PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

DRAFT

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779
Oil and Gas well locations in the state.

RADON

State Database: CA Radon
Source: Department of Health Services
Telephone: 916-324-2208
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

EDR Historical Topographic Map Report

Environmental Data Resources, Inc.s (EDR) Historical Topographic Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topographic Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the early 1900s.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 332 feet of the target property.

A summary of the information obtained is provided in the text of this report.

EDR Inquiry # 3957955.3

Contact: Elias Aparicio

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by PSI, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Interview Documentation

DRAFT

USER QUESTIONNAIRE 1 OF 2

Pursuant to ASTM E 1527-13, in order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments), the user must provide the following information (if available) to the environmental professional. Failure to provide the information could result in a determination that "all appropriate inquiry" is not complete. This form represents a type of interview and as such, the user has an obligation to answer all questions in good faith, to the extent of his or her actual knowledge.

1. Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?
☒ No ☐ Yes If yes, please explain.

2. Are you aware of any activity and land use limitations (AULs), such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state, or local law?
☒ No ☐ Yes If yes, please explain.

3. As the user of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?
☒ No ☐ Yes If yes, please explain.

4. Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?
☐ No ☒ Yes If yes, please explain.
YES ONLY ON QUESTION #1
NO ON QUESTION #2

5. Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user: (a) Do you know of the past uses of the property?; (b) Do you know of specific chemicals that are present or were once present at the property?; (c) Do you know of spills or other chemical releases that have taken place at the property?; (d) Do you know of any environmental cleanups that have taken place at the property?
☐ No ☒ Yes If yes, please explain. VARIOUS TANKS ON PROPERTY AND NEIGHBORING PROPERTY

6. As the user of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property?
☒ No ☐ Yes If yes, please explain.

DRAFT

USER QUESTIONNAIRE 2 OF 2

Proceedings Involving the Property

Pursuant to ASTM E 1527-13, as the user of this ESA do you know of (1) any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property; (2) any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property; and (3) any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?

☒ No ☐ Yes If yes, please explain.

Helpful Documents Checklist

Pursuant to ASTM E 1527-13, do you know whether any of the following documents exist related to the subject property, and if so, whether copies can and will be provided to PSI for review? Check all that apply.

- ☐ Environmental site assessment reports
- ☐ Environmental compliance audit reports
- ☐ Environmental permits (for example solid waste disposal permits, hazardous waste disposal permits, wastewater permits, NPDES permits, underground injection permits)
- ☐ Registrations for above or underground storage tanks
- ☐ Registration for underground injection systems
- ☐ Material safety data sheets
- ☐ Community right-to-know plan
- ☐ Risk assessments
- ☐ Safety plans; preparedness and prevention plans; spill prevention, countermeasure and control (SPCC) plans; etc.
- ☐ Reports regarding hydrogeologic conditions on the property or surrounding area
- ☐ Notices or other correspondence from any governmental agency relating to past or current violations of environmental laws with respect to the property or relating to environmental liens encumbering the property
- ☐ Hazardous waste generation notices or reports
- ☐ Geotechnical studies
- ☐ Recorded activity and land use limitations (AULs)

Personnel Qualifications

DRAFT

RESUME

Eric C. Fraske, PE

Geotechnical and Environmental Department Manager, Cypress, California

Education

Bachelor of Science: Major-Civil Engineering
Michigan State University: May 2004

Certifications/Registrations/Technical Training

State of California Registered Civil Engineer (PE #76976)
Nevada Certified Environmental Manager (CEM # 2134)
40 Hour HAZWOPER

Professional Experience

Mr. Fraske is the department manager for the geotechnical and environmental group of the Cypress, California office of PSI. As department manager, Mr. Fraske oversees all environmental and geotechnical projects. His responsibilities include coordinating personnel and equipment resources to ensure client satisfaction. Mr. Fraske is closely involved with clients, potential clients, and projects in order to form strong alliances and long lasting working relationships. His work involves extensive client contact, program quality assurance/quality control (QA/QC), and liaison with federal, state, and local regulatory agencies.

Prior to joining PSI, Mr. Fraske worked as a field technician for an air quality firm from 2002 to 2004. As a field technician, his work experience included ambient air sampling, gas emissions testing, pollution modeling, compliance demonstrations, TRIS, report development, and industrial air permitting.

Project Experience

Mr. Fraske has conducted many Phase I ESAs for commercial lenders, local and nationwide banks, and real-estate developers. Transactions included mergers and acquisitions, and refinancing.

Representative Phase I Environmental Site Assessments Project Experience

- Over 50 Proposed CVS Locations Throughout Southern California
- Proposed NFL Stadium Locations, Southern California
- Sony Pictures Studios, Culver City, California
- Kodak Theater and Hollywood and Highland Retail Complex, Hollywood, California
- Proposed Extra Space Self Storage Facilities, Throughout Southern California
- FDIC Portfolio Locations, Throughout Arizona
- Pacific Gateway Industrial Center, Torrance, California
- 60,000 Acres of Timberland in South Georgia
- 6,000 Acre Former Cattle Farm, Bleckley County, Georgia
- Five Volvo Equipment Dealerships, Savannah, Macon, Marietta, Atlanta, and Augusta, Georgia
- Various Fiber Optic Cable Sites, Marietta, Georgia
- Multiple Burger King Restaurants, New York, New York

DRAFT

RESUME

Mr. Fraske has performed Phase II Subsurface Investigations and a variety of subsurface investigations for commercial lenders, state environmental protection agencies, and private individuals at several commercial and industrial real estate properties.

Representative Phase II Environmental Site Assessments and Site Investigation Project Experience

- Mira Mar Naval Air Station, San Diego, California
- Former Gasoline Station, Compton, California
- Active Sugar Mill, Clewiston, Florida
- 300 Square Mile Agricultural Land Acquisition, South Florida
- Plating Facility, West Hollywood, California
- Former Western Brass Manufacturing Facility, Los Angeles, California
- Former Dry Cleaner, Garden Grove, California
- Former Auto Dealership, Manhattan Beach, California
- Former Nike Missile Site, Rancho Palos Verdes, California
- Former Wastewater Treatment Plant, Fort Oglethorpe, Georgia
- 6,000 Acre Former Cattle Farm, Bleckley County, Georgia
- Three former gasoline stations, Savannah, Georgia

Mr. Fraske has conducted soil excavations, groundwater sampling, operations and maintenance of total fluids free product recovery systems and soil vapor extraction systems, well surveys, well development, groundwater sampling and effluent sampling of treated groundwater on several impacted properties.

Representative Remediation Project Experience

- Former Gasoline Station, Culver City California
- Former Dry Cleaner, Garden Grove, California
- Former Dry Cleaner, Montclair, California
- Former Plating Facility, West Hollywood, California
- Former Technicolor Studio, Hollywood, California
- Oil Spill, Fontana, California
- Former Auto Dealership, Manhattan Beach, California
- 6,000 Acre Former Cattle Farm, Bleckley County, Georgia
- Former Wastewater Treatment Plant, Fort Oglethorpe, Georgia
- Emory Northlake Medical Center, Tucker, Georgia,
- Peachtree Mitsubishi, Doraville, Georgia

Years experience with other firms: 2
Year started with PSI: 2004

DRAFT

Lloyd D. Guss, PG

Senior Geologist, Long Beach, California

Years with PSI: 5½ **Years experience with other firms: 13½**

Education

B.Sc. in Geology, California State University, Long Beach, 1992

Certifications/Registrations/Technical Training

California Registered Professional Geologist (No. 7034)
Colorado State Environmental Scientist registration (No. 5618)
Phase II Environmental Site Assessment Workshop, PSI (1999)
Professional Certificate in UST Leak Detection Standards and Systems,
University of California, Riverside (1994)
OSHA 29 CFR 1910.120 HAZWOPER, worker

Professional Experience

For about nineteen years, Mr. Guss has been involved with all aspects of quality project work for environmental and hazardous waste site investigations, risk management, and remediation activities. His responsibilities have included: project management, technical project oversight, project administration and budgeting, upholding company safety standards, regulatory agency liaison, managing and training personnel, data evaluation, and reporting.

California Department of Transportation (Caltrans) Project Experience

Mr. Guss has over eight years of experience providing services to Caltrans under various environmental related contracts. Services have included emergency response, UST removals, hazardous waste management, soil and groundwater assessments, and aerial deposited lead investigations throughout California. Projects have included property acquisition investigations, lead studies of bridge paint and right-of-way soil, and high profile drinking water assessments. Mr. Guss maintains a good working relationship with numerous contract managers at several Caltrans district offices throughout California.

Petroleum Hydrocarbon Project Experience

As Team Leader and Project Manager for environmental work at two major Los Angeles refineries, Mr. Guss was responsible for: a high profile groundwater investigation of Los Angeles aquifers (Gage, Lynwood, and Silverado), an LNAPL recovery optimization program to expand product recovery systems, oversight of air sparge and vapor extraction systems, remedial excavation of approximately 1,000 tons of California Hazardous Waste and reporting to the DTSC, and submitting routine deliverables to the CRWQCB and AQMD.

Landfill Project Experience

Mr. Guss managed a biologically sensitive military landfill remediation/restoration project, which involved the excavation of over 30,000 tons of dioxins, furans, and lead impacted soil. In addition, his team was responsible for initiating a re-profiling program so that soil could be separated and transported to the appropriate waste disposal facility, which resulted in a substantial cost saving for the client. Not only was the project completed under budget, but it was also completed on schedule.

Chlorinated Solvent Project Experience

Mr. Guss has managed a number of chlorinated solvent projects ranging from small dry cleaning facilities to a large chemical company tank farm located in the Port of Los Angeles.

Courtney Dumas, PMP – Associate Consultant

Education:
Master of Real Estate Development, University of Southern California, 2003
BS Management Information Systems, University of Tulsa, 1993

Licenses/Registrations:
Certified Project Management Professional, Project Management Institute, 2013

Summary of Professional Experience:
Mr. Dumas has been involved in the real estate industry since 2003. His experience since 2007 includes managing environmental and real estate due diligence services for an international environmental engineering firm. He has managed and performed over 200 Phase I Environmental Assessments, and over 25 Property Condition Assessments, including lead-based paint, radon, asbestos and mold sampling assessments. Site types include industrial, multi-family, commercial, gas station, retail, adult-care facility, etc.

Additionally, Mr. Dumas' experience expands into real estate development and government contracting. In real estate development he developed single family homes, and represented clients in the entitlement /government approval process for the redevelopment of urban infill properties. As a Program Manager, he managed government contracts with federal agencies such as HUD and NASA, performing single family REO special property inspections, appraisal reviews, and deferred maintenance reporting.

Select project experience for Mr. Dumas includes:

- Apartments, Camarillo, CA, a 150-unit multifamily apartment complex, built in 1963, containing seven two-story buildings. This project was being financed under a Fannie Mae scope. Mr. Dumas conducted the environmental site assessment with no evidence of on-site RECs during the course of the assessment.
- Adult Care Facility, Los Angeles, CA, this 100 room Adult Care Facility included independent and assisted living, a pharmacy, a doctor's office, with recreational and rehabilitation facilities. Mr. Dumas conducted the environmental site assessment.
- Apartment, San Francisco, CA, a 5-story, 15-unit multifamily apartment building, built 1918. Mr. Dumas conducted the environmental, the property condition assessment and the PML site investigation. Site investigation revealed significant sub-structure and super-structure damages to the building which is located in an active seismic location. Recommendations include investigation and report by a structural engineer, and the completion of the report recommended repairs.

As a certified project manager professional, Mr. Dumas works directly with project stakeholders ensuring deliverables meet end-users' quality requirements. Mr. Dumas' background in due diligence, real estate development, and project management allows him to provide thorough assessments and evaluations thereby adding unparalleled value to the end product and the client's experience.

Michael J. Wolf – National Client Manager

Pennsylvania State University
B.S., Earth Science, May 1982

ASTM Environmental Assessment Standards Committee, Various Task Groups
OSHA 29 CFR 1910.120 40-Hour HAZWOPER and Supervisor Training and Annual 8-Hour Refreshers

Mr. Wolf has over 25 years of professional experience as an environmental consultant, with expertise in commercial client business development and technical project management. Primary clients include developers, real estate advisory firms, attorneys, lenders, foreign investors, and REITs. Mr. Wolf manages and conducts environmental due diligence projects across the U.S. and overseas, including portfolio projects. He is experienced in providing firm-wide operational support including project scoping, proposal preparation, project execution, and report reviews. Mr. Wolf's specific competencies include management of Phase I and II ESAs, PCAs, and third party/peer reviews of environmental reports, with a particular focus on the hospitality industry; Voluntary Cleanup and Voluntary Remediation Program investigations and remediation; vapor intrusion investigations and mitigation; petroleum tank removals/investigations; multimedia regulatory compliance audits; and other environmental studies.

As a Task Group member on the ASTM Environmental Assessment Standards Committee, Mr. Wolf actively participated in the development of the current Phase I ESA Standard (E1527-13) and provided multiple briefings and training sessions following publication. Since 2008, he has served as a Public Member on the Maryland Controlled Hazardous Substances (CHS) Advisory Council, appointed by the Governor, and has served as the Council Chair since 2012.

Project experience for Mr. Wolf includes:

- Phase I Environmental Site Assessments - Project manager for thousands of Phase I environmental assessments at commercial, residential, industrial, and undeveloped properties undergoing transfer, foreclosure, or financing. Significant experience with portfolio projects and hospitality properties. Activities include proposal preparation, organization of inspection teams, and report review and preparation.

- Phase II Site Investigations – Project Manager for soil, groundwater, and soil vapor investigations at a variety of commercial properties. Experienced in selection of subcontractors and development of subcontracts, design of sampling plans, management of field activities, data interpretation, and report review and preparation.

- Third Party/Peer Reviews – Provide technical reviews of due diligence reports prepared by other consultants to confirm adherence to ASTM standards, typical industry practices, and client expectations. Often combine these services with

DRAFT

desktop reviews and other research to fill in data gaps or provide preliminary findings to clients prior to full due diligence efforts.

- Voluntary Cleanup Program/Voluntary Remediation Programs – Project Manager for multi-phase and multi-media investigations and remediation projects in accordance with State VCP/VRP requirements, successfully obtaining No Further Action or Certificates of Completion letters on behalf of property owners.

- Regulatory Compliance Audits - Completion and management of multi-media environmental compliance audits ranging from limited reviews as part of Phase I ESAs to comprehensive compliance audits of operating industrial plants.

- Asbestos, Lead Paint and Mold Surveys and Abatement - Management of industrial hygiene services ranging from limited surveys as part of Phase I ESAs to comprehensive pre-renovation surveys, development of abatement specifications, and abatement monitoring.

- Remediation – Management of impacted soil excavation projects during property redevelopment; groundwater treatment activities; installation and monitoring of vapor intrusion mitigation systems; radon mitigation systems, and petroleum tank removal/remediation.

- Regulatory Compliance – Development of Stormwater Pollution Prevention Plans (SWPPPs); Spill Control and Countermeasure Plans (SPCCs); Assistance with UST and AST registrations; Completion of RCRA generator notifications; and other regulatory notifications and reports.

New York, New York 10019

Subject: **Geophysical Survey**
2045 Violet Street
Los Angeles, California 90021
AEI Project No. 394041

AEI Consultants (AEI) is pleased to provide this report which describes the activities and results of the Geophysical Survey (GPS) performed at the above referenced subject property, herein referred to as the "Site" (Figures 1 and 2). This investigation was completed in general accordance with the scope of services outlined in our authorized proposal number 60695.

1.0 SITE DESCRIPTION

The Site is approximately 0.5-acres and consists of one single-story light industrial building and the associated parking lot on the north side of Violet Street in a combined industrial and commercial area of Los Angeles, California (Figure 2). The remainder of the Site has been improved with a brick-paved parking lot and associated landscaping.

The Site is relatively flat at an elevation of about 245 feet above mean sea level. The regional topographic gradient direction slopes toward the northwest and, therefore, the direction of groundwater flow beneath the subject property is inferred to be to the northwest. According to data obtained from the Regional Water Quality Control Board's (RWQCB) GeoTracker website for a property located at 1614 East 7th Street (approximately 0.25 miles northwest of the Site), groundwater in the vicinity of the Site is estimated to be approximately 95 feet below ground surface (bgs). The Los Angeles River is located approximately 1,100 feet to the eat and is the closest body of water to the Site.

According to the United States Geologic Survey (USGS) and United States Department of the Interior, the Site is underlain by marine and non-marine (continental) sedimentary rocks from the Pleistocene-Holocene Epoch. These rocks consist of alluvial, lake, playa, and terrace deposits, both unconsolidated and semi-consolidated. A majority of these deposits are non-marine, however, an increase of marine deposits are found closer to the coast.

2.0 BACKGROUND

A Phase I Environmental Site Assessment (ESA) was performed by AEI as detailed in a report dated September 17, 2018 (AEI Project Number 394041). As detailed in the Phase I ESA, the

Site remained vacant prior to 1906, by which point, the Site had been developed into a city playground. A review of the historical information was unable to identify the length of time the playground remained, however, by 1923, the Site had been developed for residential use. By 1929, the Site had been redeveloped for commercial use, with grocery and liquor stores and a bakery. In 1941, the Site was redeveloped with the light industrial/commercial building that is currently present. Since that time, the building has been occupied by a freight line company, box manufacturer, supermarket, and various produce companies.

In the 1950s the Site was occupied by Southwestern Freight Lines. By 1960, the Site was occupied by Apex Wholesale Produce. Based on files obtained from the Los Angeles Fire Department (LAFD), during this period, one and/or both of these businesses appeared to have operated an underground storage tank (UST) of unknown size (reportredly 1,000-gallons according to a LAFD record) and contents. The specific location of this tank is not known, but according to LAFD records, it was on the southwest side of the property. In 1960, the UST was abandoned in place, reportedly having been filled with sand. Throughout the commercial/light industrial history of the Site, additional USTs and aboveground storage tanks (ASTs) were utilized, however these tanks were all removed properly and under regulatory oversight. This includes two diesel USTs that were removed from the northern side of the Site in 1998 under LAFD oversight. The USTs removed in 1998 were closed by the LAFD based on soil sampling which did not indicate impacts of concern. However, AEI identified the UST that was reportedly abandoned in 1960, as a recognized environmental condition (REC).

3.0 INVESTIGATION EFFORTS

AEI was requested to perform a geophysical survey, to evaluate the presence of the reported UST.

This work was performed under the oversight of a licensed Professional California Geologist.

3.1 Health and Safety Plan

A site-specific health and safety plan was prepared, reviewed by onsite personnel, and kept onsite for the duration of the fieldwork.

3.2 Geophysical Survey

On October 19, 2018, a geophysical survey was conducted by SubSurface Surveys (SSS) of Carlsbad, California. The purpose of the survey was to evaluate the potential presence of a former UST that was reportedly abandoned in-place in 1960. The geophysical survey was conducted using a magnetometer, ground penetrating radar (GPR), and a metal detecor. The results from the geophysical survey identified an anomaly along the southeastern edge of the parking lot, adjacent to a landscaped area and the building, and just north of the entranceway to the Site. It was unclear if the footprint of the anomaly continued into the landscaped area, due to the presence of trees and bushes in the landscaped area. The Geophysical Survey did not confirm that the anomaly was defintely the former UST; however, based on the size and shape, the anomaly could be a small UST, of the approximate size of the reported 1,000-gallon UST that was abandoned in place. The geophysical survey also identified the location of current underground utilities and gate sensors.

The complete geophysical report, including photos and figures showing the location of the anomoly and potential UST, is attached. The client should be aware of the inherent limitations of geophysical surveying methods and that underground utilities and other man-made or natural features (i.e. automobiles, debris piles, tree roots, reinforced concrete, certain soil conditions, etc.), if in the area of the survey, may decrease the effectiveness of the survey. The client should be aware that the lack of a detection of a feature from a geophysical survey does not mean that the feature does not exist only that it was not detected.

4.0 SUMMARY AND CONCLUSIONS

AEI has completed a Geophysical Survey at the Site to attempt to evaluate the potential presence of a former that was reportedly abandoned in-place in 1960, as revealed in a Phase I ESA by AEI dated September 17, 2018. The geophysical survey was limited to the southwestern portion of the Site, where, according to LAFD records, the UST had been located. The results of the Geophysical Survey identified an anomaly along the southeastern edge of the parking lot, adjacent to a landscaped area and the building.

D ue to the landscaping, the geophysical survey was not able to determine if the footprint of the anomaly continued under the landscaping area. While this anomaly was not confirmed as a former or current UST, the size and shape does indicate the potential for it to be a small UST.

Based on this information, AEI recommends a limited Phase II Subsurface Investigation to evaluate potential impacts to the subsurface in the vicinity of the suspect UST.

5.0 REPORT LIMITATIONS AND RELIANCE

This report presents a summary of work completed by AEI Consultants. The completed work includes observations and descriptions of site conditions encountered. Where appropriate, it includes analytical results for samples taken during the course of the work. The number and location of samples are chosen to provide the requested information, subject to scope of work for which AEI was retained and limitations inherent in this type of work, but it cannot be assumed that they are representative of areas not sampled. This report should not be regarded as a guarantee that no further contamination beyond that which could have been detected within the scope of this investigation is present beneath the subject property. Undocumented, unauthorized releases of hazardous material, the remains of which are not readily identifiable by visual inspection and are of different chemical constituents, are difficult and often impossible to detect within the scope of a chemical specific investigation.

Any conclusions and/or recommendations are based on these analyses and observations, and the governing regulations. Conclusions beyond those stated and reported herein should not be inferred from this document. These services were performed in accordance with generally accepted practices, in the environmental engineering and construction field, which existed at the time and location of the work. No other warranty, either expressed or implied, has been made.

This investigation was prepared for the sole use and benefit of Access Industries, Inc. All reports, both verbal and written, whether in draft or final, are for the benefit of Access Industries, Inc. This report has no other purpose and may not be relied upon by any other person or entity without the written consent of AEI. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with AEI granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against AEI, its officers, employees, vendors, successors or assigns. Reliance is provided in accordance wit h AEI's Proposal and Standard Terms & Conditions executed by Access Industries, Inc. The limitation of liability defined in the Terms and Conditions is the aggregate limit of AEI's liability to the client and all relying parties.

If there are any questions regarding our investigation, please do not hesitate to contact AEI at 301.337.9249.

Sincerely,
AEI Consultants

Andrew Leavitt, P.G.

Subject: Geophysical Survey
2045 Violet Street
Los Angeles, California

Project Number: 18-455

This report is to present the results of our geophysical survey carried over portions of property located at 2045 Violet Street in Los Angeles, California (Figure 1), on October 19th, 2018. Purpose of the survey was to locate and identify, insofar as possible, the existence of any underground storage tanks (USTs), backfilled excavations or other tank related piping that may exist on the subject property for guidance in future planning activities.

A combination of electromagnetic induction (EM), magnetometry, and ground penetrating radar (GPR) were applied to the search. A utility locator with line tracing capabilities was also brought to the field and used where risers exist onto which a signal could be impressed and traced.

FIGURE 1 –Site Location Map (Map data ©2018 Google)

Survey Design – The area to be surveyed was indicated in the field by the client and included the southwestern corner of the property within the existing parking lot, measuring approximately 30 feet wide and 70 feet long.

The magnetic gradiometer, line tracer, EM61, M-Scope and GPR were traversed systematically in many directions over the area. Additional traverses were taken, access permitting, for detailing and confirmation where anomalous conditions were found. Multiple GPR profiles were also collected throughout the area and in specific areas for confirmation where other instruments detected anomalies. The line tracer was also used to trace out all detectable utilities in the area.

Hard copy of the EM data was not acquired, that is, discrete readings on the nodes of a grid were not recorded that could be put into a contoured map format. Rather, the instruments' meters were read continuously, and in real-time, during each traverse. This free-traversing method allowed for immediate detection of anomalous objects and facilitated the opportunity to investigate them further, without first having to download data in the office. The lack of hard copy for EM data sets does not degrade the quality of the survey in any way. Hard copy merely provides a basis for report documentation of these geophysical fields, if such documentation is needed.

The line tracers were used to impress signals onto pipes, generally through accessible risers and tracer wires when present, to delineate the lines' locations and orientations. The instruments were also used in passive mode, configured to detect 60 Hz electrical signals and other common radio-frequency signals.

A Geonic's model EM61 and a Fischer M-Scope was used for the EM sampling. A Sensors and Software Noggin Ground Penetrating Radar unit with a 500 MHz antenna produced the radar images. The magnetic gradiometer was a Schonstedt GA-52, and a Metrotech 9890 and RIDGID SR-60 SeekTech utility locator rounded out the tools applied.

Brief Description of the Geophysical Methods Applied - The line locator is used to passively detect energized high voltage electric lines and electrical conduit (50-60 Hz), VLF signals (14-22 kHz), as well as to actively trace other utilities. Where risers are present, the utility locator transmitter can be connected directly to the object, and a signal (9.8-82 kHz) is sent traveling along the conductor, pipe, conduit, etc. In the absence of a riser, the transmitter can be used to impress an input signal on the utility by induction. In either case, the receiver unit is tuned to the input signal, and is used to actively trace the signal along the pipe's surface projection.

The magnetic gradiometer has two flux gate magnetic fixed sensors that are passed closely to and over the ground. When not in close proximity to a magnetic object, that is, only in the earth's field, the instrument emits a sound signal at a low frequency. When the instrument passes over a buried iron or steel object, so that locally there is a high magnetic gradient, the frequency of the emitted sound increases. The frequency is a function of the gradient between the two sensors.

The EM61 instrument is a high resolution, time-domain device for detecting buried conductive objects. It consists of a powerful transmitter that generates a pulsed primary magnetic field when its coils are energized, which induces eddy currents in nearby conductive objects. The decay of the eddy currents, following the input pulse, is measured by the coils, which in turn serve as receiver coils. The decay rate is measured for two coils, mounted concentrically, one above the other. By making the measurements at a relatively long time interval (measured in milliseconds) after termination of the primary pulse, the response is nearly independent of the electrical conductivity of the ground. Thus, the instrument is a super-sensitive metal detector. Due to its unique coil arrangement, the response curve is a single well-defined positive peak directly over a buried conductive object. This facilitates quick and accurate location of targets.

The GPR instrument beams energy into the ground from its transducer/antenna, in the form of electromagnetic waves. A portion of this energy is reflected back to the antenna at a boundary in the subsurface across which there is an electrical contrast. The instrument produces a continuous record of the reflected energy as the antenna is traversed across the ground surface. The greater the electrical contrast, the higher the amplitude of the returned energy. The radar wave travels at a velocity unique to the material properties of the ground being investigated, and when these velocities are known, the two-way travel times can be converted to depth. The depth of penetration and image resolution produced are a function of ground electrical conductivity and dielectric constant.

The M-Scope device energizes the ground by producing an alternating primary magnetic field with AC current in a transmitting coil. If conducting materials are within the area of influence of the primary field, AC eddy currents are induced to flow in the conductors. A receiving coil senses the secondary magnetic field produced by these eddy currents, and outputs the response to a meter in the form of ground conductivity values for the M-Scope. The strength of the secondary field is a function of the conductivity of the object, say a pipe, tank or cluster of drums, its size, and its depth and position relative to the instrument's two coils. Conductive objects, to a depth of approximately 7 feet for the M-Scope are sensed. The devices are also somewhat focused; that is, they are more sensitive to conductors below the instrument than they are to conductors off to the side.

Interpretation and Conclusions - The interpretation took place in real time as the survey progressed, and accordingly, the findings of our investigation were marked on the ground cover with spray chalk paint and further documented with a scaled sketch map (Figure 2), site photographs (Figures 3-10), and a radar image (Figure 11).

Piping and utilities detected during the survey were marked with spray chalk paint on the ground cover using green for drain, red for electric, blue for water, white for lines of unknown utility type and orange for an Anomaly. Please note, the unknown lines may be existing irrigation or small electrical lines feeding the perimeter planters.

One Anomaly was detected within the accessible portions of the survey area and was located immediately adjacent to the curb surrounding the planter (Figures 5, 6 and 8). The boundaries were marked on the ground cover, measuring 6 feet long and at least 4 feet wide; however, the easternmost boundaries were undetermined due to the planter limiting our accessibility. Radar imagery shows a reflective nonmetallic feature at approximately 5.0 feet below the ground surface (Figure 11). This response may have been caused by soil compaction from a previous backfilled excavation or perhaps is natural soil disturbances, unrelated to a former tank hold. There were no other suspect anomalous conditions suspect of a backfilled excavation or an existing underground storage tank detected within the boundaries of the survey area. Please use the graphics along with the markings in the field for a better representation of our findings.

Limitations and Further Recommendations - It should be understood that limitations inherent in geophysical instruments and/or surveying techniques exist at all sites, and nearly all sites exhibit conditions under which instruments might not perform optimally. Consequently, the detection of buried objects in all circumstances **cannot be guaranteed**. Such limitations are numerous and include, but are not limited to, rebar-reinforced ground cover, abrupt changes in ground cover type, above-ground obstacles preventing full traverses or traverses in one direction only, above-ground conductive objects interfering with instrument signal, nearby powerlines or EM transmitters, highly conductive background soil conditions, limiting GPR penetration, non-metallic targets, shallower or larger objects shielding deeper or smaller targets, tracing signal jumping from one line to another, and inaccessible risers, cleanouts, valve boxes, and manholes. If one or more geophysical instrument is rendered ineffective and cannot be utilized, the quality of the survey can be somewhat degraded.

For the above reasons, and in the interest of maximum safety, we encourage our clients to take advantage of Underground Service Alert (USA), Dig Alert, or other similar services, when possible. Furthermore, we recommend hand-auguring and the use of a drilling method known as air knifing and vacuum extraction, when feasible or if applicable to this project. These methods may significantly limit damage to underground pipes, conduits, and utilities that might not have been detectable during the course of this survey. Please bear in mind, that geophysical surveying is only one of several levels of protection that is available to our clients.

SubSurface Surveys may include maps in some reports. While they are an accurate general representation of the site and our findings, they are not of engineering quality (i.e., measured and mapped by a licensed land surveyor).

SubSurface Surveys and Associates makes no guarantee either expressed or implied regarding the accuracy of the findings and interpretations present. And, in no event will SubSurface Surveys and Associates be liable for any direct, indirect, special, incidental, or consequential damages resulting from interpretations and opinions presented herewith.

All data acquired in these surveys are in confidential file in this office, and are available for review by your staff, or by us at your request, at any time. We appreciate the opportunity to participate in this project. Please call, if there are questions.

Subject: **Limited Subsurface Investigation**
2045 Violet Street
Los Angeles, California 90021
AEI Project No. 394041

AEI Consultants (AEI) is pleased to provide this report which describes the activities and results of the Limited Subsurface Investigation (LSI) performed at the above referenced Site (Figures 1 and 2). This investigation was completed in general accordance with the authorized scope of services outlined in our authorized proposal number 60990.

1.0 SITE DESCRIPTION

The Site consists of a single-story brick building with a two-story area in the rear of the Site, located on the northern side of Violet Street, west of South Santa Fe Avenue in a commercial/industrial area of Los Angeles, California (Figure 2). The Site is currently occupied by Splits59, a women□apparel company. The Site operations are restricted to clothing design and administrative activities. AEI understands there are no manufacturing activities at the Site.

The Site is relatively flat and sits at an elevation of approximately 246 feet above mean sea level. The regional topographic gradient direction slopes toward the southwest and, therefore, the direction of groundwater flow beneath the Site is inferred to be to the southwest. The Los Angeles River is approximately 1,100 feet east of the Site.

According to the *Groundwater Monitoring Report, Second Quarter 2009,* dated July 22, 2009 by Ami Adini & Associates, Inc. (AAI) of Los Angeles, California, the depth to groundwater 0.66-mile northwest of the Site ranged from approximately 97.02 feet below ground surface (bgs) to 98.30 bgs, with the average depth to water 97.50 feet bgs.

Based on a review of the report *Planned Utilization of the Ground Water Basins of the Coastal Plain of Los Angeles County*, Bulletin 104, issued by the California Department of Water Resources in June 1961, the sedimentary rocks from the Pleistocene-Holocene Epoch described by the U.S. Geologic Survey (USGS) as consolidated and unconsolidated alluvial, lake, playa, and terrace deposits, consist primarily of gravel, sand, silt, and clay.

2.0 BACKGROUND

A Phase I Environmental Site Assessment (ESA) was performed by AEI and documented in a draft report dated September 17, 2018 (AEI Project Number 394041). As detailed in the Phase I ESA, the current building was built in 1941. Between 1941 and the present, the Site held a variety of businesses, including a freight line facility a box manufacturer, a supermarket, and several produce companies. The building was renovated in 2015 with the current brick-paved front area and driveway and associated landscaping. At the front of the Site building, beneath a gray brick-paved patio area there is a two-stage grease interceptor. Prior to the occupation by the current tenant, the Site was being developed as a restaurant.

Throughout the period from 1941 to 1998, multiple above-ground storage tanks and underground storage tanks (USTs) were in use at the Site, including two diesel USTs that once occupied the northern portion of the Site As part of the regulatory records search, records were obtained stating that a 1,000-gallon UST, the purpose of which was unknown, was abandoned in place in 1960 by filling with sand. As there were no regulations for the closure or abandonment of USTs at that time, the unknown condition and exact location of the UST together with the absence of information as to whether the UST experienced an unauthorized release may have occurred, was cited in the Phase I ESA as constituting a recognized environmental condition.

On October 19, 2018, AEI directed a geophysical survey performed by SubSurface Surveys, Inc. (SubSurface Surveys) of Carlsbad, California, in the parking area located on the western side of Site building and presented the results in a report dated October 26, 2018. The report indicated the presence of an anomaly located in the southeastern portion of the parking area. The entire anomalous area could not be surveyed as access was obstructed by a planter with shrubs and large trees against the southwestern side of the Site building along the southern portion of the parking area. Based on the dimensions of the detected portion of the anomaly that extends westward past the planter, AEI concluded, due to its size and shape, that the anomaly was consistent with that of a small UST.

Based on the results from the geophysical survey, AEI recommended that a Limited Subsurface Investigation be performed.

3.0 INVESTIGATION EFFORTS

The LSI consisted of the collection of soil samples at either end of the subsurface anomaly to determine whether the Site has been impacted by petroleum hydrocarbons or VOCs, indicating the potential presence of a UST.

This work was performed under the oversight of a California licensed Professional Geologist.

3.1 Health and Safety Plan

A site-specific health and safety plan was prepared, reviewed by onsite personnel, and kept onsite for the duration of the fieldwork.

3.2 Permitting and Utility Clearance

Drilling permits were not required for this investigation. The public underground utility locating service DigAlert was notified to identify public utilities in the work area. Private utility locating was conducted by Ground Penetrating Radar Systems, Inc. (GPRS) of Los Angeles, California to relocate the edges of the anomaly as well as to identify underground utilities on the Site.

3.3 Drilling and Soil Sample Collection

Drilling and soil sample collection work was performed on November 5, 2018. Initial attempts to remove the brick pavers from the proposed drilling locations by prying them out using hand tools were unsuccessful. An inventory of additional paving bricks was observed beneath the patio on the western side of the building. Upon examining the new paving bricks, they were observed to have protrusions along each side which were meant to lock them into position after installation. In light of the discovery of this additional inventory, one paving brick was removed on either end of the anomaly to facilitate the removal of three additional pavers at each boring location. The drillers took photographs of the locations prior to undertaking this activity to facilitate duplication of the correct color and pattern replacement. Prior to commencing drilling, two 2□x 4□pieces of wood, approximately 18 inches in length, were placed beneath the foot of the drill rig to prevent the vibration of the unit from damaging additional paving bricks.

Two soil borings (B-1 and B-2) were advanced on the Site (Figure 2) along two corners of the subsurface anomaly. The borings were advanced by Strongarm Environmental of Norwalk, California using a truck-mounted direct-push drilling rig. The borings were advanced to a depth of 10 feet bgs, beneath the likely bottom elevation of a 1,000-gallon UST. Boring B-1 was advanced near the southwestern corner of the anomaly and Boring B-2 was advanced near the northwestern corner of the anomaly.

The borings were advanced using 2.25-inch outer diameter rods and samples were collected by advancing the rods with acetate sample liners in approximately 5-foot intervals. After each interval, the core was retrieved, core barrel disassembled, and the sample liner was removed and transferred to the onsite geologist.

The soil borings were logged using the Unified Soil Classification System. A photo ionization detector (PID) was used to screen soil samples in the field and the PID readings for each sample were included on the boring logs (Appendix A). Selected soil samples were sealed with Teflon tape and plastic end caps. The PID readings resulting from field screening were consistently below 1 part per million (ppm). As sample selection for laboratory analysis based on the highest PID reading was not applicable, the samples from the terminal depth (10 feet bgs) from each boring location was submitted for analysis.

Down-hole equipment was decontaminated using a triple rinse system containing detergent.

3.7 Boring Destruction

Following completion of sample collection and removal of tooling, the borings were backfilled with hydrated bentonite and completed at the surface by replacing the paving bricks, using the photographs taken beforehand as a guide.

3.8 Laboratory Analyses

The soil samples were labeled and placed into a cooler with ice following sampling. The samples were transferred under appropriate chain-of-custody documentation to Alpha Scientific Corporation of Cerritos, California. Laboratory analytical documentation is provided in Appendix B.

Laboratory analysis of 2 soil samples consisted of the following:

- Total Petroleum Hydrocarbons carbon chain (TPH-cc) by U.S. Environmental Protection Agency (EPA) Method 8015M. TPH-cc consists of TPH-g (gasoline); TPH-d (diesel); and TPH-o (oil)
- Volatile Organic Compounds (VOCs) by U.S. EPA Method 8260B

3.9 Investigation Derived Wastes

No investigation derived waste was created during this investigation.

4.0 FINDINGS

The laboratory results of soil analyses were reviewed and compared to the Environmental Screening Levels (ESLs), (for commercial/industrial Sites) regulatory limits established by the San Francisco Bay Regional Water Quality Control Board in February 2016. The ESL comparison values provide conservative screening levels for over 100 chemicals commonly encountered at sites with impacted soil, ground water, and soil gas. The primary goal of the ESLs is the identification and evaluation of potential environmental concerns at impacted sites. Under most circumstances, the presence of a chemical in soil, soil gas, or groundwater detected at concentrations below their respective corresponding ESL comparison value can generally be assumed to not pose a significant threat to human health or the environment. In circumstances where a chemical is detected at concentrations exceeding its ESL comparison value, additional evaluation will generally be necessary.

The evaluation of soil data was performed using the portion of Table S-1, Direct Exposure Human Health Risk Levels titled, Commercial/Industrial: Shallow Soil Exposure. This portion of the table is designed for the comparison of laboratory analytical data collected at depths no greater than 10 feet bgs and takes into consideration commercial/industrial workers and construction workers who may be exposed to impacted soil.

4.1 Geology and Hydrogeology

Sediment encountered in each of the borings generally consisted of moderately dense silty sand to a depth of approximately 8 feet bgs, where sediments coarsened and loose to moderately dense fine to medium grained sand was observed (Appendix A). No staining or odor was observed at either boring location.

Groundwater was not encountered in borings B-1 and B-2 and therefore groundwater samples were not collected during this investigation.

4.2 Soil Sample Analytical Results

Laboratory results are provided in Appendix B and summarized in Table 1. Petroleum hydrocarbons and VOCs were not detected in the soil samples submitted for analysis at concentrations exceeding their respective laboratory method detection limits.

