Ms. Linda S. Rankin
AT&T Mobility, LLC
600 E. Green St., Room 300
Pasadena, CA 91101

**Subject: Phase I Environmental Site Assessment, 316 N. Juanita Ave.
316 N. Juanita Avenue, Los Angeles, California
EBI Project # 1118004048**

To Whom It May Concern:

Attached please find *EBI's Phase I Environmental Site Assessment*, (the *Report*) for the above-mentioned asset (the Subject Property). During the property survey and research, *EBI's* property surveyor met with agents representing the Subject Property, or agents of the owner, and reviewed the property and its history. The *Report* was completed according to the terms and conditions authorized by you, the Client. This *Report* has been completed in general conformance with ASTM E 1527-13 and *AT&T Mobility, LLC's* Scope of Work.

The exclusive purpose of this *Report* is to observe the general physical condition and maintenance status of the property, to suggest repair or maintenance items considered customary for the property to continue in its current operation compared to properties of similar age and condition, and to assist *AT&T Mobility, LLC*, in its pre-sale effort in evaluating their Property.

This *Report* was performed utilizing methods and procedures consistent with established commercial practices and in conformance with industry standards. The suggestions represent *EBI Consulting's* opinion based on written, graphic or verbal information, the property condition and data available to us at the time of the survey. Factual information regarding operations, conditions or data provided by the Client, occupants, owner or their representative has been assumed to be correct and complete.

There are no intended or unintended third party beneficiaries to this report, except as expressly stated herein.

EBI Consulting is an independent contractor, not an employee of either the issuer or the borrower, and its compensation was not based on the findings or recommendations made in the *Report* or on the closing of any business transaction.

EBI Consulting declares that, to the best of our professional knowledge and belief, *EBI* meets the definition of Environmental Professional as defined in §312.10 of 40 CFR 312 and *EBI* has the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. *EBI Consulting* has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Thank you for the opportunity to prepare this *Report*, and assist you with this project. Please call us if you have any questions or if *EBI Consulting* may be of further assistance.

Respectfully Submitted,
EBI CONSULTING

EXECUTIVE SUMMARY

At the request of AT&T Mobility, LLC, EBI has performed a Phase I Environmental Site Assessment (ESA) of the property located at 316 N. Juanita Avenue in Los Angeles, California, herein referred to as the Subject Property. The main objective of this ESA was to identify *recognized environmental conditions* in connection with the Subject Property, defined in ASTM Practice E 1527-13 as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: 1) due to any release to the environment, 2) under conditions indicative of a release to the environment, or 3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions. This ESA also includes a preliminary evaluation of certain potential environmental conditions that are outside the scope of ASTM Practice E 1527-13.

The Subject Property includes a 1.93± acre parcel improved with three single-story structures that include a 5,402± square foot administration building, a 2,160± square foot vehicle maintenance building and a 300± square foot storage building constructed 1960 – 1981. The buildings occupy approximately 10 percent of the parcel area and the rest of the land is paved and used primarily for parking, access and limited storage. The parcel is entirely enclosed by a chain-link fence with municipal sidewalks outside the fence on the northeast, east and west boundaries. Although the administration building located on the west side was originally constructed to include a wash rack and maintenance storage, these areas have been converted to administrative uses with only a small storage area remaining on the east side of this structure. The vehicle maintenance building located near the center of the site is equipped with three auto bays and three aboveground hydraulic auto lifts and overhead lines (oil, water and air) to service vehicles. An overhang is located on the west side of this building with two cargo storage containers (used and new tires) and a wood structure (used for training to install satellites dishes) on the east side. The small storage building is located on the northeast corner of the site and used primarily to store cables and electronics.

At the time of assessment, the Subject Property was solely occupied by AT&T and used for administration, vehicle maintenance and storage. There are currently no manufacturing or fueling operations conducted at the Subject Property.

Below is the Assessment Summary Table presenting our recommended actions for the Subject Property. EBI’s Findings and Opinions are presented in Section 8.0, and recommendations for further action or investigation are presented in Section 9.0.

ASSESSMENT SUMMARY TABLE 316 N. JUANITA AVE. 316 N. JUANITA AVENUE, LOS ANGELES, CALIFORNIA								
ASSESSMENT COMPONENT	SECTION	NO FURTHER ACTION	REC	HREC	CREC	OTHER	RECOMMENDED ACTION	ESTIMATED COST
Current Occupants/ Operations	2.3, 5.0	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Conduct a Phase II Environmental Site Assessment to evaluate potential impact to soil and groundwater in the area of the vehicle maintenance building of former hydraulic lifts, oil/water separator and former wash rack (south side of the administration building).	\$10,000 - \$15,000

I.0 INTRODUCTION

This report documents the findings, opinions, and conclusions of a Phase I Environmental Site Assessment (ESA) of the property located at 316 N. Juanita Avenue in Los Angeles, California.

I.1 PURPOSE

The purpose of this ESA was to identify *recognized environmental conditions* and certain environmental conditions outside the scope of ASTM Practice E 1527-13 in connection with the property at the time of the property reconnaissance.

I.2 SCOPE-OF-SERVICES

This ESA was conducted utilizing a standard of good commercial and customary practice that was consistent with the ASTM Practice E 1527-13. Any significant scope-of-work additions, deletions or deviations to ASTM Practice E 1527-13 are noted below or in the corresponding sections of this report. The scope-of-work for this assessment included an evaluation of the following:

- Physical characteristics of the Subject Property through a review of referenced sources for topographic, geologic, soils and hydrologic data.
- Subject Property history through a review of referenced sources such as land deeds, fire insurance maps, city directories, aerial photographs, prior reports, and interviews.
- Current Subject Property conditions, including observations and interviews regarding the following: the presence or absence of hazardous substances or petroleum products; generation, treatment, storage, or disposal of hazardous, regulated, or biomedical waste; equipment that utilizes oils which potentially contain PCBs; and storage tanks (aboveground and underground).
- Usage of surrounding area properties and the likelihood for releases of hazardous substances and petroleum products (if known and/or suspected) to migrate onto the Subject Property.
- Information in referenced environmental agency databases and local environmental records, within specified minimum search distances.
- Past ownership through a review of available prior reports and local municipal file review.

The scope-of-work also included consideration of the following potential environmental conditions that are outside the scope of ASTM Practice E 1527-13: asbestos-containing materials (ACM), lead-based paint (LBP), lead in drinking water and radon.

I.3 ASSUMPTIONS, LIMITATIONS AND EXCEPTIONS

This Phase I Environmental Site Assessment (the report) has been prepared for the use of AT&T Mobility, LLC, in accordance with our Standard Conditions for Engagement and Authorization Letter and Agreement for Environmental Services approved and signed by AT&T Mobility, LLC (the Agreement), and with the limitations described below, all of which are integral parts of this report. A copy of the signed Standard Conditions For Engagement and Authorization Letter and Agreement for Environmental Services is maintained at the EBI Consulting office in Burlington, Massachusetts. To the extent any provisions of this report conflict with the terms of the Agreement, the Agreement will control.

EBI has performed this Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Standard E 1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. This report was prepared with no exceptions or deletions from ASTM Standard E 1527-13.

This Phase I Environmental Site Assessment has been prepared to assess a parcel of commercial real estate with respect to the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) and petroleum products. As such, this practice is intended to permit AT&T Mobility, LLC to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability: that is, the practices that constitute “all appropriate inquiry into the previous ownership and uses of the Subject Property consistent with good commercial or customary practice” as defined in 42 U.S.C. § 9601(35)(B).

In defining a standard of good commercial and customary practice for conducting an environmental site assessment of a parcel of property, the goal of the processes established by this practice is to identify *recognized environmental conditions*. The term recognized environmental conditions means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property (1) due to a release to the environment, (2) under conditions that indicate an existing release or a past release, or (3) under conditions that pose a material threat of a future release of any hazardous substances or petroleum products into structures on the property or into the ground, ground water, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term does not include *de minimis conditions* that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

The information reported was obtained through sources deemed reasonably ascertainable, as defined in ASTM Standard E 1527-13; a visual site survey of areas readily observable, easily accessible or made accessible by the Subject Property contact and interviews with owners, agents, occupants, or other appropriate persons involved with the Subject Property and a review of standard federal, state, and tribal environmental record sources. Municipal information was obtained through review of reasonably ascertainable standard government record sources and interviews with the authorities having jurisdiction over the Subject Property. Findings, conclusions, and recommendations included in the report are based on our visual observations in the field, the standard environmental record sources and municipal information reasonably obtained, information provided by the Client, and/or a review of readily available and supplied documents and drawings. EBI relies completely on the information, whether written, graphic, or verbal, provided by the Subject Property contact or as shown on any documents reviewed or received from the Subject Property contact, owner or agent, or municipal source, and assumes that information to be true and correct unless the information is known to be inaccurate or if it is obvious, based on other information obtained as part of the assessment, that the information is not accurate. Although there may have been some degree of overlap in the information provided by these various sources, EBI did not attempt to verify independently the accuracy or completeness of all information reviewed or received during the course of these environmental services.

The information reported, as well as EBI’s findings, conclusions, and recommendations are based upon sources deemed reasonably ascertainable, as defined in ASTM Standard E 1527-13; a visual site survey of areas readily observable, easily accessible or made accessible by the Subject Property contact and interviews with owners, agents, occupants, or other appropriate persons involved with the Subject Property and a review of standard federal, state, and tribal environmental record sources. Municipal information was obtained through review of reasonably ascertainable standard government record sources and interviews with authorities having jurisdiction over the Subject Property. AT&T Mobility, LLC

agrees that EBI has no obligation to independently verify the accuracy or completeness of the information reviewed or received during the course of these environmental services.

EBI renders no opinion as to the presence of hazardous substances or petroleum products in, on or under un-surveyed and/or inaccessible portions of the Subject Property. Unsurveyed and inaccessible portions of the Subject Property are described below. In addition, EBI renders no opinion as to the presence of hazardous substances or petroleum products in, on or under the Subject Property where direct observation of the interior walls, floor, or ceiling of a structure was obstructed by objects or coverings on or over these surfaces.

EBI services and opinions are based on the scientific or technical tests or procedures specifically set forth in the scope of the Services described in this report. The ASTM Standard E 1527-13 does not encompass analytical testing to evaluate asbestos containing materials, radon, lead-based paint, drinking water quality, indoor air quality, stored chemicals, debris, fill materials, surface water, or subsurface samples (soil and groundwater) as part of a Phase I ESA. Because geologic and soil formations are inherently random, variable, and indeterminate in nature, the Services and opinions provided under this Agreement are not guaranteed to be a representation of actual conditions on the Subject Property, which are also subject to change with time as a result of natural or man-made processes, including water permeation. In performing the Services, EBI used that degree of care and skill ordinarily exercised by environmental consultants or engineers performing similar services in the same or similar locality at the same time and under similar circumstances. No other representation, expressed or implied, and no warranty or guarantee is included or intended. The report speaks only as of its date, in the absence of a specific written update of the report, signed and delivered by EBI. Additional information that becomes available after our survey and draft submission concerning the Subject Property should be provided to EBI so that our conclusions may be revised and modified if necessary, at additional cost.

Client and EBI agree that to the fullest extent permitted by law, EBI shall not be liable to Client for any special, indirect, consequential, punitive, exemplary, incidental or indirect damages or losses whatsoever, whether caused by EBI's negligence, errors, omissions, strict liability, breach of contract, breach of warranty or other cause or causes whatsoever.

The assessment was conducted in a manner consistent with the level of care and skill ordinarily exercised by members of the profession, and in accordance with generally accepted practices of other consultants currently practicing in the same locality under similar conditions.

I.4 SPECIAL TERMS AND CONDITIONS

The exclusive purpose of this Report is to observe the general physical condition and maintenance status of the property, to suggest repair or maintenance items considered customary for the property to continue in its current operation compared to properties of similar age and condition, and to assist AT&T Mobility, LLC, in its pre-sale effort in evaluating their Property.

This Report was performed utilizing methods and procedures consistent with established commercial practices and in conformance with industry standards. The suggestions represent EBI Consulting's opinion based on written, graphic or verbal information, the property condition and data available to us at the time of the survey. Factual information regarding operations, conditions or data provided by the Client, occupants, owner or their representative has been assumed to be correct and complete.

I.5 DATA GAPS

Any data gaps identified herein, as defined by ASTM Practice E1527-13 § 3.2.20, are not considered to have significantly affected the ability to identify recognized environmental conditions in connection with the Subject Property and do not alter the conclusions of this report.

2.0 SUBJECT PROPERTY DESCRIPTION

2.1 OWNERSHIP AND LOCATION

According to the Los Angeles County Assessor's Office, the Subject Property is owned by Pacific Bell / S B of E Par 2 Map 303-19-47.

The Subject Property is located at 316 N. Juanita Avenue in the City and County of Los Angeles, California. The Subject Property includes a 1.93±-acre, irregular-shaped parcel identified as Los Angeles County Assessor Parcel Number (APN) 5501-001-800. The Subject Property is located at the southwest corner of the intersection of North Madison Avenue and Oakwood Avenue and is enclosed by North Juanita Avenue on the west side. Figure 1 - Location Map depicts the location of the Subject Property on a street map of Los Angeles, California. Figure 2 - Locus Map depicts the location of the Subject Property on the Hollywood, California United States Geological Survey (USGS) 7.5 Minute Topographic Quadrangle. Figure 3 - Site Plan depicts the configuration of the Subject Property and adjoining properties.

2.2 SUBJECT PROPERTY IMPROVEMENTS

The Subject Property includes a 1.93± acre parcel improved with three single-story structures that include a 5,402± square foot administration building, a 2,160± square foot vehicle maintenance building and a 300± square foot storage building constructed 1960 – 1981. The buildings occupy approximately 10 percent of the parcel area and the rest of the land is paved and used primarily for parking, access and limited storage. The parcel is entirely enclosed by a chain-link fence with municipal sidewalks outside the fence on the northeast, east and west boundaries. Although the administration building locate on the west side was originally constructed to include a wash rack and maintenance storage, these areas have been converted to administrative uses with only a small storage area remaining on the east side of this structure. The vehicle maintenance building located near the center of the site is equipped with three auto bays and three aboveground hydraulic auto lifts and overhead lines (oil, water and air) to service vehicles. An overhang is located on the west side of this building with two cargo storage containers (used and new tires) and a wood structure (used for training to install satellites dishes) on the east side. The small storage building is located on the northeast corner of the site and used primarily to store cables and electronics.

2.3 CURRENT USE OF THE SUBJECT PROPERTY

At the time of assessment, the Subject Property was solely occupied by AT&T and used for administration, vehicle maintenance and storage. There are currently no manufacturing or fueling operations conducted at the Subject Property.

2.4 MUNICIPAL SERVICES & UTILITIES

The Subject Property is serviced by the following municipal services and utilities:

MUNICIPAL SERVICES AND UTILITIES	
Utility	Provider/Source
Potable Water Supply	Los Angeles Department of Water & Power
Sewage Disposal System	City of Los Angeles
Electrical Service	Los Angeles Department of Water & Power
Natural Gas Service	Southern California Gas Company
Oil Service	Not provided

MUNICIPAL SERVICES AND UTILITIES	
Utility	Provider/Source
Heating/Cooling Systems	Rooftop electrical and natural gas units
Emergency Power	Not provided

2.5 ADJOINING PROPERTIES

Property use in the vicinity of the Subject Property is summarized in the following table:

ADJOINING PROPERTIES	
North	The northeast side of the Subject Property is enclosed by Oakwood Avenue followed mostly by undeveloped land and the ramp to the Hollywood 101 Freeway. Remnants of a concrete structure were also located to the north with an unknown former use. MZ Collision at 340 N. Juanita Avenue and a triplex at 3812 Oakwood Avenue enclose the northwest side of the Subject Property. EBI noted a few food trucks and an inground oil/water separator at the triplex indicating the residential use was likely converted to commercial use in support of the food trucks.
South	Midway Auto at 3725 - 3737 Beverly Boulevard and Dewey Pest Control at 3713 Beverly Boulevard and 307 – 311 N. Madison Avenue enclose the south side of the Subject Property.
East	North Madison Avenue encloses the majority of the east side of the Subject Property. This street is followed by an office building that appears to provide assistance to homeless individuals at 3766 Oakwood Avenue and 340 N. Madison Avenue and by a parcel that appeared to be undergoing construction at 320 N. Madison Avenue. To the southeast was another Dewey Pest Control facility at 310 N. Madison Avenue. The other Dewey Pest Control facility at 3713 Beverly Boulevard also encloses a portion of the southeast side of the Subject Property.
West	North Juanita Avenue encloses the west side of the Subject property followed by apartments at 335 N. Juanita Avenue, a landscaping supply storage yard at 311 – 329 N. Juanita Avenue and a parking lot associated with an office building to the southwest at 3755 Beverly Boulevard.

No visual evidence of adverse environmental conditions was observed during the survey of the adjoining properties. The adjoining properties to the south were identified on the UST and LUST databases and a property to the east was identified on the Envirostor database, as further discussed in Section 4.1.

3.0 USER PROVIDED INFORMATION

The following section summarizes information provided by AT&T Mobility, LLC with regard to this Phase I Environmental Site Assessment. Additionally, a User Questionnaire was forwarded to the designated Client contact. The User Questionnaire has not been completed and returned to our offices. The information requested in the User Questionnaire is intended to assist in gathering information that may be material to identifying recognized environmental conditions in connection with the Subject Property. Relevant documentation referenced below is presented in Appendix C.

3.1 TITLE RECORDS

Title record information associated with the Subject Property has not been provided to EBI by AT&T Mobility, LLC. A detailed discussion regarding review of information obtained from other sources is presented in Section 4.3.5 of this report.

3.2 ENVIRONMENTAL LIENS AND ACTIVITY AND USE LIMITATIONS

AT&T Mobility, LLC has provided no information regarding environmental liens or activity and use limitations in connection with the Subject Property. A discussion regarding environmental liens is presented in Section 4.3.7 of this report. A detailed discussion regarding activity and use limitations is presented in Sections 4.1.1 and 4.1.2 of this report.

3.3 SPECIALIZED KNOWLEDGE

AT&T Mobility, LLC provided no specialized knowledge that is material to recognized environmental conditions in connection with the Subject Property. EBI was not provided with or made aware of previous environmental assessments or other documentation that is material to recognized environmental conditions in connection with the Subject Property, except as presented in Section 4.3.8 of this report.

3.4 COMMONLY KNOWN OR REASONABLY ASCERTAINABLE INFORMATION

AT&T Mobility, LLC has provided no commonly known or reasonably ascertainable information within the local community about the Subject Property that is material to recognized environmental conditions in connection with the Subject Property.

3.5 VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

AT&T Mobility, LLC has provided no information regarding valuation reduction for environmental issues in connection with the Subject Property.

3.6 OWNER, PROPERTY MANAGER, AND OCCUPANT INFORMATION

AT&T Mobility, LLC provided contact information for the Subject Property owner, manager and/or occupants.

3.7 REASON FOR PERFORMING PHASE I ESA

AT&T Mobility, LLC retained EBI to complete this Phase I Environmental Site Assessment in connection with a real estate transaction.

4.0 RECORDS REVIEW

4.1 STANDARD ENVIRONMENTAL RECORDS

A review of standard environmental databases maintained by Federal, state, and tribal offices was completed through Environmental Data Resources, Inc. (EDR) of Shelton, Connecticut. The databases were searched for properties with reported environmental conditions located within approximate minimum search distances as specified by ASTM Standard E 1527-13, by using geocoding information that identified the coordinates of the properties in the databases or by checking the street addresses of practically reviewable non-geocoded “orphan” properties within the same zip code. The database report is presented in Appendix E.

The database report identified two orphan sites. Orphan sites are those sites that could not be accurately mapped or geocoded due to inadequate location information. Review of the limited locational information indicates neither of these sites are located within the search radii and are unlikely to represent an environmental concern to the Subject Property.

It should be noted that plotted locations of listed sites are not always accurate. With regard to listings that are determined or suspected to be inaccurate, based on information from other sources such as direct observation or consultation with individuals familiar with the property, EBI uses the best available data when evaluating the location of listed sites discussed below.

The following table provides a summary of the findings of the environmental database report. Specific properties identified within the database report are further discussed below.

SUMMARY OF FEDERAL, STATE, AND TRIBAL AGENCY DATABASE FINDINGS			
Regulatory Database	Approximate Minimum Search Distance	Subject Property Listed	Off-site Listings Within Search Distance

4.1.1 Federal Agency Database Records

National Priority List (NPL)

The NPL database, also known as the Superfund List, is a subset of CERCLIS and identifies sites that are ranked as high priority for remedial action under the Federal Superfund Act. Neither the Subject Property nor sites located within 1.0 mile of the Subject Property were identified on the NPL.

Delisted National Priority List (NPL)

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425(e), sites may be deleted from the NPL where no further response is appropriate. Neither the Subject Property nor any sites located within 0.5 mile of the Subject Property were identified on the Delisted NPL database.

Superfund Enterprise Management System (SEMS)

SEMS contains data regarding potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies, and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability ACT (CERCLA). SEMS contains sites that are included on the National Priority List (NPL), as well as sites which are in the screening and assessment phase for possible inclusion on the NPL. Neither the Subject Property nor sites within 1 mile of the Subject Property identified on the SEMS database.

SEMS-Archive

As of February 1995, SEMS sites designated as No Further Remedial Action Planned (NFRAP) have been removed from the SEMS active list. SEMS-Archive sites may be sites where, following an initial investigation, no contamination was found, contamination was removed without the need for the site to be placed on the NPL, or the contamination was not considered sufficient to warrant Federal Superfund action or NPL consideration. The Subject Property was not identified. However, two sites located within 0.5 mile of the Subject Property were identified on the SEMS-Archive database and are unlikely to represent an environmental concern based on their No Further Remedial Action Planned status and location of at least 0.1 mile crossgradient from the Subject Property.

Resource Conservation and Recovery Act (RCRA) – Corrective Action Tracking System (CORRACTS)

RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the

Resource Conservation and Recovery Information System (RCRIS). The database includes selective information regarding sites that generate, transport, store, treat, and/or dispose of hazardous waste as defined by RCRA. The RCRA-CORRACTS database identifies TSD facilities that have conducted, or are currently conducting, corrective action(s) as regulated under RCRA. Neither the Subject Property nor sites located within 1 mile of the Subject Property were identified on the CORRACTS database.

RCRA non-CORRACTS Treatment, Storage and/or Disposal (TSD) Facilities

RCRA non-CORRACTS Treatment, Storage and/or Disposal (TSD) facilities are required to register hazardous waste activity under the Resource Conservation and Recovery Act (RCRA). Neither the Subject Property nor sites located within 0.5 mile of the Subject Property were identified on the RCRA non-CORRACTS TSD database.

RCRA Hazardous Waste Generators

Hazardous waste generators tracked under the Resource Conservation and Recovery Act (RCRA) are classified as either Large Quantity Generators (LQGs), Small Quantity Generators (SQGs), or Conditionally Exempt Small Quantity Generators (CESQG). A RCRA-LQG is defined as a facility that generates over 1,000 kilograms (Kg) of hazardous waste, or over 1 Kg of acutely hazardous waste per month. A RCRA-SQG is defined as a facility that generates between 100 Kg and 1,000 Kg of hazardous waste per month. A RCRA-CESQG is defined as a facility that generates less than 100 Kg of hazardous waste, or less than 1 Kg of acutely hazardous waste per month. The Subject Property and the following adjacent sites were identified:

RCRA GENERATOR			
Site	ID No.	Distance / Direction / Gradient*	Regulatory Status
Pacific Bell 316 N. Juanita Avenue Los Angeles, CA	CAD980891683	Subject Property	Small quantity generator 1990. No violations reported.
Gore Graphics 340 N. Madison Avenue Los Angeles, CA	CAD008332991	Adjacent/ (across street) East/ Crossgradient	Large quantity generator 1991. No violations reported.
Dewey Pest Control 3711 Beverly Boulevard Los Angeles, CA	CAD981369820	Adjacent/ South/ Crossgradient	Small quantity generator 1996. No violations reported.
J.P. Carrol Company 310 N. Madison Avenue Los Angeles, CA	CAL000294502	Adjacent/ (across street) East/ Crossgradient	Small quantity generator 2006 No violations reported.
*Presumed groundwater gradient			

Gore Graphics was not identified on other regulatory databases as a release site and is unlikely to represent an environmental concern to the Subject Property. The Subject Property and the other sites are discussed on other databases in Section 4.1.2.

Federal Engineering Control / Institutional Control Registries

The completion of site cleanup activities may include the implementation of engineering controls or institutional controls as part of the response action. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls. Neither the Subject Property nor sites within 1 mile of the Subject Property were identified on the Federal Engineering Control / Institutional Control Registries.

Emergency Response Notification System (ERNS)

ERNS is a national database used to collect information regarding reported releases of petroleum products and/or hazardous substances. The database contains information from spill reports submitted to Federal agencies, including the EPA, the U.S. Coast Guard, the National Response Center, and the U.S. Department of Transportation. A review of this database was conducted in order to determine whether any spills or incidents involving releases of hazardous substances or petroleum products have occurred at the Subject Property. The Subject Property was not identified on the ERNS database.

4.1.2 State and Tribal Agency Database Records

High-Priority Confirmed Release Sites (Response)/Deed

The California High-Priority Confirmed Release Sites (Response) and Deed databases contain confirmed release sites where the California Department of Toxic Substance Control (DTSC) is involved in remediation, either in a lead or oversight capacity and/or where Deed restrictions have been recorded. These confirmed release sites are generally high-priority and high potential risk sites. Neither the Subject Property nor sites within 1 mile of the Subject Property were identified on the Response/Deed databases.

Envirostor

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: NPL; State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites. The Subject Property was not identified on the Envirostor/Deed database. However, 22 sites located within 1 mile of the Subject Property were identified on the Envirostor/Deed database and 19 of these sites are unlikely to represent an environmental concern based on their crossgradient or downgradient locations of at least 0.12± mile from the Subject Property and their crossgradient/downgradient location or low priority/certified/no further action status. The remaining sites are presented in the following table.

ENVIROSTOR			
Site	ID No.	Distance / Direction / Gradient*	Regulatory Status

ENVIROSTOR			
Site	ID No.	Distance / Direction / Gradient*	Regulatory Status
Applied Graphics 340 N. Madison Avenue Los Angeles, CA	71002193	Adjacent/ (across street) East/ Crossgradient	This site moved to another location and was formerly a Tiered Permit facility meaning they were permitted to process wastes. Based on the business type, this facility likely conducted photographic developing and operated a silver recovery unit which was formerly permitted under this type of permit. As a release was not identified, this does not present an apparent concern.
Belmont/Hollywood Oakwood Avenue/Juanita Los Angeles, CA	19880056	Adjacent/ (across street) East/ Crossgradient	Inactive as of 2002. This was a proposed school site that was formerly developed with homes and then became a parking lot. Lead was a suspect soil contaminant. No assessment was conducted. As a release was not identified, this does not present an apparent concern.
Trust Services of America 218 – 224 N. Juanita Avenue Los Angeles, CA	19290296	350± feet/ Southwest/ Crossgradient	Historical site with no available reports. Status of Referred to another agency as of 1998. Site comprised of three lots and was a proposed school site. A 1990 geophysical located three USTs. A Phase II revealed petroleum contamination and Stoddard solvent in soil at 4,500 ppm in soil. "Contamination has also been detected in the groundwater." Medium priority assessment required. Also known as Mary Carroll Trust on the LUST List with a case closed status.
*Presumed groundwater gradient			

Based on the crossgradient locations, lack of current activity and/or low priority status, none of the above sites are likely to represent an environmental concern to the Subject Property.

CalSites

The Historical CalSites database contains potential or confirmed hazardous substance release properties. In 1996, California EPA reevaluated and significantly reduced the number of sites in the CalSites database. This database is no longer updated by the state agency and has been replaced by the EnviroStor database. Neither the Subject Property nor sites located within 1.0 mile of the Subject Property were identified on the CalSites database.

Proposition 65 Notification Records

Proposition 65 Notification Records contain facility notifications regarding any release that could potentially impact drinking water and thereby expose the public to a potential health risk. The Subject Property was not identified on the Proposition 65 Notification database. However, one site located within 1.0 mile of the Subject Property was identified on the Proposition 65 Notification database and is a closed LUST site located 0.4± mile from the Subject Property and is unlikely to represent an environmental concern based on its status and distant from the Subject Property.

Toxic Pits Cleanup Act Sites (Toxic Pits)

The Toxic Pits Cleanup Act Sites (Toxic Pits) database contains sites identified by the California Water Resources Control Board that are suspected to contain hazardous substances where cleanup has not yet been completed. Neither the Subject Property nor any sites located within 1.0 mile of the Subject Property were identified on the Toxic Pits database.

California Bond Expenditure Plan

The California Bond Expenditure Plan was developed by the California Department of Health Services as a site-specific expenditure plan for the appropriation of Hazardous Substance Cleanup Bond Act funds. This is a historic database that has been replaced by the Envirostor List. Neither the Subject Property nor sites located within 1.0 mile of the Subject Property were identified on the California Bond Expenditure Plan database.

Spill, Leaks, Investigations, and Cleanup (SLIC)

The Spills, Leaks, Investigations, and Cleanups (SLIC) database, maintained by the California Water Resources Control Board, includes unauthorized discharges from spills and leaks, other than from underground storage tanks or other regulated sites. The Subject Property was not identified on the SLIC database. However, two sites (EDR reported three sites but included a duplicate listing) located within 0.5 mile of the Subject Property were identified on the SLIC database and both are unlikely to represent an environmental concern based on their crossgradient location of at least 0.4± mile from the Subject Property.

Voluntary Cleanup Program (VCP) Properties

The Voluntary Cleanup Program (VCP) Properties database identifies low threat level properties with either confirmed or unconfirmed releases, for which the project proponents have requested that Department of Toxic Substances Control (DTSC) oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs. The Subject Property was not identified on the VCP. However, one site located within 1.0 mile of the Subject Property was identified on the VCP database is unlikely to represent an environmental concern based on its 0.12± mile downgradient location from the Subject Property.

California Water Resources Control Board (WRCB) – Leaking Underground Storage Tanks (LUST)

The California WRCB along with its Regional offices (RWQCB) and local oversight agencies maintain databases of reported Leaking Underground Storage Tank (LUST) Sites. The Subject Property and 28 sites (reduced from EDR's total of 35 due to duplicate listings) were identified on the LUST database within 0.5 mile of the Subject Property. Listing include a release at the 6633 Canoga Park (Rockwell) site listed as Pratt & Whitney Rock on the LUST List that was previously discussed under the SLIC database. Of the other 28 sites, 25 are unlikely to represent an environmental concern based on their location of at least 0.24± mile from the Subject Property and either their case closed status and/or crossgradient to downgradient location. Information for the remaining sites is as follows:

LUST			
Site	ID No.	Distance / Direction / Gradient*	Regulatory Status
AT&T Former SBC 316 N. Juanita Avenue Los Angeles, CA	T0603797875 900040225A	Subject Property	Release of gasoline to aquifer reported 2004. Case closed 04/10/2009.
Pacific Bell 316 N. Juanita Avenue Los Angeles, CA	T0603700444 900040225	Subject Property	Release of gasoline to aquifer reported 1989. Case closed 05/23/1996.

LUST			
Site	ID No.	Distance / Direction / Gradient*	Regulatory Status
Pacific Bell G1-185 3804 Oakwood Avenue Los Angeles, CA	T0603700451 900040307	Subject Property	Release of diesel to aquifer reported 1988. Case closed 10/17/1996.
Former ARCO 3737 Beverly Boulevard Los Angeles, CA	T0603700432 900040098	Adjacent/ South/ Crossgradient	Release of gasoline to aquifer reported 1990. Case closed 12/11/2013.
Mary Carroll Trust 218 N. Juanita Avenue Los Angeles, CA	T0603700440 900040189	350± feet/ Southwest/ Crossgradient	Release of gasoline to aquifer reported (release date not reported) 1993. Case closed 12/13/1996.
Unocal #6377 304 N. Vermont Avenue Los Angeles, CA	T0603700447 900040252	400± feet/ Southwest Crossgradient	Release of gasoline to soil reported 1992. Case closed 11/14/1996.
76 Station 304 N. Vermont Avenue Los Angeles, CA	T1000000206 900040252A	400± feet/ Southwest Crossgradient	Release of gasoline to other groundwater reported 2008. Case closed 08/01/2017.
*Presumed groundwater gradient			

Additional data regarding the USTs and LUST status of the Subject Property is discussed in Section 4.3.8.

No additional data was readily available for the Mary Carroll Trust site; however, the case closed status and crossgradient location indicate it is unlikely to represent an environmental concern to the Subject Property.

Former ARCO: According to the closure summary and 2012 Groundwater Monitoring Report, four USTs were removed in 1989 and 1995. Remedial action included soil excavation and pump and treat of groundwater resulting in the removal of approximately 5,464 tons of hydrocarbon impacted soil and approximately 200,000 gallons of groundwater. Per the case closure summary, notable residual groundwater contamination reportedly included 2,400 ppb TPH as gasoline and 60 ppb benzene in 2011. Two wells located nearest to the Subject Property on the north side of the ARCO site (MW1 and MW8) generally showed non-detect results except for MTBE up to 35 ppb from 2008 to 2011. Groundwater flow was reported to the south, east and southeast. Note that diesel contamination in groundwater was not reported. Review of a plume map showed the groundwater contamination had migrated south-southeast off the site and under Berkeley Boulevard. This data indicates the ARCO site is unlikely to represent an environmental concern to the Subject Property.

Unocal/76 Station: According to the 2017 case closure documentation, the 76 Station is an operating gas station. In 1995, facility renovations were completed and a release was identified. Approximate 75 cubic yards of soil were excavated. Later investigations indicated the groundwater contamination plume was less than 100 feet in length and was decreasing in areal extent with remaining contaminants limited, stable and decreasing. This data indicates the Unocal/76 Station site is unlikely to represent an environmental concern to the Subject Property.

State AST/UST Databases

The California Environmental Protection Agency, the California Water Resources Control Board and other entities previously and/or currently maintained various lists recording permitted aboveground and underground storage tank (UST) facilities and include the Facility Inventory Database (FID UST), Hazardous Substance Storage Container Database (HIST UST), and Statewide Environmental Evaluation

and Planning System (SWEEPS). The Subject Property and the following adjacent sites were identified on the UST/AST databases:

STORAGE TANKS			
Site	ID No.	Distance / Direction / Gradient*	Regulatory Status
Pacific Bell G1-118 316 N. Juanita Avenue Los Angeles, CA	99927BID 24364 3397 19002168	Subject Property	HIST UST – two total USTs reported and included one 550-gallon waste oil UST installed in 1966 and one 12,000-gallon gasoline UST installed in 1979. City of Los Angeles List – no data. SWEEPS UST – three total USTs reported and included two 12,000-gallon unleaded gasoline USTs and one 550-gallon waste oil UST. FID UST – Active, no other data. Identified on LUST List.
Pacific Bell 3804 Oakwood Avenue Los Angeles, CA	5023 19008759	Subject Property	SWEEPS UST – two total USTs reported and included one 300-gallon diesel UST and one UST of “chemical product unknown.” FID UST – Inactive, no other data. Identified on LUST List.
No Name/JP Carroll Co 310 N. Madison Avenue Los Angeles, CA	0000004056 371 0027078	Adjacent/ (across street) Southeast/ Downgradient	HIST UST – two total USTs reported and included one 6,000-gallon gasoline UST and one 6,000-gallon diesel UST. Second HIST and SWEEPS UST – two total USTs included the same USTs installed 1971. Not identified on LUST List.
Dewey Pest Control 3711 Beverly Boulevard Los Angeles, CA	23852 44-006091 000276C8 19019812 00276CE 235	Adjacent/ South/ Crossgradient	City of Los Angeles List – no data. HIST UST and SWEEPS UST – two total USTs reported and included two 7,500-gallon gasoline USTs. Second listing on HIST UST – two total USTs included two 500-gallon gasoline USTs installed 1972. Second listing on SWEEPS UST – two total USTs included one 500-gallon gasoline UST and one 10,000-gallon gasoline UST. FID UST – Active, no other data. Not identified on LUST List.
Somchai Denchartphan 3737 Beverly Boulevard Los Angeles, CA	7471	Adjacent/ South/ Crossgradient	FID and SWEEPS UST – Active, no other data. Identified on LUST List.
*Presumed groundwater gradient			

Additional data regarding the USTs and LUST status of the Subject Property is discussed in Section 4.3.8.

