
Comments:	Sampling activities have begun to delineate contamination.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Community Profile
Completed Date:	03/30/2016
Comments:	Profile details Site information and community involvement activities. Not reported

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Fact Sheets
Completed Date:	09/02/2015
Comments:	The Factsheet will be distributed to the community informing them of the public comment period for the Draft Removal Action Workplan (RAW). Public comment period will occur from September 7 to October 7, 2015. The RAW describes cleanup options for the Site soil and a pilot study to test options for the deeper soil and groundwater.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Public Notice
Completed Date:	09/01/2015
Comments:	The Public Notice will be published in the local newspapers.

Completed Area Name:	Groundwater
Completed Sub Area Name:	Not reported
Completed Document Type:	Monitoring Report
Completed Date:	08/28/2014
Comments:	Not reported

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Monitoring Plan
Completed Date:	02/11/2008
Comments:	Ground Water Monitoring Work scheduled.

Completed Area Name:	Soil
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Characterization Report
Completed Date:	02/04/2015
Comments:	Report summarizes investigation of underground storage tanks.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Removal Action Workplan
Completed Date:	10/30/2015
Comments:	The Removal Action Workplan, which includes excavation of contaminated soil and in situ chemical oxidation, has been approved.

Completed Area Name:	Shallow Soil
Completed Sub Area Name:	Not reported
Completed Document Type:	Fieldwork

METRO LOCATION 61 SOUTH (Continued) **S101617157**

Completed Date: 11/05/2015
Comments: Oversight during excavation.

Completed Area Name: Soil
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 12/15/2015
Comments: Field oversight for excavation.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 07/30/1997
Comments: w

Completed Area Name: Groundwater
Completed Sub Area Name: Not reported
Completed Document Type: Treatability Study Workplan
Completed Date: 06/24/2016
Comments: DTSC approved Pilot Workplan for bench scale test of Insitu Chemical Oxidation (ISCO).

Completed Area Name: Groundwater
Completed Sub Area Name: Not reported
Completed Document Type: Well Decommissioning Workplan
Completed Date: 06/10/2016
Comments: DTSC accepted Workplan.

Completed Area Name: Soil
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 06/30/2016
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 09/23/2016
Comments: Site visit by DTSC geologist, JNaginis.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 07/12/2017
Comments: DTSC site visit. Meeting with MTA and Arcadis regarding current and upcoming activities.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 01/25/2017
Comments: Investigation Report describes additional delineation of the Site's contamination. DTSC approved the Report.

Completed Area Name: Groundwater
Completed Sub Area Name: Not reported
Completed Document Type: Well Decommissioning Report

METRO LOCATION 61 SOUTH (Continued) **S101617157**

Completed Date: 01/25/2017
Comments: The Report documents destruction of three groundwater monitoring wells and two vapor extraction wells.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Pilot Study/Treatability Workplan
Completed Date: 12/24/2004
Comments: Plan proposed data gap investigation, air sparging and soil vapor extraction.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Pilot/Treatability Study Report
Completed Date: 12/24/2004
Comments: Addendum includes response to DTSC comments and additional data from pilot study.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Treatability Study Report
Completed Date: 06/27/2018
Comments: DTSC provided comments to Metro and will meet in August to discuss changes to ISCO use.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Clean Loan Agreement
Completed Date: 02/04/2002
Comments: Response Action Agreement (RAA) approved and signed by proponent and DTSC.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Letter - Demand
Completed Date: 09/28/2008
Comments: DTSC sent first demand letter to RP to recover the CLEAN Loan.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Voluntary Cleanup Agreement
Completed Date: 04/08/2013
Comments: VCA signed by Butterfield owner and DTSC to conduct additional investigation and remediation, if necessary.