5.0 SUMMARY AND CONCLUSIONS

The purpose of the LSI was to evaluate potential impacts to the subsurface related to a geophysical anomaly detected at the Site. AEI directed the advancement of two soil borings to a depth of 10 feet bgs on the northern and southern end of the anomaly. Soil samples were collected at depths of 5 feet and 10 feet bgs. Soil samples from the terminal interval of both borings were analyzed for petroleum hydrocarbons and volatile organic compounds. The results of laboratory analysis indicated that no compounds were present in the soil samples at concentrations exceeding their respective laboratory method detection limits.

Based on the results of this investigation, it is AEI's opinion that no further action is necessary at this time. Should the Client desire a greater degree of certainty with respect to the exact nature and identity of the anomaly, the Client may choose to have the designated area exposed for the purpose of visual identification. Such a procedure would first require the removal of all the paving bricks within the footprint of the identified anomaly, and them removal of the soil until the top of the UST is revealed, if present. If a UST is revealed, then the City of Los Angeles Fire Department must be notified, and steps undertaken to either confirm that the UST was abandoned in place or that proper removal and abandonment procedures must be performed.

The Client should understand that further evaluation of the anomaly is not mandatory at this time, given the results of this investigation; however, prior to any site redevelopment, the UST, if present, will need to be addressed as described above.

As stated in AEI's Phase I ESA, two diesel USTs on the north side of the building were removed in 1998 with LAFD oversight. Based on soil sampling at that time which indicated low levels of petroleum were present, no further action was required by the LAFD. AEI's investigation did not evaluate this portion of the property. During future redevelopment or other site disturbance in this portion of the property, impacted soils may be encountered and should be properly managed.

6.0 REPORT LIMITATIONS AND RELIANCE

This report presents a summary of work completed by AEI Consultants. The completed work includes observations and descriptions of site conditions encountered. The number and location of samples were chosen to provide the requested information, subject to the scope of work for which AEI was retained and limitations inherent in this type of work, but it cannot be assumed that they are representative of areas not sampled. This report should not be regarded as a guarantee that no further contamination beyond that which could have been detected within the scope of this investigation is present beneath the subject property. Undocumented, unauthorized releases of hazardous material, the remains of which are not readily identifiable by visual inspection and are of different chemical constituents, are difficult and often impossible to detect within the scope of a chemical specific investigation.

Any conclusions and/or recommendations are based on these analyses and observations, and the governing regulations. Conclusions beyond those stated and reported herein should not be inferred from this document. These services were performed in accordance with generally accepted practices, in the environmental engineering and construction field, which existed at the time and location of the work. No other warranty, either expressed or implied, has been made.

This investigation was prepared for the sole use and benefit of Access Industries, Inc. All reports, both verbal and written, whether in draft or final, are for the benefit of Access Industries, Inc. This report has no other purpose and may not be relied upon by any other person or entity without the written consent of AEI. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with AEI granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against AEI, its officers, employees, vendors, successors or assigns. Reliance is provided in accordance with AEI's Proposal and Standard Terms & Conditions executed by the Client. The limitation of liability defined in the Terms and Conditions is the aggregate limit of AEI's liability to the client and all relying parties.

If there are any questions regarding our investigation, please do not hesitate to contact AEI at 310-798-4255.

Sincerely,
AEI Consultants

Lab Job No.: AI811008

Dear Ms. Siegel:

Enclosed please find the analytical report for the sample(s) received by Alpha Scientific Corporation on 11-05-2018 and analyzed by the following EPA methods:

EPA 8015M (Total Petroleum Hydrocarbons)
EPA 8260B (VOCs & Oxygenates by GC/MS)

The sample(s) arrived in good conditions (i.e., chilled, intact) and with a chain of custody record attached.

Alpha Scientific Corporation is a CA ELAP certified laboratory (Certificate Number 3007). Thank you for giving us the opportunity to serve you. Please feel free to call me at (562) 809-8880 if our laboratory can be of further service to you.

Sincerely,

Roger Wang, Ph. D.
Laboratory Director

REPORT COMPLETENESS CHECKLIST

Consulting Firm: Partner Assessment Corporation
Report Title: Ford Factory
Site Address: 777 and 821 South Santa Fe Avenue; 2060 East 7th Street; 2030 and 2040 East 7th Place, Los Angeles, California 90021
Report Date: June 14, 2017

Item	(Y / N)
1. Report reviewed and signed by designated HSBC contact.	Y
2. Report complies with most recent ASTM standard.	Y
3. Adjoining properties are described.	Y
4. Utilities are described, including heating fuel source, water supply source and wastewater discharge method (sewer/septic).	Y
5. An estimate of the groundwater flow direction is provided.	Y
6. A historic chain of **use** to 1940 or first developed use is included, or "data failure" per ASTM is documented.	Y
7. Review of Sanborn maps or certification that there is no Sanborn coverage.	Y
8. Local officials (e.g.: assessor, building department) contacted for historical information.	Y
9. Date of the site visit provided.	Y
10. Inaccessible areas identified.	Y
11. Current and past operations and processes are described.	Y
12. Opinion on asbestos, radon, lead paint and lead in drinking water.	Y
13. Opinion on the significance of any nearby property identified on a regulatory database.	Y
14. Documentation of interviews with major occupants and the key site manager.	Y
15. Local officials, (fire department, health department, etc.) interviewed or files reviewed.	Y
16. Conclusions include the recommended ASTM wording about RECs.	Y
17. There is a recommendation for each REC identified.	Y
18. The Conclusions/Recommendations Table is included with a generic cost for each recommendation.	Y
The text and all possible appendices are double-sided copies.	Y
APPENDICES/ATTACHMENTS	
• Invoice submitted with report.	Y
• Site locus using USGS topographic quadrangle as base map.	Y
• Figure showing site boundaries, abutters, buildings, site features, approximate scale, north arrow	Y
• Color photographs	Y
• Sanborn maps or "no coverage" letter	Y
• Database report	Y
• Insurance certificates	Y
• Resumes of site inspector and report reviewers.	Y
• All other documentation to support conclusions and comply with ASTM.	Y

EXECUTIVE SUMMARY

Partner Assessment Corporation (Partner) has performed a Phase I Environmental Site Assessment (ESA) in general accordance with the scope of work and limitations of ASTM Standard Practice E1527-13, the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) and set forth by HSBC Bank USA, N.A. for the property located at 777 and 821 South Santa Fe Avenue; 2060 East 7th Street; 2030 and 2040 East 7th Place in the City of Los Angeles, Los Angeles County, California (the "subject property"). The Phase I Environmental Site Assessment is designed to provide HSBC Bank USA, N.A. with an assessment concerning environmental conditions (limited to those issues identified in the report) as they exist at the subject property.

Property Description

The subject property is located on the south side of East 7th Street, the west side of South Santa Fe Avenue, and the north side of Violet Street within an industrial area of Los Angeles, California. Please refer to the table below for further description of the subject property:

Subject Property Data	
Address:	777 and 821 South Santa Fe Avenue; 2060 East 7th Street; 2030 and 2040 East 7th Place, Los Angeles, California
Historical/Additional Addresses:	701-777 South Santa Fe Avenue, 2053 Violet Street, 2030, 2035, 2040 and 2043 East 7th Place and 2030-2060 East 7th Street
Assessor's Parcel Number (APN):	5166-013-010; and 5166-014-001
Nature of Use:	Industrial
Number of Buildings:	Four (4) Total: Three interconnected on the eastern side of the subject property and a parking garage on the northwest.
Number of Floors:	5-story on northeast (2060 East 7th Street); 2-story along the central eastern sections (777 South Santa Fe) and 1-story with mezzanine on the southeastern elevations (821 South Santa Fe); 4-story parking structure (2030 East 7th Street)
Type of Construction:	Steel framed and concrete
Building Square Footage (SF):	257,028 SF
Land Acreage (Ac):	3.85 acres
Date of Construction:	1913 (777 South Santa Fe); 1923 (2060 East 7th Street); 1988 (821 South Santa Fe); 2016 (2030 East 7th Street)
Current Tenants:	None (leased by Warner Music Group)

The subject property consists of three interconnected buildings along the eastern side of the subject property consisting of one five-story building section (2060 East 7th Street) with basement on the northeast side of the subject property that connects to a two-story building section with no basement (777 South Santa Fe) along the eastern side of the subject property which connects to a single story building section (821 South Santa Fe) with mezzanine area and no basement on the southeast side of the subject property. The subject property also consists of a four-story parking structure (2030 East 7th Street) on the northwest side of the subject property that was added in 2016. An asphalt parking lot is located on the western side of the subject property on the south side of East 7th Place that has the address 2040 East 7th Place. The subject property building is currently vacant and will be occupied by Warner Music Group for commercial use. In addition to the current buildings, the subject property is also improved with asphalt paved parking, an open courtyard and limited landscaping.

According to available historical sources, the subject property was formerly developed residentially as early as 1900 until 1906, and has been developed for commercial and industrial use since at least 1913. The current improvements were developed in 1913 (777 South Santa Fe); 1923 (2060 East 7th Street); 1988 (821 South Santa Fe) and 2016 (2030 East 7th Street). Tenants of concern have included Ford Motor Company (1924-1929), Printers (1933-1954), Mission Plating and Manufacturing (1940s), a plating tenant (1950), Chemical Company/Warehouse (1951-1958), Auto Repair (1953-1959), B&M Metal Products/Central Sheet Metal Works (1958), Trucking/Freight Tenants (1958-1971), and Associated Gear and Machine Company (1962-1985).

The immediately surrounding properties consist of East 7th Street to the north followed by under construction property (2029-2043 East 7th Street) and mixed use buildings (2051-2055 East 7th Street); Violet Street to the south followed by American Tea Room (909 South Santa Fe Avenue); South Santa Fe Avenue to the east followed by commercial buildings (700-826 South Santa Fe Avenue); Splits 59 (2045 East Violet Street), Better Life Organics (2020 East 7th Place), and industrial buildings (2014-2022 East 7th Street and 718-726 Mateo Street) to the west; South Santa Fe Avenue and East 7th Street intersection to the northeast followed by industrial building (2101 East 7th Street); and South Santa Fe Avenue and Violet Street intersection followed by Dorin Realty Company (900 South Santa Fe Avenue).

According to information on the State Water Resources Control Board GeoTracker website the depth to groundwater in the vicinity of the subject property is approximately 60 feet below ground surface (bgs) with the direction of groundwater flow identified to be towards the southeast.

Findings

A *recognized environmental condition (REC)* refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment.

- According to historical sources, the subject property has been occupied by various industrial tenants since as early as 1924 including Ford Motor Company (1924-1929), Printers (1933-1954), Mission Plating and Manufacturing (1940s), a plating tenant (1950), Chemical Company/Warehouse (1951-1958), Auto Repair (1953-1959), B&M Metal Products/Central Sheet Metal Works (1958), Trucking/Freight Tenants (1958-1971), and Associated Gear and Machine Company (1962-1985). These type of operations typically use hazardous materials such as petroleum products, solvents, and metals. None of these tenants were identified in the regulatory database report or regulatory agencies for the use of hazardous materials onsite; however, these tenants operated prior to a time of regulatory oversight. There is potential that oils or solvents present in historical operations could impact the subsurface. According to a prior subsurface investigation reports discussed in Section 5.2.6, six soil samples were collected in 2014 with two collected in the basement of the five-story building and four soil samples collected on the western area where the former 2030 and 2035 East 7th Street parcel was located (present day parking garage location). An additional subsurface investigation was also conducted in November 2015 that consisted of collecting six additional soil samples with three located near a former suspected gasoline UST present on Sanborn Maps on the western 2040 East 7th Place parking lot (See further discussion in environmental issues section below) and three additional in the base of the current parking garage structure on the northwestern side of the subject property. The samples were analyzed for total petroleum hydrocarbons (TPH), volatile organic compounds (VOCs), and metals. No impacts were identified. No groundwater and or soil-gas sampling was conducted as part of the limited 2014 or 2015 sampling events. No subsurface information was identified for the 777 South Santa Fe building or the 821 South Santa Fe building. Due to the limited nature of the subsurface assessments, they do not adequately assess the property potential for impacts from the historical industrial use. Based on the duration of use and likely storage and generation of large quantities of hazardous materials, the historical use of the subject property represents a recognized environmental condition and vapor encroachment cannot be ruled out at this time.

A controlled recognized environmental condition (CREC) refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. The following was identified during the course of this assessment:

- Partner did not identify any controlled recognized environmental conditions during the course of this assessment.

A historical recognized environmental condition (HREC) refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. The following was identified during the course of this assessment:

- Partner did not identify any historical recognized environmental conditions during the course of this assessment.

An environmental issue refers to environmental concerns identified by Partner, which do not qualify as RECs; however, warrant further discussion. The following was identified during the course of this assessment:

- The subject property, identified as Green Acres, Incorporated at 2040 East 7th Place, is listed as an inactive underground storage tank (UST) site in the regulatory database. No additional details are provided on the database. According to Sanborn maps reviewed, a gasoline tank is depicted on the northeast portion of this parcel from at least 1950 until 1970. No details are provided on the Sanborn Maps and it is unknown if the tank was above or below ground. Partner requested records from the Los Angeles Fire Department (LAFD) for additional information regarding former USTs onsite; however, as of this writing, Partner has not received a response from the LAFD. Additionally, no records regarding a UST at this address were identified on the Regional Water Quality Control Board (RWQCB) or Department of Toxic Substances Control (DTSC) online databases. According to a prior subsurface investigation report discussed in Section 5.2.6, six soil samples were collected in November 2015 that consisted of collecting three soil samples located near the former suspected gasoline UST present on Sanborn Maps on the western 2040 East 7th Place parking lot. The samples were analyzed for total petroleum hydrocarbons (TPH), volatile organic compounds (VOCs), and metals. No impacts were identified. Based on the lack of known or suspected releases from the former identified tank system on the Sanborn Maps, demolition of the former structure associated with the former tank operations and November 2015 subsurface investigation which identified no impacts the former tank system is not considered a significant environmental concern for the subject property.

- The subject property, identified as Mika Corp at 2030 East 7th Street, is listed as an inactive UST site in the regulatory database. No additional details are provided on the database. Partner requested records from the LAFD for additional information regarding the former UST onsite. As of this writing Partner has not received a response from the LAFD. Additionally, no records regarding a UST at this address were identified on the RWQCB or DTSC online databases. In 2014, a geophysical survey was conducted on this parcel which identified one potential UST (further discussed below); however, no potential USTs or former tank cavities were detected in the area of the historical 2030 East 7th Street address. Based on the lack of USTs or potential historical USTs identified during the geophysical survey, this listing is not expected to represent a significant environmental concern.

- The subject property, identified as Fred Kort at 2040 and 2060 East 7th Street, is listed as an active UST site in the regulatory database which has two tanks onsite. No additional details are provided. These addresses are identified as permitted UST sites on the RWQCB Geotracker database; however, no details are provided. Partner requested records from the LAFD for additional information regarding the former UST onsite. As of this writing Partner has not received a response from the LAFD; however, according to prior environmental assessments, a request made in 2014 indicated no records are on file for these addresses. Additionally, no records regarding a UST at this address were

identified on the DTSC online database. In 2014 a geophysical survey was conducted on these parcels which identified a potential UST adjacent to the west of the five-story building; however, the anomaly was uncovered as part of the current parking garage developments and it was determined to be a concrete vault that formerly contained a tank and was removed as part of redevelopment activities. As part of the 2015 subsurface investigation one soil sample was collected in the vicinity of the former vault and did not identify any traces of petroleum constituents in the soils. No additional anomalies were detected during the 2014 geophysical investigation. Based on the removal of the former vault system during redevelopment activities and sampling information from the 2015 subsurface investigation the former UST system would not represent a significant environmental concern.

Conclusions, Opinions and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of 777 and 821 South Santa Fe Avenue; 2060 East 7th Street; 2030 and 2040 East 7th Place in the City of Los Angeles, Los Angeles County, California (the "subject property"). Any exceptions to or deletions from this practice are described in Section 1.5 of this report.

This assessment has revealed evidence of recognized environmental conditions and/or environmental issues in connection with the subject property. Based on the conclusions of this assessment, Partner recommends the following:

- A subsurface investigation should be conducted in order to determine the presence or absence of soil and/or groundwater contamination due to the historical use of the subject property.

1.0 INTRODUCTION

Partner Assessment Corporation (Partner) has performed a Phase I Environmental Site Assessment (ESA) in general conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) for the property located at 777 and 821 South Santa Fe Avenue; 2060 East 7th Street; 2030 and 2040 East 7th Place in the City of Los Angeles, Los Angeles County, California (the "subject property"). Any exceptions to, or deletions from, this scope of work are described in the report.

1.1 Purpose

The purpose of this ESA is to identify existing or potential Recognized Environmental Conditions (as defined by ASTM Standard E1527-13) affecting the subject property that: 1) constitute or result in a material violation or a potential material violation of any applicable environmental law; 2) impose any material constraints on the operation of the subject property or require a material change in the use thereof; 3) require clean-up, remedial action or other response with respect to Hazardous Substances or Petroleum Products on or affecting the subject property under any applicable environmental law; 4) may affect the value of the subject property; and 5) may require specific actions to be performed with regard to such conditions and circumstances. The information contained in the ESA Report will be used by Client to: 1) evaluate its legal and financial liabilities for transactions related to foreclosure, purchase, sale, loan origination, loan workout or seller financing; 2) evaluate the subject property's overall development potential, the associated market value and the impact of applicable laws that restrict financial and other types of assistance for the future development of the subject property; and/or 3) determine whether specific actions are required to be performed prior to the foreclosure, purchase, sale, loan origination, loan workout or seller financing of the subject property.

This ESA was performed to permit the *User* to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) liability (hereinafter, the "*landowner liability protections*," or "*LLPs*"). ASTM Standard E1527-13 constitutes "*all appropriate inquiry* into the previous ownership and uses of the *property* consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35)(B).

1.2 Scope of Work

The scope of work for this ESA is in general accordance with the requirements of ASTM Standard E1527-13. This assessment included: 1) a property and adjacent site reconnaissance; 2) interviews with key personnel; 3) a review of historical sources; 4) a review of regulatory agency records; and 5) a review of a regulatory database report provided by a third-party vendor. Partner contacted local agencies, such as environmental health departments, fire departments and building departments in order to determine any current and/or former hazardous substances usage, storage and/or releases of hazardous substances on the subject property. Additionally, Partner researched information on the presence of activity and use

limitations (AULs) at these agencies. As defined by ASTM E1527-13, AULs are the legal or physical restrictions or limitations on the use of, or access to, a site or facility: 1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil or groundwater on the subject property; or 2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or engineering controls (IC/ECs), are intended to prevent adverse impacts to individuals or populations that may be exposed to hazardous substances and petroleum products in the soil or groundwater on the property.

If requested by Client, this report may also include the identification, discussion of, and/or limited sampling of asbestos-containing materials (ACMs), lead-based paint (LBP), mold, and/or radon.

1.3 Limitations

Partner warrants that the findings and conclusions contained herein were accomplished in accordance with the methodologies set forth in the Scope of Work. These methodologies are described as representing good commercial and customary practice for conducting an ESA of a property for the purpose of identifying recognized environmental conditions. There is a possibility that even with the proper application of these methodologies there may exist on the subject property conditions that could not be identified within the scope of the assessment or which were not reasonably identifiable from the available information. Partner believes that the information obtained from the record review and the interviews concerning the subject property is reliable. However, Partner cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete. The conclusions and findings set forth in this report are strictly limited in time and scope to the date of the evaluations. The conclusions presented in the report are based solely on the services described therein, and not on scientific tasks or procedures beyond the scope of agreed-upon services or the time and budgeting restraints imposed by the Client. No other warranties are implied or expressed.

Some of the information provided in this report is based upon personal interviews, and research of available documents, records, and maps held by the appropriate government and private agencies. This report is subject to the limitations of historical documentation, availability, and accuracy of pertinent records, and the personal recollections of those persons contacted.

This practice does not address requirements of any state or local laws or of any federal laws other than the all appropriate inquiry provisions of the LLPs. Further, this report does not intend to address all of the safety concerns, if any, associated with the subject property.

Environmental concerns, which are beyond the scope of a Phase I ESA as defined by ASTM include the following: ACMs, LBP, radon, and lead in drinking water. These issues may affect environmental risk at the subject property and may warrant discussion and/or assessment; however, are considered non-scope issues. If specifically requested by the Client, these non-scope issues are discussed in Section 6.3.

1.4 User Reliance

HSBC Bank USA, N.A. engaged Partner to perform this assessment in accordance with an agreement governing the nature, scope and purpose of the work as well as other matters critical to the engagement. All reports, both verbal and written, are for the sole use and benefit of HSBC Bank USA, N.A. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with Partner granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against Partner, its officers, employees, vendors, successors or assigns. Any such unauthorized user shall be responsible to protect, indemnify and hold Partner, Client and their respective officers, employees, vendors, successors and assigns harmless from any and all claims, damages, losses, liabilities, expenses (including reasonable attorneys' fees) and costs attributable to such Use. Unauthorized use of this report shall constitute acceptance of and commitment to these responsibilities, which shall be irrevocable and shall apply regardless of the cause of action or legal theory pled or asserted. Additional legal penalties may apply.

This report has been completed under specific Terms and Conditions relating to scope, relying parties, limitations of liability, indemnification, dispute resolution, and other factors relevant to any reliance on this report. Any parties relying on this report do so having accepted the Terms and Conditions for which this report was completed. A copy of Partner's standard Terms and Conditions can be found at http://www.partneresi.com/terms-and-conditions.php

1.5 Limiting Conditions

The findings and conclusions contain all of the limitations inherent in these methodologies that are referred to in ASTM E1527-13.

Specific limitations and exceptions to this ESA are more specifically set forth below:

- Interviews with past or current owners, operators and occupants were not reasonably ascertainable and thus constitute a data gap. Based on information obtained from other historical sources (as discussed in Section 3.0), this data gap is not expected to alter the findings of this assessment.

- Partner requested information relative to deed restrictions and environmental liens, a title search, and completion of a pre-survey questionnaire from the Report User. This information was not provided at the time of the assessment.

- Partner was not able to document the historical use of the subject property prior to 1900. The following sources were reviewed during the course of this assessment and found to be limited: aerial photographs were not available prior to 1928 and city directories were not available prior to 1924 were not reasonably ascertainable from local agencies; and other historical sources such as fire insurance maps did not provide coverage of the subject property prior to 1900. This data failure is not considered critical and does not change the conclusions of this report, as the 1900 Sanborn map revealed the subject property to be residential.

- Partner was unable to determine the property use at 5-year intervals, which constitutes a data gap. Except for property tax files and recorded land title records, which were not considered to be sufficiently useful, Partner reviewed all standard historical sources and conducted appropriate interviews.

- Partner submitted Freedom of Information Act (FOIA) request to Los Angeles Fire Department (LAFD) and Los Angeles County Public Health Investigation (LACPHI) for information pertaining to hazardous substances, underground storage tanks, releases, inspection records, etc. for the subject property. As of this writing, these agencies have not responded to Partner's request.

2.0 SITE DESCRIPTION

2.1 Site Location and Legal Description

The subject property at 777 and 821 South Santa Fe Avenue; 2060 East 7th Street; 2030 and 2040 East 7th Place in the City of Los Angeles, Los Angeles County, California is located on the south side of East 7th Street, west side of Santa Fe Street, north side of Violet Street, and east side of East 7th Place. According to the Los Angeles County Assessor, the subject property is identified by assessor parcel numbers (APNs) 5166-013-010; and 5166-014-001.

According to the Los Angeles County Assessor, the subject property is legally described as:
5166-013-010: VAC ALLEY,LOTS 1-3 POR LOT 4,37-42 MR 18-25,LOT 11-16,POR LOT 17-26 MR 16-73

5166-014-001: M L WICKS SUB OF KIEFER TR N 125 FT OF LOTS 43,44 AND 45 AND E 2 FT OF N 125 FT OF LOT 46

Please refer to Figure 1: Site Location Map, Figure 2: Site Plan, Figure 3: Topographic Map, and Appendix A: Site Photographs for the location and site characteristics of the subject property.

2.2 Current Property Use

The subject property consists of three interconnected buildings along the eastern side of the subject property consisting of one five-story building section (2060 East 7th Street) with basement on the northeast side of the subject property that connects to a two-story building section with no basement (777 South Santa Fe) along the eastern side of the subject property which connects to a single story building section (821 South Santa Fe) with mezzanine area and no basement on the southeast side of the subject property. The subject property also consists of a four-story parking structure (2030 East 7th Street) on the northwest side of the subject property that was added in 2016. An asphalt parking lot is located on the western side of the subject property on the south side of East 7th Place that has the address 2040 East 7th Place. The subject property building is currently vacant and will be occupied by Warner Music Group for commercial use. In addition to the current buildings, the subject property is also improved with asphalt paved parking, an open courtyard and limited landscaping.

The subject property is designated for Heavy Manufacturing by the City of Los Angeles and is considered a legal use in its current configuration.

The subject property was identified as Underground Storage Tank (UST), California Emission Inventory Data (EMI), California Statewide Environmental Evaluation and Planning System (SWEEPS) UST, and California Facility Inventory Database (FID) site in the regulatory database report of Section 4.2.

2.3 Current Use of Adjoining Properties

The subject property is located within a mixed commercial, retail, and residential area of Los Angeles County. During the vicinity reconnaissance, Partner observed the following land use on properties in the immediate vicinity of the subject property:

Immediately surrounding properties

North:	East 7th Street beyond which is under construction property (2029-2043 East 7th Street) and mixed-use buildings (2051-2055 East 7th Street);
South:	Violet Street beyond which is American Tea Room (909 South Santa Fe Avenue);
East:	South Santa Fe Avenue beyond which is commercial buildings (700-826 South Santa Fe Avenue);
West:	Splits 59 (2045 East Violet Street), Better Life Organics (2020 East 7th Place), and industrial buildings (2014-2022 East 7th Street and 718-726 Mateo Street)
Northeast:	South Santa Fe Avenue and East 7th Street intersection beyond which is industrial building (2101 East 7th Street);
Southeast:	South Santa Fe Avenue and Violet Street intersection beyond which is Dorin Realty Company (900 South Santa Fe Avenue)

The adjacent property to the northwest identified as an UST, SWEEPS UST, CA FID UST, EDR Historical Auto Station site; the adjacent property to the east was identified as a RESPONSE, Envirostor, Hist Cal-Sites and CA Bond Exp. Plan and EDR Historical Auto Station site; the adjacent property to the northeast was identified as a SEMS-ARCHIVE, Envirostor, Hist Cortese site; the adjacent property to the southwest was identified as a UST, SWEEPS UST and CA FID UST site; the adjacent property to the west was identified as an UST, SWEEPS UST, CA FID UST site in the regulatory database report, as discussed of Section 4.2.

2.4 Physical Setting Sources

2.4.1 Topography

The United States Geological Survey (USGS) *Los Angeles, California* Quadrangle 7.5-minute series topographic map was reviewed for this ESA. According to the contour lines on the topographic map, the subject property is located at approximately 245 feet above mean sea level (MSL). The contour lines in the area of the subject property indicate the area is sloping gently toward the southeast. The subject property is depicted on the 2012 map as within an urban area.

A copy of the most recent topographic map is included as Figure 3 of this report.

2.4.2 Hydrology

According to topographic map interpretation, the direction of groundwater in the vicinity of the subject property is inferred to flow toward the southeast. The nearest surface water in the vicinity of the subject property is the Los Angeles River located approximately 900 feet east of the subject property. No settling ponds, lagoons, surface impoundments, wetlands or natural catch basins were observed at the subject property during this assessment.

According to available information, a public water system operated by the Los Angeles Department of Water and Power (LADWP) serves the subject property vicinity. The sources of public water for the City of Los Angeles are surface waters from the State Water Project (including 22 dams and reservoirs), Colorado River, Owens River, Mono Lake Basin, and approximately 30-percent comes from groundwater sources.

Information specific to the subject property regarding the depth to groundwater and direction of groundwater flow was not available for the subject area. However, according to information obtained from online research, depth to the high water table is anticipated to be approximately 60 feet below ground surface (bgs).

2.4.3 Geology/Soils

Based on the review of the Geologic Map of California, Los Angeles sheet, published by the Division of Mines and Geology, dated 1969, the subject property is underlain by Quaternary alluvium and terrace deposits which primarily consist of silt and clay, with local gravel and sand lenses. The alluvium and terrace deposits overlie marine and lagoonal sedimentary rocks, which overlie the Puente formation of Monterey Shale (bedrock) at approximately 2,700 feet below surface grade.

According to the United States Department of Agriculture Soil Conservation Service, Report and General Soil Map, Los Angeles County, the near surface soil association underlying the subject property belongs to the Hanford association. The soils of this association occur on gently sloping alluvial fans between elevations from near sea level to 3,500 feet. Natural vegetation consists mainly of annual grasses and forbs and occasionally junipers. This association comprises about 11.2 percent of the report area. Hanford soils are over 60 inches deep, are well drained, and have moderately rapid subsoil permeability. They have pale-brown coarse sandy loam surface layers about 8 inches thick underlain by light yellowish-brown coarse sandy loam and gravelly loamy coarse sand substratum. Typically they are slightly acidic to mildly alkaline throughout, but occasionally are calcareous in the lower part. Thin layers of coarser material may occur below 40 inches. Available water-holding capacity is 5.0 to 7.5 inches for 60 inches of soil depth. Inherent fertility is moderate. Hanford soils make up about 85 percent of the association. Included are 10 percent Yolo soils and 5 percent Hesperia soils. In the Los Angeles basin these soils are used almost exclusively for residential and industrial purposes. In the less populated areas, agricultural uses are for the production of irrigated crops such as alfalfa, small grain, sugar beets, potatoes, and fruit and nut trees.

2.4.4 Flood Zone Information

Partner performed a review of the Flood Insurance Rate Map, published by the Federal Emergency Management Agency. According to Community Panel Number 06037C1636F, dated September 26, 2008, the subject property appears to be located in Zone X, an area located outside of the 100-year and 500-year flood plains.

3.0 HISTORICAL INFORMATION

Partner obtained historical use information about the subject property from a variety of sources. A chronological listing of the historical data found is summarized in the table below:

Historical Use Information

Period/Date	Source	Description/Use
1900-1906	Sanborn Maps	Residential
1918-Present	Aerial Photographs, Building Records, City Directories, Interviews, Onsite Observations, Sanborn Maps, Prior Reports	Commercial/Industrial

According to historical sources, the subject property has been occupied by various industrial tenants since as early as 1924 including Ford Motor Company (1924-1929), Printers (1933-1954), Mission Plating and Manufacturing (1940s), a plating tenant (1950), Chemical Company/Warehouse (1951-1958), Auto Repair (1953-1959), B&M Metal Products/Central Sheet Metal Works (1958), Trucking/Freight Tenants (1958-1971), and Associated Gear and Machine Company (1962-1985). These type of operations typically use hazardous materials such as petroleum products, solvents, and metals. None of these tenants were identified in the regulatory database or regulatory agencies for the use of hazardous materials onsite; however, these tenants operated prior to a time of regulatory oversight. During the site inspection, Partner identified a floor drain in the basement of the five story building and two floor drains on the first floor of the two story building. There is potential that oils or solvents present in the waste stream could impact the subsurface should the drain systems become compromised. According to a prior report, two soil samples were collected in 2014 during a geotechnical investigation from 5.5 feet bgs on the northeastern portion of the subject property (former printing area). The samples were analyzed for total petroleum hydrocarbons (TPH), volatile organic compounds (VOCs), and metals. No impacts were identified. However, due to the limited nature of the assessment, it did not adequately assess the property for impacts from the historical industrial use. Based on the duration of use and likely storage and generation of large quantities of hazardous materials, the historical use of the subject property represents a recognized environmental condition.

Additional environmental concerns identified in association with the former use of the subject property, as further discussed in Section 4.2.

3.1 Aerial Photograph Review

Partner obtained available aerial photographs of the subject property and surrounding area from Environmental Data Resources (EDR). The following observations were noted to be visible on the subject property and adjacent properties during the aerial photograph review:

Date: 1928	***Scale: 1"=500'***
Subject Property:	Appears to be developed with four industrial buildings on the eastern and northern portions of the subject property. The remainder of the property appears to be undeveloped.
North:	Appears to be developed with commercial and industrial buildings across East 7th Street
South:	Appears to be developed with commercial and industrial buildings across Violet Street
East:	Appears to be developed with commercial and industrial buildings across Santa Fe Street
West:	Appears to be developed with an industrial building, a road, and a vacant lot

Date: 1938	***Scale: 1"=500'***
Subject Property:	Appears to be developed with an additional commercial/industrial building on the northwestern portion. No other significant changes were noted.
North:	No significant changes visible
South:	No significant changes visible
East:	No significant changes visible
West:	No significant changes visible

Date: 1947	***Scale: 1"=500'***
Subject Property:	The southwestern portion of the property appears to be utilized for storage/parking. No other significant changes noted.
North:	No significant changes visible
South:	No significant changes visible
East:	No significant changes visible
West:	Appears to be developed with a storage yard and commercial buildings

Date: 1956, 1965, 1976	***Scale: 1"=500'***
Subject Property:	There appear to be developed with additional commercial/industrial buildings on the northwestern and southwestern portions. No other significant changes noted.
North:	No significant changes visible
South:	No significant changes visible
East:	No significant changes visible
West:	Appears to be developed with additional commercial/industrial buildings

Date: 1989	***Scale: 1"=500'***
Subject Property:	Appears to be developed with a new commercial/industrial building on the southern portion. No other significant changes were noted.
North:	No significant changes visible
South:	No significant changes visible
East:	No significant changes visible
West:	No significant changes visible

Date: 1994	***Scale: 1"=500'***
Subject Property:	The northwestern portion of the subject property appears to be a vacant lot. No other significant changes were noted.
North:	No significant changes visible
South:	No significant changes visible
East:	No significant changes visible
West:	No significant changes visible

Date: 2005	***Scale: 1"=500'***
Subject Property:	Appears a new commercial/industrial building on the northwestern portion.
North:	No significant changes visible
South:	No significant changes visible
East:	No significant changes visible
West:	Appears to be developed with a new commercial/industrial building on the southern portion. No other significant changes noted

Copies of select aerial photographs are included in Appendix B of this report.

3.2 Sanborn Fire Insurance Maps

Partner reviewed the collection of Sanborn Fire insurance maps from Environmental Data Resources (EDR). The following observations were noted to be depicted on the subject property and adjacent properties during the fire insurance map review:

Date: 1900	
Subject Property:	The subject property is addressed as 817 and 719 Santa Fe Street and is depicted with two residential dwellings and associated support structures on the eastern portion. The remainder of the property is depicted as undeveloped.
North:	Undeveloped across East 7th Street
South:	Undeveloped across Violet Street
East:	Residential across Santa Fe Street
West:	Undeveloped and Atlantic Street

Date: 1906

Subject Property: The subject property is addressed as 719-821 Santa Fe Street, 2040, 2031, 2027 Atlantic, and 2046 and 2048 East 7th Street and is depicted with commercial shops and residential dwellings on the northern portion and residential dwellings and associated support structures on the eastern portion. The southwestern portion is depicted with a portion of a playground. The remainder of the property is undeveloped.

North: A salon and undeveloped land across 7th Street

South: Undeveloped across Violet Street

East: Residential dwellings across Santa Fe Street

West: Residential dwellings, Atlantic Street, and a playground

Date: 1950

Subject Property: The subject property is addresses as 2030-2062 East 7th Street, 701-829 Santa Fe Street, 2053-2057 Violet Street, and 2031, 2035, 2040, and 2043 Atlantic and is depicted with a chemical warehouse, a loading dock and office, an industrial building with two machine shops and a metal plating facility, a large service building/warehouse with a printing facility, a tenements building, and a paper stock bindery with printing area. A gasoline tank is depicted on the northeastern portion of the 2040 East 7th Place parcel.

North: East 7th Street beyond which is a gasoline station, several commercial shops, printing facility, and a sewing room in a larger mattress factory.

South: Violet Street beyond which is a warehouse and office

East: Santa Fe Street beyond which are several warehouses, commercial shops, a printing facility, and a fire department.

West: A motor depot, parking lot, Atlantic, tenements, and a warehouse.

Date: 1953, 1954

Subject Property: The subject property is addresses as 2030-2062 East 7th Street, 701-829 Santa Fe Street, 2053 Violet Street, and 2035, 2037, and 2040 East 7th Place and there are no significant changes with the exception of an auto repair building depicted on the western portion along East 7th Place, the tenements building is no longer visible, and the plating area on the southern portion is depicted as metal polishing.

North: No significant changes noted

South: No significant changes noted

East: No significant changes noted

West: A truck repair facility is depicted and the tenements are no longer visible. Atlantic is now labeled as East 7th Place. No other significant changes noted.

Date: 1959	
Subject Property:	The subject property is addresses as 2030-2062 East 7th Street, 701-829 Santa Fe Street, 2053 Violet Street, and 2035, 2037, and 2040 East 7th Place and there are no significant changes with the exception of the northwest building is depicted as a brush warehouse (former paper sock bindery and printing)
North:	No significant changes noted
South:	No significant changes noted
East:	No significant changes noted
West:	No significant changes noted

Date: 1960	
Subject Property:	The subject property is addresses as 2030-2062 East 7th Street, 701-829 Santa Fe Street, 2053 Violet Street, and 2035, 2037, and 2040 East 7th Place and there are no significant changes with the exception of the auto repair building is depicted as a warehouse
North:	No significant changes noted
South:	No significant changes noted
East:	No significant changes noted
West:	The truck repair building is no longer depicted. No other significant changes are noted.

Date: 1967, 1970	
Subject Property:	The subject property is addresses as 2030-2062 East 7th Street, 701-829 Santa Fe Street, 2053 Violet Street, and 2035, 2037, and 2040 East 7th Place and there are no significant changes with the exception of the chemical warehouse is now a plastic warehouse
North:	No significant changes noted
South:	No significant changes noted
East:	No significant changes noted
West:	A new truck repair building is visible. No other significant changes are noted.

According to Sanborn maps reviewed, a gasoline tank was located on the northeast portion of the 2040 7th Place Parcel from at least 1950 until 1970. Information regarding USTs at this address are further discussed in Section 4.2 and Section 5.2.6.

Copies of reviewed Sanborn Maps are included in Appendix B of this report.

3.3 City Directories

Partner reviewed historical city directories obtained from Environmental Data Resources (EDR) on September 23, 2015 for past names and businesses that were listed for the subject property. The findings are presented in the following table:

City Directory Search for 2042-2062 East 7th Street, 2030, 2035, 2037, 2040, 2043 East 7th Place, 701-829 South Santa Fe Street, and 2053 Violet Street (Subject Property)

Year(s)	Occupant Listed
1924	Ford Motor Company (2060 East 7th Street)
1929	Ford Motor Company (2060 East 7th Street)
1933	Rotogreyure Printers (2042 East 7th Street)
1951	East 7th Transfer Co (2040 East 7th Street)
	East Hawkins Chemical Company (2035 East 7th Place)
1958	Pacific Coast Brush Co. (2035 and 2030 East 7th Place)
	Hawkins Chemical Company (2035 East 7th Place)
	S&M Freight Lines (2040 East 7th Street)

According to the city directory review, the adjacent properties have been occupied by commercial tenants since 1958.

Copies of reviewed city directories are included in Appendix B of this report.

3.4 Historical Topographic Maps

Partner reviewed historical topographic maps obtained from NETR Online. Topographic maps were available and reviewed for the years 1896 to 1994, as discussed below:

Date: 1896, 1898, 1900, 1904, 1907, 1913, 1920, 1927, 1931, 1940

The subject property is depicted as undeveloped.