The Somachi Denchartphan, also known as the former ARCO site, was identified on the LUST List and was previously discussed under the LUST database. The other two sites were not identified on the

LUST List and do not represent a known environmental concern as this time. However, unknown/unreported releases at adjacent sites represent inherent risks.

Hazardous Waste and Substances Sites List (Cortese)

The Hazardous Waste and Substance Site List (also known as the Cortese List) is a planning document used by the State, local agencies, and developers to comply with California Environmental Quality Act requirements in providing information regarding the location of hazardous materials releases. Government Code Section 65962.5 requires the California Environmental Protection Agency to develop at least annually an updated Cortese List. The California Department of Toxic Substance Control (DTSC) is responsible for preparing a portion of the information that comprises the Cortese List, and other state and local government agencies are required to provide additional hazardous material release information for the Cortese List. The Subject Property was identified on the Cortese database as a duplicate listing to the LUST database. In addition, 27 sites located within 0.5 mile of the Subject Property were identified on the Cortese List and are primarily duplicate listings to the LUST and Envirostor database. No additional upgradient sites were identified on the Cortese database.

Solid Waste Information System (SWIS)

Solid Waste Information System (SWIS) records typically contain an inventory of solid waste facilities or landfills identified by the Integrated Waste Management Board. These may be active or inactive facilities or open dumps that failed to meet RCRA Section 4004 criteria for solid waste landfills or disposal sites. The Subject Property was not identified on the SWIS database. However, one site located within 0.5 mile of the Subject Property were identified on the SWIS database as follows:

SWIS			
Site	ID No.	Distance / Direction / Gradient*	Regulatory Status
CalTrans Hollywood 609 Helitrope Avenue Los Angeles, CA	19-AR-1244	0.4± mile/ Northwest/ Upgradient	Identified as an active limited volume transfer operation for green materials and mixed municipal waste.
*Presumed groundwater gradient			

The site was not identified as a landfill site and based on its distant location, is unlikely to represent an environmental concern to the Subject Property.

Waste Management Unit Database / Solid Waste Assessment Test (WMUDS/SWAT)

The Waste Management Unit Database (WMUDS) is used by the California Water Resources Control Board and the Regional Water Quality Control Boards for program tracking and inventory of waste management units. WMUDS is composed of the following databases: Facility Information, Scheduled Inspections Information, Waste Management Unit Information, SWAT Program Information, SWAT Report Summary Information, SWAT Report Summary Data, Chapter 15 (formerly Subchapter 15) Information, Chapter 15 Monitoring Parameters, TPCA Program Information, RCRA Program Information, Closure Information, and Interested Parties Information. The Subject Property was not identified on the WMUDS/SWAT database. However, one site located within 0.5 mile of the Subject Property was identified on the WMUDS/SWAT database and is the 6630 Canoga Avenue property that was previously discussed under the SLIC database. However, one site located within 0.5 mile of the Subject Property were identified on the SWIS database as follows:

SWAT			
Site	ID No.	Distance / Direction / Gradient*	Regulatory Status

SWAT			
Site	ID No.	Distance / Direction / Gradient*	Regulatory Status
No Name 2 nd & Juanita Avenue Los Angeles, CA	Not provided	0.4± mile/ Northwest/ Upgradient	No data was provided
*Presumed groundwater gradient			

No data was provided for this site indicating it is not likely a landfill site and based on its distant location, is unlikely to represent an environmental concern to the Subject Property.

California Hazardous Material Incident Report System (CHMIRS)

The California Hazardous Material Incident Report System (CHMIRS) contains information regarding reported hazardous material incidents (i.e. accidental releases or spills equivalent to the ERNS database). The data source is the California Office of Emergency Services. The Subject Property was not identified on the CHMIRS database.

Hazardous Waste Information system (HAZNET)

The California Environmental Protection Agency maintains a list of facilities that issue hazardous waste manifests. The source of the manifest records is the California Department of Toxic Substance Control (DTSC). Inclusion on the HAZNET database does not necessarily indicate the existence of an environmental concern, such as a release or spill incident. The Subject Property was identified on the HAZNET database for the generation of regulated wastes from 1993 to 2016 with over 177 manifest entries reported that included the following waste types: oil/water separator sludge, liquids with halogenated compounds, aqueous solutions, unspecified solvent mixture, empty containers, off-spec/aged/surplus organics, and unspecific organic mixture. This activity is consistent with automotive services and EBI’s observations and does not indicate that a release has occurred. These activities are further discussed in Section 5.0.

Site Mitigation and Brownfields Reuse Program (SMBRP) Facility Sites with Deed Restrictions & Hazardous Waste Management Program (HWMP) Facility Sites with Deed / Land Use Restriction

The Department of Toxic Substances Control (DTSC) Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under SMBRP’s oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. This list represents deed restrictions that are currently active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder’s office. The land use restrictions on this list were required by the HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future property owners. The Subject Property was not identified; however, one site located within 0.5 mile of the Subject Property was identified on the SMBRP or HWMP Deed Restriction or Land Use Restriction Registries database and is unlikely to represent an environmental concern based on its downgradient location 0.2± mile from the Subject Property.

Tribal Environmental Databases

The United States Bureau of Indian Affairs (BIA) is responsible for the administration and management of 55.7 million acres of land held in trust by the United States for American Indians, Indian tribes, and Alaska Natives. There are 562 federally recognized tribal governments in the United States. The environmental database report identifies tribal administered lands of the United States that have any

area equal to or greater than 640 acres. No tribal administered lands were identified within 1.0 mile of the Subject Property.

Non-ASTM Databases

Several Non-ASTM databases were included in the EDR database report. The Subject Property was identified on the following additional database that was not already discussed:

NON-ASTM			
Site	ID No.	Distance / Direction / Gradient*	Regulatory Status
AT&T California – G1118 316 N. Juanita Avenue Los Angeles, CA	110064971188	Subject Property	Identified on the Facility Index System (FINDS) due to the site’s reporting to the State CERS system under the hazardous materials program.
*Presumed groundwater gradient			

This is consistent with the site’s vehicle maintenance activities and does not indicate that a release has occurred.

4.1.3 Local Regulatory Agency Records

Local municipal offices consulted during the completion of this assessment included the following:

City of Los Angeles Building Department

EBI reviewed online permits on the City of Los Angeles Department of Building and Safety Online Service website at <https://www.ladbservices2.lacity.org/OnlineServices> and at <http://ladbsdoc.lacity.org/idispublic/>. Several permits dated from 1959 to 2014 were on file for the Subject Property. Many entries did not include detailed information. The entries that included detailed information are summarized as follows:

- Grading and New Construction 1959 – 1960 for Pacific Telephone & Telegraph Co plant operating center
- Certificates of Occupancy issued in 1960 for a 12 x 20 storage room and a 37’ x 146’ plant operating center
- Building permit to construct a motor vehicle maintenance building issued 1974
- Certificate of Occupancy issued in 1975 for a 36’ x 60’ repair garage
- Certificate of Occupancy issued in 1977 for a 16’6” x 26’ roof cover over car wash area addition to an existing 36’ x 60’ vehicle maintenance building
- Permit to “remove hydraulic joint, new slab” issued 2009
- Install two new auto hoists issued 2010
- Install new concrete pad for baler under existing canopy

City of Los Angeles Fire Department – Health Hazardous Materials Department (CUPA)

EBI submitted a written request to CUPA for information regarding the generation, transportation, storage, treatment, disposal, and/or spills or releases of hazardous substances or petroleum products at the Subject Property, in accordance with the Freedom of Information Act (FOIA). This agency maintains some databases on-line that were all dated April – May 2018 and included the following:

- City of Los Angeles Historical Underground Storage Tank Files – Subject Property not listed
- City of Los Angeles Underground Storage Tank Inventory List – Subject Property not listed
- City of Los Angeles Aboveground Storage Tank Inventory List – Subject Property not listed

- City of Los Angeles Active Hazardous Materials Inventory List – Subject Property as AT&T-G118 at 316 N. Juanita Avenue FA0001768
- City of Los Angeles Inactive Aboveground Storage Tank Inventory List – Subject Property not listed
- City of Los Angeles Inactive Hazardous Materials Inventory List – Subject Property as AT&T-G118 at 316 N. Juanita Avenue FA0001768
- City of Los Angeles Inactive Underground Storage Tank Inventory List – Subject Property as AT&T-G118 at 316 N. Juanita Avenue FA0001768 and Pacific Bell at 3804 W. Oakwood Avenue FA0033021
- UST Historical Files – Subject Property not listed

Additionally, in response to our FOIA request, EBI received files from the Fire Department, which are summarized as follows:

Summary: History of at least four USTs at the site with the first a waste oil UST and a fuel oil/diesel UST for a generator by the current storage building (former generator building) on the northeast corner addressed as 3804 Oakwood. One UST removed in 1989 found some contamination in soil and subsequent investigation suggested the oil was naturally occurring in the rock and not from the UST. The agency concurred and case closure was issued in 1996.

The second UST was removed in 1992 and soil sampling results were Non-Detect (ND). A diesel AST was then installed.

Two 12,000-gallon gasoline USTs and a waste oil UST were located further south at the current garage/maintenance building with the removal/reinstallation conducted in 1992. The waste oil UST was removed in 1990 and one soil sample showed ND. The most recent 12,000-gallon UST was removed in 2004 and contamination was found. This tank was the subject of the LUST case that was issued closure in 2009.

The following was reviewed from the Fire Department file:

FD Records for 316 N Juanita Street – current address and refers to the current office and vehicle maintenance buildings

Permit to remove one 12,000-gallon UST 1/12/2006 – This appears to be a mistake. The FD issued permits for assessment and remediation oversight (see invoice issued same date). No evidence to suggest a UST was installed after the last one was removed in 2004.

FD Invoice for UST Removal 1/12/2006

FD Invoice for UST Site Assessment and Remediation 1/12/2006

One 12,000-gallon gasoline UST abandoned on 11/10/2004.

UST Removal Report for one 12,000-gallon gasoline UST removed on 11/10/2004 located just west of the maintenance building, 11/17/2004

Letter from FD stating the UST Removal Soils document of 11/17/2004 had been reviewed and “action levels” exist at the site 1/12/2006.

Remove 12,000-gallon UST permit 10/29/2005

Invoice for UST removal 10/29/2004

SBC UST Financial Responsibility 10/29/2004

Inspection log for removal of one UST for the permit issued 10/29/2004 with work performed by the Fire Dept on 11/10/2004 and 02/04/2005

Secondary containment testing 2002 – no map or tank description

Monitor Certification for one 250-gallon diesel UST and one 12,000-gallon gasoline UST 6/5/1997

One 12,000-gallon gasoline UST permitted 1998, installed 1992

Add or alter monitoring system 6/22/1994

Install one atmospheric tank, shop built per plans 5/5/1992
Remove one 12,000-gallon gasoline, dispenser and piping 5/5/1992
Renewal permit for one 12,000-gallon gasoline UST 4/27/1992
UST Closure Report for one 12,000-gallon gasoline UST located northwest of garage and soil sample results were "below cleanup levels" 8/21/1992 (located just north of the 12K UST removed in 2004)
One 12,000-gallon UST tested 8/24/1992
Two USTs "registered" on a system printout 6/13/1991
Add or alter monitoring system 6/14/1991
Remove one UST 1/4/1990 with site plan showing tank was located on the north side of the property (south of existing storage building)
One 12,000-gallon UST tested 4/6/1990
One 550-gallon waste oil UST removed on 2/9/1990, one soil sample collected on ND for BTEX and TPH
Site plans showed 550-gallon waste oil UST was located south of the garage building and east of a clarifier, 2/16/1990 and 4/12/1990. Clarifier not addressed.
Tank Abandonment sheet stated two tanks remained on the site 2/9/1990
Another different Tank Abandonment sheet stated one 10,000-gallon UST to removed and all USTs at the site had been removed by that date and new UST(s) would be installed, three soil samples for the 10K UST were collected and none exceeded action levels (analytical results not provided)
Remove/abandon one UST 1/26/1989
Hazardous Materials Underground Storage Plan for one 12,000-gallon UST and one 550-gallon UST, 5/30/1989

FD records for 3804 Oakwood Avenue -refers to structure on the northeast side of the site, likely the original site address

Tank testing 2/4/2003, no other data
UST Tank Closure Letter 10/17/1996
Permit to install one atmospheric tank 1/4/1991 with site plan stated one 250-gallon fuel oil AST to be installed and existing belowground tank to be removed. New AST to be located west of the generator (now storage) building and existing UST located south of this building on the NEC of the site
Permit to remove 500-gallon fuel oil UST 1/22/1991
UST Closure Report for one 300-gallon diesel UST removed from the NEC of the site with three soil samples reported as non detect, 4/15/1991. Site plan showed the removed UST was located south of the "Generator" building (believed to be the storage building on the NEC) and a "new diesel AST" west of the generator building.
Abandonment Information sheet for one 500-gallon diesel UST removed 2/21/1991, stated no samples "exceeded action levels" 1/22/1991
Tank test results for one 300-gallon diesel UST 2/2/1990 (installed 1982) with site plan showing the UST was located on the west side of the storage building on the northeast corner of the site
Report, Results of Additional Drilling and Sampling 10/5/1989. An initial site assessment was performed in proximity to a 300-gallon diesel UST found TPH that was thought to be part of the bedrock (naturally occurring) and not due to the diesel UST and additional assessment proved this to be true. Tank locations not shown.
One 300-gallon diesel UST installed 1982, tank tests 11/23/1988

Los Angeles County Assessor Office

According to the Los Angeles County Assessor's Office, the Subject Property was identified as APN 5501-001-800 and addressed as 316 N. Juanita Avenue. The Property Type was listed as "Other." No physical characteristics were provided. The parcel has been owned by "Pacific Bell / S B of E Par 2 Map 303-19-47" since 1967.

County of Los Angeles Public Works Department

EBI accessed the County of Los Angeles Public Works Department's website at <http://dpw.lacounty.gov/epd/UST/ustufp.cfm> where records for underground storage tanks and industrial waste are available and no records for the Subject Property address were identified on file.

California Water Resources Control Board

EBI accessed this agency's Geotracker system through their website at <http://www.geotracker.swrcb.ca.gov/>. This website lists regulated facilities in California including leaking USTs, other contaminated properties reported on the Spills, Leaks, Investigations and Cleanup List (SLIC), wells, land disposal sites, military sites and permitted UST sites. The Subject Property was not identified on the Geotracker system.

Department of Toxic Substances Control (DTSC)

EBI searched the DTSC's databases of Hazardous Waste and Substances Site List – Site Cleanup and Envirostor List that includes NPL sites, State Response Sites, Voluntary Cleanup Sites, School Cleanup Sites and Corrective Action Sites at the website <http://www.dtsc.ca.gov/> and the Subject Property was not identified on either of these state databases.

4.1.4 Vapor Migration

EBI conducted a vapor migration screening survey of the Subject Property. This vapor migration screening was conducted in accordance with ASTM E1527-13 and is not intended to satisfy the requirements of ASTM E2600-15. The scope of this screening was limited to visual observations and review of the environmental database report and did not include the collection and laboratory analysis of air samples to confirm or refute the presence of airborne contaminants by vapor intrusion.

The site has been engaged in automotive maintenance activities since at least 1966 that previously/currently include belowground/aboveground auto lifts and an oil/water separator. Furthermore, if a contamination source(s) is found on the Subject Property, higher soil and groundwater contamination levels may exist in areas not yet explored. EBI concludes the history of automotive services at the Subject Property may represent a potential vapor migration concern to the Subject Property.

4.2 PHYSICAL SETTING

4.2.1 Topography

The Subject Property is located at an elevation of approximately 270 feet above mean sea level (msl). The topography of the Subject Property slopes down to the east-southeast. The vicinity exhibits an overall downslope to the southeast (see Figure 2 - Locus Map, which depicts the location of the Subject Property on the Hollywood, California USGS 7.5 Minute Topographic Quadrangle).

4.2.2 Geology and Soils

No bedrock outcroppings were observed at the Subject Property. Information concerning the geology of the Subject Property was obtained from the USGS Ground Water Atlas of the United States, California Region (1995). The Subject Property is located within the Pacific Border physiographic province, which is characterized by steep rolling hills and mountains and consists of severely folded, faulted, commonly metamorphosed marine and continental sediments.

According to the prior reports referenced in Section 4.3.8 for the Subject Property, soil encountered in the borings for the five former groundwater monitoring wells was described as heterogeneous,

interbedded clay, silty clay and/or clayey sand to an approximate depth of 30 feet bgs. According to the soil summary data presented in the Physical Setting Source Addendum to the appended database report prepared by Environmental Data Resources, Inc., the soil type was mapped as Urban Land with variable and unreported properties for the Subject Property.

4.2.3 Hydrogeology and Hydrology

No surface water bodies were identified on or adjacent to the Subject Property. The nearest water body is the Los Angeles River located 3.5± mile east of the Subject Property.

According to the prior reports referenced in Section 4.3.8 for the Subject Property for the five former groundwater monitoring wells, groundwater was encountered at depths of approximately 9 to 14 bgs and the direction of groundwater flow was reported to the east-southeast. EBI's review of the contour maps indicates the predominant flow is to the southeast. Monitoring wells were not observed on the Subject Property.

4.3 HISTORICAL USE OF THE SUBJECT PROPERTY AND ADJOINING PROPERTIES

EBI attempted to determine the history of the Subject Property dating back to 1940 or first developed use. The following table summarizes the historical use of the Subject Property and surrounding area.

HISTORICAL USE SUMMARY			
Period	Historical Uses		Source(s)
	Subject Property	Surrounding Area	
At least 1894 - 1919	Undeveloped land	Mostly undeveloped except for a railroad track	Topographic Maps Fire Insurance Maps
1919 - 1957	Residential with limited commercial (venetian blind manufacturing, pottery molding and store 1950 - 1956)	Residential	Topographic Maps Aerial Photographs Fire Insurance Maps City Directories Municipal Records
1957 - 1960	Undeveloped	Residential and Limited Commercial including gas station to the south (first evident in 1950)	Topographic Maps Aerial Photographs Fire Insurance Maps City Directories Municipal Records
1960 to Present	Existing communications company yard	Residential and Commercial Including gas station (circa 1950 - 1990s) and Pest Control (1951-current)	Topographic Maps Aerial Photographs Fire Insurance Maps City Directories Municipal Records

The Subject Property was previously residential from at least 1919 to 1957 when the homes were demolished. A structure on the northeast corner was labeled as venetian blind manufacturing, pottery molding and store from 1950 to 1956 in fire insurance maps. The current telephone/communications yard was initially constructed in 1960 and the vehicle maintenance building was added in 1975 with the small storage building evident by 1981. Based on the installation date of at least one UST in 1966 for waste oil storage, it appears vehicle maintenance activities were conducted since at least 1966. Review of the UST databases indicates three to five USTs may have been operated at the Subject Property and the disposition of all these USTs is not known. Associated LUST cases were identified for the Subject Property with case closure dates of 1996, 1996 and 2009. LUST case data was only readily identified for one of the three cases and was for the UST removed in 2004 and closed 2009. Investigations performed for the most recent case appeared to be unaware of the prior LUST cases and did not take

their potential contribution to the groundwater contamination in consideration. EBI concludes that the source of the diesel groundwater contamination was not identified and the possibility of USTs remaining at the Subject Property and an on-site source has not been ruled out. In addition, the site has been engaged in automotive maintenance activities since at least 1966 that previously/currently include belowground/aboveground auto lifts and an oil/water separator. Furthermore, if a contamination source(s) is found on the Subject Property, higher soil and groundwater contamination levels may exist in areas not yet explored and represent an environmental concern to the Subject Property.

Several adjacent notable properties were identified and include automotive, gas station and pest control facilities to the south. The gas station was identified on the LUST List with a case closed status and data reviewed indicates it is unlikely to represent a concern to the Subject Property, as discussed in Section 4.1.2. Dewey Pest Control has a history of operating several USTs and apparently storing pest control products since circa 1951 but was not identified as a release site on regulatory databases searched.

4.3.1 Aerial Photographs

Historical aerial photographs may be used to evaluate changes in land use and to identify visible areas of potential environmental concern. A search for historical aerial photographs depicting the Subject Property and vicinity was conducted by Environmental Data Resources, Inc. (EDR). Aerial photographs depicting the Subject Property were reviewed and are summarized in the following table. Copies of the aerial photographs are presented in Appendix F.

AERIAL PHOTOGRAPH SUMMARY		
Year	Issues Noted	Observations
1923	No	Subject Property: The Subject Property appears to be developed with several houses and yards.
		Surrounding Area: The current streets were generally present, except for the Hollywood Freeway further to the north. The area was primarily residentially developed with a few commercial buildings further south.
1928 1938 1948 1952	No	Subject Property: Similar to the previous aerial.
		Surrounding Area: Similar to the previous aerial except a commercial buildings were present to the south and southeast.
		Subject Property: The administration building was present and the rest of the site was a parking lot with a possible storage shed and/or fueling island near the center.
		Surrounding Area: Homes remains to the west and northeast. Several of the current commercial buildings were present to the east, southwest and north and included a gas station (former ARCO) to the south.
1972	No	Subject Property: Similar to the previous aerial except the parking lot on the north-northwest side had been removed and was an unpaved area.
		Surrounding Properties: Similar to the previous aerial.
1977	No	Subject Property: Similar to the previous aerial except the vehicle maintenance building was present near the center of the site and areas not occupied by the buildings appeared to be paved.
		Surrounding Properties: Similar to the previous aerial.
1981 1989 1994 2002 2005 2009 2012	No	Subject Property: Conditions on the Subject Property appear similar to the current conditions including all three buildings.
		Surrounding Properties: Similar to the previous aerials except the commercial buildings to the north were also present.

AERIAL PHOTOGRAPH SUMMARY		
Year	Issues Noted	Observations
2016		

4.3.2 Fire Insurance Maps

A search for historical fire insurance maps depicting the Subject Property and vicinity was conducted by Environmental Data Resources, Inc. (EDR). Historical fire insurance maps depicting the Subject Property were reviewed and are summarized in the following table. Copies of the fire insurance maps are presented in Appendix F.

FIRE INSURANCE MAP SUMMARY		
Year	Issues Noted	Observations
1919	No	Subject Property: Developed with several dwellings. Surrounding Area: The current streets were generally present and adjacent land was residentially developed.
1950 1955 1956	No	Subject Property: Developed with several dwellings with “venetian blind manufacturing” noted on one structure on the northeast corner in 1950 then as a store in the 1955 map and as pottery molding in the 1956 map. Surrounding Area: The area remained characterized by residential development plus a gas station, stores, storage building and restaurant to the south.
1957 1959	No	Subject Property: Developed with several dwellings. Surrounding Area: Similar to the previous maps.
1960 1961	No	Subject Property: The parcel was labeled Pacific Telephone & Telegraph Company’s Central Service Yard and included the administration building with the southern half of this building labeled to include maintenance storage and a wash rack. East of this building was a tool house. Surrounding Area: Similar to the previous maps.
1966 1968 1969 1970	No	Subject Property: Similar to the previous maps. Surrounding Area: Similar to the previous map to the south. A glass warehouse was to the north, an office building was to the southwest and an auto repair, restaurant and warehouse were to the east-southeast with the addition of an office building to the east in the 1968 map.

4.3.3 Topographic Maps

Historical topographic maps provide information related to physical land configuration such as elevation, ground slope, surface water and other features. While most buildings in densely developed urban centers are not depicted, topographic maps typically show structures equal to or larger than the size of a single-family residence in rural areas. Other notable features such as woods, pipelines, municipal boundaries, and areas of filled land are often marked on topographic maps.

A search for historical topographic maps depicting the Subject Property and vicinity was conducted by Environmental Data Resources, Inc. (EDR). Historical topographic maps depicting the Subject Property were reviewed and are summarized in the following table. Copies of the topographic maps are presented in Appendix F.

TOPOGRAPHIC MAP SUMMARY		
Year	Issues Noted	Observations

TOPOGRAPHIC MAP SUMMARY		
Year	Issues Noted	Observations
1894 1900	No	Subject Property: Undeveloped. Surrounding Properties: The only adjacent development included a railroad track to the south. A few small, non-descript buildings were in the vicinity but not adjacent to the Subject Property.
1920 1926	No	Subject Property: Several non-descript, small structures were present on the Subject Property. Surrounding Properties: The railroad track was no longer present. The current streets were present and the adjacent land was developed with small buildings, likely homes.
1953 1966 1972 1981 1991	No	Subject Property: Included in a shaded area to indicate dense urban development without benefit of showing specific structures or land uses. Surrounding Properties: Included in a shaded area to indicate dense urban development without benefit of showing specific structures or land uses. The current vicinity streets are present.

4.3.4 Street Directories

Street directories are commercial publications containing names and addresses, and in many cases, occupations of the occupants of a particular community. The directories may also contain information pertaining to business processes conducted within a community. A search for historical street directories was conducted by Environmental Data Resources, Inc. (EDR). An abstract report was provided with listings at approximate 5-year intervals from 1920 to 2014. Historical street directories were reviewed and are summarized in the following table. Copies of the street directories are presented in Appendix F.

STREET DIRECTORY SUMMARY		
Year	Issues Noted	Observations
1920- 1923	No	Subject Property: No listings provided.
1924- 1951	No	Subject Property: Residential at 316 – 328 N. Juanita Avenue
1952 – 2014	No	Subject Property: No listings provided.
Various	No	Notable Adjacent Properties: Galindos Commissary at 3812 Oakwood Avenue 2010 – 2014 (only Oakwood listing provided) Laundromat at 3701 Beverly Blvd 1962 Dewey Pest Control at 3701 Beverly Blvd 1986 – 2006 Dewey Services at 3711 Beverly Blvd 1951 – 2014 Magnum Oil/Auto Service/Independent Gas & Oil at 3737 Beverly Blvd 1962 - 1990

4.3.5 Recorded Land Title Records

Land title records provide information on previous ownership of a property. Typically, deeds signifying transfer of a land parcel are recorded in county files and can be researched to determine the identity of past owners. A “chain of title” is a continuous record of ownership for a specific parcel. A 50-year chain of title search was not included in the scope of work for this assessment.

4.3.6 Property Tax Records

According to the Los Angeles County Assessor's Office, the Subject Property was identified as APN 5501-001-800 and addressed as 316 N. Juanita Avenue. The Property Type was listed as "Other." No physical characteristics were provided. The parcel has been owned by "Pacific Bell / S B of E Par 2 Map 303-19-47" since 1967.

4.3.7 Environmental Liens and Activity and Use Limitations

A search for Environmental Liens and Activity and Use Limitations was not included in the scope of this assessment.

4.3.8 Previous Environmental Reports

EBI was not provided with or made aware of previous environmental assessments or other documentation regarding environmental investigations performed for the Subject Property other than those documents found on the Geotracker website that are referenced below.

Workplan for Site Assessment, Pacific Bell Telephone Company dba AT&T, 316 N. Juanita Avenue, Los Angeles, California, Hydrologue Inc., January 18, 2006. Significant findings are summarized as follows:

- In November 2004, a 12,000-gallon gasoline UST was removed from the site with no visual evidence of holes or a release from the tank upon removal. Soil samples only detected methyl tertiary butyl ether (MTBE) at 2.7 – 6 parts per billion (ppb). A sample of the water that accumulated at the base of the excavation was also analyzed and total petroleum hydrocarbons as gasoline (TPHg) and benzene, toluene, ethylbenzene and xylene (BTEX) components were detected up to 20,900 ppb and notably included benzene at 524 ppb along with MTBE at 5,400 ppb along with other fuel contaminants.
- A prior UST had been removed from the Subject Property in 1989. A leak was reported during that tank removal activity, the site was added to the LUST List and case closure was issued in 1996. No data regarding the 1989 tank removal was available. Additional work was proposed to further determine whether the source of the groundwater contamination identified in 2004 and included the installation of five groundwater monitoring wells on the Subject Property.
- A site plan included with the Workplan showed the 12,000-gallon UST was located just west of the vehicle maintenance building. At that time, a 250-gallon fuel oil AST was shown on the northeast corner at the southwest side of the storage building. The location of the former UST removed in 1989 was not shown.

Phase II Environmental Site Assessment Report, Case No. 900040225A, AT&T G118 Facility, 316 N. Juanita Avenue, Los Angeles, California, RMT Inc., November 29, 2007. Significant findings are summarized as follows:

- Five borings were installed to a depth of approximately 30 feet below ground surface (bgs). Soil samples were collected at each approximate 5-foot interval and wells were constructed in each boring. Laboratory analysis only detected TPH as heavy extractable range organics (TPH-ORO) in one boring (MW2) at 10 feet bgs at 140 parts per million (ppm) and MTBE in another soil boring (MW1) at depths of 10 – 15 feet bgs up to 51 ppb.
- Groundwater was encountered at depths of 9.66 to 13.8 bgs and the direction of groundwater flow was determined to be to the east-southeast.

- Groundwater samples were collected from each well and the maximum contaminant levels were identified in three of the five wells: total petroleum hydrocarbon as diesel (TPH-DRO) 7,900 ppb in MW3, and MTBE up to 6.8 ppb in MW1 and MW2.
- The former ARCO site to the south at 3737 Beverly Boulevard had been in operation circa 1950s possibly to the early 1990s, was identified as a LUST site and as a potential source of contamination to the Subject Property.

Second Quarter 2008 Groundwater Monitoring Report, AT&T G1118 Facility, 316 N. Juanita Avenue, Los Angeles, California, RMT Inc., July 10, 2008. Significant findings are summarized as follows:

- Groundwater was encountered at depths of 9.7 to 13.2 bgs and the direction of groundwater flow was determined to be to the east-southeast.
- Groundwater samples were collected from each well and the maximum contaminant levels were identified in three of the five wells: TPH-DRO at 820 ppb in MW3 and 10,500 ppb in MW5; and MTBE at 8.65 ppb in MW2. MW3 was located on the northwest side of the Subject Property and MW5 was located south of the vehicle maintenance building (also south of the oil/water separator).
- The former ARCO site to the south at 3737 Beverly Boulevard had been in operation circa 1950s possibly to the early 1990s, was identified as a LUST site and as a potential source of contamination to the Subject Property.
- The report stated that the release did not occur from the former gasoline UST. EBI notes that there was no discussion of the other UST that was removed in 1989. As the report concluded the source did not appear to be on-site, case closure should be granted.

Addendum to Phase II Environmental Site Assessment Report, Case No. 900040225A, AT&T G118 Facility, 316 N. Juanita Avenue, Los Angeles, California, RMT Inc., November 6, 2008. Significant findings are summarized as follows:

- The RWQCB reportedly concurred with the consultant's request that case closure should be granted; however, the RWQCB also requested two grab groundwater samples be collected downgradient of MW5 prior to issuing case closure.
- In October 2008, two grab groundwater samples were collected from temporary wells placed downgradient of MW5. No TPH, BTEX, ethanol or fuel oxygenates were identified above laboratory detection levels in these two grab groundwater samples.
- The temporary wells were properly abandoned and the report concluded case closure should be granted.

Underground Storage Tanks Program – Case Closure Letter, Pacific Bell Telephone Company, AT&T, 316 N. Juanita Avenue, Los Angeles, Case No. 900040225A, RWQCB, April 10, 2009. This letter granted case closure/no further action for the LUST case associated with the 12,000-gallon UST removed in 2004. The reasons for case closure were that no free product was ever observed; the extent of soil and groundwater contamination had been adequately defined; the levels of residual soil contamination were below the respective Screening Levels (SLs) and the groundwater samples “did not detect any fuel hydrocarbons higher than Maximum Contaminant Levels (MCLs for drinking water).”

4.3.9 Other Historical Records and Interviews

Mr. Edwin Marroquin with AT&T assisted EBI during the site visit and was not very familiar with the Subject Property except to guess that maybe the current buildings had been around since the 1940s. The vehicle maintenance staff was not present at the time of EBI's site visit. It is also noted that a PreSurvey Questionnaire was provided to AT&T staff and EBI was informed that personnel most knowledgeable regarding site conditions were not available within the timeframe of this assessment to complete the questionnaire.

5.0 SUBJECT PROPERTY RECONNAISSANCE

The Subject Property reconnaissance was conducted by Ms. Jodi Vanneman, EBI Senior Scientist, on July 23, 2018. Ms. Vanneman was accompanied by and interviewed Mr. Edwin Marroquin with AT&T.

5.1 METHODOLOGY AND LIMITING CONDITIONS

The Subject Property reconnaissance consisted of visual and/or physical observations of the Subject Property and improvements, adjoining properties as viewed from the Subject Property boundaries, and the surrounding area based on visual observations made from adjacent public thoroughfares. Building exteriors were observed along the perimeter from the ground, unless described otherwise. Building interiors were observed as they were made safely accessible, unless described otherwise.

At the time of the survey, the weather was sunny and approximately 90° Fahrenheit. During the survey, the majority of the building and land areas were made readily available and were accessed. Note that parked vehicles precluded comprehensive visual examination of portions of the exterior areas. There were no other significant portions of the Subject Property that were inaccessible or excluded from this survey.

5.2 HAZARDOUS SUBSTANCES AND PETROLEUM PRODUCTS

5.2.1 Hazardous Substances and Petroleum Products (Identified Uses)

Notable hazardous substances or petroleum products in connection with identified uses observed at the Subject Property are described below.

HAZARDOUS SUBSTANCES AND PETROLEUM PRODUCTS			
General Type of Material	Approximate Quantity / Container / Material	Location	Storage Condition
Petroleum Hydrocarbon Automotive Fluids	Product oil in one 185-gallon AST, two 20-gallon drums and a few other smaller containers	Maintenance Building	Minor stains, no active leaks, not a concern
Miscellaneous Automotive Fluids	Approximately a dozen containers up to 5 gallons in size on and shelves	Maintenance Building	Good: No leaks or spills
Miscellaneous Flammable Materials	Two flammable materials cabinets containing aerosols, degreasers, fuels, associated with maintenance activities up to 5 gallons in size	Exterior of Maintenance Building	Good: No leaks or spills

Stains, spills or evidence of a release were generally not noted in the areas observed except for minor staining. See Sections 5.3 and 5.4.1 for additional information regarding regulated waste management and ASTs.

5.2.2 Hazardous Substances and Petroleum Products (Unidentified Uses)

EBI did not observe evidence of hazardous substance or petroleum products containers at the Subject Property that were not in connection with identified uses.

5.2.3 Unidentified Substances Containers

EBI did not observe evidence of unidentified substances containers at the Subject Property.

5.3 WASTE GENERATION, STORAGE, AND DISPOSAL

EBI identified the following waste streams generated at the Subject Property:

WASTE GENERATION, STORAGE, AND DISPOSAL			
Classification	Type of Waste / Generation Process	Type of Storage / Location	Disposal Method / Contractor
Non-regulated Solid Waste	Municipal Solid Waste / Routine Site Operations	Dumpsters in exterior enclosure	Municipal Trash Hauler – Waste Management
Non-regulated Liquid Waste	Sanitary Sewage / Routine Site Operations	NA (Municipal Sanitary Sewer)	City of Los Angeles
Regulated Solid or Liquid Waste	Grease/Oil Sludge	Exterior 3-stage underground clarifier associated with maintenance building	Removed for off-site processing
	Used Oil from automotive services	Two 55-gallons drums in secondary containment in maintenance building	Removed for off-site processing
	Used filters and shock absorbers from automotive services	Two 55-gallon drums on pallets in maintenance building	
	Used antifreeze from automotive services	One 55-gallon drum on pallet in maintenance building	
	Used oil absorbent from floor sweeping in auto bays	One 55-gallon drum on pallet in maintenance building	
	Used tires	Exterior storage container	
	Used batteries	On shelf and floor, some within plastic boxes, in maintenance building	
	Used/empty aerosol cans	One 55-gallon drum on pallet in maintenance building	
	Universal wastes – electronics, batteries, bulbs	Two boxes and a 1-gallon pail	
Biomedical Waste	None identified	NA	NA

Light surface staining was observed primarily inside the maintenance building due to years of this activity in the area. There was no significant evidence of improper solid waste management or the improper disposal of hazardous substances, petroleum products observed at the time of reconnaissance.