Completed Area Name: Soil
Completed Sub Area Name: Not reported
Completed Document Type: CEQA - Initial Study/ Environmental Impact Report
Completed Date: 08/12/2015
Comments: In accordance with CEQA, DTSC has reviewed the Environmental Impact Report (EIR) prepared by MTA for the MTA Westside Subway Extension Project (WSE) to ensure that CEQA requirements have been satisfied. The Butterfield/MTA Site will be developed as a maintenance yard for the WSE. The EIR included activities associated with the RAW and thereby evaluated environmental impact(s) from the Site. The EIR can be found on MTA s website: http://www.metro.net/projects/westside/final-eis-eir/

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

CERS Description: Industrial Facility Storm Water

Violations:
Site ID: 546387
Site Name: Waste Transfer Recycling
Violation Date: 12-15-2008
Citation: 2014-0057-DWQ - Industrial General Permit
Violation Description: SW - Deficient BMP Implementation
Violation Notes: Analytical results for Total Suspended Solids (TSS), Total Organic Carbon (TOC), Specific Conductance (SC), Oil and Grease (OG) and Iron (Fe) exceed benchmark levels.
Violation Division: Water Boards
Violation Program: INDSTW
Violation Source: SMARTS

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 09-17-2001
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: There were no stormwater documents other than the SWPPP on site (no analysis reports, etc).
Eval Division: Water Boards
Eval Program: INDSTW
Eval Source: SMARTS

Enforcement Action:
Site ID: 546387
Site Name: Waste Transfer Recycling
Site Address: 840 S MISSION RD
Site City: LOS ANGELES
Site Zip: 90280
Enf Action Date: 08-16-2010
Enf Action Type: Staff Enforcement Letter
Enf Action Description: Staff Enforcement Letter
Enf Action Notes: The letter, AR Review - Benchmark Exceedance, was sent to ensure that the permittee will develop and implement the BMPs to reduce or prevent pollutants in SW discharges. Letter also required permittee to submit evidence of implemented additional BMPs and SWPPP amendments if the permittee is already implementing the BMPs.

CERS Description: Chemical Storage Facilities

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 11-13-2018
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Inspection Report Consent to enter, inspect and take photographs was given by: Documents uploaded to CERS were reviewed and field verified. The following is a list items that need to be corrected: 1. NO VIOLATIONS OBSERVED AT TIME OF INSPECTION NOTE: The LAMC, Sections (L.A.M.C. SECTIONS 57.105.1.4; 57.120.3; 57.121.2 and 57.121.2.1.) requires business that store, uses or handle hazardous materials in the City of Los Angeles to obtain a Consolidated Permit from the Los Angeles Fire Department CUPA. To receive a Consolidated Permit you must satisfy the following requirement: **** Annual submission of a hazardous materials business plan to CERS by March 1 of every year. Please remember that any change in inventory of greater than 100 percent will require new submission within 30 days of that change. For new CERS users, please follow the procedures below: 1. Log in to http://cers.calepa.ca.gov to create a user name and password. The approval will take 2-3 days [Truncated]

Background Info: The Southern California Gas (SCG), Olympic Base Site was once a gas manufacturing plant where oil was converted into gas for lighting, heating, and cooking. Residues from the gasification process, mainly consisting of a material "lamp black", were were discovered at the site. "Lamp Black" contains varying amounts of a family of compounds called polynuclear or polycyclic aromatic hydrocarbons (PNAs or PAHs).
The plant was built in the period 1907-1908 by the City Gas Company. In 1908, the Domestic Gas Company purchased and took over the operations of City Gas. In 1910, SCG was incorporated and became the successor of Domestic Gas. SCG operated the plant until 1927, when the service for 100% natural gas started. The plant operated on a standby basis until 1952, when all gas manufacturing operations ceased and the plant was dismantled. SCG has administrative facilities on other portions of the facility.
A Consent Order was signed in December 1986, which addressed the work needed to complete the Remedial Investigation/-Feasibility Study (RI/FS) process. The RI report was approved by the Department on September 17, 1987. The RI found that soil from about 2 to 12 feet below ground surface is contaminated. The contaminants are not readily vaporized, nor do they enter aqueous phase solution. Groundwater aquifers beneath the site are unsaturated to a depth of 90 feet. Air monitoring at the site does not indicate that the contaminants are emitting vapors to the air. SCG then submitted a FS report in May 1988. DHS has reviewed the FS report and requested a full Health Risk Assessment (HRA) based on appropriate biological receptors and exposure pathways on October 20, 1988. The HRA was approved by the Department on June 4, 1990. The FS was revised by SCG and the report approved on July 19, 1990.
The RP submitted a draft RAP on August 20, 1990, as requested by the Department. The Department has published a fact sheet on the findings of the RI/FS. The RAP meeting with the community was held on November 17, 1990 and the RAP was subsequently approved in January of 1991.
The RAP proposed an asphalt cap on the site, groundwater monitoring, and a deed restriction. Groundwater monitoring is necessary as the region the site is located in is currently experiencing a drought; however, if this should change the groundwater table will rise, possibly impacting the conclusions of the RI. The deed restriction, protected the integrity of the cap by limiting land use and excavation of the waste.
The Department directed the RP to prepare a Remedial Design and Implementation (RD&I) plan. The plan included engineering specifications for the asphalt cap, permits, and a schedule for completion of the cap. The cap will be repaired as necessary; necessary; it is expected to require replacement every ten years. This operation and maintenance program will last for