The adjacent properties are depicted as developed with small structures across East 7th Street to the north, undeveloped across Violet Street to the south, small structures across South Santa Fe Avenue to the east, undeveloped to the west, industrial structures across South Santa Fe Avenue and East 7th Street to the northeast and undeveloped across South Santa Fe Avenue and Violet Street to the southeast.

Date: 1956, 1968, 1975, 1982, 1987 and 1994

The subject property is depicted as urban development with railroad track on the central portion.

The adjacent properties are depicted as urban development across East 7th Street to the north, urban development across Violet Street to the south, urban development across South Santa Fe Avenue to the east, urban development to the west, urban development across South Santa Fe Avenue and East 7th Street to the northeast and urban development across South Santa Fe Avenue and Violet Street to the southeast.

Due to copyright restrictions, copies of the reviewed topographic maps are not included in Appendix B of this report.

4.0 REGULATORY RECORDS REVIEW

4.1.1 Health Department

Regulatory Agency Data	
Name of Agency:	Los Angeles County Public Health Investigations (LACPHI)
Point of Contact:	General
Agency Address:	5555 Ferguson Drive, Suite 120-04, Commerce
Agency Phone Number:	(323) 890-7806
Date of Contact:	May 26, 2017
Method of Communication:	Email Request
Summary of Communication:	As of this date, Partner has not received a response from the LACPHI; however, according to prior report information discussed in section 5.2.6, no records were available for the subject property addresses as of 2014. Partner will forward any pertinent information obtained upon receipt.

4.1.2 Fire Department

Regulatory Agency Data	
Name of Agency:	Los Angeles Fire Department Health Hazardous Materials Division (LAFD HAZMAT), LAFD Underground Storage Tank Unit (UST) and LAFD Central Industrial Unit (CIU)
Point of Contact:	General
Agency Address:	200 North Main Street, Los Angeles, California
Agency Phone Number:	(310) 978-3680 (HAZMAT), (213) 978-3700 (UST) and (213) 978-3519 (CIU)
Date of Contact:	May 26, 2017
Method of Communication:	Email Request
Summary of Communication:	As of this date, Partner has not received a response from the LAFD; however, according to prior report information discussed in section 5.2.6, no records were available for the subject property addresses as of 2014. Partner will forward any pertinent information obtained upon receipt.

4.1.3 Air Pollution Control Agency

Regulatory Agency Data	
Name of Agency:	South Coast Air Quality Management District (SCAQMD)
Point of Contact:	Not Applicable
Agency Address:	21865 Copley Drive, Diamond Bar, California
Agency Phone Number:	(909) 396-2000
Date of Contact:	May 26, 2017
Method of Communication:	Online Search
Summary of Communication:	According to records reviewed, the subject property identified as Pacific Coast Brush Co. at 2030 East 7th Street is listed in the SCAQMD online database under Facility ID 22919. This facility granted Permit to Operate spray booth paint and solvent in 1962 The subject property identified as Sri Ten Santa Fe LLC at 777 Santa Fe Avenue is listed in the SCAQMD online database under Facility ID 181031. This facility granted Permit to Operate diesel-powered emergency generator in 2016. The subject property identified as Imperial Toy Corporation at 2060 East 7th Street is listed in the SCAQMD online database under Facility ID 8228. No permit information was provided in the online database. A copy of pertinent documents is included in Appendix B of this report.

4.1.4 Regional Water Quality Agency

Regulatory Agency Data	
Name of Agency:	California Regional Water Quality Control Board (RWQCB)
Point of Contact:	Not Applicable
Agency Address:	320 West 4th Street #200, Los Angeles, California
Agency Phone Number:	(213) 576-6600
Date of Contact:	May 26, 2017
Method of Communication:	Online Search
Summary of Communication:	No records regarding hazardous substance use, storage or releases, or the presence of USTs and AULs on the subject property were on file with the RWQCB.

4.1.5 Department of Toxic Substances Control

Regulatory Agency Data	
Name of Agency:	California Department of Toxic Substances Control (DTSCs)
Point of Contact:	EnviroStor and Hazardous Waste Tracking System (HWTS)
Agency Address:	9211 Oakdale Avenue, Chatsworth, California
Agency Phone Number:	(818) 717-6500
Date of Contact:	May 26, 2017
Method of Communication:	Online Search
Summary of Communication:	According to records reviewed, the subject property identified as Imperial Toy Company at 2060 East 7th Street is listed in the DTSC online database. This facility generated off-specification, aged or surplus inorganics and asbestos containing wastes in 2007 and 2013. The subject property identified as Ford Motor Building at 821 South Santa Fe Avenue is listed in the DTSC online database. This facility generated other inorganic solids waste in 2016. The subject property identified as Sri Ten Santa Fe Avenue LC at 777 South Santa Fe Avenue is listed in the DTSC online database. This facility generated aqueous solution with organic residues less than 10 percent, asbestos containing waste, unspecified oil-containing waste, PCBs and other organic solids in 2015 and 2016. A copy of pertinent documents is included in Appendix B of this report.

4.1.6 Building Department

Regulatory Agency Data	
Name of Agency:	Los Angeles Department of Building and Safety (LADBS)
Point of Contact:	Not Applicable
Agency Address:	221 North Figueroa Street, Los Angeles, California
Agency Phone Number:	(213) 473-3231
Date of Contact:	May 31, 2017
Method of Communication:	In Person/Online
Summary of Communication:	Partner reviewed records at the LADBS for the subject property addresses. No records regarding USTs or hazardous materials were on file for these addresses.

Building Records Reviewed for Subject Property

Year(s)	Owner/Applicant	Description
1905	Stephen Healing	Residence and Flats (809 S Santa Fe Ave)
1908	A J	Workers Warehouse (801 S Santa Fe Ave)
1910	R G Collins	Laundry (723-725 S Santa Fe Ave)
1912	Ford Motor Co.	Residence (727 Santa Fe Ave)
1912	Ella	Move house (805 Santa Fe Ave)
1912	W Harlow	Move one store building (2046 E 7th Street)
1912	Ford Motor Co.	Service Building (2050 E 7th Street)
1915	Ford Motor Co.	Oil Storage (725 Santa Fe Ave)
1927	N/A	Demolished a building (2046 E 7th Street)
1956	Bullocks Inc.	Demolished a warehouse building (2060 E 7th Street)

2015	Sri Ten Santa Fe LLC	4-story Parking Structure (
2017	Sri Ten Santa Fe LLC	Renovate Warehouse Building (777 S Santa Fe Ave)
2017	Sri Ten Santa Fe LLC	Certificate of occupancy for a new 4-story parking structure (2030 E 7th Street)

A copy of pertinent documents is included in Appendix B of this report.

4.1.7 Planning Department

Regulatory Agency Data	
Name of Agency:	Los Angeles Planning Department (LAPD)
Point of Contact:	Not Applicable
Agency Address:	221 North Figueroa Street, Los Angeles, California
Agency Phone Number:	(213) 473-3231
Date of Contact:	May 26, 2017
Method of Communication:	In Person Research
Summary of Communication:	According to records reviewed, the subject property is zoned for heavy industrial use.

4.1.8 Oil & Gas Exploration

Regulatory Agency Data	
Name of Agency:	California Division of Oil, Gas and Geothermal Resources (DOGGR)
Point of Contact:	Not Applicable
Agency Address:	195 South Broadway, Suite 101, Orcutt, California
Agency Phone Number:	(805) 937-7246
Date of Contact:	May 26, 2017
Method of Communication:	Online
Summary of Communication:	According to the DOGGR, no oil or gas wells are located on or adjacent to the subject property.

4.1.9 Assessor's Office

Regulatory Agency Data	
Name of Agency:	Los Angeles County Assessor (LACA)
Point of Contact:	Not Applicable
Agency Address:	500 West Temple St. Room 225, Los Angeles, California
Agency Phone Number:	(213) 974-3211
Date of Contact:	May 26, 2017
Method of Communication:	Online Research
Summary of Communication:	According to records reviewed, the subject property is identified by Assessor Parcel Numbers (APNs) 5166-013-010 and 5166-014-001. The subject property parcel listings list the property with 3.85 acres of land.

4.2 Mapped Database Records Search

Information from standard federal, state, county, and city environmental record sources was provided by Environmental Data Resources, Inc. (EDR). Data from governmental agency lists are updated and integrated into one database, which is updated as these data are released. The information contained in this report was compiled from publicly available sources and the locations of the sites are plotted utilizing a geographic information system, which geocodes the site addresses. The accuracy of the geocoded locations is approximately +/-300 feet.

Using the ASTM definition of migration, Partner considers the migration of hazardous substances or petroleum products in any form onto the subject property during the evaluation of each site listed on the radius report, which includes solid, liquid, and vapor.

4.2.1 Regulatory Database Summary

Radius Report Data

Database	Search Radius (mile)	Subject Property	Adjacent Properties	Sites of Concern
Federal NPL or Delisted NPL Site	1.00	N	N	N
Federal CERCLIS Site	0.50	N	N	N
Federal CERCLIS-NFRAP Site	0.50	N	**Y**	N
Federal RCRA CORRACTS Facility	1.00	N	N	N
Federal RCRA TSDF Facility	0.50	N	N	N
Federal RCRA Generators Site (LQG, SQG, CESQG)	0.25	N	N	N
Federal IC/EC Registries	0.50	N	N	N
Federal ERNS Site	Subject Property	N	N	N
State/Tribal Equivalent NPL	1.00	N	N	N
State/Tribal Equivalent CERCLIS	1.00	N	**Y**	N
State/Tribal Landfill/Solid Waste Disposal Site	0.50	N	N	N
State/Tribal Leaking Storage Tank Site	0.50	N	N	N
State/Tribal Registered Storage Tank Sites (UST/AST)	0.25	**Y**	**Y**	N
State/Tribal Voluntary Cleanup Sites (VCP)	0.50	N	N	N
State/Tribal Spills	0.50	N	N	N
Federal Brownfield Sites	0.50	N	N	N
State Brownfield Sites	0.50	N	N	N
EDR MGP	Varies	N	N	N
EDR US Hist Auto Station	Varies	N	**Y**	N
EDR US Hist Cleaners	Varies	N	N	N

4.2.2 Subject Property Listings

The subject property was identified as Underground Storage Tank (UST), California Emission Inventory Data (EMI), California Statewide Environmental Evaluation and Planning System (SWEEPS) UST, and California Facility Inventory Database (FID) site in the regulatory database report, as discussed below:

- The subject property, identified as Mika Corp at 2030 East 7th Street, is listed as an inactive UST site on the SWEEPS UST database. This listing is also identified on the CA FID UST and NPDES databases. No additional details are provided. Partner requested records from the LAFD for additional information regarding the former UST onsite. As of this writing, Partner has not received a response from the LAFD; however, according to prior report information discussed in section 5.2.6, no records were available for the subject property addresses as of 2014. Additionally, no records regarding a UST at this address were identified on the RWQCB or DTSC online databases. In 2014, a geophysical survey was conducted on this parcel which identified one potential UST (further discussed below); however, no potential USTs or former tank cavities were detected in the area of the historical 2030 East 7th Street address. Based on the lack of USTs or potential historical USTs identified during the geophysical survey, this listing is not expected to represent a significant environmental concern.

- The subject property, identified as Fred Kort at 2040 and 2060 East 7th Street, is listed as an active UST site in the regulatory database which has two tanks onsite. No additional details are provided. These addresses are identified as permitted UST sites on the RWQCB Geotracker database; however, no details are provided. Partner requested records from the LAFD for additional information regarding the former UST onsite. As of this writing Partner has not received a response from the LAFD; however, according to prior environmental assessments, a request made in 2014 indicated no records are on file for these addresses. Additionally, no records regarding a UST at this address were identified on the DTSC online database. In 2014 a geophysical survey was conducted on these parcels which identified a potential UST adjacent to the west of the five-story building; however, the anomaly was uncovered as part of the current parking garage developments and it was determined to be a concrete vault that formerly contained a tank and was removed as part of redevelopment activities. As part of the 2015 subsurface investigation one soil sample was collected in the vicinity of the former vault and did not identify any traces of petroleum constituents in the soils. No additional anomalies were detected during the 2014 geophysical investigation. Based on the removal of the former vault system during redevelopment activities and sampling information from the 2015 subsurface investigation the former UST system would not represent a significant environmental concern.

- The subject property, identified as Green Acres, Incorporated at 2040 East 7th Place, is listed as an inactive underground storage tank (UST) site in the regulatory database. No additional details are provided on the database. According to Sanborn maps reviewed, a gasoline tank is depicted on the northeast portion of this parcel from at least 1950 until 1970. No details are provided on the Sanborn Maps and it is unknown if the tank was above or below ground. Partner requested records from the Los Angeles Fire Department (LAFD) for additional information regarding former USTs onsite; however, as of this writing, Partner has not received a response from the LAFD. Additionally, no records regarding a UST at this address were identified on the Regional Water Quality Control Board (RWQCB) or Department of Toxic Substances Control (DTSC) online databases. According to a prior subsurface investigation report discussed in Section 5.2.6, six soil

samples were collected in November 2015 that consisted of collecting three soil samples located near the former suspected gasoline UST present on Sanborn Maps on the western 2040 East 7th Place parking lot. The samples were analyzed for total petroleum hydrocarbons (TPH), volatile organic compounds (VOCs), and metals. No impacts were identified. Based on the lack of known or suspected releases from the former identified tank system on the Sanborn Maps, demolition of the former structure associated with the former tank operations and November 2015 subsurface investigation which identified no impacts the former tank system is not considered a significant environmental concern for the subject property.

4.2.3 Adjacent Property Listings

The adjacent property to the northwest identified as an UST, SWEEPS UST, CA FID UST, EDR Historical Auto Station site; the adjacent property to the east was identified as a RESPONSE, Envirostor, Hist Cal-Sites and CA Bond Exp. Plan and EDR Historical Auto Station site; the adjacent property to the northeast was identified as a SEMS-ARCHIVE, Envirostor, Hist Cortese site; the adjacent property to the southwest was identified as a UST, SWEEPS UST and CA FID UST site; the adjacent property to the west was identified as an UST, SWEEPS UST, CA FID UST site in the regulatory database report, as discussed below:

- Dean and Associates at 700 South Santa Fe Street, located adjacent to the east (hydrologically down to cross-gradient) of the subject property across South Santa Fe Street, is listed as an EnviroStor, Response, Hist CalSite and CA Bond Exp Plan site. According to the database, this site historically operated as a scrap metal recycling facility. Polychlorinated biphenyls (PCBs) were identified in soil at the site, and in 1987 5,000-gallons of liquid was treated and discharged and 570 cubic yards of impacted solids were removed. This site is identified as being remediated satisfactorily under the oversight of the DTSC. Based on the regulatory status, medium impacted, and relative distance across South Santa Fe Street, this site is not expected to represent a significant environmental concern, and it is unlikely that a regulatory file review for this site would alter the findings of this assessment.
- Riggs EW at 2100 East 7th Street, historically located adjacent to the east (hydrologically down to cross-gradient) of the subject property across South Santa Fe Street, is listed as a gasoline station in 1929. No additional information is provided and records regarding USTs at the site are identified in the regulatory database; however, this site operated prior to a time of regulatory oversight. Based on the relative distance across South Santa Fe Street and inferred direction of groundwater flow, this site is not expected to represent a significant environmental concern, and it is unlikely that a regulatory file review for this site would alter the findings of this assessment.
- Baily and Schmitz Company at 2101 East 7th Street, located adjacent to the northeast (hydrologically cross-gradient) of the subject property across South Santa Fe Street, is listed as an EnviroStor, Historical Cortese, and SEMS-Archive site. According to the database, this site historically operated as an auto repair facility. A preliminary assessment was conducted and in 1989 the report was submitted to the EPA with no further action under CERCLA 2. The current status is listed as No Further Action. Based on the regulatory status, inferred direction of

groundwater flow, and relative distance across South Santa Fe Street, this site is not expected to represent a significant environmental concern, and it is unlikely that a regulatory file review for this site would alter the findings of this assessment.

- West Central Produce, Inc. at 2045 Violet Street, located adjacent to the southwest (hydrologically cross-gradient) of the subject property, is listed as an active UST site on the UST, SWEEPS UST and CA FID UST databases. No additional details are provided. Based on the regulatory status and inferred direction of groundwater flow, this site is not expected to represent a significant environmental concern, and it is unlikely that a regulatory file review for this site would alter the findings of this assessment.
- Friction Materials Co of LA at 2029 East 7th Street, located adjacent to the northwest (hydrologically up-gradient) of the subject property across East 7th Street, is listed as a gasoline station in 1933 and 1942. This site is listed as an active UST site for a diesel tank. Based on the regulatory status and relative distance across South Santa Fe Street, this site is not expected to represent a significant environmental concern, and it is unlikely that a regulatory file review for this site would alter the findings of this assessment.
- Better Life Organics (2020 East 7th Place) is located adjacent to the west of the subject property on the UST database. No detail information was provided in the database report. In addition, this site is not listed on any regulatory release database that would detail potential impacts the subject property. Based on the lack of a documented release, this site is not expected to represent a significant environmental concern.
- Diesel 2000 Corporation (726 S Santa Fe Avenue) is located adjacent to the east of the subject property. According to the database report, this site was formerly occupied by an automotive repair facility from 2008 to 2014. No additional information was provided in the database report. In addition, this site is not listed on any regulatory release database that would detail potential impacts the subject property. Based on the lack of a documented release, this site is not expected to represent a significant environmental concern.
- Apex Automotive (2029 E 7th Street) is located adjacent to the north of the subject property. According to the database report, this site was formerly occupied by a gasoline service station from 1933 to 1988. No additional information was provided in the database report. In addition, this site is not listed on any regulatory release database that would detail potential impacts the subject property. Based on the lack of a documented release, this site is not expected to represent a significant environmental concern.

Based on the findings, vapor migration is not expected to represent a significant environmental concern at this time.

4.2.4 Sites of Concern Listings

No sites of concern are identified in the regulatory database report.

4.2.5 Orphan Listings

No orphan listings of concern are identified in the regulatory database report

A copy of the regulatory database report is included in Appendix C of this report.

5.0 USER PROVIDED INFORMATION AND INTERVIEWS

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the *Brownfields Amendments*), the *User* must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. The *User* should provide the following information to the *environmental professional*. Failure to provide this information could result in a determination that *all appropriate inquiries* is not complete. The *User* is asked to provide information or knowledge of the following:

- Review Title and Judicial Records for Environmental Liens and AULs
- Specialized Knowledge or Experience of the User
- Actual Knowledge of the User
- Reason for Significantly Lower Purchase Price
- Commonly Known or *Reasonably Ascertainable* information
- Degree of Obviousness
- Reason for Preparation of this Phase I ESA

Fulfillment of these user responsibilities is key to qualification for the identified defenses to CERCLA liability. Partner requested our Client to provide information to satisfy User Responsibilities as identified in Section 6 of the ASTM guidance.

Pursuant to ASTM E1527-13, Partner requested the following site information from HSBC Bank USA, N.A. (User of this report).

User Responsibilities				
Item	**Provided By User**	**Not Provided By User**	**Discussed Below**	**Does Not Apply**
Environmental Pre-Survey Questionnaire			**X**	
Title Records, Environmental Liens, and AULs			**X**	
Specialized Knowledge			**X**	
Actual Knowledge			**X**	
Valuation Reduction for Environmental Issues			**X**	
Identification of Key Site Manager	**Section 5.1.3**			
Reason for Performing Phase I ESA	**Section 1.1**			
Prior Environmental Reports		**X**		
Other		**X**		

5.1 Interviews

5.1.1 Interview with Owner

The owner of the subject property was not available to be interviewed at the time of the assessment.

5.1.2 Interview with Report User

Please refer to Section 5.2 below for information requested from the Report User. The information requested was not received prior to the issuance of this report. Because the Report User (Client) is a lender, it is understood that the Report User would not have knowledge of the property that would significantly impact our ability to satisfy the objectives of this assessment. The lack of this information is not considered to represent a significant data gap.

5.1.3 Interview with Key Site Manager

Mr. Robert Frank, key site manager, indicated that he had no information pertaining to any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the subject property; any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the subject property; or any notices from a governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

5.1.4 Interviews with Past Owners, Operators and Occupants

Interviews with past owners, operators and occupants were not conducted since information regarding the potential for contamination at the subject property was obtained from other sources.

5.1.5 Interview with Others

As the subject property is not an abandoned property as defined in ASTM 1527-13, interview with others were not performed.

5.2 User Provided Information

5.2.1 Title Records, Environmental Liens, and AULs

Partner was not provided with title records or environmental lien and AUL information for review as part of this assessment.

5.2.2 Specialized Knowledge

No specialized knowledge of environmental conditions associated with the subject property was provided by the User at the time of the assessment.

5.2.3 Actual Knowledge of the User

No actual knowledge of any environmental lien or AULs encumbering the subject property or in connection with the subject property was provided by the User at the time of the assessment.

5.2.4 Valuation Reduction for Environmental Issues

No knowledge of valuation reductions associated with the subject property was provided by the User at the time of the assessment.

5.2.5 Commonly Known or Reasonably Ascertainable Information

The User did not provide information that is commonly known or *reasonably ascertainable* within the local community about the subject property at the time of the assessment.

5.2.6 Previous Reports and Other Provided Documentation

The following information was provided to Partner for review during the course of this assessment:

Phase I Environmental Site Assessment, AMEC Environment & Infrastructure, Inc. (April 16, 2014)

This assessment was conducted by AMEC Environment & Infrastructure, Inc. (AMEC) on behalf of Shorenstein Realty Services, LP. At the time of this assessment, the subject property was developed with the current improvements which included four buildings and associated parking areas addressed as 2030, 2035 and 2040 East 7th Place, 2030 and 2060 East 7th Street, 821 South Santa Fe Avenue, and 2053 Violet Place. According to historical sources, the subject property was developed residentially as early as 1900 until the 1920s when the majority of the current improvements were developed. The original buildings at the 2035 and 2040 East 7th Place addresses were demolished in the 1990s/2000s and a new building was constructed at 2035 East 7th Place circa 2005. The 2040 East 7th Place parcel has remained a parking lot since the prior building was demolished. The site use has been primarily been light industrial and included Ford Motor Company, chemical warehousing, auto repair, a metal plating and machine shop, and a paper stock bindery and offset printing shop.

AMEC identified a gasoline tank in the 1950 Sanborn map on the 2040 East 7th Place parcel. It is unknown if the UST has been removed; however, the building on the parcel was demolished between 2006 and 2009. The subject property was also identified as a UST site in the regulatory database under the addresses 2030 and 2060 East 7th Street and 2040 East 7th Place. No details regarding the USTs were provided and it is unknown if any of the USTs have been removed. According to the LAFD, UST plan checks were on file for 2030 and 2060 East 7th Street; however, no files regarding UST removal or closeout were in their records.

A prior Phase I conducted in 2013 by Environ was reviewed as part of this assessment. Environ did not identify any RECs; however, Environ concluded that significant data gaps prevented them from identifying potential RECs. Environ identified the historical industrial use and the former USTs as potential concerns.

In January 2014 six soil borings were drilled to assess geotechnical attributes at the subject property. Borings were advanced to depths between 6.5 and 50 feet bgs. Two samples were additionally analyzed for total petroleum hydrocarbons (TPHs), metals, and volatile organic compounds (VOCs). No VOCs or TPH were detected and metals were within background levels. Additionally, in January 2014 a geophysical survey was conducted on the subject property to identify potential USTs onsite. The

investigation was conducted in the basement of the 2060 building as well as the parking lot adjacent to the west of the building. The investigation identified a likely UST to the west of the building. Two soil borings were advanced to 20 feet bgs on either end of the presumed UST. Four soil samples were collected and analyzed for TPH-diesel and UST metals. No TPH-diesel was detected and metals were within background levels.

The anomaly detected in the parking lot to the west of the 2060 East 7th Place building that was suspected to be a 1,000 to 2,000-gallon UST. This UST was presumed to be the tank associated with the UST listing for the 2060 East 7th Street address in the regulatory database. The UST is suspected to be a heating oil tank associated with a boiler in the building as suggested by piping observed. A subsurface investigation conducted in the vicinity of the anomaly did not indicate the presence of petroleum hydrocarbon in the soil samples collected. Based on the analytical results, AMEC concluded a release from this tank is unlikely and no further investigation of this tank is warranted.

The original buildings at 2030 East 7th Street and 2040 East 7th Place addresses were demolished in the 1990s/2000s. AMEC concluded that any USTs associated with these addresses would have been encountered and removed during demolition and/or construction activities of the current improvements. AMEC did not recommend additional investigation activities at the time of this assessment; however, they did recommend that UST plan check files be reviewed for the properties at 2030 and 2060 East 7th Street be reviewed at the LAFD to determine if there is any relevant information regarding the suspect USTs identified at these addresses.

This assessment also reviewed an ACM and LBP survey from January 2014. According to the survey, ACMs and LBP were identified in all buildings except the building located at 2030 and 2035 East 7th Street.

Phase II Investigation, AMEC Foster Wheeler Environment & Infrastructure (AMEC) (November 12, 2015)

This assessment was conducted by AMEC Foster Wheeler & Infrastructure, Inc. (AMEC) on behalf of Shorenstein Realty Services, LP. The report was completed to detail the results of the soil investigation performed at the Former Ford Property located at 2030, 2035 and 2060 East 7th Street, 2053 Violet Street and 2040 East 7th Place in Los Angeles, California (Site). This investigation was conducted at the direction of Shorenstein Realty Services, L.P. (Shorenstein) based on the request of US Bank due to their concern with the historical light industrial use of the Site and potential releases of chemicals that would have been associated with this use.

AMEC discusses the prior soil sampling and geotechnical investigations performed in January 2014 that consisted of six soil borings and a geophysical investigation of the five-story building basement and parking area west of the five story building.

The scope of work for the 2015 assessment included:

- Installation of six soil borings, collection of soil samples from each of the borings, and analysis of diesel, motor oil, gasoline, CAM 17 metals, VOCs and SVOCs.

- Evaluating the results of the investigation activities and preparing this report.

Three borings were installed in the vicinity of the proposed garage area and three soil borings will be installed on the 2040 East 7th Place parcel where the historic Sanborn Insurance Maps identified a suspect UST. The borings were advanced to fifteen feet below ground surface (bgs). No groundwater was encountered in any borings. With the exception of selected metals (detected within normal background ranges) none of the requested analytes were present above laboratory detection limits.

AMEC concluded that based on the results of this investigation and sampling conducted during the previous (2014) geotechnical and UST investigations, no evidence of releases have been identified. The previous UST identified as a result of the 2014 geophysical investigation was determined to be a cement vault that formerly contained a tank and was removed as part of redevelopment activities and is no longer considered an environmental concern. AMEC concluded that based on the findings there is no evidence of past releases at the Site and further investigation is not warranted.

Copies of pertinent pages reviewed are included in Appendix B of this report.

6.0 SITE RECONNAISSANCE

The weather at the time of the site visit was sunny and clear. Refer to Section 1.5 for limitations encountered during the field reconnaissance and Sections 2.1 and 2.2 for subject property operations. The Property Manager was identified as Robert Frank. Mr. Robert Frank accompanied Partner during field reconnaissance activities and provided information pertaining to the current operations and maintenance of the subject property.

All areas of the subject property were accessible at the time of the site inspection. There were no physical or visual obstructions of the subject property.

The building is currently vacant and will be occupied by Warner Music Group for commercial use. No potential environmental concerns were identified during the onsite reconnaissance.

6.1 General Site Characteristics

6.1.1 Solid Waste Disposal

Solid waste generated at the subject property is disposed of in commercial dumpsters located on the subject property. An independent solid waste disposal contractor removes solid waste from the subject property. According to property personnel, only household trash is collected in the on-site solid waste dumpsters.

6.1.2 Sewage Discharge and Disposal

Sanitary discharges on the subject property are directed into the municipal sanitary sewer system. The City of Los Angeles services the subject property vicinity. No wastewater treatment facilities or septic systems are located on the subject property.

6.1.3 Surface Water Drainage

Storm water is removed from the subject property primarily by sheet flow action across the paved surfaces towards storm water drains located throughout the subject property and in the public right of way.

According to review of the United States Fish & Wildlife Service National Wetland Inventory Mapper (online), no wetlands are shown on the subject property or on the adjacent properties. A comprehensive wetlands survey would be required in order to formally determine actual wetlands on the subject property. A copy of the reviewed wetlands map is included in Appendix B.

No drywells were identified on the subject property.

6.1.4 Source of Heating and Cooling

Heating and cooling systems equipment are fueled by electricity and natural gas provided by Los Angeles Department of Water and Power and the Gas Company.

6.1.5 Wells and Cisterns

No aboveground evidence of wells or cisterns was observed during the site reconnaissance.

6.1.6 Wastewater

Domestic wastewater generated at the subject property is disposed by means of the sanitary sewer system. No industrial process is currently performed at the subject property.

6.1.7 Septic Systems

No septic systems were observed or reported on the subject property.

6.1.8 Additional Site Observations

No additional general site characteristics were observed.

6.2 Potential Environmental Hazards

6.2.1 Hazardous Materials and Petroleum Products Used or Stored at the Site

Partner identified hazardous materials and/or hazardous wastes to be used, stored, or generated on the subject property as noted in the following table:

Hazardous Substances/Wastes Noted Onsite

Substance	Container Size	Location	Nature of Use	Disposal Method
Diesel Fuel	500-gallon belly tank	Emergency Generator	Generator Operation Activities	Not Applicable

The materials were found to be properly labeled and stored at the time of the assessment with no signs of leaks, stains, or spills. Secondary containment is provided and appears to be in accordance with acceptable containment methods.

6.2.2 Aboveground & Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)

No evidence of current or former USTs was observed during the site reconnaissance.

Partner observed one 500-gallon belly tank for the storage of diesel fuel on the subject property. The AST is located within the emergency generator. According to Mr. Robert Frank, the AST was installed in 2016 and is equipped with secondary containment. No staining, leaks or spills were noted in the vicinity of the AST.

6.2.3 Evidence of Releases

No spills, stains or other indications that a surficial release has occurred at the subject property were observed.

6.2.4 Polychlorinated Biphenyls (PCBs)

Older transformers and other electrical equipment could contain polychlorinated biphenyls (PCBs) at a level that subjects them to regulation by the U.S. EPA. PCBs in electrical equipment are controlled by United States Environmental Protection Agency regulations 40 CFR, Part 761. Under the regulations, there are three categories into which electrical equipment can be classified: 1) Less than 50 parts per million (ppm) of PCBs – "*Non-PCB;*" 2) 50 ppm-500 ppm – "*PCB-Contaminated;*" and, 3) Greater than 500 ppm – "*PCB-Containing.*" The manufacture, process, or distribution in commerce or use of any PCB in any manner other than in a totally enclosed manner was prohibited after January 1, 1977.

The on-site reconnaissance addressed indoor and outdoor transformers that may contain PCBs. Two pad-mounted transformers were observed on the subject property. The transformers are not labeled indicating PCB content. No staining or leakage was observed in the vicinity of the transformers. Partner contacted a customer service representative of Los Angeles Department of Water and Power (LADWP), who confirmed that LADWP maintains ownership and operational responsibility for the transformers and that the units do not contain PCBs. Based on the good condition of the equipment, the transformers are not expected to represent a significant environmental concern.

The subject property building is equipped with three hydraulic elevators (two for parking structure and one for the five-story building). According to Mr. Frank the elevator systems are either new or have been replaced in 2016. The hydraulic fluid contained within elevator systems can potentially contain toxic PCBs. Based on the age of the elevators, it is unlikely that the hydraulic fluid within the equipment contains PCBs. The elevator is reportedly maintained by Otis Elevator Company. Based on the regular maintenance of the equipment, the elevator is not expected to represent a significant environmental concern.

The subject property building is also equipped with three traction freight elevators that runs from the basement to the 5th floor of building. Geared traction elevators are driven by alternating current (AC) or direct current (DC) electric motors. Based on the absence of hydraulic fluid used in association with the mechanical equipment of the elevator, the presence of these elevators are not expected to represent a significant environmental concern.

Additionally, no other potential PCB-containing equipment (interior transformers, oil-filled switches, hoists, lifts, dock levelers, balers, etc.) was observed on the subject property during Partner's reconnaissance.

6.2.5 Strong, Pungent or Noxious Odors

No strong, pungent or noxious odors were evident during the site reconnaissance.

6.2.6 Pools of Liquid

No pools of liquid were observed on the subject property.

6.2.7 Drains, Sumps and Clarifiers

No drains, sumps or clarifiers, other than those associated with storm water removal, were observed on the subject property.

6.2.8 Pits, Ponds and Lagoons

No pits, ponds or lagoons were observed on the subject property.

6.2.9 Stressed Vegetation

No stressed vegetation was observed on the subject property.

6.2.10 Additional Potential Environmental Hazards

No additional environmental hazards, including landfill activities or radiological hazards, were observed.

6.3 Non-ASTM Services

6.3.1 Asbestos-Containing Materials (ACMs)

Asbestos is the name given to a number of naturally occurring, fibrous silicate minerals mined for their useful properties such as thermal insulation, chemical and thermal stability, and high tensile strength. Asbestos is commonly used as an acoustic insulator, thermal insulation, fire proofing and in other building materials. Exposure to airborne friable asbestos may result in a potential health risk because persons breathing the air may breathe in asbestos fibers. Continued exposure can increase the amount of fibers that remain in the lung. Fibers embedded in lung tissue over time may cause serious lung diseases including: asbestosis, lung cancer, or mesothelioma.

The Occupational Safety and Health Administration (OSHA) regulation 29 CFR 1926.1101 requires certain construction materials to be *presumed* to contain asbestos, for purposes of this regulation. All thermal system insulation (TSI), surfacing material, and asphalt/vinyl flooring that are present in a building constructed prior to 1980 and have not been appropriately tested are "presumed asbestos-containing material" (PACM).

The subject property buildings were originally constructed in 1913, 1923, 1988 and 2016. Due to the age of the subject property building, there is a potential that asbestos-containing materials (ACMs) are present. However, according to Mr. Robert Frank, Chief Engineer, the building was completely renovated in 2016. The renovation included removal of all interior/exterior finishes and building systems. During Partner's site reconnaissance, the building materials were observed to be new and in good condition. Based on the extensive renovation in 2016, there is a low potential that significant amount of friable ACM is remaining at the subject property and no further actions are warranted at this time.

6.3.2 Lead-Based Paint (LBP)

Lead is a highly toxic metal that affects virtually every system of the body. LBP is defined as any paint, varnish, stain, or other applied coating that has 1 mg/cm^2 (or 5,000 ug/g or 0.5% by weight) or more of lead. Congress passed the Residential Lead-Based Paint Hazard Reduction Act of 1992, also known as "Title X", to protect families from exposure to lead from paint, dust, and soil. Under Section 1017 of Title X, intact LBP on most walls and ceilings is not considered a "hazard," although the condition of the paint should be monitored and maintained to ensure that it does not become deteriorated. Further, Section 1018 of this law directed the Housing and Urban Development (HUD) and the US EPA to require the disclosure of known information on LBP and LBP hazards before the sale or lease of most housing built before 1978.

Based on the age of the 2060 East 7th Street, 777 Santa Fe Avenue and 821 Santa Fe Avenue subject property buildings (pre-1978), there is a potential that LBP is present. A previous LBP survey, confirming the presence of LBP at the subject property, was conducted in 2014, as discussed in Section 5.2.6. However, according to Mr. Robert Frank, Chief Engineer, the building was completely renovated in 2016. The renovation included removal of all interior/exterior finishes and building systems. Interior and exterior painted surfaces were observed in good condition and therefore not expected to represent a "hazard," although the condition of the paint should be monitored and maintained to ensure that it does not become deteriorated.

6.3.3 Radon

Radon is a colorless, odorless, naturally occurring, radioactive, inert, gaseous element formed by radioactive decay of radium (Ra) atoms. The US EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three Radon Zones; Zone 1 being those areas with the average predicted indoor radon concentration in residential dwellings exceeding the US EPA Action Limit of 4.0 picoCuries per Liter (pCi/L). It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the US EPA recommends site-specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Radon sampling was not conducted as part of this assessment. Review of the US EPA Map of Radon Zones places the subject property in Zone 2, where average predicted radon levels are between 2.0 and 4.0 pCi/L, where average predicted radon levels are less than 2.0 pCi/L.

6.3.4 Lead in Drinking Water

According to available information, a public water system operated by the Los Angeles Department of Water and Power (LADWP) serves the subject property vicinity. The sources of public water for the City of Los Angeles are surface waters from the State Water Project (including 22 dams and reservoirs), Colorado River, Owens River, Mono Lake Basin, and approximately 30-percent comes from groundwater sources. According to the City of Los Angeles and the 2015 Annual Water Quality Report, water supplied to the subject property is in compliance with all State and Federal regulations pertaining to drinking water standards, including lead and copper. Water sampling was not conducted to verify water quality.

6.3.5 Mold

Molds are microscopic organisms found virtually everywhere, indoors and outdoors. Mold will grow and multiply under the right conditions, needing only sufficient moisture (e.g.in the form of very high humidity, condensation, or water from a leaking pipe, etc.) and organic material (e.g., ceiling tile, drywall, paper, or natural fiber carpet padding). Mold growths often appear as discoloration, staining, or fuzzy growth on building materials or furnishings and are varied colors of white, gray, brow, black, yellow, and green. In large quantities, molds can cause allergic symptoms when inhaled or through the toxins the molds emit.

Partner observed accessible, interior areas for the subject property building for significant evidence of mold growth; however, this ESA should not be used as a mold survey or inspection. Additionally, this inspection was not designed to assess all areas of potential mold growth that may be affected by mold growth on the subject property. Rather, it is intended to give the client an indication as to whether or not conspicuous (based on observed areas) mold growth is present at the subject property. This evaluation did not include a review of pipe chases, mechanical systems, or areas behind enclosed walls and ceilings.

No obvious indications of water damage or mold growth were observed during Partner's visual inspection.

6.4 Adjacent Property Reconnaissance

The adjacent property reconnaissance consisted of observing the adjacent properties from the subject property premises.

6.4.1 Polychlorinated Biphenyls (PCBs)

Pole-mounted transformers were observed on the adjacent properties. No staining or leakage was observed in the vicinity of the transformers. Based on these observations, the presence of adjacent transformers is not expected to represent a significant environmental concern.

7.0 FINDINGS AND CONCLUSIONS

A *recognized environmental condition (REC)* refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment.

- According to historical sources, the subject property has been occupied by various industrial tenants since as early as 1924 including Ford Motor Company (1924-1929), Printers (1933-1954), Mission Plating and Manufacturing (1940s), a plating tenant (1950), Chemical Company/Warehouse (1951-1958), Auto Repair (1953-1959), B&M Metal Products/Central Sheet Metal Works (1958), Trucking/Freight Tenants (1958-1971), and Associated Gear and Machine Company (1962-1985). These type of operations typically use hazardous materials such as petroleum products, solvents, and metals. None of these tenants were identified in the regulatory database report or regulatory agencies for the use of hazardous materials onsite; however, these tenants operated prior to a time of regulatory oversight. There is potential that oils or solvents present in historical operations could impact the subsurface. According to a prior subsurface investigation reports discussed in Section 5.2.6, six soil samples were collected in 2014 with two collected in the basement of the five-story building and four soil samples collected on the western area where the former 2030 and 2035 East 7th Street parcel was located (present day parking garage location). An additional subsurface investigation was also conducted in November 2015 that consisted of collecting six additional soil samples with three located near a former suspected gasoline UST present on Sanborn Maps on the western 2040 East 7th Place parking lot (See further discussion in environmental issues section below) and three additional in the base of the current parking garage structure on the northwestern side of the subject property. The samples were analyzed for total petroleum hydrocarbons (TPH), volatile organic compounds (VOCs), and metals. No impacts were identified. No groundwater and or soil-gas sampling was conducted as part of the limited 2014 or 2015 sampling events. No subsurface information was identified for the 777 South Santa Fe building or the 821 South Santa Fe building. Due to the limited nature of the subsurface assessments, they do not adequately assess the property potential for impacts from the historical industrial use. Based on the duration of use and likely storage and generation of large quantities of hazardous materials, the historical use of the subject property represents a recognized environmental condition and vapor encroachment cannot be ruled out at this time.