5.4 UNDERGROUND STORAGE TANKS (USTs) & ABOVEGROUND STORAGE TANKS (ASTs)

5.4.1 Existing Storage Tanks

Based upon site reconnaissance, interviews, and a review of state and local records, EBI identified no evidence of existing USTs located at the Subject Property. However, EBI identified the following ASTs located at the Subject Property.

STORAGE TANKS		
One approximate 185-gallon AST	Contents:	Product Oil
	Location:	Inside maintenance building
	Year Installed:	Not known
	Construction Materials:	Double-walled, steel tank
	Leak Detection/Prevention:	Visual
	Staining / Releases:	None although minor staining is in the area

The storage tank was not observed to be leaking. Only light, de minimis staining was identified in the area. The area is paved and in fair condition. Cleaning up with the use of oil absorbent material appears to be common practice. No significant releases or concerns were visually identified.

5.4.2 Former Storage Tanks

As previously stated in Sections 4.1.2 and 4.3.8, several USTs were permitted to operate on the Subject Property. Based on review of Fire Department files, no further investigation appears warranted regarding historic USTs. See Section 4.1//.3 for further discussion.

5.5 OIL-CONTAINING EQUIPMENT AND POLYCHLORINATED BIPHENYLS (PCBs)

Polychlorinated biphenyls (PCBs) are a chemical component of many dielectric fluids, heat transfer fluids, hydraulic fluids, lubricating oils, paints, or coatings manufactured prior to July 2, 1979. Equipment that may potentially contain PCBs includes electrical equipment such as transformers or capacitors or hydraulically operated equipment, such as elevators, compaction equipment, or manufacturing equipment. The manufacture and distribution in commerce of PCBs was banned for use in 1979 by the United States Congress, which enacted the Toxic Substance and Control Act (TSCA). In accordance with *US Code of Federal Regulations Title 40 - Protection of Environment, Chapter 1 - Environmental Protection Agency, Subchapter R - Toxic Substance Control Act (TSCA), Part 761 - Polychlorinated Biphenyls (PCBs) Manufacturing, Processing, Distribution in Commerce, and Use Prohibitions*, the owner of a transformer or other PCB-containing equipment is responsible for equipment maintenance and remediation in the event of a leak or release.

The following oil-containing equipment was identified at the Subject Property:

OIL-CONTAINING EQUIPMENT			
Classification	Type of Equipment	Year Installed / Location	Staining / Releases Identified
Transformers and Fluid-Containing Electrical Equipment	Two pole-mounted transformers owned by LADWP	Assumed prior to 1979/ Sidewalk on or adjacent to the southeast corner of Subject Property	No
Hydraulic Equipment	Three aboveground automotive lifts on concrete floor	Age not known - appeared newer/ Inside maintenance building	No
	Box baler	Age not known - appeared newer Overhang at maintenance building	No

OIL-CONTAINING EQUIPMENT			
Classification	Type of Equipment	Year Installed / Location	Staining / Releases Identified
Other Oil-containing Equipment	One air compressor	Age not known -appeared older/ Exterior east side of maintenance building	No

No staining was identified around the equipment and the oil-containing equipment does not appear to represent a significant concern to the Subject Property.

5.6 ADDITIONAL SITE CONDITIONS

The following is a summary of visual and/or physical observations of the Subject Property on the day of the site visit. Photographs of pertinent Subject Property features are presented in Appendix A.

ADDITIONAL SITE CONDITIONS	
Condition	Identified
Interior Drains, Trenches, or Sumps	Yes
Interior Stains or Corrosion	No
Unusual Odors	No
Interior Pools of Liquid	No
Stained Soil or Pavement	No
Stressed Vegetation	No
Indications of Solid Waste Disposal	No
Exterior Pits, Ponds, or Lagoons	No
Wastewater or Stormwater Discharge/Disposal	No
Oil-Water Separators or Clarifiers	Yes
Septic Systems or Cesspools	No
Wells (Drinking Water Wells, Monitoring Wells, Agricultural/Irrigation Wells, or Process Water Wells)	No
Petroleum or Natural Gas Pipelines/Easements	No

There is one floor drain was observed inside the maintenance building and reportedly discharges into the exterior three-stage oil/water separator and the accumulated waste sludge is removed for off-site disposal.

6.0 INTERVIEWS

The site contact or Key Site Manager was contacted to be interviewed to obtain information regarding recognized environmental conditions in connection with the property. Additionally, a Pre-Survey Questionnaire was forwarded to the designated Subject Property contact. The Pre-Survey Questionnaire was not completed or returned to EBI. Ms. Rankin stated that the AT&T personnel who were most knowledgeable about the Subject Property were not available within the time frame of this assessment and hoped to provide the completed questionnaire at a later date. The information requested in the Pre-Survey Questionnaire is intended to assist in gathering information that may be material to identifying recognized environmental conditions in connection with the Subject Property.

KEY SITE MANAGER INTERVIEW			
Contact / Affiliation	Date of Communication	Years Associated with Subject Property	Telephone No.
Ms. Linda Rankin Area Manager AT&T Corporate Real Estate	07/13/2018 07/16/2018 07/24/2018 07/25/2018	Not Stated	626-817-4312

The following additional persons were interviewed to obtain information regarding recognized environmental conditions in connection with the property.

ADDITIONAL INTERVIEWS			
Contact / Affiliation	Date of Communication	Years Associated with Subject Property	Telephone No.

Pertinent information from the interviews is presented in applicable sections of this report.

7.0 CONSIDERATIONS OUTSIDE THE SCOPE OF ASTM PRACTICE E 1527-13

The following sections address environmental issues or considerations at the Subject Property that parties may wish to assess in connection with commercial real estate that are outside the scope of ASTM Practice E 1527-13 (non-scope considerations).

7.1 ASBESTOS-CONTAINING MATERIAL (ACM)

Asbestos is a term used to describe a group of six naturally occurring crystalline fiber minerals. Asbestos has excellent thermal stability, a high degree of tensile strength, and has been used extensively in the textile, insulation, and building industries, particularly as a component in fireproofing, decorative coatings, insulation materials, and as reinforcement for plaster binders in building products. Asbestos-containing building materials are generally classified as friable or non-friable. Friable materials are those that can be crumbled, pulverized, or reduced to powder by hand pressure, or by normal use or maintenance can be expected to emit asbestos fibers into the air. Non-friable ACM is a potential concern if it is damaged by maintenance work, demolition, or other activities, at which time it may be considered friable.

EBI conducted a limited screening survey for the presence of ACM at the Subject Property. EBI identified friable suspect ACM in the form of plaster and/or sheetrock and joint compound wall systems, ceiling tiles and ceiling panels and non-friable suspect ACM in the form of vinyl flooring, mastic and roofing materials. These materials were observed to be generally undamaged and in fair to good condition at the time of this assessment. Please note that this survey was limited to visual observations of accessible areas and that the scope of work for this assessment did not include the collection and laboratory analysis of bulk samples of undamaged suspect ACM. Additional suspect ACM may be present in inaccessible areas, including, but not limited to, roofs, pipe chases behind solid walls and ceilings, concealed floor coverings, the interior of machinery or equipment, or water and sewer systems.

It should be noted that the limited visual screening survey conducted under the scope of work for this assessment does not constitute a full asbestos inspection, in which all areas of the building would have been thoroughly surveyed and sampled. The possibility exists for ACM to be present in areas of the building not accessed or sampled by EBI personnel. Based on the limited scope of this assessment, additional suspect ACM may also present in areas of the buildings that were accessed as part of this assessment.

Due to the continued distribution of a wide variety of asbestos-containing building materials, asbestos may be present in some of the roofing, flooring, wall and ceiling materials, caulking/putties, adhesives, spackling compounds, and insulation materials, as well as other building materials that may be used at the Subject Property. Sampling many of these materials requires techniques that may be destructive to subject facilities, and in the case of roofing material, may void warranties. It is recommended that an asbestos inspection be performed in accordance with all applicable federal, state, and local regulatory requirements prior to renovation, demolition, or other activities that could cause a material disturbance. Any removal or disturbance of ACM or suspect ACM should be performed by properly trained personnel and in compliance with federal, state, and local regulations.

7.2 RADON

Radon is a naturally-occurring, colorless and odorless radioactive gas that is generated primarily in granitic rocks. The United States Surgeon General has published information that radon is a cause of lung cancer. Radon usually enters a building through openings in the foundation, and therefore is a potential health concern to residents of the lowest level of a building with inadequate ventilation.

The EPA Map of Radon Zones indicates that Los Angeles County is located within a Zone 2 radon area. Zone 2 is defined as an area that has a moderate potential for radon gas, with a predicted average indoor radon screening level between 2.0 picoCuries per liter (pCi/L) and 4.0 pCi/L. The EPA recommended Action Level for radon is 4.0 pCi/L.

Based on the non-residential use of the Subject Property and in accordance with the scope of work for this assessment, EBI did not conduct a limited short-term radon screening at the Subject Property.

7.3 LEAD-BASED PAINT (LBP)

Use of lead in household paint was banned by the U.S. Environmental Protection Agency (EPA) effective January 1, 1978. The EPA and the U.S. Department of Housing and Urban Development (HUD) consider lead-based paint as containing a lead concentration equal to or greater than 1.0 milligram per square centimeter (mg/cm²) or 0.5% lead by weight, as defined by Title X of the 1992 Housing and Community Development Act.

Based on the non-residential use of the existing buildings and in accordance with the scope of work of this assessment, a lead-based paint (LBP) survey was not conducted at the Subject Property.

7.4 LEAD IN DRINKING WATER

Lead has historically been used in pipes, solder, and brass fixtures used in water distribution systems and building plumbing systems. In 1986, EPA banned the use of lead at concentrations exceeding 0.2% lead in solder and 8% lead in other plumbing materials. Lead in drinking water results primarily from corrosion of lead containing materials in service lines or from corrosion of lead containing materials in building plumbing systems such as lead solder, brass, bronze, and other lead containing alloys. The EPA Action Level for lead in public drinking water supplies is 0.015 parts per million (ppm) or 0.015 milligrams per liter (mg/L).

Municipal water service is provided to the Subject Property by Name of Utility Provider. Potable water is reportedly obtained from Los Angeles Aqueduct, Metropolitan Water District, Colorado Aqueduct and public production wells. Based upon review of the 2016 Drinking Water Supply and Water Quality Report, the municipal water supply meets all current criteria established by the Safe Drinking Water Act (SDWA) and local municipal drinking water standards, including those for lead. Based upon the existing municipal water service and in accordance with the scope of work for this assessment, EBI did not conduct lead-in-drinking water sampling at the Subject Property.

8.0 FINDINGS AND OPINIONS

EBI has performed this Phase I Environmental Site Assessment of the Subject Property in conformance with the scope and limitations of ASTM Standard E 1527-13. Any exceptions to, or deletions from, this practice are described in Section 1.0 of this report.

This assessment has identified no evidence of *recognized environmental conditions (RECs)* in connection with the Subject Property except for the following:

- AT&T has been engaged in automotive service activities that include petroleum hydrocarbons and generate regulated wastes (used oil and other automotive fluids such as automatic transmission fluid and antifreeze) and has operated automotive lifts since at least 1975. These operations are suspect to have occurred on the Subject Property prior to construction of the vehicle maintenance building that was constructed in 1975. AT&T also operates an in-ground oil/water separator and currently three aboveground hydraulic lifts. These lifts replaced underground hydraulic lifts in 2010 and a portion of the foundation was replaced at that time, per the Building Department record. No data regarding this activity was otherwise identified. The historic use of regulated materials, generation of regulated wastes, and presence of the in-ground automotive lifts and oil/water separator are considered to represent a recognized environmental condition (REC) to the Subject Property.

In addition, the following *historical recognized environmental conditions (HREC)* and *de minimis conditions and considerations outside the scope of ASTM Practice E 1527-13* were identified in connection with the Subject Property.

- Historic USTs and related LUST cases at the Subject Property have been resolved and are discussed in Sections 4.1.2 and 4.1.3. These are considered *HRECs* for the Subject Property and no further action appears warranted.
- EBI conducted a limited screening survey for the presence of ACM at the Subject Property. EBI identified friable suspect ACM in the form of plaster and/or sheetrock and joint compound wall systems, ceiling tiles and ceiling panels and non-friable suspect ACM in the form of vinyl flooring, mastic and roofing materials. These materials were observed to be generally undamaged and in fair to good condition at the time of this assessment. Please note that this survey was limited to visual observations of accessible areas and that the scope of work for this assessment did not include the collection and laboratory analysis of bulk samples of undamaged suspect ACM. Additional suspect ACM may be present in inaccessible areas, including, but not limited to, roofs, pipe chases behind solid walls and ceilings, concealed floor coverings, the interior of machinery or equipment, or water and sewer systems.

9.0 RECOMMENDATIONS

Based upon the findings of this investigation, EBI offers the following recommendations:

- Conduct a Phase II Environmental Site Assessment to evaluate potential impact to soil and groundwater in the area of the vehicle maintenance building of former hydraulic lifts, oil/water separator and former wash rack (south side of the administration building). Estimated cost: \$10,000 - \$15,000.
- EBI recommends implementation of an Asbestos Operations and Maintenance (O&M) Plan for the Subject Property. This O&M Plan provides the procedures and guidelines that, when used during facility cleaning, maintenance, and general operations, will minimize human exposure to asbestos fibers and minimize release of asbestos fibers to the environment. This O&M Plan is a long term management approach. Estimated cost: \$500 for O&M Plan. EBI additionally recommends that a comprehensive asbestos inspection be conducted prior to significant renovation or demolition of the buildings.

VIII. RECOMMENDED ACTION

Soil Closure only: No	Case Closure: Yes	Solvent Case? No
Additional action required (i.e.: additional site assessment, remediation, monitoring): No		

IX. COMMENTS AND JUSTIFICATION FOR RECOMMENDED ACTION

The site is located at the 316 North Juanita Avenue, City of Los Angeles (Attachment 1, Site Map). Production well 01S13W04K01S is located 18,015 feet from the site (Attachment 2, one-mile radius map). The site consists of two buildings for general office use, equipment storage and vehicle maintenance and parking lot.

On November 10, 2004, a 12,000-gallon gasoline underground storage tank (UST) was removed. Low or non-detectable concentrations of fuel hydrocarbons were detected. However, water accumulating in the excavation pit was sampled and found that the maximum concentrations of petroleum hydrocarbons as gasoline (TPH_G) at 20,900 µg/L, benzene concentration at 524 µg/L, and methyl tertiary butyl ether (MTBE) concentration at 5,400 µg/L were detected.

In November 2007, five boring were drilled and converted to groundwater monitoring wells. Since then, the maximum concentrations of petroleum hydrocarbons as diesel (TPH_D) at 7,900 µg/L(11/07), and MTBE concentration at 13.1 µg/L (2/08) were detected in groundwater samples. Non-detectable concentrations of all other fuel hydrocarbons were detected in the soil and groundwater samples.

Non-detectable concentrations of MTBE were detected in soil samples except at boring MW-1 which detected maximum concentration of MTBE at 0.051 mg/kg at a depth of 10 feet below ground surface (bgs). Groundwater was encountered between 10 feet to 13 feet bgs. The low concentrations of MTBE in soil and groundwater samples in shallow groundwater would not cause impacts on drinking water aquifer.

In October 2008, two hydropunch groundwater samples were collected to further assess the groundwater plume. Non-detectable concentrations of fuel hydrocarbons were detected.

Attachment 3 shows the summary of soil analytical results.

Attachment 4 shows the summary of groundwater analytical results.

Contaminant Exposure Pathways Evaluation

Direct Contact

The residual concentrations of gasoline constituents in the soil beneath the site do not cause any direct contact concerns, because analytical results from the latest soil sampling are all below their respective SLs.

Protection of Drinking Water Aquifer

The groundwater beneath the site did not detect any concentrations of gasoline constituents higher than MCLs. The nearest drinking water well is 18,015 feet from the site.

Plume Migration

Groundwater sampling data showed low or non-detectable concentrations of fuel hydrocarbons. Therefore, there is no plume migration.

Vapor Intrusion

The residual concentrations of gasoline constituents in the soil beneath the site are not to cause any vapor intrusion concerns because low benzene concentrations were detected in all soil samples.

Factors Supporting Low Risk Closure

Based on the above assessment, staff recommends to grant a low-risk closure for the site for the following reasons:

- The source of the petroleum contamination has been abated as the UST at the site has been removed.

Site Name/Address: AT&T G1118 Facility 316 N. Juanita Avenue Los Angeles, CA 90004	Staff Initial: 
---	--

- No free product has ever been observed in any of the monitoring wells.
- The extent of soil and groundwater contamination has been adequately defined.
- The levels of the residual soil contamination are all below the respective SLs.
- The groundwater samples did not detected any fuel hydrocarbons higher than MCLs.

X. MTBE FATE & TRANSPORT PLUME LENGTH ANALYSIS

The MTBE fate and transport analysis can not be assessed since the highest MTBE concentration was only 8.65 µg/L (below the MCL).

XI. ELECTRONIC DELIVERABLE FORMAT (EDF) SUBMISSION: Yes

Has electronic data reporting requirement been met? **Yes**

XII. AB 681 REQUIREMENT (Land Owner Notification)

Verify property ownership <http://assessor.lacounty.gov/extranet/DataMaps/Pais.aspx> (date) : 3/16/09
Have landowner or impacted site notification requirements been met? Yes
Owner AT&T Services Inc.

	40 feet	B=0.015 T=0.43 E=1.8 X=4.8 MTBE = 0.013	B=0.018 T=0.87 E=2.8 X=7.8 MTBE = 0.022	B=0.029 T=1.6 E=6.3 X=16.9 MTBE = 0.03	B=0.143 T=7.5 E=30 X=83 MTBE = 0.156
	20 feet	B=0.011 T=0.15 E=0.7 X=1.75 MTBE = 0.013	B=0.011 T=0.3 E=0.7 X=1.75 MTBE = 0.013	B=0.011 T=0.45 E=2 X=5.3 MTBE = 0.013	B=0.044 T=2.3 E=9 X=24.5 MTBE = 0.065

- TPH = Total petroleum hydrocarbons.
- BTEX = benzene, toluene, ethylbenzene, and xylenes, respectively. MTBE = methyl tertiary butyl ether.
- Respective MCLs (ppm): B=0.001, T=0.15, E=0.7, X=1.75, MTBE=0.013.
- BTEX screening concentrations determined per the attenuation factor method as described in RWQCB Guidance for VOC Impacted Sites (March 1996), with a natural degradation factor of 11 for BTEX and of 3 for MTBE. Table values can be linearly interpolated between distance above groundwater and are proportional to fraction of each lithological thickness.
- Values in Table 4-1 are for soils above drinking water aquifers. All groundwaters are considered as drinking water resources unless exempted by one of the criteria as defined under SWRCB Resolution 88-63 (TDS>3000 mg/L, or deliverability <200 gal/day, or existing contamination that cannot be reasonably treated). Regional Board staff will make a determination of potential water use at a particular site considering water quality objectives and beneficial uses. For non-drinking water aquifers, regardless of depth, TPH for ">150 feet" category in the table should be used; BTEX screening levels are set at 100 times respective MCLs and MTBE 30 times MCL as preliminary levels determined to be protective of human health and the environment.
- Distance above groundwater must be measured from the highest anticipated water level. Lithology is based on the USCS scale.
- In areas of naturally-occurring hydrocarbons, Regional Board staff will make determinations on TPH levels.

3.0 ANALYTICAL TESTING

Soil samples were submitted to Associated Laboratories (AL) for analysis, which is State certified for hazardous waste testing (Certification No. 1338) using a 24-hour turn-around-time. Analytical laboratory results are provided on Figure 4 and laboratory reports are provided in Appendix A.

Samples were submitted for the following analysis:

- Total petroleum hydrocarbons as gasoline (TPH-g) using EPA Method 8015(m).
- Benzene (B), Toluene (T), Ethylbenzene (E), and Total Xylenes (X) using EPA Method 8260B (collectively BTEX).
- 5 Oxygenates: Methyl-t-butyl ether (MtBE), Di-isopropyl ether (DIPE), Ethyl-t-butyl ether (EtBE), Tert-amyl methyl ether (TAME), and Tert-butanol (TBA) using EPA Method 8260B.
- 1,2-Dibromoethane (EDB), and 1,2-Dichloroethane (EDC) using EPA Method 8260B.
- Methanol using EPA Method 8015M.
- Ethanol using EPA Method 8260B.
- The samples were collected and preserved using EPA Method SW5035.
- The analytical testing COELT/EDF data has been uploaded to the Geotracker website in compliance with AB2886 requirements.

Dallas, Texas 75202-5399

**UNDERGROUND STORAGE TANKS PROGRAM – CASE CLOSURE
PACIFIC BELL TELEPHONE COMPANY, AT&T
316 NORTH JUANITA AVENUE, LOS ANGELES, CA
(CASE NO. 900040225A)**

Dear Mr. Weller:

This letter confirms the completion of the site investigation and remedial action for the underground storage tank(s) formerly located at the above-described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the underground storage tank(s) is greatly appreciated.

Based on information in the above-referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, this agency finds that the site investigation and corrective action carried out at your underground tank(s) site is in compliance with the requirements of subdivision (a) and (b) of section 25296.10 of the Health and Safety Code and with corrective action regulations adopted pursuant to section 25299.3 of the Health and Safety Code and that no further action related to the petroleum release(s) at the site is required.

This notice is issued pursuant to subdivision (g) of section 25296.10 of the Health and Safety Code.

If you have groundwater monitoring wells or vapor extraction wells at the subject property, you must comply with the following:

1. All wells must be located and properly abandoned.
2. Well abandonment permits must be obtained from the Los Angeles County Department of Public Health, Environmental Health Division, and all other necessary permits must be obtained from the appropriate agencies prior to the start of work.
3. You must submit a report on the abandonment of the wells to this office by **June 15, 2009**. This report must include, at a minimum, a site map, a description of the well abandonment process, and copies of all signed permits.

California Environmental Protection Agency

Our mission is to preserve and enhance the quality of California's water resources for the benefit of present and future generations.

In the event that any box (i.e. 1-16) is filled to capacity, it is possible that additional information has been captured electronically and could not be printed due to space restrictions. Nevertheless, the information printed exceeds that required by Section 19825 of the Health and Safety Code of the State of California.

15. Building Relocated From:

16. CONTRACTOR, ARCHITECT, & ENGINEER NAME ADDRESS

(C) Mjk Construction Inc	2766 Pomona Blvd,	Pomona, CA 91768	CLASS	LICENSE#	PHONE #
			B	586870	(909) 594-9830

PERMIT EXPIRATION/REFUNDS: This permit expires two years after the date of the permit issuance. This permit will also expire if no construction work is performed for a continuous period of 180 days (Sec. 98.0602 LAMC). Claims for refund of fees paid must be filed within one year from the date of expiration for permits granted by LADBS (Sec. 22.12 & 22.13 LAMC). The permittee may be entitled to reimbursement of permit fees if the Department fails to conduct an inspection within 60 days of receiving a request for final inspection (HS 17951).

17. LICENSED CONTRACTOR'S DECLARATION

I hereby affirm under penalty of perjury that I am licensed under the provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect. The following applies to B contractors only: I understand the limitations of Section 7057 of the Business and Professional Code related to my ability to take prime contracts or subcontracts involving specialty trades.

License Class: **B** Lic. No.: **586870** Contractor: **MJK CONSTRUCTION INC**

18. WORKERS' COMPENSATION DECLARATION

I hereby affirm, under penalty of perjury, one of the following declarations:

I have and will maintain a certificate of consent to self insure for workers' compensation, as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier: **Granite State Ins. Co.** Policy Number: **5708056**

I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers' compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

WARNING: FAILURE TO SECURE WORKERS' COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS (\$100,000), IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

19. ASBESTOS REMOVAL DECLARATION / LEAD HAZARD WARNING

I certify that notification of asbestos removal is either not applicable or has been submitted to the AQMD or EPA as per section 19827.5 of the Health and Safety Code. Information is available at (909) 396-2336 and the notification form at www.aqmd.gov. Lead safe construction practices are required when doing repairs that disturb paint in pre-1978 buildings due to the presence of lead per section 6716 and 6717 of the Labor Code. Information is available at Health Services for LA County at (800) 524-5323 or the State of California at (800) 597-5323 or www.dhs.ca.gov/childlead.

20. CONSTRUCTION LENDING AGENCY DECLARATION

I hereby affirm under penalty of perjury that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civil Code).

Lender's name (if any): _____ Lender's address: _____

21. FINAL DECLARATION

I certify that I have read this application INCLUDING THE ABOVE DECLARATIONS and state that the above information INCLUDING THE ABOVE DECLARATIONS is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above-mentioned property for inspection purposes. I realize that this permit is an application for inspection and that it does not approve or authorize the work specified herein, and it does not authorize or permit any violation or failure to comply with any applicable law. Furthermore, neither the City of Los Angeles nor any board, department officer, or employee thereof, make any warranty, nor shall be responsible for the performance or results of any work described herein, nor the condition of the property nor the soil upon which such work is performed. I further affirm under penalty of perjury, that the proposed work will not destroy or unreasonably interfere with any access or utility easement belonging to others and located on my property, but in the event such work does destroy or unreasonably interfere with such easement, a substitute easement(s) satisfactory to the holder(s) of the easement will be provided (Sec. 91.0106.4.3.4 LAMC).

By signing below, I certify that:

- (1) I accept all the declarations above namely the Licensed Contractor's Declaration, Workers' Compensation Declaration, Asbestos Removal Declaration / Lead Hazard Warning, Construction Lending Agency Declaration and Final Declaration; and
- (2) This permit is being obtained with the consent of the legal owner of the property.

NUMBERED NOTES:

1. NEW 7/8" X 1/2" W/40 DOUBLE SWING GANTRY WITH 1/4" BOLTS OR DOOR BOLTS TERMINATE AT 18" ABOVE ROOF LINE WITH COORDINATED IN THE FIELD BY THE CONTRACTOR.
2. DOUBLE CONTAINED SUPPLY AND RETURN LINE (1 1/2" PRIMARY AND 3" SECONDARY).
3. CONTRACTOR SHALL COORDINATE EXACT LOCATION OF ALL UNDERGROUND PIPES AND CONDUIT IN THE FIELD.
4. EXISTING ILS-250 SHALL BE RE-USED. EXISTING SENSOR SHALL BE RE-USED. CONTRACTOR SHALL PROVIDE NECESSARY CABLES AND CONDITS. VERIFY EXACT LOCATION.
5. EXISTING LEAKS ALERT SHALL BE RE-USED. ALL NEW EXISTING CONDITS. VERIFY EXACT LOCATION.
6. EXISTING TANK AND CONNECTED PIPING SHALL BE REMOVED ONLY WHEN THE NEW TANK IS COMPLETELY INSTALLED AND READY TO BE REMOVED AND TRANSFERRED TO THE NEW COMPLETELY INSTALLED TANK. PRESSURE AND VACUUM TESTING FOR PIPES SHALL BE PER PIPE MANUFACTURER'S RECOMMENDATIONS.
7. NEW UNDERGROUND TANK SHALL BE PURCHASED AND PAID FOR BY PACIFIC BELL. THIS CONTRACTOR SHALL COORDINATE WITH ALL NECESSARY AGENCIES AND OBTAIN ALL NECESSARY PERMITS. CONTRACTOR SHALL BE RESPONSIBLE FOR COMPLETE INSTALLATION AND ALL WORK INDICATED IN THIS DRAWINGS AND SPECIFICATIONS.
8. EXISTING ISLAND AND FUEL DISPENSER TO REMAIN (TO BE REUSED). CONTRACTOR SHALL PROVIDE NECESSARY CABLES AND CONDITS. NEW TANK TO LOST DISPENSER. CONTRACTOR TO INSTALL EMERGENCY SHUT-OFF VALVE, DPW 10-R.

GENERAL NOTES:

1. ALL FUEL SUPPLY, VAPOR, AND VENT LINES SHALL BE SLOPPED TOWARDS TANK. (1/4" PER FOOT)
2. SUPPLY AND VAPOR LINES SHALL BE PROVIDED WITH A CONTAMINATION METHOD OF INSTALLATION. CONTRACTOR SHALL SUBMIT TO THE CITY AND OBTAIN ALL NECESSARY PERMITS. ALL WORK SHALL BE COMPLETED BEFORE START OF WORK. PRESSURE AND VACUUM TESTING FOR PIPES SHALL BE PER PIPE MANUFACTURER'S RECOMMENDATIONS.
3. TOPPING THE TANK WITH GASOLINE FUEL FOR TESTING SHALL BE PROVIDED BY PACIFIC BELL. ALL FUEL WILL BE PROVIDED BY PACIFIC BELL.
4. M.O.P. FOR VARIOUS INSTALLATIONS SHALL BE APPROVED BY PACIFIC BELL ENGINEER BEFORE DOING ANY WORK.
5. PROVIDE OSHA APPROVED SHORING FOR ALL TANK EXCAVATIONS.

SPECIAL NOTES:

1. PROVIDE SHORING (PER OSHA STD SECTION 15.40 & 15.41) FOR ALL EXCAVATIONS. CONTRACTOR SHALL OBTAIN PERMIT FROM CAL OSHA.
2. CONTRACTOR SHALL BE RESPONSIBLE FOR OBTAINING ALL NECESSARY PERMITS AND BUILDING PERMIT. I.E. FIRE DEPARTMENT, BUILDING AND CITY AND OBTAINING AN OPERATION PERMIT. (CONTRACTOR SHALL PAY FOR PERMIT).
3. CONTRACTOR SHALL BE RESPONSIBLE FOR RECEIVING TANK TO THE CITY AND OBTAINING AN OPERATION PERMIT. (CONTRACTOR SHALL PAY FOR PERMIT).
4. ANY WORK ASSOCIATED WITH SOIL CONTAMINATIONS UNCOVERED DURING CONSTRUCTION WILL NOT BE A PART OF THE SCOPE OF WORK.
5. ALL TEST RESULT SHALL BE INCLUDED.
6. PACIFIC BELL WILL BE RESPONSIBLE FOR THE FOLLOWING ITEMS:
 A. SOIL SAMPLE REPORT
 B. AIR QUALITY MONITORING REPORT
 C. TRIPLE BOND REPORT
 D. CLOSURE REPORT.

GENERAL NOTES, (ELECTRICAL)

1. WHEREVER LOCATIONS, WIRE, AND CONDUITS FOR EXISTING ILS-250 AND LEAK ALERT EXACT LOCATION SHALL BE VERIFIED IN THE FIELD BY THE CONTRACTOR.

SUMMARY OF EXPERIENCE

Ms. Vanneman's expertise is knowledge and application of environmental regulations pertaining to both the environment and occupational health and safety.

Facilities audited for environmental and health and safety compliance by Ms. Vanneman include foundries, cabling operations, extrusion/molding operations, aerospace, commercial printing, food preparation/packaging, metal plating/etching, automotive, painting, woodworking, biomedical, concrete mixing/molding, and other various commercial and industrial facilities. Ms. Vanneman has also conducted numerous facility dismantling/decontamination projects.

To assist the financial community, Ms. Vanneman has performed and/or managed over 1,000 Phase I, II and III Environmental Site Assessments/Remediation including several types of properties not limited to industrial, commercial residential, and agricultural. These projects range from single-property transactions to multi-site portfolios. Environmental issues addressed include radon, EMR, asbestos, lead, wetlands, third-party hydrocarbon contamination, and previous on-site contaminants.

EDUCATION

BA Biology, Hastings College, Hastings, NE.

PROFESSIONAL REGISTRATIONS/CERTIFICATIONS

Registered environmental assessor, R.E.A. #05291

EPA approved lead inspectors course

Lead risk assessment course

40-hour radiation safety in radiography

Calepa/EPA sponsored risk assessment courses

Certified AHERA building inspector

Certified AHERA management planner

Certified AHERA contractor/supervisor/competent person

Cal/OSHA certified asbestos consultant

SUMMARY OF EXPERIENCE

Michael S. Ryniak is an environmental scientist with more than 25 years of environmental industry experience specializing in environmental investigations and site assessments. Mr. Ryniak also has experience conducting NEPA assessments, subsurface investigations, as well as performing indoor air quality, asbestos, radon, lead paint, and lead water surveys. He has also prepared asbestos and lead paint operations and maintenance plans and moisture management plans.

Mr. Ryniak has conducted over 1,000 environmental site-acquisition assessments/due diligence assignments for a wide range of properties throughout the United States. These assessments have been performed to evaluate site conditions, potential off-site liabilities, environmental control systems, and site remediation costs in order to advise prospective buyers, current operators, and owners of potential and existing environmental concerns. Furthermore, as a supervisor, Mr. Ryniak has been responsible for the review and client technical relations for over 4,000 additional Phase I Environmental Site Assessments. Mr. Ryniak has worked with corporate environmental officers, numerous Wall Street lending institutions, legal counsel, governmental agencies, rating agencies, investment companies and real estate brokers to develop strategies for managing properties with environmental concerns.

At EBI Consulting, Mr. Ryniak provides Senior Level review and quality control of Phase I Site Assessments and Environmental Screening reports, as well as client support, managing selected client accounts. Mr. Ryniak has over five years experience concentrating on providing these services to HUD Lender clients. Additionally, Mr. Ryniak is involved in marketing outreach activities with local Arizona banks.

RELEVANT PROJECT EXPERIENCE

ENVIRONMENTAL SITE ASSESSMENTS: Mr. Ryniak has conducted ASTM Phase I Environmental Site Assessments, Environmental Site Screenings, and soil and groundwater sampling for various clients and has prepared Phase I and Phase II reports for a variety of properties located in the United States. These properties have included industrial, commercial, retail, and multi-family residential properties, as well as telecommunications sites. Mr. Ryniak has conducted assessments at numerous senior living facilities, including all levels of senior care. Mr. Ryniak has also conducted indoor air quality, radon, asbestos-containing materials, lead-based paint and lead water surveys. Mr. Ryniak participated in remedial investigation and feasibility studies for four Arizona "Superfund" sites in Phoenix and Tucson.

OPERATIONS & MAINTENANCE PLANS: Mr. Ryniak has prepared asbestos and lead paint operations and maintenance plans, and moisture management plans for a variety of commercial and multi-family residential facilities throughout the United States.

EXECUTIVE SUMMARY

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 05/18/2018 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 3

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 11 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 04/30/2018 has revealed that there are 22 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CPS-SLIC list, as provided by EDR, has revealed that there are 3 CPS-SLIC sites within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 36 EDR Hist Auto sites within approximately 0.25 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 11 EDR Hist Cleaner sites within approximately 0.25 miles of the target property.

EDR RECOVERED GOVERNMENT ARCHIVES

Exclusive Recovered Govt. Archives

RGA LUST: The EDR Recovered Government Archive Leaking Underground Storage Tank database provides a list of LUST incidents derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the State Water Resources Control Board in California.

A review of the RGA LUST list, as provided by EDR, has revealed that there are 34 RGA LUST sites within approximately 0.5 miles of the target property.

FINDS:

Registry ID: 110002683392

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Historical Generators:

Date form received by agency: 05/31/2006
Site name: J.P. CARROL COMPANY
Classification: Large Quantity Generator

- . Waste code: D001
- . Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

- . Waste code: D018
- . Waste name: BENZENE

- . Waste code: F003
- . Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: * Discovery
 Completed Date: 06/20/1991
 Comments: From EPA CERCLA PA fit report. Site is located in three lots. 1) 218 N. Juanita Avenue: the site currently leased by Lynde-Ordway Co., Inc. Carroll Trust has owned since 1940s and LOC leased it since then. 1990 geophysical surveys located three underground tanks on the property. 2) 220 N. Juanita Avenue: it is currently a vacant lot. The Parker Judge owned in 1938. Paint Engineers owned and operated in 1946. Carroll Trust since 1953. 3) 222 N. Juanita Avenue: Hansen's Juices leased it since 1989. The Los Angeles unified school district conducted Phase I & II investigations to purchase the property. Revealed petroleum contamination in the soil. Stoddard solvent was detected in the soil. The highest level was 4500 mg/kg volatile organics and chlorinated hydrocarbons were also detected in the soil. Contamination has also been detected in the groundwater. FIT recommended NFA for EPA. Medium priority PEA required.