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

CA BOND EXP. PLAN:

Reponsible Party:	RESPONSIBLE PARTY-LEAD SITE CLEANUP WORKPLAN
Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	Southern California Gas has entered into a consent order with DHS for oversight/monitoring of its cleanup efforts. DHS has budgeted $50,000 for direct costs related to the project. DHS will recover 100 percent of direct costs plus staff costs and overhead related to the project. The responsible parties will pay all costs associated with site cleanup.
Site Description:	The Olympic Base facility, currently owned by Southern California Gas Company, is the site of a former oil gasification "towne gas" plant.
Hazardous Waste Desc:	The wastes are generally characterized as polynuclear or polycyclic aromatic hydrocarbons (PNAs or PAHs). Other constituents of concern are cyanide, lead, and semivolatile organics. Soil contamination is present at the site from the surface to a depth of 10 to 15 feet in both the northern and southern portions of the site.
Threat To Public Health & Env:	The primary concern is potential contamination of ground water. Usable ground water lies approximately 200 feet below the ground surface and the water table may rise to only 100 feet below the site. Ground water contamination has not been verified. Surface soil contamination may migrate offsite due to airborne particulates.
Site Activity Status:	The Southern California Gas Company has completed a remedial investigation/feasibility study.

. Waste code: D018
. Waste name: BENZENE

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 39178.2

Completed Document Type: * Final Remedial Action
Completed Date: 12/16/1991
Comments: The Final Remedial Action consisted of placing an asphalt cap on the unpaved portions of the Olympic Base Site which would be maintained according to the requirements set forth in the RAP. A deed restriction was recorded on the property. The design of the cap was prepared and included in the RAP workplan.

Completed Document Type: * Final Remedial Action

OLYMPIC PCB TRANSFER AND STORAGE FACILITY (Continued) **S101585050**

Completed Date: 12/16/1991
Comments: The Final Remedial Action consisted of placing an asphalt cap on the unpaved portions of the Olympic Base Site which would be maintained according to the requirements set forth in the RAP. A deed restriction was recorded on the property. The design of the cap was prepared and included in the RAP workplan.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Manufactured Gas Plants:

The Southern California Gas (SCG), Olympic Base Site was once a gas manufacturing plant where oil was converted into gas for lighting, heating, and cooking. Residues from the gasification process, mainly consisting of a material "lamp black", were weere discovered at the site. "Lamp Black" contains varying amounts of a family of compounds called polynuclear or polycyclic aromatic hydrocarbons (PNAs or PAHs). The plant was built in the period 1907-1908 by the City Gas Company. In 1908, the Domesttic Gas Company purchased and took over the operations of City Gas. In 1910, SCG was incorporated and became the successor of Domestic Gas. SCG operated the plant until 1927, when the service for 100% natural gas started. The plant operated on a stanndby basis until 1952, when all gas manufacturing operations ceased and the plant was dismantled. SCG has administrative facilities on other portions of the facility