A controlled recognized environmental condition (CREC) refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. The following was identified during the course of this assessment:

- Partner did not identify any controlled recognized environmental conditions during the course of this assessment.

A historical recognized environmental condition (HREC) refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. The following was identified during the course of this assessment:

- Partner did not identify any historical recognized environmental conditions during the course of this assessment.

An environmental issue refers to environmental concerns identified by Partner, which do not qualify as RECs; however, warrant further discussion. The following was identified during the course of this assessment:

- The subject property, identified as Green Acres, Incorporated at 2040 East 7th Place, is listed as an inactive underground storage tank (UST) site in the regulatory database. No additional details are provided on the database. According to Sanborn maps reviewed, a gasoline tank is depicted on the northeast portion of this parcel from at least 1950 until 1970. No details are provided on the Sanborn Maps and it is unknown if the tank was above or below ground. Partner requested records from the Los Angeles Fire Department (LAFD) for additional information regarding former USTs onsite; however, as of this writing, Partner has not received a response from the LAFD. Additionally, no records regarding a UST at this address were identified on the Regional Water Quality Control Board (RWQCB) or Department of Toxic Substances Control (DTSC) online databases. According to a prior subsurface investigation report discussed in Section 5.2.6, six soil samples were collected in November 2015 that consisted of collecting three soil samples located near the former suspected gasoline UST present on Sanborn Maps on the western 2040 East 7th Place parking lot. The samples were analyzed for total petroleum hydrocarbons (TPH), volatile organic compounds (VOCs), and metals. No impacts were identified. Based on the lack of known or suspected releases from the former identified tank system on the Sanborn Maps, demolition of the former structure associated with the former tank operations and November 2015 subsurface investigation which identified no impacts the former tank system is not considered a significant environmental concern for the subject property.

- The subject property, identified as Mika Corp at 2030 East 7th Street, is listed as an inactive UST site in the regulatory database. No additional details are provided on the database. Partner requested records from the LAFD for additional information regarding the former UST onsite. As of this writing Partner has not received a response from the LAFD. Additionally, no records regarding a UST at this address were identified on the RWQCB or DTSC online databases. In 2014, a geophysical survey was conducted on this parcel which identified one potential UST (further discussed below); however, no potential USTs or former tank cavities were detected in the area of the historical 2030 East 7th Street address. Based on the lack of USTs or potential historical USTs identified during the geophysical survey, this listing is not expected to represent a significant environmental concern.

- The subject property, identified as Fred Kort at 2040 and 2060 East 7th Street, is listed as an active UST site in the regulatory database which has two tanks onsite. No additional details are provided. These addresses are identified as permitted UST sites on the RWQCB Geotracker database; however, no details are provided. Partner requested records from the LAFD for additional information regarding the former UST onsite. As of this writing Partner has not received a response from the LAFD; however, according to prior environmental assessments, a request made in 2014 indicated no records are on file for these addresses. Additionally, no records regarding a UST at this address were identified on the DTSC online database. In 2014 a geophysical survey was conducted on these parcels which identified a potential UST adjacent to the west of the five-story building; however, the anomaly was uncovered as part of the current parking garage developments and it was determined to be a concrete vault that formerly contained a tank and was removed as part of redevelopment activities. As part of the 2015 subsurface investigation one soil sample was collected in the vicinity of the former vault and did not identify any traces of petroleum constituents in the soils. No additional anomalies were detected during the 2014 geophysical investigation. Based on the removal of the former vault system during redevelopment activities and sampling information from the 2015 subsurface investigation the former UST system would not represent a significant environmental concern.

Conclusions, Opinions and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of 777 and 821 South Santa Fe Avenue; 2060 East 7th Street; 2030 and 2040 East 7th Place in the City of Los Angeles, Los Angeles County, California (the "subject property"). Any exceptions to or deletions from this practice are described in Section 1.5 of this report.

This assessment has revealed evidence of recognized environmental conditions and/or environmental issues in connection with the subject property. Based on the conclusions of this assessment, Partner recommends the following:

- A subsurface investigation should be conducted in order to determine the presence or absence of soil and/or groundwater contamination due to the historical use of the subject property.

8.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

Partner has performed a Phase I Environmental Site Assessment of the property located at 777 and 821 South Santa Fe Avenue; 2060 East 7th Street; 2030 and 2040 East 7th Place in the City of Los Angeles, Los Angeles County, California in general conformance with the scope and limitations of the protocol and the limitations stated earlier in this report. Exceptions to or deletions from this protocol are discussed earlier in this report.

By signing below, Partner declares that, to the best of our professional knowledge and belief, we meet the definition of *Environmental Professional* as defined in §312.10 of 40 CFR §312. Partner has the specific qualifications based on education, training, and experience to assess a *property* of the nature, history, and setting of the subject *property*. Partner has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 332 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Application to Alter, Repair or Demolish

To the Board of Public Works of the City of Los Angeles:

Application is hereby made to the Board of Public Works of the City of Los Angeles, through the office of the Chief Inspector of Buildings, for a building permit in accordance with the description and for the purpose hereinafter set forth. This application is made subject to the following conditions, which are hereby agreed to by the undersigned applicant and which shall be deemed conditions entering into the exercise of the permit:

First: That the permit does not grant any right or privilege to erect any building or other structure therein described, or any portion thereof, upon any street, alley, or other public place or portion thereof.

Second: That the permit does not grant any right or privilege to use any building or other structure therein described, or any portion thereof, for any purpose that is, or may hereafter be, prohibited by ordinance of the City of Los Angeles.

Third: That the granting of the permit does not affect or prejudice any claim of title to, or right of possession in, the property described in such permit.

Application to Alter, Repair or Demolish

To the Board of Public Works of the City of Los Angeles:

Application is hereby made to the Board of Public Works of the City of Los Angeles, through the office of the Chief Inspector of Buildings, for a building permit in accordance with the description and for the purpose hereinafter set forth. This application is made subject to the following conditions, which are hereby agreed to by the undersigned applicant and which shall be deemed conditions entering into the exercise of the permit:

First: That the permit does not grant any right or privilege to erect any building or other structure therein described, or any portion thereof, upon any street, alley, or other public place or portion thereof.

Second: That the permit does not grant any right or privilege to use any building or other structure therein described, or any portion thereof, for any purpose that is, or may hereafter be, prohibited by ordinance of the City of Los Angeles.

Third: That the granting of the permit does not affect or prejudice any claim of title to, or right of possession in, the property described in such permit.

CITY OF LOS ANGELES

DEPARTMENT OF BUILDING AND SAFETY

BUILDING DIVISION

Application for the Erection of a Building

OF

CLASS "D"

To the Board of Building and Safety Commissioners of the City of Los Angeles:

Application is hereby made to the Board of Building and Safety Commissioners of the City of Los Angeles, through the office of the Superintendent of Building, for a building permit in accordance with the description and for the purpose hereinafter set forth. This application is made subject to the following conditions, which are hereby agreed to by the undersigned applicant and which shall be deemed conditions entering into the essence of the permit:

First: That the permit does not grant any right or privilege to erect any building or other structure therein described, or any portion thereof, upon any street, alley or other public place or portion thereof.

Second: That the permit does not grant any right or privilege to use any building or other structure therein described, or any portion thereof, for any purpose that is, or may hereafter be prohibited by ordinance of the City of Los Angeles.

Third: That the granting of the permit does not affect or prejudice any claim of title to, or right of possession in, the property described in such permit.

PERMIT EXPIRATION/REFUNDS: This permit expires two years after the date of the permit issuance. This permit will also expire if no construction work is performed for a continuous period of 180 days (Sec. 98.0602 LAMC). Claims for refund of fees paid must be filed within one year from the date of expiration for permits granted by LADBS (Sec. 22.12 & 22.13 LAMC). The permittee may be entitled to reimbursement of permit fees if the Department fails to conduct an inspection within 60 days of receiving a request for final inspection (HS 17951).

17. LICENSED CONTRACTOR'S DECLARATION

I hereby affirm under penalty of perjury that I am licensed under the provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect. The following applies to B contractors only: I understand the limitations of Section 7057 of the Business and Professional Code related to my ability to take prime contracts or subcontracts involving specialty trades.

License Class: B License No.: 831548 Contractor: A R B STRUCTURES INC

18. WORKERS' COMPENSATION DECLARATION

I hereby affirm, under penalty of perjury, one of the following declarations:

( ) I have and will maintain a certificate of consent to self insure for workers' compensation, as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

(X) I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier: LM INS. CORP. Policy Number: WA5C9O463703

( ) I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers' compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

WARNING: FAILURE TO SECURE WORKERS' COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000), IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

19. ASBESTOS REMOVAL DECLARATION / LEAD HAZARD WARNING

I certify that notification of asbestos removal is either not applicable or has been submitted to the AQMD or EPA as per section 19827.5 of the Health and Safety Code. Information is available at (909) 396-2336 and the notification form at www.aqmd.gov. Lead safe construction practices are required when doing repairs that disturb paint in pre-1978 buildings due to the presence of lead per section 6716 and 6717 of the Labor Code. Information is available at Health Services for LA County at (800) 524-5323 or the State of California at (800) 597-5323 or www.dhs.ca.gov/childlead.

20. CONSTRUCTION LENDING AGENCY DECLARATION

I hereby affirm under penalty of perjury that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civil Code).

Lender's Name (If Any): _____ Lender's Address : _____

21. FINAL DECLARATION

I certify that I have read this application **INCLUDING THE ABOVE DECLARATIONS** and state that the above information **INCLUDING THE ABOVE DECLARATIONS** is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above-mentioned property for inspection purposes. I realize that this permit is an application for inspection and that it does not approve or authorize the work specified herein, and it does not authorize or permit any violation or failure to comply with any applicable law. Furthermore, neither the City of Los Angeles nor any board, department officer, or employee thereof, make any warranty, nor shall be responsible for the performance or results of any work described herein, nor the condition of the property nor the soil upon which such work is performed. I further affirm under penalty of perjury, that the proposed work will not destroy or unreasonably interfere with any access or utility easement belonging to others and located on my property, but in the event such work does destroy or unreasonably interfere with such easement, a substitute easement(s) satisfactory to the holder(s) of the easement will be provided (Sec. 91.0106.4.3.4 LAMC).

By signing below, I certify that:

(1) I accept all the declarations above namely the Licensed Contractor's Declaration, Workers' Compensation Declaration, Asbestos Removal Declaration / Lead Hazard Warning, Construction Lending Agency Declaration, and Final Declaration; and

(2) This permit is being obtained with the consent of the legal owner of the property.

Subject: **Phase II Investigation**
Former Ford Property: 2030, 2035, and 2060 East 7th Street,
2053 Violet Street, and 2040 East 7th Place
Los Angeles, California

Dear Mr. Levy

Amec Foster Wheeler Environment & Infrastructure, Inc. (Amec Foster Wheeler) is pleased to submit this report detailing the results of the soil investigation performed at the Former Ford Property located at 2030, 2035, and 2060 East 7th Street, 2053 Violet Street, and 2040 East 7th Place in Los Angeles, California (Site). This investigation was conducted at the direction of Shorenstein Realty Services, L.P. (Shorenstein) based on the request from U.S. Bank due to their concern with the historical light industrial use of the Site and potential releases of chemicals that would have been associated with this use.

BACKGROUND

Soil Sampling Associated With Geotechnical Investigation

In January 2014, a total of six soil borings were drilled to assess geotechnical soil attributes as part of the proposed redevelopment of the Site. The borings were drilled to depths ranging from 6.5 to 50 feet below existing grade and samples were collected to assess geotechnical physical parameters as well as to characterize soil for the potential presence of chemical compounds from past historical uses. Two samples collected (at depths of 5.0 to 5.5 feet below ground surface [bgs]) from the geotechnical investigation were analyzed for the following compounds:

- Diesel and motor oil range organics
- Gasoline range organics
- CAM 17 metals
- Volatile and semivolatile organic compounds (VOCs and SVOCs)

With the exception of selected metals (detected within normal background ranges), none of the requested analytes were present above laboratory detection limits in the samples analyzed. Results of this investigation were previously provided in *Phase 1 Environmental Site Assessment, Former Ford Property – 2030, 2035, & 2060 East 7th Street, 821 South Santa Fe*

Avenue, 2053 Violet Street, and 2040 East 7th Place Los Angeles, California dated April 16, 2014.

Geophysical Investigation and Boring Investigation Associated With Suspect Underground Storage Tanks

In January 2014, Amec Foster Wheeler contracted with a geophysical contractor (Spectrum Geophysics) to perform geophysical investigations for suspect Underground Storage Tanks (USTs) at the Site. Investigations were performed in two locations at the Site: the building interior basement of the 5-story building (2060 East 7th Street) and the asphalt covered parking area just west of the 5-story building near where piping from a boiler was identified in the building basement. The survey utilize 3D-GPR (ground penetrating radar) and standard utility locating methods for the reinforced concrete interior location within the 5-story building and GPR, high sensitivity metal detection and standard utility locating methods for the exterior asphalted location.

Results of the survey within the 5-story building indentified a variety of underground utilities; however, no anomalies identified were consistent with the presence of a UST. During the investigation in this area, several pipes (associated with a boiler) were determined to be present exiting the building to the west. These pipes exited the building approximately 12 feet north of the roll up door on the west side of the building but the radio-frequency trace of these pipes only extended approximately 5 feet west of the face of the building. Based on the presence of these pipes, a geophysical survey was performed in the adjacent asphalt parking lot.

The survey in the asphalt parking lot identified two anomalies characteristic of USTs approximately 5 feet west of the 5-story building exterior west wall. The anomalies were centered on the location of the pipes found in the basement.

The first anomaly (identified as M-2) was a high amplitude anomaly measuring 25-foot by 9-foot and appeared to be associated with the pipes traced from the basement, and coincided with a GPR anomaly (identified as G-1) but extended further to the north and to the east. A portion of this anomaly could be explained by a vertical steel column and a reinforced parking curb; however, the anomaly also appeared to be associated with buried metal.

The second anomaly (G-1) was identified by GPR and coincided with anomaly M-2 adjacent to the west side of the building. This anomaly was found to be associated with a hyperbolic GPR signature beginning about 5 feet bgs and also appeared to be associated with the pipes traced from the basement of the adjacent building. Because a large portion of this anomaly was coincident with EM-61 data that identified anomaly M-2, it appeared that anomaly G-1 was also caused by a metallic source, and likely the same source as anomaly M-2. Based on its size, signature, and overlap with anomaly M-2, it appeared that anomaly G-1 was associated with a UST that was estimated to be between 1,000 and 2,000 gallons in capacity and is buried no shallower than 5 feet bgs.

On the basis of the presence of anomaly G-1, Amec Foster Wheeler performed a boring investigation on January 31, 2014 to assess if a release occurred from the suspect UST. Under

the supervision of a geologist, a California C-57 licensed driller advance two direct push soil borings to approximately 20 feet bgs on opposite ends of the suspect UST. Soil borings were advanced using a combination of hand augering and a direct-push technology drill rig equipped with a dual-tube sampling system lined with acetate sampling sleeves. Soils were logged by a geologist for lithology and screened for the presence of staining and odors. Discrete soil samples were retained approximately every 2 to 3 feet and screened with a photoionization detector for the presence of VOCs. Two samples from each boring (at depths of 10 and 20 feet bgs) were selected for laboratory analysis and analyzed for diesel range organics (which included heating oil) and UST metals.

With the exception of selected metals (detected within normal background ranges), none of the requested analytes were present above laboratory detection limits in the samples analyzed. Results of this investigation were previously provided in the Phase 1 Environmental Site Assessment cited above. The UST associated with these anomalies was determined to be a cement vault that formerly contained a tank and was removed as part of redevelopment activities and is no longer a considered an environmental concern.

SCOPE OF WORK

Our scope of included the following:

- Installation of six soil borings, collection of soil samples from each of the borings, and analysis of diesel, motor oil, gasoline, CAM 17 metals, VOCs and SVOCs
- Evaluating the results of the investigation activities and preparing this report

INVESTIGATION ACTIVITES

On November 6, 2015 Amec Foster Wheeler oversaw the installation of six direct-push soil borings (SB-1 through SB-6). Three borings were installed in the vicinity of the proposed garage area and three borings will be installed on the 2040 East 7th Place parcel where historic Sanborn insurance maps identified a suspect UST. The locations of the borings are included on Figure 1.

Prior to conducting field activities, Amec Foster Wheeler contacted Underground Service Alert to identify subsurface utilities in the Site vicinity. A soil boring permit was not required by the County of Los Angeles Department of Environmental Health.

The borings were advanced using a Geoprobe 6600 rig operated by Interphase Environmental Inc., Los Angeles, California. The Geoprobe drill rig uses a combination of hydraulic and vibratory down-force to advance a 1.5-inch diameter steel drive rod into the subsurface. Within the drill rod is a 48-inch sampling tube lined with clear butyrate tubing that is used for continuous sample collection. These tubes are then removed and cut to the desired length to provide soil samples for the laboratory analysis. The selected soil sections were capped off with Teflon tape and plastic endcaps and labeled with unique sample designations to record the location and depth sampled.

The borings were advanced to approximately 15 feet bgs and were continuously sampled to allow for detailed characterization of the sub-surface. The borings were screened for the presence of VOCs using a photoionization detector (PID) and select soil sample from each boring were prepared for laboratory analysis based on depth and the geologist's professional judgment. Soil lithology and sample recovery, were recorded in the field logs which are included in Appendix A. All drive rods were washed in an Alconox and water solution between boreholes to avoid any potential cross contamination issues.

With the exception of several readings at 0.1 parts per million (ppm) in boring SB-5, no elevated PID readings were obtained during PID monitoring and no staining or odors were noted in the soil removed from the borings. Therefore, as detailed in Amec Foster Wheeler's October 30, 2015 "Detailed Scope of Work" document, all soil samples (with the exception of the sample from SB-5) from the 5 foot bgs interval were submitted for analysis. The sample collected from a depth of 11 feet bgs was submitted from boring SB-5.

Samples were analyzed by American Scientific Laboratories (ASL), Los Angeles, California for the following analysis:

- Diesel and motor oil range organics by U.S. Environmental Protection Agency (EPA) Test Method 8015B
- Gasoline range organics by EPA Test Method 8260B
- CAM 17 metals by EPA 6010B/7471A
- VOCs and SVOCs by EPA Test Methods 8260B and 8270C respectively

ASL is a state certified hazardous materials testing laboratory for the analyses requested and certified by the California Department of Health Services through the Environmental Laboratory Accreditation Program.

Soil cuttings were placed on and covered with visqueen for temporary storage pending analysis.

RESULTS

Site Lithology

Observations during the drilling indicated that soils encountered during this investigation consisted entirely of silty sands underlain by well- and poorly-graded sands. As discussed above, with the exception of several readings at 0.1 ppm in boring SB-5, elevated PID readings were not detected during PID monitoring of the soils and no staining or odors were noted in the soil. Groundwater was not encountered in any borings. Boring logs are included in Appendix A.

Soil Analysis

Table 1 presents the laboratory analytical results for the soil samples collected from the soil borings. With the exception of selected metals (detected within normal background ranges), none of the requested analytes were present above laboratory detection limits in the samples analyzed. The laboratory analytical report is included as Appendix B.

CONCLUSIONS AND RECOMMENDATIONS

Amec Foster Wheeler completed investigation activities at the Former Ford Property on November 6, 2015. Activities included the installation of six soil borings and the collection of soil samples for laboratory analysis.

The sample analytical results for the boring investigation indicated that with the exception of selected metals which were detected within normal background ranges, none of the requested analytes were present above laboratory detection limits in the samples analyzed. In addition there was no significantly elevated PID reading or evidence of staining or odors during drilling.

Based on the results of this investigation and sampling conducted during the previous geotechnical and UST investigations, no evidence of releases have been identified. The previous UST identified as a result of the geophysical investigation was determined to be a cement vault that formerly contained a tank and was removed as part of redevelopment activities and is no longer a considered an environmental concern.

Based on the results of this investigation and sampling conducted during previous investigations, there is no evidence of past releases at the Site and further investigations are not warranted.

If you have any questions or concerns, please contact Gary Lieberman at (707) 793-3858.

Sincerely yours,
Amec Foster Wheeler Environment & Infrastructure, Inc.

AIR POLLUTION CONTROL DISTRICT
COUNTY OF LOS ANGELES

PERMIT

Appl. No. A-12709
C

A PERMIT IS HEREBY GRANTED TO:

PACIFIC COAST BRUSH COMPANY

A 12250

TO OPERATE

SPRAY BOOTH, BINKS DRY FILTER FLOOR TYPE, MODEL FF-8-7-T, 8'-0" W. X 7'-0" H. X 8'-8" D., WITH A 1 H.P. EXHAUST FAN.

LOCATED AT

2030 EAST 7TH STREET, LOS ANGELES 21, CALIFORNIA
(SUBJECT TO THE FOLLOWING CONDITIONS)

1. OPERATION OF THIS EQUIPMENT MUST BE CONDUCTED IN COMPLIANCE WITH ALL DATA AND SPECIFICATIONS SUBMITTED WITH THE APPLICATION UNDER WHICH THIS PERMIT IS ISSUED UNLESS OTHERWISE NOTED BELOW.
2. THE EQUIPMENT MUST BE PROPERLY MAINTAINED AND KEPT IN GOOD OPERATING CONDITION AT ALL TIMES.

REVOCABLE AND NOT TRANSFERABLE

This permit does not authorize the emission of air contaminants in excess of those allowed by Division 20, Chapter 2, Article 3, of the Health and Safety Code of the State of California or the Rules and Regulations of the Air Pollution Control District. This permit cannot be considered as permission to violate existing laws, ordinances, regulations or statutes of other governmental agencies.

VOID UNLESS VALIDATED ▶

AIR POLLUTION CONTROL OFFICER

BY E. B. Kennedy

B.B. Kennedy, Permit Processing

DATE February 19, 1962

FEB 19 62 $ 4 100

No. A 12250

76P235M—4-60

This initial permit must be renewed ANNUALLY unless the equipment is moved, or changes ownership.
If the billing for the annual renewal fee (Rule 301.f) is not received by the expiration date, contact the District.

Legal Owner or Operator:

ID 181031

SRI TEN SANTA FE, LLC
811 WILSHIRE BLVD, SUITE 1500
LOS ANGELES, CA 90017

Equipment Location: 777 SANTA FE AVE, LOS ANGELES, CA 90021

Equipment Description :

Internal Combustion Engine, MTU Detroit Diesel Model 12V1600G80S, Diesel-fueled, 12 Cylinders, Four-Cycle, Turbocharged and Aftercooled, Rated at 896 BHP, Equipped with a Johnson Matthey Diesel Particulate Filter Model SDPF-4-H-BITO-CS-12-LP and CRTdm Diagnostic Module and Data Logging and Alarm System, Driving an Emergency Electrical Generator.

Conditions :

1. Operation of this equipment shall be conducted in accordance with all data and specifications submitted with the application under which this permit is issued unless otherwise noted below.

2. This equipment shall be properly maintained and kept in good operating condition at all times.

3. An operational non-resettable totalizing timer shall be installed and maintained to indicate the engine elapsed operating time.

4. This engine shall not be operated more than 200 hours in any one year, which includes no more than 50 hours in any one year for maintenance and testing purposes and 4.2 hours in any one month for maintenance and testing purposes.

5. Operating beyond the 50 hours per year allotted for maintenance and testing purposes shall be allowed only in the event of a loss of grid power or up to 30 minutes prior to a rotating outage, provided that the utility distribution company has ordered rotating outages in the control area where the engine is located or has indicated that it expects to issue such an order at a certain time, and the engine is located in a utility service block that is subject to the rotating outage. Engine operation shall be terminated immediately after the utility distribution company advises that a rotating outage is no longer imminent or in effect.

6. This engine shall not be used as part of a demand response program using interruptible service contract in which a facility receives a payment or reduced rates in return for reducing its electric load on the grid when requested to do so by the utility or the grid operator.

7. The operator shall keep a log of engine operations documenting the total time the engine is operated each month and specific reason for operation as:

   A. Emergency use.

FILE COPY

B. Maintenance and testing.
C. Other (describe the reason for operating).

In addition, each time the engine is manually started, the log shall include the date of operation, the specific reason for operation, and the totalizing hour meter reading (in hours and tenths of hours) at the beginning and end of operation.

8. On or before January 15th of each year, the operator shall record in the engine operating log the following:

A. The total hours of operation for the previous calendar year, and
B. The total hours of engine operation for maintenance and testing for the previous calendar year.

Engine operating log shall be retained on site for a minimum of three calendar years and shall be made available to the Executive Officer or representative upon request.

9. This engine shall comply with all applicable requirements of Rule 431.2, Rule 1470 and Rule 1472.

10. This engine shall comply with the following emission limits:

NMHC + NOx:	4.8 g/bhp-hr
CO:	2.6 g/bhp-hr
PM:	0.15 g/bhp-hr

11. Sulfur content of diesel fuel supplied to the engine shall not exceed 15 ppm by weight.

12. This engine shall not be operated unless its exhaust is vented to the diesel particulate filter system which is in full operation and which is in good operating condition at all times.

13. This engine shall not be operated unless it is equipped with an operational exhaust temperature and engine backpressure monitoring, data logging, and alarm system. The operator shall regenerate the filter as recommended by the manufacturer to ensure proper operation and to prevent the maximum backpressure of the engine from being exceeded.

14. After every six months normal engine operation, the operator shall inspect the integrity of the filter and determine if the filter needs to be cleaned.

15. Removal of the diesel particulate filter media for cleaning may only occur under the following conditions:

A. The internal combustion engine shall not be operated for maintenance and testing or any other non-emergency use while the diesel particulate filter media is removed; and
B. The diesel particulate filter media shall be returned and re-installed within 10 working days from the date of removal; and
C. The owner or operator shall maintain records indicating the date(s) the diesel particulate filter media was removed for cleaning and the date(s) the filter media was re-installed. Records shall be retained for a minimum period of three years.

FILE COPY

16. The operator shall keep records of particulate filter inspections, replacements and manual regenerations. The operator shall maintain these records for a minimum of three years and make them available to district personnel upon request.

NOTICE

In accordance with Rule 206, this Permit to Operate or copy shall be posted on or within 8 meters of the equipment.

This permit does not authorize the emission of air contaminants in excess of those allowed by Division 26 of the Health and Safety Code of the State of California or the applicable Rules and Regulations of the South Coast Air Quality Management District (SCAQMD). This permit cannot be considered as permission to violate existing laws, ordinances, regulations or statutes of other government agencies.

EXECUTIVE SUMMARY

At the request of Shorenstein Realty Services, L.P. (Shorenstein), AMEC Environment & Infrastructure, Inc. (AMEC) performed a Phase I Environmental Site Assessment (ESA) of the Former Ford Property – 2030, 2035, & 2060 East 7th Street, 821 South Santa Fe Avenue, 2053 Violet Street, and 2040 East 7th Place (the Site). AMEC performed this work pursuant to our proposal and Implementation Letter dated March 25, 2014.

The purpose of the Phase I ESA was to identify recognized environmental conditions (RECs) at the Site using guidance provided in the American Society for Testing and Materials Standard E 1527-05, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment*. The scope of work for the Phase I ESA included conducting a Site visit and area reconnaissance; obtaining and reviewing an environmental regulatory agency database report, topographic maps, Sanborn fire insurance maps, and aerial photographs; conducting interviews with facilities personnel; evaluating the data; and preparing this report.

AMEC's Phase I ESA identified the following, based on information made available:

- The Site encompasses six contiguous parcels (except for 2040 East 7th Place) as follows:
  - 5-Story Building with basement addressed as 2060 East 7th encompassing approximately 155,000 square feet (sf).
  - 2-Story Building addressed as 2060 East 7th Street encompassing approximately 90,000 sf.
  - 1-Story Building with Mezzanine Level addressed as 821 South Santa Fe Avenue and 2053 Violet Street encompassing approximately 26,000 sf.
  - 1-Story cold storage building (and associated parking lot) addressed as 2030 and 2035 East 7th encompassing approximately 29,000 sf. The building is currently occupied by West Coast Produce.
  - Asphalt parking Area located just south of 7th Street and bound by the single story cold storage building, 2060 East 7th Street (5-story building).
  - Asphalt and gravel area addressed as 2040 East 7th Place.
- The available information indicates that the Site was developed with dwellings/residences from at least 1900 through the mid 1920's when the 2030, 2035 and 2060 East 7th Street; 821 South Santa Fe; and 2053 Violet Street buildings are identifiable on the Site. There is also a railroad spur present between 821 South Santa Fe and 2053 Violet Street between at least the mid 1920's and the 1980's. The 2040 East 7th Place parcel appears undeveloped until the 1950's. Site use

through the early 1950's is predominantly light industrial and included chemical warehousing, a metal plating and machine shop, and a paper stock bindery and offset printing shop. In the mid to late 1950's to early 1960's an auto repair shop and Brush warehouse are also present at the Site. No significant changes were noted to the site between the 1970's and the 1990's except for the disappearance of the railroad spur in the 1989 photograph. In 1994, the original 2030 and 2035 East 7th Street building has been demolished and in 2005 the current 2030 and 2035 East 7th Street building has been constructed. The structures at 2040 East 7th Place are observed to be demolished in 2009.

- A "gas tank" is depicted to be present at 2040 East 7th Place on Sanborn maps beginning in 1950. It is unknown whether this underground storage tank (UST) has have been removed from this parcels. The building at this site addressed was demolished sometime between 2006 and 2009.
- An anomaly characteristic of an UST was identified just west of the 5-story building in the vacant parking lot that bounds East 7th Street. The suspect UST was estimated to be between 1,000 and 2,000 gallons in capacity and buried no shallower than 5 feet below ground surface. This UST is suspected to be a heating oil UST associated with the boiler present in the basement of the 5-story building as evidenced by piping (which had a distinct petroleum odor) that ran from the boiler into the wall of the building.
- Sampling performed during an Asbestos and Lead-Containing Materials and Hazardous Materials Survey (Survey) identified the presence of asbestos containing materials (ACM) in all buildings except for the 2030 & 2035 East 7th Street CTU building. Friable ACM, and non-friable ACM that is likely to be rendered friable, disturbed or damaged during demolition or renovation must be removed prior to disturbance.
- Sampling performed during a Survey identified the presence of lead based paint in all buildings except for the 2030 & 2035 East 7th Street CTU building. Any paint renovation and removal performed during building demolition/renovation should be performed by properly trained persons, particularly if sanding, heating or other mechanical processes are conducted on painted surfaces.
- Sampling performed during a Survey identified the presence of low levels of polychlorinated biphenyl's (PCBs) in window caulking; the maximum detected concentrations were below the Environmental Protection Agency regulatory level of 50 parts per million and not considered hazardous. Approximately 50% of the fluorescent lighting fixtures examined during the survey had older style unmarked ballasts and should be considered PCB containing.
- Several transformers were observed at the Site; however, all the transformers are identified as "dry type" and are therefore not suspected to contain PCBs. Four elevators, two freight and two passenger, are located in the five story building; however none of the elevators are hydraulic.
- Review of regulatory listings indicated that three of the Site addresses are listed on databases indicating the presence of historical USTs; Fred Kort at 2060 East 7th Street, Mika Corporation at 2030 East 7th Street, and Green Acres Incorporated at 2040 East 7th Place. The capacity and contents of these USTs were not listed in regulatory records and it is unknown whether any of these listed USTs have been removed from their respective Site parcels.

- Multiple offsite properties were identified on regulatory lists which indicated a release had occurred. These properties were considered unlikely to have an impact to subsurface conditions at the Site based on groundwater flow direction, regulatory status, and/or distance from the Site.

This assessment has revealed no evidence of RECs. However, the following potential environmental liabilities were identified.

- The presence of a suspect 1,000 - 2,000 gallon heating oil UST just west of the 5-story building in the vacant parking lot that bounds East 7th Street. An investigation consisting of the installation and collection of soil samples from soil borings installed on opposite ends of the UST was performed and did not identify the presence petroleum hydrocarbons in samples collected. Based on the results of the investigation, a release from the tank is not suspected and no further investigation of this tank is warranted.
- The 2030 and 2060 East 7th Street and 2040 East 7th Place addresses were identified in regulatory listings as having USTs present. In addition, a “gas tank" is depicted to be present at 2040 East 7th Place on Sanborn maps. The capacity and contents of these USTs were not listed in regulatory records and it is unknown whether any of these listed USTs have been removed from the Site parcels.

  The UST identified for 2060 East 7th Street is suspected to be the UST identified just west of the 5-story building. Because the original 2030 East 7th Street building was demolished and replaced with the existing structure it is suspected that any UST associated with this parcel would have been encountered and removed during construction of the new building. The original building and infrastructure at 2040 East 7th Place was demolished sometime between 2006 and 2009 and it is suspected that any UST associated with this property address would have been removed during the infrastructure demolition at the Site.

Based on work conducted during Site redevelopments activities, AMEC does not recommend additional investigation activities at this time. However, it is recommended that UST plan check files for 2030 and 2060 East 7th Street be reviewed at the Los Angeles Fire Department to determine if there is any relevant information regarding the suspect USTs identified at these addresses.

PHASE I ENVIRONMENTAL SITE ASSESSMENT

Former Ford Property – 2030, 2035, & 2060 East 7th Street, 821 South Santa Fe Avenue, 2053 Violet Street, and 2040 East 7th Place
Los Angeles, California

1.0 INTRODUCTION

At the request of Shorenstein Realty Services, L.P. (Shorenstein), AMEC Environment & Infrastructure, Inc. (AMEC) performed a Phase I Environmental Site Assessment (ESA) of the Former Ford Property – 2030, 2035, & 2060 East 7th Street, 821 South Santa Fe Avenue, 2053 Violet Street, and 2040 East 7th Place (the Site). This ESA was conducted in general conformance with the scope and limitations set forth in the American Society for Testing and Materials (ASTM) Standard Practice E 1527-05 and pursuant to the terms and conditions of AMEC's proposal and Implementation Letter dated March 25, 2014.

1.1 PURPOSE AND SCOPE OF WORK

The purpose of the Phase I ESA is to identify recognized environmental conditions at the Site, as defined by the ASTM Standard E 1527-05, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.* The work was also designed to permit the user to satisfy one of the requirements to qualify for the innocent landowner defense to Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) liability, as well as to evaluate the potential for general environmental liability associated with the Site.

> "The term recognized environmental conditions (REC) means the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with applicable laws and regulations. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis are not recognized environmental conditions."

The scope of work for the Phase I ESA included the following activities:

- Completing Site visits on December 23, 2013 and January 10, 2014; photographs are included as Appendix A.
- Reviewing historical Sanborn Fire Insurance Maps and aerial photographs of the Site and its vicinity. The Sanborn Maps and Aerial photographs are presented in Appendix B.

- Reviewing United States Geologic Survey (USGS) 7.5-minute topographic maps to assess the physical setting of the Site and surrounding area (Appendix B).
- Obtaining and reviewing an environmental regulatory agency database report from Environmental Data Resources ([EDR], Appendix D).
- Evaluating and correlating the data from the above activities.
- Preparing this report.

Our proposed scope of services for this Phase I ESA did not include sampling or evaluating buildings for radon or asbestos-containing materials, evaluating ambient air quality, identifying wetlands, or testing of the soil, air, surface water, drinking water, or groundwater for chemical contaminants.

1.2 SPECIAL TERMS AND CONDITIONS

This document was prepared for the sole use of Shorenstein. No other party should rely on the information contained herein without the prior written consent of AMEC and Shorenstein. The interpretation, discussion, and conclusions presented in this report are based on the Site visit and interviews, review of historical documents, the database report, and other documents as described herein.

Lack of evidence of the presence of RECs following completion of the tasks of a reasonable and mutually agreed upon scope of work does not guarantee the absence of such conditions; rather, it indicates only that none was found because of the services provided. Our findings and opinions are relative to the date of our Site work and should not be relied on to represent conditions on other dates. These opinions are based on information obtained during the study and our experience. If additional information becomes available which might change our conclusions, we request the opportunity to review the information, reassess the potential concerns, and modify our opinions, if warranted.

Although this assessment has attempted to identify the potential for environmental impacts to the subject Site, potential sources of contamination may have escaped detection due to: (1) the limited scope of this assessment; (2) the inaccuracy of public records; (3) the presence of undetected or unreported environmental incidents; (4) inaccessible areas; and/or (5) deliberate concealment of information.

The Phase I ESA was performed in accordance with generally accepted methods and practices of the profession. All conclusions are based on available and obtainable information and are not to be considered scientific certainties. The intent of this study was to identify environmental concerns that would be obvious to a professional exercising due diligence and is not intended to represent an exhaustive research of all potential hazards that may exist.

1.3 USER RESPONSIBILITY

Per the ASTM standard, it is the User's responsibility to communicate to the environmental professional any information that is material to recognized environmental conditions in connection with the subject property based on such specialized knowledge, actual knowledge, experience, or commonly known and reasonably ascertainable information within the local community. Per the ASTM standard, the User must do so prior to the property visit. Shorenstein provided ascertainable information concerning the potential for recognized environmental conditions at the subject property.

2.0 SITE DESCRIPTION

2.1 LOCATION

The Site consists of four buildings and two parking areas located in the "Arts District" of Los Angeles, Los Angeles County, California. The Site is identified as having the following addresses: 2030, 2035, & 2060 East 7th Street, 821 South Santa Fe Avenue, 2053 Violet Street, and 2040 East 7th Place. The Site is bound to the north by 7th Street and a multitenant warehouse, to the south by Violet Street and West Coast Produce, to the West by several multitenant buildings and West Coast Produce, and to the east by Santa Fe Avenue. The surrounding area is characterized by a mix of commercial/industrial land uses. Maps depicting the Site location and surrounding area are presented as Figures 1 and 2.

2.2 PHYSICAL SETTING

2.2.1 Topography

The Site is at an approximate elevation of 245 feet mean sea level according to the Los Angeles, California 7.5-minute quadrangle map (USGS, 1994). The Site is generally flat, but the surrounding area slopes upward gently to the north.

2.2.2 Surface Water and Hydrogeology

Surface Water

Surface drainage of stormwater for the surrounding area is controlled by curbs and gutters; there were no drain inlets observed at the Site. No surface water was observed in proximity to the Site. The nearest surface water is a channel associated with the Los Angeles River, located approximately 1,000 feet east of the Site.

Groundwater

Groundwater flow is influenced by such factors as, surface topography, nearby surface water bodies and water supply wells, underground utilities as well as geologic material. Site specific groundwater information was not available and according to the USGS topographic maps and Site observations, regional groundwater flow is anticipated to be to the east-northeast, towards the Los Angeles River, located approximately 1,000 feet east of the Site.

Based on information from the California Geological Survey (California Division of Mines and Geology, 1998), the historic high ground-water level in the site vicinity is at a depth of approximately 60 feet beneath the existing ground surface.

2.2.3 Regional Geology

The Site is at the base of the southern flank of the Elysian Hills, approximately 0.25 mile west of the Los Angeles River and in the northernmost portion of the Los Angeles Basin. The Los Angeles Basin is a northwest-trending alluviated lowland plain, sometimes called the Coastal Plain of Los Angeles. The basin is underlain by a deep structural depression which has been filled by both marine and continental sedimentary deposits that are underlain by a basement complex of presumably igneous and metamorphic composition (Yerkes, et al, 1965).