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110002899123

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

S103437995

Latitude: 34.081679
Longitude: -118.283519
Case Type: Cleanup Program Site
Case Worker: TA
Local Agency: Not reported
RB Case Number: 0803
File Location: Regional Board
Potential Media Affected: Indoor Air, Other Groundwater (uses other than drinking water), Soil, Soil Vapor
Potential Contaminants of Concern: Other Solvent or Non-Petroleum Hydrocarbon, Tetrachloroethylene (PCE), Trichloroethylene (TCE)
Site History: This Site is a 2.4-acre parcel of land occupied by the SMH Site that consists of several buildings hosting administrative offices, warehouses for the storage of streetlight parts, and vehicle maintenance garages. Historical records show that the SMH Site was built upon residential property in 1926. Gasoline and a waste oil underground storage tanks (USTs) were removed from the SMH Site in 1990. The Regional Boards Underground Storage Tank (UST) Section issued a closure for the USTs and the case was transferred to the Site Cleanup Program because of the detection of VOCs and SVOCs in the Sites groundwater monitoring wells. Thereafter, various investigations were conducted that include a soil vapor survey, installation of 32 soil borings and 14 groundwater monitoring wells at the SMH Site. The analytical results confirmed that both soil and groundwater beneath the SMH Site are impacted with tetrachloroethylene (PCE), trichloroethylene (TCE) and benzene. The data show PCE concentrations as high as 1,670 micrograms per kilogram (a%g/Kg) in soil, 13,500 micrograms per liter (a%g/L) in the soil vapor collected from 5 feet below ground surface (bgs) and 23,300 a%g/L in groundwater. In addition, benzene was detected up to 602 a%g/Kg and 392 a%g/L in soil and groundwater, respectively. The site assessment identifies two separate potential source areas of PCE impacted soil at the SMH Site. PCE concentrations of 2,634 and 1,670 micrograms per kilogram (a%g/Kg) in the northern and southern portion, respectively, were reported. The most recent groundwater monitoring results show PCE concentration as high as 75,000 micrograms per liter (a%g/L) and TCE as high as 123 a%g/L. Soil vapor survey conducted at the site also confirm the presence of VOCs. The highest PCE concentration detected in soil vapor at the Site is 1,100 a%g/L. In addition, benzene was detected up to 602 a%g/Kg and 392 a%g/L in soil and groundwater, respectively. The results of soil and groundwater samples collected along sewer and storm drain pipelines servicing the dry cleaning facility located north east of the SMH Site. PCE concentration as high as 1,100 a%g/Kg in soil and greater than 1,000 a%g/L in groundwater was detected in samples obtained approximately 50 feet southwest of the dry cleaning facility. Based on the data, LADWP claims that the dry cleaning facility is a potential source of PCE contamination at the SMH Site. The Regional Board is following up on the potential contribution of PCE contamination from the dry cleaners. According to the Department of Water Resources Bulletin No. 104, the Site is located in the Hollywood Basin of the Coastal Plain of Los Angeles. The SMH Site lies on the western flank of the Elysian Hills that is underlain by recent alluvium, which includes the Gaspur aquifer overlying the Puente Formation. Based on the soil boring log, the soil beneath the SMH Site consists of primarily clay, sandy clay and silt to a depth of 20 feet, the maximum depth of investigation. Depth to the shallow

Actual:
333 ft.

CPS-SLIC:
 Region: STATE
Facility Status: Open - Inactive
 Status Date: 01/28/2016
 Global Id: SL0603711101
 Lead Agency: LOS ANGELES RWQCB (REGION 4)
 Lead Agency Case Number: Not reported
 Latitude: 34.08291
 Longitude: -118.284318
 Case Type: Cleanup Program Site
 Case Worker: RV
 Local Agency: Not reported
 RB Case Number: 1232
 File Location: Regional Board
 Potential Media Affected: Aquifer used for drinking water supply, Soil, Soil Vapor
 Potential Contaminants of Concern: * Chlorinated Hydrocarbons
 Site History: The Site is located in an area that is characterized by a mixed commercial residential use. Jesse Cleaners was in operation from 1995 through 2008 and the building is currently vacant. However, a dry cleaning establishment has been present on the site in the same tenant space since 1981. In 2006, two separate subsurface investigations were conducted at the Site. These are: 1) Western Environmental Engineers Company (WEECO) installed four soil borings

JESSE CLEANERS (Continued)

S109117980

to 10 feet below ground surface (bgs); and 2) JMK installed five additional soil borings to 25 feet bgs. The limited soil sampling and analysis, confirmed that soil beneath the Site are impacted with PCE and trichloroethylene (TCE). Based on the analytical results, up to 1,350,085 micrograms per kilogram (a%g/kg) of PCE and 1,834 a%g/kg of TCE were detected in soil samples collected from beneath the former dry cleaning machine. Groundwater samples obtained from locations immediately down gradient from the Jesse Cleaners and approximately 50 feet from the Streetlight Maintenance Headquarters (SMH) site have PCE concentrations greater than 1,000 micrograms per liter (a%g/L).

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 05/13/2018	Source: EPA
Date Data Arrived at EDR: 05/30/2018	Telephone: N/A
Date Made Active in Reports: 06/22/2018	Last EDR Contact: 05/30/2018
Number of Days to Update: 23	Next Scheduled EDR Contact: 07/16/2018
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 05/13/2018	Source: EPA
Date Data Arrived at EDR: 05/30/2018	Telephone: N/A

	Data Release Frequency: Quarterly

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/05/2017	Telephone: 703-603-8704
Date Made Active in Reports: 04/07/2017	Last EDR Contact: 04/06/2018
Number of Days to Update: 92	Next Scheduled EDR Contact: 07/16/2018
	Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 05/18/2018	Source: EPA
Date Data Arrived at EDR: 05/30/2018	Telephone: 800-424-9346
Date Made Active in Reports: 06/22/2018	Last EDR Contact: 05/30/2018
Number of Days to Update: 23	Next Scheduled EDR Contact: 07/30/2018
	Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 05/18/2018	Source: EPA
Date Data Arrived at EDR: 05/30/2018	Telephone: 800-424-9346

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 03/01/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/28/2018	Telephone: (415) 495-8895
Date Made Active in Reports: 06/22/2018	Last EDR Contact: 06/28/2018
Number of Days to Update: 86	Next Scheduled EDR Contact: 10/08/2018

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/01/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/28/2018	Telephone: (415) 495-8895
Date Made Active in Reports: 06/22/2018	Last EDR Contact: 06/28/2018

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 03/01/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/28/2018	Telephone: (415) 495-8895

Number of Days to Update: 86	Next Scheduled EDR Contact: 10/08/2018
	Data Release Frequency: Quarterly

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/01/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/28/2018	Telephone: (415) 495-8895

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 02/13/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 02/27/2018	Telephone: 703-603-0695
Date Made Active in Reports: 05/11/2018	Last EDR Contact: 05/29/2018
Number of Days to Update: 73	Next Scheduled EDR Contact: 09/10/2018
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 02/13/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 02/27/2018	Telephone: 703-603-0695

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Date of Government Version: 03/19/2018	Source: Environmental Protection Agency

WMUDS/SWAT: Waste Management Unit Database

Waste Management Unit Database System. WMUDS is used by the State Water Resources Control Board staff and the Regional Water Quality Control Boards for program tracking and inventory of waste management units. WMUDS is composed of the following databases: Facility Information, Scheduled Inspections Information, Waste Management Unit Information, SWAT Program Information, SWAT Report Summary Information, SWAT Report Summary Data, Chapter 15 (formerly Subchapter 15) Information, Chapter 15 Monitoring Parameters, TPCA Program Information, RCRA Program Information, Closure Information, and Interested Parties Information.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Local Lists of Hazardous waste / Contaminated Sites

US HIST CDL: National Clandestine Laboratory Register

A listing of clandestine drug lab locations that have been removed from the DEAs National Clandestine Laboratory Register.

Date of Government Version: 02/22/2018	Source: Drug Enforcement Administration
Date Data Arrived at EDR: 03/01/2018	Telephone: 202-307-1000
Date Made Active in Reports: 05/11/2018	Last EDR Contact: 05/30/2018
Number of Days to Update: 71	Next Scheduled EDR Contact: 09/10/2018
	Data Release Frequency: No Update Planned

HIST CAL-SITES: Calsites Database

The Calsites database contains potential or confirmed hazardous substance release properties. In 1996, California EPA reevaluated and significantly reduced the number of sites in the Calsites database. No longer updated by the state agency. It has been replaced by ENVIROSTOR.

Date of Government Version: 08/08/2005	Source: Department of Toxic Substance Control
Date Data Arrived at EDR: 08/03/2006	Telephone: 916-323-3400
Date Made Active in Reports: 08/24/2006	Last EDR Contact: 02/23/2009
Number of Days to Update: 21	Next Scheduled EDR Contact: 05/25/2009
	Data Release Frequency: No Update Planned

SCH: School Property Evaluation Program

This category contains proposed and existing school sites that are being evaluated by DTSC for possible hazardous materials contamination. In some cases, these properties may be listed in the CalSites category depending on the level of threat to public health and safety or the environment they pose.

Date of Government Version: 04/30/2018	Source: Department of Toxic Substances Control
Date Data Arrived at EDR: 05/02/2018	Telephone: 916-323-3400
Date Made Active in Reports: 06/22/2018	Last EDR Contact: 05/02/2018
Number of Days to Update: 51	Next Scheduled EDR Contact: 08/13/2018
	Data Release Frequency: Quarterly

CDL: Clandestine Drug Labs

A listing of drug lab locations. Listing of a location in this database does not indicate that any illegal drug lab materials were or were not present there, and does not constitute a determination that the location either requires or does not require additional cleanup work.

Date of Government Version: 06/30/2017	Source: Department of Toxic Substances Control
Date Data Arrived at EDR: 08/18/2017	Telephone: 916-255-6504
Date Made Active in Reports: 09/21/2017	Last EDR Contact: 07/05/2018
Number of Days to Update: 34	Next Scheduled EDR Contact: 10/22/2018
	Data Release Frequency: Varies

TOXIC PITS: Toxic Pits Cleanup Act Sites

Toxic PITS Cleanup Act Sites. TOXIC PITS identifies sites suspected of containing hazardous substances where cleanup has not yet been completed.

Date of Government Version: 07/01/1995	Source: State Water Resources Control Board
Date Data Arrived at EDR: 08/30/1995	Telephone: 916-227-4364
Date Made Active in Reports: 09/26/1995	Last EDR Contact: 01/26/2009
Number of Days to Update: 27	Next Scheduled EDR Contact: 04/27/2009
	Data Release Frequency: No Update Planned

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995	Source: EPA
Date Data Arrived at EDR: 07/03/1995	Telephone: 202-564-4104

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

Number of Days to Update: 52	Next Scheduled EDR Contact: 08/20/2018
	Data Release Frequency: Varies

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

CERS: CalEPA Regulated Site Portal Data

The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

GEOCHECK[®] - PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

316 N. JUANITA AVE.
316 N. JUANITA AVE.
LOS ANGELES, CA 90004

TARGET PROPERTY COORDINATES

Latitude (North):	34.077111 - 34° 4' 37.60"
Longitude (West):	118.289771 - 118° 17' 23.18"
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	380993.7
UTM Y (Meters):	3771261.8
Elevation:	271 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5630741 HOLLYWOOD, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ESE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
06037C1610F	FEMA FIRM Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>
Not Reported	

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
HOLLYWOOD	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
1	0 - 1/8 Mile West	Not Reported
2	1/2 - 1 Mile SSW	SW
A3	1/2 - 1 Mile SSW	Varies
A4	1/2 - 1 Mile SSW	Not Reported
1G	0 - 1/8 Mile West	Not Reported
2G	1/2 - 1 Mile SSW	SW
3G	1/2 - 1 Mile SSW	Varies
4G	1/2 - 1 Mile SSW	Not Reported

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Cenozoic
System: Tertiary
Series: Miocene
Code: Tm (decoded above as Era, System & Series)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: sandy loam
 gravelly - sandy loam
 silt loam
 clay
 fine sand
 gravelly - sand
 sand
 fine sandy loam

Surficial Soil Types: sandy loam
 gravelly - sandy loam
 silt loam
 clay
 fine sand
 gravelly - sand
 sand

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

The use of this material is subject to the terms of a license agreement. You will be held liable for any unauthorized copying or disclosure of this material.

This Report contains certain products owned by or licensed by Tele Atlas North America, Inc. ("TANA") and licensed to EDR pursuant to an agreement between EDR and TANA (the "TANA Agreement"). Such products include the Dynamap®/2000 (commencing with the most current version, nationwide coverage, ArcInfo™format, tiled by county, with semi-annual Updates) and are referred to in this Report as the "Licensed Products".

The use of the Licensed Products with a non-TANA map may result in increased variance between the location displayed on the map and ground truth location.

The recipient of the Report (hereinafter referred to as an "End User") shall use such Report solely for its internal purposes and not for resale.

U.S. GOVERNMENT RIGHTS. If End User is an agency, department, or other entity of the United States Government, or funded in whole or in part by the United States Government, then use, duplication, reproduction, release, modification, disclosure or transfer of this commercial product and accompanying documentation, is restricted in accordance with the LIMITED or RESTRICTED rights as described in DFARS 252.227-7014(a)(1) (JUN 1995) (DOD commercial computer software definition), DFARS 227.7202-1 (DOD policy on commercial computer software), FAR 52.227-19 (JUN 1987) (commercial computer software clause for civilian agencies), DFARS 252.227-7015 (NOV 1995) (DOD technical data – commercial items clause); FAR 52.227-14 Alternates I, II, and III (JUN 1987) (civilian agency technical data and noncommercial computer software clause); and/or FAR 12.211 and FAR 12.212 (commercial item acquisitions), as applicable. In case of conflict between any of the FAR and DFARS provisions listed herein, the construction that provides greater limitations on the Government's rights shall control. Contractor/manufacturer is Tele Atlas North America, Inc., 11 Lafayette Street, Lebanon, NH 03766-1445. Phone: 603.643. 0330. The Licensed Products are © 1984-2008 by Tele Atlas North America, Inc. ALL RIGHTS RESERVED. For purpose of any public disclosure provision under any federal, state or local law, it is agreed that the Licensed Products are a trade secret and a proprietary commercial product and not subject to disclosure.

If End User is an agency, department, or other entity of any State government, the United States Government or any other public entity or funded in whole or in part by the United States Government, such End User agrees to protect the Licensed Products from public disclosure and to consider the Licensed Products exempt from any statute, law, regulation, or code, including any Sunshine Act, Public Records Act, Freedom of Information Act, or equivalent, which permits public access and/or reproduction or use of the Licensed Products. In the event that such exemption is challenged under any such laws, any and all right to retain any copies or to use of the Licensed Products shall be terminated and considered immediately null and void. Any copies of the Licensed Products held by End User shall immediately be destroyed. If any court of competent jurisdiction considers this clause void and unenforceable, in whole or in part, for any reason, then all Licensed Products previously delivered to End User will be destroyed.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 332 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

1.0 INTRODUCTION

Hydrologue Inc. (HI) has been retained by AT&T Services Inc. (formerly SBC) to prepare a workplan for a limited Focused Site Assessment at the Pacific Bell LSANCA86 (G1118) Facility located at 316 N Juanita Ave Los Angeles CA 90004-3502 (hereinafter referred to as Site). This workplan is prepared based on Los Angeles Fire Department (LAFD) Local Oversight Program (LOP) requirement to conduct a preliminary site assessment in the proximity of the former 12,000-gallon gasoline double-wall steel underground storage tank (UST).

1.1 Site Description

The SBC property is located in a predominantly commercial area of Los Angeles, California. The Site consists of several buildings utilized for equipment storage and vehicle maintenance. The remainder of the Site is used for parking of SBC fleet and personal vehicles. The Site is located at an elevation of approximately 280 feet mean sea level (MSL). Local topography slopes to the southeast.

1.2 Property Owner

The Site is identified as Pacific Bell Telephone Co. LSANCA86 Facility (Building and GEO Location Code: G1118) and is owned by Pacific Bell Telephone Company d/b/a AT&T.

2.0 BACKGROUND

2.1 Previous Work

On November 10, 2004, SBC removed one 12000-gallon gasoline underground storage tank (UST) from the Site and HI prepared the UST removal report (*UST REMOVAL REPORT / SOILS REPORT FOR PERMIT #12134 dated November 17, 2004*). HI reported that there was no evidence of leaks or holes in the UST that was removed. Soil samples were collected from the sidewalls of the UST excavation and a sample collected from the accumulated water within the excavation. The results of the analytical testing show that NO petroleum constituents were detected above the method detection limits in the soil samples collected beneath the UST and the former fuel dispenser, except for minor Methyl-t-butyl ether (MTBE) concentrations at 2.7 micrograms per kilogram ($\mu\text{g}/\text{Kg}$), 4.7 $\mu\text{g}/\text{Kg}$, and 6 $\mu\text{g}/\text{Kg}$, slightly above the detection limit, detected in samples 1A, 1B and D1, respectively. Total Petroleum Hydrocarbons as gasoline (TPH-g) and Volatile Organic Compounds (VOCs) concentrations at 20,900 micrograms per liter ($\mu\text{g}/\text{L}$), Benzene at 524 $\mu\text{g}/\text{L}$, Toluene at 2,030 $\mu\text{g}/\text{L}$, Ethylbenzene at 282 $\mu\text{g}/\text{L}$, Total Xylenes at 1,770 $\mu\text{g}/\text{L}$, Ethanol at 2,050 $\mu\text{g}/\text{L}$, MTBE at 5,400 $\mu\text{g}/\text{L}$, Tert-amyl methyl ether (TAME) at 18 $\mu\text{g}/\text{L}$, and Tert-butanol (TBA) at 812 $\mu\text{g}/\text{L}$ were detected in the accumulated water within the excavation.

HI concluded the following: Preliminary research indicates that there was a previous onsite leak reported in or around 1989. Closure for the Site was granted by the RWQCB or the LAFD in 1996. The current data is insufficient at this time to conclude if the detected compound concentrations in the accumulated water sample collected from the base of the excavation are related to the current UST, the UST removed in 1989, or another source. Therefore, additional assessment is required to assess quality and any potential impact of groundwater underlying the Site.

2.2 Scope of Work

The scope of work as discussed between the LOP, SBC and HI is as follows:

- Preparation of a workplan and a Site-specific Health and Safety Plan;
- Mark the location of the proposed soil borings and inform US Alert 48 hours prior to initiating field activity;
- Drill five soil borings to a depth of 30 feet bgs using a hollow stem auger (HSA) drilling rig;
- Collect soil samples from each boring at 5 feet intervals to the termination depth of each soil boring;
- Conversion of the soil borings into 2-inch groundwater monitoring wells;
- Subsequent well development, survey, purging, and sampling; and,
- Preparation of the site assessment report.

2.3 Geology and Hydrogeology

The site is located in the northern portion of the Los Angeles Coastal Plain approximately three miles south of the Santa Monica Mountains and five miles northeast of the Baldwin Hills. The Silver Lake Reservoir, located approximately three miles northeast of the site and the Hollywood Reservoir, located approximately four miles northwest of the site, are the closest perennial surface water bodies. The site is located in the La Brea Plain of the Los Angeles Central Basin, and is underlain primarily by recent alluvial sediments consisting of clay, sand and gravel. According to the California Department of Water Resources, the Exposition Aquifer extends from approximately 40 feet below ground surface (bgs) to ground surface in the region of the site.

The La Brea Plain is located east of the Newport-Inglewood belt of hills and west of the Elysian Hills. A surface was originally cut by the sea during Pleistocene time on lower Pleistocene and older formations. On this eroded surface 90 to 200 feet of alluvial sediments have been deposited, the top of which now forms the La Brea Plain. The La Brea Plain has apparently been warped into an east-west anticlinal structure extending westerly from the Elysian Hills. Because of this warping and partial uplifting, the plain is being dissected and removed by erosion. A younger series of alluvial fans forming the Hollywood piedmont slope have buried the La Brea Plain from the north. Poland, et al., (*Poland, J. F., Piper, A. M., and others. "Ground Water Geology of the Coastal Zone Long Beach - Santa Ana Area, California". USGS Water Supply Paper 1109. 1956*) described the La Brea Plain and the Santa Monica Plain as being of similar origin, and additional exposures and close study of the land forms indicate that both of these forms are related in age to the Ocean Park Plain and the Torrance Plain.

The oldest geologic unit mapped in the Hollywood Quadrangle is the Cretaceous granodiorite and quartz diorite (Kgr), which is exposed in the northern part of the map area in the Santa Monica Mountains. Locally, at the surface, the granitic rocks are soft and crumbly due to weathering.

The Tertiary bedrock formations exposed on hills at the vicinity of the Site (Tush and Tmms) are assigned to deep-marine biogenic and clastic rocks of the upper Miocene Modelo Formation and upper Miocene Puente Formation. The Modelo Formation is composed of interbedded shale, siltstone, and sandstone (Tush). Tush consists of gray to light brown, thin bedded, silty clay shale, locally contains scattered large calcareous nodules; in places contains thin interbeds of fine-grained sandstone; lower part locally contains thin lenses of light tan, platy, semi-siliceous or diatomaceous shale. These formations are prone to slope failure where bedding planes are inclined in the same direction as the slope.

The Elysian Park Hills are primarily composed of deep-marine clastic and biogenic rocks of the upper Miocene Puente/Monterey Formation. These rocks consist of interbedded and interfingering siltstone and fine sandstone (Tpn1), siliceous shale and siltstone (Tpn2), diatomaceous shale and siltstone (Tpn3), and fine- to coarse-grained, thinly laminated to thick-bedded sandstone (Tpn4). The southern end of the Elysian Park Hills is composed of massive, soft, micaceous marine siltstone of the Pliocene Fernando Formation (TO). Tmss consists of tan

to light gray semi-friable arkosic sandstone that includes some interbedded silty shale.

The Quaternary unit mapped beneath the Site is Pleistocene alluvial deposits (Qoa). These old Quaternary sedimentary deposits are exposed over much of the center of the Hollywood Quadrangle and within, and adjacent to, the Baldwin Hills in southeast corner. In general, older alluvium in the Hollywood Quadrangle consists of layers of fine to coarse clayey sand and sandy clay with lesser amount of silt.

2.4 Depth To Groundwater

Publicly available information indicates that the depth to groundwater in the vicinity of the Site is 19.1 feet bgs. This is based on information from Well #2671A (ground surface elevation of 283.6.1 feet above MSL) located on Melrose and El Centro (just to the north-west of the Site) last measured on May 20, 2004. The depth to groundwater in the vicinity of the Site in another well is 6.5 feet bgs. This is based on information from Well #2692C (ground surface elevation of 242 feet above MSL) located on Kingsley and 1st (just to the west of the Site) last measured on April 5, 1978 (personal communication with Brian Hill, County of Los Angeles Department of Public Works, Hydrology Division, November 17, 2004).

3.0 FIELD INVESTIGATION

3.1 Pre Drilling

Prior to drilling activities, a Site visit will be conducted by a Hydrologist Senior Geologist. The locations of proposed borings/groundwater monitoring wells will be marked on the ground. Underground Service Alert (USA) will be notified. A Site-Specific Health and Safety Plan will be prepared and followed during field activities. HI will contact the LAFD and Client a minimum of 5 working days prior to any drilling and sampling work in order to allow a LAFD representative to be on-site during the drilling and sampling operations. Prior to drilling, a Health and Safety meeting will be held, and health and safety issues related to the Site conditions and drilling activities will be discussed with the drilling crew.

3.2 Well Construction Permits

Well construction permits will be obtained from Los Angeles County Department of Health Services.

3.3 Drilling

Five soil borings associated with the proposed groundwater monitoring wells will be drilled to a proposed termination depth of 30 feet bgs using a drilling rig equipped with 8-inch or 10-inch diameter continuous flight HSA under the direct supervision of a Hydrologist California Registered Geologist. The proposed soil borings will be converted into permanent 2-inch diameter groundwater monitoring wells.

Soil samples will be collected from each boring beginning at approximately 5 feet bgs and at approximately 5-foot intervals thereafter until the termination depth of each boring or groundwater is reached, whichever comes first. One soil sample will also be collected at or immediately above the soil/groundwater interface. Currently it is estimated that only the 5, 10 and 15-foot samples will be collected.

Soil samples will be obtained using a split-spoon modified California sampler lined with brass rings. The ends of the brass ring will be covered with Teflon sheet tape and plastic caps and taped with silicon tape over the ends. All samples will be labeled with sample identification, date and time of sampling and the HI project number, and sealed in Ziploc™ plastic bags. The samples then will be immediately placed into an ice chest chilled using frozen blue and/or crushed ice. Prior to use, all the tubes will be washed in a non-phosphate cleanser solution, rinsed with tap water and then distilled water.

The sampler will be attached to a down-hole hammer, lowered to the specific sampling depth, and then be driven 18-inches into the formation. All borings will be logged in the field in accordance with the Unified Soil Classification System according to ASTM Standards.

The presence of any volatile hydrocarbons emanating from the soil will be determined using a handheld Photovac Microtip Photoionizer Detector (PID) Model MP-1000. The soil contained

in the second tube from the bottom of the cutting shoe of the split-spoon sampler at each sampling interval will be placed in a sealed Ziploc™ plastic bag and allowed to sit in the sun for approximately 5 minutes. The headspace in the bags will then be analyzed using the PID. The PID measurements will be recorded on the boring logs.

3.4 Well Construction

The soil borings will be converted into groundwater monitoring wells which will be constructed of a 20-foot long section of flush threaded 2-inch diameter Schedule 40 PVC screen with 0.01-inch slots connected to 10-foot flush threaded 2-inch diameter Schedule 40 PVC casing extending to the surface. The annular space between the borehole and the well screen will be backfilled with # 2/12 Monterey Sand to approximately 1 foot above the well screen using a tremie pipe followed by 1.5-2 feet of ¼-inch hydrated bentonite pellets. The remaining annular space will be sealed using a 1:10 ratio of Portland cement to water with 5% bentonite via a tremie pipe. The groundwater monitoring wells will be completed at the surface by installation of an 8-inch diameter well box with a traffic rated well cover. The well casing will be equipped with a water tight lockable cap. All well string materials will be steam-cleaned prior to installation.

3.5 Well Head Elevation Survey

A California Board for Professional Engineers and Land Surveyors licensed surveyor will survey the TOC elevations for the groundwater monitoring well(s). The TOC elevations of the Site's groundwater monitoring well will be surveyed to an accurate datum or established benchmark.

3.6 Groundwater Monitoring Well Development

Immediately after installation of the screen and sand-pack but before installation of the well seal, each groundwater monitoring well will be developed by the drilling rig under the supervision of a HI geologist. A surge block will be used to force water through the well screen and a bailer will be used to remove large volumes of water from the well and to move water through the well screen.

Surging and bailing will continue until the produced water is free of visible sediment and the pH, temperature, and specific conductance of the produced water have stabilized. Stabilization of the physical parameters indicates that water in the groundwater monitoring well is representative of the water in the formation. Development will continue until sediment is reasonably cleared from the well, and the turbidity of the development water is low. HI will handle and dispose of produced water.

The groundwater monitoring wells will be then once again be developed not less than 72 hours hence by pumping a minimum of 5 well volumes of groundwater using a Whale Supersub 921 submersible pumping system. After installation and development, the groundwater monitoring wells will be allowed to stabilize 72 hours prior to sampling.

3.7 Groundwater Elevation Measurements

Depth to groundwater will be obtained in each groundwater monitoring well prior to groundwater sampling of the proposed groundwater monitoring wells. After noting the time and date, the static water level in the groundwater monitoring wells will be measured with respect to the TOC using an interface probe marked with divisions allowing measurements to the nearest 0.01 feet. The interface probe and associated measuring tape will be washed in a solution of warm tap water and a non-phosphate detergent and rinsed with de-ionized water prior to use in order to reduce the possibility of cross-contamination. Results are reported in feet below TOC (depth to water) which will be used to calculate the groundwater surface elevation in feet. All the aforementioned data will be used to prepare a groundwater elevation map for the Site.

3.8 Groundwater Sampling

Prior to groundwater sampling, approximately three well borehole volumes of groundwater will be purged from the proposed groundwater monitoring wells using a Whale Supersub 921 submersible pump (Pumping System). During purging, temperature, conductivity, and pH of the purged groundwater will be monitored over time and noted on groundwater purging and sampling logs. A groundwater sample will be collected after the water column in the wells is recovered to more than 80 % of its static condition/initial height.

Groundwater sampling will be accomplished by lowering a pre-cleaned disposable polyethylene bailer approximately 2 feet into the water column of the well. Groundwater samples will be collected in five 40 milliliter Volatile Organic Analysis (VOA) vials via a flow control device inserted into the bottom of the bailer for VOC analysis. All sample containers will be examined to ensure that no head space remained after sampling. The pre-cleaned sample containers containing appropriate preservatives for analytical testing will be supplied by the laboratory, a Department of Health Services certified laboratory for hazardous waste testing. The samples will be sealed, labeled with the sample identification, date, time of sampling and the HI project number. They will be then placed in bubble wrap and immediately placed into a chilled ice chest containing frozen blue and crushed ice. The pumping system and its associated water hose will be decontaminated prior to purging of the groundwater monitoring wells by placing the pump in a 5-gallon bucket containing tap water and a non-phosphate cleanser, followed by a 5-gallon bucket containing distilled water. Once the submersible pump has displaced the water from the bucket, the exterior of the tubing and the reel will be also rinsed with distilled water. The pump, its associated water hose, and electrical cables will be also rinsed with deionized water. This procedure will be performed to ensure that the interior and exterior of the tubing attached to the pump are properly decontaminated.

3.9 Equipment Decontamination

All HSAs and drilling rods will be steamed cleaned prior to drilling at each boring location. Following sample collection, all sampling equipment, including the brass rings, will be brushed clean in a solution of non-phosphate cleanser and rinsed with tap and distilled water and then will be shaken to remove excess moisture.

3.10 QA/QC

Chain-of-custody (COC) records will be used to document sample collection and shipment to laboratory for analysis. All sample shipments for analyses will be sent to or picked up by the analytical laboratory at the end of each sampling day and will be accompanied by a COC record. COC forms will be completed and sent with the samples for each laboratory and each shipment. The COC records identify the contents of each shipment and maintain the custodial integrity of the samples. Generally, a sample is considered to be in someone's custody if it is either in someone's physical possession, in their view, locked up, or kept in a secured area that is restricted to authorized personnel.

For field quality assurance/quality control (QA/QC) purposes, a field/equipment blank will be prepared, along with the collected groundwater samples. The field/equipment blank will be used to demonstrate whether the sampling procedures have any positive interference on the analytical results. The field/equipment blank will be collected, employing the equipment used to purge the groundwater monitoring well and obtain the groundwater sample. The trip blank will be supplied by the laboratory and will be used to provide a measure of the potential positive interference introduced by sample preservation, transportation, storage, and analysis. The aforementioned QA/QC blanks will be handled and processed in exactly the same manner as other samples, as described above. Additionally, the laboratory will perform matrix spikes, matrix spike duplicates, method blanks, check samples and standards in accordance with the Regional Water Quality Control Board (RWQCB) guidelines to provide a measure of the potential positive interference introduced by the laboratory procedure and analytical testing methods.

The containers will be handled in the same fashion as other samples (i.e. placed in a cooler with ice and identified on the COC) and delivered to the Laboratory for analysis with other samples collected the same day.

3.11 Waste Handling

All waste and effluent generated during this investigation (soil cuttings, development, purge, and decontamination fluids) will be sealed in 55-gallon steel drums that meet Department of Transportation standards for hazardous material transport. Each drum will be labeled with the boring/well number, date of waste generation, type of waste, Site and project name, and the name and phone number of the Site owner.

Based on the analytical results of the soil and groundwater samples, the client will arrange for appropriate disposal of the soil cuttings and decontamination fluid.

4.0 LABORATORY ANALYSIS

All soil and groundwater samples will be logged on requisite Chain-of-Custody record forms and delivered to American Scientific Laboratories (Certification No. 2200), Los Angeles California, a State certified laboratory for hazardous waste testing.

The soil samples and groundwater samples will be analytically tested as follows:

- Total petroleum hydrocarbons as gasoline (TPH-g) using EPA Method 8260.
- Benzene (B), Toluene (T), Ethylbenzene (E), and Total Xylenes (X) using EPA Method 8260B (collectively BTEX).
- 5 Oxygenates: Methyl-t-butyl ether (MtBE), Di-isopropyl ether (DIPE), Ethyl-t-butyl ether (EtBE), Tert-amyl methyl ether (TAME), and Tert-butanol (TBA) using EPA Method 8260B.
- Ethanol using EPA Method 8260B.
- 1, 2-Dibromoethane (EDB), and 1,2-Dichloroethane (EDC) using EPA Method 8260B (Lead Scavengers).
- Only one soil sample from one soil boring MW-1 at the 5, 10 feet and 15 feet bgs level feet bgs level will be tested for total lead using EPA Method 6010C and organic lead using CA T22.
- The soil samples will be collected and preserved using EPA Method SW5035.

The field/equipment (QA/QC) samples will be only be analyzed for BTEX/MTBE/Fuel Oxygenates using EPA Method 8260B.

5.0 PROPOSED WORK SCHEDULE

The field investigation is on a priority schedule per SBC's priority matrix and field work should begin within 2-3 weeks of receiving written authorization for the workplan from the LAFD, and receipt of well permits.

6.0 REPORTING

All work will be completed under the supervision of a Hydrologist California Registered Civil Engineer or Registered Geologist experienced in completing subsurface soil and groundwater contaminant investigations. A written report of the data collected during the field investigations will be prepared and incorporated into a final report. It is anticipated that the report will be completed within 10 working days after receipt of the final laboratory reports.

7.0 REPORTING REQUIREMENTS

This report entitled WORKPLAN FOR SITE ASSESSMENT dated January 18, 2006 should be submitted by SBC to the following agencies.