Alternate Address:	2182 EAST 11TH STREET
Alternate City,St,Zip:	LOS ANGELES, CA 90021
Background Info:	The Site is also known as the Western Lead and Metal Company Site. The Site is located in an industrial area near downtown Los Angeles and is surrounded by warehouses, food distributors, light manufacturing, and scrap metal recyclers. The Site is roughly bounded by 11th Street (Property), to the north, the Union Pacific Railroad right-of-way to the east, 14th Street, to the south, and Wilson Street to the west. The Site includes the property at 2182 East 11th Street, which was occupied by several different companies as a lead smelter from 1946 to 1965. The Western Lead Products Company operated a lead smelter on the

WESTERN LEAD AND METAL CO (INTERNATIONAL LEAD CO.) (Continued) **1001115052**

Property from 1954 to 1960 under the name of Western Lead and Metal Company. After 1965, the Property was used for die-cast manufacturing operations. The Property is approximately 110 feet by 140 feet and is currently devoid of any buildings, and is secured by fencing. The other areas of the Site include: portions of the Union Pacific Railroad right-of-way, between 14th and 10th Streets; a narrow strip of the property occupied by Coast Produce; and a residencial property at the corner of Wilson and 14th Streets. Since 1991, several site assessments have been conducted. These assessments involved mostly surface soil sampling and analyses for metals including lead, antimony, and arsenic. In 1996, the Property was paved with three inches of asphalt to prevent exposure of the public to contaminated soil. In addition, DTSC collected several surface soil samples in the areas surrounding the Property. Extremely high levels of lead (up to 574,000 ppm), antimony (up to 14,000 ppm), and arsenic (up to 920 ppm) were detected in the narrow strip along the southern and western boundaries of the Property; high levels of lead, copper, and zinc were detected along the railroad right-of-way; and elevated levels of lead (up to 1,450 ppm) were detected on the residential property. A Consent Order (Imminent and Substantial Endangerment) was entered into with Quemetco Inc., (an RSR Subsidiary) and Union Pacific Railroad Company. As required by the Order, in 1977, Quemetco completed an Emergency Removal Action at Areas 3 and 4 which are located at the perimeter of the Property and the residential property. Union Pacific has also conducted an Emergency Removal Action at Areas 1 and 2 (railroad right-of-wau). The Remedial Investigation found the extent of metal contamination. Currently, the Draft RAW, which proposes to place a 4-inch asphalt cover on the Property area and excavate soil, from the Site boundary, has been approved. The 30 day Public Comment Period starts on August 23 and ends September 22, 2004.

Completed Info:
Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 10/10/2006
Comments: Removal Action included placement of an asphalt cover in the property area and removal of 97 tons of soil contaminated with lead and arsenic.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 10/21/2004
Comments: The RAW proposes to address the lead & arsenic contaminated soil by placing a four-inch asphalt cap on the property area (15,000 sq.ft.) and removing soil from nine impacted areas at the Site boundary. Implementation is scheduled for end of January 2005.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 04/15/2003
Comments: The Remedial Investigation is approved. The RI involved sampling of lead and other metals, and volatile organic compounds, particularly tetrachlorethene and 1,1,1-trichloroethane.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Assessment Report
Completed Date: 06/30/1998
Comments: Completed a Preliminary Assessment (PA) with sampling of the site under contract with U.S. EPA.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 11/18/1997
Comments: Soil removal (excavation) of lead-contaminated soils. The Implementation Report for completion of the Emergency Removal Action by Quemetco at Area 3 (Coast Produce Warehouse) and Area 4 (Residential property at 2151 E. 14th Street) was approved. An estimated 120 tons of contaminated lead was excavated and disposed of off-site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 07/18/1997
Comments: UPRR: A removal action workplan (RAW-UPRR) was approved for Union Pacific Railroad track areas along Lemon Street (between 10th & 14th Streets). These areas are designated as Areas 1 & 2. A Notice of Exemption was also filed with the OPR as required by the CEQA laws and guidelines. The RAW-UPRR included excavation, treatment and disposal of contaminated soils in the neighboring railroad

QUEMETCO CORPORATION (Continued) **S112842372**

right-of-way (track) areas of the International Lead Company site.