Regionally, the Site is within the northern portion of the Peninsular Ranges Geomorphic Province. This geomorphic province is characterized by elongate northwest-trending mountain ridges separated by straight-sided sediment-filled valleys. The northwest trend is further reflected in the direction of the dominant geologic structural features of the province that are northwest to west-northwest trending folds and faults, such as the nearby Newport-Inglewood fault zone located approximately 7.0 miles southwest of the Site.

Based on borings, fill soils up to 7½ feet in thickness were encountered at the Site. The fill soils consist mostly of silty sand with some gravel fragments and debris. Deeper fill may be encountered at locations not explored. The fill soils are underlain by Quaternary age alluvium consisting of fine- to coarse-grained sand and silt and layers of poorly graded sands with some gravel and cobbles.

2.2.4 Oil and Gas Wells

Oil and gas wells are potential concerns when they seep oil or gas, are not abandoned to current regulations, or have associated surface contamination. They may also be associated with methane hazards. According to maps published by the California Division of Oil, Gas, and Geothermal Resources (CDOGG, 2006), the Site is located very close to the boundary of the Los Angeles City Oil Field and is adjacent to an area of historic petroleum and natural gas production. According to CDOGG maps, there are no oil or gas exploration wells documented to have previously or currently existed at the site. Since the Site is near the boundaries of an oil field, there is a potential that undocumented wells could be encountered during the proposed site development. Any wells encountered during construction will have to be abandoned in accordance with current CDOGG standards and regulations.

The site is not located in a City of Los Angeles methane zone according to the City of Los Angeles Methane Buffer Zone Map (2003).

2.3 SITE AND VICINITY GENERAL CHARACTERISTICS

The Site encompasses six contiguous parcels (except for 2040 East 7th Place) as follows:

- 5-Story Building with basement addressed as 2060 East 7th Street located at the southwest corner of 7th Street and Santa Fe Avenue. The building was constructed in 1923 and encompasses approximately 155,000 square feet (sf). The building is currently vacant.
- 2-Story Building addressed as 2060 East 7th Street located along Santa Fe Avenue. The building was constructed in 1914 and encompasses approximately 90,000 sf. The building is currently vacant.
- 1-Story Building with Mezzanine Level addressed as 821 South Santa Fe Avenue and 2053 Violet Street located at the northwest corner of Santa Fe Avenue/Violet Street. The building was constructed in 1988 and encompasses approximately 26,000 sf. The building is currently vacant.
- 1-Story cold storage building (and associated parking lot) addressed as 2030 and 2035 East 7th Street on the north side of East 7th Place. The building was constructed in 1996 and encompasses approximately 29,000 sf. The building is currently occupied by West Coast Produce.
- Asphalt parking Area locate just south of 7th Street and bound by the single story cold storage building, 2060 East 7th Street (5-story building) and the offsite adjacent multitenant building.
- Asphalt and gravel area addressed as 2040 East 7th Place located just north of East 7th Place and bound by the 2-Story Building addressed as 2060 East 7th Street on the east and West Coast Produce on the west.

The surrounding area is characterized by a mix of commercial/industrial land uses.

2.4 ENVIRONMENTAL LIENS AND TITLE REPORT

An Environmental Lien report for the Site (Assessor Parcel Numbers 5166-013-006, 5166-013-007, 5166-013-009, 5166-014-001, 5166-015-018) was obtained from EDR. The Lien report indicates that all five parcels were obtained from the Barbara Kort, Susan Kort Wasserman, and David Kort Trust in January 2008 and are held as separate LLC's (Titled by address) for each respective parcel. The report indicates that no environmental liens or activity and use limitations were identified for the Site parcels.

2.5 CURRENT USE OF THE SITE

Except for the 1-Story cold storage building (and associated parking lot) addressed as 2030 and 2035 East 7th Street and the asphalt and gravel area addressed as 2040 East 7th Place which are both utilized by West Coast Produce, the parcels are unused.

3.0 SITE HISTORICAL REVIEW

AMEC reviewed historical uses of the Site and adjacent properties to assess whether prior occupants may have conducted activities that could be of environmental concern to the Site. This review included reviewing available aerial photographs, Sanborn Fire Insurance Maps, topographic maps, a city directory abstract, and conducting interviews.

The available information indicates that the Site was developed with dwellings/residences from at least 1900 through the mid 1920's when the 2030, 2035 and 2060 East 7th Street; 821 South Santa Fe and 2053 Violet Street buildings are identifiable on the Site. There is also a railroad spur present between 821 South Santa Fe and 2053 Violet Street between at least the mid 1920's and the 1980's. The 2040 East 7th Place parcel appears undeveloped until the 1950's. Site use through the early 1950's is predominantly light industrial and included chemical warehousing, a metal plating and machine shop, and a paper stock bindery and offset printing shop. In the mid to late 1950's to early 1960's an auto repair shop and Brush warehouse are also present at the Site. No significant changes were noted to the site between the 1970's and the 1990's except for the disappearance of the railroad spur in the 1989 photograph. In 1994, the original 2030 and 2035 East 7th Street building has been demolished and in 2005 the existing 2030 and 2035 East 7th Street building has been constructed. The structures at 2040 East 7th Place are observed to be demolished in 2009.

3.1 PAST USES OF THE SITE

3.1.1 Aerial Photographs

AMEC reviewed 13 historical aerial photographs provided by EDR dated between 1928 and 2012. These photographs are presented in Appendix B.

- **1928:** The Site buildings at 2030, 2035 and 2060 East 7th Street; 821 South Santa Fe and 2053 Violet Street are identifiable. The railroad spur between 821 South Santa Fe and 2053 Violet Street is discernible. This photograph is very grainy and detailed site features are not discernable.
- **1938:** No changes to the Site are evident; the 2040 East 7th Place property is undeveloped. Tenements are identified west of the 2035 East 7th Street chemical warehouse. The fire department on the corner of East 7th Street and South Santa Fe has relocated down the block.
- **1948:** No changes to the Site and surrounding are evident. This photograph is very grainy and detailed site and surrounding area features are not discernable.
- **1952:** The 2040 East 7th Place property is now developed - this is the location where a gasoline tank is identified on the Sanborn maps. No other changes to the Site are evident.
- **1964:** The lot east of the 2035 East 7th Street chemical warehouse has been developed, the tenements to the west are no longer present. The Santa Monica Freeway (I-10) is now south of the Site.
- **1972 and 1981:** The Site and surrounding area appear relatively unchanged.
- **1989:** The photograph is very grainy and detailed site features are not discernable. The 2053 Violet property and the 821 South Santa Fe properties are now a single building and the railroad spur is no longer apparent.
- **1994:** The structures at 2030 and 2035 East 7th Street are gone.

- **2005:** A new building is in place at 2035 East 7th Street, 2030 East 7th Street appears to have been paved. No other significant changes are evident to the Site. The overall area seems be more orderly with fewer vehicles between the buildings.
- **2009:** The building at 2040 East 7th Place has been removed. No other significant changes are evident to the Site and surrounding area.
- **2010 and 2012:** No significant changes are evident to the Site and surrounding area.

3.1.2 Sanborn Maps

AMEC reviewed nine historical Sanborn Fire Insurance Maps provided by EDR dated between 1900 and 1970. These maps are presented in Appendix B.

- **1900:** A two buildings (a dwelling plus a shed or garage) are shown at 719 Santa Fe (2060 East 7th Street lot) parcel; two buildings (dwelling plus a shed or garage) are shown at the 817 Santa Fe parcel and a cabin is identified on the next parcel south indicated with an 'A.'
- **1906:** In addition to the buildings above additional residences have been built at 2046 and 2048 East 7th Street (2060 East 7th Street lot); at 2017, 2023, 2027, 2031 and 2045 East 7th Street (2030/2035 East 7th Street lot). Dwellings are also shown south of the 719 Santa Fe parcel at 727, 805, 809/809½ and 821 Santa Fe. The cabin at 'A' is gone. Engine House Number 17 is indicated at 2100 East 7th Street on the corner of East 7th Street and Santa Fe Street.
- **1950**: The Site dwellings are gone. A “gas tank” is indicated at 2040 East 7th Place Motor Freight Depot near the northeast corner of the parcel. A railroad spur separates the 2053 Violet Street metal plating shop from the 821 East Santa Fe machine shop. 2035 E. 7th (fronted by 7th Place) is identified as a chemical storage warehouse. 2030 East 7th Street is a paper stock bindery and offset printing shop. 2060 East 7th Street is identified as Bullcocks Service Building Number 2 a household goods warehouse. The fire department has moved down the block one lot (no longer on the corner).
- **1953:** Few changes to the Site are evident. A building labeled as Auto Repairing is now present at 2037 East 7th Street adjacent to the 2035 East 7th Street chemical storage warehouse. The 2053 Violet Street previously labeled metal plating shop is now labeled as metal polishing and buffing.
- **1954:** No changes to the Site are evident.
- **1959:** Few changes to the Site or immediate surrounding area are evident. The East 7th Street property is no longer as identified a paper stock bindery and offset printing shop, it is now the Brush Warehouse.
- **1960:** Few changes to the Site or immediate surrounding area are evident. The building labeled as Auto Repairing at 2037 East 7th Street is now a plastic raw materials and finished products warehouse.
- **1967:** Few changes to the Site or immediate surrounding area are evident. The chemical warehouse at 2035 East 7th Street is now identified as a TV Tube Repair Building and warehouse. The plastic raw materials and finished products warehouse at 2037 East 7th Street is no longer identified. The 2053 Violet Street metal polishing and buffing shop is vacant.

- **1970:** Few changes to the Site or immediate surrounding area are evident. The TV Tube Repair Building and warehouse at 2035 East 7th Street is now identified as a Broom warehouse. The plastic raw materials and finished products warehouse at 2037 East 7th Street is now identified as a furniture manufacturing. 2053 Violet Street is now a warehouse.

3.1.3 Topographic Maps

AMEC reviewed a total of 10 historic USGS topographic maps): two 15-minute Pasadena, California Quadrangle topographic maps (1896 and 1900); one 60-minute Southern California, Sheet 1 Quadrangle topographic map (1901); one 6-minute Los Angeles, California Quadrangle topographic map (1928); one 7.5-minute Los Angeles and Vicinity East, 2 of 4, California Quadrangle topographic map (1953); and five 7.5-minute Los Angeles, California Quadrangle topographic maps (1953, 1966, 1972, 1981, and 1994); provided by EDR. No Site improvements are depicted at the Site until 1946 at which time the railroad spurs are present. The railroad spurs remained on maps until 1987. The immediately adjacent building to the north shows up on maps beginning in 1970. Nearby building complexes and features including the U.S. Naval Reservation and a rail yard to the east and a large rail yard to the north are depicted on maps beginning in 1946.

3.1.4 City Directory

AMEC reviewed a City Directory Abstract for the Site and surrounding area provided by EDR that covered the intermittent years during the period between 1924 and 2013.

The Site parcels are not listed in the abstract. Ford Motor Company and American Lithograph are listed at the Site in the 1920's. By the 1930's, Howe Scale Company (2053 Santa Fe Avenue) and a different lithograph company are listed as occupants of the Site. In the 1940's Mission Plating & Manufacturing has replaced Howe Scale; Croker Union Lithograph continues to be present. In the 1950's multiple tenants are listed at the site addresses and include a gear and machine company, a chemical company, a brush company, a fireplace equipment manufacturer and trucking/transfer company (at the 7th Place address). Similar uses of the property continued through the 1960's and 1970's. In the 1980's, Imperial Toy Company, Kort Manufacturing, and Green Acres Produce are listed at the Site address in addition to the gear and machine company and the brush company. In the 1990's, only Kort Manufacturing, Imperial Toy Company, and Green Acres Produce are listed at the Site address. In 2000, Imperial Toy Company is now Imperial Toy Beauty Products; and midway through the 1990's Green Acres Produce has been replaced by M Company Produce.

3.2 INTERVIEWS

AMEC interviewed Shorenstein Vice President Mr. Steve Levy during the December 23, 2013 Site reconnaissance and Mr. Brandon Gill, CB Richard Ellis on January 10, 2014. No specific knowledge regarding any past environmental incidents (spills or illegal/unauthorized dumping of hazardous materials/wastes) was available during either visit.

3.3 PREVIOUS ENVIRONMENTAL STUDIES INVOLVING THE SITE

The following environmental studies have been performed at the Site.

Phase 1 Environmental Site Assessment, Kort Properties, 2060 East 7th Street, 821 South Santa Fe Avenue, 2053 Violet Street, 2030 & 2035 East 7th Street, and 2040 East 7th Place

In September 2013, on behalf of 2060 East 7th, LLC, 821 South Santa Fe, LLC, 2053 Violet LLC, 2030 & 2035 East 7th LLC, and 2040 East 7th, LLC, Environ International Inc. (Environ) performed an ESA of the Site. Environ did not identify any REC's for the Site, however, they did identify "significant" data gaps which they determined affected their ability to assess whether the findings represented a REC. They concluded that there were potential impacts from historical activities at the Site and identified the following potential concerns:

- Historical operations by companies that conducted various industrial operations, including chemical warehousing, printing and binding, furniture manufacturing, painting, metal plating, machining, auto repair, trucking and freight, and miscellaneous warehousing. Environ concluded that these former industrial operations may have included the use of petroleum products, solvents, adhesives, and other chemicals and it was unlikely that the use of these compounds was strictly regulated controlled or monitored during the Site's early operational history prior to the 1980's.
- Three of the Site addresses were listed as historically using underground storage tanks (USTs) and additionally one "gas tank" was depicted on Sanborn maps for the 2040 East 7th Place parcel between 1950 and 1970. Information regarding specific uses of the on-site USTs was not available from regulatory agencies and it was unclear whether the USTs referenced in the regulatory database listings or the Sanborn maps were ever removed from the site. In addition, due to the nature of the historical operations, Environ indicated it was possible that additional USTs or other subsurface features were historically used and remain present on-site.

Environ also identified the following *de-minimus* items:

- The presence of suspect asbestos containing materials (ACMs) in building materials.
- The presence of suspect lead based paint (LBP).

Asbestos and Lead-Containing Materials and Hazardous Materials Survey, Former Ford Property – 2030, 2035, & 2060 East 7th Street, 821 South Santa Fe Avenue, 2053 Violet Street, and 2040 East 7th Place

In January 2014, AMEC performed a hazardous materials survey at the Site for the presence of asbestos containing construction materials, lead-containing coatings (LCC/lead based paint; LBP) and polychlorinated biphenyls (PCBs). Results of the survey identified the following:

- The presence of ACM in all buildings except for the 2030 & 2035 East 7th Street CTU building. ACMs included window putty/caulking, resilient floor tile and associated mastics, resilient sheet flooring and associated mastics, transite pipe, boiler installation, wall plaster, gypsum board with joint compound, texture coat on gypsum

board, covebase and associated mastics, exterior stucco, roofing support mastic, and flashing and materials associated with the built-up roofing.

- The presence of LBP in all buildings except for the 2030 & 2035 East 7th Street CTU building. LBP components included beams and columns, painted doors, window frames and cabinets, interior and perimeter walls, exterior wall surfaces, tower tank and structural steel, various interior components such as bollards and floor striping, fire doors. In general, except for the tower and roof exterior on the 2060 East 7th Street 2-story building all paint was intact and in moderate to good condition.
- The presence of low levels of PCBs in window caulking. The maximum detected concentrations were below the Environmental Protection Agency (EPA) regulatory level of 50 parts per million (ppm) and not considered hazardous.
- Approximately 50 % of the fluorescent lighting fixtures examined had older style unmarked ballasts and should be considered PCB containing.
- Four mercury switches in thermostats were identified in the 5-story building.

In addition to the reports summarized above, AMEC also collected soil samples for environmental analysis as part of geotechnical investigation, conducted a geophysical investigation to identify suspect USTs, and conducted soil sampling to assess if soil had been impacted from a suspect UST identified as a result of the geophysical investigation. A summary of this work is discussed further below.

Soil Sampling Associated With Geotechnical Investigation

In January 2014, a total of six soil borings were drilled to assess geotechnical soil attributes as part of the proposed redevelopment of the Site. The borings were drilled to depths ranging from 6.5 to 50 feet below existing grade and samples were collected to assess geotechnical physical parameters as well as to characterize soil for the potential presence of chemical compounds (from past historical uses). Two samples collected (at depths of 5.0 to 5.5 feet below ground surface [bgs]) from the geotechnical investigation were analyzed for the following compounds:

- Diesel and motor oil range organics
- Gasoline range organics
- CAM 17 metals
- Volatile and semivolatile organic compounds (VOCs)

With the exception of selected metals (detected within normal background ranges), none of the requested analytes were present above laboratory detection limits in the samples analyzed. A copy of the laboratory analytical report associated with the samples is included in Appendix C.

Geophysical Investigation and Boring Investigation Associated With Suspect UST

In January 2014, AMEC contracted with a geophysical contractor (Spectrum Geophysics) to perform geophysical investigations for suspect UST(s) at the Site. Investigations were performed in two locations at the Site, the building interior basement of the 5-story building

(approximately 26,000 sf area) and the asphalt covered parking area (approximately 145 feet by 165 feet area) just west of the 5-story building near where piping from a boiler was identified in the building basement. The survey utilize 3D-GPR (ground penetrating radar) and standard utility locating methods for the reinforced concrete interior location within the 5-story building and GPR, high sensitivity metal detection and standard utility locating methods for the exterior asphalted location.

Results of the survey within the 5-story building indentified a variety of underground utilities; however, no anomalies identified were consistent with the presence of a UST. During the investigation within this area, several pipes (associated with a boiler) were determined to be present exiting the building to the west. These pipes exited the building approximately 12 feet north of the roll up door on the west side of the building but the radio-frequency trace of these pipes only extended approximately 5 feet west of the face of the building. Based on the presence of these pipes, a geophysical survey was performed in the adjacent asphalt parking lot.

The survey in the asphalt parking lot identified two anomalies characteristic of UST's approximately 5 feet west of the 5-story building exterior west wall. The anomalies were centered on the location of the pipes found in the basement.

The first anomaly (identified as M-2 in attached geophysics report; Appendix C) was a high amplitude anomaly measuring 25-foot by 9-foot and appeared to be associated with the pipes traced from the basement, and coincided with a GPR anomaly (identified as G-1 in attached geophysics report; Appendix C) but extended further to the north and to the east. A portion of this anomaly could be explained by a vertical steel column and a parking stop; however, the anomaly also appeared to be associated with buried metal.

The second anomaly (G-1) was identified by GPR and coincided with anomaly M-2 adjacent to the west side of the building. This anomaly was found to be associated with a hyperbolic GPR signature beginning about 5 feet bgs and also appeared to be associated with the pipes traced from the basement of the adjacent building. Because a large portion of this anomaly was coincident with EM-61 data that identified anomaly M-2, it appeared that anomaly G-1 was also caused by a metallic source, and likely the same source as anomaly M-2. Based on its size, signature, and overlap with anomaly M-2, it appeared that anomaly G-1 was associated with a UST that was estimated to be between 1,000 and 2,000 gallons in capacity and is buried no shallower than 5 feet bgs.

On the basis of the presence of anomaly G-1, AMEC performed a boring investigation on January 31, 2014 to assess if a release occurred from the suspect UST. Under the supervision of a geologist, a C-57 licensed driller advance two direct push soil borings to approximately 20 feet bgs on opposite ends of the suspect UST. Soil borings were advanced using a combination of hand augering and a direct-push technology drill rig equipped with a dual-tube sampling

system lined with acetate sampling sleeves. Soils were logged by a geologist for lithology and screened for the presence of staining and odors. Discrete soil samples were retained approximately every 2 to 3 feet and screened with a photoionization detector for the presence of VOCs. Two samples from each boring (at depths of 10 and 20 feet bgs) were selected for laboratory analysis and analyzed for diesel range organics (which included heating oil) and UST metals.

With the exception of selected metals (detected within normal background ranges), none of the requested analytes were present above laboratory detection limits in the samples analyzed. A copy of the laboratory analytical report associated with the samples is included in Appendix C.

4.0 SITE AND AREA RECONNAISSANCE

Site visits were performed on December 23, 2013, by AMEC representative Matt Fraychineaud and on January 10, 2014 by AMEC representative Don Harmon. Both Mr. Fraychineaud and Mr. Harmon are Environmental Professionals as defined by ASTM E 1527-05. Mr. Fraychineaud was accompanied by Mr. Levy during the December 23, 2013 Site reconnaissance and Mr. Harmon was accompanied by Mr. Gill on January 10, 2014. Photographs taken during the Site visit are presented in Appendix A.

4.1 SITE DESCRIPTION

As stated in Section 2.3, the Site consists of six parcels; four developed with buildings and two utilized as parking lots. The parcels are identified as follows:

- 2060 East 7th Street – 5-story building with basement
- 2060 East 7th – 2-story building
- 821 South Santa Fe Avenue and 2053 Violet Street – 1-story building with mezzanine Level
- 2030 and 2035 East 7th Street – 1-Story cold storage building (and associated parking lot)
- Asphalt parking Area located just south of 7th Street – No address
- 2040 East 7th Place – Asphalt and gravel area used for equipment storage and truck parking

No imminently hazardous conditions were observed at the Site.

4.2 GENERAL OBSERVATIONS

The three buildings along the eastern portion of the Site; 2060 East 7th Street – 5-story building with basement, 2060 East 7th - 2-story building, and 821 South Santa Fe Avenue and 2053 Violet Street are currently vacant and with the exception of a boiler and piping in the basement of the 5-story building and electrical equipment and a number of heating, ventilation, and air conditioning units. The 2060 East 7th Street buildings appear to be primarily concrete

construction (floors, columns, walls, and even the roof) and brick CMU wall is present in the 2-story building along Santa Fe Avenue. The 821 South Santa Fe Avenue and 2053 Violet Street building is constructed of CMU block walls (exterior walls) on a concrete slab and has a wooden beam roof with insulation.

The 2030 and 2035 East 7th Street building is a concrete tilt-up construction with concrete floor slab and a wood frame roof. The building is occupied by West Coast Produce for produce warehousing and operations consisting of loading, unloading, and refrigerated storage of food. Loading docks present on the south side of the building and three refrigerated rooms are located along the northern wall. At the time of AMEC's Site visit, chemical use was limited primarily to propane for the forklifts and maintenance-related chemicals that included oils and lubricants.

2040 East 7th Place address is an asphalt and gravel area utilized for employee parking and storage of refrigerated trucks as well as for storage of maintenance equipment and supplies. The parking lot along East 7th Street between the single story cold storage building and 2060 East 7th Street (5-story building) is unused.

4.2.1 Aboveground Storage Tanks and Underground Storage Tanks

No USTs are currently being utilized onsite. However, as discussed above in Section 3.3, an anomaly characteristic of a UST was identified just west of the 5-story building in the vacant parking lot that bounds East 7th Street. The suspect UST was estimated to be between 1,000 and 2,000 gallons in capacity and buried no shallower than 5 feet bgs. This UST is suspected to be a heating oil UST associated with the boiler present in the basement of the 5-story building as evidenced by piping (which had a distinct petroleum odor) that ran from the boiler into the wall of the building. This UST does not appear to be registered.

In addition, based on a review of regulatory listings discussed below in section 5.1, three of the Site addresses are listed on databases indicating the presence of historical USTs; Fred Kort at 2060 East 7th Street, Mika Corporation at 2030 East 7th Street, Green Acres Incorporated at 2040 East 7th Place.

Additionally, a "gas tank" is depicted to be present at 2040 East 7th Place on Sanborn maps beginning in 1950. The capacity and contents of these USTs were not listed in regulatory records and it is unknown whether any of these listed USTs have been removed from the site parcels.

One aboveground water tank is located at the top the five-story building at 2060 East 7th Street and appears to have been installed sometime in the 1930's.

4.2.4 Utilities

The utilities provided to the Site are as follows:

Utility	Provider
Electricity	Los Angeles Department of Water and Power
Natural Gas	Los Angeles Department of Water and Power
Water	Los Angeles Department of Water and Power
Sewer	Los Angeles Department of Water and Power
Sanitation	Unknown

4.2.5 Petroleum Products and Hazardous Materials

At the time of AMEC's Site visit, chemical use was limited primarily to propane for the forklifts and maintenance-related chemicals that included oils and lubricants. AMEC observed propane storage inside the 2030/2035 East 7th Street building and several containers of lubricant, several 55-gallon drums containing used oil and one 55·gallon drum of oil in an outside storage area of the 2040 East 7th Place parcel. The chemical use and storage was associated with the West Coast Produce operations only and no chemical storage was observed in any other areas of the Site. No evidence of surface spills or mismanagement of the chemical was observed.

4.2.6 Other Possible Areas of Concern

During the Site visit, AMEC looked for but did not observe evidence of the following, other than as described above in this section:

- Remnants of former buildings
- Chemical or petroleum smells or foul odors
- Landfill or burial activities
- Heavy industrial activities
- Groundwater monitoring wells or remedial activities
- Stained or discolored soils
- Leachate or seeps
- Distressed, discolored, or stained vegetation
- Chemical spills or releases
- Groundwater or surface water contamination
- Oil well or gas exploration, production, or refinery activities
- Discharges, leachate, migration or runoff of potential contaminants from offsite sources
- Pits, ponds, or lagoons exist on or near the Site

- Unidentified substance containers

4.2.7 Polychlorinated Biphenyls and Mercury

As detailed above in Section 3.3, sampling performed during the Asbestos and Lead-Containing Materials and Hazardous Materials Survey identified the presence of low levels of PCBs in window caulking; the maximum detected concentrations were below the EPA regulatory level of 50 ppm and not considered hazardous. Approximately 50% of the fluorescent lighting fixtures examined during the survey had older style unmarked ballasts and should be considered PCB containing.

Several transformers were observed at the Site; however, all the transformers are identified as “dry type” and are therefore not suspected to contain PCBs. Four elevators, two freight and two passenger, are located in the five story building; however, none of the elevators are hydraulic.

4.2.8 Asbestos Containing Building Materials

As detailed above in Section 3.3, sampling performed during the Asbestos and Lead-Containing Materials and Hazardous Materials Survey (Survey) identified the presence of ACM in all buildings except for the 2030 and 2035 East 7th Street CTU building. Friable ACM, and non-friable ACM that is likely to be rendered friable, disturbed or damaged during demolition or renovation must be removed prior to disturbance. Abatement work should be performed by a qualified abatement contractor, and disposed of in accordance with Federal, state and local regulations.

4.2.9 Leaded Coatings

As detailed above in Section 3.3, sampling performed during the Survey identified the presence of LBP in all buildings except for the 2030 and 2035 East 7th Street CTU building. Any paint renovation and removal performed during building demolition/renovation should be performed by properly trained persons, particularly if sanding, heating or other mechanical processes are conducted on painted surfaces. In addition, coated surfaces that are likely to be damaged or impacted during renovation work be sampled before the work is performed to determine if a lead exposure risk exists. Chipped, flaking, peeling and 'corn-flaked' coatings should be removed by properly trained workers before demolition or renovation activities that would further damage the coatings, begin. Any abated LCC shall be collected and properly disposed of as lead waste.

4.2.10 Adjacent Properties

AMEC performed on-foot reconnaissance of the properties adjacent to the Site to observe businesses that may use, store, generate, or dispose of hazardous materials. Results are as follows:

- **North:** The Site is bordered to the north by East 7th Street. Across East 7th are multiple retail and commercial tenants that include automotive repair related businesses and a bar as well as several parking lots.
- **South:** The Site is bordered to the south by Violet Street. Across Violet Street are a produce company and several commercial businesses.
- **East:** The Site is bordered to the east by Santa Fe Avenue. Across Santa Fe Avenue are a fire station, a restaurant, several commercial buildings, and apartment building.
- **West:** The Site is bordered to the west by West Coast Produce, ED Produce, several restaurants, and several large warehouse type buildings that appear to be associated with the garment industry.

Land use in the area surrounding the Site is characterized by a mix of commercial/industrial land uses. No obvious use, storage, generation, or disposal of hazardous materials or waste, was observed during the area reconnaissance and based on the regulatory review, the adjacent properties do not appear to be of environmental concern at this time.

5.0 REGULATORY AGENCY DATABASE REPORT REVIEW

ASTM Standard E 1527-05 identifies standard federal and state environmental "record sources" that should be reviewed to identify RECs. The standard defines approximate minimum search distances from the Site for the types of properties listed in these records. The principal criterion is whether offsite properties could impact environmental conditions on the Site, although the appearance of a property in an environmental database does not necessarily mean that it has hazardous materials/wastes problems or poses a risk to the Site.

AMEC obtained and evaluated an environmental regulatory agency database report from EDR. The EDR report identifies properties listed in ASTM-recommended databases within recommended search distances from the Site and provides information on listed properties. The EDR report is included as Appendix C, and the results of the search are summarized below.

Based on the observed local and regional topography and the physical setting and resources reviewed (see Section 2.2), groundwater flow direction is expected to be to the south-southeast. Therefore, upgradient properties are presumed to be those north-northwest of the Site.

5.1 THE SITE

The Site was listed in the following databases:

- UST, SWEEPS UST, and CA FID UST - Fred Kort at 2060 East 7th Street, Mika Corporation at 2030 East 7th Street, Green Acres Incorporated at 2040 East 7th Place were the listed properties. The capacity and contents of these USTs were not listed in regulatory records and it is unknown whether any of these listed USTs have been removed from the site parcels. Based on the investigations completed to date at the Site, these listings are not considered RECs.
- Integrated Compliance Information System – this list provides compliance information on National Pollutant Discharge Elimination System program and Clean

Air Act. Imperial Toy was listed as having compliance violations of the Clean Air Act; however, it is unknown what the violations were related to. Because this was compliance related violation, this listing is not considered to be a REC.

- Hazardous Waste Manifest Information (HAZNET) and Other Pertinent Environmental Activity (FINDS) – Both these listings are related to disposal of hazardous waste by Imperial Toy are not considered to be a REC.
- Aerometric Information Retrieval System – this listing is related to air emissions and according to the EDR report, Imperial Toy was inspected and found to be in compliance. This listing is not considered to be a REC.

5.2 OFFSITE PROPERTIES

AMEC conducted a review of regulatory lists published by federal and state regulatory agencies to evaluate whether the listed properties identified as having a past or present record of actual or potential environmental impact or are under investigation for an environmental impact or have the potential to impact the Site. Regulatory listings are limited to only those properties that are known to regulatory agencies at the time of publication to be contaminated, in the process of evaluation, subject to monitoring for potential contamination or otherwise regulated. The EDR report indicates that surrounding sites were identified on the databases reviewed. Regulatory lists reviewed by EDR are summarized below.

Federal Environmental Record Sources

ASTM E 1527-05 guidance requires review of the following federal databases:

- **Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS, 0.5 mile), October 25, 2013.** CERCLIS contains data on potential hazardous waste sites that have been reported to the EPA by states, municipalities, private companies, and private persons pursuant to the CERCLA. The CERCLIS List includes sites that are either proposed for the National Priorities List (NPL) or in the screening and assessment phase for possible inclusion on the NPL. Source: EPA/National Technical Information Service (NTIS).

  There are no listed CERCLIS properties within 0.5 mile of the Site.

- **CERCLIS-NFRAP (0.5 mile), October 25, 2013.** No-further-remedial-action-planned **(**NFRAP) properties are those removed from CERCLIS because, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the property to be placed on the NPL, or the contamination was not serious enough to require federal Superfund action or NPL consideration. The purpose of the NFRAP is to remove unintended barriers to the redevelopment of the properties as part of EPA's Brownfields program to promote economic development of unproductive urban properties. Source: EPA.

  There are two listed CERCLIS-NFRAP properties within 0.5 mile of the Site. Bailey and Schmitz Co., 2101 E. 7th Street, is located approximately 67 feet northeast and cross- to upgradient of the Site. Assessment and cleanup activities were completed in 1989 and based on the property's regulatory status and direction from Site, it is considered unlikely to impact the Site and is not considered a REC. Exley Express, 634 S. Mateo Street is located approximately 0.20 mile north-northwest and up- to crossgradient of the Site. Based on this property's regulatory

status and distance from the Site, it is considered unlikely to impact the Site and is not considered a REC.

- **National Priorities List (1.0 mile), October 25, 2013.** The NPL is a subset of CERCLIS and identifies over 1,200 properties for priority cleanup under the Superfund program. An NPL (i.e., Superfund) Site must meet or surpass a predetermined hazard ranking system score, be chosen as a state's top priority Site, or meet three specific criteria set jointly by the U.S. Department of Health and Human Services and the EPA. Source: EPA.

  There are no listed federal Superfund sites within 1.0 mile of the Site.

- **Resource Conservation and Recovery Act (RCRA) Info (replaced Resource Conservation and Recovery Information System [RCRIS]), September 10, 2013.** RCRA Info includes selected information on facilities that generate, transport, store, treat and/or dispose of hazardous waste, as defined by the RCRA. Source: EPA/NTIS. RCRA Info includes the following databases:

  - **RCRA TSD Facilities (0.5 mile)**. Facilities that treat, store, and/or dispose of hazardous wastes.

    There are no listed treatment, storage, and/or disposal facility within 0.5 mile of the Site.

  - **RCRA Generators Lists (0.25 mile).** RCRA large quantity generators (LQG) are those facilities that generate at least 1,000 kilograms per month (kg/month) of nonacutely hazardous waste or meet other applicable RCRA requirements. RCRIS small quantity generators (SQG) generate less than 1,000 kg/month of nonacutely hazardous waste or meet other applicable RCRA requirements.

  - Many RCRA generators also appear on either or both of two non ASTM lists; FINDS and Hazardous Waste Information System. The EPA's FINDS provides facility information and "pointers" to other databases (e.g., Permit Compliance System, Aerometric Information Retrieval System, and Federal Facilities Information System).

    There are no listed RCRA LQGs within 0.25 mile of the Site.

    There are15 listed RCRA SQGs within 0.25 mile of the Site. Golden Plating, Inc., 930 S. Mateo Street was issued several written informal notices of violation; compliance was typically indicated within one day. Golden Plating also appears on the LA Co. Site Mitigation and EMI lists. Because this was a compliance related violations, this listing is not considered to be a REC.

    No violations were reported for the other properties and none of the properties showed up on other regulatory lists that indicate a release has occurred. On the basis of the volumes of wastes generated, lack of violations for the properties and current regulatory status, these properties are considered unlikely to impact the Site and are not considered RECs.

    There are no RCRA – CESQGs within 0.25 mile of the Site. The businesses generate and dispose of a variety of wastes that include metals, ignitable wastes, and solvents.

- **Corrective Action Report (CORRACTS, 1.0 mile), September 10, 2013.** CORRACTS identifies hazardous waste handlers with RCRA corrective action activity. Source: EPA.

There is one listed CORRACTS property within 1.0 mile of the Site. The Southern California Gas Company property is approximately 0.627 mile downgradient and across the Los Angeles River from the Site and considered unlikely to impact the Site and is not considered a REC.

- **Records of Decision (ROD, 1.0 mile), November 25, 2013.** ROD documents mandate a permanent remedy at an NPL site containing technical and health information to aid the cleanup. Source: EPA.

  There are no listed ROD properties within 1.0 mile of the Site.

- **Sites with Engineering and/or Institutional Controls (US Eng and US INST Controls, 0.5 mile), December 17, 2013.** These lists are specific to ASTM E 1527-05 and identify properties with engineering and/or institutional controls in place to eliminate, control, or limit contamination. Source: EPA.

  There are no listed US Eng or US INST Control properties within 0.5 mile of the Site.

State Environmental Record Sources

ASTM E 1527-05 requires review of the following state databases:

- **Leaking Underground Storage Tank Information System (LUST, 0.5 mile), December 16, 2013.** The LUST database lists reported leaking underground storage tank incidents. Source: Water Board.

  Eleven listed LUST facilities are within 0.5 mile of the Site. All of the listed cases are either downgradient, have received closure, or have undergone cleanup and are undergoing final monitoring and are considered to have low likelihood or be unlikely to impact the Site and are not considered RECs.

- **EnviroStor, (1 mile), February 3, 2014.** The Department of Toxic Substances Control (DTSC's) database identifies sites that have known contamination or sites for which there may be reasons to investigate further.

  Twenty-five listed EnviroStor facilities are within 1.0 mile of the Site. Twenty-one of the listed properties are either down or crossgradient, greater 0.5 mile upgradient, or have received case closure and are considered to have low likelihood or be unlikely to impact the Site and are not considered RECs. Bailey and Schmitz Co. was discussed above in the CERCLIS NFRAP section and based on the property's regulatory status and direction from Site was considered unlikely to impact the Site and not considered a REC. The remaining three properties are discussed as follows:

  Dean and Associates, 590 South Santa Fe Avenue, is located approximately 50 feet north-northeast and upgradient of the Site. According to EnviroStor database files (www.envirostor.dtsc.ca.gov), the facility was historically used as a scrap metal recycling facility that accepted transformers, which resulted in a release of PCBs to soil only. Remediation activities consisting of soil excavation and offsite disposal was completed in 1996 and certified by the DTSC and a "No Further Action" letter was issued for the case in 2005. On the basis of the property's regulatory status and release to soil only it is considered unlikely to affect the Site and is not considered a REC.

  BASF Inmont/Sun Chemical, 700 South Santa Fe Avenue, is located approximately 0.3 mile north and upgradient of the Site. According to EnviroStor

database files, the site is the location of a paint, lacquer, and printing manufacturing facility in which soil and groundwater underlying the site were impacted by VOCs. The site was formerly under the oversight of the Water Board and entered into a voluntary cleanup agreement (VCA) with the DTSC in April 2013. The case is currently undergoing final characterization and a removal/remediation action is scheduled to take place by 2015. On the basis of the planned remediation removal/remediation activities and distance from the Site, this property is considered to have a low likelihood to affect the Site and is not considered a REC.

Golden Plating Inc., 930 South Mateo, is located approximately 550 feet southwest and crossgradient of the Site. No Information was present in EnviroStor database on the basis of this property's nearby location it is considered to have a low likelihood to affect the Site and is not considered a REC.

- **EnviroStor Permitted Facilities List (HWP, 1 mile), February 24, 2014.** The DTSC's database identifies hazardous waste facilities and corrective action sites tracked in EnviroStor.

  There are two listed HWP sites within 1 mile of the Site. Southern California Gas Company was discussed above in the CORRACTS section and is considered unlikely to impact the Site and is not considered a REC. The remaining property is almost 0.75 mile downgradient of the Site and is also considered unlikely to impact the Site and is not considered a REC.

- **Solid Waste Information System (SWIS/SWF/LF, 0.5 mile), February 14, 2014.** Active, Closed and Inactive Landfills. The source is the Integrated Waste Management Board.

  There are two listed SWF/LF properties within 0.5 mile of the Site. Both properties are between 025 and 0.5 mile cross- to downgradient of the Site and are considered unlikely to impact the Site and are not considered RECs.

- **Spills, Leaks, Investigations and Cleanup (SLIC, 0.5 mile), December 16, 2014.** An inventory of sites from the Regional Water Quality Control Board (RWQCB).

  There is one listed SLIC property within ½ mile of the Site. BASF Inmont/Sun Chemical was discussed above in the Envirostor listing and was considered to have a low likelihood to affect the Site and is not considered a REC.

- **Underground Storage Tanks (UST, 0.25 mile), December 16, 2013.** List of regulated underground storage tanks. The source is the RWQCB.

  There are seven listed UST properties within 0.25 mile of the Site. None of the properties appear on regulatory lists indicating releases have occurred, and are therefore, considered unlikely to impact subsurface conditions at the Site and are not considered RECs.