Inspector Neil Reitzell
Captain Frank K. Comfort
Los Angeles Fire Department/Environmental
200 North Main St., City Hall
Room 1700 CHE 17th Floor Annex
Los Angeles, CA 90012

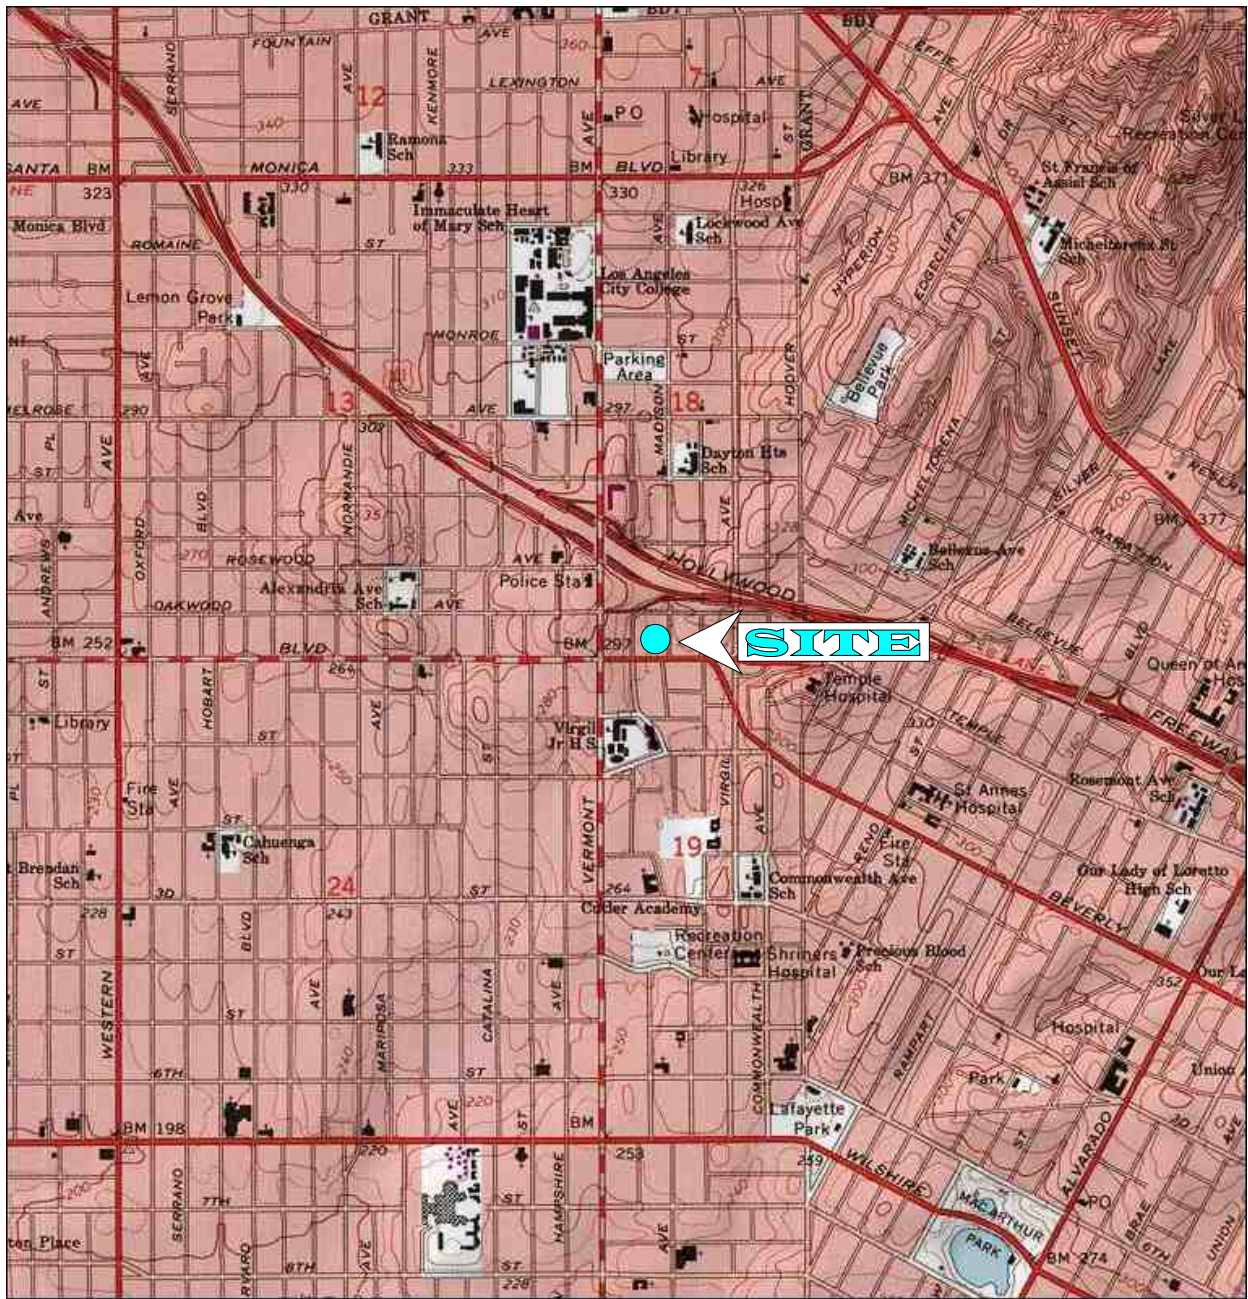

8.0 LIMITATION

Our professional services have been performed using that degree of care and skill ordinarily exercised, under similar circumstances, by reputable environmental consultants practicing in this or similar localities. The findings and conclusions presented herein are based primarily upon the analyses of test results from the soil and/or water and/or air samples during this study. This report has been prepared exclusively for SBC (CLIENT) and other authorized parties for the subject site at a specific point in time, and hence it DOES NOT contain sufficient information for other parties or other uses (with the exception of parties named in the "Reporting Requirements" Section *supra*). CLIENT shall be the sole beneficiary of this agreement, and no third party shall be an intended beneficiary unless so stated in writing. No other third party shall have the right to rely on HI's opinions rendered in connection with this report without HI's written consent. This report is also for the use and review of the jurisdictional regulatory agency(s) as named in the "Reporting Requirements" Section *supra*. This report shall not create any rights or benefits to parties other than CLIENT, HI and other expressly named parties. The conclusions and recommendations included in this report are based on information contained or referenced herein, and our best judgment. No other warranty, expressed or implied, is made as to the professional advice contained in this report. No right or interest in the contract associated with this report may be assigned by either HI or CLIENT without the written permission of the other party, and any attempted assignment shall be wholly void and totally ineffective for all purposes. No delegation of any duty owed by either HI or CLIENT may be made without the written permission of the other party. This report is prepared subject to the terms and conditions in the contract related to this report and which was expressly negotiated, agreed to and acknowledged by CLIENT.

All work has been conducted in accordance with generally accepted practices in the fields of environmental engineering, geology, and hydrogeology that exist in this or similar localities at this time. No other warranty, either expressed or implied, is made. The fact that HI finds no recognized environmental conditions after performing the work described herein does not constitute a warranty by HI that this property is free of contamination. HI's opinion about the condition of this Site does not constitute a warranty of any kind. It is impossible to guarantee that any property is free from contamination without testing every square inch of the property for every conceivable hazardous substance, which would obviously be prohibitively expensive. Due to the inherent limits of time and cost, some uncertainty about Site conditions will always remain.

LEGEND

af	Qg	Qc	Qls
----	----	----	-----

SURFICIAL SEDIMENTS
unconsolidated detrital sediments; generally undissipated at artificial cut and fill
 Qg gravel and sand of major stream channels
 Qc clay and sand of pre-development marshlands
 Qa alluvium: clay, sand and gravel; includes gravel and sand of minor stream channels

Qae	Gop	Qoa
-----	-----	-----

OLDER SURFICIAL SEDIMENTS
unconsolidated to weakly consolidated; dissected and eroded where elevated; late Pleistocene age
 Qae similar to Qa, but slightly elevated and dissected; includes alluvial fan sediments
 Gop paleosol in Baldwin Hills (Fox Hills residual paleosol of Weber et al. 1982); moderately indurated, erosion-resistant, gray to rusty brown pebbly and sandy paleosol or "hardpan" on Qoa
 Qoa older alluvium, gray to light brown pebble-gravel, sand, silt, and clay of detritus derived from Santa Monica Mountains; similar to Qae, but slightly consolidated; in Baldwin Hills designated as Baldwin Hills sandy gravel (Weber et al. 1982), where it is much dissected and eroded

—UNCONFORMITY—
 in mountain areas

Tush

UNNAMED SHALE
 (included in Puente Formation by Lamar 1970, and Weber 1980; equivalent to upper Modelo Formation of Hoots 1931, and Weber 1980; equivalent to upper Modelo Formation of Durrell 1954, in Santa Monica Mountains; and to Sisquoc Shale of Dibblee 1989, in Ventura Basin)
 Tush gray to light brown, thin-bedded silt clay shale, soft and crumbly; locally contains scattered hard calcareous nodules; in places contains laminae of fine grained soft sandstone

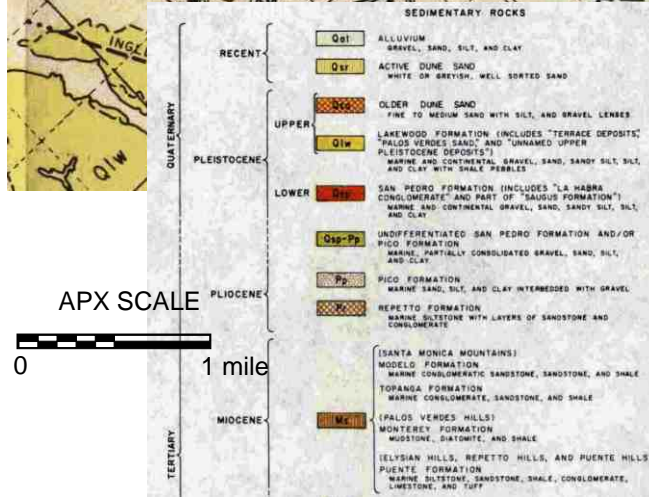

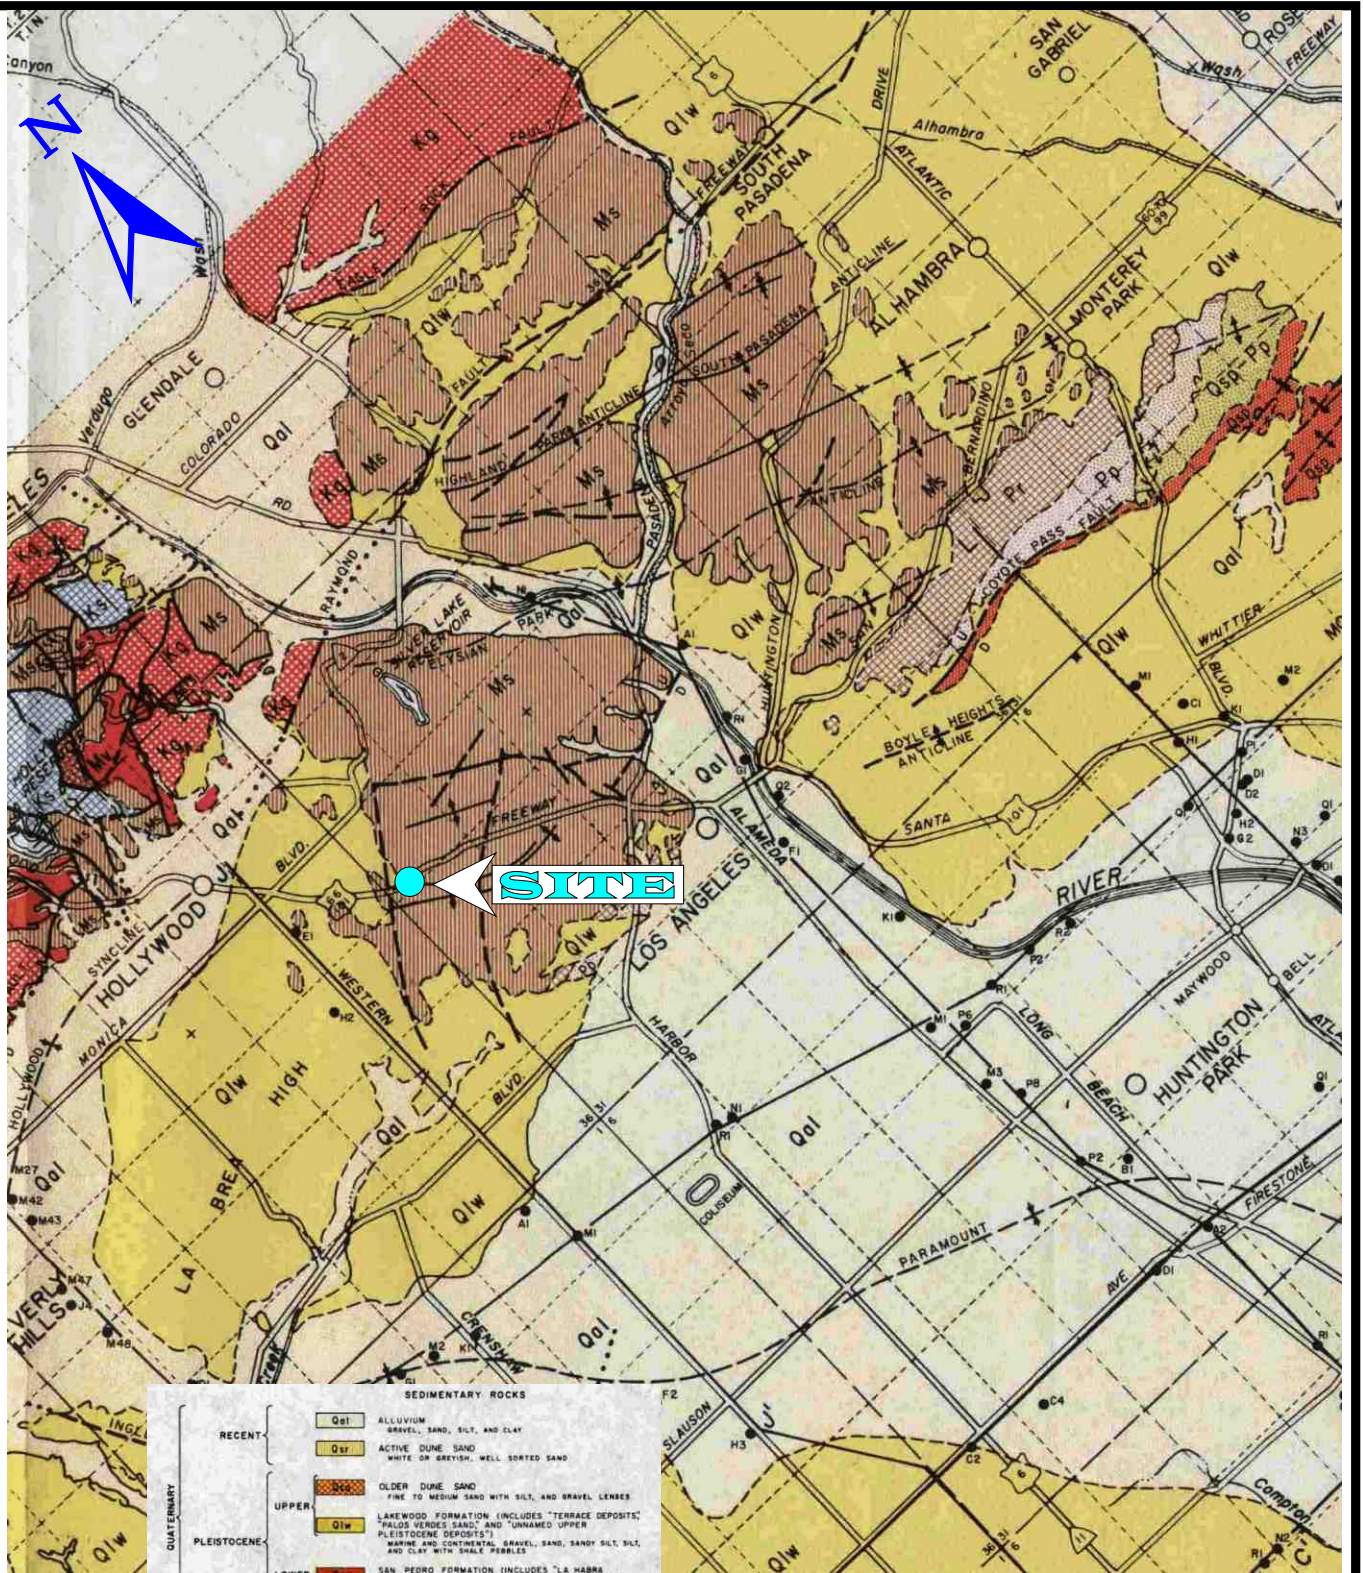

Tm	Tmss
----	------

MONTEREY FORMATION
 (included in Puente Formation by Lamar 1970, and Weber 1980; lower member of Modelo Formation of Hoots 1931, and lower Modelo Formation of Durrell 1954, in Santa Monica Mountains; equivalent to Monterey Formation of Dibblee 1989, in Ventura Basin)
 marine biogenic and clastic; mostly late Miocene age (Mohnian Stage)
 Tm white-weathering, thin bedded, platy siliceous shale, hard to semi-chalky; at Griffith Park directly overlies granodiorite basement rocks if not in fault(?) contact
 Tmss tan to light gray semi friable sandstone; includes thin interbeds of micaceous silty clay shale; forms Elysian deep sea fan of Dibblee 1989

Section 1

Introduction

1.1 Introduction

RMT, Inc. (RMT) has been retained by AT&T Services, Inc. (AT&T), the current property owner and occupant to implement the Work Plan which was approved on August 9, 2007 by the Los Angeles Regional Water Quality Control Board (RWQCB). The Site is a current Pacific Bell Telephone Co. d/b/a AT&T G1118 (LSANCA86) Fleet Yard located at 316 N. Juanita Avenue, Los Angeles, California 90004 (Site) (See Figure 1).

1.2 Objective

The results of the previous underground storage tank (UST) removal at the Site have indicated that groundwater beneath the Site may have been impacted with hydrocarbons. The RWQCB has determined that further action is warranted and has directed AT&T to conduct a soil and groundwater investigation beneath the Site.

1.3 Scope of Work

In accordance with the RWQCB approved and amended work plan, and the Site-Specific Risk Analysis and Health and Safety Plan, RMT performed a vadose zone soil-matrix and groundwater investigation described in more detail in Sections 3 through 5.

All work was completed under the responsible charge of Mr. Alan Lui, a California Professional Civil Engineer (PE) experienced in environmental investigations. Mr. Lui supervised all work associated with the project within the purview of the professional, as defined in the Professional Engineers Act of the California Code of Regulations.

Section 2

Summary of Site Conditions

2.1 Site Location

The "Site" is defined as the real property located at 316 N. Juanita Avenue, Los Angeles, Los Angeles County, California, 90004. The property is bordered by private property to the south, private property and Oakwood Avenue on the north, Madison Avenue to the east and Juanita Avenue to the west.

The Site consists of two buildings utilized for general office use, equipment storage and vehicle maintenance. The remainder of the Site is used for parking of AT&T fleet and personal vehicles.

The vicinity around the Site has been developed for mixed industrial, commercial, and residential use. The Site is generally surrounded by other commercial and industrial sites. Figures 1 & 3 show the location of the Site.

2.2 Site History

On November 10, 2004, a 12,000-gallon gasoline UST was removed from the Site. Following removal of the 12,000-gallon UST, two soil samples were collected from the base of the tank excavation and one soil sample was collected from beneath the location of the former fuel dispenser. The only constituent detected in the three soil samples was methyl tert butyl ether (MTBE) at concentrations of 2.7 micrograms per kilogram (ug/kg), 4.7 ug/kg, and 6.0 ug/kg. However, water accumulating in the excavation was sampled and analyzed with the following concentrations of chemicals detected: 20,900 ug/L Total Petroleum Hydrocarbons (TPH) – Gasoline (TPH-GRO); 524 ug/L benzene; 2,030 ug/L toluene; 282 ug/L ethylbenzene; 1,770 ug/L total xylenes; 5,400 ug/L MTBE; 2,050 ug/L ethanol; 18 ug/L tert-amyl methyl ether (TAME); and 812 ug/L tert-butanol (TBA). The UST Removal Report, dated November 17, 2004, was submitted by Hydrologue Inc. (HI, 2004) to the Los Angeles Fire Department (LAFD).

On January 12, 2006, the LAFD requested an investigation work plan, which was prepared and submitted to the LAFD on January 18, 2006. Upon the request of the LAFD, an Unauthorized Release form was submitted on April 18, 2007, and on April 19, 2007, the LAFD referred the case to the RWQCB. The RWQCB requested additional background information for their review of the investigation work plan on May 22, 2007, which was submitted on July 12, 2007. The January 18, 2006 Work Plan was approved with comments by the RWQCB on August 9, 2007,

and a deadline of October 15, 2007 was set for completion of the investigation and submittal of a report. This deadline was extended to December 15, 2007 by Ms. Mercedes Hsu on September 10, 2007.

2.3 Topography

The site and surrounding properties gently slope to the east. According to the United States Geologic Survey (USGS) Hollywood, CA. 7.5 Minute Series topographic map, the Site elevation is 297 feet above mean sea level (msl).

2.4 Geology & Hydrogeology

The following section is extracted from the previously submitted work plan. The Site is located in the northern portion of the Los Angeles Coastal Plain approximately three miles south of the Santa Monica Mountains and five miles northeast of the Baldwin Hills. The Silver Lake Reservoir, located approximately three miles northeast of the site and the Hollywood Reservoir, located approximately four miles northwest of the site, are the closest perennial surface water bodies. The Site is located in the La Brea Plain of the Los Angeles Central Basin, and is underlain primarily by recent alluvial sediments consisting of clay, sand and gravel. According to the California Department of Water Resources, the Exposition Aquifer extends from approximately 40 feet below ground surface (bgs) to ground surface in the region of the Site (HI, 2006).

The La Brea Plain is located east of the Newport-Inglewood belt of hills and west of the Elysian Hills. A surface was originally cut by the sea during Pleistocene time on lower Pleistocene and older formations. On this eroded surface, 90 to 200 feet of alluvial sediments have been deposited, the top of which now forms the La Brea Plain. The La Brea Plain has apparently been warped into an east-west anticlinal structure extending westerly from the Elysian Hills. Because of this warping and partial uplifting, the plain is being dissected and removed by erosion. A younger series of alluvial fans forming the Hollywood piedmont slope have buried the La Brea Plain from the north. Poland, et al., (Poland, 1956) described the La Brea Plain and the Santa Monica Plain as being of similar origin, and additional exposures and close study of the land forms indicate that both of these forms are related in age to the Ocean Park Plain and the Torrance Plain (HI, 2006).

The oldest geologic unit mapped in the Hollywood Quadrangle is the Cretaceous granodiorite and quartz diorite (Kgr), which is exposed in the northern part of the map area in the Santa Monica Mountains. Locally, at the surface, the granitic rocks are soft and crumbly due to weathering. The Tertiary bedrock formations exposed on hills at the vicinity of the Site (Tush

and Tmms) are assigned to deep-marine biogenic and clastic rocks of the upper Miocene Modelo Formation and upper Miocene Puente Formation. The Modelo Formation is composed of interbedded shale, siltstone, and sandstone (Tush). Tush consists of gray to light brown, thin bedded, silty clay shale, and locally contains scattered large calcareous nodules; in places, it also contains thin interbeds of fine-grained sandstone; the lower part locally contains thin lenses of light tan, platy, semi-siliceous or diatomaceous shale. These formations are prone to slope failure where bedding planes are inclined in the same direction as the slope (HI, 2006).

The Elysian Park Hills are primarily composed of deep-marine clastic and biogenic rocks of the upper Miocene Puente/Monterey Formation. These rocks consist of interbedded and interfingering siltstone and fine sandstone (Tpn1), siliceous shale and siltstone (Tpn2), diatomaceous shale and siltstone (Tpn3), and fine- to coarse-grained, thinly laminated to thick-bedded sandstone (Tpn4). The southern end of the Elysian Park Hills is composed of massive, soft, micaceous marine siltstone of the Pliocene Fernando Formation (TO). Tmss consists of tan to light gray semi-friable arkosic sandstone that includes some inter-bedded silty shale. The Quaternary unit mapped beneath the Site is Pleistocene alluvial deposits (Qoa). These old Quaternary sedimentary deposits are exposed over much of the center of the Hollywood Quadrangle and within, and adjacent to, the Baldwin Hills in the southeast corner. In general, older alluvium in the Hollywood Quadrangle consists of layers of fine to coarse clayey sand and sandy clay with a lesser amount of silt (HI, 2006).

A map of regional geology is presented in Figure 2.

2.5 Regional Groundwater Quality

The site is located in an area which has been in commercial use for at least 75 years, primarily associated with industrial uses. RMT conducted a review of certain RWQCB files, particularly for the former ARCO facility, which is located to the south of the subject site. RMT also reviewed records available through Geotracker, a database maintained by the RWQCB.

This review identified the former ARCO site, which has been impacted by hydrocarbons, and is located to the south and cross-gradient of the subject site:

- **Former ARCO (LUFT # T0603700432; ID 900040098)** – The Former Arco site located at 3737 Beverly Blvd. W, Los Angeles, CA 90004 is located immediately adjacent to the south of the AT&T Site. This site has had a fueling service station since at least 1950. Several gasoline and diesel USTs have been determined to be leaking from the late 1980's and 1990's and have been removed. A review of the quarterly monitoring data show that elevated levels of TPH-GRO, BTEX and

MTBE have been encountered below the former Arco Site. Remediation has been ongoing. The historical site assessment reports for this site have also reported *“near saturated gasoline contaminated soil”* just south of the AT&T site. However, the current groundwater monitoring results show that the groundwater monitoring wells close to the AT&T property line show low levels of hydrocarbon contamination.

The subject site is located cross-gradient of the significant impacts to regional groundwater from the former ARCO site.

2.6 Chemicals of Potential Concern

Based on information regarding the history of the Site and discussions with the RWQCB, the following contaminants of concern have been identified and addressed as part of this Investigation. The primary contaminants of concern are hydrocarbons (TPH, MTBE, BTEX, TAME and TBA) and ethanol, which were detected in the UST removal.

Section 3

Field Work

3.1 Sampling Strategy & Approach

The field sampling investigation consisted of two components: a vadose zone soil and a groundwater sampling investigation.

The following sections describe the sampling rationale, investigative methods and procedures, sample analysis program, sample handling, decontamination procedures, and management of investigation derived wastes (IDW).

3.2 Sampling Strategy

3.2.1 Vadose Zone Soil Sampling

The soil sampling locations and existing on-Site features are presented on Figure 4. Vadose zone soil sampling was conducted at five (5) locations to characterize the on-Site soil.

3.2.2 Groundwater Sampling

After the soil borings were converted to groundwater monitoring wells, the wells were developed, purged and sampled. The groundwater samples from the five onsite monitoring wells were analytically tested. The methods, procedures and results are presented in the concurrently submitted, *Fourth Quarter 2007 Groundwater Monitoring Report* for the Site.

3.3 Health and Safety

All activities were conducted in accordance with the Site Specific Health and Safety Plan (HSP), a copy of which was submitted to the RWQCB. The HSP identifies Site hazards and mitigations measures to reduce exposure of Site workers to those hazards.

Field activities were performed in accordance with the safety requirements outlined in the Site-specific HSP. RMT field personnel reviewed the HSP before performing any field work and conducted daily health and safety tailgate meetings with subcontractors working at the Site.

3.4 Utility Clearance

Prior to commencement of field activities, Underground Services Alert (USA) was notified of RMT's intent to conduct subsurface investigations at least 48 hours prior to initiation of intrusive field sampling. All proposed boring locations were clearly marked with white paint as required by USA. USA contacted all utility owners of record within the site vicinity and notified them of RMT's intention to conduct subsurface investigations in proximity to buried utilities. All utility owners of record, or their designated agents, marked the position of their utilities on the ground surface throughout the area designated for investigation.

3.5 Vadose Zone Soil Sampling

Vadose zone soil sampling was conducted at five (5) locations to characterize the on-Site soil. At each onsite location, soil samples were collected from depths of 5, 10 and 15 feet below ground surface (bgs) as shown in Table 1. The boring locations are shown on Figure 4. Vadose zone soil sampling was conducted on November 1 and 2, 2007, by JDK Drilling Inc (JDK), a California Water Well Drilling Contractor C-57 # 887038, of Covina, California, using a CME -75 hollow-stem auger drilling rig to assess soil and groundwater conditions beneath the site.

The soil boring locations are shown on Figure 4. The soil borings were advanced to approximately 30 feet bgs. RMT observed the soil during drilling and collected soil samples at 5-foot depth intervals, approximately, from the boring using a California Modified split-spoon soil sampler.

During drilling operation, an organic vapor monitor (OVM) was used to monitor the soil for the presence and level of organic vapors in the borings and to screen soil samples. These organic vapor readings were recorded on boring logs, prepared by the field geologist during drilling activities. The presence of any volatile hydrocarbons emanating from the soil was determined using a properly calibrated handheld OVM. The soil was collected from each sampling interval and was placed in a sealed Ziploc™ plastic bag and allowed to equilibrate™ for approximately 15 minutes prior to placing the probe tip into the container.

The boring logs recorded the following sampling information:

- boring number and location;
- sample identification numbers;
- date and time;
- sample depth;

- lithologic description in accordance with the Unified Soils Classification System (USCS);
- description of any visible evidence of soil contamination (i.e., odor, staining); and
- organic vapor monitor readings.

The following section describes type of vadose zone soil sampling methodology that was used at the site.

Soil Sample Collection: A hollow-stem auger rig was used for drilling and sample collection. The soil borings were sampled at discrete depths. Discrete soil samples were collected using an 18-inch long modified California sampler lined with 2-inch new stainless steel liners. Samples were collected in 6-inch long, 2-inch diameter stainless steel sleeves. The sampler was driven 18 inches with a standard 30-inch drop of a 140-pound hammer. The hammer blow counts were recorded on the boring logs. Selected sleeves were then sealed for chemical analysis. The remaining soil was then used for lithologic description. After decontamination and adding new sleeves, the sample barrel was lowered back into the augers, additional 5-foot sections of auger were added, and the process was repeated until the desired depth was reached.

Sample Preparation & Preservation: After sample recovery, the ends of that portion of the sleeve selected for analytical testing were covered with Teflon and plastic caps taped over the ends. The samples were properly labeled with the sample identification, date and time of sampling and project number. The samples were immediately placed into an ice chest chilled using frozen blue and/or crushed ice.

Soil samples requiring VOC analysis were manually cored using an EPA SW5035 Method. The sampling and preservation protocols used the ESS Lock N' Load 5035 Soil Syringe Sampler. The Soil Syringe Sampler is a one-time use tool, which collects approximately 5 grams of soil. The soil collected from the Soil Syringe Sampler was then transferred into pre-weighed 40-mL vials with appropriate preservatives. Two ESS LowBleed Septa 40-mL vials were prepared using Sodium Bisulfate solution preservative for low concentration testing and one ESS LowBleed Septa 40-mL vial was prepared using methanol preservative for high concentration testing.

Equipment Decontamination: All drilling rods were steam-cleaned prior to drilling at each boring location. Following sample collection, all sampling equipment were brushed clean in a solution of non-phosphate cleanser and rinsed with tap water and distilled water, and then shaken to remove excess moisture.

QA/QC Samples: A field/equipment blank was prepared, along with the collected soil samples for field quality assurance/quality control (QA/QC) purposes to demonstrate whether the field

sampling procedures have any interference on the analytical results. One field equipment blank water sample was collected after completion of drilling activities by pouring laboratory provided Ultra Pure Blank Water over decontaminated drilling equipment, such as a sampling barrel. The water was collected in laboratory provided 40-ml vials. The aforementioned QA/QC blanks were handled and processed in exactly the same manner as other samples, as described above. Additionally, the laboratory performed matrix spikes, matrix spike duplicates, method blanks, check samples and standards in accordance with the RWQCB guidelines to provide a measure of the potential positive interference introduced by laboratory procedures and analytical testing methods. The containers were handled in the same fashion as other samples (i.e. placed in a chilled cooler and identified on the COC) and delivered to the laboratory for analysis with other samples collected the same day.

3.6 Field Instrument Calibration

An OVM was used for health and safety monitoring and field screening during soil sampling. The data was used as an immediate indicator of volatile organic vapors in subsurface materials. A handheld Thermo OVM 580B Portable VOC Photo Ionization Detector (PID) calibrated against an Isobutylene gas standard was employed at the Site.

The handheld (PID) calibrated against an Isobutylene gas standard displayed VOCs concentration in units equivalent to parts per million (ppm). Isobutylene gas standard, containing a known concentration of isobutylene, was used to set the sensitivity. Isobutylene at 100 ppm in air was used for calibration purposes. The instrument was calibrated as follows:

1. Connect the calibration adapter to the gas inlet tube of the PID, and connect the calibration adapter to the isobutylene Gas cylinder. Hand tighten the fittings.
2. Turn the flow controller knob counter-clockwise about half a turn to start the flow of gas. The pump noise should change indicating that the gas has started to flow.
3. Wait for the instrument reading to stabilize within ± 0.1 ppm. This usually takes about 30 to 40 seconds. When the last digit of the reading stops changing for a few seconds, press the [enter] key to complete the procedure.
4. Turn the flow controller knob fully clockwise to turn off the flow of gas. Disconnect the calibration adapter from the PID.

One may press the [menu] key at any time before pressing the [enter] key in Step 3 to abort the calibration. In this case, the previously stored calibration data is not changed.

The instruments were calibrated at a minimum of once per day. The OVM which was used at the Site was equipped with a lamp energy of 10.6 eV.

3.7 Boring Logs

A lithologic description of the materials encountered and collected was maintained on boring logs compiled by the field geologist. Soils were classified in accordance with the Unified Soils Classification System (USCS), and descriptions included soil type, particle size and distribution, color, moisture content, and evidence of contamination (discoloration, unusual odors, etc.). The soil samples were screened for the presence of elevated organic vapor concentrations using an OVM and the measurements were recorded on the boring log.

3.8 Decontamination Procedures

All equipment that came into contact with potentially contaminated soil or water was decontaminated consistently to assure the quality of samples collected. Disposable equipment intended for one time use was not decontaminated, but packaged for appropriate disposal. Decontamination occurred prior to and after each use of a piece of equipment. All drilling and sampling devices used were decontaminated using the following procedures:

- Non-phosphate detergent and tap water wash, using a brush if necessary;
- Tap-water rinse;
- Initial deionized/distilled water rinse; and
- Final deionized/distilled water rinse.

Equipment was decontaminated in a designated area on pallets or plastic sheeting, and clean bulky equipment stored on plastic sheeting in uncontaminated areas. Cleaned small equipment was stored in plastic bags. Materials to be stored more than a few hours was also covered.

3.9 Investigation Derived Waste

All equipment that came into contact with potentially contaminated soil or water was decontaminated consistently to assure the quality of samples collected. Disposable equipment (if any) intended for one time use was not decontaminated, but packaged for appropriate disposal. Decontamination occurred prior to and after each use of a piece of equipment. All drilling and sampling devices used were decontaminated in a pre-designated area using the following procedures:

- Non-phosphate detergent and tap water wash and brush;

- Tap water rinse;
- Initial deionized/distilled water rinse; and
- Final deionized/distilled water rinse.

Soils generated during drilling and decontamination fluids were placed and sealed in U.S. Department of Transportation (DOT) approved 55 gallon drums for temporary storage pending disposal. The drums were labeled with the boring number, date of waste generation, type of waste, Site and project name, and the name and phone number of the Site owner. The IDW (decontamination water and soil cuttings) were disposed at appropriate disposal/ treatment/ recycling facilities by Belshire Environmental. All shipping documents (hazardous waste manifests and bills of lading) are attached in Appendix I.

Section 4

Installation of Monitoring Wells

4.1 Well Permits

Prior to installation of the new wells, monitoring well permits were obtained from the Los Angeles Department of Health Services (LADHS). Copies of these permits are included in Appendix G.

4.2 Drilling of Groundwater Monitoring Wells

On the same day of drilling, the soil borings MW1, MW2, MW3, MW4 and MW5 were converted into groundwater monitoring wells under the direction of a RMT geologist. Each borehole was drilled to a depth of approximately 30 feet bgs. Upon completion of soil borings, wells were constructed in the boreholes through the hollow stem auger. JDK Drilling Inc a California Water Well Drilling Contractor C-57 # 887038, of Covina completed the groundwater monitoring well installation using a hollow stem drilling rig (Figure 4 and Appendix B).

4.3 Well Construction

Provided below is a description of well construction activities with specific well construction details included in Appendix B.

Groundwater monitoring wells were constructed by using 2 inch diameter flush-threaded Schedule (Sch) 40 polyvinyl chloride (PVC) well screen casing and material. The well screen section was constructed using 20 ft lengths of 0.010 slotted Sch 40 PVC and sand filter pack. Each well head was constructed with flush-mounted traffic-rated well boxes designed to reduce the infiltration of surface water. The monitoring well casings were secured with a locking slip cap fitted with a water resistant lock.

The casing and screen assembly was suspended by wire-line during the installation of the filter pack, bentonite seal, and grout to keep the casing straight in the borehole. Annular materials were placed in the borehole from the top of the open HSA. Sand pack (Monterey #2/12) was installed from the bottom of the borehole to 2-feet above the top of screen.

The wells were surged and bailed after sand placement, and the depth to the filter pack was checked for settlement. A bentonite seal (Enviroplug medium chips) with a thickness of

approximately 3 feet was installed above the sand filter pack and hydrated. The remaining annular space was backfilled with bentonite/cement grout to approximately 2 ft bgs. The remaining annular space was sealed using concrete. Well construction details are included in Appendix B. The locations of these new wells are shown on Figure 4. The well string materials were steam-cleaned prior to installation.

4.4 Well Survey

A California-licensed land surveyor, William L. Meagher of WM Surveys Inc. (PLS # 5948) of Ventura, California, surveyed the elevation of the ground surface and the measuring point (top of casing) at each well location relative to mean sea level for all groundwater monitoring wells on November 6, 2007. The survey was completed using a state benchmark as the control. Well survey coordinates and the well survey data are provided in Appendix F. The GEO_XY and GEO_Z survey data have been uploaded into Geotracker.

4.5 Well Development

The monitoring wells were developed under observation by the RMT geologist on the day of the drilling after installing the filter pack, but before placing the seal by the drilling rig crew. This procedure allows fluids to flow more freely into the well. Prior to well development, the wells were surged approximately 10 minutes. This method involved surging the groundwater in the well with a surge block to induce the entry of sediments from the sand pack into the well casing. A stainless steel bailer was then used to remove water and sediments from the well and to move water through the well screen. Surging and bailing continued until the produced water was free of visible sediment and the pH, temperature, and specific conductance of the produced water had stabilized. Stabilization of the physical parameters indicated that water in the groundwater monitoring well was representative of the water in the formation. Development continued until at least five casing volumes were removed, sediment was reasonably cleared from the well, and the turbidity of the development water was low.