Completed Area Name: PROJECT WIDE

Completed Info:
Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 10/10/2006
Comments: Removal Action included placement of an asphalt cover in the property area and removal of 97 tons of soil contaminated with lead and arsenic.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 10/21/2004
Comments: The RAW proposes to address the lead & arsenic contaminated soil by placing a four-inch asphalt cap on the property area (15,000 sq.ft.) and removing soil from nine impacted areas at the Site boundary. Implementation is scheduled for end of January 2005.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 04/15/2003
Comments: The Remedial Investigation is approved. The RI involved sampling of lead and other metals, and volatile organic compounds, particularly tetrachlorethene and 1,1,1-trichloroethane.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Assessment Report
Completed Date: 06/30/1998
Comments: Completed a Preliminary Assessment (PA) with sampling of the site under contract with U.S. EPA.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 11/18/1997

QUEMETCO CORPORATION (Continued) **S112842372**

Comments:	Soil removal (excavation) of lead-contaminated soils. The Implementation Report for completion of the Emergency Removal Action by Quemetco at Area 3 (Coast Produce Warehouse) and Area 4 (Residential property at 2151 E. 14th Street) was approved. An estimated 120 tons of contaminated lead was excavated and disposed of off-site.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Removal Action Workplan
Completed Date:	07/18/1997
Comments:	UPRR: A removal action workplan (RAW-UPRR) was approved for Union Pacific Railroad track areas along Lemon Street (between 10th & 14th Streets). These areas are designated as Areas 1 & 2. A Notice of Exemption was also filed with the OPR as required by the CEQA laws and guidelines. The RAW-UPRR included excavation, treatment and disposal of contaminated soils in the neighboring railroad right-of-way (track) areas of the International Lead Company site.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Removal Action Completion Report
Completed Date:	06/25/1998
Comments:	Excavation, treatment and disposal of 2,500 tons of metal contaminated soil from the UPRR rail track areas. The Implementation Report of Emergency Removal Action by Dames & Moore for Areas 1 and 2 was approved.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Removal Action Workplan
Completed Date:	07/18/1997
Comments:	A removal action workplan (RAW-QUEMETCO) which proposed excavation and disposal of contaminated soils, was approved for Areas 3 and 4 (perimeter of Property and residential property). A Notice of exemption was also filed with the OPR as required by the CEQA laws and guidelines.
Completed Area Name:	PROJECT WIDE

Completed Info:
Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 06/13/2003
Comments: DTSC approves PEA Report. The PEA investigative activities conducted at the former smelting site identified arsenic (3410 mg/kg), and lead (25,700 mg/kg). DTSC concluded that the current conditions (building and pavement intact, no exposed soil) at the Site does not pose a potential threat to industrial workers. Due to elevated levels of the above-mentioned metals in the soil, if there is any demolition of the buidling or parking lot, or development at the Site, the responsible party(s) will be required to submit a Removal Action Workplan or Remedial Action Plan to DTSC for approval.

Completed Area Name: PROJECT WIDE

HIST UST:
Name: ALCO FLATING CORPORATION
Address: 1400 LONG BEACH AVENUE
City,State,Zip: LOS ANGELES, CA 90021
File Number: 0002626E
URL: http://geotracker.waterboards.ca.gov/ustpdfs/pdf/0002626E.pdf
Region: STATE
Facility ID: 00000016805
Facility Type: Other
Other Type: ELECTROPLATING
Contact Name: DAVE CULP
Telephone: 2137497561
Owner Name: ALCO PLATING CORPORATION
Owner Address: 1400 LONG BEACH AVENUE
Owner City,St,Zip: LOS ANGELES, CA 90021
Total Tanks: 0014

Tank Num: 001

ALCO FLATING CORPORATION (Continued) **U001560836**

Container Num:	A1
Year Installed:	Not reported
Tank Capacity:	00002000
Tank Used for:	WASTE
Type of Fuel:	Not reported
Container Construction Thickness:	3
Leak Detection:	Visual
Tank Num:	002
Container Num:	B1
Year Installed:	Not reported
Tank Capacity:	00009600
Tank Used for:	PRODUCT
Type of Fuel:	DIESEL
Container Construction Thickness:	Not reported
Leak Detection:	Stock Inventor