- **Above Ground Storage Tanks (AST, 0.25 mile), August 1, 2009.** List of regulated above ground storage tanks. The source is the RWQCB. This database is no longer updated.

  There is one listed AST property within 0.25 mile of the Site. This property does not appear on regulatory lists indicating releases have occurred, and is therefore, considered unlikely to impact subsurface conditions at the Site and is not considered a REC.

- **Waste Management Unit Database System (WMUDS/SWAT, 0.5 mile), April 1, 2000.** Database is used for tracking and inventory of waste management units. The source is the RWQCB. This database is no longer updated.

  There is one listed WMUDS/SWAT property within ½ mile of the Site. This property is 0.4 mile cross- to downgradient of the Site and is therefore considered unlikely to impact the Site and is not considered a REC.

- **Voluntary Cleanup Program Sites (VCP, 0. 5 mile), February 3, 2014**. These are low threat properties with either confirmed or unconfirmed releases that have entered the VCP program. The source is the DTSC.

  There are four listed VCP properties within 0.5 mile of the Site. BASF Inmont/Sun Chemical was discussed above in the Envirostor listing and was considered to have a low likelihood to affect the Site and is not considered a REC. The remaining three listed properties are either down or crossgradient or have received case closure and are considered to have low likelihood or be unlikely to impact the Site and are not considered RECs.

- **DRYCLEANERS (0.25 mile), September 10, 2013.** DryCleaners provides a list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial; garment pressing and cleaners' agents; linen supply; coin-operated laundries and cleaning; dry-cleaning plants except rugs; carpet and upholstery cleaning; industrial launderers; laundry and garments services.

  There is one listed Dry Cleaner property within 0.25 mile of the Site. The property (Dragon Trims Inc.) is located approximately 200 feet northwest of the Site. No evidence of this property was noted during the surrounding area reconnaissance and it does not appear on any regulatory lists indicating a release has occurred, and therefore, this property is considered unlikely to have impacted the Site and is not considered a REC.

- **RESPONSE (1.0 mile), February 3, 2014**. RESPONSE identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

  There are four listed RESPONSE properties within 1.0 mile of the Site. Dean and Associates was discussed above in the EnviroStor listing and was considered to have a low likelihood to affect the Site and is not considered a REC. The remaining three properties are greater than 0.2 mile cross or downgradient of the Site and considered unlikely to have impacted the Site and are not considered RECs.

Orphan Sites

The orphan or unmapped site list consists of sites with poor address quality, usually without zip code information. However, if street addresses are available, these locations are checked against the known vicinity of the Site to evaluate if they are within the select ASTM search distance. None of the orphan or unmapped sites appeared to be within the required search distance of the Site. Furthermore, no sites were noted during our area reconnaissance that would be expected to be on one of the regulatory lists.

Other Lists

Multiple other non-ASTM regulatory lists summarized in Appendix C were also reviewed. None of the properties identified on those lists were determined to have a potential to impact the Site.

5.3 REGULATORY FILE REVIEW AND INTERVIEWS

AMEC contacted the following agencies to assess whether they maintained files for the Site:

- County of Los Angeles Public Health (County)
- Los Angeles Fire Department, Hazardous Materials Division and UST Division (LAFD)

The County did not identify any files available for the Site parcels. The LAFD indicated that chemical inventory files from the mid 2000's were available for the Imperial Toy Company and that there were UST plan check files for 2030 and 2060 East 7th Street; however no files related to tank removal or closeout were present in their records.

5.4 DATA GAPS

Our services did not include assessing fair market value of the property. Other deviations or deletions from the scope of work defined by ASTM E 1527-05 were not intentionally made. The EPA's proposed All Appropriate Inquiry document [40 Code of Federal Regulations (CFR) 312.10] states that a data gap means "*a lack of or inability to obtain information required by the standards and practices listed in Subpart C of Part 312 despite good faith efforts by the environmental professional or persons identified under Part 312.1 (b), as appropriate, to gather such information pursuant to Part 312.20 (d) (1) and Part 312.20(d) (2).*"

The following presents AMEC's interpreted data gaps, resolution efforts, and our opinions on the data gap significance.

Data Gaps, Resolution Efforts and Opinion on Data Gap Significance			
General data gap description	Specific gap	Good faith efforts	Opinions on data gap significance
Historical records	Documentation was not available for all land use dates.	AMEC reviewed reasonably ascertainable maps and aerial photographs.	Low significance - The available historical information provides sufficient information to support historical uses at the Subject Property.
Interviews	Complete ownership interviews were not available.	Based on the detailed environmental history for the Site, it was not necessary to complete ownership interviews.	Low significance - With respect to the current development, the reviewed historical photos, and maps, provides sufficient information to support historical use at the Subject Property.

Data Gaps, Resolution Efforts and Opinion on Data Gap Significance			
General data gap description	Specific gap	Good faith efforts	Opinions on data gap significance
Regulatory Records	The capacity and contents of onsite USTs were not listed in regulatory records	AMEC reviewed reasonably regulatory records.	It is unknown whether listed USTs for 2030 East 7th Street and 2040 East 7th Place have been removed from the site parcels. UST plan check files for these addresses should be reviewed at the LAFD.

6.0 CONCLUSIONS

At the request of Shorenstein, AMEC has performed a *Phase I Environmental Site Assessment* in general conformance with the scope and limitations of ASTM Practice E 1527 of the Former Ford Property – 2030, 2035, and 2060 East 7th Street, 821 South Santa Fe Avenue, 2053 Violet Street, and 2040 East 7th Place located in Los Angeles, California. Any exceptions to, or deletions from this practice are described in Section 1.2 of this report.

This assessment has revealed no evidence of RECs. However, the following potential environmental liabilities were identified.

- The presence of a suspect 1,000 - 2,000 gallon heating oil UST just west of the 5-story building in the vacant parking lot that bounds East 7th Street. An investigation consisting of the installation and collection of soil samples from soil borings installed on opposite ends of the UST was performed and did not identify the presence petroleum hydrocarbons in samples collected. Based on the results of the investigation, a release from the tank is not suspected and no further investigation of this tank is warranted.
- The 2030 and 2060 East 7th Street and 2040 East 7th Place addresses were identified in regulatory listings as having UST's present. In addition, a "gas tank" is depicted to be present at 2040 East 7th Place on Sanborn maps. The capacity and contents of these USTs were not listed in regulatory records and it is unknown whether any of these listed USTs have been removed from the site parcels.

  The UST identified for 2060 East 7th Street is suspected to be the UST identified just west of the 5-story building. Because the original 2030 East 7th Street building was demolished and replaced with the existing structure it is suspected that any UST associated with this property would have been encountered and removed during construction of the new building. The original building and infrastructure at 2040 East 7th Place was demolished sometime between 2006 and 2009 and it is suspected that any UST associated with this property address would have been removed during the infrastructure demolition at the Site.

Based on work conducted during Site redevelopments activities, AMEC does not recommend additional investigation activities at this time. However, it is recommended that UST plan check files for 2030 and 2060 East 7th Street and 2040 East 7th Place be reviewed at the LAFD to

determine if there is any relevant information regarding the suspect USTs identified at these addresses.

7.0 ENVIRONMENTAL PROFESSIONAL STATEMENT

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental professional as defined in § 312.10 of 40 CFR 312 and I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Gary A. Lieberman, CEM
Associate Geology Professional

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 332 feet of the target property.

A summary of the information obtained is provided in the text of this report.

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OR DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction orforecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AMEC Environment & Infrastructure, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EDR Historical Topographic Map Report

Environmental Data Resources, Inc.s (EDR) Historical Topographic Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topographic Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the early 1900s.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

USER QUESTIONNAIRE

Introduction

In order to qualify for one of the Landowner Liability Protections offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfield Amendments"), the user must provide the following information (if available) to the environmental professional. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete.

1. **Environmental cleanup liens that are filed or recorded against the site (CFR 312.25)**
   Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?

   We are not aware of any environmental liens.

2. **Activity and land use limitations that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26)**
   Are you aware of any activity and use limitations, such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?

   We are not aware of any use limitations.

3. **Specialized knowledge or experience of the person seeking to qualify for the Landowner Liability Protections (40 CFR 312.28)**
   As the user of this Phase I, do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line or business as the current of former occupants of the property or an adjoining so that you would have specialized knowledge of the chemicals and processes used by the type of business?

   We have no specialized knowledge.

4. **Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29)**
   Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you concluded that there is a difference, have you considered whether the lower purchase price is because contamination is known of believed to be present at the property?

   Unknown.

5. **Commonly known or reasonably ascertainable information about the property (40 CFR 312.30)**
   Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of a release or threatened release? For example, as user:

- Do you know the past uses of the property? **Minimal information provided.**

- Do you know of specific chemicals that are present or once were present at the property? **Unknown.**

- Do you know of spills or other chemical releases that have taken place at the property? **Unknown.**

- Do you know of any environmental cleanups that have taken place at the property? **Unknown.**

6. **The degree of obviousness of the presence of likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31)**
   As the user of this Phase I, based on your knowledge and experience related to the property, are there any obvious indicators that point to the presence or likely presence of contamination at the property?
   Unknown.

STEVEN LEVY
Printed Name

In addition, certain information should be collected, if available, and provided to the environmental professional selected to conduct the Phase I. This information is intended to assist the environmental professional but is not necessarily required to qualify for one of the Landowner Liability Protections. The information includes:

1. the reason why the Phase I is required,
2. the type of property and type of property transaction, for example, sale, purchase, exchange, etc.,
3. the complete and correct address for the property (a map or other documentation showing property location and boundaries is helpful),
4. the scope of services desired for the Phase I (including whether any parties to the property transaction may have a required standard scope of services on whether any considerations beyond the requirements of E 1527-05 are to be considered),
5. identification of all parties who will rely on the Phase I report,
6. identification of the site contact and how the contact can be reached,

7. any special terms and conditions which must be agreed upon by the environmental professional, and
8. any other knowledge or experience with the property that may be pertinent to the environmental professional (for example, copies of any available prior environmental site assessment reports, documents, correspondence, etc., concerning the property and its environmental condition).

Enclosed are the results of analyses on 2 samples analyzed as specified on attached chain of custody.

Wendy Lu
Organics Supervisor

American Scientific Laboratories, LLC (ASL) accepts sample materials from clients for analysis with the assumption that all of the information provided to ASL verbally or in writing by our clients (and/or their agents), regarding samples being submitted to ASL, is complete and accurate. ASL accepts all samples subject to the following conditions:

1) ASL is not responsible for verifying any client-provided information regarding any samples submitted to the laboratory.
2) ASL is not responsible for any consequences resulting from any inaccuracies, omissions, or misrepresentations contained in client-provided information regarding samples submitted to the laboratory.

Results of Geophysical Investigation
Industrial Building
Santa Fe Avenue & 7th Street
Los Angeles, California

Introduction

On January 13th 2014, Spectrum Geophysics conducted a geophysical investigation at an industrial building located at the corner of Santa Fe Avenue and 7th Street, in Los Angeles California (hereinafter referred to as the Property). The purpose of the investigation was to delineate the surface trace of detectable steel underground storage tanks (USTs).

The area of investigation, as indicated by Don Harmon of AMEC, was the main floor area of the basement, which extended approximately 190 feet by 120 feet. Excluded from the area of investigation was the former boiler room, electrical room and the hallway below the 7th street sidewalk; the resultant area of investigation is hereinafter referred to as "Basement". Subsequently an additional 40 by 40 foot area of the exterior parking lot was investigated; this area was asphalt covered and is referred to as "Exterior Area West of Building" (or simply "Exterior").

Methods

The equipment used in this investigation consisted of a Geonics EM-61 high-sensitivity metal detector, a shallow-focus metal detector (M-scope), a Sensors & Software "Noggin Smart Cart" GPR system and electromagnetic (EM) utility-locating equipment.

Ground Penetrating Radar

In a structure such as a reinforced concrete basement the only nondestructive method to possibly detect underground storage tanks (USTs) is ground penetrating radar (GPR).

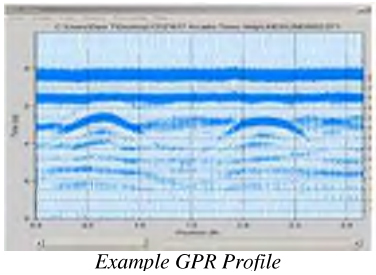
Therefore, Basement GPR data were collected along parallel south-north profiles spaced 1.5 feet apart (Figure 1). Exterior GPR data were collected along parallel profiles spaced 2.5 feet apart within an established grid (Figure 3). During GPR surveys, an antenna containing both a transmitter and a receiver is pulled along the ground surface. The transmitter radiates

GPR Data Collection (archive photo)

short pulses of high-frequency (center frequencies of 250-MHz) electromagnetic energy into the ground. These electromagnetic waves propagate into the subsurface at a velocity that is dependent on the electrical properties of the material through which the wave travels. When the GPR wave encounters the interface (boundary) of two materials having different electrical properties, a portion of the energy is reflected back to the surface and received at the antenna at a time (in nanoseconds) that is related to the depth of the reflecting interface, where later times generally represent greater depths of investigation. The contrast in velocity between the media either side of the boundary can be quantified by a reflection coefficient at the media boundary, where a larger reflection coefficient (larger contrast in materials) corresponds to a higher amplitude reflection.

The reflected signal is detected at a receiver antenna, transmitted to a control unit (the Smart Cart) and viewed on the computer screen as the data are being acquired. The data may be stored electronically, and subsequently processed with various software packages.

The GPR signal is effective in the detection of geologic layering, metallic and nonmetallic utilities, underground storage tanks, excavations, and voids and cavities beneath roads or concrete walls. When the target of a GPR survey is metallic, the characteristic response is readily identified as a high-amplitude anomaly because the electromagnetic wave is completely reflected upon reaching the metallic object (much the way a mirror works).



Example GPR Profile

GPR data collected during this investigation were processed using GPR-Slice™ V7.0 by Dean Goodman (2009). GPR-Slice™ was used for interpretation purposes by Spectrum's licensed geophysicist.

EM-61 High Sensitivity Metal Detector

The EM-61 high-sensitivity metal detector was used in an effort to delineate areas where metallic objects (such as USTs, metal debris, and conduits) may be buried. The EM-61 transmitter generates short pulses of electromagnetic energy that travel downward and outward and have a primary field associated with them. This

energy becomes "trapped" in conductive materials and causes a secondary magnetic field to be generated in these materials. Between pulses, the receiver measures the voltage of the decay of this secondary magnetic field that is proportional to the conductivity of the subsurface materials.

EM-61 data collection (archive photo)

During this investigation, EM-61 data were collected in the Exterior area only, as these data would be subject to extreme interference in the Basement. EM-61 voltage readings were recorded and stored in a digital field computer using a rectangular coordinate system. These data were processed in the field and used to generate contour maps to assist in identifying anomalous areas that may be caused by buried metallic features.

Top *or* bottom coil data can be useful for identifying near-surface metallic objects; although, the top coil generally has a larger response than the bottom coil to deeply buried objects. The differential data (top coil data minus the bottom coil data) was used in this survey to distinguish deeper targets such as steel USTs and reinforced concrete footings from shallow ones such as a vault lid or scrap metal. Utilization of the differential data allows for the suppression of near surface targets that might mask the response from deeper targets of interest.

Electromagnetic (EM) Utility Location

Passive and active EM utility-locating methods were used in an effort to identify possible sources of EM-61 and GPR anomalies in the area of investigation.

Electromagnetic (EM) utility location (Archive photo)

Passive locating is possible when electrically conductive conduits are energized by ambient radio frequencies (RF) that are often produced by 50/60 cycle electrical, radio, audio, television, and communication transmissions. A receiver tuned to these frequencies can be used to locate the re-radiated signal emitted by the conductor (i.e., conduit).

Active locating is initiated by conducting an EM signal at a known frequency (8 and 33 kHz for this site) on a conduit exposed at the surface. A receiver, tuned to these frequencies, is then used to locate the signal maxima (or surface trace) of the applied signal.

Survey Exclusions

Utilities *excluded* from this scope of work include:

- Inaccessible sanitary sewer and storm drain lines.
- Utilities that originate inside inaccessible buildings, vaults or utility closet whose surface trace is only detectable by applying a direct signal or through use of an induction clamp.
- Non-metallic/non-electrically conductive utilities which are not detectable through standard EM utility-locating methods and/or the use of the additional geophysical methods (e.g., ground penetrating radar).
- Abandoned or inaccessible utilities to which standard locating techniques may not be applied.
- Utilities whose burial depths exceed that of the detection limits of the equipment in a specific setting.
- Utilities whose detectable signal may be distorted or rendered undetectable due to reinforced concrete, steel plates or above ground interferences.
- Utilities whose surface trace cannot be determined due to the utilities' proximity to a greater conductor.

Results

As previously stated, two areas at the Property were investigated for detectable underground storage tanks: in this section these areas are designated as "Basement" and "Exterior Area West of Building" (or simply "Exterior"). A map of the Basement area of investigation is presented in Figure 1. A representative GPR- Slice map for the Basement (converted to depth in inches) is presented in Figure 2. A map of the Exterior area of investigation is presented in Figure 3. A contour map of the EM-61 differential data collected in the Exterior area is presented in Figure 4, and a representative GPR- Slice map for the Exterior is presented in Figure 5.

Basement

Standard utility locating methods were used and GPR data were collected in the Basement.

Figure 1 illustrates the limits of the data collection and various utilities detected in the Basement area of investigation. During the investigation, a hatch on the western side of the building was observed. Upon further investigation several pipes were determined to be present-exiting to the west. These pipes exited the building approximately 12 feet north of the roll up door on the west side of the building but the radio-frequency trace of these pipes only extended approximately five feet west of the face of the building (Figure 3).

Exposed pipes

Upon review of the GPR-Slice data (Figure 2) the results indicated the presence of a variety of underground utilities; however, no anomalies identified were consistent with the presence of a UST in the Basement.

Exterior Area West of Building

Upon consultation with AMEC representatives a further investigation was performed on a 40 by 40 foot area centered on the position of the pipes found in the basement. Both EM-61 and GPR data were collected in the Exterior area. A major source of interference in the Exterior area was generated by the metallic canopy that projected out 16 feet from the building. This structure generated a significant amount of interference for the EM-61 and a moderate amount of interference for the GPR unit. In addition, the steel reinforcement in the building generated interference within 5 feet of its walls. Two anomalies were identified in the EM-61 data and one anomaly was identified in the GPR data collected in the Exterior area; these anomalies are discussed below.

Canopy on west side of building

EM-61

Anomalies M-1 and M-2 were identified in the EM-61 differential data and are indicated in blue hatching in Figure 3, and with a

green dashed line in Figure 4. Our licensed geophysicist was consulted in order to better characterize these anomalies.

Anomaly M1 is a 15- x 13-foot triangular-shaped anomaly. Follow-up investigation of the anomaly using EM utility-locating methods revealed an electric line associated with the light pole just west of *Anomaly M1*; however, this electric line just crosses the southern portion of *Anomaly M1* and does not fully explain it. Based on the size and amplitude of this anomaly, it appears to be associated with a utility or the intersection of utilities; however, there is a possibility that it is associated with a UST. Spectrum recommends further investigation of this anomaly.

Anomaly M-2 is a high amplitude 25-foot by 9-foot (actually 4 feet of these 9 feet consists of projected EM-61 data as no EM-61 data were collected within 4 feet of the building wall) anomaly. This anomaly appears to be associated with the pipes traced from the basement, and coincides with GPR *Anomaly G-1* but extends further to the north and to the east. Although a portion of *Anomaly M-2* could be explained by a vertical steel column and a parking stop, *Anomaly M-2* is offset from these surface features and appears to be associated with buried metal. The outline of *Anomaly M-2* was marked in pink surveyor's chalk on the ground at the Property. Based on the size and amplitude of this anomaly, it could be associated with a UST. Spectrum recommends further investigation of this anomaly to determine its source.

GPR

Anomaly G-1 was identified in the Exterior GPR data, and is indicated with red hatching in Figure 3. Our licensed geophysicist was consulted in order to better characterize this anomaly.

Initially an anomalous high intensity (red) area adjacent to the west side of the building was identified in the GPR-Slice contour map (Figure 5). Once identified, this high intensity area was further investigated by careful review of the GPR profiles that were used to generate the GPR-Slice image. Based on this review, *Anomaly G-1* was found to be associated with a hyperbolic GPR signature beginning about 5 feet below ground surface. Based on Spectrum's experience, while part of Anomaly G-1 could be explained by the pipes traced from the Basement, the entire anomaly is wider and has greater extent than what would be expected from these pipes. In addition, because a large portion of *Anomaly G-1* is coincident with EM-61 *Anomaly M-2,* it appears

that *Anomaly G-1* is caused by a metallic source, and likely the same source as *Anomaly M-2*.

While *Anomaly G-1* is thought to be a bit more definitive of the subsurface than *Anomaly M-2* since it was interpreted from vertical profiles of the subsurface, the GPR data were a bit compromised by the overhead metallic canopy and by the back scattered airwave coming off of the building. Therefore, it is possible that *Anomaly G-1* extends further to the north than that indicated in the interpretation map, and that all of *Anomaly M-2* is caused by a buried UST. Based on its size, signature, and overlap with *Anomaly M-2*, it appears that *Anomaly G-1* is associated with a UST. If this anomaly is caused by a UST, it appears that it would be a 1,000 or 2,000 gallon tank, and is buried no shallower than 5 feet below ground surface (likely somewhere between 5 and 6 feet below ground surface). Spectrum recommends investigation of *Anomaly G-1* to determine its source.

Limitations

Reliable EM-61 data cannot be collected in the presence of surface metallic objects such as reinforced concrete pads and sidewalks, buildings, chain-link fencing, above ground storage tanks, steel parking blocks, and parked vehicles. As a result, Spectrum cannot guarantee that a UST is not present beneath these features. In addition, during this investigation the presence of the metallic canopy in the Exterior area limited the ability of the EM-61 to precisely delineate boundaries of subsurface metallic features such as USTs.

The penetration depth of the GPR signal was between 4 and 5 feet in the areas investigated. Because of this limitation, Spectrum cannot guarantee that all conduits (including sewers and PVC water lines) and USTs at depths greater than about 4 feet have been identified. In addition, some utility materials may not provide sufficient contrast in density from the surrounding soils to allow detection. A discussion of the limitations of each method follows.

Ground Penetrating Radar

The performance capability of GPR is dependent on the soil electrical conductivity at the site. If the soil conductivity is high, attenuation of the radar signal in the soil can severely restrict the maximum penetration depth of the radar signal. Under favorable conditions depth of penetration can be greater than 10 feet, however, average depths of GPR penetration in the Southwest tend to range between 3-5 feet. Soils high in clay content and moisture

will have higher signal attenuation. GPR surveys should be performed in the dry season if at all possible, especially at California sites. Soil moisture, especially in high-clay soils, only increases the radar attenuation rates, further limiting the radar performance.

EM-61

The EM-61 is capable of detecting a 55-gallon drum up to a depth of 3 meters under favorable conditions. We recommend a minimum 10-foot buffer between the survey area and any metallic or metal bearing surface cultural features such as buildings, cars, metal signs, metallic canopies or aboveground piping, which could severely compromise the quality of the data. Reliable EM-61 data cannot be collected over areas covered with reinforced concrete.

General

It should be understood that the location of subsurface objects and utilities is dependent upon the recognition of physical phenomena at the ground surface. These phenomena can be magnetic fields or electro-magnetic waves that give rise to a surface expression which in turn is interpreted as representative of subsurface objects. These waves, however, may be attenuated and/or distorted by a number of factors including soil moisture, corrosion, and proximity to other surface and subsurface facilities.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

2060 EAST 7TH STREET
LOS ANGELES, CA 90021

COORDINATES

Latitude (North):	34.0336000 - 34° 2' 0.96''
Longitude (West):	118.2304000 - 118° 13' 49.44''
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	386414.1
UTM Y (Meters):	3766369.5
Elevation:	246 ft. above sea level

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 10/25/2013 has revealed that there are 2 CERC-NFRAP sites within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
BAILEY AND SCHMITZ CO	2101 E 7TH ST	NNE 0 - 1/8 (0.013 mi.)	C11	20
EXLEY EXPRESS	634 S MATEO ST	NNW 1/8 - 1/4 (0.198 mi.)	S77	95

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 09/10/2013 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
SOUTHERN CALIFORNIA GAS COMPAN	***2424 EAST OLYMPIC BLVD.***	***SE 1/2 - 1 (0.627 mi.)***	***AF121***	***214***

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/10/2013 has revealed that there are 15 RCRA-SQG sites within approximately 0.25 miles of the target property.

RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the RESPONSE list, as provided by EDR, and dated 02/03/2014 has revealed that there are 4 RESPONSE sites within approximately 1 mile of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 02/03/2014 has revealed that there are 25 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, and dated 02/14/2014 has revealed that there are 6 SWF/LF sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/10/2013 has revealed that there are 2 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 2 EDR MGP sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 18 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there are 3 EDR US Hist Cleaners sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

AIRS (AFS):

Reponsible Party: COST RECOVERY/OPERATION AND MAINTENANCE SITE
Project Revenue Source Company: Not reported
Project Revenue Source Addr: Not reported
Project Revenue Source City,St,Zip: Not reported
Project Revenue Source Desc: DHS has utilized Bond funds to complete the remedial action. DHS is currently undertaking appropriate cost recovery actions.
Site Description: This site was previously used to scrap electrical transformers.
Hazardous Waste Desc: Polychlorinated biphenyls (PCBs) were detected in the soil.
Threat To Public Health & Env: The remedial action has been completed. Soil contaminated with PCBs was excavated and redisposed of in a licensed landfill. There is no threat to public health and the environment.
Site Activity Status: In August, 1985, the RP, Mr. Rodney Dean, pled no contest to three felony

DEAN AND ASSOCIATES (Continued) **S100833562**

counts of illegal storage, transportation and disposal of hazardous wastes. Mr. Dean's probation required that the cleanup of the site be completed and reported to the court. The RP retained a contractor for the cleanup and began the remedial actions. The contractors removed much of the contaminated soil. DHS completed the cleanup after the RP exhausted his financial resources. DHS is currently in the cost recovery stage.

Completed Date:	09/04/1996
Comments:	DTSC reviewed a Preliminary Endangerment Assessment for the site under a Voluntary Cleanup Agreement. Based on the information and data presented, DTSC determined that the hazardous constituents remaining at the site do not constitute a threat to human health or the environment.
Completed Area Name:	PROJECT WIDE

SANTA FE/W.A. GRANT (Continued) **S102860873**

Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 09/13/1995
Comments: The Department received a Non-Emergency Hazardous Substance Release Report dated January 31, 1995. Review of the document indicates that the site is contaminated with elevated levels of heavy metals such as lead, copper and zinc. Foundry operations existed at the site from at least 1906 until 1990, operated by W.G. Grant & Co. Santa Fe Railway is the current owner of the site. RP removed USTs from the site without any regulatory agency oversight. Due to evidence of a release, DTSC is recommending that a PEA be conducted to evaluate the site. On September 13, 1995, DTSC notified the RP thereof.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

WASTE TRANSFER & RECYCLING (Continued) **S103673980**

CA WDS:

Facility ID:	4 19I002666
Facility Type:	Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
Facility Status:	Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
NPDES Number:	CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board
Subregion:	4
Facility Telephone:	3232629699
Facility Contact:	S ABAJIAN
Agency Name:	WST MGT INC

POTW:	Not reported
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Facility name: MISSION ROAD RECYCLING AND TRANSFER
Site name: WASTE TRANSFER AND RECYCLING
Classification: Small Quantity Generator

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Violation Status: No violations found

Background Info:	The site is located at 590 South Santa Fe Avenue, Los Angeles, California. The site consists of two land parcels totaling approximately 2.68 actes of land and is located witin an indus-industrial portion of the City of Los Angeles. Historically the site has been used for chemeical or paint manufacturing. Not reported The site was formerly under the oversight of the California Regional Water Quality Control Board (CRWQCB). (CRWQCB) has overseen the site investiation and remediation since approximately 1986. Not reported Previous sampling activities have confirmed both soil and groundwater contamination. Contaminants of concern identified in the groundwater and soil include benzene, ethyl benzene, 1,1-dichlorethane, 1,1-dichloroethene, 4-methyl-2-pentanone (MIBK), toluene, and total xylene. The toluene, and xylene appear to be primarily located within the groundwater beneath the northern portion of the site whereas MIBK has been identified in the groundwater along the southwest corner of the site and may extend beyond the site boundary.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	CEQA - Initial Study/ Neg. Declaration
Completed Date:	03/18/2003
Comments:	Special Initial Study, Negative Declaration, and De Minimis Impact Finding were prepared and made available for public review. No verbal or written comments were received. DTSC approved the CEQA documents on 3/18/2003. DTSC approved RAW on 3/18/03. Proposed removal activities consists of removing approximately 615 cubic yards of contaminated soil. Chemicals of potential concern previously identified in the soil include the following: Lampslack, PAH's, and

ALAMEDA MANUFACTURED GAS PLANT (Continued) **S101584054**

BTEX. Removal Activities are anticipated to last approximately 30 days.

Comments: Removal Action Workplan Approved

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 12/31/2002
Comments: DTSC approved site characterization activities in December 2002. Contaminants of concern included PAH's & BTEX. A RAW involving excavation will be implemented for the Site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 05/20/1993
Comments: The Department completed review of the PEA. A Manufactured Gas Plant (MGP) was operated at the site in the late 1800s and early 1900s. Gas was produced from crude oil for distribution in the site area. Several companies operated at the site. In 1909, the site was owned by the Los Angeles Gas and Electric Corp., which merged with the Southern Calfornia Gas Company in 1937. SoCalGas owned the property until 1976, and sold to the current owners. The MGP was dismantled sometime before 1906. The byproducts from the manufactured gas operation were tars, oils, sludges, and lampblack. Elevated levels of polycyclic aromatic hydro- carbons (PAH), heavy metals such as lead and arsenic and cyanides were found at the site. The PEA concluded that there was contamination at the site above screening values. Therefore, the Department recommended that further investigation or assessment at the site was necessary.

Manufactured Gas Plants:

Site located at 725 Chemming Street, Los Angeles, California, approximately 2.5 acres. From 1887 util 1906 an oil gas plant was operated at site. MGP may have been converted to a natural gas storage site in approximately 1906. Records indicate that MMGP equipment may have been removed by 1930. Site is currently used as a Greyhound Bus parking lot.

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018
Waste name: BENZENE

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order

ANGELUS WESTERN PAPER FIBERS (Continued) **S101704329**

should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Alternate Address:	2182 EAST 11TH STREET
Alternate City,St,Zip:	LOS ANGELES, CA 90021
Background Info:	The Site is also known as the Western Lead and Metal Company Site. The Site is located in an industrial area near downtown Los Angeles and is surrounded by warehouses, food distributors, light manufacturing, and scrap metal recyclers. The Site is roughly bounded by 11th Street (Property), to the north, the Union Pacific Railroad right-of-way to the east, 14th Street, to the south, and Wilson Street to the west. The Site includes the property at 2182 East 11th Street, which was occupied by several different companies as a lead smelter from 1946 to 1965. The

WESTERN LEAD AND METAL CO (INTERNATIONAL LEAD CO.) (Continued) **1001115052**

Western Lead Products Company operated a lead smelter on the Property from 1954 to 1960 under the name of Western Lead and Metal Company. After 1965, the Property was used for die-cast manufacturing operations. The Property is approximately 110 feet by 140 feet and is currently devoid of any buildings, and is secured by fencing. The other areas of the Site include: portions of the Union Pacific Railroad right-of-way, between 14th and 10th Streets; a narrow strip of the property occupied by Coast Produce; and a residencial property at the corner of Wilson and 14th Streets. Since 1991, several site assessments have been conducted. These assessments involved mostly surface soil sampling and analyses for metals including lead, antimony, and arsenic. In 1996, the Property was paved with three inches of asphalt to prevent exposure of the public to contaminated soil. In addition, DTSC collected several surface soil samples in the areas surrounding the Property. Extremely high levels of lead (up to 574,000 ppm), antimony (up to 14,000 ppm), and arsenic (up to 920 ppm) were detected in the narrow strip along the southern and western boundaries of the Property; high levels of lead, copper, and zinc were detected along the railroad right-of-way; and elevated levels of lead (up to 1,450 ppm) were detected on the residential property. A Consent Order (Imminent and Substantial Endangerment) was entered into with Quemetco Inc., (an RSR Subsidiary) and Union Pacific Railroad Company. As required by the Order, in 1977, Quemetco completed an Emergency Removal Action at Areas 3 and 4 which are located at the perimeter of the Property and the residential property. Union Pacific has also conducted an Emergency Removal Action at Areas 1 and 2 (railroad right-of-wau). The Remedial Investigation found the extent of metal contamination. Currently, the Draft RAW, which proposes to place a 4-inch asphalt cover on the Property area and excavate soil, from the Site boundary, has been approved. The 30 day Public Comment Period starts on August 23 and ends September 22, 2004.

Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 06/13/2003
Comments: DTSC approves PEA Report. The PEA investigative activities conducted at the former smeltingsite identified arsenic (3410 mg/kg), and lead (25,700 mg/kg). DTSC concluded that the current conditions (building and pavement intact, no exposed soil) at the Site does not pose a potential threat to industrial workers. Due to elevated levels of the above-mentioned metals in the soil, if there is any demolition of the buidling or parking lot, or development at the Site, the responsible party(s) will be required to submit a Removal Action Workplan or Remedial Action Plan to DTSC for approval.

Background Info:	The Southern California Gas (SCG), Olympic Base Site was once a gas manufacturing plant where oil was converted into gas for lighting, heating, and cooking. Residues from the gasification process, mainly consisting of a material "lamp black", were were discovered at the site. "Lamp Black" contains varying amounts of a family of compounds called polynuclear or polycyclic aromatic hydrocarbons (PNAs or PAHs). The plant was built in the period 1907-1908 by the City Gas Company. In 1908, the Domestic Gas Company purchased and took over the operations of City Gas. In 1910, SCG was incorporated and became the successor of Domestic Gas. SCG operated the plant until 1927, when the service for 100% natural gas started.

OLYMPIC BASE (Continued) **S105689611**

The plant operated on a standby basis until 1952, when all gas manufacturing operations ceased and the plant was dismantled. SCG has administrative facilities on other portions of the facility.
A Consent Order was signed in December 1986, which addressed the work needed to complete the Remedial Investigation/-Feasibility Study (RI/FS) process. The RI report was approved by the Department on September 17, 1987. The RI found that soil from about 2 to 12 feet below ground surface is contaminated. The contaminants are not readily vaporized, nor do they enter aqueous phase solution. Groundwater aquifers beneath the site are unsaturated to a depth of 90 feet. Air monitoring at the site does not indicate that the contaminants are emitting vapors to the air. SCG then submitted a FS report in May 1988. DHS has reviewed the FS report and requested a full Health Risk Assessment (HRA) based on appropriate biological receptors and exposure pathways on October 20, 1988. The HRA was approved by the Department on June 4, 1990. The FS was revised by SCG and the report approved on July 19, 1990.
The RP submitted a draft RAP on August 20, 1990, as requested by the Department. The Department has published a fact sheet on the findings of the RI/FS. The RAP meeting with the community was held on November 17, 1990 and the RAP was subsequently approved in January of 1991.
The RAP proposed an asphalt cap on the site, groundwater monitoring, and a deed restriction. Groundwater monitoring is necessary as the region the site is located in is currently experiencing a drought; however, if this should change the groundwater table will rise, possibly impacting the conclusions of the RI. The deed restriction, protected the integrity of the cap by limiting land use and excavation of the waste.
The Department directed the RP to prepare a Remedial Design and Implementation (RD&I) plan. The plan included engineering specifications for the asphalt cap, permits, and a schedule for completion of the cap. The cap will be repaired as necessary; necessary; it is expected to require replacement every ten years. This operation and maintenance program will last for 20 years.

CA BOND EXP. PLAN:

Reponsible Party:	RESPONSIBLE PARTY-LEAD SITE CLEANUP WORKPLAN
Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	Southern California Gas has entered into a consent order with DHS for oversight/monitoring of its cleanup efforts. DHS has budgeted $50,000 for direct costs related to the project. DHS will recover 100 percent of direct costs plus staff costs and overhead related to the project. The responsible parties will pay all costs associated with site cleanup.
Site Description:	The Olympic Base facility, currently owned by Southern California Gas Company, is the site of a former oil gasification "towne gas" plant.
Hazardous Waste Desc:	The wastes are generally characterized as polynuclear or polycyclic aromatic hydrocarbons (PNAs or PAHs). Other constituents of concern are cyanide, lead, and semivolatile organics. Soil contamination is present at the site from the surface to a depth of 10 to 15 feet in both the northern and southern portions of the site.
Threat To Public Health & Env:	The primary concern is potential contamination of ground water. Usable ground water lies approximately 200 feet below the ground surface and the water table may rise to only 100 feet below the site. Ground water contamination has not been verified. Surface soil contamination may migrate offsite due to airborne particulates.
Site Activity Status:	The Southern California Gas Company has completed a remedial investigation/feasibility study.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Hazardous Waste Summary:
Waste code: 181
Waste name: 181

Waste code: 281
Waste name: 281

Waste code: 291
Waste name: 291

Waste code: 331
Waste name: 331

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D008
Waste name: LEAD

Corrective Action Summary:

SOUTHERN CALIFORNIA GAS COMPANY-OLYMPIC (Continued) **1000166039**

Event date: 06/30/1995
Event: RFA Completed

Event date: 06/30/1997
Event: Stabilization Measures Evaluation,This facility is not amenable to stabilization activity at the present time for reasons other than 1- it appears to be technically infeasible or inappropriate (NF) or 2- there is a lack of technical information (IN). Reasons for this conclusion may be the status of closure at the facility, the degree of risk, timing considerations, the status of corrective action work at the facility, or other administrative considerations.

Event date: 06/30/1997
Event: CA Prioritization, Facility or area was assigned a low corrective action priority.

Event date: 07/09/2010
Event: CA550RC

Event date: 07/09/2010
Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.

Event date: 07/09/2010
Event: Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of significant changes at the facility.

Event date: 09/30/2011
Event: Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of significant changes at the facility.

Manufactured Gas Plants:

The Southern California Gas (SCG), Olympic Base Site was once a gas manufacturing plant where oil was converted into gas for lighting, heating, and cooking. Residues from the gasification process, mainly consisting of a material "lamp black", were weere discovered at the site. "Lamp Black" contains varying amounts of a family of compounds called polynuclear or polycyclic aromatic hydrocarbons (PNAs or PAHs). The plant was built in the period 1907-1908 by the City Gas Company. In 1908, the Domesttic Gas Company purchased and took over the operations of City Gas. In 1910, SCG was incorporated and became the successor of Domestic Gas. SCG operated the plant until 1927, when the service for 100% natural gas started. The plant operated on a stanndby basis until 1952, when all gas manufacturing operations ceased and the plant was dismantled. SCG has administrative facilities on other portions of the facility

Design Flow:	0
Baseline Flow:	0
Reclamation:	No reclamation requirements associated with this facility.
POTW:	The facility is not a POTW.
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Comments:	The site has been occupied by metal plating companies since 1943. Site soil and possibly groundwater is contaminated with heavy metals and cyanides. Also, there are four under- ground abandoned storage tanks at the site. The tanks were closed without proper regulatory involvement. site, staff recommends a PEA.