Well development logs are included in Appendix E.

On November 8, 2007, all groundwater monitoring wells were again developed by pumping a minimum of 5 to 10 well volumes of groundwater using a Grundfos RediFlo 2 submersible pump. Development continued until sediment was reasonably cleared from the well, and the turbidity of the development water was low.

4.6 Groundwater Monitoring Summary

Groundwater monitoring field activities were conducted on November 15, 2007. See Appendix E for the groundwater Sampling Procedures and Field Sheets

4.6.1 Current Field Activities

Groundwater monitoring frequency	Quarterly
Activity date	November 15, 2007
Field subcontractor	RMT Inc.
Purging method	Submersible pump
Purging subcontractor	RMT Inc
Disposal method/facility	Hauled offsite by Belshire Environmental
Gallons of groundwater purged:	Approximately 40 gallons
Number of groundwater wells total	5
Number of groundwater wells offsite	0
Number of wells sampled this period	5
Number of wells with Product	None.

4.6.2 Site Hydrology

Average groundwater elevation (of wells gauged):	259.29 feet above MSL
Average groundwater elevation change from previous quarter:	n/a
Approximate groundwater flow direction:	east-southeast
Approximate hydraulic gradient:	0.05 foot/foot

4.6.3 Groundwater Conditions

Maximum TPH-DRO concentration:	7.9 mg/L – MW3
Minimum TPH- DRO concentration:	ND
Historical maximum TPH- DRO concentration:	7.9 mg/L – MW3 (11/15/2007)
Maximum MTBE concentration:	6.8 ug/L – MW2
Minimum MTBE concentration:	5.1 – MW1
Historical maximum MTBE concentration:	6.8 ug/L – MW2 (11/15/2007)

Section 5

Laboratory Analysis & Sample Preservation

5.1 Analysis Methods

All soil samples were logged on requisite Chain-of-Custody record and delivered to American Scientific Laboratories (Certification No. 2200), Los Angeles California, a State certified laboratory for hazardous waste testing.

A total of 15 soil samples were collected from MW1, MW2, MW3, MW4 and MW5 soil borings along with a field equipment blank, and were analytically tested for:

- TPH-DRO (Extractable Diesel Range Organics C28 to C40) using EPA Method 8015B;
- TPH-ORO (Heavy Extractable Range Organics C28 +) using EPA Method 8015B;
- TPH-GRO (Gasoline Range Organics C6 to C10) using EPA Method 8260B;
- BTEX using EPA Method 8260B;
- Ethanol using EPA Method 8260B; and
- 5 Fuel Oxygenates: methyl-t-butyl ether (MTBE), di-isopropyl ether (DIPE), ethyl-t-butyl ether (ETBE), tert-amyl methyl ether (TAME), tert-butanol (TBA) using EPA Method 8260B.

The soil samples were collected and preserved using EPA Method SW5035.

5.2 Sample Containers and Preservation

Sample containers for trip and equipment blanks for the specified analyses were provided by the laboratory immediately prior to the sampling event. The pre-cleaned containers were not rinsed prior to sample collection. Any requisite preservatives were added to the containers by the laboratory prior to shipment of the sample containers to the sample collector.

The labeled and sealed soil sample sleeves were placed into clear plastic Ziploc bags, and then placed into an ice chest filled with ice for transport to a California certified analytical laboratory. Soil samples were logged on a Chain-of-Custody form. The Chain-of-Custody forms were also placed into a clear plastic Ziploc bag, and then placed inside the ice chest. One ice chest per day was used to hold all of the soil samples.

5.3 Sample Labels and Identification System

A sample label was placed on each sample container and had the following information:

- Project number
- Site name and location
- Boring number
- Sample identification number
- Sampler's initials
- Date and time of collection
- Preservative, if any.

Soil samples were given an identification starting with MW, followed by the location number, followed by "d" and the depth (feet bgs) at which they are taken, for example MW1d05 or MW1d10. Field Blanks were labeled QCEB.

5.4 Sample Packaging and Shipment

Following collection and labeling, the following protocol was followed for soil sample packaging:

1. A self-adhesive custody seal was placed across the lid of each sample container.
2. Sample containers were placed in clear, plastic, leak-resistant bags prior to placement in the ice chest. Caps were checked for tightness, prior to placing the sample in the bag.
3. Samples to be shipped were placed in the cooler and packed with packaging materials to minimize the potential for disturbance and/or breakage of the sample containers.
4. Ice and "Blue Ice" packs were placed in leak-resistant plastic bags and included in the coolers to keep samples at a chilled temperature during transport to the analytical laboratory. When ice is used, the drain plug of the cooler was secured with fiberglass tape to prevent melting ice from leaking out of the cooler.
5. The chain-of-custody form was placed in a water-resistant plastic bag and taped on the inside of the lid of the cooler.
6. Strapping tape was placed around all coolers prior to transport to the laboratory.

A temperature blank consisting of a 40-milliliter glass vial of distilled water was included in each cooler sent to the analytical laboratory. The purpose of the temperature blank was to allow the analytical laboratory to obtain a representative measurement of the temperature of samples enclosed in a cooler without disturbing the actual samples. The field team packaged and labeled

the temperature blank like a regular water sample; however, the analytical laboratory only measured the temperature of the blank.

Every effort was made to transport the samples to the analytical laboratory at the end of each sampling day. However, if the sampling runs late and the laboratory closes, the samples were stored overnight in a secured location (e.g., at the office) under appropriate chain-of-custody procedures, and the samples were delivered to the laboratory the next day. Prior to overnight storage, the cooler(s) were restocked with new ice or blue ice to maintain the samples in a chilled state. The temperature blank inside each cooler was checked by the sample collector at the beginning of the evening and in the morning and the temperature readings were recorded in the field logbook.

5.5 Chain-of-Custody Records

Chain-of-custody (COC) records were used to document sample collection and shipment to laboratory for analysis. All sample shipments for analyses were accompanied by a COC record. Form(s) were completed and sent with the samples for each laboratory and each shipment. If multiple coolers are sent to a single laboratory on a single day, COC form(s) were completed and sent with the samples for each cooler. The COC record identified the contents of each shipment and maintained the custodial integrity of the samples. Generally, a sample is considered to be in someone's custody if it is either in someone's physical possession, in someone's view, locked up, or kept in a secured area that is restricted to authorized personnel. Until receipt by the laboratory, the custody of the samples were the responsibility of the sample collector. A self-adhesive custody seal was placed across the lid of each sample, except for VOC samples (which need to avoid adhesives). The shipping containers in which samples are stored (usually a sturdy picnic cooler or ice chest) was also sealed with self-adhesive custody seals any time they are not in someone's possession or view before shipping. All custody seals were signed and dated.

Section 6

Results of Investigation

6.1 Site Geology

Soil encountered in borings MW1 through MW5 consists of heterogeneous, interbedded clay, silty clay and/or clayey sand to a depth of approximately 30 feet bgs (the maximum depth explored). Descriptions of the conditions encountered in the soil borings are presented on the soil boring logs in Appendix B.

6.2 Soil Characterization Results

6.2.1 TPH

- TPH-DRO was not detected in the soil samples.
- TPH-ORO was only detected in the sample from MW2 at 10 feet bgs at 140 mg/Kg.
- TPH-GRO was not detected in the soil samples.

6.2.2 BTEX & Fuel Oxygenates

- MTBE was only detected in soil boring MW1 at 5 feet (16 ug/kg), 10 feet (51 ug/kg) and 15 feet (7.4 ug/kg) bgs.
- Benzene was not detected in the soil samples.
- Ethylbenzene was not detected in the soil samples.
- Toluene was not detected in the soil samples.
- Total xylenes were not detected in the soil samples.
- DIPE was not detected in the soil samples.
- ETBE was not detected in the soil samples.
- TAME was not detected in the soil samples.

- TBA was not detected in the soil samples.

6.2.3 Ethanol

- Ethanol was not detected in the soil samples.

The analytical testing results of laboratory QA/QC samples, which include matrix spike/matrix spike duplicates, check blank, method blanks, continuing calibration verification, laboratory control sample/laboratory control sample duplicate, calibration standards, and reference standards, are also found in the laboratory reports and generally fell within acceptable ranges (see Appendix C).

6.3 Groundwater Characterization Results

6.3.1 TPH

- TPH-DRO was only detected in monitoring well MW3 at 7.9 mg/L.
- TPH-ORO was not detected in the groundwater samples
- TPH-GRO was not detected in the groundwater samples.

6.3.2 BTEX & Fuel Oxygenates

- MTBE was only detected in two monitoring wells, MW1 (5.1 ug/L) and MW2 (6.8 ug/ L).
- Benzene was not detected in the groundwater samples.
- Ethylbenzene was not detected in the groundwater samples.
- Toluene was not detected in the groundwater samples.
- Total xylenes were not detected in the groundwater samples.
- DIPE was not detected in the groundwater samples.
- ETBE was not detected in the groundwater samples.
- TAME was not detected in the groundwater samples.
- TBA was not detected in the groundwater samples.

6.3.3 Ethanol

- Ethanol was not detected in the groundwater samples.

The analytical testing results of laboratory QA/QC samples, which include matrix spike/matrix spike duplicates, check blank, method blanks, continuing calibration verification, laboratory control sample/laboratory control sample duplicate, calibration standards, and reference standards, are also found in the laboratory reports and generally fell within acceptable ranges (see Appendix D).

Section 7

Summary

Based on the results of this investigation, RMT is providing the following summary and conclusions:

- Five soil borings (MW1, MW2, MW3, MW4 and MW5) were drilled to a termination depth of 30 feet bgs, using hollow stem auger drilling techniques. Soil samples were collected at five foot intervals in from each boring until 15 feet bgs.
- No visual, olfactory, or PID indications of contamination were encountered in the soil borings.
- The soil samples were collected and preserved using EPA Method SW5035.
- The soil borings were converted into groundwater monitoring wells (MW1, MW2, MW3, MW4 and MW5). The installed groundwater monitoring wells were then surveyed by a licensed surveyor, developed, and sampled.
- Soil encountered in borings MW1 through MW5 consists of heterogeneous, inter-bedded clay, silty clay and/or clayey sand to a depth of approximately 30 feet bgs (the maximum depth explored). Based on the low permeability of the saturated zone, the groundwater wells can be classified as low recovery wells.
- The laboratory analytical results of soil samples collected from the soil borings show that TPH-DRO, TPH-GRO, Benzene, Ethylbenzene, Toluene, Xylenes, DIPE, ETBE, TAME, TBA, or ethanol were not detected above laboratory reporting limits in any of the soil samples collected. TPH-ORO was only detected in one sample from MW2 at 10 feet bgs at 140 mg/Kg. MTBE was only detected in one soil boring MW1 at 5 feet (16 ug/kg), 10 feet (51 ug/kg) and 15 feet (7.4 ug/kg) bgs.
- The laboratory analytical results of groundwater samples collected from the five monitoring wells show that TPH-ORO, TPH-GRO, Benzene, Ethylbenzene, Toluene, Xylenes, DIPE, ETBE, TAME, TBA, or ethanol were not detected above laboratory reporting limits in any of the groundwater samples collected. TPH-DRO was only detected in one monitoring well, MW3 at 7.9 mg/L. MTBE was only detected in two monitoring wells, MW1 (5.1 ug/L) and MW2 (6.8 ug/ L).
- The former Arco site located at 3737 Beverly Blvd W, Los Angeles, CA 90004 is located immediately adjacent to the south of the AT&T Site. The former ARCO site has had a fueling service station since at least 1950. Several gasoline and diesel USTs have been

determined to be leaking from the late 1980's and 1990's and have been removed. A review of the quarterly monitoring data show that the elevated levels of TPH-GRO, BTEX and MTBE have been encountered below the former Arco Site. Remediation has been ongoing. The historical site assessment reports for this site have also reported "*near saturated gasoline contaminated soil*" just south of the AT&T site. Other sites in the vicinity cannot be ruled out as a source for hydrocarbon concentrations detected in the groundwater in the area.

- The California Primary Maximum Contaminant Level (MCL) for MTBE is 13 ug/L. The highest MTBE detected in the groundwater is 6.8 ug/L in MW2. The highest TPH-DRO detected in groundwater is 7.9 mg/L in MW3. The minor residual contamination could be potentially unrelated to the former gasoline UST which is the subject of this investigation. The current concentrations in both soil and groundwater do not warrant further investigations and/or corrective action.
- The analytical testing COELT/ EDF data have been uploaded to the State of California Geotracker database website in compliance with California's electronic reporting requirements.

Based on the current and previous investigations, RMT recommends that this Site be granted No Further Action status by the Los Angeles Regional Water Quality Control Board if groundwater monitoring for three more quarters confirm that the concentrations of contaminants of concern decrease or remain stable at the Site.

2004 UST Removal Report

3.0 ANALYTICAL TESTING

Soil samples were submitted to Associated Laboratories (AL) for analysis, which is State certified for hazardous waste testing (Certification No. 1338) using a 24-hour turn-around-time. Analytical laboratory results are provided on Figure 4 and laboratory reports are provided in Appendix A.

Samples were submitted for the following analysis:

- Total petroleum hydrocarbons as gasoline (TPH-g) using EPA Method 8015(m).
- Benzene (B), Toluene (T), Ethylbenzene (E), and Total Xylenes (X) using EPA Method 8260B (collectively BTEX).
- 5 Oxygenates: Methyl-t-butyl ether (MtBE), Di-isopropyl ether (DIPE), Ethyl-t-butyl ether (EtBE), Tert-amyl methyl ether (TAME), and Tert-butanol (TBA) using EPA Method 8260B.
- 1,2-Dibromoethane (EDB), and 1,2-Dichloroethane (EDC) using EPA Method 8260B.
- Methanol using EPA Method 8015M.
- Ethanol using EPA Method 8260B.
- The samples were collected and preserved using EPA Method SW5035.
- The analytical testing COELT/EDF data has been uploaded to the Geotracker website in compliance with AB2886 requirements.

4.0 DEPTH TO GROUNDWATER

Publicly available information indicates that the depth to usable groundwater in the vicinity of the Site is 19.1 feet bgs. This is based on information from Well #2671A (ground surface elevation of 283.6.1 feet above MSL) located on Melrose and El Centro (just to the north-west of the Site) last measured on May 20, 2004. The depth to usable groundwater in the vicinity of the Site in another well is 6.5 feet bgs. This is based on information from Well #2692C (ground surface elevation of 242 feet above MSL) located on Kingsley and 1st (just to the west of the Site) last measured on April 5, 1978 (personal communication with Brian Hill, County of Los Angeles Department of Public Works, Hydrology Division, November 17, 2004).

5.0 CONCLUSIONS

Based on the data contained in this report, the following are concluded:

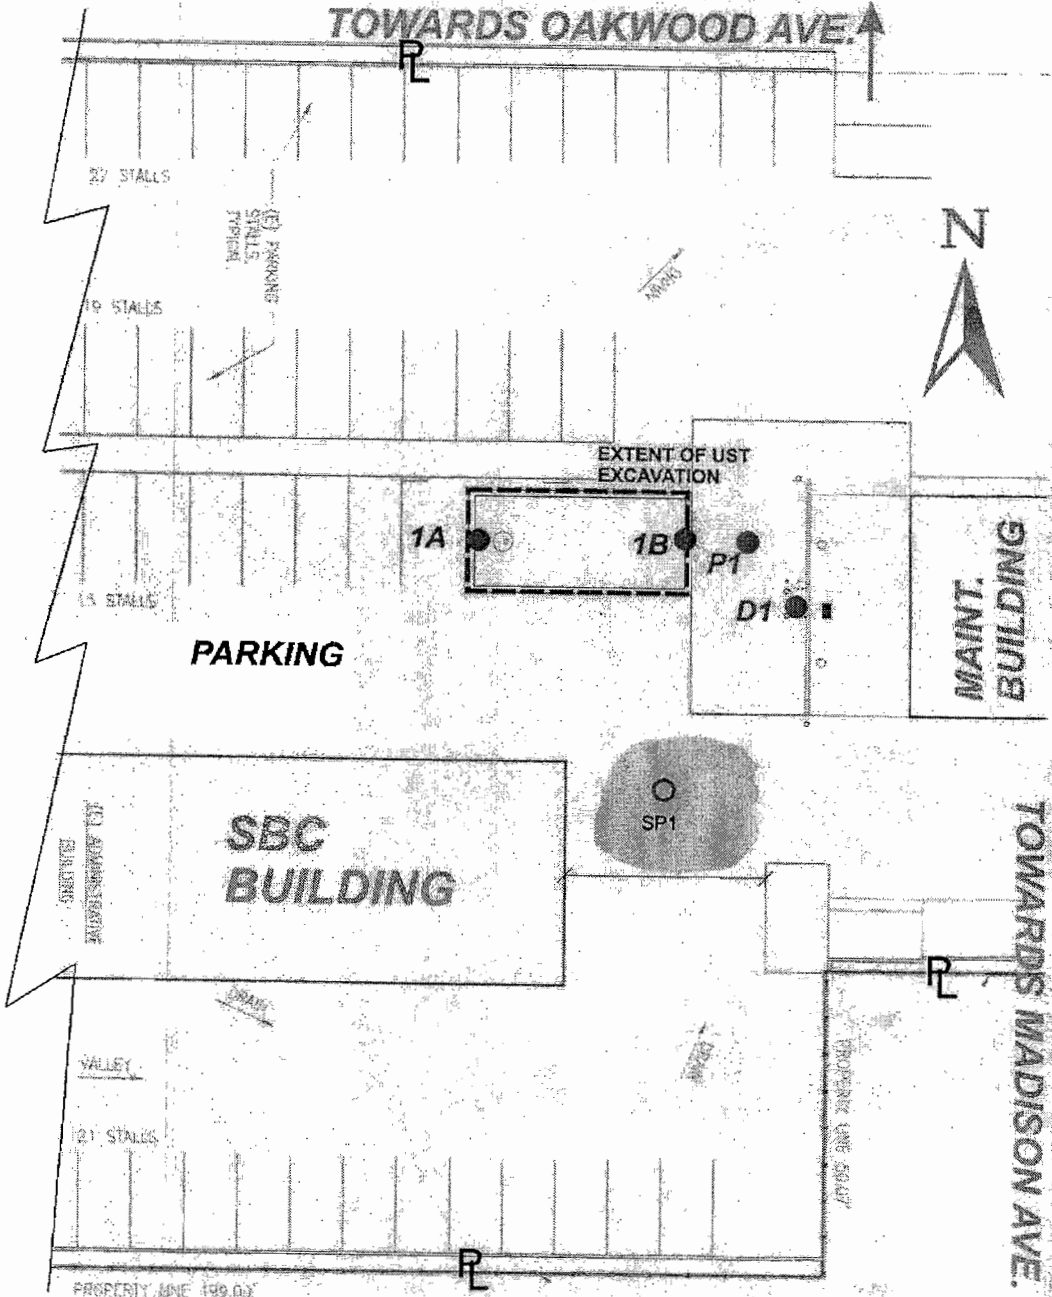

- One 12,000-gallon gasoline double-walled Modern Welding Glassteel UST was properly removed from the Site and disposed under state and local regulations.
- The results of the analytical testing show that **NO** TPH-g, BTEX, DIPE, TAME, ETBE, TBA, EDB, EDC, Ethanol were detected above the method detection limits in the soil samples collected beneath the UST and the former fuel dispenser. Minor MTBE at 2.7 J $\mu\text{g}/\text{Kg}$, 4.7 J $\mu\text{g}/\text{Kg}$, 6 $\mu\text{g}/\text{Kg}$, slightly above the detection limit was detected in samples 1A, 1B and D1 only.
- Elevated concentrations of TPH-g (20,900 $\mu\text{g}/\text{L}$), BTEX, Ethanol (2,050 $\mu\text{g}/\text{L}$), MTBE (5,400 $\mu\text{g}/\text{L}$), TAME (18 $\mu\text{g}/\text{L}$), TBA (812 $\mu\text{g}/\text{L}$) were detected in the accumulated water within the excavation.
- All soil samples were collected and preserved using EPA Method SW5035.

Preliminary research indicates that there was a previous onsite leak reported in or around 1989. Closure for the Site was granted by the RWQCB or the LAFD in 1996. The current data is insufficient at this time to conclude if the current levels of elevated concentrations detected in the accumulated water sample collected from the base of the excavation are related to the current UST; the 1989 UST, or another source. Therefore, additional assessment is required to assess quality and any potential impact of groundwater underlying the Site.

PROJECT NAME:	AT&T LSANCA86 (G1118) FACILITY
PROJECT NUMBER:	00-06644.04
PROJECT MANAGER:	CHRIS D'SA
SITE LOCATION:	316 NORTH JUANITA AVENUE LOS ANGELES, CA
DATES OF FIELDWORK:	11/1/2007 TO 11/2/2007
PURPOSE OF FIELDWORK:	
WORK PERFORMED BY:	Alejandra Lopez (AL)

A circular professional engineer seal for the State of California. The seal contains the text "REGISTERED PROFESSIONAL ENGINEER" around the top and "STATE OF CALIFORNIA" around the bottom. In the center, there is a signature, the license number "PE # C 45250", and the expiration date "EXP 9/30/08". The word "CIVIL" is written at the bottom of the seal.

WORK / SAMPLING PERFORMED		
Install five soil borings to depth of 30 ft. in the location of the former UST pit.		
A hollow stem auger drill rig was used.		
Soil samples were collected at 5 ft. intervals to groundwater. Samples were analyzed for TPH diesel, TPH gasoline, BTEX, MTBE, DIPE, ETBE, TAME, TBA and ethanol.		
Borings were converted into 2" diameter pvc monitoring wells.		
Soil cuttings and purge water are stored onsite temporarily until shipped out for offsite disposal.

PROJ. NAME: AT&T LSANCA86 (G1118) FACILITY	WELL ID: MW-1 to MW-5
PROJ. NO: 00-06644.04	DATE INSTALLED: 11/1/2007
INSTALLED BY: AL	CHECKED BY:

CASING AND SCREEN DETAILS
TYPE OF RISER: <u>2-INCH PVC</u>
PIPE SCHEDULE: <u>40</u>
PIPE JOINTS: <u>THREADED O-RINGS</u>
SOLVENT USED? <u>NO</u>
SCREEN TYPE: <u>2-INCH PVC</u>
SCR. SLOT SIZE: <u>0.01-INCH</u> INCH
BOREHOLE DIAMETER: <u>8</u> IN. FROM <u>0</u> TO <u>30</u> FT. <u> </u> IN. FROM <u> </u> TO <u> </u> FT.
SURF. CASING DIAMETER: <u> </u> IN. FROM <u> </u> TO <u> </u> FT. <u> </u> IN. FROM <u> </u> TO <u> </u> FT.

WELL DEVELOPMENT
DEVELOPMENT METHOD: <u>SURGE AND BAIL</u>
TIME DEVELOPING: <u>0.5</u> HOURS PER WELL
WATER REMOVED: <u>10 TO 20</u> GALLONS
WATER ADDED: <u>0</u> GALLONS
WATER CLARITY BEFORE / AFTER DEVELOPMENT
CLARITY BEFORE: _____
COLOR BEFORE: _____
CLARITY AFTER: _____
COLOR AFTER: _____
ODOR (IF PRESENT): _____

NOTES:

WATER LEVEL SUMMARY		
SWE MEASUREMENT	DATE	TIME
BEFORE DEVELOPING:		T/PVC
AFTER DEVELOPING:		T/PVC
OTHER		T/PVC
OTHER		T/PVC

PROTECTIVE COVER AND LOCK INSTALLED? YES NO
 PERMANENT, LEGIBLE WELL LABEL ADDED? YES NO

American Scientific Laboratories, LLC (ASL) accepts sample materials from clients for analysis with the assumption that all of the information provided to ASL verbally or in writing by our clients (and/or their agents), regarding samples being submitted to ASL, is complete and accurate. ASL accepts all samples subject to the following conditions:

- 1) ASL is not responsible for verifying any client-provided information regarding any samples submitted to the laboratory.
- 2) ASL is not responsible for any consequences resulting from any inaccuracies, omissions, or misrepresentations contained in client-provided information regarding samples submitted to the laboratory.

American Scientific Laboratories, LLC (ASL) accepts sample materials from clients for analysis with the assumption that all of the information provided to ASL verbally or in writing by our clients (and/or their agents), regarding samples being submitted to ASL, is complete and accurate. ASL accepts all samples subject to the following conditions:

- 1) ASL is not responsible for verifying any client-provided information regarding any samples submitted to the laboratory.
- 2) ASL is not responsible for any consequences resulting from any inaccuracies, omissions, or misrepresentations contained in client-provided information regarding samples submitted to the laboratory.

Appendix E
Groundwater Sampling Procedures &
Field Sheets

INSPECTION AND GAUGING

Wells are inspected prior to evacuation and sampling. The condition of the wellhead is checked and noted according to a wellhead inspection checklist. Standard measurements include the depth to water (DTW) and the total well depth (TD) obtained with industry standard electronic water level indicators that are graduated in increments of hundredths of a foot. The water in each well is inspected for the presence of immiscibles. When free product is suspected, its presence is confirmed using an electronic interface probe (e.g. MMC). No samples are collected from a well containing over two-hundredths of a foot (0.02') of product.

EVACUATION

Depth to water measurements are collected by RMT personnel prior to purging and minimum purge volumes are calculated anew for each well based on the height of the water column and the diameter of the well. Expected purge volumes are never less than three case volumes. Well purging devices are selected on the basis of the well diameter and the total volume to be evacuated. In most cases, the well will be purged using an electric submersible pump (i.e. Grundfos) suspended near (but not touching) the bottom of the well.

STABILIZATION of PARAMETERS

Well purging completion standards include minimum purge volumes, but additionally require stabilization of specific groundwater parameters prior to sample collection. Typical groundwater parameters used to measure stability are electrical conductivity, pH, and temperature. Instrument readings are obtained at regular intervals during the evacuation process (no less than once per case volume). Stabilization standards for routine quarterly monitoring of fuel sites include the following: Temperature is considered to have stabilized when successive readings do not fluctuate more than +/- 1 degree Celsius. Electrical conductivity is considered stable when successive readings are within 10%. pH is considered to be stable when successive readings remain constant or vary no more than 0.2 of a pH unit.

DEWATERED WELLS

Normal evacuation removes no less than three case volumes of water from the well. However, less water may be removed in cases where the well dewateres and does not immediately recharge.

MEASURING RECHARGE

Upon completion of well purging, a depth to water measurement is collected and notated to ensure that the well has recharged to within 80% of its static, pre-purge level prior to sampling. Wells that do not immediately show 80% recharge or dewatered wells will be allowed a

minimum of 2 hours to recharge prior to sampling. The water level at time of sampling will be noted.

PURGEWATER CONTAINMENT

Non-hazardous purgewater evacuated from each groundwater monitoring well is captured and contained in 55-gallon drums, on-board storage tanks on the Sampling Vehicle and/or special water hauling trailers. Effluent from the decontamination of reusable apparatus (sounders, electric pumps and hoses etc.) consisting of groundwater combined with deionized water and non-phosphate soap, is similarly captured. Non-hazardous purge and rinsate water is off loaded into 55-gallon drums on site.

SAMPLE COLLECTION DEVICES

All samples are collected using disposable bailers.

SAMPLE CONTAINERS

Sample material is decanted directly from the sampling bailer into sample containers provided by the laboratory that will analyze the samples. The transfer of sample material from the bailer to the sample container conforms to USEPA specifications. The type of sample container, material of construction, method of closure and filling requirements are specific to the intended analysis. Chemicals needed to preserve the sample material are commonly placed inside the sample containers by the laboratory or glassware vendor prior to delivery of the bottle to our personnel. The laboratory sets the number of replicate containers.

QA/QC SAMPLES

For field Quality Assurance/Quality Control (QA/QC) purposes, either an equipment blank (QCEB) sample or a trip blank (QCTB) sample may be prepared along with the collected groundwater samples. If trip blanks are collected during this event, they are taken to the site and kept inside the sample cooler for the duration of the event. They are turned over to the laboratory for analysis with the other collected samples. The QCEB sample is generally obtained after decontamination activities by pouring ultra-pure de-ionized water over the pump. A sample is then collected using, to the extent feasible, the same sampling protocol and equipment used to obtain the other samples. Any collected QA/QC blank samples are handled and processed in exactly the same manner as regular samples, as described herein. Additionally, the laboratory performed matrix spikes, matrix spike duplicates, method blanks, check samples and standards in accordance with the RWQCB guidelines to provide a measure of the positive interference introduced by the laboratory procedure and analytical testing methods.

DUPLICATES

Duplicates, if requested, may be collected at a site. The Duplicate sample is labeled "DUP" and the time of collection is omitted from the COC, thus rendering the sample blind.

SAMPLE STORAGE

All sample containers are promptly placed in food grade ice chests for storage in the field and transport (direct or via our facility) to the designated analytical laboratory. These ice chests contain quantities of restaurant grade ice as a refrigerant material. The samples are maintained in either an ice chest or a refrigerator until relinquished into the custody of the laboratory or laboratory courier.

DOCUMENTATION CONVENTIONS

A label must be affixed to all sample containers. In most cases these labels are generated by our office personnel and are partially preprinted. Labels can also be hand written by our field personnel. The site is identified with the store number and site address, as is the particular groundwater well from which the sample is drawn (e.g. MW-1, MW-2, S-1 etc.) The time and date of sample collection along with the initials of the person who collects the sample are handwritten onto the label. Chain of Custody records are created using client specific preprinted forms following USEPA specifications.

DECONTAMINATION

All equipment is brought to the site in clean and serviceable condition and is cleaned after use in each well and before subsequent use in any other well. Equipment (i.e. reels, pumps and bailers) are decontaminated before leaving the site. Any sensitive equipment or parts (i.e. Dissolved Oxygen sensor membrane, water level indicator, etc.) that cannot be washed using the high pressure water, will be sprayed with a nonphosphate soap and deionized water solution and rinsed with deionized water.

**UNDERGROUND STORAGE TANKS PROGRAM
PACIFIC BELL TELEPHONE COMPANY, AT&T
316 NORTH JUANITA AVENUE, LOS ANGELES, CA
(CASE NO. 900040225A)**

Dear Mr. Smith:

Thank you for submitting the general information package dated July 12, 2007. We have reviewed the "UST Removal Report/Soils Report (Report)," dated November 17, 2004, and the "Workplan for Site Assessment (Workplan)," dated January 18, 2006, prepared by Hydrologue, Inc. (HI), for the subject site. The Report indicated that the total petroleum hydrocarbons as gasoline (TPH_G) concentration at 20,900 µg/L, benzene concentration at 524 µg/L and methyl tertiary butyl ether (MTBE) concentration at 5,400 µg/L were detected in a water sample collected from the excavation. In the Workplan, HI proposes to drill five soil borings and convert the borings to groundwater monitoring wells to assess soil and groundwater contamination beneath the site

We concur with the Workplan as proposed, provided the following conditions are met:

1. The construction, development, and abandonment of groundwater monitoring wells must comply with requirements prescribed in the California Well Standards (Bulletin 74-90), published by the California Department of Water Resources (can be seen at www.dpla2.water.ca.gov and go to "groundwater").
2. All necessary permits must be obtained from the appropriate agencies prior to the start of work.
3. Pursuant to State Water Resources Control Board Resolution No. 92-49, under Water Code section 13304, all fieldwork related to subsurface investigation must be conducted by, or under the direct responsible supervision of, a licensed California Professional Geologist (PG) or Civil Engineer (PE). All technical documents submitted to this Regional Board must be reviewed and signed and/or stamped by a licensed California PG or PE with at least five years subsurface hydrogeologic experience.
4. Soil must be logged at five-foot intervals, at changes in the soil lithology, and at areas of obvious contamination. The registered professional in responsible charge shall review the boring logs and assume the responsibility for the accuracy and completeness of the logs.

California Environmental Protection Agency

Our mission is to preserve and enhance the quality of California's water resources for the benefit of present and future generations.

Soil samples collected from on-site wells must be prepared per EPA Method 5035 for analyses.

5. Soil and Groundwater samples must be analyzed by Cal-LUFT GC/FID or Cal-LUFT GC/MS Method for TPH_G, total petroleum hydrocarbons as diesel (TPH_D), and by EPA Method 8260B for benzene, toluene, ethylbenzene, and xylenes (BTEX), and fuel oxygenate compounds including MTBE, di-isopropyl ether (DIPE), ethyl tertiary butyl ether (ETBE), tertiary amyl methyl ether (TAME), and TBA. Ethanol is also required and shall be analyzed by either method above. The analytical detection limits must conform to the Regional Board General Laboratory Testing Requirements (9/06) (http://www.waterboards.ca.gov/losangeles/html/lab_report.html). All respective analytical methods must be certified by the California Environmental Laboratory Accreditation Program (ELAP). All analytical data must be reported by a California-certified laboratory.

Prior to consideration of case closure, you must analyze at least one round of groundwater samples including all common aromatic and chlorinated volatile organic compounds per EPA Method 8260B. If the site has a waste oil tank, the full suite of aromatic and chlorinated analyses must also be tested and reported per EPA Method 8260B.

6. All proposed groundwater monitoring wells must be developed and surveyed to a benchmark of known elevation above mean sea level by a licensed land surveyor or registered civil engineer. Prior to collecting samples, free product thickness (if present) must be determined and the depth to water must be measured in all wells to be sampled, then the wells are to be properly purged until the temperature, conductivity, and pH stabilize, and the water is free of suspended and settleable matter, before samples are collected for analysis. Any wells containing free product must be purged to remove any standing product, allowed to equilibrate to prepurged levels and free product thickness measured and reported.
7. You are required to submit a technical report summarizing this phase of investigation by **October 15, 2007**. The report must also include the soil boring logs, analytical results, well permits, geologic cross-section, isoconcentration map of contaminants, and as-built construction details of the new groundwater monitoring wells installed.
8. You are required to implement a quarterly groundwater monitoring program. The groundwater monitoring reports are to be submitted by the fifteenth day following the end of the month as shown in the following schedule:

<u>Reporting Period</u>	<u>Report Due Date</u>
January-March	April 15 th
April-June	July 15 th
July-September	October 15 th
October-December	January 15 th

The first groundwater monitoring report under this schedule is due by **October 15, 2007**.

Mr. Mark Smith
AT&T Environmental, Health & Safety

- 3 -

August 9, 2007

9. The quarterly groundwater monitoring report must include the following:
- A separate summary table containing current concentrations.
 - A summary table containing all historical data per each well with groundwater depth (or elevation) and well screen intervals.
 - A regional map depicting site vicinity business and street, etc.
 - A site plot plan depicting site location, tank and associated system locations.
 - A site map depicting all well locations and groundwater elevations (contour) with flow gradient and direction.
 - An isoconcentration map for TPH(g), benzene, MTBE, and TBA, respectively.
 - A hydrograph superimposing on concentration over time at the most impacted well for TPH(g), benzene, MTBE, and TBA (or at any other wells as warranted).
 - Conclusions and recommendations.
10. Two weeks prior to commencing field work, a Health and Safety plan pertinent to the subject project must be submitted to this office. The field crew must follow the Health and Safety Plan.
11. Please notify us at least seven working days prior to the start of work so that we may schedule a member of our staff to be present.

If you have any questions concerning this matter, please call me at (213) 576-6712 or e-mail me at mhsu@waterboards.ca.gov.

Sincerely,

Mercedes S. Hsu
Water Resource Control Engineer

Section 1

Introduction

1.1 Introduction

RMT, Inc. (RMT) has been retained by AT&T Services, Inc. (AT&T), the current property owner and occupant for environmental services as required by the Los Angeles Regional Water Quality Control Board (RWQCB). The Site is a Pacific Bell Telephone Co. d/b/a AT&T G1118 (LSANCA86) Fleet Yard located at 316 N. Juanita Avenue, Los Angeles, California 90004 (Site) (See Figure 1).

Based on the current and previous investigations, RMT previously recommended that this Site be granted No Further Action status by the RWQCB if groundwater monitoring for three more quarters confirm that the concentrations of contaminants of concern decrease or remain stable at the Site. In a letter dated January 7, 2008, the RWQCB concurred with RMT's conclusions and recommendations and directed AT&T to conduct two more rounds of groundwater monitoring, at which time the site will be re-evaluated for low risk closure. Therefore, in accordance with the RWQCB's guidance, the Second Quarter 2008 Groundwater Monitoring Report was submitted to the RWQCB as the final monitoring event and the RWQCB was respectfully requested to grant closure for this Site. However, in a letter dated July 28, 2008, the RWQCB requested the collection of two "hydropunch" groundwater samples down-gradient of well MW-5. The proposed grab groundwater sampling locations were presented and approved by Ms. Mercedes Hsu of the RWQCB on September 17, 2008.