Comments:	Former name of this site was "California Reception Center - LAC". This 20+ acre site is being broken into two irregularly-shaped parcels, with no identifiable addresses. The establishment of 2 parcels will facilitate addressing future activities. This site will now be known as Los Angeles CRA - Sale Parcel "497A" and represents one of the parcels. The other Parcel is Alameda Corridor-Sale Parcel "497B". CalSites # 19400011. Parcel "497A" will be the project of the Los Angeles Community Redevelopment Agency (CRA). CRA, in their "Brownfields Program" will complete an RI/FS on the 497A Parcel, obtain a purchase option from the State of California, and solicit foster redevelopment of the site. Parcel "497B" will be the project of the Alameda Corridor Transportation Authority (ACTA). Please see CalSites #19400011 for further information on Parcel "497B".

Alternate Address:	2435 E. WASHINGTON BLVD.
Alternate City,St,Zip:	LOS ANGELES, CA 90021
Background Info:	The historic usage of the site is a railroad maintenance yard. Chlorinated solvents TCE and PCE have been identified in the soil along the border of the site with 2425 E. Washington Blvd. Possible pathways for contamination migration are soil and groundwater. Possible receptors are on-site workers and the population which may drink contaminated drinking water extracted from nearby drinking wells. Some shallow soil gas sampling has been performed on-site in 1995. This survey was concentrated along the border of 2455 E. Washington Blvd. Results showed decreasing contaminant concentrations with increasing distance from 2425 E. Washington Blvd. property boundry. No source was identified at the Amtrak property.
	Not reported
	An approximately 50-acres site located in an industrial/ commerical area of Los Angeles, one-half mile south of the Santa Monica freeway. The site is also known as the Redondo Junction Facility. Various buildings are located on the property for support and maintenance of trains. Rail Spurs

AMTRAK (Continued) **S101586462**

run throughout the property in a general north-south direction. The Los Angeles river is located directly to the east. Previous owner of the property from 1885 to 1976 was Atchison, Topeka, and Sante Fe Railroad Corporation.
Not reported
Investigation of this site is key to determining the extent of soil gas and groundwater contamination found on the adjacent property 2425 E. Washington Boulevard, known as State Surplus Parcel (SSL-497). A draft VCA was prepared by DTSC for recovery of oversight costs. A limited subsurface soil gas survey is proposed as a first step to determine extent of chlorinated solvent contamination and also to identify any contributing sources.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 10/25/2013
Date Data Arrived at EDR: 11/11/2013
Date Made Active in Reports: 01/28/2014
Number of Days to Update: 78

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/25/2013

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 10/25/2013
Date Data Arrived at EDR: 11/11/2013

Data Release Frequency: Quarterly

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/25/2013
Date Data Arrived at EDR: 11/11/2013
Date Made Active in Reports: 02/13/2014

Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 10/25/2013

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 09/10/2013

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 09/10/2013
Date Data Arrived at EDR: 10/02/2013
Date Made Active in Reports: 12/16/2013
Number of Days to Update: 75

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Last EDR Contact: 03/10/2014
Next Scheduled EDR Contact: 06/23/2014
Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 12/17/2013

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 12/04/2013

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

Data Release Frequency: Quarterly

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Data Release Frequency: No Update Planned

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

2020 COR ACTION: 2020 Corrective Action Program List
The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

EPA WATCH LIST: EPA WATCH LIST
EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)
The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR US Hist Cleaners: EDR Exclusive Historic Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data
Source: Rextag Strategies Corp.
Telephone: (281) 769-2247
U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities
Source: Department of Social Services
Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

Target Property Map:	34118-A2 LOS ANGELES, CA
Most Recent Revision:	1994

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

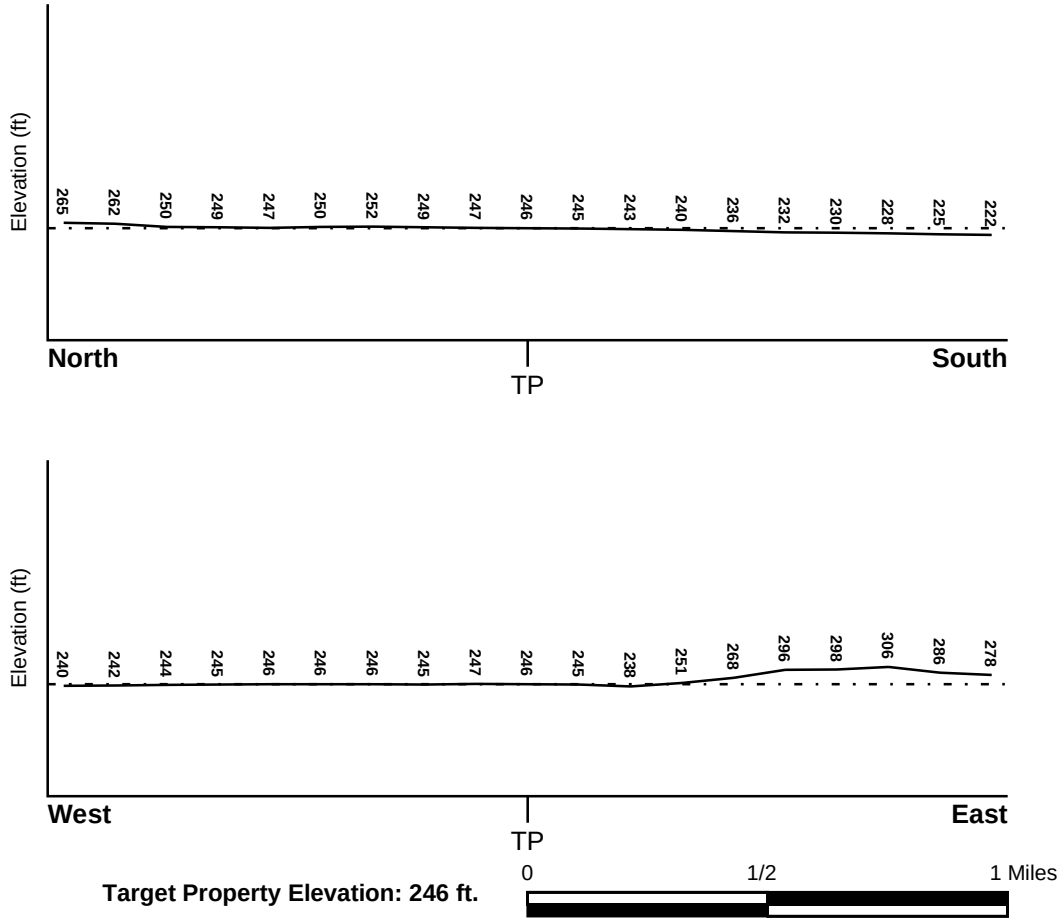
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 246 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
LOS ANGELES, CA	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 06037C - FEMA DFIRM Flood data

Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
LOS ANGELES	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
1	1/4 - 1/2 Mile South	Not Reported
2	1/2 - 1 Mile NE	SW

For additional site information, refer to Physical Setting Source Map Findings.

* ©1996 Site-specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
sandy loam
gravelly - sandy loam
silt loam
clay
fine sand
gravelly - sand
sand
fine sandy loam

Surficial Soil Types:
sandy loam
gravelly - sandy loam
silt loam
clay
fine sand
gravelly - sand
sand
fine sandy loam

Shallow Soil Types:
fine sandy loam
gravelly - loam
sandy clay
sandy clay loam
clay
silty clay
sand

Deeper Soil Types:
gravelly - sandy loam
sandy loam
very gravelly - sandy loam
stratified
very fine sandy loam
weathered bedrock
sand
gravelly - fine sandy loam
silty clay loam
clay loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 02/07/2017 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/12/2016 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/12/2016 has revealed that there are 14 RCRA-SQG sites within approximately 0.25 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/31/2016 has revealed that there are 29 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, has revealed that there are 4 SWF/LF sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/12/2016 has revealed that there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 2 EDR MGP sites within approximately 1 mile of the target property.

SO CAL GAS/OLYMPIC B	2424 E OLYMPIC BLVD	SE 1/2 - 1 (0.632 mi.)	Z115	274

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 14 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 3 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

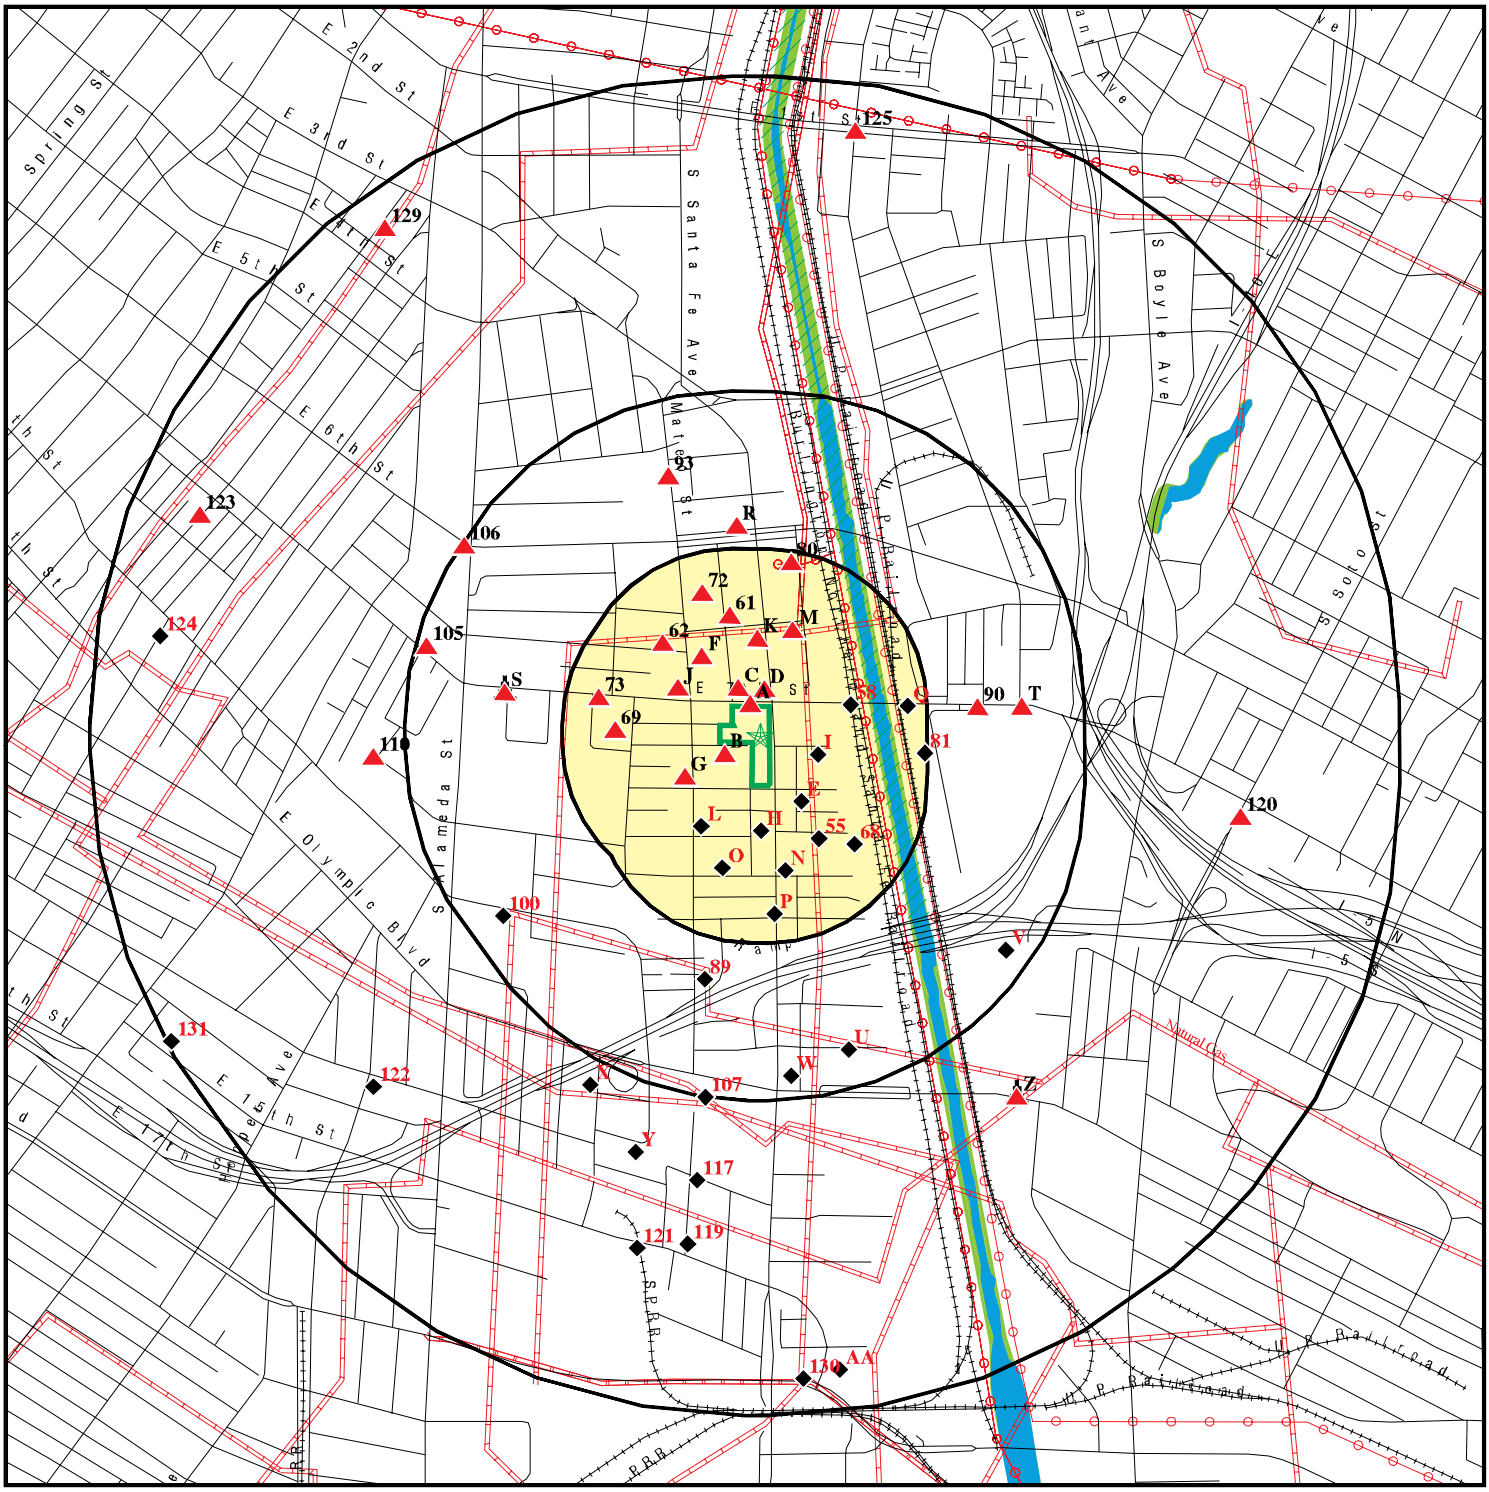
EXECUTIVE SUMMARY

Due to poor or inadequate address information, the following sites were not mapped. Count: 11 records.

Site Name	Database(s)
KEYSTONE FORD	RGA LUST
SANTA MONICA FORD	RGA LUST
CALTRANS I-105 FRWY PROJ 2,PCLS 10	RESPONSE, ENVIROSTOR CDL
PUREX CORP TURCO PRODS	SEMS-ARCHIVE
ACTA NORTH - PARCEL NE-009-SFGS	SLIC
ACTA NORTH - PARCEL NE-029-SFGS	SLIC
ACTA NORTH - PARCEL NE-019-SFGS	SLIC
DENA NEW PRIMARY CENTER	ENVIROSTOR, SCH
CENTRAL REGION HIGH SCHOOL #15	ENVIROSTOR, SCH
CALIFORNIA RECLAMATION/US BRASS (F	ENVIROSTOR

OVERVIEW MAP - 4945476.2S



- Target Property
- Sites at elevations higher than or equal to the target property
- Sites at elevations lower than the target property
- Manufactured Gas Plants
- National Priority List Sites
- Dept. Defense Sites
- Indian Reservations BIA
- Power transmission lines
- Pipelines
- 100-year flood zone
- 500-year flood zone
- National Wetland Inventory
- State Wetlands
- Areas of Concern

This report includes Interactive Map Layers to display and/or hide map information. The legend includes only those icons for the default map view.

SITE NAME:	Ford Factory	CLIENT:	Partner Engineering and Science, Inc.
ADDRESS:	821 S. Santa Fe Avenue, 2060 East 7th Street, 2030 Los Angeles CA 90021	CONTACT:	Thomas Campagna
LAT/LONG:	34.033742 / 118.230397	INQUIRY #:	4945476.2s

CA BOND EXP. PLAN:

Reponsible Party:	COST RECOVERY/OPERATION AND MAINTENANCE SITE
Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	DHS has utilized Bond funds to complete the remedial action. DHS is currently undertaking appropriate cost recovery actions.
Site Description:	This site was previously used to scrap electrical transformers.
Hazardous Waste Desc:	Polychlorinated biphenyls (PCBs) were detected in the soil.
Threat To Public Health & Env:	The remedial action has been completed. Soil contaminated with PCBs was excavated and redisposed of in a licensed landfill. There is no threat to public health and the environment.
Site Activity Status:	In August, 1985, the RP, Mr. Rodney Dean, pled no contest to three felony counts of illegal storage, transportation and disposal of hazardous wastes. Mr. Dean's probation required that the cleanup of the site be completed and

DEAN AND ASSOCIATES (Continued) **S100833562**

reported to the court. The RP retained a contractor for the cleanup and began the remedial actions. The contractors removed much of the contaminated soil. DHS completed the cleanup after the RP exhausted his financial resources. DHS is currently in the cost recovery stage.

FINDS:

Registry ID: 110002758766

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Document Type:	Preliminary Endangerment Assessment Report
Completed Date:	09/04/1996
Comments:	DTSC reviewed a Preliminary Endangerment Assessment for the site under a Voluntary Cleanup Agreement. Based on the information and data presented, DTSC determined that the hazardous constituents remaining at the site do not constitute a threat to human health or the environment.
Completed Area Name:	PROJECT WIDE

SANTA FE/W.A. GRANT (Continued) **S102860873**

Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 09/13/1995
Comments: The Department received a Non-Emergency Hazardous Substance Release Report dated January 31, 1995. Review of the document indicates that the site is contaminated with elevated levels of heavy metals such as lead, copper and zinc. Foundry operations existed at the site from at least 1906 until 1990, operated by W.G. Grant & Co. Santa Fe Railway is the current owner of the site. RP removed USTs from the site without any regulatory agency oversight. Due to evidence of a release, DTSC is recommending that a PEA be conducted to evaluate the site. On September 13, 1995, DTSC notified the RP thereof.

Completed Area Name: PROJECT WIDE

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

VOLKSWORKS (Continued) **1000272901**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Comments: OK

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 12/02/2013
Comments: Workplan approved to conduct sampling for data gaps.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 06/30/2014
Comments: Based on the elevated concentrations in the groundwater, DTSC requires submittal of a pilot study workplan that would evaluate potential remedies.

Completed Area Name: Shallow Soil
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 03/22/2016
Comments: The Completion Report summarizes the removal of underground storage tanks and shallow soil excavation. DTSC approved Report. Soil contamination at greater depth and groundwater contamination needs to be completed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 11/17/2013
Comments: Sampling activities have begun to delineate contamination.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Community Profile
Completed Date: 03/30/2016
Comments: Profile details Site information and community involvement activities. Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fact Sheets
Completed Date: 09/02/2015
Comments: The Factsheet will be distributed to the community informing them of the public comment period for the Draft Removal Action Workplan (RAW). Public comment period will occur from September 7 to October 7, 2015. The RAW describes cleanup options for the Site soil and a pilot study to test options for the deeper soil and groundwater.

BUTTERFIELD (SUN CHEMICAL CORPORATION) (Continued) **S105481902**

Unknown Type:	0
Alternate Address:	590 SOUTH SANTA FE AVENUE
Alternate City,St,Zip:	LOS ANGELES, CA 90013
Background Info:	The site is located at 590 South Santa Fe Avenue, Los Angeles, California. The site consists of two land parcels totaling approximately 2.68 actes of land and is located witin an indus- industrial portion of the City of Los Angeles. Historically the site has been used for chemeical or paint manufacturing. Not reported The site was formerly under the oversight of the California Regional Water Quality Control Board (CRWQCB). (CRWQCB) has overseen the site investiation and remediation since approximately 1986. Not reported Previous sampling activities have confirmed both soil and groundwater contamination. Contaminants of concern identified in the groundwater and soil include benzene, ethyl benzene, 1,1-dichlorethane, 1,1-dichloroethene, 4-methyl-2-pentanone (MIBK), toluene, and total xylene. The toluene, and xylene appear to be primarily located within the groundwater beneath the northern portion of the site whereas MIBK has been identified in the groundwater along the southwest corner of the site and may extend beyond the site boundary.

Completed Document Type:	Preliminary Endangerment Assessment Report
Completed Date:	05/20/1993
Comments:	The Department completed review of the PEA. A Manufactured Gas Plant (MGP) was operated at the site in the late 1800s and early 1900s. Gas was produced from crude oil for distribution in the site area. Several companies operated at the site. In 1909, the site was owned by the Los Angeles Gas and Electric Corp., which merged with the Southern Calfornia Gas Company in 1937. SoCalGas owned the property until 1976, and sold to the current owners. The MGP was dismantled sometime before 1906. The byproducts from the manufactured gas operation were tars, oils, sludges, and lampblack. Elevated levels of polycyclic aromatic hydro- carbons (PAH), heavy metals such as lead

FARMERS PRODUCE PROJECT INC (Continued) **S101584054**

and arsenic and cyanides were found at the site. The PEA concluded that there was contamination at the site above screening values. Therefore, the Department recommended that further investigation or assessment at the site was necessary.

Manufactured Gas Plants:

Site located at 725 Chemming Street, Los Angeles, California, approximately 2.5 acres. From 1887 util 1906 an oil gas plant was operated at site. MGP may have been converted to a natural gas storage site in approximately 1906. Records indicate that MMGP equipment may have been removed by 1930. Site is currently used as a Greyhound Bus parking lot.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Completed Date:	09/30/2009
Comments:	Not reported
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Land Use Restriction - Site Inspection/Visit
Completed Date:	10/17/2013
Comments:	Site visit for LUC completed. Cap appears intact.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	CEQA - Notice of Exemption
Completed Date:	10/21/2004
Comments:	NOE completed for Removal Action Workplan which describes installation of asphalt cap and soil removal.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Removal Action Completion Report
Completed Date:	10/10/2006
Comments:	Removal Action included placement of an asphalt cover in the property area and removal of 97 tons of soil contaminated with lead and arsenic.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Removal Action Workplan
Completed Date:	10/21/2004
Comments:	The RAW proposes to address the lead & arsenic contaminated soil by placing a four-inch asphalt cap on the property area (15,000 sq.ft.) and removing soil from nine impacted areas at the Site boundary. Implementation is scheduled for end of January 2005.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Remedial Investigation Report
Completed Date:	04/15/2003
Comments:	The Remedial Investigation is approved. The RI involved sampling of lead and other metals, and volatile organic compounds, particularly tetrachlorethene and 1,1,1-trichloroethane.

WESTERN LEAD AND METAL CO (INTERNATIONAL LEAD CO.) (Continued) **1001115052**

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Assessment Report
Completed Date: 06/30/1998
Comments: Completed a Preliminary Assessment (PA) with sampling of the site under contract with U.S. EPA.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 11/18/1997
Comments: Soil removal (excavation) of lead-contaminated soils. The Implementation Report for completion of the Emergency Removal Action by Quemetco at Area 3 (Coast Produce Warehouse) and Area 4 (Residential property at 2151 E. 14th Street) was approved. An estimated 120 tons of contaminated lead was excavated and disposed of off-site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 07/18/1997
Comments: UPRR: A removal action workplan (RAW-UPRR) was approved for Union Pacific Railroad track areas along Lemon Street (between 10th & 14th Streets). These areas are designated as Areas 1 & 2. A Notice of Exemption was also filed with the OPR as required by the CEQA laws and guidelines. The RAW-UPRR included excavation, treatment and disposal of contaminated soils in the neighboring railroad right-of-way (track) areas of the International Lead Company site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 06/25/1998
Comments: Excavation, treatment and disposal of 2,500 tons of metal contaminated soil from the UPRR rail track areas. The Implementation Report of Emergency Removal Action by Dames & Moore for Areas 1 and 2 was approved.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 07/18/1997
Comments: A removal action workplan (RAW-QUEMETCO) which proposed excavation and disposal of contaminated soils, was approved for Areas 3 and 4 (perimeter of Property and residential property). A Notice of exemption was also filed with the OPR as required by the CEQA laws and guidelines.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 11/07/1994
Comments: DTSC received an information letter for 3 possible hazardous substance release sites allegedly associated with Quemetco/ RSR Corporation, a lead smelting company.

Alternate Address:	2182 EAST 11TH STREET
Alternate City,St,Zip:	LOS ANGELES, CA 90021
Background Info:	The Site is also known as the Western Lead and Metal Company Site. The Site is located in an industrial area near downtown Los Angeles and is surrounded by warehouses, food distributors, light manufacturing, and scrap metal recyclers. The Site is roughly bounded by 11th Street (Property), to the north, the Union Pacific Railroad right-of-way to the east, 14th Street, to the south, and Wilson Street to the west. The Site includes the property at 2182 East 11th Street, which was occupied by several different companies as a lead smelter from 1946 to 1965. The Western Lead Products Company operated a lead smelter on the Property from 1954 to 1960 under the name of Western Lead and Metal Company. After 1965, the Property was used for die-cast manufacturing operations. The Property is approximately 110 feet by 140 feet and is currently devoid of any buildings, and is secured by fencing. The other areas of the Site include: portions of the Union Pacific Railroad right-of-way, between 14th and 10th Streets; a narrow strip of the property occupied by Coast Produce; and a residencial property at the corner of Wilson and 14th Streets. Since 1991, several site assessments have been conducted. These assessments involved mostly surface soil sampling and analyses for metals including lead, antimony, and arsenic. In 1996, the Property was paved with three inches of asphalt to prevent exposure of the public to contaminated soil. In addition, DTSC collected several surface soil samples in the areas surrounding the Property. Extremely high levels of lead (up to 574,000 ppm), antimony (up to 14,000 ppm), and arsenic (up to 920 ppm) were detected in the narrow strip along the southern and western boundaries of the Property; high levels of lead, copper, and zinc were detected along the railroad right-of-way; and elevated levels of lead (up to 1,450 ppm) were detected on the residential property. A Consent Order (Imminent and Substantial Endangerment) was entered into with Quemetco Inc., (an RSR Subsidiary) and Union Pacific Railroad Company.

WESTERN LEAD AND METAL CO (INTERNATIONAL LEAD CO.) (Continued) **1001115052**

As required by the Order, in 1977, Quemetco completed an Emergency Removal Action at Areas 3 and 4 which are located at the perimeter of the Property and the residential property. Union Pacific has also conducted an Emergency Removal Action at Areas 1 and 2 (railroad right-of-wau). The Remedial Investigation found the extent of metal contamination. Currently, the Draft RAW, which proposes to place a 4-inch asphalt cover on the Property area and excavate soil, from the Site boundary, has been approved. The 30 day Public Comment Period starts on August 23 and ends September 22, 2004.

Corrective Action Summary:
Event date: 06/30/1995
Event: RFA Completed

Event date: 06/30/1997
Event: CA Prioritization, Facility or area was assigned a low corrective action priority.

Event date: 06/30/1997
Event: Stabilization Measures Evaluation,This facility is not amenable to stabilization activity at the present time for reasons other than 1- it appears to be technically infeasible or inappropriate (NF) or 2- there is a lack of technical information (IN). Reasons for this conclusion may be the status of closure at the facility, the degree of risk, timing considerations, the status of corrective action work at the facility, or other administrative considerations.

Event date: 07/09/2010
Event: Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of significant changes at the facility.

Event date: 07/09/2010
Event: CA550RC

Event date: 07/09/2010
Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information

SOUTHERN CALIFORNIA GAS COMPANY (Continued) **1000166039**

contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.

Event date: 09/30/2011
Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.

CA BOND EXP. PLAN:
Reponsible Party: RESPONSIBLE PARTY-LEAD SITE CLEANUP WORKPLAN
Project Revenue Source Company: Not reported
Project Revenue Source Addr: Not reported
Project Revenue Source City,St,Zip: Not reported
Project Revenue Source Desc: Southern California Gas has entered into a consent order with DHS for oversight/monitoring of its cleanup efforts. DHS has budgeted $50,000 for direct costs related to the project. DHS will recover 100 percent of direct costs plus staff costs and overhead related to the project. The responsible parties will pay all costs associated with site cleanup.
Site Description: The Olympic Base facility, currently owned by Southern California Gas Company, is the site of a former oil gasification "towne gas" plant.
Hazardous Waste Desc: The wastes are generally characterized as polynuclear or polycyclic aromatic hydrocarbons (PNAs or PAHs). Other constituents of concern are cyanide, lead, and semivolatile organics. Soil contamination is present at the site from the surface to a depth of 10 to 15 feet in both the northern and southern portions of the site.
Threat To Public Health & Env: The primary concern is potential contamination of ground water. Usable ground water lies approximately 200 feet below the ground surface and the water table may rise to only 100 feet below the site. Ground water contamination has not been verified. Surface soil contamination may migrate offsite due to airborne particulates.
Site Activity Status: The Southern California Gas Company has completed a remedial investigation/feasibility study.

Manufactured Gas Plants:

The Southern California Gas (SCG), Olympic Base Site was once a gas manufacturing plant where oil was converted into gas for lighting, heating, and cooking. Residues from the gasification process, mainly consisting of a material "lamp black", were weere discovered at the site. "Lamp Black" contains varying amounts of a family of compounds called polynuclear or polycyclic aromatic hydrocarbons (PNAs or PAHs). The plant was built in the period 1907-1908 by the City Gas Company. In 1908, the Domesttic Gas Company purchased and took over the operations of City Gas. In 1910, SCG was incorporated and became the successor of Domestic Gas. SCG operated the plant until 1927, when the service for 100% natural gas started. The plant operated on a stanndby basis until 1952, when all gas manufacturing operations ceased and the plant was dismantled. SCG has administrative facilities on other portions of the facility

Background Info:	The Southern California Gas (SCG), Olympic Base Site was once a gas manufacturing plant where oil was converted into gas for lighting, heating, and cooking. Residues from the gasification process, mainly consisting of a material "lamp black", were were discovered at the site. "Lamp Black" contains varying amounts of a family of compounds called polynuclear or polycyclic aromatic hydrocarbons (PNAs or PAHs). The plant was built in the period 1907-1908 by the City Gas Company. In 1908, the Domestic Gas Company purchased and took over the operations of City Gas. In 1910, SCG was incorporated and became the successor of Domestic Gas. SCG operated the plant until 1927, when the service for 100% natural gas started. The plant operated on a standby basis until 1952, when all gas manufacturing operations ceased and the plant was dismantled. SCG has administrative facilities on other portions of the facility. A Consent Order was signed in December 1986, which addressed the work needed to complete the Remedial Investigation/-Feasibility Study (RI/FS) process. The RI report was approved by the Department on September 17, 1987. The RI found that soil

OLYMPIC BASE (Continued) **S105689611**

from about 2 to 12 feet below ground surface is contaminated. The contaminants are not readily vaporized, nor do they enter aqueous phase solution. Groundwater aquifers beneath the site are unsaturated to a depth of 90 feet. Air monitoring at the site does not indicate that the contaminants are emitting vapors to the air. SCG then submitted a FS report in May 1988. DHS has reviewed the FS report and requested a full Health Risk Assessment (HRA) based on appropriate biological receptors and exposure pathways on October 20, 1988. The HRA was approved by the Department on June 4, 1990. The FS was revised by SCG and the report approved on July 19, 1990.
The RP submitted a draft RAP on August 20, 1990, as requested by the Department. The Department has published a fact sheet on the findings of the RI/FS. The RAP meeting with the community was held on November 17, 1990 and the RAP was subsequently approved in January of 1991.
The RAP proposed an asphalt cap on the site, groundwater monitoring, and a deed restriction. Groundwater monitoring is necessary as the region the site is located in is currently experiencing a drought; however, if this should change the groundwater table will rise, possibly impacting the conclusions of the RI. The deed restriction, protected the integrity of the cap by limiting land use and excavation of the waste.
The Department directed the RP to prepare a Remedial Design and Implementation (RD&I) plan. The plan included engineering specifications for the asphalt cap, permits, and a schedule for completion of the cap. The cap will be repaired as necessary; necessary; it is expected to require replacement every ten years. This operation and maintenance program will last for 20 years.

EASTERN SMELTING AND REFINING SITE (Continued) **S106568216**

Completed Date: 06/13/2003
Comments: DTSC approves PEA Report. The PEA investigative activities conducted at the former smelting site identified arsenic (3410 mg/kg), and lead (25,700 mg/kg). DTSC concluded that the current conditions (building and pavement intact, no exposed soil) at the Site does not pose a potential threat to industrial workers. Due to elevated levels of the above-mentioned metals in the soil, if there is any demolition of the buidling or parking lot, or development at the Site, the responsible party(s) will be required to submit a Removal Action Workplan or Remedial Action Plan to DTSC for approval.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Assessment Report
Completed Date: 06/30/1998
Comments: Completed a Preliminary Assessment (PA) of the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 11/07/1994
Comments: DTSC received an information letter for 3 possible hazardous substance release sites allegedly associated with Quemetco/RSR Corp, a lead smelter.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Voluntary Cleanup Agreement
Completed Date: 09/19/2000
Comments: DTSC entered into a Voluntary Cleanup Agreement (Agreement) (Docket Number HSA-A 99/00-171) with Whittaker Corporation (Proponent) to conduct a Preliminary Endangerment Assessment.

Reclamation:	No reclamation requirements associated with this facility.
POTW:	The facility is not a POTW.
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Case Type:	Cleanup Program Site
Case Worker:	JL
Local Agency:	Not reported
RB Case Number:	1290
File Location:	Regional Board
Potential Media Affected:	Aquifer used for drinking water supply, Contaminated Surface / Structure, Soil, Soil Vapor
Potential Contaminants of Concern:	Tetrachloroethylene (PCE), Trichloroethylene (TCE), Chromium, Chromium VI
Site History:	Plating operations started in the mid-1910s in the southwestern portion of the Site until 2005. Ace Plating owned and conducted plating related operations on the 11 contiguous parcels, specifically electrochemical coating of metal parts. Numerous assessments conducted at the site indicate that the soil is impacted with VOCs and metals. The soil vapor has been sampled throughout the Site with tetrachloroethene (PCE) concentrations at 5 feet below ground surface (bgs) ranging from 7.9 micrograms per liter (a%g/L) to 87 a%g/L. The soil vapor data is limited at depths greater than 30 feet bgs. At 60 feet bgs and below, PCE concentrations range from 39 a%g/L below the Assembly Room to 127 a%g/L offsite on Crocker Street. The lateral extent of shallow PCE greater than 12 a%g/L is only defined on the east side. The source of the PCE is unknown but slightly higher concentrations exist in the central portions of the Plating Rooms. Chromium concentrations ranged from 1.5 mg/kg to 4,300 mg/kg for total chromium and from 0.92 to 840 mg/kg for hexavalent chromium. The maximum concentrations were both collected from SSVW-2 at 1 foot bgs located in the alley between the Crocker Street and Towne Avenue buildings and is adjacent to the location of the former chromium tanks. Outside of the area impacted by the former chromium tanks, the maximum chromium concentration is 4200 mg/kg for total chromium and 94 mg/kg for hexavalent chromium at MW-1. Degreasers that contained PCE were utilized in Plating Rooms 1 and 2 from 1993 to 2001. The

FORMER ACE PLATING (Continued) **S105632824**

maximum PCE concentration is 0.150 mg/kg and was sampled 4 feet deep in the vicinity of the former nickel dip tank in Plating Room 2. Two groundwater monitoring wells have been installed. Hexavalent chromium was not detected above the laboratory detection limits in any of the groundwater samples collected. Tetrachloroethylene (PCE) and 1,1-dichloroethene are the only VOC detected in groundwater, with the maximum concentration detected in MW-3 at a concentration of 33 ug/L and 2.7 ug/L, respectively.

Alternate Address: 2435 E. WASHINGTON BLVD.
Alternate City,St,Zip: LOS ANGELES, CA 90021
Background Info: The historic usage of the site is a railroad maintenance yard. Chlorinated solvents TCE and PCE have been identified in the soil along the border of the site with 2425 E. Washington Blvd. Possible pathways for contamination migration are soil and groundwater. Possible receptors are on-site workers and the population which may drink contaminated drinking water extracted from nearby drinking wells. Some shallow soil gas sampling has been performed on-site in 1995. This survey was concentrated along the border of 2455 E. Washington Blvd. Results showed decreasing contaminant concentrations with increasing distance from 2425 E. Washington Blvd. property boundry. No source was identified at the Amtrak property.
Not reported
An approximately 50-acres site located in an industrial/ commerical area of Los Angeles, one-half mile south of the Santa Monica freeway. The site is also known as the Redondo Junction Facility. Various buildings are located on the property for support and maintenance of trains. Rail Spurs run throughout the property in a general north-south direction. The Los Angeles river is located directly to the east. Previous owner of the property from 1885 to 1976 was Atchison, Topeka, and Sante Fe Railroad Corporation.
Not reported
Investigation of this site is key to determining the extent of soil gas and groundwater contamination found on the adjacent property 2425 E. Washington Boulevard, known as State Surplus Parcel (SSL-497). A draft VCA was prepared by DTSC for recovery of oversight costs. A limited subsurface soil gas survey is proposed as a first step to

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Comments: Former name of this site was "California Reception Center - LAC". This 20+ acre site is being broken into two irregularly-shaped parcels, with no identifiable addresses. The establishment of 2 parcels will facilitate addressing future activities. This site will now be known as Los Angeles CRA - Sale Parcel "497A" and represents one of the parcels. The other Parcel is Alameda Corridor-Sale Parcel "497B". CalSites # 19400011. Parcel "497A" will be the project of the Los Angeles Community Redevelopment Agency (CRA). CRA, in their "Brownfields Program" will complete an RI/FS on the 497A Parcel, obtain a purchase option from the State of California, and solicit foster redevelopment of the site. Parcel "497B" will be the project of the Alameda Corridor Transportation Authority (ACTA). Please see CalSites #19400011 for further information on Parcel "497B".

Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Completion Report
Completed Date: 10/30/1992
Comments: While excavating the eastern area and demolishing all existing buildings, other areas were discovered to be contaminated with lead and VOCs (April'94). As a result the total volume of material excavated and removed prior to legislative cancellation of the prison project (Sept'92) was about 40,000 tons. Stabilization measures were also taken, including the implementation of dust control, fensing and posting, and site security. Further investigation and remediation was stopped due to lack of funds.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Plan
Completed Date: 03/04/1992
Comments: Bid Package 1B-Hazardous Waste Remedial Action (RAP) completed by K/J/C. The RAP was developed for the shallow soil excavation in the eastern area of the site with a cleanup level of 10 ppm.

Completed Date:	10/30/1987
Comments:	Lockwood-Singh and Associates completed the Preliminary Site Assessment (Phase I) report under contract by the California Department of Corrections (CDC).
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Public Participation Plan / Community Relations Plan
Completed Date:	04/27/1995
Comments:	DTSC prepared a Public Participation Plan.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Preliminary Endangerment Assessment Report
Completed Date:	10/30/1994
Comments:	DTSC completed a PEA and recommended further action at the site. This included further remedial activities, public participation and PRP search.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Remedial Action Completion Report
Completed Date:	10/30/1992
Comments:	While excavating the eastern area and demolishing all existing buildings, other areas were discovered to be contaminated with lead and VOCs (April'94). As a result the total volume of material excavated and removed prior to legislative cancellation of the prison

CROWN COACH (Continued) **S106568222**

project (Sept'92) was about 40,000 tons. Stabilization measures were also taken, including the implementation of dust control, fensing and posting, and site security. Further investigation and remediation was stopped due to lack of funds.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Plan
Completed Date: 03/04/1992
Comments: Bid Package 1B-Hazardous Waste Remedial Action (RAP) completed by K/J/C. The RAP was developed for the shallow soil excavation in the eastern area of the site with a cleanup level of 10 ppm.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Supplemental Site Investigation Report
Completed Date: 05/31/1988
Comments: Kennedy/Jenks/Chilton completed the Site Assessment and Investigation report under contract by the CDC.

ALAMEDA CORRIDOR-SALE PARCEL 497B (Continued) **S106568223**

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Remedial Action Plan
Completed Date:	06/25/1999
Comments:	Remedial Action Plan and Remedial Design completed for Operable Unit No. 1. Remedial Action commenced on 06/26/99 to remove surface soils contaminated with lead, arsenic, and PCBs.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Remedial Investigation / Feasibility Study
Completed Date:	04/23/1999
Comments:	Remedial Investigation for Operable Unit 1 and Operable Unit 2 completed.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Voluntary Cleanup Agreement
Completed Date:	02/05/1998
Comments:	DTSC and the Alameda Corridor Transportation Authority executed a Voluntary Cleanup Agreement (VCA) for the site, which is a 4.4-acre parcel of the former California Reception Center site (aka State Surplus Sale Parcel 497). DTSC will oversee completion of a Remedial Investigation/Feasibility Study (RI/FS), remediation of the site.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/05/2017

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 04/05/2017

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 12/12/2016
Date Data Arrived at EDR: 12/28/2016

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 12/12/2016

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing

The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

821 S. SANTA FE AVENUE, 2060 EAST 7TH STREET, 2030
LOS ANGELES, CA 90021

TARGET PROPERTY COORDINATES

Latitude (North):	34.033742 - 34° 2' 1.47''
Longitude (West):	118.230397 - 118° 13' 49.43''
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	386414.6
UTM Y (Meters):	3766385.2
Elevation:	246 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5630795 LOS ANGELES, CA
Version Date:	2012
Northwest Map:	5630741 HOLLYWOOD, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

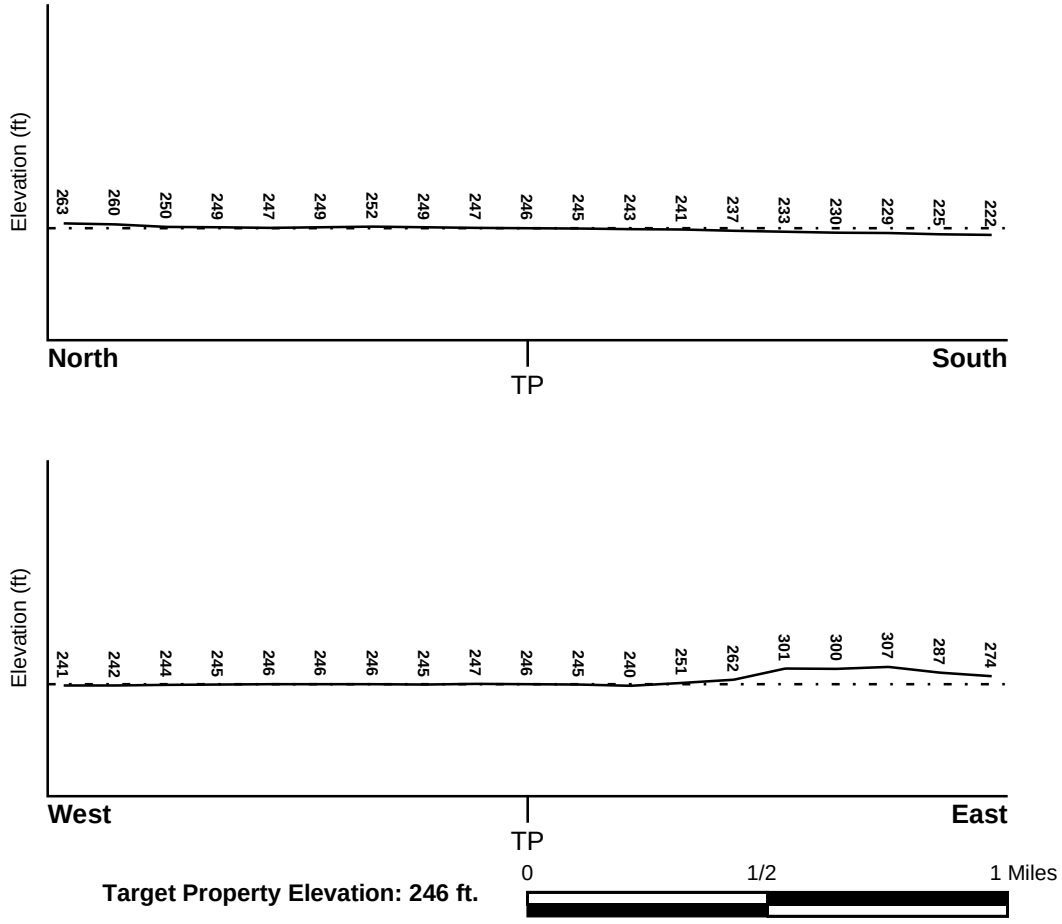
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 246 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06037C1636F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06037C1637F	FEMA FIRM Flood data
06037C1638F	FEMA FIRM Flood data
06037C1639F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
LOS ANGELES	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
1	1/2 - 1 Mile South	Not Reported
2	1/2 - 1 Mile ENE	SW

For additional site information, refer to Physical Setting Source Map Findings.

* ©1996 Site-specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
sandy loam
gravelly - sandy loam
silt loam
clay
fine sand
gravelly - sand
sand
fine sandy loam

Surficial Soil Types:
sandy loam
gravelly - sandy loam
silt loam
clay
fine sand
gravelly - sand
sand
fine sandy loam

Shallow Soil Types:
fine sandy loam
gravelly - loam
sandy clay
sandy clay loam
clay
silty clay
sand

Deeper Soil Types:
gravelly - sandy loam
sandy loam
very gravelly - sandy loam
stratified
very fine sandy loam
weathered bedrock
sand
gravelly - fine sandy loam
silty clay loam
clay loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

APPENDIX D: QUALIFICATIONS

PARTNER

Nasim Ahmed, REA
Partner Associate

Education
Bachelor of Science, Chemical Engineering, BUET, Bangladesh
Master of Science, Chemical Engineering, University of Southern California

Registrations
California Registered Environmental Assessor (REA I- 08051)

Summary of Professional Experience
Mr. Ahmed has 13 years experience in the environmental service industry. He is familiar with all aspects of Due Diligence Property Assessments and the needs and requirements of varied number of reporting standards, including the standard ASTM, EPA's All Appropriate Inquiry (AAI), and customized client formats. Mr. Ahmed is a certified AHERA Asbestos Building Inspector with experience developing and implementing asbestos, lead-based paint, PCB, and radon Operations & Maintenance (O&M) Programs. Mr. Ahmed has also performed Phase II Subsurface Investigations, Regulatory Compliance Assessments, and Property Condition Assessments.

Project experience for Mr. Ahmed includes:
- Provided daily client support and management of environmental, engineering and associated projects in the due diligence process.
- Client management duties have included assessment of current and potential collateral properties for applicable due diligence requirements, with "cradle to grave" client support of projects through loan closing (including addressing client concerns, comments and revisions).
- Performed daily Quality Assurance/Quality Control (QA/QC) and technical reviews of Phase I Environmental Site Assessment reports performed throughout the United States.
- Performed Phase I ESAs, Phase II Subsurface Investigations, and Regulatory Compliance Assessments on numerous multi-acre, multi-tenant industrial, multi-family residential, commercial office, retail and multi-regional retail mall complexes.
- Performed subsurface evaluation, including but not limited to, evaluation of current and historical dry cleaning operations, current and historical industrial operations, and gasoline service operations at commercial and industrial properties.
- Developed and implemented asbestos, lead-based paint, lead in water, and radon Operations and Maintenance (O&M) Programs.

Finally, Mr. Nasim's diversity across residential, industrial, and commercial environments is a major contribution to Partner Engineering and Science's Associate team in the Southwest region of the United States.

Brian A. Dugan
Principal
Senior Project Manager

Education

Bachelor of Science, Environmental Science, Rutgers University, Cook College, New Brunswick, New Jersey

Registrations

Environmental Protection Agency (EPA) / Asbestos Hazard Emergency Response Act (AHERA) Accredited Asbestos Building Inspector

Asbestos Management Planner, State of Ohio, Department of Health, Asbestos Hazard Evaluation Specialist (Certificate No. ES35190)

Highlights

18 years in the real estate due diligence consulting industry
Phase I Environmental Site Assessments
Transaction Screen Assessments (TSA)
Property Condition Assessments (PCAs)
Experienced in Commercial Mortgage Backed Securities (CMBS), Equity, Fannie Mae and Freddie Mac ESAs and PCAs.

Experience Summary

Mr. Dugan serves as a National Senior Project Manager for Partner Engineering & Science, Inc. (Partner), and is a Principal of the firm. Mr. Dugan has played an integral role in the due diligence process for a wide range of equity clients, CMBS lenders, and leading nationwide banks. His responsibilities include project oversight, staff supervision, employee training, report review and client management. Mr. Dugan is responsible for ensuring consistency and quality of due diligence services, providing senior review expertise to ensure conformance with most recent American Society of Testing and Materials (ASTM) standards and U.S, EPA's All Appropriate Inquiry (AAI), and the satisfaction of client requirements for Phase I ESAs, TSAs, RSRA, PCAs, SRAs and Agency services related to Fannie Mae and Freddie Mac.

Mr. Dugan began his career as a Project Staffer, conducting Phase I ESA, TSAs and PCAs throughout the Northeast United States. His due diligence resume includes experience in Operation and Management (O&M) Program development, soil and groundwater contamination investigations, radon measurement and mitigation, and the identification of underground storage tanks (USTs), asbestos, lead-based paint, and PCB contamination. Mr. Dugan previously was retained by a national due diligence firm to perform technical report reviews, project management and support technical relationship management. Mr. Dugan joined Partner in 2010 and has operated as a Senior Project Manager for both environmental and building science services. Over the past 18 years, Mr. Dugan has successfully performed, reviewed or managed due diligence projects on thousands of properties throughout the United States, Canada, Mexico and in Europe.

Project Experience

Multi-Family Apartment Portfolio; 36 Site Portfolio. Mr. Dugan managed multiple ESA and PCA scope assessments that were performed on apartment complexes in the eastern Unites States for a National Lender according to the Fannie Mae scope of work. Management included staffing assessors, coordinating assessments, technical review and delivery within a two week timeframe.

Doud BTS Industrial Portfolio; 27 Site Portfolio. Mr. Dugan managed multiple ESA and PCA scope assessments that were performed on industrial complexes located throughout the Unites States for a National CMBS Lender. Management included staffing assessors, coordinating assessments, technical review and delivery.

Marine Terrace, Astoria, New York. Mr. Dugan managed this Freddie Mac ESA and PCA scope assessment that included environmental services including New York State Department of Environmental Conservation (NYSDEC) file reviews of former underground storage tanks and Spills cases. The site included an ongoing spills investigation and remediation. Analysis included evaluating and discussing with client the potential liabilities remaining from historical heating oil storage onsite. The Property Condition Assessment included a reserve analysis incorporating post renovation budgeting and improvements.

High-Rise Mixed Use Building, New York, NY. Mr. Dugan managed this ESA and PCA scope assessment on a 40-story structure built in 1911-1915 and comprised of 1,900,000 square feet total of building area.

Training

OSHA 40-Hour Health and Safety Training

Highlights

Over 16 years in the environmental and engineering consulting industry
Founder member of Partner Engineering and Science, Inc.
Executive Board Member of Partner Engineering and Science, Inc.

Experience Summary

Ms. Redlin has more than 16 years of experience in the environmental and engineering consulting industry. Her background in environmental science, in addition to her knowledge of current commercial real estate due diligence standards, allows her to offer the most efficient and cost-effective means of regulatory compliance. Ms. Redlin has extensive experience managing all aspects of due diligence, specializing in environmental due diligence, for nationwide and local clients such as:

- Residential Developers
- Commercial Developers
- Mortgage Brokers
- Real Estate Brokers
- Individual Property Owners and Buyers
- Financial Institutions including:
- Portfolio Lenders
- SBA Lenders
- HUD Lenders
- Fannie Mae Lenders
- Freddie Mac Lenders
- Private Equity Funds
- Insurance Lenders

Ms. Redlin has gained valuable knowledge and know-how from having been personally involved in the details of thousands of real estate transactions for various client types, and therefore understands the specific needs and scopes of work required for all parties involved in a transaction.

Ms. Redlin has served as an environmental scientist, project manager, or executive senior author on over 15,000 real estate transactions. Ms. Redlin's due diligence resume includes experience at all levels, advising lenders and real estate investors through the following product types:

- Phase I Environmental Site Assessments

- Phase II Subsurface Investigations
- Phase III Site Characterizations
- Remedial Cost Estimates
- Remediation Design and Implementation
- Environmental Transaction Screens
- Property Condition Assessments
- Probable Maximum Loss Assessments
- Property Condition Evaluations

Real estate investors, redevelopment agencies, financial institutions, insurance lenders, and real estate equity funds have come to rely on her advice and judgment to help them with their real estate business decisions. Ms. Redlin is a dedicated professional who takes pride and pleasure in meeting her client's needs and spearheading and assembling the team with the expertise to handle any issue that may come up during the transaction.

Project Experience

Ms. Redlin has extensive experience in testing soil, soil gas, and groundwater in the context of a real estate transaction, as well as under the supervision of state and federal regulators. Among her specialties is guiding landowners and prospective purchasers through the process of selling or acquiring an environmentally challenged site.

Ms. Redlin has participated in the characterization of groundwater and soil contamination; quarterly groundwater monitoring; implementation of various systems such as soil vapor extraction systems, dual phase extraction systems, ozone sparging, air sparging, pump and treat; and soil excavation projects such as tank removals at several clean-up sites in Los Angeles and Orange County.

Ms. Redlin also has extensive experience in environmental compliance monitoring and biological consulting. She has extensive experience working as an independent contractor for and in conjunction with state and local agencies such as Santa Barbara County Parks, California Department of Fish and Game, California Public Utilities Commission, Los Angeles Water and Sanitation and others. This included monitoring construction activities near sensitive biological receptors; containing, quantifying and reporting any hazardous material spills that occurred; working with construction crews to ensure compliance with environmental permit regulations as well as reporting to interested parties on the progress and compliance of the project.

Distinctions

Real Estate Forum- Woman of Influence 2012

Ms. Redlin was named by the Los Angeles Business Journal for Women Making a Difference in 2010.

Ms. Redlin has been designated a 2009 California Mortgage Bankers Association (CMBA) Future Leader.

Ms. Redlin was named Real Estate Southern California Woman of Influence in 2008 for her role in the area's commercial real estate transactions.

Ms. Redlin was one of only two consultants asked to sit on the Risk Managers Association (RMA) Credit Committee roundtable which discussed the effects of the new Federal All Appropriate Inquiries (AAI) standard on Phase I Environmental Site Assessments.

Ms. Redlin received an Industry Profile of Distinction in Brownfield Renewal.

APPENDIX E
USER QUESTIONNAIRE

USER QUESTIONNAIRE:

Property Address: 2020 and 2040 East 7th Place and 2045 Violet Street, Los Angeles, CA

The user of this environmental assessment must provide the following information:

1. **Environmental cleanup liens that are filed or recorded against the site**

   Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?

   No Knowledge

2. **Activity and land use limitations (AULs) that are in place on the site or that have been filed or recorded in a registry**

   Are you aware of any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?

   No Knowledge

3. **Specialized knowledge or experience**

   Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

   No Knowledge

4. **Relationship of the purchase price to the fair market value of the property if it were not contaminated**

   Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?

   No Knowledge

5. Commonly known or reasonably ascertainable information about the property

a. Do you know the past uses of the property?

No Knowledge

b. Do you know of specific chemicals that are present or once were present at the property?

No Knowledge

c. Do you know of spills or other chemical releases that have taken place at the property?

No Knowledge

d. Do you know of any environmental cleanups that have taken place at the property?

No Knowledge

6. The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation

Based on your knowledge and experience related to the property, are there any obvious indicators that point to the presence or likely presence of contamination at the property?

No Knowledge

APPENDIX F
QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

RAMBOLL

ENVIRONMENT & HEALTH

EDDIE ARSLANIAN

Managing Principal – Southwest Business Unit

Eddie Arslanian has over 20 years of professional experience in providing technical and management expertise in environmental consulting and engineering to help clients understand their environmental liabilities and evaluate their risks. His clients include law firms, financial institutions, insurance companies, real estate investment trusts (REITs) and commercial/industrial businesses. Eddie has designed, implemented and managed various phases of site characterizations, feasibility studies, remediation design and implementation, indoor air testing, health risk assessments and fate and transport studies at contaminated sites under the oversight of various federal, state and local environmental regulatory agencies. He has also managed and performed environmental due diligence of aerospace, biotech, chemical, manufacturing and healthcare facilities, nurseries, and multi-tenant and light industrial business parks as part of corporate mergers and acquisitions and commercial real estate transactions throughout the US, as well as in Europe and Mexico. As part of the due diligence process, he has evaluated environmental liabilities for subsurface contamination issues and compliance issues regarding air, wastewater, waste, and health and safety.

PROJECTS

Site Investigation and Remediation

- Assisted a developer with the redevelopment of a former pen manufacturing facility in Santa Monica, California with VOC impacts to underlying soil, soil vapor, and groundwater. Although an *in situ* thermal treatment remediation program had been implemented at the site to the satisfaction of the LARWQCB, residual VOC impacts remained in subsurface soil and soil vapor. Accordingly, a soil management plan was prepared to properly handle soils during earthwork activities and to minimize off-site disposal costs. Further, designed and implemented a sub-slab depressurization system (SSDS) to address the potential for VOC vapor intrusion into the existing on-site buildings.
- Designed and managed the implementation of site characterizations, remediation, and health risk assessments for the redevelopment of a shopping center in Pleasant Hill, California under the oversight of the San Francisco Bay Regional Water Quality Control Board (SFRWQCB). The work was conducted for the developer of the shopping center and involved decommissioning a former auto care facility, which included the removal of hydraulic lifts containing polychlorinated biphenyls (PCBs), above-ground and underground storage tanks (USTs), and clarifiers. Remediation activities included “hot-spot” soil

BS, Civil/Environmental Engineering, University of California, Irvine, 1995

COURSES/CERTIFICATIONS

Professional Engineer (Civil) California

excavations to address soils impacted by total petroleum hydrocarbons (TPH), volatile organic compounds (VOCs), and PCBs, as well as in situ injections of sodium permanganate to address VOC-impacted groundwater. As part of obtaining a "no further action" (NFA) designation for the site from the SFRWQCB, assisted client with respect to finalization of the deed restriction for the site.

- Designed and managed the site characterization, health risk assessments, and the interim remediation plan (IRAP) for a former industrial site in Torrance, California with known VOC impacts to underlying soil and groundwater. Work was initially conducted under the oversight of the Los Angeles Regional Water Quality Control Board and was later transferred to the California Environmental Protection Agency's Department of Toxic Substances Control (DTSC). As part of the IRAP, implemented a sub-slab venting system to address vapor intrusion issues within the building at the site. As part of the feasibility study, performed a treatability study for various oxidants and the design and implementation of an *in situ* pilot study involving activated persulfate. Due to the sensitivity of the site characterization, which involves a significant amount of work on adjacent properties due to the dispersion of the VOCs in groundwater, interfaced with public relations firm and community members to alleviate environmental concerns. The work is still ongoing under the oversight of the DTSC.
- Managed the implementation of a remediation project at a site in Los Angeles, California where soil and groundwater had been impacted by petroleum hydrocarbons including methyl tert-butyl ether (MTBE) and other fuel oxygenates. The remediation involved soil vapor extraction (SVE) for soils and bioslurping of gasoline free product from select groundwater monitoring wells. The work was conducted under the oversight of the LARWQCB. The work also involved coordination with the California Underground Storage Tank Fund for reimbursement of environmental expenses.
- Designed and managed a Resource Conservation and Recovery Act (RCRA) Facility Investigation and Corrective Measures study of a tanker truck washing facility in Carson, California under a DTSC Corrective Action Consent Agreement. Contaminants evaluated in the subsurface included VOCs and toxaphene. The work, which is currently ongoing, involved the preparation of a site conceptual model, health risk assessment, contaminant fate and transport modeling, as well as the preparation of a Corrective Measures Study (CMS) report involving various corrective measures to address separate source areas/chemicals of potential concern associated with the site. As part of the work, two separate interim measures were implemented consisting of (1) in situ ozone sparging to remediate VOCs in groundwater within one of the source areas and to control off-site VOC migration and (2) SVE to remediate VOCs within the vadose zone on a portion of the site located adjacent to residences and to address potential VOC vapor intrusion.
- Assisted a developer with the redevelopment of a property in South Gate, California that was formerly used for concrete pipe manufacturing. A soil management plan was initially prepared to guide earthwork. Although the site had received a NFA letter for soil with unrestricted use from the DTSC, shortly after grading activities the first of several areas of soil impacted with TPH, VOCs, and semivolatile organic compounds (SVOCs) were encountered. To keep the project on track and avoid costly penalties for missed tenant pad deadlines, aggressive excavations were conducted of impacted areas. At final count, a total of 24,749 tons of impacted soil were removed and disposed off-site. In areas where building pads were proposed, soil gas surveys were completed as an additional assurance for future tenants that the risk to site workers was well below commonly accepted standards.
- Provided strategic oversight on the design and implementation of subsurface investigations and remedial planning of a site in Lakewood, California with PCE releases to underlying soil and groundwater. As part of the oversight efforts, assisted with the planning/design/implementation of the SVE system, as well as the design and implementation of a treatability study for various oxidants and an *in situ* pilot studies involving persulfate and potassium permanganate. The work is being conducted under the oversight of the LARWQCB.

- Designed and managed several site investigation and remediation projects involving SVE at dry cleaning facilities in California. Successfully obtained NFA designations for the sites from environmental agencies including the LARWQCB and the County of Los Angeles Fire Department – Health Hazardous Materials Division (County Fire Department).
- Assisted developer in Culver City with the redevelopment of a site that had underlying petroleum hydrocarbon impacts to soil, soil vapor, and groundwater from a nearby gasoline service station. Effort involved overseeing mass excavation and performing routine air monitoring, advising contractor on proper segregation of soils. Due to the elevated petroleum hydrocarbon impacted soils in certain areas, certain mass excavation activities were performed in Level C with respirators.
- Designed and managed the implementation of a remedial action workplan (RAW) for a site in Norco, California where groundwater was impacted with VOCs, perchlorate, and N-Nitrosodimethylamine (NDMA). The remedial action involved the use of 2-PHASE™ extraction to treat impacted soil vapors and groundwater. All work was conducted under the oversight of DTSC.
- Designed and managed site investigations and the preparation of a feasibility study and a remedial action plan (RAP) for an acetone recycling facility in Los Angeles, California under the oversight of DTSC. The remedial action plan called for in situ and ex situ treatment of soils by SVE. The work was performed on behalf of a potential responsible party (PRP) group.
- Assisted a tenant with decommissioning of its sulfur prilling facility at the Port of Long Beach in California. Efforts involved characterization of sulfur waste material, preparation of a soil management plan to guide earthwork activities, oversight of site demolition including the abatement of asbestos, lead-based paint, and mold from building structures. During demolition activities, assisted client with management of separate waste streams including sulfur-impacted soil/concrete/wood.
- Designed and managed subsurface soil investigations, as well as the preparation and implementation of soil excavation plans to address asbestos-impacted soils at sites in San Bernardino, California. The work was performed under the oversight of the South Coast Air Quality Management District (SCAQMD) under a Procedure 5 Plan. The work also included negotiating with SCAQMD to designate a portion of the site as an asbestos inactive waste site pursuant to National Emission Standards for Hazardous Air Pollutants Rule 61.151.
- Oversaw the closure of an industrial facility in Vernon, California with known soil impacts of arsenic and VOCs. The work involved conducting site-wide soil and soil gas sampling, on-site monitoring for soils, decommissioning of various clarifiers and sumps, soil excavations, abandoning a former water well, and performing a human health risk assessment under the oversight of the city of Vernon – Environmental Health and Control Department.
- Managed the site characterization and remediation as part of the sale of a paper mill facility in Pomona, California. The work was conducted under the oversight of the County Fire Department and involved soil and soil gas sampling, soil excavation, as well as the preparation of a soil management plan and screening human health risk assessment. Successfully achieved a NFA designation from the County Fire Department for the facility under a tight timeframe.
- Managed several UST removal projects including soil sampling and excavations at sites in California under the oversight of the Los Angeles County – Department of Public Works and other city agencies.
- Designed, managed, and participated in various subsurface investigations in the evaluation of metals, PCBs, polynuclear aromatic hydrocarbons, petroleum hydrocarbons, and chlorinated solvents impact to soil and groundwater at sites throughout Arizona and California. Subsurface investigations involved soil vapor surveys, cone penetrometer testing (CPT), membrane interphase probe (MIP) investigations, soil and groundwater sampling, and installation of groundwater monitoring wells.
- Managed fate and transport modeling efforts as they relate to petroleum hydrocarbons and chlorinated solvents in groundwater. One of these projects involved the fingerprinting and age-dating of petroleum hydrocarbons from a commingled groundwater plume.

Due Diligence

- Developed and managed the environmental due diligence program for a major life insurance company's nationwide portfolio of real estate assets.
- Managed a team of professionals in the process of evaluating environmental liabilities and remediation budgets of a former aerospace manufacturing facility in California under extremely tight deadline. The site has been impacted with various VOCs, TPH, metals, emerging chemicals (NDMA and 1,4-dioxane), and radioactive wastes. The assignment also included a methane evaluation, as well as asbestos, lead-based paint, and indoor air quality assessments. The work was conducted on behalf of the site's buyer, which developed it into a commercial business park.
- Managed the environmental due diligence of six nurseries located throughout California, Georgia, North Carolina, Ohio, and Oregon, and evaluated issues related to subsurface impacts by former uses of pesticides, as well as on-going operational compliance issues.
- Assisted a buyer of a former industrial facility in southern California that was significantly impacted by chlorinated solvents in soil and groundwater. Post-acquisition efforts included oversight of the remediation of the vadose zone with in situ thermal treatment and evaluation of human health risk assessments to assess various future redevelopment scenarios. The work was conducted under the oversight of the LARWQCB.
- Assisted buyer of a former industrial facility that was undergoing investigations and remediation of VOCs, metals, and PCBs under the oversight of the DTSC in Los Angeles, California. Issues that were evaluated included the deed restriction, short term remediation including deep soil excavation, long term remediation of groundwater including in situ injections of molasses, as well as potential vapor intrusion issues.
- Managed the environmental due diligence of an approximately 20-acre pet food manufacturing facility in Vernon, California. Former operations at the facility involved gasoline stations; automobile repair and maintenance facilities; an oil tank farm; foundries; machine shops; a cleaning product manufacturing facility; a mineral processing facility; wool and leather products manufacturing facilities; and numerous meat processing and packing facilities.
- Managed the environmental due diligence of radiopharmaceutical manufacturing facilities in Texas. As part of the due diligence, evaluated the conditions and financial assurance requirements of its radioactive materials license issued by the Texas Department of State Health Services.
- As part of a business auction, managed a team in evaluating environmental liabilities at eight food product manufacturing facilities located in California, Missouri, New Mexico, New York, and Texas. Primary compliance issues involved air, wastewater, health and safety, and risk management plans.
- Managed and implemented several mold surveys at apartment complex facilities in California to assist client in risk management and for capital improvement planning.
- Managed several asbestos surveys at sites in California and advised client on abatement methods, notification procedures, and contractor selection.
- Prepared projected cost scenarios for soil and groundwater remediation at various sites in the US and in Europe. Cost scenarios have included the remediation of asbestos, PCBs, chlorinated solvents, petroleum hydrocarbons, and metals in soil and/or groundwater.

Litigation Support and Mediation

- Assisted client counsel in preparation of report and served as percipient witness in depositions on a case involving the cause of subsurface groundwater contamination of volatile organic compounds at a site in Carson, California. Issues involved standard of care during drilling and installation of groundwater monitoring wells, source of contamination, and estimated damages. Designated as an expert witness on the case.

- Assisted client counsel in preparation of report and served as percipient witness in a deposition on a case involving reimbursement of remediation costs incurred as a result of redevelopment of a site in South Gate, California.
- As part of an eminent domain action, developed remedial action options and cost estimates for a former commercial/industrial property in Los Angeles, California that was to be redeveloped as a public school institution.
- Assisted counsel on the preparation of an expert report in a case involving the standard of environmental due diligence and the amount of environmental reserve that should had been set aside for the remediation at a steel mill and other facilities formerly located on a property in Los Angeles, California that was to be converted to residential and commercial use.
- Assisted a potential responsible party on review of RCRA Facility Investigations and potential cost allocations of a former pesticide manufacturing facility in northern California. The work is being done under a Corrective Action Consent Agreement with the DTSC.
- Conducted historical investigations and managed subsurface soil investigations, as part of potential litigation and settlement discussions, to evaluate the extent of buried asbestos at a former asbestos manufacturing facility in San Bernardino, California.
- Assisted counsel with regard to the presence and origin of slag- and tar-like material found at a site in Carson, California. The effort included forensic fuel-fingerprint analysis on the slab and tar samples to age-date the samples.

Compliance Assistance

- Assisted manufacturing facilities with compliance issues as they relate to their wastewater discharges. Such assistance included negotiations with regulatory agencies including the Los Angeles County Sanitation District for higher discharge limits.
- Provided assistance to facilities with regard to storm water issues in accordance with the Los Angeles County Standard Urban Storm Water Mitigation Plan (SUSMP). Such assistance has included the evaluation of best management practices (BMPs), as well as design issues for storm water infiltration basins.
- Assisted commercial property owner in the City of Mountain View, California with evaluation of its sanitary sewer discharge to comply with city requirements.
- Provided assistance to a retail shopping center in Malibu, California to comply with its Waste Discharge Requirements (WDR) permit issued by the LARWQCB relating to groundwater monitoring to assess potential impacts from an on-site leachfield that discharges treated wastewater.
- Provided assistance to chemical manufacturing facilities to help them comply with the Toxic Substance Control Act.
- Assisted a Japanese client with potential waste characterization issues as it relates to products that they plan to import to the US.

Other Projects

- Managed the repair and upgrade activities related to USTs and their components to comply with SB989 requirements.
- Managed and implemented indoor air quality testing activities for sites with underlying soil and groundwater impacts with VOCs.
- Managed a team of architects and engineers to obtain Leadership in Energy and Environmental Design (LEED) certification from the US Green Building Council for a learning center building located in Torrance, California.

AMY MANION

Senior Managing Consultant

Amy Manion is a California-licensed Professional Geologist and Certified Hydrogeologist with over ten years of experience in environmental consulting and geology. During her time at Ramboll, she has focused on the characterization and remediation of subsurface contamination in soil, soil vapor, and groundwater. She has designed, managed, and implemented site characterization programs for properties in California and Nevada in several industries, including aerospace, metal plating, and chemical manufacturing. She has directed field investigations under the oversight of local, state, and federal environmental regulatory agencies, including installation of monitoring, injection, and extraction wells, large-scale excavations and property redevelopment, soil, soil vapor, groundwater, and indoor air sampling and monitoring, and operation and maintenance of remediation systems. Amy has developed conceptual site models, remedial investigation reports and action plans, treatability and feasibility studies, risk assessments, and performed environmental due diligence and indoor air evaluations. Prior to joining Ramboll, she worked as a staff scientist for a remediation company in New Jersey and as a laboratory assistant at a radiocarbon dating facility in Florida.

CAREER

2008-2010
Field Scientist/Senior Field Scientist, EWMA, LLC
Parsippany, New Jersey

2007-2008
Laboratory Assistant, Beta Analytic
Miami, Florida

EDUCATION

2004-2008
BS, Geology and Marine Science
University of Miami, Coral Gables, United States

COURSES/CERTIFICATIONS

Professional Geologist - California, 2013-2018
Certified Hydrogeologist – California, 2017 to 2018
OSHA 40-hour Hazardous Waste Operations and Emergency Response Standard - HAZWOPER
American Red Cross Adult CPR & First Aid Training

PROJECTS

2018-Present
Redevelopment of Former Auto Service Station
Project Manager
Managed site investigation, excavation, and risk assessment work for a property undergoing redevelopment in Culver City, California. Conducted pre-construction soil characterization to minimize disposal fees. Evaluated the distribution of VOCs and TPH in groundwater, soil, and soil vapor as a result of impacted groundwater migrating from a neighboring property, and engaged the LARWQCB. Developed a soil management plan and supervised earthwork activities, which included monitoring soil for impacts and separation of soil for different disposal facilities. Prepared health and safety guidance related to environmental issues for all contractors working at the site, and managed a vapor intrusion and risk evaluation for future building occupants.

2016-Present
Former Chlorate and Perchlorate Production Facility
Lead Field Geologist
Supervised a team of geologists during a 15+ month comprehensive subsurface characterization field program in Henderson, Nevada in accordance with a consent agreement with Nevada Division of Environmental Protection (NDEP). Characterization efforts spanned an approximately 350-acre site and approximately 2.5 miles in the downgradient direction toward a municipal water source. Implemented soil logging quality control procedures, identified geologic formations and paleochannels, determined well screen intervals, and communicated results to regulators, project team members, and client representatives. Evaluated the distribution of chemicals of concern (perchlorate, chlorate, VOCs, and metals including hexavalent chromium) in the subsurface for a comprehensive remedial investigation report through the preparation of cross-sections, boring logs, and contour maps.

2014-2017
Aerospace Manufacturing Facility
Project Manager
Managed site characterization efforts at a metal plating and anodizing facility in Compton, California under a DTSC Voluntary Cleanup Agreement that included a Phase I ESA, development and implementation of a Site Characterization Work Plan, presentation of findings at the DTSC, evaluation of local and regional geology and hydrogeology, and submittal of a Site Characterization Report. Chemicals of concern included VOCs, metals including hexavalent chromium, petroleum hydrocarbons, 1,4-dioxane, and cyanide.

2010-Present
Former Metal Plating Facility
Project Manager/Geologist
Wrote and implemented several workplans for a former metal plating facility in Torrance, California with known VOC impacts to soil and groundwater. Investigations included the use of sonic drilling with telescoping casings to locate groundwater bearing zones and semi-confining clay layers, soil vapor probe installation and soil sampling beneath the building footprint, IAQ sampling and monitoring well installation at a nearby property, and soil gas surveying with mobile and stationary laboratories using syringe and SUMMA canister sampling methods.

2010-2015
Former Laboratory/Testing Site
Project Geologist
Supervised a high profile drilling project in a residential neighborhood in Norco, California that included the use of ARCH drilling techniques in bedrock and utilized downhole video cameras to log rock type and fractures. Performed indoor air quality sampling, soil vapor sampling, and oversight of sub-slab depressurization system installation at neighboring residences.

2010-Present
Former Aerospace Manufacturing Site
Project Manager/Geologist
Managed and conducted semi-annual groundwater monitoring and reporting in accordance with a LARWQCB Clean-Up and Abatement Order for a former aerospace manufacturing facility in Burbank and Glendale, California impacted with hexavalent chromium and chlorinated solvents. Oversaw and reported on the installation of tensiometers for use in characterizing a sitewide clay layer. Conducted regulatory file reviews of local site remediation strategy and efficacy.

2010-2016
Former Chemical Manufacturing Facility
Project Geologist
Prepared costs, planned, and implemented several workplans to install groundwater monitoring wells, soil vapor extraction wells, and multi-depth soil vapor probes at a former chemical manufacturing facility in Vernon, California. Collected samples for VOCs and compound specific isotope analysis of chlorinated solvents, prepared geologic cross-sections, and evaluated the presence of multiple regional aquifers beneath the site.

2010-2015
Former Concrete Pipe Manufacturer
Project Geologist
Led large scale, time-sensitive excavations of TPH, VOC, and SVOC impacted soil at a former concrete pipe manufacturer in South Gate, California. Worked with the construction and development companies on the project to determine time and cost effective strategies for excavation; participated in client meetings and provided supporting documentation for client insurance claims. Oversaw the removal of part of the 24,749 tons of soil excavated from the site, and assisted in coordinating the removal of previously unknown USTs.

2011-2016
Truck Washing Facility
Project Geologist
Led subsurface investigation and remediation efforts at a truck washing facility in Carson, California under a DTSC Corrective Action Consent Agreement. Supervised the installation of 91 ozone injection wells, 29 monitoring wells, and a soil vapor extraction system, while coordinating semi-annual groundwater sampling efforts and training junior staff.

RAMBOLL

ENVIRONMENT & HEALTH

STEPHANIE T ECKELMAN

Senior Consultant

Stephanie Eckelman has over 18 years of experience in environmental consulting. She has conducted soil, groundwater, and soil vapor investigations for Phase II and groundwater monitoring programs. Stephanie has conducted many ASTM Phase I environmental and due diligence site assessments of commercial, industrial and residential properties.

EDUCATION

1994-1999
BS, Environmental Studies
State of New York College of Environmental Sciences and Forestry, Syracuse, United States

COURSES/CERTIFICATIONS

OSHA 40-hour Hazardous Waste Operations and Emergency Response Standard - HAZWOPER, 2000-2018

SELECTED PROJECTS

2000-2018
Phase I Environmental Site Assessments
Conducted over 100 Phase I ESAs of various commercial and industrial facilities to identify environmental liabilities. Facility types have included: vacant properties, office buildings, residential complexes, warehouses, daycares, dietary supplement manufacturers, medical equipment manufacturing, aerospace parts manufacturing, and auto storage and maintenance.

2000-2018
Field Investigations
Responsible for numerous field investigations involving collection of soil, soil gas, and groundwater samples, as well as decommissioning of wells at sites including small commercial facilities.

2010-2018
Waste Audits
Responsible for numerous field waste audits specializing in hazardous waste characterization, identification and proper disposal. Facility types have included remote cable satellite offices, retail stores and transmission centres.

Ramboll
350 S Grand Avenue
Suite 2800
Los Angeles, CA 90071
United States of America

2000-2018
Boring Log Software Expertise
Conceptualized, generated, altered and updated numerous templates for boring log and groundwater well log graphics for approximately 80 subsurface investigations.

2016-2017
Lead Based Paint Investigations
Responsible for numerous lead-based paint investigations, sampling and reporting for various industry clientele.

2006-2011
Rocket Fuel Contaminated Property Investigation
Conducted soil sampling, surface water runoff sampling, groundwater sampling, soil vapor sampling and groundwater pump tests at a 1000-acre property contaminated with rocket fuel components.

2007-2009
Storm Water Pollution Prevention Monitoring
Conducted Storm Water Pollution Prevention Plan monitoring including pre- and post-storm surface inspection on a large oil field.

2006-2008
City of Los Angeles Wastewater Treatment Submittal Management
Prepared and submitted Wastewater Treatment Surcharge Statements and tracked Wastewater Treatment Surcharge Quarterly Reports for a facility in South Los Angeles.

2008
Water Management
Researched and prepared report detailing various Urban Water Management Plans in the Central Basin.