1.2 Objectives & Scope of Work

RMT's scope of work listed below was developed in coordination with AT&T and the RWQCB to accomplish the following objectives:

- To evaluate whether there is any hydrocarbon contamination in the down-gradient shallow groundwater below the Site; and

The following scope of work was approved by the AT&T and the RWQCB prior to this investigation:

- Collect a total of two groundwater samples in two down -gradient locations (see Figure 4) using a hollow stem auger drilling rig. Groundwater was anticipated to be between 10-15 feet below ground surface (bgs). These borings were logged and groundwater samples collected.

- Analytically test the collected groundwater samples in accordance with the previously submitted work plan.

The work was completed under the responsible charge of Galen Kenoyer, Ph.D., a California Professional Geologist (PG) with more than 25 years of experience in environmental investigations.

Section 2

Summary of Site Conditions

2.1 Site Location

The "Site" is defined as the real property located at 316 N. Juanita Avenue, Los Angeles, Los Angeles County, California, 90004. The property is bordered by private property to the south, private property and Oakwood Avenue on the north, Madison Avenue to the east and Juanita Avenue to the west.

The Site consists of two buildings utilized for general office use, equipment storage and vehicle maintenance. The remainder of the Site is used for parking of AT&T fleet and personal vehicles.

The vicinity around the Site has been developed for mixed industrial, commercial, and residential use. The Site is generally surrounded by other commercial and industrial sites. Figures 1 & 3 show the location of the Site.

2.2 Site History

On November 10, 2004, a 12,000-gallon gasoline UST was removed from the Site. Following removal of the 12,000-gallon UST, two soil samples were collected from the base of the tank excavation and one soil sample was collected from beneath the location of the former fuel dispenser. The only constituent detected in the three soil samples was methyl tert butyl ether (MTBE) at concentrations of 2.7 micrograms per kilogram (ug/kg), 4.7 ug/kg, and 6.0 ug/kg. However, water accumulating in the excavation was sampled and analyzed with the following concentrations of chemicals detected: 20,900 ug/L Total Petroleum Hydrocarbons – Gasoline (TPH-GRO); 524 ug/L benzene; 2,030 ug/L toluene; 282 ug/L ethylbenzene; 1,770 ug/L total xylenes; 5,400 ug/L MTBE; 2,050 ug/L ethanol; 18 ug/L tert-amyl methyl ether (TAME); and 812 ug/L tert-butanol (TBA). The UST Removal Report, dated November 17, 2004, was submitted by Hydrologue Inc. (HI, 2004) to the Los Angeles Fire Department (LAFD).

On January 12, 2006, the LAFD requested an investigation work plan, which was prepared and submitted to the LAFD on January 18, 2006. Upon the request of the LAFD, an Unauthorized Release form was submitted on April 18, 2007, and on April 19, 2007, the LAFD referred the case to the RWQCB. The RWQCB requested additional background information for their review of the investigation work plan on May 22, 2007, which was submitted on July 12, 2007. The January 18, 2006 Work Plan was approved with comments by the RWQCB on August 9, 2007,

and a deadline of October 15, 2007 was set for completion of the investigation and submittal of a report. This deadline was extended to December 15, 2007 by Ms. Mercedes Hsu on September 10, 2007.

In November 2007, RMT completed a Phase II Site Assessment investigation. The following is summarized from the report dated November 29, 2007 which was submitted to the RWQCB:

- Five soil borings (MW1, MW2, MW3, MW4 and MW5) were drilled to a termination depth of 30 feet bgs, using hollow stem auger drilling techniques. Soil samples were collected at five foot intervals in from each boring until 15 feet bgs. No visual, olfactory, or PID indications of contamination were encountered in the soil borings. Soil encountered in borings MW1 through MW5 consists of heterogeneous, inter-bedded clay, silty clay and/or clayey sand to a depth of approximately 30 feet bgs (the maximum depth explored). Based on the low permeability of the saturated zone, the groundwater wells can be classified as low recovery wells.
- The soil borings were converted into groundwater monitoring wells (MW1, MW2, MW3, MW4, and MW5). The installed groundwater monitoring wells were then surveyed by a licensed surveyor, developed, and sampled.
- The laboratory analytical results of soil samples collected from the soil borings show that TPH-DRO, TPH-GRO, Benzene, Ethylbenzene, Toluene, Xylenes, DIPE, ETBE, TAME, TBA, or ethanol were not detected above laboratory reporting limits in any of the soil samples collected. TPH-ORO was only detected in one sample from MW2 at 10 feet bgs at 140 mg/kg. MTBE was only detected in one soil boring MW1 at 5 feet (16 ug/kg), 10 feet (51 ug/kg) and 15 feet (7.4 ug/kg) bgs. The soil samples were collected and preserved using EPA Method SW5035.
- The laboratory analytical results of groundwater samples collected from the five monitoring wells show that TPH-ORO, TPH-GRO, Benzene, Ethylbenzene, Toluene, Xylenes, DIPE, ETBE, TAME, TBA, or ethanol were not detected above laboratory reporting limits in any of the groundwater samples collected. TPH-DRO was only detected in one monitoring well, MW3 at 7.9 mg/L. MTBE was only detected in two monitoring wells, MW1 (5.1 ug/L) and MW2 (6.8 ug/L).
- The former ARCO site located at 3737 Beverly Blvd W, Los Angeles, CA 90004 is located immediately adjacent to the south of the AT&T Site. The former ARCO site has had a fueling service station since at least 1950. Several gasoline and diesel USTs have been determined to be leaking from the late 1980's and 1990's and have been removed. A review of the quarterly monitoring data show that the elevated levels of TPH-GRO,

BTEX and MTBE have been encountered below the former ARCO Site. Remediation has been ongoing. The historical site assessment reports for this site have also reported “near saturated gasoline contaminated soil” just south of the AT&T site. Other sites in the vicinity cannot be ruled out as a source for hydrocarbon concentrations detected in the groundwater in the area.

- The California Primary Maximum Contaminant Level (MCL) for MTBE is 13 ug/L. The highest MTBE detected in the groundwater in November 2007 was 6.8 ug/L in MW2. The highest TPH-DRO detected in groundwater was 7.9 mg/L in MW3. The residual contamination could be unrelated to the former gasoline UST which is the subject of this investigation. The current concentrations in both soil and groundwater do not warrant further investigations and/or corrective action.

Based on the current and previous investigations, RMT previously recommended that this Site be granted No Further Action status by the RWQCB if groundwater monitoring for three more quarters confirm that the concentrations of contaminants of concern decrease or remain stable at the Site. In a letter dated January 7, 2008, the RWQCB concurred with RMT’s conclusions and recommendations and directed AT&T to conduct two more rounds of groundwater monitoring, at which time the site will be re-evaluated for low risk closure. Therefore, in accordance with the RWQCB’s guidance, the Second Quarter 2008 Groundwater Monitoring Report was submitted to the RWQCB as the final monitoring event. During this final groundwater monitoring event, the laboratory analytical results of groundwater samples collected from the five monitoring wells show that TPH-ORO, TPH-GRO, Benzene, Ethylbenzene, Toluene, Xylenes, DIPE, ETBE, TAME, TBA, or ethanol were not detected above laboratory reporting limits in any of the groundwater samples collected. TPH-DRO was only detected in two monitoring wells, MW5 (at 10.5 mg/L) and MW3 (at 0.82 mg/L). MTBE was only detected in one monitoring well, MW2 (8.65 ug/L).

RMT concluded the following in the Second Quarter 2008 Groundwater Monitoring Report:

- The TPH-DRO results in the groundwater were anomalous and appear inconsistent with historical data related to the 12,000-gallon **gasoline** UST that was removed from the Site on November 10, 2004 and which is the subject of this site investigation. The ARCO site located at 3737 Beverly Blvd W, Los Angeles, CA 90004 (*Case #: 900040098*) is located immediately adjacent to the south of the AT&T Site. The former ARCO site has had a fueling service station since at least 1950. Several gasoline and diesel USTs have been determined to be leaking between the late 1980’s and 1990’s and have been removed. Remediation has been ongoing. The historical site assessment reports for this site have also reported “near saturated gasoline contaminated soil” just south of the

AT&T site. Other sites in the vicinity cannot be ruled out as a source for hydrocarbon concentrations detected in the groundwater in the area

- o The foregoing conclusions were also further evidenced by the lack of contaminants in soil samples which were collected during the installation of the groundwater monitoring wells in November 2007. No visual, olfactory, or PID indications of contamination were encountered in the soil borings. No TPH-DRO, TPH-GRO, Benzene, Ethylbenzene, Toluene, Xylenes, DIPE, ETBE, TAME, TBA, or ethanol were detected above laboratory reporting limits in any of the soil samples collected. TPH-ORO was only detected in one sample from MW2 at 10 feet bgs at 140 mg/Kg. MTBE was only detected in one soil boring MW1 at 5 feet (16 ug/kg), 10 feet (51 ug/kg) and 15 feet (7.4 ug/kg) bgs.

Due to the foregoing, the RWQCB was respectfully requested to grant closure for this Site. However, in a letter dated July 28, 2008, the RWQCB requested the collection of two "Hydropunch®" type groundwater samples downgradient of well MW-5. The proposed grab groundwater sampling locations were presented to Ms. Mercedes Hsu of the RWQCB and approved by the RWQCB on September 17, 2008.

2.3 Topography

The site and surrounding properties gently slope to the east. According to the United States Geologic Survey (USGS) Hollywood, CA. 7.5 Minute Series topographic map, the Site elevation is 297 feet above mean sea level (msl).

2.4 Geology & Hydrogeology

The following section is extracted from the previously submitted work plan. The Site is located in the northern portion of the Los Angeles Coastal Plain approximately three miles south of the Santa Monica Mountains and five miles northeast of the Baldwin Hills. The Silver Lake Reservoir, located approximately three miles northeast of the site and the Hollywood Reservoir, located approximately four miles northwest of the site, are the closest perennial surface water bodies. The Site is located in the La Brea Plain of the Los Angeles Central Basin, and is underlain primarily by recent alluvial sediments consisting of clay, sand, and gravel. According to the California Department of Water Resources, the Exposition Aquifer extends from approximately 40 feet below ground surface (bgs) to ground surface in the region of the Site (HI, 2006).

The La Brea Plain is located east of the Newport-Inglewood belt of hills and west of the Elysian Hills. A surface was originally cut by the sea during Pleistocene time on lower Pleistocene and older formations. On this eroded surface, 90 to 200 feet of alluvial sediments have been deposited, the top of which now forms the La Brea Plain. The La Brea Plain has apparently been warped into an east-west anticlinal structure extending westerly from the Elysian Hills. Because of this warping and partial uplifting, the plain is being dissected and removed by erosion. A younger series of alluvial fans forming the Hollywood piedmont slope have buried the La Brea Plain from the north. Poland, et al., (1956) described the La Brea Plain and the Santa Monica Plain as being of similar origin, and additional exposures and close study of the land forms indicate that both of these forms are related in age to the Ocean Park Plain and the Torrance Plain (HI, 2006).

A map of regional geology is presented in Figure 2. The oldest geologic unit mapped in the Hollywood Quadrangle is the Cretaceous granodiorite and quartz diorite, which is exposed in the northern part of the map area in the Santa Monica Mountains. Locally, at the surface, the granitic rocks are soft and crumbly due to weathering. The Tertiary bedrock formations exposed on hills at the vicinity of the Site are assigned to deep-marine biogenic and clastic rocks of the upper Miocene Modelo Formation and upper Miocene Puente Formation. The Modelo Formation is composed of interbedded shale, siltstone, and sandstone (Tush). Tush consists of gray to light brown, thin bedded, silty clay shale, and locally contains scattered large calcareous nodules; in places, it also contains thin interbeds of fine-grained sandstone; the lower part locally contains thin lenses of light tan, platy, semi-siliceous or diatomaceous shale (HI, 2006).

The Elysian Park Hills are primarily composed of deep-marine clastic and biogenic rocks of the upper Miocene Puente/Monterey Formation. These rocks consist of interbedded and interfingering siltstone and fine sandstone (Tpn1), siliceous shale and siltstone (Tpn2), diatomaceous shale and siltstone (Tpn3), and fine- to coarse-grained, thinly laminated to thick-bedded sandstone (Tpn4). The southern end of the Elysian Park Hills is composed of massive, soft, micaceous marine siltstone of the Pliocene Fernando Formation (TO). Tmss consists of tan to light gray semi-friable arkosic sandstone that includes some inter-bedded silty shale. The Quaternary unit mapped beneath the Site is Pleistocene alluvial deposits (Qoa). These old Quaternary sedimentary deposits are exposed over much of the center of the Hollywood Quadrangle and within, and adjacent to, the Baldwin Hills in the southeast corner. In general, older alluvium in the Hollywood Quadrangle consists of layers of fine to coarse clayey sand and sandy clay with a lesser amount of silt (HI, 2006).

2.5 Regional Groundwater Quality

The site is located in an area which has been in commercial use for at least 75 years, primarily associated with industrial uses. RMT conducted a review of certain RWQCB files, particularly for the former ARCO facility, which is located to the south of the subject site. RMT also reviewed records available through Geotracker, a database maintained by the RWQCB.

This review identified the former ARCO site, which has been impacted by hydrocarbons, and is located to the south and cross-gradient of the subject site:

- **Former ARCO (LUFT # T0603700432; ID 900040098)** – The Former Arco Site located at 3737 Beverly Blvd. W, Los Angeles, CA 90004 is located immediately adjacent to the south of the AT&T Site. This site has had a fueling service station since at least 1950. It is unknown when this site stopped being an active service station. Several gasoline and diesel USTs have been determined to be leaking from the late 1980's and 1990's and have been removed. A review of the quarterly monitoring data show that elevated levels of TPH-GRO, BTEX and MTBE have been encountered below the former Arco Site. Remediation has been ongoing. The historical site assessment reports for this site have also reported "*near saturated gasoline contaminated soil*" just south of the AT&T site.

The subject site is located cross-gradient of the significant impacts to regional groundwater from the former ARCO site.

2.6 Chemicals of Potential Concern

Based on information regarding the history of the Site and discussions with the RWQCB, the following contaminants of concern have been identified and addressed as part of this Investigation. The primary contaminants of concern are hydrocarbons (TPH, MTBE, BTEX, TAME and TBA) and ethanol, which were detected in the UST removal.

Section 3

Field Investigation

3.1 Health and Safety

A site-specific health and safety plan (HSP) was generated in accordance with the proposed scope of work. The HSP was designed primarily to minimize exposure of RMT personnel to potentially hazardous materials. The HSP was prepared under the direction of RMT's health and safety officer and was implemented in the field by the site safety officer.

Prior to field work, a Health and Safety meeting was held, and health and safety issues related to the Site conditions and drilling activities was discussed with the drilling crew.

3.2 Utility Clearance

Prior to commencement of field activities, Underground Services Alert (USA) was notified of RMT's intent to conduct subsurface investigations at least 48 hours prior to initiation of intrusive field sampling. Proposed boring and soil gas locations were clearly marked with white paint as required by USA. USA contacted all utility owners of record within the site vicinity and notified them of RMT's intention to conduct subsurface investigations in proximity to buried utilities. All utility owners of record, or their designated agents, marked the position of their utilities on the ground surface throughout the area designated for investigation.

Prior to drilling, all the boring locations were hand augered to about 5 feet below ground surface (bgs) to reduce the risk of encountering underground utilities or subsurface structures during drilling activities.

3.3 Well Permits

Prior to drilling, permits were obtained from the Los Angeles County Department of Health. Copies of these permits are attached as Appendix C.

3.4 Drilling of Soil Borings

Two soil borings (B5 and B6) were drilled to depths of 20 feet bgs for this phase of the investigation. The boring locations are shown on Figure 4. Drilling and groundwater sampling was conducted on October 20, 2008, by JDK Drilling Inc (JDK), a California Water Well Drilling

Contractor C-57 # 887038, of Anaheim, California, using a CME -75 hollow-stem auger drilling rig to assess subsurface conditions beneath the site. RMT observed the soil during drilling and collected soil samples at 5-foot depth intervals, approximately, from the boring using a California Modified split-spoon soil sampler.

The following section describes type of vadose zone soil sampling methodology that was used at the site.

Hollow-Stem Auger Soil Sample Collection: : A hollow-stem auger rig was used for drilling and sample collection. The soil borings were sampled at discrete depths. Discrete soil samples were collected using an 18 inch long modified California sampler lined with 2-inch new stainless steel liners. Samples were collected in 6-inch long, 2-inch diameter stainless steel sleeves. The sampler was driven 18 inches with a standard 30-inch drop of a 140-pound hammer. The hammer blow counts were recorded on the boring logs. The remaining soil was then used for lithologic description. After decontamination and adding new sleeves, the sample barrel was lowered back into the augers, additional 5-foot sections of auger were added, and the process was repeated until the desired depth was reached.

Field Instrument Monitoring: During drilling operation, an organic vapor monitor (OVM) was used to monitor the presence and level of organic vapors in the borings and to screen soil samples. The soil was collected from each sampling interval and was placed in a sealed Ziploc™ plastic bag and allowed to equilibrate for approximately 15 minutes prior to placing the probe tip into the container. The organic vapor readings were recorded on boring logs prepared by the field geologist during drilling activities.

Field Instrument Calibration: An OVM was used for health and safety monitoring of air in the breathing zone, and for field screening during soil sampling. The data were used as an immediate indicator of volatile organic vapors in subsurface materials. A handheld Thermo OVM 580B Portable VOC Photo Ionization Detector (PID) calibrated against an Isobutylene gas standard was employed at the Site.

The calibrated OVM displayed VOCs concentration in units equivalent to parts per million (ppm). Isobutylene gas standard, containing a known concentration of isobutylene, was used to set the sensitivity of the instrument. Isobutylene at 100 ppm in air was used for calibration purposes. The instrument was calibrated as follows:

1. Connect the calibration adapter to the gas inlet tube of the PID, and connect the calibration adapter to the isobutylene gas cylinder. Hand tighten the fittings.
2. Turn the flow controller knob counterclockwise about half a turn to start the flow

of gas. The pump noise should change indicating that the gas has started to flow.

3. Wait for the instrument reading to stabilize within ± 0.1 ppm. This usually takes about 30 to 40 seconds. When the last digit of the reading stops changing for a few seconds, press the [enter] key to complete the procedure.
4. Turn the flow controller knob fully clockwise to turn off the flow of gas. Disconnect the calibration adapter from the PID.

The instruments was calibrated at a minimum of once per day. The OVM which was at the Site is equipped with lamp energy of 10.6 eV.

3.5 Boring Logs

A lithologic description of the materials encountered and collected was maintained on boring logs compiled by the field geologist. Soils were classified in accordance with the Unified Soils Classification System (USCS), and descriptions included soil type, particle size and distribution, color, moisture content, and evidence of contamination (discoloration, unusual odors, etc.). The soil samples were screened for the presence of elevated organic vapor concentrations using an OVM and the measurements recorded on the boring log.

3.6 Backfilling of All Borings

After groundwater sampling the borings were properly sealed the same day, by the C-57 licensed Water Well Driller under the direct supervision of RMT.

Upon reaching the termination depth, each boring was backfilled with Portland cement grout. Five gallons of water were mixed with each 94 pound cement bag. The surface was leveled to match existing grade.

3.7 Decontamination Procedures

All equipment that comes into contact with potentially contaminated soil or water was decontaminated to assure the quality of samples collected. Disposable equipment intended for one time use was not decontaminated, but packaged for appropriate disposal. Decontamination occurred prior to and after each use of a piece of equipment. All drilling and sampling devices used were decontaminated using the following procedures:

- Non-phosphate detergent and tap water wash, using a brush if necessary

- Tap-water rinse
- Initial deionized/distilled water rinse
- Final deionized/distilled water rinse.

3.8 Investigation Derived Waste (IDW)

Soil generated during drilling and decontamination fluids were placed and sealed in U.S. Department of Transportation (DOT) approved 55 gallon drums for temporary storage pending disposal. The drums were labeled with the boring number, date of waste generation, type of waste, Site and project name, and the name and phone number of the Site owner. The IDW (decontamination water and soil cuttings) were disposed at appropriate disposal/ treatment/ recycling facilities by Belshire Environmental. All shipping documents (hazardous waste manifests and bills of lading) are attached in Appendix E.

Section 4

Sample Collection Activities

4.1 Drilling of Temporary Groundwater Monitoring Wells

On the same day of drilling, soil borings B6 and B7 were converted into temporary groundwater monitoring wells under the direction of a RMT geologist. Each borehole was drilled to a depth of approximately 20 feet bgs. Upon completion of soil borings, temporary wells were constructed in the boreholes through the hollow stem auger. JDK Drilling Inc a California Water Well Drilling Contractor C-57 # 887038, of Anaheim completed the groundwater monitoring well installation using a hollow stem drilling rig.

4.2 Temporary Well Construction

Provided below is a description of temporary well construction activities:

- Temporary groundwater monitoring wells were constructed by using 2-inch diameter flush-threaded Schedule 40 polyvinyl chloride (PVC) well screen casing and material. The well screen section was constructed using 10-ft lengths of 0.010 slotted SCH 40 PVC and sand filter pack.
- The casing and screen assembly was suspended during the installation of the filter pack to keep the casing straight in the borehole. Annular materials were placed in the borehole from the top of the open HSA. Sand pack (Monterey #2/12) was installed from the bottom of the borehole to 2-feet above the top of screen. The depth to the filter pack was checked for settlement.

4.3 Groundwater Sampling

Standard measurements include the depth to water (DTW) and the total well depth (TD) obtained with electronic water level indicators that are graduated in increments of hundredths of a foot. The water in each well was visually inspected for the presence of free product. However, none of the wells showed any presence of free product. Depth to water measurements were collected by RMT personnel prior to purging and minimum purge volumes calculated for each well based on the height of the water column and the diameter of the well. Purge volumes are a minimum of three casing volumes. Each of the temporary wells were purged using an electric submersible pump (Grundfos) suspended near (but not touching) the bottom of the well.

Purge water evacuated from each temporary groundwater monitoring well was captured and contained in 55-gallon drums. Decontamination water for reusable apparatus (sounders, electric pumps and hoses etc.) consisting of groundwater combined with de-ionized water and non phosphate soap, was also captured in drums and stored on site.

Upon completion of well purging, a depth to water measurement was collected and notated to ensure that the well had recharged to within 80% of its static, pre-purge level prior to sampling.

Groundwater samples were collected directly from the purge water stream, as described above. The pumping rate was adjusted downward to minimize aeration, bubble formation, or turbulent filling of sample bottles.

Groundwater samples were collected using the following procedures:

- For volatile organic analyses, groundwater samples are collected in 40-milliliter, VOA vials with Teflon-lined caps. A pre-measured quantity of hydrochloric acid preservative was added to all vials by the laboratory prior to receipt by the laboratory. For TPH, analysis, groundwater samples were collected in 500-milliliter amber glass bottles. Samples are held at 4°C or less while in the field and in transit to the laboratory. Other appropriate containers, preservatives, and holding protocols are used for non-volatile analyses.
- VOA vials are filled completely so that no headspace or air bubbles are present within the vial. Care is taken so that the vials are not overfilled, and the preservative is not lost.
- Sample containers are immediately labeled and sealed after collection.
- Samples are stored in a cooler while on-site and in transport to the laboratory or office. The cooler has sufficient ice to maintain appropriate temperature prior to collecting samples. The VOA vials are kept chilled both prior to and after filling.

All the samples were delivered to an independent California Certified Hazardous Waste Testing Laboratory for analytical testing following EPA chain of custody procedures.

4.4 Sample Analysis

Offsite groundwater analytical services were provided by American Scientific Laboratories, Inc. (ASL) of Los Angeles, California (ELAP Certification No. 2200).

The following samples (including field quality control [QC] samples) was collected and analyzed as part of this investigation effort:

- A total of 2 groundwater samples were collected from the two soil borings.

- One field equipment blank was collected and analytically tested for TPH and VOCs.

A total of 2 groundwater samples were collected from B6 and B7 temporary wells along with a field equipment blank, and were analytically tested for:

- TPH-DRO (Extractable Diesel Range Organics C28 to C40) using EPA Method 8015B;
- TPH-ORO (Heavy Extractable Range Organics C28 +) using EPA Method 8015B;
- TPH-GRO (Gasoline Range Organics C6 to C10) using EPA Method 8260B;
- BTEX using EPA Method 8260B;
- Ethanol using EPA Method 8260B; and
- 5 Fuel Oxygenates: methyl-t-butyl ether (MTBE), di-isopropyl ether (DIPE), ethyl-t-butyl ether (ETBE), tert-amyl methyl ether (TAME), tert-butanol (TBA) using EPA Method 8260B.

4.5 QA/QC Samples

For QA/QC purposes, one field equipment rinseate blank (QCEB) was prepared, along with the collected samples. The field equipment blanks were used to demonstrate whether the sample containers and or the sampling procedures have any positive interference on the analytical results. The QCEB sample was obtained after decontamination activities by pumping de-ionized water through the pump then collecting a water sample from the pump discharge port itself using, to the extent feasible, the same sampling protocol and equipment used to obtain the other samples.

The aforementioned QA/QC blanks were handled and processed in exactly the same manner as other samples, as described above. Additionally, the laboratory performed matrix spikes, matrix spike duplicates, method blanks, check samples and standards in accordance with the LARWQCB WIP guidelines to provide a measure of the potential positive interferences introduced by the laboratory procedure and analytical testing methods.

4.6 Sample Containers and Preservation

Sample containers for equipment blanks for the specified analyses were provided by the laboratory immediately prior to the sampling event. The pre-cleaned containers were not rinsed prior to sample collection. Any requisite preservatives were pre-added to the containers by the laboratory prior to shipment of the sample containers to the sample collector.

The labeled and sealed samples were placed into clear plastic Ziploc bags, and then placed into an ice chest filled with ice for transport to a California certified analytical laboratory. Samples were logged on a Chain-of-Custody form. The Chain-of-Custody forms were also placed into a

clear plastic Ziploc bag, and then placed inside the ice chest. One ice chest per day was used to hold all of the soil samples.

4.7 Sample Labels and Identification System

A sample label was placed on each sample container with the following information:

- Project number
- Site name and location
- Boring number
- Sample identification number
- Sampler's initials
- Date and time of collection
- Preservative, if any.

Groundwater samples were given an identification starting with B, followed by the location number, for example B6. Field Blanks were labeled QCEB.

4.8 Sample Packaging and Shipment

Following collection and labeling, the following protocol was followed for sample packaging:

1. A self-adhesive custody seal was placed across the lid of each sample container.
2. Sample containers were placed in clear, plastic, leak-resistant bags prior to placement in the ice chest. Caps were checked for tightness, prior to placing the sample in the bag.
3. Samples to be shipped were placed in the cooler and packed with packaging materials to minimize the potential for disturbance and/or breakage of the sample containers.
4. Frozen crushed ice were placed in leak-resistant plastic bags and included in the coolers to keep samples at a chilled temperature during transport to the analytical laboratory. Since ice is used, the drain plug of the cooler was secured with fiberglass tape to prevent melting ice from leaking out of the cooler.
5. The chain-of-custody form was placed in a water-resistant plastic bag and taped on the inside of the lid of the cooler.
6. Strapping tape was placed around all coolers prior to transport to the laboratory.

4.9 Chain-of-Custody Records

Chain-of-custody (COC) records were used to document sample collection and shipment to laboratory for analysis. All sample shipments for analyses were accompanied by a COC record. Form(s) were completed and sent with the samples for each laboratory and each shipment. If multiple coolers are sent to a single laboratory on a single day, COC form(s) were completed and sent with the samples for each cooler. The COC record identified the contents of each shipment and maintained the custodial integrity of the samples. Until receipt by the laboratory, the custody of the samples were the responsibility of the sample collector. A self-adhesive custody seal was placed across the lid of each sample, except for VOC samples (which need to avoid adhesives). The shipping containers in which samples are stored (usually sturdy picnic cooler or ice chest) were also sealed with self-adhesive custody seals any time they are not in someone's possession or view before shipping. All custody seals were signed and dated.

4.10 Sample Documentation

At a minimum, the following information was recorded during the collection of each sample:

- Sample identification number
- Sample location and description
- Site sketch showing sample location and measured distances
- Sampler's name(s)
- Date and time of sample collection
- Designation of sample as composite or grab
- Type of sample (i.e., matrix)
- Type of preservation
- Type of sampling equipment used
- Field observations and details important to analysis or integrity of samples (e.g., heavy rains, odors, colors, etc.)
- Instrument readings (e.g., photoionization detector [PID], etc.)
- Chain-of-custody form numbers and chain-of-custody seal numbers
- Transport arrangements (courier delivery, lab pickup, etc.)
- Recipient laboratory or laboratories

Section 5

Results of Investigation

5.1 Site Geology

Soil encountered in borings B6 and B7 consists of heterogeneous, interbedded clay, silty clay and/or clayey sand to a depth of approximately 20 feet bgs (the maximum depth explored). Descriptions of the conditions encountered in the soil borings are presented on the soil boring logs in Appendix A.

5.2 Site Groundwater Conditions

Groundwater was encountered at 15.01 feet bgs in boring B6 and approximately at 19 feet bgs in boring B7.

5.3 Groundwater Characterization Results

5.3.1 TPH

- TPH-DRO was not detected in the groundwater samples.
- TPH-ORO was not detected in the groundwater samples.
- TPH-GRO was not detected in the groundwater samples.

5.3.2 BTEX & Fuel Oxygenates

- MTBE was not detected in the groundwater samples.
- Benzene was not detected in the groundwater samples.
- Ethylbenzene was not detected in the groundwater samples.
- Toluene was not detected in the groundwater samples.
- Total xylenes were not detected in the groundwater samples.
- DIPE was not detected in the groundwater samples.
- ETBE was not detected in the groundwater samples.
- TAME was not detected in the groundwater samples.

- TBA was not detected in the groundwater samples.

5.3.3 Ethanol

- Ethanol was not detected in the groundwater samples.

The analytical testing results of laboratory QA/QC samples, which include matrix spike/matrix spike duplicates, check blank, method blanks, continuing calibration verification, laboratory control sample/laboratory control sample duplicate, calibration standards, and reference standards, are also found in the laboratory reports and generally fell within acceptable ranges (see Appendix B).

Section 6

Summary and Conclusions

Based on the results of this investigation, RMT is providing the following summary and conclusions:

- Two soil borings (B6 and B7) were drilled to a termination depth of 20 feet bgs, using hollow stem auger drilling techniques.
- No visual, olfactory, or PID indications of contamination were encountered in the soil borings.
- The soil borings were converted into temporary groundwater monitoring wells (B6 and B7). The installed groundwater monitoring wells were then purged and sampled.
- Soil encountered in borings B6 and B7 consists of heterogeneous, interbedded clay, silty clay and/or clayey sand to a depth of approximately 20 feet bgs (the maximum depth explored).
- The laboratory analytical results of groundwater samples collected from the temporary monitoring wells show that TPH-DRO, TPH-ORO, TPH-GRO, MTBE, Benzene, Ethylbenzene, Toluene, Xylenes, DIPE, ETBE, TAME, TBA, or ethanol were not detected above laboratory reporting limits in either of the groundwater samples collected from the two down-gradient temporary wells.
- The temporary groundwater monitoring wells were removed and the boreholes were sealed the same day in accordance with the Los Angeles County Department of Health permit regulations.
- The analytical testing COELT/ EDF data have been uploaded to the State of California Geotracker database website in compliance with California's electronic reporting requirements.

During the three previous groundwater monitoring events, the laboratory analytical results of groundwater samples collected from the five monitoring wells show that TPH-ORO, TPH-GRO, Benzene, Ethylbenzene, Toluene, Xylenes, DIPE, ETBE, TAME, TBA, or ethanol were not detected above laboratory reporting limits in any of the groundwater samples collected. In the final Second Quarter 2008 event, TPH-DRO was only detected in two monitoring wells, MW5 (at 10.5 mg/L) and MW3 (at 0.82 mg/L). MTBE was only detected in one monitoring well, MW2 (8.65 ug/L). RMT had previously concluded (RMT Inc, 2008b) that the previous TPH-DRO results in the groundwater were anomalous and appear inconsistent with historical data related

to the 12,000-gallon **gasoline** UST that was removed from the Site on November 10, 2004 and which is the subject of this site investigation. This conclusion is also supported by the following:

- The current investigation confirms that no TPH-DRO, TPH-ORO, TPH-GRO, MTBE, Benzene, Ethylbenzene, Toluene, Xylenes, DIPE, ETBE, TAME, TBA, or ethanol were detected in the two down-gradient temporary wells.
- TPH-GRO has always been below laboratory reporting limits during the groundwater monitoring activities for the onsite wells.
- The ARCO site located at 3737 Beverly Blvd W, Los Angeles, CA 90004 (*Case #: 900040098*) is located immediately adjacent to the south of the AT&T Site. The former ARCO site has had a fueling service station since at least 1950. Several gasoline and diesel USTs have been determined to be leaking between the late 1980's and 1990's and have been removed. Remediation also has been ongoing at the ARCO site. The historical site assessment reports for this ARCO site have also reported "near saturated gasoline contaminated soil" just south of the AT&T site.
- Other sites in the vicinity cannot be ruled out as a source for hydrocarbon concentrations detected in the groundwater in the area.
- The soil samples results which were collected during the installation of the groundwater monitoring wells in November 2007 showed no visual, olfactory, or PID indications of contamination during the drilling of the soil borings. No **TPH-DRO**, TPH-GRO, Benzene, Ethylbenzene, Toluene, Xylenes, DIPE, ETBE, TAME, TBA, or ethanol were detected above laboratory reporting limits in any of the soil samples collected. TPH-ORO was only detected in one sample from MW2 at 10 feet bgs at 140 mg/Kg. MTBE was only detected in one soil boring MW1 at 5 feet (16 ug/kg), 10 feet (51 ug/kg) and 15 feet (7.4 ug/kg) bgs.

Based on the results of current and previous investigations, RMT recommends that this Site be granted No Further Action status by the Los Angeles Regional Water Quality Control Board.

TEMPERATURE: _____ °F	WIND: _____ MPH	VISIBILITY: _____
WORK / SAMPLING PERFORMED		
Install two soil borings to depth of 20 ft. on the eastern portion of the Site		
A hollow stem auger drill rig was used.		
Soil samples were collected at 5 ft. intervals to groundwater. Groudwater samples colected and analyzed fo		
TPH gasoline, BTEX, MTBE, DIPE, ETBE, TAME, TBA and ethanol.		
Borings were converted into temp 2" diameter pvc monitoring wells.		
Borings destroyed the same day		
Soil cuttings and purge water are stored onsite temporarily until shipped out for offsite disposal.

Dallas, Texas 75202-5399

**UNDERGROUND STORAGE TANK PROGRAM – DIRECTIVE TO TAKE CORRECTIVE ACTION IN RESPONSE TO UNAUTHORIZED UNDERGROUND STORAGE TANK RELEASE PURSUANT TO HEALTH AND SAFETY CODE SECTION 25296.10 AND TITLE 23, CALIFORNIA CODE OF REGULATIONS, SECTIONS 2720-2727
PACIFIC BELL TELEPHONE COMPANY, AT&T
316 NORTH JUANITA AVENUE, LOS ANGELES, CA
(CASE NO. 900040225A)**

Dear Mr. Weller:

Pursuant to Health and Safety Code section 25296.10, you are required to take corrective action (i.e. Preliminary Site Assessment, Soil and Water Investigation, Corrective Action Plan Implementation, and Verification Monitoring) to ensure protection of human health, safety and environment. Corrective action requirements are set forth in California Code of Regulations (CCR), title 23, Chapter 16, sections 2720 through 2727.

We have reviewed the "Second Quarter 2008 Groundwater Monitoring Report (Report)," dated July 10, 2008, prepared by RMT, Inc. (RMT), for the subject site. The Report indicated that the current maximum total petroleum hydrocarbon as diesel (TPH_D) at 10,500 µg/L, and methyl tertiary butyl ether (MTBE) concentration at 8.65 µg/L were detected at the site. TPH_D was detected in the most downgradient well MW-5.

Based on our review, we have determined that the groundwater contamination plume has not been adequately assessed at the Site. At least one downgradient groundwater monitoring well must be installed to assess the extent of the groundwater contamination plume. Alternatively, you can use hydro-punch groundwater sampling method. At least two hydro-punch groundwater samples downgradient of MW-5 must be collected.

You can proceed with the field work for the hydro-punch sampling provided that the Board staff concur with the site plan for boring locations.

Pursuant to State Water Resources Control Board Resolution No. 92-49, under Water Code section 13304, all fieldwork related to subsurface investigation must be conducted by, or under the direct responsible supervision of, a licensed California Professional Geologist (PG) or Civil Engineer (PE). All technical documents submitted to this Regional Board must be reviewed and signed and/or stamped by a licensed California PG or PE with preferably five years subsurface hydrogeologic experience.

California Environmental Protection Agency

Our mission is to preserve and enhance the quality of California's water resources for the benefit of present and future generations.

Mr. Jason Weller
AT&T Environmental, Health & Safety

- 2 -

July 28, 2008

Groundwater samples must be analyzed by Cal-LUFT GC/FID or Cal-LUFT GC/MS Method for TPH_G, total petroleum hydrocarbons as diesel (TPH_D), and by EPA Method 8260B for benzene, toluene, ethylbenzene, and xylenes (BTEX), and fuel oxygenate compounds including methyl tertiary butyl ether (MTBE), di-isopropyl ether (DIPE), ethyl tertiary butyl ether (ETBE), tertiary amyl methyl ether (TAME), and tertiary butyl alcohol (TBA). Ethanol is also required and shall be analyzed by either method above. The analytical detection limits must conform to the Regional Board General Laboratory Testing Requirements (9/06) (http://www.waterboards.ca.gov/losangeles/publications/forms/forms/ust/lab_forms/labreq9-06.pdf). All respective analytical methods must be certified by the California Environmental Laboratory Accreditation Program (ELAP). All analytical data must be reported by a California-certified laboratory.

Prior to consideration of case closure, you must analyze at least one round of groundwater samples including all common aromatic and chlorinated volatile organic compounds per EPA Method 8260B. If the site has a waste oil tank, the full suite of aromatic and chlorinated analyses must also be tested and reported per EPA Method 8260B.

If you have any questions concerning this matter, please call me at (213) 576-6712 or e-mail me at mhsu@waterboards.ca.gov.

Sincerely,

Mercedes S. Hsu
Water Resource Control Engineer

** High Priority **

Hi Mercedes: We are planning to do this drilling in the first week of October. We are planning to drill two temporary wells and collect grab water samples. I am attaching the site plan in Acrobat (2 pages). I am applying for permits from LA-DHS. please let me know if the locations are acceptable. thanks

Chris

**UNDERGROUND STORAGE TANKS PROGRAM
PACIFIC BELL TELEPHONE COMPANY, AT&T
316 NORTH JUANITA AVENUE, LOS ANGELES, CA
(CASE NO. 900040225A)**

Dear Mr. Smith:

We have received the "Phase II Environmental Site Assessment Report (Report)," dated November 29, 2007, prepared by RMT, Inc. (RMT), for the subject site. A total of five borings were drilled. Analytical test results of soil samples indicated all fuel hydrocarbons constituents were not detected. The borings were converted to groundwater monitoring wells. Analytical results of groundwater samples indicated that maximum total petroleum hydrocarbon as gasoline (TPH_G) concentration at 7,900 µg/L and methyl tertiary butyl ether (MTBE) concentration at 6.8 µg/L were detected. RMT recommended no further action for the site.

We have reviewed the information provided including previous site assessments and determined that you are required to conduct at least two more rounds of quarterly groundwater monitoring events. We will review the additional groundwater monitoring data for low risk closure.

If you have any questions concerning this matter, please call me at (213) 576-6712 or e-mail me at mhsu@waterboards.ca.gov.

Sincerely,

Mercedes S. Hsu

**UNDERGROUND STORAGE TANKS PROGRAM
PACIFIC BELL TELEPHONE COMPANY, AT&T
316 NORTH JUANITA AVENUE, LOS ANGELES, CA
(CASE NO. 900040225A)**

Dear Mr. Smith:

Thank you for submitting the general information package dated July 12, 2007. We have reviewed the "UST Removal Report/Soils Report (Report)," dated November 17, 2004, and the "Workplan for Site Assessment (Workplan)," dated January 18, 2006, prepared by Hydrologue, Inc. (HI), for the subject site. The Report indicated that the total petroleum hydrocarbons as gasoline (TPH_G) concentration at 20,900 µg/L, benzene concentration at 524 µg/L and methyl tertiary butyl ether (MTBE) concentration at 5,400 µg/L were detected in a water sample collected from the excavation. In the Workplan, HI proposes to drill five soil borings and convert the borings to groundwater monitoring wells to assess soil and groundwater contamination beneath the site

We concur with the Workplan as proposed, provided the following conditions are met:

1. The construction, development, and abandonment of groundwater monitoring wells must comply with requirements prescribed in the California Well Standards (Bulletin 74-90), published by the California Department of Water Resources (can be seen at www.dpla2.water.ca.gov and go to "groundwater").
2. All necessary permits must be obtained from the appropriate agencies prior to the start of work.
3. Pursuant to State Water Resources Control Board Resolution No. 92-49, under Water Code section 13304, all fieldwork related to subsurface investigation must be conducted by, or under the direct responsible supervision of, a licensed California Professional Geologist (PG) or Civil Engineer (PE). All technical documents submitted to this Regional Board must be reviewed and signed and/or stamped by a licensed California PG or PE with at least five years subsurface hydrogeologic experience.
4. Soil must be logged at five-foot intervals, at changes in the soil lithology, and at areas of obvious contamination. The registered professional in responsible charge shall review the boring logs and assume the responsibility for the accuracy and completeness of the logs.

California Environmental Protection Agency

Our mission is to preserve and enhance the quality of California's water resources for the benefit of present and future generations.

Soil samples collected from on-site wells must be prepared per EPA Method 5035 for analyses.

5. Soil and Groundwater samples must be analyzed by Cal-LUFT GC/FID or Cal-LUFT GC/MS Method for TPH_G, total petroleum hydrocarbons as diesel (TPH_D), and by EPA Method 8260B for benzene, toluene, ethylbenzene, and xylenes (BTEX), and fuel oxygenate compounds including MTBE, di-isopropyl ether (DIPE), ethyl tertiary butyl ether (ETBE), tertiary amyl methyl ether (TAME), and TBA. Ethanol is also required and shall be analyzed by either method above. The analytical detection limits must conform to the Regional Board General Laboratory Testing Requirements (9/06) (http://www.waterboards.ca.gov/losangeles/html/lab_report.html). All respective analytical methods must be certified by the California Environmental Laboratory Accreditation Program (ELAP). All analytical data must be reported by a California-certified laboratory.

Prior to consideration of case closure, you must analyze at least one round of groundwater samples including all common aromatic and chlorinated volatile organic compounds per EPA Method 8260B. If the site has a waste oil tank, the full suite of aromatic and chlorinated analyses must also be tested and reported per EPA Method 8260B.

6. All proposed groundwater monitoring wells must be developed and surveyed to a benchmark of known elevation above mean sea level by a licensed land surveyor or registered civil engineer. Prior to collecting samples, free product thickness (if present) must be determined and the depth to water must be measured in all wells to be sampled, then the wells are to be properly purged until the temperature, conductivity, and pH stabilize, and the water is free of suspended and settleable matter, before samples are collected for analysis. Any wells containing free product must be purged to remove any standing product, allowed to equilibrate to prepurged levels and free product thickness measured and reported.
7. You are required to submit a technical report summarizing this phase of investigation by **October 15, 2007**. The report must also include the soil boring logs, analytical results, well permits, geologic cross-section, isoconcentration map of contaminants, and as-built construction details of the new groundwater monitoring wells installed.
8. You are required to implement a quarterly groundwater monitoring program. The groundwater monitoring reports are to be submitted by the fifteenth day following the end of the month as shown in the following schedule:

<u>Reporting Period</u>	<u>Report Due Date</u>
January-March	April 15 th
April-June	July 15 th
July-September	October 15 th
October-December	January 15 th

The first groundwater monitoring report under this schedule is due by **October 15, 2007**.

California Environmental Protection Agency

Mr. Mark Smith
AT&T Environmental, Health & Safety

- 3 -

August 9, 2007

9. The quarterly groundwater monitoring report must include the following:
- A separate summary table containing current concentrations.
 - A summary table containing all historical data per each well with groundwater depth (or elevation) and well screen intervals.
 - A regional map depicting site vicinity business and street, etc.
 - A site plot plan depicting site location, tank and associated system locations.
 - A site map depicting all well locations and groundwater elevations (contour) with flow gradient and direction.
 - An isoconcentration map for TPH(g), benzene, MTBE, and TBA, respectively.
 - A hydrograph superimposing on concentration over time at the most impacted well for TPH(g), benzene, MTBE, and TBA (or at any other wells as warranted).
 - Conclusions and recommendations.
10. Two weeks prior to commencing field work, a Health and Safety plan pertinent to the subject project must be submitted to this office. The field crew must follow the Health and Safety Plan.
11. Please notify us at least seven working days prior to the start of work so that we may schedule a member of our staff to be present.

If you have any questions concerning this matter, please call me at (213) 576-6712 or e-mail me at mhsu@waterboards.ca.gov.

UNDERGROUND STORAGE TANKS (UST) PROGRAM – REQUEST FOR ADDITIONAL INFORMATION
PACIFIC BELL TELEPHONE COMPANY, AT&T
316 NORTH JUANITA AVENUE, LOS ANGELES, CA
(CASE NO. 900040225A) (GLOBAL ID# T0603797875)

Dear Mr. Delano:

On April 19, 2007, the City of Los Angeles Fire Department (LADF) transmitted this case to this agency due to concerns of groundwater impact from the subject site. The California Regional Water Quality Control Board, Los Angeles Region, is the public agency with primary responsibility for the protection of ground and surface water quality for all beneficial uses within the Los Angeles and Ventura counties. As such, we are the lead regulatory agency for overseeing corrective action (assessment and/or monitoring activities) and cleanup of releases from leaking underground storage tank (UST) systems at the subject site.

I. Technical Reports Submitted by Referring Agency

The LADF has provided the Regional Board with the following copies of the technical reports:

- "Workplan For Site Assessment" dated January 18, 2006.

II. Additional Information Required

To facilitate our review, we would appreciate that you provide the following information regarding the referenced site that has not already been submitted (see above):

- Facility contact person's name and phone number (email address, if any);
- Facility mailing address;
- Contaminant release information (e.g., copy of Site Assessment Report);
- Tank removal and/or repair information (include tank size and contents, removal and/or repair date);
- Tank disposal documentation;
- Copies of all previous site assessment and/or remediation report(s), if any;
- Reports of all previous soil and groundwater sample analytical results, if any;

California Environmental Protection Agency

Our mission is to preserve and enhance the quality of California's water resources for the benefit of present and future generations.

- Name, telephone number and email address of your environmental consultant, if any; and
- Copies of all correspondence regarding environmental assessment for the subject site.

III. Landowner or Impacted Site Notification Requirements

Pursuant to the California Health and Safety Code Chapter 6.75 (Section 25299.37.2) and Division 7 of the Porter Cologne Water Quality Control Act under AB 681, the Regional Board is required to notify all current fee title holders for the subject site or sites impacted by releases from underground storage tanks prior to considering corrective action and cleanup or case closure. If corrective action data from the site indicate that release(s) from the underground storage tank systems have impacted offsite property, you are required to provide to this Regional Board the name, mailing address, and phone number for any new record fee title holders for the subject site and any offsite property(ies) impacted by releases from the subject site, together with a copy of county record of current ownership (grant trust deed), available from the County Recorder's Office, for each property affected. Or as an alternative, you can complete this Regional Board's "Certification Declaration for Compliance with Fee Title Holder Notification Requirements," for each site (available at

http://www.waterboards.ca.gov/losangeles/html/programs/ust/AB681_form.pdf).

If this information has been provided in the past, then you need not provide it again. Copies of future technical reports shall also be sent directly to the property owner of the site and to any other property owner(s) impacted by contamination from the site. You are also responsible to provide new contact information if the property owner(s) has been changed. The new owner shall comply with the requirement stated above.

The above requested information is due to this Regional Board, no later than **July 15, 2007**.

IV. Regulatory Requirement for Electronic Submission of Laboratory Data to the State Geotracker Internet Database

On September 30, 2004, the State Water Resources Control Board (SWRCB) adopted the resolution to revise regulations in Chapter 30, Division 3 of Title 23 of California Code of Regulations (CCR), which requires persons to ensure electronic submission of laboratory analytical data (i.e., soil or water chemical analysis) and locational data (i.e., location and elevation of groundwater monitoring wells), via the Internet to the SWRCB's GeoTracker database. The regulations and other background information are available at <http://geotracker.waterboards.ca.gov>.

In accordance with the above regulations, you are required to submit all future laboratory data over the Internet in the Electronic Deliverable Format to the SWRCB's GeoTracker database for any soil and/or groundwater samples obtained after September 1, 2001. This would include any sampling completed for underground storage tank system removal, site assessment activities, periodic groundwater monitoring, and post cleanup verification sampling. Per the same regulations, you are also required to submit locational data for all groundwater monitoring wells (i.e., latitude, longitude, and elevation survey data) together

Mr. Louise Delano
AT&T Service Incorporated

- 3 -

May 22, 2007

with groundwater information (i.e., elevation, depth to free product, monitoring well status, etc.) and a site map commencing January 1, 2002. Hard copy paper reports for the main contents are still required per Regional Board guidelines available at http://www.waterboards.ca.gov/losangeles/html/programs/ust/04_0621_e-QMRGuideline6-04.pdf.

If you have any questions concerning this matter, please call me at (213) 576-6712 or e-mail me at mhsu@waterboards.ca.gov.

Sincerely,

Mercedes S. Hsu

July 10, 2008

Los Angeles Regional Water Quality Control Board
Mercedes S. Hsu
320 W. 4th Street, Suite 200
Los Angeles, CA 90013

Subject: Second Quarter 2008 Groundwater Monitoring Report
April 1, 2008 through June 30, 2008
AT&T G1118 (LSANCA86) Facility 316 N. Juanita Avenue Los Angeles, CA 90004
RWQCB Case #900040225A RMT, Inc. Project No. 00-06644.02

Dear Ms. Hsu:

On behalf of AT&T Environment, Health and Safety, RMT Inc (RMT) has prepared this Second Quarter 2008 Summary Report for the property located at 316 N. Juanita Avenue, Los Angeles, CA 90004 (the Site; Figure 1). Electronic Deliverable Format (EDF) files have been uploaded to the State Water Resources Control Board Geotracker website.

In accordance with the RWQCB's January 7, 2008 letter, this is the final quarter of monitoring and the RWQCB is respectfully requested to grant closure for this Site.

If you have any questions or need additional information, please contact Mr. Chris D'Sa, the RMT Project Manager at (310) 570-7069 or Mr. Jason Weller, the AT&T Environmental Manager at (214) 464-5226.

Sincerely,

A handwritten signature in blue ink, appearing to read 'Chris D'Sa', is written over a horizontal line.

AT&T G1118 (LSANCA86) Facility 316 N. Juanita Avenue Los Angeles, CA 90004
RWQCB Case #900040225A RMT, Inc. Project No. 00-06644.02

Dear Ms. Hsu:

On behalf of AT&T Environment, Health and Safety, RMT Inc (RMT) has prepared this Second Quarter 2008 Summary Report for the property located at 316 N. Juanita Avenue, Los Angeles, CA 90004 (the Site; Figure 1). Electronic Deliverable Format (EDF) files have been uploaded to the State Water Resources Control Board Geotracker website.

Based on the current and previous investigations, RMT previously recommended that this Site be granted No Further Action status by the RWQCB if groundwater monitoring for three more quarters confirm that the concentrations of contaminants of concern decrease or remain stable at the Site. In a letter dated January 7, 2008, the RWQCB concurred with RMT's conclusions and recommendations and directed AT&T to conduct two more rounds of groundwater monitoring, at which time the site will be re-evaluated for low risk closure. Therefore, in accordance with the RWQCB's guidance, this is the final quarter of monitoring and the RWQCB is respectfully requested to grant closure for this Site.

If you have any questions or need additional information, please contact Mr. Chris D'Sa, the RMT Project Manager at (310) 570-7069 or Mr. Jason Weller, the AT&T Environmental Manager at (214) 464-5226.

Sincerely,

Chris D'Sa

3. CONSULTANT INFORMATION:

- Contact Mr. Chris D'Sa
- Company RMT Inc.
- Address One Bunker Hill Bldg
601 W 5th St, Ste 760
Los Angeles, CA 90071-2004
- Phone 213-623-4175 x2503

4. WORK PERFORMED THIS QUARTER:

- Groundwater monitoring

5. WORK PROPOSED FOR NEXT QUARTER:

- none

6. CURRENT PHASE OF PROJECT (Initial Assessment, Additional Assessment, Corrective Action Plan (CAP), Remediation, Post-Remediation Monitoring, etc.):

- Low risk closure

7. DESCRIBE CORRECTIVE AND REMEDIAL TECHNIQUES TO BE IMPLEMENTED IN THE FUTURE AND INCLUDE TIME SCHEDULE FOR THE INITIATION OF THE ASSOCIATED ACTIVITIES (NAPL Removal, Pump and Treat, Vapor Extraction System (VES), Excavation, etc.):

- N/A

8. CURRENTLY MONITORING (Soil, Groundwater, Vapor, None):

- Groundwater

9. MONITORING FREQUENCY (Quarterly, Monthly, etc.):

- Wells MW1, MW2, MW3, MW4 and MW5 are sampled quarterly until 2nd Quarter 2008.

10. CUMULATIVE SOIL REMOVED TO DATE:

- N/A

11. SOIL REMOVED THIS QUARTER:

- None

12. ARE CONTAMINATED SOILS OR LIQUIDS GENERATED FROM INVESTIGATIONS OR CLEANUPS CURRENTLY STORED ONSITE?

- No

13. GROUNDWATER MONITORING SUMMARY

CURRENT FIELD ACTIVITIES

Groundwater monitoring frequency	Quarterly
Activity date	June 24, 2008
Field subcontractor	RMT Inc.
Purging method	Submersible pump
Purging subcontractor	RMT Inc
Disposal method/facility	Hauled offsite by Belshire Environmental
Gallons of groundwater purged:	Approximately 40 gallons
Number of groundwater wells total	5
Number of groundwater wells offsite	0
Number of wells sampled this period	5
Number of wells with Product	None.

SITE HYDROLOGY

Average groundwater elevation (of wells gauged):	259.88 feet above MSL
Average elevation change from previous quarter:	-0.84 feet
Approximate groundwater flow direction:	east-southeast
Approximate hydraulic gradient:	0.05 foot/foot

14. GROUNDWATER CONDITIONS

TPH-DRO Range:	10.5 mg/L in MW5 to 0.82 mg/L in MW3 ND (<0.50 mg/L) in MW1, MW2, and MW4
Historical maximum TPH- DRO concentration:	10.5 mg/L - MW5 (06/24/2008)
MTBE Range:	8.65 ug/L in MW2 to ND (<2 ug/L) in MW1, MW3, MW4, and MW5
Historical maximum MTBE concentration:	13.1 ug/L – MW2 (2/11/2008)
TPH-ORO:	ND in all wells (<0.50 mg/L)
TPH- GRO:	ND in all wells (<50 ug/L)
Ethanol:	ND in all wells (<500 ug/L)
BTEX, DIPE, ETBE, TAME:	ND in all wells (<2 ug/L)
TBA:	ND in all wells (<10 ug/L)

ND	Not Detected
ug/L	Micrograms per liter
ug/Kg	Micrograms per kilogram
mg/L	Milligrams per liter
mg/Kg	Milligrams per kilogram
TPH-DRO	Total Petroleum Hydrocarbons for Extractable Diesel Range Organics (C10 to C28)
TPH-ORO	Total Petroleum Hydrocarbons for Heavy Extractable Oil Range Organics (C28+)
TPH-GRO	Total Petroleum Hydrocarbons Gasoline Range Organics (C6 to C10)
MTBE	methyl-t-butyl ether
DIPE	di-isopropyl ether
ETBE	ethyl-t-butyl ether
TAME	tert-amyl methyl ether
TBA	tert-butanol

15. CONCLUSIONS

- Concentrations of gasoline-related analytes tested are relatively consistent with previous historical results. In accordance with the Los Angeles Regional Water Quality Control Board (RWQCB's) January 7, 2008 letter, this is scheduled to be the final quarter of monitoring and the RWQCB is respectfully requested to grant closure for this Site.
- During this groundwater monitoring event, the laboratory analytical results of groundwater samples collected from the five monitoring wells show that typical gasoline constituents, including TPH-ORO, TPH-GRO, benzene, ethylbenzene, toluene, xylenes, DIPE, ETBE, TAME, TBA, or ethanol were not detected above laboratory reporting limits in any of the groundwater samples collected. TPH-DRO was only detected in two monitoring wells, MW5 (at 10.5 mg/L) and MW3 (at 0.82 mg/L). MTBE was only detected in one monitoring well, MW2 (8.65 ug/L).
- The TPH-DRO results in the groundwater are anomalous and are inconsistent with historical data related to the 12,000-gallon gasoline UST that was removed from the Site

on November 10, 2004 and which is the subject of this site investigation. The DRO concentrations at MW5 and MW3 appear to be unrelated the AT&T site for the following reasons:

- The former on-site UST contained gasoline, not diesel.
 - No gasoline constituents are detected in the groundwater.
 - The DRO concentrations are anomalous because they have increased over time at MW5, which is inconsistent with an on-site source because the UST was removed in 2004, and it did not contain diesel.
 - The former ARCO site located at 3737 Beverly Blvd W, Los Angeles, CA 90004 (*Case #: 900040098*) is located immediately adjacent to the south side of the AT&T Site. The former ARCO site has had a fueling service station since at least 1950. Several gasoline and diesel USTs at the former ARCO site have been determined to be leaking between the late 1980's and 1990's and have been removed. Remediation has been ongoing. The historical site assessment reports for this site reported "near saturated gasoline contaminated soil" on the ARCO site just south of the AT&T site. Other sites in the vicinity cannot be ruled out as a source for hydrocarbon concentrations detected in the groundwater in the area.
- Soil samples results which were collected during the installation of the groundwater monitoring wells at the AT&T Site in November 2007 also indicate a lack of contamination associated with the former gasoline UST on Site. No visual, olfactory, or PID indications of contamination were encountered in the soil borings. No **TPH-DRO**, TPH-GRO, benzene, ethylbenzene, toluene, xylenes, DIPE, ETBE, TAME, TBA, or ethanol were detected above laboratory reporting limits in any of the soil samples collected. TPH-ORO was only detected in one sample from MW2 at 10 feet bgs at 140 mg/Kg. MTBE was only detected in one soil boring MW1 at 5 feet (16 ug/kg), 10 feet (51 ug/kg) and 15 feet (7.4 ug/kg) bgs.

Based on the current and previous investigations, RMT recommends that this Site be granted No Further Action status and the RWQCB is respectfully requested to grant closure for this Site.

Attachment 4
Groundwater Sampling
Procedures & Field Sheets

Inspection & Gauging

Wells are inspected prior to evacuation and sampling. The condition of the wellhead is checked and noted according to a wellhead inspection checklist. Standard measurements include the depth to water (DTW) and the total well depth (TD) obtained with industry standard electronic water level indicators that are graduated in increments of hundredths of a foot. The water in each well is inspected for the presence of free product. When free product is suspected, its presence is confirmed using an electronic interface probe (e.g. MMC). No samples are collected from a well containing free product.

Evacuation

Depth to water measurements are collected by RMT personnel prior to purging and minimum purge volumes are calculated anew for each well based on the height of the water column and the diameter of the well. Purge volumes are a minimum of three case volumes. Well purging devices are selected on the basis of the well diameter and the total volume to be evacuated. In most cases the well will be purged using an electric submersible pump (i.e. Grundfos) suspended near (but not touching) the bottom of the well.

Parameter Stabilization

Purging standards include minimum purge volumes, but additionally require stabilization of specific groundwater parameters prior to sample collection. Typical parameters used to measure stability are electrical conductivity, pH, temperature. Instrument readings are obtained at regular intervals during the evacuation process (no less than once per case volume). Stabilization standards for routine quarterly monitoring include the following: Temperature is considered to have stabilized when successive readings do not fluctuate more than +/- 1 degree Celsius. Electrical conductivity is considered stable when successive readings are within 10%. pH is considered to be stable when successive readings remain constant or vary no more than 0.2 of a pH unit.

Dewatered Wells

Normal evacuation removes no less than three case volumes of water from the well. However, less water may be removed in cases where the well dewateres and does not immediately recharge..

Purge Water Containment

Purge water evacuated from each groundwater monitoring well is captured and contained in 55-gallon drums, on-board storage tanks on the sampling vehicle and/or special water hauling trailers. Effluent from the decontamination of reusable apparatus (sounders, electric pumps and hoses etc.) consisting of groundwater combined with de-ionized water and non-phosphate soap, is also captured in drums. Non-hazardous purge and rinsate water is off loaded into 55-gallon drums on site.

Sample Collection Devices

All groundwater samples are collected using disposable bailers.

Sample Containers

Sample material is decanted directly from the sampling bailer into sample containers provided by

the laboratory that will analyze the samples. The transfer of sample material from the bailer to the sample container conforms to USEPA specifications. The type of sample container, material of construction, method of closure and filling requirements are specific to the intended analysis. Chemicals needed to preserve the sample material are commonly placed inside the sample containers by the laboratory or glassware vendor prior to delivery of the bottle to our personnel. The laboratory sets the number of replicate containers.

QA/QC Samples

For field Quality Assurance/Quality Control (QA/QC) purposes, either an equipment blank (QCEB) sample or a trip blank (QCTB) sample may be prepared along with the collected groundwater samples. If trip blanks are collected during this event, they are taken to the site and kept inside the sample cooler for the duration of the event. They are turned over to the laboratory for analysis with the samples from that site. The equipment blank sample is generally obtained after decontamination activities by pouring ultra-pure, de-ionized water over the pump. A water sample is then collected using, to the extent feasible, the same sampling protocol and equipment used to obtain the other samples. Any collected QA/QC blank samples are handled and processed in exactly the same manner as regular samples, as described herein. Additionally, the laboratory performs matrix spikes, matrix spike duplicates, method blanks, check samples and standards in accordance with the RWQCB guidelines to provide a measure of the positive interference introduced by the laboratory procedure and analytical testing methods.

Duplicates

Duplicates, if requested, may be collected at a site. The Duplicate sample is labeled "DUP" and the time of collection is omitted from the COC, thus rendering the sample blind.

Sample Storage

All sample containers are promptly placed on ice in ice chests for storage in the field and transport (direct or via our facility) to the designated analytical laboratory. The samples are maintained in either an ice chest or a refrigerator until relinquished into the custody of the laboratory or laboratory courier.

Documentation Conventions

Labels are affixed to all sample containers. The sample is identified with the project number and site address, and the groundwater well from which the sample is drawn (e.g. W-01, W-02, etc.). The time and date of sample collection along with the initials of the person who collects the sample are handwritten onto the label. Chain of Custody records are created using client specific preprinted forms following USEPA specifications.

Decontamination

All equipment is brought to the site in clean and serviceable condition and is cleaned between uses in each well. Equipment (reels, pumps and bailers) is decontaminated before leaving the site. Any sensitive equipment or parts (Dissolved Oxygen sensor membrane, water level indicator, etc.) that cannot be washed using the high pressure water, will be sprayed with a non-phosphate soap and de-ionized water solution and rinsed with de-ionized water.

Laboratory Director

American Scientific Laboratories, LLC (ASL) accepts sample materials from clients for analysis with the assumption that all of the information provided to ASL verbally or in writing by our clients (and/or their agents), regarding samples being submitted to ASL, is complete and accurate. ASL accepts all samples subject to the following conditions:

- 1) ASL is not responsible for verifying any client-provided information regarding any samples submitted to the laboratory.
- 2) ASL is not responsible for any consequences resulting from any inaccuracies, omissions, or misrepresentations contained in client-provided information regarding samples submitted to the laboratory.

Attachment 6
Background & Site History

The "Site" is located at 316 N. Juanita Avenue, Los Angeles, Los Angeles County, California, 90004. The property is bordered by private property to the south, private property and Oakwood Avenue on the north, Madison Avenue to the east and Juanita Avenue to the west.

On November 10, 2004, a 12,000-gallon gasoline UST was removed from the Site. Following removal of the 12,000-gallon UST, two soil samples were collected from the base of the tank excavation and one soil sample was collected from beneath the location of the former fuel dispenser. The only constituent detected in the three soil samples was methyl tert butyl ether (MTBE) at concentrations of 2.7 micrograms per kilogram (ug/kg), 4.7 ug/kg, and 6.0 ug/kg. However, water accumulating in the excavation was sampled and analyzed with the following concentrations of chemicals detected: 20,900 ug/L Total Petroleum Hydrocarbons (TPH) – Gasoline (TPH-GRO); 524 ug/L benzene; 2,030 ug/L toluene; 282 ug/L ethylbenzene; 1,770 ug/L total xylenes; 5,400 ug/L MTBE; 2,050 ug/L ethanol; 18 ug/L tert-amyl methyl ether (TAME); and 812 ug/L tert-butanol (TBA). The UST Removal Report, dated November 17, 2004, was submitted by Hydrologue Inc. (HI, 2004) to the Los Angeles Fire Department (LAFD).

On January 12, 2006, the LAFD requested an investigation work plan, which was prepared and submitted to the LAFD on January 18, 2006. Upon the request of the LAFD, an Unauthorized Release form was submitted on April 18, 2007, and on April 19, 2007, the LAFD referred the case to the RWQCB. The RWQCB requested additional background information for their review of the investigation work plan on May 22, 2007, which was submitted on July 12, 2007. The January 18, 2006 Work Plan was approved with comments by the RWQCB on August 9, 2007, and a deadline of October 15, 2007 was set for completion of the investigation and submittal of a report. This deadline was extended to December 15, 2007 by Ms. Mercedes Hsu on September 10, 2007.

In November 2007, RMT completed a Phase II Site Assessment investigation. The following is summarized from the report dated November 29, 2007 which was submitted to the RWQCB:

- Five soil borings (MW1, MW2, MW3, MW4 and MW5) were drilled to a termination depth of 30 feet bgs, using hollow stem auger drilling techniques. Soil samples were collected at five foot intervals in from each boring until 15 feet bgs. No visual, olfactory, or PID indications of contamination were encountered in the soil borings. Soil encountered in borings MW1 through MW5 consists of heterogeneous, inter-bedded clay, silty clay and/or clayey sand to a depth of approximately 30 feet bgs (the maximum depth explored). Based on the low permeability of the saturated zone, the groundwater wells can be classified as low recovery wells.
- The soil borings were converted into groundwater monitoring wells (MW1, MW2, MW3, MW4, and MW5). The installed groundwater monitoring wells were then surveyed by a licensed surveyor, developed, and sampled.
- The laboratory analytical results of soil samples collected from the soil borings show that TPH-DRO, TPH-GRO, Benzene, Ethylbenzene, Toluene, Xylenes, DIPE, ETBE, TAME, TBA, or ethanol were not detected above laboratory reporting limits in any of the soil samples collected. TPH-ORO was only detected in one sample from MW2 at 10 feet bgs at 140 mg/Kg. MTBE was only detected in one soil boring MW1 at 5 feet (16 ug/kg), 10 feet (51

ug/kg) and 15 feet (7.4 ug/kg) bgs. The soil samples were collected and preserved using EPA Method SW5035.

- The laboratory analytical results of groundwater samples collected from the five monitoring wells show that TPH-ORO, TPH-GRO, Benzene, Ethylbenzene, Toluene, Xylenes, DIPE, ETBE, TAME, TBA, or ethanol were not detected above laboratory reporting limits in any of the groundwater samples collected. TPH-DRO was only detected in one monitoring well, MW3 at 7.9 mg/L. MTBE was only detected in two monitoring wells, MW1 (5.1 ug/L) and MW2 (6.8 ug/L).
- The former ARCO site located at 3737 Beverly Blvd W, Los Angeles, CA 90004 is located immediately adjacent to the south of the AT&T Site. The former ARCO site has had a fueling service station since at least 1950. Several gasoline and diesel USTs have been determined to be leaking from the late 1980's and 1990's and have been removed. A review of the quarterly monitoring data show that the elevated levels of TPH-GRO, BTEX and MTBE have been encountered below the former ARCO Site. Remediation has been ongoing. The historical site assessment reports for this site have also reported "near saturated gasoline contaminated soil" just south of the AT&T site. Other sites in the vicinity cannot be ruled out as a source for hydrocarbon concentrations detected in the groundwater in the area.
- The California Primary Maximum Contaminant Level (MCL) for MTBE is 13 ug/L. The highest MTBE detected in the groundwater in November 2007 was 6.8 ug/L in MW2. The highest TPH-DRO detected in groundwater was 7.9 mg/L in MW3. The residual contamination could be potentially unrelated to the former gasoline UST which is the subject of this investigation. The current concentrations in both soil and groundwater do not warrant further investigations and/or corrective action.

Based on the current and previous investigations, RMT recommended that this Site be granted No Further Action status by the RWQCB if groundwater monitoring for three more quarters confirm that the concentrations of contaminants of concern decrease or remain stable at the Site. In a letter dated January 7, 2008, the RWQCB concurred with RMT's conclusions and recommendations and directed AT&T to conduct two more rounds of groundwater monitoring, at which time the site will be re-evaluated for low risk closure.

APPENDIX H

TERMINOLOGY

TERMINOLOGY

The following provides definitions and descriptions of certain terms that may be used in this report. Italics indicate terms that are defined by ASTM Standard Practice E 1527-13. The Standard Practice should be referenced for further detail related definitions or additional explanation regarding the meaning of terms.

Recognized environmental condition (REC): The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: 1) due to any release to the environment, 2) under conditions indicative of a release to the environment; or 3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.

De minimis conditions: Conditions that generally do not present threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis are not recognized environmental conditions or controlled recognized conditions.

Historical recognized environmental condition(s) (HREC): A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted residential use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a historical recognized environmental condition, the environmental professional must determine whether the past release is a recognized environmental condition at the time of the Phase I Environmental Site Assessment is conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past release to be a recognized environmental condition at the time of the Phase I ESA, the condition shall be included in the conclusions section of the report as a recognized environmental condition,

Controlled recognized environmental condition(s) (CREC): A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by the regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). A condition considered by the environmental professional to be a controlled recognized condition shall be listed in the findings section of the Phase I Environmental Site Assessment report, and as a recognized environmental condition in the conclusions section of the Phase I Environmental Site Assessment report. NOTE: A condition identified as a controlled recognized environmental condition does not imply that the environmental professional has evaluated or confirmed the adequacy, implementation, or continued effectiveness of the required control that has been, or is intended to be, implemented.

Material threat: A physically observable or obvious threat which is reasonably likely to lead to a release that, in the opinion of the environmental professional, is threatening and might result in impact to public health or the environment. An example might include an aboveground storage tank that contains a hazardous substance and which shows evidence of damage such that it may cause or contribute to tank integrity failure with a release of contents to the environment.

Material impact to public health or environment: A substantial risk of harm to public health or the environment resulting from the presence or likely presence of an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, ground water, or surface water of the property. An example might include a release of a hazardous substance in concentrations exceeding applicable governmental agency standards under conditions that could reasonably and foreseeably result in substantial exposure to humans or

substantial damage to natural resources. The risk of that exposure or damage would represent a material impact to public health or environment.

General risk of enforcement action: The likelihood that an environmental condition would be subject to enforcement action if brought to the attention of appropriate governmental agencies. If the circumstances suggest an enforcement action would be more likely than not, then the condition is considered a general risk of enforcement action.

Data failure: A failure to achieve the historical research objectives, even after reviewing the standard historical sources that are reasonably ascertainable and likely to be useful. Data failure is one type of data gap.

Data gap: A lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. Data gaps may result from incompleteness in any of the activities required by this practice, including, but not limited to site reconnaissance (for example, an inability to conduct the site visit), and interviews (for example, an inability to interview the key site manager, regulatory officials, etc.).
